

FOREWORD

The Commander, Naval Sea Systems Command (NAVSEA), as the designated Chief of Naval Operations agent for maritime outfitting, is assigned responsibility for program, financial management, and execution of Navy ships' outfitting programs. Within NAVSEA under the Sustainment Directorate (SEA 06), the Materiel Readiness Division (SEA 06M) is assigned responsibility for the Provisioning, Allowance, and Fitting Out Support (PAFOS) Technical Specification (Tech Spec) 9090-1500. SEA 06M is responsible for the review, coordination, approval, and issuance of changes to the PAFOS Tech Spec.

The PAFOS Tech Spec has not been updated since 2010. However, in April 2019, Chapters 4 and 8 were superseded and extracted for updating and inclusion in the Provisioning and Allowance Procedures Manual (NAVSEA M-4423.1) to amplify the provisioning direction and guidance promulgated in the Provisioning Policy Instruction (NAVSEAINST 4423.5). In addition, a revision was agreed upon to update Chapters 1, 5 and 6 to reflect existing policies and procedures applicable to the current NAVSEA organization and associated process stakeholders.

Chapter 1: Supply Support Overview provides high level of supply support functions and procedures, structure of organizations who participate in provisioning, allowancing, and fitting out; Chapter 5: Interim Supply Support is a primary guidebook used by program offices to drive supply support requirements prior to Material Support Date (MSD); and Chapter 6: Allowance Documents identifies the various allowance lists or documents developed to outfit a ship entering the Fleet.

M. L. EDMONDS
Deputy Commander for Sustainment
and NAVSEA Chief Logistician
