**ABSTRACT**

**Abstract #:** air cargo, freight, rail transportation, marine transportation, air transportation, ground transportation,

NSWC Crane has developed an air-certified Mounting System (Patent 7,036,786) used to secure shelters or containers. The mounting system integrates a roll-on/off design and locks into existing aircraft cargo handling systems. The design eliminates the need for tie down chain assemblies and the use of a crane to load cargo, while increasing efficiency in the loading and unloading processes. Commercial market potentials are: ground, air, marine and rail freight transportation.

**THUMBNAIL**

Air certified cargo mounting system offering a unique quick-load design and utilizes existing mounting aircraft tie-downs to secure containers and shelters.
