d. Miscellaneous testing, such as operational testing, will be documented on a QA form 17 when higher test authority requires a record and for which there is no other QA form.

e. Drop testing. Used to test the integrity of a system by applying pressure and holding for a specified time and correcting the pressure drop for temperature changes. A QA form 27 will be used to document the OQE that the drop test was completed satisfactorily.

f. Nondestructive Testing (NDT). Used to determine the integrity of metals with no detrimental effects to the subject metal. Specific guidance on NDT and required OQE is contained in reference (d) and Part I, Chapter 11 of this volume.

g. Test instrumentation. Test instrumentation will be per the source documents.

(1) Installed master or primary and backup test pressure gages, including shop hydrostatic test stands, must be calibrated for accuracy as required by references (a), (c) and (e). These references may not include special test gage requirements and other source documents (e.g., Reactor Plant Manual (RPM), special test procedures, maintenance and replacement instruction requirements) may have to be consulted.

(2) Non-nuclear test instruments will be per references (c) and (e). Local exceptions to gage range and increments, or both, specified in references (c) and (e) will be approved by an individual with a technical warrant.

h. Duration of tests. The duration of a shop or shipboard test will normally be established by the applicable technical reference (e.g., Test Pressure Drawing (TPD), technical manual, RPM, maintenance and replacement instructions), references (b) and (c) for non-nuclear piping systems, or reference (a) for nuclear systems. The following are general guidelines for duration of tests:

(1) Mechanical joint tightness tests. All operating pressure tests performed to verify the integrity of a remade mechanical joint, which has only software (e.g., Flexitallic gasket, gasket, O-ring) replaced, a 30-minute soak period at test pressure prior to commencement of inspections is required to permit weepage or seepage to accumulate.

(2) Strength and porosity tests. Tests performed per references (a) or (b) and (c) to verify the integrity of untested pressure boundary parts (e.g., flanges, bonnets, valve cartridges) or newly brazed or welded joints must be soaked at test pressure for a minimum of 30 minutes prior to commencement of inspections.

(3) Periodic system hydrostatic tests. Periodic hydrostatic tests performed to verify the integrity and leak tightness of entire systems must be conducted per

references (b) and (c), which require a minimum 30-minute soak at test pressure prior to commencement of inspections.

(4) Operational tests. All operational tests performed to assure that all items, components, controls and indications function as designed and per specifications will be conducted for as long as required to prove the operability of the item being tested.

(5) The pressurization time prior to commencing inspections for leakage may be reduced from the normal 30-minute period when pressurization for 30 minutes using installed system equipment is impractical or undesirable (e.g., to avoid generation of radioactive liquid waste or hazardous waste, to avoid undesirable start or stop cycling of the normal system pressure source). In such cases where no minimum pressurization time is specified or it is impractical, maintain pressure for at least five minutes before inspecting joints.

(6) When performing a pneumatic test on any nuclear or non-nuclear system using a soap bubble leak test method, a 15-minute hold period at test pressure is required. If system configuration makes it impossible to pressurize the joints continuously for 15 minutes, they should be pressurized for as long as possible.

i. Testing of valve stems. Replaced stems in non-nuclear valves do not require a strength or porosity test, but the re-assembled valves do require a mechanical joint tightness test after assembly as discussed in reference (c). This includes stems manufactured by an FMA from certified Level I barstock.

j. Testing of new flanged valves received without drilled bolt holes. New valves (e.g., Submarine Safety (SUBSAFE), Level I, nuclear Ready for Issue, and other valves received with certification) without bolt holes in the flanges require only mechanical joint tightness and operational testing in system, not strength testing, following machining bolt holes into flanges.

k. Following routine maintenance and repair work performed on submarine Fly-By-Wire Ship Control Systems following submarine class maintenance plan, testing must be performed as identified in class Fly-By-Wire Ship Control System Technical Work Document and reference (f). Work impacting Unrestricted Operations/Maintenance Requirement Card 019 measured parameters must invoke conduct of applicable portions of Unrestricted Operations/Maintenance Requirement Card 019.

7.2 TESTING.

7.2.1 Test Procedures. Non-nuclear testing will comply with the detailed system or component plans of the source documents. TPDs have been developed for some classes of ships and contain strength test pressures, designated as “H” on the TPD, and mechanical joint tightness test pressures, designated as “J” on the TPD, for all portions of piping systems. Revisions and modifications to TPDs are documented in the SUBMEPP Strength and Tightness Standardized Test Procedure between periodic revisions to the TPDs. The Test Procedure should be reviewed for changes to the TPD. If TPDs do not exist, and test pressures are not identified on applicable system drawings, particular attention must be devoted to system design pressures and configuration. Technical Repair Standard (TRS) or Submarine Maintenance Standard (SMS) provide requirements for testing of many piping system components and generally are the source

document for testing of those components. General guidelines for use of TPD "H" or "J" pressures and Appendices A and B Column 1 or Column 2 pressures are:

a. TPD "H" or Appendices A and B Column 1 pressure is used following:

(1) Major repairs.

(2) Installation of new piping, components or fittings that have not been previously strength tested. DO NOT assume that new uncontrolled material from the Navy Supply System has been previously strength tested. Exceptions to the strength test requirement exist only for reduced energy criteria systems, installation of approved mechanically attached fittings, seals (gaskets, including pressure seal rings and O-rings), fasteners, valve stems and material meeting the requirements of Note 1following this sub-paragraph. A strength test is not required if the end user obtains adequate documentation that a strength test has been previously completed for a specific item.

(3) (Submarines only) Re-making the mechanical joint between the hull and hull valve.

NOTE: "H" PRESSURE TESTING FOR NEW MATERIAL IS NOT REQUIRED IF ALL THE FOLLOWING ARE MET:

1. MATERIAL IS SUBSAFE SPECIAL MATERIAL IDENTIFICATION CODE (SMIC) OR LEVEL I MATERIAL RECEIVED FROM THE NAVY SUPPLY SYSTEM PROPERLY MARKED.

2. A SATISFACTORY RECEIPT INSPECTION IS COMPLETED BY THE END USER.

3. MATERIAL IS RECEIVED IN THE CONFIGURATION REQUIRED FOR USE WITHOUT REQUIRING ADDITIONAL MACHINING, WELDING OR OTHER MAJOR REPAIR. (BAR, INGOTS, PLATE, FORGINGS, ETC., WHICH ARE MACHINED, WELDED OR HAVE A MAJOR REPAIR, REQUIRE AN "H" PRESSURE TEST TO CERTIFY THE COMPONENT.)

b. TPD "J" or Appendices A and B Column 2 pressure is used following:

(1) Minor repairs.

(2) Re-made mechanical joints meeting requirements of reference (c).

(3) Repairs, replacements and modifications of piping, components and fittings in reduced energy criteria systems (those operating at 500 psig or less and 200°F or less); the work must meet all applicable specifications and requirements and satisfactorily pass all other required non-destructive testing.

(4) Installation of approved mechanically attached fittings meeting the requirements of reference (c).

7.2.2 Test Requirements. The following requirements pertain to non-nuclear testing:

a. Reference (b), (c) and (e) contain the test rig, test gauges, and testing procedure requirements for performing non-nuclear testing. Additionally, ship or system specific

manuals such as a Steam Plant Manual should be consulted where applicable. Test, Measuring and Diagnostic Equipment documentation for operating pressure tests is not required if normally installed system gages are used.

b. When a test gauge is not listed in reference (e), a gauge where the test pressure falls within 50-90% of the gauge range will be used (not applicable for operating pressure tests using normally installed system gages).

c. Portions of systems that are not designed for full test pressure will be isolated and provided with a relief or vent path to prevent over pressurization during testing.

d. Hydrostatic or pneumatic test results will be documented on a QA form 26 and system drop tests will be documented on a QA form 27. Miscellaneous testing will be documented on a QA form 17.

e. Where test requirements cannot be met, a Departure from Specification (DFS) will be processed per Part I, Chapter 8 of this volume.

f. Shop test of replacement components will be conducted per reference (c).

g. Renewal or replacement of non-nuclear mechanical joint fasteners. If mechanical joint fasteners are removed and re-installed or replaced one at a time, torqued following an approved procedure and using approved thread lubricants, the integrity of the mechanical joint has not been violated and a test for strength or tightness is not required. For submarines, this applies to joints both within and outside of hull integrity areas. Replacement must be controlled by a Technical Work Document.

7.2.3 Test Pressure Source References. Mechanical joint tightness tests are performed to test work performed on piping systems and components. The following list provides typical documents used to determine test pressures and operational requirements:

a. TPD. The applicable TPD, if issued for a particular class of ship, can be found through the use of the TPD Index or Ship's Drawing Index or referenced in the Record of Shipboard Tests.

b. RPM.

c. Steam and Electric Plant Manual Maintenance and Replacement Instructions requirements.

d. Component technical manual.

e. Ship valves technical manual.

f. Ship System Manual.

g. Naval Ships' Technical Manual (NSTM) chapter dealing with the appropriate system.

h. Record of Shipboard Tests.

i. Standardized Class Shipboard Test Procedures.

j. System diagrams or drawings.

k. Vendor drawings.

l. SMSs.

m. Steam Plant Manual.

n. Boiler Repair Manual (reference (g)).

o. References (a), (b), (c), (d), (h), (i), (j), (k) and (l) of this chapter. In each case, every effort should be made to conform to the latest applicable specifications and detailed test requirements.

7.2.4 Non-Nuclear Pressure Drop Tests. (Submarines only)

7.2.4.1 General Instructions.

a. When accomplishing pneumatic mechanical joint tightness tests on air, compressed gas systems, tanks or compartments as specified by the procedure, pressurize the space or system with the test medium (air, nitrogen, etc.) to the pressure specified. Isolate the test rig from the test area and allow the system to stabilize and remain isolated for the specified amount of time. The actual drop in test pressure corrected for temperature change must be calculated.

b. This method of testing may also be used when testing valves for tightness or seat tightness using water. When test pressure is reached, lock in test pressure and isolate the pressure source from the test rig, and allow the system to stabilize and remain isolated for the specified amount of time. Acceptance criteria is no drop in pressure over the specified time (unless a specific drop in pressure is specified). Test duration must be as specified in the TWD. Generally, calculations for correction due to temperature changes are not required.

7.2.4.2 Calculations.

a. METHOD: Pressure Drop, (psi) Temperature Corrected = $\frac{(P_1+14.7)(T_2+460)}{(T_1+460)}$ - (P2 + 14.7)

WHERE:

T_1 = Initial Measured Temperature ^oF

T_2 = Final Measured Temperature ^oF

P_1 = Initial Measured Pressure, psig from Test Gage

P_2 = Final Measured Pressure, psig from Test Gage

14.7 = Atmospheric Pressure, psi (added to gage pressure to convert to absolute pressure)

460 = Absolute Temperature Scale (added to Fahrenheit temperature to convert to absolute temperature)

b. The temperature value used for calculations must be the net effective temperature for the tested volume. For a submarine high-pressure air system under test, most of the system gas is in the flasks located in the main ballast tanks. Therefore, temperatures most nearly representing the flask(s) internal temperature(s) are required. The net effective temperature of a high-pressure air system on a waterborne submarine is

calculated by a weighted average of temperatures using a weighing factor of nine (9) for seawater temperature and one (1) for average compartment temperature.

$$T_{net} = \frac{(\text{SEA WATER TEMP X 9}) + (\text{COMPARTMENT TEMP})}{10}$$

7.2.4.3 Example. This paragraph provides a typical example of a Pressure Drop Test corrected for a temperature change:

Ships Air Bank Initial Pressure 4500 psig

* Sea Water Temperature Outside Ballast Tank at Start of Test 44°F

* Sea Water Temperature Outside Ballast Tank at End of Test 50°F

** Ship's Compartment Air Temperature at Start of Test 70°F

Ship's Compartment Air Temperature at End of Test 72°F

Ship's Air Bank Final Pressure 4520 psig

Allowable Pressure Drop in 24 Hours at 1 % 45 psi

$$\text{Actual Pressure Drop} = \frac{(P_1+14.7)(T_2+460)}{(T_1+460)} - (P_2 + 14.7)$$

$$T_1 \text{ Net} = \frac{(44 \times 9)+(70 \times 1)}{10} + 460 = 507$$

$$T_2 \text{ Net} = \frac{(50 \times 9) + (72 \times 1)}{10} + 460 = 512$$

$$\frac{(4500+14.7)\ (512)}{(507)} = 4559.2$$

Actual Pressure Drop = 4559.2 – 4534.7

= 24.5

RESULT: Final pressure drop in 24 hours corrected for temperature change is 24.5 psi, which is less than the allowable 45 psi; therefore, test is satisfactory.

* Sea water temperature should preferably be taken at one-half (1/2) keel depth in proximity to air banks. For a ship in drydock, substitute air flask surface temperatures in the main ballast tanks in lieu of seawater temperatures.

** Compartment temperatures should be taken in close proximity to the air system piping and should include surface temperature of air flasks within compartments which are included in the test boundaries.

7.3 WEIGHT HANDLING EQUIPMENT. All weight handling equipment, fittings and fixtures, must be tested and marked or tagged to indicate completion of test prior to being placed into service.

a. Shipboard Equipment. The following are sources of test procedures for shipboard equipment or systems that require tests upon completion of manufacture or repairs:

Equipment or System	Governing Document(s)
Davits	NSTM 583, Planned Maintenance System (PMS)
Cranes	NSTM 589, PMS
General stores & provisions handling (i.e., dumbwaiters, hoists, conveyors)	NSTM 572, PMS
Booms	NSTM 573, PMS
Underway replenishment	NSTM 571, PMS
Anchors & anchoring	NSTM 581, PMS
Elevators	NSTM 588, NSTM 772, PMS
Deck fittings	NSTM 9120, PMS
Deck edge safety nets	PMS, Naval Sea Systems Command (NAVSEA) Dwgs 53711-803-5000902 and 53711-803-5184097
Trunk nets	PMS, NAVSEA Dwg 53711-804-5184163
Ordnance handling	NAVSEA SG420-AP-MMA-010, NSTM 700
Slings: - General Purpose - Specialized	 NSTM 572 Per drawing or In-Service Engineering Activity guidance
Padeyes (temporary - installed for rigging purposes)	Install per NAVSEA S9AA0-AB-GOS-010
Portable weight handling equipment; chain falls (pneumatic or manual) and come-alongs	PMS, NSTM 572, ASME HST-3, MIL-H-904* *MIL-H-904 is inactive and used only for replacement parts. ASME HST-3 is used for new procurement.
Aircraft securing and engine run-up fittings	803-191630, PMS
Cargo tie down fittings	NSTM 572, PMS
Landing craft tie downs	NSTM 584, PMS
Vehicle tie downs	NSTM 575, PMS
Bridge cranes	NSTM 700

Equipment or System	Governing Document(s)
Hoists	NSTM 700

NOTE: PER NAVSEA DIRECTION, STATIC, DYNAMIC AND RATED LOAD TESTING OF MAIN STORAGE BATTERY LIFTING GEAR INSTALLED IN SUBMARINE BATTERY COMPARTMENTS IS NOT REQUIRED UNLESS REPAIRS TO STRUCTURAL OR WEIGHT SUPPORTING COMPONENTS HAVE BEEN ACCOMPLISHED. FOLLOWING REPAIRS, LOAD TESTING WILL BE ACCOMPLISHED DURING BATTERY REPLACEMENT AFTER THE BATTERY CELLS HAVE BEEN REMOVED.

b. Reactor plant and Nuclear Support Facility (NSF) lifting and handling equipment testing requirements.

(1) In addition to the respective ship class RPM, references (h) and (i) must be consulted for reactor plant lifting and handling tests and inspection requirements.

(2) The applicable NAVSEA drawing, the respective ship class NSF manual and reference (m), specify the lifting and handling tests and inspection requirements for NSFs or CIFs.

7.4 EXEMPTIONS OR ALTERNATIVE TEST REQUIREMENTS (NON-NUCLEAR).

7.4.1 General. In some instances, the required test may not be able to be performed. The following exemption or alternative tests have been developed in order to properly recertify the system or component. These tests are non-nuclear unless specifically addressed in nuclear technical documents. A DFS will be used to document non-performance of the required testing or deferral of certification of the system to an at sea test.

NOTE: THE DFS APPROVAL WILL BE PER CHAPTER 8, PART I, PARAGRAPH 8.2.6.b OF THIS VOLUME TO IDENTIFY APPLICABLE RESTRICTIONS TO SHIP OPERATIONS (IF ANY) REQUIRED UNTIL SATISFACTORY COMPLETION OF THE CONTROLLED DEEP DIVE.

a. (Submarines only) Technical Work Documents for maintenance or repair of seawater interface systems which require a "J" pressure test, equivalent to test depth pressure, to certify the maintenance boundaries must be closed prior to underway operations, if at sea, prior to operations below 200 feet. When controlled deep dive testing is required in lieu of a joint tightness test to "J" pressure, a QA form 12 must be used to establish accountability for the controlled deep dive test. If certification of the maintenance associated with the exception or alternative for non-SUBSAFE controlled systems or components (such as LI, O2, etc.) retest requires a controlled deep dive test in lieu of a joint tightness test to "J" pressure of TPD, the DFS will:

(1) Identify completion of the controlled assembly (if required).

(2) Identify results of the exception or alternative testing.

(3) Identify the at-sea testing requirements, acceptance criteria and restrictions, if any, for unsatisfactory testing. Generally, failed testing of work on a non-SUBSAFE system does not result in depth limitations.

b. (Submarines only) If a Maintenance Certification Record/Re-Entry Control is closed by transferring at sea testing to a DFS (e.g., controlled dive to test depth for test of a periscope hull gland, controlled dive for test of a sea connected system (e.g., Main Sea Water (MSW), Auxiliary Sea Water (ASW)) in lieu of joint tightness test to "J" pressure of TPD), the ship will be restricted to the requirements of part I, chapter 5, Section 5.6.5a of this volume until satisfactory completion of a controlled deep dive per Volume VI, Chapter 26 of this manual.

c. (Submarines only) If work on a non-controlled system requires an exception, alternative retest or at sea testing, the work must be performed in the following manner:

(1) A Formal Work Package per part I, chapter 2 of this volume, (e.g., PMS Maintenance Requirement Card, technical manual pages, detailed maintenance outline), will be used to control and document all work performed.

(2) If a controlled assembly is required, the QA form 34 must be retained per part I, chapter 10 of this volume. Controlled assembly requirements are:

(a) Verification that surface finishes of gasket or O-ring sealing surfaces are following applicable specifications.

(b) Verification that fastener material and installation is following applicable specifications.

(c) Verification that gaskets or O-rings are properly installed and following applicable specifications.

(d) Assembly is documented on a QA form 34.

(e) Inspected by a Quality Assurance Inspector or Quality Assurance Supervisor.

(3) If certification of the maintenance associated with the exception or alternative retest requires a controlled deep dive test in lieu of a joint tightness test to "J" pressure of TPD, the DFS will:

(a) Identify completion of the controlled assembly (if required).

(b) Identify results of the exception or alternative testing.

(c) Identify the at sea testing requirement(s) and acceptance criteria and restrictions, if any, for unsatisfactory testing. Generally, failed testing of work on a non-SUBSAFE system does not result in depth limitations.

7.4.2 Exemptions and Alternatives to Test Requirements (Non-Nuclear unless Specifically Addressed in Nuclear Technical Documents).

NOTE: 1. "H" PRESSURE TESTING FOR NEW MATERIAL IS NOT REQUIRED IF BOTH THE FOLLOWING ARE MET:

1. MATERIAL IS SUBSAFE SMIC OR LEVEL I MATERIAL RECEIVED FROM THE NAVY SUPPLY SYSTEM PROPERLY MARKED.

2. A SATISFACTORY RECEIPT INSPECTION IS COMPLETED BY THE END USER.

NOTE: 2. MATERIAL IS RECEIVED IN THE CONFIGURATION REQUIRED FOR USE WITHOUT REQUIRING ADDITIONAL MACHINING, WELDING OR OTHER MAJOR REPAIR. (BAR, INGOTS, PLATE, FORGINGS, ETC., WHICH ARE MACHINED, WELDED OR HAVE A MAJOR REPAIR, REQUIRES A "H" PRESSURE TEST TO CERTIFY THE COMPONENT.)

a. Mechanical joints. For minor repairs on those mechanical joints previously strength tested (e.g., an "H" test has been conducted on the pressure boundary parts in the past) including hull joints, where system configuration makes mechanical joint tightness testing impractical, the following is considered a satisfactory alternate testing method.

(1) Perform a controlled assembly of the joint(s).

(2) Visually inspect the joint for leakage during first system pressurization to nominal or system operating pressure and document on a QA form 17.

(3) (Submarines only) For submarine sea connected systems, initiate a minor DFS to document the lack of retest. Clearance will require joints to be visually inspected at each incremental depth during the first controlled dive. No leakage is allowed.

b. Valve test. Following the in place repair of valves where configuration precludes mechanical joint tightness testing or seat tightness testing after minor repairs, the following is considered a satisfactory alternate testing method.

NOTE: (SUBMARINES ONLY) EXCEPT FOR EMERGENCY MAIN BALLAST TANK (EMBT) PARKER CHECK VALVES, THE FOLLOWING EXEMPTIONS DO NOT APPLY TO SUBMARINE HULL AND BACKUP VALVES OR ASSOCIATED HULL INTEGRITY JOINTS OUTBOARD OF THE BACKUP VALVE.

(1) For lack of seat tightness testing, measure and document the following as applicable:

(a) A seat blue check for non-ball valves (100% contact required).

(b) For soft seated valves, such as Parker check valves, where a blue check is not practical, re-assemble the valve, perform the appropriate mechanical joint tightness test, and applicable portions of the Unrestricted Operation Maintenance Requirement Card (if applicable). A minor DFS is required to document the lack of seat tightness testing and the requirements to conduct inspections during a controlled dive to test depth to verify seat tightness.

(c) Dimensional verification or stack height for ball valves (satisfactory seat compression required).

(d) For welded or brazed in-line SUBSAFE valves (hull and backup valves are specifically excluded) and all non-nuclear, non-SUBSAFE valves repaired in place, no DFS is required.

(e) For bolted-in SUBSAFE valves repaired in place, initiate a major DFS to the Type Commander per Part I, Chapter 8 of this volume to document the lack of seat tightness test.

(2) For lack of mechanical joint tightness testing for valves in submarine sea connected systems, perform a controlled assembly of the valve(s) mechanical pressure boundary joints and initiate a minor DFS to document the lack of test. Clearance will require that the affected joints be visually inspected during the first controlled dive.

c. Welded joint options. Reference (c) contains options for testing welded joints.

NOTE: ELECTION TO INVOKE THE OPERATING PRESSURE TEST OPTION REQUIRES A CLEAR UNDERSTANDING OF THE SYSTEM OPERATING, TEST AND INSPECTION REQUIREMENTS OF REFERENCES (c), (d) AND APPLICABLE TEST METHODS. CONSIDERATION MUST BE GIVEN TO SAFETY, MAINTENANCE COST, TIME AND THE SPECIFIC SYSTEM UNDERGOING REPAIR. THE OPERATING PRESSURE TEST OPTION MUST BE PART OF THE PRE-PLANNED REPAIR PROCESS INCORPORATED INTO THE TECHNICAL WORK DOCUMENT.

d. Nuclear interface systems. Nuclear interface systems should be tested per reference (a).

e. Brazed joints.

(1) A hydrostatic test is not required after brazed repairs or replacements if all of the following criteria are met:

(a) System is a reduced energy system. (Normal operating pressure 200 psig or less and normal operating temperature 200 degrees F or less). Joints are not in “lethal” system as defined in reference (n). Joints are not in seawater or sea connected systems or portions thereof, which are subject to submergence pressure below 200 feet or to sections of piping that pass through sea pressure rated bulkheads and which are rated for submergence pressures greater than 200 feet.

(b) All applicable NDT on brazed joints is performed.

(c) Visually inspect for leakage during the first system pressurization to normal operating pressure.

(2) When a brazed joint of a system or component cannot be strength tested due to configuration, the following is considered to be an acceptable alternative:

(a) Initiate a major DFS to document the lack of strength test.

(b) Visually inspect the joint for leakage during first system pressurization to nominal or system operating pressure and document on a QA form

17.

f. Mechanically attached fittings are not welded or brazed fittings. They must meet all QA requirements as specified in the applicable Uniform Industrial Process Instruction or Process Instruction for mechanically attached fitting installation per reference (c). Election of the operating pressure test option will not require a DFS if pre-planned into the repair process to ensure all original QA requirements and additional NDT required by reference (c) are performed.

g. (Submarines only) When post deep dive passive or pre-energize testing is required by SUBMEPP Maintenance Standard, System Specific Test Procedure, Maintenance Index Pages/Maintenance Requirement Cards, Combat System Test Procedure on an outboard electrical connections subject to full submergence sea pressure, it will be documented on a QA form 12 as a minor departure to accomplish post deep dive passive or pre-energize testing. The departure will also indicate if a controlled assembly was performed.

h. (Submarines only) For lack of mechanical joint tightness testing following replacement of BPS-16 upper RADAR mast seals, perform a controlled assembly of the mast mechanical pressure boundary joints and initiate a minor DFS to document the lack of test. Clearance will require that the affected joints be visually inspected during the first controlled dive.

7.5 REACTOR PLANT AND NUCLEAR SUPPORT FACILITY TESTING.

7.5.1 Hydrostatic Tests, Pneumatic Tests or Drop Tests. A QA form 26 or QA form 27 will be used to document the OQE that the hydrostatic, pneumatic, or drop testing was completed satisfactorily. Miscellaneous testing will be documented on a QA form 17 when higher test authority requires a record and for which there is no other QA form.

a. When unable to accomplish the required test, a Liaison Action Request will be initiated per part i, chapter 8, of this volume.

b. When unable to satisfactorily test repaired valves due to out of specification seat leakage, part i, chapter 8, of this volume describes the procedure to defer work and close out the CWP.

c. Reference (a) contains the hydrostatic test requirements for reactor plant fluid systems and portions of systems. It contains requirements for test rigs, test gauges, and test precautions.

d. Some reactor plant fluid systems have specific system hydrostatic test instructions and special test requirements in the RPM. Others must have local procedures prepared based on the requirements of reference (a) and the RPM.

e. The Immediate Superior in Command will review Ship's Force test procedures for FMA accomplished nuclear work and will resolve questions or problems with test requirements.

f. The System Test Check List in volume IV, chapter 9 of this manual will be used in preparation, conduct and recovery from test. For pneumatic tests, a hold time of 15

minutes will be used in lieu of the hold time in the System Test Check List in volume IV, chapter 9 of this manual.

g. Test, Measuring and Diagnostic Equipment documentation for operating pressure tests is not required if normally installed system gages are used.

7.5.2 Mechanical Joint Fasteners.

a. When mechanical joint fasteners are removed and re-installed or replaced one at a time and torqued per an approved procedure, refer to reference (a) to determine the extent of test required.

b. Test requirements for mechanical fasteners within the reactor plant SUBSAFE boundary are contained in Appendix 8 of reference (h).

c. Replacement of fasteners must be controlled by a CWP per part I, chapter 2, of this volume, for hydrostatic tests and tests above normal operating pressure when an external source is required.

7.5.3 Valve Seat Leak Tests. Periodically and following any repair which affects seat tightness, installed valves (i.e., valves repaired in-place) seat leak tests must be performed per reference (o), in conjunction with the cognizant RPM. The necessity for seat tightness testing of replaced valves (with or without Ready for Issue) should be determined using the requirements of reference (o) and the cognizant RPM. Prior to installation or recertification as Ready for Issue, valves removed from the system for overhaul or refurbishment must be tested per the applicable component technical manual. Fleet Maintenance Support Branch Quality Engineering Division Note 18 provides information for troubleshooting and leak testing reactor plant valves.

7.6 SUPPLEMENTAL TEST CRITERIA (NON-NUCLEAR). This section is provided along with section 7.4 of this chapter to identify test requirements that may be used when more authoritative requirements are not available, or are incomplete. The performance of tests per these requirements will constitute satisfactory testing. A DFS will not be required unless specifically required as part of the alternative test. The applicable ship class source documents take precedence over Appendices A and B. Appendix A applies to Surface ships systems and Appendix B applies to Submarines.

a. Appendices A and B are intended as a general guide for testing where specific guidance is not provided. All portions of a given system may not necessarily be tested to the pressure specified (e.g., the 30 psig portions of a submarine Fuel Oil Filling, Transfer, and Compensating Water System should not be tested to 150% of test depth pressure).

b. For component testing, where a TRS or SMS has been used for restoration or overhaul, TRS or SMS testing requirements should be followed. TRS or SMS requirements may differ from the test specifications on the drawing for the component. The drawing specifications are generally intended as manufacturing acceptance tests. Though no specific guide to precedence can be made, good engineering judgment and conservative approach to testing should prevail. If only part of a TRS or SMS was used in component maintenance, the testing requirements in the TRS or SMS may not apply. The use of submarine TRS or SMS in the testing phase of maintenance has, in the past, required an inordinate amount of work during submarine upkeep and refit

periods. Where only minor repairs (as defined in the glossary) are accomplished using a TRS or SMS, only the applicable test requirements should be accomplished.

APPENDIX A

TESTING REQUIREMENTS FOR SURFACE SHIP SYSTEMS

System (Note 1)	Column Strength and Porosity Test Pressure (Notes 2, 3, and 4)	Column 2 Mechanical Joint Tightness Test Pressure (Notes 3, 4, and 5)	Special Notes
Steam	135% system design pressure	100% nominal operating pressure	
Non-Nuclear structural tanks			
Feed and condensate	135% system design pressure	100% nominal operating pressure	
Fuel oil service	135% system design pressure	100% nominal operating pressure	
Lube oil fill, transfer, and service	135% system design pressure	100% nominal operating pressure	Note 3
Oxygen (except surface ship divers' life support systems)	135% system design pressure	100% nominal operating pressure	Notes 6, 7, and 8
Nitrogen	135% system design pressure	100% nominal operating pressure	Note 7
Fresh water cooling, chilled water, potable water	135% system design pressure	100% nominal operating pressure	
Fuel oil filling and transfer	135% system design pressure	100% nominal operating pressure	
Compressed air (except surface ship divers' life support systems, bleed air, and starting air)	135% system design pressure	100% nominal operating pressure	
Hydraulic (e.g., ship service, controllable pitch propeller, windlass)	135% system design pressure	100% nominal operating pressure	Notes 3 and 9
Boiler (within boundary valves)	See Note 10	See Note 10	
Fire main and flushing	135% system design pressure	100% nominal operating pressure	
Sea water cooling	135% system design pressure	100% nominal operating pressure	

System (Note 1)	Column Strength and Porosity Test Pressure (Notes 2, 3, and 4)	Column 2 Mechanical Joint Tightness Test Pressure (Notes 3, 4, and 5)	Special Notes
Deck and plumbing drains, sound tubes open to the atmosphere	Not required	See Note 11	
Countermeasures wash down	50 psig	Operational test	
Divers' life support system (air, oxygen, helium)	135% system design pressure	100% nominal operating pressure	Notes 7, and 8
Sewage	135% system design pressure	100% nominal operating pressure	
Ballasting, sea water transfer	135% system design pressure	100% nominal operating pressure	
Primary and secondary drainage from pump	50 psig	Operational test	
Primary and secondary drainage from eductor	135% system design pressure	100% nominal operating pressure	
Bilge stripping system	50 psig	Operational test	
Main steam drain system	Relief valve setting	Operational test	
Feedwater drain collecting system	Fill with water and let stand		
Feedwater drain collecting tank and discharge from tank	135% system design pressure	Operational test	
Gage lines (all systems)	135% system design pressure for welded and brazed joints visual inspection for other joints	Operational Test	
Freon, Halon, hydrocarbons	135% system design pressure	See Note 12	
Valves	135% system design pressure		Note 13

NOTE 1: Testing requirements for surface ship piping and components not specified in this appendix will be 135% of system design pressure where repairs meet the criteria of a major repair.

NOTE 2: Strength and porosity test - Where a major repair is accomplished on the pressure boundary of a piping system or component, that portion of the system or component will be hydrostatically tested as indicated in column 1. Strength and porosity test duration is 30 minutes unless otherwise specified on a component, system, or TPD. The strength and porosity test pressure is identified on a TPD as the "H" pressure.

a. Strength and porosity test pressure must be not less than 50 psig.

b. New mechanical joints (as defined in the Glossary of Terms) are subjected to a strength and porosity test.

NOTE 3: Test fluids**.**

a. If the test fluid for a mechanical joint tightness test is not specified, either clean fresh water or system fluid must be used. System fluid must be used for hydraulic and lubricating oil systems. Compressed gasses may be used for mechanical joint tightness tests provided they can be used safely.

b. Observe safety precautions for air, industrial gases, and hydraulic systems found in NSTM, as well as the notes in this appendix, if system fluid or gas is used.

NOTE 4: Exceptions or alternatives to hydrostatic test requirements are provided in Section 7.4 of this chapter.

NOTE 5: Mechanical joint tightness test duration is 30 minutes unless otherwise specified on a component, system, or TPD. The mechanical joint tightness test pressure is indicated on a TPD as the "J" pressure or nominal operating pressure if performing an operational pressure test. Zero visual external leakage is normally the tightness acceptance criterion.

a. Re-made mechanical joints (as defined in the glossary) are subjected to a mechanical joint tightness test.

b. The tightness test must be performed with the thermal insulation removed from mechanical joints to be examined.

NOTE 6: Where oxygen piping or system components are re-installed by mechanical joints, these portions of the system will be tested to 100% operating pressure using nitrogen per reference (p). System fluid (oxygen) may be used in at-sea situations when use of nitrogen is not practical. The test pressure will be held for a minimum of 15 minutes plus the time required to conduct inspection of joints under test.

NOTE 7: Refer to reference (p) for testing requirements and procedures for oxygen, nitrogen, and hydrogen systems.

NOTE 8: Before testing oxygen stop valves with Kerotest Co. cartridges per Kerotest Drawing 72594765, ensure the valve is assembled per Kerotest Instruction K-673 and that the union is torqued to 160 - 170 ft.-lbs. This is necessary to ensure the cartridge is not damaged.

CAUTION: CARE MUST BE EXERCISED WHEN HYDRAULIC OIL IS USED AS A TEST LIQUID TO PREVENT SPRAY OR LEAKAGE FROM BECOMING

A FIRE OR CONTAMINATION HAZARD.

NOTE 9: Where shop pre-tested hydraulic system components or hydraulic system piping are reinstalled by mechanical joints, those portions will be tested to column 2 requirements using hydraulic oil as the test fluid.

NOTE 10: All testing within the boundary valves of boilers must be accomplished per reference (g).

NOTE 11: System must be open to the atmosphere. Fill system with water and allow to stand for a minimum of 30 minutes. Examine disturbed joints for leakage; none is allowed.

NOTE 12: Refer to system, equipment, or component technical manual. Final test involves performance of pressure drop tests over various time periods. See also reference (p).

NOTE 13: Cycle valve during hydrostatic testing as required by NSTM.

APPENDIX B

TESTING REQUIREMENTS FOR SUBMARINE SYSTEMS

System (Note 1)	Column 1 Strength and Porosity Test Pressure (Notes 2, 3 and 4)	Column 2 Mechanical Joint Tightness Test Pressure (Notes 3, 4 and 5)	Special Notes
Steam	135% system design pressure	100% nominal operating pressure	
Non-Nuclear structural tanks			Notes 13 and 18
Feed and condensate	135% system design pressure	100% nominal operating pressure	
Fuel oil service	135% system design pressure	100% nominal operating pressure	
Lube oil fill, transfer, and service	135% system design pressure	100% nominal operating pressure	Note 3
Oxygen (except surface ship divers' life support systems)	135% system design pressure	100% nominal operating pressure	Notes 10, 11 and 12
Nitrogen	135% system design pressure	100% nominal operating pressure	Note 11
Fresh water cooling, chilled water, potable water	135% system design pressure	100% nominal operating pressure	
Fuel oil filling and transfer	135% system design pressure (135% test depth pressure for those portions of submarine systems exposed to submergence pressure)	100% nominal operating pressure (100% test depth pressure for those portions of submarine systems exposed to submergence pressure)	
Compressed air including EMBT blow (except surface ship divers' life support systems, bleed air, and	135% system design pressure	100% nominal operating pressure. For submarines, this is up to the pressure hull cutout valve if the	Notes 6, 8 and 24

System (Note 1)	Column 1 Strength and Porosity Test Pressure (Notes 2, 3 and 4)	Column 2 Mechanical Joint Tightness Test Pressure (Notes 3, 4 and 5)	Special Notes
starting air)		airline penetrates the pressure hull	
Hydraulic (e.g., ship service, steering and diving, windlass, flood control)	135% system design pressure	100% nominal operating pressure	Notes 3, 23 and 24
Hull glands, cables, shafts, masts			Notes 13, 25, 26 and 29
Escape trunks, hatches (including missile tube muzzle hatches on SSBN and SSGN Class Submarines), watertight bulkhead doors, Sonar Spheres			Notes 14, 21, 27, 28, 29, 32, 33 and 34
Periscopes			Note 16
Antennas		Per NAVSEA 0900-LP-016-7007 and SS-404-1971420	Note 31
Diesel Sea Water (DSW)			Notes 6 and 9
Hydrogen	135% design pressure	100% nominal operating pressure	Note 11
Hovering or depth control, sea water circulating (e.g., ASW, MSW, Air Conditioning Seawater)	150% test depth plus pump shutoff pressure	100% test depth pressure	Notes 6, 7, 24, and 30
Plumbing system subjected to submergence pressure	150% test depth	100% test depth pressure	Note 6

System (Note 1)	Column 1 Strength and Porosity Test Pressure (Notes 2, 3 and 4)	Column 2 Mechanical Joint Tightness Test Pressure (Notes 3, 4 and 5)	Special Notes
Trim and drain systems subjected to submergence pressure	150% test depth pressure	100% test depth pressure	Notes 6, 7 and 24
Torpedo tube system, including the entire SUBSAFE portion of the system	100% test depth pressure plus 90 psig	100% test depth pressure plus 90 psig	Notes 17 and 24
Signal ejectors			Notes 20, 24 and 32
SSBN and SSGN bulkhead penetrator holes and covers			Note 22
Snorkel induction and exhaust lines			Notes 15 and 32
Cable plugs to EHFs, EHPs, antennas, masts, radars and other component connection or joint exposed to submergence sea pressure (excluding shore power connectors and pressure proof caps used on EHFs and EHPs)			Notes 31 and 35
SONAR Hydrophone, Transducer, Projectors and Outboard Components			Note 35

NOTE 1: Testing requirements for submarine ship piping and for submarine pressure hull envelope systems and components not specified in this appendix will be 135% of system design pressure where repairs meet the criteria of a major repair.

NOTE 2: Strength and porosity test - Where a major repair is accomplished on the pressure

boundary of a piping system or component, that portion of the system or component will be pressure tested as indicated in the applicable TPD. The strength and porosity test pressure is identified on a TPD as the "H" pressure. In the absence of specific test pressure direction on a TPD, test pressure must be per Note 1. Strength and porosity test duration is 30 minutes unless otherwise specified in a technical reference.

a. Strength and porosity test pressure must be not less than 50 psig unless otherwise specified in the TPD.

b. New mechanical joints (as defined in the Glossary of Terms) are subjected to a strength and porosity test.

NOTE 3: Test fluid.

a. If the test fluid for a mechanical joint tightness test is not specified, either clean fresh water or system fluid must be used. System fluid must be used for hydraulic and lubricating oil systems. Compressed gases may be used for mechanical joint tightness tests provided they can be used safely.

b. Observe safety precautions for air, industrial gases, and hydraulic systems found in NSTM, as well as the notes in this appendix, if system fluid or gas is used.

NOTE 4: Exceptions and alternatives to hydrostatic test requirements are provided in Section 7.4 of this chapter.

NOTE 5: Mechanical joint tightness test duration is 30 minutes unless otherwise specified on a component, system, or TPD. The mechanical joint tightness test pressure is indicated on a TPD as the "J" pressure or nominal operating pressure if performing an operational pressure test. Zero visual external leakage is normally the tightness acceptance criterion.

a. Re-made mechanical joints (as defined in the glossary) are subjected to a mechanical joint tightness test.

b. The tightness test must be performed with the thermal insulation removed from mechanical joints to be examined.

c. This note does not apply to submarine hull and backup valves. (See NOTE 6 of this appendix)

NOTE 6: Where hull valves and backup valves are repaired or replaced, they will be tested in the following manner:

a. Valves removed for repair. Hull valve or backup valves that are removed completely from the system for repair or maintenance will be tested in the following manner:

(1) Prior to installing in the system:

(a) Conduct a strength and porosity test to column 1 requirements with the valve ball or disc positioned such that the unproven pressure boundary parts and disturbed joints are exposed to test pressure.

(b) With the valve shut, test from seaside to column 1 requirements to test for seat leakage.

(c) If a mechanical joint leaks at column 1 pressure, decrease to column 2

pressure and verify no leakage.

(d) For minor repairs, test as in steps a.(1) (a) through a.(1) (c) of this Note, but to column 2 requirements.

(e) Where valve internals can be visually inspected for leakage, seat tightness test pressure need only be maintained for three minutes unless specified otherwise in the applicable maintenance document.

(2) After re-installation in system, test disturbed mechanical joints in the following manner:

(a) Apply test pressure of column 1 requirements to all mechanical joints to which major repairs were conducted and not strength tested prior to valve installation.

(b) Apply external (seaside) test to column 1 requirements of all mechanical joints between hull valve and hull. For other disturbed mechanical joints, test to column 2 requirements.

(c) For hull joints where testing is not feasible, controlled assembly followed by a controlled dive per paragraph 7.4.2 a of this chapter is a satisfactory alternative to the test.

b. Valves repaired in place.

(1) If major repairs have been accomplished:

(a) Conduct a strength test to column 1 requirements with the valve ball or disc positioned such that the unproven pressure boundary parts and disturbed joints are exposed to test pressure.

(b) With the valve shut, test from seaside to column 1 requirements to test for seat leakage.

(c) If a mechanical joint leaks at column 1 pressure, decrease to column 2 pressure and verify no leakage.

(2) If minor repairs have been accomplished, test as in step b.(1) of this Note, but to column 2 requirements. If test to column 2 requirements is not possible, controlled assembly followed by a controlled dive per paragraph 7.4.2 of this chapter, is a satisfactory alternative to the test.

(3) For those mechanical joints in sea connected systems where testing is not feasible, controlled assembly followed by a controlled dive per paragraph 7.4.2 a. of this chapter, is a satisfactory alternative to the test.

c. Operational test. In addition to the hydrostatic testing required by steps a. or b. of this Note, after repairs have been completed on the valve or hydraulic actuator, in-place operational testing of Emergency Flood Control hydraulic components or EMBT Blow valves will be conducted by performing applicable portions of the operational Unrestricted Operation.

d. Trash Disposal Units (TDU). The TDU is a special purpose device which requires tests beyond those normally required of hull or backup valves. The specific testing required for the re-certification of the TDU after maintenance must be determined from SMSs or other reference documentation. A good reference to ensure adequate testing is the Index of Submarine Maintenance Engineering, Planning and Procurement (SUBMEPP) Standardized Test Procedures SSN/SSBN/SSGN Submarines.

NOTE 7:

A. For testing work performed on portions of the sea connected systems including the joint between the hull and hull valve, tests must be conducted for strength and porosity and mechanical joint tightness to the pressures specified on the applicable ship or class drawing. In some instances, the pressures specified will not reflect those on the individual TPDs provided to the ship. Errors in any TPD should be reported to SUBMEPP via SUBMEPP Feedback Form available at https://ebiz.submepp.navy.mil/feedback/FOUO%20SUBMEPP%20Product%20Feedback%20Form.docx (CUI Only). For SSN 688, SSBN and SSGN 726 Class ships, the applicable TPDs must be used. The applicable ship or class drawings listed here should be used if TPDs are not available.

Ship or Class	Drawing	Strength	Tightness
SSN 21	830-6404016	#Item 18 plus 50 psi	Item 1
SSN 688	845-4456141	Item 3	Item 6
SSBN and SSGN 726	845-4640418	*Item 11	Item 1
SSN774	801-6984058	**Item 12	Item 18

\# Except for SSN23 LDT hull insert for TD-704 and 705 valve assembly which is tested to Item 1 of NAVSEA Dwg 830-6404016.

* Except valves TD-2021 and TD-2022 and associated piping which are tested to Item 2 of NAVSEA Dwg 845-4640418.

** Except valves TD-116, TD-138 and TD-554 and associated piping which are tested to Item 2 of NAVSEA Dwg 801-6984058.

B. Re-made mechanical joints, using existing material, in the following piping must be assembled using a controlled assembly, no additional testing is required:

(1) Permanent blanks installed in piping (SSN 688 Class) P168 and P169 downstream of ASW-35 and ASW-36

(2) Permanent blanks installed in piping (SSN 21 Class) P81 and P82 downstream of ASW-39 and ASW-40.

CAUTION: CRYSTALLIZATION OR MELTING OF MAIN BALLAST TANK HULL STOP VALVE SEATS AND DOWNSTREAM EMBT BLOW VALVE SEATS MAY RESULT FROM RAPID PRESSURIZATION OF THE EMBT BLOW PIPING AGAINST SHUT MAIN BALLAST TANK HULL STOP VALVES.

NOTE 8: 4500 psig air system hull stop and bank stop valves will not be used as a boundary for hydrostatic test pressures greater than 4500 psig unless valve seats and software are replaced after the test and a mechanical joint tightness is performed.

NOTE 9: For repairs to the DSW system, inboard of the hull and backup valve, the column 1 test pressure is 122 psig and the column 2 test pressure is 88 psig. This is to prevent damaging the attached DSW pump.

NOTE 10: Where oxygen piping or system components are re-installed by mechanical joints, these portions of the system will be tested to 100% operating pressure using nitrogen per reference (p). System fluid (oxygen) may be used in at-sea situations when use of nitrogen is not practical. The test pressure will be held for a minimum of 15 minutes plus the time required to conduct inspection of joints under test.

NOTE 11: Refer to reference (p) for testing requirements and procedures for oxygen, nitrogen, and hydrogen systems.

NOTE 12: Before testing oxygen stop valves with Kerotest Co. cartridges per Kerotest Drawing 72594765, ensure the valve is assembled per Kerotest Instruction K-673 and that the union is torqued to 160 - 170 ft.-lbs. This is necessary to ensure the cartridge is not damaged.

CAUTION: WHEN TESTS INVOLVE NUCLEAR BOUNDARIES, REFER TO REFERENCE (h), REFERENCE (q), AND THE APPLICABLE RPM BEFORE TESTING.

NOTE 13: When packing glands, stuffing tubes, manhole covers, etc., in hull envelope boundary tanks are entered and remade, the assembled unit will be tested by conducting a 12 psig air tightness test. With 12 psig air within the tank, apply soap solution to the work area and inspect for leakage. No leakage is allowed.

NOTE 14: Escape trunk penetrations not exposed to sea pressure during normal ship operation, escape and access lower hatches, and watertight bulkhead doors require only a completion test. The completion test is a 12 psig air test with no pressure drop allowed in 10 minutes. If unable to accomplish the completion test, perform an alternate test per note 25 of this Appendix. No inspection following the controlled dive is required.

NOTE 15: Where repairs are performed on the snorkel induction or exhaust piping or valves, refer to reference (r) for test requirements.

NOTE 16: Submarine Periscope Pressure testing, evacuation, charge and dew point testing will be per reference (s).

NOTE 17: Where minor repairs have been accomplished on torpedo tubes (including attached piping) or impulse tanks, the applicable portion of the system will be tested by performing sub-paragraph a., b. or c. of this note.

NOTE: WHEN REMOVAL OF THE TORPEDO TUBE SIGHT GLASS (SSN688 OR SSB(G)N726 CLASS) OR LIGHT PIPE (SSN21 AND 774 CLASSES) ASSEMBLIES IS REQUIRED TO INSTALL TEST INSTRUMENTATION, REINSTALLATION OF THE SIGHT GLASS MUST INCLUDE A VISUAL INSPECTION OF THE GLASS (CHECK FOR CHIPPING, CRACKS, ETC.) OR IF THE SIGHT GLASS HAS BEEN REMOVED FOR REPAIRS (LEAKS,

BROKEN GLASS, STRIPPED THREADS, ETC.), TESTING MUST BE ACCOMPLISHED PER SUB-PARAGRAPH b.

a. "J" pressure hydrostatic test pierside.

b. Controlled assembly of components exposed to sea pressure, completion test and a watertight integrity test.

NOTE: DUE TO HIGH IN-SERVICE ALLOWABLE LEAKAGE RATES FOR AIR TURBINE PUMPS, TIGHTNESS TEST MAY NOT BE POSSIBLE. IT IS PERMISSIBLE TO UTILIZE THE AIR TURBINE PUMP INFLATABLE SEAL TO AID WITH TESTING. IF THE AIR TURBINE PUMP TEST IS STILL NOT ACHIEVABLE, A MAJOR DFS MUST BE SUBMITTED FOR FAILED TESTING.

NOTE: FOR SUBMARINES EQUIPPED WITH AIR TURBINE EJECTION PUMPS (SSB(G)N726 CLASS, SSN21 AND 774 CLASS), THERE IS AN ALLOWABLE LEAKAGE RATE (FRESH WATER OR SEAWATER) PAST THE TURBINE PUMP MECHANICAL SEALS. MAXIMUM ALLOWED LEAKAGE RATE FOR NEW AND RESTORED TURBINE PUMPS IS 55 CC PER HOUR. MAXIMUM ALLOWED LEAKAGE RATE FOR IN-SERVICE TURBINE PUMPS IS 5 GALLONS PER MINUTE.

(1) For Torpedo Tubes and piping: The affected joints must be assembled as a controlled assembly and subjected to a 12 psig air tightness test for 10 minutes. Accomplish a soap bubble test of the affected joints. In addition, a minor DFS will be used to document requirement for inspections during a controlled dive in order to verify re-establishment of the watertight integrity for those repaired joints.

(2) If air soap test is impractical, or if the affected joint is inaccessible: The affected joints must be assembled as a controlled assembly and subjected to a drop test by pressurizing to 12 psig air. Allow time for pressure or temperature to stabilize. Hold for 10 minutes. No drop allowed. In addition, a minor DFS will be used to document the requirement for inspections during controlled dive in order to verify re-establishment of the watertight integrity for those repaired joints.

c. For Impulse Tank: The affected joints must be assembled as a controlled assembly and subjected to a drop test by pressurizing to 12 psig air. Allow time for pressure or temperature to stabilize, hold for 10 minutes. No drop allowed. In addition, a minor DFS will be used to document requirement for inspections during a controlled dive in order to verify re-establishment of the watertight integrity for those repaired joints.

(1) When drop test is conducted in drydock, record the highest pressure held. Minimum pressure must be five psig. No drop allowed. Repeat at 12 psig when waterborne.

(2) In lieu of drop test, the affected joints must be assembled as a controlled assembly and the tank subjected to a 12 psig air tightness test for 10 minutes. Accomplish a soap bubble test of the affected joints. In addition, a minor DFS

will be used to document requirement for inspections during controlled dive in order to verify re-establishment of the watertight integrity for those repaired joints.

CAUTION: WHEN PERFORMING TESTING OF TANKS, COMPLY WITH REFERENCE (q), SECTIONS 50 THROUGH 54.

NOTE 18: NAVSEA drawing 126-5792666 provides the detailed requirements and guidance for tank testing.

NOTE 19: DELETED

NOTE 20: Signal ejectors and launchers are special purpose devices, which require tests beyond those normally required of hull or backup valves. The specific testing required for the re-certification of signal ejector or launcher after maintenance must be determined from ship's plans or other reference documentation. A good reference to ensure adequate testing is the Index of SUBMEPP Standardized Test Procedures SSN/SSBN/SSGN Submarines.

NOTE 21: Upper escape and access hatches (including missile tube muzzle hatches on SSBN and SSGN Class Submarines) and escape trunk penetrations exposed to sea pressure during normal ship operation require a completion test and a controlled dive to test depth. The completion test is a 12 psig air test conducted per Note 25 of this Appendix for 10 minutes. In addition, a minor DFS will be used to document the requirement to inspect for leakage by opening the escape trunk drain at depths for hull valve cycling per NAVSEA Instruction C9094.2B to verify re-establishment of the watertight integrity for the repaired items.

NOTE 22: Bulkhead penetration hole covers will be tested using the air hose test alternative of Note 25, step c. of this appendix. Upon successful completion of the air hose test, document test on a QA Form 17 and submit to the ship's Quality Assurance Officer. A DFS is not required.

CAUTION: CARE MUST BE EXERCISED WHEN HYDRAULIC OIL IS USED AS A TEST LIQUID TO PREVENT SPRAY OR LEAKAGE FROM BECOMING A FIRE OR CONTAMINATION HAZARD.

NOTE 23: Where shop pre-tested hydraulic system components or hydraulic system piping are reinstalled by mechanical joints, those portions will be tested to column 2 requirements using hydraulic oil as the test fluid.

NOTE 24: For maintenance involving a system or component monitored under the Unrestricted Operation Maintenance Requirement Card program, partial or full performance of in-periodicity operational Unrestricted Operation Maintenance Requirement Cards may be required as a retest. Consult NAVSEA 0924-062-0010, Submarine Safety Requirements Manual, Section 6.4.5 for additional information. Perform applicable portions of Unrestricted Operation-Maintenance Requirement Card 025. For "O" and "I" level activities, when a component in the Emergency Flood Control System is disturbed, the retest must consist of testing the entire Emergency Flood Control System, e.g., if a component in the Engine Room was disturbed, a retest of the entire Engine Room is required. If a component in the Forward Emergency Control System is disturbed, a retest of the entire Emergency Flood Control System in the Forward compartment is required.

NOTE: NAVSEA DRAWING 126-5792666 ALSO CONTAINS INFORMATION REGARDING TESTING OF SUBMARINE TANKS AND COMPARTMENTS.

NOTE 25: Hull Glands (e.g., cable stuffing tubes, shaft or mast packing glands, electrical or electronic hull fittings excluding the inboard packing assembly and pressure proof caps screwed onto EHF cable connection). Hull glands require a completion test (12 psig compartment test) and an acceptance or structural watertight integrity test (where the joint is exposed to full submergence depth pressure). If the structural watertight integrity test will be accomplished by performing a controlled dive to test depth, the work is required to be accomplished using a controlled assembly, and a minor DFS for the controlled deep dive is required. The affected joints will be inspected during the first controlled dive. Performance of alternate completion tests are acceptable in lieu of a 12 psi compartment test and do not require a DFS. In the event that a 12 psig compartment test or an alternate completion test cannot be accomplished and the structural watertight integrity test will be accomplished by performing a controlled dive to test depth, the work is required to be accomplished using a controlled assembly and a major DFS for the controlled deep dive is required. The affected joints will be inspected during the first controlled dive. If required, perform one of the following alternate completion test methods when a 12 psi compartment test is not scheduled or practical.

a. Cofferdam Test Method.

(1) A pressure cofferdam can be used to verify the tightness of hull or bulkhead patches or components after re-installation where it is physically possible to cover the item. A simple cofferdam can be constructed from six-inch diameter or larger pipe with length determined by item to be tested. One end of the pipe is capped and the other fitted with a suitable gasket to provide a seal. Sufficient pipe threaded penetrations should be provided for air supply, gauge, and relief valve fittings.

(2) Cofferdam tests, used in lieu of 12 psig compartment air tests, will be performed in the following manner:

(a) Install the cofferdam over joint or fittings to be tested so that the pressure differential will be in the same direction as a full compartment or tank test. Secure the cofferdam by use of shores and wedges or hydraulic jacks braced against sound structure. Attach air supply and non-isolable gauge and relief valves.

(b) Pressurize the air space inside the cofferdam to the test pressure specified for the test of the applicable tank or compartment, as shown in the ship’s test drawing.

(c) Apply a soapy solution to the opposite side of the structure and inspect for leakage.

(d) Acceptance criteria for cofferdam tests will be no evidence of leakage.

(e) Where the opposite side of the structure is inaccessible, an alternate method of providing tightness is to measure the drop in pressure within the cofferdam over a ten-minute period. The gasket and fittings in the cofferdam should be checked for leakage using a soapy solution.

(f) Acceptance criteria for this alternate cofferdam test will be no drop in pressure.

b. Vacuum Box Test Method.

(1) A vacuum box can be used to test the same items tested by the cofferdam method. However, since the pressure differential is now in the opposition direction, it may be used in many locations where a cofferdam is not suitable. Several portable vacuum pumps capable of pulling a vacuum in a small displacement test vessel are commercially available. An air eductor can be used to pull a vacuum for testing penetrations through the deck over a submarine battery space.

(2) Vacuum box tests used, in lieu of 12 psig compartment air tests, will be performed in the following manner:

(a) Apply a soapy solution to the joint to be tested.

(b) Install the vacuum box over the joint or fitting to be tested so that the pressure differential will be in the same direction as a full compartment or tank test.

CAUTION: PROVIDE SUPPORT FOR THE VACUUM BOX WHERE A CHANGE IN THE INTERNAL PRESSURE COULD CAUSE THE BOX TO FALL.

(c) Draw a vacuum to obtain a pressure differential comparable to the test pressure specified in the ship's test drawings.

(d) Inspect the joint or fitting for leakage by observing through the Plexiglas cover of the vacuum box for the formation of bubbles which would indicate leakage.

(e) Acceptance criteria for vacuum box tests will be no evidence of leakage.

(f) An alternate test method of proving tightness with the vacuum box is to measure the rise in pressure within the vacuum box over a ten-minute period.

NOTE: A SOAPY SOLUTION SHOULD BE APPLIED TO THE GASKET, COVER, AND FITTINGS INSIDE THE VACUUM BOX. FORMATION OF BUBBLES ON THE INTERIOR OF THE VACUUM BOX INDICATES A LEAK IN THE BOX.

(g) Acceptance criteria for this alternate vacuum box test will be no rise in pressure.

c. Air Hose Test Method.

(1) An air hose test may be used to verify the tightness of piping or electrical penetrations directly accessible on both sides of the bulkhead or pressure hull for observation. Extreme caution will be used when this method is used to test periscopes, hydraulic control rods or other movable cylinders that penetrate bulkheads or the pressure hull due to the possibility of blowing abrasive material into the seals. Also, ensure that openings exist to prevent ambient pressure buildup.

(2) Air hose tests will be performed in the following manner:

(a) The air hose nozzle must be about 3/8 inch in diameter and the pressure at the nozzle must be about 90 psig.

(b) Apply a soapy solution to the structure on the side opposite from the side the stream of air is to be applied. Communications are to be established to ensure air hose nozzle position and soap test are being accomplished at the same location (i.e., top, bottom, port, starboard).

WARNING: HIGH VELOCITY AIR IS A PERSONNEL HAZARD. ALL NON-ESSENTIAL PERSONNEL WILL BE CLEARED FROM THE AREA BEING TESTED. SAFETY GLASSES WILL BE WORN AT ALL TIMES. CARE MUST BE TAKEN SO THAT THE AIR STREAM IS NOT DIRECTED TOWARD ANY PERSONNEL.

(c) The air hose must be located so as to produce a pressure differential in the same direction as would occur if a full compartment or tank test were performed. Hold the nozzle as close as possible, within two inches, if possible, to the joint or fitting under test and direct the air stream in the manner most likely to reveal leakage. The test must be accomplished for a minimum of 30 to 45 seconds on each quadrant or area.

(d) Inspect the soapy solution for the formation of bubbles during the test, which would indicate leakage.

(e) Acceptance criteria for air hose tests will be no evidence of leakage.

d. Pressurized Water Testing Method for Submarine Main Propulsion Shaft Primary Seals (Shaft Seal Cavity Testing in advance of Controlled Deep Dive).

(1) Conduct pressurized water testing of the shaft seal cavity following assembly of any seal repaired following applicable tech manual or maintenance standard.

(2) If no pressurized water test procedure is available,

(a) Pressurize the repaired shaft seal cavity with fresh water to 100 (95 to 105) psig.

(b) Measure leakage rate past the affected seal into the ship. Allowable leakage is 16 oz per minute maximum. Test pressure must be held for a 30 minute minimum.

NOTE 26: For steering and diving penetrations (and other hull V-Ring packing installations including associated O-rings), perform a controlled assembly and initiate a minor DFS to document the requirement for inspections during a controlled dive to test depth in order to verify re-establishment of the watertight integrity for those joints.

NOTE 27: Removable Logistics Escape Trunks and Logistics Plug Trunks require an inter seal tightness test and a controlled dive to test depth. The inter seal tightness test will be accomplished using air or nitrogen to 100% test depth pressure with no pressure drop allowed in 10 minutes. In addition, immediately following the first controlled dive to test depth, enter the

trunk and remove the cleanliness cap from the drain or test connection and verify no leakage has occurred. A minor DFS will be used to document the requirement to inspect for leakage immediately following the dive to verify re-establishment of the watertight integrity for the reinstalled trunk.

NOTE 28: The Sonar Sphere requires a completion test and a controlled dive to test depth. The completion test is a 12-psig air test with no pressure drop allowed in 10 minutes. If unable to accomplish the completion test, perform an alternate test per note 25 of this Appendix. In addition, immediately following the first controlled dive to test depth, enter the sonar sphere and inspect for evidence of leakage. A minor DFS will be used to document the requirement to inspect for leakage immediately following the dive to verify re-establishment of the watertight integrity.

NOTE 29: Electrical/electronic hull fitting pressure proof caps manufactured per MIL-C-24231/12, 13 or 14 are not Level I or boundaries within the SUBSAFE Systems and do not require REC or testing when installed or operated.

NOTE 30: For preventative maintenance (e.g., PMS) to inspect and replace seawater heat exchanger pencil and disc type zinc anodes closed with an O-ring threaded plug with a nominal diameter of 1-5/8" or less accomplished without additional testing, the following conditions must be met:

a. Work will be performed using a CWP within the SUBSAFE boundary and a Formal Work Package when performing work outside the SUBSAFE boundary.

b. The joint will be assembled as a controlled assembly and documented on QA form 34.

c. Complete a surfaced condition maximum operating pressure test with zero leakage for 5 minutes. Operate seawater pumps at maximum speed without causing cavitation or violating operating procedure restrictions.

d. List "SURFACED" as the actual pressure on QA forms.

e. No new pressure boundary parts are installed (excluding software).

f. No testing is required for other maintenance or repair (e.g., ASW valve repairs) which would subject the zinc anode area to at least mechanical joint tightness pressure.

CAUTION: APPLYING POWER TO ANTENNA CONTROL CABLES OR TRANSMITTING ON RADIO FREQUENCY CABLES THAT HAVE NOT HAD THE ELECTRICAL CHECKS COMPLETED CAN SIGNIFICANTLY DAMAGE EQUIPMENT OR COMPONENTS. IF THE APPROPRIATE ELECTRICAL CHECKS CANNOT BE COMPLETED, CONSIDERATION OF AN EQUIPMENT TAG-OUT MAY BE APPROPRIATE.

NOTE 31: Submarine SubHDR and Photonics systems outboard cable removal and replacement.

a. Insert plugs with new O-ring each time the cable is unplugged and assemble using a controlled assembly. The QA form 34 is required to be retained until the availability is complete or if accomplished outside of an availability, the QA form 34 will be retained until the package is closed and reviewed by the Quality Assurance Officer.

b. For SubHDR Antennas only, after performing a deep dive, passive or pre-energize testing must be performed following the system specific Technical Manual, SUBMEPP approved Maintenance Standard, SUBMEPP approved Standard Test Procedure or Maintenance Requirement Card to ensure the system is not grounded prior to use.

c. Controlled Assembly Process used for Re-Entry Control (REC) Exceptions or Exception to Retest Requirements for Mechanical Joints consists of:

(1) Verification that surface finishes of gasket or O-ring sealing surfaces are following applicable specifications.

(2) Verification that fastener material and installation is following applicable specifications.

(3) Verification that gaskets or O-rings are properly installed and following applicable specifications.

(4) Assembly is documented on a Quality Assurance (QA) form 34.

(5) Inspected by a Quality Assurance Inspector (QAI) or Quality Assurance Supervisor (QAS).

NOTE 32: A partial distressed submarine and salvage inspection must be accomplished per Volume IV, Chapter 18 of this manual for any item worked during an availability (i.e., hatches, salvage air valves, etc.).

NOTE 33: Repairs of SSGN Class Lockout Chamber and SSN 774 Class Lockout trunks and hatches within the certified Scope of Certification boundary require an 89-psig completion test. Minor repairs, in addition to an 89-psi completion test, require a minor DFS for a controlled dive to test depth to certify structural watertight integrity. Major repairs require a hydrostatic test at "H" pressure or an 89-psi completion test and a major DFS to perform a controlled dive to test depth to certify structural watertight integrity. Hydrostatic testing at "H" pressure satisfies all mechanical joint testing requirements for minor repairs.

NOTE 34: Specific repair and acceptance criteria for submarine watertight doors and hatches is defined in the following SUBMEPP Maintenance Standards:

a. 1000-081-774

b. 1000-081-726

c. 1000-081-688

d. 1000-081-021

NOTE 35: Post installation testing must be conducted following the applicable SUBMEPP Maintenance Standard or Combat System Test Procedure. Post deep dive testing must be accomplished per the applicable Combat System Test Procedure, Hull, Mechanical and Electrical Test Procedure or Maintenance Requirement Card. For transducer or hydrophone replacements for spherical arrays (excluding SSBNs), a dental chart, or equivalent test, performed following the applicable technical manual or Maintenance Requirement Card must be performed prior to getting underway.

LISTING OF APPENDICES.

A Departure From Specification Request Message Format
B Departure From Specification Clearance or Cancellation Report Message Format

8.1 PURPOSE. To establish standard procedures to be used by the Fleet and all maintenance activities for reporting, requesting approval and clearance, at the earliest opportunity, of all non-conforming or departable conditions, Departures from Specification (DFS).

8.1.1 Background. Specifications are engineered requirements such as type of materials, dimensional clearances, vibration levels, flow rates, and physical arrangement to which ship components are purchased, installed, tested, and maintained. All ships are designed and constructed to specific technical and physical requirements. It is imperative that every effort be made to maintain all ship systems and components to their designed specifications. There are occasions when the applicable specifications cannot be met. In these cases, the nonconformance to specifications is controlled with a DFS.

8.1.2 Terminology.

a. A DFS is the mechanism used to document and resolve a lack of compliance with any authoritative document, plan, procedure, instruction, etc., except in instances where NAVSEA has signed and issued formal correspondence adjudicating one of the preceding such as a Liaison Action Request (LAR), Engineering Request (ER), or similar documents.

b. Authorized Technical Authority. An Authorized Technical Authority is a representative designated by reference (a) to act for Naval Sea Systems Command (NAVSEA) in dispositioning nonconformance issues. They are also charged with providing technically sound maintenance alternatives to the Fleet upon which maintenance and operational decisions can be made.

c. As determined by the ship and ISIC, temporary nonconformances, except SUBSAFE, Scope of Certification, and Fly-by-Wire nonconformances, that are minor which would not benefit from an engineering analysis or risk assessment will be entered into the CSMP. CSMP entries of this type do not require a corresponding DFS to adjudicate the condition and will be scheduled for repair in a future maintenance availability.

d. The terms deviation and waiver are often used synonymously. The principal difference being that deviations are requested prior to conducting work that will result in a non-conformance and waivers are requested after a nonconformance has been discovered.

e. Within this publication the Technical Authorities for Shore C4I is Naval Information Warfare Systems Command, and Shore Facilities is Naval Facilities Engineering Systems Command. These are utilized in place of Naval Sea Systems Command Technical Warrant Holder throughout the DFS process for Naval Information Force and Commander Naval Installations Command.

f. Within this chapter, for shore activities subordinate to Naval Information Force, the term “ship” is synonymous with shore activities.

8.1.3 Specification. Technical specifications originate from a variety of sources. When a conflict exists between specifications, the governing requirement has to be determined on a case-by-case basis. The following listing is provided to assist in determining the governing specification. This listing may not be exact for a particular case and all pertinent technical documents will require review:

a. Non-Nuclear listing of specifications which may be consulted when determining the governing specification:

(1) Volume V (Quality Maintenance) of the Joint Fleet Maintenance Manual.

(2) Fleet or Type Commander (TYCOM) Technical Notes.

(3) Ship’s plans or drawings, NAVSEA Standard and Type drawings, and approved Technical Repair Standard or Maintenance Requirement Procedure, or Maintenance Standard.

(4) NAVSEA letters and Liaison Action Requests (LAR).

(5) The Military Standard (MIL-STD) and Military Specification (MIL-SPEC) series. MIL-SPEC for specific components being procured or manufactured, MIL-STD for specific processes being performed.

(6) NAVSEA approved component technical manuals.

(7) NAVSEA 0902-018-2010; General Overhaul Specifications for Deep Diving SSBN/SSN Submarines.

(8) TYCOM Instructions.

(9) Naval Ships' Technical Manuals and Technical Specifications.

(10) NAVSEA Instructions.

(11) NAVSEA S9AA0-AB-GOS-010; General Specifications for Overhaul of Surface Ships.

NOTE: WHERE THIS MANUAL IS MORE RESTRICTIVE THAN OTHERS, THIS MANUAL WILL TAKE PRECEDENCE UNLESS SPECIFICALLY STATED THAT IT PROVIDES GUIDANCE ONLY. UNRESOLVED QUESTIONS ON PRECEDENCE SHOULD BE REFERRED TO THE TYCOM FOR RESOLUTION. IN SOME INSTANCES A SPECIFICATION OF LESSER PRECEDENCE MAY MODIFY OR SUPERSEDE A MORE SENIOR SPECIFICATION, I.E., A NAVSEA LETTER OR LAR RESPONSE COULD SPECIFICALLY MODIFY A TECHNICAL STANDARD PENDING REVISION.

b. Nuclear listing of specifications which may be consulted when determining the governing document:

(1) Reactor Plant Manual.

(2) Reactor plant component technical manuals.

(3) NAVSEA technical manuals (e.g., NAVSEA 250-1500-1 Welding Standard).

(4) Reference (b).

(5) Reactor Plant Drawings.

(6) NAVSEA instructions.

(7) TYCOM instructions.

(8) Reference (c).

(9) Reference (d).

8.2 DEPARTURE FROM SPECIFICATION. A DFS (non-nuclear only) is a lack of compliance with any authoritative document, plan, procedure, instruction, etc. General guidance regarding DFS is:

NOTE: FOR SURFACE FORCE SHIPS AND AIRCRAFT CARRIERS, THE TYCOM WILL PERFORM THE IMMEDIATE SUPERIOR IN COMMAND (ISIC) FUNCTIONS OF THIS CHAPTER.

a. During a maintenance action, including temporary repairs, a DFS is required for lack of compliance with cognizant documents, drawings, etc. For "as found" conditions during maintenance, the ISIC, ship and Fleet Maintenance Activity (FMA) (if involved) must evaluate the non-compliance using the guidance of paragraph 8.2.5 and 8.2.6 of this chapter.

b. For "as found" conditions or equipment failures during operations that result in non-compliance with cognizant documents, drawings, etc., the ship or ISIC (if in port) must evaluate the condition or failure using the guidance of paragraph 8.2.5 and 8.2.6 of this chapter to determine if the non-conforming condition meets the criteria as a Major or Minor DFS. Nonconformances meeting the criteria as a major or minor DFS must be submitted to the ISIC for adjudication when in a port with a FMA and must be approved by the Commanding Officer if at sea or in a port without an FMA. If at sea, the guidance of paragraph 8.3.8 of this chapter will be followed.

8.2.1 Reporting Departures from Specification. It is incumbent upon ships, FMAs, and ISICs to discuss potential DFS as early as possible (prior to the work close out or component assembly if possible) to determine direction of actions, and alternatives to the DFS. Every effort must be made to correct each deficiency prior to equipment or system operation or underway of the ship. If a DFS has to be submitted, the request for it must be processed as soon as possible to enable a technical evaluation of the DFS request and final adjudication from the TYCOM.

8.2.2 Reporting Departures from Specification while Conducting a CNO Availability Sea Trial. (Submarines only) Any failed inspection, test or as found deficient condition that would normally be documented on a DFS will be documented and reported in the daily Submarine Sea Trial Situation Report (SITREP) as required by volume II, part III, chapter 2 of this manual. The only DFS required to be written during CNO Availability Sea Trials are those DFS used to close Re-Entry Controlled (REC) work performed at sea during the trials to accomplish testing below 200 ft.

8.2.3 Types of Departures from Specification. A DFS is classified as either Major or Minor depending on its significance. Major DFS are described in paragraph 8.2.5 of this chapter. Minor DFS are described in paragraph 8.2.6 of this chapter. Care must be exercised in evaluating and determining the type of DFS. All submarine DFS submitted for evaluation must be adjudicated prior to ship's underway operations except when executing berth shifts that do not involve open ocean movements (i.e. movements within a harbor or river). All submarine DFS submitted for evaluation must be adjudicated prior to operating the affected equipment except:

a. A ship is in a Chief of Naval Operations availability and the affected system or component has been turned over to the Shipyard for maintenance or operation.

OR

b. The system or component is entered into a formal test or test program, which controls operation.

8.2.4 Permanent and Temporary Approval of Departure from Specification. DFSs are approved as either permanent or temporary depending on the nature of the non-compliance and technical determination of whether the condition needs to be repaired.

a. A temporary DFS requires subsequent action to correct the non-compliance and is

approved with specific direction regarding duration and actions necessary to clear. A Major DFS accepting a temporary repair or condition is approved by the TYCOM following concurrence by an Authorized Technical Authority. A Minor DFS accepting a temporary repair will be approved by the TYCOM or ISIC as specified in paragraph 8.2.6 of this chapter.

b. Temporary deviation or waivers initiated by the Authorized Technical Authority per reference (a) require TYCOM concurrence prior to approval.

c. A permanent DFS requires no additional repair effort and is approved by NAVSEA. Technical Authority within NAVSEA for approval of a permanent DFS is specified in reference (a). As an exception, a permanent DFS may be approved only by the TYCOM or ISIC as specifically allowed in paragraph 8.2.6.a. of this chapter when previously approved precedent setting documentation that directly applies to the DFS exists. The specific NAVSEA precedent must be referenced in the DFS approval.

d. Reference (e) requires that a DFS be written and provided to NAVSEA 05 by the Lead Maintenance Activity for adjudication whenever eddy current inspections are not completed within a window of 12 months prior to, or 6 months after, their scheduled due date as directed by the applicable Class Maintenance Plan. Lead Maintenance Activities must submit departures from specification that technically support scheduling requests. The DFS must use prior inspection reports and establish individual component condition-based recommendations. This requirement applies to main condensers, turbine generator condensers, auxiliary gland exhaust condensers, reboilers, and reboiler feed heater drain coolers in nuclear surface ships and submarines.

NOTE: PARAGRAPH 8.2.5 OF THIS CHAPTER DOES NOT APPLY TO THE CATEGORY OF DFSs FOR CRANES COVERED UNDER REFERENCE (f). REFERENCE (f) LISTS THE CATEGORY REQUIREMENTS AND LEVEL OF APPROVAL FOR CRANE RELATED DFSs.

NOTE: AN OUT-OF SPECIFICATION PARAMETER IN A SUBMARINE FLY-BY-WIRE SHIP CONTROL SYSTEM FUNCTION MEASURED BY URO/MRC 019 IS ALSO CONSIDERED A MAJOR NONCONFORMANCE WHETHER OR NOT THE URO/MRC IS DUE FOR ACCOMPLISHMENT. URO MRC 019 PROVIDES THE REQUIREMENTS FOR PROCESSING URO MRC RELATED NONCONFORMANCES.

NOTE: THIS LISTING IS NOT ALL INCLUSIVE AND SITUATIONS MAY ARISE WHERE DEFICIENCIES NOT LISTED MAY BE OF SUCH A NATURE TO WARRANT A MAJOR DFS. FOR EACH DEFICIENCY DETERMINED TO DIRECTLY INVOLVE SAFETY OF SHIP, SAFETY OF PERSONNEL, OR CAUSE A REDUCTION IN THE INTEGRITY OR OPERABILITY OF EQUIPMENT ESSENTIAL TO SHIP'S MISSION, A MAJOR DFS MUST BE ISSUED.

8.2.5 Major Departure from Specification. A major DFS is one that affects performance, durability, reliability or maintainability, interchangeability, effective use or operation, weight or appearance (where they are a factor), health or safety, system design parameters such as

schematics, flow, pressures, or temperatures, or compartment arrangements or assigned function. The following list identifies some deficient conditions which require a major DFS:

NOTE: IN SOME INSTANCES, THESE MAJOR DEPARTURES MAY SUBSEQUENTLY BE RECATEGORIZED BY THE LOCAL TECHNICAL AUTHORITY (LTA) FROM MAJOR TO A MINOR PER REFERENCE (A).

NOTE: LIST OF DEFICIENCIES BELOW ARE NOT COMPREHENSIVE. REQUIREMENTS OF SPECIFIC EQUIPMENT CHAPTERS IN VOLUME IV OF THIS MANUAL MAY ALSO RESULT IN A DFS. REFER TO EQUIPMENT SPECIFIC CHAPTERS FOR ADDITIONAL INFORMATION (E.G., CHAPTER 3 BOILERS, CHAPTER 4 DIESEL ENGINES, CHAPTER 17 CATAPULTS, CHAPTER 23 GAS TURBINE ENGINE INSPECTION FOR SURFACE FORCE SHIPS, CHAPTER 27 REBOILER INSPECTION).

a. Use of unapproved joint design or additional joints.

b. Nonconformances to plan specifications that result in a change in configuration. Examples are:

(1) Nonconformances to plan specifications resulting in a change in configuration or dimensions to pressure boundary parts or components. Examples would be "as found" dimensional or clearance differences from plan requirements for a Submarine Safety (SUBSAFE) valve bonnet and no authorization (e.g., Ship Alteration, Alteration and Improvement, Engineering Change Notice or NAVSEA letter) is available.

(2) Nonconformances to plan specification resulting in a change in configuration considered to be a permanent repair to pressure boundary parts. An example would be replacement of a failed valve of older design with one of more recent design because valves of the older design are no longer available and no authorization (e.g., Ship Alteration, Alteration and Improvement, Engineering Change Notice, NAVSEA letter) is available.

c. Failure to meet all applicable standards for major repairs unless other alternatives are authorized by this volume. Examples are linear indications, failed tightness test, hydrostatic test, use of unqualified welder or brazer, failed radiography, inadequate bond during brazing, etc.

d. Pipe or component wall thickness below minimum specification without restoration. Epoxy and shim methods for ball valve repairs are not considered restorations of component wall thickness.

e. Manufacture of a part or component without use or availability of applicable technical documentation (e.g., manufactured per sample due to non-availability of detailed drawings), regardless of whether the repair is considered temporary or permanent. A DFS is not required if the part or component is non-level and in a non-controlled system, it is fabricated from the correct material and the lack of technical documentation does not affect performance, durability, reliability or maintainability, interchangeability, use or operation, weight or appearance (where a factor), health or safety, or system design parameters.

f. Failure to complete required retest of a SUBSAFE, Level I or Submarine Flight Critical Component (SFCC) component or system.

g. Leakage from a SUBSAFE or Level I hull fitting, piping system, or component that meets one or more of the following conditions:

(1) Hull valve or fitting to hull flange leakage.

(2) Leakage or weepage through a component body or pipe wall. Completion of temporary repairs (e.g., plastic pipe patch) does not negate the requirement for a DFS.

(3) Leakage or weepage from a welded or brazed joint. Completion of temporary repairs (e.g., plastic pipe patch) does not negate the requirement for a DFS.

(4) Leakage upper escape and access hatches, leakage from hull glands (e.g., cable stuffing tubes, shaft or mast packing glands, electrical or electronic hull fittings excluding the inboard packing assembly and pressure proof caps screwed onto Electrical Hull Fitting cable connection) that is in excess of the allowable specification that cannot be repaired, immediately, by a packing adjustment or greasing.

h. Installation of new pressure boundary parts which do not meet all applicable material certification requirements. The following are some departable conditions:

(1) (Submarines only) Non-Level I valve internals (e.g., ball, disc, poppet, flapper) installed in seawater or sea-connected hull valves and backup valves.

(2) Non-Level I weld rod, insert material, brazing filler, etc. installed in a SUBSAFE or Level I system welded or brazed joint.

(3) Non-Level I pressure boundary parts (e.g., stem, bonnet, studs, nuts) installed in or on SUBSAFE or Level I components or systems.

i. (Submarines only) For any Unrestricted Operation (URO) Maintenance Requirement Card (MRC) measured parameter found out of tolerance and not restored, whether the MRC is due or not.

j. (Submarines only) Failure to complete any URO MRC within required periodicity.

(1) Nonconformance requests that result in a change of the URO MRC inspection periodicity (not authorized by the MRC), a change in a URO MRC technical requirement, or deferral of required work require NAVSEA approval. TYCOM or Authorized Technical Authority approval is not authorized for these nonconformances.

(2) To support operational commitments, TYCOMs may authorize temporary periodicity extensions (not authorized by MRC) after consultation with NAVSEA 07T. The periodicity extensions should be limited to the next availability or in port period, where a submarine maintenance activity is available, and must be documented by a major DFS.

(3) When a URO/MRC periodicity becomes due during a maintenance availability, a DFS is not required when the TYCOM or ISIC takes positive

actions to restrict submerged operations. Prior to the ship conducting underway surfaced or conducting submerged operations (except when executing berth shifts that do not involve open ocean movements (i.e. movements within a harbor or river), all operational URO/MRC must be within periodicity (URO MRC 016, 019, 022, 025, 026, 029 and 036) and requirements must be complied with or a Major DFS must be approved. Surfaced operations with an expired URO 036 do not require a DFS or waiver.

k. (Submarines only) For all submarine hatch (Logistics Escape Trunks, Lock Out Chambers, Logistic Plug Trunks, etc.) deficiencies which will not be repaired prior to ships underway involving the following:

(1) Non-operational submarine access hatch. (Upper Hatch Operability and Remote Operating Devices)

(2) Hatch clearance reading out of specification. (Hatch-to-Seat Clearance)

(3) Locking ring hatch lug alignment out of specification. (Coaming Lugs and Locking Rings)

(4) Locking ring hatch or trunk coaming lug metal-to-metal contact out of specification. (In Service Lug Engagement)

(5) Hatch gasket groove and hatch trunk seating surface out of specification. (Gasket and seating surface inspection)

l. (Submarines only) Non-operational Emergency Main Ballast Tank Blow Valve, seawater system hull or backup valve, Modified After Signal Ejector or signal ejector muzzle ball valve, salvage air valve, etc.

m. (Submarines only) A fault condition or unsatisfactory test within the FBW SCS certification boundary indicates a deficiency with a safety critical function per reference (g) and must be classified as a Major nonconformance under the following conditions:

(1) When the system design employs more than two redundant SFCCs and a deficiency degrades the redundancy to only two remaining SFCCs.

(2) When the system design employs two redundant SFCCs or a non-redundant SFCC and a deficiency results in the loss of a SFCC.

n. Headed fasteners locally manufactured from Level I material (i.e., cap screws, bolts, machine screws, etc.) which have not been certified by tensile and hardness testing specified in MIL-DTL-1222 (Studs, Bolts, Screws and Nuts for Applications Where a High Degree of Reliability is Required; General Specification for) or FF-S-86 (Federal Specification, Screw, Cap, Socket Head) as applicable.

o. (Submarines only) All high pressure compressed gas flasks designed to MIL-F-22606 specifications must be recertified at intervals not to exceed 20 years for SSN 688, SSN 21 and SSN 774 Classes and 21 years for SSBN and SSGN 726 Class. High-pressure air moisture separator flasks must be recertified at an interval not to exceed ten years for SSN 688, SSN 21, SSBN, SSGN 726 and SSN 774 Classes. All oxygen and gas management separator flasks designed to MIL-F-24032 specifications must be

recertified at an interval not to exceed nine years for SSN 688, SSN 21 Class, SSBN and SSGN 726 Class. A major DFS, approved by NAVSEA, is required for any flask that will exceed the recertification periodicity.

p. (Submarines only) Propulsion shafts must be replaced at intervals not to exceed six years for SSBN and SSGN 726 Class, seven years for SSN 688 and SSN 774 Classes and ten years for SSN 21 Class. A major DFS, approved by NAVSEA, with supporting operating information, including shaft turn count since shaft installation is required for shafts that will exceed planned replacement periodicity.

q. (Submarines only) A Major DFS is required to document missing or damaged Special Hull Treatment removed from external structure only when the coating system beneath the Special Hull Treatment is missing or delaminated resulting in bare metal that is either left bare or repaired using temporary underwater coatings (e.g., Hycote). Missing or damaged Special Hull Treatment removed from external structure is to be tracked using the CSMP process as long as the remaining coating system is intact or repaired (i.e., no bare metal) when the following conditions are met:

(1) The submarine is not currently in a Depot Level availability.

(2) Anti-corrosive coating repairs are performed following the requirements of reference (b), section 9.

(3) The CSMP item is scheduled to be cleared no later than the next scheduled Depot Level availability.

r. (Submarines only) Torpedo Tube Muzzle Door K-Monel linkage components must be replaced every eight (8) years on all submarine classes. A major DFS, approved by NAVSEA, with supporting information including total waterborne exposure time of existing components and torpedo tube recess anode type (LVA or Zinc), is required for any instance where this periodicity is exceeded. The replacement periodicity is increased to 16.5 years (198 months) for SSN 774 Class submarines with SHIPALT 4570K and hulls that have Muzzle Door Linkage Failure Indication installed during new construction. Note that this requirement is not applicable to SSN 688 Class submarines with Ordalt 18000 and SSBN and SSGN 726 class submarines with TZ-0932.

s. Diesel Inspector Inspection Findings documenting a severe degradation.

t. Any of the following associated with a shipboard diesel engine:

(1) Inoperative alarms or safety devices.

(2) Low lube oil pressure.

(3) Readings that exceed the limits of PMS or manufacturer specifications that during unrestricted operation would present a hazard to equipment.

(4) Lube oil fuel dilution above safe levels.

(5) Controllable exhaust leaks as defined in new reference (i).

u. (Submarines only) Dew Points for both Emergency Main Ballast Tank and High-Pressure Air Dehydrators or Interstage Membrane Dehydrator's must be maintained within periodicity and specification when measured or a Major DFS must be approved

by NAVSEA 05U7 in advance of submerged operations with the following exceptions:

(1) For submarines on deployment, when unable to accomplish air bank dew point measurements, High Pressure Air Dehydrator or Interstage Membrane Dehydrator testing within periodicity, a DFS is not required, however, testing will be performed as soon as practicable, and no later than nine months since last accomplished.

(2) Following Deployment, if air bank dew points, High Pressure Air Dehydrator or Interstage Membrane Dehydrator testing is out of periodicity, satisfactory testing must be completed prior to the next underway for submerged operations.

8.2.6 Minor Departure from Specification. A DFS which is not a Major DFS as defined in paragraph 8.2.5 of this chapter is considered to be a Minor DFS. All permanent Minor (and Major) DFSs will be approved by NAVSEA except those identified in paragraph 8.2.6.a. of this chapter, which may be dispositioned by the TYCOM or the ISIC. Temporary Minor DFSs identified in paragraph 8.2.6.b. of this chapter may also be dispositioned by the TYCOM or the ISIC. All other temporary Minor DFSs will be approved by the TYCOM. For submarines, TYCOM approval will follow the QA form 12 block 19 table. Temporary nonconformances, except SUBSAFE, Scope of Certification, and Fly-by-Wire nonconformances, that are minor which would not benefit from an engineering analysis or risk assessment will be entered into the CSMP and are not required to be submitted as a DFS. Paragraphs 8.2.6.a. through f. of this chapter identify some deficient conditions which require a Minor DFS:

a. Any condition which could be considered a Major DFS except for the fact that specific and definite (TYCOM or NAVSEA) guidance is available based on documented action for another identical (same component, same application, and same class ship) request in which no restriction was imposed. An example would be a previous DFS which was approved as a precedent setting DFS.

b. Any condition which is associated with exemptions or alternatives to non-nuclear retest requirements in section 7.4 of part I, chapter 7, of this volume on testing, except where noted. Examples are:

NOTE: IF A MAINTENANCE CERTIFICATION RECORD/RE-ENTRY CONTROL IS CLOSED BY TRANSFERRING AT SEA TESTING TO A DFS (E.G., CONTROLLED DIVE TO TEST DEPTH FOR RETEST OF A PERISCOPE HULL GLAND, CONTROLLED DIVE FOR RETEST OF A SEA CONNECTED SYSTEM (E.G., MAIN SEAWATER, AUXILIARY SEAWATER) IN LIEU OF JOINT TIGHTNESS TEST TO "J" PRESSURE OF TEST PRESSURE DRAWING (TPD)), THE SHIP WILL BE RESTRICTED IN DEPTH AS REQUIRED IN PART I, CHAPTER 5, PARAGRAPH 5.6.5 OF THIS VOLUME.

(1) (Submarines only) DFS for controlled dive following re-installation of a periscope.

(2) (Submarines only) DFS for controlled dive following work on a hatch exposed to sea pressure.

(3) (Submarines only) DFS for controlled dive following work on an Electrical or Electronic Hull Fitting.

(4) (Submarines only) DFS for installation of ty-wraps in lieu of cable banding following waterborne cable replacement by divers.

(5) (Submarines only) DFS for controlled dive following for work lacking Mechanical Joint Tightness Testing of Torpedo Tube Flood and or Drain Electrodes.

(6) (Submarines only) DFS for conducting at sea operational testing such as Main Sea Water Fast Speed operations, shooting water slugs from 3" Launcher, Trim and or Drain Pump operations to measure Heat during operations.

(7) (Submarines only) DFS for deferral of System Operability Verification Testing.

c. Any condition that requires at sea operations to certify planned maintenance or repairs excluding structural watertight integrity testing except as previously discussed.

d. Associated with a temporary repair to a system or component not involving ship or personnel safety or not involving integrity or operability of equipment essential to ship's mission.

e. For a material deficiency discovered during a maintenance action that will not be corrected prior to the ship's underway, and is not categorized as a Major DFS per paragraph 8.2.5 of this Chapter.

f. (Submarines only) For all rescue seating surface (RSS) (Escape Trunks, Logistics Escape Trunks and Lockout Trunks) Periodic Maintenance Requirements (PMRs) not completed within periodicity. A minor DFS, approved by TYCOM, is required for rescue seats that will exceed planned PMR periodicity.

g. (Submarines only) For all Disabled Submarine components maintained by maintenance requirement cards (MRCs) listed within Disabled Submarine equipment maintenance plans 59400/series PMS deficiencies, following scheduled completion where deficiencies are identified and not corrected prior to ships underway require a minor DFS approved by TYCOM.

8.3 DEPARTURE FROM SPECIFICATION PROCEDURES.

NOTE: FOR SURFACE FORCE SHIPS AND AIRCRAFT CARRIERS, THE TYCOM WILL PERFORM THE ISIC FUNCTIONS OF THIS CHAPTER.

8.3.1 General Administrative Requirements. The following requirements pertain to all DFSs:

a. Requests for DFS will be submitted, approved and cleared per paragraph 8.3.7 or 8.3.8 of this chapter. The Web Based Electronic Departure from Specification (eDFS) program is acceptable for use unless directed otherwise by the respective TYCOM.

NOTE: THE FORMS (QUALITY ASSURANCE (QA) FORM 12, QA FORM 12A) MENTIONED IN THE FOLLOWING DISCUSSION ARE COMPLETED ELECTRONICALLY WHEN USING eDFS.

NOTE: WHEN USING A NAVAL MESSAGE TO REQUEST A DFS OR REPORT A

COMMANDING OFFICER APPROVED DFS THE EXACT FORMAT SHOWN IN APPENDIX A WILL BE USED. EACH PARAGRAPH IN THE NAVAL MESSAGE WILL HAVE A PARAGRAPH NUMBER, THE PARAGRAPH TITLE AND A COLON. ANY DEVIATION IN THE FORMAT MAY CAUSE A PROBLEM WITH THE AUTOMATIC DFS PROCESSOR. IF THE SHIP IS UNABLE TO CONNECT TO eDFS, A DEPARTURE MAY BE REQUESTED BY NAVAL MESSAGE USING THE FORMAT OF APPENDIX A.

b. Requests for DFS will be normally submitted on a QA form 12. The approval of the DFS will normally be made on the QA form 12. If unable to use QA form 12, use the message format of Appendix A. Surface ships that are not able to generate a DFS using eDFS have the option of generating DFS per existing message based system or Command E-mail. The Command E-mail must be approved by the ship's Commanding Officer or their designated representative.

c. The ship is responsible for all approved DFS relating to its systems or components until cleared or canceled. When a DFS is approved as a temporary repair requiring rework to correct the discrepancy, a CSMP entry for correction of the discrepant condition will be initiated by the ship or ISIC. This CSMP entry must include the DFS serial number, On-Site Analysis Report serial number (if applicable), or other technical references documenting or tracking the nonconformance. The ship's Quality Assurance Officer (QAO) will ensure that this action is done. Verify an active Job Control Number (JCN) exists for all active temporary DFSs at the completion of all scheduled Fleet maintenance activity availabilities, major or minor, Chief of Naval Operations availabilities or at least quarterly and maintain an auditable record of the verification until superseded.

d. The ISIC is responsible for all DFSs which have been approved or forwarded to TYCOM for approval until the DFS is cleared, canceled or formally transferred to another TYCOM. The ISIC is also responsible for ensuring that the CSMP entry is annotated on the DFS for temporary repairs.

e. All DFS must be reported and controlled. Each activity must have an auditable system for reporting and controlling DFS. Deviation or waivers will be retained and tracked in an auditable fashion within the DFS system by Ship's Force and the ISIC or TYCOM until permanent documentation is confirmed to reflect the specific non-compliance. Use of the Web Based eDFS program will facilitate meeting these requirements.

f. When work performed results in a DFS and requires future action (e.g., re-inspection, repair), the ship will submit a Ship's Maintenance Action Form, OPNAV 4790/2K (2-Kilo),(or equivalent) with a new Job Sequence Number. The CSMP Job Sequence Number will be included in Block 17 of the DFS. This Job Sequence Number will be added to the DFS prior to submission to the ISIC. The DFS or waiver will be retained in an auditable fashion with the DFS file. DFSs and waivers written exclusively to transfer accountability for testing do not require a 2-Kilo (or equivalent) with a new Job Sequence Number.

g. To preclude last minute ship's operational delays, DFS should be processed as early as

possible. Any request for approval for a DFS must contain all pertinent information on materials, processes, testing and procedures used, so that a complete and educated engineering evaluation can be made by the TYCOM, LTA or System Command. System Command requires at least five working days to review DFS. Anything less requires urgent prioritization, and the submitting activity must provide justification for the urgency.

(1) (Carriers and Surface Force Ships) DFS serial numbers for Ship's Force initiated departures will be automatically supplied by eDFS (0000 series). For departures initiated by a depot level activity, the serial numbers will be automatically supplied by eDFS (1000 series). All outstanding departures must be submitted to the TYCOM for evaluation by an LTA prior to a ship's underway. However, if the LTA evaluation is not complete prior to the underway, the ship is responsible to ensure adequate temporary precautions or standing orders are in effect until the DFS evaluation is complete. For temporary departures expiring during an underway, as discussed in paragraph 8.3.9 of this chapter, the extension request must be made sufficiently in advance to allow the evaluation process to be completed before the expiration date and preferably prior to the underway in which the DFS expires.

(2) (Aircraft Carriers only) Aircraft Carries will follow the review and approval process outlined in reference (a) unless the JFMM specifically cites where the TYCOM may approve a Minor DFS. The carrier TYCOM's will follow the DFS approval process of reference (a) enclosure (4) and will forward all departures not specifically cited for TYCOM approval to the cognizant LTA for adjudication.

(3) (Submarines only) DFS serial numbers for Ship's Force initiated departures will be maintained either in a handwritten or electronic log. For DFS serial numbers for work performed by NAVSEA managed activities, to include Public and Private shipyards or activities directed by TYCOM, must use 1000 series DFS numbers auto initiated by the eDFS software. For temporary departures expiring during an underway, as discussed in paragraph 8.3.9 of this chapter, the extension request will be made sufficiently in advance to allow the evaluation process to be completed before the expiration date (Temporary Approved Until Date) and prior to the underway in which the DFS expires.

h. The activity originally requesting the DFS will track the DFS until it is approved or disapproved.

i. For any DFS, Nonconformance, deviation or waiver that has been adjudicated, the approving activity is required to provide a copy of the DFS, Nonconformance, deviation or waiver to the ship's QAO for retention and tracking per paragraph 8.3.1e. of this chapter.

j. (Submarines only) All departures must be adjudicated prior to the ship getting underway for submerged operations except as authorized by TYCOM where the approved existing DFS has a "Temporary Approved Until Date" that is the same or later than the unit's anticipated return to port date or has an approved plan to clear or

extend the DFS to support ship's schedule.

8.3.2 Review of Outstanding Departures from Specification. Commands responsible for tracking approved DFS will review them prior to each upkeep to establish FMA or shipyard work requirements to clear the DFS. DFSs should be cleared as soon as possible based on:

a. Approval as a permanent repair.

b. Condition has been corrected.

c. Condition is no longer applicable as a result of an alteration.

d. Condition is no longer applicable as a result of a change in the specification that originally resulted in the DFS request.

8.3.3 Clearing of Departure from Specification by Exposing Sea Connected Systems and Hull Integrity Boundary Items to Submergence Pressure (Submarines only). SUBSAFE certified submarines will submerge to 95% of design test depth, as a minimum, as measured to the keel, for clearing certain "Controlled Dive" DFSs. Satisfactory completion of the test and clearance of the DFS will be in the format of QA form 12A. If unable to use QA form 12A, use message format of Appendix B.

8.3.4 Incorporation of Departure from Specification in Selected Record Drawings, Data or Technical Variance Documentation.

a. Those DFSs for a change in configuration, which NAVSEA accepts as a permanent repair, will be maintained in an auditable file by the ship and the ISIC until reflected in ship's selected record drawings, data or technical variance documentation. Examples are:

(1) An oversized shaft and bushing.

(2) A seal welded mechanical joint.

(3) Addition of piping joints or fittings.

(4) Different style or type valve.

b. The activity submitting the DFS for permanent approval will inform the ship of the configuration change and provide sufficient data to support submission of Ship's Configuration Change Form, OPNAV 4790/CK (CK), and a Fleet COSAL Feedback Report (FCFBR), NAVSUP 1371.

c. For DFS approved as a permanent repair for material or component substitution resulting in a configuration change, the ship will submit a CK and a FCFBR to ensure accurate configuration accounting and technical or supply support are maintained.

d. The activity causing or discovering the nonconformance or departable condition that the DFS approved as a permanent repair, and affects selected drawings and records, will provide a copy of the marked up drawing to Ship's Force prior to underway and will forward a copy of the applicable portions of the work package and a marked up copy of the affected drawing or record to the planning yard as soon as practical. The ship and accomplishing activity will maintain a copy of the correspondence until the technical variance documentation or selected record drawing is issued.

8.3.5 Preparations for Correction of Departure from Specification and Clearance During Depot Level Availabilities. The following procedures will be used to schedule DFS for correction and report correction of DFS in depot level availabilities:

a. Ship's Force or the parent ISIC will provide copies of DFS outstanding at the Availability Planning Conferences for incorporation into the work package as required by the Availability Baseline Work Package.

b. DFS deferred to a Depot Availability for correction must be cleared by the submission of a QA form 12A as the shipyard accomplishes the work, provided that the shipyard "scope of work" corrected the DFS. Completion reports from shipyards are not required. These forms are submitted by Ship's Force to the ISIC or the NSA correcting the nonconformance. If unable to use a QA form 12A, use the message format of Appendix B.

8.3.6 Numbering of Departures from Specification. All DFSs will be identified by a unique sequential number issued by the affected ship. The sequential number will consist of the ship's designation and hull number, a hyphen, the sequential number portion, a hyphen, and the last two digits of the year (e.g., SSN 674-13-90, CVN 70-30-94). DFSs already assigned a number under another numbering system will be retained, as there is no intent to revise the numbers already used. DFSs established using the Web Based eDFS program will use the numbering conventions of those systems. Approved temporary departures requiring extension will not be assigned new Departure numbers.

NOTE: FOR AIRCRAFT CARRIERS AND SURFACE SHIPS, IN THE EVENT THAT ANY DFS EVALUATION IS NOT COMPLETED PRIOR TO A SHIP'S UNDERWAY, ALL DFS CONDITIONS OR RESTRICTIONS ESTABLISHED BY SHIP'S FORCE AND SUBMITTED ON THE QA FORM 12 WILL REMAIN IN EFFECT UNTIL THE EVALUATION IS COMPLETED AND DISPOSITION IS PROVIDED, UNLESS FURTHER DIRECTIONS ARE PROVIDED BY THE TYCOM PRIOR TO THE UNDERWAY. ON EXTENSION REQUESTS, ALL DFS CONDITIONS ESTABLISHED BY PREVIOUS ADJUDICATION APPLY.

8.3.7 Submission and Approval of Departures from Specification. The activity finding or causing a DFS will normally report the DFS to the appropriate approval authority using either a QA form 12, a naval message or electronically using the eDFS program. The DFS Request will be completed per the instructions. If unable to use QA form 12 or the electronic web-based programs, use the naval message request format of Appendix A.

NOTE: IN THE FOLLOWING SECTION, IF USING eDFS, WHEN IT IS DIRECTED THAT THE QA FORM 12 IS SIGNED, AN ELECTRONIC SIGNATURE IS IMPLIED. ISIC AND UNITS ASSIGNED TO TYCOMs UTILIZING THE eDFS SYSTEM WILL SUBMIT DFSs TO THE TYCOM VIA THE eDFS PROGRAM. THIS PROGRAM REQUIRES A USER IDENTIFICATION AND PASSWORD SUPPLIED BY THE TYCOM. THE FOLLOWING PROCESSES WILL BE EXECUTED UNDER THE eDFS PROGRAM USING THE ELECTRONIC VERSION OF THE QA FORM 12 AND QA FORM 12A. THE SIGNATURES WILL BE ONLY THE PRINTED NAME AND TITLE OF THE

INDIVIDUAL. SHIPS WITHOUT UNCLASSIFIED INTERNET ACCESS MAY SUBMIT DFSs AND DFS CLEARANCES TO THE ISIC VIA A MANUALLY PREPARED QA FORM 12 OR QA FORM 12A, THE STAND-ALONE MS ACCESS DATABASE FORMAT OR MESSAGE FORMAT IF AT SEA.

a. The Work Center Supervisor, Leading Petty Officer, Craftsman or Quality Assurance Inspector will fill out the applicable portion of the QA form 12, ensuring the extent of the DFS and the recommendation for repair and re-certification must be clearly and completely stated, and deliver, after review by the cognizant division officer, to:

(1) For ship initiated DFS, the Ship's QAO or in their absence the Ship's Duty Officer.

(2) For FMA initiated DFS, the FMA QAO or in their absence the FMA Repair Duty Officer.

b. The QAO or designated representative will:

(1) Review the QA form 12 for technical adequacy, accuracy, and completeness.

(2) Determine the latest time the answer must be received in order to carry out the ship's schedule, obtain and enter the next consecutive number from the affected ship's DFS log. For aircraft carriers, the numbering convention assigned by the Web Based eDFS program when submitting the DFS will be used.

(3) Deliver or forward to Department Head (ship) or Repair Officer (FMA).

c. For ship initiated DFS, Ship Department Head (in their absence Ship's Duty Officer) will:

(1) Review the QA form 12 for technical adequacy, accuracy, and completeness.

(2) Sign the QA form 12 and deliver or forward to the cognizant ISIC QAO (in their absence ISIC Duty Officer).

d. For FMA initiated DFS, FMA Repair Officer (in their absence their designated representative) will:

(1) Review the QA form 12 for technical adequacy, accuracy, and completeness.

(2) Determine the latest time the answer must be received in order to carry out the ship's schedule.

(3) Sign the QA form 12 and deliver or forward it to the cognizant ISIC QAO (in their absence ISIC Duty Officer).

e. For Depot initiated temporary waivers and deviations, responsible Depot personnel will:

(1) Review the waiver or deviation for technical accuracy, adequacy, and completeness.

(2) Determine the latest time the answer must be received in order to carry out the ship's schedule.

(3) Prepare and electronically sign a QA form 12 via eDFS and deliver or forward it to the cognizant ISIC representative QAO (in their absence the ISIC Duty Officer) for review and concurrence prior to approval. For a DFS initiated by a depot level activity, the ISIC will provide the JCN to the depot level activity when requested. For carrier repair activities, eDFS will automatically supply the next open DFS serial number. See paragraph 8.3.1g.(1) of this chapter for carriers and Surface Force ships and paragraph 8.3.1g.(2) of this chapter for submarines for a description of the current process for assigning DFS serial numbers.

(4) The ISIC representative QAO will review and concur with the waiver or deviation by signing the ISIC block of the QA form 12 or electronically signing in eDFS prior to Depot approval and return the waiver or deviation to the Depot. For temporary waivers and deviations, the ISIC representative will contact the Ship's Maintenance Planner or the Ship's QAO for a JCN and a Departure serial number (if required) prior to returning the waiver or deviation to the Depot.

f. The cognizant ISIC QAO (in their absence their designated representative) will:

(1) Review the QA form 12 for technical adequacy, accuracy, and completeness.

(2) Issue instructions regarding clearance and approve or disapprove and return QA form 12 to the Department Head (Ship) or Repair Officer (FMA) for action, filing in QA files, or both.

(3) Deployed Ships ISICs will ensure parent ISIC is an information addressee on all QA form 12s.

g. Approval or disapproval of a DFS by the ISIC, TYCOM, LTA or NAVSEA will be noted on the QA form 12.

h. Upon completion of corrective action, the DFS will be cleared by the ship using the format of QA form 12A. The NAVSEA or TYCOM approval of a permanent repair requires no further administrative action.

NOTE: DO NOT DELETE ANY INFORMATION FROM AN eDFS ITEM THAT HAS RECEIVED TEMPORARY APPROVAL FROM EITHER THE ISIC, TYCOM OR AUTHORIZED TECHNICAL AUTHORITY.

NOTE: THE ABILITY TO ADD COMMENTS TO AN APPROVED DFS IS LIMITED BY THE ELECTRONIC SYSTEM'S ASSIGNED LEVEL OF ACCESS (I.E., ISICs CAN ADD COMMENTS ONLY TO THE ISIC PORTION OF THE DFS FORM).

8.3.8 Departure from Specification Approval and Reporting for Ships While at Sea or at a Port Without a Fleet Maintenance Activity.

8.3.8.1 Evaluation. The Commanding Officer will evaluate any DFS and approve the corrective action to be taken including any necessary restrictions. The Commanding Officer will issue directions regarding clearance and approve or disapprove the DFS and return the QA form 12 to the Department Head for action, filing, or both. For any Commanding Officer approved DFS, a

report of the condition and intended action will be made at the first opportunity to the ship's ISIC (if applicable) and TYCOM utilizing either a naval message in the "EXACT" format of Appendix A or the eDFS program.

8.3.8.2 Condition not Corrected. If the condition is not planned to be corrected or cannot be corrected during the next inport period (a port with a fleet maintenance facility), the Commanding Officer approved DFSs must be submitted to the applicable approval authority for adjudication prior to getting underway.

a. (Submarines only) All departures must be adjudicated prior to the ship getting underway. This does not apply to brief in-port periods, as determined by the operational commander, for operational reasons. Examples of these periods include, but are not limited to, brief stops pier side for cargo or personnel transfers and towed array replacements. The guidance of paragraph 8.3.8.1 will continue to apply during port visits that meet these requirements.

b. (Aircraft Carriers and Surface Force Ships only) In the event the DFS evaluation is not completed prior to the ship's underway, the Commanding Officer approved DFS will remain in effect until the evaluation is completed and disposition provided.

NOTE: AN EXTENDED DEPARTURE WILL NOT BE ASSIGNED A NEW DEPARTURE NUMBER THAT CANCELS OR SUPERSEDES THE ORIGINAL DEPARTURE NUMBER.

8.3.9 Extending a Temporary Departure. In the event that a departed condition will not be corrected by the expiration date, the Ship's QAO is responsible to submit the departure(s) to the ISIC requesting an extension. The extension request will explain why the departure will not be corrected. The extension request must be made sufficiently in advance to allow the evaluation process to be completed before the expiration date. The Departure extension will be routed to the same level of approval authority as the original Departure.

a. Nonconformances are expected to expire. It is acceptable for nonconformances to expire while the ship or Deep Submergence System (DSS) or Scope of Certification (SOC) asset is in a scheduled availability except as listed here:

(1) Nonconformances must not be permitted to expire for equipment or systems that are in operation or will be operated during the availability except:

(a) A ship is in a Chief of Naval Operations availability and the affected system or component has been turned over to the Shipyard for maintenance or operation.

OR

(b) The system or component is entered into a formal test or test program which control operation.

(2) Nonconformances associated with UROs must be approved and or extended prior to submarine underway operations unless the submarine is repositioned by tug or similar craft.

b. (Submarines, DSS and SOC assets only) Must not get underway with expired nonconformances unless the submarine, DSS or SOC asset is repositioned by tug or similar craft.

c. Extension requests via the eDFS program must be accomplished using the Request Extension feature accessed by clicking the associated button at the top of the QA form 12 for the most recent approved active DFS extension. If allowed by the TYCOM, changes to an existing nonconformance in the eDFS program may be accomplished by submittal of an "UPDATE" as directed in paragraph 8.3.10.c of this chapter. All changes to an existing nonconformance in the eDFS program that require NAVSEA approval must be accomplished by submittal of a DFS extension.

8.3.10 Electronic Nonconformance Administration.

a. User access requires TYCOM or initiating agencies Point of Contact (POC) approval for all levels of access.

b. All attachments to the electronic nonconformances are preferred to be in Adobe Acrobat PDF format. If another format is used, ensure it is one that is readily available on government computers, such as Microsoft Word or Excel format. Nonconformances with attachments that cannot be opened by the ISIC or TYCOM will be rejected.

c. Changes to an existing electronic nonconformance is normally accomplished by submittal of an "UPDATE" to the QA form 12.

(1) Changes must be disseminated via an e-mail alert.

(2) Deletion of QA form 12s will not be supported. Clear or cancel QA form 12s with a QA form 12A.

d. The DFS CLEARANCE STATUS entry block must contain a brief description and status of the nonconformance (e.g., REPAIR GREASE DISTRIBUTION VALVE).

e. Naval Sea Logistics Center (NAVSEALOGCEN) assistance is required to change an archived nonconformance. NAVSEALOGCEN will use the following process to change an electronic nonconformance:

(1) Database nonconformance changes (change to a QA form 12) will only be accomplished if requested by the TYCOM or the initiating agencies POC.

(2) Archived nonconformances requiring changes which were signed by multiple TYCOMS or multiple initiating agencies:

(a) Requires e-mail concurrence of all POC signatory users to the nonconformance prior to NAVSEALOGCEN making database changes or unarchiving the nonconformance (i.e., Supervisor of Shipbuilding, TYCOM and NAVSEA signed QA form 12).

(b) If a nonconformance is unarchived to allow TYCOMs or agency users to make changes, change will be accomplished per the requirement cited in paragraph 8.3.10.c. of this chapter.

(c) Each signatory level user should indicate their concurrence to the

change per the requirement cited in paragraph 8.3.10.c. of this chapter.

(3) Archived nonconformances requiring change which were signed by a single TYCOM or single initiating agency:

(a) Requires e-mail concurrence of the POC signatory user to the nonconformance prior to NAVSEALOGCEN making database changes or unarchiving the nonconformance (i.e., Supervisor of Shipbuilding, TYCOM or NAVSEA signed QA form 12).

(b) If a nonconformance is unarchived to allow a TYCOM or agency user to make changes, change will be accomplished per the requirement cited in paragraph 8.3.10.c. of this chapter.

8.4 NUCLEAR COGNIZANT AREAS. Request for DFS for nuclear systems will be neither requested nor approved. If a ship or FMA has a question, problem, or is unable to comply with nuclear specifications, request for technical resolution will be made using a LAR. Formal resolution of the LAR is required prior to reactor plant or propulsion plant startup.

8.4.1 Nuclear Powered Surface Ships. A memorandum of agreement exists between NAVSEA Nuclear Propulsion Directorate (08) and NAVSEA PMS 312 or 335 that details the division of responsibilities within the propulsion plants of nuclear powered ships. This may be useful to Forces Afloat as an aid in directing inquiries and correspondence and has been distributed to all nuclear surface ships as a NAVSEA letter Ser 08J/C90-5873, dated 7 AUG 90.

8.4.2 Reactor Plant Systems. If a nuclear powered ship or nuclear capable FMA is unable to comply with specifications for reactor plant systems or components listed in enclosure (1) to reference (j) and also those systems identified as nuclear by the appropriate nuclear or non-nuclear interface diagram (references (b) and (c)), then a review of NAVSEA 08 requirements must be requested. In general, technical resolution to questions or problems for reactor plant systems or components requires use of a liaison inquiry according to the requirements of references (b) and (c).

a. References (b) and (c) provide the requirements on submission of LARs for nuclear powered surface ships and submarines.

NOTE: LARs SUBMITTED MUST CONTAIN ALL INFORMATION REQUIRED BY REFERENCE (B) AND REFERENCE (C) TO ENSURE A RAPID, ACCURATE RESPONSE.

b. Reference (d) provides the requirements on submissions of LARs for nuclear support facilities.

c. A LAR should not be submitted for cases of out of specification seat leakage of nuclear valves after repairs. The Reactor Plant Planning Yard and Reactor Plant Prime Contractors do not have the authority to waive valve leakage specifications. When valve seat leakage exceeds reactor plant manual specification after attempted Ship's Force or FMA repairs, the following method may be used to defer rework and close out the Controlled Work Package (CWP):

NOTE: THIS ALTERNATIVE TO SATISFACTORY COMPLETION OF RETEST IS APPLICABLE ONLY TO VALVE SEAT LEAKAGE.

(1) The ship must inform TYCOM (via squadron or group for submarines) by message with an info copy to NAVSEA 08. The message must include a description of the initial problem, repairs conducted, seat leakage rate, leak specification, dates of next availability, status of the following sub-paragraphs (2) through (5), and request for authorization to continue operation with out-of-specification seat leakage.

(2) All hydrostatic and tightness test requirements must be satisfactorily completed.

(3) All other portions of the CWP must be properly completed.

(4) A new maintenance deferred action must be submitted to the ISIC for repair of the valve seat leakage at the next FMA availability.

(5) The valve seat leakage must not constitute an operational problem (for submarines, Group or Squadron's determination and justification statement required).

(6) Based on Ship's justification statement, TYCOM will respond by message to all concerned regarding deferral of corrective maintenance. After satisfactory final review, closeout of the CWP can be made with an approved deferral of corrective maintenance in lieu of a satisfactory seat leakage test.

d. A liaison action file, with a sequential index and containing all submitted Nuclear LARs, must be maintained by the originating activity. The file must contain a copy of LARs submitted. A copy of the liaison action must be kept with liaison requests in the Answered LARs section and in the CWP or Formal Work Package if applicable.

e. Request for DFS for nuclear systems will be neither requested nor approved. If a ship, FMA or shipyard has a question, problem or is unable to comply with nuclear specifications, request for technical resolution will be made using an LAR or Trouble Record.

8.4.3 Propulsion Plant Systems (Aircraft Carriers only). If a ship or FMA has a question, problem or is unable to comply with non-nuclear specifications, technical assistance is available from the Propulsion Plant Engineering Activity (PPEA). The PPEA was formed to provide an additional technical resource for assisting operational aircraft carriers with technical or operational issues not associated with Ship Alteration installation and configuration control. PPEA Liaison services are requested using the Steam Plant Action Request (SPAR). The SPAR allows the Fleet and overhaul activities to submit requests to the PPEA for technical assistance on non-Ship Alteration related issues; the SPAR is not intended to replace the LAR process described in this chapter or non-nuclear LARs submitted to the Hull Planning Yard per reference (k). The PPEA can request information, disseminate technical information associated with the Steam Plant to the Fleet or overhaul activities, or direct work that does not require a drawing change or affect system configuration control using the Steam Plant Liaison Inquiry. Procedures for preparing SPARs are discussed in reference (c).

8.5 NON-NUCLEAR COGNIZANT AREAS.

a. Non-nuclear LARs may be initiated via the NSLC eForms website at https://eforms.nslc.navy.mil/LAR. Various LAR User Guides are listed under the

Help Menu in eLARs.

NOTE: REFERENCE (L) PROVIDES SPECIFIC GUIDANCE FOR PROCESSING NON-NUCLEAR LARS. LAR TECHNICAL SPECIFICATION (TS909-100B) CAN BE FOUND IN APPENDIX F OF REFERENCE (K).

b. Once a LAR is initiated, signed and released in the NSLC system, an auto email is generated from the NSLC site to the LAR "Originator" via their Navy or Contractor Outlook email account. Originators are the only persons who receive this auto email. The LAR must now be sent to the activity responsible to adjudicate the problem defined in the LAR and the appropriate TYCOM. It is recommended to use to the "send email" function within the eLAR software.

(1) Carriers	Send LARs to lars_sea05V@us.navy.mil.
(2) Surface Force Ships	Send LARs to the appropriate Planning Yard, Ship Design Manager, Program Office, or Technical Warrant Holder as need to address the issue.
(3) Submarines	(688/21/774 Class) Send LARs to PMS392 In-Service Attack Submarines LAR Notification. (726 Class) Send LARs to PMS396 In-Service SSGN/BN Strategic Submarines LAR Notification.

NOTES:

1. Office codes for TYCOMs are: COMNAVAIRLANT N43/N9; COMNAVAIRPAC N434; COMNAVSURFLANT N434; COMNAVSURFPAC N434; COMNAVSURFLANT/AIRLANT SNPMTT N02NB; COMNAVSURFPAC N434 AND COMNAVAIRPAC N9/N434; PACIFIC FLEET CVNs – COMNAVAIRPAC N9/N434; COMNAVSURFLANT N434 AND COMNAVAIRLANT N9/N43; ATLANTIC FLEET CVNs - COMNAVAIRLANT N9/N43; COMSUBLANT N4322; COMSUBPAC N4, N4322.
2. Office codes for NAVSEA are: PMS 392 and SEA 07TC (All SSN and SSBN/SSGN); PMS 390N (DEEPSUBM and DDS); OOC (DDS and DLSS). For URO related DFS, also include the appropriate NAVSEA codes listed in the URO MRC.
3. Include NAVSEA 07Q for informational purposes on all SUBSAFE DFS messages. Include the applicable Program Manager at NAVSEA for informational purposes on all SOC DFS messages. Include the NAVSEA 07T for informational purposes on all Fly-By-Wire Ship Control System (FBW SCS) DFS messages.
4. Include SUBMEPP only on URO related DFS.
5. Comply with current annotation and declassification requirements for classified messages.
6. Year/Month/Day.
7. Enter date of latest revision.
8. When non-approved parts are used, identify part by NSN, Mil Spec, drawing and piece number and MIC level.
9. When DFS is the result of part non-availability, identify APL and NSN or drawing and piece number and state that the part is not available until (year, month, day) or unknown.

10. Where new welded or brazed pipe joints are added, state the welding or brazing procedure used. State the NDT procedure(s) used (if applicable). State completed, or to be completed tests.

INSTRUCTIONS:

1. From Line - Command requesting or submitting the DFS.
2. To Line - List the respective ISIC, TYCOM and NAVSEALOGCEN Mechanicsburg PA. (see note 1)
3. Info Line - Any additional activities that should receive a copy of this DFS message. (see notes 2, 3 and 4)
4. Subject Line - Must include one of the following:

   For a standard DFS request, the subject line will start out with:

DFS REQUEST FOR (SHIP'S NAME AND HULL NUMBER, THE DEPARTURE NUMBER ASSOCIATED WITH THE REQUEST, THE COMPONENT AND SHORT DESCRIPTION)

   For a notification of a CO approved DFS the subject line will start out with:

NOTIFICATION OF COMMANDING OFFICER APPROVED DFS (SHIP'S NAME AND HULL NUMBER, THE DEPARTURE NUMBER ASSOCIATED WITH THE NOTIFICATION, THE COMPONENT AND SHORT DESCRIPTION)

5. Reference Line - List all required references. (see note 6)
6. AMPN Line - Used if only one reference is listed. (see note 7)
7. NARR Line - Used if there are two or more references listed. (see note 7)
8. RMKS Section - Must be completed exactly as shown here:

NOTE: THE COLONS MUST BE INSERTED EXACTLY AS SHOWN.

RMKS/1. DFS NUMBER: (enter the next sequential DFS number from the ship's DFS log. Note, this number may be changed during the input process due to previously entered departures that were entered prior to receipt of this message)

2. SHIP & HULL NUMBER: *(enter the ship's name and hull number)*

3. JCN: *(enter JCN of task that resulted in a discrepant condition or the lack of compliance)*

4. CWP NUMBER: *(enter the CWP serial number if a CWP was used or mark N/A if no CWP used)*

5. DATE OF DFS: *(enter the date the DFS was initiated)*

6. ORIGINATOR: *(name of person initiating the DFS)*

7. DEPARTURE TYPE *(at least one item under departure type will be YES. For submarines a yes will be entered by SUBSAFE, SOC, FBW and SFCC as needed)*

A. MAJOR: *(enter either YES or leave blank)*

B. MINOR: *(enter either YES or leave blank)*

C. SUBSAFE: *(enter either YES or leave blank)*

D. SOC: *(enter either YES or leave blank)*

E. FBW: *(enter either YES or leave blank)*

F. SFCC: *(enter either YES or leave blank)*

8. DEPARTURE CLASSIFICATION *(either DEVIATION or WAIVER will have a YES after it. FBWDR will be followed by YES if applicable for submarines)*

A. DEVIATION: (*enter either YES or leave blank)*

B. WAIVER: *(enter either YES or leave blank)*

C. FBWDR: *(enter either YES or leave blank)*

9. SYSTEM/COMPONENT/LOCATION/ESWBS: *(enter the system/component affected, location and ESWBS if known)*

10. NAVSEA DRAWING/PLAN NUMBER/PIECE NUMBER: *(enter the NAVSEA drawing number, plan number and piece number)*

11. REFERENCES: *(enter applicable references)*

12. APPLICABLE SPECIFICATIONS: *(enter the applicable specifications citing the reference from block 11. Be descriptive and specific. Enter the reference that provided the specification. This block should fully explain the specifications and include the Job Identification Number or part applicable (e.g., perform "J" pressure test to test pressure depth after mechanical assembly of joints "XXXX" in which software was replaced). This block must be explicit, so that no reference is required to the work procedure to understand the specifications.)*

13. SITUATION/DEGREE OF NON-COMPLIANCE: *(enter what the actual condition is. (enter qualitative/quantitative deviation description from block 12 including variations based on ship's conditions.) Sketches, drawings, QA forms, etc., may be attached, if they clarify the description of the non-conforming condition.)*

14. COMMENTS/RECOMMENDATION: *(enter justification, course of action, tests conducted, affected systems, ECD (if known))*

15. DATE ANSWER REQUESTED BY: *(MMDDYYYY enter the month, day and year that an answer to the DFS request is required by. For a Notification of a CO Approved DFS leave blank, no date is required)*

16. SUBMITTING ACTIVITY: *(enter the name of the activity submitting the departure)*

17. NEW JCN: *(enter the JCN that will be used to correct the non-compliance or discrepant condition)*

18. CO APPROVED DFS: *(enter either YES (if this is a Notification of a CO Approved DFS) or leave blank)*

LISTING OF APPENDICES.

A Vertical Audits
B Horizontal Audits
C Surveillances
D Submarine Quality Assurance Assessment Evaluation Criteria
E Quality Assurance Audit, Assessments and Surveillance Discrepancy Form

9.1 PURPOSE. Provide requirements, procedures, and criteria for audits, surveillance, evaluations and assessments of the Fleet Quality Assurance (QA) Program.

9.2 GENERAL. Command evaluation is necessary in order to ensure that positive and effective corrective actions are determined and taken in any deficient areas. Audit, surveillance, evaluation and assessment programs are objective and constructive evaluations of the quality, effectiveness and efficiency with which repairs are being accomplished. The purpose of these programs is to determine the activity's compliance with established directives and to serve as tools to reduce rework, improve efficiency and produce permanent improvement in operational readiness. The internal audit and surveillance program must be flexible and dynamic. Specific grooming, concentrating on any recent problems, should be done on a regular basis to increase the benefit of the audit or surveillance. Infrequent repair efforts, components which have repetitive failures, first time repair efforts or time critical work are excellent examples of the types of jobs where extra monitoring could prove most beneficial. Guides used should lend themselves to evaluate recent command or division issues. Involvement of the highest levels of the command is essential to a highly effective program. QA form 14 can be a valuable tool to accomplish the tracking of corrective actions.

9.2.1 Audits. Audits are an internal systematic comparison of records and requirements to ensure compliance with technical and administrative requirements. Different types of audits may be performed depending on the area to be audited and the purpose of the audit. The audit categories are:

a. Vertical Audit. These audits review all aspects of one repair or maintenance action. They track the system or component task from start to finish. This is done by verifying all aspects of the technical, material, process and documentation requirements associated with the work. These audits include attributes covering the entire spectrum of the task (e.g., training and qualification of personnel, technical and production requirements, cleanliness, material control). Appendix A provides guidelines for the preparation and conduct of vertical audits.

b. Horizontal Audit. These audits are conducted on only one specific area or aspect of the QA program (e.g., Re-Entry Control (REC), welding, training, qualification, and testing). They focus on the particular area and do not track a job from start to finish. Appendix B provides guidelines for preparation and conduct of horizontal audits.

9.2.2 Surveillance. Surveillance involves observation of actual work in progress or specific areas of concern. Appendix C provides general guidance for the preparation and conduct of a surveillance.

9.2.3 Evaluation. Evaluations provide the Commanding Officer with an internal review of the overall adequacy and effectiveness of the QA program.

9.2.4 Assessments. Assessments are an external programmatic review of processes to ensure compliance with parent directives. Assessments are normally conducted by the Command's Immediate Superior In Command (ISIC) with participation of other commands, as determined by the ISIC.

9.2.5 Key Elements. Fleet Activities will use, as a minimum, the following key elements to assure the effectiveness of their audit or surveillance program.

a. Conduct training on techniques for preparation, execution and the evaluation of findings prior to conducting an audit or surveillance for the first time.

b. Development and use of attribute sheets and guides. These should be based on key attributes from the source documents and are not meant to limit the scope of the review.

c. Selective use of QA form 14. QA form 14 is an effective tool to document and track those deficiencies that require further investigation and programmatic evaluation. Deficiencies that are minor in nature, or that do not indicate a weak area in the ship's or Fleet Maintenance Activity's (FMA) QA program, should be documented in the audit or surveillance conducted along with corrective action taken.

NOTE: CORRECTION OF SOME DEFICIENCIES ASSOCIATED WITH THE AUDITS OF RECORDS FOR CONTROLLED WORK MAY RESULT IN REWORK.

d. Develop a thorough review process focusing on audit and surveillance deficiencies to identify adverse trends and recurring deficiencies.

9.2.6 Record Retention. The retention of records for audits and surveillance will be per Part I, Chapter 10 of this volume.

9.3 RESPONSIBILITIES AND PROCEDURES.

NOTE: THE WELDER REQUIREMENTS OUTLINED IN THIS CHAPTER ARE FOR PRODUCTION WELDERS ONLY AND DO NOT APPLY TO SUBMARINE NUCLEAR PROPULSION PLANT OPERATOR WELDERS (NEC CODE 3351 AND 3361).

9.3.1 Ship's Force Audits, Surveillance and Evaluation Program.

a. Ship's Force personnel will conduct internal QA Audit and Surveillance as scheduled by the Quality Assurance Officer (QAO) as part of the ship's overall monitoring program. This program should focus on in-process controlled work and must use the guidance of Appendices A, B and C. QA form 14 should be used to document and track those deficiencies that require further investigation and programmatic evaluation. Minor deficiencies which do not affect certification of a component or system or the nature of the finding does not warrant specific follow up action, may be entered into a deficiency-tracking system for trend analysis or corrected without causal analysis or long-term corrective action unless recurring in nature.

b. Ship's Force will schedule and conduct the following audits:

(1) Annual audits to be conducted:

(a) Material control.

(b) QA Audit and Surveillance program.

(c) QA and welder training and qualification programs.

(d) QA records and record retention.

(e) Departure from Specification (DFS).

(f) Cleanliness controls to include:

1 Training and qualification.

2 Local directives.

(g) Technical documentation availability and controls.

(h) Shipboard calibration facilities. (Aircraft Intermediate Maintenance Department calibration facilities only.)

(i) (Submarines only) Submarine Safety (SUBSAFE), REC, Fly-By-Wire (FBW) and Scope of Certification (SOC) program compliance.

(j) (Submarines only) Unrestricted Operation (URO) Maintenance Requirement Card (MRC) Program.

(2) Perform a closeout audit.

(a) Perform a closeout vertical audit of all Controlled Work Packages (CWP) on a quarterly basis, except RECs, when not in a Chief of Naval Operations availability.

(b) Perform a post closeout audit of all RECs within 60 days following availability completion or within 60 days of work completion if work was not accomplished in availability.

(3) Written audit guides must be used for each audit. The QAO will develop audit guides for all audits. The audit guides should be tailored and customized for the specific organization or area being audited. One successful technique is to acquire a collection of audit findings from previous audits or other ships and incorporate these into the audit guides.

(4) All audits should be conducted on an annual basis unless a shorter period is specified. Those areas identified as weak should be audited more frequently. The periodicity of these audits must be adjusted by the QAO based upon the results of previous audits or surveillance.

(5) Maintain an auditable record of the most current Job Control Number to DFS verification.

c. Administer an aggressive QA surveillance program to ensure compliance with all QA requirements and to support work process improvements. The surveillance program must include the following elements:

(1) Surveillance of in-process work of all types.

(2) Surveillance of shipboard calibration facilities.

(3) Surveillance of all work center controlled material storage areas at a minimum frequency of semi-annually. This surveillance must be conducted by a qualified CMPO, QAI, QAS, or QAO.

d. Report results of all audits and Surveillances to the Commanding Officer with copies to the Executive Officer and cognizant Department Head or Division Officer.

e. Annually, the ship's QAO will evaluate the effectiveness of the QA Audit and Surveillance program. This reviews the results of the internal Audit and Surveillance program to identify trends or areas requiring additional monitoring. It should also review external inspections or monitoring deficiencies to determine if immediate and permanent corrective actions have been effective or if additional surveillance is required in a specific area.

f. (Submarines only). During Inactivation Availabilities, the ship may reach certain milestones where assigned audits and surveillances become obsolete. After the Inactivation Availability begins, the audits and surveillances required by section 9.3.1.b and 9.3.1.c of this chapter are no longer required when the milestones of reference (e) Section V are met. When each required audit or surveillance is secured, a letter, signed by the Commanding Officer or their designated representative, stating that the milestone is met must be retained with the QA audit and surveillance records until decommissioning.

9.3.2 Fleet Maintenance Activity Audit, Surveillance and Evaluation Program.

a. FMAs will schedule and conduct the following audits:

(1) Annual audits to be conducted:

(a) Material control.

(b) QA audit and surveillance program.

(c) QA, NDT, and brazer or welder training and qualification.

(d) QA records and record retention.

(e) Cleanliness controls to include:

1 Training and qualification.

2 Local directives.

3 Facilities such as permanent oxygen clean work areas, oxygen clean material storage areas and special clean or cleaning rooms (except for oxygen clean instrument room).

(f) Technical documentation availability and controls.

(g) Test equipment (mechanical, electrical and electronic) control, issue, receipt and maintenance.

(h) Audits of calibration facilities per references (a) and (b).

(i) (Submarine repairs only) Submarine Safety (SUBSAFE), REC, SOC and FBW program compliance.

(2) Perform a post closeout audit of all CWPs.

(a) Perform a post closeout audit of all CWPs quarterly except RECs.

(b) Perform a post closeout audit of all RECs within 60 days following availability completion.

(3) Written audit guides must be used for each audit. The FMA will develop audit guides for all audits. The audit guides should be tailored and customized for the specific organization or area being audited. One successful technique is to acquire a collection of audit findings from other FMAs and incorporate these into the audit guides.

(4) All audits should be conducted on an annual basis unless a shorter period is specified. Those areas identified as weak should be audited more frequently. The periodicity of these audits must be adjusted by the QAO based upon the results of previous audits or surveillance.

(5) Report results of all audits to the Commanding Officer with copies to the Repair Officer (Planning Officer at TRIDENT Refit Facilities) and cognizant Department Head or Division Officer.

b. Administer an aggressive FMA QA surveillance program to ensure compliance with requirements and to support FMA work process improvements. The surveillance program must include the following elements:

(1) Surveillance of in-process work of all types.

(2) Surveillance of calibration facilities per references (a) and (b).

c. Evaluations. The FMA QAO will conduct a semi-annual evaluation of the overall adequacy and effectiveness of the FMA's QA program.

(1) This evaluation should include the following areas:

(a) Findings of the annual internal audits.

(b) Results of the FMA's internal surveillance program.

(c) An evaluation of trends identified by the FMA QA audit and surveillance programs. Areas requiring additional monitoring should be identified.

(d) A review of external inspections or monitoring deficiencies (ISIC, Radiological Controls Practices Evaluation and Naval Reactors Representative's Office surveillance) that relate to the FMA QA program or QA records.

(e) The previous semi-annual evaluation to determine the effectiveness of corrective actions.

(f) Review of the last FMA assessment to check for recurring deficiencies and effectiveness of corrective action.

(2) Results of this evaluation will be provided to the Repair Officer, Department Head (Planning Officer at TRIDENT Refit Facilities) and Commanding Officer.

NOTE: IN THE CASE OF SHIPS WITH MULTIPLE CREWS (SUCH AS LCS, SSBN OR SSGN), ISIC APPENDIX D PROGRAM AREA EVALUATIONS MUST BE SUBMITTED FOR EACH CREW VICE A SINGLE REPORT REQUIRED BY THE TYCOM.

9.3.3 Immediate Superiors in Command Assessments, Audits, and Surveillance.

a. QA Program Assessment.

(1) ISICs must schedule and conduct a QA Program assessment in conjunction with the Fleet Readiness Training Plan (or as determined by each Type Commander (TYCOM)) of all assigned ships. This assessment will review these areas:

(a) Vertical audit of CWPs, to include Level I, Submarine Flight Critical Components per reference (d) and nuclear work (i.e., CWPs), as applicable.

(b) Material identification and control, including procurement, receipt inspection, marking, storage, issuing and in-process use.

(c) Qualification and training of QA personnel.

(d) (Surface Force ships and Aircraft Carriers) Metal fabrication, including welding, brazing, NDT qualification and processes.

(e) DFS.

(f) Cleanliness program.

(g) Audit and surveillance programs (to include QA-14 Binder).

(h) QA records and record retention.

(i) Effectiveness of corrective actions for previous audit findings.

(j) (Submarines only) SUBSAFE, SOC and FBW program compliance, to include REC exceptions.

(k) (Submarines only) URO MRC Program.

(2) (Submarines only) Assessments will be evaluated using the criteria provided in Appendix D. Electronic copies of the assessment reports will be forwarded to the TYCOM. Submission of the assessment may be via e-mail with appropriate cover letter.

(3) (Surface Force Ships) Copies of the assessment reports will be forwarded to the TYCOM noting completion of assessment as satisfactory with findings documenting corrective action taken or proposed corrective action or corrective action required to be taken by the TYCOM or higher authority.

b. ISICs will conduct the following additional periodic audits and surveillance:

(1) Conduct periodic monitoring of Ship's Force controlled work and QA program on all assigned ships during maintenance periods.

(a) Perform at least one surveillance during each refit, upkeep or FMA availability.

(b) Conduct monitoring during industrial availabilities.

(2) Conduct monitoring of assigned FMA's QA. This monitoring will include:

(a) Review of work procedures including opening and closing practices.

(b) Monitoring of in progress work both on tended ships and in FMA work centers.

c. (Submarines only) Additional ISIC Requirements.

(1) On completion of a Selected Restricted Availability (SRA), Pre-Inactivation Restricted Availability (PIRA), Major Maintenance Period (MMP), Extended Refit Period (ERP), Docking Phased Maintenance Availability (DPMA) or Interim Drydocking (IDD), the ISIC will conduct an audit to include the following:

(a) Conduct a 100% audit of CWPs for SUBSAFE work accomplished by Forces Afloat (FMA and Ship's Force).

(b) Conduct an audit of UROs assigned to Forces Afloat (Ship's Force and the FMA) by the Availability Work Package (AWP) and ensure all URO MRCs have been satisfactorily completed and documented within the required periodicity. Verify that all URO MRC items coming due within six months of availability completion are complete or assigned to a follow-on fleet availability. ISICs are not responsible for auditing UROs assigned to the depot in the AWP.

(c) Conduct a review of all outstanding Forces Afloat DFSs.

NOTE: UPON COMPLETION, PROVIDE THE SHIP'S COMMANDING OFFICER AND THE FMA COMMANDING OFFICER A COPY OF THE RESULTS FROM THE REVIEWS CONDUCTED PER PARAGRAPH 9.3.3 OF THIS CHAPTER AND IDENTIFY ANY DEFICIENCY THAT MUST BE CORRECTED OR RESOLVED PRIOR TO UNDERWAY. REPORT SIGNIFICANT DEFICIENCIES TO THE TYCOM.

(2) For submarines scheduled to and undergoing a Post Shakedown Availability (PSA), Depot Modernization Period (DMP), Extended Docking Selected Restricted Availability (EDSRA), Engineered Overhaul (EOH), Engineered Refueling Overhaul (ERO), Refueling Overhaul (RFOH) or Regular or Refueling Overhaul (ROH), the following audits will be performed:

(a) Vertical audits of all Forces Afloat (including FMA) CWPs done since commencement of the PSA, DMP, EDSRA, EOH, ERO, RFOH or ROH prior to cold operations and prior to Fast Cruise. CWPs audited for cold operations do not have to be re-audited for Fast Cruise. These audits must be done sufficiently early to avoid impact on the PSA, DMP, EDSRA, ERO, EOH, RFOH or ROH schedule. If deemed necessary by the ISIC or based on the amount of Forces Afloat work, the ISIC may conduct vertical audits prior to other Key Events (e.g., hot operations, criticality, undocking).

(b) Prior to commencement of Fast Cruise for the PSA, DMP, EDSRA, EOH, ERO, RFOH or ROH conduct an audit of the following:

1 Conduct an audit of UROs assigned to Forces Afloat (Ship's Force and the FMA) by the AWP and ensure all URO MRCs have been satisfactorily completed and documented within the required periodicity. Verify that all URO MRC items coming due within six months of availability completion are complete or assigned to a follow-on fleet availability. ISICs are not responsible for auditing UROs assigned to the depot in the AWP.

2 All outstanding Forces Afloat DFS.

3 Verify any non-conformance of a temporary nature has been correctly resolved per Part I, Chapter 8 of this volume.

(3) The ISIC will perform a Submarine Operating Cycle Extension Assessment of each submarine per reference (c) when required by TYCOM.

NOTE: THE ISIC IS ONLY RESPONSIBLE TO AUDIT FBW WORK PERFORMED BY FORCES AFLOAT OR TYCOM MANAGED ACTIVITIES.

(4) Conduct a 100% audit if Upgrades, Alterations or Major Repair Work of the FBW system were performed. Use the FBW message reporting process for certification specified in Volume II, Part IIII, Chapter 2 of this manual for availabilities of less than six months duration.

9.3.4 Type Commander Assessments. TYCOM QA Assessments of ISICs, where applicable, and submarine maintenance FMAs will be conducted annually, not to exceed 18 months. Assessments by TYCOMs will be accomplished concurrently with FMA assessments, explained in Volume IV, Chapter 2 of this manual, when scheduled in the same calendar year. Assessments will include review of the following areas as applicable:

a. Level I, Submarine Flight Critical Components per reference (d) and nuclear work (i.e., CWPs).F

b. Material identification and control including procurement, receipt inspection, marking, storage, issuing, and in-process use.

c. Qualification and training of QA personnel.

d. (FMA Only) Metal fabrication including welding, brazing, NDT, qualification, and processes.

e. DFS program.

f. Cleanliness program.

g. Audit and surveillance program.

h. QA records and record retention.

i. Effectiveness of corrective actions for previous audit findings.

j. (Submarines only) SUBSAFE, REC, SOC and FBW program compliance.

k. (Submarines only) URO MRC program.

9.4 REPORTING AUDIT, SURVEILLANCE AND ASSESSMENT RESULTS AND CORRECTIVE ACTION.

NOTE: WHEN REPEAT FINDINGS ARE NOTED, THE AUDITOR MUST DECIDE IF ROOT CAUSE ANALYSIS IS REQUIRED FOR THE SPECIFIC DEFICIENCY.

9.4.1 Reporting Requirements for External Audits, Surveillances and Assessments. Each Audit, Assessment and Surveillance Report finding should be a concise statement of the situation, complete to the extent that it will stand on its own as a summary of the condition. It should include the requirement for immediate corrective action where such action is indicated. In the event the finding is not a direct violation of a requirement or the nature of the finding does not warrant specific oversight from the auditing activity, yet it offers room for process improvement, no official response is required. These findings are offered to commands as a tool to improve their processes. Such findings will be clearly identified in the audit report reflecting that no official response is required. A discussion should generally be included to amplify the nature of the finding. If not included in the finding, identify positively what directives were violated. TYCOM, ISIC audit, assessment or surveillance findings will be reported using the format of Appendix E. The TYCOM or ISIC cover letter forwarding the QA Audit, Assessment or Surveillance Discrepancy forms (Appendix E) will include a summary of all areas. When repeat findings are noted, the effectiveness of the corrective action taken in response to previous audits should be addressed.

a. Ship's Force will provide a report to the ISIC of completed corrective action, proposed corrective action and schedule of accomplishment within 60 days of receipt of the ISIC Official Audit, Assessment or Surveillance Report. Specifically, the Ship's Force report must:

(1) For individual findings that require immediate corrective action, include a root cause, causal analysis, immediate corrective action and permanent corrective action.

(2) For areas evaluated as weak Below Standards include:

(a) A discussion of the fundamental root causes.

(b) A discussion of action taken to correct the causes and an evaluation of the effectiveness of this action.

(c) If the Below Standards Area or Immediate Corrective Action Report (ICAR) or Report of Corrective Action Required (RCAR) are repeat findings from the previous inspection, a discussion of the reasons why previous corrective action was not successful in improving any area where repeat findings indicate that previous corrective action was not effective.

(3) For all other individual findings, the ship will identify the appropriate corrective actions and retain them with the official report of corrective actions (i.e., Audits).

b. (Submarines and Submarine Repair Activities) For immediate corrective action items (items that must be corrected prior to certain operations):

(1) (Within the SUBSAFE Boundary) The immediate corrective action must be complete and verified with the ISIC prior to the ship's next underway for submerged operations or within 15 days of receipt of the ISIC Official Audit, Assessment or Surveillance Report, whichever is sooner. All deficiencies which affect certification must be categorized as "IMMEDIATE CORRECTIVE ACTION".

(2) (Within the SOC Boundary) The immediate corrective action must be clearly identified as to whether it must be completed prior to manned operations whether in-port or at-sea, or prior to unmanned operations at-sea or within 15 days of receipt of the ISIC Official Audit,
Assessment or Surveillance Report, whichever is sooner. This may require discussions with the Program Manager or the System Certification Authority (SCA). The corrective action must be complete and verified with the ISIC prior to the operation being conducted that was restricted.

(3) (Within the Level I Boundary) The immediate corrective action must be clearly identified as to what system operation restrictions must be in place prior to the completion of the corrective actions. The corrective action must be complete and verified with the ISIC prior to the operation of the system if restricted or prior to at-sea operations or within 15 days of receipt of the ISIC Official Audit, Assessment or Surveillance Report, whichever is sooner.

(4) (Within the FBW Boundary) The immediate corrective action must be complete and verified with the ISIC prior to the ship's next underway for surfaced or submerged operations or within 15 days of receipt of the ISIC Official Audit, Assessment or Surveillance Report, whichever is sooner. All deficiencies which affect certification must be categorized as "IMMEDIATE CORRECTIVE ACTION".

c. FMAs will provide a report to TYCOM via ISIC (if applicable) on completed corrective action, assessment of root cause, proposed permanent corrective action, and schedule of accomplishment within 60 days of receipt of the TYCOM QA Audit, Assessment or Surveillance Official Report. Those items determined to need immediate correction should be addressed on a case basis. No official response is required for those items indicated as not requiring a response.

d. Naval Sea Systems Command (NAVSEA) Deep Submergence System and SOC Surveys. Findings for Deep Submergence System and SOC Surveys are reported per Part III paragraphs 9.3.4.2 or 9.3.6.3 of this volume, as applicable. Survey findings will be formally forwarded to the Sustaining Activity via the ISIC and an informational copy to the respective TYCOM and maintenance activity, as applicable. The Sustaining Activity response will be provided to the SCA via the operational chain of command. Survey findings to allow manned operations will be processed as indicated here:

(1) When action identified by a specific card has been completed, a brief summary of the corrective action must be written on the card and the card must be signed by the Command responsible for the corrective action. All applicable Objective Quality Evidence (OQE) documenting the corrective action taken must be attached to the signed card and forwarded to the SCA via the ISIC and an informational copy to the respective TYCOM.

(2) For Category 1A, Category 1B and applicable Category 1C findings affecting manned operations, the corrective action must be completed and verified with the SCA prior to manned operations whether in-port or at-sea, or prior to unmanned operations at-sea, or within 30 days of receipt of the Official NAVSEA Survey Report, whichever is shorter.

(3) For all other findings, the Sustaining Activity will provide a report to NAVSEA, via the ISIC, of completed corrective action, proposed corrective action and schedule of accomplishment within 60 days of receipt of the Official NAVSEA Survey Report.

9.4.2 Correcting Deficiencies in Certified Controlled Work Packages or Objective Quality Evidence Records. Deficiencies identified in OQE of certified (closed) CWPs or OQE records (such as retained for REC exceptions) require action to update or correct the OQE to support continued certification of the system. No changes are permitted to a certified CWP, the certified supporting documents listed on the Maintenance Certification Record/REC or certified OQE record except as noted below. Additional OQE that is generated to clarify the certified documents can include providing additional administrative information to clarify the OQE

documentation, re-performance of the maintenance or performance of certification testing. The CWP OQE record must be annotated to associate the additional information to the document(s).

a. A QA form 14 must be generated for each OQE deficiency identified. Each QA form 14 must identify the deficiency, root cause and corrective action required or completed. The corrective action taken must clearly identify the revised OQE attributes such as data, an attached certified QA form, a separate CWP number (to document a rework such as performance of a required test, inspection or assembly process) or approved DFS (if applicable).

b. The QA form 14 serial number(s) must be annotated at the top of the QA form 9 or QA form to clearly indicate a QA form 14 has been generated to revise or update the OQE.

c. Once all required actions are completed to revise or update the OQE, a copy of the completed QA 14 forms and any additional documentation generated must be attached to the CWP QA form record such that it is clear that the OQE was revised or updated and certification of the system was restored. The QA form 14 index log must be updated to indicate the action was completed and the log must be retained per Part I, Chapter 10 paragraph 10.5.6 of this volume.

APPENDIX A

VERTICAL AUDITS

1. The function of a vertical audit is to determine if a single job has been completed following the required specifications. It tracks the job from start to finish by using the documentation used to perform and certify the job. The following steps are considered the minimum requirements to conduct an audit:
   a. Assemble the documentation for the job being audited.
   b. Assemble the references.
   c. Assign auditors who are familiar with the job being audited.
   d. Develop (if not already existing) attribute sheets to be used during conduct of audit.
   e. Assemble previous audit discrepancies, if applicable.
   f. Brief auditors on the following:
      (1) Purpose of vertical audit.
      (2) Common discrepancies from previous audits.
      (3) Audit attributes.
   g. Conduct audit in the following manner:
      (1) Review procedure against the governing references or documentation to ensure they reflect what was supposed to be accomplished, if it was accomplished, and how it was accomplished.
      (2) Review all documentation pertaining to OQE to ensure that it actually reflects that the job was done correctly. Additionally, a check for accuracy and completeness of forms is required.
      (3) All deficiencies noted, that require investigation or program evaluation to identify root cause and permit effective and permanent corrective action, will be documented on a QA Audit Discrepancy form (Appendix E), or QA form 14, as appropriate, and presented to the activity being audited.
2. There is no specific formula for the successful completion of a vertical audit other than time and attention to detail. If properly performed, this audit provides an excellent method to assess the effectiveness of the QA program, since it provides small concise snap-shots of several areas of the entire program.

APPENDIX B

HORIZONTAL AUDITS

1. The function of a horizontal audit is to review one specific area or part of an area to ensure compliance with the governing requirements. It focuses only on the documentation used to certify the area of concern. The following steps should be considered minimum requirements for an audit:
   a. Assemble the source documents and references for the area being audited.
   b. Assemble the documentation and records of area being audited.
   c. Develop (if not already existing) attribute sheets and audit guide to be used during conduct of the audit.
   d. Assemble previous audit findings (if available) for area being audited.
   e. Assemble and brief auditors on the following:
      (1) Purpose of audit.
      (2) Audit attributes.
      (3) Common discrepancies from previous audits (if available).
   f. Conduct audit in the following manner:
      (1) Review area being audited using attribute sheets and audit guide.
      (2) Review the organization's implementation and adherence to the source documents.
      (3) Review the documentation used to certify that the organization is in compliance with the governing requirements.
      (4) Document deficiencies which require investigation or program evaluation to determine root cause and permit effective and permanent corrective action on a QA Audit Discrepancy form (Appendix E), or QA form 14, as appropriate, and present it to the organization being audited.
2. If properly performed this type of audit provides an excellent assessment of a specific area within the overall QA program.

APPENDIX C

SURVEILLANCES

1. Surveillance programs provide an excellent method for activities to review in-process work and every day practices to determine if deficient conditions or areas exist. A surveillance is designed to observe in-process work on a particular job.
2. The following steps should be considered minimum requirements for surveillance:
   a. Personnel assigned to conduct a surveillance must be knowledgeable and trained in how to conduct surveillance.
   b. Personnel assigned to conduct a specific surveillance must be knowledgeable in the area to be monitored.
   c. Once assigned, the individual should prepare for the surveillance in the following manner:
      (1) Assemble the reference material for the surveillance (e.g., Technical Work Document, Formal Work Package, Planned Maintenance System MRC, URO MRC and process instruction).
      (2) Review reference material. This review may indicate other documentation that must be reviewed. This review should concentrate on the specific steps or portions of the procedure, which will be monitored during the surveillance.
      (3) Based on the review, attribute checklists may be developed and used, which are tailored to the area to be monitored.
      (4) Individual assigned must stay abreast of the job progress to ensure that the surveillance is conducted as required to observe the critical aspects. It serves no purpose to conduct the surveillance, if the job has progressed to a point of insignificant importance (e.g., surveillance of a valve repair after valve is repaired and being reassembled).
   d. Once all preparations are complete, the surveillance should proceed in the following manner:
      (1) Upon arrival at the job site, inform individuals performing the job that a surveillance is being conducted.
      (2) Position yourself so the job can be monitored but not to interfere with individual(s) performing the work.
      (3) Ensure that all key elements and attributes are observed. The focus must be on technical requirements and adherence to it. In those instances, where a safety issue, incorrect assembly, or violation of a technical requirement critical to the job is noted, identify this to the individuals performing the job and request they stop until the problem can be resolved.
      (4) Look beyond the items on the checklist, if used, for evidence that work is being done correctly.

(5) Once the surveillance is completed, inform the individuals performing the job of any violations or comments noted during the surveillance. Findings will also be discussed with appropriate supervisor.

(6) Write up surveillance findings and provide them to the QAO with copy to the division officer in charge of the work surveyed.

e. It is important that personnel involved in the surveillance program understand that they must focus their efforts towards improvement of the program by being objective and thorough when performing a surveillance. Identification of deficiencies should lead to effective corrective action and an overall improvement in the QA program.

APPENDIX D

SUBMARINE QUALITY ASSURANCE ASSESSMENT EVALUATION CRITERIA

1. The following guidance is provided to establish consistent grading standards across the Submarine Force. This will enable consistent evaluation of QA assessments in the Submarine Force and provide specific feedback to commands thus improving their ability to independently assess and maintain readiness in Undersea Warfare. The areas are based on the requirements of this chapter. The ISIC retains the ability to determine the grades of their units weighing all factors associated with the crew (timing since the last inspection, change out of personnel, volume of work conducted, etc.) The overall assessment will be graded as satisfactory or unsatisfactory. A grade of unsatisfactory will be assigned by the ISIC if any of the following criteria are met:

   a. Unsatisfactory in any of the following areas:

      SUBSAFE, REC, DSS-SOC, FBW-SCS Program or URO MRC Program or,

   b. Unsatisfactory in Vertical Audit of CWPs and Audit, Surveillance, Evaluation and Assessment Program or,

   c. Unsatisfactory in Vertical Audit of CWPs and QA Training and Qualification. Any additional trending may be provided by the ISIC. An overall grade of unsatisfactory will result in the ISIC restricting the ship from processing any controlled work and the ISIC will issue specific guidance for controlled work processing and performance up to and including assuming certification responsibilities for controlled work. This assumption of certification responsibilities by the ISIC will remain until the ISIC has deemed that adequate actions have been taken to correct the significant programmatic issues.

2. Quality Assurance Program Assessment area criteria.

NOTE: WHERE NOT PREVIOUSLY DEFINED BY REFERENCE (A), ISICS SHOULD GENERALLY REVIEW 20%, BUT NO LESS THAN 10 CWPS, OF THE TOTAL CWPS WORKED BY THE SHIP SINCE THE PREVIOUS AUDIT.

   a. Vertical Audit of CWPs: This review encompasses a sampling of RECs, REC Exceptions and Maintenance Certification Records. Deficiencies noted during the review that affect certification and require an ICAR are generally the grade drivers for this area of the assessment. Additionally, systemic weaknesses in documentation of OQE, determination of technical requirements (e.g., torque, retest) and ineffective supervisor reviews may also require an ICAR.

Vertical Audit of CWPs	
Grade	Attributes
Above Standards	No ICARs.
At Standards	≤ 2 ICAR.

Below Standards	≥ 3 ICARs or systemic problems in specific areas of work package development or review (i.e., inadequate supervisory reviews, inability to properly determine retest).
Unsatisfactory	ICARs written on four or more CWPs or ICARs written on 40% of the CWPs audited, whichever is greater.

b. Material Control: This review focuses on storage, handling and documentation. Inspections of lockers are the usual source of deficiencies in this area. Cards are written based on the magnitude of deficiencies. The magnitude should be determined by taking the total items with deficiencies and dividing by the number of items in the inventory. Additionally, systemic failures to follow both local and Joint Fleet Maintenance Manual (JFMM) requirements or installation of uncertified material into a controlled system may require an ICAR.

Material Control	
Grade	Attributes
Above Standards	No Locker deficiencies.
At Standards	< 10% deficiencies No ICAR on material Control.
Below Standards	≤ 25% deficiencies or one ICAR on Material Control (Controlled work or Program Coordination).
Unsatisfactory	> 25% deficiencies or one ICAR on Material Control (Controlled work or Program Coordination).

c. DEPARTURES FROM SPECIFICATION: This program review consists of a review of active DFSs and necessary OQE supporting clearance of DFSs against JFMM requirements. Deficiencies are normally centered on improper administration (e.g., incorrect Job Control Numbers) or inadequate record retention.

DFS	
Grade	Attributes
Above Standards	No deficiencies noted.
At Standards	Only minor (< 10) administrative deficiencies noted with program administration.
Below Standards	Multiple deficiencies with records (≥ 10) or systemic failure to follow JFMM and ISIC requirements for administration of program.
Unsatisfactory	Any ICAR assigned based on failure to follow DFS policies.

d. Audit, Surveillance, Evaluations and Assessment: This review should concentrate on validating the ship has an active Quality Assurance Program, Chain of Command involvement in the analysis of causes and corrective actions, and that required audits, surveillances, and evaluations are scheduled, performed, processed, and retained.

Audit, Surveillance, Evaluation and Assessment Program	
Grade	Attributes
Above Standards	All audits performed as scheduled **or** required.
At Standards	≤ 1 Audit not performed. Only minor (< 10) administrative deficiencies noted with program administration.
Below Standards	≤ 2 Audits not performed. Multiple deficiencies with records (≥10) or systemic failure to follow JFMM and ISIC requirements for administration of program.
Unsatisfactory	> 5 Audits not performed. Continued below standards performance with program.

e. QA Training and Qualification: This review will validate that the ship has an auditable qualification program and that the ship is maintaining the qualification (i.e., continuing training) as required by Part I, Chapter 3 of this volume.

QA Training and Qualification	
Grade	Attributes
Above Standards	Demonstrated QAO involvement in the QA Program. Demonstrated ability to incorporate lessons learned in QA Training Program. Demonstrated accountability in SUBSAFE, FBW-SCS and DSS-SOC awareness training for all required personnel.
At Standards	Only minor (< 10) administrative deficiencies noted with program administration. Adequate number of qualified personnel.
Below Standards	Multiple deficiencies with records (≥ 10) or systemic failure to follow JFMM requirements for administration of program (e.g., QA training plan not incorporated into Engineering Training Plan, qualification of personnel not auditable).
Unsatisfactory	Continued below standards performance with program.

f. QA Records and Record Retention: Review will ensure that OQE and program records are being maintained per Part I, Chapter 10 of this volume.

QA Records and Record Retention	
Grade	Attributes
Above Standards	All required records are available and auditable.
At Standards	Records retained in an auditable fashion. Only minor (< 10) administrative deficiencies or missing records noted.
Below Standards	Multiple deficiencies with records (≤ 25) or systemic failure to maintain records as required by JFMM requirements.

Unsatisfactory	Records completely un-auditable or loss of a controlled work package.

g. SUBSAFE, REC, DSS-SOC and FBW-SCS Program: This review ensures that the ship has maintained certification of SUBSAFE, REC, FBW-SCS and DSS-SOC systems following the applicable manuals. When ships utilize more than one level of control (e.g., SUBSAFE and FBW) then individual grades will be provided. ICARs of SUBSAFE, REC, FBW-SCS or DSS-SOC may influence the grade for this area as indicated here:

SUBSAFE, REC, SOC and FBW Program	
Grade	Attributes
Above Standards	Only minor (≤ 10) administrative deficiencies noted with program administration.
At Standards	Only minor (>10 but <25) administrative deficiencies noted with program administration.
Below Standards	Multiple deficiencies with records (≥ 25) or systemic failure to follow JFMM requirements for administration of program. Missing one or two REC Exception Documents.
Unsatisfactory	Failure to issue certification of continuity letters or failure to use REC controls when performing SUBSAFE, REC, DSS-SOC or FBW-SCS work when re-entry controls are required. Missing three or more REC Exception Documents.

h. URO MRC Program: This program review is to ensure that the ship maintains certification on all systems that contain URO measured parameters. Ships are required to call out the correct retest and maintain appropriate documentation for the program per volume VI, chapter 25 of this manual.

URO MRC Program	
Grade	Attributes
Above Standards	Not applicable.
At Standards	All documentation on hand. All UROs within periodicity. All maintenance affecting URO parameters properly retested.
Below Standards	Missing **or** un-auditable URO documentation (records were recovered from other organizations). Failing to properly document a URO retest for associated maintenance (retest performed for some other reason, e.g., periodicity).
Unsatisfactory	Operated at sea with an Out of Specification, untested or overdue URO parameter.

3. The following metrics will be identified in the Quality Assurance Assessment report issued by the ISIC:

CWPs		REC EXCEPTIONS		Total	
ISSUED	AUDITED	ON-FILE	AUDITED	ICARS	CARS
QAO History (since previous audit)					
	Rank/Name		Duration Assigned (mm/yy-mm-yy)		
Current					
Prior					
Assistant QAO History (since previous audit)					
	Rank/Name		Duration Assigned (mm/yy-mm-yy)		
Current					
Prior					
Qualification Status					
	Actual		Fleet Standard for Area		
Craftsman					
Planner					
CMPOs					
QAI					
WCS					
Welders					
O2 Clean					
STP Clean					
RP Clean

(b) SECNAV M-5210.1 - Department of the Navy, Navy Records Management Program, Records Management Manual
(c) NAVSEA T9044-AD-MAN-010 - Requirements Manual for Submarine Fly-By-Wire Ship Control Systems
(d) COMSUBLANT/COMSUBPAC NOTE C3120 - Submarine Operating Restrictions and Depth Authorizations
(e) NAVSEAINST 9210.39 - Submarine Nuclear Propulsion Plant Operator Welders: Procedures for Maintenance of Qualification
(f) NAVSEA 0924-062-0010 - Submarine Safety (SUBSAFE) Requirements Manual

10.1 PURPOSE. Provide record keeping and retention requirements for the Quality Assurance (QA) records used by the Fleet.

10.2 GENERAL. QA records provide the only lasting records and Objective Quality Evidence (OQE) that repairs and alterations performed on ships of the fleet were accomplished and subsequently tested following applicable specifications. The accuracy of these records will be beyond reproach and the record for each job will be complete so as to "stand alone", that is, the record will be understood without additional explanation.

10.2.1 Quality Assurance Record Requirements. Record keeping methods are of concern because they affect the apparent validity of a completed record. In order to ensure continued validity of Fleet maintenance records, and to provide the necessary OQE, the following record keeping rules are specified:

a. Hand written Record and Certification Signature Block or signature will be legible, in ink accompanied by signer’s printed name and the date signed. Erasures, write-overs, white outs, ditto marks, continuation arrows, signature stamps, etc., are not acceptable.

b. Neatness and readability of the original record is paramount. Copying records to "make them neat" is prohibited.

c. When an error is made, it will be corrected by drawing a single line through the error, recording the correct entry, initialing, dating and printing the name of the person making the correction.

d. When a questionable item is recognized and is subsequently justified or accepted, remarks explaining the decision will be added or appended as appropriate.

e. QA records pertaining to certification of nuclear work will be kept per the requirements of reference (a).

10.2.2 Record Retention in General. The following paragraphs summarize the general QA records that will be retained by each organizational group and how long they will be retained:

a. Reduced Size Records. Records (except radiographic film) required to be maintained may be reduced in size (such as by microfilming or CD-ROM in .pdf format only). However, the activity (ship or Fleet Maintenance Activity (FMA)) responsible for the record will ensure that the reduced size records are clearly legible, reproducible, and will so certify prior to destroying the original records. The following procedure will be followed for record reduction:

(1) Record reduction must be per reference (b).

(2) Compare the reduced size record against the original record to ensure each page of the original record has been reduced. This comparison must ensure that the front and the associated back of QA forms and tags have been reproduced.

(3) Reproduce two randomly selected pages of the reduced record into paper copy. Verify completeness and legibility of reproduced pages by comparing against the original record.

(4) Person making comparison will sign the logbook or some other permanent record to certify that the reduced size record is complete and legible after being reproduced.

(5) After steps (1) through (4) are satisfactorily completed, the original record may be destroyed.

b. Storage and Disposal.

(1) Nuclear Records.

(a) Records that are required to be retained for the life of the ship by reference (a) require Naval Sea Systems Command Nuclear Propulsion Directorate (NAVSEA 08) approval prior to record disposal.

(b) Records of nuclear controlled work will be retained at the activity (ship or FMA) for at least three years following completion of the work per reference (a). They may then be transferred to a Federal Records Center (FRC) or other designated records repository per reference (b), after these records are no longer required on board.

(c) Records stored at an FRC. Records stored at FRC will be per reference (b). Those records stored at a FRC or other designated repository will be appropriately cataloged to allow prompt retrieval if necessary. A copy of the list of records transferred to storage will be sent to the applicable Type Commander (TYCOM). TYCOM will retain these lists until the ship is stricken from Navy rolls. Activities may forward reactor plant work records to FRCs specifying that the records be destroyed 75 years from the date the records are sent to the FRC.

(2) Level I Records.

(a) Non-Nuclear and Non-Submarine Safety (SUBSAFE) Level I Records will be maintained for a minimum of 75 years from the ship's delivery date for new construction or 75 years from the availability completion date for repairs, overhauls, conversions, etc. Disposition instructions will be requested from NAVSEA 05P via the appropriate TYCOM after that time.

(b) Records of Level I work will be retained at the activity (ship or FMA) for at least three years following the completion of the work. After three years, the records may be stored ashore.

(3) Submarine Safety and Submarine Flight Critical Component (SFCC) Records.

(a) SFCC records must be kept per reference (c). The re-entry control log, completed Re-Entry Controls Forms (MCR/REC), and supporting documentation for SUBSAFE and SFCC work must be maintained for the life of the ship.

(b) Records of SUBSAFE and SFCC work will be retained at the activity (ship or FMA) for at least three years following the completion of the work. After three years the records, including completed RECs and supporting documentation, may be stored ashore or at a FRC in an auditable condition.

(c) Records stored at a FRC will be per reference (b). Those records stored at a FRC or other designated repository will be appropriately cataloged to allow prompt retrieval if necessary. Activities may forward SUBSAFE and SFCC records to FRCs specifying that the records be destroyed 75 years from the date the records are sent to the FRC.

(d) Approval to destroy non-ship-specific completed RECs, REC logs, completed RECs, and supporting documentation must be obtained from NAVSEA 07Q via the appropriate submarine TYCOM.

(4) Scope of Certification (SOC) Records.

(a) The REC log, completed RECs and supporting documentation must be maintained for the operational life of the Deep Submergence System.

(b) The REC log, completed RECs, and supporting documentation of work performed by the Sustaining Activity must be maintained by the Sustaining Activity in an auditable condition for the period between major availabilities and between sustaining surveys. When work requiring REC is accomplished by an activity other than the Sustaining Activity, the Sustaining Activity’s REC log must reflect this work and the Sustaining Activity must maintain a copy of the completed REC form (QA form 9 and QA form 10 when applicable). After this period, the records, including completed RECs and supporting documentation, may be stored ashore or at a FRC in an auditable condition.

10.3 TYPE COMMANDER QUALITY ASSURANCE RECORD RETENTION.

10.3.1 Assessment Record Retention. Retain copy of last assessment of FMAs and Immediate Superiors in Command (ISIC), where applicable, including the report of root causes and corrective action.

10.3.2 Departure from Specification Record Retention.

a. Maintain outstanding Departure from Specification (DFS) File. This file may be maintained on electronic media.

(1) An index that reflects the major DFS unique serial number assigned, date approved, the system or component including brief description and status.

(2) A copy of each outstanding major DFS and all applicable correspondence.

b. (Submarines only) A hard or electronic copy of cleared major SUBSAFE and SFCC DFSs with an index will be retained for life of ship.

10.3.3 Material Certification Statement Retention (Submarines only).

a. A hard or electronic copy of the TYCOM and NAVSEA SUBSAFE Material Certification message from new construction, Depot Modernization Period (DMP), Engineered Overhaul (EOH), Engineered Refueling Overhaul (ERO), Refueling Overhaul (RFOH) and Regular or Refueling Overhaul (ROH) will be retained for life of ship.

b. A hard or electronic copy of the Operating Cycle Extension Assessment used as basis for granting TYCOM extension of operating interval or operating cycle will be retained until the ship enters the next Selected Restricted Availability (SRA), DMP, EOH, ERO, RFOH or ROH for which the TYCOM extension applies.

10.4 IMMEDIATE SUPERIOR IN COMMAND QUALITY ASSURANCE RECORD RETENTION.

10.4.1 Assessment and Surveillance Record Retention.

a. Copy of last ISIC or TYCOM assessment of assigned ships and FMA including report of root causes and corrective action.

b. (Submarines only) Copy of the ISIC monitor surveillance reports of the FMA and assigned ships and the corrective action. Retain the past 18 months of monitor surveillance reports. These records may be kept with the other ISIC monitor program records.

c. (Submarines only) Copy of the last TYCOM assessment of the ISIC and corrective actions.

d. All SUBSAFE and Fly-By-Wire Certification Audit Reports of ships must be retained for the life of the ship per paragraph 10.2.2b. of this chapter.

10.4.2 Departure from Specification Record Retention.

a. Outstanding DFS Files.

(1) A hard copy or electronic media index that reflects the DFS unique serial number assigned, TYCOM major DFS number (if assigned), date approved, system or component including brief description and status.

(2) A copy of each outstanding DFS and all applicable correspondence.

b. A hard or electronic copy of cleared DFS with an index will be retained for 24 months.

10.4.3 Material Certification Statement Retention (Submarines only).

a. The SRA or Tiger Team certification statements from industrial activities will be retained until the next SRA, DMP, EOH, ERO, RFOH or ROH of the affected ship.

b. The ISIC request for Sea Trials (Volume II, Part III, Chapter 2, Appendix BC, and if used, Appendix BK of this manual) and the TYCOM message authorizing Sea Trials (Volume II, Part I, Chapter 3, Appendix BG, and if used, Appendix BL of this manual) for CNO availabilities less than 6 months until the next SRA, DMP, EOH, ERO, RFOH or ROH of the affected ship.

c. The most recent FMA end of upkeep statement.

d. The most recent ship generated, prior to underway, certification continuity report will be retained.

e. The audit guide and justification used for any Operating Cycle Extension Assessment of assigned ships will be retained per paragraph 10.3.3 of this chapter.

10.5 SHIP'S QUALITY ASSURANCE RECORD RETENTION.

10.5.1 Controlled Work Package Log. The Quality Assurance Officer (QAO) will maintain a Controlled Work Package (CWP) log, using the QA form 11, for the life of the ship. Re-copying or consolidation of this log is not to be done.

10.5.2 Completed Controlled Work Packages. All CWPs (retain onboard per paragraph 10.2.2 of this chapter), which includes:

a. Maintenance Certification Record (MCR/REC) (QA forms 9 and 10).

b. References unique to this task (e.g., NAVSEA letters, Liaison Action Requests) will be retained with the CWP unless specifically identified to allow recall, if necessary.

c. All enclosures documenting the OQE (e.g., QA forms and Ready for Issue (RFI) tags (NAVSEA 9210/2 and 9210)) will be retained.

d. FWPs executed as the core of a CWP must be retained with the CWP. After three years when CWPs are moved ashore or placed in storage, the FWP portion of the CWP may be discarded.

10.5.3 Controlled Material Records. Controlled material records will be maintained with the associated CWP. Those records not associated with a CWP will be maintained on file by the QAO.

a. The Supply Officer will maintain on file the letter of certification from the Supervisor of Shipbuilding, for all lots of Level I, SFCC Stock Program material and Nuclear Repair Parts during the new construction period. When the material is issued, a copy of this letter should be attached to the QA form 1.

NOTE: MATERIAL CONTROL RECORDS (E.G., QA FORM 2s) ARE NOT REQUIRED TO BE RETAINED FOR REMOVED AND REINSTALLED CONTROLLED MATERIAL AFTER THE CWP IS CLOSED.

b. The QAO will maintain controlled material records as outlined here. These records should be included in the appropriate CWP to the maximum extent practical. Retain material certification files for all Nuclear Level I, SFCC and Level I material installed.

(1) RFI tags for Nuclear Level I items installed.

(2) For any Nuclear Level I items received and installed without a RFI tag retain all OQE used to certify.

(3) All OQE used to upgrade material for non-nuclear "Level" use.

(4) All QA forms 3 for any rejected items accepted for use.

(5) A file of QA forms 1 with certification documentation.

10.5.4 Qualification Records. The QAO will maintain a master list of qualified Work Center Supervisors and Maintenance Planners, Controlled Material Petty Officers (CMPO), Cleanliness Inspectors, Quality Assurance Inspectors (QAI), Quality Assurance Supervisors (QAS), Oxygen Clean Workers and Oxygen Clean Instructors. The records will be retained for the duration the individual is onboard. Records in the case of re-qualifications must consist of a written plan and sub-paragraphs a. through d., as applicable, based upon the plan defined by the QAO or Department Head. The file will consist of:

a. Date Personnel Qualification Standard completed. For Oxygen Clean Workers and Oxygen Clean Instructors, the date the required course of instruction is completed.

b. Qualification test results. This includes a record of the examination cover sheet or electronic record of examination. In addition, a copy of the examination given with answers must be available either in electronic medium or hard copy. For Oxygen Clean qualifications, this entry is not required.

c. A record of the signed Final Qualification Page from the Personnel Qualification Standard.

d. Copy of the signed oral interview sheets for each qualification record.

e. (Submarines only) A master list of qualified Oxygen Clean Workers must be retained for the life of the ship.

10.5.5 Departure from Specification Records.

a. Outstanding DFS Files.

(1) An index that reflects the DFS unique serial number assigned, date approved, the system or component including brief description, annotation for SUBSAFE and status.

(2) A copy of each outstanding DFS and all applicable correspondence.

b. A copy of cleared DFS with an index will be retained for 24 months.

c. A copy of all DFS approved as permanent repairs, with an index, will be retained until they are reflected in the ship's selected records and drawings or technical variation documents.

10.5.6 Assessments, Evaluations and Audits. The QAO will retain records of assessments, evaluation and surveillance for the past 24 months (unless otherwise stated). The records will consist of:

a. QA form 14 index log that has the item numbers, work center responsible to correct and estimated date corrective action is due.

b. Copy of last higher authority assessment and the corrective action for all items.

c. Results of all Audits and Surveillances of the QA Program, including the root cause, immediate and permanent corrective action. (This may be kept with the rest of the monitor program records).

d. Last annual QA Program evaluation performed.

e. Maintain an auditable record of the most current Job Control Number to DFS verification.

10.5.7 Training.

a. (Submarines only) The ship must maintain a record of completion for each member of the crew indicating the date of completion for annual SUBSAFE Awareness, Fly-by-Wire Awareness and SOC Awareness Training, as applicable.

b. A hard or electronic copy of the record of lectures and seminars conducted during the past 12 months must be retained.

c. The record should show the topic, the lecturer or seminar leader, the monitor, and the number of personnel in attendance. Topics should include a brief listing of material covered where appropriate.

d. Attendance records by name are not required, except as noted in sub-paragraph a.

e. This record should be kept in a format that enables it to be compared against the Long Range Training Plan to determine the utilization of that plan.

10.6 ADDITIONAL SUBMARINE NUCLEAR AND UNIQUE QUALITY ASSURANCE RECORD RETENTION REQUIREMENTS.

10.6.1 Submarine Safety, Level I, Submarine Flight Critical Component, Scope of Certification and Other Certification (Submarines Only). The ship will retain the following records for the life of the ship or as indicated in this manual:

10.6.1.1 Reactor Plant Work Accomplishment Report. A copy of all completed Reactor Plant Work Accomplishment Reports.

10.6.1.2 Submarine Safety Material Certification. Copy of the TYCOM and NAVSEA SUBSAFE Material Certification message from new construction, DMP or overhaul until the ship's current status is reflected in reference (d). When the ship's current status is reflected in the notice, the messages may be destroyed, and the current notice will be retained.

10.6.1.3 End of Fleet Maintenance Availability Certification. Retain the last end of FMA Availability letter from the FMA.

10.6.1.4 Certification Continuity Reports. Retain the last certification continuity report sent by the ship.

10.6.1.5 Industrial Activity Certification Reports. A copy of all industrial activity and shipyard certification letters or messages from all SRA conducted between overhauls. In addition, a copy of the ISIC audit of SUBSAFE work performed by the industrial activity should also be kept. These may be disposed of at the next Extended Refit Period, SRA, DMP, EOH, ERO, RFOH or ROH.

10.6.1.6 Other Certification Reports . A copy of any other correspondence or messages that affect the certification of the ship or hull integrity should be retained until:

a. Resolved via inspection or maintenance or DFS as required or

b. As defined within the applicable correspondence or message.

10.6.1.7 Controlled Material. Except for Fly-By-Wire Diagnostic and Maintenance Computers (DMAC), Ship's Force is not required to use a QA form 1 to document receipt inspection of Level I, SFCC or SOC material to be immediately installed for a specific maintenance action. A QA form 2 will be used to document receipt inspection of material to be immediately installed. DMACs require a QA form 1 to document receipt inspection but do not require a QA form 2. The QA form 1 for the DMAC will be retained in the ship REC exception folder.

10.6.1.8 Scope of Certification. Retain a copy of the NAVSEA and TYCOM, if applicable, Scope of Certification or Sustaining Survey Certification letter or message.

10.6.1.9 Unrestricted Operations. Retain records related to the Unrestricted Operations Program as defined by volume VI, chapter 25 of this manual.

10.6.2 Nuclear Records.

10.6.2.1 Nuclear Record Retention. Nuclear records will be retained as required by reference (a). Reference (a) defines which nuclear records must be retained and length of retention as well as specifies requirements for retention of existing records. It is not intended to create new records for record retention requirements, if they do not already exist.

10.6.2.2 Nuclear Propulsion Plant Operator Welder Records (Submarines only). The Main Propulsion Assistant will retain the following qualification records per reference (e), for each welder as long as the welder is qualified onboard.

a. Documentation certifying original weld school completion.

b. QA form 20 for most current proficiency welds and qualification welds (the four most recent test assemblies).

c. Copy of current eye examination report.

10.6.3 Re-Entry Control/Maintenance Certification Record Exception Objective Quality Evidence and Other Controlled Assembly Records.

a. Retain a file of the most recent QA form 34 generated for each component or system assembled as a controlled assembly and performed as a REC exception per reference (f) and part III, chapter 5, paragraph 5.8.6.1.b of this volume.

b. Retain a file of the most recent QA form 34 generated for each component or system assembled as a controlled assembly and performed as a MRC exception per part I, chapter 2, paragraph 2.2.5 Note 2 and part I, chapter 2, paragraph 2.3.7.7.1 of this volume.

c. Retain a file of the most recent QA form 34 record generated per part I, chapter 7, paragraph 7.4.1.c of this volume for non-controlled systems or components until the system or component testing is completed satisfactory (e.g. completion of a controlled deep dive).

10.7 FLEET MAINTENANCE ACTIVITY QUALITY ASSURANCE RECORD RETENTION.

10.7.1 Submarine Safety, Nuclear, Level I, Scope of Certification and Other Certification. The QAO or designated officer will retain material certification (SUBSAFE, Nuclear, Level I, Scope of Certification and CWP category "Other") records for the life of each tended ship.

10.7.2 Reactor Plant Work Accomplishment Report (Submarines only). The Nuclear Repair Officer will retain a legible copy of all FMA generated Reactor Plant Work Accomplishment Reports.

10.7.3 Controlled Work Package Log. The QAO will maintain a CWP log, using the QA form 11, for the life of the ship. Re-copying or consolidation of this log is not to be done.

10.7.4 Completed Controlled Work Packages. All CWPs (retain onboard per paragraph 10.2.2 of this chapter), which includes:

a. MCR/REC (QA forms 9 and 10).

b. References unique to this task (e.g., NAVSEA letters, Liaison Action Requests) will be retained with the CWP unless specifically identified to allow recall, if necessary.

c. All enclosures documenting the OQE (e.g., QA forms and RFI tags (NAVSEA 9210/2 and 9210)) will be retained.

d. FWPs executed as the core of a CWP must be retained with the CWP. After three years when CWPs are moved ashore or placed in storage, the FWP portion of the CWP may be discarded.

NOTE: MATERIAL CONTROL RECORDS (E.G., QA FORM 2s) ARE NOT REQUIRED TO BE RETAINED FOR REMOVED AND REINSTALLED CONTROLLED MATERIAL AFTER THE CWP IS CLOSED.

10.7.5 Controlled Material Records. Controlled material records will be maintained with the associated CWP. Those records not associated with a CWP will be maintained on file by the QAO. The QAO will maintain controlled material records as outlined in this paragraph. These records should be included in the appropriate CWP to the maximum extent practical. Retain material certification files for all Nuclear Level I, SFCC, Level I and SOC material installed.

a. RFI tags for nuclear Level I items installed.

b. For any Nuclear Level I items received and installed without a RFI tag retain all OQE used to certify the material for installation.

c. All OQE used to upgrade material for non-nuclear "Level" use.

d. All QA forms 3 for any rejected items accepted for use.

e. A file of QA forms 1 with certification documentation.

f. All material control records from receipt inspection through installation will be maintained throughout the life of Deep Submergence Systems.

10.7.6 Assessment, Audits, Surveillance and Evaluations. The QAO will retain records for the past 18 months (unless otherwise stated). The records will consist of:

a. Last year and present year internal audit schedule.

b. Completed audit plans and guides and results (Associated QA forms 14 or other discrepancy reports).

c. QA form 14 index log that has the item numbers, work center responsible to correct and estimated date corrective action is due.

d. Copy of last higher authority assessment, surveillance and the corrective action for all items.

e. Schedule and results of internal surveillance of the QA Program, including the corrective action. (This may be kept with the rest of the monitor program records).

f. Last two semi-annual QA Program evaluations.

g. Two years' worth of records for calibration laboratory spot checks or sampling of outgoing work.

h. Two years' worth of records for Field Calibration Activity spot checks or sampling of outgoing work, as applicable.

10.7.7 End of Fleet Maintenance Activity Certification Report to Tended Submarines (Submarines only). The QAO will retain a copy of the last End of Fleet Maintenance Activity Certification Report to tended submarines issued per part I, chapter 5, paragraph 5.6.8.b. or part III, chapter 5, paragraph 5.8.7.b of this volume, as applicable.

10.7.8 Nuclear, Submarine Safety and Scope of Certification Work. The master lists of qualified CMPO or Controlled Material Handler, Cleanliness Inspector, Cleanliness Certifier, QAI and QAS (if assigned), will be maintained by name, for the duration the individual is assigned to the repair activity.

NOTE: AT AN FMA, CIVILIAN EMPLOYEE CONTINUING TRAINING KNOWLEDGE EXAMINATION QUESTIONS AND ANSWERS WILL BE RETAINED FOR TWO YEARS.

10.7.9 Qualification Record. The QAO will maintain a master list of qualified CMPOs, Controlled Material Handlers, Cleanliness Inspectors, QAIs, QASs, Oxygen Clean Workers and Oxygen Clean Instructors and a qualification file on each CMPO, Controlled Material Handler, Cleanliness Inspector, QAI and QAS. The records will be retained for the duration the individual is onboard. The file will consist of:

a. Date Personnel Qualification Standard completed. For Oxygen Clean Workers and Oxygen Clean Instructors, the date the required course of instruction is completed.

b. Qualification test results. This includes a copy of the examination cover sheet. In addition, a copy of the examination given with answers must be available either in electronic medium or hard copy. For Oxygen Clean qualifications, this entry is not required.

c. A copy of the signed Final Qualification Page from the Personnel Qualification Standard.

d. Copy of the signed oral interview sheets for each qualification record.

e. (Submarines only) A master list of all qualified Oxygen Clean Workers must be retained for the life of the FMA.

VOLUME V

PART I

CHAPTER 11

QUALITY ASSURANCE FORMS AND FORM INSTRUCTIONS

REFERENCES.

(a) NAVSEAINST 9210.23 - Requirements for Naval Nuclear Work at Naval Activities and Private Shipyards - Certification of Work Accomplishment and Data Retention of Associated Records and Retention of Design Records

11.1 PURPOSE. Provide Quality Assurance (QA) forms and tags with instructions for preparation and usage. QA forms for DSS and SOC use are located in Part III, Chapter 11 of this Volume.

11.2 USE OF QA FORMS. QA forms are used to create Objective Quality Evidence (OQE) when required by higher authority. While QA form instructions identify requirements for usage, they are not self-invoking. The use of a QA form is initiated from requirements of previous chapters within part I and part III of this volume. In the absence of guidance on any form instructions or while signing OQE, the individual shall sign, print their name, and date in any section that requires a signature. Examples of when QA forms are required by this volume include:

a. To support capturing OQE for a Controlled Work Package (CWP) as required by Chapter 2.

b. To support documenting a controlled assembly required by Maintenance Certification Record (MCR) exceptions (Chapter 2), SUBSAFE Re-Entry Control (REC) exceptions (Chapter 5), Alternate Testing (Chapter 7) or as specified in an approved Departure from Specification (DFS).

c. Documenting receipt inspections and end usage as required by Chapter 6.

d. Documenting DFS as required by Chapter 8.

e. Correcting certified OQE as required by Chapter 9.

11.3 NATIONAL ITEM IDENTIFICATION NUMBER. National Item Identification Number (NIIN) may be used whenever National Stock Number (NSN) is called for, including all QA forms. The NIIN uniquely identifies material in supply system and is adequate for OQE purposes.

11.4 CERTIFICATION SIGNATURES ON QA FORMS. When certification signatures, as defined in reference (a) and Part I, Chapter 2, Appendix C of this volume, are documented on QA forms of Nuclear CWPs, the single "*" or double "**" and associated statement are not required on the individual form.

11.5 LIST OF FORMS. This chapter provides copies of the QA forms and tags discussed throughout this volume

a. QA form 1. - Material Receipt Control Record.

b.	QA form 2.	-	Material ID/Control Tag.
c.	QA form 3.	-	Controlled Material Reject Tag.
d.	QA form 9.	-	Maintenance Certification Record/Re-Entry Control.
e.	QA form 10.	-	Maintenance Certification Record/Re-Entry Control Supplement Sheet.
f.	QA form 11.	-	Controlled Work Package (CWP)/Re-Entry Control (REC) Log.
g.	QA form 11A.	-	REC/MCR Exception Controlled Assembly Log

QA FORM 1 INSTRUCTIONS

MATERIAL RECEIPT CONTROL RECORD

PURPOSE: To document the proper receipt, control, end use and certification of material to the required "Level of Essentiality" for controlled material.

PROCEDURE: The numbered blocks on QA form 1 correspond with the block instructions listed.

NOTE: ATTACH SHIPPING PAPERS, IF PROVIDED, TO QA FORM.

NOTE: WITH THE EXCEPTION OF FLY-BY-WIRE DIAGNOSTIC AND MAINTENANCE COMPUTERS, SHIP'S FORCE IS NOT REQUIRED TO COMPLETE A QA FORM 1 TO DOCUMENT THE RECEIPT INSPECTION OF CONTROLLED MATERIAL IF THE ITEM(S) IS TO BE IMMEDIATELY INSTALLED FOR A SPECIFIC MAINTENANCE ACTION. IN THESE CASES, THE RECEIPT INSPECTION WILL BE CAPTURED ON A QA FORM 2. IF THE MATERIAL IS NOT UTILIZED DURING THE SPECIFIC MAINTENANCE ACTION FOR WHICH IT WAS PROCURED IT SHOULD BE TURNED BACK IN TO SUPPLY. IF THE MATERIAL IS TO BE RETAINED FOR A FUTURE MAINTENANCE ACTION, A QA FORM 1 MUST BE FILLED OUT PRIOR TO PLACING THE MATERIAL IN A CONTROLLED MATERIAL STORAGE LOCKER OR STORAGE AREA.

NOTE: IF THE COMPONENT HAS A SHORTENED MATERIAL IDENTIFICATION AND CONTROL (MIC) MARKING, ENSURE THE FULL MIC MARKING FROM THE SHIPPING DOCUMENTS, TAGS, OR PACKAGING IS ENTERED ON QA FORM 1 AND QA FORM 2.

NOTE: IF PORTIONS OF A COMPONENT WILL BE CANNABALIZED FOR INSTALLATION VICE INSTALLING THE ENTIRE COMPONENT, DISPOSITION IN ACCORDANCE WITH PART I, CHAPTER 6, PARAGRAPH 6.3.9.1.D OF THIS VOLUME.

BLOCK 1 - MATERIAL NOMENCLATURE

Enter the noun name of the material (e.g., 5/8" - 11 NICU studs, 10" O.D. CUNI Barstock).

BLOCK 2 - LEVEL OF ESSENTIALITY

Enter the applicable Level of Essentiality (SUBSAFE, Level I, Nuclear Level I, Submarine Flight Critical Component (SFCC) or Scope of Certification (SOC) Material Control Division (MCD)) for the material received. For assemblies such as valves, the Level of Essentiality will be the Level of Essentiality for the entire assembly, not individual parts.

a. Nuclear Level I:

(1) Material received with a "Target" Ready for Issue (RFI) tag or Naval Sea Systems Command (NAVSEA) Prime Contractor Material determined to be Nuclear Level I.

(2) Material from stock system required to be certified as Nuclear Level I.

b. SUBSAFE:

(1) Special Material Identification Code (SMIC) material with valid MIC markings.

(2) Submarine Antenna Quality Assurance Material (SAQAM) SMIC material.

(3) Open purchased and stock system non-level material required to meet SUBSAFE requirements.

c. Level I:

(1) LI, C1, S1 or D1 SMIC material with valid MIC markings.

(2) Non-level material required to be upgraded to Level I requirements.

d. SOC MCD A or MCD B: The entry will be based on the SOC Level of Essentiality as determined in Part III, Chapter 6 of this volume.

BLOCK 3 - MIC NO./I.D. NO.

NOTE: THE PNSY "TRACE CODE" RESEMBLES A MIC NUMBER BUT DOES NOT INCLUDE THE GENERIC MATERIAL DESIGNATOR (E.G., 98205-003A).

a. Enter the MIC or the identification number or name plate data (I.D. No. if no MIC No.) etched on the major part of the assembled material received (some individual parts may also have MIC numbers that need not be recorded). Fleet Maintenance Activity (FMA) will enter MIC upon completion of upgrading for FMA certified or upgraded material. Ships (Non-FMA) will enter the FMA MIC No. for material that the FMA certifies for the ship. For rotatable items, enter the appropriate rotatable pool serial number (e.g., rp-148a, tin-292-11893, etc.).

b. For fasteners enter either the MIC number (when MIC number is marked on the fastener or the individual tag for some small fasteners) or the color code and the PNSY "trace code" provided on the shipper and the package or box.

c. If the material is MCD B, enter Markings on the material or documented on the shipping papers providing identification to material type or military specification.

d. If the material is MCD A, enter the Traceability Number.

BLOCK 4 - REQUISITION NUMBER (REQ. NO.)

Enter the Requisition No. (invoice number) that was used to order the material or appears on shipping documents (if provided).

BLOCK 5 - JULIAN DATE

Enter the five digit Julian Date (e.g., 90121, 91200, 92030) the material is received.

BLOCK 6 - NUMBER RECEIVED

Enter the total number received (must agree with the invoice). If the material is, for example, "Barstock" enter the number of pieces and total length. Only one QA form 1 is required if the entire lot has the same MIC number and is receipt inspected on the same day.

BLOCK 7 - NSN/SMIC

Enter the National Stock Number (NSN), including the SMIC, of material received. If material is identified only by drawing and piece number, enter them.

BLOCK 8 - VENDOR'S MARKINGS

a. Enter any Vendor's Marking (heat, lot) present on the material.

b. For fasteners, enter the heat or lot number, material type, and manufacturer's symbol (for nuts containing a self-locking insert, the color of the insert is the manufacturer's symbol).

BLOCK 9 - REQUIRED CERTIFICATION DOCUMENTS FURNISHED (SIGNATURE AND DATE)

a. If required certification documentation is provided, and the item passes receipt inspection per Chapter 6, enter an "X" in the "YES" block. Controlled Material Petty Officer (CMPO) or Controlled Material Handler (CMH) print name, sign and date the block to certify the item passed receipt inspection. Blocks 10 through 15 are completed as required, incomplete blocks are left blank. Attach a QA form 2. A copy of any certification documentation will be attached to the QA form 1.

b. If the certification documentation is unacceptable or the material fails receipt inspection or the item is non-level material undergoing upgrading, enter an "X" in the "NO" block, attach a QA form 3 to the item, and notify the Quality Assurance Officer (QAO) or Quality Assurance Supervisor (QAS). CMPO or CMH print name, sign and date the block.

BLOCK 10 - ENTER APPROPRIATE CODE

QAO or QAS will mark the applicable blocks signifying attributes that must be verified for receipt inspection, by referring to the appropriate references, using the appropriate code; "X" (whenever records are required) or "O" (whenever records are not required, e.g., visual inspection).

BLOCK 11 - INSPECTION RESULTS, REMARKS, SIGNATURE AND DATE

a. CMPO or Quality Assurance Inspector (QAI) or QAS will enter the results of all inspections and, if unsatisfactory, state the reason for failure.

b. Print name, sign and date all entries which certifies the inspections, issues, and records.

NOTE: BLOCKS 12, 13 AND 14 ARE COMPLETED AS REQUIRED, INCOMPLETE BLOCKS ARE LEFT BLANK.

BLOCK 12 - DISPOSITION

Check the appropriate block based upon inspection results documented in Block 11 and fill out Blocks 13 or 14 as applicable.

BLOCK 13 - CERTIFIED

Check the appropriate block signifying the level of essentiality to which the material has been inspected or certified. For SOC material, enter the applicable MCD designator (A or B) in the blank.

NOTE: NON-LEVEL ITEMS UPGRADED OR CERTIFIED WILL HAVE THE ASSIGNED MIC NUMBER ENTERED IN BLOCK 3 ABOVE PRIOR TO SIGNATURE IN BLOCK 15.

BLOCK 14 - DOWNGRADE

Check the appropriate block, if "reject" is checked in Block 12.

BLOCK 15 - SIGNATURE AND DATE

QAO or QAS responsible for Blocks 10-14 will print name, sign and date certifying the record as correct.

BLOCK 16 - Same as Block 1.

BLOCK 17 - Same as Block 2.

BLOCK 18 - Same as Block 3.

BLOCK 19 - Same as Block 4.

BLOCK 20 - Same as Block 7.

BLOCK 21 - Same as Block 6.

BLOCK 22 - Enter the date that the material is issued.

BLOCKs 23A, 23B, AND 23C - Enter the Unit Identification Code (UIC), Work Center (WC), and the job sequence number that the material is issued against.

BLOCK 24 - Enter the system that the material is issued for.

BLOCK 25 - Enter the Controlled Work Package (CWP) serial number that the material is issued for.

BLOCK 26 - Enter the amount of material issued.

BLOCK 27 - Enter the amount of material remaining after issue.

BLOCK 28 - CMPO or CMH issuing material, print name.

BLOCK 29 - Enter "Yes" or "No" as appropriate.

BLOCK 30 - Enter Level the material was downgraded to.

BLOCK 31 - QAO sign, signifying authorization to downgrade material.

NOTE: THE COMPLETED QA FORM 1 WILL BE FORWARDED TO THE QA OFFICE, WHEN THE MATERIAL HAS BEEN ISSUED FOR INSTALLATION.

QA FORM 2 INSTRUCTIONS

MATERIAL IDENTIFICATION (ID)/CONTROL TAG
LANTFLT 4790/2 (8-01) S/N 0103-LF-981-0300

PURPOSE:

1. Used for receipt inspection, certification and traceability of new controlled material.
2. Used to maintain traceability and identification of Level I, Nuclear Level I, SOC, SFCC and non-level controlled items removed from a controlled system or component during maintenance including transfer between organizations until reinstalled.

PROCEDURE: The numbered blocks on QA form 2 correspond with the block instructions listed. Two sets of instructions are provided depending on purpose.

PURPOSE 1: RECEIPT OF NEW MATERIAL FROM SUPPLY SYSTEM. CMPO OR CMH WILL COMPLETE BLOCKS 1-7 DURING THE RECEIPT INSPECTION.

NOTE 1: FOR NUCLEAR MATERIAL, ANY RFI OR OTHER CERTIFICATION TAGS ATTACHED TO THE ITEM WILL REMAIN ATTACHED UNTIL THE MATERIAL IS INSTALLED.

NOTE 2: IF PORTIONS OF A COMPONENT WILL BE CANNABALIZED FOR INSTALLATION VICE INSTALLING THE ENTIRE COMPONENT, ATTACH A QA FORM 2 (PURPOSE 1 INSTRUCTIONS) TO THE PORTIONS OF THE COMPONENT OR ASSEMBLY TO BE INSTALLED IN THE SYSTEM. REMOVE THE ORIGINAL QA FORM 2 (DISCARD) AND ATTACH A NEW QA FORM 2 (PURPOSE 1 INSTRUCTIONS) DOCUMENTING THE ACTUAL CONFIGURATION OF THE REMAINING PORTION OF THE ORIGINAL ASSEMBLY. DISPOSITION IN ACCORDANCE WITH PART I, CHAPTER 6, PARAGRAPH 6.3.9.1.D OF THIS VOLUME.

BLOCK 1 - TAG (A) OF (B)

a. Block A – Enter “1”. For additional tags used during the fabrication, transfer or installation process, number the tags in sequential order as used (2, 3, 4, etc.).

b. Block B - The last number reflects the total number of tags used for this item during this maintenance action. This block is filled in by the craftsman at the time Block 20 is signed for non-SUBSAFE or non-SOC systems. For SUBSAFE, Nuclear or SOC systems, this block is filled in by the QAI at the time Block 21 is signed on the last tag (e.g., 3 of 3).

BLOCK 2 - MIC NO./SERIAL NO.

NOTE: THE INFORMATION ENTERED FOR FASTENERS MAY NEED TO INCLUDE INFORMATION FROM BLOCKS 3 AND 8 FROM QA-1.

a. New Material:

(1) Enter the MIC etched on the material. If the component has no MIC or a shortened MIC marking, ensure the full MIC marking from the shipping documents, tags or packaging is entered.

(2) For Flight Critical Components, enter the component serial number.

(3) For TRIPER Program Components, enter the TRIPER component serial number (e.g., tin-292-11893).

b. Fasteners: Document the markings from the fastener to include either:

(1) The color code and the heat or lot number, material type, and manufacturer's symbol (for nuts containing a self-locking insert, the color of the insert is the manufacturer's symbol).

(2) The MIC number (when MIC number is on the fastener or on the individual tag for some small fasteners).

c. If the material is MCD B, enter Markings on the material or documented on the shipping papers providing identification to material type or military specification.

d. If the material is MCD A, enter the Traceability Number.

BLOCK 3 - MAT LEVEL

Check the NEW block and the appropriate block for Level of Essentiality [e.g., check LI, NUC LI, if Level I or Nuclear Level I, or check SOC, if Scope of Certification, or check SFCC if Submarine Flight Critical Component or check "OTHER"]. This block should be the same as the "Level" on the QA form 1.

BLOCK 4 - MATL DESCRIPTION

Enter the quantity, size and noun name of the material (e.g., (6 each) 5/8" - 11 NICU studs, 10" O.D. CUNI barstock 6" long).

BLOCK 5 - NSN/SMIC

Enter the NSN, including SMIC, of the material. If none, enter "NONE".

BLOCK 6 - RECEIPT INSPECTION COMMENTS

Enter receipt inspection results (i.e., SAT or UNSAT). If inspection results are UNSAT in Block 6, initiate a QA form 3. For UNSAT results in Block 6, the CMPO will only sign Block 7 of the QA form 2 if the QAO dispositions the item suitable for use on Block 12 of the QA form 3. For SAT receipt inspection of SOC MCD Level A or B material received without an RFI tag or an EB Blue tag, enter the following statement with the blank having the appropriate A or B entered:

"Material Receipt Inspected SAT and is certified as SOC MCD ___."

This entry will be signed by the QAO.

For SAT receipt inspection of SOC MCD A or B material received with an RFI tag or an EB Blue tag, enter the MCD Level (i.e., MCD A or MCD B) after the receipt inspection results.

BLOCK 7 - CMPO/CMH

CMPO or CMH certifying the entries in Blocks 1-7 print name, enter signature and date.

NOTE 1: THE CMPO WILL VERIFY THAT THE ITEM IS WHAT IS REQUIRED FOR INTENDED USE PRIOR TO TURNING THE MATERIAL OVER TO CRAFTSMAN FOR FABRICATION OR INSTALLATION AND FILL IN BLOCKS 8 THROUGH 12 AT THE TIME THE MATERIAL IS ISSUED.

NOTE 2: IF A PARTIAL ISSUE IS MADE (E.G., A SECTION OF BARSTOCK IS CUT OFF A LARGER PORTION OR ONLY 4 OF 12 NUTS IN A BOX ARE USED), THE CMPO MAKING THE ISSUE WILL COMPLETE BLOCKS 1-12 OF A NEW QA FORM 2 FOR THE PARTIAL ISSUE PER PART I, CHAPTER 6, PARAGRAPH 6.3.9 OF THIS VOLUME AND UPDATE THE ASSOCIATED QA-FORM 1. THE ORIGINAL OR "PARENT" QA-FORM 2 DOCUMENTING ORIGINAL RECEIPT OF MATERIAL WILL NOT BE MODIFIED. THE QA-FORM 1 WILL TRACK DISTRIBUTION OF MATERIAL.

BLOCK 8 - UIC, WC, JSN AND CWP SERIAL NO.

At the time of issue, enter the Job Control Number (JCN) [UIC, WC and Job Sequence Number (JSN)] and CWP serial number. If removal or installation of existing material is authorized as a REC exception, CWP serial number may be marked "N/A".

BLOCK 9 - WC NO.

Enter the number of the WC receiving material (e.g., EM01, 10C, 38A).

BLOCK 10 - DATE

Enter date the WC received the material.

BLOCK 11 - REMARKS

Enter the reason for issue (e.g., issued to 31A for manufacture of fitting, issued to EM01 for installation).

BLOCK 12 - CRAFTSMAN/CMPO/CMH/QAI

For Initial Material Issue: Print name, enter signature signifying issue of material by CMPO or CMH. For Fabrication or Transfer (Additional QA form(s) 2 required). Print name, enter signature signifying receipt of material.

NOTE: THE REMAINING SECTIONS OF THE TAG ARE COMPLETED BY THE COGNIZANT CRAFTSMAN, CMPO, CMH OR QAI DURING THE FABRICATION OR +INSTALLATION PROCESSES.

NOTE: SATISFACTORY CONDITION OF MATERIAL EXCHANGED BETWEEN WCs IS ASSUMED, UNLESS AN ENTRY IS MADE IN REMARKS INDICATING MATERIAL IS REJECTED.

BLOCK 13 - WC NO.

Enter the number of the WC receiving material (e.g., 56A or EA01).

BLOCK 14 - DATE

Enter date material received.

BLOCK 15 - REMARKS

Record work performed while the material was in the custody of the WC (e.g., drilled screws and installed Nyloc pellets).

BLOCK 16 - CRAFTSMAN/CMPO/CMH/QAI

Cognizant craftsman print name and sign to certify the blocks are complete and correct.

NOTE: IF 2 OR MORE WCs ARE INVOLVED IN THE FABRICATION PROCESS, ADDITIONAL QA FORMS 2 WILL BE FILLED OUT AND NUMBERED IN ACCORDANCE WITH THE INSTRUCTIONS ABOVE FOR BLOCK 1.

NOTE: IF FOR ANY REASON THE COGNIZANT CRAFTSMAN REJECTS THE MATERIAL THEY WILL COMPLETE AND ATTACH A MATERIAL REJECT TAG (QA FORM 3) AND LEAVE THE QA FORM 2 ATTACHED.

NOTE: BLOCKS 17 THROUGH 21 WILL CONTAIN THE RECORD OF FINAL INSTALLATION. IF ADDITIONAL TAGS ARE REQUIRED FOR THE MATERIAL DURING THE FABRICATION AND TRANSFER PROCESS (MORE THAN TWO WCs OR PROCESSES INVOLVED IN THE REPAIR), BLOCKS 9 THROUGH 12 AND BLOCKS 17 THROUGH 21 MAY BE USED.

BLOCK 17 - WC NO.

Enter the number of the WC responsible for installation of the material (e.g., 56A or EA01).

BLOCK 18 - DATE

Enter the date of installation.

BLOCK 19 - REMARKS

Enter the location where the material was installed into the system or component (e.g., installed in AHP-514, installed in system at joints ASW-70014(F) and ASW-70015(F), etc.).

BLOCK 20 - CRAFTSMAN

Cognizant craftsman print name and enter signature signifying that the material is the correct material, is installed correctly and per the applicable technical specifications. Remove the QA form 2 and file with the CWP if a QAI is not required.

NOTE: A QAI INSPECTION IS REQUIRED FOR NEW MATERIAL INSTALLATIONS FOR JOINTS AND ASSEMBLIES WITHIN THE HULL INTEGRITY BOUNDARY (INCLUDING ELECTRICAL HULL FITTING (EHF) TO PRESSURE HULL JOINTS), SOC JOINTS AND COMPONENTS, SUBSAFE SEAWATER OR SEA-CONNECTED FLANGED PIPE JOINTS, AND ALL NUCLEAR LEVEL I SYSTEM JOINTS AND COMPONENTS.

BLOCK 21 - INSPECTOR

When required, inspector print name and enter signature and date certifying that the material is the correct material, acceptable for application and correctly installed. Enter NA in QAI signature space when QAI is not required. Remove the QA form 2 and file with the CWP.

NOTE: IF, FOR ANY REASON, A CRAFTSMAN, CMPO, CMH OR QAI REJECTS MATERIAL, THEY WILL COMPLETE AND ATTACH A QA FORM 3, LEAVING THE QA FORM 2 ATTACHED. TAG USED ITEMS WHICH MUST BE TURNED IN TO SUPPLY AND ANY ITEM WHICH IS NOT PROPERLY DISCARDED (E.G., AT THE END OF WORK DAY OR SHIFT).

NOTE: WHEN EXISTING CONTROLLED MATERIAL IS REINSTALLED INTO THE SYSTEM, THE QA FORM 2 WILL BE COMPLETED AND RETAINED WITH THE CWP UNTIL THE CWP IS CLOSED OUT. THE ACCOUNTABILITY FOR CONTROLLED MATERIAL REINSTALLATION IS ON THE APPLICABLE OBJECTIVE QUALITY EVIDENCE (OQE) RECORD (E.G., JOINT OR COMPONENT REPAIR RECORD, QA FORM 34). THE QA FORM 2 MAY BE DISCARDED AFTER THE CWP IS CLOSED OUT.

PURPOSE 2: UPON REMOVAL FROM SYSTEM OR COMPONENT (EXISTING MATERIAL).

NOTE: DAMAGED EXISTING MATERIAL REMOVED FROM CONTROLLED SYSTEMS WHICH IS NOT INTENDED TO BE REPAIRED OR REUSED AND IS INTENDED TO BE DISPOSED OF AS TRASH DOES NOT REQUIRE A QA FORM 2 TO BE ATTACHED PROVIDED THE MATERIAL IS IMMEDIATELY DISCARDED. EXAMPLES OF THIS ARE DAMAGED VALVE STEMS, DAMAGED COMPONENT FASTENER NUTS AND STUDS. DOES NOT APPLY TO TURN-IN ITEMS SUCH AS DEPOT LEVEL REPAIRABLE.

BLOCK 1 - TAG (A) OF (B)

a. Number the tags in sequential order as used (e.g., 1, 2, 3, etc.).

b. The last number reflects the total number of tags written for each part removed from a disassembled component or system. This block is filled in by the craftsman at the same time Block 20 is signed for final installation of non-SUBSAFE or non-SOC systems. For SUBSAFE, Nuclear or SOC systems, the QAI will fill in this block at the time Block 21 is signed on the last tag (e.g., 3 of 3).

BLOCK 2 - MIC NO./SERIAL NO.

Enter the MIC etched on the material. Where there is no visible MIC number, enter existing material marking, such as color code for fasteners, heat or lot number, and manufacturer's symbol (for nuts containing a self-locking insert, the color of the insert is the manufacturer's symbol). If none, enter “NONE.” For rotatable items, enter the appropriate rotatable pool serial number (e.g., rp-148a, tin-292-11893, etc.). For Flight Critical Components, enter the component serial number. For periscopes, enter the registry number. For mast, enter the MIC etched on the outer housing.

BLOCK 3 - MAT LEVEL

Check the EXISTING block and the appropriate block for Level of Essentiality (e.g., check LI, NUC LI, if Level I or Nuclear Level I, or check SOC if Scope Of Certification, SFCC, or check “OTHER”).

BLOCK 4 - MATL DESCRIPTION

Enter the quantity, size and noun name of the material (e.g., 6 each, 5/8" - 11 NICU studs, AHP-56 4500/2000 PSI Reducer).

BLOCK 5 - NSN/SMIC

Enter "NA".

BLOCK 6 - RECEIPT INSPECTION COMMENTS

Enter "NA".

BLOCK 7 - CMPO/CMH

Enter "NA".

BLOCK 8 - UIC, WC, JCN AND CWP SERIAL NO.

Enter the JCN, consisting of the UIC, WC, JSN, and CWP serial number in the appropriate blocks. If removal or installation of existing material is authorized as a REC exception, JCN and CWP serial number may be marked "N/A".

NOTE: CAUTION MUST BE TAKEN WHEN USING THE WORDS "REPAIRED", "REINSTALLED" TO ENSURE THAT THESE WORDS ARE USED PROPERLY.

TAG BACK SIDE

(This side is filled out by the QAI, CMPO, CMH or craftsman).

BLOCK 9 - WC NO.

Enter the number of the WC which completed Blocks 1-8 of the tag (e.g., 56X, EA01).

BLOCK 10 - DATE

Enter date material removed from system or component.

BLOCK 11 - REMARKS

Enter information regarding why component was removed (e.g., removed for repair of valve seats, removed for transfer to AS-40 for repair and testing).

BLOCK 12 - CRAFTSMAN/CMPO/CMH/QAI

The cognizant craftsman will print name and sign.

NOTE: IF MORE THAN ONE WC IS INVOLVED IN THE FABRICATION OR REPAIR PROCEDURE, BLOCKS 13-16 WILL BE FILLED OUT BY THE COGNIZANT CRAFTSMAN IN THE SAME MANNER AS BLOCKS 9 THROUGH 12 AS THE ITEM IS TRANSFERRED FROM ONE WC TO ANOTHER FOR FABRICATION, ETC. FOR A TOTAL SHIP'S FORCE JOB, THESE BLOCKS ARE NORMALLY "NA", UNLESS ANOTHER WC HAS TO DO SOMETHING TO THE MATERIAL.

If used for transfer of material between organizations, blocks 13-16 will be filled out by the receiving activity.

BLOCK 13 - WC NO.

Enter the number of the WC receiving material (e.g., 56A, 38C).

BLOCK 14 - DATE

Enter date material received.

BLOCK 15 - REMARKS

Record work performed while in the custody of the WC.

BLOCK 16 - CRAFTSMAN/CMPO/CMH/QAI

Cognizant individual will print name and sign that all work performed was completed satisfactorily and per applicable technical requirements. This signature will be made prior to transferring the material back to the original organization from which it was received.

NOTE: BLOCKS 17 THROUGH 21 WILL CONTAIN THE RECORD OF FINAL INSTALLATION. IF ADDITIONAL TAGS ARE REQUIRED FOR THE MATERIAL DURING THE FABRICATION AND TRANSFER PROCESS (MORE THAN TWO WCs OR PROCESSES INVOLVED IN THE REPAIR), BLOCKS 9 THROUGH 12 AND BLOCKS 17 THROUGH 21 MAY BE USED.

BLOCK 17 - WC NO.

Enter WC responsible for installation.

BLOCK 18 - DATE

Enter date of final installation.

BLOCK 19 - REMARKS

Enter the location where the material was installed into the system or component (e.g., installed in AHP-514, installed in system at joints ASW-70014(F) and ASW-70015(F), etc.).

BLOCK 20 - CRAFTSMAN

Cognizant craftsman print name and enter signature signifying that the material is installed correctly and per applicable technical specifications. Remove the QA form 2 and file with the CWP.

NOTE: QAI VERIFICATION IS REQUIRED FOR NUCLEAR LEVEL I PRESSURE BOUNDARY JOINTS OR WHEN TRANSFERRED OR CANNIBALIZED MATERIAL IS INSTALLED WITHIN THE SUBSAFE OR SOC BOUNDARY.

BLOCK 21 - INSPECTOR

When required, inspector print name, and enter signature and date certifying that the material is the correct material, acceptable for application and correctly installed. Remove the QA form 2 and file with the CWP.

NOTE: IF, FOR ANY REASON, A CRAFTSMAN, CMPO, CMH OR QAI REJECTS MATERIAL THEY WILL COMPLETE AND ATTACH A QA FORM 3, LEAVING THE QA FORM 2 ATTACHED. TAG USED ITEMS WHICH MUST BE TURNED IN TO SUPPLY AND ANY ITEM WHICH IS NOT PROMPTLY DISCARDED (E.G., AT THE END OF WORK DAY OR SHIFT).

NOTE: WHEN EXISTING CONTROLLED MATERIAL IS REINSTALLED INTO THE SYSTEM THE QA-2 WILL BE COMPLETED AND RETAINED WITH THE CWP UNTIL THE CWP IS CLOSED OUT. THE ACCOUNTABILITY FOR CONTROLLED MATERIAL REINSTALLATION IS ON THE APPLICABLE OQE RECORD (E.G., JOINT OR COMPONENT REPAIR RECORD, QA-34). THE QA-2 MAY BE DISCARDED AFTER THE CWP IS CLOSED OUT.

QA FORM 3

CONTROLLED MATERIAL REJECT TAG

CONTROLLED MATERIAL
REJECT TAG
QA FORM 3

PART I
1. MIC/ID NUMBER

2. ☐ L/I ☐ NUC L/I

☐ MIL-SPEC ☐ OTHER

3. REASON

Red tag with black lettering.

QA FORM 3 INSTRUCTIONS

CONTROLLED MATERIAL REJECT TAG
S/N 0103-LF-655-1300

PURPOSE: This tag provides visual evidence and identification of rejected material or material in a hold status, and a request for QAO evaluation for final disposition.

NOTE: DAMAGED EXISTING MATERIAL REMOVED FROM CONTROLLED SYSTEMS WHICH IS NOT INTENDED TO BE REPAIRED OR REUSED AND IS INTENDED TO BE DISPOSED OF AS TRASH DOES NOT REQUIRE A QA FORM 3 TO BE ATTACHED PROVIDED THE MATERIAL IS IMMEDIATELY DISCARDED. EXAMPLES OF THIS ARE DAMAGED VALVE STEMS, DAMAGED COMPONENT FASTENER NUTS AND STUDS. DOES NOT APPLY TO TURN-IN ITEMS SUCH AS DEPOT LEVEL REPAIRABLE. ALL MIC MARKINGS ON DAMAGED MATERIAL WILL BE REMOVED OR OBSCURED TO PREVENT INADVERTENT REUSE.

NOTE: QA FORM 3 FOR PREVIOUSLY REJECTED AND NOW ACCEPTED CONTROLLED MATERIAL MUST BE FILED WITH THE APPLICABLE CWP.

PROCEDURE:

a. Part I and Blocks 5 through 7 of Part II are filled out by personnel attaching the tag.

b. Attach filled out tag to the material.

c. Person attaching the tag will remove Part II, and forward to the QAO or QAS via the division officer.

d. The QAO will determine the final disposition and fill out Part III.

e. The numbered blocks on QA form 3 correspond with the block instructions listed.

PART I

BLOCK 1 - MIC/SERIAL NO.

Enter the MIC, serial number or other identifying permanent marking etched on the material, or if the item does not have a MIC number, serial number or other identifying marking visible, enter none or existing, as appropriate. Enter the same in Block 5.

BLOCK 2 - MATL LEVEL

Check the appropriate block indicating the Level of Essentiality for the material or fill in the blank for "other". When "other" is selected, enter in the amplifying remarks why the material is being tagged (e.g., Controlled or SOC).

BLOCK 3 - REASON

Enter the reason for rejection of the material (be explicit). Example: "Invalid MIC marking", "Linear indications on weld". Provide as much applicable information as possible concerning the item (e.g., rejection form(s) (Departure From Specification (DFS), Quality Deficiency Report, etc.), Drawing No., Piece No., Contract, Stock No., Control Work Procedure, etc.).

BLOCK 4 - REJECTED BY/DATE

Cognizant individual print name, enter signature and date rejected.

PART II - QA DISPOSITION REQUEST

BLOCK 5 - MIC/SERIAL NO.

Enter the same information that is in Block 1.

BLOCK 6 - LOCATION

Enter exact location of material (e.g., Rejected Material Locker WC 38A).

BLOCK 7 - REASON

Enter the reason why the rejected material should be released (e.g., located Nondestructive Test (NDT) records for material, etc.).

BLOCK 8 - REQUESTED BY

Cognizant division officer print name and enter signature.

NOTE: REMOVE AND FORWARD THE COMPLETED PART II OF THE REJECT FORM TO THE QAO VIA THE DIVISION OFFICER. SHIPS MAY NEED ASSISTANCE FROM THE FMA QAO IN DISPOSITIONING THE MATERIAL.

PART III - FINAL DISPOSITION BY QA

Enter all data used to determine final disposition.

BLOCK 9 - ACCEPT AS

Enter the level of essentiality to which the item is to be accepted (e.g., Non-Level to Level I) A DFS may be required. If this item will not be accepted, mark this blank "NA".

BLOCK 10 - DOWNGRADE TO

Enter Level of Essentiality to which the item is to be downgraded. If it is to be returned to its source, enter "NA" or "None".

BLOCK 11 - RETURN TO SOURCE

If to be returned to source, place an "X" or check in the block.

BLOCK 12 - REMARKS

Enter any remarks needed to explain the disposition of the material or why a particular decision was made. Identify the Objective Quality Evidence (OQE) or technical justification or documentation which authorizes use or disposal of material (e.g., DFS, Liaison Action Record (LAR), waivers, deviations, etc.).

BLOCK 13 - QA OFFICER SIGNATURE AND DATE

QAO who made the disposition decision print name, enter signature and date. The tag must stay with the material. Upon installation of the material, remove the tag and return to the QAO.

MAINTENANCE CERTIFICATION RECORD/RE-ENTRY CONTROL
QA FORM 9

VERIFICATION OF WORK COMPLETION

17. THE PRODUCTION WORK DESCRIBED BY THIS MCR / REC HAS BEEN ACCOMPLISHED IN ACCORDANCE WITH THE SPECIFIED INSTRUCTIONS AND REFERENCES OF BLOCK 13 AND SUPPORTING DOCUMENTATION LISTED IN BLOCK 16 HAS BEEN COMPLETED, REVIEWED AND IS CORRECT.
APPROVAL SIGNATURE LEGIBLY PRINTED, TYPED OR STAMPED NAME & BADGE/GRADE/RANK DATE

CERTIFICATION OF DOCUMENTATION OF PRODUCTION WORK

18. ALL DOCUMENTATION AND CERTIFICATION FOR PRODUCTION WORK SPECIFIED IN BLOCK 16 HAS BEEN COMPLETED. THE DOCUMENTATION HAS BEEN REVIEWED FOR ACCURACY AND COMPLETENESS.
APPROVAL SIGNATURE LEGIBLY PRINTED, TYPED OR STAMPED NAME & BADGE/GRADE/RANK DATE

CERTIFICATION OF TESTING RESULTS

19. THE TESTING INVOKED FOR THIS MCR HAS BEEN COMPLETED. THE TEST DOCUMENTATION SPECIFIED IN BLOCK 16 HAS BEEN REVIEWED FOR ACCURACY AND COMPLETENESS.
APPROVAL SIGNATURE LEGIBLY PRINTED, TYPED OR STAMPED NAME & BADGE/GRADE/RANK DATE

FINAL MCR CLOSEOUT CERTIFICATION

20. ALL CERTIFICATIONS RELATED TO THIS MCR HAVE BEEN REVIEWED FOR CORRECTNESS AND VERIFIED TO BE COMPLETE. I CERTIFY THIS QA CERTIFICATION/RE-ENTRY IS CLOSED.
PRIME APPROVAL SIGNATURE LEGIBLY PRINTED, TYPED OR STAMPED NAME & BADGE/GRADE/RANK DATE

21. SHIP'S COMMANDING OFFICER SIGNATURE LEGIBLY PRINTED, TYPED OR STAMPED NAME & GRADE/RANK DATE

QA FORM 9 INSTRUCTIONS

MAINTENANCE CERTIFICATION RECORD/RE-ENTRY CONTROL

PURPOSE:

NOTE: "N/A" ALL UNUSED BLOCKS.

1. This form is used to authorize and certify maintenance within SUBSAFE, Nuclear Level I, Level I, SOC or SFCC boundaries and is used as a CWP cover sheet.
2. The instructions are broken down into two separate situations.

SITUATION 1. CONTROLLED WORK OR SUBSAFE RE-ENTRY CONTROL BY SHIP'S FORCE ONLY.

a. The following instructions contain the minimum information and controls necessary to maintain certified systems on board ship when work is performed by Ship's Force on a certified ship.

b. Each block number on the Maintenance Certification Record (MCR)/Re-Entry Control (REC), QA form 9 corresponds to the same block number in the instructions. The number identifies the purpose and use of the entry on the MCR/REC.

c. Each block will be filled in or signed by the personnel assigned or their authorized representatives. Such authorized representatives will be designated in writing in an approved ship's instruction.

BLOCK 1 - PAGE OF

NOTE: A TECHNICAL WORK DOCUMENT MAY CONTAIN MULTIPLE QA FORMS OF THE SAME TYPE, (E.G. MORE THAN ONE QA-26). THE PAGE ENTRY IS FOR THIS SPECIFIC FORM, NOT THE TOTAL NUMBER OF PAGES ON ALL FORMS OF THE SAME TYPE.

Enter the page number, starting with page 1, of total number of QA form pages (e.g., 1 of , 2 of). The last number reflects the total number of QA Form pages written. This block is filled in by a QAI or the QAO after all certification testing is complete before block 19 on the QA-9 is signed. (e.g., 1 of 3, 2 of 3, 3 of 3).

Enter the total number of pages (QA form 9 plus any QA form 10 used as a supplement, should normally be 1 of 2).

BLOCK 2 - [ ] SUBSAFE/RE-ENTRY [ ] NUCLEAR [ ] LEVEL I [ ] SCOPE OF CERTIFICATION [ ] FBW-SCS/RE-ENTRY [ ] OTHER

Check or "X" the appropriate block(s) and, if "OTHER" is checked, will enter the appropriate level of control (e.g., P-1, P-3a, P-LT).

BLOCK 3 - SHIP HULL NO.

Enter ship's name and hull number.

BLOCK 4 - CWP SERIAL NO.

Obtain the next CWP serial number from the ship's QAO and enter in the block. Revision "-" (dash) will be entered on the initial version of all MCR/RECs. When a revision is required, enter the next revision letter. If necessary, prepare a new MCR/REC using the original numbers plus the next revision letter. Upon issuance of each REC revision, all prior revisions are canceled and superseded and must be so annotated and retained as OQE. A REC revision must go through the same approval process as the original REC. REC Supplement or continuation sheets (QA-10) must not be used as an alternate to revision of the REC.

BLOCK 5 - J.O./JCN

Enter the JCN for the maintenance action.

BLOCK 6 - ASSOCIATED CWP(s)/REC(s)

Shipyard use only.

BLOCK 7 - ORIGINATOR

Enter the name (and badge, grade or rank) of the person preparing the CWP.

BLOCK 8 - ORGANIZATION

Enter the division of the person preparing the CWP.

BLOCK 9 - SYSTEM REPAIRED/RE-ENTERED

Enter the system(s) being repaired or re-entered.

BLOCK 10 - REPAIR/RE-ENTRY LOCATION

Enter the physical location of the work.

BLOCK 11 - COMPONENT(s)

Enter the noun name of the component(s) being repaired or re-entered.

BLOCK 12 - JID MAP/DWG WITH REV

a. Enter the number and revision of the appropriate mapping drawing(s) for the work. If no mapping drawing is available, list the most appropriate arrangement or component drawing or diagram. For component repair, enter the applicable document (Standard Navy Valve Drawing, Vendor Drawing, etc.) which depicts the disturbances of the item (work in place or shop work). Based on the scope of work planned, several drawings may need to be referenced. If necessary, local sketches are authorized.

b. The general order of precedence for entering Joint Identification (JID) is:

   (1) JID number from the SUBSAFE Joint Mapping Plan, if there is one.

   (2) JID number from the Joint Index Drawing, ship or class, for welding.

   (3) Joint description or JID from Assembly or Arrangement or Installation Drawing. The drawing chosen must adequately portray the joints to be broken.

   (4) Drawings or diagrams from technical manual.

   (5) A locally prepared sketch where other alternatives do not adequately describe the joints to be broken. Since the sketch will not be retrievable elsewhere, it

must be kept in the REC package as OQE and must be documented on a QA-10.

BLOCK 13 - WORK AND TESTING TO BE PERFORMED AND WORK AND TEST REFERENCE DOCUMENTS

Enter the total scope of work and testing required for certification of this repair or re-entry (e.g., ripout, repair, restore, replace, reinstall). Enter the work and test description and make positive reference to the TWD, which contains the detailed work procedure, material requirements, testing and certification to be performed. Work and testing references will be identified for each action listed in this block. If additional space is needed to properly identify all elements, then a QA form 10 will be used to supplement this block. The information provided in Block 6 does not need to be repeated in Block 13. The description of work on each REC revision must detail the total revised Scope of Work. Cumulative partial descriptions do not satisfy this requirement.

BLOCK 14 - APPLICABLE JOINT NO(s), OR, IF NOT SUPPLIED, SPECIFIC BOUNDARIES

Enter the JID to be repaired or re-entered. If joint numbers are not supplied, specify boundaries in specific terms (e.g., body to bonnet joint of valve ASW-29) or assign local joint numbers. If local joint numbers are assigned, the sketch used to identify the joints must be included as OQE in the completed CWP. Listing of work boundary "end points" in lieu of listing discrete individual joints does not satisfy this requirement.

BLOCK 15 - PRIME APPROVAL SIGNATURE

a. BLOCK 15A. The QAO will sign, legibly print or stamp their name and badge, grade or rank and enter the date indicating the package is technically correct.

b. BLOCK 15B. The Department Head will sign, legibly print or stamp their name and badge, grade or rank and enter the date granting permission for work to be conducted. **No work can start prior to this signature.**

c. BLOCK 15C. For nuclear system work, the ship's Commanding Officer (Reactor Officer for CVNs) will sign, legibly print or stamp their name and badge, grade or rank and enter the date granting permission for work to be conducted per Part I, Chapter 2, Appendix E of this Volume. No nuclear work can start prior to this signature. The Immediate Superior In Command (ISIC) Material Officer will counter sign and enter their badge, grade or rank to indicate review for testing of repair activity accomplished nuclear work per Part I, Chapter 2, Appendix E of this Volume. For oxygen, SUBSAFE, Scope of Certification or Safety of Flight Critical Component work, the ship's Engineer Officer (Chief Engineer for CVNs) will sign, legibly print or stamp their name and badge, grade or rank and enter the date, granting permission for work to be conducted per Part I, Chapter 2, Appendix E of this Volume. **No nuclear, oxygen system, SUBSAFE, Scope of Certification or Safety of Flight Critical Component work can start prior to this signature.**

d. BLOCK 15D. The Officer Of the Deck, Duty Officer or Engineering Officer of the Watch or Engineering Duty Officer, depending on the work to be performed, will sign, legibly print or stamp their name and badge, grade or rank and enter the date

authorizing the work to start. The signature establishes the work and CWP start date and signifies that the system or component is in a condition to accomplish the work.

NOTE: COMPLETE BLOCKS 16, 17 AND 18 BEFORE PERFORMING ANY SHIPBOARD TESTING. IF REWORK BECOMES NECESSARY AS THE RESULT OF SHIPBOARD TESTING, THE REQUIREMENTS OF PART I, CHAPTER 2, PARAGRAPH 2.3.7.2 OF THIS VOLUME MUST BE FOLLOWED. FOR SHIP-TO-SHOP MAINTENANCE, BLOCKS 16, 17 AND 18 DO NOT NEED TO BE COMPLETED FOR IN-PROCESS TESTING IDENTIFIED AS PART OF THE CWP "PROCEDURE" SECTION. AFTER COMPLETING THE PROCEDURE AND BEFORE PERFORMING THE CWP "TESTING AND INSPECTION" SECTION, COMPLETE BLOCKS 16, 17, AND 18.

NOTE: RFI "TAGS" FOR MCD-A AND MCD-B MATERIAL MAY CONSIST OF A PHYSICAL TAG ATTACHED TO THE COMPONENT OR MARKINGS ON THE PACKAGING THAT CONTAIN THE RECEIPT INSPECTION SERIAL NUMBER, MCD LEVEL, NATIONAL STOCK NUMBER (NSN) WITH SMIC (D0, D4, D5, D6, D7, OR D8) AND CONTRACT NUMBER. WHEN THE RFI MARKINGS ARE CONTAINED ON THE PACKAGING, A PHOTO-COPY OF THE PACKAGING IS ACCEPTABLE FOR RECORD RETENTION PURPOSES.

BLOCK 16 - SUPPORTING DOCUMENTATION

The Lead Work Center (LWC) Division Officer will identify all supporting documentation required and generated as established by the CWP. For example, a typical entry would be: QA2(3), QA12(1), QA26(1), QA34(1), RFI Tag(1), LAR(2). List only QA form 2s for new material installed in the system or component. The cumulative documentation (OQE) must be listed on the latest revision. (The QA-10 is a continuation sheet for the QA-9 and is not required to be listed in Block 16.)

NOTE: QA FORMS FOR PRODUCTION WORK SHOULD BE CLOSED OUT BY APPLICABLE SUPERVISOR PRIOR SIGNING BLOCK 17 (E.G., QA-34 BLOCK 12) AND BLOCK 18 (E.G., QA-34 BLOCK 13). BUT IN SOME INSTANCES, PRODUCTION WORK IS STILL REQUIRED ON QA FORMS FOLLOWING COMPLETION OF TESTING (E.G., LOCKWIRE, LOCKING CABLE, LOCK TABS, ETC.) PRIOR TO FINAL CLOSE OUT OF THE FORM. IN THESE CASES, THE FORM(S) WILL BE CLOSED OUT PRIOR TO BLOCK 20 SIGNATURE AND SHOULD BE NOTED IN BLOCK 13 (E.G., AFTER TESTING PERFORM, INSTALL). ALL QA FORMS ARE REQUIRED TO BE COMPLETE, ACCURATE, AND CORRECT DURING EACH STEP OF THE VERIFICATION AND CERTIFICATION PROCESS.

BLOCK 17 - VERIFICATION OF WORK COMPLETION

The LWC Division Officer will sign, legibly print or stamp their name (and badge, grade or rank) and enter the date certifying that the production work described by the MCR/REC has been accomplished per the specified instructions and that the required documentation for the production work as described in Block 16 has been completed, reviewed and is correct. When

rework is identified following signing blocks 17 and 18, new signature and date blocks for blocks 17 and 18 must be documented on a QA form 10.

BLOCK 18 - CERTIFICATION OF DOCUMENTATION OF PRODUCTION WORK

The QAO will sign, legibly print or stamp their name and badge, grade or rank and enter the date certifying that all documentation for the production work specified in Block 16 has been reviewed for accuracy and completeness and is complete and accurate. When rework is identified following signing blocks 17 and 18, new signature and date blocks for blocks 17 and 18 must be documented on a QA form 10.

BLOCK 19 - CERTIFICATION OF TESTING RESULTS

The QAO will sign, legibly print or stamp their name and badge, grade or rank and enter the date certifying that the testing invoked for this MCR/REC has been completed satisfactorily. The test documentation specified in Block 16 has been completed, has been reviewed, and is complete and accurate.

BLOCK 20 - FINAL MCR/REC CLOSEOUT CERTIFICATION

The Department Head will sign, legibly print or stamp their name and badge, grade or rank and enter the date certifying that all documentation related to this MCR/REC has been reviewed for accuracy and completeness and is complete and accurate. For oxygen, SUBSAFE, Scope of Certification or Safety of Flight Critical Component work, the ship's Engineer Officer (Chief Engineer for CVNs) must perform this certification and sign, legibly print or stamp their name and badge, grade or rank and enter the date.

BLOCK 21 - SHIP'S COMMANDING OFFICER SIGNATURE

The ship's Commanding Officer (Reactor Officer for CVNs) will sign, legibly print or stamp their name and grade or rank and enter the date per Part I, Chapter 2, Appendix E of this Volume. (Submarines only) This signature is REQUIRED to complete certification of Re-Entry into SUBSAFE, Scope of Certification and Fly-by-Wire systems and components.

SITUATION 2. CONTROLLED WORK (NUCLEAR, LEVEL I, SOC, OTHER) OR SUBSAFE REC BY REPAIR ACTIVITY AND SHIP OR REPAIR ACTIVITY ONLY.

a. The following instructions contain the minimum information and controls necessary to maintain certified systems on board ship, or to document new work for eventual certification when work is performed by Ship's Force and a repair activity or by a repair activity only on a certified ship or component.

b. Each block number on the MCR/REC, QA form 9 corresponds to the same block number in the instructions. The number identifies the purpose and use of the entry on the MCR/REC.

c. The planner will fill in Blocks 1 – 14. All other blocks will be filled in or signed by the personnel assigned or their authorized representatives. Such authorized representatives will be designated in writing in an approved ship's or activity's instruction.

BLOCK 1 - PAGE 1 OF

NOTE: A TECHNICAL WORK DOCUMENT MAY CONTAIN MULTIPLE QA FORMS OF THE SAME TYPE, (E.G., MORE THAN ONE QA-26). THE PAGE ENTRY IS FOR THIS SPECIFIC FORM, NOT THE TOTAL NUMBER OF PAGES ON ALL FORMS OF THE SAME TYPE.

Enter the page number, starting with page 1, of total number of QA form pages (e.g., 1 of , 2 of). The last number reflects the total number of QA Form pages written. This block is filled in by a QAI or the QAO after all certification testing is complete before block 19 on the QA-9 is signed. (e.g., 1 of 3, 2 of 3, 3 of 3).

Enter the total number of pages (QA form 9 plus any QA form 10 used as a supplement, should normally be 1 of 2).

BLOCK 2 - [ ] SUBSAFE/REC [ ] NUCLEAR [ ] LEVEL I [ ] SCOPE OF CERTIFICATION [ ] FBW-SCS/RE-ENTRY [ ] OTHER

Check or "X" the appropriate block(s) and, if "OTHER" is checked, will enter the appropriate level of control (e.g., P-1, P-3a, P-LT).

BLOCK 3 - SHIP HULL NO.

Enter ship's name and hull number.

BLOCK 4 - CWP SERIAL NO.

a. For Ship's Force and FMA work, obtain the next CWP serial number from the ship's QAO and enter it in the block. For controlled or SUBSAFE work to be performed by the repair activity only (in repair activity shops and the repair activity does no work onboard the ship, examples include ship to shop work; rotatable pool assets) obtain the next CWP serial number from the FMA QAO and enter it in the block. Revision "-" (dash) will be entered on the initial version of all MCR/RECs. When a revision is required, enter the next revision letter. If necessary, prepare a new MCR/REC using the original numbers plus the next revision letter.

b. For FMA work on a SUBSAFE system, the REC number will be obtained from the ship's QAO and entered after the CWP number (e.g., CWP/REC number). Upon issuance of each REC revision, all prior revisions are canceled and superseded and must be so annotated and retained as OQE. A REC revision must go through the same approval process as the original REC. REC Supplement or continuation sheets (QA-10) must not be used as an alternate to revision of the REC.

BLOCK 5 - J.O./JCN

Enter the JCN for the maintenance action.

BLOCK 6 - ASSOCIATED CWP(s)/REC(s)

Shipyard use only.

BLOCK 7 - ORIGINATOR

Enter the name (and badge, grade or rank) of the person preparing the CWP.

BLOCK 8 - ORGANIZATION

Enter the division of the person preparing the CWP.

BLOCK 9 - SYSTEM REPAIRED/RE-ENTERED

Identify the system(s) being repaired or re-entered.

BLOCK 10 - REPAIR/RE-ENTRY LOCATION

Identify the physical location (i.e., ship or shop) of the work.

BLOCK 11 - COMPONENT(s)

Identify the noun name of the component(s) being repaired or re-entered.

BLOCK 12 - JID MAP/DWG WITH REV

a. Enter the number and revision of the appropriate mapping drawing(s) for the work. If no mapping drawing is available, list the most appropriate arrangement or component drawing or diagram. For component repair, enter the applicable document (Standard Navy Valve Drawing, Vendor Drawing, etc.) which depicts the disturbances of the item (work in place or shop work). Based on the scope of work planned, several drawings may need to be referenced. If necessary, local sketches are authorized.

b. The general order of precedence for entering JID is:

(1) JID number from the SUBSAFE Joint Mapping Plan, if there is one.

(2) JID number from the Joint Index Drawing, ship or class, for welding.

(3) Joint description or JID from Assembly or Arrangement or Installation Drawing. The drawing chosen must adequately portray the joints to be broken.

(4) Drawings or diagrams from technical manual.

(5) A locally prepared sketch where other alternatives do not adequately describe the joints to be broken. Since the sketch will not be retrievable elsewhere, it must be kept in the REC package as OQE and must be documented on a QA-10.

BLOCK 13 - WORK AND TESTING TO BE PERFORMED AND WORK AND TEST REFERENCE DOCUMENTS

Enter the total scope of work and testing required for certification of this repair or re-entry (e.g., ripout, repair, restore, replace, reinstall). Enter the work and test description and make positive reference to the TWD, which contains the detailed work procedure, material requirements, testing and certification to be performed. Work and testing references will be identified for each action listed in this block. If additional space is needed to properly identify all elements, then a QA form 10 will be used to supplement this block. The information provided in Block 6 does not need to be repeated in Block 13. The description of work on each REC revision must detail the total revised Scope of Work. Cumulative partial descriptions do not satisfy this requirement.

BLOCK 14 - APPLICABLE JOINT NO(s), OR, IF NOT SUPPLIED, SPECIFIC BOUNDARIES

Enter the JID to be repaired or re-entered. If joint numbers are not supplied, specify boundaries in specific terms (e.g., body to bonnet joint of valve ASW-29) or assign local joint numbers. If local joint numbers are assigned, the sketch used to identify the joints must be included as OQE in the completed CWP. Listing of work boundary "end points" in lieu of listing discrete individual joints does not satisfy this requirement.

BLOCK 15 - PRIME APPROVAL SIGNATURE

a. BLOCK 15A. The QAO will sign, legibly print or stamp their name and badge, grade or rank and enter the date indicating the package is technically correct. **No work can start prior to this signature.**

b. BLOCK 15B. The Department Head will sign, legibly print or stamp their name and badge, grade or rank and enter the date granting permission for work to commence. **No SUBSAFE work can start prior to this signature.**

c. BLOCK 15C. For nuclear, oxygen, SUBSAFE, Scope of Certification or Safety of Flight Critical Component work, the ship's Engineer Officer (Reactor Officer for CVNs) will sign, legibly print or stamp their name and badge, grade or rank and enter the date, granting permission for work to be conducted. **No nuclear, oxygen system, SUBSAFE, Scope of Certification or Safety of Flight Critical Component work can start prior to this signature.**

d. BLOCK 15D. The Officer Of the Deck or Duty Officer or Engineering Officer of the Watch or Engineering Duty Officer, depending on the work to be performed, will sign, legibly print or stamp their name and badge, grade or rank and enter the date, authorizing the work to start. This signature establishes the work and CWP start date and signifies that the system or component is in a condition to accomplish the work. This signature is not required for repair activity generated MCR/RECs to repair ship to shop items from tended ships (e.g., periscopes, relief valves, antennae).

NOTE: COMPLETE BLOCKS 16, 17, AND 18 BEFORE PERFORMING ANY SHIPBOARD TESTING. IF REWORK BECOMES NECESSARY AS THE RESULT OF SHIPBOARD TESTING, THE REQUIREMENTS OF PART I, CHAPTER 2, PARAGRAPH 2.3.7.2 OF THIS VOLUME SHALL BE

FOLLOWED. FOR SHIP-TO-SHOP MAINTENANCE, BLOCKS 16, 17, AND 18 DO NOT NEED TO BE COMPLETED FOR IN-PROCESS TESTING IDENTIFIED AS PART OF THE CWP "PROCEDURE" SECTION. AFTER COMPLETING THE PROCEDURE AND BEFORE PERFORMING THE CWP "TESTING AND INSPECTION" SECTION, COMPLETE BLOCKS 16, 17, AND 18.

NOTE: RFI "TAGS" FOR MCD-A AND MCD-B MATERIAL MAY CONSIST OF A PHYSICAL TAG ATTACHED TO THE COMPONENT OR MARKINGS ON THE PACKAGING THAT CONTAIN THE RECEIPT INSPECTION SERIAL NUMBER, MCD LEVEL, NATIONAL STOCK NUMBER (NSN) WITH SMIC (D0, D4, D5, D6, D7, OR D8) AND CONTRACT NUMBER. WHEN THE RFI MARKINGS ARE CONTAINED ON THE PACKAGING, A PHOTOCOPY OF THE PACKAGING IS ACCEPTABLE FOR RECORD RETENTION PURPOSES.

BLOCK 16 - SUPPORTING DOCUMENTATION

a. The LWC Division Officer will identify all supporting documentation required and generated as established by the CWP. For example, a typical entry would be: QA2(3), QA12(1), QA26(1), QA34(1), RFI Tag(1), LAR(2). List only QA form 2s for new material installed in the system or component. The cumulative documentation (OQE) must be listed on the latest revision. The QA-10 is a continuation sheet for the QA-9 and is not required to be listed in Block 16.)

b. For activities using the Task Group Instruction (TGI) process. Deficiency Logs (DL) do not have to be listed in this block since DLs are integral to the TGI. The TGI should be cited in Block 16 if not already cited in Block 13. QA forms and other individual OQE records must be listed.

NOTE: QA FORMS FOR PRODUCTION WORK SHOULD BE CLOSED OUT BY APPLICABLE SUPERVISOR PRIOR SIGNING BLOCK 17 (E.G., QA-34 BLOCK 12) AND BLOCK 18 (E.G., QA-34 BLOCK 13). BUT IN SOME INSTANCES, PRODUCTION WORK IS STILL REQUIRED ON QA FORMS FOLLOWING COMPLETION OF TESTING (E.G., LOCKWIRE, LOCKING CABLE, LOCK TABS, ETC.) PRIOR TO FINAL CLOSE OUT OF THE FORM. IN THESE CASES, THE FORM(S) WILL BE CLOSED OUT PRIOR TO BLOCK 20 SIGNATURE AND SHOULD BE NOTED IN BLOCK 13 (E.G., AFTER TESTING PERFORM, INSTALL). ALL QA FORMS ARE REQUIRED TO BE COMPLETE, ACCURATE, AND CORRECT DURING EACH STEP OF THE VERIFICATION AND CERTIFICATION PROCESS.

BLOCK 17 - VERIFICATION OF WORK COMPLETION

The LWC Division Officer will sign, legibly print or stamp their name (and badge, grade or rank) and enter the date, certifying that the production work described by the MCR/REC has been accomplished per the specified instructions and that the required documentation for the production work as described in Block 16 has been completed, reviewed and is correct. When rework is identified following signing blocks 17 and 18, new signature and date blocks for blocks 17 and 18 must be documented on a QA form 10.

BLOCK 18 - CERTIFICATION OF DOCUMENTATION OF PRODUCTION WORK

The QAO will sign, legibly print or stamp their name and badge, grade or rank and enter the date, certifying that all documentation for the production work specified in Block 16 has been reviewed for accuracy and completeness and is complete and accurate. When rework is identified following signing blocks 17 and 18, new signature and date blocks for blocks 17 and 18 must be documented on a QA form 10.

BLOCK 19 - CERTIFICATION OF TESTING RESULTS

The QAO will sign, legibly print or stamp their name and badge, grade or rank and enter the date, certifying that the testing invoked for this MCR/REC has been completed satisfactorily. The test documentation specified in Block 16 has been completed, reviewed, and is complete and accurate.

BLOCK 20 - FINAL MCR/REC CLOSEOUT CERTIFICATION

The Department Head will sign, legibly print or stamp their name and badge, grade or rank and enter the date, certifying that all documentation related to this MCR/REC has been reviewed for accuracy and completeness and is complete and accurate.

BLOCK 21 - SHIP'S COMMANDING OFFICER SIGNATURE

For "Ship's Force and FMA" MCR/REC, the ship's Commanding Officer (Reactor Officer for CVNs) will sign, legibly print or stamp their name and grade or rank and enter the date, per Part I, Chapter 2, Appendix E of this Volume. For "FMA ONLY" MCR/REC, this block is marked N/A.

QA FORM 10

QA FORM 10 INSTRUCTIONS

MAINTENANCE CERTIFICATION RECORD/RE-ENTRY CONTROL SUPPLEMENT SHEET

PURPOSE: MCR/REC Supplement Sheets are used to record supplemental data required by the MCR/REC, QA form 9. Examples of supplemental data are:

a. Continuation of Blocks 12 (including local sketches), 13, 14 and 16 of the QA form 9.

b. When rework is identified following signing blocks 17 and 18 of the QA form 9, new signature and date blocks for blocks 17 and 18 must be documented on a QA form 10.

PROCEDURE: The MCR/REC Supplement Sheet, QA form 10 may be used, as required, to record supplemental data required by the MCR/REC, QA form 9 (page number will normally be 2 of _). Record the QA form 9 block number and supplemental data. Record name and signature of the person recording the information (normally the person who is signing QA form 9) and date, except where the entry is preprinted by Planning prior to initial review for approval or opening.

QA FORM 11 INSTRUCTIONS

CONTROLLED WORK PACKAGE (CWP)/RE-ENTRY CONTROL (REC) LOG

PURPOSE: To provide a record of ship and repair activities entries into SUBSAFE, nuclear, Level I, Deep Submergence SOC and other certified systems or components. The CWP/REC Log will summarize the chronological record of CWP and REC for the life of the ship.

PROCEDURE: The numbered blocks on the CWP/REC Log, QA form 11 correspond to the same block number in the instructions. A CWP/REC Log will be maintained by each ship, FMA and naval shipyard per sub-paragraphs a through d.

a. The log is maintained by the QAO for ships and repair activities.

b. When the CWP/REC is performed by the ship alone, the serial number will be recorded in the ship's CWP/REC Log.

c. The FMA will also have a tended ship CWP/REC Log that records entries for work on each tended ship.

d. When the CWP/REC is a Ship's Force provided serial number, it will be recorded in both the ship's CWP/REC Log and in the FMA's tended ship CWP/REC Log.

BLOCK 1 - PAGE NO.

As each new page is started, the QAO will enter the appropriate page number(s).

BLOCK 2 - SHIP

The QAO will enter the ship's name and hull number. Locally pre-printed forms with the ship's name and hull number are acceptable.

BLOCK 3 - CWP/REC NUMBER

For controlled (i.e., Level I, Nuclear, Scope of Certification) or SUBSAFE work to be performed by Ship's Force only, the ship's QAO will issue the CWP/REC numbers sequentially for entry in Block 4 of the ship's QA form 9. For controlled or SUBSAFE work performed by the repair activity on, or for a tended ship, the ship's QAO will issue CWP/REC numbers sequentially to the repair activity for entry in Block 4 of the repair activity's QA form 9. For controlled or SUBSAFE work to be performed by the repair activity only, not associated with a specific ship (example – rotatable pool assets), the repair activity's QAO will issue the CWP/REC numbers sequentially for entry in Block 4 of the repair activity's QA form 9. The format of the CWP/REC serial numbers will be the serial number followed by the year (e.g., 1-90, 123-01).

NOTE: SOC IS A LEVEL OF WORK TERM FOR DEEP SUBMERGENCE SYSTEM WORK IN ACCORDANCE WITH NAVSEA SS800-AG-MAN-010/P9290 USED IN CONJUNCTION WITH WORK ON HOST SYSTEMS FOR DRY DECK SHELTERS.

BLOCK 4 - LEVEL OF WORK

The QAO will enter the level of the work (e.g., SUBSAFE, Nuclear, Level I, SFCC or SOC). For SUBSAFE or SOC work on a tended unit by a repair activity other than during a

scheduled Chief of Naval Operations Availability, the repair activity will obtain a REC number from the ship's QAO and record it in this block (e.g., SUBSAFE/REC No.).

NOTE: IF THE MCR IS REVISED BEYOND REVISION "G", THE ADDITIONAL REVISION LETTERS WILL BE ENTERED AND CROSSED OUT IN THE REMARKS BLOCK, BLOCK 9.

BLOCK 5 - REVISIONS

The QAO will circle, cross out, and record the applicable revision. This column controls the revisions, with the first version being "-" (dash), the first revision being A, second revision being B, etc. When the initial CWP/REC number is issued the dash (-) will be circled, when subsequent revisions of the MCR are issued the appropriate letter (A, B, C) will be circled and the previously circled Revision Letter will be crossed out using an "X".

BLOCK 6 - SYSTEM/COMPONENT

The QAO will enter the same system as in Block 9 or component as in Block 11 of the QA form 9.

NOTE: COMPONENT IS PREFERRED IF IT IS A VALVE OR EQUIPMENT WITH A UNIQUE IDENTIFIER (e.g., ASW-617, NO. 1 MAIN CONDENSER, ETC.).

BLOCK 7 - PRIME RESPONSIBILITY WORK CENTER OR GROUP

The QAO will enter the division or organization responsible for the work. For a repair activity, this is the LWC as assigned by the Planning Officer. For the ship, this is the WC initiating the QA form 9.

NOTE: IF THE COMMANDING OFFICER OF THE SHIP IS REQUIRED TO REVIEW FOR CLOSING THE QA FORM 9, THEN THE DATE IN BLOCK 21 OF THE QA FORM 9 DOCUMENTING THE CO's REVIEW MUST BE DOCUMENTED IN BLOCK 8 OF THE QA FORM 11.

BLOCK 8 - DATE

The QAO will enter the date the MCR serial number is assigned in the column "ISSUED". In the column "STARTED", the QAO will enter the same date as in Block 15D of the MCR for Situation 1 or block 15B for Situation 2 as soon as Block 15 is dated. In the column "CLOSED", the QAO will enter the same date documented in Block 20 or 21, as applicable, of the QA form 9.

BLOCK 9 - REMARKS

This column is to be used to record revisions of the MCR/REC, if more revisions are issued after revision "G", and to summarize the work description and any other pertinent information (e.g., repair ASW-22, accomplish Unrestricted Operation (URO) Maintenance Requirement Card (MRC) 008 on ASW-7, overhaul number 2 periscope).

REC/MCR EXCEPTION CONTROLLED ASSEMBLY LOG
QA FORM 11A

			1. Page No.	2. Ship	
3. TWD	4. LEVEL OF WORK	5. SYSTEM/COMPONENT	6. PRIME RESPONSIBILITY WORK CENTER OR GROUP	7. DATE FILED	8. REMARKS

QA FORM 11A INSTRUCTIONS

REC/MCR EXCEPTION CONTROLLED ASSEMBLY LOG

PURPOSE: To provide a record for the completion of maintenance on components or systems assembled as a controlled assembly and performed as a REC/MCR exception.

PROCEDURE: The numbered blocks on QA Form 11A correspond to the same block number in the instructions. A REC/MCR Exception Controlled Assembly log will be maintained by each ship.

a. The log is maintained by the QAO for ships.

b. The REC/MCR Exception and Controlled Assembly Log will summarize the chronological record of REC/MCR exceptions and controlled assemblies until all maintenance on the log sheet has been superseded.

NOTE: EACH REC/MCR EXCEPTIONS LOG PAGE MUST BE RETAINED IN THE FRONT OF THE REC EXCEPTION BINDER UNTIL ALL ITEMS LISTED ON THAT PAGE ARE SUPERSEDED.

BLOCK 1: - PAGE NO.

As each new page is started, the QAO will enter the appropriate page number(s).

BLOCK 2: - SHIP

The QAO will enter the ship's name and hull number. Locally pre-printed forms with the ship's name and hull number are acceptable.

BLOCK 3: - TWD

QAO will identify the TWD used to perform the REC/MCR exception controlled assembly, (i.e. FWP serial number, PMS MRC, component technical manual, etc.).

BLOCK 4: - LEVEL OF WORK

The QAO will enter the level of work (e.g. SUBSAFE, Level I, SOC).

BLOCK 5: - SYSTEM OR COMPONENT

The QAO will enter the system or component for the maintenance (e.g. Salvage Air SA-1 thru SA-8, RO Unit Wye Strainer).

BLOCK 6: - PRIME RESPONSIBILITY WORK CENTER OR GROUP

The QAO will enter the division or workcenter responsible for the work. This is the workcenter conducting the controlled assembly.

BLOCK 7: - DATE

QAO will enter date QA-34 was filed in REC Exception binder.

BLOCK 8: - REMARKS

This column is to be used to summarize the work description and any other pertinent information (e.g., Salvage Air SA-1 through 8, RO Unit Wye Strainer PMS, External Air Charging Conn). Enter "N/A" if block is not used.

QA FORM 12 INSTRUCTIONS

DEPARTURE FROM SPECIFICATION REQUEST

NOTE: THE QA-12 WHEN PRINTED WILL DISPLAY AT A MINIMUM THE FIELDS DEPICTED IN THE QA-12 FORM BUT MAY BE ARRANGED OR SEQUENCED IN A DIFFERENT VIEW.

PURPOSE: Used to report and request approval of a DFS.

PROCEDURE:

1. The activity finding or causing a DFS will immediately report the DFS to the appropriate approval authority using this form.
2. The numbered blocks on QA form 12 correspond with block instructions listed.

BLOCK 1 - DEPARTURE NO.

Enter the next sequential number from the affected ship serial file.

BLOCK 2 - SHIP HULL NO.

Enter the name and hull number of the ship on which the DFS occurred.

NOTE: BLOCK 3 OR BLOCK 17 HAS TO BE FILLED IN TO SUPPORT A TEMPORARY DEPARTURE IF THERE IS SUBSEQUENT ACTION TO CLEAR A TEMPORARY DEPARTURE.

BLOCK 3 - JCN

Enter the JCN for the job that is intended to correct the DFS condition.

BLOCK 4 - CWP / REC SER. NO.

Enter the CWP / REC serial number or enter N/A if no CWP / REC is required. Do not list the CWP / REC revision.

BLOCK 4A - TECHNICAL WORK DOCUMENT

(SHIPYARD USE ONLY) Enter the technical work document that identified the non-conformance.

BLOCK 5 - DATE

Enter the date the DFS request is filled out.

BLOCK 6 - ORIGINATOR

Print or type the name of the originator of the DFS.

BLOCK 7 - DEPARTURE TYPE

Enter the applicable departure type. (Major or Minor) and classification as necessary (SUBSAFE, SOC, URO, FBW or SFCC). Enter appropriate Functional Group Code, FGC, if desired.

BLOCK 7A - EXPECTED CLEARANCE DATE

The submitting activity must enter an expected clearance date. This date will normally be the expiration date but may be a date earlier than the expiration of the non-conformance. The Ship, ISIC or TYCOM may revise this date to be earlier than the expiration date of the non-conformance.

BLOCK 7B - TEMPORARILY APPROVED UNTIL DATE

The Approval Activity will fill in the "TEMPORARILY APPROVED UNTIL DATE" for non-Electronic Departure from Specification departures. Electronic Departures from Specification will automatically populate with the TEMPORARILY APPROVED UNTIL DATE in conjunction with the approval authority signature.

BLOCK 8 - ADDITIONAL CLASSIFICATION (SHIPYARD AND SOC USE ONLY)

Enter the necessary information as required. If the departure is conditional, mark the appropriate block to indicate that ISIC concurrence is required.

BLOCK 9 - SYSTEM/COMPONENT/LOCATION

Enter the affected system, component, and location. A short description may be added if needed to fully identify the system, component and location.

BLOCK 10 - NAVSEA DRAWING/PLAN NUMBER/PIECE NUMBER

Enter the NAVSEA drawing number, plan number and piece number, as applicable, that shows the component or system on which the DFS is initiated.

BLOCK 11 - REFERENCES

Enter additional references used (e.g., Training Aid Booklet, Ships Information Book, Ships Systems Manual, Steam and Electric Plant Manual, SUBSAFE Certification Boundary Book, Tech Manual) as applicable.

BLOCK 12 - APPLICABLE SPECIFICATIONS

Enter the applicable specifications. Be descriptive and specific. Enter the reference that provided the specification. This block should fully explain the specifications and include the JID or part applicable (e.g., perform "J" pressure test to test pressure depth after mechanical assembly of joints "XXXX" in which software was replaced). This block must be explicit, so that no reference is required to the work procedure to understand the specifications.

BLOCK 13 - SITUATION/DEGREE OF NON-COMPLIANCE

Enter what the actual condition is. Sketches, drawings, QA forms, etc., may be attached, if they clarify the description of the non-conforming condition.

BLOCK 14 - COMMENTS/RECOMMENDATION (TEST CONDUCTED, AFFECTED SYSTEMS)

Enter comments and recommendations pertinent to the job. The comments will include recommendation and justification for approval of the DFS. Enter tests conducted and the results, SAT or UNSAT.

BLOCK 15 - DATE ANSWER REQUESTED BY

Enter date.

BLOCK 16 - SUBMITTING ACTIVITY

Type or print name and enter signature.

NOTE: BLOCK 3 OR BLOCK 17 HAS TO BE FILLED IN TO SUPPORT A TEMPORARY DEPARTURE IF THERE IS SUBSEQUENT ACTION TO CLEAR A TEMPORARY DEPARTURE.

BLOCK 17 - NEW JCN NUMBER FOR CONDITIONAL DEPARTURES

If the JCN in block 3 does not include all the work necessary to clear the DFS condition, enter the JCN(s) for the additional work necessary to clear the DFS.

BLOCK 18 - APPROVAL ACTIVITY

List the activity who will be the final approval.

BLOCK 19 - COPY TO

Enter activities to receive copy.

For the ISIC, TYCOM, LOCAL TECHNICAL AUTHORITY and NAVSEA or NAVAIR TECHNICAL AUTHORITY blocks, the applicable activity will request, concur, approve, disapprove and indicate temporary, permanent or precedent setting as applicable. In the case of temporary non-conformances, specify the TEMPORARILY APPROVED UNTIL DATE (dd/mm/yyyy) that the noncompliance is acceptable prior to correction and list any restrictions.

ISIC: Check the appropriate blocks. Check the FWD to TYCOM/LOCAL TECH. AUTHORITY FOR ACTION block for any DFS requiring TYCOM action and print name, sign and date.

a. (Surface Forces only) The originator of the non-conformance will check the appropriate blocks to forward the non-conformance to the appropriate activity for action.

b. For an at sea generated DFS, the Commanding Officer will use the ISIC section to indicate approval of the DFS.

c. In the instances where a depot activity forwards a conditional departure to the ISIC for concurrence, the ISIC will check the block labeled CONCUR, FORWARDED TO TYCOM FOR ACTION. The ISIC will type or print name, sign and date.

TYCOM: Check the appropriate blocks. Type or print name, sign and date. ((Submarines only) See QA-12 Block 19 table for approval guidance).

LOCAL TECHNICAL AUTHORITY: When appropriate, check the appropriate blocks and type or print name, sign and date. Check the FWD TO NAVSEA FOR ACTION BLOCK for any DFS requiring NAVSEA final approvals.

NAVSEA/NAVAL AIR SYSTEMS COMMAND (NAVAIR) action: The appropriate blocks will be checked and signed by NAVSEA.

NAME/SIGNATURE/DATE: The ISIC Material Officer, ISIC QAO, TYCOM Representative, Local Technical Authority Chief Engineer or Commanding Officer (for an at-sea initiated DFS)

will type or print name and title, sign and date in the appropriate block signifying technical acceptance of the DFS. In the case of shipyard conditional departures, the ISIC signature only signifies acceptance that work to clear the deficient condition is acceptable to be delayed to a future time period. The ISIC signature in this case does not signify acceptance of the technical merit of the departure.

TYCOM: Check the appropriate blocks. Type or print name, sign and date.

NOTE: WHEN ANY OF THE FOLLOWING BLOCKS IN SECTION 7 ARE CHECKED, THE TYCOM MAY APPROVE THE DFS AS DEFINED IN THE FOLLOWING TABLE:

QA-12 Block 19 Table (Submarines Only)	
MAJOR	TYCOM may approve MAJOR non-conformances on a temporary basis with concurrence from the appropriate NAVSEA technical authority.
MINOR	TYCOM may approve all MINOR non-conformances not also marked SUBSAFE, FBW, SFCC, or SOC.
SUBSAFE	TYCOM may approve the following MINOR departures: (1) Departures to which a NAVSEA approved PRECEDENT-setting departure clearly applies. The NAVSEA approved departure cited as the PRECEDENT must be referenced and retained with the approved departure. (2) Departures administered solely for the purpose of transferring accountability to an alternative accountability system in support of at-sea testing. The TYCOM may approve all other MAJOR or MINOR non-conformances within the SUBSAFE Certification Boundary following discussion with the designated NAVSEA technical authority or regional Chief Engineer.
URO	With the exception of at-sea portions of URO MRC 022, the TYCOM must obtain NAVSEA technical approval of all URO MRC non-conformances.
FBW **or** SFCC	TYCOM may approve the following MINOR departures: (1) Departures to which a NAVSEA approved PRECEDENT-setting departure clearly applies. The NAVSEA approved departure cited as the PRECEDENT must be referenced and retained with the approved departure. (2) Departures in the FBW SCS Certification Boundary when the system design employs four (or more) SFCCs with the same function (quad redundant) and a deficiency degrades the operation of only one SFCC. (3) Departures in the FBW SCS Certification Boundary administered solely for the purpose of meeting the alternative accountability system requirement for at-sea testing. The TYCOM may approve all other MAJOR or MINOR non-conformances within the FBW SCS Certification Boundary following discussion with NAVSEA 05U7.
SOC	MINOR non-conformances: Following agreement from NAVSEA that a condition is MINOR, may be approved by the TYCOM as a temporary SOC non-conformance provided that it does not affect the watertight integrity of the DDS and no DDS manned operations will be conducted. Non-conformances affecting any system, equipment or component within the SOC boundary, which are determined to be required by Part III, Chapter 8 of this volume, must be categorized

	and processed as a MAJOR departure, unless otherwise directed by NAVSEA, will require NAVSEA approval.

DEPARTURE CLEARANCE REPORT
QA FORM 12A

1. FROM:	2. DATE
3. TO:	
4. SUBJECT DFS NUMBER _____ DATED _____ ON SYSTEM/COMPONENT _____ IN USS _____	
5. REFERENCE(s): (A) COMUSFLTFORCOMINST 4790.3 - JOINT FLEET MAINTENANCE MANUAL (B) (C) (D)	
6. JUSTIFICATION	
7. CLEAR / CANCEL SUBJECT DFS IN ACCORDANCE WITH REFERENCE (A). (CIRCLE ONE)	
8. SIGNATURE TITLE DATE	

QA FORM 12A INSTRUCTIONS

DEPARTURE CLEARANCE REPORT

PURPOSE: Provide document for reporting the clearance of a DFS.

PROCEDURE: The numbered blocks on QA form 12A correspond with the block instructions listed. QA form 12A should be completed by the ship, ISIC or the NSA correcting the non-conformance on which the DFS exists as soon as the discrepant condition has been corrected.

BLOCK 1 - FROM

Enter the ship's name and hull number or enter the name and activity of person clearing DFS.

BLOCK 2 - DATE

Enter date the DFS was cleared or cancelled.

BLOCK 3 - TO

Enter the appropriate ISIC or, if clearing ship approved DFS, enter "CO". For all others, enter the name and activity of person clearing DFS.

BLOCK 4 - SUBJECT

Enter the required data taken from the QA form 12.

BLOCK 5 - REFERENCE(s)

Enter all applicable references.

BLOCK 6 - JUSTIFICATION

Enter detailed justification for the clearance or cancellation listing all references, tests and inspections used for the DFS clearance.

BLOCK 7 - CLEAR/CANCEL

Circle or check the appropriate action.

BLOCK 8 - SIGNATURE

QAO or the activity correcting the non-conformance, print name, enter signature, title and date. For EDFS this must be an electronic signature.

SURVEILLANCE/MONITORING/AUDIT DISCREPANCY RECORD

QA FORM 14 INSTRUCTIONS

SURVEILLANCE/MONITORING/AUDIT DISCREPANCY RECORD

PURPOSE:

a. To provide as a result of conducting audits and surveillances, a method or means of reporting a discrepancy and ensuing corrective actions are taken by the WC or division.

b. To provide a method of recording discrepancies, reworks and processing actions until final clearance.

c. To provide the only approved method to correct or add Objective Quality Evidence to a certified CWP or closed QA Form.

d. To provide, when maintained in an auditable fashion, a record of completed corrective actions.

e. To provide, when completed, an ability to conduct trend analysis to improve overall FMA and ship's maintenance quality.

NOTE: A COPY OF ALL ASSOCIATED QA FORMS 14 MUST BE INCLUDED WITH THE CWP, QA FORM OR REC. DEFICIENCIES FOUND IN A CLOSED CWP, QA FORM OR REC THAT REQUIRE CORRECTION MUST BE DOCUMENTED ON A QA FORM 14. NO CHANGE TO THE CLOSED CWP, QA FORM OR REC IS PERMITTED EXCEPT AS CITED IN THIS NOTE. THE QA FORM 14 SERIAL NUMBER WILL BE ANNOTATED AT THE TOP OF THE QA FORM 9 OR QA FORM TO CLEARLY INDICATE A QA FORM 14 WAS WRITTEN AFTER THE CWP, QA FORM OR REC WAS CLOSED OR CERTIFIED AND THAT ADDITIONAL OQE IS ASSOCIATED WITH THE CLOSED CWP, QA FORM OR REC PACKAGE.

PROCEDURE: The numbered blocks in QA form 14 correspond with the block instructions listed.

BLOCK 1 - DATE

The person discovering or documenting the discrepancy will enter the date the report was initiated.

BLOCK 2 - SERIAL NUMBER

The QAS or QAO will enter the next sequential number from the QA form 14 Log.

BLOCK 3 - WC

Person discovering or documenting the discrepancy will enter the WC responsible.

BLOCK 4 - PART 1 - DISCREPANCY DESCRIPTION

Person discovering the discrepancy will enter a description of the discrepancy and the associated reference. If associated with a CWP, enter the CWP serial number.

BLOCK 5 - ORIGINATOR SIGNATURE

The individual discovering or documenting the discrepancy will sign, and legibly print, type or stamp their name.

BLOCK 6 - QA OFFICER/QA SUPERVISOR REVIEW SIGNATURE

The QAO or a QAS will sign and legibly print, type or stamp their name signifying a review of and concurrence with the validity of the discrepancy.

NOTE: BLOCK 7, WHEN COMPLETE, WILL SIGNIFY A COMPREHENSIVE PROCESS BY WHICH THE BLOCK 4 DISCREPANCY'S CAUSE, CORRECTION AND PREVENTION ARE IDENTIFIED AND TRACKED TO COMPLETION.

BLOCK 7 - PART 2 - CORRECTIVE ACTION

a. ROOT CAUSE: When this form is used to document a deficiency or when required by the QAO, the Division Officer of the WC responsible (Block 3) for causing the discrepancy will enter the root cause and a brief supporting discussion.

b. IMMEDIATE CORRECTIVE ACTION: The Division Officer of the WC responsible for causing the discrepancy will enter a description of the IMMEDIATE CORRECTIVE ACTIONS (if applicable) that have been taken or are planned and indicate their Estimated Completion Date (ECD).

c. PERMANENT CORRECTIVE ACTION: The Division Officer of the WC responsible for causing the discrepancy will enter a description of the PERMANENT CORRECTIVE ACTIONS (to prevent recurrence) that have been taken or are planned and indicate their ECD. Examples include process improvements and policy or procedural changes.

d. OBJECTIVE QUALITY EVIDENCE CORRECTIONS: The Division Officer of the WC responsible for causing an Objective Quality Evidence discrepancy will enter all required information that adds or corrects existing discrepant OQE (described in Block 4) to a closed CWP, QA FORM or REC. In the event the deficiency identified in Block 4 is not related to OQE, this area must be marked NA.

NOTE: UPON SIGNING BLOCK 8, THE DIVISION OFFICER MUST RETAIN A COPY FOR TRACKING PURPOSES, UNTIL RESOLVED, AND PROVIDE A COPY OF THE QA FORM 14 TO THE QAO OR QAS.

BLOCK 8 - DIVISION OFFICER SIGNATURE

The Division Officer of the WC responsible for causing the discrepancy will sign, date and legibly print, type or stamp their name signifying comment validity and accurate corrective action or OQE correction (if applicable) exists.

NOTE: UPON SIGNING BLOCK 9, THE QAO OR QAS MUST FILE A COPY OF THE SIGNED QA FORM 14 WITH THE DISCREPANT CLOSED CMP, QA FORM OR REC (AS APPLICABLE) TO ALLOW IT TO STAND ALONE.

BLOCK 9 - QA OFFICER/QA SUPERVISOR SIGNATURE

The QAO or QAS will sign, date and legibly print, type or stamp their name indicating full acceptance of the Block 7 comments.

BLOCK 10 - PART 3 - EFFECTIVENESS RE-INSPECTION/AUDIT

When required by the QAO, the QAO or QAS will enter a description of the necessary QAO or QAS re-inspections or audits that will support determining effectiveness of each Block 7 Corrective Action and indicate an ECD for each re-inspection or audit action. Examples include but are not limited to audits, surveillances, exams and level of knowledge interviews.

BLOCK 11 - EFFECTIVENESS

Upon completion of a Re-inspection / Audit (Block 10), the QAO or QAS will enters its effectiveness as "YES or NO". If the effectiveness has been determined to be "NO", the QAO or QAS must transfer the issue to a new QA form 14 (for further root causal analysis and corrective actions) and enter that new QA FORM 14 serial number in the space provided.

NOTE: UPON CLOSURE, THE QAO OR QAS MUST FILE THE COMPLETED AND CLOSED QA FORM 14 IN THE QA FORM 14 BINDER WITH A COPY FILED WITH THE DISCREPANT CLOSED CWP, QA FORM OR REC (AS APPLICABLE) TO ALLOW IT TO STAND ALONE.

BLOCK 12 - EFFECTIVENESS REVIEW/FORM CLOSEOUT QA OFFICER/QA SUPERVISOR SIGNATURE

Upon completion of all corrective actions re-inspections or audits (Block 10), determination of effectiveness and deferral (by QA-14 for any corrective actions deemed NOT effective), the QAO or QAS must enter signature and date, and legibly print, type or stamp their name indicating acceptance and closure of the QA form 14.

TEST AND INSPECTION RECORD

QA FORM 17 Planning must fill in blocks identified by a ♦ prior to issuing

Page____ of ____

QA WCS SIGNATURE (QAO/QAS SIGNATURE FOR SUBSAFE/SOC/SFCC ONLY)	DATE

QA FORM 17 INSTRUCTIONS

TEST AND INSPECTION RECORD

PURPOSE: To provide a report form for work, tests and inspections not covered by other QA forms. This form can be used for flushes, operational testing, shop inspections, cleanliness inspections, generic material identity test, and other tests, inspections, and information deemed necessary. The QA form 17 will not be used in lieu of a QA form 26A in DSS or SOC applications.

TOP OF FORM: Page ___ of ___

NOTE: A TECHNICAL WORK DOCUMENT MAY CONTAIN MULTIPLE QA FORMS OF THE SAME TYPE, (E.G. MORE THAN ONE QA-26). THE PAGE ENTRY IS FOR THIS SPECIFIC FORM, NOT THE TOTAL NUMBER OF PAGES ON ALL FORMS OF THE SAME TYPE.

Enter the page number, starting with page 1, of total number of QA form pages (e.g., 1 of , 2 of). The last number reflects the total number of QA Form pages written. This block is filled in by a QAI or the QAO after all certification testing is complete before block 19 on the QA-9 is signed. (e.g., 1 of 3, 2 of 3, 3 of 3).

PROCEDURE. The numbered blocks on QA form 17 correspond with the block instructions listed. The planning organization must fill in Blocks 1 through 8 (identified by a ◆) prior to issuing the CWP.

BLOCK 1 - SHIP HULL NO.

Enter the ship's name and hull number.

BLOCK 2 - JCN

Enter the JCN.

BLOCK 3 - LWC

Enter the shop number of the LWC.

BLOCK 4 - CWP/REC SERIAL NO.

Enter the CWP/REC serial number or enter N/A if no CWP/REC is required. Do not list the CWP/REC revision.

BLOCK 5 - SYSTEM/COMPONENT

Enter the noun name of the system or component to be tested or inspected.

BLOCK 6 - REFERENCES (COMPONENT ASSY/DETAIL DRAWING AND REVISION)

Enter all references used to identify component parts, material information, and required test or inspection including revision letter and if applicable, the assembly number (Assy D, Assy RA, etc.). For original issue drawings (no revisions) enter a dash (-). For vendor drawings, include vendor name. Revisions for technical manuals are not required.

BLOCK 7 - PART DESCRIPTION/PIECE NO.

Enter the part number or description (pc 5, bonnet, stem bore, backseat, etc.).

BLOCK 8 - DESCRIPTION OF TEST AND/OR INSPECTION

Enter a detailed description of tests, inspections or work to be performed or note the reference used and paragraph or note number that specifies the inspection or test. Enter the required pressure, duration, medium and acceptance criteria of the test. If the test or inspection has a numerical value (e.g., maximum or minimum value), the values will be written in. If listing the pressure values would classify the work procedure, list the applicable reference including paragraph, table, section or item number, and the "J" or "H" symbol (if applicable) instead of classifying the document.

NOTE: WHEN MANUFACTURING PARTS, ENTER THE MATERIAL SPECIFICATION OR NSN FOR RAW STOCK AND RECORD THE PLAN AND WHEN APPLICABLE, THE PIECE NUMBER OF THE PART MANUFACTURED.

NOTE: FOR URO MRCs TO BE PERFORMED AS A RETEST, LIST THE SPECIFIC APPLICABLE PORTIONS OF THE URO MRC (TO INCLUDE APPLICABLE PRE-REQUISITE STEPS) REQUIRED TO RECERTIFY THE SYSTEM.

BLOCK 9 - RESULTS

Enter the specific results of the test, inspection or work specified in Block 8. Indicate satisfactory or unsatisfactory results or completion. If UNSAT, the craftsman will:

a. Initiate action to resolve the condition.

b. Record actions taken in this block to correct the unsatisfactory condition.

c. Sign in this block (Block 9).

Do not sign Block 10 unless signing for satisfactory results or completion are obtained or for an UNSAT condition that has been accepted.

NOTE: IF THE TEST OR INSPECTION REQUIRES THE USE OF TMDE, RECORD THE INSTRUMENT, RANGE AND SERIAL NUMBER AND CAL DUE DATE IN THE RESULTS BLOCK.

NOTE: WHEN VULCANIZING O-RINGS, ENTER THE STOCK NUMBER AND EXPIRATION DATE (IF PROVIDED).

NOTE: IF SKETCHES, DRAWINGS, URO DATA REPORT FORMS OR ADDITIONAL INFORMATION IS REQUIRED TO SUPPLEMENT THIS REPORT, EACH DRAWING, ETC., WILL BE LABELED AS AN ATTACHMENT TO ITS RESPECTIVE QA FORM 17, INCLUDING THE PAGE NUMBER, WHICH MUST BE SIGNED (INCLUDE PRINTED NAME, DATE) BY THE CRAFTSMAN AND QAI FILLING OUT THE QA FORM 17. (FOR ATTACHMENTS WITH MULTIPLE PAGES, ONLY THE FIRST PAGE REQUIRES SIGNATURES.)

NOTE: FOR OPERATIONAL JOINT TIGHTNESS TESTS, ENTER ACTUAL PRESSURE AND DURATION. TEST DURATION WILL INCLUDE THE REQUIRED TEST PERIOD AND THE TIME REQUIRED TO COMPLETE THE INSPECTION. IF LISTING THE ACTUAL TEST PRESSURE VALUE

WOULD CLASSIFY THE WORK PROCEDURE, THEN LIST THE APPLICABLE REFERENCE INCLUDING PARAGRAPH, TABLE, SECTION OR ITEM NUMBER, AND THE SYMBOLS "J" OR "H" (IF APPLICABLE) INSTEAD OF CLASSIFYING THE DOCUMENT. FOR URO MRCs PERFORMED AS A RETEST, COMPLETE REQUIRED PORTIONS OF THE URO MRC DATA FORMS AND ENTER SATISFACTORY OR UNSATISFACTORY IN BLOCK 9.

BLOCK 10 - CRAFTSMAN/DATE

Craftsman print name, enter signature and date after completing Block 9. Do not sign Block 10 unless satisfactory results or completion are obtained or the UNSAT condition has been accepted.

NOTE: FOR NDT INSPECTIONS, THE NDT INSPECTOR WILL SIGN BLOCK 10 AS THE CRAFTSMAN AND THE NDT SUPERVISOR WILL SIGN BLOCK 11 FOLLOWING REVIEW OF THE FORM.

BLOCK 11 - QA INSPECTOR/DATE

Inspector print name, enter signature and date verifying the accuracy of the data recorded in Block 9.

BLOCK 12 - RECORD HAS BEEN REVIEWED FOR COMPLETENESS

QAS or QAO will print name, enter signature and date for final review, signifying the accuracy of the completed form for SUBSAFE, SOC or SFCC items only. For other components, the QA Work Center supervisor must sign and date the form signifying the accuracy of the completed form.

QA FORM 17A INSTRUCTIONS

EPOXY REPAIR RECORD

PURPOSE: To document the proper OQE for epoxy repairs on components when directed by the Technical Work Document.

NOTES:

1. **EACH FORM ALLOWS FOR TWO EPOXY REPAIRS TO BE DOCUMENTED, BUT MUST BE LIMITED TO A SINGLE COMPONENT (E.G., TD-29/30 VALVE ASSEMBLY).**
2. **REWORK: IN CASES WHERE REWORK IS REQUIRED AFTER CRAFTSMAN CERTIFICATION OF A RECORD, A NEW RECORD AND WORK AUTHORIZING DOCUMENT IS REQUIRED.**
3. **IN CASES WHERE REWORK IS REQUIRED DUE TO AN IN-PROCESS FAILURE, THE FOLLOWING PROCESS MUST BE USED:**
   a. **CHECK THE "UNSAT" BOX IN THE "TEST RESULTS" SECTION OF BLOCK 10 ALONG WITH AN EXPLANATION OF FAILURE IN BLOCK 11. LEAVE REMAINING UNSIGNED BLOCKS BLANK.**
   b. **ENTER "REWORK FOR ITEM 9X" (WHERE X IS THE LETTER DESIGNATOR FOR THE BLOCK 9 ITEM LINE (E.G., 9A, 9B)) OR SIMILAR WORDS IN THE NEXT BLANK "PART NO./NAME/ DESCRIPTION OF DEFECT AREAS" BLOCK, ALONG WITH AN ASTERISK OR OTHER MARK WITH A CORRESPONDING EXPLANATION IN BLOCK 11 WITH SIGNATURE, BADGE NUMBER AND DATE. IF THERE IS NO EMPTY ITEM LINE, ANOTHER QA FORM 17A MAY BE USED AS A CONTINUATION SHEET. IF THE RECORD CONTAINS MULTIPLE PAGES, IDENTIFY THE PAGE THAT CONTAINS THE ITEM LINE FOR WHICH THE REWORK IS ACCOMPLISHED (E.G., 9A OF PAGE 1).**
   c. **RE-ENTER ALL OF THE ORIGINALLY REQUIRED TESTS IN THE NEW ITEM LINE AND COMPLETE ALL BLOCKS EXCEPT THE "PART NO./NAME/DESCRIPTION OF DEFECT AREAS" BLOCK WHICH IS ANNOTATED AS DESCRIBED IN PARAGRAPH B. ABOVE. IT IS ACCEPTABLE FOR THE CRAFTSMAN TO COPY ENTRIES INTO PLANNING BLOCKS FROM THE ORIGINAL PLANNING ENTRIES.**

SCOPE: Documentation with this QA form is required for epoxy repair of the following:

- SUBSAFE components
- Scope of Certification (SOC) components
- Seawater ball valves

TOP OF FORM: - Page_____of_____

NOTE A TECHNICAL WORK DOCUMENT MAY CONTAIN MULTIPLE QA FORMS OF THE SAME TYPE, (E.G. MORE THAN ONE QA-26). THE PAGE ENTRY IS FOR THIS SPECIFIC FORM, NOT THE TOTAL NUMBER OF PAGES ON ALL FORMS OF THE SAME TYPE.

Enter the page number, starting with page 1, of total number of QA form pages (e.g., 1 of , 2 of). The last number reflects the total number of QA Form pages written. This block is filled in by a QAI or the QAO after all certification testing is complete before block 19 on the QA-9 is signed. (e.g., 1 of 3, 2 of 3, 3 of 3).

PROCEDURE: Planning Department: Provide guidance per UIPI 2560-107 or UIPI 6300-905, and provide QA-17A records as part of the TWD or DL. The numbered blocks on QA form 17A correspond with the block instructions listed. Planning must fill in blocks identified by a ♦ prior to issuing QA form 17A. The shop craftsman is responsible for all other blocks on the form unless otherwise specified.

BLOCK 1 - SHIP HULL NO.

Enter the ship's name and hull number or enter the appropriate rotatable pool system designator (e.g., TRIPER, CCRP, AERP, SSN 688CL, etc.).

BLOCK 2 - JCN

Enter the Job Control Number (JCN). Naval shipyards enter Job Order and Key Op.

BLOCK 3 - LWC/SHOP

Enter the lead shop (e.g., X38, outside machinist).

BLOCK 4 - CWP/REC SERIAL NO.

Enter the CWP/REC serial number or enter NA if no CWP/REC is required. Do not list the REC revision.

BLOCK 5 - SYSTEM/COMPONENT/ROTATABLE POOL SER NO.

Enter the noun name of the system and component (if applicable) (e.g., MSW-25). If the record is for in-shop restoration of rotatable or factory pool material, enter the serial number of the material.

NOTE: ROTATABLE POOL OR FACTORY SERIAL NUMBERS MAY BE ENTERED BY THE PLANNER, IF KNOWN, OR THE CRAFTSMAN AS SPECIFIED BY LOCAL INSTRUCTIONS.

BLOCK 6 - REFERENCES (COMP DETAIL/ASSY DWG & REV)

Enter all references used to identify component parts, material information and test or inspection requirements. Include revision letter and if applicable, identify the assembly number (e.g., Assy D, Assy RA, etc.). For original issue (non-revised) drawings, enter a dash (-). Revisions for Technical Manuals are not required. Include vendor name for vendor drawings.

BLOCK 7 - EPOXY REPAIRS ARE PER

Check the "UIPI 2560-107" or "UIPI 6300-905" box when applicable; otherwise check the "OTHER" box and specify the procedure. Do not enter revision or change of procedure.

BLOCK 8 - LEGEND FOR EPOXY METHOD

Identifies the designators for Block 9 (EPOXY METHOD). Planning must specify the type of epoxy repair on the line following the "OT - OTHER" designator when a required repair method is not listed.

BLOCK 9 - DESCRIPTION OF REPAIR(S)

NOTE: PLANNING MUST COMPLETE ALL SECTIONS OF BLOCK 9. ADDITIONAL QA 17A FORMS MAY BE ADDED AS CONTINUATION SHEETS IF NECESSARY.

PART NO./NAME & DESCRIPTION OF DEFECT AREA(S)

Enter part number or name (e.g., pc 5, bonnet; pc 3, body, etc.) and description of defect areas (e.g., O-ring groove pitted, stem bore, backseat, etc.). Ensure each surface area being epoxy repaired is clearly identified.

NOTE: USE BLOCK 11, THE BACK OF THE SHEET, OR BOTH, FOR ADDITIONAL INFORMATION AND SKETCHES.

REF DWG LTR(S)

Enter the letters corresponding to the reference listed in Block 6 which provides the material, dimensional and testing or inspection information for the items listed in the "PART NO./NAME & DESCRIPTION OF DEFECT AREA(S)" block.

UIPI 2560-107 METHOD OR EPOXY METHOD

Enter the epoxy repair method code from UIPI 2560-107 when applicable, or use a symbol from the legend in Block 8 that identifies the method of epoxy repair being accomplished when UIPI 6300-905 or OTHER instruction is identified in Block 7. For an epoxy repair method not identified in the Block 8 legend, enter "OT" and specify the epoxy repair method on the line following "OT - OTHER" in Block 8.

BLOCK 10 - REPAIR(S) & TEST ACCOMPLISHED

NOTE: CRAFTSMAN MUST COMPLETE ALL SECTIONS OF BLOCKS 10A AND 10B. PLANNING MUST COMPLETE BLOCK 10C.

BLOCK 10A. - PRE-EPOXY DIMENSIONS

DEPTH OF MACHINING

When required by the TWD, record the thickness of the material removed during machining. Enter "NA" when not required by the TWD or material removal is not accomplished.

REMAINING WALL THICKNESS

When required by the TWD, enter the wall thickness dimensions after machining or removing material. Dimensions must take into account the depth of remaining defects. Enter "NA" when material is not removed or wall thickness documentation is not required by the TWD.

DEPTH OF REMAINING DEFECTS

Enter the maximum depth of remaining defects. Enter "No Defects Remain" if there are no remaining defects after machining.

SHIM/SLEEVE THICKNESS & MAT'L USED

Enter "NA" when shims are not used. Enter the thickness of the shim or sleeve (or bushing used as a sleeve) used (e.g., 0.032, 1/8 or 3/32, etc.). When installing "S", "L", or top hat shims, enter the thickness of the upper, the middle and the lower legs as applicable. Enter the generic material (e.g., titanium) or a stock number of the shim when provided by the naval or local stock program. When this block is being used to document installation of the shim in lieu of a QA form 34, then the stock number (NSN), part number, drawing and piece number, generic or material spec marking, or results of generic material identity testing must be documented here also. If reinstalling an existing shim, enter "Reinstalled existing".

SIGNATURE/BADGE/DATE

Craftsman enter signature, badge number and date for pre-epoxy dimensions recorded in Block 10A.

BLOCK 10B. - EPOXY APPLIED

EPOXY MATERIAL & BATCH NO. USED

Enter the epoxy material (e.g., 3M Epoxy Adhesive EC-2216B/A) used and the batch number when provided on the container (e.g., Batch 1234).

SIGNATURE/BADGE/DATE

Craftsman enter signature, badge number and date signifying the epoxy was applied per the requirements and the data recorded in Block 10B.

BLOCK 10C. - REQUIRED TESTS/RESULTS

Enter the number(s) for the required test(s) from the legend.

TEST RESULTS FINAL SURFACE FINISH MEETS REQUIREMENTS

The craftsman must check the SAT or UNSAT block to indicate test.

SIGNATURE/BADGE/DATE

Craftsman enter signature, badge number and date signifying that each epoxy repair has been satisfactorily accomplished and tested per the requirements and the OQE documented in Blocks 7, 9, 10A, 10B and 11, and the surface finish meets requirements.

If UNSAT, the craftsman will initiate action to resolve the unsat condition and indicate the action taken in Block 11 and sign in Block 11. Do not sign Block 10 (for the specific line item) unless a satisfactory repair is completed or the unsat condition is accepted. If the condition is accepted, identify the document that grants acceptance in Block 11.

BLOCK 11 - ADDITIONAL INFORMATION/SKETCHES

This block can be used to provide additional information, signatures, and sketches (if required to clarify epoxy repair area(s) or shim or sleeve). If there is insufficient room, the back of the form or the addition of a second page is allowed for use. Include a signature, badge number

and date with any additions to this block. Initials may be entered in lieu of an employee's signature and badge number, if a corresponding employee's signature and badge number appears elsewhere on the same page.

NOTE: IF MORE THAN ONE EPOXY REPAIR IS BEING ACCOMPLISHED, IDENTIFY THE ADDITIONAL INFORMATION, SIGNATURES AND SKETCHES BY THE LINE ITEM LETTERS IN BLOCK 9 (E.G., 9A, 9B).

BLOCK 12 - QA INSPECTOR/SHOP SUPERVISOR SIGNATURE/BADGE NO./DATE

Naval Shipyards: Production Shop Supervisor must sign that the records have been reviewed for completeness.

BLOCK 13 - QAS SIGNATURE/BADGE NO./DATE

For SUBSAFE or SOC Components Only, QAS or cognizant QA representative as defined by local instructions will sign, enter badge number and date in this block to indicate the completeness of the entries.

QA FORM 17B INSTRUCTIONS

ELECTROPLATING REPAIR RECORD

PURPOSE: To document the proper OQE for electroplating repairs on components when directed by the work procedure.

TOP OF FORM: Page ___ of ___

NOTE A TECHNICAL WORK DOCUMENT MAY CONTAIN MULTIPLE QA FORMS OF THE SAME TYPE, (E.G. MORE THAN ONE QA-26). THE PAGE ENTRY IS FOR THIS SPECIFIC FORM, NOT THE TOTAL NUMBER OF PAGES ON ALL FORMS OF THE SAME TYPE.

Enter the page number, starting with page 1, of total number of QA form pages (e.g., 1 of , 2 of). The last number reflects the total number of QA Form pages written. This block is filled in by a QAI or the QAO after all certification testing is complete before block 19 on the QA-9 is signed. (e.g., 1 of 3, 2 of 3, 3 of 3).

PROCEDURE: The numbered blocks on QA form 17B correspond with the block instructions listed. The planner must fill in blocks identified by a ♦ (1 through 9 and 11) prior to issuing the CWP.

BLOCK 1 - SHIP HULL NO.

Enter the ship's name and hull number, or enter the appropriate rotatable pool system designator (e.g., TRIPER, CCRP, AERP, SSN 688CL, etc.).

BLOCK 2 - JCN

Enter the Job Control Number (JCN). Naval shipyards enter Job Order and Key Op.

BLOCK 3 - LWC/SHOP

Enter the lead shop (e.g., X38, outside machinist).

BLOCK 4 - CWP/REC SERIAL NO.

(Work Packaging, Planning Organization or Craftsman) Enter the CWP or REC serial number or enter NA if no CWP/REC is required. Do not list the REC revision.

BLOCK 5 - REFERENCES (COMP DETAIL/ASSY DWG & REV)

Enter all references used to identify component parts, material information, and test or inspection requirements including revision letter and if applicable, the assembly number (e.g., Assy D, Assy RA, etc.). For original issue (non-revised) drawings, enter a dash (-). Revisions for Technical Manuals are not required. Include vendor name for vendor drawings.

BLOCK 6 - SYSTEM/COMPONENT/ROTATABLE POOL SER NO

Enter the noun name of the system and component (if applicable) being plated, (e.g., MSW-25). If the record is for in-shop restoration of rotatable pool material, enter the serial number of the material when known.

NOTE: ROTATABLE POOL SERIAL NUMBERS MAY BE ENTERED BY THE CRAFTSMAN IF NOT ENTERED BY PLANNING ORGANIZATION.

BLOCK 7 - ELECTROPLATING PROCESSES ARE IN ACCORDANCE WITH

Mark the applicable box for the electroplating process. Specify the process when OTHER is marked. Do not enter revision or change of procedure.

BLOCK 8 - LEGEND FOR TYPE OF REPAIR

Identifies the designators for Block 9 (TYPE OF REPAIR). For other than DYNAMIC (D) or STATIC (S) surfaces, PLANNING ORGANIZATION must specify the type of repair on the line following the "OT=OTHER" designator, or in Block 13 if additional space is needed.

BLOCK 9 - DESCRIPTION OF DEFECT & TYPE OF REPAIR

NOTE: PLANNING ORGANIZATION MUST COMPLETE ALL SECTIONS OF BLOCK 9 EXCEPT AS NOTED. ADDITIONAL QA 17B FORMS MAY BE ADDED AS CONTINUATION SHEETS IF NECESSARY.

PART NO./NAME/DESCRIPTION OF DEFECT AREA(S)

Enter part number or name (e.g., pc. 5, bonnet, body, etc.) and description of defect areas. Include dimension after machining and maximum depth of remaining defects prior to plating (e.g., Stem bore O-ring groove pitted, machined 0.010", removed all defects). For more than one of a kind component (XYZ fitting, threaded end) enter the total number of items (e.g., XYZ fitting, threaded end, 6 ea.). Identify each surface area being plated as a separate line item.

NOTE: USE BLOCK 13 AND THE BACK OF THE SHEET FOR ADDITIONAL INFORMATION, SKETCHES, OR BOTH.

REFERENCE DRAWING LETTER

Enter the letter(s) corresponding to the reference(s) listed in Block 5 which provided the material, dimensional, and test and inspection information for the items listed in the "PART NO./NAME/DESCRIPTION OF DEFECT(S)" block(s).

BASE MATERIAL

Enter the required base material.

EXISTING PLATING MATERIAL

Identify any known existing plating or mark the NONE box.

TYPE OF REPAIR

Enter the symbol from the legend in Block 8 that identifies the type of electroplating repair being accomplished.

HYDROGEN BAKE REQUIRED

Mark the YES box when hydrogen bake is required; otherwise mark the NO box.

PLATING MATERIAL REQ'D

Enter the plating material to be applied.

MAXIMUM THICKNESS OR RANGE ALLOWED

Enter the maximum plating thickness allowed or the allowable thickness range (minimum or maximum).

BLOCK 10 - MATERIAL VERIFICATION & REPAIR(S) ACCOMPLISHED

NOTE: THE CRAFTSMAN MUST COMPLETE ALL SECTIONS OF BLOCK 10.

BASE MATERIAL VERIFIED

Craftsman must visually compare the required base material identified and the base material to be plated for obvious discrepancies such as color of material or material markings, and ensure that all existing plating has been removed or identified as being existing. Perform a generic material test if existing material cannot be identified. Check the "SAT" block if no discrepancies are found. Report any discrepancies to PLANNING ORGANIZATION for resolution.

AFTER MACHINING DIMENSIONS

When required by the TWD, record the dimensions after machining.

REMAINING DEFECTS DEPTH

Record the depth of any remaining defects. If no defects remain, mark the NONE box.

APPLIED PLATING THICKNESS WITHIN MAX ALLOWED OR RANGE

Mark SAT if the thickness of plating meets the maximum thickness or range identified by PLANNING ORGANIZATION in Block 9.

PLATING MATERIAL APPLIED

Enter the generic plating material applied (e.g., nickel cap, copper fill, etc.).

NOTE: IF THE APPLIED PLATING THICKNESS IS BEYOND THE MAXIMUM ALLOWED OR NOT WITHIN THE SPECIFIED RANGE, STOP WORK AND OBTAIN FURTHER TECHNICAL DIRECTION.

ELECTROPLATING REPAIR HAS BEEN ACCOMPLISHED IN ACCORDANCE WITH REQUIREMENTS

Craftsman(s) must sign, record badge number, print name and date verifying that each ELECTROPLATING application has been satisfactorily accomplished per the requirements and the OQE documented in Blocks 7, 9 and 10 (and 13 when used) and is complete and accurate. For cases where further machining is required, the electroplating craftsman that completed the plating must sign this block to indicate application of electroplating only, prior to sending the component to the machining craftsman. After the machining and test have been accomplished, a final signature must be made indicating satisfactory completion of the form and the testing. The last signature indicates final acceptance. Use Block 13 for clarification of requirements.

BLOCK 11 - REQUIRED TEST(S)

Enter the designator(s) (i.e., 1-5) for the test(s) required to ensure proper installation or bonding. For "Other" (5), enter the type of test required in the block or in Block 13 if additional space is needed.

BLOCK 12 - TEST(S) RESULTS

2ND Operator, Inspector, or other person qualified to the plating procedure (other than the workpiece craftsman) must sign, record badge number, print name and date to indicate the coating meets the acceptance criteria of the required test(s).

NOTE: SATISFACTORY LIQUID PENETRANT TEST RESULTS MUST BE DOCUMENTED IN ONE OF THE FOLLOWING MANNERS:

1. **A QUALIFIED NDT INSPECTOR OR QAI MAY SIGN, RECORD BADGE NUMBER AND DATE TO INDICATE SATISFACTORY TEST RESULTS.**
2. **THE CRAFTSMAN MAY ENTER THE NON-DESTRUCTIVE TEST (NDT) RECORD NUMBER (OR ATTACH A COPY OF THE RECORD) THAT DOCUMENTS THE SATISFACTORY RESULTS OF NDT PERFORMED BY A QUALIFIED NDT INSPECTOR. THE CRAFTSMAN MUST SIGN (NAME, BADGE, DATE) FOR EACH ENTRY.**

BLOCK 13 - ADDITIONAL INFORMATION/SKETCHES

This block may be used to provide additional information, signatures, and sketches (if required to clarify electroplate repair area(s)). If there is insufficient room, use of the back of the form or the addition of a second page is allowed. Include signature, badge number and date (except where the entry is pre-printed on the form by PLANNING ORGANIZATION with any entries in this block). Initials may be entered in lieu of an employee's signature and badge number, if a corresponding employee's signature and badge number or printed name appears elsewhere on the same page.

NOTE: IF MORE THAN ONE ELECTROPLATING REPAIR IS BEING ACCOMPLISHED, IDENTIFY THE ADDITIONAL INFORMATION, SIGNATURES, AND SKETCHES BY THE LINE ITEM NUMBERS IN BLOCK 9 (e.g., 9a, 9b, etc.). IF THE RECORD CONTAINS MULTIPLE PAGES, INCLUDE THE PAGE NUMBER OF THE REFERENCED ITEM LINE NUMBER.

BLOCK 14 - QUALITY ASSURANCE INSPECTOR/SHOP SUPERVISOR SIGNATURE/BADGE NO.

Production shop supervisor must sign and print name that the record has been reviewed for completeness.

BLOCK 15 - QAS SIGNATURE/BADGE NUMBER/RECORD HAS BEEN REVIEWED FOR COMPLETENESS

For SUBSAFE or SOC Components Only: QAS or authorized QAO representative, as defined by local instructions, will sign, enter badge number, print name and date this block to indicate the completeness of the entries.

COMPONENT REPAIR RECORD – (MACHINING/MANUFACTURING/MODIFICATIONS)

QA FORM 17C Planning must fill in blocks identified by a ♦ prior to issuing Page of

QA FORM 17C INSTRUCTIONS

COMPONENT REPAIR RECORD

PURPOSE: To document the proper OQE for multiple repairs to a single component (i.e., machining, manufacturing, modifications) when directed by the work document.

NOTE: THIS FORM ALLOWS MULTIPLE REPAIRS TO BE ACCOMPLISHED, BUT SHOULD BE LIMITED TO A SINGLE COMPONENT (E.G., TD-29/30 VALVE ASSEMBLY).

TOP OF FORM: Page ___ of ___

NOTE A TECHNICAL WORK DOCUMENT MAY CONTAIN MULTIPLE QA FORMS OF THE SAME TYPE, (E.G. MORE THAN ONE QA-26). THE PAGE ENTRY IS FOR THIS SPECIFIC FORM, NOT THE TOTAL NUMBER OF PAGES ON ALL FORMS OF THE SAME TYPE.

Enter the page number, starting with page 1, of total number of QA form pages (e.g., 1 of , 2 of). The last number reflects the total number of QA Form pages written. This block is filled in by a QAI or the QAO after all certification testing is complete before block 19 on the QA-9 is signed. (e.g., 1 of 3, 2 of 3, 3 of 3).

PROCEDURE: The numbered blocks on QA form 17C correspond with the block instructions listed. Planning must fill in blocks identified by a ♦ prior to issuing the CWP.

BLOCK 1 - SHIP HULL NO.

PLANNER - Enter the ship's name and hull number, or enter the appropriate rotatable pool system designator (e.g., TRIPER, CCRP, AERP, SSN 688CL, etc.).

BLOCK 2 - JCN

PLANNER - Enter the Job Control Number (e.g., 20884-EM01-2947, 3872556103/R01). Naval Shipyards enter Job Order and Key Op.

BLOCK 3 - LWC/SHOP

PLANNER - Enter the lead shop (e.g., X56, outside machinist).

BLOCK 4 - CWP/REC SERIAL NO.

(REC Originator or PLANNER as defined by local instructions) Enter the CWP/REC serial number if applicable; otherwise mark NA. Do not list the REC Revision.

BLOCK 5 - SYSTEM/COMPONENT/ROTATABLE POOL SER NO.

PLANNER - Enter the noun name of the system, component (e.g., MSW-25). If the record is for in-shop repair or manufacture of rotatable pool item, enter the serial number of the item when known.

NOTE: ROTATABLE POOL SERIAL NUMBERS MAY BE ENTERED BY THE CRAFTSMAN IF NOT ENTERED BY THE PLANNER.

BLOCK 6 - REFERENCES (COMPONENT DETAIL/ASSEMBLY DRAWING AND REVISION)

PLANNER - Enter all references used to identify component parts, material information and required testing or inspection. Include revision letter and if applicable, the assembly number (e.g., Assy D, Assy RA, etc.). For original issue (non-revised) drawings, enter a dash (-). For vendor drawings, include vendor name. Revisions for technical manuals are not required.

BLOCK 7 - DESCRIPTION OF REPAIR(S)

NOTE: PLANNING MUST COMPLETE ALL SECTIONS OF BLOCK 7.

LINE NO. Pre-filled. A number to provide traceability to new material documented in Block 8.

PART NO./ DESCRIPTION Enter part number, description or component assembly (e.g., pc 5, bonnet, body, stem bore, backseat, etc.).

NOTE: USE BLOCK 9 AND THE BACK OF THE SHEET FOR ADDITIONAL INFORMATION, SKETCHES, OR BOTH.

REF DWG LTR Enter applicable reference letter(s) of the drawing or document listed in Block 6 that provides the material or dimensional information for the items listed in the "PART NO./DESCRIPTION" block.

QTY Enter quantity of items to repair. Enter NA if not applicable.

DESCRIPTION OF MODIFICATION(S) / MANUFACTURING PROCESS / SUPPLEMENTAL INFORMATION / INSTRUCTION

Enter description of action to perform (e.g., drill and Nyloc per reference (b), **MF** stem per reference (c), **V** per reference (d), **MM** .005" to remove pits, splice o-rings, etc.). The description must clearly identify the surface(s) to be machined. Use legend for abbreviation.

NOTE: USE BLOCK 9 AND THE BACK OF THE SHEET FOR ADDITIONAL INFORMATION, SKETCHES, BOTH. IF ADDITIONAL SPACE IS REQUIRED, ADDITIONAL SHEETS MUST HAVE CONTINUING PAGE NUMBERS AND INFORMATION FROM BLOCKS 1 THROUGH 5 ON EACH SHEET.

REQUIRED MINIMUM/FINAL DIMENSION(S) AND TOLERANCE

When minimum or final dimension documentation is required, Planning must specify the final dimension(s) and tolerance(s) numerically, do not cite a drawing detail or other reference. Enter NA in this block and the Block 8 ACTUAL FINAL DIMENSIONS section if not applicable.

BLOCK 8 - RESULT OF REPAIR(S)

NOTE: THE CRAFTSMAN MUST COMPLETE ALL SECTIONS OF BLOCK 8 EXCEPT THE SECTION TITLED "TEST REQ'D".

ACTUAL FINAL DIMENSION(S)

When final dimension documentation is required by Planning, the craftsman must record the actual final dimension(s) identified in Block 7. If final dimension documentation is not required, Planning must enter NA in the block.

NOTE: CRAFTSMAN MAY ENTER "NA" IF REQUIRED OR MINIMUM FINAL DIMENSION(S) AND TOLERANCE SECTION OF BLOCK 7 IS MARKED "NA" BY PLANNING.

NEW MATERIAL - MANUFACTURED/INSTALLED

Enter the following information for any parts or material, Level I and non-level, in the appropriate blocks. If a portion of a new valve is used to replace parts (e.g., bonnet and disc assembly), document the Level I number of the new valve and list the parts that the assembly consists of in the remarks block with a note that the stem and disc assembly were taken from the new valve.

QTY — Enter the quantity of the replacement parts installed. Enter NA for raw material used in manufacture.

NOTE: THE TERM "ASSEMBLY" REFERS TO ONE PACKAGE OF PARTS (E.G., STEM AND DISC ASSEMBLY OR BALL AND SEAT ASSEMBLY) WHERE THE ITEM IS ORDERED UNDER ONE STOCK NUMBER, AND IS ASSIGNED ONE LEVEL I NUMBER.

LOE — (Level of Essentiality, Level I) – Enter the MIC level (e.g., "I" or "LI") for the part or assembly. Enter NA or dash (-) for non-Level.

MATERIAL IDENT/ DESCRIPTION — Identification must be per Table 1 or Forces Afloat. Record one of the following for raw material used to manufacture components:

TABLE 1- DOCUMENTATION REQUIREMENTS

Material Control Level	Required Information
Level I Material Other Than Fasteners	MIC Number and any other traceability number, including any local traceability number (e.g., PNSY MLN – examples Z142, AB12).
Level I Fasteners	Either the MIC number or Material Marking, Color Code, Heat or Lot Number, and Manufacturers Symbol (Note: For nuts containing a self-locking insert, the color of the insert is the Manufacturer's symbol).
Controlled Structural Material And SOC Control Division "A" Material	Traceability Number
SOC Control Division "B" Material	Markings providing identification to material type or specification
AERP And Other Rotatable Pool Material (688 Class, TRIPER, Etc.)	Enter the appropriate rotatable pool serial number (e.g. RP-148A, 4810-013-5812-A3-0113, TIN -292-11893, etc.)
Transferred And Cannibalized Material	Enter the Equipment Removal List No. or other material History or Traceability number (ERL# XXXX, SSBN-600 EHF #24, etc.)
Other Material Within The LEVEL I/SUBSAFE Boundary And SOC Control Division "C" Material	1. Enter at least one of the following documentation attributes: a. Stock Number (from package or container) b. Part Number (from package or piece) c. Part Number and associated Manufacturing Work Procedure (for manufactured items) d. Local Traceability Number (from piece or tag) e. Drawing and Piece Number (from piece or tag) f. Generic, MIL-SPEC, or Material Specification Marking (from piece) g. NDT record numbers or test results for items verified by generic material testing. 2. For SOC components only: Enter the stock number of the "O-ring lubricant or any sealant used during assembly.

- MIC NUMBER
- RAW MATERIAL NSN
- GENERIC MATERIAL

- MIL-SPEC
- MATERIAL SPECIFICATION MARKING
- NDT RECORD OR TESTING RESULTS FOR GENERIC MATERIAL TESTING

NOTE: IF NDT IS REQUIRED, RECORD SATISFACTORY NDT REPORT NUMBER OR ENCLOSURE NUMBER IN THIS BLOCK AND ATTACH OR INCLUDE A COPY OF THE REPORT.

TEST REQ'D — Planning must enter the test(s) (e.g., NDT, hydrostatic pressure testing, etc.) required to ensure proper certification.

PROCESS IDENTIFIED, MATERIAL AND TEST HAS BEEN SATISFACTORILY ACCOMPLISHED IN ACCORDANCE WITH REQUIREMENTS

Craftsman must sign, record badge number and date of the signature, verifying that each repair process, material installed or utilized, and test has been satisfactorily accomplished per the requirements and the OQE documented in Blocks 7 and 8, respectively.

NOTE: IF UNSATISFACTORY, THE CRAFTSMAN WILL INITIATE ACTION TO RESOLVE THE UNSATISFACTORY CONDITION (E.G., SUBMIT A DF). INDICATE THE ACTION TAKEN TO RESOLVE THE UNSATISFACTORY CONDITION ALONG WITH A SIGNATURE, BADGE NUMBER AND DATE IN BLOCK 9. DO NOT SIGN BLOCK 8 (FOR THE SPECIFIC LINE NO.) UNLESS A SATISFACTORY REPAIR IS COMPLETED OR THE UNSATISFACTORY CONDITION IS ACCEPTED.

BLOCK 9 - ADDITIONAL INFORMATION/SKETCHES

This block can be used to provide additional information, signatures, and sketches (if required to clarify repair area(s)). If there is insufficient room, the back of the form or the addition of a second page is allowed. Include a signature, badge number, and date with any additions to this block. Initials may be entered in lieu of an employee's signature and badge number, if a corresponding employee's signature and badge number appears elsewhere on the same page.

NOTE: IF MORE THAN ONE REPAIR IS BEING ACCOMPLISHED, IDENTIFY THE ADDITIONAL INFORMATION, SIGNATURES, AND SKETCHES BY THE LINE ITEM NUMBERS IN BLOCK 7.

BLOCK 10 - QA INSPECTOR/SHOP SUPERVISOR/BADGE NO./DATE

NA if inspection is not required by the technical work document (e.g., TGI, FWP).

BLOCK 11 - QAS SIGNATURE/BADGE NO. (RECORDS HAVE BEEN REVIEWED FOR COMPLETENESS)

For SUBSAFE or SOC Components Only: QAS or cognizant QA representative as defined by local instructions, will sign, enter badge number, and date in this block to indicate the completeness of the entries.

For other components: the Production Shop or Work Center Supervisor must sign that the records have been reviewed for completeness.

SUBMARINE FLIGHT CRITICAL COMPONENT (SFCC) ACCESS, REMOVAL AND INSTALLATION RECORD

QA FORM 17D INSTRUCTIONS

SUBMARINE FLIGHT CRITICAL COMPONENT (SFCC) ACCESS, REMOVAL AND INSTALLATION RECORD

REFERENCES:

(a) NAVSEA T9044-AD-MAN-010 - Requirements Manual for Submarine Fly-By-Wire Ship Control Systems

NOTE: PLANNING MUST FILL IN BLOCKS IDENTIFIED BY A ♦ PRIOR TO ISSUING.

PURPOSE: To provide a standard form to document the SFCC access, replacement, removal and installation record capturing the requirements of reference (a), Appendix H.

REQUIREMENTS:

1. The FORM 17D is required for all SFCC work within the boundary specified in reference (a).

2. Form 17D must be used for each component that requires controlled access, replacement, removal or installation.

NOTE: ANY BLOCK NOT USED WILL BE MARKED "N/A".

TOP OF FORM: Page ___ of ___

NOTE A TECHNICAL WORK DOCUMENT MAY CONTAIN MULTIPLE QA FORMS OF THE SAME TYPE, (E.G. MORE THAN ONE QA-26). THE PAGE ENTRY IS FOR THIS SPECIFIC FORM, NOT THE TOTAL NUMBER OF PAGES ON ALL FORMS OF THE SAME TYPE.

Enter the page number, starting with page 1, of total number of QA form pages (e.g., 1 of , 2 of). The last number reflects the total number of QA Form pages written. This block is filled in by a QAI or the QAO after all certification testing is complete before block 19 on the QA-9 is signed. (e.g., 1 of 3, 2 of 3, 3 of 3).

BLOCK 1 - SHIP/HULL NO.

Planner enter the ship's name and hull number.

BLOCK 2 - JCN

Planner enter the Job Control Number (JCN).

BLOCK 3 - LWC/SHOP

Planner enter the lead shop assigned to install the component.

BLOCK 4 - CWP/REC SER NO.

Planner enter the CWP/REC serial number or enter NA if no CWP/REC is required. Do not list the CWP/REC revision.

BLOCK 5 - SYSTEM(S)/COMPONENT

Planner enter the noun name of the system and component (if applicable) (e.g., SCPU CHANNEL A CPU#2 or CIRCUIT 1DB). If record is for in-shop restoration, enter the serial number of the material if known.

BLOCK 6 - NOMENCLATURE

Planner enter the system or component nomenclature as described in the technical documentation.

BLOCK 7 - REFERENCE DESIGNATION

Planner enter the reference designation of the component as described in the technical documentation.

BLOCK 8 - REFERENCES

Planner enter the applicable component technical reference documents.

BLOCK 9 - DIAGNOSTICS

Check the block if diagnostic codes or data are continued on reverse of form. If necessary, additional diagnostic codes or data may be listed on reverse of form.

Craftsman record diagnostic data as appropriate for SFCC being replaced as part of repair efforts. Mark "N/A" if repair effort is not being performed.

- Alert Messages - Enter any observed Alert Messages displayed by the Ship Control Station
- Fault Status - Enter any fault status message observed at the system status display
- LRU Callout - Enter any Line Replaceable Unit (LRU) Callouts
- Additional Diagnostic Indications - Record any additional diagnostic information
- Existing pertinent fault data - Record any existing pertinent fault data identified on the MC/DMAC

NOTE: SFCC MATERIAL WILL HAVE CERTIFICATE OF COMPLIANCE (COC) OR A SMIC; EITHER IS ACCEPTABLE.

BLOCK 10 - EXISTING SFCC REMOVAL

List data required as appropriate for each of the provided blocks. Record the specific components software revision level. If software is pre-programmed on SFCC, record the software revision level identified on the applicable SFCC Certificate of Conformance.

NOTE: SFCC MATERIAL WILL HAVE CERTIFICATE OF COMPLIANCE (COC) OR A SMIC; EITHER IS ACCEPTABLE.

BLOCK 11 - NEW SFCC INSTALLATION

Craftsman mark as "SAT", "UNSAT" or list data required as appropriate for each of the provided blocks. Record the specific components software revision level. If software is pre-programmed on SFCC, record the software revision level identified on the applicable SFCC Certificate of Conformance.

BLOCK 12 - SFCC RESTORATION

Craftsman mark as "SAT" or "UNSAT" as appropriate.

BLOCK 13 - OPERATIONAL VERIFICATION

Craftsman mark as "SAT" or "UNSAT" as appropriate.

BLOCK 14 - SOFTWARE INSTALLATION

NOTE: BLOCK 14 ONLY USED DURING SYSTEM OR SOFTWARE UPGRADES OR ALTERATIONS.

Craftsman list data required as appropriate for each of the provided blocks (N/A if not used).

• Installation Software Rev - Record the Ship Control System operational software revision level identified in the change vehicle.

• VDD Checksum - Record the checksum value identified in the Version Description Document (VDD). Should match Installation Checksum.

BLOCK 15 - SOFTWARE VERIFICATION

NOTE: "INSTALLATION CHECKSUM" IS ONLY USED FOR PROGRAMMED SW SMIC SFCC COMPONENTS OR DURING VU SMIC UPGRADES OR ALTERATION (N/A IF NOT USED).

• Installation Checksum - Record the checksum as observed during installation. Should match VDD Checksum from original installation.

• New SFCC Configured Similarly as Removed SFCC - Verify that the SFCC is configured similarly as the SFCC removed from the FBW SCS chassis per the controlled work package documentation. This includes satisfactory VDD Checksum verification (if applicable).

BLOCK 16 - REMARKS

Craftsman or Alteration Installation Team (AIT) Lead will record amplifying information as required or additional space is required, and will sign, print name and date Block 16.

BLOCK 17 - CRAFTSMAN SIGNATURE

Craftsman must sign this block signifying that the work has been accomplished.

BLOCK 18 - AIT LEADER/INSPECTOR SIGNATURE

(SHIP'S FORCE) INSPECTOR or QAI will enter signature, date and badge number for final review, signifying the accuracy of the completed form and witnesses testing associated with Blocks 13, 14 and 15 (as applicable). If any entry is UNSAT, initiate action to resolve the UNSAT condition and indicate the action taken in the "Remarks" block. Do not sign unless a satisfactory repair is completed or the UNSAT condition is accepted.

BLOCK 19 - RECORD HAS BEEN REVIEWED FOR COMPLETENESS

The OSIC, QAS or QAO must sign, date and enter badge number for final review, signifying entries are complete and that the data agrees with the listed requirements.

STUD INSTALLATION RECORD Planning must fill in blocks identified by a ♦ prior to issuing Page _____ of _____

QA FORM 17SI

♦1. SHIP	HULL NO.	♦2. JCN	♦3. LWC / SHOP	♦4. CWP / REC SER NO.	♦5. SYSTEM/COMPONENT / ROTATABLE POOL NO.

QA FORM 17SI INSTRUCTIONS

STUD INSTALLATION RECORD

PURPOSE: To document the proper OQE for installing Level One studs in a SOC, SUBSAFE or Level One application when directed by the work procedure.

TOP OF FORM: Page ___ of ___

NOTE A TECHNICAL WORK DOCUMENT MAY CONTAIN MULTIPLE QA FORMS OF THE SAME TYPE, (E.G. MORE THAN ONE QA-26). THE PAGE ENTRY IS FOR THIS SPECIFIC FORM, NOT THE TOTAL NUMBER OF PAGES ON ALL FORMS OF THE SAME TYPE.

Enter the page number, starting with page 1, of total number of QA form pages (e.g., 1 of , 2 of). The last number reflects the total number of QA Form pages written. This block is filled in by a QAI or the QAO after all certification testing is complete before block 19 on the QA-9 is signed. (e.g., 1 of 3, 2 of 3, 3 of 3).

PROCEDURE. The numbered blocks on QA form 17SI correspond with the block instructions listed. Blocks marked with a ♦ must be completed by the planner prior to issue.

BLOCK 1 - SHIP HULL NO.

Enter the ship's name and hull number.

BLOCK 2 - JCN

Enter the JCN.

BLOCK 3 - LWC

Enter the shop number of the LWC.

BLOCK 4 - CWP/REC SERIAL NO.

Enter the CWP/REC serial number or enter N/A if no CWP/REC is required. Do not list the CWP/REC revision.

BLOCK 5 - SYSTEM/COMPONENT

Enter the noun name of the system and component being repaired. (e.g., MSW-25 Hull Insert). If the record is for in-shop repair or manufacture of rotatable pool item, enter the serial number of the item.

BLOCK 6 - NEW MATERIAL DESCRIPTION

NOTE: THE CRAFTSMAN MUST COMPLETE ALL SECTIONS OF BLOCK 6.

MATERIAL DESCRIPTION

Enter a description of the new studs installed in the joint. Include diameter, thread, and length (e.g., Stud, 5/8"-11x3").

QTY - Record the quantity of the new studs installed.

LOE - Enter the Level of Essentiality as "I" or "NA" as appropriate.

IDENTIFICATION/MIC/TRACEABILITY NO.

Document the markings from the fastener to include either:

(1) The color code and the heat or lot number, material type and manufacturer's symbol (for nuts containing a self-locking insert, the color of the insert is the manufacturer's symbol).

(2) The MIC number (when MIC number is on the fastener or on the individual tag for some small fasteners).

BLOCK 7 - DESCRIPTION OF STUD DATA REQUIREMENTS

NOTE: THE PLANNER MUST COMPLETE ALL SECTIONS OF BLOCK 7.

JOINT MAPPING DRAWING & REV

Enter the joint mapping drawing and revision. Enter NA when no mapping drawing exists.

JOINT NO/JOINT DESCRIPTION

Enter the joint number if applicable or clearly describe the installation location. If joint numbers are assigned via a sketch in the TWD, identify the sketch enclosure number and TWD number.

REQUIRED STUD DIAMETER & THREAD SERIES

Enter the required diameter and thread series of the replacement stud.

DETAIL DRAWING & REV

Enter the detailed drawing and revision number. For original issue (non-revised) drawings, enter a dash (-). Include vendor name for vendor drawings. Revisions for Technical Manuals are not required.

STUD PIECE NO.

Enter the detailed drawing pertaining to the stud.

REQUIRED STUD LENGTH

Enter the required length of the stud.

REQUIRED CLASS OF FIT AUTHORIZED INSTALLATION METHOD

Mark the appropriate block for the required class of fit.

TORQUE REFERENCE

Enter the source for the torque value (e.g., NAVSEA S9505-AM-GYD-010, SAE J2270, drawing, SMS, etc.).

REQUIRED MIN BREAKAWAY TORQUE OR STUD SETTING TORQUE

Enter the required minimum breakaway torque, the tolerance or range, and mark the appropriate torque units box (ft-lb or in-lb).

BLOCK 8 - STUD INSTALLATION DOCUMENTATION

REQUIRED ANAEROBIC LOCKING COMPOUND: GRADE OR MANUFACTURER PRODUCT NUMBER

Planner enter the required grade of anaerobic locking compound. Leave blank for Class 5 installation method.

ACTUAL ANAEROBIC LOCKING COMPOUND MANUFACTURER OR PRODUCT NAME & GRADE OR MANUFACTURER PRODUCT NUMBER

Record either the manufacturer or the product name in addition to the material grade or manufacturer product number of the thread locking compound used. Leave blank for Class 5 installation method.

REQUIRED STUD STANDOUT & TOLERANCE

Enter the required stud standout and tolerance.

ACTUAL STUD(S) STANDOUT

Record the actual stud standout for each new or reset existing stud.

BLOCK 9 - SKETCH/REMARKS

Provide a sketch of the fastener circle, showing all the newly installed and all re-installed existing studs and their orientation to the component.

BLOCK 10 - CRAFTSMAN SIGNATURE/BADGE NO./DATE

Craftsman print name, enter signature, badge number and date after completing Blocks 6, 8 and 9. Do not sign Block 10 unless signing for satisfactory results. If unsat, the craftsman will report the unsat condition and document the rework on the applicable QA form. If only one fastener is unsat, the craftsman may sign for completing the installation of the remaining studs but must clearly annotate in Block 9 the location of the stud and reason for the unsatisfactory condition.

Craftsman signature signifies the following:

- Fastener size, length, and class of fit are per the stated requirements
- Minimum breakaway torque or stud setting or stud setting torque (as applicable) is satisfactory
- Stud installation complies with all installation requirements
- All new material meets specified requirements, is installed and listed in Block 6
- Material not listed as new is existing, and is acceptable for re-use and is installed

BLOCK 11 - QAI/SHOP SUPERVISOR SIGNATURE/BADGE NO./DATE

NOTE: REQUIRED FOR SOC, SUBSAFE AND LEVEL I COMPONENTS ONLY.

Inspector or shop supervisor print name, enter signature, badge number and date certifying the accuracy of the data recorded in Block 6, 8 and 9. This signature is only required for SOC, SUBSAFE and Level I components.

BLOCK 12 - RECORDS HAVE BEEN REVIEWED FOR COMPLETENESS

QAS or QAO will print name, enter signature, badge number and date for final review, signifying the accuracy of the completed form for SUBSAFE or SOC items only. For other components, the Work Center supervisor must sign and date the form signifying the accuracy of the completed form.

QA FORM 17W INSTRUCTIONS

HANDLING EQUIPMENT TEST RECORD INSTRUCTIONS

PURPOSE: To provide a report form for work, tests and inspections not covered by other QA forms. This form can be used for handling equipment weight testing except cranes and strategic weapons handling equipment.

TOP OF FORM: Page ___ of ___

NOTE A TECHNICAL WORK DOCUMENT MAY CONTAIN MULTIPLE QA FORMS OF THE SAME TYPE, (E.G. MORE THAN ONE QA-26). THE PAGE ENTRY IS FOR THIS SPECIFIC FORM, NOT THE TOTAL NUMBER OF PAGES ON ALL FORMS OF THE SAME TYPE.

Enter the page number, starting with page 1, of total number of QA form pages (e.g., 1 of , 2 of). The last number reflects the total number of QA Form pages written. This block is filled in by a QAI or the QAO after all certification testing is complete before block 19 on the QA-9 is signed. (e.g., 1 of 3, 2 of 3, 3 of 3).

PROCEDURE: The numbered blocks on QA form 17W correspond with the block instructions listed. When this form is used to certify manufacture or repair of handling equipment, the planning organization must fill in Blocks 1 through 11 (identified by a ♦) prior to issuing a procedure requiring use of this form. When this form is used to perform periodic handling equipment testing, the weight test supervisor or shop supervisor must fill in Blocks 1 through 12 (identified by a ♦) prior to performing testing.

BLOCK 1 - SHIP HULL NO.

Enter the ship's name and hull number.

BLOCK 2 - JCN

Enter the JCN.

BLOCK 3 - LWC/SHOP

Enter the shop number of the LWC.

BLOCK 4 - CWP/REC SERIAL NO.

Enter the CWP serial number or enter NA if no CWP/REC is required. Do not list the CWP/REC revision.

BLOCK 5 - EQUIPMENT DESCRIPTION

Enter the name and a readily understood description of the equipment or component name from the Test Load Methods Drawing (TLMD). If the equipment is permanently installed (e.g., a monorail or pad eye, etc.), enter the compartment location, (e.g., torpedo room, port, overhead, and frame 21.)

BLOCK 6 - LOG I.D. NUMBER

Enter log identification number from the TLMD when applicable.

BLOCK 7 - MANUFACTURER OR LOCAL SERIAL NUMBER

Enter the manufacturer or Local Serial Number when applicable (i.e., Hull No. - Work Center - Number).

BLOCK 8 - NAVSEA DRAWING NUMBER/REVISION

Enter NAVSEA drawing number and revision for drawing used to conduct the test.

BLOCK 9 - SAFE WORKING LOAD (SWL)

Enter the item's Safe Working Load (SWL), in pounds, from the TLMD.

NOTE: LIST THE SWL FOR BOTH THE SHORT AND LONG POSITIONS FOR LOADING POLES.

BLOCK 10 - DYNAMIC TEST LOAD (DTL)

Enter the item's Dynamic Test Load (DTL), in pounds, from the TLMD.

BLOCK 11 - STATIC TEST LOAD (STL)

Enter the item's Static Test Load (STL), in pounds, from the TLMD.

BLOCK 12 - STL FREQUENCY

Enter the frequency required for the static test in months.

NOTE: STRATEGIC WEAPONS HANDLING EQUIPMENT COVERED UNDER THE PREVENTIVE MAINTENANCE MATERIAL PROGRAM (PMMP) DOES NOT REQUIRE A QA FORM 17W. EQUIPMENT NOT COVERED UNDER THE PMMP MUST MEET THE REQUIREMENTS OF THIS MANUAL.

BLOCK 13 - TEST TYPE

Enter the test date, the action taken (e.g., STL, DTL, MT, VT, tension, compression, short or long for loading poles) and the name or hull number of the testing facility. Print the name (e.g., first name, middle initial and last name) of the test facility witness. The test facility witness must then sign the block above the name. If test facility witness signature or QA signature cannot be obtained, the source document bearing that signature will be obtained and retained in the weapons handling test record log. Only the latest source document applicable to any particular piece of equipment or component need be retained.

BLOCK 14 - REMARKS

(Craftsman, QAI, QAS or Planning) Enter any pertinent remarks or additional information related to the repair or assembly of the component. Each entry must contain signature, badge number and date except where the entry is pre-printed on the form by Planning.

FIGURE 1 Record measurement in blocks provided on the back of the QA form 17W when applicable.

a. Hook throat opening measurements and tram point pre-test or post-test measurements when new, or as first recorded, per NSTM 700 or PMS.

b. Length and link diameters of hoist load chains when new, or as first recorded, per NSTM 700 or PMS.

QA FORM 18 INSTRUCTIONS

SILVER BRAZE FABRICATION AND INSPECTION RECORD

PURPOSE: To provide a standard form for documenting OQE for a silver brazed joint.

NOTE: BLOCKS 13, 17, P-NUMBER, 20, F-NUMBER, AND 26 ARE FOR QUALIFICATION USE ONLY AND ARE NOT REQUIRED FOR PRODUCTION BRAZES.

TOP OF FORM: Page ___ of ___

NOTE A TECHNICAL WORK DOCUMENT MAY CONTAIN MULTIPLE QA FORMS OF THE SAME TYPE, (E.G. MORE THAN ONE QA-26). THE PAGE ENTRY IS FOR THIS SPECIFIC FORM, NOT THE TOTAL NUMBER OF PAGES ON ALL FORMS OF THE SAME TYPE.

Enter the page number, starting with page 1, of total number of QA form pages (e.g., 1 of , 2 of). The last number reflects the total number of QA Form pages written. This block is filled in by a QAI or the QAO after all certification testing is complete before block 19 on the QA-9 is signed. (e.g., 1 of 3, 2 of 3, 3 of 3).

PROCEDURE: The numbered blocks on QA form 18 correspond with the block instructions listed. The planner preparing the work procedure will complete blocks identified with the diamond symbol. The craftsman will complete blocks without the diamond symbol. The NDT Supervisor will verify the completed form and sign in Block 38. A QA form 18A will be attached to this form to complete each brazed joint record.

BLOCK 1 - SHIP HULL NO.

Enter the tended ship's name and hull number.

BLOCK 2 - JCN

Enter the JCN.

BLOCK 3 - LWC/SHOP

Enter the shop number for the LWC.

BLOCK 4 - CWP/REC SER NO.

Enter the CWP/REC serial number or enter N/A if no CWP/REC is required. Do not list the CWP/REC revision.

BLOCK 5 - SYSTEM/COMPONENT

Enter the system or component noun name.

BLOCK 6 - PURPOSE

Check appropriate block.

BLOCK 7 - INSTALLATION DRAWING

Enter the installation drawing number and revision.

BLOCK 8 - JOINT ID/DESCRIPTION

Enter the map joint number from the applicable plan (Block 10). If not a mapped joint, assign a local unique joint ID number or enter a description of the joint.

BLOCK 9 - JOB DESCRIPTION

Enter a brief statement describing the work.

BLOCK 10 - MAP JOINT DWG

Enter ship's plan number and revision, which show and identify the map number of the joint being brazed or enter "NA" if there isn't a map drawing.

BLOCK 11 - P-3A SPECIAL/P-3A/P 3B

Enter an "X" in the appropriate box.

BLOCK 12 - BRAZE PROCEDURE

Enter the braze procedure used, including revision and change.

BLOCK 13 - BRAZE PROCESS

Enter an "X" in the appropriate block per NAVSEA 0900-LP-001-7000.

BLOCK 14 - JOINT DESIGN

Enter an "X" in the appropriate boxes.

BLOCK 15 - ACCESS

Enter an "X" in the appropriate box.

BLOCK 16 - ORIGINAL/REPAIR

Enter an "X" in the appropriate box.

BLOCK 17 - FITTING, PIPE AND TUBE MATERIALS

a. Enter the fitting piece and pipe or tube piece number from the installation drawing (Block 7) or NA if not available.

b. Enter the size of the fitting and pipe or tube (e.g., 1/2 Normal Pipe Size (NPS)).

c. Enter the thickness (.127 inches).

d. Enter the actual thickness (minimum value) of the fitting and pipe or tube.

e. Enter the material specification of the component (from Table 4-4 of NAVSEA 0900-LP-001-7000), when known. If existing, enter "existing".

f. For qualification purposes, enter the applicable P-number from Table 4-4 of NAVSEA 0900-LP-001-7000.

g. Enter an "X" in the appropriate New or Exist box.

h. Enter the material marking of the component. Enter the MIC Number for new level I material installed or N/A. Enter other material markings if material is not required to be level I and marking is present. If fitting is existing and is not marked, an acid check when required by the TWD to ensure generic material is correct must be accomplished and documented in remarks block.

BLOCK 18 - LAND WIDTH

Enter the land width or socket depth for fittings without inserts. N/A blocks that are not applicable.

BLOCK 19 - FLUX

a. Enter an "X" if minimum flux technique was used.

b. Enter an "X" for flux type per FED-SPEC O-F-499.

BLOCK 20 - BRAZE ALLOY

Enter the Mil-Spec and the alloy grade. Enter the MIC Number when new level I brazing material is installed in a Level I application or enter "NA" for non-level applications when material is not required to be level I.

BLOCK 21 - JOINT DATA IS CORRECT/CRAFTSMAN SIGNATURE

Verify data entered is correct and actual material to be used or installed is as specified. Sign name, enter date and badge number to certify information is correct.

BLOCK 22 - INSPECTION TYPE

a. Mark the appropriate type of inspection.

b. Diametrical Clearance – Enter the actual measurement. Acceptance criteria is per Table 5.2 of NAVSEA 0900-LP-001-7000.

c. Fit up Inspection-Acceptance criteria of paragraph 7.2.1.a of NAVSEA 0900-LP-001-7000.

d. Alloy Draw-Acceptance criteria per paragraph 7.2.1.d of NAVSEA 0900-LP-001-7000.

e. Evidence of Alloy-Acceptance criteria per paragraph 7.2.1.e of NAVSEA 0900-LP-001-7000.

f. Clearance Acceptance criteria per paragraph 7.2.1.f of NAVSEA 0900-LP-001-7000.

BLOCK 23/24- ACCEPT/REJECT

Mark the appropriate column.

BLOCK 25 - SIGNATURE

Enter the signature, badge number and date.

BLOCK 26 - BRAZED POSITION

Mark the appropriate block for position brazing performed.

BLOCK 27 - BRAZE PROCEDURE IS SATISFACTORY

Brazer sign name and enter Brazer badge number and date to certify all joint information is correct.

BLOCK 28 - NDT REQUIREMENTS

a. Enter an "X" if Ultrasonic Testing (UT) is not required.

b. Enter the NDT procedure number.

BLOCK 29 - SCANNING METHOD

Enter an "X" in the appropriate box.

BLOCK 30 - EQUIPMENT MANUFACTURER

Enter Equipment Manufacture Name, Model, Serial number and calibration Due Date of Equipment.

BLOCK 31 - TRANSDUCER MANUFACTURER

Enter Equipment Manufacture Name, Size, Type, Serial number, and Frequency of Equipment.

BLOCK 32 - COUPLANT TYPE

Enter the name of the fluid used.

BLOCK 33 - LAND/PIPE/MID/FTG

Enter the percent of bond, X, NA or NP, as applicable. Enter the total for all segments used and the average percent bond for the lands (or passes of a non-insert fitting).

BLOCK 34 - TOTAL % BOND

Calculate and enter the total % bond for the joint.

BLOCK 35 - DISPOSITION

Enter an "X" in the appropriate box to accept or reject the joint.

BLOCK 36 - INSPECTOR/BADGE/DATE

UT inspector will sign, enter badge number and date, signifying the technical accuracy of the data recorded and acceptance or rejection of the joint.

BLOCK 37 - REMARKS

Enter any additional information.

BLOCK 38 - FINAL DISPOSITION/SUPERVISOR

NDT Supervisor print name, badge number, enter signature and date signifying all information in Blocks 1 through 36 is technically and administratively correct.

BLOCK 39 - FINAL DISPOSITION/RECORD HAS BEEN REVIEWED FOR COMPLETENESS/QAS

QAS or QAO will print name, enter signature and date for final review, signifying the accuracy of the completed form for SUBSAFE or SOC items only. For other components, the Work Center supervisor must sign and date the form signifying the accuracy of the completed form.

ULTRASONIC INSPECTION RECORD

NOTES:
1. INCREMENTS FOR WHICH NO ULTRASONIC READING CAN BE OBTAINED WILL BE MARKED AS FOLLOWS:
   "X" - INCREMENTS THAT ARE INACCESSIBLE DUE TO FITTING CONFIGURATION.
   "NA" - INCREMENTS THAT ARE INACCESSIBLE DUE TO PIPING CONFIGURATION OR LOCATION.
   "NP" - INCREMENTS IN WHICH THERE IS NO ULTRASONIC PENETRATION.
2. INCREMENTS OF THE ABOVE TYPE WILL BE ASSIGNED PERCENT BOND VALUES AS FOLLOWS:
   "NA" = 0% BOND.
   "NP" AND "X" = INCREMENTS UP TO A TOTAL LENGTH NOT EXCEEDING 20% OF THE CIRCUMFERENCE OF THE LAND WILL BE ASSIGNED A % BOND VALUE EQUAL TO THAT OF THE LOWEST READABLE INCREMENTS ADJACENT TO THE "X" OR "NP" INCREMENTS OR 60% WHICHEVER IS THE LEAST. "X" AND "NP" INCREMENTS IN EXCESS OF 20% OF CIRCUMFERENCE WILL BE ASSIGNED A BOND VALUE OF 0%. THE INSPECTOR MAY AT THEIR DISCRETION, SHIFT THE INCREMENTAL SCALE SO THAT THE MINIMUM NUMBER OF INCREMENTS CONTAIN "X", "NP" OR "NA" VALUES.

QA FORM 18A INSTRUCTIONS

ULTRASONIC INSPECTION RECORD

PURPOSE: To supplement the QA form 18 to document UT inspection date, equipment used, and acceptability of UT results.

- PAGE ____ OF _____

NOTE A TECHNICAL WORK DOCUMENT MAY CONTAIN MULTIPLE QA FORMS OF THE SAME TYPE, (E.G. MORE THAN ONE QA-26). THE PAGE ENTRY IS FOR THIS SPECIFIC FORM, NOT THE TOTAL NUMBER OF PAGES ON ALL FORMS OF THE SAME TYPE.

Enter the page number, starting with page 2, of total number of QA forms 18A associated with the joint (e.g., 2 of 3, 3 of 3). The associated QA form 18 is always page 1 of __. The last number reflects the total number of QA Form pages written. This block is filled in by a QAI or the QAO after all certification testing is complete before block 19 on the QA-9 is signed. (e.g., 1 of 3, 2 of 3, 3 of 3).

PROCEDURE: QA form 18A will be completed by the planner, UT NDT Inspector, or both. The numbered blocks on QA form 18A correspond with the block instructions listed.

BLOCK 1 - SHIP HULL NO.

Enter the tended ship's name and hull number.

BLOCK 2 - JCN

Enter the JCN.

BLOCK 3 - LWC/SHOP

Enter the LWC/Shop.

BLOCK 4 - CWP/REC SERIAL NO.

Enter the CWP/REC serial number or enter N/A if no CWP/REC is required. Do not list the CWP/REC revision.

BLOCKS 5-10 - EQUIPMENT MANUFACTURER/MODEL NO./SERIAL NO./TRANSDUCER MANUFACTURER/SIZE/TYPE/ FREQUENCY/SERIAL NO.

Enter the information for the equipment used to conduct the inspection.

BLOCK 11 - SCANNING METHOD

Place an "X" in the appropriate box.

BLOCK 12 - COUPLANT TYPE

Enter the name of fluid used.

BLOCK 13 - CAL EXP DATE

Enter the calibration expiration date of the equipment listed in Blocks 6-11.

BLOCK 14 - JOINT ID NO.

Enter the JID of the joint being UT inspected. If it is a qualification joint and not an actual production joint, enter the individual's name performing the qualification.

BLOCK 15 - DWG. NO.

Enter the number of the drawing or plan that identifies the joint listed in Block 15 if a production braze.

BLOCK 16 - REMARKS/NOTES

Enter any applicable remarks or notes.

BLOCK 17 - LAND/PIPE/MIDDLE/FITTING

Enter percent bond, X, NA or NP as applicable. Enter the total for all segments used and the average percent bond for the lands (or passes of a no-insert fitting).

BLOCK 18 - DISPOSITION

Place an "X" in the appropriate box to accept or reject the joint.

BLOCK 19 - TOTAL % BOND

Calculate and enter the total % bond for the joint.

BLOCK 20 - INSPECTOR/DATE

NDT Inspector print name, enter signature and date, signifying the technical accuracy of the data recorded and acceptance or rejection of the joint.

QA FORM 20 INSTRUCTIONS

WELDING IN PROCESS CONTROL/NONDESTRUCTIVE TEST RECORD

PURPOSE: To document in process controls for welding and NDT of a completed weld.

BLOCK 1 - PAGE 1 OF_____

NOTE A TECHNICAL WORK DOCUMENT MAY CONTAIN MULTIPLE QA FORMS OF THE SAME TYPE, (E.G. MORE THAN ONE QA-26). THE PAGE ENTRY IS FOR THIS SPECIFIC FORM, NOT THE TOTAL NUMBER OF PAGES ON ALL FORMS OF THE SAME TYPE.

Enter the page number, starting with page 1, of total number of QA form pages (e.g., 1 of , 2 of). The last number reflects the total number of QA Form pages written. This block is filled in by a QAI or the QAO after all certification testing is complete before block 19 on the QA-9 is signed. (e.g., 1 of 3, 2 of 3, 3 of 3).

PROCEDURE:

1. QA form 20 will be completed by the planner preparing the CWP, welder and NDT Inspector(s) observing or performing tests.
2. The numbered blocks on QA form 20 correspond to the block instructions listed. When the form is used for production welding, the blocks marked with a ◆ must be completed by the planner.

BLOCK 2 - SHIP HULL NO.

Enter the ship's name and hull number.

BLOCK 3 - JCN

Enter the JCN.

BLOCK 4 - CWP/REC SER. NO.

Enter the CWP/REC Serial Number or enter N/A if no CWP/REC is required. Do not list the CWP/REC revision.

BLOCK 5 - LWC

Enter the shop number of the LWC.

BLOCK 6 - DATE

Enter the date this form is initiated.

BLOCK 7 - SYSTEM

Enter the noun name of the system.

BLOCK 8 - COMPONENT

Enter the noun name of component.

BLOCK 9 - DWG NO.

Enter the JID or mapping drawing, if applicable. If not applicable, the planner will enter the applicable arrangement drawing, system diagram, or component drawing number, or locally prepared JID sketch.

BLOCK 10 - CWP STEP NO.

Enter the appropriate step number(s) of the CWP.

BLOCK 11 - JOINT ID

Enter the JID from the joint identification or map plan if JID is unavailable, assign local JID. If for a qualification joint (and not production joint identification) enter individual name performing the qualification.

BLOCK 12 - JOINT DESIGN

Enter the joint design (e.g., P-73, PN-1A, P-14, PN-7) to be used.

BLOCK 13 - INST LOCATION

Enter the compartment, frame number, and check port, starboard or centerline where the component is located.

BLOCK 14 - WELDED LOCATION

Check the appropriate block.

BLOCK 15 - COMPONENT A/B

Enter the component name (e.g., pipe, valve).

BLOCK 16 - MATERIAL

Enter the material type (e.g., CUNI, CRES).

BLOCK 17 - SIZE

Enter the iron pipe size or NPS.

BLOCK 18 - THICKNESS

For nuclear welds, enter the design material thickness. For non-nuclear welds, enter the nominal thickness or the actual measured thickness, if taken, for determining penetrameter selection for radiographed piping joints per NAVSEA T9074-AD-GIB-010/271, NAVSEA S9074-AR-GIB-010/278, and NAVSEA T9074-AD-GIB-010/1688 and for determining fillet legs on partial penetration welds per NAVSEA T9074-AD-GIB-010/271, NAVSEA T9074-AD-GIB-010/1688 and MIL-STD-1689 (for Surface Force Ships only).

BLOCK 19 - MATL SPEC

Enter the appropriate material specification for the material.

BLOCK 20 - MIC NO.

Enter the MIC number for component A and B, if applicable. Verify the MIC number from the QA form 2 for new material. For existing material, if the required MIC number is not readable enter “existing”.

BLOCK 21 - [ ] SEAL RING [ ] BACK RING/STRIP

Check the appropriate block for the type of backing.

BLOCK 22 - MATERIAL

Enter the material type (e.g., CUNI, CRES).

BLOCK 23 - SIZE

Enter the ring size.

BLOCK 24 - THICKNESS

Enter the actual measured thickness of the ring or strip.

BLOCK 25 - MIL-SPEC

Enter the appropriate MIL-SPEC for the ring or strip.

BLOCK 26 - MIC NO.

Enter the MIC number of the ring or strip, if applicable. Verify the number from the QA form 2.

BLOCK 27 - TYPE OF FILLER(S)

Enter the type of the filler material(s) used (e.g., 9010, 11018, 304, RN62).

BLOCK 28 - SIZE

Enter the size rod, wire, insert, etc.

BLOCK 29 - MATL

Enter the material type (e.g., CUNI, CRES).

BLOCK 30 - MIL-SPEC

Enter the appropriate MIL-SPEC for the filler and insert (if applicable) material.

BLOCK 31 - MIC NO.

Enter the appropriate MIC number for the filler and insert (if applicable) material. Verify the number from the QA form 2.

BLOCK 32 - WELDING STANDARD

Enter the applicable welding standard.

BLOCK 33 - WELDING PROCEDURE

Enter the weld procedure number.

BLOCK 34 - DATA SHEET

Enter the weld procedure technique sheet number.

BLOCK 35 - POSITION

Check the appropriate block for the weld position.

BLOCK 36 - ACCESSIBILITY

Check the proper block for the actual accessibility.

BLOCK 37 - PREHEAT TEMP

Enter the actual preheat temperature as measured just prior to welding.

BLOCK 38 - PRE-HEAT METHOD

Enter the required pre-heat method.

BLOCK 39 - POST HEAT TEMP START TIME AND STOP TIME

Enter the temperature required for the post weld heat and the start and stop time for post heat.

BLOCK 40 - PURGE GAS

Enter the type of purge gas.

BLOCK 41 - FLOW RATE

Enter the actual flow rate of the purge gas.

BLOCK 42 - SHIELD GAS

Enter the type of shield gas.

BLOCK 43 - FLOW RATE

Enter the actual flow rate of the shield gas.

BLOCK 44 - CUP SIZE

Enter the gas cup size.

BLOCK 45 - TUNGSTEN SIZE

Enter the tungsten size.

BLOCK 46 - WELD LAYER

Enter the layer of welding (i.e., tacks, root, intermediate, and final).

BLOCK 47 - PROCESS

Enter the type of welding process used (e.g., SMAW, GTAW).

BLOCK 48 - QUAL EXP DATE

Enter qualification expiration date.

BLOCK 49 - AMPS

Enter the welding amperage actually used.

BLOCK 50 - INTERPASS TEMP

Enter the maximum interpass temperature as measured during the process.

BLOCK 51 - WELDER SIGNATURE

Print name and enter signature certifying the data recorded in Blocks 46-51 for the layer welded.

BLOCK 52 - DATE

Enter the date Block 51 is signed.

BLOCK 53 - REMARKS

Enter additional remarks or sketches. Enter the appropriate Test, Measuring and Diagnostic Equipment as defined in Part I, Chapter 5, paragraph 5.2.1 of this volume to include temperature indicating crayons when used. If required, a continuation of Block 53 is on the back of the form at the bottom for additional information.

BLOCK 54 - INSPECTION STANDARD

Enter the applicable inspection standard.

BLOCK 55 - WELD CLASS

Enter class 1 or 2, per the requirements of NAVSEA 250-1500-1, for nuclear welds. The class (e.g., A-1, A-2, A-F, A-LT, M-1, P-1, PL-T, T-1) for non-nuclear welds.

BLOCK 56 - ACCEPTANCE STANDARD

Enter the applicable acceptance standard.

BLOCK 57 - ACCEPT CLASS

Enter acceptance class 1 or 2, per the requirements of NAVSEA 250-1500-1, for nuclear welds. The class (e.g., I, II, III) for non-nuclear welds.

BLOCK 58 - WELD PREP - COMPONENT A/B

Enter the component names (e.g., pipe, valve) in the blocks titled Component A and Component B.

BLOCK 59 - INSPECTION METHOD

Enter the type and method of inspection performed (e.g., VT 5X, PT).

BLOCK 60 - ACCEPT/REJECT

Enter accept or reject to indicate disposition of the weld preps.

BLOCK 61 - NDT INSPECTOR SIGNATURE

NDT Inspector print name and enter signature certifying the disposition of the weld prep.

BLOCK 62 - DATE

Enter the date Block 61 is signed.

BLOCK 63 - JOINT FIT-UP

Enter results (i.e., inspection method, Accept or Reject, Inspector and date) of joint fit up inspections.

BLOCK 64 - INSP LAYER

Enter the weld layer inspected (i.e., tacks, root, intermediate, final, inside, backside, accessible or inaccessible).

BLOCK 65 - INSP METHOD

Enter the type and method of inspection performed (e.g., VT 5X, PT).

BLOCK 66 - INSP PROC NO.

Enter the inspection procedure number.

BLOCK 67 - ACCEPT/REJECT

Enter accept or reject to indicate disposition of the weld layer. If final disposition of the weld is rejectable, document reason(s) for rejection, description and location of the defect(s) in Block 53. Document the repair number, length, width and depth of the defect(s) in Block 70, 78, or 86, as applicable.

BLOCK 68 - NDT INSPECTOR SIGNATURE

NDT Inspector print name and enter signature certifying the disposition of the weld layer.

BLOCK 69 - DATE

Enter the date Block 68 is signed.

NOTE: IF REPAIRS ARE REQUIRED TO THE JOINT, RECORD THE INSPECTIONS IN BLOCKS 72 THROUGH 77, 80 THROUGH 85, AND 88 THROUGH 93 IN THE SAME MANNER AS BLOCKS 64 THROUGH 69. BLOCKS NOT COMPLETED WILL BE LEFT BLANK EXCEPT AS DIRECTED BELOW.

BLOCK 70 - REPAIR NUMBER/L W D

The NDT Inspector will enter the repair number, length, width and depth of the defect(s) if known. Enter N/A for length, width or depth if unknown based on the limitations of the inspection method performed.

BLOCK 71 - REPAIR METHOD/L W D

The welder will record the method of repair (e.g., file, excavate and weld, weld only). Document the length, width and depth of the excavation. If excavation was not required for weld repair, enter N/A for L W D.

BLOCK 78 - REPAIR NUMBER/L W D

The NDT Inspector will enter the repair number, length, width and depth of the defect(s) if known. Enter N/A for length, width or depth if unknown based on the limitations of the inspection method performed.

BLOCK 79 - REPAIR METHOD/L W D

The welder will record the method of repair (e.g., file, excavate and weld, weld only). Document the length, width and depth of the excavation. If excavation was not required for weld repair, enter N/A for L W D.

BLOCK 86 - REPAIR NUMBER/L W D

The NDT Inspector will enter the repair number, length, width and depth of the defect(s) if known. Enter N/A for length, width or depth if unknown based on the limitations of the inspection method performed.

BLOCK 87 - REPAIR METHOD/L W D

The welder will record the method of repair (e.g., file, excavate and weld, weld only). Document the length, width and depth of the excavation. If excavation was not required for weld repair, enter N/A for L W D.

BLOCK 94 - FINAL DISPOSITION

The NDT Inspector who completed the final inspection of the final weld will check acceptable or rejectable.

BLOCK 95 - NDT SUPERVISOR SIGNATURE DATE

NDT Supervisor print name, enter signature and date signifying all information in Blocks 1 through 93 is technically and administratively correct.

QA FORM 20A INSTRUCTIONS

RADIOGRAPHIC TEST INSPECTION RECORD

PURPOSE: To provide a supplement to the QA form 20 to document the technical aspects of the radiograph and the acceptance or rejection of the item radiographed. Both the QA form 20 and QA form 20A are required for a complete radiographic record of a joint.

PROCEDURE: QA form 20A will be completed by the radiographer and the RT inspector. The numbered blocks on QA form 20A correspond with the block instructions listed.

BLOCK 1 - PAGE ____ OF ____

NOTE A TECHNICAL WORK DOCUMENT MAY CONTAIN MULTIPLE QA FORMS OF THE SAME TYPE, (E.G. MORE THAN ONE QA-26). THE PAGE ENTRY IS FOR THIS SPECIFIC FORM, NOT THE TOTAL NUMBER OF PAGES ON ALL FORMS OF THE SAME TYPE.

Enter the page number, starting with page 1, of total number of QA form pages (e.g., 1 of , 2 of). The last number reflects the total number of QA Form pages written. This block is filled in by a QAI or the QAO after all certification testing is complete before block 19 on the QA-9 is signed. (e.g., 1 of 3, 2 of 3, 3 of 3).

BLOCK 2 - SHIP AND HULL NO.

Enter the tended ship's name and hull number.

BLOCK 3 - JCN

Enter the JCN.

BLOCK 4 - CWP/REC SERIAL NO.

Enter the CWP/REC serial number or enter N/A if no CWP/REC is required. Do not list the CWP/REC revision.

BLOCK 5 - CWP STEP NO.

Enter the CWP step number(s).

BLOCK 6 - JOINT ID

Enter JID.

BLOCK 7 - REPAIR NO.

Enter ORIG or repair number (e.g., R-1, R-2).

BLOCK 8 - INSP STD & CLASS

Enter the inspection standard and class.

BLOCK 9 - QUALITY LEVEL

Enter the quality level required.

BLOCK 10 - RT COVERAGE REQ'D

Indicate the RT coverage required.

BLOCK 11 - PENETRAMETER

Record the penetrameter size and group. Indicate use of source or film side penetrameter.

BLOCK 12 - SPECIMEN MATL

Enter the material type of the item being radiographed (e.g., NICU, CFE).

BLOCK 13 - TM

Enter the nominal or actual, or design material thickness of the item being radiographed per NAVSEA 250-1500-1 or NAVSEA T9074-AS-GIB-010/271.

BLOCK 14 - TS

Enter the total specimen thickness.

BLOCK 15 - EXPOSURE TECH

Check the appropriate technique used (e.g., if a pipe was radiographed through two walls and the image of both walls are to be viewed for acceptance, enter an "X" in the brackets next to DWE/DWV).

BLOCK 16 - FILM

Enter the film type and brand. "X" the appropriate method used to load the film cassette.

BLOCK 17 - ISOTOPE

Record the listed information when using the source.

BLOCK 18 - X-RAY MACHINE MFG

Record the listed information when using the X-ray machine.

BLOCK 19 - X-RAY PARAMETERS

Record the listed information when using the X-ray machine.

BLOCK 20 - SFD

Enter the source to film distance used.

BLOCK 21 - RADIOGRAPHIC SHOOTING SKETCH

The radiographer will draw a sketch indicating the items listed.

BLOCK 22 - SHIM

Enter the shim material used and thickness.

BLOCK 23 - LEAD SCREENS THICKNESS

Record thickness, front and back of the intensifying screens.

BLOCK 24 - REMARKS

The radiographer will use this block to record any unusual technique requirements.

BLOCK 25 - RADIOGRAPHER

The radiographer will print name, sign and date upon verifying that all the information in Blocks 1 through 24 is correct.

BLOCKS 26 thru 28- RADIOGRAPHIC INTERPRETATION

NOTE: BLOCK 26 WILL BE COMPLETED BY THE RT INSPECTOR AS THE FILM IS READ.

a. One RT Inspector will evaluate the radiograph, check ACCEPT/REJECT as appropriate in Block 27, print name, enter signature and date in Block 28.

b. It is important to note that all indications read must be recorded on the QA form 20A and dispositioned in the appropriate block.

c. Additional sheets may be added to the report by the RT Inspector. The additional sheets will be properly numbered and will be authenticated with printed name and signature on each sheet by the RT Inspector making up the report.

BLOCK 29 - RT EXAMINER

The Command RT Examiner will review the weld record (including radiographic film) for completeness accuracy and compliance with applicable standards, print name, enter signature, unique identification number, and date.

QA FORM 20B (PART A) INSTRUCTIONS

STRUCTURAL PRIMARY RECORD

PURPOSE: To provide a standard form and instruction for documenting required structural welding and NDT completion data.

NOTES:

1. PLANNING MUST FILL IN BLOCKS IDENTIFIED BY A ♦ PRIOR TO ISSUING. ANNOTATED PERSONNEL MUST COMPLETE ALL REMAINING BLOCKS.
2. RECORD OF ACCOMPLISHMENT DEFINITION: A RECORD USED FOR SOME SUBMARINE WELDS THAT NAVSEA TECH PUB T9074-AD-GIB-010/1688 ALLOWS REDUCED NDT DATA REQUIREMENTS. IT IS PRIMARILY USED FOR MAGNETIC PARTICLE TESTING (MT) INSPECTION. MT INSPECTIONS THAT MAY USE A RECORD OF ACCOMPLISHMENT FOR COMPLETION DATA ARE DEFINED IN TABLES 6-1 AND 6-2 OF NAVSEA TECH PUB T9074-AD-GIB-010/1688, BY REFERENCE TO NOTE 8. NDT COMPLETION DATA FOR A RECORD OF ACCOMPLISHMENT IS DEFINED IN NAVSEA TECH PUB T9074-AD-GIB-010/1688, PARAGRAPH 5.3.1.
3. BLOCKS AND ROWS OF THIS RECORD MAY BE EXPANDED OR DELETED TO SUIT THE WORK BEING DOCUMENTED.
4. EACH SIGNATURE WILL BE ACCOMPANIED BY A PRINTED NAME AND DATE. AN EMPLOYEE MAY USE THEIR INITIALS PROVIDED THEIR SIGNATURE AND PRINTED NAME APPEAR ELSEWHERE ON THE SAME PAGE.

SCOPE: The scope of this instruction is limited to structural welding and NDT for overhaul and repair governed by NAVSEA Tech Pub T9074-AD-GIB-010/1688, or MIL-STD-1689A as invoked by Naval Ships Tech Manual S9086-CH-STM-010/CH-074, through NAVSEA S9AA0-ABGOS-010/GSO, NAVSEA 0902-018-2010 or COMUSFLTFORCOMINST 4790.3 Joint Fleet Maintenance Manual.

BLOCK 1 - RECORD NO.

Enter the Part A record number. The numbering convention is A-01, A-02, A-03 etc., in numerical order, depending on how many Part A records are generated for the TWD. Keep the number of Primary Records generated to a minimum.

BLOCK 2 - LWC/SHOP

Enter local work center or lead shop.

BLOCK 3 - SHEET _____ OF ____

NOTE A TECHNICAL WORK DOCUMENT MAY CONTAIN MULTIPLE QA FORMS OF THE SAME TYPE, (E.G. MORE THAN ONE QA-26). THE PAGE ENTRY IS FOR THIS SPECIFIC FORM, NOT THE TOTAL NUMBER OF PAGES ON ALL FORMS OF THE SAME TYPE.

Enter the sheet number, starting with sheet 1, of total number of QA form sheets (e.g., 1 of , 2 of). The last number reflects the total number of QA Form sheets written. This block is filled in by a QAI or the QAO after all certification testing is complete before block 19 on the QA-9 is signed. (e.g., 1 of 3, 2 of 3, 3 of 3).

BLOCK 4 - SHIP/HULL NO.

Enter the ship name, hull type, SSN, SSBN, SSGN, CVN, etc., and unique hull number for the ship, 759, 732, or 65, etc.

BLOCK 5 - JCN

Enter the Job Control Number (JCN).

BLOCK 6 - CWP/REC

Enter the CWP/REC serial number or enter N/A if no CWP/REC is required. Do not list the CWP/REC revision.

BLOCK 7 - REFERENCES

Enter references, drawings etc. that are to be used to describe joints. Do not enter references that are associated only with joints that require a Part B record.

BLOCK 8 - JOINT NUMBER

Enter the Joint Numbers.

BLOCK 9 - SS/SOC

Check the block associated with each joint number if it is SUBSAFE or Scope Of Certification (SOC). All joints that involve the SUBSAFE boundary must be checked whether they require re-entry control or not. For example, attachment welds to the boundary must be checked even though this work is not subject to re-entry control. For surface ship welds, enter NA.

BLOCK 10 - REC (SHIPYARD USE ONLY)

Check the block associated with each joint number if the joint requires re-entry control.

BLOCK 11 - COMPONENT NUMBER 1 (Leave blocks blank for joints that require a Part B Record.)

Enter the letter associated with the drawing number in Block 7, which describes the component and enter the piece number (if necessary to describe the joint) for the component. For joints that may require explanation, enter “See remarks” as a reference in a Block 7, refer to this note as the craftsman would a drawing and give the explanation in remarks.

The term “EXISTING” may be used to describe existing ship structure, provided the other component in the joint defines the joint location. To do this, add “EXISTING” as a reference in Block 7, refer to it as the craftsman would a drawing, and “N/A” the piece number. Enter the base material type (OSS, HY-80, HSS, etc.), S-Group Number from Table 1 of NAVSEA S9074-AQ-GIB-010/248, and the drawing material thickness (decimal or fraction).

BLOCK 12 - COMPONENT NUMBER 2

Make entries for Component 2 as described in Block 11. For repair sites, enter N/A in Component 2 columns.

BLOCK 13 - WELD INFO (Leave blocks blank for joints that require a Part B Record.)

JOINT DESIGN: Enter the joint design in terms of MIL-STD-22 joint numbering system (PT2S.1, PT2V.1, C2V.2, B2V.3 etc.). Use Remarks (Block 14) to describe "Special Joints", as described in paragraph 11.4.7 of NAVSEA Tech Pub T9074-AD-GIB-010/1688 or paragraph 11.2.7 of MIL-STD-1689A, including any special weld buildup required for the joint.

WELD SIZE: Enter the weld size in terms of fractions. Enter N/A for butt welds, plug welds, base material repairs, weld surfacing, corner welds with no reinforcing fillet, clad welds, and edge welds. For PT2V.3 and PT2V.4, enter sizes for both reinforcing fillets. Use Remarks blocks for local joint clarification or joint or sketch numbers.

BLOCK 14 - REMARKS

Enter any joint clarifying comments. This block may also be used to specify any special heat restriction instructions (e.g., preheat and interpass requirements). Each entry must contain signature, printed name and date except where the entry is pre-printed on the form by P&E.

NOTE: BLOCKS 15-18 ARE RESERVED FOR FUTURE USE.

BLOCK 19 - NDT METHODS & ACCEPTANCE PROCEDURES/REV/CHG

(INSPECTOR) Enter the NDT methods and acceptance standard procedure, revision, and change for NDT listed in Block 21 as the inspection is performed. This entry is not required for joints that do not list required NDT or that have Block 24 checked off. Leave unused blocks blank.

BLOCK 20 - JOINT NO.

(P&E) Repeat joint numbers listed in Block 8.

BLOCK 21 - NDT OR DATA REQUIREMENT

NOTE: LEAVE THIS BLOCK BLANK IF A PART B RECORD IS REQUIRED. IF A PART B RECORD IS NOT USED, ENTER REQUIRED NDT OR DATA REQUIREMENTS AS FOLLOWS:

a. DATA REQUIREMENTS: List WELD COMPL (weld complete) as the first entry for each joint listed in Block 20 that does not require a Part B record.

b. NDT REQUIREMENTS: List required NDT for the joint. List each required NDT as a separate line item in approximate order in which they will occur. Use the following convention: List NDT Type first (VT, 5X VT, MT, PT, ET, RT or UT), Wait Time second (8HR, 24HR, 7DAY, or AH (for after hydro) etc.), and Phase last (EXCAV, BACKGOUGE or FINAL). It is not necessary to give a wait time for ambient temperature NDT; it is assumed if not given. Typical examples are: MT EXCAV, MT BACKGOUGE, MT FINAL, ET FINAL, PT FINAL, RT 8HR FINAL, MT 24HR FINAL, MT 7DAY FINAL, MT AH FINAL, and VT FINAL.

c. WORKMANSHIP AND VT SPECIAL REQUIREMENTS:

1) Workmanship inspections are not normally listed as required NDT. Certification of satisfactory completion is made either by TWD signature when the joint does not require documentation using a Part A or Part B record, or by signature on the Part A or Part B record when the joint does require documentation.

2) Joints that require VT only do not require a structural record. The VT is specified and certified by TWD. Certification of satisfactory VT completion for VT only welds can be made by a NDT inspector signature in the body of the TWD.

BLOCK 22 - CERTIFICATION OF DATA ENTRY OR SAT NDT

a. (P&E) Enter "See Part B record" for joints that require a Part B record.

b. (WELDER) Enter signature, printed name, and date beside each WELD COMPL data entry to certify that the weld is complete, and that fit-up and weld workmanship inspection requirements have been met. The weld is complete when all weld metal has been deposited, required weld soaks are completed, preheat is removed, weld has cooled to ambient temperature and the weld has been prepared to ensure the weld is ready for final NDT. When required, include the ambient temperature time in Block 23 as described in Block 23 instructions.

c. (NDT INSPECTORS) Enter signature, printed name, and date for each NDT when the NDT is satisfactory. Except when a Part C record is required, this signature is made when the weld is complete and the NDT is satisfactory. Part C records are required only if local instructions require them or if the note "Initiate a Part C record if NDT fails" appears in Block 23. If a Part C record is required and the NDT rejects the weld, enter an X in Block 24 for the NDT that generated the reject and initiate a Part C record. Your signature in Block 22, in this case, indicates the NDT failed and a Part C record was generated. If indications are cleared by grinding or polishing only and the subsequent VT (final) is satisfactory, a Part C record is not required.

BLOCK 23 - DATA ENTRY OR ADDITIONAL NDT REQMT

a. (P&E)

1) Enter any NDT clarifying comments, (i.e., partial inspections or expansion requirements).

2) Enter "AMB TIME:" for each WELD COMPL data requirement listed in Block 21.

NOTE: THE AMBIENT TIME IS ONLY REQUIRED IF SUBSEQUENT NDT HAS A WAIT TIME, SUCH AS A 24 HOUR MT.

3) Enter "PENETRANT:" for each PT requested in Block 21.

4) Enter "EQUIP No:" for each ET requested in Block 21.

5) For submarine envelope attachment weld MT inspections, enter "Initiate a Part C record if NDT fails" and "EQUIP No:".

6) For submarines, enter "Initiate a Part C record if NDT fails" for RT or UT listed in Block 21 (expansions are required when repair welding is required as a result of RT or UT inspection).

b. (WELDERS) Enter military time when the weld reaches ambient temperature beside the "AMB TIME:" entry associated with each WELD COMPL data requirement. If this data is entered by someone other than who signed Block 22, a signature, printed name and date is required.

NOTE: THE AMBIENT TIME IS ONLY REQUIRED IF SUBSEQUENT NDT HAS A WAIT TIME, SUCH AS A 24 HOUR MT.

c. (NDT INSPECTORS)

1) Enter penetrant used, manufacturer's brand and type, beside each "PENETRANT:" entry.

2) Enter equipment information beside each MT or ET with "EQUIP No:" entry:

(a) ET: Enter unique equipment identification, or instrument manufacturer and model number used.

(b) MT: if AC yoke is used, enter the word "Yoke". Otherwise, enter unique equipment identification, or instrument manufacturer and model number used.

BLOCK 24 - SUPPLEMENTAL RECORD (CHECK IF REQD)

(NDT INSPECTORS) When required by local procedures to document deficiencies, or if the note "Initiate a Part C record if NDT fails" is listed in Block 23, a Part C record must be initiated to document defects. If a part C record is initiated, check the box in the row associated with the required NDT.

BLOCK 25 - RECORD NO. OF REPAIR CYCLES (SURFACE SHIPS ONLY)

(INSPECTOR or WELDER) Enter the number of repair cycles required to obtain a satisfactory NDT, (i.e., "1" for the first cycle, "2" for the second, etc.).

BLOCK 26 - REMARKS

(ALL) Enter any clarifying comments associated with the record. Add or refer to any expansion requirements here or in Block 14. Each entry must contain signature, printed name, and date except where the entry is pre-printed on the form by P&E.

BLOCK 27 - SUPERVISOR

(WELD SUPERVISOR) Certify final disposition of all welding and NDT for all joints listed in Block 20 (including continuation sheets) by entering signature, printed name, and date. This includes certification of any Part C records generated. Ensure that page numbering is correct.

BLOCK 28 - QAS (SUBSAFE/SOC ONLY)

(QAS) Enter signature, printed name, and date to certify completeness of entries. To aid the certification process, this block is repeated on the Part B record in Block 34. For joints being documented by Part B record, the individual signing for all joints must review the certification

signature(s) on the Part B record(s) and sign the Part A record based on the Part B signature(s).

STRUCTURAL PRIMARY RECORD CONTINUATION SHEET: Follow corresponding block instructions in this attachment.

32. REMARKS

QA FORM 20B (PART B) INSTRUCTIONS

STRUCTURAL WELD HISTORY

NOTE: PLANNING SHALL FILL IN BLOCKS IDENTIFIED BY A ♦ PRIOR TO ISSUING. ANNOTATED PERSONNEL MUST COMPLETE ALL REMAINING BLOCKS. FOR CONTINUATION SHEETS GENERATED DURING PLANNING, P&E MUST COMPLETE BLOCKS 1, 4, 5 AND 32 (IF NECESSARY). ANNOTATED PERSONNEL MUST COMPLETE ALL REMAINING BLOCKS. FOR CONTINUATION SHEETS GENERATED DURING EXECUTION, ANNOTATED PERSONNEL MUST COMPLETE ALL BLOCKS.

NOTE: BLOCKS AND ROWS OF THIS RECORD MAY BE EXPANDED OR DELETED TO SUIT THE WORK BEING DOCUMENTED.

BLOCK 1 - JOINT NO.

Enter Joint Number. If the Part B record is referenced from a Part A record, the joint number on both records must match.

BLOCK 2 - LWC/SHOP

Enter lead work center.

BLOCK 3 - SHEET ___ OF ___

NOTE A TECHNICAL WORK DOCUMENT MAY CONTAIN MULTIPLE QA FORMS OF THE SAME TYPE, (E.G. MORE THAN ONE QA-26). THE PAGE ENTRY IS FOR THIS SPECIFIC FORM, NOT THE TOTAL NUMBER OF PAGES ON ALL FORMS OF THE SAME TYPE.

Enter the sheet number, starting with sheet 1, of total number of QA form sheets (e.g., 1 of , 2 of). The last number reflects the total number of QA Form sheets written. This block is filled in by a QAI or the QAO after all certification testing is complete before block 19 on the QA-9 is signed. (e.g., 1 of 3, 2 of 3, 3 of 3).

BLOCK 4 - SHIP/HULL NO.

Enter the ship name, hull type, SSN, SSBN, SSGN, CVN, etc., and unique hull number for the ship, 759, 732, or 65, etc.

BLOCK 5 - JCN

Enter the Job Control Number (JCN).

BLOCK 6 - CWP/REC

Check the [ ] Y box if CWP or REC is required, and enter CWP or REC number. Check the [ ] N box if a CWP or REC is not required.

BLOCK 7 - REFERENCES

Enter references, drawings etc. that are to be used to describe joints or material requiring traceability.

BLOCK 8 - COMPONENT NUMBER 1

Enter the letter associated with the drawing number in Block 7, which describes the component and enter the piece number (if necessary to describe the joint) for the component. For joints that may require explanation, enter "See remarks" as a reference in Block 7, refer to this note as the craftsman would a drawing and give the explanation in remarks. When piece number, material type, or material thickness is provided in Remarks, these columns should be left blank, or a dash entered.

The term "EXISTING" may be used to describe existing ship structure, provided the application is not SUBSAFE or SOC, and provided the other component in the joint defines the joint location. To do this, add "EXISTING" as a reference in Block 7, refer to it as the craftsman would a drawing, and "N/A" the piece number.

Enter the base material type (OSS, HY-80, HSS, etc.), S-Group Number from Table I of NAVSEA S9074-AQ-GIB-010/248 and the component thickness (decimal or fraction). If a component has more than one thickness or material type, enter each one on a separate row, or use Block 11 (Remarks).

BLOCK 9 - COMPONENT NUMBER 2

Make entries for Component 2 as described in Block 8. For repair sites, enter N/A in Component 2 columns.

BLOCK 10 - WELD INFO

Enter the joint design in terms of MIL-STD-22 joint numbering system (PT2S.1, PT2V.1, C2V.2, B2V.3, etc.). Use Remarks (Block 11) to describe "Special Joints", as described in paragraph 11.4.7 of NAVSEA Tech Pub T9074-AD-GIB-010/1688, including any special weld buildup required for the joint. For base material repairs and weld surfacing, enter N/A, or describe the repair or surfacing in Remarks (Block 11).

Enter the weld size in terms of fractions. Enter N/A for butt welds, plug welds, corner welds with no reinforcing fillet, weld surfacing, base material repairs, and edge welds. For PT2V.3 and PT2V.4, enter sizes for both reinforcing fillets. Use Remarks for local joint clarification or joint numbers.

BLOCK 11 - REMARKS

Enter any joint clarifying comments. Add or refer to any expansion requirements here or in Block 32. Each entry must contain signature, printed name and date except where the entry is pre-printed on the form by P&E.

BLOCK 12 - NEW MATERIAL

a. (P&E) Check the box "[ ] Y or [ ] N", to indicate that material documentation is or is not required and enter reference letter from Block 7 and the associated piece number to describe the material requiring traceability. Block 12 is marked "No" when electrode only is installed (e.g., repair of a pit, or for cladding) because electrode is entered in Block 16.

b. (CRAFTSMAN or QAI) At the time of installation, enter traceable material marking (e.g., MIC No., TSCM No., Heat No., or other) for the piece number listed and certify (signature, printed name, and date). If existing material is being reinstalled, enter

"EXISTING" in the TRACEABLE MATERIAL-MARKING column and sign. If "No" is Checked by P&E, no entry is required.

BLOCK 13 - WELD PROCEDURE, REV, CH, AND TECHNIQUE SHEET(S)

(WELDER) Before welding, enter the Weld Procedure to be used. Include Technique Sheet if applicable.

BLOCK 14 - MINIMUM PREHEAT

(WELDER) Before welding, enter the required minimum preheat. In certain situations, when heat must be controlled using non-standard temperatures, P&E may complete this block.

BLOCK 15 - MAXIMUM INTERPASS

(WELDER) Before Welding, enter the required maximum interpass temperature. In certain situations, when heat must be controlled, P&E may complete this block.

BLOCK 16 - WELD FILLER MATERIAL

(WELDER) Just prior to welding, enter grade or type (e.g., MIL-11018-M or 11018-M) and MIC Number (e.g., WCAF 9093 202A) of electrode used. Filler letters, A, B, C, etc., are provided so that the data needs only to be entered once for that electrode and its corresponding traceability number. Enter the filler letter, A, B, C, etc., corresponding to the electrode used during the weld process in the FILLER LTR block, Block 20. The filler material information recorded in this block only applies to weld phases being documented on this sheet. If a continuation sheet is used, the filler material used to document welding on that continuation sheet must be recorded in Block 16 of that sheet.

BLOCK 17 - FITUP SAT

(CRAFTSMAN or QAI) Enter signature, printed name, and date when the workmanship inspection for fit-up or base material preparation for weld surfacing or repair is satisfactory. This signature certifies that the joint or base metal surface is ready for welding. For weld repairs, the signature certifies the excavation is ready for NDT (if required).

BLOCK 18 - PHASE LETTER KEY

No entry is required for this block. Use Phase Letter Key given to complete Block 19.

BLOCK 19 - PHASE LETTER

(WELDER) Using the Phase Letter Key given, enter the phase being accomplished during the weld process in the PHASE LETTER blocks provided. Check the box, "[ ] (See Structural Weld History Continuation Sheet)" when the record has insufficient room for the number of entries, and a continuation sheet is needed.

BLOCK 20 - FILLER LETTER

(WELDER) Enter the letter corresponding to the filler material information entered in Block 16 of the sheet being completed. If the phase does not involve the addition of filler metal, enter N/A.

BLOCK 21 - PREHEAT & INTERPASS TEMP

(WELDER) Check Preheat and Interpass Temperature for the phase being accomplished. Mark the block when satisfactory. Take corrective action if it is not satisfactory. Enter "NA" for phases that do not involve welding, (e.g., back-gouge phases).

BLOCK 22 - WELDER AND WELD WORKMANSHIP

(WELDER) Enter signature, printed name, and date for the associated phase. Signing of this block certifies that all welding has been performed per the welding procedure entered in Block 13; the MIC number of welding rod(s) used is recorded in Block 16; Blocks 19, 20, and 21 are completed and required information is correct and that all weld workmanship inspection requirements have been satisfied. For back-gouge phase, the signature certifies that the weld has been back-gouged and the root meets the workmanship requirements. Block 22 signatures must be made based on personal observation.

BLOCK 23 - REMARKS

(WELDER) Enter remarks if necessary. If the remark is made by someone other than the welder who signed Block 22, entry must contain signature, printed name, and date except where the entry is pre-printed on the form by P&E.

BLOCK 24 - WELDING COMPLETE

(WELDER or WELDER SUPERVISOR) Enter signature, printed name, and date when welding is complete, all metal has been deposited, required weld soaks are completed, preheat is removed and weld meets workmanship inspection requirements. This signature must be made based on personal observation or by normal trade supervisory controls.

BLOCK 25 - JOINT IS AT AMBIENT TEMP

(WELDER OR WELDER SUPERVISOR) Enter military time weld reached ambient temperature and sign name (include name and date). The ambient time is only required if subsequent NDT has a wait time, such as a 24 hour MT.

BLOCK 26 - JOINT IS COMPLETE AND READY FOR FINAL NDT

(CRAFTSMAN) Enter signature, printed name, and date when the joint is complete and ready for final NDT (i.e., meets workmanship inspection requirements).

BLOCK 27 - REQUIRED NDT

(P&E) Choose the required NDT from the menu given or add NDT if necessary. The NDT menu given lists most NDT required by NAVSEA Tech Pub T9074-AD-GIB-010/1688. Choose the NDT desired by deleting the rows from the form for NDT that is not required. Include the Notes block at the bottom of the menu. After deleting NDT that is not required, ensure that the required NDT list will fit on a single page. If "MT EXCAV", "MT BACKGOUGE", and "MT EVERY LAYER" are not used, delete Note 2 from the note block. If "MT EVERY LAYER" is not used, delete Note 3 from the Note block.

BLOCK 28 - NDT & ACCEPTANCE PROCEDURE REV, CH

(INSPECTOR) Enter the NDT methods and acceptance standard procedure used.

BLOCK 29 - NDT REPORT, EQUIPMENT

(INSPECTOR) Enter NDT Report number or equipment used as directed on the form. Enter "Yoke" when performing an MT by yoke method. Equipment information is not required for MT by yoke. If "MT EXCAV", "MT BACKGOUGE" or "MT EVERY LAYER" is the NDT listed in Block 27, "Entry Not Required" may be entered in Block 29. (See example of Part B form).

BLOCK 30 - RESULTS A OR R

(INSPECTOR) Enter "A" for accept or "R" for reject to indicate the inspection result. If indications are cleared by grinding or polishing only, and the subsequent VT (final) is satisfactory, a Part C record is not required.

BLOCK 31 - INSPECTOR

(INSPECTOR) Enter signature, printed name, and date for the inspections performed. When a NDT results in a deficiency, the results of any other NDT not performed yet in the process will be documented on the Part C record generated for the failed NDT. All blocks for NDT not yet performed will be left blank on this sheet.

BLOCK 32 - REMARKS

(ALL) Enter remarks. Add or refer to any expansion requirements here or in Block 11. Each entry must contain signature, printed name, and date except where the entry is pre-printed on the form by P&E.

BLOCK 33 - WELD SUPERVISOR

(WELD SUPERVISOR) Certify final disposition of all welding and NDT for the joint listed in Block 1 by entering signature, printed name and date.

NOTE: WHEN PERFORMING RECORD REVIEW, ALL CERTIFICATION DATA TO REPAIR DEFECTS (I.E., DEFECT EXCAVATION INFORMATION, REPAIR WELD HISTORY, FINAL NDT OF DEFECTS AND CERTIFICATION SIGNATURES, ETC.) ARE DOCUMENTED ON ASSOCIATED PART C RECORDS FOR THE JOINT AND PAGE NUMBERING IS CORRECT, INCLUDING ANY PART C RECORDS.

BLOCK 34 - QAS (SUBSAFE/SOC/REC ONLY)

(QAS) Enter signature, printed name, and date to certify completeness of entries for joints listed in Block 1.

STRUCTURAL WELD HISTORY CONTINUATION SHEET:

Follow corresponding block instructions in this attachment except as noted:

(WELDER) Transcribe entries from the associated Part B record (sheet 1) onto the continuation sheet for Blocks 1, 4, 5 and 6.

BLOCK 13 - WELD PROCEDURE, REV, CH, AND TECHNIQUE SHEET(S)

(WELDER) Check the box provided if the weld procedure and technique sheet (if applicable) used for the Block 19 phase(s) is the same as shown on the associated Part B record (sheet 1). Otherwise, enter the weld procedure and technique sheet (if applicable) used for the Block 19 phase(s) being documented on the continuation sheet.

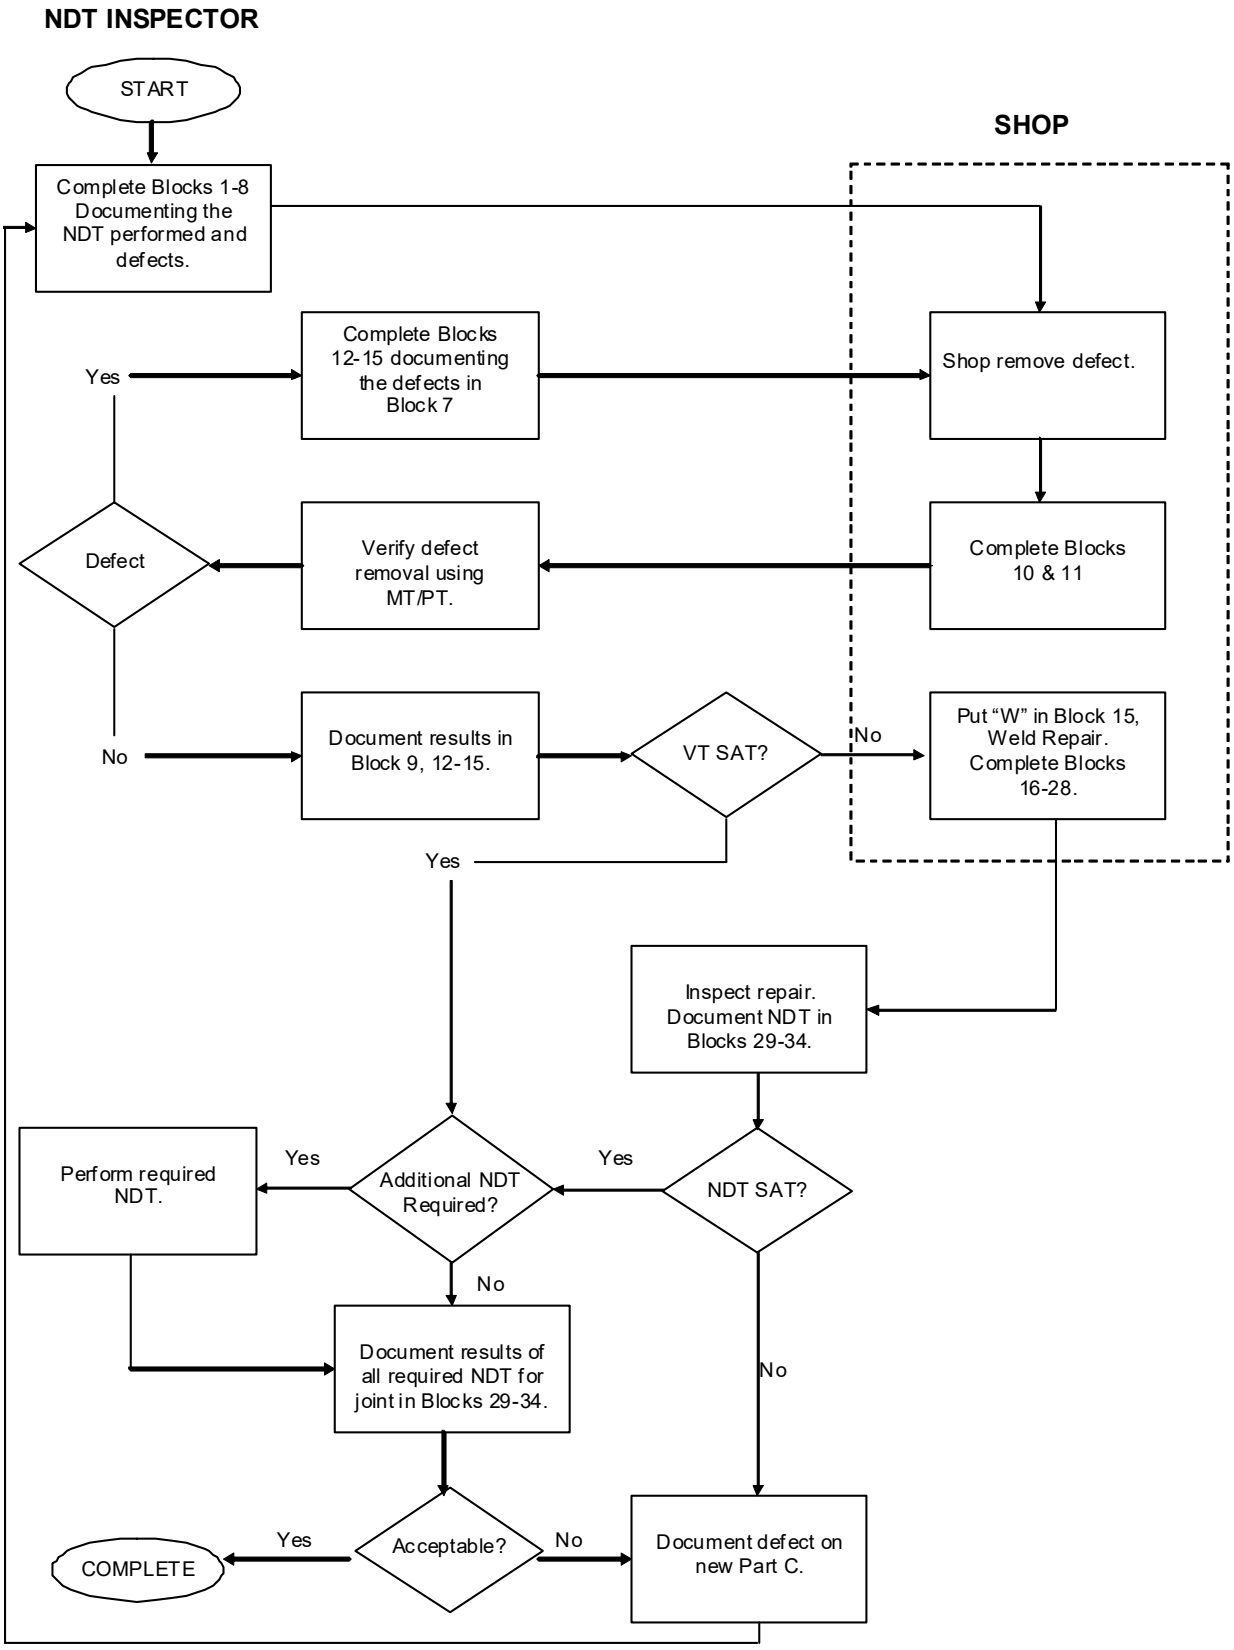
QA-20B PART C FLOWCHART



QA FORM 20B (PART C) INSTRUCTIONS

STRUCTURAL DEFECT RECORD

PURPOSE: To document defect completion data noted by failed NDT associated with a QA Form 20B Part A, Part B, or (if continued repair cycles are necessary) other Part C records. This form is only required for defects on the skin of the ship.

PROCEDURE. The numbered blocks on the QA Form correspond with block instructions listed. The P&E organization must complete Blocks 17, 18 (in special situations) and 35 (if necessary). The blocks and rows of this record may be expanded to suit the work being documented. Unused rows for multiple entries (i.e., Blocks 10-15) may be deleted as necessary such that the form fits on a single page. If unable to keep on a single page a continuation sheet must be used.

NOTE: EACH SIGNATURE WILL BE ACCOMPANIED BY A PRINTED NAME AND DATE. AN EMPLOYEE'S INITIALS MAY BE USED PROVIDED THEIR SIGNATURE AND PRINTED NAME APPEAR ELSEWHERE ON THE SAME PAGE.

NOTE: BLOCKS 1 - 10 WILL BE FILLED IN BY THE NDT INSPECTOR.

BLOCK 1 - JOINT NO.

Enter Joint Number.

BLOCK 2 - SHEET____OF____

NOTE A TECHNICAL WORK DOCUMENT MAY CONTAIN MULTIPLE QA FORMS OF THE SAME TYPE, (E.G. MORE THAN ONE QA-26). THE PAGE ENTRY IS FOR THIS SPECIFIC FORM, NOT THE TOTAL NUMBER OF PAGES ON ALL FORMS OF THE SAME TYPE.

Enter the sheet number, starting with sheet 1, of total number of QA form sheets (e.g., 1 of , 2 of). The last number reflects the total number of QA Form sheets written. This block is filled in by a QAI or the QAO after all certification testing is complete before block 19 on the QA-9 is signed. (e.g., 1 of 3, 2 of 3, 3 of 3).

BLOCK 3 - SHIP/HULL NO.

Enter the ship name and hull number.

BLOCK 4 - JCN

Enter the Job Control Number (JCN).

BLOCK 5 - CWP/REC NO.

Check the [ ] N box if a CWP or REC is not required. Check the [ ] Y box if CWP or REC is required, and enter CWP or REC number. This information can be obtained from the associated Part A or B record.

BLOCK 6 - METHOD OF REJECTED INSPECTION

Check the box or indicate what NDT method has rejected.

BLOCK 7 - DESCRIPTION OF DEFICIENCY

Sketch, describe, or reference supporting documents to show defects. Label defects with an indication number. The numbering scheme must be consistent throughout the record.

BLOCK 8 - INSPECTOR

The inspector that rejected the NDT must sign name, badge number and date for the NDT with exceptions for defects noted. (Signature certifies that all areas requiring inspection are satisfactory, except as noted in Block 7). If associated records are used to document acceptance, refer to the applicable records (e.g., RT, UT records).

BLOCK 9 - NDT EQPT

Enter equipment number or "YOKE" when MT is performed by Yoke method, or PT penetrant as directed on the form. The letters are to be annotated in Block 13 to correlate the equipment used with the NDT being performed. Check the box "[ ] (SEE ADDITIONAL STRUCTURAL DEFECT RECORD)" in the REPAIR section of the form when Block 10 has insufficient rows for the required number of entries.

BLOCK 10 - IND NO.

For each NDT performed on the repair excavation, list the indication number associated with the NDT being performed.

BLOCK 11 - DEFECT REMOVAL

(CRAFTSMAN) Enter signature, badge number and date for defect removal certifying the defect has been removed and the site is ready for VT and other NDT to verify defect removal.

NOTE: THE PURPOSE OF BLOCKS 12-15 IS TO DOCUMENT THE STEPS TAKEN TO EITHER BRING THE DEFECT TO THE POINT OF BEING CLEARED WITH NO ADDITIONAL ACTION OR TO THE POINT THAT REQUIRES WELD REPAIR.

BLOCK 12 - NDT

(INSPECTOR) Enter the NDT performed on the excavation site using one line per NDT entry. This must include all VT and other NDT performed to verify defect removal. Unless otherwise directed by TWD or DL, NDT of the excavation site to verify defect removal must be as indicated in sub-paragraph's a and b.

a. For defects discovered by VT, MT or PT, defect removal must be verified by the NDT method (VT, MT or PT) that discovered the defect. All original required NDT must be accomplished and meet requirements to certify the weld.

b. For defects discovered by ET, RT, or UT, defect removal must be verified by MT (Ferrous) or PT (Non-Ferrous). All original required NDT must be accomplished and meet requirements to certify the weld.

NOTE: THE MT OR PT PROVES SOUND METAL AFTER THE DEFECT IS REMOVED. ACTUAL DEFECT REMOVAL IS VERIFIED BY THE VOLUMETRIC INSPECTION THAT FOUND THE DEFECT (AFTER WELD REPAIR).

BLOCK 13 - NDT EQUIP LTR

(INSPECTOR) Enter the letter from Block 9 that corresponds to the equipment or penetrant used in the inspection. Enter N/A if not applicable.

BLOCK 14 - REASON FOR REJECT OR EXCAVATION

(INSPECTOR) If the inspection fails, indicate reason for failure (e.g., type, dimensions and location of indication). If it is a VT failure, indicate length, width, and depth of excavation. To show locations, modify sketch or description in Block 7 if possible. Such modifications must contain signature, printed name, and date.

BLOCK 15 - FINAL NDT FOR DEFECT REMOVAL

(INSPECTOR) Enter "A", "R", or "W" to indicate results of inspection and enter signature and date. "A" means the inspection is acceptable. "R" means reject, (i.e., defect is not removed). "W", which is entered by the VT inspector and means weld repair is required, (i.e., defect is removed but the weld does not meet criteria for completed weld). Check the box "[ ] (SEE ADDITIONAL STRUCTURAL DEFECT RECORD)" in the REPAIR section of the form when Block 10 has insufficient rows for the required number of entries.

BLOCK 16 - WELD PROCEDURE, REV, CH, & TECHNIQUE SHEET(S)

(WELDER) Check the box provided if Weld Procedure and Technique Sheet (if applicable) to be used for repair welding is the same as shown on the associated Part B record. Otherwise, before welding enter the Weld Procedure (including Revision and Change used for repair welding). Include Technique Sheet if applicable.

BLOCK 17 - MINIMUM PREHEAT

(WELDER) First, see Part A (Block 14) or B record (Block 14), to verify that no special heat restrictions apply. If no special restrictions apply, before welding enter the required minimum preheat temperature. If special heat restrictions apply, before welding, enter the preheat temperature applied as specified by the Part A or Part B record.

BLOCK 18 - MAXIMUM INTERPASS

(WELDER) First, see Part A (Block 14) Part B record, (Block 15), to verify that no special heat restrictions apply. If no special restrictions apply, before welding, enter the required maximum interpass temperature. If special heat restrictions apply, before welding, enter the interpass temperature applied as specified by the Part A or Part B record.

BLOCK 19 - WELD FILLER MATERIAL

(WELDER) Just prior to welding, enter grade or type (e.g., MIL-11018-M or 11018-M) and MIC Number (e.g., WCAF 9093 202A) of electrode used in repair welding. Filler letters A and B are provided so that the data needs only to be entered once for that electrode and its corresponding traceability number. Enter the filler letter, A or B, corresponding to the electrode used during the weld repair process in Block 23. The filler material recorded here is only applicable to this sheet. If an additional Part C sheet is used, the filler material used to document weld phases on that sheet is recorded in Block 19 of that sheet.

BLOCK 20 - PHASE LETTER KEY

No entry is required for this block. Use Phase Letter Key given to complete Block 22.
NOTE: Check the box

"[ ] (SEE ADDITIONAL STRUCTURAL DEFECT RECORD)" in the REPAIR section of the form when Block 21 or 22 has insufficient rows for the required number of entries.

BLOCK 21 - IND NO.

(WELDER) Enter the indication number(s) for the defect(s) that is or are being worked on.

BLOCK 22 - PHASE LETTER

(WELDER) Using the Phase Letter Key given, enter the phase being accomplished during the weld repair process in the PHASE LETTER blocks provided. For most repairs, the last entries for each indication must be "WC" (weld complete) and "AMB" (ambient temperature). Multiple phases may be accomplished and certified as one line item entry (e.g., "WC/AMB").

BLOCK 23 - FILLER LTR

(WELDER) Enter the letter corresponding to the filler material information entered in Block 19 of this sheet. If the phase does not involve the addition of filler material, enter NA.

BLOCK 24 - MAX INTERBEAD & INTERPASS TEMP

(WELDER) Check Maximum Interbead and Interpass Temperature for the phase being accomplished. Mark the block when satisfactory. Take corrective action if it is not satisfactory. Enter NA for phases that do not involve welding (e.g., WC and AMB).

BLOCK 25 - WELDER

(WELDER or WELDER SUPERVISOR) Enter signature, printed name, badge number and date for the associated phase. Signing of this block certifies that all welding has been performed per the applicable welding procedure entered in Block 16, the traceability number of the filler material used is recorded in Block 19, Blocks 21 through 24 are completed and required information is correct, and that all weld workmanship inspection requirements have been satisfied. This signature must be made based on personal observation. For Phase Welding Complete (WC), signature indicates welding is complete, all metal has been deposited, required weld soaks are completed, preheat is removed and weld meets workmanship inspection requirements. This signature must be made based on personal observation or by normal trade supervisory controls. For Phase "AMB" enter military time that the weld reached ambient temperature (less than 125 Deg. F) in Block 26 and sign Block 25.

NOTE: THE AMBIENT TIME IS ONLY REQUIRED IF SUBSEQUENT NDT HAS A WAIT TIME, SUCH AS A 24 HOUR MT.

BLOCK 26 - REMARKS

(WELDER) Enter remarks if necessary. Ensure ambient temperature time is noted for the ambient temperature (AMB) phase after reaching ambient temperature (See note in Block 25). Each entry must contain signature, printed name and date except, (1) where the entry is pre-printed on the form by P&E, or (2) for ambient temperature time if "AMB" is listed in Block 22. These signature requirements are not necessary if the Block 26 entry is made by the welder who has signed for the acceptance requirements in Block 25.

BLOCK 27 - IND NO(S).

(CRAFTSMAN or SUPERVISOR) Enter indication numbers being certified ready for NDT in Block 28. The block is large enough to enter several indication numbers. Two blocks are provided if different craftsmen are signing for different indications. Unused blocks may be left blank.

BLOCK 28 - COMPLETE & READY FOR NDT

(WELDER, WELDER SUPERVISOR or CRAFTSMAN) Enter signature, printed name, badge number and date when the weld is ready for final NDT (i.e., meets workmanship inspection requirements). This signature must be made based on personal observation or by normal trade supervisory controls. This block may be signed by other than welder for non-weld issues.

NOTE: THE PURPOSE OF BLOCKS 29-34 IS TO PICK-UP THE JOINT NDT PROCESS AT THE POINT THE PART C RECORD WAS GENERATED AND TO DOCUMENT THE PROCESS FROM THAT POINT FORWARD. CHECK THE BOX "[ ] (SEE ADDITIONAL STRUCTURAL DEFECT RECORD)" IN THE REPAIR SECTION OF THE FORM WHEN BLOCK 29 OR 30 HAS INSUFFICIENT ROWS FOR THE REQUIRED NUMBER OF ENTRIES.

BLOCK 29 - IND NO.

(INSPECTOR) At the point the Part C record was generated, some required NDT may have already been completed and certified except for indications noted in Block 7. Other required NDT may yet need to be performed on the entire joint. Make block entries using this criteria:

a. For inspections of repairs to clear indications in Block 7, list the indication number being inspected.

b. For inspections on the entire joint that are not yet completed on a Part A or Part B Record, enter "N/A" beside the required NDT. The N/A entry means the required NDT applies to the entire joint.

BLOCK 30 - REQUIRED NDT

(INSPECTOR) List all required NDT to certify the defect being inspected.

a. Ensure all the required NDT for the entire joint is documented and certified, including NDT previously certified on previous Part A, Part B, or Part C records (if required by local instruction), and all other NDT required to complete the joint, plus repair NDT. On the Part C record, at a minimum, list all NDT required to clear the defect and any remaining (not previously certified) NDT required to certify the joint. All NDT required, (previously certified and repair NDT) may be listed if required by local instructions. Required NDT can be found in Block 21 of the Part A record, in Block 27 of the Part B record, or in Block 30 of other Part C records generated for previous repair cycles. See discussion on expansion requirements in Block 35.

b. On rare occasion the required NDT may change. In this case, the substituted NDT must be listed, not the original required NDT. These changes may be specified by P&E through TWD revisions.

BLOCK 31 - NDT & ACCEPTANCE PROCEDURE REV, CH

(INSPECTOR) Enter the NDT methods and acceptance standard procedure used for the NDT listed in Block 30.

BLOCK 32 - NDT REPORT, EQUIPMENT

(INSPECTOR) The purpose of this block is to record data for equipment or PT penetrant used. Enter equipment or PT penetrant information for the required NDT listed in Block 30 as directed on the form or list the NDT Report number that gives this information. Enter "Yoke" when performing an MT by yoke method. Equipment information is not required for MT by yoke. If the NDT listed is NDT previously completed satisfactorily and does not have to be repeated, enter "See Part (A or B or C)" as applicable. If "MT EXCAV", "MT BACKGOUGE" or "MT EVERY LAYER" is the NDT listed in Block 27, "Entry Not Required" may be entered in Block 29. (See example of Part B form). NA VT only inspections.

BLOCK 33 - RESULTS A OR R

(INSPECTOR) Enter "A" for accept or "R" for reject to indicate the inspection result. For NDT that has been accepted up to this point in the process enter "A". In this case, your entry is based on entries and certification signatures made on associated Part A, B, or C records.

BLOCK 34 - INSPECTOR

Enter signature, printed name, badge number and date for entries in Blocks 29 through 33. Your signature for previous, acceptable NDT is based on entries and certification signatures made on associated Part A, B, or C records.

BLOCK 35 - REMARKS

(ALL) Enter remarks. Expansion requirements should be documented or referred to in this block. Each entry must contain signature, printed name and date except where the entry is pre-printed on the form by P&E.

NOTE: EXPANSION REQUIREMENTS MAY BE SPECIFIED BY P&E THROUGH TWDS.

69. REMARKS

QA FORM 20C INSTRUCTIONS

PIPE, MACHINERY AND PRESSURE VESSEL WELD RECORD/WELD DEFECT REPAIR SHEET

PURPOSE: This instruction provides a form to document in process controls for welding and NDT of piping, machinery, pressure vessels, shafting and propellers including base metal repair and repair of castings per NAVSEA S9074-AR-GIB-010/278 (NSTP-278), MILSTD-2191, DOD-STD-2185 or per NAVSEA 250-1500-1. This Form does not contain all required data for accomplishment of Titanium Welds. Additional data is required as specified in local documents.

NOTES:

1. WHEN ADDITIONAL NDT AND OPERATIONAL TESTING (IN LIEU OF HYDROSTATIC STRENGTH TESTING) OF WELDED PIPE JOINTS IS SPECIFIED PER CHAPTER 505 OF NAVSEA S9086-RK-STM-010/CH505, PIPING SYSTEMS FOR NSTP-278 CLASS P-1 JOINTS, THE CWP OR TGI MUST CLEARLY SPECIFY THAT ADDITIONAL NDT IN LIEU OF HYDROSTATIC TESTING IS REQUIRED. ROOT LAYER MUST BE PT OR MT INSPECTED. THE 5X VISUAL INSPECTION SUBSTITUTION ALLOWED BY NSTP-278 IS NOT PERMITTED. THE FINAL LAYER MUST BE PT INSPECTED; MT IS NOT PERMITTED.
2. PLANNER MUST COMPLETE THE BLOCKS IDENTIFIED BY A RED DIAMOND PRIOR TO ISSUING.
3. PER NAVSEA S9074-AR-GIB-010-278, WHEN A SPECIFIC ITEM ON A RECORD IS NOT APPLICABLE THE LETTERS “NA” MUST BE ENTERED. IF A LINE ITEM HAS A “NA” BLOCK, CHECKING THE BLOCK MEETS THE INTENT OF ENTERING “NA” FOR THE REMAINDER OF THE BLOCKS FOR THAT LINE.

SCOPE: This weld record is required for NSTP-278 A-F, A-1, A-2, A-3, A-LT, P-1, P-LT, M-1, and T-1 welds, SUBSAFE welds, SOC welds, welding per MIL-STD-2191 (Main Shafts) and DOD-STD-2185 (Propellers) and other welds as required by the local Engineering authority.

TOP OF FORM: Page ___ of ___

NOTE A TECHNICAL WORK DOCUMENT MAY CONTAIN MULTIPLE QA FORMS OF THE SAME TYPE, (E.G. MORE THAN ONE QA-26). THE PAGE ENTRY IS FOR THIS SPECIFIC FORM, NOT THE TOTAL NUMBER OF PAGES ON ALL FORMS OF THE SAME TYPE.

Enter the page number, starting with page 1, of total number of QA form pages (e.g., 1 of , 2 of). The last number reflects the total number of QA Form pages written. This block is filled in by a QAI or the QAO after all certification testing is complete before block 19 on the QA-9 is signed. (e.g., 1 of 3, 2 of 3, 3 of 3).

PROCEDURE. Production and QA personnel make entries in QA form 20C as required. Signatures verify that all entries in the associated line item are correct. When adding Continuation or Repair Sheets, enter the Ship (from Block 1), Map Drawing Number (from

Block 9) or JCN (from Block 2) if there is no Map Drawing and the Joint Number (from Block 10). Enter the page number, starting with page 2, for each supplemental sheet (Continuation Sheet or Defect Repair Sheet) associated with the joint.

PIPE, MACHINERY AND PRESSURE VESSELS WELDING DETAIL AND NDT RECORD IDENTIFICATION SECTION

BLOCK 1 - SHIP HULL

Enter ship's name and hull number.

BLOCK 2 - JCN

Enter Job Control Number.

BLOCK 3 - LWC/SHOP

Enter LWC.

BLOCK 4 - CWP/REC SER NO.

Enter REC serial number or NA as applicable. Do not list the REC Rev.

BLOCK 5 - SYSTEM/COMPONENT

Enter system or component to be welded, (e.g., Main Sea Water, 1MS-V23, HP Air flask, or #2 propulsion shaft).

BLOCK 6 - FABRICATION STD.

Mark the governing fabrication standard, NSTP-278 or NAVSEA 250-1500-1. For other fabrication standards (MIL-STD 2191, DOD-STD-2185) enter an asterisk or other identifying mark and record procedure in the Remarks block.

BLOCK 7 - WELD CLASS

Enter applicable weld class from NSTP-278 fabrication standard (e.g., P-1, A-2). Enter classification for NAVSEA 250-1500-1 welds.

BLOCK 8 - JT DESIGN

Enter joint design. This can be a MIL-STD-22D or NAVSEA 250-1500-1 joint number, a joint design from a drawing or technical manual or a description such as "Build-up" or "Seal Weld". More than one joint design may be entered if allowed by drawing, NSTP-278, the Weld Procedure and local policy. If necessary, enter "RMKS" and list allowed joint design(s) in the Remarks section.

BLOCK 9 - SSMAP/JT ID DWG & REV

Enter map drawing or joint identification drawing. Enter NA if there is no map or joint identification drawing. Note that most submarine work requires that P-1 joints are mapped to a drawing that is included in the Ship's Drawing Index. See Deep Diving General Overhaul Specifications (DDGOS) 9480-0-I.

BLOCK 10 - JOINT NO.

Enter joint number, including type (WB, WS etc.) if listed, from joint map drawing. Check the "Mark JT" block if the weld is not mapped. NSTP-278 requires weld joint marking of class A-

F, A-1, A-2, A-3, A-LT, P-1, P-LT, M-1 and T-1 welds if not mapped. Fabrication, repair or cladding welds within components do not require marking if the weld location is clearly defined on the record such that the record is clearly applicable to only that location.

If there is no joint number or map drawing or other traceability from joint to record:

Check the "MARK JT" block if required by TWD or local instruction. This box identifies to the fitter that the joint must be marked, usually by vibra-tool, scribe or etch.

Example: Enter the Level I Certifying Activity Designator (CAD) letter(s) followed by a five-digit date number and a joint number. The date number is the two-digit year plus the Julian day when the record is created. A job at Norfolk Naval Shipyard that installs one elbow would need two joint numbers for records created on May 14 1999, N-99134-1 and N-99134-2. (The joint number is unique to the applicable job (JCN). Each job starts a new series so there is no need for joint number logs or pre-allocation of joint numbers).

BLOCK 11 - PART DESCRIPTION

a. Enter information for each part to be joined or repaired.

b. Enter description of piece (e.g., pipe, valve, clevis, plate, etc.).

c. Enter NPS pipe size and schedule or class (pipe welds only, NA others including pipefittings).

d. Enter arrangement drawing (preferred) or diagram and applicable revision.

e. Enter piece number from drawing just entered (enter NA if there is no pc no.).

f. Enter the base material type (normally from drawing) and the S-Group Number (e.g., ASTM A 178, Grade A (S-1), CUNI-70:30 (S-34), CRES 316 (S-8), 1-1/4Cr 1/2Mo (S-4)). S-group numbers are obtained from Table (1) of NSTP 278. Specify CRES by grade, Aluminum by grade and temper and Inconel (S-43) as either 600 or 625. In addition, for carbon steels (Group S-1) with carbon content greater than 0.30%, make a note of the maximum carbon content in the Remarks block. Include material spec if known (e.g., QQ-N-281, ASTM A182 F11). For new material, P&E verifies that information in Block 11, especially for material type, matches material ordering information in TWD. Use the Remarks block if additional space is needed.

NOTE: FOR BASE METAL REPAIRS, NORMALLY ONLY INFORMATION FOR PART 1 IS COMPLETED. ENTER "NA" IN PART 2 BLOCKS. FOR BASE METAL REPAIRS INVOLVING MORE THAN ONE MATERIAL TYPE, SUCH AS A REPAIR TO CU-NI BASE MATERIAL THAT TIES INTO AN ADJACENT NI-CU CLADDING, INFORMATION FOR BOTH MATERIALS MUST BE COMPLETED AS PART 1 AND PART 2.

INSTALLATION SECTION

NOTE: THE PURPOSE OF BLOCK 12 IS TO CONFIRM THE MATERIAL OF EACH PART IS THE SAME AS LISTED IN BLOCK 11.

BLOCK 12 - PART NO.1 AND PART NO.2

(Welder) Check New or Existing for each part. If the part is new, no further action is required. If existing, check the method used to verify the material and annotate the existing

material markings found or the results of the generic material test in the results section. For base metal repairs, Part 2 will be left blank if Part 2 of Block 11 is blank as only one part exists.

BLOCK 13 - PART NO.

(Welder) Enter part number from Block 11 for each new part. Enter "NA" for backing rings or consumable inserts which are not included in Block 11.

BLOCK 14 - DESCRIPTION

(Welder) Enter piece description either from Block 11 or for additional pieces, such as backing rings or consumable inserts which do not have a part number.

BLOCK 15 - LEVEL I NO./OTHER TRACE NO./MATERIAL/SPECIFICATION MARKINGS

(Welder) For all new material, enter the material type (e.g., 316L, Inconel 625, ASTM A106 Grade B, etc.) when this information is on the piece or its accompanying tag or documentation. In addition, the following information is required:

a. For new material in applications requiring traceability markings (e.g., Level I, SOC, etc.), enter the traceability marking.

b. For new material not requiring traceability marking and not having a material type evident, enter the information required by Table 1 (this would normally be the stock number).

TABLE 1- DOCUMENTATION REQUIREMENTS

Material Control Level	Required Information
Level I Material Other Than Fasteners	MIC Number and any other traceability number, including any local traceability number (e.g., PNSY MLN – examples Z142, AB12)
Level I Fasteners	Either the MIC number or Material Marking, Color Code, Heat or Lot Number, and Manufacturers Symbol (Note: For nuts containing a self-locking insert, the color of the insert is the Manufacturer's symbol)
Controlled Structural Material And SOC Control Division "A" Material	Traceability Number
SOC Control Division "B" Material	Markings providing identification to material type or specification
AERP And Other Rotatable Pool Material (688 Class, TRIPER, Etc.)	Enter the appropriate rotatable pool serial number (e.g., RP-148A, 4810-013-5812-A3-0113, TIN -292-11893, etc.)
Transferred And Cannibalized Material	Enter the Equipment Removal List No. or other material History or Traceability number (ERL# XXXX, SSBN-600 EHF #24, etc.)
Other Material Within The LEVEL I/SUBSAFE Boundary And SOC Control Division "C" Material	1. Enter at least one of the following documentation attributes: a. Stock Number (from package or container) b. Part Number (from package or piece) c. Part Number and associated Manufacturing Work Procedure (for manufactured items) d. Local Traceability Number (from piece or tag) e. Drawing and Piece Number (from piece or tag) f. Generic, MIL-SPEC, or Material Specification Marking (from piece) g. NDT record numbers or test results for items verified by generic material testing 2. For SOC components only: Enter the stock number of the "O"-ring lubricant or any sealant used during assembly

c. If an alternate material is authorized enter an asterisk or other identifying symbol and provide authorization (e.g., DFS #) in Block 39 (Remarks).

d. For consumable inserts, enter the type (e.g., MIL-67) marked on the insert, the insert size and the Level I or certified material number from the tag.

BLOCK 16 - FITTER/INSPECTOR

Sign to verify that Block 15 entries match the markings on the piece or tag and to verify that the material matches that required by Block 11. Where material type is not annotated on the piece or its accompanying tag or documentation, material verification is accomplished by matching the identifying marking on the tag or documentation against the ordering information specified in the TWD.

BLOCK 17 - PART

No entry. Part numbers correspond to Block 11.

BLOCK 18 - WALL THICKNESS REQUIRED

Enter nominal wall thickness for piping and piping fittings.

NA may be entered for non-piping applications which are greater than ½ inch thick, or pipe socket fittings, valves, piping drilled after boss installation or piping passing through sleeves.

Nominal wall thickness is the nominal wall thickness for the associated system piping. Minimum allowable piping installation wall thickness is that provided by the installation drawing or can be calculated by subtracting 10% from the nominal wall thickness. Tubing specifications generally specify a minimum wall thickness only. For NAVSEA 250-1500-1 welds and if required by local direction for NSTP-278 welds, the nominal wall thickness for tubing should be calculated by adding 10% to the tubing minimum wall thickness. If the basis for minimum wall thickness is different, document the special basis in the Remarks.

Enter minimum allowable installation thickness.

BLOCK 19 - WALL THICKNESS ACTUAL

(Welder) Enter minimum measured thickness after end preparation. "NA" may be entered for non-piping applications which are greater than ½ inch thick, or pipe socket fittings, valves, piping drilled after boss installation or piping passing through sleeves.

For casting repairs, record the wall thickness adjacent to the defect (excavation area). A sketch showing the size (length, width, and depth) and location of all nominal and special repair will be entered per the directions for the REMARKS section (Block 39).

BLOCK 20 - FITUP

Planner mark PREWELD NDT and FITUP AFTER TACK blocks "NA" when not applicable. Fitter check other appropriate blocks or make entry for:

a. Completion of any required pre-weld NDT - See Block 35 and 36 and the TWD.

b. Installed joint design - Annotate the joint design installed. The installed joint design must be as specified in Block 8. If an alternate joint design is authorized, enter an asterisk or other identifying symbol and provide authorization (e.g., DFS #) in Block 39 (Remarks). For base metal repair, sketch excavation in Remarks section. Sketches should include location, dimensioned from a reference surface or line, and length width and depth of excavation.

c. Satisfactory fit-up - This means that the fit-up meets the procedure requirements for the joint design, and that any scribe line or joint number marking (required if "MARK JT" in Block 10 is checked) is complete.

d. Satisfactory fit-up after tacking - If NA is not checked in advance by P&E, the SAT block will be checked after satisfactory fit-up after tacks by the NDT Inspector.

BLOCK 21 - VERIFICATION

(Fitter or NDT Inspector) Sign verification of proper fit-up.

WELDING SECTION

BLOCK 22 - WELD PROC/REV/CH & TECH DATA SHEET

(Welder) Enter weld procedure (including revision and change), tech data sheet or other welding instruction.

BLOCK 23 - POSITION

(Welder) Circle HFP (Horizontal Fixed Pipe), VFP (Vertical Fixed Pipe) or OOP (Out Of Position pipe) as applicable by local instruction.

BLOCK 24 - MIN PREHEAT

PREHEAT - (Welder) Enter minimum preheat temperature just prior to welding.

INTERPASS - (Welder) Enter maximum interbead/interpass temperature as measured during the process.

BLOCK 25 - FABRICATION LOCATION

(Welder) Enter location where work is performed. Compartment can be the damage control number or the common name such as UL MMR1, or Aux Machinery Space. Circle Port (P), Centerline (C), or Starboard (S).

BLOCK 26 - LAYER(S)

(Welder) Enter type of weld layer(s) (e.g., Tack (T), Root (R), Intermediate (I), or Final (F)). Record one line for each different welder or filler metal combination. (If a complete weld is done by the same welder, on the same day, using filler metal with the same traceability numbers, the layer may be indicated as T, R, I, F using only one line). However, the welder's signature is required prior to each specified inspection, (e.g., If a root PT or 5X is required, the R and I layers cannot be on the same line). Intermediate layers must be numbered (I1, I2, I3…) if needed, to record more than one filler metal lot or welder. Use continuation sheet if needed.

BLOCK 27 - FILLER TYPE

(Welder) Enter type of filler material used, (e.g., RN60, 9N10, etc.).

BLOCK 28 - FILLER SERIAL NO.

(Welder) Enter filler serial number (Level I numbers, traceability numbers) from filler or tag. Enter, "Non-Level I", for Non-level filler material.

BLOCK 29 - WELDER

(Welder) Sign, enter badge number and Date to verify that the entries made are correct and the weld is per the required procedure. For HY or HSLA welds enter the time and date that the weld reached ambient temperature in the remarks.

BLOCK 30 - STRESS RELIEF REQUIRED

Planner mark "Yes" if stress relief is desired for distortion control or is required by tech manual or drawing, otherwise mark "NO" block. If Block 30 is marked "NO", "NA" Blocks 31 and 32.

BLOCK 31 - PROCEDURE

Welder enter stress relief procedure used, temperature range and duration. Planner mark "NA" if Block 30 is marked "NO".

BLOCK 32 - HEAT TREATER

Heat Treater, sign to verify that the heat treatment was accomplished per the required procedure, temperature range and duration. Planner, mark "NA" if Block 30 is marked "NO".

BLOCK 33 - WELDER/FITTER

(Welder) (Fitter includes other trades as applicable). For welds that are machined or ground flush, include a sketch in the Remarks section including weld location from a reference surface or line, and the length and width of the weld prior to requesting NDT. Sign that all welding and surface preparation is correctly completed, reference line(s) and joint number (if checked in Block 10) are marked and weld is ready for NDT. The welder must sign this block for weld workmanship if welding is performed and should be co-signed by the shop performing the final action on the joint (if other than the welder) prior to inspection as specified by local direction.

WELD INSPECTIONS SECTION

BLOCK 34 - ACCEPTANCE STANDARD/CLASS

Planner enter NDT acceptance standard (e.g., MIL-STD-2035 or NAVSEA 250-1500-1) and acceptance standard class (if applicable). (NDT acceptance standard classes for NSTP-278 welds are found in NSTP-278 Table XI).

BLOCK 35 - INSPECTION

Planner mark inspection(s) required. Mark NA for inspections that are not required. Note that first line allows writing in inspections, especially pre-weld inspections like excavations or end-preps. Mark MT/PT-ID for joints which require MT or PT and have an inside accessible surface (e.g., non-backing ring butt welds).

BLOCK 36 - INSPECTION TYPE

Planner mark the types of NDT (VT, 5X, PT, MT or RT). Mark "Inside" when required for welds that allow for inside inspections. For welding of HY, HSLA and STS materials indicate when 8 hour RT or 24 hour MT are required by marking appropriate box.

(Inspector) Record equipment numbers as appropriate. Line out Type II [Method] C if that type penetrant dye and method are not used and record substitute PT types and methods in the Procedure or Remarks block. If a yoke is used for MT write "Yoke" in place of the unique equipment identification. Mark "inaccessible" or "partial inspection done", as appropriate, if full inspection of inside surface cannot be accomplished.

BLOCK 37 - PROCEDURE USED

(Inspector) Record inspection procedure used.

BLOCK 38 - INSPECTOR

(Inspector) Mark "SAT" for satisfactory or "REJ" for rejection of required inspections. Do not mark either for inaccessible inspections. Sign verification for inspections required by Blocks 35 and 36. Rejection is required if an inspection shows rejectable conditions that have not been satisfactorily repaired by polishing or light grinding and reinspected. If an inspection is rejected, add a Weld Defect Repair Sheet and complete Blocks 52-54. Carry rejected, voided, and incomplete inspections to Block 65 and 66. See Header instructions for adding a Repair Sheet. If PT or MT-ID (F) in Block 36 is marked "inaccessible", the Inspector will enter signature and leave "SAT" and "REJ" check box blank.

BLOCK 39 - REMARKS

(All) Record additional relevant information as directed in this instruction, by work document or identified in-process. Appropriate remarks entries or sketches include defect size and location, special weld joint designs, records of material weldability tests for casting repairs, or the additional records required for Titanium welding. Use a continuation sheet for additional space or reference a separate record. Each entry must contain a signature, printed name and date except where the entry is pre-printed on the form by P&E.

FINAL DISPOSITION

BLOCK 40 - SUPERVISOR

The NDT Supervisor will enter printed name, signature, badge number and date signifying all information on the record (including any rejects and repairs) is technically acceptable and administratively correct. Enter total pages in the Heading.

BLOCK 41 - LOCAL GOVERNMENT INSP./QAS

For shipyard use only.

WELD HISTORY

BLOCKS 42 - 46 - LAYER, FILLER TYPE, FILLER SERIAL NO., PREHEAT/INTERPASS TEMP, WELDER

(Welder) See instructions for Blocks 24 and 26-29. Note any changes in Remarks on continuation sheet.

WELD INSPECTION

BLOCKS 47 - 50 - INSP, INSPECTION TYPE, PROCEDURE USED, INSPECTOR

(Engineering, Planning, Inspector) See instructions for Blocks 35-38. Write out inspection type in Block 48. General instruction may be written in the Remarks section.

BLOCK 51 - REMARKS

(All) See Block 39 instructions for remarks. Each entry must contain signature, badge number and date except where the entry is pre-printed on the form by P&E. Initials may be entered in lieu if an employee's signature appears elsewhere on the same page.

QA FORM 20C - WELD DEFECT REPAIR SHEET

DEFECT DESCRIPTION

BLOCK 52 - DEFECT DESCRIPTION

(Inspector) Place an "X" in the applicable defect description block that describes the defect.

BLOCK 53 - DEFECT LOCATION(S) AND EXTENT

(Inspector) Describe or sketch in remarks (Block 69) the defect location(s) and size(s). Defect location in reference to a permanent landmark is recommended.

BLOCK 54 - INSPECTOR

(Inspector) Verify that rejected inspections from page 1, continuation sheet or previous repair sheet are marked in Block 65 and 66 to be redone. Verify defect identification by signature.

DEFECT REPAIR

BLOCK 55 - TYPE OF REPAIR

(Welder) Mark type(s) of repair. Identify repair type (grind only, grind and weld, etc.). More than one repair type may be marked.

BLOCK 56 - REPAIR LOCATION(S) AND EXTENT

(Welder) Describe or sketch in Remarks section the repair locations and size (length, width and depth). Descriptions must include distances, degrees, or both, from "0" reference points or lines to locate repairs. Note that generally, the repair extends beyond the defect and this must be recorded.

BLOCK 57 - WELD PROC & REV/CH

(Welder) Mark "NA" if only grinding is needed for repair. Enter the weld procedure, revision and data sheet or mark "Same as original weld" if welding is required.

BLOCK 58 - EXCAVATION NDT REQUIRED

(Welder) Check if MT, PT or 5X VT is required for the excavation area. Also, mark Blocks 65 and 66. Any weld repair which originally required final MT or PT requires MT, PT or 5X VT of repair excavations. Consult P&E or local facility engineering if there is any uncertainty about the repair inspection requirements.

BLOCK 59 - ROOT PASS INSPECTION REQUIRED

(Welder) Mark if a new root pass inspection is required (when all or part of the root is replaced), also mark Blocks 65 and 66 root pass inspections. Repaired root welds which originally required inspections must require the same inspections when replaced or repaired. Consult P&E or local facility engineering if there is any uncertainty about the repair inspection requirements.

BLOCKS 60 - 64 - LAYER, FILLER TYPE, FILLER SERIAL NO., PREHEAT/INTERPASS, WELDER

See instructions for Blocks 24 and 26-29.

REPAIR INSPECTIONS

BLOCKS 65 - 68 - INSP, INSPECTION TYPE, PROCEDURE USED, INSPECTOR

(As Appropriate) In-process repairs of weld rejects generally require the same inspections as the original weld with the addition of inspection of the excavation needed to remove the defect.

The inspector is responsible to carry forward all inspections, from page 1, a Continuation Sheet or a previous Repair Sheet, which were rejected (see Block 38).

The welder will mark any additional inspections required due to the extent of the repair.

Excavations must be 5X VT, MT or PT inspected if MT or PT is a requirement of the finished weld. Root inspections must be accomplished if all or part of the root is redone. Also, mark any intermediate layer inspections for repeat if these layers are removed by repair. These inspections must be done prior to covering by the repair. Blocks 58 and 59 serve to remind welders of this before the welding phase of the repair.

Previously accepted inspections must be redone if a subsequent inspection requires rework that could affect the previous inspection result. Voided inspections must be marked to be redone in the repair area. Any weld material removal for repair voids the completed finished surface inspections (F), VT, PT, MT, or RT inspections in Block 35.

Consult P&E, NDT Supervisor, or local facility engineering for repair inspection details. Note that your local activity may require that a discrepancy be clarified by a Liaison Action Request for formal direction or approved by a Departure from Specification prior to proceeding with in-process repair of welding defects.

BLOCK 69 - REMARKS

(All) Record additional details here, especially sketches of defect areas and repairs. Each entry must contain signature, printed name and date except where the entry is preprinted on the form by P&E. Initials may be entered if a corresponding employee's signature appears elsewhere on the same page. Use a continuation sheet for additional space. See Block 39.

HYDROSTATIC/PNEUMATIC TEST RECORD

QA FORM 26 INSTRUCTIONS

HYDROSTATIC/PNEUMATIC TEST RECORD

PURPOSE: To document hydrostatic or pneumatic tests accomplished on piping systems or portions of a system to recertify the system after maintenance. It also provides a method for the FMA to specify the required retests for work they performed. The QA form 26 will not be used in DSS or SOC applications. Use QA form 26A located in Part III, Chapter 11 of this Volume.

TOP OF FORM: Page ___ of ___

NOTE A TECHNICAL WORK DOCUMENT MAY CONTAIN MULTIPLE QA FORMS OF THE SAME TYPE, (E.G. MORE THAN ONE QA-26). THE PAGE ENTRY IS FOR THIS SPECIFIC FORM, NOT THE TOTAL NUMBER OF PAGES ON ALL FORMS OF THE SAME TYPE.

Enter the page number, starting with page 1, of total number of QA form pages (e.g., 1 of , 2 of). The last number reflects the total number of QA Form pages written. This block is filled in by a QAI or the QAO after all certification testing is complete before block 19 on the QA-9 is signed. (e.g., 1 of 3, 2 of 3, 3 of 3).

PROCEDURE: The numbered blocks on QA form 26 correspond with the block instructions listed. Any block not used will be marked NA. The planning organization must fill in blocks identified with the diamond symbol prior to issuing the CWP.

BLOCK 1 - SHIP HULL NO.

Enter the ship's name and hull number.

BLOCK 2 - JCN

Enter the JCN.

BLOCK 3 - LWC

Enter the shop number of the LWC.

BLOCK 4 - CWP/REC SER. NO.

Enter the CWP/REC serial number or enter N/A if no CWP/REC is required. Do not list the CWP/REC revision.

BLOCK 5 - SYSTEM/COMPONENT

Enter the name of the system and component to be tested.

BLOCK 6 - TEST REFERENCES

Enter the applicable test reference or other applicable references (e.g., drawing number and revision used to obtain the required test pressure and conducting of the test).

NOTE: ENTER "S9505-AF-MMA-010/PIPING SYSTEMS" OR "0378-046-8000/ SYSTEM HYDROSTATIC TEST REQUIREMENTS" AS APPROPRIATE WHICH PROVIDES REQUIREMENTS FOR SHIP'S FORCE TO SET-UP AND CONDUCT TESTING.

BLOCK 7 - REQUIRED TEST AND INSPECTION POINTS

Enter the specific test requirements necessary to recertify the work. Specify test requirements (i.e., type of test, test fluid, special valve positions, duration, test medium, acceptance criteria, joints to be tested (if entire component or system is tested, so state)).

BLOCK 8 - DIAGRAM OF TEST AREA

Enter a diagram of the test area. Be specific. Include such things as relief valve locations, gage locations, blanks, gags, and valve positions, etc. The QAI will verify the diagram prior to performance of the test. For nuclear tests, identify major components to be isolated or vented to preclude unnecessary pressurization.

NOTE: ALL VALVES WITHIN THE TEST BOUNDARIES MUST BE IDENTIFIED AND THEIR POSITION (OPEN OR SHUT) DURING THE TEST ANNOTATED.

NOTE: IF DRAWINGS OR ADDITIONAL INFORMATION IS REQUIRED TO SUPPLEMENT THIS REPORT, EACH DRAWING, ETC., WILL BE NUMBERED AND AUTHENTICATED WITH THE SIGNATURE BY THE CRAFTSMAN AND QAI MAKING UP THE REPORT.

NOTE: LOCAL EXCEPTIONS TO GAGE RANGE AND OR INCREMENTS WILL BE APPROVED BY AN INDIVIDUAL WITH A TECHNICAL WARRANT.

NOTE: SHIPS, FLEET MAINTENANCE ACTIVITIES AND REGIONAL MAINTENANCE CENTERS MANAGED BY UNITED STATES FLEET FORCES COMMAND OR TYCOMS MUST DISREGARD THE BLOCK 8 DIAMOND WHEN TESTING IS PERFORMED BY AN ACTIVITY OTHER THAN THE ACTIVITY PERFORMING REPAIR. THE ACTIVITY PERFORMING THE TESTING MUST COMPLETE THE DIAGRAM REQUIRED BY BLOCK 8.

BLOCK 9 - GAGE DATA

Enter the primary and backup gage data.

BLOCK 10 - REQ'D TEST PRESSURE (PSIG) AND TEST DURATION

Enter the required pressure values and test duration. If listing the test pressure would classify the CWP, list the applicable reference including paragraph, table, section or item number, and the "J" or "H" symbol (if applicable) instead of classifying the document.

BLOCK 11 - ACTUAL TEST PRESSURE (PSIG) AND TEST DURATION

Enter the actual test pressure and the duration the test pressure was applied. Test duration will include the required test period and the time required to complete the inspection. If listing the pressure values would classify the CWP, list the applicable reference including paragraph, table, section or item number, and "J" or "H" symbol (if applicable instead of classifying the document.

BLOCK 12 - TEST MEDIUM

Enter the actual test medium.

BLOCK 13 - TEST RESULTS

a. Check “SAT” block, if all inspections specified by Block 7 are complete and satisfactory.

b. Check “UNSAT” block, if test results are unsatisfactory. Identify the specific **inspection and reason for failure in the remarks section.**

NOTE: IF A SATISFACTORY TEST CANNOT BE ACHIEVED, A DFS FOR NON-NUCLEAR TESTS OR LAR FOR NUCLEAR TESTS MUST BE PROCESSED IN ACCORDANCE WITH PART 1 CHAPTER 8 OF THIS VOLUME OR THE TASK MUST BE REWORKED AND RETESTED.

BLOCK 14 - REMARKS

Remarks pertinent to this test will be entered in this block.

BLOCK 15 - CERTIFICATION

PERFORMED BY

Person performing the test print name, enter signature, badge number and date signifying accuracy of data recorded.

INSPECTED BY

QAI or Shipyard Representative print name, enter signature, badge number and date verifying the accuracy of test results recorded and inspection performed satisfactory.

DROP TEST RECORD

QA FORM 27

QA FORM 27 INSTRUCTIONS

DROP TEST RECORD

PURPOSE: To document drop tests accomplished on piping systems or portions of a system to recertify the system after maintenance actions have been accomplished. The QA form 27 will not be used in DSS or SOC applications. Use QA form 27A located in Part III, Chapter 11 of this Volume.

TOP OF FORM: Page ___ of ___

NOTE A TECHNICAL WORK DOCUMENT MAY CONTAIN MULTIPLE QA FORMS OF THE SAME TYPE, (E.G. MORE THAN ONE QA-26). THE PAGE ENTRY IS FOR THIS SPECIFIC FORM, NOT THE TOTAL NUMBER OF PAGES ON ALL FORMS OF THE SAME TYPE.

Enter the page number, starting with page 1, of total number of QA form pages (e.g., 1 of , 2 of). The last number reflects the total number of QA Form pages written. This block is filled in by a QAI or the QAO after all certification testing is complete before block 19 on the QA-9 is signed. (e.g., 1 of 3, 2 of 3, 3 of 3).

PROCEDURE. The numbered blocks on QA form 27 correspond with the block instructions listed. Any block not used will be marked NA. The planning organization must fill in blocks identified with the diamond symbol, the Required Initial Test Pressure of Block 10 and the maximum allowable pressure drop in Block 12 prior to issuing the CWP.

BLOCK 1 - SHIP HULL NO.

Enter ship's name and hull number.

BLOCK 2 - JCN

Enter the JCN.

BLOCK 3 - LWC

Enter the shop number for the LWC.

BLOCK 4 - CWP/REC SER NO.

Enter the CWP/REC serial number or enter N/A if no CWP/REC is required. Do not list the CWP/REC revision.

BLOCK 5 - SYSTEM/COMPONENT

Enter the name of the system or component (i.e., FWD ESCAPE TRUNK) to be tested.

BLOCK 6 - REFERENCES

Enter the applicable test reference or other applicable references (e.g., drawing number and revision used to obtain the required test pressure and conducting of the test).

NOTE: ENTER "S9505-AF-MMA-010/PIPING SYSTEMS" OR "0378-046-8000/ SYSTEM HYDROSTATIC TEST REQUIREMENTS" AS APPROPRIATE WHICH PROVIDES REQUIREMENTS FOR SHIP'S FORCE TO SET-UP AND CONDUCT TESTING.

BLOCK 7 - REQUIRED TEST AND INSPECTION POINTS

Enter the specific test requirements, including inspection points, necessary to recertify the work. FMAs will fill in this block and then provide the QA form 27 to Ship's Force so they can prepare the test procedure to retest FMA work.

BLOCK 8 - DIAGRAM OF TEST AREA

Enter a diagram of the test area. Be specific. Include such things as relief valve locations, gage locations, blanks, gags, valve positions, initial and final temperature (if applicable), etc. The QAI will verify the diagram prior to performance of the test. For nuclear tests, identify major components to be isolated or vented to preclude unnecessary pressurization.

NOTE: ALL VALVES WITHIN THE TEST BOUNDARIES MUST BE IDENTIFIED AND THEIR POSITION (OPEN OR SHUT) DURING THE TEST ANNOTATED.

NOTE: IF DRAWINGS OR ADDITIONAL INFORMATION IS REQUIRED TO SUPPLEMENT THIS REPORT, EACH DRAWING, ETC., WILL BE NUMBERED AND AUTHENTICATED WITH THE SIGNATURE BY THE CRAFTSMAN AND QAI MAKING UP THE REPORT.

NOTE: LOCAL EXCEPTIONS TO GAGE RANGE AND OR INCREMENTS WILL BE APPROVED BY AN INDIVIDUAL WITH A TECHNICAL WARRANT.

NOTE: SHIPS, FLEET MAINTENANCE ACTIVITIES AND REGIONAL MAINTENANCE CENTERS MANAGED BY UNITED STATES FLEET FORCES COMMAND OR TYCOMS MUST DISREGARD THE BLOCK 8 DIAMOND WHEN TESTING IS PERFORMED BY AN ACTIVITY OTHER THAN THE ACTIVITY PERFORMING REPAIR. THE ACTIVITY PERFORMING THE TESTING MUST COMPLETE THE DIAGRAM REQUIRED BY BLOCK 8.

BLOCK 9 - GAGE DATA

Enter the primary and backup gage data.

NOTE: IF LISTING THE TEST PRESSURE WOULD CLASSIFY THE CWP, ENTER "J", "H", "ITEM 1 OF REF (A)", OR ETC., AS APPROPRIATE FROM THE APPLICABLE REFERENCE INSTEAD OF CLASSIFYING THE DOCUMENT.

BLOCK 10a - REQUIRED TEST PRESSURE

Enter the required test pressure (psig).

BLOCK 10b - ACTUAL TEST PRESSURE

Enter the actual test pressure.

BLOCK 11a - FINAL PRESSURE AT END OF TEST

Record final pressure reading when the required test time is completed.

BLOCK 11b - ACTUAL DURATION

Enter the actual duration of the test.

BLOCK 12 - ALLOWABLE PRESSURE DROP % IN MINUTES/HOURS

Enter the allowable pressure drop (an actual value including units, e.g., 2oz in 10 min) or as a percentage of the test pressure in minutes or hours (e.g., 0% in 10 min). Cross out time measure not used.

BLOCK 13 - FINAL PRESSURE DROP CORRECTED FOR TEMPERATURE CHANGE

Record final pressure drop calculated with corrections for temperature change in the same units as Blocks 11 and 12.

BLOCK 14 - TEST MEDIUM

Enter the actual test medium used.

BLOCK 15 - TEST RESULTS

Check "SAT" block, if all inspections specified by Block 7 are complete and satisfactory.

Check "UNSAT" block, if test results are unsatisfactory. Identify the specific inspection and reason for failure in the remarks section.

NOTE: IF A SATISFACTORY TEST CANNOT BE ACHIEVED, A DFS FOR NON-NUCLEAR TESTS OR LAR FOR NUCLEAR TESTS MUST BE PROCESSED IN ACCORDANCE WITH PART I CHAPTER 7 OF THIS VOLUME OR THE TASK MUST BE REWORKED AND RETESTED.

BLOCK 16 - REMARKS

Enter any comments pertinent to the test.

BLOCK 17 - CERTIFICATION

PERFORMED BY

Person performing the test print name, enter signature and date signifying accuracy of data recorded.

INSPECTED BY

QAI or Shipyard Representative print name, enter signature, badge number and date verifying the accuracy of test results recorded and inspection performed satisfactory.

SHOP TEST RECORD

QA FORM 28 INSTRUCTIONS

SHOP TEST RECORD

PURPOSE: To document the OQE required when performing in-shop testing.

TOP OF FORM: Page ___ of ___

NOTE A TECHNICAL WORK DOCUMENT MAY CONTAIN MULTIPLE QA FORMS OF THE SAME TYPE, (E.G. MORE THAN ONE QA-26). THE PAGE ENTRY IS FOR THIS SPECIFIC FORM, NOT THE TOTAL NUMBER OF PAGES ON ALL FORMS OF THE SAME TYPE.

Enter the page number, starting with page 1, of total number of QA form pages (e.g., 1 of , 2 of). The last number reflects the total number of QA Form pages written. This block is filled in by a QAI or the QAO after all certification testing is complete before block 19 on the QA-9 is signed. (e.g., 1 of 3, 2 of 3, 3 of 3).

PROCEDURE. The numbered blocks on QA form 28, SHOP TEST RECORD, correspond with the block instructions listed. The form will become part of the TWD, and the responsibilities for filling out the form are:

a. Planning must fill in blocks identified by a ♦ prior to issuing QA form 28.

b. QAI will complete Block 11 (when required by this manual).

c. QAS must complete Block 12 for SUBSAFE or SOC Testing.

d. Shop Supervisor must complete Block 12 for other testing.

BLOCK 1 - SHIP/HULL

Enter the ship's name and hull number, or enter the appropriate rotatable pool system designator (e.g., TRIPER, CCRP, AERP, SSN 688CL, etc.).

BLOCK 2 - JCN/Job Order & Key-Op

Enter the Job Control Number (e.g., 20884-EM01-2947, 3872556103/R01). Naval Shipyards enter Job Order and Key Op.

BLOCK 3 - LWC/SHOP

Enter the shop number of the Lead Work Center or the Assigned Key Shop.

BLOCK 4 - CWP/REC SERIAL NO.

Enter the CWP/REC serial number if applicable, otherwise NA. Do not list the CWP/REC revision.

BLOCK 5 - SYSTEM/COMPONENT/ROTATABLE POOL SER NO.

Planner enter the noun name of the system and component, or the name of the component being tested (e.g., ASW-80/81). If the record is for testing rotatable pool material, Planner or Craftsman enter the serial number of the material when available or known.

BLOCK 6 - TEST REFERENCES

Enter the document number that provides the test requirements other than those test requirements listed in the Task Group Instruction, JCN or Job Order listed in Block 2: (e.g., SUBMEPP Maintenance Standard (SMS) or Technical Repair Standard or (TRS) Revision and Change, Task Group Instruction, Technical Manual and Section No., Assembly Drawing Number & Revision, etc.).

BLOCK 7 - TEST GAGE RANGE/TEST INSTRUMENT USED, SERIAL NO. & CALIBRATION DUE DATE

Enter each test gage and each instrument (normally enter the gage or instrument range) used for testing any item or component. Enter the serial number of the gage or instrument, and Calibration Due Date. If the items are part of a computerized test stand, indicate the serial number of the test stand.

BLOCK 8 - RELIEF VALVE SET POINT

Enter the relief valve set point and verification signature of person setting the relief. The signature(s) in Block 8 include that the test was accomplished with the proper calibrated test equipment. Use Block 10 for additional space. If listing the pressure values would classify the CWP, list the applicable reference including paragraph, table, section or item number, and "J" or "H" symbol (if applicable) instead of classifying the document.

BLOCK 9 - TEST REQUIREMENTS & RESULTS

Planner enter all test requirements Test Procedure, Type of Test and Paragraph, required valve position and entry point (if not described by Test procedure, SUBMEPP Maintenance Standard or Technical Repair Standard, that is invoked in the Technical Work Document), Required Medium, Required Pressure, Minimum Duration, Allowable Leakage and any other test requirements. NA blocks if not applicable. Enter other test requirements, if applicable, in Block 9 or the Remarks Block 10. If listing the pressure values would classify the CWP, list the applicable reference including paragraph, table, section or item number, and "J" or "H" symbol (if applicable) instead of classifying the document.

NOTES:

1. For Scope of Certification Tests requiring Divers Air Clean Requirements, Planning add a SOC Cleanliness Maintained Test Requirement (annotate to verify that system cleanliness has been maintained) with signature, badge number and date for the craftsman.
2. For hydraulic actuators with relief valves which must be removed for the hydrostatic or tightness tests, relief valve reinstallation must be documented in one of the following manners:
    a. On a QA form 34A
    b. On a QA form 17C
    c. Planning: Enter "Relief valve removed for test and reinstalled after test" in the QA Form 28 Remarks block and provide an area for the mechanic to record the following attributes for all new material installed:
        - Piece number
        - Drawing number or reference letter

- Part description
- Quantity
- LOE

Mechanic: Record the data for each attribute listed for all new material installed. Provide signature, badge number and date for Objective Quality Evidence that the relief valve and o-ring were reinstalled after the test; all new material meets specified requirements, is installed and listed; and after verifying existing material is acceptable for re-use and is installed.

3. For hydraulic 2 position valve orientation, enter a requirement in the Remarks block for the operation of the valve ("PRESSURIZE C1 TO OPEN, PRESSURIZE C2 TO CLOSE"), signature, badge number and date for Objective Quality Evidence of the proper operation if not already identified in the Maintenance Standard Test requirements.

   Test or Production personnel enter the results of testing (Actual Medium Used, Actual Pressure, Actual Duration (including inspection time), Actual Leakage, and the results of testing (SAT or UNSAT) and enter signature, badge number and date. Signature also verifies that test instrumentation was calibrated, the correct test configuration was used to perform the test and any sequencing (e.g., valve cycling) listed in Block 9 or 10 was accomplished. If the results are unsatisfactory, enter the deficiency report number or DL serial number which documents the test deficiency or work accomplished to correct the deficiency. If unsat, the craftsman will report the condition on a Deficiency Form or document the re-work on the applicable QA Form. Further testing of the component should not continue until the unsat condition is resolved. NA blocks if not applicable.

NOTES:

1. For Test Procedure steps that require testing from both directions, annotate or record Actual Pressure, Duration, Leakage, and Results for each direction.
2. For SOC work, valves that act as a boundary closure between two distinct operating pressure systems or subsystems must have the test pressure of each port identified by a temporary tag when testing is performed in a shop or on a test bench, when the valve configuration is such that it could be installed two ways into the system, and the ports are not otherwise marked or identified. The temporary tags can be removed after the valves have been installed. The purpose of the tag is to alert personnel of the correct orientation of the valve into the system. (P9290 Appendix J, Paragraph J8 refers).

   Enter any remarks in Block 10. Remarks must be accompanied by a signature, badge number and date, if not part of the original technical direction.

BLOCK 10 - REMARKS

Enter any remarks. Identify which test the remarks apply to. Remarks must have a signature, badge number and date except where the entry is pre-printed on the form by Planning, unless the pre-printed entry requires signature for OQE. Initials may be entered in lieu of an employee's signature and badge number, if a corresponding employee's signature and badge number appears elsewhere on the same page.

BLOCK 11 - QA INSPECTOR/SHOP SUPERVISOR SIGNATURE/BADGE NO

Quality Assurance Inspector or Shipyard Representative enter signature, badge number and date verifying the completeness of the data recorded in Blocks 7 through 9 and that the data agrees with the listed requirements (as implemented by local Shipyard instruction).

BLOCK 12 - QAS SIGNATURE/BADGE NO.

For SUBSAFE or SOC components only, QAS or cognizant QA representative as defined by local instructions, will sign, enter badge number and date in this block to indicate the completeness of the entries.

For other components, the Production Shop Supervisor must sign that the records have been reviewed for completeness.

QA FORM 34 INSTRUCTIONS

JOINT/COMPONENT TORQUE AND ASSEMBLY RECORD

NOTE: PLANNING MUST FILL IN BLOCKS IDENTIFIED BY A ♦ PRIOR TO ISSUING.

PURPOSE: To provide a standard form to document the assembly and torquing of Nuclear Level I system piping joints, SUBSAFE, and SOC mechanical joints and assemblies listed in the requirements. All other mechanical joints requiring assembly OQE, not listed, may be documented on a QA form 34A.

NOTE: ALTHOUGH JOINTS FOR CONTROLLED ASSEMBLIES AND NUCLEAR LEVEL I SYSTEM PIPING AND COMPONENT MECHANICAL JOINTS ARE CERTIFIED ON THIS FORM, TORQUE VALUES MAY NOT APPLY TO ALL JOINTS.

REQUIREMENTS:

1. Torque documentation is required for the following joints and must be documented on a QA form 34.
   a. All nuclear Level I system piping and components mechanical joints.
   b. All joints assembled as a Controlled Assembly.
   c. SUBSAFE:
      (1) Sea Connected or Seawater bolted pressure boundary joints NPS 1/2 inch and larger from the inboard joint of the backup valve (or equivalent) outboard (i.e., Hull Integrity (HI) joints).
      (2) All sea connected or Seawater bolted pressure boundary piping and component joints from systems NPS 4 inches and larger inboard of the inboard joint of the backup valve.
      (3) Electrical Hull Fitting Installation joints including EHF to pressure hull and EHF Shore Power joints.

NOTE: BOLTED PRESSURE BOUNDARY JOINTS ARE DEFINED AS JOINTS WHICH UTILIZE BOLTS, NUTS, STUDS, STUD-BOLTS, OR SCREWS TO JOIN TWO PRESSURE BOUNDARY PARTS.

   d. Scope of Certification:
      (1) All SOC bolted pressure boundary piping and SOC component joints.
      (2) In-line SOC union piping joints with torque values specified on drawing or document.

PLANNING THE SCOPE OF A QA 34 FORM: In order to support the execution process, it is necessary to properly limit the scope of Assembly Records. The following rules are provided to ensure proper breakdown:

   a. Each shipboard piping joint must have a unique joint record consisting of separate Block 9 entries.

b. All Level I material must be traceable to a specific joint. To ensure unique joint traceability, if any identical Level I parts are used in multiple joints within an assembly (normally this applies to fasteners), the craftsman will annotate which joint (Block 9A, 9B, etc.) the material was installed in.

c. For complex assemblies (e.g., Shaft Seal installations), assembly records should be scoped to support testing evolutions.

TOP OF FORM: Page ___ of ___

NOTE A TECHNICAL WORK DOCUMENT MAY CONTAIN MULTIPLE QA FORMS OF THE SAME TYPE, (E.G. MORE THAN ONE QA-26). THE PAGE ENTRY IS FOR THIS SPECIFIC FORM, NOT THE TOTAL NUMBER OF PAGES ON ALL FORMS OF THE SAME TYPE.

Enter the page number, starting with page 1, of total number of QA form pages (e.g., 1 of , 2 of). The last number reflects the total number of QA Form pages written. This block is filled in by a QAI or the QAO after all certification testing is complete before block 19 on the QA-9 is signed. (e.g., 1 of 3, 2 of 3, 3 of 3).

PROCEDURE: The numbered blocks on QA form 34 correspond with block instructions listed. Any block not used will be marked N/A. Planning must fill in blocks identified by a ♦ prior to issuing the CWP. For QAI signatures, the planner will determine the need for a QAI prior to the start of the job. If no QAI is required, the planner will enter NA in the QAI signature block.

BLOCK 1 - SHIP/HULL NO.

Planner enter the ship's name and hull number, or enter the appropriate rotatable pool system designator (e.g., TRIPER, CCRP, AERP, SSN 688CL, etc.).

BLOCK 2 - JCN

Planner enter the Job Control Number (JCN).

BLOCK 3 - LWC/SHOP

Planner enter the lead shop assigned to assemble the joint (e.g., X31, X58, X56).

BLOCK 4 - CWP/REC SER. NO.

Planner enter the CWP/REC serial number or enter NA if no CWP/REC is required. Do not list the CWP/REC revision.

BLOCK 5 - SYSTEM/COMPONENT/ROTATABLE POOL SER NO.

Planner enter the noun name of the system and component (if applicable), (e.g., MSW-25). For Rubber Insert Sound Isolation Coupling (RISIC) enter the Selected Record Drawing (SRD) Line Item No. If Record is for in-shop restoration of rotatable pool material, enter the serial number of the material if known.

NOTE: ROTATABLE POOL SERIAL NUMBERS MAY BE ENTERED BY THE CRAFTSMAN IF NOT ENTERED BY THE PLANNER.

BLOCK 6 - REFERENCES

Planner enter all references used to identify component parts, joint, material and assembly information. Include revision letter and, when applicable, the assembly number (e.g., Assy D, Assy RA, etc.). Revisions for technical manuals are not required. If joint numbers are assigned via a sketch in a TWD or Planning sketch, include the TWD or Planning sketch number. Include both the assembly drawing and electrical holes' assignment drawing for Electrical Hull Fittings. NAVSEA Technical Manual S9502-AM-GYD-010 may be abbreviated as "GYD-010" if needed.

BLOCK 7 - NEW MATERIAL

Craftsman

PC NO: Enter the piece numbers of parts. List only the new parts being installed. New body bound studs documented on a QA form 17SI should not be documented on a QA form 34.

REF: Enter the letter corresponding to the reference listed in Block 6 that provides the material specification or assembly information for the piece listed in the "PC NO." block.

JOINT BLOCK ID: Enter the alphanumeric designator corresponding with the particular Block 9 or Block 14 entry (9A, 9B, 14A, 14B, etc.) that identifies the joint where the material is installed.

DESCRIPTION: Describe all new parts associated with the assembly or joint. For fasteners and nuts, include diameter and thread (e.g., bolt, ½"-13; stud, ½"-12; SHCS, ½"-13, etc.). Record shim thickness when shims are installed unless the installation is already documented on another QA form (not required for shims installed as a part of an epoxy repair).

NOTE: IF A PORTION OF A NEW VALVE OR COMPONENT IS USED TO REPLACE PARTS (E.G., BONNET AND DISC ASSEMBLY), ENTER A DESCRIPTION OF THE PART OR ASSEMBLY OF PARTS AND DOCUMENT THE LEVEL I NUMBER OF THE NEW VALVE OR COMPONENT IN THE IDENT SECTION. LIST THE PARTS THAT THE ASSEMBLY CONSISTS OF IN THE REMARKS BLOCK (A SINGLE COMPONENT MAY BE LISTED IN BLOCK 7) WITH A NOTE THAT THE PART(S) WERE TAKEN FROM THE NEW VALVE OR COMPONENT.

QTY: Record quantity of new material installed. Each quantity must be unique to one Block 9 joint.

LOE: Identify the Level of Essentiality (MIC Level). The material control level must be as identified by craftsman. Example: LI, NA. For SOC material, enter the appropriate Material Control Division (A, B, or C).

IDENT: Enter the marking on the part or on the packaging, container or tag (when the part is not marked) as shown in Table 1.

CRAFT INT: Craftsman: Installing craftsman enter initials for material installed. The initials must correspond to the related Block 9 craftsman's signature unless otherwise noted with a corresponding signature elsewhere on the form (e.g., Remarks block entry and signature).

NOTE: IF THE CRAFTSMAN INSTALLING THE MATERIAL IS OTHER THAN THE CRAFTSMAN SIGNING FOR JOINT DATA IN BLOCK 9 OR BLOCK

14, A CORRESPONDING SIGNATURE, PRINTED NAME AND DATE MUST BE ENTERED IN THE REMARKS BLOCK.

TABLE 1- DOCUMENTATION REQUIREMENTS

Material Control Level	Required Information
Level I Material Other Than Fasteners	MIC Number and any other traceability number, including any local traceability number (e.g., PNSY MLN – examples Z142, AB12).
Level I Fasteners	NOTE: THE INFORMATION ENTERED FOR FASTENERS MAY NEED TO INCLUDE INFORMATION FROM BLOCKS 3 AND 8 FROM QA FORM 1. DO NOT ENTER THE PNSY TRACE NUMBER FROM BLOCK 3 OF THE QA FORM 1. Document the markings from the fastener to include either: (1) The color code and the heat or lot number, material type, and manufacturer's symbol (for nuts containing a self-locking insert, the color of the insert is the manufacturer's symbol). (2) The MIC number (when MIC number is on the fastener or on the individual tag for some fasteners).
Controlled Structural Material And SOC Control Division "A" Material	Traceability Number
SOC Control Division "B" Material	Markings providing identification to material type or specification
AERP And Other Rotatable Pool Material (688 Class, TRIPER, Etc.)	Enter the appropriate rotatable pool serial number (e.g. RP-148A, 4810-013-5812-A3-0113, TIN -292-11893, etc.)
Transferred And Cannibalized Material	Enter the Equipment Removal List No. or other material History or Traceability number (ERL# XXXX, SSBN-600 EHF #24, etc.)
Other Material Within The LEVEL I/SUBSAFE Boundary And SOC Control Division "C" Material	1. Enter at least one of the following documentation attributes: a. Stock Number (from package or container) b. Part Number (from package or piece) c. Part Number and associated Manufacturing Work Procedure (for manufactured items) d. Local Traceability Number (from piece or tag) e. Drawing and Piece Number (from piece or tag) f. Generic, MIL-SPEC, or Material Specification Marking (from piece) g. NDT record numbers or test results for items verified by generic material testing. 2. For SOC components only: Enter the stock number of the "O-ring lubricant or any sealant used during assembly.

BLOCK 8 - BLUE/CHALK CHECK AND/OR VALVE BALL COMPRESSION DATA

NOTE: A QA-34 FORM IS NOT REQUIRED TO BE GENERATED SOLELY FOR CAPTURING BLOCK 8 DATA IF THE REMAINDER OF THE COMPONENT IS TO BE ASSEMBLED USING A QA-34A FORM. USE A QA-17 OR OTHER APPROPRIATE METHOD.

(PLANNING) A documented blue or chalk check or valve ball compression check is required for all controlled assemblies and is allowed by the DDGOS in lieu of a seat tightness test for welded in-line valves and components where a seat tightness test is not practical. Enter an X in the applicable NA box when Blue or Chalk Check or Valve Ball Compression is not applicable. When a Valve Ball Compression check is required, enter the required stack height and ball cavity dimensions. These dimensions should include maximum and minimum requirements.

(CRAFTSMAN) Record actual ball or seat stack heights and cavity dimensions when Planning has provided the required dimensions. If more than one blue check is required, enter additional checks in Remarks. For hull and back up valves where more than one ball or seat stack height dimension is required, enter in the following manner:

(3.213 or 3.567) where the first dimension is for one ball or seat combination and the second dimension is for the other one. Identify each dimension to its associated valve. Sign, date and

print name after satisfactory accomplishment of a Blue or Chalk Check or Valve Ball Compression check.

BLOCK 9 - JOINT DATA FOR JOINTS REQUIRING TORQUE DOCUMENTATION

NOTE: WHEN MULTIPLE JOINTS ARE DOCUMENTED ON ONE QA 34 FORM, ENTER A SUCCESSIVE LETTER FOR EACH BLOCK 9_ USED (E.G., 9B, 9C, ETC.).

NOTE: THIS BLOCK MAY BE USED FOR SPECIFIC ATTRIBUTES THAT ARE NOT COVERED BY THE STANDARD ATTRIBUTES ON THE FORM.

JOINT ID/JOINT TYPE:	Planner enter the joint identification number including joint type (e.g., ASW-5744 F). For joint types, use "F" for flanged bolted joints, "U" for union joints, and "S" for screw joints. When a joint identification number is not available, a joint description (e.g., Tailpiece-to-Body (F)) must be used. Locally assigned joint numbers may be used when a joint description is not practicable and clarity is required. When additional attribute(s) applies to a component (e.g., hatches, etc.) that are not covered by the attributes already on the form, list the attribute and location (applicable reference) for the acceptance criteria (e.g., TWD, technical manual, etc.). For hatches, at a minimum list the "Seat Clearance Measurement".
JOINT REF:	Planner enter the letter corresponding to the reference listed in Block 6 that identifies where the joint number or description information is found (e.g., Mapping Diagram, Drawing, Tech Manual, Work Procedure, etc.).
REQ THREAD LUBE:	Planner enter the type(s) of thread lubricant(s) that are authorized (e.g., MOLYKOTE P37, Fel-Pro C5A, etc. or options (e.g., MOLYKOTE P37 or Fel-Pro C5A)). Enter "None" if no lubricant is required.
APPLIED THREAD LUBE:	Craftsman enter the thread lubricant actually used during assembly. Enter "None" if no lubricant was used.
HI FSTNR:	Planner indicate (Yes or No) whether the joint contains Hull Integrity Male Fasteners. When "NO" is checked, enter "NA" in the "EXISTING HI MALE FASTENER MARKING" block.
EXISTING HI MALE "FASTENER MARKING:	(Craftsman) When the "HI FSTNER" block is marked Yes", record the quantity of reused or existing male fasteners and the symbols of recognizable significance, as required by Part I, Chapter 5, paragraph 5.4.3.b(2) of this volume (e.g., 6 ea. .K., 2 ea. unmarked).

NOTE: (CRAFTSMAN) IF HULL INTEGRITY MALE FASTENERS (DRIVEN STUDS) ARE UNMARKED, ILLEGIBLE, OR THE SYMBOLS ARE NOT

RECOGNIZABLE PER CRITICAL INSPECTION REQUIREMENTS OF PART I, CHAPTER 5, PARAGRAPH 5.4.3.b(2) OF THIS VOLUME, AND THEY WERE NOT REMOVED FROM THE HULL INSERT OR COMPONENT BODY:

a. DOCUMENT THE QUANTITY
b. ENTER THE WORDS "STUDS NOT REMOVED" IN THE REMARKS BLOCK
c. REQUEST QAI PERFORM A GENERIC MATERIAL IDENTIFICATION TEST (E.G., ACID SPOT TEST).

NOTE: (QUALITY ASSURANCE INSPECTOR) PERFORM A GENERIC MATERIAL IDENTIFICATION TEST ON HULL INTEGRITY MALE FASTENERS (DRIVEN STUDS) THAT ARE UNMARKED, ILLEGIBLY MARKED, OR MARKED WITH SYMBOLS THAT ARE NOT RECOGNIZABLE PER CRITICAL INSPECTION REQUIREMENTS OF PART I, CHAPTER 5, PARAGRAPH 5.4.3.b(2) OF THIS VOLUME AND FOR WHICH THE CRAFTSMAN HAS ANNOTATED "STUDS NOT REMOVED". MARK STUDS THAT ARE IDENTIFIED AS HAVING THE CORRECT MATERIAL (I.E., K. OR KM). IF THE STUDS CANNOT BE MARKED DUE TO SIZE OR CONFIGURATION, ETC., ENTER THE RESULTS OF THE GENERIC MATERIAL IDENTIFICATION TEST IN THE REMARKS BLOCK.

Planner enter "NA" if not an HI joint or if no existing pressure boundary male fasteners are to be reused.

STUD ROTATION: Planner enter an X in the NA box of the Stud Rotation block when not applicable (e.g., when joint does not contain studs).

Craftsman record SAT after verifying all set studs to be tight during nut installation and torquing per Part I, Chapter 5, paragraph 5.4.7 of this volume.

a. Anaerobic Stud Bonding Inspection - Newly Installed Studs. The following test procedures must be performed to ensure proper bonding after curing has been completed:

(1) Mark the end of the studs using a felt tip marker, paint pen or other appropriate marking pen by making a line in the direction of the center of the bolt circle.

(2) All newly installed studs must be tested using one of the following methods. Either method may be used unless otherwise specified. Both methods utilize the same lubricant as required for final assembly of the joint. Studs must not be restrained from turning during the test by any method other than the locking compound in the set end of the stud.

(3) Torque Method. Apply the minimum breakaway torque on each newly installed stud per TABLE 2. Double nuts or a stud extractor (Colette) must be used to apply the required torque. Acceptance criteria is per paragraph b.

(4) Self Locking Nut Method. Apply torque to each newly installed stud by installing and removing an unused self-locking nut per NASM 25027 or

commercial spec IFI-100/107 with plastic elements. Install the nut to a point of stud thread protrusion that is at least 3 threads beyond the self-locking insert. Acceptance criteria is per paragraph b.

b. The assembly is considered acceptable if there is no turning of the stud during the Breakaway Torque or Self-Locking Nut check. The assembly may also be considered acceptable if a slight initial turning motion (up to 1/4 turn) of the stud is observed, and no further turning motion is observed during torquing or nut installation or removal. (A small turning of the set stud represents a breaking or powdering of the locking compound which actually increases resistance to further turning motion.) Report any failures to Engineering.

c. In some cases, work-authorizing TWDs may specify that studs set with an anaerobic locking compound in submarine hull integrity applications be subjected to an ultraviolet light inspection. Engineering requests for this test will be based on accessibility and ability to view the stud hole. When ultraviolet light inspection is specified, properly installed anaerobic compounds should appear as a red dye and should fully encircle the stud. This is considered to be an extra line of defense above and beyond performance proof testing of paragraphs a.(1) through b. Under no circumstances should ultraviolet light inspection be used as a substitute for performance proof testing.

d. In-Service Anaerobic Stud Rotation. Rotation of in-service Class 3 studs with anaerobic locking compound on subsequent tightening to the required torque is permissible, as long as the following check is performed:

(1) If the stud does rotate up to 1/4 turn during in-service nut tightening, then back off the nut 1/4 turn before continuing to torque it.

(2) If the stud does not rotate while backing off the nut or when torquing the nut afterwards, the stud is acceptable as long as the stud does not violate the standoff requirement for that application. In this case, the stud rotation represents further breaking or powdering of the locking compound which increases resistance to any further turning motion.

(3) If the stud rotates while backing off the nut, rotates when torquing the nut afterwards or violates the standoff requirement for that application, the stud must be removed and replaced. In this case, the stud rotation represents locking compound failure.

NOTE: IF ANY STUD ROTATION CAUSES THE STUD STANDOFF TO VIOLATE THE STANDOFF REQUIREMENTS FOR THAT APPLICATION, THEN THE STUD MUST BE REMOVED. THE STUD MAY BE CLEANED AND REINSTALLED IF IN ACCEPTABLE CONDITION OR REPLACED BY A NEW STUD.

TABLE 2 - Resistance Test Breakaway Torque Values for Anaerobic Locking Compounds

STUD SIZE	MIN TORQUE (FT-LBS.)	STUD SIZE	MIN TORQUE (FT-LBS.)	STUD SIZE	MIN TORQUE (FT-LBS.)

1/4	2.5	5/8	25	1-3/8	100
5/16	5	3/4	33	1-1/2	115
3/8	6.7	7/8	50	1 ¾-5	150
7/16	8.3	1	67	1 ¾-8	160
1/2	12.5	1-1/8	75	2	180
9/16	17	1-1/4	83	2-1/4	215

FASTENER SIZE/TYPE: Planner enter the type, size and thread of the male fastener (e.g., 1-1/4”-7 Stud, 9/16”-18 SHCS, 3/4”-10 bolt, etc.). Planner enter “N/A” if the joint being assembled does not contain male threaded fasteners (bolts, studs, or stud-bolts, bolt-studs).

REQUIRED TORQUE TOLERANCE: Planner enter the torque and tolerance required for the component or fastener. Mark the appropriate block (in-lbs or ft-lbs). When special tightening or assembly instructions apply in lieu of torque, enter tightening or assembly instructions and reference document or drawing; use Remarks if additional space is required.

TORQUE REF: Planner enter the letter of the reference listed in Block 6 that identifies where the torque value was obtained, including paragraph or table when applicable.

AVERAGE RUNNING TORQUE: Craftsman enter the average running torque as measured. Mark the appropriate block (in-lbs or ft-lbs).

(Planning) Enter “N/A” in the block for joint assemblies where construction drawings specify that running torque has been incorporated into the required torque.

NOTE: RUNNING TORQUE DOES NOT NEED TO BE TAKEN INTO ACCOUNT FOR FASTENERS GREATER THAN 5/8 INCH DIAMETER UNLESS SPECIFIED IN THE TWD. THE INTENT IS TO ENSURE PROPER TORQUE IS APPLIED, TAKING RUNNING TORQUE INTO CONSIDERATION WHEN IT IS A SIGNIFICANT FACTOR WITH REGARD TO THE FINAL TORQUE. IF RUNNING TORQUE DOCUMENTATION IS NOT REQUIRED BY THE TWD FOR FASTENERS GREATER THAN 5/8”, PLANNING SHOULD ANNOTATE THE BLOCK “NR” FOR NOT REQUIRED.

NOTE: CLICKER STYLE TORQUE WRENCHES AND HYTORC DEVICES ARE NOT TO BE USED TO MEASURE RUNNING TORQUE.

NOTE: THE AVERAGE RUNNING TORQUE MAY BE OBTAINED BY USING THE SAME DIAL TYPE TORQUE WRENCH THAT WILL BE USED FOR MEASURING THE FINAL TORQUE. A LOW RANGE DEVICE IS NOT REQUIRED AND RUNNING TORQUE DOES NOT HAVE TO FALL WITHIN

THE 20% TO 90% SCALE REQUIREMENT. IF RUNNING TORQUE IS NOT MEASURABLE USING THIS DEVICE, ENTER "0" (ZERO) FOR THE AVERAGE RUNNING TORQUE.

NOTE: DOCUMENTATION OF THE TORQUE WRENCH USED FOR DETERMINING THE AVERAGE RUNNING TORQUE IS NOT REQUIRED. IF A DIFFERENT WRENCH IS USED TO TAKE THE RUNNING TORQUE BECAUSE THE FINAL TORQUE IS MEASURED WITH A CLICKER STYLE OR HYTORC DEVICE, THEN THE TORQUE WRENCH DATA MUST BE RECORDED.

FINAL TORQUE: Craftsman record the final torque observed on the torque device. The final torque observed must be the average running torque, as required, plus the required torque. When construction drawings specify that running torque has been incorporated into the required torque, final torque is the torque value specified in the construction drawing and running torque is NOT added to the required torque during joint assembly. Mark the appropriate block (in.-lbs or ft-lbs). Request QAI to verify final torque by direct observation for all Controlled Assemblies and SUBSAFE hull integrity pressure boundary joints (as required in Table 3). In the event that a multiplier or HYTORC machine is used, place an asterisk or other symbol in this block and refer to the remarks block. In the remarks block add a statement such as "Torque multiplier was used, actual torque reading was XXX PSI. This converts to a torque value of XXX Ft-lbs." When a combination of torquing methods (e.g., torque wrench, turn-of-the-nut method, etc.) is used for a single joint, record the final torque applied, and document the alternate torquing process. Record the quantity of fasteners that were tightened using the alternate method. When special tightening or assembly instructions apply in lieu of torque, as identified in the required torque block, document the actual special tightening or assembly applied to the joint (tightened, wrench tight, cap installed, etc.).

TORQUE DEVICE/ INSTRUMENT USED: Craftsman enter the range, serial number and calibration due date of the torque device used during assembly for the final increment. For HYTORC machine, enter "HYTORC", the HYTORC's head data (i.e., serial number), serial number of the pressure gauge used to read actual pressure applied for final torque and the calibration due date of that pressure gauge. If other calibrated instruments (e.g., torque multiplier, torque meter) are used, also enter data for these instruments.

CRAFTSMAN SIGNATURE/BADGE: Craftsman sign and date after satisfactory assembly of the joint.

QAI SIGNATURE/BADGE: When required, QAI must sign and date after the satisfactory completion of assembly per the requirements. Planner enter NA when QAI is not required.

Table 3 - QAI Inspection Requirements

Location	Software Installation	Material Installations	Torque	Sealing Surface & Fasteners
Nuclear Level I piping system mechanical joints	Note 1	Yes - Existing and New LI	Yes (when a torque is specified)	No
Controlled Assemblies	Yes	Yes - New LI Only	Yes	Yes
SUBSAFE Hull Integrity Joints	Yes	Yes - New LI Only	Yes	Yes
SUBSAFE Bolted Pressure Boundary Joints	No	Yes - New LI Only	No	No
EHF Installations	Yes	Yes - New LI Only	Yes	Yes
SOC Bolted Pressure Boundary Joints	Yes	Yes - New LI Yes - MCD-A Yes - MCD-B Yes - MCD-C	Yes	Yes
SOC Unions	Yes	Yes - New LI Yes - MCD-A Yes - MCD-B Yes - MCD-C	Yes (When source is specified)	Yes

NOTE: YES - IF A FLEXATALLIC GASKET IS USED AND THE MATING SURFACES ARE NOT IN CONTACT. THE QAI IS NOT REQUIRED TO WITNESS INSTALLATION OF THE GASKET BUT MUST INSPECT THE MATING SURFACE GAP AND PARALLELISM AFTER SOFTWARE INSTALLATION AND FINAL TORQUE.

FOR JOINTS: CRAFTSMAN or QAI signature(s) certifies that the joint meets the requirements for the following:

a. The applied lubricant is acceptable per the technical direction.

b. All existing Hull Integrity Male Fasteners have been examined for markings of significance or have been verified by a generic material identification test to ensure they are of proper material. All markings have been recorded and if required, the results of any material identification testing are recorded in the Remarks block.

c. All set studs have been verified to be tight during assembly per Part I, Chapter 5, paragraph 5.4.7 of this volume.

d. The final required pre-load torque has been applied per specified requirements.

e. Sealing surfaces meet the acceptance criteria of the applicable Maintenance Standard.

f. Alignment, gap and parallelism meet the specified requirements for the joint.

g. Male fasteners type and size agree with entries in the “FASTENER SIZE/TYPE” block and the specified criteria.

h. Existing fasteners are reinstalled in the same joint and are not obviously incorrect based on markings, color, corrosion or other visual indication.

i. Thread protrusion is satisfactory. Thread protrusion is the number of threads protruding above the nut. Minimum thread protrusion is one thread on non-self-locking fasteners or flush for self-locking fasteners. Maximum thread protrusion is ten threads unless authorized by drawing or technical manual.

j. All new material associated with the joint meets specified requirements and is listed in Block 7. Existing material associated with the joint is acceptable and is correctly installed.

k. The Craftsman will perform a visual check of new Level I material at the time of installation to verify the material meets the requirements of the TWD used to install the new material.

FOR OTHER THAN JOINTS: CRAFTSMAN or QAI signature(s) indicates compliance with the attribute(s) listed and the corresponding listed acceptance criteria. All new material associated with the joint meets specified requirements and is listed in Block 7. Existing material associated with the joint is acceptable and is correctly installed.

If UNSAT, the craftsman or QAI will initiate action to resolve the UNSAT condition (e.g., submit a DF) and indicate the action taken in the Remarks block. Do not sign unless a satisfactory repair is completed or the UNSAT condition is accepted.

BLOCK 10 - LOCKWIRE/LOCKING CABLE/DEVICE INSTALLED OR REQD ACTION

(Only required for SUBSAFE, DSS or SOC joints)

NOTE: THIS BLOCK APPLIES TO LOCKING DEVICES THAT ARE INSTALLED AFTER JOINT MAKE-UP OR FOR CASES WHEN AN ACTION MUST BE TAKEN AFTER JOINT MAKE-UP TO ENGAGE THE LOCKING DEVICE (E.G., FLIPPING OF A LOCKTAB, STAKING A FASTENER, ETC.) TO ALLOW JOINT MAKE-UP AND TESTING PRIOR TO INSTALLING OR ENGAGING THE LOCKING DEVICE. THIS DOES NOT INCLUDE SELF LOCKING NUTS, SELF LOCKING BOLTS, CAP SCREWS, LOCKWASHERS, ETC. THAT ARE PART OF THE JOINT MAKE-UP AND ARE LISTED IN BLOCK 7.

Planner enter an X in the NA box when not applicable. When an action is required to engage the locking device, enter a description of the required action.

Craftsman sign, date and check SAT when lockwire, locking cable or required locking device (e.g., locking ring for EHFs, barrel nut locking device, etc.) has been properly installed, or the required action has been accomplished. Enter description (e.g., lockwire, locking cable, lock tab) and ident (e.g., stock number, to include SMIC if given, MIL-SPEC, or piece number) of the lockwire, locking cable or locking device. Enter description and "Existing" for existing locking devices. If more than one locking device type (e.g., lockwire and lock tab washers) exists on the assembly, record additional information in the "Remarks block". When the installation of more than one of the same type of locking device is being documented in Block 10 (e.g., 2 setscrews), record the quantity in addition to the description

(Block 11 may be used if additional space is needed). Recording the quantity is not required for lockwire or locking cable, nor when the locking device quantity is documented in Block 7. QAI sign, print and date in Block 11 for new MCD-C material installed by craftsman in Block 10 to ensure material conforms to specified requirements.

BLOCK 11 - REMARKS

(Craftsman, QAI, QAS or Planning) Enter any pertinent remarks or additional information related to the repair or assembly of the component. Each entry must contain signature, badge number and date except where the entry is pre-printed on the form by Planning (adding an "N/A" does not require signature, badge number and date). For controlled assemblies on systems requiring MIL-STD-1622 for critical applications or MIL-STD-1330, document "Cleanliness maintained per (MIL-STD-1622 Critical Applications or MIL-STD-1330 (as applicable))" and include the Craftsman's signature and date.

BLOCK 12 - LWC SUPERVISOR/SHOP SUPERVISOR SIGNATURE/BADGE NO.

LWC Supervisor will enter signature, date and badge number for final review, signifying the accuracy of the completed form. If any entry is UNSAT, initiate action to resolve the unsat condition and indicate the action taken in the "Remarks" block. Do not sign unless a satisfactory repair is completed or the UNSAT condition is accepted.

BLOCK 13 - QAS/QAO SIGNATURE/BADGE NO.

QAS or QAO sign, date and enter badge number for final review, signifying entries are complete and that the data agrees with the listed requirements.

BLOCK 14 - JOINT DATA FOR JOINTS NOT REQUIRING TORQUE DOCUMENTATION

NOTE: THIS BLOCK MAY BE USED FOR SPECIFIC ATTRIBUTES THAT ARE NOT COVERED BY THE STANDARD ATTRIBUTES ON THE FORM.

NOTE: (SUBMARINES ONLY) THIS BLOCK MUST NOT BE USED FOR CONTROLLED ASSEMBLIES OR SOC PRESSURE BOUNDARY JOINTS.

JOINT ID/JOINT TYPE OR ATTRIBUTE DESCRIPTION: Planner enter the joint identification number including joint type (e.g., ASW-5744 F). For joint types, use "F" for flanged bolted joints, "U" for union joints, and "S" for screw joints. When a joint identification number is not available, a joint description (e.g., Bonnet-to-Body (S)) must be used. Locally assigned joint numbers may be used when a joint description is not practicable and clarity is required. When additional attribute(s) applies to a component (e.g., hatches, etc.) that are not covered by the attributes already on the form, list the attribute and location (applicable reference) for the acceptance criteria (e.g., TWD, technical manual, etc.). For hatches, at a minimum list the "Seat Clearance Measurement".

JT. REF: Planner enter the corresponding reference listed in Block 6 that identifies where the joint number or description information is found (e.g., Mapping Diagram, Drawing, Tech Manual, Work Procedure, etc.).

(C) FOR CRAFTSMAN OR (I) FOR INSPECTOR: Planner enter "C" on one line for each joint or attribute. Enter "I" on the remaining line for each joint or attribute that requires an inspector signature; leave blank if inspector signature is not required.

CRAFTSMAN SIGNATURE/BADGE/DATE: Craftsman sign and enter badge number and date on the line associated with the "C" after satisfactory assembly of the joint. If UNSAT, the craftsman will initiate action to resolve the UNSAT condition and indicate the action taken in the Remarks block. Do not sign unless a satisfactory repair is completed or the UNSAT condition is accepted.

FOR JOINTS: This signature provides certification that the joint meets the requirements for the following:

a. All driven studs have been verified to be tight during assembly. Stud rotation during torquing (and break away) is limited to 1/4 turn, but no more turning during installation or removal of the nut for newly installed Class 3 studs installed with locking compound.

b. The joint has been tightened using an approved method. Recording of torque value is not required.

c. Sealing surfaces meet the acceptance criteria of the applicable Maintenance Standard.

d. Alignment, gap and parallelism meet the specified requirements for the joint.

e. All new material associated with the joint meets specified requirements and is listed in Block 7. Existing material associated with the joint is acceptable and is correctly installed.

f. The Craftsman will perform a visual check of new Level I material at the time of installation to verify the material meets the requirements of the TWD used to install the new material.

g. The applied lubricant is acceptable per the technical direction.

h. Existing fasteners are reinstalled in the same joint and are not obviously incorrect based on markings, color, corrosion or other visual indication.

i. Thread protrusion is satisfactory. Thread protrusion is the number of threads protruding above the nut. Minimum thread protrusion is one thread on non-self-locking fasteners or flush for self-locking fasteners. Maximum thread protrusion is ten threads unless authorized by drawing or technical manual.

FOR OTHER THAN JOINTS: This signature indicates compliance with the attribute(s) listed and the corresponding listed acceptance criteria. All new material associated with the joint meets specified requirements and is listed in Block 7. Existing material associated with the joint is acceptable and is correctly installed.

INSPECTOR SIGNATURE/BADGE/DATE: (Inspector) When required, Inspector sign and enter badge number and date on the line associated with the "(I)" for verification that all new material associated with the joint meets specified requirements and is listed in Block 7. Existing material associated with the joint is acceptable and is correctly installed.

JOINT/COMPONENT ASSEMBLY RECORD Planning must fill in blocks identified by a ♦ prior to issuing.

QA FORM 34A INSTRUCTIONS

JOINT/COMPONENT ASSEMBLY RECORD

FOR ASSEMBLIES NOT REQUIRING TORQUE DOCUMENTATION

PURPOSE: To provide a standard form to document the assembly of joints that do not require torque documentation. Planning must fill in blocks identified by a ♦ prior to issuing. The QA form 34A is not to be used in Nuclear or SOC applications.

REQUIREMENTS:

1. A QA form 34A is required for:
   a. All non-nuclear Level I pressure boundary joints (e.g., "F", "S", and "U" type joints.
   b. The following submarine applications:
      (1) (Pre-688 Class) Submarine SUBSAFE Bolted Pressure Boundary Joints including in-line pipe joints as well as component (bonnet to body) joints less than 4-inch NPS inboard of the inboard joint of the backup valve.
      (2) Other SUBSAFE joints:
         (a) Non-Seawater or Non-Sea Connected piping and component joints to include non-pressure boundary joints (e.g., EMBT Blow, Artic Blow, Emergency Flood Control, Stern Diving).
         (b) Non-bolted pressure boundary piping and component joints within the hull integrity boundary (e.g., Union ("U") Bonnet Joints on Hull and Backup Valves, Hull and backup valve stem retainers ("S"), Boiler type Manhole Covers ("BTMC") on Impulse Tanks).
         (c) Non-bolted pressure boundary piping and components (e.g., "U" and "S" joints) not within the hull integrity boundary.
         (d) Linkage or mechanical interlock joints.
         (e) SUBSAFE or Non-SUBSAFE interface piping joints (e.g., "F" and "U" joints).

PLANNING THE SCOPE OF A QA 34A FORM: In order to support the execution process, it is necessary to properly limit the scope of Assembly Records.

a. Each joint must have a unique joint record consisting of separate Block 8 entries.
b. All Level I material must be traceable to a specific joint. To ensure unique joint traceability, if any identical Level I parts are used in multiple joints within an assembly (normally this applies to fasteners), the craftsman will annotate which joint (Block 8A, 8B, etc.) the material was installed in.
c. For complex assemblies (e.g., Shaft Seal installations), assembly records should be scoped to support testing evolutions.

TOP OF FORM: Page ___ of ___

NOTE A TECHNICAL WORK DOCUMENT MAY CONTAIN MULTIPLE QA FORMS OF THE SAME TYPE, (E.G. MORE THAN ONE QA-26). THE PAGE ENTRY IS FOR THIS SPECIFIC FORM, NOT THE TOTAL NUMBER OF PAGES ON ALL FORMS OF THE SAME TYPE.

Enter the page number, starting with page 1, of total number of QA form pages (e.g., 1 of , 2 of). The last number reflects the total number of QA Form pages written. This block is filled in by a QAI or the QAO after all certification testing is complete before block 19 on the QA-9 is signed. (e.g., 1 of 3, 2 of 3, 3 of 3).

PROCEDURE: The numbered blocks on QA form 34A correspond with block instructions listed. Any block not used will be marked N/A. Planning must fill in blocks identified by a ♦ prior to issuing the CWP. For QAI signatures, the planner will determine the need for a QAI prior to the start of the job. If no QAI is required, the planner will enter NA in the QAI signature block.

BLOCK 1 - SHIP HULL NO.

Planner - Enter the ship's name and hull number, or enter the appropriate rotatable pool system designator (e.g., TRIPER, CCRP, AERP, SSN 688CL, etc.).

BLOCK 2 - JCN

Planner - Enter the Job Control Number (JCN). Naval shipyards enter Job Order and Key Op.

BLOCK 3 - LWC/SHOP

Planner - Enter the LWC lead shop assigned to assemble the joint (e.g., X31, X38, X56).

BLOCK 4 - CWP/REC SER. NO.

Planner - Enter the CWP/REC serial number or enter N/A if no CWP/REC is required. Do not list the CWP/REC revision.

BLOCK 5 - SYSTEM/COMPONENT/ROTATABLE POOL NO.

Planner - Enter the noun name of the system and component (if applicable), (e.g., MSW-25). For Rubber Insert Sound Isolation Coupling enter the Selected Record Drawing Line Item No.

NOTE: ROTATABLE POOL SERIAL NUMBERS MAY BE ENTERED BY THE PLANNER, IF KNOWN, OR THE SHOP AS SPECIFIED BY LOCAL INSTRUCTIONS.

BLOCK 6 - REFERENCES

Planner - Enter all references used to identify component parts, joint, material and assembly information. Both the assembly drawing and electrical holes' assignment drawing must be listed for Electrical Hull Fittings (EHF). Include revision letter and, if applicable, the assembly number (e.g., Assy D, Assy RA etc.).

BLOCK 7 - NEW MATERIAL

PC NO: Craftsman - Enter the piece number of parts. List only the new parts being installed.

REF: Craftsman - Record the reference letter of the drawing or document listed in Block 6 which provides the material specification or assembly information for the piece listed in the "PC NO." block.

JOINT ID: Craftsman - Enter the alphanumeric designator corresponding with the particular Block 8 entry (8A, 8B, 8C, etc.) that identifies the joint where the material is installed.

DESCRIPTION: Craftsman - Describe all new parts associated with the assembly or joint. For fasteners and nuts, include diameter and thread (e.g., bolt, ½"-13; stud, ½"-12; SHCS, ½"-13; etc.). Record shim thickness when shims are installed unless the installation is already documented on another QA form.

NOTE: IF A PORTION OF A NEW VALVE OR COMPONENT IS USED TO REPLACE PARTS (E.G., BONNET AND DISC ASSEMBLY), ENTER A DESCRIPTION OF THE PART OR ASSEMBLY OF PARTS AND DOCUMENT THE LEVEL I NUMBER OF THE NEW VALVE OR COMPONENT IN THE IDENT SECTION. LIST THE PARTS THAT THE ASSEMBLY CONSISTS OF IN THE REMARKS BLOCK (A SINGLE COMPONENT MAY BE LISTED IN BLOCK 7) WITH A NOTE THAT THE PART(S) WERE TAKEN FROM THE NEW VALVE OR COMPONENT.

QTY: Craftsman - Record quantity of new material installed.

LOE: Craftsman - Identify the Level of Essentiality (MIC Level) as "I" or "NA". The material control level must be as identified by Planning in the TWD.

IDENT: Craftsman - Enter the marking on the part or on the packaging, container or tag (when the part is not marked) as shown in Table 1.

CRAFT INT: Craftsman - Installing craftsman enter initials for material installed. The initials must correspond to the related Block 8 craftsman's signature unless otherwise noted with a corresponding signature elsewhere on the form (e.g., Remarks block entry and signature).

NOTE: IF THE CRAFTSMAN INSTALLING THE MATERIAL IS OTHER THAN THE CRAFTSMAN SIGNING FOR JOINT DATA IN BLOCK 8, A CORRESPONDING SIGNATURE, BADGE NUMBER AND DATE MUST BE ENTERED IN THE REMARKS BLOCK.

TABLE 1- DOCUMENTATION REQUIREMENTS

Material Control Level	Required Information
Level I Material Other Than Fasteners	MIC Number and any other traceability number, including any local traceability number (e.g., PNSY MLN – examples Z142, AB12).
Level I Fasteners	NOTE: THE INFORMATION ENTERED FOR FASTENERS MAY NEED TO INCLUDE INFORMATION FROM BLOCKS 3 AND 8 FROM QA FORM 1. DO NOT ENTER THE PNSY TRACE NUMBER FROM BLOCK 3 OF THE QA FORM 1. Document the markings from the fastener to include either: (1) The color code and the heat or lot number, material type, and manufacturer's symbol (for nuts containing a self-locking insert, the color of the insert is the manufacturer's symbol). (2) The MIC number (when MIC number is on the fastener or on the individual tag for some fasteners).
Controlled Structural Material	Traceability Number
AERP And Other Rotatable Pool Material (688 Class, TRIPER, Etc.)	Enter the appropriate rotatable pool serial number (e.g. RP-148A, 4810-013-5812-A3-0113, TIN -292-11893, etc.)

Transferred And Cannibalized Material	Enter the Equipment Removal List No. or other material History or Traceability number (ERL# XXXX, SSBN-600 EHF #24, etc.)
Other Material Within The LEVEL I/SUBSAFE Boundary	1. Enter at least one of the following documentation attributes: a. Stock Number (from package or container) b. Part Number (from package or piece) c. Part Number and associated Manufacturing Work Procedure (for manufactured items) d. Local Traceability Number (from piece or tag) e. Drawing and Piece Number (from piece or tag) f. Generic, MIL-SPEC, or Material Specification Marking (from piece) g. NDT record numbers or test results for items verified by generic material testing.

BLOCK 8 - JOINT DATA

NOTES:

(1) THIS BLOCK MAY BE USED FOR SPECIFIC ATTRIBUTES THAT ARE NOT COVERED BY THE STANDARD ATTRIBUTES ON THE FORM.

(2) FOR OVERHAUL OF HYDRAULIC ACTUATORS AND HYDRAULIC CONTROL VALVE ASSEMBLIES, ONLY ONE ENTRY IS REQUIRED FOR THE ENTIRE ASSEMBLY IN LIEU OF LISTING INDIVIDUAL JOINTS AS LONG AS A CLEAR DEFINITION OF WORK BOUNDARIES HAS BEEN IDENTIFIED IN THE WORK PROCEDURE. FOR THESE CASES, LIST "ACTUATOR ASSEMBLY" OR "CONTROL VALVE ASSEMBLY" IN THIS BLOCK.

(3) FOR FLEET ONLY: FOR NON-CONTROLLED ASSEMBLIES WHEN NO SPECIFIC ATTRIBUTE IS SPECIFIED, INSPECTOR SIGNATURE CERTIFIES ACCEPTANCE OF LEVEL I MATERIAL ONLY. NUCLEAR LEVEL 1, INSPECTOR SIGNATURE CERTIFIES WITNESSING GASKET COMPRESSION AND FLANGE PARALLELISM (GAP MEASUREMENT IS ONLY REQUIRED IF MATING SURFACES DO NOT CONTACT).

JOINT ID & JOINT TYPE OR ATTRIBUTE DESCRIPTION: Planner - Enter the joint identification number including joint type (e.g., ASW-5744 F). For joint types, use "F" for flanged bolted joints, "U" for union joints, and "S" for screw joints. When a joint identification number is not available, a joint description (e.g., Bonnet-to-Body (S)) must be used. Locally assigned joint numbers may be used when a joint description is not practicable and clarity is required. When an additional attribute(s) applies to a component (e.g., hatches, etc.) that are not covered by the attributes already on the form, list the attribute and location (applicable reference) for the acceptance criteria, (e.g., TWD, technical manual, etc.). For hatches, at a minimum list the "Seat Clearance Measurement".

JT. REF: Planner - Enter the corresponding reference listed in Block 6 that identifies where the joint number or description information is found (e.g., Mapping Diagram, Drawing, Tech Manual, Work Procedure, etc.).

(C) FOR CRAFTSMAN OR (I) FOR INSPECTOR: Planner - Enter "C" on one line for each joint. Enter "I" on the remaining line for each joint requiring an inspector signature.

CRAFTSMAN SIGNATURE/BADGE/DATE: Craftsman sign and enter badge number and date on the line associated with the "C" after satisfactory assembly of the joint.

For joints, this signature provides certification that the joint meets the requirements for the following:

a. All set studs to be tight during nut installation and torquing per Part I, Chapter 5, paragraph 5.4.7 of this volume.

b. The joint has been tightened using an approved method. Recording of torque value is not required.

c. Sealing surfaces meet the acceptance criteria of the applicable Maintenance Standard or drawing.

d. Alignment, Gap and Parallelism meet the specified requirements for the joint.

e. All new material associated with the joint meets specified requirements and is listed in Block 7. Existing material associated with the joint is acceptable and is correctly installed.

For other than joints, the signature indicates compliance with the attribute(s) listed and the corresponding listed acceptance criteria. All new material associated with the joint meets specified requirements and is listed in Block 7. Existing fasteners are installed in the same joint and are not obviously incorrect based on markings, color, corrosion or other visual inspection.

INSPECTOR SIGNATURE/BADGE/DATE: (QAI) When required, Inspector sign, print and enter badge number and date on the line associated with the "(I)" for verification of the following:

a. Controlled assemblies: All controlled assemblies must be documented on a QA Form 34.

b. Non-Controlled assemblies: Inspector signature certifies:

(1) That new Level I material meets the specification for use and is properly documented in Block 7.

(2) That Hull integrity joint sealing surfaces for new or reused material meets acceptance criteria.

(3) That all new material, including software, installed in Hull Integrity joints meets specification, is properly installed and documented in Block 7.

If UNSAT, the craftsman or QAI will initiate action to resolve the UNSAT condition (e.g., initiate a DFS) and indicate the action taken in the Remarks block. Do not sign unless a satisfactory repair is completed or the UNSAT condition is accepted.

BLOCK 9 - LOCKING DEVICE INSTALLED OR REQD ACTION

NOTE: THIS BLOCK APPLIES TO LOCKING DEVICES ON SUBSAFE COMPONENTS THAT ARE INSTALLED AFTER JOINT MAKE-UP OR FOR CASES WHEN AN ACTION MUST BE TAKEN AFTER JOINT MAKE-UP TO ENGAGE THE LOCKING DEVICE (E.G., FLIPPING OF A LOCKTAB, STAKING A FASTENER, ETC.) TO ALLOW JOINT MAKE-UP AND TESTING PRIOR TO INSTALLING OR ENGAGING THE LOCKING DEVICE. THIS DOES NOT INCLUDE SELF LOCKING NUTS, SELF LOCKING BOLTS, CAP SCREWS, LOCKWASHERS, ETC. THAT ARE PART OF THE JOINT MAKE-UP, AND ARE LISTED IN BLOCK 7.

Planner - Mark the NA box when not applicable. When an action is required to engage the locking device, enter a description of the required action.

(CRAFTSMAN) Enter the Block 8 joint identifier (e.g., 8A) in the JT ID block, check the "SAT" box and sign, enter badge number and date when lockwire or required locking device (e.g., locking ring for EHFs, barrel nut locking device, etc.) has been properly installed, or the required action has been accomplished. Enter description (e.g., lockwire, lock tab) and identification (e.g., stock number, MIL-SPEC or piece number) of the lockwire or locking device. Enter description and "Existing" for existing locking devices. If more than one locking device type (e.g., lockwire and lock tab washers) exists on the assembly, record additional information in the REMARKS block. When the installation of more than one of the same type of locking device is being documented in Block 9 (e.g., 2 setscrews), record the quantity in addition to the description (Block 10 may be used if additional space is needed). Recording the quantity is not required for lockwire or locking cable, nor when the locking device quantity is documented in Block 7.

BLOCK 10 - REMARKS

(CRAFTSMAN/QAI/QAS) Enter any pertinent remarks or additional information related to the repair or assembly of the component. Each entry must contain signature and date except where the entry is pre-printed on the form by Planning. Adding an "N/A" does not require signature and date.

BLOCK 11 - LWC SUPERVISOR/SHOP SUPERVISOR SIGNATURE/BADGE NO.

LWC or shop LWC Supervisor will enter signature, badge number and date for final review, signifying the accuracy of the completed form. If any entry is UNSAT, initiate action to resolve the unsat condition and indicate the action taken in the "Remarks" block. Do not sign unless a satisfactory repair is completed or the UNSAT condition is accepted.

BLOCK 12 - QAS SIGNATURE/BADGE NO.

QAS or QAO will print name, enter signature, badge number and date for final review, signifying the accuracy of the completed form. If any entry is UNSAT, the QAS will initiate action to resolve the unsat condition and indicate actions taken in the "Remarks" block. Do not sign unless a satisfactory repair is completed or the UNSAT condition is accepted.

QA FORM 35 INSTRUCTIONS

THICKNESS MEASUREMENT RECORD

PURPOSE: To document UT thickness measurements and acceptability of material measured based on design material thickness.

TOP OF FORM: Page ___ of ___

NOTE A TECHNICAL WORK DOCUMENT MAY CONTAIN MULTIPLE QA FORMS OF THE SAME TYPE, (E.G. MORE THAN ONE QA-26). THE PAGE ENTRY IS FOR THIS SPECIFIC FORM, NOT THE TOTAL NUMBER OF PAGES ON ALL FORMS OF THE SAME TYPE.

Enter the page number, starting with page 1, of total number of QA form pages (e.g., 1 of , 2 of). The last number reflects the total number of QA Form pages written. This block is filled in by a QAI or the QAO after all certification testing is complete before block 19 on the QA-9 is signed. (e.g., 1 of 3, 2 of 3, 3 of 3).

PROCEDURE: The numbered blocks in QA form 35 correspond with the block instructions.

BLOCK 1 - SHIP HULL NO.

Enter the ship's name and hull number.

BLOCK 2 - JCN

Enter the JCN.

BLOCK 3 - LWC

Enter the LWC.

BLOCK 4 - CWP/REC SER. NO.

Enter the CWP/REC serial number or enter N/A if no CWP/REC is required. Do not list the CWP/REC revision.

BLOCK 5 - SYSTEM/COMPONENT

Enter nomenclature and NPS (if applicable) for component being measured and if known, the end use (e.g., Valve body for ASW-352).

BLOCK 6 - REFERENCES

Enter the drawing number(s) or other references that show the material and design specifications for the component being measured (e.g., 845-4385050), the NDT inspection procedure number, and the drawing number and revision, material specification, or Military Standard used for acceptance criteria.

BLOCK 7 - MATERIAL

PC NO: Enter piece number of the part or component to be checked.

REF: Record the reference letter of the drawing or document listed in Block 6 which provides the assembly information for the piece listed in the "PC NO." block.

TYPE MATERIAL: Enter the material type (e.g., CRES-304, 7030 CUNI, 9010 CUNI).

MIL-SPEC: Enter the material MIL-SPEC or equivalent (e.g., ASTM, ASME, SPEC).

MATERIAL: Enter the abbreviation for the material being checked. If other than pipe, casting, or plate, write it in the block (e.g., forged) in the blank provided.

INSPECTION PROCEDURE: Enter the reference letter indicating the NDT inspection procedure number.

ACCEPTANCE CRITERIA: Enter the reference letter indicating the drawing, material specification or Military Standard used for acceptance.

DESIGN MATL THICKNESS: Enter the design material thickness specified on the drawing, specification or standard.

MIN/MAX ACCEPT THK: Enter the drawing minimum acceptable thickness and if applicable the maximum drawing acceptable thickness with a MAX subscript.

ACTUAL THK: Enter the actual thickness as measured.

ACCEPT/REJECT: Check the appropriate box to indicate the results of the inspection.

BLOCK 8 - ULTRASONIC EQUIPMENT

INSTR (MOD/ SER. NO): Enter the equipment model and serial number.

CAL DUE DATE: Enter the calibration due date of the equipment used during the measurement.

TYPE TRANSDUCER: Enter the type transducer used during the measurement. Check the appropriate block.

SIZE: Enter the transducer size used during the measurement.

FREQ: Enter the transducer frequency used during the measurement.

CAL STANDARD: Enter the serial no. of the calibration standard used.

COUPLANT: Enter the couplant used during the measurement.

BLOCK 9 - SURFACE FINISH ACCEPTABILITY

Enter the piece number being inspected and check the appropriate block (SAT or UNSAT) indicating the result of the surface finish inspection.

BLOCK 10 - INSPECTION AREA SKETCH/REMARKS

Enter a sketch of the area measured. In addition to the sketch, enter a list of any other references to determine acceptability of material thickness. Enter grid spacing if applicable. Enter a list of any other references to determine acceptability of material thickness. This block may also be used to record the results of multiple thickness readings on the same component. Enter remarks or comments pertinent to the inspection. Sign and date each entry.

BLOCK 11 - INSPECTOR/DATE

NDT Inspector(s) print name, enter signature and date signifying accuracy of the data recorded.

BLOCK 12 - NDT SUPERVISOR ID NO./DATE

NDT examiner or supervisor print name, enter signature, and date signifying the report as technically and administratively complete and accurate.

MAT-1 INSTRUCTIONS

SHIP TO SHOP TAG MAT-1 (GENERAL USE)

S/N 0103-LF-984-3400

NOTE 1: NOT TO BE USED FOR CONTROLLED MATERIAL.

NOTE 2: THE MAINTENANCE PROVIDER WILL ESTABLISH A PROCESS FOR CONTROLLING MATERIAL BEING TRANSPORTED FROM SHIP TO SHOP. IF A PROCESS IS USED OTHER THAN DESCRIBED BELOW, ISIC APPROVAL IS REQUIRED.

1. PURPOSE: To maintain positive identification and control of ship to shop transfer of equipment and components.

2. PROCEDURE:

   a. Ship's Force personnel will fill out all blocks in Part 1 and those marked with an asterisk (*) in Parts 2 and 3, attach the tag to the equipment or component and deliver to the Repair Activity. Verify correct EIC or APL is provided. Ensure accurate description of desired work is included in Job Brief/Equip Nomenclature Block. Example: No. 2 Main Lube Oil Pump Discharge Relief Valve Pop Test to 45 psi and attach test tag.

   b. When the component is delivered to the Repair Activity, ship's representative will sign and date Part 1 and 3 in the applicable blocks. The Repair Activity representative will sign and date Part 3 to acknowledge receipt of the equipment or component. Part 3 will be detached from the tag and given to the ship's representative.

   c. Upon completion of repairs, the Repair Activity will record work performed, sign and date Part 2 and forward Part 2 to the ship as notice that the equipment or component is ready to be picked up.

   d. The ship's representative will present Part 3 to the Repair Activity Shop when picking up the equipment or component. Ship's Force should sign the Work Request for job completion when the item is picked up. If desired, part 3 may be attached to the completed work request.

3. BLOCK DESCRIPTION:

   a. Part 1.

SHIP	Ship's name and hull number
JCN	Job Control Number (UIC, Work Center and JSN)
EIC/APL	Equipment Identification Code or Allowance Parts List of item worked
SER. NO.	Equipment or Component Serial Number
JOB BRIEF/EQUIP NOMENCLATURE	Job Description and name of equipment or component

LEAD W/C	Work center responsible for equipment or component
DATE DELV'D	Date delivered to Repair Activity
DELIVERED BY	Signature of person delivering item

b. Part 2.

SHIP	Ship's name and hull number
JCN	Job Control Number (UIC, Work Center and JSN)
JOB BRIEF-WORK PERFORMED	Job Description and brief explanation of work performed by repair activity
REPAIR ACTIVITY REP.	Signature of person verifying work complete
DATE	Date of signature

c. Part 3.

SHIP	Ship's name and hull number
JCN	Job Control Number (UIC, Work Center and JSN)
JOB BRIEF/EQUIP NOMENCLATURE	Job Description and name of equipment or component
RECEIVED BY	Signature of Repair Activity person accepting item for work
DATE	Date of signature
DELIVERED BY	Signature of person delivering item to Repair Activity
DATE	Date of signature

CHAPTER 12

SUBMARINE PRESERVATION

REFERENCES.

(a) NAVSEA SI 009-32 - Cleaning and Painting Requirements Accomplishment
(b) NAVSEA S9086-VD-STM-010 - NSTM Chapter 631 (Preservation of Ships In-Service - General)
(c) SMS 6310-081-015 - Submarine Preservation General Painting
(d) NAVSEA ltr Ser 396A2/30641 of 25 Jun 93 - Trident Preservation Maintenance
(e) NAVSEA ltr Ser 92T124/006 of 14 Mar 02 - Preservation QA Requirements for In-Service Submarines

12.1 PURPOSE. The purpose of this chapter is to specify maintenance requirements for preservation systems on submarines to the submarine maintenance community. This chapter provides the requirements for the Trident Repair Facilities to be used in all instances of maintaining, repairing, and replacing preservation systems on non-nuclear components and spaces of U.S. Navy submarines.

12.2 GENERAL PRESERVATION REQUIREMENTS.

a. Reference (a) is the primary preservation document and complies with requirements of reference (b), except where deviations are specifically approved by Naval Sea Systems Command (NAVSEA). In instances where the requirements specified in reference (a) conflict with requirements specified in other standards (including but not limited to Naval Ships' Technical Manuals, Deep Diving General Overhaul Specifications, Maintenance Requirement Cards, Maintenance Standards, and Individual Ship's Paint Schedules), the criteria of reference (a) must govern. Supplemental information and requirements for submarines can be found in reference (c).

b. To reduce overall maintenance and to help ensure that the maximum coating life is obtained, Section 11 of reference (b) and reference (a), as applicable, are invoked by reference (d) for all *Ohio* Class preservation maintenance. In that section, the term "shipyard" is to be interpreted to mean "Refit Facility".

c. Preservation maintenance must be performed as authorized by work statements in work packages or as specifically authorized by NAVSEA or the Type Commanders. In process inspections must be performed per reference (a).

12.3 SUBMARINE PRESERVATION MAINTENANCE PROCESSES.

12.3.1 Maintenance Processes. Reference (c) provides additional requirements for accomplishing cleaning, surface preparation, inspection, and paint application to maintain or replace submarine coatings. The individual maintenance processes are organized into separate attachments which can be used independently to perform the particular maintenance, and provide guidance to accomplish the minimum amount of work that has been historically required to support the safe operation of submarines.

12.3.2 Coating System Maintenance Authorization. Maintenance on a coating system is authorized by the work package or by the Current Ship's Maintenance Project, but it is the responsibility of the repair activity to evaluate the existing coating system to determine whether the authorized maintenance is adequate and proper to support reliable operation of the ship. When a repair activity determines, by inspection, that the level of repair needed is greater than authorized, they must obtain approval of the Type Commander for authorization to accomplish the additional work. The existing coating must be evaluated by a qualified technical evaluator who has, at a minimum, successfully completed the National Association of Corrosion Engineers (NACE) Level I Basic Coating Inspector Training (or equivalent) per reference (a).

12.4 QUALITY ASSURANCE FOR CRITICAL COATED AREAS. The Quality Control requirements of Section 11 of reference (b), and reference (a), as applicable, and reference (e) must form an integral part of a shipyard's overall Quality Control program. The maintenance activity Quality Assurance organization must be responsible for ensuring all requirements of this section are met.

12.4.1 Critical Coated Areas. Critical coated areas are areas where premature failure of the coating system cannot be detected by routine observation due to inaccessibility (such as inside ship's tanks) and those areas where restoration of the failed system cannot be undertaken without laying up the ship (e.g., nuclear space, ship's underwater hull requiring dry docking, and ship's tanks requiring separation from associated systems for access, cleaning and represervation).

12.4.2 Requirements for Critical Coated Areas. Critical coated areas must have:

a. Surface preparation accomplished by certified blasters.

b. Coatings applied by certified painters.

c. Test and inspection records maintained per Table 631-11-1 of reference (b) and reference (a), as applicable.

d. Key checkpoints signed off by certified coating inspectors. See additional Quality Assurance requirements for potable water tanks and other high purity water tanks in applicable sections of reference (b) and reference (a), as applicable.

e. Any out-of-specification condition found is to be mitigated per reference (c), paragraph 9.

12.4.3 Test and Inspection Records. The maintenance activity must maintain auditable records of the tests and inspections listed in Table 631-11-1 of reference (b) and reference (a), as applicable, for critical coated areas. The records must be designed to provide objective quality evidence that applicable surface preparation and painting procedures were followed and that acceptable conditions and quality attributes were achieved for each parameter defined in Table 631-11-1 of reference (b) and reference (a), as applicable. A separate set of records must be maintained for each area painted. Records applicable to painting reported in docking reports must be incorporated into the docking report. The records must be available for five years after the delivery of the ship or completion of an overhaul or refit or a full coating service life period (from initial recoat through subsequent full recoat), whichever is longer. At the expiration of the records retention period, NAVSEA or its authorized representatives must be given a written notification. If no disposition instructions are received within six months from the notification, the records may be destroyed.

12.4.4 Blaster and Painter Certification. The maintenance activity must maintain a certification program for blasters and painters of critical coated areas. The program must include minimum

training requirements and provide for adequate records verifying the completion and currency of training for each blaster or painter involved in surface preparation or application of coatings in critical areas. Documentation must be maintained verifying that only certified blasters and painters are used for preservation work in critical areas. Training must include all blasting and paint application techniques and procedures appropriate to the surface preparation and coating materials being used. These techniques and procedures include mixing, conditioning and thinning of paints, proper selection, control and maintenance of blasting and application equipment, and blasting and application techniques.

12.4.5 Coating Inspector Certification. The maintenance activity Quality Assurance Departments must maintain a certification program for paint inspectors of critical coated areas. The program must include minimum training requirements and provide for adequate records verifying the completion and currency of training for each paint inspector involved in inspecting surface preparation, or application of coatings in critical areas. Documentation must be maintained verifying that only certified paint inspectors are used for inspecting preservation work in critical areas. Training must include all techniques and procedures appropriate to inspecting the surface preparation and coating application being used. These techniques and procedures include determining the acceptability of surface preparation prior to commencement of paint application, determining the degree of compliance with blasting and painting procedures appropriate to the surface preparation and coating materials being used and determining the acceptability of finished products following established standardized acceptance criteria. At a minimum, coating inspectors must be certified and maintain certification to the NACE Level I Basic Coating Inspector training or equivalent per reference (a). Activities using application procedures such as thermal spray, resulting in deposition of flame sprayed aluminum or flame sprayed zinc, and other high technology coatings, are required to have at least one coating inspector professionally certified to NACE Level I or equivalent per reference (a). The coating inspector must be knowledgeable of the process and requirements.

12.4.6 Coating Inspector Responsibilities. Coating inspectors are responsible for providing reasonable confidence that material receipt and storage, surface preparation, paint application and paint curing are done per the requirements of references (a) and (b) and paint manufacturer instructions. These responsibilities require the coating inspector to:

a. Inspect material storage and receipt inspection facilities.

b. Ensure all inspection equipment requiring calibration certification is certified under organization metrology calibration programs.

c. Perform in-process inspections of surface preparation and painting activities in critical coated areas.

d. Verify successful completion of key checkpoints in the application process.

e. Inspect and accept or reject final paint systems in critical coated areas.

12.4.6.1 Inspection of Storage and Receipt Inspection Facilities. Inspections of these areas must be done periodically to ensure paints are being stored and receipt inspected per manufacturer's product data sheets (American Society for Testing and Materials F718) and the requirements of reference (b) and reference (a), as applicable. It is an organizational level responsibility to obtain American Society for Testing and Materials F718s and Material Safety Data Sheets for specified products. These documents must reflect the properties and requirements of the specified product as of the date

of Navy approval for use. Records of inspection results must be maintained for NAVSEA audit, in a manner similar to the test and inspection records of paragraph 631-11.4 of reference (b) and reference (a), as applicable.

12.4.6.2 In-Process Inspections. Coating inspectors must be given notice and must perform an inspection of each critical coated area when the following key checkpoints are reached:

a. Surface cleaned and ready for abrasive blasting.

b. Surface abrasive blasted and ready for priming.

c. Between each successive coat of paint and between stripe coats.

d. Final coat of paint applied and area ready for final inspection.

The inspector is required to examine all data maintained by the paint foreman concerning environmental conditions, surface cleanliness, surface profile and paint thickness. Certain data must always be verified, depending on the checkpoint in question, including surface cleanliness, surface profile, dry film thickness and workmanship. Environmental data, such as temperatures, relative humidity and dew point need only be verified if the inspector is doubtful of the recorded values. Deficiencies in personnel training, certification, record maintenance, equipment maintenance or any matter that is not following good painting practice must be recorded. The coating inspector must verify successful completion of each checkpoint with a signature on an appropriate form, which must then be maintained per the instructions of paragraph 631-11.4 of reference (b) and reference (a), as applicable.

12.4.7 Inspection of Final Coating System. Inspection of final coating systems must be performed per section IV.1.e of Table 631-11-1 of reference (b) and reference (a), as applicable, by certified paint inspectors. The responsibility for proper application including all associated processes for the application of the coating systems resides with the maintenance activity. Coating imperfections found, which may cause premature coating failure, must be corrected before the paint system is accepted using appropriate touch-up procedures. Slight imperfections in the coating system are allowable, as long as they will not result in premature failure of the coating in the immediate vicinity of the imperfection. Such slight imperfections should be left intact, as trying to correct them could result in damage to the surrounding coating system. Failure to meet minimum dry film thickness requirements must result in application of an additional coat or coats of paint in deficient areas before the coating system is accepted.

12.4.8 Review of Records for Final Coating Evaluation. A certified paint inspector authorized to represent NAVSEA must review the paint records of each critical area to ensure the maintenance activity has maintained adequate control of the painting process. Records must include all the test and inspection data required by reference (b) and reference (a), as applicable. Failure to produce such records, or records which indicate that blasting and painting was done following governing specifications or instructions, may be grounds for rejection.

12.4.9 Acceptance or Rejection of Final Coating Systems. Certified coating inspectors independent of the group, shop or code accomplishing the preservation work are responsible for accepting or rejecting completed coating systems in critical coated areas. Acceptance or rejection of coatings must be based on a review of the painting records for the area and an inspection of the area, per paragraphs 631-11.11 and 631-11.12 of reference (b) and reference (a), as applicable.

VOLUME V

PART I

CHAPTER 13

WIRE REMOVAL AND REPLACEMENT

LISTING OF APPENDICES.

A Wire Removal and Replacement Form MAT-2

13.1 PURPOSE. To establish requirements, procedures and administrative tools to control work involving wire removal and connection. The disconnecting and reconnecting of electrical leads must be formally controlled to preclude inadvertent equipment configuration changes. Improper wire connections during maintenance have caused incidents of equipment malfunction and damage, and may result in increased personnel hazard.

13.2 ACTION. All operations which involve the physical removal or connection of one or more wires from their termination point will be documented using Appendix A of this chapter. A separate form will be used for each separate component or system (e.g., maintenance on two instrumentation drawers should be documented on two separate forms).

a. For maintenance actions which will result in an intentional wiring configuration change (e.g., Ship Alteration installation) Appendix A of this chapter must be documented such that the disconnecting of old wiring and the reconnecting of new wiring is verified to be per print.

b. Blueprints, drawings and schematic diagrams will be reviewed prior to work. The expected configuration must be entered on the Appendix A of this chapter before any wires are disconnected or moved. This will identify any discrepancy between the reference drawing and the ship's wiring configuration. Temporary wire markings will be used for positive identification if necessary and all checks will include proper hardware stack-up (lugs, washers, fastener tightness, etc.).

c. A clear method of identifying wire connections must be used (e.g., a worker who was not involved in the disconnection will be able to reconnect the wires without the need for further information sources). If necessary, a simple sketch can be generated and kept with the wire removal form to facilitate this, but the sketch is not intended to replace the use of Appendix A.

d. Jumpers. Use of jumpers internal to cabinets requires use of Appendix A of this chapter, and if more than one jumper is used, a marking system must be used to identify them and prevent confusion (i.e., marked as Jumper-1, Jumper-2 or use different colored wires). When installing jumpers, fill out the "Wires Reconnected" blocks of Appendix A of this chapter first, then the "Wires Disconnected" blocks after the jumpers are removed. These procedures are not intended to replace any of the requirements of Section 4.d of Appendix F of the Tagout User's Manual.

APPENDIX A

WIRE REMOVAL AND REPLACEMENT FORM MAT-2

Page____ of____

Job Description_____ Date_____

Equipment or Component Affected_____

Wiring Diagram used_____

WIRES TO BE DISCONNECTED					DISCONNECTED		WIRES TO BE RECONNECTED					RECONNECTED	
Lead Number	Terminal Board#	Color Code	1st CK	2nd CK	1st CK	2nd CK	Lead Number	Terminal Board#	Color Code	1st CK	2nd CK	1st CK	2nd CK

Print name and initials for each 1st and 2nd checker listed.

Initials	Print Name		Initials	Print Name

Supervisor Review _____Title_____Date_____

NOTES:

1. Maintenance personnel are to review diagrams, drawings, etc. Complete the "Lead Number" and "Terminal Board" number columns on the "Wires To Be Disconnected" and the "Wires To Be Reconnected" sections of the wire removal form. If colors are specified on the drawing, that can also be filled in on the "Color Code" block of the "wires to be disconnected" and "Wires To Be Reconnected" sections of the wire removal form.
2. The first checker will open the panel or component where the wires are to be removed and check the configuration as compared to what was obtained from the drawings. If the colors have not been entered, they should be entered at this time in the "Wires To Be Disconnected" section of the form. The first checker should initial the 1st check block on the "Wires To Be Disconnected" section indicating that the individual checked the configuration and the identification of each wire compared to the form. The first checker will also complete the lead number, terminal board number and color code blocks in the "Wires To Be Reconnected" section and initial the "1st Check" block in the wires to be reconnected section. If the required configuration is different than the actual configuration, the technician will inform his appropriate chain of command and alter the wire removal form to reflect actual condition.

CAUTION: ALTHOUGH IN MOST CASES THESE COLUMNS WILL BE IDENTICAL TO THE WIRES REMOVED SECTION, THERE ARE SITUATIONS WHERE THEY WILL NOT BE. EXAMPLES INCLUDE SWAPPING OF FIELD LEADS DURING PERIODIC MAINTENANCE ON GENERATORS, FINDING EQUIPMENT NOT WIRED PER THE DRAWING OR REPLACING LEADS INSIDE EQUIPMENT. IF THE COLORS OF THE WIRES TO BE RECONNECTED ARE CHANGED, THE FIRST CHECKER SHOULD ANNOTATE THIS IN THE COLOR CODE BLOCK OF THE WIRES TO BE RECONNECTED BLOCK.

3. The second checker will perform the same process as the first checker independently and prior to removal of any wires. The intent of the 2nd check block is that an independent person verifies the wire configuration, including the color code, before the wires are removed.
4. The first checker will remove all of the wires and initial the "Disconnected 1st Check Block" to the right of the "Wires To Be Disconnected" section of the form.
5. The second checker will verify that the correct wires were removed and initial the "2nd Check" block to the right of the "Wires To Be Disconnected" section of the form.
6. When the work is completed, the first checker will re-attach each wire per the "Wires To Be Reconnected" section of the form and initial the form as each wire is reconnected (vice waiting until the end) to ensure there is no confusion or errors in reconnecting the wires. This step includes entry of the wire color code just in case a wire was replaced with a different color wire than what was removed. Once each wire is reconnected, the first checker will initial the "reconnected 1st check" block to the right of the "Wires To Be Reconnected" section.

7. The second checker will verify the wires were reconnected correctly one at a time and initial in the “2nd Check” block to the right of the “Wires To Be Reconnected” section of the form.
8. The leading chief petty officer for the applicable division will review the completed form and sign in the supervisor review block at the bottom of the form.

VOLUME V
PART III
FOREWORD
SCOPE OF CERTIFICATION

LISTING OF APPENDICES.

A Glossary of Terms

1.1 PURPOSE. Part III of this volume provides information to supplement Part I in the area of Scope of Certification. It provides processes and guidance to ensure, with a reasonable level of confidence, that work on Scope of Certification systems on Deep Submergence Systems (DSS) and Host Submarines and ships is accomplished with first time quality. It contains the necessary material and procedural requirements for DSS certification of manned noncombatant submersible, submarine oriented DSSs including diving systems, and the man rated portion of their handling systems.

1.2. SCOPE. This section is directive in nature and may be cited as authority for action. It is applicable to every ship and DSS in the fleet. Where higher authority imposes more stringent requirements, such requirements will have precedence. When such conflicts are identified they should be reported immediately to the Type Commanders (TYCOM) or Immediate Superior In Command as appropriate. In the absence of any guidance, refer to the order of precedence listed in Part I, Foreword, paragraph 1.3.3 of this Volume.

1.3 NEED FOR SCOPE OF CERTIFICATION QUALITY MAINTENANCE PROCESSES.

a. The Deep Submergence Systems Program (DSSP) resulted from the Deep Submergence System Review Group (DSSRG) which was formed after the loss of the USS THRESHER (SSN 593) with all hands in April 1963. The Secretary of the Navy directed the DSSRG to examine the Navy's plans for the development and procurement of components and systems related to location, identification, rescue from and recovery of deeply submerged vessels from the ocean floor and to recommend a program that would result in optimizing the future effectiveness of such components and systems.

b. During the development of the DSSP, there were a number of mishaps that emphasized the importance of such a program. These incidents emphasize the need for properly designed systems, meeting design requirements and operating, maintaining and monitoring systems following approved procedures.

(1) In the early 1970s, two separate commercial incidents claimed three lives. The better known, the Johnson Sea Link entrapment, was where two lives were lost when a DSV became entangled on a scuttled destroyer.

(2) In 1982, five divers lost their lives when a vacuum was inadvertently drawn onboard USS GRAYBACK (SS 574). This led to redesign of diving systems to ensure a vacuum could not be drawn. It also led to ensuring Naval Sea Systems Command (NAVSEA) 00C is involved in the design of submarine

oriented diving systems, in the approval of diving equipment, and in NAVSEA 07 SCA surveys of diving systems when NAVSEA 00C deems it necessary. Additionally, it led to requiring safety analysis during design for all systems within the Scope of Certification.

(3) In the 1980s, two Navy submersibles had casualties that did not result in any injuries but had the potential for serious implications. One DSS became entangled on the ocean floor when it began operating in an unauthorized area. In 1987, the other DSS lost buoyancy on sea trials after an overhaul as a result of a ballast tank valve being installed backwards. In 1987 a civilian submersible viewport failed due to improper design resulting in the death of one of the operators.

APPENDIX A

GLOSSARY OF TERMS

TERM	DEFINITION
Aircraft Carriers	All ships under the responsibility of Naval Air Forces, Atlantic and Pacific Fleets. Includes all CVNs and supporting activities.
Atmospheric Diving System	The Atmospheric Diving System (ADS) is a one-man, one-atmosphere, dry, submersible used primarily for submarine rescue. It is a surface supported submersible with a primary mission of clearing debris from the hatch of a disabled submarine and connecting the downhaul cable for the Submarine Rescue Chamber.
Certification	The process of certification application, review, survey and approval of all items and procedures within a Deep Submergence System (DSS) Scope of Certification (SOC) that affect the safety of DSS personnel. Written statement attesting that an item, procedure or system meets specified requirements.
Certification Package	The certification package consists of the Objective Quality Evidence supporting conformance to certification requirements.
Certification Survey Plan	A detailed checklist derived from the SOC which is used to identify the description of requirements and the supporting documentation to substantiate the requirements. It is used as the basis for certification surveys. Certification Survey Plans replace Pre-Survey Outline Booklets which were previously used for this purpose.
Cognizant Technical Authority	The organization which the NAVSEA Chief Engineer has designated as having the authority to represent the Chief Engineer on a specific technical area.
Critical Explodable Item	Any explodable item, which by exploding, affects the safety of the DSS personnel.
Critical Implodable Item	Any implodable item, which by imploding, affects the safety of the DSS personnel.
Deep Submergence Rescue Vehicle	A non-combatant submersible, consisting of three spheres with the internal pressure of each sphere normally at one atmosphere, but slightly elevated internal pressures may be experienced, which carries crewmembers of a disabled submarine to the surface.
Deep Submergence	The authorization granted by the System Certification Authority

TERM	DEFINITION
System Certification	(SCA) to operate a DSS within its prescribed parameters.
Deep Submergence System Personnel	The occupants or operators of the DSS. The safety of personnel involved with the external handling and external equipment operations of the DSS is not covered by the certification process unless a danger to their well-being imperils DSS personnel.
Deep Submergence System Unit	Those systems and components which, when working together, provide the capability for manned underwater operations. Elements may include a manned vehicle, shore training facilities, designated support equipment, those systems that are a temporary or permanent part of a submarine that are used to disembark or recover personnel such as a Dry Deck Shelter (DDS) or Lockout Trunk, and handling equipment.
Differential Loading	The presence of pressure on the interior or exterior surface of a component, piping system, sphere, implodable or other object which is more or less than the pressure located on the opposite surface.
Dry Deck Shelter	A unit consisting of three spheres which can be attached to a submarine or operated at designated shore base training facilities. The DDS has a specified external test depth and has specific internal pressure limits to which each sphere is operated. The DDS can deploy Special Operating Forces and their equipment, including SEAL Delivery Vehicles, while submerged.
Explodable Volume	Any pressure housing containing a volume of gas at a pressure above the external ambient sea pressure (at any depth) which has the potential to burst. Note that some volumes may be explodable at shallow depths and implodable at deeper depths.
Flotation	The materials, components or equipment that provide buoyancy to the DSS. Syntactic foam is a type of generally used flotation or buoyancy material.
Functional Audits	A functional audit is an audit of an activity performing SOC work. It is a review of policies, processes, controls, procedures and associated functions used to perform specific certification related tasks. The SCA will develop (define) an audit plan. This audit supplements the DSS construction, availability and sustaining surveys performed using the Certification Survey Plan.
Hull Envelope	The external hull and its penetrations including plates, inserts, frames, tanks, etc. It is the primary boundary between operators and

TERM	DEFINITION
	the environment.
Hull Integrity Fasteners	Hull Integrity Fasteners (HF) are male threaded items such as bolts, studs and cap screws loaded by the differential between sea pressure and DSS internal atmospheric pressure and which are a part of pressure hull integrity component or of systems penetrating the pressure hull integrity boundary from the hull to and including the inboard valve. Does not include nuts and lock washers.
Hull Integrity Procedures (HIPs)	A group of procedures (currently DDS only) that must be performed as scheduled to sustain certification. These procedures perform periodic tests and inspections to: 1. Minimize the possibility of undetected degradation of hull integrity boundary materials due to their service environment. 2. Provide evidence that acceptable material conditions are being maintained to provide confidence that safe operations may be continued. 3. Provide specific guidance as to how the test or inspection must be conducted, extent of inspection, procedure by which to measure the material conditions, criteria of acceptance and the required intervals between inspections for scheduling purposes.
Hull Openings	Openings in the pressure hull used for access, escape and logistics, which are designed to withstand the differential of sea pressure to internal hull pressure at collapse depth.
Hyperbaric Chamber	Pressure resistant structure, including reinforced openings, penetrations, hatches, piping, boundary valves and medical lock that experience differential pressures and provides space for personnel. Recompression chambers are examples of hyperbaric chambers.
Immediate Superior In Command	For Submarine Type Commander (TYCOM) DSS assets it is the Squadron or Group. For DDS units it is Commander, Naval Special Warfare Group (COMNAVSPECWARGRU) Three. When the DSS unit is attached to a host ship the Immediate Superior In Command must be as identified in the Memorandum of Agreement.
Implodable Volume	Any pressure housing containing a non-compensated compressible volume at a pressure below the external sea pressure (at any depth down to the maximum operating depth) which has the potential to

TERM	DEFINITION
	collapse. The outer shell volume is used when calculating the volume of an implodable. Subtracting the volume of items internal to the implodable is not allowed. Externally mounted lights, gauges, bottles, flasks, spheres, tanks and beacons are examples of implodable items.
Initial Certification	A certification process conducted on all DSSs procured for Navy use following demonstration of material and procedural adequacy.
Letter of Certification	A letter, message or other formal correspondence issued by the SCA, stating the terms and conditions of certification.
Life Support System	A structure (sphere, chamber or habitat at one atmosphere or greater internal pressure) which provides a livable environment for personnel or a piping system which provides or monitors a metabolic breathing mixture suitable and safe for use by divers or operators of DDS, Submarine Rescue Chambers or Recompression Chambers.
Manned Testing	The act of enclosing personnel inside a DSS asset and isolating them from the outside or host submarine atmosphere or environment, regardless of the time period involved during testing or training following a certification plan for initial certification or reinstatement of certification of the DSS as approved by the SCA per NAVSEA SS800-AG-MAN-010/P-9290, section 2.9.
Manned Use	The act of enclosing personnel inside a DSS asset and isolating them from the outside or host submarine atmosphere or environment, regardless of the time period involved during normal operations. This can include testing and training in pursuit of certification or recertification of the DSS as described in NAVSEA SS800-AG-MAN-010/P-9290, section 3.7.4.
Non-critical Explodable Item	Any explodable item, which by exploding, does not affect the safety of DSS personnel.
Non-critical Implodable Item	Any implodable item, which by imploding, does not affect the safety of DSS personnel.
Objective Quality Evidence	Any documented statement of fact, either quantitative or qualitative, pertaining to the quality of a product or service based on observations, measurements or tests that can be verified. Evidence will be expressed in terms of specific quality requirements or characteristics. These characteristics are identified on drawings, in

TERM	DEFINITION
	specifications and other documents that describe the item, process or procedure.
Planning Yard	The Naval Shipyard or other activity designated by NAVSEA to perform technical services in design matters, maintaining up to date files of working drawings and Selected Record Drawings.
Program Manager	The organization or activity that acts for the DSS Sponsor and provides overall program management direction.
Reinstatement of Certification	The SCA will reinstate certification when the cause of the suspension has been thoroughly investigated and satisfactorily corrected and the material and procedural adequacy of the DSS has been re-established.
Scope of Certification	Those systems, subsystems and components and the associated maintenance and operational procedures required to provide maximum reasonable assurance that DSS personnel are not imperiled during system operations.
Scope of Certification Notebook	A document containing simplified diagrams which outline those structures, systems, subsystems and equipment within the DSS SOC and may provide guidance to ensure compliance with the certification requirements.
Scope of Certification Planned Maintenance System	PMS which must be satisfactorily performed within periodicity to maintain system SOC certification.
Skirt	A formed shape which is permanently attached to a sphere. The skirt is designed to mate the sphere or DSS unit to another object and the interior of the skirt is designed to be equalized to the same interior pressure as the sphere, allowing the sphere to be opened. When mated, the skirt is subjected to the same differential loading as the sphere.
Special Material Identification Code (SMIC)	A two-digit letter or number code at the end of the National Stock Number or Navy Item Control Number to provide visibility to designated items to ensure maintenance of their technical integrity. The following SMICs from NAVSUPWSSINST 4355.7 Series are for material commonly used in the Fleet for DSS-SOC systems: D0 An item that requires special cleaning and packaging for oxygen or nitrogen service (MIL-STD-1330/MIL-STD-1622 critical clean) and is considered Deep Submergence Program Scope of

TERM	DEFINITION
	Certification MCD "B" material. Each item has undergone receipt inspection to ensure it meets the requirements of the applicable specification or drawing and is certified for use in DSS-SOC applications. Items must have serialization markings identified on a securely attached Ready For Issue (RFI) tag. Material coded with SMIC D0 requires receipt inspection and segregated storage.
D4	An item that supports the Deep Submergence Program and is considered Scope of Certification MCD "B" material. Each item has undergone receipt inspection to ensure it meets the requirements of the applicable specification AOR drawing and is certified for use in DSS-SOC applications. Items must have serialization markings identified on a securely attached RFI tag. Material coded with D4 SMIC requires receipt inspection and segregated storage.
D5	An item that supports the Deep Submergence Program and is considered Scope of Certification MCD "A" material. Each item has undergone receipt inspection to ensure it meets the requirements of the applicable specification or drawing and is certified for use in DSS-SOC applications. Items must be permanently marked or tagged with a unique number traceable to the OOE. Material coded with D5 SMIC requires receipt inspection and segregated storage.
D6	An item that requires special cleaning and packaging for oxygen or nitrogen service (MIL-STD-1330/MIL-STD-1622 critical clean) and is considered Deep Submergence Program Scope of Certification MCD "A" material. Each item has undergone receipt inspection to ensure it meets the requirements of the applicable specification or drawing and is certified for use in DSS-SOC applications. Items must be permanently marked or tagged with a unique number traceable to the OOE. Material coded with D6 SMIC requires receipt inspection and segregated storage.
D7	An item that supports the Deep Submergence Program and is considered Scope of Certification, MCD "C" material. Each item has undergone receipt inspection to ensure it meets the requirements of the applicable specification or drawing and is certified for use in DSS-SOC applications. Items must have serialization markings identified on a securely attached RFI tag.

TERM	DEFINITION
	D8 An item that requires special cleaning and packaging for oxygen or nitrogen service (MIL-STD-1330/MIL-STD-1622 critical clean) and is considered Deep Submergence Program Scope of Certification MCD "C" material. Each item has undergone receipt inspection to ensure it meets the requirements of the applicable specification or drawing and is certified for use in DSS-SOC applications. Items must have serialization markings identified on a securely attached RFI tag.
Submarines Only	All ships under the responsibility of Submarine Forces, Atlantic and Pacific Fleets. Includes all submarine classes (e.g., SSN, SSBN, SSGN) and supporting activities: ARDMs, ASs, and UUVs.
Surface Force Only	All ships under the responsibility of Naval Surface Forces, Atlantic and Pacific Fleets. Includes all surface ship classes and supporting activities that are NOT under the responsibility of Submarine Forces or Naval Air Forces (e.g., Aegis Ashore, CG, DDG, ESB, LCC, LCS, LHA, LHD, LPD, LSD, MCM).
Surveys	Initial and sustaining surveys verify the adequacy of the DSS for manned use to the limits for which certification is being requested or was issued. This is accomplished by examining Objective Quality Evidence, reviewing processes and procedures and inspecting equipment to validate compliance with approved procedural, design, fabrication, test and maintenance requirements.
Suspension of Certification	A prohibition on manned operation of the DSS until the cause of the prohibition has been resolved.
Sustaining Activity	The recipient of the Letter of Certification. The Sustaining Activity maintains and operates the DSS in the as certified condition per the Letter of Certification required by the appropriate NAVSEA technical specification or manual.
Sustaining Certification	To sustain certification, the DSS must be operated and maintained in the as certified condition **per** the Letter of Certification.
System Certification Authority	The code within NAVSEA assigned the responsibility for the manned DSS process by Naval Operations. The SCA has final authority and responsibility for granting certification for DSSs covered by this manual. The SCA resides with the Deputy Commander for Submarines (NAVSEA 07). The working responsibility for certification is vested in NAVSEA 07Q.

TERM	DEFINITION
Technical Assistance Review	An overall or specific area review of certification related documentation, processes or practices conducted at the request of the Program Manager to provide SCA guidance in support of the assigned DSS or facility certification.
Technical Data	Recorded information (regardless of the form or method of recording) of a scientific or technical nature (including computer databases and computer software documentation). This term does not include computer software or financial, administrative, cost or pricing, or management data or other information incidental to contract administration. The term includes recorded information of a scientific or technical nature that is included in computer databases. For these purposes, technical data includes the characteristic of a particular science, trade or profession.
Type Commander	For Submarines and Submarine TYCOM DSS assets it is Commander Submarine Force Atlantic and Commander Submarine Force Pacific. For DDS units it is Commander, Naval Special Warfare Command. When the DSS unit is attached to the host ship the TYCOM must be as identified in the Memorandum of Agreement.
User Activity	The activity that provides and exercises operational control for the DSS. In some instances the User Activity and the Sustaining Activity will be the same.
Waterline	The term "waterline" in this manual refers to where the hull of a ship meets the surface of water when afloat.
Work	a. Any action that actually or potentially changes (including disassembly for the purposes of inspection or repair) the approved configuration of any part, component or ship's system. b. Any action that removes or affects the ship's ability to operate ship's systems or components following ship's systems **or** operating manuals or reactor plant manuals. c. Any testing or inspections required to establish, maintain or reestablish certification. d. Any design, engineering, planning or configuration management functions that involve the final review or approval of technical information. Examples of work include the following:

TERM	DEFINITION
	1. Action which disassembles or removes any part, component or ship's system. 2. Action specified in a Technical Work Document. 3. Any action that removes or affects the ship's ability to operate ship's systems or components following ship's systems manuals, operating manuals or reactor plant manuals, excluding tagout per the Tagout User's Manual, including but not limited to: (a) Component or system tests. (b) Intrusive inspections (such as breaking the plane of electrical panels requiring electrical safety). (c) Valve line ups that alter the normal system line up not governed by operating procedures. (d) Removing valve hand wheels, disconnecting of reach rods.

VOLUME V

PART III

CHAPTER 1

ORGANIZATIONAL RESPONSIBILITIES

REFERENCES.

(a) NAVSEA SS800-AG-MAN-010/P-9290 - System Certification Procedures and Criteria Manual for Deep Submergence Systems
(b) COMSUBLANT/COMSUBPACINST 3502.1 - Continuous Improvement in the Submarine Force

1.1 PURPOSE. To provide a list of responsibilities and duties of key personnel within the organizations that are involved in the Scope of Certification (SOC) Program. Responsibilities and duties listed in this section are SOC specific and are in addition to the responsibilities listed in part I, chapter 1 of this volume. Scope of Certification Organization.

a. Type Commander (TYCOM).

b. Immediate Superior In Command (ISIC).

c. Sustaining Activity.

d. User Activity.

1.2 RESPONSIBILITIES.

1.2.1 Type Commander. The TYCOM for Deep Submergence Systems (DSS) is responsible for the following items:

a. Obtain System Certification Authority (SCA) approval for exception to Re-Entry Control (REC) requirements in SOC systems.

b. Administer a Departure from Specification (DFS) system to:

(1) Establish and maintain an auditable method of processing requests for approval of DFS.

(2) Review and evaluate DFS requests and obtain clarification of technical specifications from Naval Sea Systems Command (NAVSEA) where appropriate.

(3) Approve or disapprove Non-SOC DFS requests.

(4) Monitor all outstanding major DFS and ensure ISIC records agree with TYCOMs and pursue DFS clearance.

(5) Obtain Program Manager approval of all DFSs in DSS SOC systems, unless the Program Manager has delegated, in writing, authority to approve specific routinely recurring DSS SOC DFSs or authority to approve minor DSS SOC DFSs.

(6) Keep the Program Manager and SCA informed of all DFS requests.

(7) Liaison with the Program Manager on any outstanding DFS items requiring NAVSEA action. Provide a periodic status report to the Program Manager of those DFSs for which NAVSEA action is overdue.

c. Perform assessments of ISICs responsible for DSSs annually not to exceed 18 months.

d. At the discretion of the TYCOM perform random, unannounced User or Sustaining Activity Quality Assurance (QA) assessments and monitor visits.

NOTE: THE SCA, NOT THE TYCOM, ALSO APPROVES INITIAL DSS CERTIFICATION.

e. Review and evaluate ISIC reports of corrective action taken on QA assessments to ensure compliance with this program.

f. Perform an annual self-evaluation of the QA program.

g. Evaluate and analyze proposed changes to this volume.

h. Recommend to the SCA suspension and reinstatement of DSS certification as appropriate.

i. Perform annual SOC awareness training for staff members that routinely review SOC Objective Quality Evidence (OQE), make determinations on SOC DFSs and perform other SOC work oversight functions.

1.2.2 Immediate Superior In Command. The ISIC for the DSS and host submarines and ships is responsible for the following:

a. Organize and implement a QA program to carry out the provisions of this volume.

b. Organize and implement a program to verify performance of required maintenance to sustain the material condition necessary to support Unrestricted Operations to authorized operating depth following the applicable class Hull Integrity Procedure Maintenance Requirement Card manual and Volume VI of this manual.

c. (Submarines only) Organize and implement a work request screening process such that those jobs requiring special controls are recognized and the supporting technical documentation is provided to the maintenance activity as required by this volume (not applicable to COMNAVSPECWARCOM).

d. Ensure DSS certification continuity report, when required by this volume, is received and reviewed before DSS manned use. In particular, the ISIC will ensure all Hull Integrity Procedure planned maintenance is up to date. Discrepancies noted must be resolved prior to underway.

e. In accordance with reference (a), paragraph 3.7.4, when performing manned operations (manned use) in pursuit of certification or reinstatement of certification, review and approve User or Sustaining Activity requests prior to conducting these operations, as applicable.

f. Review and sign the Memorandum of Agreement (MOA) required by volume II, part IIII, chapters 2 and 3, of this manual and reference (a). This agreement will list the responsibilities and actions of each party before start of any availability (e.g., Tiger Team repairs, technical assist visits) that involves work within SOC boundaries to

ensure responsibilities for recertification of work performed is not split between maintenance activities and that each activity is responsible to certify the work they performed.

g. Administer a DFS system to:

(1) Establish and maintain system of processing requests for DFSs.

(2) Review and evaluate DFS requests and obtain clarification of technical specifications from TYCOM or NAVSEA where appropriate.

(3) Approve or disapprove DFS requests as authorized by the applicable SOC Notebook.

(4) Obtain TYCOM or NAVSEA approval of DFS when required by the appropriate TYCOM or NAVSEA directive, technical specification or manual.

(5) (Submarines only) Ensure the deployed ISIC directing the supporting Fleet Maintenance Activity (FMA) will act as the cognizant ISIC for those actions required to approve, review and track DFSs for ships deployed. The parent ISIC, with concurrence from the deployed ISIC, may, on a case-by-case basis, perform these functions. In such cases, the parent ISIC will inform the deployed ISIC when such action(s) concurred upon are complete.

(6) (Submarines only) The parent ISIC will provide a complete file of all outstanding DFSs to the deployed ISIC, prior to any ship deployment. The deployed ISIC will provide a complete file of all outstanding DFSs to the parent ISIC at the end of deployment.

(7) Specify procedures for:

(a) Submission of Ship's Maintenance Action Form, OPNAV 4790/2K (2-Kilo),for DFSs that require a future maintenance action to clear the departed condition.

(b) Submission of Ship's Configuration Change Form, OPNAV 4790/CK (CK)for permanent repair DFSs which result in new Allowance Parts List and Coordinated Shipboard Allowance List support requirements.

(8) (Submarines only) Keep parent ISIC apprised on the status of DFSs for deployed units.

(9) Maintain files of outstanding DFSs.

(10) Aggressively pursue clearing of DFSs.

h. (Submarines only) Monitor the QA program and procedures of assigned FMA periodically and monitor corrective actions on discrepancies noted during the last TYCOM audit.

i. (Submarines only) Schedule and conduct a QA Program assessment in conjunction with the Fleet Readiness Training Plan (or as determined by each TYCOM) of all assigned ships to ensure the repair actions undertaken by Ship's Force conform to the provisions of the QA Program as well as pertinent technical requirements.

j. (Submarines only) Review and endorse TYCOM audit report of assigned FMA(s).

k. Conduct periodic monitoring of Ship's Force work and QA program on all assigned DSS during maintenance periods.

(1) Perform at least one surveillance during each refit, upkeep or FMA availability.

(2) Conducting monitoring during industrial availabilities (e.g., Selected Restricted Availability, Drydocking Selected Restricted Availability, Extended Refit Period, Post Shakedown Availability, Phased Maintenance Availability, Docking Phased Maintenance Availability, Depot Modernization Period, Engineered Refueling Overhaul and Regular or Refueling Overhaul).

l. Properly maintain certification on assigned DSS.

m. Review and evaluate User or Sustaining Activity reports of corrective action taken on SCA Surveys to ensure compliance with this program. Retention of OQE to substantiate reviews or evaluations is not required except in the case where the review or evaluation of a Survey response was determined to be unsatisfactory.

n. Ensure the Sustaining Activities properly perform internal surveys per reference (a).

o. Ensure Sustaining Activities properly process requests for sustaining certification.

p. Perform QA assessments of the Sustaining Activities or User Activities associated with the DSS and host submarines and ships annually not to exceed 18 months. Forward results of the assessments to the TYCOM and Program Manager.

q. Route all appropriate DSS SOC DFSs to TYCOM and Program Manager for approval.

r. Conduct a vertical audit of assigned DSS unit's OQE for all work within the SOC accomplished by the User Activity and the Sustaining Activity prior to the first sea trials or manned operation at the end of each major availability and after completion of any major repairs, modifications or alterations completed during non-depot level availability periods. Not required if an SCA Survey is scheduled at the conclusion of the availability.

s. Perform annual SOC awareness training for staff members that routinely review SOC OQE, make determinations on SOC DFSs and perform other SOC work oversight functions.

t. Ensure fact-finding critiques are held to establish underlying causes and pursue corrective actions when necessary. When major errors or problems occur during maintenance of DSS or SOC systems, a critique may be necessary. Examples include when significant problems or trends occur or those that did result or could result in incidents, significant unplanned rework, serious equipment damage, malfunction or personnel injury. Minor problems are isolated deficiencies with minimal overall impact and no significant consequences; these should normally be corrected on the spot and without expending much time and effort.

(1) Contact the TYCOM immediately of issues which will be result in a Submarine Safety (SUBSAFE), Fly-By-Wire (FBW) Ship Control System

(SCS), DSS or SOC critique, SUBSAFE, FBW SCS, DSS or SOC trouble report or SUBSAFE, FBW SCS, DSS or SOC fact-finding.

(2) (Submarines only) Additional guidance and direction for critiques is contained in reference (b).

(3) (Submarines only) Copies of critiques and incident reports for DSS or SOC issues that result in a problem severity level of Level 1 (critical) or Level 2 (serious) will be sent to the TYCOM electronically.

1.2.3 Sustaining Activity or User Activity. Sustaining and User Activities in some cases may be the same organization. The Sustaining Activity is responsible for ensuring that the requirements established in the Letter of Certification and reference (a) are met. The Sustaining Activity and User Activity will:

a. Follow REC procedures during re-entry of a certified component, system or a portion of a system.

b. Document all deviations from the certification requirements in a form suitable for survey.

c. Accomplish periodic maintenance actions as specified in the supporting requirements developed for each DSS and ensure that adequate OQE is available during surveys in a format conducive to review.

d. Ensure accountability of maintenance for each DSS and establish an auditable system of scheduling, performing and reporting accomplishment of Maintenance Requirement Cards.

e. Submit an official request to NAVSEA for continuation of certification for a specific time period and include written rational for the continuation together with a status of maintenance and system condition.

f. Sustaining Activities will conduct internal surveys per section 4.1.2 of reference (a) and:

(1) If the SCA sustaining certification survey periodicity is 15 months or greater, perform at least two internal surveys between the SCA surveys, not to exceed a 12-month periodicity.

(2) Prior to the SCA on-site survey, conduct an internal survey to evaluate compliance with certification requirements.

(3) For other than overhaul or new construction, complete the Sustaining Activity's internal survey and submit it to the Program Manager per the applicable SOC notebook or reference (a) section 4.1.2.

(4) Overhaul and New Construction. The activity’s internal survey must be completed not more than 30 days prior to the SCA survey and the results of the internal survey must be submitted to NAVSEA at least 10 working days prior to the start of the SCA survey.

(5) Obtain NAVSEA approval of an updated Certification Survey Plan at least two weeks prior to the SCA survey for an SCA Certification Survey Only.

g. Report to NAVSEA resolution of all survey deficiencies.

h. Retain the completed maintenance and dive log, including, where required, pre-dive and post-dive check-off procedures for all evolutions from survey to survey. The procedures utilized must have prior Program Manager and SCA concurrence.

i. Obtain NAVSEA approval for alterations to items within the SOC. This includes the addition of any mission-related equipment outside the defined lines of the DSS as deemed necessary by the SCA.

j. Accomplish and report Maintenance Requirement Cards and Hull Integrity Procedures following the assigned periodicities approved by the Program Manager and immediately resolve any unacceptable conditions found as a result of conducting the maintenance procedures or inspections.

k. Review and sign the MOA required by Volume II, Part IIII of this manual. This agreement, as a minimum, must define the activity's functions and responsibilities for implementing and administrating REC procedures. Volume II, part IIII of this manual contains specific requirements for MOAs. All applicable activities must sign the MOA prior to the start of work.

l. The User Activity must issue the DSS certification continuity report before manned operations (Not applicable when in pursuit of certification or reinstatement of certification per reference (a) paragraph 3.7.4.). For vehicles loaded on submarines, the certification continuity report must be issued prior to the underway of the host ship (not required to issue DSS certification continuity report for work performed at sea).

m. Obtain formal approval for any temporary modifications prior to installation in a DSS from the Program Manager. Submit the request to the Program Manager and include the items listed in section 5.4.4 of reference (a) and any other items as required by the Program Manager.

n. Operate the DSS within the limits specified as part of the requirements for each sustaining certification.

o. The Sustaining Activity must report any violation of the DSS operating limits to NAVSEA stating the cause or justification for the violation.

p. Keep the Program Manager and SCA advised of any failure or improper operation experienced by, or damages sustained to, any item or system within the SOC.

q. The responsibilities listed in Part I, Chapter 1 Section 1.5 of this volume apply to the User or Sustaining Activity. Each activity must comply with the applicable responsibilities listed in this section. For instance, DSSs are responsible for the duties listed in the Ship Commanding Officer section.

r. When the sustaining Activity is different than the user activity, the Sustaining Activity will issue a written report to the User Activity, with a copy to parent ISIC, which addresses the status of SOC RECs, testing of SOC systems, Hull Integrity Procedure maintenance requirements completed and DFS items.

s. Ensure fact-finding critiques are held to establish underlying causes and pursue corrective actions when necessary. When major errors or problems occur during

maintenance of DSS or SOC work, a critique may be necessary. Examples include when significant problems or trends occur or those that did result or could result in incidents, significant unplanned rework, serious equipment damage, malfunction or personnel injury. Minor problems are isolated deficiencies with minimal overall impact and no significant consequences; these should normally be corrected on the spot and without expending much time and effort. Contact the ISIC immediately of issues which will result in a SUBSAFE, FBW SCS, DSS or SOC critique, SUBSAFE, FBW SCS, DSS or SOC trouble report or SUBSAFE, FBW SCS, DSS or SOC fact-finding (Submarines only) Additional guidance and direction for critiques is contained in reference (b). Copies of critiques and incident reports for DSS or SOC issues that result in a problem severity level of Level 1 (critical) or Level 2 (serious) will be sent to the TYCOM electronically.

Examples include, but are not limited to the following:

(1) Noncompliant work or technical direction resulting in nonacceptable material within the DSS or SOC boundary (e.g., incorrect material installed, failure to complete recertification actions, incorrect torque applied, improper conduct of testing, wrong weld procedure, lack of or incorrect Nondestructive Test, unqualified welder, failure to use specified measuring device, etc.).

(2) Inaccurate or missing information or data provided on deliverable DSS or SOC technical documents affecting the certification status (e.g., certification messages, Unrestricted Operations Maintenance Requirement Card data reports).

(3) Conduct of work within the SOC boundary without required authorization or re-entry control.

(4) Failure to accomplish mandatory SOC related PMS within the required periodicity.

(5) Performance of DSS manned operations with an open Category 1A, Category 1B (unless as allowed by the card) or expired Category 1C system certification survey card, or outside of the allowed sustaining certification periodicity.

(6) Operation of SOC systems contrary to or without a NAVSEA approved procedure.

CHAPTER 2

QUALITY MAINTENANCE PROCESSES

REFERENCES.

(a) NAVSEA 0924-062-0010 - Submarine Safety (SUBSAFE) Requirements Manual
(b) NAVSEA SS800-AG-MAN-010/P-9290 - System Certification Procedures and Criteria Manual for Deep Submergence Systems

2.1 APPLICABILITY. Use all of the quality maintenance processes specified in Part I, Chapter 2 of this volume.

2.2 CONTROLLED WORK PACKAGE. A Controlled Work Package is required for those items listed in Part I, Chapter 2, Paragraph 2.2.4 of this volume and the following items:

a. Installation of Material Control Division A, B or C materials.

b. Manufacture Material Control Division A, B or C materials. Manufacture of Material Control Division C materials may be made with a TWD other than a CWP if the part is labeled or tagged with the required information necessary for verification at the time of installation.

c. Work within Scope of Certification (SOC) hull integrity boundary, identified in reference (a), (b) or the applicable Deep Submergence System (DSS) SOC Notebook, including pressure hull grinding, cutting and welding.

d. Painting in excess of 10% of any DSS compartment including the interior of the transition trunk on the host ship above the access hatch.

e. Installation and maintenance on implodable items within the SOC boundary and all explodable items that meet the requirements of reference (b) or the applicable DSS SOC Notebook.

VOLUME V

PART III

CHAPTER 3

PERSONNEL QUALIFICATION AND TRAINING

REFERENCE.

(a) NAVEDTRA 43523 - Personnel Qualification Standard for Quality Maintenance Program

3.1 APPLICABILITY. Use the training and qualification requirements specified in part I, chapter 3 of this volume as modified in the following paragraphs.

3.2 GENERAL. Personnel who screen, plan, perform, inspect and supervise maintenance as listed in part I, chapter 2, and part III, chapter 2 of this volume must be trained and qualified per this volume and reference (a).

3.3 DISCUSSION. For Deep Submergence Systems, modify the training specified in the qualification standard of reference (a) and the appendices of part I, chapter 3, of this volume to include Scope of Certification (SOC) knowledge and practical factors. Send the revised qualification cards to the applicable Type Commander via the Immediate Superior In Command. The Type Commander will standardize qualification requirements for all subordinate commands dealing with SOC issues.

3.4 QUALIFICATION REQUIREMENTS.

3.4.1 Qualifications. Most User Activities are too small and do not have billets for Quality Assurance Officers (QAO). However, the responsible Immediate Superior In Command will have a QAO qualified per part 1, chapter 3 of this volume. The Sustaining Activity will have a QAO qualified per part 1, chapter 3, of this volume.

3.4.2 Scope of Certification Quality Maintenance Qualifications. Use the qualification requirements for other qualifications as listed in part I, chapter 3 of this volume. Note that not all qualifications would apply.

3.5 TRAINING.

3.5.1 Scope of Certification Awareness Training (Submarines and Submarine Repair Facilities only). All maintenance crewmembers required to qualify as craftsman on board submarines with SOC systems or components must receive SOC awareness training during initial indoctrination and annually thereafter. All personnel assigned to a command responsible for performing maintenance on submarine system(s) within the SOC boundary must receive SOC awareness training during initial indoctrination and annually thereafter.

3.5.2 Immediate Superior In Command and Type Commander Training. ISIC and TYCOM staff members that routinely review SOC Objective Quality Evidence, make determinations on SOC Departures from Specifications and perform other SOC work oversight will receive annual SOC awareness training to keep knowledge and proficiency levels high.

(c) MIL-STD-1330 - Standard Practice for Precision Cleaning and Testing of Shipboard Oxygen, Helium, Helium-Oxygen, Nitrogen and Hydrogen Systems
(d) NAVSEA S9086-CM-STM-010 - NSTM Chapter 078 (Gaskets, Packing and Seals)
(e) NAVSEAINST 4720.23 - Deep Submergence Systems Temporary Modifications

LISTING OF APPENDICES.

A Message Format for Certification Continuity for DSS
B Letter Format for Certification Report to Tended DSS
C Message Format for DDS Transfer of Custody Certificate of Continuity for Off-loads
D Message Format for DDS Transfer of Custody Certificate of Continuity for On-loads
E Message Format for DDS Acceptance of Custody

5.1 PURPOSE. To provide the requirements or direct the user to the appropriate references to ensure that maintenance performed during the Deep Submergence System's (DSS) life cycle supports certification at all times. Sustaining Activities, User Activities and Maintenance Activities should review specific system requirements for additional or superseding requirements. All material used within any DSS must be as authorized for the specific DSS as required by reference (a).

5.2 EXCEPTIONS TO RE-ENTRY CONTROL. Exceptions to Re-Entry Control (REC) must be listed in the applicable DSS Scope of Certification (SOC) Notebook.

5.3 PLANNED MAINTENANCE. Completion of Planned Maintenance System (PMS) is mandatory for continued certification of DSS units. Each DSS unit's PMS program will be administered per reference (a), reference (b) and the applicable SOC Notebook. Any incomplete SOC PMS or any SOC PMS not performed when scheduled requires a major Departure From Specification (DFS) to be processed and adjudicated prior to executing manned SOC operations. The Program Manager will determine SOC-REC implementation based on the maintenance task complexity, system boundary and material control requirements. It is critically important to realize that even though a particular maintenance procedure does not require a REC, any repair or replacement of SOC components necessary to correct a deficient condition identified during that maintenance may require a REC. There are two documentation categories for SOC PMS:

a. SOC - REC Required. Each SOC-REC PMS item requires the issuance of a REC Form and associated Controlled Work Package (CWP).

    (1) Each SOC PMS Maintenance Requirement Card (MRC) card will utilize the following note or an equivalent note that has been approved by the System

Certification Authority (SCA): "This maintenance involves equipment within the DSS SOC as defined by the SOC Notebook or applicable document. Performance of this maintenance requires that REC be utilized."

(2) This maintenance will be documented and audited using the REC as Objective Quality Evidence.

b. SOC - NO REC Required. PMS items exempted from re-entry controls:

(1) Each SOC PMS Maintenance Requirement Card (MRC) will utilize the following note or an equivalent note that has been approved by the SCA: "This maintenance involves equipment within the DSS SOC as defined by the SOC Notebook or applicable document. Performance of this maintenance does not require REC. However, if repair or replacement of any component is necessary, compliance with system certification requirements must be documented."

(2) The Sustaining Activity must, depending on the frequency and complexity of the maintenance action, determine the methodology of documenting the accomplishment and completion of SOC PMS in a form suitable for audit. The maintenance requirements must identify that documentation is required.

5.4 TEST, MEASUREMENT AND DIAGNOSTIC EQUIPMENT. Follow the requirements specified in Part I, Chapter 5, Section 5.2 of this volume regarding Test, Measuring and Diagnostic Equipment for in-process work.

5.5 TORQUE. Follow the requirements specified in system drawings and Part I, Chapter 5, Section 5.3 of this volume for torque applied to components.

5.6 INSPECTIONS.

5.6.1 General Requirements. This section provides the minimum requirements and guidance for the performance of inspections. Inspections during the performance of maintenance form one of the fundamental elements essential in assuring that the task is completed properly and in compliance with all specifications. Inspections occur during the in-process phase of repair or maintenance (disassembly, repair, and re-assembly) and the re-certification phase (testing). Inspections serve to provide a careful and critical examination of the areas being inspected and form one of the cornerstones of a successful Quality Assurance (QA) Program. Use of inspections have and will continue to establish the Objective Quality Evidence (OQE) necessary for ensuring compliance to technical requirements.

5.6.2 Inspection Records. Inspection records provide a lasting record that the inspection was performed and completed according to the applicable specifications. Inspection records will be maintained when required for OQE and will be documented on appropriate QA forms contained in this volume or as Certification Signature Blocks in the Formal Work Package (FWP).

5.6.3 Critical Inspections. An inspection on any system or component, which by its nature is so critical to the successful completion of the task, that the inspection requires verification by a separate individual, other than the craftsman, qualified as an inspector. These inspections will be annotated in the written work procedure by the presence of an (I) or circle I, or in the case of Cleanliness Inspections (CI) or circle CI in the margin next to the applicable paragraph requiring

the inspection and will be documented as a signature in the FWP or on the appropriate QA form. Critical Inspections applicable to all DSS Systems or components are:

NOTE: THESE ARE CONSIDERED MINIMUM REQUIREMENTS FOR USAGE OF AN INDEPENDENT INSPECTOR DURING THE PERFORMANCE OF SOC CONTROLLED WORK. IT MUST BE UNDERSTOOD THAT THE REQUIREMENTS FOR AN INDEPENDENT INSPECTOR DO NOT NECESSARILY MEAN THAT THE DATA PROVIDED IS RETAINABLE AS OQE. VARIOUS SOURCE DOCUMENTS ADDRESS RECORD RETENTION AND MUST BE FOLLOWED FOR ENSURING THE PROPER OQE IS RETAINED.

a. Inspections performed for all acceptance testing (e.g., hydrostatic testing, drop tests, joint tightness tests, weight tests) for certification of work completed under a CWP.

b. Inspections performed to verify permanent traceability markings of SOC Material Control Division A material assigned and made locally at either a Fleet Maintenance Activity (FMA), a Sustaining Activity or at the User Activity. These inspections may also be performed by a Controlled Material Petty Officer.

c. Inspections performed to verify permanent markings of Level I or SOC material (those which the FMA manufacture or transfer to smaller pieces of controlled material). These inspections may also be performed by a Controlled Material Petty Officer.

d. Mechanical measurements used to verify wall thickness of components for work performed using a CWP.

e. Inspections performed for post machining of any SOC component.

f. All sealing surface inspections for work performed as a Controlled Assembly.

g. Inspections for oxygen or nitrogen systems cleanliness as required by reference (c). These independent inspections are performed by personnel qualified as Oxygen Clean Workers per reference (c).

h. Material receipt inspection. These inspections may also be performed by a Controlled Material Petty Officer.

i. Weight testing or Pull Testing of SOC components.

j. Performance of Emergent Controlled Work following the instructions of Part I, Chapter 2 of this volume.

k. Sealing surface inspections for all SOC pressure boundary joints.

l. Hull Integrity joint body bound stud inspections. For new stud installations, this includes stud standout measurements and break away torque verification. For studs that were not removed and are to be reused, this includes verification of markings of significance (.K. or KM) or completion of generic material identification check.

m. Verification of body bound stud standout measurements and breakaway torque for new stud installations in SOC systems.

n. Final torque verification of SOC pressure boundary joints.

o. Verification of new controlled material installed into the SOC boundary.

p. Verification of proper software installation in SOC pressure boundary joints.

q. Stack height measurement verification for hull packing installation.

r. Seat tightness tests of SOC hull and backup valves.

s. Surface finish inspection and final torque verification of SOC Host interface non-pressure boundary bolted joints (i.e., DDS pedestals, etc.).

5.6.4 Cleanliness Inspections. Cleanliness controls are required to prevent the entry of foreign material which could interfere with the operation of any system or component. Cleanliness controls are essential during maintenance with the degree of control depending upon the system and work to be accomplished. Hydraulic system cleanliness controls are necessary to minimize degradation of components and system leaks. Life Support system cleanliness controls are necessary to ensure the safety of personnel. Improper cleanliness controls can result in personnel injury or damage to operating machinery or fouling of system components. The time spent making sure the work site is clean and system openings are properly controlled will help prevent premature component failure and rework.

a. Cleanliness Inspectors are individuals who are trained and qualified to perform CI required by work procedures for systems or components requiring cleanliness controls. At the TRIDENT Refit Facilities, they are called Cleanliness Certifiers.

NOTE: ALL SYSTEMS REQUIRE VARYING DEGREES OF CLEANLINESS CONTROLS, BUT MAY NOT REQUIRE AN INDEPENDENT INSPECTOR. CRITICAL QUALITY CONTROL POINT INSPECTIONS BY SUPERVISORY PERSONNEL SHOULD BE USED WHERE APPROPRIATE.

b. Acceptance inspections of cleanliness by an independent inspector (Cleanliness Certifier or Cleanliness Inspector) are required for the following as a minimum: Oxygen or nitrogen systems per reference (c).

c. Results of cleanliness acceptance inspections required by paragraph 5.6.4.b of this chapter must be documented in the Technical Work Document and certified by a signature. These inspections will be identified by a (CI) or circle CI in the left margin, if performed by an independent inspector.

d. There are no specific requirements for independent CI or acceptance by a Cleanliness Certifier or Cleanliness Inspector, during many SOC maintenance actions. However, many jobs may be performed using a craftsman to verify cleanliness vice requiring independent Cleanliness Inspector presence. When the risk or consequence of loss of cleanliness is minimal during a maintenance action, such as work requiring bonnet removal from a small hydraulic valve, maintenance of cleanliness may be verified by the craftsman. When the risk or consequences of loss of cleanliness is significant, such as when removing the bonnet from an oxygen or nitrogen valve or when the type or quantity of detrimental materials (e.g., cutting oils) pose a significant risk, the use of an independent inspector to verify maintenance of cleanliness should be considered by the Department Head, Quality Assurance Officer (QAO) and Planning Officer (if assigned).

e. It is the responsibility of User Activity to ensure the appropriate cleanliness control requirements are incorporated in any maintenance for which clear responsibility for cleanliness is not assigned.

5.7 SOFTWARE. For SOC system maintenance, software should always be selected per the approved plans and drawings. However, to assist in the determination of acceptability of non-metallic packing materials (e.g., O-Rings, wall seals) for installation in SOC systems, decision aids have been developed from reference (d) and are provided in Part I, Chapter 5, Appendix A of this volume. Because software can contain critical attributes in SOC systems, a Liaison Action Request (LAR) to the Planning Yard may be appropriate to resolve conflicts in requirements.

a. It is Fleet policy that software (e.g., O-Rings, gaskets) will be reused only as a last resort. If new software is not available, software may be used after satisfactory inspection for damage, resiliency, discoloration or cracking per reference (d). This inspection will be documented in the CWP or FWP.

b. In all cases, the guidance provided in applicable Naval Sea Systems Command (NAVSEA) technical documents (e.g., drawings, component technical manuals) for SOC systems and components will be followed.

c. Reuse of software during daily PMS or other specified situations. The practice of not reusing software does not apply to items of daily PMS or items disturbed in the normal operation of a component per an approved operating procedure and, therefore, the O-Ring or gaskets may be reused provided the software has been inspected and is not damaged and new software is not required per the procedure.

5.8 SCOPE OF CERTIFICATION MAINTENANCE CERTIFICATION AND RE-ENTRY CONTROL.

5.8.1 Purpose. To issue the policy and procedures for:

a. Maintaining continuity of SOC certification during the operating cycle.

b. General Maintenance Certification Record administrative requirements.

(1) Reference (a) establishes the SOC certification criteria which must be accomplished on DSS in order for NAVSEA to certify the DSS for operation. Once the certification criteria are satisfied, NAVSEA will issue a letter of certification to the Sustaining Activity. Based upon the NAVSEA letter of certification, the Sustaining Activity and the User Activity will operate the DSS within the SOC as authorized by NAVSEA in the SOC Notebook, Operating Instructions, Operating Procedures, Emergency Procedures, technical manuals or other directives governing operations.

(2) Sustaining Certification for continued operation is dependent on:

(a) The positive control and re-certification of all re-entries into the SOC or hull integrity boundaries of the DSS, and

(b) The satisfactory and timely completion of Hull Integrity Procedure (HIP) requirements, and

(c) Completion of SOC PMS within periodicity and as written.

5.8.2 Re-Entry Control Program.

a. Applicability. This section is applicable whenever work is accomplished within a SOC boundary as defined by reference (a), and as depicted in the specific DSS SOC Notebook.

NOTE: THE SCA IS THE FINAL AUTHORITY FOR DETERMINING IF AN ITEM IS WITHIN THE SOC BOUNDARY. THE SOC NOTEBOOK IS AN ILLUSTRATED REFERENCE TO AID IN THE DETERMINATION OF WHETHER AN ITEM IS SOC OR NOT.

b. General. The REC Program includes those elements associated with maintenance or repair necessary to maintain the certification established by NAVSEA. The program provides auditable OQE of the following:

(1) What work was accomplished, including material and components used, re-test requirements, tests performed and test data.

(2) Why work was required.

(3) Who authorized and accepted the REC.

(4) Who did the work.

(5) When and where the work was accomplished, including the work and re-test boundaries.

c. When it becomes necessary to re-enter a SOC certified system or structure, it will be accomplished following the requirements and procedures of paragraph 5.8.3 of this chapter. Specific direction on completing the Maintenance Certification Record (MCR) (QA form 9) is contained in the instructions for QA form 9 in Part I, Chapter 11 of this volume.

d. Some exceptions to RECs are allowed due to frequent entry into the certified boundary for routine operations or maintenance actions. These exceptions and administrative or operational control requirements are contained in paragraph 5.8.6 of this chapter.

e. NAVSEA DSS Grams are not authorized for use by sustaining activities or maintenance activities managed by the Type Commander (TYCOM). DSS Grams will be engineered into the Joint Fleet Maintenance Manual where appropriate.

5.8.3 Re-Entry Control Administrative Procedures.

a. General. REC procedures provide a continuous, auditable record of work done on fully certified systems to provide positive assurance that they remain “certified”. Continuity of Certification is mandatory throughout the operational life of the DSS to ensure continued safe operation within design limits for personnel safety.

b. REC. When re-entry of a SOC system or a portion of a SOC system (or component) is necessary, the work and re-certification of the work will be documented using the MCR/REC, QA form 9.

(1) An MCR/REC will be used for each re-entry of each certified system, certified component or portion thereof as defined by the SOC certification boundaries.

(2) An MCR/REC will be restricted to a single system within a single mapping plan, a single component removed from a system or a single component removed or worked that requires multiple mapping plans.

(3) When an MCR/REC is opened on a DSS to permit removal of a component by Sustaining or User Activity for repair by an FMA as a "ship to shop" job, an MCR/REC must be opened by the FMA to cover the work and retesting of the work center work performed.

NOTE: AN AUTHORIZED CONTRACTOR MAY BE PERFORMING WORK AS THE FMA OR DEPOT ACTIVITY. THE SPECIFIC MEMORANDUM OF AGREEMENT WILL FURTHER AMPLIFY THESE PROCEDURES AND THE INTERACTION WITH THE SUSTAINING OR USER ACTIVITY.

(4) Where other certified systems must be re-entered to accomplish an MCR/REC, each system will have its own MCR/REC, except as described in paragraph 5.8.3.b.(2) of this chapter.

(5) The MCR/REC and records of MCR/REC will contain all of the OQE necessary to comply with paragraph 5.8.2.b. of this chapter.

(6) The work procedures associated with an MCR/REC will contain sufficiently detailed instructions to assure that all requirements for certification are properly accomplished and documented.

(7) Work and test boundaries will be defined in terms that are unique and directly identifiable with the specific mapping plan or task involved.

(8) When work and test boundaries are different, both boundaries will be set forth. The work boundaries, test boundaries and pressure boundaries should be specified and should not be confused. Work boundaries define the limits to which work was performed. Test boundaries define the limits for testing to certify the work; these tests may involve actuators, indicators or components other than those actually repaired. Pressure boundaries define (perhaps by valve lineups) the limits of the system which were pressurized to hydrostatically test the work. The pressure boundaries and test boundaries may be the same.

(9) On a "ship to shop" job the work boundaries may be best described by system joint designators even though those joints were not "disturbed" by the FMA (e.g., rebuild a Rubber Insert Sound Isolation Coupling, the work or test boundaries will be the end flanges that bolt up to the system, the joint identification numbers may be clearest identification of that boundary point).

(10) Previously certified hardware will be reused when certification is not affected by the re-entry, or when it can be recertified. The words "replace", "repair" and "re-install" should be used carefully. "Replace" means the use of a different or new component, while "re-install" indicates the use of the previously installed component, whether repaired or not. "Repair" indicates

that some refurbishment, other than mere disassembly or cleaning, was performed.

(11) Associated supporting documents such as Nondestructive Testing (NDT) records, material certification, test data, etc., will be specifically identified and referenced on the MCR/REC.

(12) When it becomes necessary for an FMA to re-enter NON-Depot Level Repairable certified components (rotatable pool, bench spares) which will not be returned to the DSS from which it was removed, or when a component is re-entered when the DSS on which it will be installed is not present, the FMA will control the work and document the re-entry using a QA form 9, MCR/REC. The MCR/REC will be initiated and closed out by the FMA. A copy of the completed MCR/REC will accompany the component when it is installed in a SOC certified DSS or shipped to another activity as proof of certification. These controls are required whether the certified component is to be installed in certified SOC DSS or stored. Each component must retain its certification. These RECs are separate from and in addition to any MCR/REC required for removal of a component from a SOC system and are only necessary whenever the original component will not be returned during the current availability to the ship from which it was removed.

(13) The CWP/REC Log, QA form 11, will be established and maintained by the QAO per the detailed instructions for QA form 11 in Part I, Chapter 11 of this volume. The QA form 11 must be reviewed by the QAO to verify all MCR/RECs are closed prior to manned or submerged operations of the DSS, except as discussed in reference (a), paragraph 3.7.4. The FMA QAO will maintain a log for the FMA only and one for each tended ship RECs. The QA form 11 must be reviewed by the FMA QAO to verify all FMA MCR/RECs are closed prior to manned or underway operations of each tended ship or DSS, except as discussed in reference (a), paragraph 3.7.4.

(14) Revisions to the MCR/REC are required for the following:

(a) Change in work boundaries (e.g., breaking additional or new mechanical joints not previously identified on the MCR/REC). A REC revision is not required to delete undisturbed joints. Deletion of joints must be authorized by cognizant technical authority and documented in the REC package. Block 14 must be annotated to reflect joint deletions prior to signing REC Block 17.

(b) Change in NDT or test requirements (e.g., “J” vice H hydrostatic test, when “H” was originally specified). This does not include a DFS for unaccomplished testing. A REC revision is not required for NDT incidental to minor repairs as defined in paragraph 5.8.3.b.(14) (d) of this chapter. NDT results must be documented in the REC package.

(c) Scope of work changes (e.g., originally replace software changed to weld repair sealing surfaces, originally replace software changed to metallic pressure boundary part replacement).

(d) The REC does not require revision in order to conduct minor repairs in support of the original scope of work. These minor repairs must be authorized by cognizant authority and documented in the REC package, with appropriate OQE generated and added to Block 16 prior to the signing of Block 16 of the QA form 9. Hot work is not classified as a minor repair. Minor repairs authorized to be performed without a revision are:

1 Minor machining such that the machining is within the limits of the technical drawing, Maintenance Standard or technical manual (e.g., taking a skim cut on an O-Ring groove such that the final machined dimensions are within the tolerances of the technical reference).

2 Epoxy repairs.

3 Electroplate repairs.

4 Preventive coating application.

(15) A revision cannot be used when a new MCR/REC is required (e.g., different system must be entered to conduct repair).

(16) REC Cancellation and REC Administrative Closeout. In the event a CWP is prepared and the job is planned to be accomplished but for some reason it was cancelled or deferred, the following actions should be taken:

(a) If work was authorized to start, the CWP or REC must be revised to reflect that no work was accomplished and the REC was revised to close administratively. The QA form 11 log will be annotated that the job was “Cancelled”.

(b) If work was not authorized to start, and the job has been cancelled, annotate the remaining blocks of the QA form 9 with “NA” and note that the REC was cancelled and no work was accomplished. Blocks 20 and 21 will be signed to formally close the REC. If the REC was prepared by a Repair Facility, a copy of the QA form 9 will be provided to the tended unit with the Certification Continuity Letter. QA form 11 log will be annotated that the job was “Cancelled”.

(c) If work was not authorized to start and the job has been deferred to a future maintenance period, the REC is not required to be cancelled. The QA form 11 log will be annotated as "Deferred". This is not considered an open REC.

(17) As a policy, RECs for work within the SOC certification boundary or test documents within the SOC Boundary must not be closed out until resolution of all actions necessary to verify certification has been maintained when any breach of the boundary has occurred. An acceptable alternative, however, is to close out a REC or test documents within the SOC Boundary by transferring remaining at sea testing actions to a separate auditable accountability system (e.g., DFS, Sea Trial Agenda). All RECs closed in this manner must be annotated by the activity with the reference documents that contained the transfer actions. This policy must be verified by the activity accomplishing the work, supervising authority, submarine Commanding Officer and ISIC.

(18) Prior to manned operations (and each submarine underway for submerged operations) except as discussed in reference (a) paragraph 3.7.4, the USER ACTIVITY will submit to the Immediate Superior In Command (ISIC), a written report per paragraph 5.8.7 of this chapter. An SOC certification letter is only required.

(19) Ship's Force is responsible for providing "Buddy" SOC REC serial numbers to outside repair activities performing SOC work on the DSS systems. The Buddy REC number is issued from ship's QA form 11 log and will be documented on repair activities SOC REC FORM. The use of the Ship's Force Buddy REC number is not required for Chief of Naval Operations or TYCOM scheduled availabilities.

5.8.4 Using a Departure from Specification to Close a Maintenance Certification Record Re-Entry Control. If an MCR/REC is closed by transferring accountability for testing to an at-sea testing DFS, the DSS will be restricted per the following requirements:

a. The unit must dive to the maximum depth at which it is to be certified or recertified to operate. The affected joints must be inspected for joint tightness during initial submergence and subsequently at 200-foot intervals. Operations are restricted to that depth at which satisfactory joint tightness has been certified. Inspections must be conducted at 200-foot intervals down to the maximum depth at which it is to be certified or recertified to operate. The test dive may be a single dive or a series of dives to accomplish the same purpose. The DSS will stay at test depth for the time required as detailed in the normal retest procedure (i.e., 30 minutes if the normal joint tightness test is for 30 minutes) plus adequate time to permit inspections.

NOTE: THE DSS MAY BE MANNED OR UNMANNED WHILE THE UNIT IS PROGRESSING TO EACH DEPTH INCREMENT. IF THE UNIT IS UNMANNED, BILGE ALARMS OR OTHER MEANS OF DETECTING FAILURES MUST BE PROVIDED TO ALERT OPERATORS OF ANY DSS SYSTEM FAILURE. SUFFICIENT TIME MUST BE ALLOTTED AT EACH 200 FOOT DEPTH INCREMENT FOR A POTENTIAL LEAK TO REGISTER

AN ALARM BEFORE PROCEEDING TO THE NEXT DEPTH. IF THE BILGE ALARM (OR OTHER MEANS) INDICATES A FAILURE, THE PROHIBITION AGAINST MANNED OPERATIONS AND DEPTH LIMITATIONS OF 5.8.4C. BELOW APPLY. FINAL INSPECTIONS OF AFFECTED JOINTS DURING UNMANNED TESTING WILL BE MADE AT 200 FEET OR SHALLOWER PROVIDING NO OTHER INDICATIONS OF POTENTIAL FAILURE WERE NOTED AT THE DEEPER DEPTHS.

b. If inspections of the system or component during the controlled dive are satisfactory, the DSS is released for operations with no immediate report required. Clearance of the DFS will be reported as required by Part III, Chapter 8 of this volume.

c. If inspections of the system or component during the initial submergence or subsequent deeper depths are unsatisfactory:

(1) The DSS is not authorized manned operations at any depth.

(2) The DSS is restricted to a depth of 200 feet unless specific authorization is received from the TYCOM approving unmanned operations at depths deeper than 200 feet.

(3) An immediate report of unsatisfactory inspections will be made to the ISIC.

d. If unmanned operations at depths greater than 200 feet are required, the Commanding Officer or Officer-in-Charge must provide justification and request approval from the TYCOM (info ISIC, NAVSEA, 07Q and applicable Program Executive Officer) to conduct unmanned operations at depths deeper than 200 feet.

e. Deficiencies discovered that are not joints specified for inspection in the MCR/REC and DFS must be dispositioned as required by Part III, Chapter 8 of this volume and are not cause for depth restrictions unless the Commanding Officer or Officer-in-Charge deem necessary.

5.8.5 Voyage or At-Sea Repairs. If emergent repairs or at-sea repairs involve REC work, the ship or DSS is limited to 200 feet or less until the ship's Commanding Officer has signed for the closed REC.

5.8.6 Exceptions to Re-Entry Control. Certain systems and equipment within the certified SOC boundary require frequent entry into the certified boundary for routine operations or maintenance actions in order to enable the ship to carry out its mission. These systems and components are listed in the DSS SOC Notebook. The operational requirements for these systems and equipment have been reviewed. Inherent operational controls in the present system are considered adequate and the items are considered safe exceptions to the formalized REC system. The operational control which is considered as meeting the intent of the REC requirements is specified in the DSS SOC Notebook and must be in effect in order to use the exception. Some REC exceptions permit removal of material from the installed system to perform maintenance or testing. The original material must be reinstalled or a complete REC (controlled work package) must be used to capture the installation of new Material Control Division A, B or C material or certification testing for new material.

NOTE: MCR/REC EXCEPTIONS ARE FOR USER ACTIVITY'S USE ONLY AND ARE NOT AUTHORIZED FOR USE BY REPAIR ACTIVITIES. REPAIR

ACTIVITIES MUST NOT REQUEST THE SHIP TO INVOKE A REC EXCEPTION IN CONJUNCTION WITH REPAIR ACTIVITY WORK UNLESS SPECIFICALLY AUTHORIZED BY THE USER ACTIVITY'S SOC NOTEBOOK.

Controlled Assembly Requirements for SOC REC Exceptions.

a. An FWP per part I, chapter 2 of this volume, (e.g., PMS MRC, technical manual pages, detailed maintenance outline), will be used to control and document all work performed as a REC exception.

b. Controlled Assembly requirements are:

(1) Verification that surface finishes of gasket or O-Ring sealing surfaces are per applicable specifications.

(2) Verification that fastener material and installation is per applicable specifications.

(3) Verification that gaskets or O-Rings are properly installed and per applicable specifications.

(4) Assembly is documented on a QA form 34 or 34B as applicable.

(5) Inspected by a Quality Assurance Inspector or Quality Assurance Supervisor.

(6) Verification that cleanliness was maintained per MIL-STD-1622 for critical applications or reference (c) (where applicable). Document "Cleanliness maintained per [MIL-STD-1622 or reference (c) (as applicable)]" and include the Craftsman's signature and date in the remarks block of the QA form 34.

5.8.7 Certification Continuity Report. In order to ensure continued certification of each DSS, periodic reports are required per the following requirements:

a. Prior to each manned operation, except as discussed in reference (a), paragraph 3.7.4, the User Activity will submit to the ISIC (deployed ISIC, if deployed), a written certification continuity report, which addresses the status of the DSS SOC RECs, testing of SOC RECs, HIPs completed and RECs closed by transferring actions to a DFS. Submarines must submit this report to the ISIC prior to dockside manned operations or each underway for submerged operations (not required to issue DSS certification continuity report for work performed at sea). Appendix A provides the minimum requirements for the letter or message. If no SOC controlled work, testing or HIPs were accomplished, no report is required.

b. Prior to the DSS submerged operations after an FMA availability, refit or inport period when SOC work was performed, the FMA Commanding Officer will issue a letter report to each tended DSS, with a copy to the Sustaining Activity and parent ISIC, which addresses the status of SOC CWPs, testing of SOC systems, HIP maintenance requirements completed and SOC non-conformances (i.e., DFS and LAR). Appendix B provides the minimum requirements for the letter or message.

c. Prior to the DSS underway, activities other than FMAs which perform SOC maintenance on a DSS will issue a report to the DSS with a copy to the Sustaining

Activity and parent ISIC, certifying that the maintenance performed meets the requirements of applicable specifications invoked by the governing document and the Memorandum of Agreement.

d. In order to ensure continued certification of those DSSs that frequently change custody between activities such as the Dry Deck Shelters, off-loads and on-loads will use the format of Appendix C and D respectively to transfer custody of the vehicle. The receiving activity will conduct a review of the items identified in the transfer of custody letter or message and then report acceptance of custody using the format of Appendix E.

5.9 MATERIAL CONDITION MONITORING HULL INTEGRITY PROCEDURES PROGRAM (SUBMARINES ONLY).

a. The HIP Program is applicable to specific DSS. The program provides the minimum material condition requirements to Sustain Certification, with an established periodicity to accomplish. It is one of the programs required to maintain SOC certification. Accomplishment of the HIP will identify changes within the SOC or hull integrity boundaries of the ship, which result from the degradation caused by the service environment.

b. Administration, scheduling and reporting of the HIP program will be per the requirements of Volume VI, Chapter 38 of this manual. A summary of HIP status will be reported by the DSS User Activity per paragraph 5.8.7 of this chapter.

c. When performing corrective maintenance, the following guidance is provided with regard to HIPs:

(1) When performing corrective maintenance, associated HIP should be reviewed to determine if the HIP should be accomplished concurrently ahead of scheduled periodicity to preclude having to disassemble equipment again to accomplish the HIP. The DSS schedule or FMA resources may preclude concurrent, early accomplishment of HIPs.

(2) If HIP criteria are used, in total or in part, during corrective maintenance, and a measured parameter is found out of tolerance and not restored, a major DFS must be submitted, following the instructions of Part III, Chapter 8 of this volume, even though the periodicity of the HIP MRC has not expired.

(3) When performing corrective maintenance that does affect a HIP measured parameter, perform that portion of the applicable HIP.

d. Following installation of an alteration (Field Change, Temporary Modification) that modifies the structure of the DSS, such that access to vital equipment is or may be impacted, the Sustaining Activity must evaluate the need to perform the Access to Vital Equipment DSS HIP. If access to vital equipment could be restricted, the Sustaining Activity must perform the applicable DSS HIP. Partial accomplishment of the DSS HIP is acceptable if appropriate for the alteration. If partial accomplishment is performed, provide a copy to the installing activity and the ISIC. If the complete DSS HIP is accomplished, provide a copy to normal distribution.

5.10 TEMPORARY MODIFICATIONS. The User Activity or Sustaining Activity must obtain formal approval from the Program Manager for any use of special equipment or modification of a DSS unit on a temporary basis.

5.10.1 Temporary Modification Program. NAVSEA PMS 390N and 07 have established a Temporary Modification Program. Each User Activity or Sustaining Activity must manage Temporary Modifications to DSS as directed in reference (e).

NOTE: TEMPORARY MODIFICATIONS APPROVED FOR USE ON ONE DSS UNIT WILL NOT BE INSTALLED ON ANOTHER DSS UNIT WITHOUT PRIOR APPROVAL OF THE PROGRAM MANAGER WITH SCA CONCURRENCE.

5.10.2 Configuration Control. Installation of a previously approved temporary modification on the same unit is authorized only when the approval documentation is available and contains approval for re-installation for continuing use.

PART III
CHAPTER 6
MATERIAL CONTROL

REFERENCES.

(a) NAVSEA 0948-LP-045-7010 - Material Control Standard (Non-Nuclear)
(b) NAVSEA SS800-AG-MAN-010/P-9290 - System Certification Procedures and Criteria Manual for Deep Submergence Systems
(c) NAVSUPWSSINST 4355.7 - Level I Systems Scope of Certification and Fly-By-Wire Stock Program Material Procedures
(d) NAVSEALOGCENINST 4355.14 - Receipt Inspection Requirements for Deep Submergence Systems-Scope of Certification (DSS-SOC) Stock Program Material
(e) NAVSEA 0924-062-0010 - Submarine Safety (SUBSAFE) Requirements Manual

6.1 PURPOSE. To define responsibility and provide guidance for material control which includes procurement, receipt inspection, stowage, issue, in-process control and records for controlled material used in maintenance.

6.1.1 Material Control Divisions (MCD). MCD will be used to define levels of control and Objective Quality Evidence (OQE) within the Scope of Certification (SOC) boundary. Material will be controlled as either MCD A, B or C depending on its application. Controlled material is the term used in this manual to describe those materials designated for use in or removed from SOC boundary which are in the custody of the end-user work center, division Controlled Material Petty Officer (CMPO) or are undergoing receipt inspection, have been certified for use and are tagged with the appropriate Quality Assurance (QA) forms of this manual.

6.1.2 Deep Submergence Systems (DSS)-SOC. DSS-SOC material in the custody of the Naval supply system, which includes supply departments onboard ships, Fleet Maintenance Activities (FMA) and contractors is identified as DSS-SOC stock program materials.

6.2 CONTROLLED MATERIAL DETERMINATION. This section describes the use of the specific references used to identify proper material for repair work. This section also provides references and guidance necessary to obtain this understanding and to determine if controlled material is required, and if so, the proper level of control.

6.2.1 General Requirements. In order to determine the correct material to be installed in a DSS and to properly certify the material prior to installation, the work center responsible for the specific area of the DSS must first gather the appropriate reference material:

a. Naval Sea Systems Command (NAVSEA) approved “List of Material” or “Component List” which may be part of a drawing, diagram or may be a separate document.

b. System or Component technical manual.

c. Applicable "Y" suffixed Allowance Parts List (APL) from the ship's Coordinated Shipboard Allowance List. Y suffixed APLs are specific to DSS-SOC systems and components.

6.2.2 Scope of Certification Material Control Divisions. SOC components will be controlled as MCD A, B or C. The definitions and scope of boundaries for each MCD are:

a. Material Control Division A: Any material in a manned DSS whose single failure would result in DSS loss with DSS personnel on board or death of the DSS personnel. As such MCD-A is assigned to any component for which back-up protection is not feasible and therefore even a single failure is unacceptable. Types of MCD-A material are:

(1) Components exposed to the differential pressure between sea pressure and DSS internal atmospheric pressure.

(2) Components that operate at greater than 400 psig which are internal to the DSS and cannot be isolated from the pressure source either by a directly accessible or remotely operated shut off valve.

(3) Any piping that penetrates the pressure hull from the pressure hull to and including the inboard flange of the first directly accessible or remotely operated shut-off valve.

(4) All oxygen and hydrogen systems with a design pressure of 100 psig and above.

(5) Components within an emergency or back-up system (e.g., jettison and emergency life support systems and release devises for external appendages) where maximum assurance that the system will operate when needed is essential to preventing a single failure in a primary system from resulting in the death or injury of DSS personnel.

(6) Components such as pressure hull (plate, forgings, castings, weld filler material, inserts and penetrations) hard structure, pressure storage tanks and flasks located in manned spaces, high pressure or sea connected piping components including mechanical joints and associated fasteners.

b. Material Control Division B: Any material or component where failure would require immediate emergency corrective action, the activation of any emergency system or emergency return to the surface. MCD-B material includes:

(1) Low pressure (<400 psig) piping and component assemblies in the primary and back-up life support systems.

(2) The portion of the electrical power distribution system exposed to sea pressure.

(3) Instruments and sensors used to monitor external ambient conditions.

(4) Instruments and sensors used to monitor or control DSS functions.

(5) Hoses, tethers and umbilical's providing life support or thermal protection.

(6) All SOC piping and piping components external to manned spaces.

(7) All other low pressure (<400 psig) SOC piping and piping components within the manned spaces not otherwise classified as MCD-A.

(8) Mechanical joints and fasteners, not otherwise classified as MCD-A, used on SOC piping systems and piping components.

c. Material Control Division C: Any SOC material that is not classified as either MCD-A or MCD-B. MCD-C material includes:

(1) Emergency electrical power distribution systems.

(2) Portions of the main electrical power distribution system and electrical components not classified as MCD-A or MCD-B.

(3) Soft goods such as O-rings, gaskets and seals.

6.3 RECEIPT INSPECTION OF CONTROLLED MATERIAL. This section provides the guidance and procedures for Sustaining Activities, User Activities and FMAs to conduct and document receipt inspections to certify controlled material as acceptable for installation.

NOTE: THE TECHNICAL INSPECTION REQUIREMENTS OF THE APPLICABLE TECHNICAL MANUAL, DRAWING OR OTHER TECHNICAL REFERENCE AND PIPING SYSTEM MATERIAL REQUIREMENTS (E.G., CLEANLINESS, DIMENSIONS, SURFACE FINISH) ARE THE RESPONSIBILITY OF THE END-USER (WORK CENTER SUPERVISOR OR CRAFTSMAN) TO ACCOMPLISH PRIOR TO INSTALLATION AND ARE NOT PART OF THE RECEIPT INSPECTION OF THIS MANUAL.

NOTE: IN SOME PROGRAMS, A CERTIFICATE OF CONFORMANCE (COC) IS ISSUED BY THE NAVY SUPPLY SYSTEM OR THE CONTRACTOR MANAGING THE STOCK PROGRAM FOR THE NAVY. NAVSEA HAS AUTHORIZED THE SUPPLY SYSTEM OR CONTRACTOR TO RETAIN ALL REQUIRED DOCUMENTS AND ISSUE THE COC TO THE SUSTAINING OR USER ACTIVITY AS SUPPORTING DOCUMENTATION FOR RECEIPT INSPECTION. THE SUSTAINING OR USER ACTIVITY MAY REQUEST ALL SUPPORTING DOCUMENTATION FROM THE CONTRACTOR AT ANYTIME.

6.3.1 General Requirements. Once the material ordered for use in SOC systems is received, the material must be receipt inspected. Receipt inspection of this material is required to establish positively that the material is the correct material for the job. For SOC MCD-A material, a unique marking system is required for "traceability" which links the material to OQE. OQE for the material is the quantitative and qualitative data proving that the material conforms to specified requirements. To meet the requirements for traceability, the following requirements are instituted:

a. Receipt inspection of the material.

b. Use of QA tags in association with the item(s).

c. Segregated stowage for DSS-SOC stock program material and controlled material.

d. Custody by CMPO or Controlled Material Handlers (CMH), Quality Assurance Inspectors (QAI) or qualified craftsman.

e. Use of material verification procedures, as required by reference (a), during installation of the material.

f. SOC material directly procured from Electric Boat or Teledyne Brown Engineering provided as interim spares or initial outfitting may be received with special tags, titled "Record of DSS-SOC Receipt Inspection" (Figure 6-1 Electric Boat, Figure 6-2 Teledyne Brown Engineering) that denote all inspection and certification attributes have been met except for a physical inspection to confirm the material was not damaged in shipping. SOC Material procured from Naval Surface Warfare Center Panama City Division can be provided for use with a special tag (Figure 6-3 Naval Surface Warfare Center Panama City Division) that denote all inspection and certification attributes have been met except for a physical inspection to confirm the material was not damaged in shipping.

(1) The blue tags and yellow tags, if received, will be retained as OQE and used to receipt inspect material.

(2) The Electric Boat blue tags must have the part number and stock number of the material ordered and the material received must be the material ordered.

(3) The Teledyne Brown Engineering blue tag is acceptable for SWCS material only and must have the applicable drawing number, part number, serial number (MCD A must be a unique number), remarks, NSN or NICN, material order, purchase order number, and certifying agent signature to include employee number and date.

(4) The Naval Surface Warfare Center Panama City Division yellow tag is acceptable for SWCS material only and shall have the following:

(a) National Stock Number.

(b) Part number (include drawing number revision).

(c) Material description.

(d) Serial number.

(e) Condition code.

(f) Type and size of material (for raw stock only).

(g) Unit of issue and initial quantity inspected.

(h) MCD designation if SOC material.

(i) Contract number, purchase order number, and work instruction number, as applicable (for shop or assembly).

(j) Remarks section to include Quality Control log number.

(k) Email contact (NSWCPCD_SDV_CM@navy.mil).

(l) Any other pertinent information, and signature or stamp of person affixing tag.

g. Level I Stock Program material ordered for a DSS-SOC application, as defined by the ship's Y-suffixed Allowance Parts List, and received from the Naval supply system with Material Identification and Control (MIC) numbers, may be used in DSS-SOC applications on all submarines.

h. Level I material that was not procured per sub-paragraph g. may be used in DSS-SOC applications. Under this condition, the following conditions apply.

(1) The MIC satisfies:

(a) Material Marking Requirements

(b) Records of Chemical and Mechanical Tests

(2) The MIC does not satisfy:

(a) Unique DSS-SOC OQE

(b) Lubrication and Thread Locking

(c) Paints

(d) Unique Clean Requirements

(e) DSS-SOC required as required by the specification

(f) DSS-SOC required Nondestructive Testing

(g) Certification of Compliance and when applicable, Certificate of Test

i. Navy supply stock program material with Special Material Identification Codes (SMIC) LI, C1, Q3 or VG which are also used in DSS-SOC applications are identified by APLs that reflect a Y-suffix, e.g., 887056021Y. This material has been procured to meet any additional requirements of reference (b).

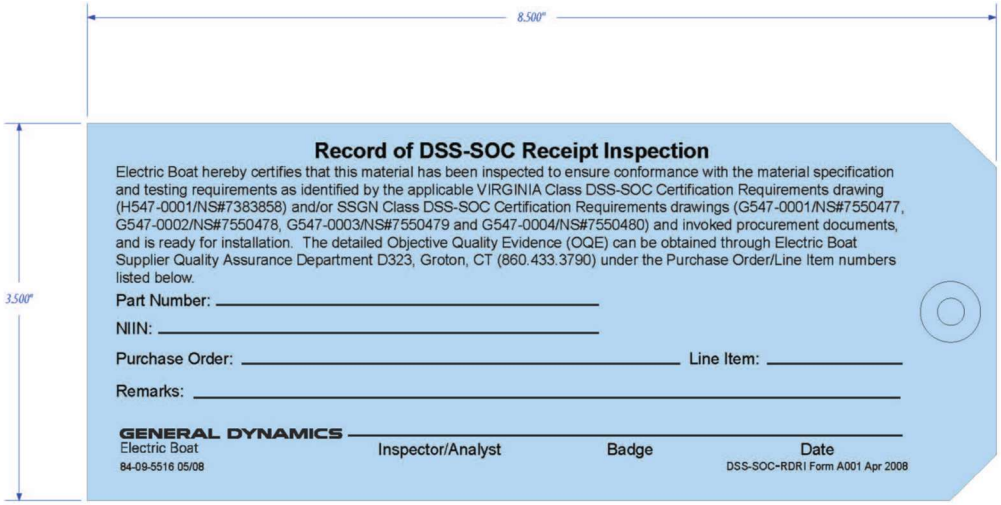

Figure 6-1 Electric Boat Record of DSS-SOC Receipt Inspection

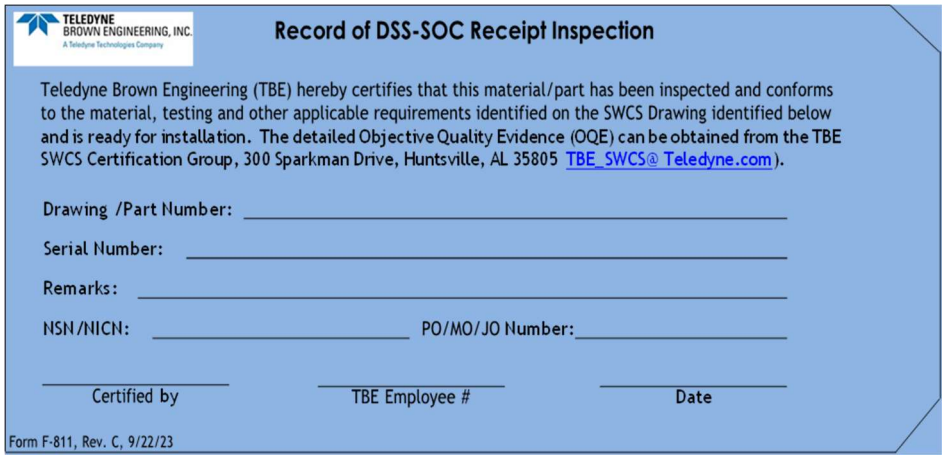

TELEDYNE BROWN ENGINEERING, INC.
A Teledyne Technologies Company

Record of DSS-SOC Receipt Inspection

Teledyne Brown Engineering (TBE) hereby certifies that this material/part has been inspected and conforms to the material, testing and other applicable requirements identified on the SWCS Drawing identified below and is ready for installation. The detailed Objective Quality Evidence (OQE) can be obtained from the TBE SWCS Certification Group, 300 Sparkman Drive, Huntsville, AL 35805 TBE_SWCS@ Teledyne.com).

6.3.2 Quality Assurance Forms for Receipt Inspections. The QA forms necessary to complete and document receipt inspections (QA form 1, QA form 2 and QA form 3) and instructions are found in Part I, Chapter 11 of this volume and are further discussed in paragraph 6.3.4 of this chapter.

6.3.3 NAVSUP WSS DSS-SOC Stock Program Material. DSS-SOC Stock Program material requires the material to be shipped to Portsmouth Naval Shipyard for Receipt Inspection prior to issuance to the end user per references (c) and (d). Material received from Portsmouth Naval Shipyard is shipped with Ready-for-Issue (RFI) tags (Figure 6-4) which contain the Receipt Inspection serial number, MCD level, National Stock Number (NSN) with a SMIC (D0, D4, D5, D6, D7, or D8) and contract number. RFI tag (Figure 6-4) denotes all inspection and certification attributes have been met except a physical inspection to confirm the material was not damaged in shipping. Material previously procured by the NAVSUP Weapons Systems Support (WSS) DSS-SOC Stock Program required the OQE to be shipped with each item.

Material currently held by activities in condition code "A" is acceptable for use providing the required OQE is packaged with the material.

Figure 6-4 DSS-SOC Stock Program Material Ready-For-Issue (RFI) Tag (examples)

6.3.4 General Requirements for Receipt of Scope of Certification Material. This section contains the requirements for receipt inspection and control of new materials. Section 6.5 of this chapter contains the requirements for handling controlled material removed from a DSS for maintenance purposes.

a. MCD-A material received from the Navy supply system with either a D5 or D6 SMIC and an RFI tag, or an EB Blue tag, will be receipt inspected by the CMPO using the following procedure:

Procedure	Responsibility
Visually inspect the material.	Sustaining or User Activity, CMPO or CMH
Check that quantity received is same quantity ordered.	Sustaining or User Activity, CMPO or CMH
Check for completeness (i.e., are all parts of a component present); disassembly is not required or desired.	Sustaining or User Activity, CMPO or CMH
Check NSN on part and verify that it is the NSN ordered.	Sustaining or User Activity, CMPO or CMH
Verify item has either 1) a RFI tag attached which contains the Receipt Inspection serial number, MCD level, NSN with a SMIC (D5 or D6), and contract number, or 2) an EB Blue tag. Navy supply material received that does not meet this criterion must be receipt inspected using the receipt inspection process for Navy supply material received without a RFI tag attached per paragraph 6.3.4.c of this chapter.	Sustaining or User Activity, CMPO or CMH
Verify item is permanently marked with a receipt inspection number that matches the receipt inspection number on the RFI tag, and that is formatted per paragraph 6.3.7.2 of this chapter.	Sustaining or User Activity, CMPO or CMH
Verify that material received with a SMIC of D6 is packaged for special cleanliness (MIL-STD-1330 or MIL-STD-1622) and that the package is securely sealed and the proper cleanliness tag is present.	Sustaining or User Activity, CMPO, Cleanliness Inspector or CMH
Fill out QA form 1 and attach the shipping papers, if provided.	Sustaining or User Activity, CMPO or CMH

NOTE: QA FORM 1 IS NOT REQUIRED FOR SHIP'S FORCE WHEN PERFORMING RECEIPT INSPECTION OF MATERIAL TO BE IMMEDIATELY INSTALLED FOR A SPECIFIC JOB. IF ALL MATERIAL IS NOT UTILIZED IN THE ONGOING JOB, QA FORM 1 MUST BE FILLED OUT PRIOR TO PLACING THE MATERIAL IN A STOWAGE LOCKER.

File QA form 1 with all applicable documents.	Sustaining or User Activity, CMPO or CMH
Fill out and attach QA form 2 to each unit of issue accepted. Turn over material to craftsman or stow in approved storage area.	Sustaining or User Activity, CMPO or CMH
If material fails any of the steps, reject and attach QA form 3.	Sustaining or User Activity, CMPO or CMH

Forward QA form 1 to QA Office when the material has been issued for installation.	CMPO or CMH

b. MCD-B material received from the Navy supply system with either a D0 or D4 SMIC and an RFI tag, or an EB Blue tag, will be receipt inspected by the CMPO using the following procedure:

Procedure	**Responsibility**
Visually inspect the material.	Sustaining or User Activity, CMPO or CMH
Check that quantity received is same quantity ordered.	Sustaining or User Activity, CMPO or CMH
Check for completeness (i.e., are all parts of a component present); disassembly is not required or desired.	Sustaining or User Activity, CMPO or CMH
Check NSN on part and verify that it is the NSN ordered.	Sustaining or User Activity, CMPO or CMH
Verify item has either 1) a RFI tag attached which contains the Receipt Inspection serial number, MCD level, NSN with a SMIC (D0 or D4), and contract number, or 2) an EB Blue tag. Navy supply material received that does not meet this criterion must be receipt inspected using the receipt inspection process for Navy supply material received without a RFI tag attached.	Sustaining or User Activity, CMPO or CMH
Verify that material received with a SMIC of D0 is packaged for special cleanliness (MIL-STD-1330 or MIL-STD-1622) and that the package is securely sealed.	Sustaining or User Activity, CMPO, Cleanliness Inspector or CMH
Fill out QA form 1 and attach the shipping papers, if provided.	Sustaining or User Activity, CMPO or CMH

NOTE: QA FORM 1 IS NOT REQUIRED FOR SHIP'S FORCE WHEN PERFORMING RECEIPT INSPECTION OF MATERIAL TO BE IMMEDIATELY INSTALLED FOR A SPECIFIC JOB. IF ALL MATERIAL IS NOT UTILIZED IN THE ONGOING JOB, QA FORM 1 MUST BE FILLED OUT PRIOR TO PLACING THE MATERIAL IN A STOWAGE LOCKER.

File QA form 1 with all applicable documents.	Sustaining or User Activity, CMPO or CMH
Fill out and attach QA form 2 to each unit of issue accepted. Turn over material to craftsman or stow in approved storage area.	Sustaining or User Activity, CMPO or CMH

If material fails any of the steps, reject and attach QA form 3.	Sustaining or User Activity, CMPO or CMH
Forward QA form 1 to QA Office when the material has been issued for installation.	CMPO or CMH

c. Receipt of MCD-A material without either an RFI tag, an EB Blue tag or received from a contractor or activity assigned by the Program Manager to supply the specific DSS will be receipt inspected by the CMPO and certified by the Quality Assurance Officer (QAO) using the following procedure:

Procedure	Responsibility
Review vendor data, Military Standard (MIL-STD), or Naval Shipyard or FMA manufacturing and test data to ensure that it all matches. See note at end of this table regarding vendor data.	Sustaining or User Activity, CMPO, CMH, QAI and QAO
Transfer MIC markings from accompanying OQE onto the item if the MIC is not already marked on the item. Disassembly of the item is not allowed or required.	Sustaining or User Activity, CMPO, CMH or QAI
Fasteners will be appropriately marked and color-coded if required.	Sustaining or User Activity, CMPO, CMH or QAI
Fill out QA form 1 to document the receipt inspection.	Sustaining or User Activity, CMPO, CMH or QAI

NOTE: QA FORM 1 IS NOT REQUIRED FOR SHIP'S FORCE WHEN PERFORMING RECEIPT INSPECTION OF MATERIAL TO BE IMMEDIATELY INSTALLED FOR A SPECIFIC JOB. IF ALL MATERIAL IS NOT UTILIZED IN THE ONGOING JOB, QA FORM 1 MUST BE FILLED OUT PRIOR TO PLACING THE MATERIAL IN A STOWAGE LOCKER.

NOTE: IF THE COMPONENT HAS A SHORTENED MIC MARKING, ENSURE THE FULL MIC MARKING FROM THE SHIPPING DOCUMENTS, TAGS, OR PACKAGING IS ENTERED ON QA FORM 1 AND QA FORM 2.

File QA form 1 with all applicable documents.	Sustaining or User Activity, Quality Assurance Supervisor, QAI or CMPO
Fill out and attach QA form 2 to the item. Turn over material to craftsman or stow in approved storage area.	Sustaining or User Activity, CMPO, CMH or QAI
Forward QA form 1 to QA Office when the material has been issued for installation.	CMPO or CMH
If material fails any of the steps, reject the material and attach QA form 3.	CMPO or CMH

NOTE: VENDOR DATA - MATERIAL RECEIVED DIRECTLY FROM THE MANUFACTURER REQUIRES CERTIFICATION DOCUMENTATION PER PARAGRAPHS 6.3.4.c.(1) THROUGH 6.3.4.c.(5) OF THIS CHAPTER AS A MINIMUM. A THOROUGH REVIEW OF THE PROCUREMENTS SPECIFICATIONS IS NECESSARY TO ENSURE ALL REQUIREMENTS ARE MET.

NOTE: NAVAL SHIPYARDS AND FMAS MAY USE A LOCALLY GENERATED TASK GROUP INSTRUCTION (TGI) OR CONTROLLED WORK PACKAGE (CWP) IN LIEU OF A COC AND COT FOR RECEIPT INSPECTION OF MCD A DSS SOC COMPONENTS MANUFACTURED OR FABRICATED BY THE ACTIVITY. THE TGI OR CWP MUST CONTAIN ALL OQE NECESSARY TO ESTABLISH THAT THE PART HAS BEEN PROPERLY MANUFACTURED, FABRICATED AND TESTED TO THE REQUIREMENTS OF APPLICABLE DRAWINGS AND SPECIFICATIONS, AS WELL AS TO MEET THE CERTIFICATION CRITERIA OF REFERENCE (B). THE TGI OR CWP HAS THE SAME RETENTION REQUIREMENTS AS A COC OR COT FOR A DSS SOC APPLICATION.

NOTE: IF ANY ITEM IS CERTIFIED AS LEVEL I, IT IS CONSIDERED AS MEETING THIS REQUIREMENT.

(1) Chemical and mechanical testing is required for all metallic material. Chemical and mechanical testing for non-metallic materials as required by material specification.

(2) Records of Nondestructive Testing as required by the specification.

(3) Records of testing as required by the specification for implosion testing, cleanliness testing, toxicity or flammability testing, etc.

(4) COC. Certifies that the components comply with the requirements of the procurement documents, invoked specifications and drawings. Asserts that the physical and chemical properties (material type, yield strength, tensile strength, elongation or hardness testing) are as specified in the contract specifications. The certificate will include:

(a) Contractors name, address, phone number and date.

(b) The issuing agency’s purchase order number.

(c) Item nomenclature of the purchased item (the product is identified by description, amount, lot number, etc.).

(d) Contractor’s or authorized person’s signature.

NOTE: INSTALLATION OF MATERIAL ON THE BASIS OF A COC WILL NOT RELIEVE THE INSTALLING ACTIVITY OF THE RESPONSIBILITY FOR INCORPORATING MATERIAL WHICH CONFORMS TO THE REQUIREMENTS OF THE DRAWINGS AND SPECIFICATIONS. MATERIAL NOT CONFORMING TO THE REQUIREMENTS OF THE DRAWINGS AND SPECIFICATIONS WILL BE SUBJECT TO REJECTION WHETHER IN PLACE OR NOT.

(5) In some cases a Certificate of Test (COT) may be required as evidence that testing was completed. The distinguishing characteristic of a COT is that it presents data which is

the result of positive, reproducible testing performed to determine the quality of the product. It may be contained within the COC. The COT, issued by a test laboratory, states that a certain product was tested for certain qualities and must include:

(a) Contractors name, address, phone number and date.

(b) The issuing agency's purchase order number.

(c) Item nomenclature of the purchased item (the product is identified by description, amount, lot number, etc.).

(d) Contractor's or authorized person's signature.

(e) Test data is given along with the conclusion on conformance or non-conformance.

NOTE: IF ALL TESTING REQUIRED BY REFERENCE (b) CANNOT BE ACCOMPLISHED, THEN THE NEW COMPONENT CANNOT BE USED UNTIL A DEPARTURE FROM SPECIFICATION (DFS) IS SUBMITTED PER PART I, CHAPTER 8 OF THIS VOLUME.

NOTE: MORE THAN ONE MIC NUMBER MAY BE ON A COMPONENT (E.G., VALVE BODY MAY HAVE ONE MIC NUMBER AND THE BONNET MAY HAVE ANOTHER MIC NUMBER). IF THE COMPONENT HAS A SHORTENED MIC MARKING, ENSURE THE FULL MIC MARKING IS AVAILABLE ON THE SHIPPING DOCUMENTS, TAGS OR PACKAGING. VERIFY THAT THE SHORTENED MIC MARKING IS CORRECT PER PARAGRAPH 6.3.7 OF THIS CHAPTER AND REFERENCE (a).

d. Receipt of MCD-B material without an RFI tag, an EB Blue tag or received from a contractor or activity assigned by the Program Manager to supply the specific DSS will be receipt inspected by the CMPO and certified by the QAO using the following procedure:

Procedure	Responsibility
Review vendor data (if provided with material), MIL-STD, or Naval Shipyard or FMA manufacturing and test data to ensure that it all matches. See note at end of this table regarding vendor data.	Sustaining or User Activity, CMPO, CMH, QAI or QAO
Fill out QA form 1 to document the receipt inspection.	Sustaining or User Activity, CMPO, CMH or QAI
File QA form 1 with all applicable documents.	Sustaining or User Activity Quality Assurance Supervisor, QAI or CMPO

NOTE: QA FORM 1 IS NOT REQUIRED FOR SHIP'S FORCE WHEN PERFORMING RECEIPT INSPECTION OF MATERIAL TO BE IMMEDIATELY INSTALLED FOR A SPECIFIC JOB. IF ALL MATERIAL IS NOT UTILIZED IN THE ONGOING JOB, QA FORM 1 MUST BE FILLED OUT PRIOR TO PLACING THE MATERIAL IN A STOWAGE LOCKER.

NOTE: IF THE COMPONENT HAS A SHORTENED MIC MARKING, ENSURE THE FULL MIC MARKING FROM THE SHIPPING DOCUMENTS, TAGS, OR PACKAGING IS ENTERED ON QA FORM 1 AND QA FORM 2.

Procedure	Responsibility
Fill out and attach QA form 2 to the item. Turn over material to craftsman or stow in approved storage area.	Sustaining or User Activity, CMPO, CMH or QAI
Forward QA form 1 to QA Office when the material has been issued for installation.	CMPO or CMH
If material fails any of the steps, reject the material and attach QA form 3.	CMPO or CMH

NOTE: VENDOR DATA - MATERIAL RECEIVED DIRECTLY FROM THE MANUFACTURER REQUIRES CERTIFICATION DOCUMENTATION PER PARAGRAPHS 6.3.4.d.(1) THROUGH 6.3.4.e. OF THIS CHAPTER AS A MINIMUM. A THOROUGH REVIEW OF THE PROCUREMENTS SPECIFICATIONS IS NECESSARY TO ENSURE ALL REQUIREMENTS ARE MET.

NOTE: NAVAL SHIPYARDS AND FMAS MAY USE A LOCALLY GENERATED TGI OR CWP IN LIEU OF A COC AND COT FOR RECEIPT INSPECTION OF MCD B DSS SOC COMPONENTS MANUFACTURED OR FABRICATED BY THE ACTIVITY. THE TGI OR CWP MUST CONTAIN ALL OQE NECESSARY TO ESTABLISH THAT THE PART HAS BEEN PROPERLY MANUFACTURED, FABRICATED AND TESTED TO THE REQUIREMENTS OF APPLICABLE DRAWINGS AND SPECIFICATIONS, AS WELL AS TO MEET THE CERTIFICATION CRITERIA OF REFERENCE (B). THE TGI OR CWP HAS THE SAME RETENTION REQUIREMENTS AS A COC OR COT FOR A DSS SOC APPLICATION.

(1) COC which indicates any of the tests, if required, for implosion testing, cleanliness test, toxicity or flammability testing etc., have been satisfactorily accomplished.

(2) Certification that Hull, Mechanical and Electrical testing was accomplished as required by the specification. The COC must state each contractually invoked test by name and that it was performed satisfactorily. Actual test records are not required to be sighted.

(3) COC that the components comply with the requirements of the procurement documents, including invoked specifications and drawings.

e. There is no receipt inspection or unique storage requirements for MCD-C material. MCD-C material must be inspected by the Craftsman and certified on the applicable QA form by the QAI at installation.

Procedure	Responsibility
Visual inspection at installation to ensure material conforms to specified requirements such as stock number, design dimensions, surface condition,	Sustaining or User Activity Craftsman and QAI

compliance with technical work instructions or any vendor or manufacturer supplied information.

NOTE: VENDOR DATA - MATERIAL RECEIVED DIRECTLY FROM THE MANUFACTURER REQUIRES CERTIFICATION DOCUMENTATION PER PARAGRAPH 6.3.5 OF THIS CHAPTER AS A MINIMUM.

6.3.5 Verification of Completion of Required Testing. This section is only applicable to DSS-SOC material received without a D0, D4, D5, D6, D7, or D8 SMIC and associated RFI tag, received without an EB Blue tag or contractor or activity assigned by NAVSEA. Regardless of the MCD, if implosion testing, cleanliness testing, toxicity or flammability testing etc., are required by the applicable specification or drawing, a review of the OQE for these tests will be conducted prior to installation. If a COC is received with the component, it should be carefully reviewed to ensure that testing was performed satisfactory.

6.3.6 Authorized Material Certification Activities. This section provides a list of those activities that are currently authorized to receipt inspect and accept DSS-SOC controlled material. This list is provided as a reference to be used in performance of receipt inspections of paragraph 6.3.4.a, 6.3.4.b, and 6.3.4.c of this chapter. NAVSEA has authorized the following activity to certify material as MCD-A, MCD-B and MCD-C per reference (b) and this material may be used for DSS-SOC applications without further receipt inspection, other than normal receipt inspections of paragraph 6.3.4.a, 6.3.4.b, and 6.3.4.c of this chapter. The activity and their designator are:

Activity	Identification Code
Portsmouth Naval Shipyard	A

6.3.7 Marking of DSS-SOC Stock Program Material.

6.3.7.1 General Requirements. DSS-SOC Stock Program Material passes from the manufacturers into the Navy supply system by way of a Navy receipt inspection activity, which examines the material and subjects it to a number of tests. DSS-SOC material which meets acceptance criteria is marked with a unique identifying number traceable to the OQE.

a. The purpose of the unique identifying number is four-fold:

   (1) To denote that the marked material has been inspected, verified and accepted.

   (2) To verify the material in hand by comparing it to the applicable drawings, plans, ordering requirements, and installing documents.

   (3) To provide traceability from the installed material to OQE.

   (4) To preclude complete re-inspection of material accepted by an approved activity.

b. Two problems arise in application that can defeat the purpose of the unique identifying number:

   (1) Internal components of an assembly which is marked with a unique identifying number on the exterior, are usually not marked individually, and can lose their identity as DSS-SOC material if separated during disassembly. Strict adherence to “bag and tag” requirements, using fleet QA forms, overcomes this problem. Any part that

becomes separated from its QA form (a loss of traceability) must be treated as uncontrolled material.

(2) Reference (d) permits the use of a securely attached RFI tag in cases where material is non-metallic, cannot be marked without disassembly, are too small for marking (less than 3/8 square inch), oxygen clean items, welding consumables, plated parts or hardened material and all MCD-B or MCD-C material. The complete unique identifying number is recorded during receipt inspection. Although the unique identifying number may not be visible once the item is installed, traceability is maintained through the retained QA paperwork and tags associated with the job, which will list the full unique identifying number.

c. The unique identifying number is in addition to the required manufacturer's marking.

d. Altering of a DSS-SOC unique identifying number is prohibited.

e. Method of marking DSS-SOC material. The physical marking method is described in reference (d).

f. Items not physically capable of being marked. Items such as small parts are packaged in homogeneous lots (i.e., same heat, batch or melt; and same vendor traceability) and the package is marked. If the package is opened, the individual items removed must be tagged with QA form 2. The remaining items in the package will be controlled by the use of a single QA form 2 attached to the package.

6.3.7.2 SMIC DSS-SOC Material Acceptance Identification. Per reference (d), MCD-A metallic material must be permanently marked. Items that cannot be marked due to physical limitations, and all MCD-B or MCD-C material, must be identified using the following instructions:

a. Serialization marking must be by use of a securely attached RFI tag. The RFI tag must contain the Receipt Inspection serial number, MCD level, the NSN and the contract number. The RFI tag must clearly state, "Based upon review of the OQE, this material meets the requirements of the applicable specification and drawing and is certified for use in DSS-SOC applications."

b. Serialization of MCD-A material must bear a number consisting of a two-digit year, three digit Julian day, a daily serial number between 001 and 099, the Receipt Inspecting Activity Certifying Activity Designator followed by "MCDA". For example: "08137-001A-MCDA".

c. Serialization of MCD-B and MCD-C material must utilize the Receipt Inspection Management System for technical inspection with the prefix "MCDB" or "MCDC", followed by the two-digit year, a three digit Julian date, the Receipt Inspecting Activity Certifying Activity Designator and a daily serial number. For example: "MCDB 08137-A01" or "MCDC 08137-A06".

6.4 STORAGE, ISSUE AND HANDLING OF SCOPE OF CERTIFICATION MATERIAL. Refer to Part I, Chapter 6, paragraph 6.3.9 of this volume for process requirements related to storage, staging, issue and handling of SOC material.

6.5 RE-USE OF PREVIOUSLY CERTIFIED SCOPE OF CERTIFICATION MATERIAL.

6.5.1 Material Removed from a Deep Submergence System or Operating Ship. Material removed from a DSS or operating ship to be installed in a SOC application on another DSS or ship is acceptable under the following conditions:

a. Re-Entry Control (REC) is used to document material removal from the supplying ship. The supplying DSS or ship must be certified and REC must still be in effect.

b. The following must be supplied by the supplying ship to the receiving ship:

(1) All outstanding DFS on the component.

(2) Any applicable technical variance documentation.

(3) The last accomplishment date and category of all applicable Maintenance Requirement Card (MRC) inspections.

(4) All legible component markings must be documented.

(5) A copy of the supplying ship's REC.

c. Positive control and identification must be maintained from removal through reinstallation.

d. All documentation listed in sub-paragraph b of this paragraph must be maintained and filed with the REC package that installs the component on the receiving ship.

e. The receiving activity must conduct a material receipt inspection to verify the following:

(1) Received component came from a certified system and REC has been maintained and that positive control has been maintained since removal from the supplying activity.

(2) Material marking or tagging on hardware matches material marking on supporting software.

(3) Applicable MRC inspections or any other maintenance actions are current for the intended end use.

(4) End use installation is consistent with the previous service parameters such as the design pressure rating, design temperature rating or system applicability of the component.

f. Receiving activity must update applicable software to document information and records (e.g., DSS or Ship's Drawing Index for drawing revision) date of last MRC periodicity accomplishment and documentation of outstanding DFS into installing DSS or ship's Current Ship's Maintenance Project.

g. Non-Conforming Material that is received from a DSS or operating ship to be installed in a SOC application that does not meet all the requirements of paragraph 6.5.1 of this chapter may be acceptable under the specific instances.

(1) Material received which is not current with respect to the applicable MRC inspection or any other required maintenance actions that are not current for the intended use must have the applicable maintenance actions completed. Any inspection or maintenance action not completed must be departed using the process of Part I, Chapter 8 of this volume.

(2) Material which has an end use that is not consistent with the previous service parameters must be subject to and satisfy the testing requirements for a new component installed in the receiving DSS or ship, provided the design is consistent with the intended end use.

6.5.2 Reuse of Scope of Certification Material. Reuse of SOC material from a ship whose certification has lapsed by virtue of inactivation availability is acceptable under the following conditions:

a. Prior to commencement of system disassembly, material identified for transfer must be included in an identification and transfer system designated for this application. This system must provide a means for tagging components to be transferred to preclude compromise of material control integrity through unauthorized re-entry. NAVSEA considers existing tag-out systems as an adequate template for this identification system. However, identification system tags must be durable and clearly discernible from existing "tag-out" system tags.

b. The identification tags must include as a minimum:

(1) The statement that the component is SOC material and that the component is not to be removed until the tag is uniquely marked by the facility conducting the inactivation.

(2) The DSS or Ship hull number (e.g., SSN 752).

(3) System and item identification (e.g., MIC number, ASW-1, etc.).

(4) Activity unique identifier (e.g., PHNSY-657-001).

c. The following must be supplied by the supplying activity or ship to the receiving ship:

(1) All outstanding DFS on the component.

(2) Any applicable technical variance documentation.

(3) The last accomplishment date and category of all applicable MRC inspections.

(4) All legible component markings must be documented.

(5) A copy of the supplying ship's REC.

d. All work completed on the material or component after removal from the supplying DSS or ship must be documented and controlled by a REC.

e. Those fasteners removed which connect a transferred item to equipment or components remaining on board, such as valve flange fasteners, must not be shipped with the item, since to do so needlessly complicates the certification process.

f. The receiving activity must conduct material receipt inspection to verify the following:

(1) Attached material identification tag and material marking on the material matches the documentation provided from the facility conducting the inactivation.

(2) End use installation is consistent with the previous service parameters such as the design pressure rating, design temperature rating or system applicability of the component.

g. The receiving activity must complete any maintenance due or overdue for the material. Any inspection not performed or other maintenance action not completed must be departed.

h. The receiving activity must maintain documentation of receipt, inspection, installation and testing of the provided material.

i. The material will be installed using a REC.

6.5.3 Material Recertification Required.

a. Material which does not satisfy the requirements of paragraphs 6.5.1 or 6.5.2 of this chapter must require full component certification to all DSS program requirements prior to use. Documentation of this certification must be traceable from the installing activity's REC.

b. If the SOC material to be transferred is designated for non-SOC end use, and if the removal is to be accomplished subsequent to the Inactivation Availability start date, applicable non-SOC transfer requirements are in effect. These requirements for Submarine Safety components are in reference (e) and the requirements for Level I components are in reference (a).

6.5.4 Material Re-Certification Following Transfer to Outside Agency (Excluding Naval Shipyards). Material transferred to and received from an outside maintenance organization which is not under Joint Fleet Maintenance Manual controls (to exclude Naval Shipyards audited by NAVSEA) will be handled in the following manner:

Procedure	Responsibility
Remove existing attached QA form 2 and retain in Controlled Work Package for OQE.	Sustaining or User Activity
Transfer existing material using DD 1149 to and from the Outside Agency.	Sustaining or User Activity, Department Head
Upon receipt, review vendor data, COC and test data as required by applicable specifications.	Sustaining or User Activity, CMPO, CMH, QAI or QAO
Fill out QA form 2 per Part III, Chapter 11 of this volume and attach to the item. Turn over material to craftsman or stow in approved storage area.	Sustaining or User Activity, CMPO, CMH or QAI
Place COC in respective REC for material control documentation.	Sustaining or User Activity, QAI or QA Supervisor
If material fails any of the steps, reject the material and attach QA form 3.	Sustaining or User Activity, CMPO or CMH

6.5.5 Material Re-Certification Following Transfer to a Naval Shipyard. Material transferred to and received from a Naval Shipyard which is not under Joint Fleet Maintenance Manual controls but is audited by NAVSEA will be handled in the following manner:

Procedure	Responsibility
Existing QA form 2 will remain attached to the component. Fill out QA form 2 Blocks 13 through 16 to document transfer to the Naval Shipyard	Sustaining or User Activity
Attach Material Tracking Tag (MTT) or equivalent. The MTT (or equivalent) must include	Naval Shipyard

component identification, Shipyard Task Group Instruction and any special requirements (e.g., maintain diver air clean per MIL-STD-1622 for critical applications).	
Upon receipt, fill out QA form 2 Blocks 13 through 16 to document receipt from the Naval Shipyard. Positively identify the material, review certification or test data and verify proper cleanliness controls have been met as required by applicable specifications. Document results on QA form 2 Block 15. Shipyard certification or test data that has been satisfactorily reviewed and recorded on QA form 2 Block 15 may be discarded.	Sustaining or User Activity, CMPO, CMH, QAI or QAO
Turn over material to craftsman or stow in approved storage area.	Sustaining or User Activity, CMPO, CMH or QAI
Place QA form 2 and MTT (or equivalent) in respective REC for material control documentation. QA form 2 and MTT (or equivalent) may be discarded after the associated REC has been closed.	Sustaining or User Activity, QAI, Quality Assurance Supervisor
If material fails any of the steps, reject the material and attach QA form 3.	Sustaining or User Activity, CMPO or CMH

CHAPTER 7

TESTING REQUIREMENTS

REFERENCES.

(a) NAVSEA SS800-AG-MAN-010/P-9290 - System Certification Procedures and Criteria Manual for Deep Submergence Systems
(b) NAVSEA SS521-AA-MAN-010 - U.S. Navy Diving and Manned Hyperbaric Systems Safety Certification Manual
(c) NAVSEA S9505-AF-MMA-010 - Submarine Non-Nuclear Piping Systems Test Manual

7.1 PURPOSE. To provide additional guidance for Deep Submergence Systems (DSS) that cannot be found in Part 1, Chapter 7 of this volume.

NOTE: (SUBMARINES ONLY) EXCEPT FOR EMERGENCY MAIN BALLAST TANK (EMBT) PARKER CHECK VALVES, THE FOLLOWING EXEMPTIONS DO NOT APPLY TO SUBMARINE HULL AND BACKUP VALVES OR ASSOCIATED HULL INTEGRITY JOINTS OUTBOARD OF THE BACKUP VALVE.

7.2 TESTING REQUIREMENTS. Testing must be per part I, chapter 7 of this volume with the following additions and exceptions:

a. Hydrostatic Testing Requirements:

(1) Implodable and explodable testing must be per references (a) and (b), as applicable. Additional implodable and explodable requirements may be contained in the applicable Scope of Certification Notebook.

(2) Pipe and piping components whose pressure boundary is externally loaded by sea pressure, but whose internal maximum operating pressure is equal to or greater than DSS design test depth pressure, must only require an internal hydrostatic test.

(3) Pipe and piping components whose pressure boundary is externally loaded by sea pressure, but whose internal maximum operating pressure is less than DSS design test depth pressure, must only require an external hydrostatic test. Additional guidance on external hydrostatic test requirements is contained in reference (a).

(4) Pipe and piping components that penetrate any hull integrity boundary where a single failure could result in internal flooding of the DSS unit must be hydrostatically tested from the hull integrity boundary penetration inboard to the first isolation valve at a pressure equal to 150% of DSS design test depth or 150% of system maximum operating pressure, whichever is greater.

(5) Pipe and piping components open to internally pressurized tanks or enclosures (including hyperbaric chambers) must be hydrostatically tested internally from the tank or enclosure penetration outboard to the first isolation valve at a pressure equal to the pressure used to hydrostatically test the tank or enclosure. These requirements are not applicable to piping and piping components open to compressed gas flasks.

(6) External hydrostatic test acceptance criteria of "no permanent deformation" for pipe must, in addition to a complete visual inspection, be verified by out of roundness measurements. Out-of-roundness measurements not within the pipe specification, approved drawing or Military Standard 1627 (for pipe bends) must be cause for rejection of the item.

b. Joint Tightness Testing.

(1) Pipe and piping components whose pressure boundary is externally loaded by sea pressure, but whose internal maximum operating pressure is equal to or greater than DSS design test depth pressure, must only require an internal joint tightness test.

(2) Pipe and piping components whose pressure boundary is externally loaded by sea pressure, but whose internal maximum operating pressure is less than DSS design test depth pressure, must require both external and internal joint tightness testing. Note that the ability to conduct external joint tightness testing is extremely limited. This testing is normally deferred using a Controlled Assembly per part I, chapter 7 of this volume, documenting a minor Departure from Specification and retesting during a dive to design test depth.

(3) Pipe and piping components that penetrate any hull integrity boundary, where a single failure could result in internal flooding of the DSS unit, must be joint tightness tested from the hull integrity boundary penetration inboard to the first isolation valve at a pressure equal to 100% of DSS design test depth pressure or 100% of system maximum operating pressure, whichever is greater.

(4) Pipe and piping components open to internally pressurized tanks or structural enclosures (including hyperbaric chambers) must be joint tightness tested internally from the tank or enclosure penetration outboard to the first isolation valve at a pressure equal to 100% of the maximum internal operating pressure of the tank or enclosure. These requirements are not applicable to piping and piping components open to compressed gas flasks.

c. Pressure Drop Testing.

(1) Pressure drop testing for oxygen, helium, helium-oxygen, nitrogen and hydrogen diving systems must be as specified in reference (b).

(2) Pressure drop testing of submarine compressed air systems must be as specified in reference (c).

d. Objective Quality Evidence. Objective Quality Evidence (OQE) documenting the satisfactory accomplishment of all required testing must be available and maintained in a format suitable for review and audit. Reference (a), Appendix J contains a

detailed list of information which must be documented as OQE for testing. Existing forms contained in part I, chapter 11 of this volume do not capture all required OQE data. Forms contained in part III, chapter 11 of this volume should be used to support documentation of all reference (a), Appendix J OQE data. All mechanical joint tightness and hydrostatic testing (both those utilizing an external pressure source or internal system pressure) should be documented on QA form 26A to ensure the requirements of reference (a), Appendix J are met. In the event standardized forms are not available, it is permissible to modify and use the forms in part 1, chapter 11 of this volume and standardize these forms within the Sustaining Activity organization.

e. Operational Test. A test of a system to nominal operating pressure using the system fluid, system pumps and installed system gage(s) vice test instrumentation to determine leak tightness.

(1) A drop test meeting requirements of paragraph 7.2.c. may be performed as an operational test.

(2) An operational test can be used to satisfy a mechanical joint tightness test.

PART III

CHAPTER 8

DEPARTURE FROM SPECIFICATIONS

REFERENCES.

(a) NAVSEA SS800-AG-MAN-010/P-9290 - System Certification Procedures and Criteria Manual for Deep Submergence Systems

8.1 PURPOSE. To establish standard procedures to be used for reporting and requesting approval and clearance, at the earliest opportunity, of all non-conforming or departable conditions, Departures from Specification (DFS) associated with Scope of Certification (SOC) systems on Deep Submergence Systems (DSS). The guidance of part 1, chapter 8 of this volume and reference (a) should be used for handling DFS situations with the modifications listed in this chapter.

8.2 DEPARTURE FROM SPECIFICATION.

a. A DFS is a non-conformance of any certification attribute from the intended or as-certified condition of the DSS. This includes non-conformances to approved drawings, components, specifications, technical manuals, operating and emergency procedures, maintenance procedures and any other authoritative document specifying a certification attribute of the DSS. DFS are identified as either a Deviation or Waiver.

   (1) Deviation: A DFS which is requested prior to a planned non-conformance.

   (2) Waiver: A DFS which is requested subsequent to the non-conformance occurring.

b. Should any system, equipment or component within the SOC fail to operate within specifications, regardless of how the deficiency is discovered, and repair at the Sustaining Activity level is not practicable prior to a planned underway period or manned operations, a Major DFS must be submitted.

8.2.1 Reporting Departures from Specification. It is incumbent upon User Activities, Sustaining Activities, Fleet Maintenance Activities and Immediate Superiors In Command to discuss potential DFS as early as possible (prior to the work close out or component assembly if possible) to determine direction of actions and alternatives to the DFS. Every effort must be made to correct each deficiency prior to equipment or system operation or underway of the DSS.

8.2.2 Approval of Departures from Specification. All SOC DFSs require Program Manager approval with System Certification Authority (SCA) concurrence prior to manned use of the DSS. Immediate Superiors In Command and Type Commanders are required to present all DFS items to the Program Manager for approval, except as noted in the SOC Notebook.

8.2.3 Major and Minor Departure from Specification Classification. These are specified in part 1, chapter 8 of this volume and each activities SOC notebook.

8.2.4 General Administrative Requirements. The following requirements pertain to all DFS:

a. The User Activity and Sustaining Activity are responsible for all approved DFS relating to their systems or components until cleared or canceled. When a DFS is approved as a temporary repair requiring rework to correct the discrepancy, the ship referencing the DFS sequential number will initiate a Current Ship's Maintenance Project entry for correction of the discrepant condition. The ship's Quality Assurance Officer will ensure that this action is done.

b. The Sustaining Activity must maintain a master departure log (or computer program equivalent) of all waivers and deviations approved for each DSS. The log must contain, as a minimum, the following:

(1) DSS unique identifier.

(2) Departure number.

(3) Departure title.

(4) Classification (Major or Minor).

(5) Type of departure (Deviation or Waiver).

(6) Date requested.

(7) Date resolved or approved.

(8) Approval or disapproval status.

(9) Conditional approval comments (if applicable).

(10) A copy of all applicable Naval Sea Systems Command correspondence delegating local approval of DFSs.

c. Each activity must maintain all DFSs in a form suitable for audit including supporting justification, technical documentation, calculations, rationale and related correspondence.

d. When an activity performs work which results in a conditionally approved DFS or waiver which requires future action (e.g., re-inspection, repair), the ship will submit a Ship's Maintenance Action Form, OPNAV 4790/2K (2-Kilo), (or equivalent) with a new Job Sequence Number. This Job Sequence Number will be added to the DFS prior to submission to the Immediate Superior In Command. The Current Ship's Maintenance Project Job Sequence Number will be included in Block 17 of the DFS form.

8.2.5 Submission and Approval of Departures from Specification.

a. A copy of the waiver or deviation must be forwarded to the applicable asset and its planning yard. This applies to both approved and disapproved waivers and deviations to ensure the planning yard is kept fully informed and for maintenance of the asset historical file.

b. The approval and routing actions are the same as listed in part 1, chapter 8, paragraph 8.3.7 of this volume with the User Activity performing the ship functions and the Sustaining Activity performing the Fleet Maintenance Activity functions.

c. Unless specifically delegated by the Program Manager and approved by the SCA, the Program Manager must approve all DFSs and obtain SCA concurrence.

8.2.6 Departure from Specification Approval and Reporting for DSSs While at Sea. The Commanding Officer or Officer in Charge will evaluate any DFS and approve the corrective action to be taken including any necessary restrictions.

a. The decision to continue manned operation of the DSS must be made only after a careful review of the impact the deficiency will have on DSS personnel safety under all normal and emergency conditions. A report to the Program Manager via the chain of command will be made at the first opportunity.

b. As a minimum, the report must contain a description of the condition as well as the intended actions. If continued operation of the DSS is intended, the report must include a statement of impact on the ability of the system to operate safely, specifics and any required temporary local changes to the operating and emergency procedures made as a result of the deficiency and any imposed operating restrictions.

c. If the condition is not corrected during the next in-port period (i.e., a port with a fleet maintenance facility), it must be forwarded as a DFS report for approval prior to the next manned use of the DSS.

VOLUME V

PART III

CHAPTER 9

AUDITS, SURVEILLANCE, EVALUATIONS, ASSESSMENTS AND SURVEYS

REFERENCES.

(a) SS800-AG-MAN-010/P-9290 - System Certification Procedures and Criteria Manual for Deep Submergence Systems
(b) NAVSEA SS521-AA-MAN-010 - U.S. Navy Diving and Manned Hyperbaric Systems Safety Certification Manual

9.1 PURPOSE. Provide requirements, procedures and criteria for audits, surveillance, evaluations and assessments for Scope of Certification (SOC) systems. The requirements of Part 1, Chapter 9 of this volume should be followed with the exception of the modified sections in this chapter.

9.2 RESPONSIBILITIES AND PROCEDURES.

9.2.1 User Activity Surveillance and Evaluation Program. The responsibilities and procedures listed for Ship's Force in Part I, Chapter 9, paragraph 9.3.1 of this volume should be used by the User Activity.

9.2.2 Sustaining Activity Audit, Surveillance and Evaluation Program. The responsibilities and procedures listed for the Ship's Force Audits, Surveillance and Evaluation Program in Part I, Chapter 9, paragraph 9.3.1 of this volume and reference (a) should be used by the Sustaining Activity with the modifications listed in this chapter.

a. Deep Submergence Systems (DSS) Sustaining Activities must schedule and conduct an internal survey within 12 months of the last sustaining survey. A second internal survey must be performed not more than 30 days prior to the next sustaining survey unless otherwise directed by the program SOC Notebook. Results of all internal surveys must be forwarded to Naval Sea Systems Command (NAVSEA) for review.

NOTE: IF THE SYSTEM CERTIFICATION AUTHORITY (SCA) SURVEY PERIODICITY FOR THE DSS IS 15 MONTHS OR GREATER, THE SUSTAINING ACTIVITY WILL PERFORM AT LEAST TWO INTERNAL SURVEYS BETWEEN THE SCA SURVEYS. THE SUSTAINING ACTIVITY MUST COMPLETE THE FIRST INTERNAL SURVEY WITHIN 12 MONTHS OF THE LAST SUSTAINING SURVEY.

b. Results of audits and evaluations will be provided to the Commanding Officer or Officer in Charge.

9.2.3 Immediate Superiors In Command Assessments, Audits and Surveillance. The responsibilities and procedures listed for Immediate Superiors In Command (ISIC) in Part I, Chapter 9, paragraph 9.3.3 of this volume should be used with the modifications listed in this chapter.

a. ISICs must schedule and conduct a Quality Assurance (QA) Program assessment of all assigned User and Sustaining Activities. SOC and Hull Inspection Procedures should be substituted for Submarine Safety and Unrestricted Operation/Maintenance Requirement Cards respectfully where specified.

b. ISICs will conduct the following additional periodic audits and surveillance:

(1) Conduct periodic monitoring of User Activity controlled work and QA program on all assigned DSSs during maintenance periods.

(a) Perform at least one surveillance during each refit, upkeep or fleet maintenance availability.

(b) Conduct monitoring during industrial availabilities.

(2) Conduct monitoring of assigned Sustaining Activity QA. This monitoring will include:

(a) Review of work procedures including opening and closing practices.

(b) Monitoring of in progress work both on tended ships and in Sustaining Activity work centers.

9.2.4 Type Commander Assessments. Type Commanders (TYCOM) should follow the guidance of reference (b) and Part 1, Chapter 9, paragraph 9.3.4 of this volume for assessments of ISICs associated with DSSs. The assessment will include a review of SOC controlled work packages.

9.3 SYSTEM CERTIFICATION AUTHORITY CERTIFICATION SURVEYS AND FUNCTIONAL AUDITS.

9.3.1 Certification Process. The requirements define reference (a) certification processes for TYCOM Activities and is the process the SCA and NAVSEA Program Managers will use when certifying or auditing Fleet Deep Submergence System (DSS) Sustaining Activities. Surveys for Certification (Initial Certification), Reinstatement of Certification and Sustaining Certification (Sustaining Surveys) are performed by NAVSEA 07 as the SCA per reference (a). Functional Audits may be performed at the discretion of the SCA. TYCOM assessments performed per Part I, Chapter 9 of this volume meet Functional Audit requirements and must be submitted, copy to the SCA, via the Program Manager.

9.3.2 Certification Survey Cards. SCA survey deficiencies noted during the survey and the recommended corrective action must be documented in the form of certification survey cards.

9.3.2.1 Categorization of Certification Survey Cards. Survey cards for Certification or Functional audits of the DSS must be categorized as:

a. Category IA. Findings of such importance that manned use of the system will not be authorized and certification will be withheld until the deficiencies are satisfactorily resolved. These deficiencies must be satisfactorily resolved and the resolutions accepted by the Program Manager and SCA to ensure the material condition of the DSS is verified as satisfactory prior to manned use.

b. Category IB. Findings which will allow manned use of the system for conduct of specific controlled evolutions, but will not allow issuance of the Letter of Certification

until the deficiencies are satisfactorily resolved or required actions taken. These findings must be satisfactorily resolved and the resolutions accepted by the Program Manager and SCA to ensure the material condition of the system is verified as satisfactory for use prior to the issuance of the Letter of Certification.

c. Category IC. Findings of such importance that satisfactory resolution must be accomplished prior to a specific date or event specified on the survey card to sustain certification. These items must be satisfactorily resolved and the resolutions accepted by NAVSEA or be granted an extension approval from the SCA prior to the date or event specified in order to sustain certification.

d. Category II. Findings which, while not mandatory for resolution to obtain or maintain certification, identify systemic weaknesses in the DSS program. These deficiencies should be resolved in a timely manner.

e. Category III. Items audited and found acceptable.

9.3.2.2 Categorization of Functional Audit Cards. Survey cards for functional audits of the DSS activity must be categorized as:

a. Certification. A non-compliance that affects or potentially affects the certification of a DSS; including a certified DSS. Resolution of a Certification item is mandatory prior to certifying DSS for manned operations.

b. Non-Compliance. Any violation of documented requirements (e.g., local, NAVSEA or higher-tier instructions, procedures, specifications or contracts).

c. Operational Improvements. A condition, that while not a specific requirement violation, may cause a degradation in the effectiveness of the DSS program, or an observation expected to offer significant improvement in the effectiveness of the DSS program.

9.3.3 Administration of Survey and Audit Findings. Survey and audit findings must be forwarded by official correspondence (i.e., letter). SCA surveys and Functional Audits of TYCOM activities will be forwarded from the Program Manager to the Sustaining Activity via the ISIC and an informational copy to the respective TYCOM. Responses from the Sustaining Activity must be forwarded to the SCA via the ISIC and Program Manager, with an informational copy to the respective TYCOM and the Program Manager. When a survey or audit identifies program deficiencies at a TYCOM Fleet Maintenance Activity the routing of the findings and responses must be made via the assigned chain of command. Findings identified at NAVSEA managed activities or contractors will be forwarded as defined by the Program Manager, copy to the Sustaining Activity and the assigned chain of command. Category IA, Category IB and applicable Category IC findings affecting manned operations must be acted on immediately by the activity surveyed or audited regardless of the status of the official correspondence. While the Program Manager is responsible for the management and tracking of Category IA, Category IB and Category IC survey items, the ISIC will also track status of all survey findings.

9.3.4 Administration of Surveys for Initial Certification or Reinstatement of Certification. Initial Certification surveys are performed for certification of a DSS during new construction or new acquisition. Surveys performed to reinstate certification are performed following a

suspension, such as failure to perform a Sustaining Survey on time or due to an event that causes decertification, such as a casualty or a major availability. The NAVSEA Program Manager will suspend certification when a Sustaining Survey due date is exceeded, when a significant casualty occurs or when major repairs, work or modifications defined during a maintenance period would affect certification of the DSS. The SCA will reinstate system certification when the cause for the suspension or decertification has been thoroughly investigated, satisfactorily corrected or restored, and the material and procedural adequacy of the DSS has been reestablished. A Certification Survey Plan (CSP) specified by the Program Manager and approved by the SCA identifies all of the surveys and testing required to be met to fulfill the certification or reinstatement of certification requirements of the DSS. When the CSP requirements are met, the SCA will define certification for a specific period of time or identify when the next Sustaining Survey will be performed.

9.3.4.1 Actions to Support Surveys for Initial Certification or Reinstatement of Certification. Internal surveys for initial certification or reinstatement of certification following overhaul or major availabilities, are normally performed by the Maintenance Activity to support the SCA survey following the CSP. For all other reinstatement of certification scenarios, the Sustaining Activity will submit a CSP tailored to ensure all SOC work and all operations performed since the last survey receive an adequate review to the Program Manager for approval by the SCA via the ISIC and an informational copy to the respective TYCOM. The Program Manager, with SCA concurrence, will formally specify the requirements for reinstatement of certification. The following prerequisites have been established to ensure an activity is ready to support a certification survey:

a. For initial certification, 85 percent of SOC Re-Entry Control (REC) work must have been completed. Complete work means all work, testing and recertification associated with the document has been completed.

b. All SOC maintenance requirements must be current and, if requested, reports submitted to the SCA prior to the start of the survey.

c. All maintenance logs must reflect the current status of maintenance actions.

d. Deferred maintenance requirements must be appropriately approved and documented following existing documents.

e. At least 90 percent of the SOC portion of all strength and tightness tests must be completed. All SOC operational tests and inspections which are possible to complete must be complete. At-sea and manned testing is excluded from these requirements.

f. Provide a list of all open (unapproved or conditionally approved) Departures from Specification.

g. Sustaining Activity must obtain NAVSEA approval of an updated Certification Survey Plan at least two weeks prior to the SCA survey.

h. The activity’s internal survey must be completed not more than 30 days prior to the SCA survey and the results of the internal survey must be submitted to NAVSEA at least 10 working days prior to the start of the SCA survey.

i. An updated copy of the activity’s internal survey reflecting actions taken as a result of the finding must be available to the SCA at the time of the SCA survey.

j. Key personnel must be present (Officer In Charge, Engineering Officer, etc.) to support the survey. It is also essential that qualified personnel knowledgeable in all aspects of the DSS be available and ready to assist the survey team.

9.3.4.2 Authorization of Operational Demonstration for Initial Certification or Reinstatement of Certification. These surveys support Builder's Trials or Sea Trials to complete the initial certification or reinstatement of certification per reference (a), section 3.7. Satisfactory completion of trials is mandatory to achieve final certification. Contingent upon the DSS material condition and status of findings of the survey, the SCA will normally authorize manned dockside testing and manned at-sea testing in pursuit of certification via the Program Manager to the TYCOM of the Sustaining Activity. The TYCOM will forward the SCA recommendations to the Sustaining Activity and authorize the applicable operations.

NOTE: MANNED USE OF THE DSS WILL NOT BE AUTHORIZED UNTIL THE SCA CERTIFIES TO THE SUSTAINING ACTIVITY VIA THE ASSIGNED TYCOM THAT THE SYSTEM IS CERTIFIED TO SUPPORT THE REQUIRED TESTING.

a. Survey findings will be formally forwarded to the Sustaining Activity via the ISIC and an informational copy to the respective TYCOM and maintenance activity as applicable. The Sustaining Activity response will be provided to the SCA via the ISIC and an informational copy to the respective TYCOM. Survey findings to allow manned operations will be processed as:

(1) When action identified by a specific card has been completed, a brief summary of the corrective action must be written on the card and the card must be signed by the Command responsible for the corrective action. All applicable Objective Quality Evidence documenting the corrective action taken must be attached to the signed card, and forwarded to the SCA via the ISIC and an informational copy to the respective TYCOM.

(2) Category IA, Category IB and applicable Category IC findings affecting manned operations, will be accepted by the SCA per reference (a). The Program Manager will provide copies of all completed survey cards to the Sustaining Activity via the TYCOM or ISIC, as applicable.

b. The User Activity or Sustaining Activity, as applicable, must submit a trial schedule to the operational chain of command for approval by the SCA via the Program Manager. Included must be a description of general environmental considerations concerning safety (e.g., sea state limits, visibility limits, DSS handling capabilities, limits on diving under overhangs, cables, caves, etc.).

9.3.4.3 Certification or Reinstatement of Certification. Upon satisfactory completion of all testing identified by the CSP, and completion of all SCA or Program Manager actions specified to resolve any test deficiencies, the SCA will certify the DSS or reinstate certification of the DSS to the TYCOM via a Letter of Certification. TYCOM must formally forward the Letter of Certification to the designated Sustaining Activity, copy to the operational chain of command, the Program Manager and the SCA.

9.3.5 Manned Use in Pursuit of Certification or Reinstatement of Certification.

a. When pursuing initial certification or reinstatement of certification there may be occasion where manned testing or training is required prior to conducting operational demonstration or trials testing. An assessment of items that could impact operator safety is necessary prior to conducting manned testing or training without obtaining formal SCA approval. The assessment must be provided to the activity immediately senior to the User Activity for approval. A copy of the assessment must be provided to the SCA, via the Program Manager, for information only, at least 24 hours prior to the evolution. If conducting testing or training at greater than one atmosphere, this section does not apply and formal SCA approval must be obtained.

b. For manned testing with the DSS wet, the system will be tethered and in a pool, tethered to a certified lift system in port or in a certified captured lift system in port or at sea. Any other configuration while wet requires SCA approval prior to conducting the test. The following items must be assessed to support either wet or dry manned testing:

(1) Provide an impact assessment for any open Category IA survey cards.

(2) Identify any outstanding deficiencies that may impact testing or dives.

(3) Identify all open RECs and their impact on planned testing or dives.

(4) Ensure life support and communications system testing has been completed satisfactorily and are functioning properly.

(5) Ensure the results of the closed boat atmosphere analysis (bomb sample) are satisfactory.

(6) Ensure Operating Procedures or Emergency Procedures that will be used during the test or training, including pre-dive and post-dive procedures, have been updated to reflect new installations and system modifications.

(7) Ensure preventive maintenance procedures that will be used prior to and during the test or dive, have been updated to reflect new installations and system modifications.

(8) Ensure the safety analysis of new installations or modified systems that will be operated or tested during the dive has been evaluated by NAVSEA and that there are no hazards that impact planned tests or dives.

(9) Ensure electrical system testing (e.g., continuity, insulation resistance and ground checks) have been accomplished to the extent necessary to ensure electrical hazards do not exist to the operators.

c. For other than one-atmosphere DSS systems, all manned testing or training conducted at other than one atmosphere requires SCA authorization.

9.3.6 Sustaining Certification Surveys. Sustaining Surveys conducted by the SCA are performed to verify that the DSS has been operated and maintained in the as-certified condition following the Letter of Certification. These surveys are granted for a specific time frame or are due on a specific date following initial certification or the last Sustaining Survey.

9.3.6.1 Scheduling. The Sustaining Survey must be scheduled for completion before the survey due date on the Letter of Certification or the previous Sustaining Survey letter. The periodicity of Sustaining Surveys is negotiated between the Program Manager and the SCA, is based upon results of the last survey, with other oversight and performance indicators taken into account. The periodicity must not be greater than that established in the DSSs Scope of Certification Notebook. If the SCA Sustaining Surveys occur more than 15 months apart, the Sustaining Activity must perform at least two internal surveys between the SCA surveys, not to exceed 12 months apart. The Sustaining Activity is responsible for scheduling Sustaining Surveys with the SCA via the Program Manager and the ISIC or TYCOM (as applicable). If the Sustaining Survey cannot be conducted prior to the survey due date due to operational circumstances, and manned use is required, the Sustaining Activity must submit a request for Continuation of Certification per section 9.3.7 of this chapter.

NOTE: IF THE SUSTAINING SURVEY DUE DATE IS EXCEEDED, MANNED OPERATIONS OF THE DSS MUST BE SUSPENDED UNTIL AUTHORIZED BY THE SCA AND TYCOM (AS APPLICABLE).

9.3.6.2 Actions to Maintain Certification. Internal surveys are performed by the Sustaining Activity to support the SCA survey following the CSP. The Sustaining Activity will perform an internal survey of DSSs on an annual basis and prior to the sustaining survey per section 9.2.2 of this chapter. Copies of these internal surveys are to be forwarded to the SCA via the Program Manager and the ISIC or TYCOM (as applicable). The following prerequisites have been established to ensure an activity is ready to support a sustaining certification survey:

a. If the survey coincides with an availability with a duration of 30 days or less, 60 percent of SOC REC work must have been completed. If the availability is greater than 30 days, 85 percent of SOC REC work must have been completed. Complete work means all work, testing and recertification associated with the document has been completed. If the sustaining survey does not coincide with an availability, no work completion requirement exists, however, a complete list of all SOC work performed since the last survey will be provided to the SCA.

b. All SOC maintenance requirements must be current and, if requested, reports submitted to the SCA prior to the start of the survey.

c. All maintenance logs must reflect the current status of maintenance actions.

d. Deferred maintenance requirements must be appropriately approved and documented following existing documents.

e. If the survey coincides with an availability, at least 90 percent of the SOC portion of all strength and tightness tests must be completed. All SOC operational tests and inspections which are possible to complete must be complete. At-sea and manned testing is excluded from these requirements.

f. Provide a list of all open (unapproved or conditionally approved) Departures from Specification.

g. Sustaining Activity must obtain NAVSEA approval of an updated Certification Survey Plan at least two weeks prior to the SCA survey.

h. The activity's internal survey must be completed and the results submitted to NAVSEA at least two working days prior to the start of the SCA survey or as specified in the specific DSS SOC Notebook.

i. Key personnel must be present (Officer In Charge, Engineering Officer, etc.) to support the survey. It is also essential that qualified personnel knowledgeable in all aspects of the DSS be available and ready to assist the survey team.

j. Deficiencies noted during the survey and recommended corrective actions must be documented in the form of certification survey cards.

9.3.6.3 Authorization for Manned Use Following a Sustaining Survey. Following formal reporting of the Sustaining Survey by the SCA, all Category IA, Category IB and applicable Category IC findings must be completed and accepted by the SCA prior to continued manned operations. If no Category IA, Category IB or Category IC audit cards are generated by the survey, manned use of the DSS may continue with no reports. Upon completion of a Sustaining Survey, manned use can be continued if the following actions are completed:

a. All Category IA, Category IB and Category IC findings affecting manned operations with completed corrective actions must be presented to the SCA via the chain of command as described previously in section 9.3.4.2.a(1) of this chapter.

b. Category IA, Category IB and Category IC findings affecting manned operations will be accepted by the SCA per reference (a). The Program Manager will provide copies of all completed survey cards to the Sustaining Activity via the TYCOM or ISIC, as applicable.

9.3.7 Continuation of Certification. If the Sustaining Survey cannot be conducted prior to the survey due date due to operational circumstances, and manned use is required, the Sustaining Activity must submit a request for Continuation of Certification. The following actions are required:

a. At least six weeks prior to the expiration date of certification, the Sustaining Activity must submit an official request to NAVSEA via the operational chain of command for continuation of certification for a specific time period, and include written rationale for the continuation together with a status of maintenance and system condition.

b. NAVSEA may conduct on-site surveys to verify system material condition and ensure that existing certification requirements have been properly sustained.

c. The Sustaining Activity reports by message to NAVSEA, via the ISIC and an informational copy to the respective TYCOM, completion of any Category IA, Category IB and applicable Category IC survey deficiencies affecting manned operations, as applicable.

d. The SCA grants continuation of certification to the Sustaining Activity, via the TYCOM for a specific period of time contingent on the overall DSS material condition. TYCOM will authorize the operations noting all required restrictions associated with the special case certification.

VOLUME V

PART III

CHAPTER 10

QUALITY ASSURANCE RECORDS

REFERENCES.

(a) NAVSEA SS800-AG-MAN-010/P-9290 - System Certification Procedures and Criteria Manual for Deep Submergence Systems
(b) NAVSEAINST 4720.23 - Deep Submergence Systems Temporary Modifications

10.1 PURPOSE. Provide record keeping and retention requirements for the Quality Assurance records used in the Scope of Certification Program per reference (a). The requirements of part I, chapter 10 of this volume apply as modified in this chapter.

10.2 DEPARTURE FROM SPECIFICATION RECORD RETENTION.

a. Each activity, Type Commander, Immediate Superior In Command, User Activity and Maintaining Activity is required to maintain an outstanding Departure From Specification (DFS) file. This file may be maintained on electronic media and will contain the following information:

(1) An index that reflects a Deep Submergence System unique identifier.

(2) Departure number.

(3) Departure title.

(4) Classification (Major or Minor).

(5) Type of Departure (Deviation or Waiver).

(6) Date requested.

(7) Date resolved.

(8) Approval or disapproval status.

(9) Conditional approval comments (if applicable).

(10) A copy of all applicable Naval Sea Systems Command correspondence delegating local approval of DFSs.

b. A copy of each outstanding DFS and all applicable correspondence.

c. A hard or electronic copy of cleared DFSs with an index will be retained for life of ship.

10.3 USER AND SUSTAINING ACTIVITY QUALITY ASSURANCE RECORD RETENTION. User and Sustaining Activities will maintain records per the record retention requirements of this volume part 1, chapter 10, Section 10.6 for Submarines, and Section 10.7 for Fleet Maintenance Activities. Miscellaneous records to maintain include:

a. Completed maintenance records dive log, including where required, pre-dive and post-dive check-off procedures for all evolutions must be retained from certification survey to survey or three years, whichever is longer.

b. The marked up laminated pre-dive and post-dive sign off sheets which show valve and switch positions must be retained until commencement of the next dive.

c. Records of gas supply certifications required by the applicable Scope of Certification Notebook must be retained for three years.

d. Record of Temporary Modifications will be maintained per reference (b).

VOLUME V

PART III

CHAPTER 11

QUALITY ASSURANCE FORMS AND FORM INSTRUCTIONS

11.1 PURPOSE. Provide Quality Assurance (QA) forms for Scope of Certification items. Forms listed in Part 1, Chapter 11 of this volume should be used except for the QA-26 and QA-27 forms. Use the QA-26A and QA-27A forms listed in this chapter for Hydrostatic or Pneumatic Test Records and Drop Test Records respectively, and the QA form 34B listed in this chapter for the assembly of Electrical and Electronic Cable connector assemblies.

11.2 LIST OF FORMS. This chapter provides copies of the following QA forms with instructions on how to complete each form.

a. Instructions for QA form 2 for existing controlled material received from an outside vendor not under Joint Fleet Maintenance Manual controls.

b. QA form 26A - Hydrostatic or Pneumatic Test Record for Deep Submergence Systems.

Instructions for QA form 26A

c. QA form 27A - Drop Test Record for Deep Submergence Systems.

Instructions for QA form 27A

d. QA form 34B - Electrical or Electronic Cable Connector Assembly and Test Record.

Instructions for QA form 34B

QA FORM 2 INSTRUCTIONS

MATERIAL IDENTIFICATION (ID)/CONTROL TAG

LANTFLT 4790/2 (8-01) S/N 0103-LF-981-0300

PURPOSE: Used for receipt inspection, certification and traceability of existing controlled material received from an outside vendor not under Joint Fleet Maintenance Manual controls.

PROCEDURE: The numbered blocks on QA form 2 correspond with the instructions listed here.

BLOCK 1 - TAG (A) OF (B)

a. Block A - Enter "1". For additional tags used during the fabrication, transfer or installation process, number the tags in sequential order as used (2, 3, 4, etc.).

b. Block B - The last number reflects the total number of tags used for this item during this maintenance action. This block is filled in by the QAI at the time Block 21 is signed on the last tag (e.g., 3 of 3).

BLOCK 2 - MIC NO./SERIAL NO.

NOTE: THE INFORMATION ENTERED FOR FASTENERS MAY NEED TO INCLUDE INFORMATION FROM BLOCKS 3 AND 8 FROM QA-1. DO NOT ENTER THE PNSY TRACE NUMBER FROM BLOCK 3 OF THE QA-1.

a. New Material: Enter the Material Identification and Control (MIC) etched on the material. If the component has no MIC or a shortened MIC marking, ensure the full MIC marking from the shipping documents, tags, or packaging is entered.

b. Fasteners: Document the markings from the fastener to include either:

(1) The color code and the heat or lot number, material type, and manufacturer's symbol (for nuts containing a self-locking insert, the color of the insert is the manufacturer's symbol).

(2) The MIC number (when MIC number is on the fastener or on the individual tag for some small fasteners).

c. If the material is Material Control Division B, enter Markings on the material or documented on the shipping papers providing identification to material type or military specification.

BLOCK 3 - MAT LEVEL

Check the Existing block and the SOC block.

BLOCK 4 - MATL DESCRIPTION

Enter the quantity, size and noun name of the material (e.g., (6 each) 5/8" - 11 NICU studs, 10" O.D. CUNI barstock 6" long).

BLOCK 5 - NSN/SMIC

Enter "NA".

BLOCK 6 - RECEIPT INSPECTION COMMENTS

Enter receipt inspection results (i.e., SAT or UNSAT). If inspection results are UNSAT in Block 6, initiate a QA form 3. For UNSAT results in Block 6, the CMPO will only sign Block 7 of the QA form 2 if the QAO dispositions the item suitable for use on Block 12 of the QA form 3. For SAT receipt inspection, enter the following statement:

"Material Receipt Inspected SAT and is certified for re-use."

This entry will be signed by the QAO.

BLOCK 7 - CMPO/CMH

CMPO or CMH certifying the entries in Blocks 1-7 print name, enter signature and date.

NOTE: THE CMPO WILL VERIFY THAT THE ITEM IS WHAT IS REQUIRED FOR INTENDED USE PRIOR TO TURNING THE MATERIAL OVER TO CRAFTSMAN FOR FABRICATION OR INSTALLATION AND FILL IN BLOCKS 8 THROUGH 12 AT THE TIME THE MATERIAL IS ISSUED.

BLOCK 8 - UIC, WC, JSN AND CWP SERIAL NO.

At the time of issue, enter the Job Control Number (JCN) [UIC, WC and Job Sequence Number (JSN)] and CWP serial number. If removal or installation of existing material is authorized as a REC exception, CWP serial number may be marked "N/A".

BLOCK 9 - WC NO.

Enter the number of the WC receiving material (e.g., EM01, 10C, 38A).

BLOCK 10 - DATE

Enter date the WC received the material.

BLOCK 11 - REMARKS

Enter the reason for issue (e.g., issued to 31A for manufacture of fitting, issued to EM01 for installation).

BLOCK 12 - CRAFTSMAN/CMPO/CMH/QAI

For Initial Material Issue: Print name, enter signature signifying issue of material by CMPO or CMH. For Fabrication or Transfer (Additional QA form(s) 2 required). Print name, enter signature signifying receipt of material.

NOTE: THE REMAINING SECTIONS OF THE TAG ARE COMPLETED BY THE COGNIZANT CRAFTSMAN, CMPO, CMH OR QAI DURING THE FABRICATION OR INSTALLATION PROCESSES.

NOTE: SATISFACTORY CONDITION OF MATERIAL EXCHANGED BETWEEN WCs IS ASSUMED, UNLESS AN ENTRY IS MADE IN REMARKS INDICATING MATERIAL IS REJECTED.

BLOCK 13 - WC NO.

Enter the number of the WC receiving material (e.g., 56A or EA01).

BLOCK 14 - DATE

Enter date material received.

BLOCK 15 - REMARKS

Record work performed while the material was in the custody of the WC (e.g., drilled screws and installed Nyloc pellets).

BLOCK 16 - CRAFTSMAN/CMPO/CMH/QAI

Cognizant craftsman print name and sign to certify blocks 1 through 15 are complete and correct.

NOTE: IF 2 OR MORE WCs ARE INVOLVED IN THE FABRICATION PROCESS, ADDITIONAL QA FORMS 2 WILL BE FILLED OUT AND NUMBERED PER THE INSTRUCTIONS ABOVE FOR BLOCK 1.

NOTE: IF FOR ANY REASON THE COGNIZANT CRAFTSMAN REJECTS THE MATERIAL, THEY WILL COMPLETE AND ATTACH A MATERIAL REJECT TAG (QA FORM 3) AND LEAVE THE QA FORM 2 ATTACHED.

NOTE: BLOCKS 17 THROUGH 21 WILL CONTAIN THE RECORD OF FINAL INSTALLATION. IF ADDITIONAL TAGS ARE REQUIRED FOR THE MATERIAL DURING THE FABRICATION AND TRANSFER PROCESS (MORE THAN TWO WCs OR PROCESSES INVOLVED IN THE REPAIR), BLOCKS 9 THROUGH 12 AND BLOCKS 17 THROUGH 21 MAY BE USED.

BLOCK 17 - WC NO.

Enter the number of the WC responsible for installation of the material (e.g., 56A or EA01).

BLOCK 18 - DATE

Enter the date of installation.

BLOCK 19 - REMARKS

Enter the location where the material was installed into the system or component (e.g., installed in AHP-514, installed in system at joints ASW-70014(F) and ASW-70015(F), etc.).

BLOCK 20 - CRAFTSMAN

Cognizant craftsman print name and enter signature signifying that the material is the correct material, is installed correctly and per the applicable technical specifications. Remove the QA form 2 and file with the CWP if a QAI is not required.

NOTE: A QAI INSPECTION IS REQUIRED FOR MATERIAL INSTALLATIONS FOR JOINTS AND ASSEMBLIES WITHIN THE SOC BOUNDARY.

BLOCK 21 - INSPECTOR

When required, inspector print name and enter signature and date certifying that the material is the correct material, acceptable for application and correctly installed. Enter NA in QAI signature space when QAI is not required. Remove the QA form 2 and file with the CWP.

QA FORM 26A INSTRUCTIONS

HYDROSTATIC/PNEUMATIC TEST RECORD

PURPOSE: To document hydrostatic or pneumatic tests accomplished on Scope of Certification piping systems or portions of a system to recertify the system after maintenance. It also provides a method for the Fleet Maintenance Activity to specify the required retests for work they performed. This form should be utilized to document mechanical joint tightness testing utilizing both an external pressure source and internal system pressure.

TOP OF FORM: Page ___ of ___

NOTE A TECHNICAL WORK DOCUMENT MAY CONTAIN MULTIPLE QA FORMS OF THE SAME TYPE, (E.G. MORE THAN ONE QA-26). THE PAGE ENTRY IS FOR THIS SPECIFIC FORM, NOT THE TOTAL NUMBER OF PAGES ON ALL FORMS OF THE SAME TYPE.

Enter the page number, starting with page 1, of total number of QA form pages (e.g., 1 of , 2 of). The last number reflects the total number of QA Form pages written. This block is filled in by a QAI or the QAO after all certification testing is complete before block 19 on the QA-9 is signed. (e.g., 1 of 3, 2 of 3, 3 of 3).

PROCEDURE: The numbered blocks on QA form 26A correspond with the instructions listed here. Any block not used will be marked NA. The planning organization must fill in blocks identified by a ◆ prior to issuing the Controlled Work Package (CWP).

BLOCK 1 - DSS Platform/Hull Number

Enter the Deep Submergence System (DSS) or ship's name and hull number.

BLOCK 2 - JCN

Enter the Joint Control Number (JCN).

BLOCK 3 - LWC

Enter the shop number of the Lead Work Center (LWC).

BLOCK 4 - CWP SER. NO.

Enter the CWP serial number.

BLOCK 5 - SYSTEM/COMPONENT

Enter the name of the system and component to be tested.

BLOCK 6 - TEST REFERENCES

Enter the applicable test reference and other applicable references (e.g., drawing number and revision used to obtain the required test pressure and conducting of the test).

NOTE: ENTER "S9505-AF-MMA-010/PIPING SYSTEMS" WHICH PROVIDES REQUIREMENTS FOR SHIP'S FORCE TO SET-UP AND CONDUCT TESTING.

BLOCK 7 - REQUIRED TEST AND INSPECTION POINTS

Enter the specific test requirements necessary to recertify the work. Specify test requirements (i.e., type of test, test medium, special valve position, duration, acceptance criteria, joints to be tested (if entire component or system is tested, so state)).

BLOCK 8 - DIAGRAM OF TEST AREA

Enter a diagram of the test area. Be specific. Include such things as relief valve locations, gage locations, blanks, gags, and valve positions, etc. The Quality Assurance Inspector (QAI) will verify the diagram prior to performance of the test.

NOTE: ALL VALVES WITHIN THE TEST BOUNDARIES MUST BE IDENTIFIED AND THEIR POSITION (OPEN OR SHUT) DURING THE TEST ANNOTATED.

NOTE: IF DRAWINGS OR ADDITIONAL INFORMATION IS REQUIRED TO SUPPLEMENT THIS REPORT, EACH DRAWING, ETC., WILL BE NUMBERED AND AUTHENTICATED WITH THE SIGNATURE BY THE CRAFTSMAN AND QAI MAKING UP THE REPORT.

NOTE: LOCAL EXCEPTIONS TO GAGE RANGE AND OR INCREMENTS WILL BE APPROVED BY AN INDIVIDUAL WITH A TECHNICAL WARRANT.

NOTE: SHIPS, FLEET MAINTENANCE ACTIVITIES AND REGIONAL MAINTENANCE CENTERS MANAGED BY UNITED STATES FLEET FORCES COMMAND OR TYCOMS WILL DISREGARD THE BLOCK 8 DIAMOND WHEN TESTING IS PERFORMED BY AN ACTIVITY OTHER THAN THE ACTIVITY PERFORMING REPAIR. THE ACTIVITY PERFORMING THE TESTING MUST COMPLETE THE DIAGRAM REQUIRED BY BLOCK 8.

BLOCK 9 - GAGE DATA

Enter the Primary and backup gage data. Backup gage data is not required when performing an operational test as defined in Part I, Chapter 7 of this volume when a second system gage is not available.

BLOCK 10 - REQUIRED TEST FLUID

Enter the required test fluid.

BLOCK 11 - REQ'D TEST PRESSURE (PSIG)

Enter the required test pressure. If listing the value would classify the CWP then the symbols "J" or "H" with the applicable reference may be used instead of classifying the document.

BLOCK 12 - ACTUAL TEST PRESSURE (PSIG)

Enter the actual test pressure. If listing the value would classify the CWP then the symbols "J" or "H" with the applicable reference may be used instead of classifying the document.

BLOCK 13 - REQUIRED TEST DURATION

Enter the required test duration including units.

BLOCK 14 - ACTUAL TEST DURATION

Enter the actual test duration including units.

BLOCK 15 - ALLOWABLE LEAKAGE

Enter the allowable leakage including units for the leakage.

BLOCK 16 - MEASURED LEAKAGE

Enter the actual measured leakage including units for the leakage.

BLOCK 17 - TEST MEDIUM

BLOCK 18 - INSPECTION RESULTS

a. Check "SAT" block, if all inspections specified by Block 7 are complete and satisfactory.

b. Check "UNSAT" block, if test results are unsatisfactory. Identify the specific inspection and reason for failure in the remarks section.

NOTE: IF A SATISFACTORY TEST CANNOT BE ACHIEVED, A DEPARTURE FROM SPECIFICATION MUST BE PROCESSED PER PART 1, CHAPTER 8 OF THIS VOLUME OR THE TASK MUST BE REWORKED AND RETESTED.

BLOCK 19 - OUT-OF-ROUNDNESS MEASUREMENTS

Enter out-of-roundness measurements for external hydrostatic tests of pipes only.

BLOCK 20 - REMARKS

Remarks pertinent to this test will be entered in this block.

BLOCK 21 - CERTIFICATION

PERFORMED BY

Person performing the test print name, enter signature and date signifying accuracy of data recorded.

INSPECTED BY

QAI print name, enter signature and date verifying the accuracy of test results recorded and inspection performed satisfactory.

BLOCK 22 - VALVE/SYSTEM LINEUP FOR PRESSURE TESTING

List all the valves within the test boundary and those valves that make up the test boundary. The required position for adequate testing of the component or system will be listed. Each valve will have the initials of the initial positioner, or in the event the valve is in the correct position and does not require positioning "NA" will be marked. Each valve will have 1st and 2nd checkers initials. Personnel involved with initial positioning, 1st and 2nd checking will print their names, sign, initial and date the required blocks at the bottom of the form.

NOTE: SHIPS, FLEET MAINTENANCE ACTIVITIES AND REGIONAL MAINTENANCE CENTERS MANAGED BY UNITED STATES FLEET FORCES COMMAND OR TYCOMS WILL DISREGARD THE BLOCK 21

DIAMOND WHEN TESTING IS PERFORMED BY AN ACTIVITY OTHER THAN THE ACTIVITY PERFORMING REPAIR. THE ACTIVITY PERFORMING THE TESTING MUST COMPLETE THE VALVE LINEUP REQUIRED BY BLOCK 21.

QA FORM 27A INSTRUCTIONS

DROP TEST RECORD

NOTE: PLANNING WILL FILL IN BLOCKS IDENTIFIED BY A ◆ PRIOR TO ISSUING.

PURPOSE: To document drop tests accomplished on Scope of Certification piping systems or portions of a system to recertify the system after maintenance actions have been accomplished.

TOP OF FORM: Page ___ of ___

NOTE A TECHNICAL WORK DOCUMENT MAY CONTAIN MULTIPLE QA FORMS OF THE SAME TYPE, (E.G. MORE THAN ONE QA-26). THE PAGE ENTRY IS FOR THIS SPECIFIC FORM, NOT THE TOTAL NUMBER OF PAGES ON ALL FORMS OF THE SAME TYPE.

Enter the page number, starting with page 1, of total number of QA form pages (e.g., 1 of , 2 of). The last number reflects the total number of QA Form pages written. This block is filled in by a QAI or the QAO after all certification testing is complete before block 19 on the QA-9 is signed. (e.g., 1 of 3, 2 of 3, 3 of 3).

PROCEDURE: The numbered blocks on QA form 27A correspond with the instructions listed here. Any block not used will be marked NA. The planning organization must fill in blocks identified by a ◆ prior to issuing the CWP.

BLOCK 1 - DSS Platform/Hull Number

Planner enter the DSS or ship's name and hull number.

BLOCK 2 - JCN

Planner enter the JCN.

BLOCK 3 - LWC

Planner enter the shop number of the LWC.

BLOCK 4 - CWP SER. NO.

Planner enter the CWP serial number.

BLOCK 5 - SYSTEM/COMPONENT

Planner enter the name of the system and component to be tested.

BLOCK 6 - TEST REFERENCES

Planner enter the applicable test reference and other applicable references (e.g., drawing number and revision used to obtain the required test pressure and conducting of the test).

NOTE: ENTER "S9505-AF-MMA-010/PIPING SYSTEMS" WHICH PROVIDES REQUIREMENTS FOR SHIP'S FORCE TO SET-UP AND CONDUCT TESTING.

BLOCK 7 - REQUIRED TEST AND INSPECTION POINTS

Planner enter the specific test requirements necessary to recertify the work. Specify test requirements (i.e., type of test, test medium, special valve position, duration, acceptance criteria, and joints to be tested (if entire component or system is tested, so state)).

BLOCK 8 - DIAGRAM OF TEST AREA

Planner enter a diagram of the test area. Be specific. Include such things as relief valve locations, gage locations, blanks, gags, and valve positions, etc. The QAI will verify the diagram prior to performance of the test. For nuclear tests identify major components to be isolated or vented to preclude unnecessary pressurization.

NOTE: ALL VALVES WITHIN THE TEST BOUNDARIES MUST BE IDENTIFIED AND THEIR POSITION (OPEN OR SHUT) DURING THE TEST ANNOTATED.

NOTE: IF DRAWINGS OR ADDITIONAL INFORMATION IS REQUIRED TO SUPPLEMENT THIS REPORT, EACH DRAWING, ETC., WILL BE NUMBERED AND AUTHENTICATED WITH THE SIGNATURE BY THE CRAFTSMAN AND QAI MAKING UP THE REPORT.

NOTE: LOCAL EXCEPTIONS TO GAGE RANGE AND OR INCREMENTS WILL BE APPROVED BY AN INDIVIDUAL WITH A TECHNICAL WARRANT.

NOTE: SHIPS, FLEET MAINTENANCE ACTIVITIES AND REGIONAL MAINTENANCE CENTERS MANAGED BY UNITED STATES FLEET FORCES COMMAND OR TYCOMS WILL DISREGARD THE BLOCK 8 DIAMOND WHEN TESTING IS PERFORMED BY AN ACTIVITY OTHER THAN THE ACTIVITY PERFORMING REPAIR. THE ACTIVITY PERFORMING THE TESTING MUST COMPLETE THE DIAGRAM REQUIRED BY BLOCK 8.

BLOCK 9 - GAGE DATA

Craftsman enter the Primary and backup gage data. Backup gage data is not required when performing an operational test as defined in Part I, Chapter 7 of this volume when a second system gage is not available.

BLOCK 10 - REQUIRED TEST FLUID

Planner enter the required test fluid.

NOTE: IF LISTING THE TEST PRESSURE WOULD CLASSIFY THE CWP, ENTER "J", "H", "ITEM 1 OF REF (A)", OR ETC., AS APPROPRIATE FROM THE APPLICABLE REFERENCE INSTEAD OF CLASSIFYING THE DOCUMENT.

BLOCK 11 - REQ'D TEST PRESSURE (PSIG)

Planner enter the required test pressure.

BLOCK 12 - INITIAL TEST PRESSURE

Craftsman enter initial test pressure achieved at start of test.

BLOCK 13 - FINAL PRESSURE AT END OF TEST

Craftsman enter final pressure reading when the required test time is completed.

BLOCK 14 - TEMPERATURE AT START OF TEST

Craftsman enter temperature at start of the test with units.

BLOCK 15 - TEMPERATURE AT END OF TEST

Craftsman enter temperature at the end of the test with units.

BLOCK 16 - CHANGE IN TEMPERATURE

Craftsman subtract temperature at the end of the test recorded in Block 15 from temperature at the start of the test recorded in Block 14.

BLOCK 17 - REQUIRED TEST DURATION

Planner enter the required test duration including units.

BLOCK 18 - ACTUAL TEST DURATION

Craftsman record actual duration of the test.

BLOCK 19 - ALLOWABLE PRESSURE DROP % IN MINUTES/HOURS

Planner enter the allowable pressure drop as a percentage of the test pressure in minutes or hours. Cross-out time measure not used.

BLOCK 20 - FINAL PRESSURE DROP CORRECTED FOR TEMPERATURE CHANGE

Craftsman record final pressure drop calculated with corrections for temperature change in the same units as Blocks 11 and 12.

BLOCK 21 - TEST MEDIUM

BLOCK 22 - TEST RESULTS

Craftsman

a. Check “SAT” block if all inspections specified by Block 7 are complete and satisfactory.

b. Check “UNSAT” block, if test results are unsatisfactory. Identify the specific inspection and reason for failure in the remarks section.

NOTE: IF A SATISFACTORY TEST CANNOT BE ACHIEVED, A DEPARTURE FROM SPECIFICATION MUST BE PROCESSED PER PART 1, CHAPTER 8, OF THIS VOLUME OR THE TASK MUST BE REWORKED AND RETESTED.

BLOCK 23 - REMARKS

Remarks pertinent to this test will be entered in this block.

BLOCK 24 - CERTIFICATION

PERFORMED BY

Craftsman performing the test print name, enter signature and date signifying accuracy of data recorded.

INSPECTED BY

QAI print name, enter signature and date verifying the accuracy of test results recorded and inspection performed satisfactory.

NOTE: SHIPS, FLEET MAINTENANCE ACTIVITIES AND REGIONAL MAINTENANCE CENTERS MANAGED BY UNITED STATES FLEET FORCES COMMAND OR TYCOMS WILL DISREGARD THE BLOCK 24 DIAMOND WHEN TESTING IS PERFORMED BY AN ACTIVITY OTHER THAN THE ACTIVITY PERFORMING REPAIR. THE ACTIVITY PERFORMING THE TESTING MUST COMPLETE THE VALVE LINEUP REQUIRED BY BLOCK 24.

BLOCK 25 - VALVE/SYSTEM LINEUP FOR PRESSURE TESTING

List all the valves within the test boundary and those valves that make up the test boundary. The required position for adequate testing of the component or system will be listed. Each valve will have the initials of the initial positioner, or in the event the valve is in the correct position and does not require positioning "NA" will be marked. Each valve will have 1st and 2nd checkers initials. Personnel involved with initial positioning, 1st and 2nd checking will print their names, sign, initial and date the required blocks at the bottom of the form.

ELECTRICAL/ELECTRONIC CABLE CONNECTOR ASSEMBLY AND TEST RECORD **QA FORM 34B (DSS)** PAGE _____ OF _____

A separate QA Form 34B must be used for each connector requiring controlled assembly documentation. The QA Form 34B must be used to provide: 1) Standalone documentation for cable connector reconnection when controlled assembly is required by authorized REC exception; or 2) QA Form 34B will be included in CWP/REC packages when documentation of controlled assembly is required as OQE for the work performed. Planning must fill in blocks identified by a ◆ prior to issuing.

QA FORM 34B INSTRUCTIONS

ELECTRICAL/ELECTRONIC CABLE CONNECTOR ASSEMBLY AND TEST RECORD

NOTE: PLANNING WILL FILL IN BLOCKS IDENTIFIED BY A ◆ PRIOR TO ISSUING.

PURPOSE: To provide a standard form to document the assembly and test of Scope of Certification electrical and electronic cable connector assemblies.

TOP OF FORM: Page ___ of ___

NOTE A TECHNICAL WORK DOCUMENT MAY CONTAIN MULTIPLE QA FORMS OF THE SAME TYPE, (E.G. MORE THAN ONE QA-26). THE PAGE ENTRY IS FOR THIS SPECIFIC FORM, NOT THE TOTAL NUMBER OF PAGES ON ALL FORMS OF THE SAME TYPE.

Enter the page number, starting with page 1, of total number of QA form pages (e.g., 1 of , 2 of). The last number reflects the total number of QA Form pages written. This block is filled in by a QAI or the QAO after all certification testing is complete before block 19 on the QA-9 is signed. (e.g., 1 of 3, 2 of 3, 3 of 3).

PROCEDURE: The numbered blocks on QA form 34B correspond with instructions listed here. Any block not used will be marked N/A. The planning organization must fill in blocks identified by a * prior to issuing the CWP.

BLOCK 1 - DSS PLATFORM/HULL NO.

Planner enter the DSS or ship's name and hull number.

BLOCK 2 - JCN

Planner enter the JCN.

BLOCK 3 - LWC

Planner enter the LWC.

BLOCK 4 - CWP/REC SER. NO.

Planner enter the CWP serial number.

BLOCK 5 - SYSTEM(S)/COMPONENT

Planner enter the noun name of the system(s) and component (if applicable).

BLOCK 6 - CABLE/CONNECTOR DESIGNATION

Planner enter the designation of the connector as listed on prints or other reference material.

BLOCK 7 - CABLE/CONNECTOR DESIGNATION

Planner enter the designation of the cables entering the connector as listed on prints or other reference material.

BLOCK 8 - CONNECTOR SIZE

Planner enter the type and size of the male connector (ex. M24231/13-001, where the M24231 is the standard for the type of receptacle and the 13-001 is the size and number of contacts from the standard).

BLOCK 9 - REFERENCES

Planner enter all references used to identify component parts, joint, material, and assembly information. Include revision letter and, if applicable, the assembly number (e.g., Assy D, Assy RA, etc.). Revisions for technical manuals are not required. If joint numbers are assigned in a sketch in a Work Procedure, include the Work Procedure sketch number. For Electrical Hull Fittings, include both the assembly drawing and electrical hole assignment drawing.

BLOCK 10 - NEW MATERIAL

Craftsman

PC NO: Enter piece numbers of parts. List only the new replacement parts actually being installed.

REF: Record the reference letter of the drawing or document listed in Block 9 which provides the material specification or assembly information for the piece listed in the "PC NO." block.

DESCRIPTION: Describe all new parts associated with the assembly or joint. For O-rings: record the MIL SPEC and the size. Enter the stock number of the O-ring lubricant or any sealant used during assembly.

QTY: Record quantity of new material installed.

LOE: Identify the Level of Essentiality (MIC Level). Example: LI, NA. For SOC material, enter the appropriate Material Control Division (A, B or C).

IDENT: Record the National Stock Number or traceability number of the new materials that were used.

R/I (Receipt Inspection): Enter receipt inspection results from the QA form 2 (SAT). For non-controlled material, enter "N/A". For SOC MCD C material, the craftsman will perform a receipt inspection per Part III Chapter 6 of this volume and document the inspection results in the R/I column of Block 10.

BLOCK 11 - INSPECTION

PINS: Craftsman record "SAT" or "UNSAT" for the plug and jack inspection using requirements of the references listed in Block 9.

SEALING SURFACE: Craftsman record "SAT" or "UNSAT" for the sealing surface inspection using requirements of the references listed in Block 9.

Planning. If the sealing surface is not required to be checked, mark the "NOT APPLICABLE" block.

THREADS: Craftsman record "SAT" or "UNSAT" for the fastening thread inspection using requirements of the references listed in Block 9.

Planning. If the thread inspection is not required to be checked, mark the "NOT APPLICABLE" block.

REMARKS: Enter any pertinent remarks or additional information related to the inspection of the pins, thread or sealing surfaces in Block 14. Each entry must contain a signature and date except where the entry is pre-printed on the form by planning.

BLOCK 12 - TORQUE DOCUMENTATION

Not all electrical or electronic cable connectors require torque documentation. For those joints not requiring torque documentation, the Planner will mark the "NOT APPLICABLE" block. The craftsman will still sign indicating that the joint was assembled following specification and the correct O-ring was used.

For those electrical or electronic cable connectors which require torque documentation:

REQUIRED TORQUE AND TOLERANCE: The Planner will list the required torque for the vent screw and coupling ring as applicable per the requirements of the reference(s) listed in Block 9.

FINAL TORQUE: The craftsman will record the final torque applied to the vent screw or coupling ring.

TORQUE DEVICE DATA: Craftsman record range, serial number and calibration due date for the torque wrench or other device used during the assembly of the connector.

CRAFTSMAN(S) AND QAI CERTIFICATION BLOCK FOR JOINT DATA: Craftsman(s) and QAI must sign, record badge number and date of the signature after the satisfactory completion of assembly following the requirements. This signature provides certification that the joint meets the requirements for the following:

(1) The applied lubricant is acceptable per the technical direction.

(2) The final required pre-load torque has been applied following specified requirements.

(3) Sealing surfaces meet the acceptance criteria of the applicable Maintenance Standard.

QAI CERTIFICATION BLOCK FOR JOINT DATA: QAI must sign and date the signature after the satisfactory completion of assembly following the requirements. This signature provides certification that the joint meets the requirements for the following:

(1) The applied lubricant is acceptable per the technical direction.

(2) The final required pre-load torque has been applied following specified requirements.

(3) Sealing surfaces meet the acceptance criteria of the applicable Maintenance Standard.

BLOCK 13 - LOCKWIRE/LOCKING CABLE/DEVICE INSTALLATION

NOTE: THIS BLOCK APPLIES TO LOCKING DEVICES OTHER THAN SELF-LOCKING NUTS, SELF-LOCKING INSERTS OR SELF-LOCKING BOLT OR CAP SCREWS.

Planner enter an X in the "NOT APPLICABLE" box when not applicable. When an action is required to engage the locking device, enter a description of the required action.

NOTE: FOR MCD-C LOCKWIRE, LOCKING CABLE OR DEVICE, THE QAI WILL UTILIZE SPACE IN BLOCK 14 TO DOCUMENT COMPLETION OF INSPECTION OF MCD-C MATERIAL DURING INSTALLATION.

Craftsman sign, date and check SAT when lockwire, locking cable or required locking device (e.g., locking ring for EHFs, barrel nut locking device, etc.) has been properly installed or the required action has been accomplished. Enter description (e.g., lockwire, locking cable, lock tab) and ident (e.g., stock number, MIL-SPEC or piece number) of the lockwire, locking cable or locking device. Enter description and "Existing" for existing locking devices. If more than one locking device type (e.g., lockwire and lock tab washers) exists on the assembly, record additional information in the Remarks block. When the installation of more than one of the same type of locking device is being documented in Block 13 (e.g., 2 locking devices), record the quantity in addition to the description (Block 14 may be used if additional space is needed). Recording the quantity is not required for lockwire or locking cable, nor when the locking device quantity is documented in Block 10.

QAI sign, print and date in Block 14 for new MCD-C material installed by craftsman in Block 13, to ensure material conforms to specified requirements.

BLOCK 14 - REMARKS/RECORD OF REPAIRS/MODIFICATIONS/ INSPECTIONS

Enter any pertinent remarks or additional information related to the repair or assembly of the component. Each entry must contain a signature and date except where the entry is pre-printed on the form by planning.

BLOCK 15 - QA INSPECTOR/SHOP SUPERVISOR SIGNATURE/BADGE NO/DATE. (RECORD HAS BEEN REVIEWED FOR FINAL ACCEPTANCE)

QAI must sign, record badge number and date of the signature after the satisfactory review for Final Acceptance of all recorded data. Do not sign unless accepting all recorded data.

BLOCK 16 - QAS SIGNATURE/BADGE (RECORD HAS BEEN REVIEWED FOR COMPLETENESS)

Quality Assurance Supervisor or Quality Assurance Officer will print name, enter signature and date for final review, signifying the accuracy of the completed form. If any entry is UNSAT, the Quality Assurance Officer will initiate action to resolve the unsat condition and indicate the action taken in the remarks block. Do not sign unless a satisfactory repair is completed or the UNSAT condition is accepted.

14.1 Purpose VI-14-1

14.2 Policy VI-14-1
14.2.1 Commander Naval Surface Force Ships VI-14-1
14.2.2 Naval Air Force Ships VI-14-2
14.2.3 Submarine Force Ships VI-14-2

14.3 Definitions VI-14-2
14.3.1 Self-Cannibalization VI-14-2
14.3.2 System Cannibalization VI-14-2
14.3.3 Active Ship Cannibalization VI-14-2

14.4 Criteria for Authorization (Active Ship Cannibalization) VI-14-2

14.5 Request Procedure (Active Ship Cannibalization) VI-14-3
14.5.1 Requesting Ship VI-14-3
14.5.2 ISIC (Surface Force Only) VI-14-3

14.6 Cannibalization Authorization and Execution (Active Ship Cannibalization) VI-14-4
14.6.1 Type Commander VI-14-4
14.6.2 Type Commander/Immediate Superior In Command VI-14-4
14.6.3 Requesting Ship VI-14-4
14.6.4 Cannibalized Ship VI-14-4

Appendices
A Sample Cannibalization Request Message (Aircraft Carriers and Surface Force Ships Only) VI-14A-1
B Cannibalization Request (Surface Force Ship Ships only – based on TYCOM Guidance) VI-14B-1

CHAPTER 15 - AMMUNITION OFF-LOAD

15.1 Purpose VI-15-1

15.2 Policy VI-15-1
15.2.1 Chief of Naval Operations Scheduled Maintenance Availabilities VI-15-1
15.2.2 Fleet Maintenance Availabilities VI-15-1

15.3 Action VI-15-1

15.4 Notification VI-15-2

CHAPTER 16 - HABITABILITY

16.1 Purpose VI-16-1
16.1.1 Policy VI-16-1
16.1.2 Discussion VI-16-2

16.2 Habitability Improvement Programs VI-16-2
16.2.1 Ship's Force Habitability Improvement Projects VI-16-2
16.2.2 Habitability Programs Under the Technical Sponsorship of Naval Sea Systems Command VI-16-3

16.3 New Construction Ships VI-16-7

16.4 Naval AIRPAC and AIRLANT Specific Habitability Improvement Programs VI-16-7
16.4.1 Aircraft Carrier Climate Control Improvement Team VI-16-7
16.4.2 Food Service and Laundry (Commander, Naval Air Force Pacific) and Enhanced Quality Of Life Program (Commander, Naval Air Force Atlantic) VI-16-8

Appendices
A Table of Habitability Project Technical Requirements and Actions VI-16A-1
B Sample Habitability OPTAR Augment Funding Request VI-16B-1
C Advance Planning Milestones VI-16C-1

CHAPTER 17 - IMPRESSED CURRENT CATHODIC PROTECTION

17.1 Purpose VI-17-1

17.2 Cathodic Protection Logs VI-17-1
17.2.1 Surface Force Ships VI-17-1
17.2.2 Naval Air Force Ships VI-17-1
17.2.3 Submarine Force Ships VI-17-1

17.3 Impressed Current Cathodic Protection System Activation VI-17-1

CHAPTER 18 - INFLATABLE LIFE RAFTS

18.1 Purpose VI-18-1
18.2 Fleet Life Raft Program VI-18-1
18.3 Types of Inflatable Life Rafts VI-18-1
18.4 Commercial Life Rafts VI-18-1
18.5 Recertification VI-18-2
18.6 LRU 13/A Life Rafts VI-18-2
18.7 Automated Tracking System VI-18-2
18.8 Responsibilities VI-18-2
18.8.1 Commanding Officer or Officer In Charge VI-18-2
18.8.2 Fleet RMC, SRF, and FMA Life raft Repair Facility VI-18-2
18.8.3 TYCOM Life raft Program Manager VI-18-3
18.9 Unserviceable or Rejected Life Rafts VI-18-4
18.10 Departures from Specifications VI-18-4
18.11 Records VI-18-4

CHAPTER 19 - MAINTENANCE AND MATERIAL MANAGEMENT

19.1 Purpose VI-19-1
19.2 Policy VI-19-1
19.3 Scope VI-19-1

CHAPTER 19-1 – NAVAL AIR FORCES 3-M POLICIES

19-1.1 Applicability VI-19-1-1
19-1.2 Roles and Responsibilities VI-19-1-1
19-1.3 Qualifications VI-19-1-22
19-1.4 Planned Maintenance VI-19-1-22
19-1.4.1 Minimum Standards VI-19-1-22
19-1.4.2 Functional Components VI-19-1-24
19-1.4.3 PMS Functional Operations VI-19-1-27
19-1.4.4 Related Maintenance VI-19-1-28
19-1.4.5 Inactive Equipment Maintenance VI-19-1-30
19-1.4.6 Deactivated Equipment VI-19-1-32
19-1.4.7 Scheduling VI-19-1-33
19-1.4.8 SKED VI-19-1-34
19-1.4.9 SKED Server Failure VI-19-1-35
19-1.4.10 Accomplishing PMS VI-19-1-35
19-1.4.11 Non-Accomplished PMS Categories VI-19-1-36
19-1.4.12 Accountability VI-19-1-37
19-1.4.13 Force Revision Implementation VI-19-1-37

19-1.4.14 Planned Maintenance System Feedback Reports VI-19-1-41
19-1.4.15 Assessment Procedure MRCs VI-19-1-49
19-1.4.16 Self-Assessments VI-19-1-49

19-1.5 Zone Inspection Program VI-19-1-52
19-1.5.1 Purpose VI-19-1-52
19-1.5.2 Background VI-19-1-52
19-1.5.3 Zone Designation VI-19-1-53
19-1.5.4 Zone Space Assignment VI-19-1-53
19-1.5.5 Procedures VI-19-1-53
19-1.5.6 Inspection Criteria VI-19-1-55
19-1.5.7 Repair Priorities VI-19-1-56
19-1.5.8 Program Assessment VI-19-1-56

19-1.6 3-M Assists, Training, Assessments, and Inspections VI-19-1-57
19-1.6.1 Accommodations and Transportation VI-19-1-57
19-1.6.2 3-M Assist Visit VI-19-1-57
19-1.6.3 3-MTT Training Visit VI-19-1-57
19-1.6.4 3-M Assessment VI-19-1-58
19-1.6.5 3-M Inspections VI-19-1-60

19-1.7 Engineering Trouble Call VI-19-1-64
19-1.7.1 Purpose VI-19-1-64
19-1.7.2 Background VI-19-1-64
19-1.7.3 Policy VI-19-1-64
19-1.7.4 Duties and Responsibilities VI-19-1-64

19-1.8 Repair Service Organization VI-19-1-68
19-1.8.1 Purpose VI-19-1-68
19-1.8.2 Background VI-19-1-68
19-1.8.3 Aircraft Carrier CNO Availability Repair Teams VI-19-1-69
19-1.8.4 Engineering Repair Mission VI-19-1-69
19-1.8.5 Meetings VI-19-1-69
19-1.8.6 Maintenance Screening and Repair Organization VI-19-1-70
19-1.8.7 Program Assessment VI-19-1-73

Appendices
A 3-MTT Grade Sheets VI-19-1A-1
B 3-M Inspection Criteria VI-19-1B-1
C Zone Inspection Deficiency List, Zone Inspection Material Guide and Flow Charts VI-19-1C-1
D SKED 3.2 Settings and Preferences VI-19-1D-1
E Format for Reporting 3-M Inspections VI-19-1E-1

CHAPTER 19-2 – NAVAL EXPEDITIONARY COMBAT COMMAND 3-M POLICIES

19-2.1 Roles and Responsibilities VI-19-2-1

19-2.2 Qualifications VI-19-2-9

19-2.3 Planned Maintenance VI-19-2-9

19-2.3.1 Minimum Standards VI-19-2-9
19-2.3.2 Functional Components VI-19-2-11
19-2.3.3 Related Maintenance VI-19-2-13
19-2.3.4 Inactive Equipment Maintenance VI-19-2-14
19-2.3.5 Scheduling VI-19-2-16
19-2.3.6 SKED VI-19-2-17
19-2.3.7 Accomplishing PMS VI-19-2-18
19-2.3.8 Non-Accomplished PMS Categories VI-19-2-18
19-2.3.9 Accountability VI-19-2-19
19-2.3.10 Force Revision Implementation VI-19-2-19
19-2.3.11 Planned Maintenance System Feedback Reports VI-19-2-24
19-2.3.12 Assessment Procedure MRCs VI-19-2-32

19-2.4 Maintenance and Material Management Afloat and Ashore Evaluation Criteria VI-19-2-32
19-2.4.1 Self Assessments VI-19-2-32
19-2.4.2 Inspections VI-19-2-35

Appendices
A 3-M Inspection Criteria VI-19-2A-1
B Format for Reporting 3-M Inspections VI-19-2B-1

CHAPTER 19-3 – NAVAL INFORMATION FORCE 3-M POLICIES

19-3.1 Roles and Responsibilities VI-19-3-1

19-3.2 Qualifications VI-19-3-10

19-3.3 Planned Maintenance VI-19-3-12
19-3.3.1 Minimum Standards VI-19-3-12
19-3.3.2 Functional Components VI-19-3-15
19-3.3.3 Related Maintenance VI-19-3-16
19-3.3.4 Inactive Equipment Maintenance VI-19-3-18
19-3.3.5 Scheduling VI-19-3-20
19-3.3.6 SKED VI-19-3-21
19-3.3.7 SKED Server Failure VI-19-3-22
19-3.3.8 Accomplishing PMS VI-19-3-22
19-3.3.9 Non-Accomplished Categories VI-19-3-23
19-3.3.10 Accountability VI-19-3-24
19-3.3.11 Force Revision Implementation VI-19-3-24
19-3.3.12 Planned Maintenance System Feedback Reports VI-19-3-29
19-3.3.13 Assessment Procedure MRCs VI-19-3-37

19-3.4 Maintenance and Material Management Afloat and Ashore Evaluation Criteria VI-19-3-37
19-3.4.1 Self Assessments VI-19-3-37
19-3.4.2 Maintenance Dat System VI-19-3-43
19-3.4.3 Programmatics VI-19-3-46
19-3.4.4 Inspections and Training Assist Visits VI-19-3-47

Appendices
A Inspection Criteria VI-19-3A-1
B Division Inactive Equipment Maintenance Plan VI-19-3B-1
C Format for Reporting 3-M Inspections VI-19-3C-1
D NESD Customer Service VI-19-3D-1

CHAPTER 19-4 – NAVAL INSTALLATION COMMAND 3-M POLICIES

19-4.1 Roles and Responsibilities VI-19-4-1

19-4.2 Qualifications VI-19-4-9

19-4.3 Planned Maintenance VI-19-4-9
19-4.3.1 Minimum Standards VI-19-4-9
19-4.3.2 Functional Components VI-19-4-10
19-4.3.3 Related Maintenance VI-19-4-14
19-4.3.4 Inactive Equipment Maintenance VI-19-4-15
19-4.3.5 Scheduling VI-19-4-17
19-4.3.6 SKED VI-19-4-18
19-4.3.7 SKED Server Failure VI-19-4-19
19-4.3.8 Accomplishing PMS VI-19-4-19
19-4.3.9 Non-Accomplished Categories VI-19-4-20
19-4.3.10 Accountability VI-19-4-21
19-4.3.11 Force Revision Implementation VI-19-4-21
19-4.3.12 Planned Maintenance System Feedback Reports VI-19-4-25
19-4.3.13 Assessment Procedure MRCs VI-19-4-33

19-4.4 Maintenance and Material Management Evaluation Criteria VI-19-4-33
19-4.4.1 Self-Assessments VI-19-4-33
19-4.4.2 Inspections VI-19-4-35

Appendices
A Inspection Criteria VI-19-4A-1
B Division Inactive Equipment Maintenance (IEM) Plan VI-19-4B-1
C Format for Reporting 3-M Inspections VI-19-4C-1

CHAPTER 19-5 – NAVAL SUBMARINE FORCES 3-M POLICIES

19-5.1 Applicability VI-19-5-1

19-5.2 Roles and Responsibilities VI-19-5-2

19-5.3 Qualifications VI-19-5-13

19-5.4 Planned Maintenance VI-19-5-14
19-5.4.1 Minimum Standards VI-19-5-14
19-5.4.2 Functional Components VI-19-5-15
19-5.4.3 Submarine Safety, Scope of Certification, Flight Critical Components and Survivability and Escape VI-19-5-18
19-5.4.4 Related Maintenance VI-19-5-19
19-5.4.5 Inactive Equipment Maintenance VI-19-5-21

19-5.4.6 Deactivated Equipment VI-19-5-24
19-5.4.7 Scheduling VI-19-5-24
19-5.4.8 SKED VI-19-5-25
19-5.4.9 SKED Server Failure VI-19-5-26
19-5.4.10 Accomplishing PMS VI-19-5-26
19-5.4.11 Non-Accomplished PMS Categories VI-19-5-27
19-5.4.12 Accountability VI-19-5-28
19-5.4.13 Force Revision Implementation VI-19-5-28
19-5.4.14 Planned Maintenance System Feedback Reports and PMS Service Requests VI-19-5-32
19-5.4.15 Transferring Dry Deck Shelter VI-19-5-41
19-5.4.16 Planning Board for Maintenance VI-19-5-42
19-5.4.17 Assessment Procedure MRCs VI-19-5-42

19-5.5 Maintenance and Material Management Afloat and Ashore Evaluation Criteria VI-19-5-43
19-5.5.1 Self-Assessment VI-19-5-43
19-5.5.2 Inspection VI-19-5-46

Appendices
A Format for Reporting 3-M Inspections VI-19-5A-1
B Inspection Criteria VI-19-5B-1
C Division IEM Plan for Fleet and CNO Availabilities VI-19-5C-1
D Sample 3-M Quarterly Assessment Report VI-19-5D-1

CHAPTER 19-6 – NAVAL SURFACE FORCES 3-M POLICIES

19-6.1 Applicability VI-19-6-1

19-6.2 Purpose VI-19-6-1

19-6.3 Roles and Responsibilities VI-19-6-1

19-6.4 Shipboard Maintenance VI-19-6-9
19-6.4.1 Preventative Maintenance System VI-19-6-9
19-6.4.2 SKED Program Failure And Restoration VI-19-6-10
19-6.4.3 Minimum Standards VI-19-6-11
19-6.4.4 Functional Components VI-19-6-12
19-6.4.5 3-M Coordinator VI-19-6-14
19-6.4.6 Related Maintenance VI-19-6-15
19-6.4.7 Inactive Equipment Maintenance VI-19-6-17
19-6.4.8 Assessment Procedures MRCs VI-19-6-19
19-6.4.9 Scheduling VI-19-6-20
19-6.4.10 Accomplishing PMS VI-19-6-21
19-6.4.11 Non-Accomplished Categories VI-19-6-22
19-6.4.12 Accountability VI-19-6-23
19-6.4.13 Force Revision Implementation VI-19-6-23
19-6.4.14 Planned Maintenance System Feedback Reports VI-19-6-25
19-6.4.15 PMS Spot Check Program VI-19-6-34
19-6.4.16 Corrective Maintenance VI-19-6-37

19-6.4.17 Life Cycle Of A Work Candidate VI-19-6-40
19-6.4.18 Key Component Of A Work Candidate VI-19-6-40
19-6.4.19 NTCSS Failure And Recovery VI-19-6-42
19-6.4.20 Equipment Validations VI-19-6-42

19-6.5 Planning Board For Maintenance VI-19-6-44
19-6.5.1 PB4M Meeting VI-19-6-44
19-6.5.2 PE Responsibilities VI-19-6-44
19-6.5.3 PB4M Timing, Periodicity, And Agenda VI-19-6-44

19-6.6 3M 365 Continuous Monitoring VI-19-6-44
19-6.6.1 Pillars Of Performance VI-19-6-44
19-6.6.2 Periodic Reports VI-19-6-45
19-6.6.3 CSMP Reconciliation Report (OMMS) VI-19-6-51
19-6.6.4 CSMP Reconciliation Report VI-19-6-54
19-6.6.5 CSMP Self-Sufficiency Report VI-19-6-57
19-6.6.6 3-M 365 Program Validation VI-19-6-60
19-6.6.7 Spot check Program VI-19-6-61
19-6.6.8 CSMP Management Pillar VI-19-6-62

CHAPTER 19-7 – MAINTENANCE DATA SYSTEM AFLOAT AND ASHORE GENERAL REQUIREMENTS

19-7.1 Purpose VI-19-7-1

19-7.2 Specific Requirements and Policy VI-19-7-1

19-7.3 Configuration Data Manager VI-19-7-3

19-7.4 Configuration Worthy Item VI-19-7-3

19-7.5 Databases VI-19-7-5

19-7.6 Data VI-19-7-7

19-7.7 Reporting VI-19-7-7

19-7.8 Configuration Change Form OPNAV 4790/CK VI-19-7-9

19-7.9 Maintenance Action Form OPNAV 4790/2K or Work Candidate VI-19-7-12

19-7.10 Current Ship's and Station's Maintenance Project VI-19-7-18

Appendices
A Standard Work Center Codes for Master Job Catalog Items VI-19-7A-1
B Job Originator Values VI-19-7B-1
C Preparation Instructions Configuration Change Form (OPNAV 4790/CK) VI-19-7C-1
D Preparation Instructions Maintenance Action Form (OPNAV 4790/2K) VI-19-7D-1
E Preparation Instructions Supplemental Form (OPNAV 4790/2L) VI-19-7E-1
F Shipyard Alteration Certification Letter Example VI-19-7F-1
G Ship's First Endorsement On Alteration Certification Letter Example VI-19-7G-1

H Work Candidate and JSN Log Example VI-19-7H-1

CHAPTER 20 - WEIGHT AND MOMENT CONTROL FOR SUBMARINES

20.1 Purpose VI-20-1

20.2 Ballast Changes VI-20-2
20.2.1 Naval Sea Systems Command Notification VI-20-2
20.2.2 Ballast Types VI-20-2

20.3 Unusual Conditions VI-20-3

Appendices
A Sample Ship Message to ISIC Concerning Removal or Reinstallation of Cargo Ballast VI-20A-1
B Sample Ship Message to ISIC Concerning Audit of Cargo Ballast Documentation VI-20B-1

CHAPTER 21 – SHORE MODERNIZATION PROGRAM

21.1 Scope VI-21-1

21.2 Purpose VI-21-2

21.3 Background VI-21-2

21.4 Applicability For C3 Ashore Sites VI-21-3

21.5 Applicability For Non-C3 Ashore Sites VI-21-3
21.5.1 Non-C3 Ashore Sites VI-21-3
21.5.2 MILCON for Non-C3 Shore Platforms VI-21-5
21.5.3 Acquisition VI-21-5
21.5.4 Overwatch Software Armory VI-21-5

21.6 Responsibilities VI-21-5
21.6.1 C3 Shore Site Organization Responsibilities VI-21-5
21.6.2 Non-C3 Shore Site Organization Responsibilities and C3 Shore Sites Not Transitioned to Full NMP Processes VI-21-10

21.7 Process VI-21-11
21.7.1 Key Elements VI-21-11
21.7.2 Decision Points VI-21-12
21.7.3 Change Document VI-21-12
21.7.4 Technical Assessment Teams VI-21-17
21.7.5 Cost Benefit Analysis Review VI-21-18
21.7.6 Combing of Phases VI-21-18
21.7.7 Non-Permanent Changes (NPC) VI-21-18

21.8 Voting Rules VI-21-19
21.8.1 Voting Database Rules VI-21-19
21.8.2 Initiate Change Document Business Rules VI-21-19

21.9 Decision Board Process VI-21-19
21.9.1 Decision Board Process VI-21-19

21.9.2 Board Specific Rules....VI-21-19
21.10 Milestones....VI-21-20
21.11 C3 Shore Organization....VI-21-20
21.12 C3 Shore Integrated Availabilities....VI-21-20
21.13 Meetings, Reviews, and Conferences....VI-21-20
21.13.1 Maintenance Cycle Planning Conference....VI-21-20
21.13.2 Work Package Integration Conference....VI-21-21
21.13.3 Work Package Execution Review....VI-21-21
21.13.4 Planning Board for Maintenance....VI-21-21
21.14 Work Package Planning Sources....VI-21-21
21.15 Submission of Work Candidates....VI-21-22
21.16 Site Visits....VI-21-22
21.17 Availability Work Package Development....VI-21-22
21.18 Updating the BAWP....VI-21-23
21.19 Change Management Process....VI-21-23
21.19.1 Change Requests and Change Notification....VI-21-23
21.19.2 Cancellation Deferral Notification System....VI-21-23
21.19.3 Technical Deferral and Adjudication Process for Post-Award....VI-21-24
21.19.4 Deferral Letters....VI-21-24
21.19.5 Subsequent Reprogramming....VI-21-24
21.20 Planning....VI-21-24
21.20.1 Work Item Development....VI-21-24
21.20.2 Late Work....VI-21-24
21.20.3 New Work....VI-21-25
21.20.4 Growth Work....VI-21-25
21.20.5 Adjudication....VI-21-25
21.20.6 Emergent Availability....VI-21-25
21.20.7 Material Delivery....VI-21-25
21.21 Availability Execution....VI-21-25

21.21.3 Departures from Specification....VI-21-26
21.21.4 Out-Brief....VI-21-26
21.21.5 Availability Work Certification....VI-21-26
21.21.6 Availability Completion Report....VI-21-26
21.22 Closeout Administration....VI-21-27
21.22.1 Closeout Procedures....VI-21-27
21.22.2 Closeout Conference....VI-21-27
21.22.3 Check In or Check Out....VI-21-27
21.23 Non-C3 Shore Site Decision Point....VI-21-28

21.24 FRCB Process for PEO and OCF Alterations VI-21-28
21.24.1 Entry Point Review VI-21-28
21.24.2 System and Shore Reviews VI-21-29
21.24.3 NAVIFOR ILS Artifact Review VI-21-29
21.24.4 Parallel ILS Review VI-21-29
21.24.5 Site Concurrence VI-21-30
21.24.6 NAVIFOR Board Authorization VI-21-31

21.25 Third Party Alteration Process VI-21-31

21.26 Departure from Specifications V1-21-31

Appendices
A Availability Milestones VI-21A-1
B Availability Completion Report Template VI-21B-1
C Fleet Readiness Certification Board Workflow VI-21C-1

CHAPTER 22 - TRIDENT SYSTEM AND EQUIPMENT MAINTENANCE PLANS

22.1 Purpose VI-22-1

22.2 TRIDENT System and Equipment Maintenance Plans VI-22-1
22.2.1 TRIDENT Planned Equipment Replacement VI-22-1
22.2.2 Deployed SSGN Unplanned TRIPER Change Out VI-22-2
22.2.3 Major Shore Spare VI-22-3
22.2.4 Fleet Logistics Agent VI-22-4
22.2.5 Updating of Submarine Logistics Technical Data VI-22-4
22.2.6 Planned Refit Work Lists VI-22-4

Appendices
A TRIPER Information Sheet VI-22A-1

CHAPTER 23 - SUBMARINE NOISE REDUCTION

23.1 Purpose VI-23-1
23.1.1 Scope VI-23-1
23.1.2 Background VI-23-2

23.2 Noise Reduction Program Elements VI-23-2
23.2.1 Radiated Noise Surveys VI-23-2
23.2.2 Onboard Noise Surveys VI-23-3
23.2.3 Shipboard Noise Reduction Program VI-23-5
23.2.4 Training VI-23-6

23.3 Responsibilities VI-23-6
23.3.1 Immediate Superior In Command VI-23-6
23.3.2 Industrial Activity VI-23-6
23.3.3 Submarine Commanding Officer VI-23-7

Appendices
A Supplemental Noise Measurements VI-23A-1
B Beartrap Acoustic Radiated Trials (BART) VI-23B-1

C Shipboard Noise Reduction Instruction VI-23C-1
D Predeployment Noise Inspection VI-23D-1
E Submarine Silencing Publications VI-23E-1
F Sample Propeller Changeout Message VI-23F-1

CHAPTER 24 - PERIODIC MAINTENANCE REQUIREMENT PROGRAM

24.1 Purpose VI-24-1

24.2 Type Commander Scheduling System VI-24-1
24.2.1 Periodic Maintenance Requirements Schedule VI-24-2
24.2.2 Scheduling Periodic Maintenance Requirements Work VI-24-2
24.2.3 Periodic Maintenance Requirements Calldown and Brokering VI-24-2
24.2.4 Calculating Adjusted Last Maintenance Action Date VI-24-2
24.2.5 Calculating Due Dates VI-24-2

24.3 Periodic Maintenance Requirements Accomplishment VI-24-3

24.4 Material Support for Fleet Maintenance Activity Accomplished Periodic Maintenance Requirements VI-24-3
24.4.1 Mandatory Parts VI-24-3
24.4.2 Contingency Parts VI-24-3
24.4.3 Requisitioning Procedures VI-24-3
24.4.4 Material Support Provided by the Advance Equipment Repair Program VI-24-3
24.4.5 Material Support Provided by the TRIDENT Planned Equipment Replacement Program VI-24-4

24.5 Corrective Maintenance of Equipment Using Periodic Maintenance Requirements VI-24-4

24.6 Periodic Maintenance Requirements Accomplishment During Chief of Naval Operations Maintenance Availabilities VI-24-5

24.7 Periodic Maintenance Requirement Accomplishment During Dry Deck Shelter Maintenance Availabilities VI-24-6
24.7.1 Regular Overhaul VI-24-6
24.7.2 Restricted Availabilities (RAV) VI-24-7

24.8 Responsibilities VI-24-7
24.8.1 Type Commander VI-24-7
24.8.2 Submarine Maintenance Engineering, Planning and Procurement Activity VI-24-7
24.8.3 Immediate Superior In Command VI-24-8
24.8.4 Fleet Maintenance Activity VI-24-11
24.8.5 Submarine Commanding Officer VI-24-12
24.8.6 Deep Submergence System Commanding Officer VI-24-13
24.8.7 3-M Coordinator VI-24-13

Appendices
A Submarine Periodic Maintenance Requirement (PMR) Management Process VI-24A-1
B Work Package Supplement - Shipyard Planning and Feedback Report VI-24B-1
C Work Package - Ship's System Work Description (Part 4.13) VI-24C-1

CHAPTER 25 - UNRESTRICTED OPERATIONS

25.1 Purpose VI-25-1

25.2 Unrestricted Operation Maintenance Scheduling, Planning and Reporting VI-25-1
- 25.2.1 Maintenance Requirements for Continued Unrestricted Operation to Design Test Depth VI-25-1
- 25.2.2 Scheduling and Reporting VI-25-1
- 25.2.3 Baseline and Due Dates VI-25-2
- 25.2.4 Periodicity Extensions VI-25-3
- 25.2.5 Scheduling, Planning and Reporting Unrestricted Operation Accomplishment at Ship or Fleet Maintenance Activity Level VI-25-3
- 25.2.6 Unrestricted Operation Maintenance Requirement Card Accomplishment During Chief of Naval Operations Maintenance Availabilities VI-25-4
- 25.2.7 Unrestricted Operation Maintenance Requirement Card Completion Reporting VI-25-4
- 25.2.8 Operating Cycle/Interval Extensions VI-25-5

25.3 Responsibilities VI-25-5
- 25.3.1 Type Commander VI-25-5
- 25.3.2 Submarine Maintenance Engineering, Planning and Procurement Activity VI-25-5
- 25.3.3 Immediate Superior In Command VI-25-6
- 25.3.4 Submarine Commanding Officer VI-25-10

Appendices
- A URO MRC Automated Work Request for Ship's Force Accomplishment VI-25A-1
- B URO MRC Automated Work Request for FMA Accomplishment VI-25B-1
- C SUBMEPP URO MRC Inventory VI-25C-1
- D SUBMEPP URO MRC Schedule VI-25D-1
- E Request for URO MRC Periodicity Extension Format VI-25E-1
- F Sample Work Package Supplement VI-25F-1

CHAPTER 26 - OPERATING DEPTH POLICY

26.1 Purpose VI-26-1

26.2 Initial Tightness Dive VI-26-1

26.3 Deep Dive or Controlled Dive VI-26-2
- 26.3.1 Depth Limitations VI-26-2
- 26.3.2 Conduct of Deep Dives or Controlled Dives VI-26-2
- 26.3.3 Deep Submergence Bill VI-26-2
- 26.3.4 Valve Operation VI-26-2

CHAPTER 27 - SCHEDULED PRESERVATION UPKEEP COORDINATED EFFORT

27.1 Purpose VI-27-1

27.2 Scheduling VI-27-1

27.3 Responsibilities VI-27-2
27.3.1 Type Commander VI-27-2
27.3.2 Immediate Superior In Command VI-27-2
27.3.3 Fleet Maintenance Activity VI-27-3
27.3.4 Submarine Commanding Officer VI-27-3

Appendices
A SPRUCE Key Event Schedule VI-27A-1
B SPRUCE Report Form VI-27B-1
C SPRUCE Check List VI-27C-1

CHAPTER 28 - CABLEWAY ASSESSMENT

28.1 Purpose VI-28-1

28.2 Hazard Categories VI-28-1

28.3 Deficiency Correction VI-28-1

28.4 Assessment Scheduling VI-28-1
28.4.1 Initial Assessment VI-28-1
28.4.2 Follow-up Assessments VI-28-1
28.4.3 Partial Assessments VI-28-2

28.5 Cableway Assessment/Assist Team Composition and Procedures VI-28-2

28.6 Responsibilities VI-28-2
28.6.1 Immediate Superior In Command VI-28-2
28.6.2 Regional Maintenance Center VI-28-2
28.6.3 Fleet Maintenance Activity VI-28-2
28.6.4 Cableway Assessment Team VI-28-3
28.6.5 Ship Commanding Officer VI-28-3

28.7 Reports VI-28-3

Appendices
A Sample Cableway Assessment Message VI-28A-1

CHAPTER 29 - HEAT STRESS CONTROL AND REPAIR OF THERMAL INSULATION

29.1 Purpose VI-29-1

29.2 Heat Stress VI-29-1
29.2.1 Measurement of Insulation Surface Temperatures VI-29-2
29.2.2 Heat Stress Area Stay Times VI-29-2

29.3 Industrial Availability Lagging Plan VI-29-2

29.4 Asbestos Lagging and Insulation VI-29-2
29.4.1 Asbestos Control and Safety VI-29-2
29.4.2 Repairs to Asbestos Lagging or Insulation VI-29-3
29.4.3 Removal of Asbestos Lagging or Insulation VI-29-3

Appendices

A Inspection Guide for Excessive Heat VI-29A-1

CHAPTER 30 - PORTABLE TOOL ASSISTANCE PROGRAM

30.1 Purpose VI-30-1

30.2 Portable Tool Inventory Policy VI-30-1
30.2.1 Distribution Priorities VI-30-1
30.2.2 Borrowing Procedures VI-30-1
30.2.3 Borrowing Ship's Responsibilities VI-30-1

CHAPTER 31 - SURFACE FORCE SHIP MAINTENANCE PLACEMENT AND OVERSIGHT BUSINESS RULES

31.1 Purpose VI-31-1

31.2 Background VI-31-1

31.3 Ship Maintenance Funding Management Business Rules VI-31-1
31.3.1 Scope VI-31-1
31.3.2 Ship and Maintenance Team Business Responsibilities VI-31-1
31.3.3 Regional Maintenance Center Business Responsibilities VI-31-4
31.3.4 Type Commander Responsibilities VI-31-5

31.4 Maintenance Proposal Review VI-31-6
31.4.1 Concept VI-31-6
31.4.2 Business Rules VI-31-6
31.4.3 Continuous Estimating Incremental Planning Review Process VI-31-7

31.5 Guidance for Firm Fixed Price Contracts VI-31-9
31.5.1 Overall Process VI-31-9
31.5.2 Firm Fixed Price Planning VI-31-9
31.5.3 Firm Fixed Price Placement VI-31-10

Appendices
A RMC Spotlight Reports VI-31A-1

CHAPTER 32 - TOP MANAGEMENT ATTENTION TOP MANAGEMENT ISSUES

32.1 Purpose VI-32-1

32.2 Background VI-32-1

32.3 Applicability and Scope VI-32-1

32.4 Responsibilities VI-32-2
32.4.1 Commander, United States Fleet Forces Command VI-32-2
32.4.2 Naval Sea Systems Command VI-32-3
32.4.3 Top Management Attention-Top Management Issues Panels VI-32-4
32.4.4 Top Management Attention-Top Management Issues Analysis Center VI-32-6
32.4.5 Type Commanders VI-32-6

32.5 Metrics VI-32-6

32.5.1 Top Management Attention-Top Management Issues Candidate Selection....VI-32-7
32.5.2 Charts and Graphs....VI-32-11

Appendices
A Top Management Attention and Top Management Issues Flowchart....VI-32A-1

CHAPTER 33 - MAINTENANCE AND MODERNIZATION BUSINESS PLAN

33.1 Maintenance and Modernization Business Plan....VI-33-1

33.2 Maintenance and Modernization Business Plan Responsibilities....VI-33-1
33.2.1 Maintenance Team Responsibilities....VI-33-1
33.2.2 NSA Responsibilities....VI-33-2
33.2.3 TYCOM Responsibilities (Surface Force Ships only)....VI-33-2
33.2.4 TYCOM Responsibilities (Aircraft Carriers and Submarines only)....VI-33-3
33.2.5 Ship Program Manager Responsibilities....VI-33-3

33.3 The Maintenance and Modernization Business Plan Submission....VI-33-3
33.3.1 MMBP Spreadsheet....VI-33-3
33.3.2 Prioritization....VI-33-5
33.3.3 Maintenance Summary and Risk Assessment....VI-33-5

33.4 Budget Process and Maintenance and Modernization Business Plan Development Timeline....VI-33-5
33.4.1 Guidance....VI-33-5
33.4.2 Initial Budget Guidance (March)....VI-33-5
33.4.3 Provide Controls to Maintenance Team (April)....VI-33-6
33.4.4 Execution Strategy Adjustments (May)....VI-33-6
33.4.5 (Surface Ships only) Maintenance Team Submit MMBPs for Approval via NSA (June)....VI-33-6
33.4.6 TYCOM Approves MMBPs (July)....VI-33-6
33.4.7 Submit Phasing Plans (August)....VI-33-6

33.5 Business Plan Resources....VI-33-6

Appendices
A Executive Summary Sheet....VI-33A-1

CHAPTER 34 - FLIGHT DECK NON-SKID INSPECTION

34.1 Purpose....VI-34-1

34.2 Background....VI-34-1

34.3 Scope....VI-34-2

34.4 Responsibilities....VI-34-2
34.4.1 Ship's Force....VI-34-2
34.4.2 Quality Insurance Officer....VI-34-2

CHAPTER 35 - REGIONAL MAINTENANCE CENTER I-LEVEL MAINTENANCE CAPABILITIES

35.1 Purpose VI-35-1

35.2 Background VI-35-1
35.2.1 Onboard Support VI-35-1
35.2.2 Applicable Regional Maintenance Centers VI-35-1

35.3 Responsibilities VI-35-1
35.3.1 Fleet Commanders VI-35-1
35.3.2 Commander, Navy Regional Maintenance Center VI-35-2
35.3.3 Regional Maintenance Center VI-35-4

35.4 Regional Maintenance Center Performance Measures VI-35-4

Appendices
A Regional Maintenance Center I-Level Maintenance Capability Matrix VI-35A-1

CHAPTER 36 - SURFACE FORCE SHIP AND AIRCRAFT CARRIER MODERNIZATION PROGRAM

36.1 Scope VI-36-1

36.2 Purpose VI-36-1

36.3 Background VI-36-2

36.4 Navy Modernization Process VI-36-2
36.4.1 Exceptions and Exemptions VI-36-2
36.4.2 Software Policy VI-36-3

36.5 Ship Change Documents VI-36-4
36.5.1 Scope VI-36-4
36.5.2 Funding VI-36-4
36.5.3 Duration VI-36-4
36.5.4 Non-Standard VI-36-5
36.5.5 Mandatory Safety VI-36-5
36.5.6 Fleet Experimentation and Technology Demonstration VI-36-5
36.5.7 Emergent VI-36-5
36.5.8 Modernization Through Attrition And Modernization in Lieu of Repair VI-36-6
36.5.9 Low Impact VI-36-6

36.6 Ship Change Document Process VI-36-6
36.6.1 Ship Change Documents Initiation VI-36-6
36.6.2 Ship Change Document Submission VI-36-6
36.6.3 Technical Assessment Team Review VI-36-6
36.6.4 Ship Program Manager Review VI-36-6
36.6.5 Cost Benefit Analysis Review VI-36-6
36.6.6 Resource Sponsor Review VI-36-7
36.6.7 Ship Change Document Voting VI-36-7
36.6.8 Navy Modernization Process Phases VI-36-7
36.6.9 Regional Maintenance and Modernization Coordination Office VI-36-11

36.7 Work Execution VI-36-13

36.7.1 Production Work VI-36-13
36.7.2 Plan of Action and Milestones Requirements VI-36-13
36.7.3 Notional Plan of Action and Milestones during CNO Availabilities VI-36-13
36.7.4 Production Plan of Action and Milestones during CNO Availabilities VI-36-13
36.7.5 Plan of Action and Milestones during Non-CNO Availabilities VI-36-14
36.7.6 Weekly Progress Updates VI-36-14

36.8 System Operational Verification Test and Test Procedure VI-36-14

36.9 Integrated Logistics Support VI-36-14
36.9.1 Integrated Logistics Support Product Delivery VI-36-14
36.9.2 Ship Installation Drawing Red-Lines VI-36-15

36.10 Completion VI-36-15
36.10.1 Ship's Force or NSA Out-Brief VI-36-15
36.10.2 Completion Report Naval Message VI-36-15
36.10.3 Regional Maintenance and Modernization Coordination Office Check-Out VI-36-15
36.10.4 Ship Changes Completion Status Update VI-36-16
36.10.5 Ship Change Document Closeout VI-36-16

CHAPTER 37 - REGIONAL MAINTENANCE CENTER PASSIVE COUNTERMEASURE SYSTEM SUPPORT REQUIREMENTS

37.1 Purpose VI-37-1

37.2 Passive Countermeasure System Event Description VI-37-2

37.3 Passive Countermeasure System Personnel Certification VI-37-2
37.3.1 Passive Countermeasure System In-Service Engineering Activity VI-37-3
37.3.2 Training Requirements VI-37-3
37.3.3 Support Personnel VI-37-3
37.3.4 Regional Maintenance Center Japan, Regional Maintenance Center Rota and Pearl Harbor Naval Shipyard VI-37-3
37.3.5 Ship's Force Personnel VI-37-3

37.4 Passive Countermeasure System Technical Assistance VI-37-3

37.5 Responsibilities VI-37-3

CHAPTER 38 - DEEP SUBMERGENCE SYSTEMS HULL INTEGRITY PROCEDURES

38.1 Purpose VI-38-1

38.2 Hull Integrity Procedures Maintenance Scheduling, Planning and Reporting VI-38-1
38.2.1 Maintenance Requirements for Continued Certification VI-38-1
38.2.2 Scheduling and Reporting VI-38-1
38.2.3 Baseline and Due Dates VI-38-2
38.2.4 Periodicity Extensions VI-38-2
38.2.5 Scheduling, Planning and Reporting Hull Integrity Procedure Accomplishment at Sustaining Activity or Fleet Maintenance Activity Level VI-38-3

38.2.6 Scheduling, Planning and Reporting Hull Integrity Procedures Accomplishment During Regular Overhaul (ROH) VI-38-3
38.2.7 Scheduling, Planning and Reporting Hull Integrity Procedures Accomplishment During Restricted Availabilities (RAV) VI-38-4
38.2.8 Deep Submergence System Hull Integrity Procedures Completion Reporting VI-38-4

38.3 Responsibilities VI-38-5
38.3.1 Type Commander VI-38-5
38.3.2 Submarine Maintenance Engineering, Planning and Procurement Activity VI-38-5
38.3.3 Immediate Superior In Command VI-38-5
38.3.4 Deep Submergence System Commanding Officer VI-38-8

Appendices
A SUBMEPP DSS HIP Inventory VI-38A-1
B SUBMEPP DSS HIP Schedule VI-38B-1
C Request for DSS HIP Periodicity Extension Format VI-38C-1

CHAPTER 39 - MAINTENANCE AND MODERNIZATION PERFORMANCE REVIEW AND LESSONS LEARNED CONFERENCE FOR SURFACE FORCE SHIPS

39.1 Purpose VI-39-1

39.2 Maintenance and Modernization Performance Review Overview VI-39-1
39.2.1 MMPR Objective VI-39-1
39.2.2 MMPR Key Membership VI-39-1
39.2.3 MMPR Action Items VI-39-2
39.2.4 Further Guidance VI-39-2

39.3 Lessons Learned Conference Overview VI-39-2
39.3.1 Lessons Learned Conference Concept VI-39-3
39.3.2 Lessons Learned Conference Objective VI-39-3
39.3.3 Lessons Learned Conference Key Membership VI-39-3

39.4 Preparing for the Lessons Learned Conference VI-39-4
39.4.1 Preparation VI-39-4
39.4.2 Lessons Learned Conference Presentation Overview VI-39-4

39.5 Conducting a Lessons Learned Conference VI-39-5
39.5.1 Lessons Learned Conference Schedule VI-39-5
39.5.2 Agenda VI-39-5
39.5.3 Lessons Learned Conference Focus Areas VI-39-5
39.5.4 Invitees VI-39-5
39.5.5 Invites and Announcement VI-39-5
39.5.6 Lessons Learned Conference Documents VI-39-5
39.5.7 Lessons Learned Conference Minutes VI-39-5
39.5.8 Lessons Learned Conference Website VI-39-6

39.6 Interaction Among Feedback Processes VI-39-6
39.6.1 Relationships VI-39-6
39.6.2 Consistency VI-39-6

39.7 Lessons Learned Conference Application and Knowledge Sharing VI-39-6

Appendices
A Access to Lessons Learned Conference and MMPR Sites on the ST1 Portal VI-39A-1

CHAPTER 40 - SUBMARINE MESSAGE REPORTING

40.1 Purpose VI-40-1

40.2 Background VI-40-1

40.3 Scope VI-40-1

40.4 Policy VI-40-1

40.5 Responsibilities VI-40-3
40.5.1 Type Commanders VI-40-3
40.5.2 Immediate Superior In Command VI-40-3
40.5.3 Ship's Commanding Officer VI-40-3

40.6 Message Requirements VI-40-3

Appendices
A Sample (SUBS) Initial Message VI-40A-1
B Sample (SUBS) Update Message VI-40B-1
C Sample (SUBS) Final and Closeout Message VI-40C-1
D Sample (SUBS) SHIPALT and TEMPALT Installation Message VI-40D-1
E Sample (SUBS) SHIPALT and TEMPALT Removal Message VI-40E-1

CHAPTER 41 - MAINTENANCE AND PROJECT TEAM

41.1 Purpose VI-41-1

41.2 Maintenance Team VI-41-1
41.2.1 Crew Swap VI-41-1
41.2.2 Maintenance Team Members VI-41-1
41.2.3 The Principal Roles of the Maintenance Team VI-41-2
41.2.4 Specific Duties of Maintenance Team Members VI-41-4

41.3 Project Team VI-41-12
41.3.1 Project Manager VI-41-12
41.3.2 Contract Specialist VI-41-18
41.3.3 Quality Assurance Specialist VI-41-18
41.3.4 NSA Logistical Representative VI-41-20
41.3.5 SEA 21 Hull, Mechanical and Electrical and AEGIS Combat Systems On Site Logistician (Surface Force Only) VI-41-20
41.3.6 Project Support Engineer VI-41-20
41.3.7 Integrated Test Engineer VI-41-21
41.3.8 Assessment Director VI-41-22
41.3.9 Technical Matter Expert VI-41-23
41.3.10 Shipbuilding Specialist VI-41-23
41.3.11 Combat Systems Project Engineer (Surface Force only) VI-41-26

41.3.12 SEA 21 Hull Manager (Surface Force only).....VI-41-28
41.3.13 SURFMEPP Waterfront Engineering (Surface Force only).....VI-41-28
41.3.14 Government Availability Planning Manager (Surface Force only).....VI-41-28
41.3.15 Schedule Analyst (Surface Force only).....VI-41-30
41.3.16 Work Integration Manager (Surface Force only).....VI-41-31

41.4 Alteration Installation Team Management, Oversight, And Execution.....VI-41-33

41.5 Planning Process Support.....VI-41-33

41.6 Planning Board for Maintenance.....VI-41-34

41.7 Workforce Development Program (RMC only).....VI-41-34

41.8 Integrated Project Team Development (Surface Force only).....VI-41-35
41.8.1 Project Team.....VI-41-35
41.8.2 Program Events.....VI-41-35

Appendices
A Sample Supervising Authority Report of Availability Lessons Learned.....VI-41A-1

CHAPTER 42 - MATERIAL READINESS ASSESSMENT

42.1 Purpose.....VI-42-1

42.2 Applicability.....VI-42-2

42.3 Objectives.....VI-42-3

42.4 Principles.....VI-42-3

42.5 Material Assessment Process.....VI-42-3
42.5.1 Discussion.....VI-42-3
42.5.2 Material Assessments.....VI-42-4
42.5.3 Assessment Authorizing.....VI-42-4
42.5.4 Assessment Planning.....VI-42-5
42.5.5 Assessment Execution.....VI-42-5
42.5.6 Assessment Reporting.....VI-42-6
42.5.7 Standard Assessment Tool Kit.....VI-42-7
42.5.8 Assessment Personnel.....VI-42-7

42.6 Responsibilities.....VI-42-7
42.6.1 Fleet Commander.....VI-42-7
42.6.2 Type Commander.....VI-42-7
42.6.3 Material Assessment Executing Activity.....VI-42-8
42.6.4 Commanding Officer.....VI-42-9

Appendices
A Assessment Process.....VI-42A-1
B Prerequisites and Test Requirements Message (Example).....VI-42B-1
C Readiness to Commence Message (Example).....VI-42C-1
D Completion Quicklook Message (Example).....VI-42D-1
E Job Originator Identification Table.....VI-42E-1

CHAPTER 43 - GUIDANCE FOR ENHANCED MODERNIZATION AND ALTERATION INSTALLATION TEAM INTEGRATION DURING AVAILABILITIES

43.1 Concept.....VI-43-1
43.2 Availability Planning Business Rules VI-43-2
43.3 Availability Execution Business Rules VI-43-4

VOLUME VI
FOREWORD
INTRODUCTION

REFERENCES.

(a) OPNAVINST 3120.32 - Standard Organization and Regulations of the U.S. Navy
(b) OPNAVINST 4700.7 - Maintenance Policy for U.S. Naval Ships
(c) COMLANTFLTINST 5400.2 - U.S. Atlantic Fleet Regulations
(d) COMPACFLTINST 5400.3 - U.S. Pacific Fleet Regulations
(e) NAVSEAINST 4790.8 - Ships' Maintenance and Material Management (3-M) Manual
(f) SSPINST 4720.1 - Policies and Procedures for Alteration of Strategic Weapon System Equipment

1.1 PURPOSE. To provide guidance in the execution and management for maintenance programs applicable to units of the Navy.

a. The Foreword of this manual contains a master listing of all references used throughout the Joint Fleet Maintenance Manual. These references are arranged in alphanumeric order to facilitate their procurement for use with this manual. References used in specific chapters of this volume are listed at the beginning of each chapter in the order in which they appear in the chapter text.

b. Acronyms are identified when they are initially used in each chapter of this volume. Appendix C of the Foreword contains a master listing of acronyms used throughout this manual.

c. References (a) through (e) must be used in conjunction with this manual, however, the requirements of this manual must **not** take precedence over these higher authority directives, or technical directives from applicable Systems Commands (SYSCOM). Where conflicts exist with previously issued Fleet Commander, Commander, Naval Reserve Force (COMNAVRESFOR), Type Commander (TYCOM) letters, transmittals and instructions, other than references (c) and (d), this manual must take precedence. Conflicts must be reported to the cognizant TYCOM for resolution.

1.2 SCOPE. This volume applies to all ships and shore activities under the cognizance of Commander, Fleet Forces Command (COMFLTFORCOM), Commander, Pacific Fleet (COMPACFLT) and COMNAVRESFOR. This volume is not intended to be all encompassing, since the guidance for many elements of the maintenance programs and their execution are promulgated by higher or technical authority (e.g., Naval Ships' Technical Manuals (NSTM), Office of the Chief of Naval Operations Instruction (OPNAVINST)).

a. This volume contains general programs applicable to all ships and units under the cognizance of COMFLTFORCOM or COMPACFLT. In those cases where chapters, sections or paragraphs of chapters are not applicable to certain Forces, an applicability statement has been used for clarification.

b. Equipment under the cognizance of Naval Sea Systems Command Nuclear Propulsion Directorate (NAVSEA 08) is maintained per NAVSEA 08 directives.

c. Nuclear-Powered Ballistic Missile Submarine (SSBN) Strategic Weapon System (SWS) and Nuclear-Powered Guided Missile Submarine (SSGN) Attack Weapons Systems (AWS) equipment under the cognizance of Strategic Systems Programs (SSP) is operated, maintained, modified or modernized per approved SSP directives and instructions.

(1) Reference (f) defines policies, controls, processes and procedures for the accomplishment of all SSP Alterations (SPALT) issued by the Director, Strategic Systems Programs for all SSP cognizant equipment on both SSBNs and SSGNs. Reference (f) further defines the methodology and processes to plan, document, coordinate, install, and test SWS, AWS hardware, software and modernization SPALTs.

(2) Adherence to reference (f) ensures that all related or affected Equipment, Fleet Documentation, Training, Logistic and Maintenance functions under the cognizance of SSP are fully integrated as part of the SPALT. Only SSP authorized SWS and AWS SPALTs are installed on SSBNs and SSGNs.

(3) Applicable and required local support services such as Crane, Riggers, Power Isolation, Tag-Out, Hazardous Material, Quality Assurance, Critical Skill requirements, etc., for the conduct of a SPALT must be identified within the Director, Strategic Systems Programs SPALT document, related Ordnance Document, or SPALT installation pre-brief. This information must be communicated or provided to all involved and affected local activities per the SPALT process no later than forty-five (45) days prior to the conduct of a SPALT, as outlined and defined within reference (f).

(4) An SSP Contractor or Government Team must provide the required operational and engineering support for all SPALT, Maintenance and Repair Activities to SWS and AWS equipment under the cognizance of SSP. The respective responsibilities of SSP Contractor, Government Teams, the Fleet Maintenance Activity and other local Commands for the execution of the SSP SPALT program must be documented in an overarching Memorandum of Agreement in order to define areas of responsibility for all activities involved in the accomplishment of authorized alterations in a timely, efficient, and coordinated manner.

1.3 CHANGES AND CORRECTIONS. Changes and corrections will be issued as required. Comments and suggestions for improving or changing this volume are invited. Address comments, recommendations, and requested changes to Submarine Maintenance Engineering, Planning and Procurement (SUBMEPP) Activity utilizing the change request form located in the front of this manual. If changes are submitted in electronic format, facsimile or E-mail, each change request must contain the information required on the change request form.

VOLUME VI

CHAPTER 1

WATERBORNE UNDERWATER HULL CLEANING

REFERENCES.

(a) NAVSEA S9086-CQ-STM-010 - NSTM Chapter 081 R4 (Waterborne Underwater Hull Cleaning of Navy Ships)
(b) NAVSEA 389-0288 - Radiological Controls
(c) NAVSEA S0600-AA-PRO-010 - Underwater Ship Husbandry Manual

1.1 PURPOSE. To implement the program requirements delineated in references (a), (b) and (c), and to provide guidance for waterborne hull cleaning of naval ships. This process applies to all surface force ships, submarines and aircraft carriers.

1.2 SCOPE. As stated in reference (a), commercial and Naval experience has demonstrated that appreciable savings in energy are obtainable by maintaining smooth underwater hull and propeller surfaces through periodic waterborne hull cleaning. Additionally, a hull-cleaning program provides a means in which hull damage can be detected in early stages and corrective action can be taken. The hull cleaning and propeller polishing requirements of this instruction apply to all ships. It is intended to conserve fuel, restore effectiveness of sonar systems, and reduce ship self-noise, which increases anti-submarine warfare effectiveness. Reference (a) provides necessary criteria, methodology, and guidelines for waterborne underwater ship inspection and cleaning. Reference (a) provides a rating scale for inspecting and reporting fouling, fouling thresholds to initiate cleaning, approved cleaning equipment for various underwater ship systems (i.e., hull sections, appendages, dome, masker or prairie air), cleaning requirements, safety precautions and procedures for cleaning, guidelines for establishing cleaning intervals and documentation and reporting requirements. To meet the objectives of reference (a), special attention will be given to ensure that appropriate action will be taken to clean ships within 30 days of deployment.

1.3 POLICY.

a. Scheduling of periodic cleaning will be the responsibility of the Type Commander (TYCOM) and accomplished per reference (a). Full, partial and interim cleaning must be accomplished by diving activities (military and civilian) certified by Naval Sea Systems Command (NAVSEA) code 00C.

b. Full hull cleaning will only be accomplished by NAVSEA divers contracted for worldwide waterborne underwater hull cleaning services. Interim or partial hull cleaning will be done by a certified navy activity or NAVSEA contracted service.

c. The execution of waterborne underwater hull cleaning operations must follow best management practices delineated in reference (c) to maximize hull-cleaning effectiveness and to minimize the release of hull cleaning by-products into surrounding waters.

1.4 RESPONSIBILITIES. An effective hull-cleaning program that ensures the delivery of reliable, environmentally sound, and quality services to the Fleet requires the well-coordinated effort of several organizations. Together, these groups must manage the planning, execution,

quality assurance, inspection and condition-reporting functions necessary to ensure the work is performed efficiently and following technical specifications. Reference (c), Chapter 28, Appendix A, Section II specifies the responsibilities for each organization (NAVSEA code 00C, Commander United States Fleet Forces Command, TYCOMs, On-Scene Navy Representative, and the Ship's Chief Engineer) involved in the hull cleaning program.

1.5 REPORTS. All waterborne underwater hull cleaning and inspection must be documented and submitted to the respective TYCOM and NAVSEA 00C for review. Documentation for cleaning submarines must also be transmitted to SUBMEPP Code 1873. Documentation for cleaning and inspection of aircraft carrier hulls must also be transmitted to PMS 312C Carrier Planning Activity, Code 22. Inspection results must be recorded on the standard Diver Hull Inspection Data form (NAVSEA 4730/3 available on-line at https://forms.documentservices.dla.mil/order/). The inspection documentation may be mailed or electronically stored and transmitted to the appropriate organizations.

LISTING OF APPENDICES.

A Area Regional Maintenance Center Fleet Technical Assistance Contact Information
B Sample Technical Assistance Visit Report (TAVR) Message
C Sample E-MAIL Technical Assistance Visit Report (E-TAVR)
D Submarine Fleet Technical Support Providers Roles and Responsibilities.

2.1 PURPOSE. This chapter provides policy, procedures and guidance regarding utilization of Fleet Technical Assistance (FTA) program resources in support of all surface ships, aircraft carriers, submarines and craft. Commander, U. S. Fleet Forces Command and Commander, U.S. Pacific Fleet Fleet Maintenance Officers (N43) will ensure that appropriate Fleet resources are available to provide technical assistance to the Naval operating forces under their cognizance.

2.2 FLEET TECHNICAL ASSISTANCE DEFINITION. FTA is the help that surface ships, aircraft carriers, submarines and craft request when they are unable to resolve equipment or software deficiencies using their own ships resources or other means available within their Strike Group. Paragraph 2.3 of this chapter lists FTA program exclusion items. Use of Regional Maintenance Center (RMC) or RMC-obtained resources for other purposes, such as non-Ship's Force repairs, assessments, Board of Inspection and Survey inspections, etc., is not considered an FTA but is addressed elsewhere in this manual or other policy guidance. All FTA requests will be responded to by the RMCs as defined in paragraph 2.4.1 of this chapter.

2.3 FLEET TECHNICAL ASSISTANCE EXCLUSION AREAS. RMCs are not responsible for technical assistance in the following areas:

a. Naval Sea Systems Command Nuclear Propulsion Directorate (NAVSEA 08) cognizant equipment.

b. TRIDENT missile weapons systems.

c. Aircraft.

d. Catapults and arresting gear - Aircraft Launch and Recovery Equipment.

e. Ordnance and munitions.

f. Submarine Safety systems and components.

g. Nuclear weapons.

h. Special clearance carry-on equipment.

i. Undersea and land-based surveillance equipment.

j. Flight deck certification related systems and equipment.

k. Diver life support systems.

l. Non-Program of Record (pre-prototype) programs.

m. Naval Supply Systems Command (NAVSUP) (e.g., Navy Cash)

n. Navy Personnel Command (NAVPERS) (e.g., RAPIDS, MIAP, NSIPS)

2.4 FLEET TECHNICAL ASSISTANCE POLICY.

NOTE: WHEN CONTACTING AN AREA RMC, UTILIZE SECURE COMMUNICATIONS AS APPROPRIATE TO MAINTAIN SECURITY OF CLASSIFIED EQUIPMENT AND OPERATIONAL PARAMETERS.

2.4.1 Requesting Assistance. It is important that ships develop and exercise self-sufficiency for shipboard system maintenance to the fullest extent possible. If unable to resolve a technical problem internally, or by other means available within their Strike Group, and there are no RMC representatives or Other Source of Support Subject Matter Experts (SME) already onboard, the ship will contact the Area RMC as outlined in paragraph 2.8.2 of this chapter using the contact information found in Appendix A of this chapter. When requesting assistance the ship will provide the pertinent information listed in paragraph 2.4.2 of this chapter. In the case where the applicable RMC representatives or Other Source of Support SMEs are onboard and available, ships will coordinate with the Area RMC when requesting to utilize onboard SMEs for immediate support.

2.4.2 Required Fleet Technical Assistance Request Information. A Casualty Report (CASREP) solely to establish an FTA is not required. When requesting Technical Assistance, the following information is **necessary** to assist in a timely and accurate response, regardless if the RMC representative or Other Source of Support SME is onboard for immediate response:

a. Job Control Number (JCN) (required) and Casualty Report (if applicable) numbers.

b. Equipment identification: (Noun name, nomenclature, model, MK or MOD, etc.).

c. Equipment failure mode: Detailed description of the nature of failure or casualty, including symptoms and operational condition at time of casualty, current symptoms and indications and any other relevant information available to assist in diagnosing the problem.

d. Repair actions taken to date: [Include any extra-unit assistance (e.g., Ship Repair Facility, Tender, etc.)].

e. Parts status: (Indicate spare parts required, estimated delivery date, document numbers, document status, etc., if known).

f. Technical manual: (NAVSEA, NAVSHIPS, NAVORD Technical manual number or Commercial Off-The-Shelf manufacturer's publication identification, if available).

g. Dates: (Include earliest through latest possible dates assist is required. Provide alternate dates if possible).

h. Location: (Country, port, Naval Base, pier, berth, etc.).

i. Contact information: (Ship or staff Point of Contact name(s) and rate and rank, DSN, INMARSAT, commercial phone numbers, FAX number, SIPRNET or NIPRNET E-mail addresses).

j. Manufacturer of equipment for which assistance is required (if known).

k. Equipment Allowance Parts List or Record Identification Number.

l. Commanding Officer assessment as to effect on ship's mission in the event Distance Support is unsuccessful.

2.4.3 Chief of Naval Operations Availability Fleet Technical Assistance Procedures. Fleet units may request technical assistance while in a Chief of Naval Operations scheduled maintenance availability. The request must be submitted to the cognizant Area RMC, which will coordinate with the appropriate Naval Supervising Authority (NSA) (if not the same as the cognizant Area RMC) for technical assistance related to systems or equipment that are under the NSA's cognizance or are part of an availability work package. When the cognizant Area RMC is the NSA, the RMC will provide technical support. If not the NSA, the cognizant Area RMC may also do so, as necessary and coordinated with the NSA.

2.4.4 Initial Response. The initial response to all FTA requests will be via Distance Support. If the Operational Commander or Type Commander (TYCOM) determines on-site support is necessary, it is incumbent on them to inform the cognizant area RMC that on-site support is required.

2.4.5 On-Site Support. In a port without an RMC or while underway, if Distance Support is determined unsuccessful by the RMC, the Operational Commander or TYCOM will determine whether the cognizant RMC will transition or provide on-site assistance. In a port with a RMC, the RMC may determine transition to on-site support, as prioritized by guidance in paragraph 2.8.4.a. of this chapter.

2.5 COMPLETION.

NOTE: THERE WILL BE OCCASIONS WHEN AN UNDERWAY SHIP MAY NOT REQUIRE ALL SYSTEMS TO BE FULLY OPERATIONAL. SUCH SYSTEM DEFICIENCIES MAY BE THE SUBJECT OF A CASREP OR THEY MAY ONLY BE DOCUMENTED IN THE SHIP'S CURRENT SHIP'S MAINTENANCE PROJECT.

2.5.1 Fleet Technical Assistance Completion. To complete the FTA the ship must concur that the cognizant RMC or Other Source of Support has completed one of the following:

a. The fault is resolved.

b. Parts are identified to resolve the fault.

c. Original fault troubleshooting is complete and the deficiency is identified (i.e., Ship understands what needs to be repaired).

2.5.2 Transition to Repair. A completed FTA may require a subsequent deferral (TA-1, TA-2) for repair activity action or Ship's Force corrective maintenance (TA-4).

2.6 RESPONSIBILITIES.

2.6.1 Ship's Commanding Officer. Ship's Commanding Officer will:

a. Ensure all FTA requests are accurate, complete and timely.

b. Ensure all FTA requests reference a JCN and contain a detailed problem description per paragraph 2.4.2 of this chapter. Ensure 2-Kilo is up-lined for the FTA request at earliest opportunity. If FTA request is associated with a CASREP, up-line JCN per volume II, part II, chapter 1 of this manual per current operational guidelines. If unable to up-line the associated JCN due to operational constraints, submit a message work candidate per volume II, part I, chapter 4, Appendix C of this manual.

c. For FTA requests associated with systems that are not required to meet current or projected mission tasking, ensure an associated CASREP, 2-Kilo, or both, specify if on-site assistance, with associated period of performance, will be required if Distance Support is unsuccessful.

d. Ensure the TYCOM, Immediate Superior In Command (ISIC) and Operational Commander are kept informed of technical issues and technical assistance requests following existing guidance.

e. While a ship is underway or in another port without an RMC, ensure Distance Support alternatives are exhausted before on-site technical assistance is requested. This policy is in place to ensure satisfactory crew and technical assistance personnel Distance Support procedure training and proficiency so they are able to efficiently use Distance Support when the ship is deployed.

f. Ensure Ship's Force technicians who are qualified on the systems and equipment in question are available to support technical assistance personnel.

g. Immediately upon completion of an on-site FTA visit per paragraph 2.5.1 of this chapter, the Fleet unit will release the FTA personnel. When redirection of the same personnel to other problems is desired, the Fleet unit will coordinate with the cognizant RMC and Operational Commander for transfer of FTA personnel.

h. Ships will establish a central, secure E-mail account for appropriately cleared technical assistance personnel providing onboard support for communicating with their home office or detachment for technical support or information. The account will be RMCTECHASSIST@Ship.navy.mil where "Ship" is the name of the vessel. If secure email is unavailable, the ship will establish a communication path for technical support and information per current operational guidelines.

i. Ship will issue arrival and departure message keeping all apprised of technical representative movement.

2.6.2 Commanders, Naval Regional Maintenance Center. Commanders, Naval Regional Maintenance Center (CNRMC) will ensure a physical Operations Center is established and maintained within the CNRMC command building or within close proximity.

2.6.3 Regional Maintenance Center Commanders. RMC Commanders will ensure:

a. Sufficient capability exists to provide timely response to all requests for technical assistance, either with RMC personnel or other sources of support. The RMC is responsible for coordinating the response from other sources of support as detailed in

paragraph 2.6.4 of this chapter. The cognizant RMC responsibility is defined in paragraph 2.8.2 of this chapter.

b. RMC mission funds are used to fund FTA efforts per paragraph 2.8.4 of this chapter.

c. Technical support is provided to Fleet units per this directive. In the event there is a work priority conflict, the Area RMC will coordinate resolution with the appropriate TYCOM, Operational Commander or Fleet Maintenance Officer Staff, as necessary.

d. The initial response to FTA requests is via Distance Support to prioritize RMC or subject matter expert work assignments and service a wider customer base. If Distance Support is unsuccessful, the distance support provider, if not the cognizant RMC, will notify the cognizant RMC at the earliest opportunity who will determine what level of additional support is required and if on-site assistance is appropriate per paragraph 2.8.4.c of this chapter. If appropriate, the cognizant Area RMC will provide on-site FTA from RMC resources or coordinate provision of on-site support from other government or contractor organizations per paragraph 2.6.4 of this chapter.

e. Personnel responding to a request for technical assistance are thorough in their review of the specific technical problem, including system trouble shooting, fault isolation, root cause analysis, failed parts identification, logistic support and system restoration assistance while imparting the maximum amount of onboard maintenance training to Ship's Force personnel. Troubleshooting must be conducted per volume V, part I, chapter 2, paragraph 2.4 of this manual.

f. Acknowledgment and response to FTA requests will be made within 24 hours of receipt, via phone conversation, e-mail or Naval Message by cognizant RMC.

g. Cognizant RMC personnel providing on-site technical assistance or working with or coordinating efforts with other source providers, will keep the cognizant ship's department head or designated representative informed of the scope of the problem and the recommended corrective action.

NOTE: THE PURPOSE OF THE TAVR IS TO CAPTURE THE DETAILS OF THE TECHNICAL ASSISTANCE PROVIDED, AND TO ALSO IDENTIFY WHERE POSSIBLE, SPECIFIC ISSUES AND CIRCUMSTANCES THAT LED TO THE NEED FOR ONBOARD TECHNICAL ASSISTANCE, AS WELL AS LONG-TERM IMPROVEMENT RECOMMENDATIONS THAT CAN HELP IMPROVE SAILOR SELF-SUFFICIENCY AND REDUCE THE NEED FOR ONBOARD TECHNICAL ASSISTANCE. A DETAILED TAVR, TRANSMITTED TO THE APPROPRIATE ORGANIZATIONS, CAN BE VERY HELPFUL IN ACHIEVING THAT OBJECTIVE.

h. A message Technical Assistance Visit Report (TAVR) (Naval), in the format provided in Appendix B, is required at the completion of an on-site FTA anytime one or more of the following criteria are met:

(1) Personnel or Equipment safety issue.

(2) Submarine FTA.

i. An E-mail TAVR (E-TAVR), in the format provided in Appendix C, is required at the completion of an FTA on Surface Force Ships and Carriers anytime one or more of the following criteria are met:

(1) C3 or C4 CASREP.

(2) Repetitive system or equipment failure or long-term improvement recommendations.

(3) FTA passed to other Source of Support.

(4) Loss of mission capabilities (e.g., AAW, MOB, ASW).

(5) Significant follow-on repair recommendations.

(6) High visibility.

j. Task other Source of Support provider who responds to an on-site FTA, coordinated by their RMC, to provide daily updates and status of on-site FTA to the cognizant RMC per paragraph 2.6.3.a of this chapter. The cognizant RMC is responsible to provide updates and status of on-site FTA, to include Source of Support assistance, to appropriate TYCOM or ISIC. Upon completion of Source of Support FTA, Source of Support provider shall submit a TAVR as required by paragraph 2.6.4.e of this chapter or the cognizant RMC will task them to provide the technical information necessary for the cognizant RMC to generate a TAVR.

k. Submission of a message report if an on-site assist visit is terminated. Technicians who are not adequately supported by Ship's Force personnel must immediately notify the ISIC or TYCOM. If the lack of support by Ship's Force personnel cannot be resolved, then the technicians are authorized to depart the ship and terminate the visit. Termination of the ship visit under these circumstances will be detailed in a follow-up message to the appropriate TYCOM or ISIC with information to the appropriate Fleet Commander (N43).

l. Track all requests for FTA using approved FTA software. Currently, this is the Fleet Technical Support (FTS) for Surface Force ships and submarines. The Cognizant RMC is responsible for timely updating of FTA with the status of all assigned FTA.

m. Ensure Submarine Warfare Federated Tactical System or Non-Propulsion Electronic System technicians providing FTA to submarines with systems, subsystems or equipment postured at the Sensitive Compartmented Information level are eligible for access to Sensitive Compartmented Information based on a current Single Scope Background Investigation.

n. (Submarines Only) Accomplish assigned Fleet Technical Support as outlined in Appendix D.

2.6.4 Other Source of Support Providers. Examples of other source of support providers include: Naval Warfare Center, Original Equipment Manufacturer, commercial repair firms, Systems Command, non-RMC Naval Shipyard, other Area RMC, Propulsion Plant Engineering Activity, etc. Other source of support providers will:

a. Acknowledge receipt of FTA assignment to the tasking RMC and the requesting unit.

b. First, use Distance Support to resolve the problem. Provide the tasking Area RMC with timely Distance Support status and results.

c. Coordinate with the tasking Area RMC and execute an on-site technical assist if Distance Support is unable to resolve the problem. Ensure personnel providing on-site technical assistance are thorough in their review of the specific technical problem, including system trouble shooting, fault isolation, root cause analysis, failed parts identification, logistic support and system restoration assistance, while imparting the maximum amount of onboard maintenance training to Ship's Force personnel.

d. Ensure that personnel providing on-site technical assistance keep the cognizant ship's department head or designated representative and tasking RMC informed of the scope of the problem and the recommended corrective action daily via email, reports, or other means of communication to provide a status to ensure appropriate TYCOM or ISIC stands informed.

e. At the completion of on-site technical assistance, comply with administrative requirements addressed in paragraph 2.9 of this chapter within five working days of the visit completion to the tasking RMC.

f. In the cases where Other Source of Support SMEs are onboard and directly tasked by the ship to perform FTA beyond the original purpose of the on-site support, the responding activity will coordinate with the Area RMC and TYCOM, and provide FTA data upon completion for tracking purposes. If the additional support will cause additional cost, the responding activity will need pre-approval from the cognizant RMC. The administrative requirements in paragraph 2.9 of this chapter also apply. Where Other Source of Support SMEs are onboard for FTA and provide non-FTA support, whether solicited or unsolicited, the cognizant RMC is not responsible for funding this work outside of FTA.

g. (Submarines Only) Accomplish assigned Fleet Technical Support as outlined in Appendix D.

2.7 COMMANDERS, NAVAL REGIONAL MAINTENANCE CENTER ENTERPRISE OPERATIONS CENTER.

2.7.1 CNRMC Enterprise Operations Center. The CNRMC Maritime Operations Center will act as the RMC enterprise's single coordinating activity to monitor fleet priorities, inform stakeholders, and provide oversight, coordination and management of RMC resources required for global execution of shipboard casualty fleet technical assistance, I-Level maintenance, and Battle Damage Assessment and Repair while concurrently providing emergency management services and continuity of enterprise functions.

2.7.2 Purpose.

a. Provide 24 hour, 7 day support to the RMC enterprise, including Emergency Management functions, ship casualty coordination, reference (a) Full Scale Exercises, warfighting exercises and real-world events.

b. Collaborate with Fleet and Theater Operational Commanders to align priorities.

c. Assist the RMCs in obtaining needed support from "other sources" (e.g. Naval Surface Warfare Centers, In-Service Engineering Activities, Naval Information Warfare

Systems Command, Naval Surface Warfare Center s, Naval Supply, Original Equipment Manufacturers).

(1) Maintain communication rosters and organizational charts for all stakeholders.

(2) Assist in removing barriers (e.g. travel, funding).

d. Maintain a communications plan to provide required reports to RMC leadership, Fleet and Operational Commanders on the status of casualty response efforts.

(1) Participate in established battle rhythm meetings.

(2) Provide risk assessments and recommended courses of action when resources are constrained.

(3) Maintain library of required and approved reporting templates.

(4) Maintain archive of historical reports.

e. Monitor NIPRNET and SIPRNET naval message traffic for casualty assistance requests and applicable Operational Commander guidance to inform the RMC enterprise of additional requirements, restrictions and impending tasking which may impact RMC personnel movement.

f. Maintain library of current CASREP and guidance messages.

g. Facilitate communication of forward deployed ships schedules (e.g. port visits, in-chops, out-chops).

h. Monitor RMC technician movements and locations in forward deployed Areas of Responsibility (AORs).

i. Per reference (b), monitor the status and progress of RMC Continuity of Operations plans, when activated.

j. Solicit RMCs to share subject matter expert resources when and where needed.

2.8 REGIONAL MAINTENANCE CENTERS.

2.8.1 Regional Maintenance Centers. RMCs will serve as the primary source of Fleet Technical Assistance. For purposes of this specific FTA policy, use of the term "RMC" includes Naval Submarine Support Facility New London and TRIDENT Refit Facility Kings Bay since these two activities will be serving as “Area RMCs” in providing FTA as noted in Table 2-1 of this chapter.

2.8.2 Area Regional Maintenance Center Area of Responsibility. Regional RMC Area of Responsibility (AOR) assignments are listed in Table 2-1. Figure 2-1 graphically supplements Table 2-1 in depicting the AOR for each RMC. The AOR in which a ship is operating at the time a CASREP or emergent FTA request is initiated will dictate which Area RMC is responsible for coordinating or providing that FTA (becomes the “cognizant Area RMC”). If a ship is located in an AOR other than their homeport AOR, and the ship initiates a routine FTA request (one that does not require the cognizant RMC to expend travel or overtime funds for on-site support in the event Distance Support is unsuccessful), the homeport Area RMC will assume cognizance of that FTA request and accomplish it as a routine priority via Distance Support or, if necessary, via on-site FTA when the ship returns to homeport.

AREA RMC	AREA OF RESPONSIBILITY (AOR)
Southwest Regional Maintenance Center (SWRMC), San Diego, CA	Ships, SSNs*, aircraft carriers and craft in port or operating off the U.S. West Coast from the San Francisco Bay area south to the southern point of South America and selected mine warfare systems worldwide.
Puget Sound Naval Shipyard & Intermediate Maintenance Facility (PSNS & IMF), Bremerton, WA	Ships, SSNs, aircraft carriers and craft in port or operating in the PACNORWEST area from North of San Francisco, CA, to northern Pacific or Alaska area and all SSBN and SSGN units in PACFLT.
Pearl Harbor Naval Shipyard & IMF (PHNS & IMF), Pearl Harbor, HI	Ships, aircraft carriers, craft and SSN 688 and SSN 774 Class submarines in port or operating in the MIDPAC area and all non-SSBN or SSGN submarines (excluding SSN 21 Class) and submarine tenders operating in the Seventh Fleet AOR (excluding those SSN 688 and SSN 774 Class submarines operating in port or operating out of Diego Garcia, UK).
Ship Repair Facility (SRF) and Japan Regional Maintenance Center (JRMC), Yokosuka, Japan	Ships, aircraft carriers and craft in port or operating in the Seventh Fleet AOR.
Mid-Atlantic Regional Maintenance Center (MARMC), Norfolk, VA	Ships, aircraft carriers and craft in port or operating in the Atlantic Ocean from Charleston, SC, latitude northward extending to the Azores longitude eastward. Submarines* in port and all SSN 688 and SSN 774 Class submarines operating in the Second, Fourth, Fifth and Sixth Fleet AOR and those submarines operating in port or out of Diego Garcia, UK, excluding those submarines in port or in the Groton and New London, CT regional waters.
Forward Deployed Regional Maintenance Center (FDRMC) Naples, Italy FDRMC Detachment Bahrain FDRMC Detachment Rota, Spain	Ships, aircraft carriers and craft in port or operating from the Azores longitude eastward to include the Fifth Fleet and Sixth Fleet AOR.
Naval Submarine Support Facility (NSSF) or Submarine Technical Support Center (STSC) Groton, CT	SSN 688 and SSN 774 Class submarines* in port or operating in the Groton-New London, CT regional waters.
TRIDENT Refit Facility, Kings Bay, GA	All Atlantic Fleet SSBN and SSGN units. Underwater ship husbandry to Naval Nuclear Power Training Unit Charleston.

AREA RMC	AREA OF RESPONSIBILITY (AOR)
Southeast Regional Maintenance Center (SERMC), Mayport, FL	Ships, aircraft carriers and craft in port or operating south of the Charleston, SC latitude in the Atlantic Ocean to the southern tip of South America.

* PSNS & IMF has responsibility for all SSN 21 Class submarines regardless of location.

Table 2-1 RMC Area of Responsibility Assignments

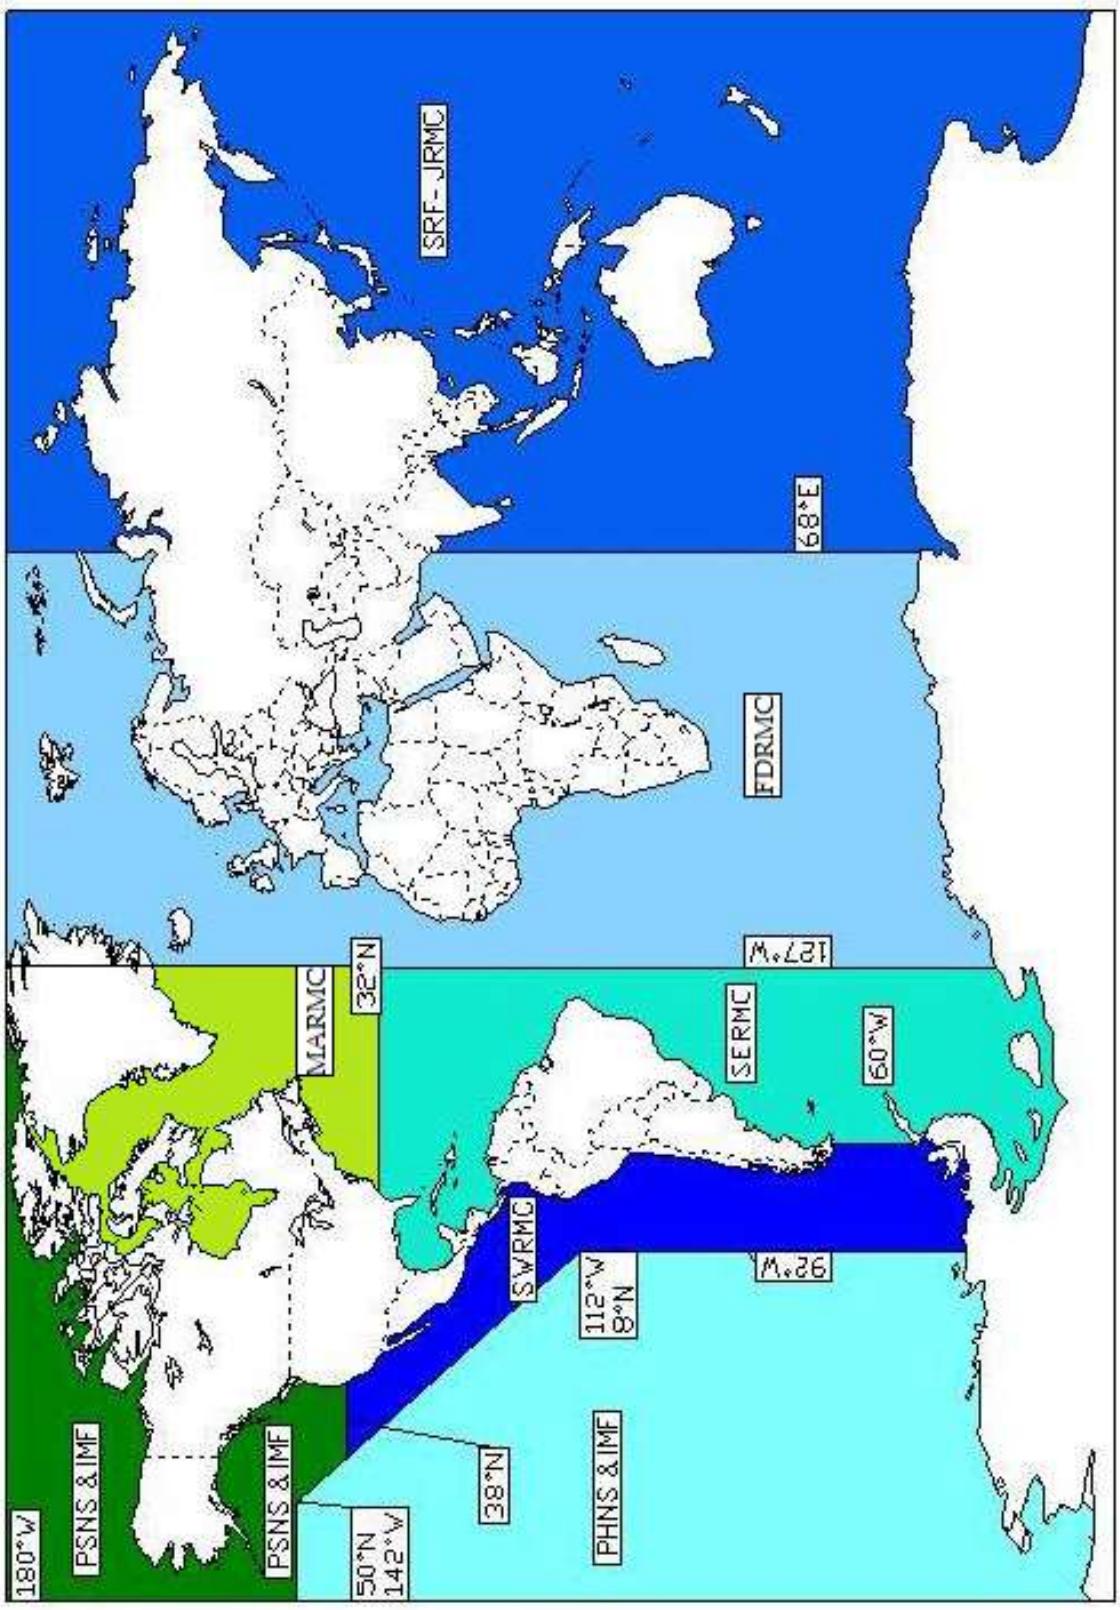

Figure 2-1 RMC Area of Responsibility

2.8.3 Considerations for Providing Assistance.

2.8.3.1 Distance Support. Costs to provide FTA can be dramatically reduced using Distance Support especially when a ship is underway or is not in a port with an RMC. Distance Support may include various forms of two-way communication such as telephone, e-mail, web "chat", streaming video, etc. Additionally, its use has facilitated a more effective use of limited technical resources to service a larger number of customers more efficiently. Normally, the cognizant RMC will have a subject matter expert available to respond to FTA requests via Distance Support, but in the event that such an expert is not readily available, the cognizant RMC is encouraged to contact another RMC to enlist their assistance in providing such Distance Support. In support of the Chief of Naval Operation's guidance to shift away from a risk averse culture in the Navy, not all FTA requests will be responded to with on-site support. However, the Operational Commander or TYCOM may direct immediate on-site support, if warranted.

2.8.3.2 On-Site Support. If the use of on-site support is warranted, the cognizant RMC will provide or obtain personnel to affect on-site assistance. When a ship transits from one AOR to another, the cognizant RMC will validate the need for on-site support before transitioning from Distance Support . The cognizant RMC will take into account the ship's operational schedule, as well as ship, ISIC, Operational Commander and TYCOM requirements, when determining if and at what point to shift from Distance Support to on-site support. Paragraph 2.8.4.1 of this chapter provides additional specific guidance regarding when on-site support will be provided and the prioritization of such responses should there be multiple requirements for the same FTA support personnel.

2.8.3.3 Fleet Technical Assistance Support Transfer and Acceptance. The cognizant RMC is responsible for providing or obtaining FTA support and is responsible for its completion. If the cognizant area RMC has neither the capability nor capacity to provide the FTA support required, the cognizant RMC will request FTA support from another RMC or another source of support per paragraph 2.6.4 of this chapter.

2.8.3.4 Transferring Regional Maintenance Center. The RMC transferring the FTA will transmit FTA status via appropriately classified e-mail or Naval message, detailing actions taken to date on the FTA after reaching agreement with another source of support to accept responsibility for the FTA. For Surface Ships and Carriers, the transferring cognizant RMC requests FTA support from another RMC, each RMC shall document all time and actions taken in approved FTA software. For submarines, the ship’s homeport will broker the 2-kilo to the accepting source of support.

2.8.3.5 Accepting Source of Support. The accepting source of support for the FTA assumes responsibility to provide the necessary support to resolve the FTA. If the source of support cannot resolve the FTA, they must request the cognizant RMC obtain the necessary support to resolve the FTA. The accepting source of support shall document all time and actions taken related to the FTA, and inform the cognizant RMC on the status of the FTA. If the source of support resolves the FTA, the accepting source of support shall document all time and actions taken to resolve the FTA via TAVR. A TAVR shall be provided to the cognizant RMC to ensure the cognizant RMC can provide timely FTA completion status to ship, ISIC, Operational Commander, TYCOM and stakeholders.

2.8.3.6 Support Coordination. If another source of support is required, close coordination will be maintained between the supporting activity providing such assistance and the cognizant RMC to ensure the highest level of responsiveness is being provided. Assistance from another Area RMC, or other service provider, does not abrogate the cognizant RMC's responsibility to ensure completion of the FTA or from the responsibilities identified in paragraph 2.6.3.j. Other source providers will interface with ships force and the cognizant RMC per paragraph 2.6.4.d. The cognizant RMC retains full responsibilities as outlined in this manual.

2.8.4 Funding.

a. Expenditure of funds for on-site FTAs has been significantly reduced by increased use of Distance Support. The source selection to provide on-site FTA must consider overall resource availability and total cost to the Government (e.g., labor, travel, per diem, administration, etc.) balanced against criticality of need and required speed of response. Resources to meet on-site FTA needs should be considered in the following priority order:

(1) Area RMC personnel.

(2) Other RMC personnel.

(3) Other government resources.

(4) Private sector.

b. If personnel from another Area RMC are used to support the FTA requirement, the Area RMC providing the personnel will pay all costs for those personnel including base salary, overtime, travel and per diem. For all other sources of support, the cognizant RMC will pay all costs for providing the on-site support. Other source providers will provide the requesting RMC a rough order of magnitude itemizing costs for administrative fees, labor, travel, and material. RMCs will notify the Fleets if their total FTA related expenditures in support of ships home ported in other RMC locations become significant. The Fleets will review these submissions and determine if funds transfer(s) are required to ensure RMC mission completion.

NOTE 1: PER REFERENCE (C), FORWARD DEPLOYED NAVAL FORCES CONTINUOUSLY OPERATE WITHIN THE INTEGRATED OR SUSTAINMENT PHASE UNLESS IN A CNO AVAILABILITY.

NOTE 2: IF U.S. COAST GUARD OR FOREIGN NAVY VESSELS ARE PART OF A CARRIER STRIKE GROUP OR EXPEDITIONARY STRIKE GROUP, EITHER IN WORK-UP PHASE OR DEPLOYMENT, THEY WILL RECEIVE FTA SUPPORT PRIORITIZATION AS THOUGH THEY WERE UNITED STATES NAVY SHIPS (PRIORITIES 1-7 APPLY). REIMBURSEMENT FOR ALL COSTS TO PROVIDE SUCH FTA SERVICES WILL BE FOLLOWING THE MEMORANDUM OF AGREEMENT OR MEMORANDUM OF UNDERSTANDING THAT IS NORMALLY SIGNED BETWEEN THE SERVICES OR GOVERNMENTS WHEN SUCH JOINT OPERATIONAL ARRANGEMENTS EXIST.

c. On-Site Support. If Distance Support is unsuccessful or if the nature of the FTA request warrants immediate transition to on-site support, the cognizant RMC will coordinate and provide such on-site support as prioritized:

Priority 1 - Casualties requiring clear and immediate action to offset personnel safety hazards or catastrophic equipment damage.

Priority 2 - Services to deployed ships. If resource constrained when there are multiple requirements to provide on-site support to deployed ships, prioritization of response will be:

(1) SSBN FTAs;

(2) FTAs associated with a CASREP as determined by the TYCOM;

(3) Other FTA requirements as determined by the Operational Commander and TYCOM.

Priority 3 - Services to ships that are classified as within the pre-deployment or post-deployment part of the Sustainment Phase of reference (d). If resource constrained when there are multiple requirements to provide on-site support, prioritization of response will be:

(1) SSBN FTAs;

(2) FTAs associated with a CASREP as determined by the TYCOM;

(3) Other FTA requirements as determined by the Operational Commander and TYCOM.

Priority 4 - Services to ships that are classified as within the Integrated phase of reference (d), or ship's that are classified as Independent Unit Ready for Tasking. If resource constrained when there are multiple requirements to provide on-site support, prioritization of response will be:

(1) SSBN FTAs;

(2) FTAs associated with a CASREP as determined by the TYCOM;

(3) Other FTA requirements as determined by the Operational Commander and TYCOM.

Priority 5 - Services to ships that are classified as within the Basic phase of reference (d). If resource constrained when there are multiple requirements to provide on-site support, prioritization of response will be:

(1) SSBN FTAs;

(2) FTAs associated with a CASREP as determined by the TYCOM;

(3) Other FTA requirements as determined by the Operational Commander and TYCOM.

Priority 6 - Other U.S. Navy FTA requests not addressed in one of these priorities (e.g., FTA support during Chief of Naval Operations availabilities addressed in paragraph 2.4.3 of this chapter).

Priority 7 - Technical assistance requests from non-Navy organizations (e.g., Coast Guard, U.S. Army, U.S. Air Force, Foreign Military Sales, etc.).

2.9. POST-FLEET TECHNICAL ASSISTANCE ADMINISTRATIVE REQUIREMENTS.

a. At the conclusion of an on-site technical assistance visit, the RMC representative(s) will assist the ship in completing the 2-Kilo and provide a final debrief to the ship's cognizant Department Head, or their designated representative, prior to departing the ship. Information collected for the FTA must be uploaded to 3M history.

b. A TAVR is required at the completion of on-site FTA visits as addressed in paragraph 2.6.3.h through 2.6.3.k of this chapter. TAVRs shall be submitted within five working days after departure from the ship. In cases where urgent information needs to be conveyed, an e-mail will be sent to the ISIC or TYCOM while the TAVR is in routing.

NOTE: ENSURE MESSAGES ARE FOLLOWING CURRENT MESSAGE FORMAT AND CURRENT PLAIN LANGUAGE ADDRESS DIRECTORY (PLAD) IS UTILIZED.

APPENDIX C

SAMPLE E-MAIL TECHNICAL ASSISTANCE VISIT REPORT (E-TAVR)

E-mail TAVR distribution will include the following:
TO: SHIP REQUESTING ASSISTANCE (C.O., X.O., DEPT HEADS)
ADDITIONAL ACTION ADDRESSEES (AS APPROPRIATE, TO INCLUDE ACCEPTING RMC FOR FTA TRANSFERS)
CC:
U.S. FLEET FORCES COMMAND N43
COMMANDER U.S. PACIFIC FLEET N43
FLEET COMMANDERS: (as appropriate)
TYPE COMMANDERS: (as appropriate)
NAVSEA/NAVWAR PROGRAM MANAGERS: (as appropriate)
NSWC/SSC IN-SERVICE ENGINEERING AGENTS: (as appropriate)
RMCS: (as appropriate)
TRAINING COMMANDS: (TRAINING ISSUES ONLY, as appropriate)
NAVAL SURFACE WARFARE CENTER CORONA (crna_tavr@us.navy.mil)

Email TAVR format will be:

SUBJ/USS XXX (HULL) EQUIPMENT NAME TECH ASSIST VISIT REPORT//(Insert brief equipment description; for ex. T 1348 Transmitter)
REF/A/CASREP/DTG//(Reference Designation, change as necessary/Change as necessary/Date Time Group of reference)
REF/B/DOC/2-KILO//
REF/C/TEL/TELCON INFO//
NARR/REF A IS XXXXXXX. REF B IS XXXXXX. REF C IS XXXXXX.//(Summary of Tech Assist request. For ex., REF A is CASREP Initial 04003 request for tech assist)
POC/NAME/GRADE-RATE/TEL:DSN /TEL: // (Identify RMC Technician/RMC Technician Grade/Rank. For ex., GS-12 or E7 / RMC Technician DSN/extention/RMC Technician Comm/extention)
1. BACKGROUND: REF A REPORTED (Problem). AS REQUESTED REF A, RMCXXXC REP, (Name) PROVIDED TECH ASSIST (Date) AT (Location) TO ASSIST WITH CORRECTION OF THE PROBLEM. REF B IS THE APPLICABLE TECH MANUAL.
2. REPORTED DISCREPANCY:
    A. BRIEF PROBLEM STATEMENT.

3. FINDINGS/CORRECTIVE ACTION:
    A. SUMMARIZE FINDINGS & CORRECTIVE ACTION ON HARDWARE. (STATE WHY DISTANCE SUPPORT WAS UNABLE TO RESOLVE THIS ISSUE. IF THIS TAVR IS TO DOCUMENT AN FTA TRANSFER, SO STATE AND INCLUDE FTA ACCEPTING RMC COMMAND TITLE AND SPECIFIC POC INFO.).
    B. SUMMARIZE FINDINGS & CORRECTIVE ACTION ON LOGISTICS (IF ANY).
4. CONCLUSION:

A. STATEMENT ON CAUSE OF PROBLEM/ROOT CAUSE.
B. SOMETIMES CONVENIENT TO COMBINE WITH FINDINGS.

5. LEVEL OF SF SUPPORT:
   A. ABOVE AVERAGE/AVERAGE/BELOW AVERAGE
   B. NUMBER OF SHIPS FORCE PERSONNEL TRAINED DURING VISIT
6. RECOMMENDATIONS:
   A. FOR USS XXXX:
      (1) IDENTIFY FOLLOW-ON ACTION
      (2) ABOVE DISCUSSED WITH (Name) PRIOR TO DEPARTING SHIP
   B. FOR TYCOM/RMC:
      (1) IDENTIFY FOLLOW-ON ACTION
      (2) ABOVE DISCUSSED WITH (Name) ON (Date)
   C. FOR NAVSEA/ISEA:
      (1) IDENTIFY FOLLOW-ON ACTION
      (2) ABOVE DISCUSSED WITH (Name) ON (Date)
7. INFORMATION FOR THE 2-KILO PROVIDED TO SHIP DURING DEBRIEF. JCN _____ APPLIES.
8. A. MANHOURS EXPENDED FOR TECH ASSIST.
   B. MANHOURS EXPENDED FOR TRAINING.
9. EVALUATION OF NECESSITY FOR TECHNICAL ASSISTANCE:
   A. WAS ADEQUATE TECHNICAL DOCUMENTATION AVAILABLE TO SHIP'S FORCE TO CORRECT THE PROBLEM?
   B. WERE ADEQUATE TOOLS AVAILABLE TO SHIP'S FORCE TO CORRECT THE PROBLEM?
   C. WERE ADEQUATE MATERIAL/SPARE PARTS AVAILABLE TO SHIP'S FORCE TO CORRECT THE PROBLEM?
   D. WAS SHIP'S FORCE LEVEL OF KNOWLEDGE ADEQUATE TO CORRECT THE PROBLEM?
   E. WAS THIS A CYBER-SECURITY PROBLEM?
   F. FOLLOW-ON TA-1 DEPOT AND/OR TA-2 IMA JOB REQUIREMENT?

NOTE: DEFAULT TO NAVAL MESSAGE TAVR IF NECESSARY EMAIL ADDRESSES ARE NOT KNOWN.

APPENDIX D

SUBMARINE FLEET TECHNICAL SUPPORT PROVIDERS ROLES AND RESPONSIBILITIES

1. The purpose of this Appendix is to provide standard policy for direction on Fleet Technical Support (FTS) for Submarine Regional Maintenance Centers (RMCs).

2. For the purpose of the FTS policies of this Appendix, use of the term "RMC" includes all Fleet funded activities (i.e., RMC, FMA, NSY, SRF, IMF, RSG, TRF) that execute FTS mission tasks for Submarines.

3. Submarine RMC Commanding Officers are accountable and responsible for accomplishing assigned FTS as outlined here:

a. Execute FTS mission tasks for Fleet and Type Commander (TYCOM) customers using FTS mission funding.

b. Work with the TYCOM and other FTS providers in the execution of assigned FTS tasks.

c. Work with the TYCOM to forecast annual FTS workload and identify resources required to accomplish projected workload.

d. Manage, track and report actual FTS workload and expenditures to TYCOM and Commander, Naval Regional Maintenance Center.

e. Utilize common reporting mechanisms, standard reports, metrics and processes in reporting FTS workload and financial data.

f. Provide resources required to manage and accomplish FTS in assigned AOR.

g. Categorize FTS mission tasks using the following six functions:

(1) Function F1. Fleet Technical Assistance (FTA). FTA is characterized by performing troubleshooting and fault isolation. FTA support consists of waterfront and deck-plate engineering, technical, logistics, management and coordination assistance and services; technical over-sight and consultation; over-the-shoulder maintenance training; and FTA data collection and reporting.

(2) Function F2. System or equipment operational and maintenance assessment. System or equipment operational and maintenance assessments include scheduled shipboard assessments (i.e., Total Ship Readiness Assessment (TSRA), Combat Systems Assessments (CSA)) and continuous operational and maintenance data assessments (i.e., Top Managements Actions (TMA), Submarine Continuous Operational and Maintenance Assessment). Scheduled shipboard assessments are characterized by teams of Subject Matter Experts (SMEs) led by a Test or Assessment Director performing authorized or approved test plans or procedures to determine material or mission readiness; identifying, resolving, and reporting discrepancies; and providing over-the-shoulder maintenance training to ships force. Continuous data assessments are

characterized by system or equipment analysts and SMEs working together and analyzing fleet maintenance data to identify or address fleet system/equipment problems and trends and provide "Actionable Data" to Fleet, TYCOM and SYSCOM customers in order to make "Data Driven Decisions" to improve mission readiness, system or equipment design, and life-cycle support. Also included in the (F2) Assessment Function is SME waterfront, engineering, technical, and logistics support and feedback to Fleet, TYCOM, SYSCOM, and ISEA customers at Technical Conferences, Lean Events, Working Groups, Integrated Product Teams, etc., for system or equipment maintenance or maintainability and product improvement.

(3) Function F3 – Modernization or Installation support. Modernization or installation support consists of Alteration Installation Team (AIT) support including dockside, at-sea, pre- and post-modernization or installation testing (PICO and SOVT) and shipboard technical and logistics support during system or equipment modernization installations.

(4) Function F4. Shipyard, Availability, IMA support. Maintenance support is characterized by SMEs providing technical assistance to shipyard or IMA engineering and ship personnel in troubleshooting and fault isolation; pre-post-availability inspections and grooms; work packages and Task Group Instructions (TGIs) review; provide engineering technical, logistics oversight, guidance, and support to shipyard and IMA personnel during repair, replacement, overhaul, and testing. Maintenance support also includes providing system or equipment operation and maintenance on-the-job training to shipyard and IMA personnel.

(5) Function F5. Onboard logistics and configuration management support. Onboard logistics and configuration management support is characterized by SMEs and logistics personnel working with Fleet, TYCOM, SYSCOM, ISEA, OEM, NAVSUP WSS, Class CDM, shipyard, IMA, and ships force personnel to identify and resolve logistics and configuration management problems to improve material condition readiness. Onboard logistics and configuration management support includes system or equipment specific logistics and configuration management support for all of the FTS Functions (1-4) such as FTA CASREP material support; assist or support parts identification, requisition, expedition, and delivery; identify or address system, equipment, and material configuration issues; TSRA and CSA logistics or CM audits; assisting ships force in updating supply or COSAL records; installation of ILS products; RMMCO support; and generating 4790CKs.

(6) Function F6. CHENG or Engineering Technical Authority support. CHENG or Engineering Technical Authority support is characterized by managers, engineers, and SMEs working with and providing engineering and technical support or recommendations to the AOR Chief Engineer (CHENG) to support the resolution of technical authority issues or questions which arise out of FTS and waterfront work executed in their homeport or AOR. Only activities with a warranted CHENG may charge to this functional area.

LISTING OF APPENDICES.

A Major Ship Alteration Types Executive Summary
B Submarine Alteration Request Format
C Sample TEMPALT or OPALT Reporting Message
D TYKIT Requisition Form
E TYCOM Alteration Management System Interpretation Guide
F Sample Alteration Feedback Message and Email Format

3.1 PURPOSE. To establish procedures, policy and responsibilities for fleet level management and execution of the Navy Modernization Program (NMP) as it pertains to the Submarine Force. Additional information is contained in references (a) and (b).

3.1.1 Scope. The scope of this chapter is limited to Ship Alterations (SHIPALT), Naval Sea Systems Command Nuclear Propulsion Directorate (NAVSEA 08) Alterations (NUCALT), Alteration and Improvement (A&I) Items, Type Zero (TZ) Improvements, Engineering Changes, Field Changes (FC), Ordnance Alterations (ORDALT), Temporary Alterations (TEMPALT), Operational Alterations (OPALT), TRIDENT Command and Control System Modifications,

Temporary Engineering Changes and Type Commander (TYCOM) Discretionary Changes (TDC). Appendix A of this chapter provides an executive summary of these major alteration types.

3.1.2 Definition. An alteration is defined as any modification in the hull, machinery, equipment or fittings that involves a change in design, materials, number, location or relationship of an assembly's component parts, whether the change is separate from, incidental to, or in conjunction with repairs. All modifications affecting ship's configuration, both major and minor, are prohibited without the applicable Systems Command technical approval and TYCOM authorization.

3.2 RESPONSIBILITIES.

3.2.1 Immediate Superior In Command (Squadron or Naval Submarine Support Command). The Immediate Superior In Command (ISIC) will assign an Alteration Coordinator who is responsible for managing the alteration program for each assigned unit:

a. Informing the Fleet Maintenance Activity (FMA) of upcoming availabilities.

b. Monitoring FMA long-range modernization and availability planning.

c. Establishing installation priorities. Based on FMA evaluation, inform the TYCOM of any alteration that can only be accomplished in a major availability.

d. Screen alterations to the FMA for accomplishment immediately upon receiving TYCOM authorization. Ensure no action is taken to accomplish alterations which are not TYCOM authorized. TYCOM concurrence is required for exceptions.

e. Maintaining a file of active alteration briefs and other related documentation.

f. Assisting units in the preparation of alteration requests (Appendix B) and reviewing them for technical adequacy, applicability and recommended level of accomplishment. Alteration requests should be limited to alterations affecting safety or providing a substantial maintenance or operational benefit.

g. Identifying design deficiencies, changes to hull applicability, or non-availability of material or design for alterations.

h. Ensuring that only TYCOM authorized (including partially completed alterations) appear on the individual ship's Current Ship's Maintenance Project (CSMP). Review the Type Availability Code to ensure alterations have been properly screened for either FMA or Ship's Force accomplishment (Type Availability Two for FMA or Type Availability Four for Ship's Force). Reference (c) provides detailed Maintenance and Material Management (3-M) Program requirements.

i. Ensuring that the Master Job Catalog (MJC) contains all alterations authorized for accomplishment. The Maintenance Document Control Office (MDCO) or comparable local organization is responsible for the retrieval of authorized alteration information from the MJC and its addition to the appropriate maintenance brokering database. If an authorized alteration is not contained in the MJC, contact the TYCOM or SUBMEPP or take appropriate steps to locally add it. Reference (c) provides detailed 3-M Program requirements.

j. Ensuring that all OPNAV 4790/CKs are collected three days prior to the end of the availability. Within two days of receipt, the MDCO (or equivalent maintenance document processing office) will input the original OPNAV 4790/CK into the appropriate maintenance database. Provide copies of all OPNAV 4790/CKs to the TYCOM Modernization Program Manager.

k. Ensuring that a Reactor Plant Configuration Change Report (RPCCR) Completion Report summarizing reactor plant configuration changes accomplished by a shipyard organization, Nuclear Regional Maintenance Department (NRMD) or FMA are forwarded to the ship's Commanding Officer either electronically or by hard copy at the end of each availability. Ensure the ship's engineer acknowledges the report back to the installing activity and that a copy of the RPCCR Completion Report is provided to the ISIC alteration manager and Squadron Engineer so the NUCALTs can be closed out in the appropriate maintenance brokering database. Additional details are available in references (d) and (e).

l. Ensuring situational alterations are accomplished when conditions warrant.

m. Informing ships of alterations planned during an availability in the pre-arrival message. Include alterations being accomplished by outside activities (industrial activity, vendor, Alteration Installation Team (AIT), etc.).

n. Verifying reports of alteration completions provided by the industrial activity during Chief of Naval Operations (CNO) Maintenance Availabilities.

o. Ensuring that alterations authorized for Forces Afloat accomplishment are completed to the maximum extent possible prior to ship entry into a CNO Maintenance Availability.

p. Ensure a Memorandum of Agreement (MOA) is in place for any alteration, TEMPALT or OPALT scheduled for accomplishment before installation begins. Ensure the MOA provides the duration of installation and scheduled removal date for TEMPALTs or OPALTs. Reference (f) provides detailed TEMPALT Program requirements.

q. Ensuring installation of TEMPALTs or OPALTs are per reference (f) and installation or removal is reported in the format provided in Appendix C of this chapter.

r. Ensuring installation of alterations by the AIT is per reference (g).

s. Ensuring that the FMA requisitions Ready for Issue (RFI) TYCOM Alteration Kits (TYKIT) using a TYKIT Requisition Form provided in Appendix D.

t. Ensuring that TYCOM authorized Category A Mandatory Safety A&Is and Mandatory Safety Title D SHIPALTs are completed during the next availability of sufficient duration. If Ready for Accomplishment (RFA) Category A Mandatory Safety A&I or Mandatory Safety Title D SHIPALT must be deferred beyond an availability of sufficient duration, concurrence must be granted by the TYCOM, Ship's Program Manager and NAVSEA 05 Chief Engineer. This concurrence communication may be conducted via electronic mail.

u. Ensuring that Category "B" A&Is are completed within 24 months of the date of authorization. Category "B" A&Is affect personnel and equipment safety and failure to complete a Category "B" A&I within 24 months could result in personnel injury or equipment damage. Provide a Quarterly Plan of Action and Milestones for the accomplishment of overdue Category "B" A&Is to the TYCOM Modernization Program Manager.

v. Ensuring all Fly-By-Wire Ship Control System alterations are planned and installed per the requirements of reference (h) and Chapter 34 of this volume.

3.2.2 Fleet Maintenance Activity. The FMA will establish and maintain an Alteration Management Group. This group will be responsible for:

a. Using the priorities set by the TYCOM or ISIC, commence alteration planning and material procurement in time to permit on time accomplishment.

b. Ensuring required ship checks are conducted in a timely manner.

c. Ensuring no action is taken to accomplish alterations which are not authorized for accomplishment. TYCOM concurrence is required for exceptions.

d. Notifying the ISIC that an alteration is ready to work when all procedures have been prepared and all material is on hand.

e. Upon completion of each non-reactor plant alteration, ensure that the OPNAV 4790/CK is completely filled in by the Lead Work Center per reference (c) and returned with the signed off Automated Work Request to the Analysis, Records and Reports Section. The OPNAV 4790/CK will be forwarded by the Analysis, Records and Reports Section to MDCO (or equivalent maintenance document processing office) for entry into the appropriate maintenance brokering database and then forwarded to the ship for follow-up. Reference (c) provides detailed 3-M Program requirements.

f. Ensuring that an RPCCR Completion Report summarizing reactor plant configuration changes accomplished by the NRMD or FMA are forwarded to the ship's Commanding Officer either electronically or by hard copy at the end of each availability. Ensure the ship's engineer acknowledges the report back to the installing activity and that a copy of the RPCCR Completion Report is provided to the ISIC alteration manager and Squadron Engineer so the NUCALTs can be closed out in the appropriate maintenance brokering database. Once the ship's engineer acknowledges the report, distribute the RPCCR(s) electronically via the Enterprise Business System RPCCR application. Additional details are available in references (d) and (e).

g. Maintaining a current scheduling and completion status of alterations on assigned units.

h. Maintaining the status of alteration planning for all alterations authorized for Forces Afloat accomplishment.

i. Requisitioning RFI TYKITs using Appendix D.

j. Ensuring material necessary for the installation of alterations is procured in sufficient time to ensure availability during scheduled upkeeps. This includes obtaining all hardware and software required for Ship's Force responsible alterations.

k. Providing for proper stowage of TYKITs and other alteration material pending installation.

l. Ensuring all Fly-By-Wire Ship Control System alterations are planned and installed per reference (h).

m. Upon completion of each installation, ensure that red lined drawings (if required) are provided to the ship and planning yard per reference (a).

n. Ensure delivery of all required Integrated Logistics Support (ILS) documentation to the ship per reference (a) and the approved ILS Certification Form. Inform ISIC or TYCOM if all ILS is not available prior to the start of the installation so a TYCOM Risk Assessment can be conducted.

3.2.3 Ship's Alteration Coordinator. Ships will designate the Ship's Maintenance Manager, the 3-M Coordinator or a designated assistant as the Alteration Coordinator. Responsibilities will include:

a. Acting as the central point of contact for all matters relating to alterations.

b. Responding to specific requests for ship checks made by the TYCOM, ISIC or FMA.

c. Ensuring no alteration is attempted by Ship's Force until the alteration appears in the unit's CSMP as planned for accomplishment by the appropriate work center.

d. Ensuring that all OPNAV 4790/CK forms provided by the installing activity are expeditiously completed and submitted to MDCO or equivalent maintenance document processing office per reference (c) three days prior to end of upkeep.

e. For reactor plant alterations completed by the Shipyard or NRMD, an RPCCR Completion Report will be provided by the shipyard or NRMD and within four weeks of receipt, the ship's engineer must acknowledge receipt and return the report to the Naval Supply Systems Command (NAVSUP) Code N87 Waterfront Representative. The shipyard or NRMD will be responsible for electronically processing these RPCCRs via the Enterprise Business System RPCCR application.

f. For reactor plant alterations completed by Ship's Force, RPCCRs will be submitted via SIPR e-mail to BPMI at address pomms.fct@navy.smil.mil. The TYCOM Modernization Manager and squadron Alteration Coordinators should also be copied on the e-mail. Detailed instructions governing RPCCR submission are contained in references (d) and (e).

g. Monitoring the accomplishment of alterations during Depot Maintenance Availabilities by both the industrial activity and Ship's Force and reviewing alteration completion reports provided by the industrial activity. Report any discrepancies to the ISIC or TYCOM.

h Ensuring proper 3-M reporting by monitoring the submission of OPNAV 4790/CK forms regardless of the installing activity or availability. If an OPNAV 4790/CK form

has not been submitted for a completed alteration, obtain one. The certification letter of alterations accomplished by a shipyard or AIT will be processed as OPNAV 4790/CKs as required by reference (c).

i. Ensuring an MOA is in place before installation of an alteration or TEMPALT or OPALT by any industrial activity. Ensure the MOA provides the duration of installation and scheduled removal date for TEMPALTs or OPALTs.

j. Ensuring installation of TEMPALTs or OPALTs is per reference (f) and installation or removal is reported in the format provided in Appendix C.

k. Ensuring TEMPALTs are removed and the ship is returned to its original configuration by the scheduled removal date.

l. Ensuring all TEMPALTs are removed and the ship is returned to its original configuration prior to a CNO Maintenance Availability.

m. Ensuring installation of alterations by an AIT is per reference (g).

n. Ensuring all Fly-By-Wire Ship Control System alterations are planned and installed per the requirements of reference (h).

o. Following installation of an alteration that modifies the structure of the ship, such that access to vital equipment is or may be impacted, the ship must evaluate the need to perform Unrestricted Operation (URO)-29. If access to vital equipment could be restricted, the ship must perform URO-29 and provide a copy to the installing activity and the ISIC. Partial accomplishment of URO-29 is acceptable if appropriate for the alteration.

3.3 ALTERATION PROGRAMS.

3.3.1 Reactor Plant Ship Alteration Package Program (Nuclear Powered Ships only). A NAVSEA 08 program to package and position reactor plant alteration material at the NAVSUP Weapons System Support (WSS) Mechanicsburg for requisition and installation by Forces Afloat. RFI reactor plant alteration packages should be requisitioned via fax to (717) 605-7706 or official correspondence to the address identified in this paragraph. All requests must include National Stock Number, alteration number, hull number and name, complete shipping address, point of contact (including phone number), and required delivery date.

Naval Supply Systems Command Weapons System Support (NAVSUP WSS)
Code (per Field Change instructions)
P.O. Box 2020
Mechanicsburg, PA 17055-1788

3.3.2 Alteration Installation Team Program. A program to support the installation of alterations by an industrial team normally outside of a CNO Maintenance Availability. Specific guidelines governing AITs are contained in reference (g). AIT installations are scheduled and authorized through the Submarine Modernization and Alteration Requirements Tool (SMART).

3.3.3 Type Commander Alteration Kit Program. A TYCOM program which packages hardware and software required to plan, install and report completion of the alteration. Accomplishment will be authorized in TYCOM Alteration Management System (TAMS) when the TYKIT becomes available. The TYKIT inventory report is available on the SUBLANT and SUBPAC

websites. Once TYKITs are reported available for issue, installing activities should use the form provided in Appendix D to request shipment the TYCOM.

3.3.4 Alteration & Improvement Item Program. A TYCOM program to issue NAVSEA approved changes to the fleet which are different from SHIPALTs in that they do not normally result in significant design changes, have no logistically significant material requirements, no significant ILS Requirements and no significant industrial production work or support requirements. Joint COMSUBLANT and COMSUBPAC A&I approval letters are issued by COMSUBLANT.

3.3.4.1 Message Alterations and Improvements. In the event that operational concerns require an immediate configuration change to ships at sea, a Naval Message may be used to direct specific actions with an assigned A&I number.

3.3.4.2 Alteration and Improvement Category Codes.

Category A: Mandatory Safety – After TYCOM authorization accomplish at the next availability of sufficient duration based on scope and complexity. Deferral requires TYCOM, Ship's Program Manager and SEA05 approval.

Category B: Safety - Accomplish within two years of authorization.

Category C: Maintenance Improvement - Accomplish within three years of authorization.

Category D: Optional (Habitability).

Category E: Optional (Minor Improvement).

Category F: Situational - Accomplish when the condition outlined in the A&I occurs.

3.3.5 Command, Control, Communications, Computer, Combat Systems, Intelligence, Surveillance and Reconnaissance (C5ISR) Modernization Program (C5IMP). The Submarine Force C5IMP was established to manage configuration baselines, ensure critical C5ISR interoperability and manage operational risks associated with C5ISR modernization. The C5IMP is scheduled and authorized through the SMART. C5I modernization is normally accomplished during CNO Maintenance Availabilities or by an AIT during pier side availabilities. Additional details are available in references (i) and (j).

3.4 MONITORING OF ALTERATION STATUS.

3.4.1 Type Commander Alteration Management System. An automated system operated by the TYCOMs containing information relating to an alteration's authorization, completion status, scheduling and designated accomplishing activity for all A&I Items, TZ Improvements and SHIPALTs. TAMS is the instrument by which the TYCOM authorizes the accomplishment of TYCOM alterations and maintains completion status. Appendix E provides a TAMS Interpretation Guide.

3.4.2 Navy Data Environment - Navy Modernization. The official automated system supporting the information and decision support requirements of NMP managers Navy wide. Navy Data Environment - Navy Modernization (NDE-NM) contains data related to ships and their availability schedules, alteration applicability, alteration material requirements and procurement status and installation and outfitting costs for non-nuclear alterations. Submarine TYCOM alterations and SSBN and SSGN alterations are not scheduled in NDE-NM at this time.

3.4.3 Submarine Modernization and Alteration Requirements Tool. SMART is the authoritative tool for the Submarine Force C5IMP. All C5I modernization planning, scheduling and authorization is conducted utilizing SMART. SMART is available on COMSUBLANT and COMSUBPAC NIPR site for SSNs and SSGNs and on COMSUBLANT and COMSUBPAC SIPR site for SSBNs. In addition, the TYCOM uses SMART to schedule and authorize all Hull, Mechanical and Electrical non-nuclear alterations being accomplished by AIT.

3.4.4 Nuclear Alteration Technical Documentation Compact Disk. The NUCALT Technical Documentation CD provides information required to accomplish nuclear SHIPALTs and A&I items. It is issued to applicable ships, ISICs and FMAs quarterly. It provides information on all outstanding nuclear alterations applicable to each individual ship.

3.5 LIAISON ACTION REQUEST. A Liaison Action Request (LAR) is to be submitted to the appropriate Planning Yard or Reactor Plant Planning Yard, with copy to the TYCOM Modernization Program Manager, when a technical problem is encountered during the planning for or installation of an alteration. The use of eLARs is preferred. The LAR form in reference (k) may be used. Non-technical issues should be addressed to the TYCOM via Alteration Feedback per paragraph 3.6.

3.6 ALTERATION FEEDBACK. An Alteration Feedback message or e-mail (Appendix F) is to be submitted to the TYCOM Modernization Program Manager when a non-technical or administrative problem is encountered during the planning for or installation of an alteration. Technical issues should be addressed to the appropriate planning yard via LAR per paragraph 3.5.

3.7 ALTERATION REQUESTS. Requests for new alterations should be made using the format provided in Appendix B. Alteration requests should be limited to alterations affecting safety or those providing a substantial warfighting or maintenance benefit. Initiator must provide adequate justification or the alteration request will be returned disapproved. ISIC endorsement of Alteration Requests from the fleet is required.

3.8 TYCOM MODERNIZATION WEBSITES. Both the COMSUBLANT and COMSUBPAC NIPRNET and SIPRNET Websites provide a wealth of modernization information to include periodic TAMS Reports, TYKIT Inventory and Requisition Form, Alteration Document (SHIPALT, A&I, TZ Improvement) Archives and general information.

3.9 PERMANENT MODIFICATIONS TO TENDERS WITH NUCLEAR SUPPORT FACILITIES. Rearrangement or modification to spaces within or adjacent to the Nuclear Support Facility must be accomplished per reference (l).

APPENDIX A

MAJOR SHIP ALTERATION TYPES EXECUTIVE SUMMARY

TYPE ALTERATION	BRIEF	WHO FUNDS FMP INSTALLATION
Title K SHIPALT	Most complex military characteristic change; requires Industrial Activity (including AIT) expertise.	Program Office
Title K-P SHIPALT	Approved package alteration for AIT or forces afloat accomplishment.	Program Office
Title D SHIPALT	Less complex fleet responsible Alteration Equivalent to a Repair. May require Industrial Activity or FMA expertise. Reactor Plant Title "D" SHIPALTs are situational - to be accomplished only when the situation outlined in the SHIPALT occurs.	Fleet Commander or TYCOM
Title F SHIPALT	Less complex fleet responsible Alteration Equivalent to a Repair. May require FMA or Ship's Force expertise. Only used for Reactor Plant alterations.	Fleet Commander or TYCOM
ORDALT	Modification of ordnance equipment or systems after establishment of the product baseline which involves a change in design, material, quantity, installed location, ILS, or the relationship of the component parts of an assembly within the ship. ORDALTs are normally accomplished by an AIT.	Program Office
MACHALT NOTE: Submarines no longer issue MACHALTs but will retain this definition to support legacy MACHALTs.	Hull, Mechanical and Electrical changes within strict equipment/system boundaries and with limited system ramifications managed by the In-Service Engineering Activity.	Program Office or TYCOM
Engineering Changes, Field Changes (FC)	A mechanical, electronic or electrical change, made to electronic equipment after establishment of the product baseline and delivery to the government, including	Program Office

TYPE ALTERATION	BRIEF	WHO FUNDS FMP INSTALLATION
	software changes, which do not impact interfaces to other equipment within the ship, change the footprint, form or fit, change power, weight or air conditioning requirements. Engineering Changes and FCs are normally installed by AIT or Ship's Force.	
Alteration & Improvement (A&I) Item	Tests, inspections and minor alterations to submarines and submarine tenders; no significant ILS impact.	Fleet Commander or TYCOM
Type Zero (TZ) Improvements	Minor alterations to SSBN and SSGN 726 Class submarines; no significant ILS impact.	Fleet Commander or TYCOM
TYCOM Discretionary Changes (TDC) NOTE: Submarines no longer issue TDCs but will retain this definition to support legacy TDCs.	Minor alteration to SSBN and SSGN 726 Class submarines at the discretion of the TYCOM or ISIC; no significant ILS impact.	Fleet Commander or TYCOM
TRIDENT Command and Control System Modification	Alterations on the TRIDENT Command and Control System.	Program Office
Temporary Engineering Changes	Emergent temporary modification to the TRIDENT Command and Control System.	Program Office
TEMPALT	Emergent, proof of concept or mission related temporary modification to submarines; installed for short, predetermined time frame not normally to exceed 24 months or 18 months wet duration time with any external structure or any implodable volume features.	Technical Sponsor
OPALT	TEMPALTs with ILS requirements (usually an interim installation pending SHIPALT development).	Technical Sponsor
TRIDENT Alteration (TRID)	Major alteration to SSBN and SSGN 726 Class submarines. Significant ILS impact.	Program Office

APPENDIX B

SUBMARINE ALTERATION REQUEST FORMAT

4720
Ser
Date

From: Commanding Officer, USS (Ship's Name and Hull No.)
To: Commander, Naval Sea Systems Command
Via: ISIC (as appropriate)
TYCOM (as appropriate)

Subj: USS (Ship's Name and Hull No.) ARN (Hull No.-CY-Ser No.) REQUEST FOR ALTERATION TO (PROVIDE, REMOVE, REPLACE, RELOCATE, INSTALL, CORRECT, etc.) IN (Ship Type or Class)

Ref: (a) COMUSFLTFORCOMINST 4790.3; Joint Fleet Maintenance Manual

Encl: (1) (Photographs, sketches, etc. to fully describe the proposed alteration)
(2) Recommended Changes to Technical Documentation

1. Existing Deficiency or Condition. Statement of circumstances which warrant initiation of alteration request.
2. Alteration Request. Per Volume VI, Chapter 3 of reference (a), request that the following alteration be approved for (Ship Type or Class) ships and be authorized for accomplishment on USS (Ships Name and Hull No.).
   a. Brief: Description of alteration desired.
   b. Justification: Statements that the alteration meets one or more of the following criteria:
      (1) Significant improvement in ship or equipment safety.
      (2) Significant improvement in equipment or system reliability, reduction in maintenance requirements or both.
      (3) Significant benefits to health or safety of personnel.
      (4) Significant improvement in mission capability.
   c. Applicable Plans and Publications: List applicable technical manuals, drawings, correspondence, maintenance documentation, etc.
   d. Priority: Defined by TYCOM instructions.
   e. Relationship to other issued alterations:
   f. Manual Changes: Recommended manual changes (attached as enclosure (2)).
   g. Effect on Habitability.
   h. Materials.
   i. Work to be accomplished by:

ISIC ENDORSEMENT OF SUBMARINE ALTERATION REQUEST FORMAT

4720
Ser
Date

FIRST ENDORSEMENT on Commanding Officer, USS (Ship's Name and Hull No.) ltr 4720 (Ser No. and Date)

From: ISIC (as appropriate)
To: Commander, Naval Sea Systems Command
Via: TYCOM (as appropriate)

Subj: USS (Ship's Name and Hull No.) ARN (Hull No.-CY-Ser #) REQUEST FOR ALTERATION TO (PROVIDE, REMOVE, REPLACE, RELOCATE, INSTALL, CORRECT, ETC.) IN (Ship Type or Class Ships).

1. Forwarded, concurring with the basic correspondence (with the following comments).
2. The alteration should be applicable to (Type, Class, Hulls).
3. This alteration should be issued as an (A&I, Title D, F, K, P SHIPALT).
4. This alteration should be accomplished by (Forces Afloat or industrial activity).

Copy to:
USS (Ship's Name and Hull No.) (requesting ship)

4. TELEPHONE (VOICE or FAX):
5. DATE REQUIRED:
6. SPECIAL INSTRUCTIONS:

APPENDIX E

TYCOM ALTERATION MANAGEMENT SYSTEM INTERPRETATION GUIDE

ALTID: Alteration Identification Number

Format of ALTID is:

PR Type 00000

Alt Prefix Ship Type Alt Number

The Alt Prefix is SA for SHIPALTs, TY for A&I Items and MA for MACHALT. Ship Type is a four-character element for the type of ship (SSN, SSBN, AS, etc.) and the Alt Number is a five-digit number which begins with a 0 for SHIPALTs and a letter prefix for A&I items.

Ship Type Abbreviation	A&I Prefix	Ship Type
SSN688 or 21 Class	N	Nuclear-Powered Attack Submarine
SSN774 Class	V	Nuclear-Powered Attack Submarine
SSBN or SSGN 726 Class	T	TRIDENT or SSGN Submarines
AS	A or R	Submarine Tender
All Nuclear Ships	Q	Reactor Plant Modifications
Drydocks	D or M	Drydocks

REV: Revision Number

INCR: SHIPALT Increment Number (if applicable).

TITLE: SHIPALT Title

K = Funded & scheduled by NAVSEA
KP = Funded by NAVSEA and scheduled by TYCOM or NAVSEA
F = Funded & scheduled by TYCOM
D = Funded & scheduled by TYCOM

NOUN NAME: Noun Name of Alteration

EIC: Equipment Identification Code (Z0ZZ = Reactor Plant Equipment)

SWAB: Ship Work Authorization Boundary

ICNC: Alteration Cancellation Indicator

0 = Active
1 = Canceled
2 = Superseded
3 = Never Issued

4 = Completed
5 = Not Used
6 = Low Priority, Obsolete, Deferred

08: Nuclear Indicator (* denotes reactor plant alteration)

CAP: Capability Code - Recommended Level of Accomplishment

S/F = Ship's Force
FMA = Fleet Maintenance Activity
SY = Shipyard (Industrial Activity)
AIT = Alteration Installation Team
FA = Forces Afloat

CAT: Category Code - (non-reactor plant A&I items only)

A = Mandatory Safety - Accomplish at the next availability of sufficient duration based on scope and complexity after authorization. Deferral requires TYCOM, Ship's Program Manager and SEA05 approval.
B = Safety - Accomplish within two years of authorization.
C = Maintenance Improvement - Accomplish within three years of authorization.
D = Optional (Habitability).
E = Optional (Minor Improvement).
F = Situational - Accomplish when the situation outlined in the A&I occurs.

ALT NARR: Narrative description of the alteration.

TYST: TYCOM Status

A = Applicable but not yet authorized. No action should be taken to accomplish this alteration without TYCOM concurrence.
B = Applicable and Authorized.
C = Alteration has been fully completed per the alteration document. For non-reactor plant alterations, "C" is assigned only after the completion report has been up-line reported in the 3-M System. For reactor plant alteration, "C" is assigned only after the RPCCR has been distributed per reference (d) and all applicable FCs or RPSMs have been reported complete.
D = Deferred. No action should be taken to accomplish without TYCOM concurrence.
E = Intent of the alteration has been equivalently accomplished via a method other than the alteration document.
H = May or may not have been accomplished during new construction or Post Shakedown Availability via Headquarters or Field Modification Request. A shipcheck is required to determine status.

I	=	Incomplete Reactor Plant Alteration (all applicable FCs or RPSMs have not been completed).
J	=	Title P SHIPALT package scheduled for installation by the FMA.
K	=	Title P SHIPALT package scheduled for installation by an industrial activity during Depot Maintenance Availabilities.
L	=	Title P SHIPALT package scheduled for AIT installation.
M	=	System Under Military Sealift Command Cognizance
N	=	Not Applicable.
P	=	Partially complete.
Q	=	A reactor plant alteration reported complete via paper RPCCR but not reported complete in EBS.
T	=	Technically applicable, however, requirement to accomplish has been negated by another alteration.
V	=	Not required within five years of inactivation.
X	=	Cancelled.
Z	=	Interim completion. For non-reactor plant alterations, awaiting feedback from the 3-M system that the completion has been up-line reported. For reactor plant alterations, awaiting RPCCR or RPCCR Completion Report.

FYPR: Fiscal Year Programmed - Fiscal year in which alteration is to be accomplished (** denotes situational alteration).

PRRMK: Programming Remarks - Assigned Accomplished Level

AIT	=	Alteration Installation Team
CMAV	=	Continuous Maintenance Availability
CNX	=	Cancelled
CON	=	New Construction
DEF	=	Deferred
DSCO	=	Docking Service Craft Overhaul
EDSRA	=	Extended Docking Selected Restricted Availability
EOH	=	Engineered Overhaul (Not Refueling)
ERO	=	Engineered Refueling Overhaul
ERP	=	Extended Refit Period
FA	=	Forces Afloat
FAA	=	Forces Afloat Anytime
FAP	=	Forces Afloat Prior to Depot Availability
FMA	=	Fleet Maintenance Activity
IDD	=	Interim Dry-docking
IMA	=	Intermediate Maintenance Activity
MTS	=	Moored Training Ship
PIRA	=	Pre-Inactivation Selected Availability
PSA	=	Post Shakedown Availability
RAV	=	Restricted Availability
SRA	=	Selected Restricted Availability
SY	=	Shipyard

TAT	=	TYKIT for AIT Installation
TKT	=	TYCOM Alteration Kit
TOA	=	TYCOM Opportunity Availability
TSY	=	TYKIT for Depot Level Installation
TYC	=	No Installing Activity Assigned
XXX	=	Cancelled

TYCOM AUTH: Alteration authorization date.

DUE DATE: Date the alteration is required to be completed.

REMARKS: Used to record information relating to hull status or situational requirements.

APPENDIX F

4.1 PURPOSE. To provide guidance in the management of shipboard Electromagnetic Compatibility (EMC) through the Shipboard Electromagnetic Compatibility Improvement Program (SEMCIP) for all ships, per reference (a) and procedures outlined in reference (b).

4.2 BACKGROUND. The SEMCIP was established by Naval Sea Systems Command (NAVSEA) under the sponsorship of the Chief of Naval Operations (CNO). The goals of SEMCIP are to rectify mission-degrading Electromagnetic Interference (EMI) problems, support fleet EMC training and maintain shipboard EMC. SEMCIP is divided into five major elements: Up-front Systems Engineering, Fleet Response, EMI Problem Quantification, Spectrum Management, EMC in the ship alteration installation approval process, Engineer EMI Fixes and Fleet EMC Support Tools. One of the Fleet tools is the SEMCIP Technical Assistance Network (STAN), a database containing current and historical information on all known shipboard,

submarine and Strike Force EMI problems. Since some SEMCIP elements are normally associated with the development of new systems, all elements will not be discussed here.

4.3 ELECTROMAGNETIC COMPATIBILITY CERTIFICATIONS AND EMI SURVEYS. EMC certifications are an important line of defense against shipboard EMI problems and are performed by NAVSEA designated activities for the purpose of testing various shipboard systems for EMI degradation. During an EMC Certification or EMI Survey, EMI problems are investigated and evaluated, applicable EMI fixes are installed and effects of EMI on each system tested is ascertained and recorded in STAN.

4.3.1 Surface Ships and Aircraft Carriers Electromagnetic Compatibility Certifications. Deploying surface ships and aircraft carriers will receive an EMC Certification from a NAVSEA qualified activity following CNO or extended maintenance availability periods (more than 120 days) or major topside changes prior to deployment. EMC Technicians are billeted onboard CVN, LHA and LHD class ships and at Regional Maintenance Center (RMC) or Fleet Maintenance Activity (FMA). Ships may submit requests for EMI or EMC technical assistance from co-located CVN, LHA, and LHD class ships through their normal chain of command channels. Ships may submit requests for an EMI or EMC technical assistance to the RMC or FMA by submitting a Ship's Maintenance Action Form, OPNAV 4790/2K (2-Kilo). 2-Kilo should be used to document maintenance actions as part of an Availability Work Package (AWP) for completion during CNO availabilities or prior to and in preparation for EMC Certification. Since there are differences in the systems and processes between platforms, they will be discussed separately.

4.3.1.1 EMC certification consists of four phases: a planning and test plan development phase, an in-port certification testing phase, an underway certification phase, and reporting phase.

4.3.1.2 EMC certifications should not be scheduled coincidental with evolutions that restrict either antenna radiation or personnel movement about the ship.

4.3.1.3 EMC certifications must be performed per the requirements of reference (c), and include, but are not limited to:

a. Using STAN to verify that all available EMI fixes have been installed, or if not installed, documented in ship's Current Ship's Maintenance Project.

b. Performing topside visual surveys to ensure the ship conforms to the applicable topside electromagnetic control drawing as specified in STAN for that ship.

c. Performing High Frequency Intermodulation Interference (IMI) test.

d. Performing IMI source location when IMI level exceeds the 19th product order.

e. Performing broadband noise test.

f. Performing source location when broadband noise is detected.

g. Performing Time-Domain or Frequency-Domain Reflectometer measurements on all high frequency, very-high frequency and ultra-high frequency transmission lines.

h. Conducting Voltage Standing-Wave Ratio tests on all high frequency, very-high frequency and ultra-high frequency transmit antennas. Where transmission lines and antennas are coupled and cannot be easily separated, reconnected and weather-

proofed, testing of transmission line and antenna combinations may be performed via Time-Domain Reflectometer or Frequency-Domain Reflectometer, satisfying the testing requirements of this paragraph and paragraph 4.2.1.1.3.g.

i. Performing insulation resistance tests on high frequency antennas, where required by the Planned Maintenance System (PMS).

j. Documenting all discrepancies noted on OPNAV 4790/2Ks.

k. Assisting Ship's Force with hands-on training and technical guidance in correcting discrepancies as appropriate.

4.3.1.4 EMC Certifications. EMC certifications should be scheduled during the O-FRP "Maintenance" phase per reference (d), immediately following the ships Target Configuration Date (TCD) and following periodicity requirements and prerequisites contained in reference (e).

4.3.2 Submarines Electromagnetic Compatibility Certifications.

4.3.2.1 Submarines will receive pre-deployment EMI Surveys from a NAVSEA qualified activity. Ships may submit requests for an EMI or EMC technical assistance to the RMC or FMA by submitting a 2-Kilo. 2-Kilo should be used to document maintenance actions as part of an Availability Work Package (AWP) for completion during CNO availabilities or prior to and in preparation for EMC Certification. Since there are differences in the systems and processes between platforms, they will be discussed separately.

4.3.2.2 EMI surveys require up to four working days depending on the ship class being evaluated. EMI surveys can be accomplished concurrently with most submarine work but must not be scheduled coincidental with evolutions that would impede access to the forward sonar and communications system units or cause power-down of systems during the EMI survey without prior notification of the EMC technician conducting the testing. If equipment must be powered down, the EMC technician will determine if further EMI testing can be accomplished. For an accurate assessment of the submarine EMC posture, the ship's forward electronics must be energized as close as possible to the ship's at-sea lineup. The electronics and hydraulics for both multifunction mast antennas must be operational. In addition, crane service is required to lift two antenna shields (approximate weight 130 lbs. each) to cover both partially raised multifunction mast antennas for testing. Major sonar, communications, fire control or navigation system casualties will cause test data to be invalid. EMI surveys must be performed, per references (f) and (g), by qualified NAVSEA or NAVSEA designated activities and include, but not limited to:

a. Using STAN to verify all available EMI fixes have been installed.

b. Briefing Ship's Force on the details of the EMI Survey and discussing testing time-lines and potential impacts.

c. Coordinating antenna shield installation and removal with the ship, RMC or FMA and port services.

d. Performing a visual survey in the submarine to verify EMI corrective action installations in sonar and communications equipment and to look for potential EMI coupling areas associated with these systems.

e. Energizing forward electronics following the equipment energized list, provided in reference (f) for SSN Class submarines or reference (g) for TRIDENT Class submarines.

f. Conducting EMI analysis on sonar and communications equipment.

g. Installing or repairing any EMI corrective action needed to produce EMI reduction in order to improve the total shipboard EMC of all shipboard electronic equipment and systems. This will include a retest to determine the actual reduction achieved.

h. Analyzing test data, noting all discrepancies and generating a naval message, prior to departing the ship, documenting the results of the EMI survey.

i. Providing EMC posture debrief to the designated submarine's officers, chiefs and leading petty officers. The naval message, noting all discrepancies, will be provided to the ship after final report has been reviewed.

j. Assisting ship with hands-on training and technical guidance in correcting discrepancies as appropriate.

k. Documenting all discrepancies noted on OPNAV 4790/2Ks.

4.4 FLEET ELECTROMAGNETIC COMPATIBILITY SUPPORT TOOLS. SEMCIP provides Fleet EMC support tools to help eliminate emergent EMI problems between certifications. When a ship encounters an EMI problem beyond the scope of Ship's Force and RMC or FMA capabilities, outside technical assistance can be arranged on short notice. The problem should be reported per guidance in Chapter 5 of this Volume. In addition to the normal message addressees, the message should also be sent to COMNAVSEASYSCOM WASHINGTON DC//05H4//, NAVSURFWARCENDIV DAHLGREN VA//B54//, NAVUNSEAWARCENDIV NEWPORT RI//3431// (submarines only), COMNAVWARSYSCOM SAN DIEGO CA //051-1C//, INFO COMNAVIFOR SUFFOLK VA, NAVINFOWARDEVCEN NORFOLK VA. NAVMARSPECCEN FT GEORGE G MEADE MD and appropriate regional Navy and Marine Corps Spectrum Office (NMCSO) as outlined in reference (h). The following paragraphs list additional support resources that will improve the warfighting readiness of EM Spectrum Dependent Systems (SDS).

a. SEMCIP Technical Assistance Network (STAN): The official repository for EMC and EM radiation hazard (RADHAZ) data for systems, ships, submarines and strike groups certifications for all SDS. RADHAZ includes several subsets (e.g., Hazard of Electromagnetic Radiation to Personnel (HERP), Hazard of Electromagnetic Radiation to Fuels (HERF)). Primary products include EMI brief sheets and associated affected ships list, EMI test procedures, tailored ship equipment lists and an Electromagnetic Environmental Effects (E3) document library. Additional products are available in STAN, such as EMI problem listings by selected criteria, EM control drawings and the EMC Certification test plan generator. STAN access and familiarity is highly recommended for all units. Requests for STAN access is obtained via the STAN web site https://semcip.nswc.navy.mil.

b. Air Systems Electromagnetic Interference Corrective Action Program (ASEMICAP): ASEMICAP provides E3 systems engineering support to the Fleet and NAVAIR team to ensure E3 hardness of operational aircraft systems, subsystems and equipment

throughout their life cycles. The primary task is to provide deck plate engineering and technical support to the Fleet in an attempt to rapidly resolve E3 problems while striving to elevate Fleet E3 capabilities through a dedicated process of deck plate support. The emphasis continues to be immediate response to EMI issues through engineering solutions for operational aircraft systems and equipment. The increasing reliance on Unmanned Aerial Systems (UAS) and the resultant demands on the congested EM operational environment (EMOE) forces improved Electromagnetic Spectrum (EMS) awareness and impacts of aviation operations by Sailors and Marines. ASEMICAP also provides engineering and technical support directly to Fleet units to resolve EMI problems and represents Fleet interest within the acquisition community. ASEMICAP is located on NIPR at https://asemicap.navair.navy.mil.

c. NAVSEA EMI Capability and Limitations (EMI C&L) Portal: The EMI C&L provides the Fleet a central repository for ship-specific EMI and EMC information. The data is tailored for EMI C&L individual ship and strike forces and provides an overall force-wide EMI and EMC perspective. The C&L portal includes information on shipboard characteristics, coverage plots for selected communications and weapons systems, host nation frequency restrictions (HNR), for all SDS and RADHAZ limitation information. The portal is located on SIPR at http//cnl.phdnswc.navy.smil.mil/emi_cnl/default.htm.

4.5 ENGINEER ELECTROMAGNETIC INTERFERENCE FIXES. SEMCIP EMC engineers identify and characterize new EMI problems and develop and formalize solutions for these problems. When new EMI problems are detected through testing, per references (c), (f) and (g), SEMCIP engineering will develop a fix. SEMCIP engineering also updates standard EMI test procedures for references (c), (f) and (g).

4.6 SHIPBOARD FULL-SCALE ELECTROMAGNETIC COMPATIBILITY EVALUATIONS. Shipboard full-scale EMC evaluations are performed by NAVSEA in the lead ship of a class or in individual ships at the conclusion of any major event (such as conversion, modernization or overhaul) which could affect the EMC status of the ship. SEMCIP engineering teams energize, test and evaluate the capability of electromagnetic emitters and sensors to operate simultaneously on the same ship without interference.

4.7 ELECTROMAGNETIC COMPATIBILITY CERTIFICATION. NAVSEA 05H coordinates EMC Certification in new construction ships, ships undergoing industrial availabilities and ships receiving new systems both in and outside of industrial availabilities. The EMC Certification testing is conducted by NAVSEA or NAVSEA-qualified activities. There are two types of EMC Certification: System and Ship EMC Certification. Each type is addressed in this section.

4.7.1 System Electromagnetic Compatibility Certification. System EMC Certification ensures all newly installed electrical and electronic systems are compatible with previously installed systems. System EMC Certification will be accomplished per reference (e) for surface force ships:

a. For electrical and electronic systems installed by Fleet or Program Alterations following the Navy Modernization Process, Management and Operations Manual (NMP-MOM).

b. Following the System Operational Verification Test or other operation test for the newly installed system.

c. By NAVSEA 05H4 test team for the first two ships of a class, flight or baseline.

d. By Program Acquisition Resource Manager, Ship Program Manager, Naval Supervisory Authority, RMC or FMA or a contractor witnessed by a government activity for the subsequent System EMC Certifications using test procedures provided in references (c) and (f).

e. System EMC Certification requirements mandate:

(1) The system has an approved (Stage 4) Application for Frequency Allocation (JF-12).

(2) No mission-degrading EMI has been introduced by installation of the system.

(3) EMI fixes have been installed to correct mission-degrading EMI caused by the installation of the system.

4.7.2 Ship Electromagnetic Compatibility Certification. Ship EMC Certification ensures all shipboard systems are compatible with each other and topside EMI mitigation treatments are in place. Ship EMC Certifications will be accomplished per references (e) and (i). Ship EMC Certification requirements mandate:

a. All "available EMI fixes" that correct mission-degrading EMI problems are installed. Available EMI fixes are fixes that have been developed and listed in the STAN database. An "available EMI fix" is required for certification even if the kit or parts are not in stock. In that case, priority would be given for procurement and installation of the fix required for certification.

b. All mission-degrading EMI problems that remain uncorrected due to non-availability of EMI fixes must be identified and reported to the ship's Commanding Officer (CO).

c. All discrepancies causing IMI above the 19th order must be corrected. IMI levels are defined in reference (c).

4.8 ELECTROMAGNETIC COMPATIBILTY CERTIFICATION MAINTENANCE. System Commands provide support during ship construction and CNO Maintenance Availabilities at industrial activities to achieve EMC certification. It is the responsibility of the Type Commander, the RMC or FMA and Ship's Force to maintain EMC at the highest level practical. EMC technical billets (Navy Enlisted Classification (NEC) ET-1419 surface) have been established in reference (j) for RMCs or FMAs, aircraft carriers and selected larger ships to provide technical assistance to Ship's Force in maintaining EMC. These technicians conduct EMI inspections, install known fixes, test for problems and investigate new problems.

4.9 RESPONSIBILITIES.

a. Type Commander should:

(1) Coordinate with the System Commands in identifying, solving and correcting operational EMI deficiencies.

(2) Prior to promulgation, review and authorize all documents prepared by technical agencies that contain procedures relative to EMI reduction and the fleet EMC process.

(3) Evaluate comments and recommendations regarding EMI reduction and the fleet EMC process. If necessary, issue changes to existing policy and procedures.

(4) Ensure participation of each aircraft carrier, surface force and submarine EMC technician in at least one EMI survey every 6 months. Qualified EMC technicians must meet this requirement to retain qualification status.

b. Group, Squadron and Regional Support Group Commanders should:

(1) Schedule EMC certifications prior to deployment for each unit. For submarines, the EMI Survey should be conducted within two months of deployment during Pre-Overseas Movement 2, take up to four days to perform and can be scheduled concurrently with most shipboard evolutions provided power is not secured to a major system. NAVSEA personnel will be contacted to perform the EMC certification.

(2) Review and take the appropriate action to correct EMI discrepancies on EMC reports for subordinate units.

(3) Request SEMCIP engineering assistance when determined necessary.

c. RMCs and FMAs should:

(1) Maintain qualified EMC personnel (NEC-1419 for Surface Force Ships and Aircraft Carriers) in coordination with NAVSEA 05H4 and ensure that test equipment assets are available to perform EMC assessments and surveys.

(2) Assist aircraft carriers, surface force and submarines in conducting EMC-related PMS procedures when requested.

(3) Conduct EMC certifications per applicable references (c), (e) through (i) and (k).

(4) Install authorized limited corrective actions when required in STAN.

(5) Write a naval message, prior to departing the ship, describing the results of the EMC certification using the latest message formats. Message is submitted to the aircraft carrier, surface force or submarine during the EMC certification briefing prior to departing the ship.

(6) Maintain an active account on STAN.

(7) Maintain an up-to-date file of EMI and EMC information, which includes naval messages generated on tended submarines and original data recorded during the EMI surveys.

d. Aircraft Carrier, Surface Force and Submarine Commanding Officers should:

(1) Ensure EMI PMS is conducted. Request RMC or FMA assistance when required.

NOTE: EMC CERTIFICATIONS CONDUCTED WITHIN ONE MONTH PRIOR TO DEPLOYMENT WILL PROVIDE THE MOST CURRENT EMI DATA.

(2) Request an EMC certification within six months of deployment or when any new indications of EMI in ship's electrical and electronic systems appear.

(3) Transmit the EMC naval message promulgating the results of the EMI survey to all cognizant activities.

(4) Maintain an up-to-date file of EMI and EMC information that includes EMC naval messages from the last three surveys.

(5) Establish an EMS Readiness Improvement Program with following shipboard organization per references (j), (l), (m) and (n).

e. Electromagnetic Spectrum Operations (EMSO) Officer:

(1) Assigned CWO-2 or above designated in writing by the Commanding Officer.

(2) Qualified 308 Electromagnetic Spectrum Operations (EMSO) Officer.

(3) Serve as Principal Advisor to the Commanding Officer on all EMS-related issues and provide the CO with monthly EMS effectiveness summaries to include major EMS degradation, personnel compliance with EMS Certification requirements, and a plan of action and milestones to correct any tactically significant EMI degradations.

(4) Prioritize corrective actions for tactically significant EMC deficiencies.

(5) Coordinate shipboard EMS indoctrination and training for newly reported personnel.

(6) Serve as single point of contact for quality assurance of EMS-related maintenance projects.

(7) Review all topside configuration changes (including program alterations, Fleet alterations, field changes, Combat System Smooth Log, etc.).

(8) Review and update bills, instructions, and messages (e.g., HERP, RADHAZ, Emissions Control (EMCON), Personal Electronic Device (PED) plans, wireless plans, OPSTAT Unit, Afloat Electromagnetic Spectrum Operations Program (AESOP) reply messages, etc.).

(9) Review all EMS incidents (Joint Spectrum Interference Resolution Online (JSIRO), Communications Department (COMSPOTS) and EMI).

(10) Ensure EMS-related PMS is included in the command PMS Spot-check Program.

(11) Assign a Command Electromagnetic Spectrum Operations (EMSO) Coordinator.

f. Command EMSO Coordinator:

(1) Assigned E-7 or above with NEC 2379 Information Technician or NEC 1781 Cryptologic Technician Technical.

(2) Qualified 304 Electromagnetic Spectrum Operations (EMSO) Coordinator Afloat.

(3) Designated in writing by the Commanding Officer.

(4) Perform the duties of the Afloat Spectrum Manager outlined in references (l) and (k).

(5) Primary assistant to the EMS Officer maintaining the EMS Readiness Program and serve as the EMS subject matter expertise (SME) afloat.

(6) Perform as EMSO Team Training Lead - developing unit level EMS awareness, effects of all emitters and receivers in the EMOE.

(7) Establish and maintain accounts for EM SDS databases (Communications Equipment Population Survey (CEPS), JSIRO and STAN).

(8) Liaison with the Combat Systems Maintenance Manager (CSMM) or equivalent on all EMS issues pertaining to the combat system equipment.

(9) Ensure the EMS personnel are familiar with EMS tools in paragraph 4.3.

g. EMSO Planners:

(1) EMSO Radar and Communication Planners should be proficient using AESOP software as mandated by the CNO, reference (o).

(2) Qualified 301 Radar Planner and 302 Communication Planner.

(3) Use the AESOP tool to assist in minimizing intra-ship EMI and IMI between radars, communications equipment and all other SDS. Inter-ship EMI mitigation through AESOP planning and best practices for ships in company and future operations.

(4) Achieve SME level of knowledge of all AESOP reports, reply messages, standing communication plans, radar coverage plots, spectrum occupancy displays and the spectrum monitor functionality.

(5) Develop and maintain working relationships with Ship's Signal Exploitation Space (SSES) Signal Warfare Officer (SIGWO) for their operations in the EMOE.

(6) Achieve and maintain a working knowledge of the EMOE and the warfighting impacts of all emitters and receivers in the AESOP EMSO Plan (atmospheric ducting effects on radar probability of detection, counter-detection of high power radars and ducting effects on transmitted energy within littoral operating areas and into host nation restrictions).

(7) Ensure EMS reporting of JSIRO and COMSPOTS.

h. EMC Maintenance Technicians:

(1) Assign one E-5 or above from each of the following ratings: Electronic Technician (ET), Cryptologic Technician Technical (CTT), Cryptologic Technician Maintenance (CTM), Information Technician (IT) Fire Controlman Technician (FC), Sonar Technician (ST).

(2) Qualified 303 EMC Maintenance Technician.

(3) EMC Maintenance Technicians should be familiar with references (i), (j) and (o); and all EMI and EMC issues for their related equipment (source or victim).

(4) Serve as the EMI and IMI SME for their equipment and assist with training other personnel on the impacts to the EME and the ship's EMS footprint in the EMOE.

LISTING OF APPENDICES.

A Equipment Operational Capability Range of Values and Definitions.

5.1 PURPOSE. The purpose of this chapter is to provide guidance on accurately documenting ship's material condition and on ensuring that this documentation is done in a timely and expeditious fashion. Deficiency documentation is used for determining and reporting a ship's material condition to ensure maximum operational readiness, maintain an adequate quality of life for embarked personnel, maximize safety for all personnel and ensure the ship reaches its designed service life. This documentation will be used for:

a. Accurate and timely material readiness reporting.

b. Reporting ship material deficiencies, requests for maintenance assistance or support equipment from off-ship maintenance activities and the documentation of completed maintenance actions.

c. Maintaining an accurate Current Ship's Maintenance Project (CSMP).

d. Maintaining an accurate and current ship's configuration database.

5.1.1 Background.

a. The Navy has identified the need for a more near real time, accurate and comprehensive understanding of an activity's material condition in a more timely fashion to support fleet material readiness reporting. Additionally, this information is used in developing, planning and executing more thorough and comprehensive maintenance availability work packages and to better project future material condition readiness and actionable trends.

b. Using existing maintenance documentation (Casualty Reports (CASREP), 3M Maintenance Action Forms (2 Kilo), Class Maintenance Plan (CMP), etc.), material readiness is calculated for equipment, systems, activities, ships or ship classes against various tasks, missions and warfare areas. This information is used by Navy leadership to determine an activity's ability to perform a desired mission or task, and

to make recommendations for maintenance actions that can improve the ship's readiness to perform a mission or task. Further, it allows the maintenance community working with constrained budgets to better prioritize maintenance that can most improve the activity's material readiness for a known mission or task.

c. Ship operations involve performing various Naval Tasks when, where and how required. While there may be multiple alternate means to accomplish any particular Naval Task to adequately support operations, equipment and systems must function as designed. Constrained resources (time, funds, and manpower) require better synchronization and prioritization of the maintenance effort.

d. Not all Ship's Maintenance Action Form, OPNAV 4790/2K (2-Kilo) impact current material readiness reporting.

(1) Condition Based Maintenance (i.e., degraded equipment). Condition Based Maintenance deficiencies drive activity material readiness reporting. The reality of Naval operations is that equipment breaks and system performance is impacted. Condition Based Maintenance is the art of managing material failures. Condition Based Maintenance items run the scope from administrative requirements (placards, stenciling, etc.), run to fail items (e.g., light bulbs, fuses, etc.), gracefully degrading distributed systems (e.g., deck covering, lagging, corrosion, minor leaks, etc.) through catastrophic failures. The Equipment Operational Capability (EOC) Value, Descriptions and Example Table (Appendix A) describes graduations of material condition (fix it after it breaks, fix it before it breaks or fix it because it is about to break).

(2) Engineered Maintenance (i.e., CMP or Planned Maintenance System (PMS)). Until they exceed periodicity, engineered maintenance does not impact activity material readiness reporting. Typically, time directed maintenance actions encompass the art of anticipating failure. Engineered maintenance includes both push and pull CMP items, items written to arrange services or order parts to support future PMS and Baseline Automated Work Packages written by life cycle managers as placeholders for historically anticipated depot work.

(3) Modernization (i.e., alterations). See Chapter 3 (Submarine Fleet Modernization Program) and Chapter 36 (Surface Force Ship and Aircraft Carrier Modernization Program of this volume. Planned modernization does not impact activity material readiness reporting. Modernization encompasses replacing obsolete equipment or systems, increasing capacity beyond installed design or adding new capabilities. However, because material deficiencies on replaced or removed equipment or systems are no longer applicable to the activity, material readiness may be positively impacted once modernization is accomplished.

(4) Services (i.e., tasks that support maintenance). Services do not impact activity material readiness. Services are overhead items (force protection, berthing ashore, cranes, etc.) in support of maintenance availabilities.

5.1.2 Scope. Except where indicated, this chapter applies to all ships and activities of the Navy (active and reserve). It does not apply to civilian operated ships assigned to the Military Sealift

Command. Throughout this chapter, the term "ship" refers to all surface ships, aircraft carriers, submarines, shore activities and service craft specified in reference (a) and the term "activity" refers to both ship and shore activities. Ship's Force refers to personnel assigned to any "activity". Reference (b) provides policy and guidance for maintenance of service craft and boats not addressed in reference (c).

5.1.3 Definitions.

5.1.3.1 Material Readiness. Material Readiness, a term interchangeably used with Material Condition, is a value relative to the observed performance of a single component up to and including a system. The value is obtained through a process of the operator's observation of the parameters for a component and comparing this measurement to a standard (e.g., design criteria or normal operating parameters). The result of the comparison is the value of Material Readiness or Material Condition. The Fleet Measure of Effectiveness is called the EOC. Found in Appendix A, for the full range of this dimensionless value is the Color Representation when displayed, a specific Definition, a Description and Shipboard Examples.

5.1.3.2 Maintenance Figure of Merit Index Value. The Maintenance Figure of Merit (MFOM) was developed as part of the Defense Readiness Reporting System (DRRS) to provide an objective measure of the true material condition of an activity. The MFOM Index Value is an objectively calculated value where the scale of values and definitions are the same as the EOC as described in Appendix A.

5.1.3.3 Maintenance Worthy. Maintenance Worthy is any object (system, equipment, component, sub component, part, etc.) that is Danger or Caution tagged or part of a tag out (i.e., tag hung on it) per reference (d), has maintenance preformed on it that is either planned (e.g., PMS, calibration, CMP, etc.) or corrective and has maintenance information (e.g., material history, meter readings, test information) recorded about it. Maintenance Worthy is contextually different from Configuration Worthy. Traditionally, Configuration Worthy was a term used to describe the sparing plan requirements associated with onboard repair parts that enabled ships to be "maintenance self-sufficient" for periods of time away from home port or parent tender. Accordingly, the Consolidated Onboard Shipboard Allowance List provided great merit or support to self-sufficiency. The support of accurate and timely material readiness reporting necessitates the use of a broader term.

5.1.3.4 Current Ship's Maintenance Project. The CSMP, per reference (c) and (e), is the primary repository of information concerning the material condition of the activity. The CSMP consists of two files, shipboard (local) file and the master (shore) file.

a. The Shipboard File must be maintained by Ship's Force in a complete and current status at all times. The CSMP must be used by the activity to document all completed without prior deferral preventive and corrective maintenance requirements. These deferred items must be validated by Ship's Force and entered into the CSMP per reference (e) guidelines.

b. The Master File contains the material deficiencies uploaded from the shipboard (local) file, other work identified by shore-based managers and tasks from CMPs.

c. Reconciliation of the Shipboard File and Master File is the process of insuring that the two files are essentially the same.

NOTE: THE TERMS "4790/2K", "2K", "2 KILO", "AWR", "AUTOMATED WORK REQUEST", "AUTOMATED WORK NOTIFICATION", "NOTIFICATIONS", "AWN" AND "WORK CANDIDATE" ARE USED GENERICALLY THROUGH OUT THIS CHAPTER AND THIS MANUAL TO DESCRIBE ANY SHIP'S MAINTENANCE ACTION FORM, OPNAV 4790/2K.

5.1.3.5 Ship Maintenance Action Form. The 2-Kilo, located at https://navalforms.documentservices.dla.mil/formsDir/_OPNAV_4790_2k_IMF_VER_3915.pdf and discussed in chapter 19 of this volume, is the principal means used to document material deficiencies and completed maintenance actions.

a. A Maintenance Ready 2-Kilo contains correct and complete information, and provides an accurate diagnosis of the deficiency affecting the object.

b. Validated Maintenance Ready 2-Kilo properly supports the planning and executing activities ability to understand the maintenance requirement; does not require the expenditure of additional manpower or time to obtain missing required data or information.

c. Completion 2-Kilo contains:

(1) A detailed and comprehensive description of the "as found" condition.

(2) A synopsis of tasks and actions taken to complete the maintenance requirement.

(3) Failure Mode and Root Cause identified.

(4) Documentation of labor and material costs.

5.1.3.6 Casualty Report. The CASREP, per reference (f), is used to both notify the chain of command and the readiness stakeholders of degradations to operational readiness caused by deficiencies in an activity's material condition and alert support activities to the nature of outside assistance required for correction. A CASREP is made on a system or equipment which has a maintenance requirement that cannot be corrected within 48 hours and the maintenance requirement reduces the activity's ability to perform an assigned task or mission (primary or secondary). The CASREP category (C2, C3 and C4) must be determined per reference (f).

5.1.3.7 Department of War Readiness Reporting System. The DRRS was established by the Department of War (DoW) Directive 7730.65 (June 2, 2002) establishing the requirement and means to manage and report the readiness of the DoW and its subordinate components to execute the National Military Strategy as assigned by the Secretary of Defense in the Defense Planning Guidance, Contingency Planning Guidance, Theater Security Cooperation Guidance and the Unified Command Plan. All DoW components will align their readiness reporting processes to DRRS. The DRRS will build upon processes and readiness assessment tools used in the DoW to establish a capabilities-based, adaptive, near real-time readiness reporting system. All DoW Components will use the DRRS to identify critical readiness deficiencies, develop strategies for rectifying these deficiencies and ensure they are addressed in program or budget planning and other DoW management systems.

5.1.3.7.1 Joint Mission Essential Tasks. Joint Mission Essential Tasks are developed in support of missions as assigned by the Secretary of War. The Joint Mission Essential Tasks will be

based on tasks derived from mission analysis using the language of the Universal Joint Task List. Additionally, the DoW components will develop Mission Essential Tasks or similar indicators for all assigned missions, and use information technology to collect near real-time data on the readiness of military forces and support organizations to perform these missions. The Mission Essential Tasks are based on mission analysis and approved by the commander as absolutely necessary, indispensable or critical to the success of a mission. For a given mission there is generally more than one Mission Essential Task that the object supports.

5.1.3.7.2 Navy Capabilities Readiness Reporting System. Subsequent guidance (NAVADMIN 172345ZAUG05) identified DRRS-N (Navy) as Navy's Capabilities Readiness Reporting System, identified OPNAV N4 as Resource Sponsor and identified United States Fleet Forces Command as executive agent.

5.1.3.8 Item Unique Identification. Item Unique Identification (IUID) is an asset identification system instituted by the United States DoW to uniquely identify a discrete tangible item or asset and distinguish it from other like or unlike tangible items. Reference (g) provides evolving clarification, increased insight and guidance regarding implementation of Machine-Readable Information (MRI) for item identification marking and automatic data capture associated with IUID. The IUID is used by MFOM and the Navy's Configuration Data Base of Record, Ship's Configuration and Logistics Support Information System to uniquely differentiate an object from other objects. IUIDs are either installed by the original manufacture or for legacy items, through the use of the eSOMS software and per reference (d).

5.2 RESPONSIBILITIES. Chapter 19 of this volume provides detailed responsibilities with respect to the implementation of policies for the Maintenance and Material Management (3-M) system as set forth in reference (e). The responsibilities delineated here represent an overview of those policies.

5.2.1 Ship's Force.

a. Ship's Force will comply with the guidance provided in reference (c) and chapter 19 of this volume when submitting a 2-Kilo.

b. Ship's Force will comply with guidance provided in reference (f) and paragraph 5.3.2 when submitting a CASREP.

5.2.2 Immediate Superior In Command.

a. The Immediate Superior In Command is responsible for screening and technically reviewing all submitted 2-Kilos.

b. The Immediate Superior In Command is responsible for technically reviewing all submitted CASREPs.

5.2.3 Maintenance Team. The Maintenance Team is responsible for reviewing and validating all submitted 2-Kilos for content and technical correctness. When directed by the Type Commander (TYCOM), members of the Maintenance Team are responsible for validating, screening and brokering all 2-Kilos.

5.2.4 Type Commander.

a. The TYCOM is responsible for validating, screening and brokering all 2-Kilos.

b. The TYCOM is responsible for brokering all 2-Kilos associated with any outstanding C3 or C4 CASREP during the next scheduled maintenance availability if it has not previously been corrected as an emergent availability.

c. The TYCOM is responsible for:

(1) Complying with the policy provided in paragraph 5.3.2.3.

(2) Enforcing compliance with the policy of paragraph 5.3.2.2.

5.2.5 Fleet Maintenance Activity. The Fleet Maintenance Activity, as described in volume II, part I, chapter 2 and 3 for aircraft carriers, volume II, part II, chapters 2 and 3 for Surface Force ships and volume II, part III, chapters 2 and 3 submarines of this manual, will comply with paragraph 5.1.3.5.c of this chapter when preparing end of availability completion data associated with each 2-Kilo.

5.3 GUIDANCE.

5.3.1 Generation of a Ship's Maintenance Action Form OPNAV 4790/2K. The 2-Kilo is the principal means used to document material deficiencies and completed maintenance actions. These actions require the highest degree of accuracy and accomplishment in a timely and expeditious fashion. Chapter 19 of this volume provides policy and assigns responsibility applicable to specified 2-Kilo data elements critical to obtaining outside support and material readiness reporting.

5.3.1.1 Procedures for Documenting a Maintenance Action. A 2-Kilo must be filled out per chapter 19 of this volume and the Software Users Guide for the Automated Information System being used. All Unclassified Non-Nuclear Naval Propulsion Information will be handled per current regulations and standing guidance from NAVSEA 08. The following policy guidance for data elements is provided:

a. The 2-Kilo associated with a CASREP will remain open, even after the CASREP is cancelled, until repairs have been completed.

b. Every active CASREP must have at least one active associated 2-Kilo. To ensure timely, accurate material readiness reporting when the CASREP is updated, the 2-Kilo must be updated concurrently. If circumstances dictate, a more appropriate active 2-Kilo may be associated with the CASREP and the existing 2-Kilo closed or canceled.

c. The associated 2-Kilo to the CASREPs must have a comparable or equivalent severity coding per reference (e). In particular, Ship's Force will ensure that the Equipment Status Code corresponds directly to the equipment configuration (Allowance Parts List (APL) or Equipment Identification Code (EIC), Location) that the 2-Kilo is written against. Examples where attention to detail is particularly warranted:

(1) 2-Kilo written against the Main Engine when a thermometer is Out Of Commission (OOC). Equipment Status Code 2 (non-operational) should not be used since it indicates the Main Engine is OOC.

(2) 2-Kilo written against a Weapons System when construction of storage space was requested. Assigning a Status Code 2 indicates the Weapons System is OOC.

d. Attention to detail when selecting equipment configuration is critical. To support repair part ordering, some configuration data may be generic (e.g., circuit breaker in the Consolidated Onboard Shipboard Allowance List could have multiple applications). For readiness reporting purposes, it is important to specify which application. Determine if the reported configuration would support an equipment Tag-Out. Configuration elements include:

(1) APL or Allowance Equipage List (AEL). Must be written against the sub APL or AEL where applicable. Avoid using just any higher level APL or AEL for the system or equipment.

(2) EIC. Must be for the lowest affected assembly, not just any higher level EIC for the system or equipment. The selected level of assembly should be lowest that fully encompasses the material deficiency.

(3) Equipment Serial Number: When multiple equipment (fire pumps, main engines, radio transceivers) have the same APL or EIC, ensure the serial number designation is appended.

(4) Location.

(5) Equipment Noun Name. Must be the same name that would be used on a Danger or Caution Tag per reference (d).

5.3.2 Generation of a Casualty Report. The CASREP is used to both notify the chain of command and readiness stakeholders of degradations to operational readiness caused by deficiencies in an activity's material condition and alert outside support activities to the nature of outside assistance required for correction. The CASREP is not a onetime report, but has four distinct types; initial, update, correct or cancel, as specified and described in reference (f). Submitting a CASREP does not relieve the requirement for timely submission of work notifications (2-Kilo) or material requisitions.

5.3.2.1 Guidance on Initial Documenting with a Casualty Report. A CASREP must be prepared per reference (f) and the Software Users Guide for the Automated Information System being used. This section does not apply to Fleet Ballistic Missile systems under the cognizance of Strategic Systems Programs. All Unclassified Non-Nuclear Naval Propulsion Information will be handled per current regulations and standing guidance from NAVSEA 08. The following policy guidance is provided:

a. C3 or C4 CASREPs identify severe task or mission degradation that generally requires emergent repairs be effected at the earliest opportunity. C2 CASREPs are less severe and are generally corrected during scheduled maintenance availabilities. C2 CASREPs requiring Fleet Technical Assistance (i.e., Distance Support or onboard Technical Assistance) in determining repairs should result in the technical assistance completed well enough in advance of the scheduled maintenance availability to facilitate repairs during the maintenance availability.

(1) CASREP category must be assigned per reference (f). It must not be elevated solely to expedite onboard technical assistance, services, parts delivery or repairs.

(2) Any outstanding C3 or C4 CASREP requiring repair assistance should be repaired during the next scheduled maintenance availability if it has not previously been corrected in an emergent availability.

(3) If an outstanding C2 CASREP requiring repair assistance is not scheduled for repairs during the next scheduled maintenance availability, it should not be canceled and repairs should be pursued following the normal C2 CASREP procedures.

b. Submitting a CASREP during maintenance availabilities is only justified if repairs to the system or equipment resulting in the task or mission degradation will not be corrected during the maintenance availability.

c. An activity must submit a cancellation CASREP (Casualty Cancellation (CASCAN)) upon the commencement of a maintenance availability for which the effected system or equipment is scheduled for repair.

d. Do not CASREP hardware or software that have not completed system operational testing or have not been turned over to the activity for operational use (e.g., System Operation Verification Testing, Acceptance Trials, post availability testing).

e. Ship's Force or others may not submit a CASREP for installation of an alteration that will provide for either modernization of existing systems or equipment, or add new capability. CASREPs are used to document material readiness issues with installed systems or equipment. See volume II, part I, chapter 1, section 1.6 for aircraft carriers, volume II, part I, chapter 1, section 1.5 for Surface Force ships and volume II, part I, chapter 1, section 1.6 for submarines of this manual for questions concerning alterations.

f. Any system or equipment casualty that would threaten to cause or cause a discharge of oil or oily waste to sea must be reported with a CASREP.

g. Any equipment mishap involving damages or losses exceeding $50,000 must be reported with a CASREP. The CASREP alerts the Naval Safety Center an incident has occurred that requires a mishap investigation.

h. Estimated Time to Repair (ETR). The ETR must be realistic and an accurate ETR is required for all repairs. Simply extending the ETR by three days (or 30 days for C2) every update period does not support the intent of providing an ETR. If the problem will not be corrected within 24 hours of the ETR, send an update to change the ETR.

i. A 2-Kilo is required to receive off-ship assistance (technical, repair, parts) or to document Ship's Force work. Every active CASREP must be associated with an active JCN – no exceptions.

(1) CASREPs must never be generated with associated 2-Kilos that have an Equipment Status Code of 1 (operational) or 0 (N/A), or a Priority code of 4 (routine). If the CASREP is required, then the Equipment Status Code and Priority code for the 2-Kilo need to be updated.

(2) The associated 2-Kilo must have the correct configuration data (e.g., APL, EIC) to the lowest assembly and that configuration data must be reported on the CASREP.

(3) To associate multiple 2-Kilos with a CASREP, pick a primary 2-Kilo to list as JCN and list the remaining 2-Kilos in the remarks section. If parts are ordered against other APLs than the APL used on the primary associated 2-Kilo, those APLs must be listed in the amplification line of the parts section.

j. An assist line is mandatory for an initial CASREP and optional on subsequent updates. In the ASSIST AMPN line, clearly specify type of off-ship assistance and the time frame desired by the activity. Clearly identify Distance Support efforts. The following options are acceptable:

(1) Assist, Technical or Distance.

(2) Assist, Other or Distance.

(3) Assist or none.

k. CASREP description and remarks should be concise and consistent with the 2-Kilo without sacrificing clarity. The system or equipment listed in the casualty line must indicate the affected assembly. Wording must accurately portray present and potential impacts on the task or mission. The remarks section for an initial CASREP must contain the sub-paragraphs here. Indicate the classification at the beginning of individual sub-paragraphs to facilitate access to non-classified information.

(1) Summary or Impact: Brief executive overview of casualty and specific Naval Tactical Task(s) or ROC-POE mission(s).

(a) Indicate if this message reflects a downgrade to C2 or upgrade to C3 or C4.

(b) Identify any loss of operational capabilities such as speed, power output, detection range, self-defense, loss of a sensor, etc.

(c) Equipment serial number, location and number of similar equipment (backup or redundancy).

(d) Identify which warfare area(s) are impacted, what capabilities or functions are degraded and to what degree.

(2) Technical Description: Concise synopsis of sufficient granularity to facilitate future Distance support or prepare shore maintenance support services.

(a) How and when the casualty was discovered. Provide description of the casualty to include information on operating configuration, symptoms and indications, initial follow-up and troubleshooting.

(b) Repair efforts completed to date, or technical assistance received.

(c) To facilitate distance support, include any test results from troubleshooting.

(3) Pending Actions: Any ongoing or anticipated actions to be taken by Ship's Force or any outside activity.

(4) Activity Point of Contact: Include name, best time period and the best way to contact the Point of Contact in Zulu time. Typically, phone numbers and E-mail addresses are provided.

(5) Mishap Report: (If required) Is required to identify whether it has been completed or is still in progress. If in progress, an estimated completion time should be provided.

(6) Ships Schedule: For the next 30 days at a minimum. Where appropriate, indicate next scheduled maintenance availability.

(7) Minimize Considered: (When required) Ensure this statement is included inside the remarks section.

l. CASREP transmission, receipt and processing.

(1) Ship's Force is responsible to verify CASREPs reach the intended recipients. There have been incidents where a CASREP has been released via naval message, but has not reached the intended recipients intact. Attention to detail with respect to Plain Language Addressees (PLAD), a well-trained Radio Central and a controlled chop process are key to success. At a minimum, COMUSFLTFORCOM Norfolk VA (AIG 6842 or 6843) must be included on all CASREPs to ensure the CASREP is captured in the shore based CASREP Automated Information System.

(2) Ship's Force must ensure CASREPs are forwarded in a timely manner when requested.

5.3.2.2 Guidance on Updating a Casualty Report. Follow the format guidelines defined in paragraph 5.3.2.1 of this chapter for Initial CASREPs. CASREP update is required for:

a. Revisions to previously submitted information.

b. Changes in parts status including receipt of parts.

c. Requests for additional assistance (an assist line is mandatory).

d. Substitution of an alternate active 2-Kilo in place of a closed or canceled one.

e. Changes to ship's schedule.

f. Changes to ETR (CASREP updates are to me made 24 hours prior to the expiration of the ETR).

g. C4 CASREP, at least every 72 hours.

h. C3 CASREP at least every 10 days.

i. C2 CASREP every 30 days.

NOTE: IF A DEFERRED CASREP IS CORRECTED AT ANYTIME DURING THE DEFERRED PERIOD, A CASCOR MUST BE SUBMITTED.

5.3.2.3 Guidance on Deferral of a Casualty Report. The TYCOM is required to approve any planned delay of action on a CASREP. In the event that the delay effectively constitutes a CASREP deferral, the activity will forward the deferral recommendation to the TYCOM for approval. A CASREP Deferral is submitted when it is determined that the CASREP will not be corrected while the activity is in the Sustainment Phase (i.e., deployment or surge). This action places the CASREP in an inactive status which reduces the support and eliminates the activity's requirement for updating the CASREP.

a. The activity must not report a CASREP as deferred until directed by the TYCOM or his designated representative.

b. The activity must submit a CASREP update with the word DEFRD in the estimated time of repair section of a CASREP update. See reference (f) for details.

NOTE: CASREPS WILL NOT REMAIN OPEN FOR RECEIPT OF PARTS IF THE SYSTEM OR EQUIPMENT IS OPERATIONAL. SENDING A CASUALTY CORRECTION (CASCOR) WITH PARTS REQUESTED VIA A WHISKEY NUMBER WILL NOT CANCEL THE PARTS REQUISITION.

5.3.2.4 Guidance on Correction of a Casualty Report.

a. CASREP Correction is required:

(1) After repairs are completed to the affected system or equipment to restore to operational condition. If the system or equipment subsequently fails operational testing, a new CASREP must be submitted.

NOTE: MAINTENANCE ASSIST MODULES INSTALLED ASSEMBLIES ARE CONSIDERED TEMPORARY REPAIRS.

(2) After temporary repairs have been accomplished, and the system or equipment restored to operational status to support the task or mission. Most temporary repairs will require a DFS (see volume V, part I, chapter 8 of this manual) with its associated active 2-Kilo until permanent repairs are completed per all technical requirements. When original JSN is closed due to temporary repair by repair activity, ships force will submit a new 2-Kilo for permanent repairs and annotate via associated Casualty Update (CASUP).

b. Include in the remarks section of the CASCOR:

(1) A detailed but concise summery of repairs. If operational testing was not completed, include an estimated date for accomplishment.

(2) Ship's Force understanding of what the root cause was for the failure (e.g., normal wear and tear, inadequate design, power transient, etc.). Normally the root cause will mirror the input for block 8 on the 2-Kilo.

(3) Hours since last failure of the system or equipment prior to the initiation of the CASREP.

(4) Adequacy of Ship's Force resources to prevent or correct the CASREP. Details should be provided as to what contributed to the CASREP (e.g., troubleshooting procedures, PMS coverage, parts support, test equipment,

conduct of drills, operational policy, technical documentation, training, manning, etc.). Include actions taken to correct lack of resources.

5.3.2.5 Guidance on Cancellation of a Casualty Report.

a. An activity must submit a cancellation CASREP (CASCAN) upon the commencement of a maintenance availability for which the affected system or equipment is scheduled for repair. Ensure the maintenance availability for which repairs are scheduled is recorded in the remarks section of the CASCAN.

b. If all associated 2-Kilos are closed or cancelled without repairs being affected, the corresponding CASREP must be cancelled (CASCAN).

APPENDIX A

EQUIPMENT OPERATIONAL CAPABILITY RANGE OF VALUES AND DEFINITIONS

Examples are:

EOC Value - 1.0 (Green)

EOC DEFINITION - Fully Operable.

EOC Description – Configuration or maintenance worthy object appears to be in very good material condition. It has no evidence of corrosion or noticeable discrepancies. Notification created only for Preventive Maintenance actions or ordering parts.

Actions – Document man-hour expenditures.

EOC Value - 0.9 (Green)

EOC DEFINITION - Fully Operable with Cosmetic Discrepancies.

EOC Description – Maintenance worthy object works with only cosmetic discrepancies. It may have slight corrosion. The documented discrepancy does not affect performance. There are no anticipated problems or a need for troubleshooting.

Actions - Equipment requires cleaning or minor maintenance that may be accomplished by Ship's Force. Document man hour expenditures.

Shipboard Examples:

- Cosmetic deficiencies, e.g., scratches, scuffs, dents, dirt, stains, etc.
- Minor leaks and surface corrosion.
- Missing identification label plates or stenciling.
- Incorrect system color scheme, non-safety related.
- Operating Instructions or Lubrication Charts missing.
- Equipment weight test data available, but missing placards.
- Corrosion - Minor Surface rust present.

EOC Value - 0.8 (Green)

EOC DEFINITION – Fully Operable with No Performance Impacting Discrepancies.

EOC Description - Maintenance worthy object works with no loss in performance but has minor discrepancies or minimal corrosion. Problems are anticipated or troubleshooting is necessary. Minor redundancy impacted with no effect on performance.

Actions – Document man-hour expenditures and 2-Kilo deferral for future Ship’s Force actions.

Shipboard Examples:

- Non-critical components degraded or inoperative.
- Minor leaks and corrosion.
- Burnt out indicator lights.
- Filters need to be changed.
- Redundant modules within electronic systems are inoperative.
- Corrosion. Some running rust, discolored areas.

EOC Value - 0.7 (Yellow)

EOC DEFINITION - Operable with minor discrepancies that do not impact performance.

EOC Description – Maintenance worthy object works with no loss in performance but has significant discrepancies that need to be corrected or monitored. One of many modes may be inoperative. Minor corrosion.

Actions – 2-Kilo notification needs to be created for discrepancies or requesting outside activity assistance in troubleshooting. Troubleshooting procedures should be initiated. Consult reference (d) for proper usage of Yellow Caution Tags.

Shipboard Examples:

- Redundant operating modes or stations not functioning.
- System parameters within limits but warrants watch stander attention.
- Missing/incorrect warning signage, color scheme, or DC material condition labels.
- Corrosion - Running rust in several places in the area inspected.

EOC Value - 0.6 (Yellow)

EOC DEFINITION - Operable with discrepancies that could potentially impact performance in the future. No Restrictions.

EOC Description – Maintenance worthy object works with no current loss in performance but performance degradation is anticipated. Significant discrepancies need to be corrected or troubleshooting initiated to prevent performance degradation. Corrosion could impact performance if not corrected.

Actions – A standing order must be issued to ensure all watch standers are aware of the work around modification to operating instructions and procedures. 2-Kilo notification needs to be created for discrepancies. Consult Volume V, Part I, Chapter 8 of this manual for requirements for submitting a DFS.

Shipboard Examples:

- System capable of normal operation within performance standards but with no redundant components.
- System parameters approaching, but still within limits for normal operation.
- Watch stander adjustments required to maintain parameters within limits.
- Corrosion – Early stages of damage to structure due to corrosion (loose rust in bilges, fasteners broken due to heavy corrosion, significant rust in vent plenums, etc.).

EOC Value - 0.5 (Yellow)

EOC DEFINITION - Operable with discrepancies that effect performance. No restrictions on operation.

EOC Description – Maintenance worthy object is capable of performing intended functions, but not to all designed performance standards, or not capable of performing required functions in all operating modes.

Actions – A standing order must be issued to ensure all watch standers are aware of the work around modification to operating instructions and procedures. 2-Kilo notification needs to be created for discrepancies. Based on status of related equipment or systems, consult reference (f) for requirements for submitting a CASREP. Consult reference (d) for proper usage of Red

Tags for troubleshooting.

Shipboard Examples:

- System not capable of meeting full rated performance standards (speed, pressure, flow, power, temperature, etc.), but able to function at reduced capacity.
- System non-critical parameters slightly outside specified range for normal operations; watch stander actions required to prevent further degradation.
- System not responding correctly to control system input in some operating modes or at some control stations.
- Corrosion - Corrosion induced structural damage (hull thinning as indicated by UT measurements, corroded or damaged hardware, localized coating failure, etc.).

EOC Value - 0.4 (Red)

EOC DEFINITION - Restricted operation. Significant discrepancies.

EOC Description – Maintenance worthy object not operating correctly and no means or work-around allow the object to do everything it was designed to perform.

Actions – 2-Kilo notification needs to be created for discrepancies. Based on status of related equipment or systems, consult reference (f) for requirements for submitting a CASREP. Consult reference (d) for proper usage of Red Tags.

Shipboard Examples:

- System operating at greatly reduced capacity.
- System parameters outside acceptable range for normal operations and require casualty control actions to prevent further deviation.
- System not responding correctly to control system input in primary operating modes or control stations.
- Corrosion - Corrosion induced structural damage (tank contents contaminated due to leakage, limited access to space, immediate preservation required, coefficient of friction failures).

EOC Value - 0.3 (Red)

EOC DEFINITION - Severely degraded with major operational restrictions.

EOC Description – Maintenance worthy object not operating correctly or performing intended functions. Not a threat to personnel safety but further equipment damage may occur from continued operation.

Actions – 2-Kilo notification needs to be created for discrepancies. Based on status of related equipment or systems, consult reference (f) for requirements for submitting a CASREP. Consult reference (d) for proper usage of Danger Tags.

Shipboard Examples:

- System not responding correctly to control system input in most operating modes or at most control stations.
- System parameters significantly outside acceptable range for normal operations; equipment damage probable.
- System limited to emergency operating modes and local control stations of key functions.

- Corrosion- Structural damage to superstructure (restricted access to compartment, watertight doors inoperable due to corroded hinges, etc.).

EOC Value - 0.2 (Red)

EOC DEFINITION - Repair Before Operation (RBO).

EOC Description – Maintenance worthy condition existing that, if left unattended, would pose an immediate or near-term hazard to personnel safety. May only be operated under emergency conditions. RBOs may not be departed via DFS, except as noted in Volume IV.

Actions - Secure or turn off object. Use object only in an operational emergency. 2-Kilo notification needs to be created for discrepancies. Based on status of related equipment or systems, consult reference (f) for requirements for submitting a CASREP. Consult reference (d) for proper usage of Danger Tags.

Shipboard Examples:

- RBO deficiencies for Boiler, Gas Turbines, and Diesel Engine, refer to Volume IV.
- System operational certifications (e.g., weight tests, safety devices, sensor calibrations, etc.) not conducted, failed, or overdue.
- Emergency modes degraded or inoperative, if affecting personnel safety.
- System operable only with safety devices disabled or overridden.
- System parameters outside safe operating range.
- Significant system leaks, including seawater flooding, flammable fluids, lube oil, high pressure air, sewage, etc.
- Corrosion - Significant structure corrosion (tank leakage, cracking in structural areas, fall protection barriers corroded through, etc.).

EOC Value - 0.1 (Red)

EOC DEFINITION - Should not be operated-Battle Short.

EOC Description – Maintenance worthy object not functioning. Secure or turn off immediately. “Battle Short" refers to equipment that is intentionally set to a state where it will not shut down even under extreme conditions, essentially "shorting" the fuses to permit operating during combat, even if it could potentially damage the equipment. This is a last-ditch effort to maintain functionality in a critical situation.

Actions - Secure or turn off immediately. 2-Kilo notification needs to be created for discrepancies. Based on status of related equipment or systems, consult reference (f) for requirements for submitting a CASREP. Consult reference (d) for proper usage of Danger Tags.

Shipboard Examples:

- System operation could cause severe flooding, fire, flammable fluid release, toxic gas discharge, etc.
- System parameters outside safe operating range.
- Corrosion - Critical failure of compartment (tanks or voids render unusable, structural failure imminent, etc.)

EOC Value - 0.0 (Red)

EOC DEFINITION - Totally Inoperative.

EOC Description – Maintenance worthy object does not work at all.

Actions – 2-Kilo notification needs to be created for discrepancies. Based on status of related equipment or systems, consult reference (f) for requirements for submitting a CASREP. Consult reference (d) for proper usage of Daner Tags.

Shipboard Examples:

- Equipment does not start, operate, or respond to control system commands.
- Equipment components removed.
- Corrosion – Failure has occurred (corrosion in hull such that leakage from sea is occurring, etc.)

The EOC range of values and definitions are:

Title	EOC value or range	Description or Definition
Fully Operable	1.0 (Green)	Configuration or maintenance worthy object appears to be in very good material condition. It has no evidence of corrosion or noticeable discrepancies. Notification created only for Preventive Maintenance actions or ordering parts.
Fully Operable with Cosmetic Discrepancies	0.9 (Green)	Maintenance worthy object works with only cosmetic discrepancies. It may have slight corrosion. The documented discrepancy does not affect performance. There are no anticipated problems or a need for troubleshooting.
Fully Operable with no Performance impacting discrepancies	0.8 (Green)	Maintenance worthy object works with no loss in performance but has minor discrepancies or minimal corrosion. Problems are anticipated or troubleshooting is necessary. Minor redundancy impacted with no effect on performance.
Operable with minor discrepancies that do not impact Performance	0.7 (Yellow)	Maintenance worthy object works with no loss in performance but has significant discrepancies that need to be corrected or monitored. One of many modes may be inoperative. Minor corrosion.
Operable with discrepancies that could potentially impact Performance in the future. No Restrictions	0.6 (Yellow)	Maintenance worthy object works with no current loss in performance but performance degradation is anticipated. Significant discrepancies need to be corrected or troubleshooting initiated to prevent performance degradation. Corrosion could impact performance if not corrected.
Operable with discrepancies that effect Performance. No restrictions on operation.	0.5 (Yellow)	Maintenance worthy object is capable of performing intended functions, but not to all designed performance standards, or not capable of performing required functions in all operating modes.
Restricted operation. Significant discrepancies.	0.4 (Red)	Maintenance worthy object not operating correctly and no means or work around allows the object to do everything it was designed to perform.
Severely degraded with major operational restrictions.	0.3 (Red)	Maintenance worthy object not operating correctly or performing intended functions. Not a threat to personnel safety but further equipment damage may occur from continued operation.

Title	EOC value or range	Description or Definition
Repair Before Operation (RBO)	0.2 (Red)	Maintenance worthy condition existing that, if left unattended, would pose an immediate or near-term hazard to personnel safety. May only be operated under emergency conditions. RBOs may not be departed via DFS, except as noted in Volume IV.
Should not be operated-Battle Short	0.1 (Red)	Maintenance worthy object not functioning. Secure or turn off immediately. “Battle Short" refers to equipment that is intentionally set to a state where it will not shut down even under extreme conditions, essentially "shorting" the fuses to keep it operating during combat, even if it could potentially damage the equipment. This is a last-ditch effort to maintain functionality in a critical situation.
Totally Inoperative	0.0 (Red)	Maintenance worthy object does not work at all.

LISTING OF APPENDICES.

A Plant Equipment Project Form
B Surface Ship Organizational Level Repair Capability Matrix
C LHA-6 and LHD-l Class IPE
D LPD-17 Class IPE
E LSD-41 and LSD-49 Class IPE
F CG-47 Class IPE
G DDG-51 Class IPE
H DDG-1000 Class IPE
I FFG-62 Class IPE
J LCS-1 and LCS-2 Class IPE

6.1 PURPOSE. This chapter is divided into two major sections, paragraphs 6.2 and 6.3 define the responsibilities and procedures for the acquisition and management of Class Three and Class Four Plant Property (inactive equipment) as defined in reference (a). Paragraph 6.6 establishes requirements, guidelines, and responsibilities in order to standardize Industrial Plant Equipment (IPE) for all Naval Surface Forces, promoting self-sufficiency. Previous guidance for Naval Surface Force IPE was provided by COMUSFLTFORCOM/COMPACFLTINST 4790.1, Surface Ship Industrial Plant Equipment Requirements, which has been cancelled.

6.1.1 Scope. This instruction applies to Class Three and Class Four Plant Property as defined in reference (b) with the following exclusions:

a. Alterations. Develop and submit requests for alterations per volume VI, chapter 3 of this manual. Requests for additional shipboard equipment that will be permanently installed require an approved alteration.

b. Productivity enhancement or fast paybacks. Develop and submit requirements per reference (b). Due to payback documentation requirements the Productivity Enhancement Incentive Fund is most often used in requesting new technology equipment for the establishment of major new capabilities. This fund is also used for the implementation of radical procedural, productivity or efficiency improvements to current maintenance capabilities.

c. Plant property assigned an active National Stock Number (NSN). Forward requirements by requisition through the supply system to the cognizant Inventory Control Point. Acquisition of new equipment discussed in this chapter pertains only to items that are not assigned an active NSN.

d. Operating Forces Support Equipment. Submit requirements to the cognizant Area Commander for funding consideration and local procurement by the requesting activity.

e. Materials Handling Equipment is under the single manager control of the Naval Supply Systems Command (see volume IV, chapter 13 of this manual). Civil engineering support equipment is under the single manager control of the Naval Facilities Engineering Command. General Purpose Electronic Test Equipment is under the single manager control of Naval Sea Systems Command (NAVSEA) 06 (see volume VI, chapter 9 of this manual).

6.1.2 Background. The program for acquisition of Class Three and Class Four Plant Property (as defined in section 6.2 of this chapter) is managed and funded by NAVSEA PMS421 and 321. References (a) and (c) provide instructions to facilitate procurement and management of Class Three and Class Four Plant Property within the Department of the Navy.

6.2 PLANT EQUIPMENT - CLASSES THREE AND FOUR PLANT PROPERTY. Navy owned plant property of a capital nature (consisting of equipment, machine tools, test equipment, furniture, vehicles, accessories and auxiliary items, but excluding special tooling and special test equipment) used or capable of use in the manufacture of supplies or in the performance of services or for any administrative or general purpose, as defined in references (a) and (d).

6.3 PROCUREMENT REQUIREMENTS.

6.3.1 Requesting Activities. All requesting activities must submit requests for plant property as outlined in paragraphs 6.3.2 through 6.3.4:

6.3.2 New Procurement. Submit all replacement (new equipment) requirements to the cognizant Type Commander (TYCOM). Use the Plant Equipment Project (PEP) Form, Appendix A of this chapter, to submit requirements one calendar year prior to the start of the fiscal year in which equipment is actually required (e.g., 1 October 1995 for Fiscal Year 1997).

a. Identify each different requirement by individual project format. Instructions for completing the PEP form are included in Appendix A of this chapter.

b. Provide a priority listing of all projects with each annual submission.

c. Activities, such as Fleet Maintenance Activities, having an IPE Management System or IPE Maintenance Module Program must submit PEPs on computer disk accompanied by a hard copy.

d. New procurement requirements, and Other Plant Equipment or IPE Maintenance Requirements (e.g., major repairs or overhaul) must be forwarded to the cognizant TYCOM for funding consideration.

6.3.3 Urgent Replacement. Submit previously unidentified requirements to the cognizant TYCOM. Use the PEP form of Appendix A of this chapter, or message format if the replacement is associated with correcting a Casualty Report. Assign an integrated priority position for each requirement. If message format is used, justification and all relevant data for equipment acquisition must be provided.

a. All PEPs must be prioritized and evaluated to ensure compatibility with maintenance capability requirements or configuration.

b. PEPs for replacement of currently installed equipment must be screened to ensure there is no conflict with other maintenance actions.

c. Cancel any project which is no longer required. Notify the TYCOM by letter of any canceled requirements.

6.3.4 Receipt of Plant Property. Upon receipt of plant property, comply with the procedures described here:

a. Receive the equipment from the staging area.

b. Notify the procurement activity immediately if deficient conditions are found after receipt. Notifications will be made via a Product Quality Deficiency Report with an information copy to the cognizant TYCOM. Product Quality Deficiency Report preparation and processing instructions are available in reference (e).

(1) When timing is critical, such as near the end of the warranty period, or when an urgent need to correct the problem exists, notify the procurement activity by the most expedient method (i.e., telephone or message).

(2) Provide the contract number, model and serial number of the plant property, date accepted, date problem developed, nature of the problem and local point of contact (name and telephone numbers).

c. Notify the TYCOM of actual equipment delivery date.

d. Notify the TYCOM when installation is satisfactorily completed.

e. Submit an OPNAV 4790/CK or Allowance Change Request as required to initiate Coordinated Shipboard Allowance List support for new equipment and, if appropriate, to stop Coordinated Shipboard Allowance List support for IPE replaced by new equipment.

f. Submit requests for excess IPE or Other Plant Equipment disposition instructions to the cognizant TYCOM.

6.4 RESPONSIBILITIES.

6.4.1 Fleet Commander. Fleet Commanders must:

a. Review all PEPs submitted by cognizant afloat and shore activities for technical accuracy and completeness.

b. Review each PEP that requests replacement of currently installed equipment to ensure there is no conflict with other maintenance actions (e.g., separate repair, rebuild or replacement action).

c. Prioritize all PEPs and evaluate each project to ensure compatibility with the requesting activity's maintenance capability requirements and site configuration.

d. Return unapproved requests to the submitting activity.

e. Schedule an annual assessment of assigned activity's IPE and coordinate repairs.

f. Evaluate all procurement requirements in accordance with reference (a).

6.4.2 Type Commander. TYCOMs must:

a. Review all PEPs submitted by the TYCOMs.

b. Prioritize and assign a Project Number to PEPs and forward the approved requests to NAVSEA PMS 321 or PMS 421, as appropriate. Return the unapproved requests to the TYCOM.

c. Upon notification from NAVSEA PMS 321 or PMS 421, forward the information regarding disposition (approval or disapproval), acquisition status and delivery dates for PEPs to the submitting activities with an information copy to the cognizant TYCOM.

d. Forward the approved requests to the Fleet Commander for consolidation.

6.5 REPORTS. Information forwarded on forms pertaining to the requirements of PEP, as required in this chapter, is exempt from the report controls required by reference (e).

6.6 NAVAL SURFACE FORCES INDUSTRIAL PLANT EQUIPMENT. IPE is defined as installed and portable equipment needed to complete organizational level maintenance task. IPE will normally be installed or stowed in workshops or those spaces or areas in which servicing, repairing, and operational testing of the ship's Hull, Mechanical and Electrical (HM&E) systems and equipment is performed. Related factors such as ship size, pace availability, manning, spare part availability, and advances in technology or manufacturing should be considered when revising IPE requirements. IPE directly enables maintenance and repair self-sufficiency and bolster warfighting capability. However, IPE alone does not enable self-sufficiency. Proactive chain of command engagement, technical documentation discipline, robust supply support and trained personnel are critical enablers to success.

6.6.1 Scope and Applicability. This chapter outlines the minimum IPE requirement(s) for surface force vessels by class as outlined in Appendices B through J. Various factors (age of ship, manning, training, advances in technology) may cause ships to request or acquire additional IPE in order to maintain and meet operational demands. At no time should IPE listed in this chapter be removed without the written consent of Naval Systems Engineering and Logistics Directorate (NAVSEA 05). Ships will endeavor to maintain the IPE listed within this chapter in an operational status per approved Maintenance and Material Management.

a. IPE requirements found within this chapter address HM&E ship support at the organizational maintenance workshop level. Requirements for additional installed systems (i.e. weapon systems, gun shops) are outside the purview of this chapter.

b. Reference (f) provides standard practices and design criteria to develop HM&E afloat organizational maintenance workshops. This chapter expands on the guidelines within reference (f) and establishes a Fleet requirement.

c. References (g) and (h) provide specific requirements for Micro-Miniature (2M), Fiber Optic Test and Repair (FOTR) and Fuel programs onboard surface ships. These requirements are also considered IPE, however this chapter does not cover 2M-FOTR requirements. FOTR kits are provided by the Program Office (NAVSEA 06M3) and maintained per reference (g). Refer to references (g) and (h) as required.

6.6.2 Responsibilities and Actions.

a. NAVSEA 05 is the Technical Warrant Holder (TWH) responsible for all IPE across the surface force. The assigned TWH will:

(1) Establish, monitor, approve, and apply IPE technical standards.

(2) Maintain the currency and relevancy of IPE technical standards within their scope.

(3) Communicate with programmatic authorities to ensure technical standards meet the needs of the Surface Fleet and are implemented in contracts. Integrate NAVSEA 06 Metrology Calibration TWH Science and Technology selection and measurement traceability requirements in alignment with references (i) and (j).

(4) Adjudicate all technical feedback reports on IPE.

(5) Delegate responsibility as required to In-Service Engineering Agents (ISEA). ISEAs will:

(a) Provide technical services to TWH and Fleet customers.

(b) Provide IPE system performance analysis.

(c) Assist with design, certification, production or integration of IPE for in-service systems.

b. NAVSEA's Small Combatant & Expeditionary Modernization and Sustainment Office (PMS 321) and NAVSEA’s Large Surface Combatant Modernization and Sustainment Office (PMS 421), lead lifecycle management for all IPE. PMS 321 and PMS 421 are responsible for:

(1) Managing lifecycle logistics and track/develop integrated logistics support (ILS) for IPE.

(2) Developing engineering services and products in support of IPE.

(3) Executing the program executive office ship and program management responsibilities of references (e) and (f).

(4) Coordinate recommended IPE sustainment tasks (e.g. PMS, ship change

documents, etc.) and planned overseas movement issue recommendations for IPE lifecycle support.

c. Type Commander will:

(1) Perform periodic assessments of all IPE during the Organic Repair Capability Assessment on afloat units.

(2) Provide feedback to NAVSEA 05, PMS 421 and PMS 321 for any issues or requested changes to IPE on surface ships required by changes in Consolidated Onboard Ship Allowance from this document.

(3) Provide feedback to NAVSEA 05, NAVSEA 06, PMS 421, and PMS 321 for any issues or requested changes to IPE on surface ships.

6.6.3 Capability and Functionality. Different ship classes (and specific hulls within) will have different requirements throughout the life of the ship. Consequentially, the capability and functionality of the areas below are meant to be a general discussion and not a definitive and unchanging definition. The absence of a dedicated space (compartment) in no way decreases the capability or functionality listed below. Equipment may be shared or stored in the available space allotted by class.

a. General Repair (Machinery). Equipment to support:

(1) Horizontal turning and boring.

(2) Drilling, external and internal threading, reaming, and broaching.

(3) Horizontal and Vertical sawing operations.

(4) Horizontal and Vertical milling, grinding, indexing, and slotting operations.

(5) Metal disintegration, heat treatment, and hardness testing operations.

(6) Welding and oxygen or acetylene cutting, burning, and welding.

(7) Sheet metal shearing, nibbling, and forming.

(8) Vertical pressing.

b. Precision Measuring Instruments. Those items to support IPE and general repair operations.

c. Structural Repair. Equipment to support:

(1) Repairs to shipboard hull systems and components such as watertight doors, hatches, and damage control fittings, crew's lockers, ready service and pyrotechnic boxes, handrails, shelves, bookcases, desks, copper tanks, strainer baskets for flushing and cooling systems, and sinks.

(2) Welding, burning and general fabrication of both non-ferrous and ferrous metals. Welding may include manual arc, metallic inert gas welding, tungsten inert gas welding and oxygen - acetylene welding, cutting, brazing, and soldering.

(3) Miscellaneous repairs to hull plating and fittings.

(4) Brake, form, and shear mild steel.

(5) Repairs to metal deck gratings, drain lines, and piping systems.

(6) Remove, fabricate, and replace flange gaskets.

d. Pipe Repair. Equipment to support:

(1) Remove, repair, manufacture, and re-install piping for steam, water, gas, fuel, and oil systems using ferrous and non-ferrous pipe, flanges and fittings.

(2) Test, inspect and repair washdown piping.

(3) Soft solder, silver braze and braze ferrous, and non-ferrous materials using torch.

(4) Weld ferrous and non-ferrous materials using arc welder.

(5) Disassemble, inspect, and replace rubber elements and flexible couplings.

(6) Maintain flexible hose installations.

(7) Install and repair flared fittings on tubing.

(8) Fabricate, assemble, make up, and install screw type fittings and segmented type fitting flexible hose assemblies.

(9) Flush, soak, and test pipe and hose assemblies.

e. Electric Motor Repair Equipment to support:

(1) Pre-overhaul inspection and testing.

(2) Overhaul AC motors to include clean, drying, bearing replacement and testing.

(3) Rewind AC motors to include recording winding data, burnout and trip motors, clean, turn coils, varnish, bake, and test.

(4) Perform testing of motors to include insulation resistance, DC high potential, AC high potential, and voltage surge comparison.

f. Valve Repair. Equipment to support:

(1) Overhaul and repair ball and butterfly valves for steam, water, oil, and gas systems including globe, gate, check, pilot, pressure reducing, pressure regulating, relief, and safety types.

(2) Clean, inspect, and replace internal valve parts, lap valve seats, lap or resurface valve disks.

(3) Clean valve bodies using abrasive blasting.

(4) Remove and replace broken off studs from valve bodies.

(5) Install new gate seats.

(6) Test pilot and main valve operations (as applicable).

(7) Cut rubber and composition gasket material.

(8) Perform valve reseating of globe valves and gate valves.

(9) Perform valve leak detection in place.

(10) Hydrostatic testing (as applicable).

g. Pump Repair. Equipment to support:

(1) Clean, inspect, and replace internal pump parts. Perform precision measurements on internal pump parts.

(2) Perform a pump shaft alignment on split casing and closed coupled pumps.

(3) Perform an operational test on pumps before putting back in service.

h. Air Conditioning & Refrigeration (AC&R) Repair. Equipment to support:

(1) The inspection, troubleshooting, and organizational level repair of Air Conditioning systems and compressors.

(2) The inspection, troubleshooting, and organizational level repair of refrigeration plants.

(3) Reclamation, handling, and reintroduction of refrigerant into AC&R Systems.

i. Weight Handling and Rigging. Equipment to support:

(1) Remove, lift, transport, and place heavy equipment.

(2) Operate deck winches, chain falls, and other rigging equipment. Operate weight handling equipment including rigging booms and securing guys for loading and off-loading equipment.

j. Locksmith. Equipment to support:

(1) Duplication of standard and barrel key blanks.

(2) Service, install, and troubleshoot common key locking systems (pad locks, doorknobs, cabinets, etc.).

(3) Service, troubleshoot, and reset common mechanical combination locks (safes, cipher locks, etc.).

(4) Service, diagnose, troubleshoot, and repair General Services Administration approved locks, vaults, and containers.

NOTE: IF EQUIPMENT IS AVAILABLE, IT WILL BE STRICTLY CONTROLLED TO AVOID UNAUTHORIZED ACCESS AS DESCRIBED IN TITLE 18, UNITED STATES CODE, SECTION 1386.

k. Engraving. Equipment to support:

(1) Horizontal engraving services on plastic, metallic, and wooden surfaces.

(2) Rotary engraving services on cylindrical surfaces.

6.6.4 Emerging Capability.

a. Additive Manufacturing (AM) and advanced manufacturing (AdvM) capability requirements have been recently developed to support surface force operations, per reference (k). As such, the AM IPE requirements are being developed to respond to

challenges associated to logistics, long-lead or obsolete materials, emergent at-sea repairs, limited onboard stowage space or inventory shortfalls. Consequentially, the specific requirements for polymer and metal AM/AdvM capability and functionality will evolve as specific systems are fielded, which may differ through Strike Groups, ship classes and specific hulls within. The following table is adapted from reference (k) to illustrate the desired end state of AM capability.

Requirement	Threshold Value (T)	Objective Value (O)
Printer Reliability (A_o)	80%	95%
Polymer AM Materials	Polyethylene terephthalate glycol (PET-G) or similar, Nylon, Nylon-chopped carbon fiber and Thermoplastic polyurethane	Polyetherimide (PEI), Polyetheretherketone (PEEK) and Polyetherketoneketone (PEKK)
Afloat Unit Polymer Printers	75% of all units	100% of all units
Metal AM Materials	316L stainless steel	CP2 Titanium, Nickel Aluminum Bronze Copper-Nickel Alloy (70/30)
Afloat Unit Metal Printers	75% of all LHA/LHDs and 25% of other L-Class units	100% of all LHA/LHDs and 50 % of other L-Class units
Repair Facilities Polymer and Metal Printers	N/A	100% of all Regional Maintenance Centers, Ship Repair Facilities and Public Shipyards

b. Metal advanced manufacturing is projected to support applications including, but not limited to, the following areas:

(1) general repair (machinery)

(2) structural repair

(3) pipe repair

(4) valve repair

(5) pump repair

(6) air conditioning and refrigeration

(7) locksmith.

c. Polymer additive manufacturing is expected to support applications including but not limited to the following areas:

(1) general repair

(2) valve repair

(3) pump repair

(4) air conditioning and refrigeration

(5) locksmith.

d. Both Metal and Polymer AM/AdvM may also support special tooling applications, quality of life products, and fabrication of items below the lowest replaceable unit. All the AM/AdvM applications shall follow existing policy and guidance on use of AM/AdvM released by the system owner's System Command (SYSCOM).

			PAGE of

INSTRUCTIONS FOR COMPLETION OF PLANT EQUIPMENT PROJECT FORM

1. (Block 1) Activity, Unit Identification Code (UIC) and Location.
   a. Activity. The name of the military facility (and hull number if applicable) where the proposed equipment is to be used. (mandatory)
   b. UIC. (mandatory)
   c. Location. For shore activities: building number, street, city, state and zip code. (mandatory)
   For ships: homeport and building number (if applicable), street, city, state and zip code. (mandatory)
2. (Block 2) Activity Priority. Priority of requested equipment. (Example: 001-94) (mandatory)
3. (Block 3) Type Commander Priority. Priority order for TYCOM. (mandatory)
4. (Block 4) Military Construction (MILCON) Project Number. MILCON Project Number if equipment requested is to be installed as part of a MILCON project.
5. (Block 5) Project Number. Assigned by the cognizant Fleet Commander.
6. (Block 6) Fiscal Year. The fiscal year in which the equipment is requested to be purchased. (mandatory)
7. (Block 7) Date. Record the month, day and year the PEP is developed. (mandatory)
8. (Block 8) Description. Description title of the proposed equipment or system. Include capacity or size. (mandatory)
9. (Block 9) Plant Equipment Code. Use Plant Equipment Code number and include all 12 digits, if possible. Plant Equipment Code numbers are assigned per reference (e). For Class Three, use NSN (preferred), or Federal Supply Class.
10. (Block 10) Number of Equipment Items or Systems Requested. The total number of items or systems in Block 8 required by this project. (mandatory)
11. (Block 11) DD Form 1419. Required only for surplus Class Four equipment acquisition.
12. (Block 12) Estimated Costs - Project.
    (1) The total estimated cost including equipment, transportation and installation. (mandatory)
    (2) The estimated cost of the equipment includes all desired accessories. (mandatory)
    (3) The estimated cost of transportation shipping from the supplier to the activity. (mandatory)
    (4) The estimated installation cost. (mandatory)
13. (Block 13) Justification Category. Check Appropriate Block. (mandatory)
    A. Indicate if equipment is an additional requirement (additional shipboard requirements to be permanently installed require an approved alteration).

B. Indicate if equipment is a replacement requirement. For shipboard activities this requires entering the Allowance Parts List (APL) number (if assigned) in Block 21 when replacing existing equipment. A copy of the APL page must be attached with the PEP submission.

NOTE: CHECK ONLY ONE OF THE ABOVE TWO CHOICES.

C. Indicate if equipment is being replaced or added for economic reasons. Economic reasons may include frequent and costly maintenance or an advanced equipment design that makes the installed version obsolete.

D. Indicate if equipment replacement or addition is mandatory. This block should be checked if new or additional equipment is required to meet significant increases in, or new, tasking.

E. Indicate if equipment is being replaced or added to meet safety or Occupational Safety and Health Administration requirements. Reasons for checking this block could include replacement of equipment that has become unsafe to operate or is required to meet new safety or Occupational Safety and Health Administration regulations.

F. Indicate if equipment is being replaced or added to meet pollution abatement standards. This block should be checked if the replacement or addition of equipment will facilitate significant reduction in the generation of hazardous waste or is required to satisfy newly levied pollution abatement criteria.

NOTE: MORE THAN ONE BLOCK (C THROUGH F) MAY BE CHECKED.

14. (Block 14) Special Program.

A. Indicate if equipment is for Forces Afloat Program.

B. Indicate if equipment is for Ship Alteration Program.

C. Indicate if equipment is for Productivity Enhancement or Fast Payback Program.

D. Indicate if equipment is for Nuclear Support.

E. Indicate if equipment is Collateral Equipment for MILCON.

15. (Block 15) Procurement. (mandatory)

A. Indicate if project is recommended for procurement by NAVSEA.

B. Indicate if project is recommended for procurement locally by requesting activity.

16. (Block 16) Location of Equipment.

A. Shop/Code. The shop number, activity code, cost center or organizational segment, as applicable, where the proposed equipment or system is to be used. (mandatory if applicable)

B. Work Center. Work Centers where the equipment will be assigned. (mandatory if applicable)

C. Building. The building number where the proposed equipment or system is to be used. (mandatory if applicable)

17. (Block 17) Purpose, Description and Justification of Project.

NOTE: BLOCK 17 MAY BE CONTINUED ON THE BACK OF THE FORM OR ON ADDITIONAL PAGES. IF BLOCK 17 IS CONTINUED ON ADDITIONAL PAGE(S), REPEAT BLOCKS 1 AND 8 ON EACH PAGE. ENSURE ADDITIONAL PAGE(S) ARE ANNOTATED IN THE SPACE PROVIDED BELOW BLOCK 21.

a. Purpose. Purpose for which the new equipment or system is to be used. In addition, state increased capacities or capabilities (increased power, speeds, feeds, safety, state of the art improvements, pollution abatement features, etc.). An alteration may be required for shipboard applications if other than a "one-for-one" replacement (mandatory).

b. Description. Include a complete technical description and specifications in sufficient detail to ensure procurement of the exact equipment required (include necessary accessories and attachments). If any of the description is restrictive or proprietary to one manufacturer, underline this portion and give adequate justification for the proprietary requirement. State the manufacturer, model number(s), size, weight, or utility restrictions (mandatory).

c. Justification. Information and data concerning the following items will constitute the basis of the requirements. Each item should be addressed as fully as possible and in the same sequence in which they are listed in the following sub-paragraphs: (A positive or negative statement should be used in lieu of yes or no answers) (mandatory.)

(1) Reason for the replacement of the equipment. Identify item being replaced (include manufacturer, model number, serial number, plant account number (where applicable), size and capacity).

(2) Is additional space required for the installation? If so, where will the installation be made? Submit sketches, complete with size restrictions, including hatch sizes to be considered if equipment must pass through them.

(3) Is military or minor construction required? If MILCON, give the title of the MILCON project and beneficial occupancy date, if available. If MILCON, ensure the project number is in Block 4.

(4) Indicate the particular electrical characteristics from which the equipment is to be powered (voltage, frequency, phase, number or wires, and if power source is grounded or ungrounded). Also, state whether or not sufficient power is available.

(5) Is the need for the requested equipment generated wholly or partially by the assignment of new tasks or by new or tightened specifications for existing task(s)? If so, give details.

(6) Will the new equipment produce products of better usable quality (products which will last longer, perform better, ensure ready interchangeability, etc.)? If so, give details.

(7) What would happen if the present equipment failed? Also, answer the following:

(a) What is the remaining life expectancy of present equipment?

(b) Is the present equipment worn? To what extent?

(c) Is the present equipment unsafe? To what extent?

(d) Does the present equipment have an adequate capacity or capability?

(8) Is the proposed equipment a mandatory requirement (capability increase)? If so, give reason.

(9) Is the proposed equipment recommended for local procurement? Block 15B must be checked. If so, give justification.

(10) Does the requested equipment require an hour meter?

(11) Will this equipment or system be installed in a secure area thus requiring the prime contractor to provide the installer(s) with current security clearance requirements to enable the timely accomplishment of installation services, training, or warranty repairs?

18. (Block 18) Typed Name of Project Preparer. (mandatory)

19. (Block 19) Signature of Preparer. (mandatory)

20. (Block 20) Date Signed. (mandatory)

21. (Block 21) APL Number.

APPENDIX B

SURFACE SHIP ORGANIZATIONAL LEVEL REPAIR CAPABILITY MATRIX

Capability	Ship Class							
	LHA6 /LHD1	LPD 17	LSD 41/49	CG 47	DDG 51	DDG 1000*	FFG 62*	LCS *
General Repair (Machinery)								
Horizontal turning and boring	X	X	X	X	X			
Drilling, external and internal threading, reaming, and broaching	X	X	X	X	X			
Horizontal (H) and Vertical (V) sawing operations	X	X	H	H	H			
Horizontal (H) and Vertical (V) milling, grinding, indexing, and slotting operations	H&V	H&V	V	V	V			
Metal disintegration, heat treatment, and hardness testing operations	X	X	X					
Welding and oxygen/acetylene cutting, burning, and welding	X	X	X	X	X			
Sheet metal shearing, nibbling, and forming	X	X	X	X	X			
Vertical pressing	X	X	X					
Precision Measuring								
IPE and general repair operations support items	X	X	X	X	X	X	X	X
Structural Repair								
Repairs to shipboard hull systems and components such as watertight doors, hatches, and damage control fittings, crew's lockers, ready service and pyrotechnic boxes, handrails, shelves, bookcases, desks, copper tanks, strainer baskets for flushing and cooling systems, and sinks	X	X	X	X	X			
Welding, burning and general fabrication of both non-ferrous and ferrous metals. Welding may include manual arc, metallic inert gas welding, tungsten inert gas welding and oxygen – acetylene welding, cutting, brazing, and soldering	X	X	X	X	X			
Miscellaneous repairs to hull plating and fittings	X	X	X	X	X			
Brake, form, and shear mild steel	X	X	X	X	X			

Capability	Ship Class							
	LHA6 /LHD1	LPD 17	LSD 41/49	CG 47	DDG 51	DDG 1000*	FFG 62*	LCS *
Repairs to metal deck gratings, drain lines, and piping systems	X	X	X	X	X			
Remove, fabricate, and replace flange gaskets	X	X	X	X	X			
Pipe Repair								
Remove, repair, manufacture, and re-install piping for steam, water, gas, fuel, and oil systems using ferrous and non-ferrous pipe, flanges and fittings	X	X	X					
Test, inspect and repair washdown piping	X	X	X					
Soft solder, silver braze and braze ferrous, and non-ferrous materials using torch	X	X	X	X	X			
Weld ferrous and non-ferrous materials using arc welder	X	X	X	X	X			
Disassemble, inspect, and replace rubber elements and flexible couplings	X	X	X	X	X			
Maintain flexible hose installations	X	X	X					
Install and repair flared fittings on tubing	X	X	X	X	X			
Fabricate, assemble, make up and install screw type fittings and segmented type fitting flexible hose assemblies	X	X	X					
Flush, soak and test pipe and hose assemblies	X	X	X					
Electric Motor Repair								
Pre-overhaul inspection and testing	X	X	X	X	X			
Overhaul AC motors to include clean, drying, bearing replacement and testing	X	X	X	X	X			
Rewind AC motors to include recording winding data, burnout and trip motors, clean, turn coils, varnish, bake, and test	X	X						
Perform testing of motors to include insulation resistance, DC high potential, AC high potential, and voltage surge comparison	X	X	X	IR only	IR only			
Valve Repair								

Capability	Ship Class							
	LHA6 /LHD1	LPD 17	LSD 41/49	CG 47	DDG 51	DDG 1000*	FFG 62*	LCS *
Overhaul and repair ball and butterfly valves for steam, water, oil, and gas systems including globe, gate, check, pilot, pressure reducing, pressure regulating, relief, and safety types	X	X	X					
Clean, Inspect, and replace internal valve parts, lap valve seats, lap or resurface valve disks	X	X	X	X	X			
Clean valve bodies using abrasive blasting	X	X						
Remove and replace broken studs from valve bodies	X	X	X					
Install new gate seats	X	X	X	X	X			
Test pilot and main valve operations (as applicable).	X	X	X					
Perform valve reseating of globe valves and gate valves	X	X	X	X	X			
Perform valve leak detection in place	X	X	X					
Hydrostatic testing (as applicable)	X	X						
Pump Repair								
The inspection, troubleshooting, and organizational level repair of Air Conditioning systems and compressors	X	X	X	X	X			
The inspection, troubleshooting, and organizational level repair of refrigeration plants	X	X	X	X	X			
Reclamation, handling and reintroduction of refrigerant into AC&R Systems	X	X	X	X	X			
AC&R Repair								
The inspection, troubleshooting, and organizational level repair of Air Conditioning systems and compressors	X	X	X	X	X			
The inspection, troubleshooting, and organizational level repair of refrigeration plants	X	X	X	X	X			
Reclamation, handling and reintroduction of refrigerant into AC&R Systems	X	X	X	X	X			
Weight Handling and Rigging								
Remove, lift, transport, and place heavy equipment	X	X	X	X	X			

Capability	Ship Class							
	LHA6 /LHD1	LPD 17	LSD 41/49	CG 47	DDG 51	DDG 1000*	FFG 62*	LCS *
Operate deck winches, chain falls, and other rigging equipment and weight handling equipment including rigging booms and securing guys for loading and off-loading equipment	X	X	X	X	X			
Locksmith								
Duplication of standard and barrel key blanks	X	X	X	X	X			
Service, install, and troubleshoot common key locking systems (pad locks, doorknobs, cabinets, etc.)	X	X	X	X	X			
Service, troubleshoot and reset common mechanical combination locks (safes, cipher locks, etc.)	X	X	X	X	X			
Service, diagnose, troubleshoot, and repair General Services Administration (GSA) approved locks, vaults, and containers	X	X	X	X	X			
Engraving								
Horizontal engraving services on plastic, metallic, and wooden surfaces	X	X	X	X	X			
Rotary engraving services on cylindrical surfaces	X	X						

Note:
* DDG-1000, FFG-62, LCS 1, and LCS-2 Classes' IPE are derived from Design, Build and Process Specification (DBPS). As the ship classes mature, the IPE listed in this enclosure should be updated to match the requirements.

APPENDIX C

LHA-6 and LHD-1 CLASS IPE

Equipment	Qty		Equipment	Qty
General Repair (Machinery) Inventory				
Lathe, 40" Bed	1		Boring head per milling machine	1
Lathe, 60" Bed	1		Indexing head per milling machine	1
Lathe, Gap (gap can be combined with 60" bed in one lathe)	1		6" Kurt machine vise or equivalent per milling machine	1
Lathe, Jewelers	1		10" Rotary table	1
CNMG-432 or equivalent turning tool per standard/gap lathe	1		Milling Machine, Vertical	1
Inserted external threading tool per standard/gap lathe (must be able to cut 4 threads per inch)	1		Drilling Machine, Press, 18"	1
CNMG-432 boring bar or equivalent with ¾" or 1" per lathe	1		Band Saw, Horizontal	1
Inserted threading boring bar per standard/gap lathe (must be able to cut 4 threads per inch)	1		Ginder, Wet/Dry, 12” (Primary)	1
Three Jaw chuck per lathe	1		Grinder, Bench Top, 7" (Optional/Secondary)	1
Four Jaw Chuck per lathe	1		Hydraulic Press, 75 Ton	1
Center Rest per lathe	1		Arbor Press, 3 Ton	1
Follower rest per lathe	1		Hardness Tester	1
Magnetic base indicator holders per lathe	2		Heat Treating Furnace	1
Precision Measuring Instrument Inventory				
6-inch dial caliper	2		Thread micrometer	1
12-inch vernier caliper	1		Inside diameter micrometer set	1
24-inch vernier caliper	1		Dial indicator	2
48-inch vernier caliper	1		Inside diameter dial indicator	1
Vernier Height gauge	1		Dial bore gauge	1
Vernier Bevel protractor	1		Depth gauge set	1
0–1-inch micrometer	1		Gauge block set	1
1–2-inch micrometer	1		Sine bar	1
2–3-inch micrometer	1		Surface roughness scale	1
3–4-inch micrometer	1		Telescopic gauge set	1
4–5-inch micrometer	1		Surface layout plate	1
5–6-inch micrometer	1		Surface layout block	1
6–9-inch micrometer	1		Machinist square	1
9–12-inch micrometer	1		Parallel bar set	1
Pipe ball micrometer	1		Lapping block	1
Structural Repair Inventory				

Equipment	Qty		Equipment	Qty
Bending Brake Machine	1		Cutting Torch and Gas	2
Metal Shearing Machine, Squaring	1		Welding Machine, Installed with Coolers, 300 AMP (MIG/TIO/STICK)	2
Punching Machine	1		Welding Machine, Spot	1
Universal Iron Worker	1		Platen Table	1
Slip Roll Forming Machine Manual	1		Welding Machine, 300 AMP, (MIG/TIG/STICK) Portable	2
Slip Roll Forming Machine Hydraulic	1		Welding Machine, 200 AMP, (TIO/STICK) Portable	2
Grinding Machine Wet/Dry 12 inch	1		Welding Machine, Stud	1
Combination Machine, Power Beading	1		Plasma Cutter, ARC	2
Band Saw, Vertical	1		Tungsten grinder	1
Electrode Dry Rod Oven	2		Amp meter	1
Drilling Machine, 20"	1		Pyrometer	1
Pipe Repair Inventory				
Welding Machine, 300 AMP, (MIG/TIG/STICK)	2		Vise, Pipe	1
Welding Machine, 300 AMP (MIG/TIG/STICK), Installed, Water/air Cooled	2		Cutting Torch with Gas	1
Hose Cutter, Portable	1		Platen Table	1
Hose Crimping Machine, Power	1		Welding Machine, 200 AMP, (TIG/STICK) Portable	2
Bending Machine Pipe/Conduit Hydraulic, ½ - 4 inch	1		Electrode Dry Rod Oven	1
Tube Bender, ½ - 1 inch	1		Plasma Cutter, ARC	2
Pipe Threading Machine, Power	2		Elastic Strain Preloaded Fittings Kit	1
Grinding Machine, Wet/Dry, 12 inch	1		Handheld Electric Shearing Tool	2
Band Saw, Metal, Portable	1			
Electric Motor Repair Inventory				
Winding Machine	1		Stator Coil Puller	1
Reel Rack	1		Electrical Workbench	1
Insulation Cutter, 24"	1		Special Electric Testing Equipment	8
Insulation Former	1		Mechanical Workbench	1
Bake Oven, 500°F, Armature	1		Portable Bearing Oven	1
Burn-out Oven, 850°F	1		Digital ohmmeter (Valhalla 4176)	1
Varnish Dip Tank	1		Surge/DC Hi-pot Tester	1
Cleaning Machine, Agitating	1		AC Hi-pot Tester	1
Balancing Machine	1		Test set-armature	1
Armature & Starter Motor Holder	1		Clamp-on Ammeter	1

Equipment	Qty		Equipment	Qty
Armature Maintenance Stand	1		Micrometer	4
Bench Grinder, 7"	1		Gauge, Snap	3
General Purpose Test Panel	1		Gauge, Bore	1
Coil Winding Machine, Floor Mounted	1		Wrench, Torque	4
Coil Cutter	1		Dial Indicator	4
Portable Bearing puller set - Two legged and three legged/clam shell	1		Dial Indicator Holder	2
Pump and Valve Repair Inventory				
Hydrostatic Valve Test Stand	1		Lapping Plate	1
Abrasive Blast Cabinet w/Separator	1		Alignment Kit, Laser	1
Valve Refacing Machine, Portable	1		Gear Puller, Bearing	1
Valve Boring Bar, Seal Ring Seat, Portable	1		Shim kit (various sizes and thicknesses)	1
Valve Leak Detector, W/X-Y Recorder	1		0-12-Inch Outside Micrometer Kit	1
Valve Leak Detector, Handheld	1		Dowel Pins Tapered (various sizes)	
Valve Leak Detector, Model 5110N	1		Jacking bolts (various sizes)	
Valve Reseating Outfit globe 1/4" to 4"	1		Blank Flanges (various pipe sizes, thickness for up to 250 PSI)	
Valve Reseating Outfit gate 2-1/2" to 4"	1		RMS Surface Roughness/Finisher Comparator	1
Valve Reseating Outfit globe 4" to 12"	1		Dial indicator with magnetic base	1
Valve Reseating Outfit gate 8-1/2" to 12"	1		CTRL UL101 Ultrasonic Leak Detector	1
Platen Table (as required)	1			
Refrigerant Recovery/Reclaim Unit	2		Electronic Refrigerant Scale	2
Vacuum Pump	2		Nitrogen Regulator	2
Lansing Machine	1		Vacuum Gauge, Set	2
Leak detector, Halogen TIF 5500	2		Refrigerant Recovery Cylinders, R-134a	1
Leak detector, H-IO PRO	2		Refrigerant Recovery Cylinders, R-404a	1

LISTING OF APPENDICES.

A Submarine Paint Guide
B Coating Inspection Report Form
C Shipboard Power Cleaning Tools

7.1 INTRODUCTION. The objective of this document is to provide Fleet Maintenance Activities (FMA) with the procedures necessary to perform preservation maintenance between major shipyard availabilities. It has consolidated all the necessary knowledge from reference (a) for submarine crews that may be inexperienced in the areas of surface preparation and touch-up painting to maintain protective coating systems. This document is to be used in maintaining and repairing preservation systems on non-nuclear components and spaces of U.S. Navy submarines. Appendix A is a guide to assist with preparing, handling and applying paint to interior submarine surfaces.

7.1.1 Applicability.

a. This document is not to be used during regular shipyard work, where all prevailing technical requirements of reference (a) applies. This includes preservation of tanks, voids and underwater hull, otherwise referred to as critical coated areas. Critical coated areas are defined as areas that cannot be easily accessed and represerved without drydocking of the ship. Many of these areas are also monitored under the reference (b) inspection program. Ship's Force should not be conducting preservation of these areas unless addressed in this manual. FMAs who are supporting shipyard

availabilities should utilize a trained workforce to accomplish work in critical coated areas or to complete preservation work associated with reference (b). The lead maintenance activity (shipyard, Regional Maintenance Center, Intermediate Maintenance Facility) executing the availability should publish to the FMA the qualifications required of personnel who can accomplish preservation in these areas. These qualifications must meet the requirements of references (a) through (i) and be acceptable to the lead maintenance activity.

b. Occasionally tanks are entered for other reasons by the FMA or Ship's Force. National Association of Corrosion Engineers (NACE) Level I and Naval Sea Systems Command (NAVSEA) Basic Paint Inspector (NBPI)), and Society of Protective Coatings (SSPC) Protective Coating Inspector Program (PCI) training do not fully instruct on how to inspect an in-service coating system. References (c) and (f) provide further information for in-service coating system evaluation. If a tank is entered for any reason, it must be inspected. If significant defects or paint failure is found, the Type Commander or shipyard must be contacted. A Departure from Specification may need to be submitted to evaluate deferring repair to a future availability. If immediate repairs are needed, NAVSEA will provide the proper guidance.

7.1.2 Technical Point of Contact. Point of Contact for technical questions regarding this chapter is NAVSEA 05U7124.

7.2 SCOPE. This manual provides information to the FMA with basic step-by-step instructions for:

a. Inspecting and reporting areas of coating failure.

b. Providing oversight during the paint process.

c. Identifying the required surface preparation method.

d. Preparing the surface for repainting using hand or power tools.

e. Selecting proper paint(s) for a given application.

f. Becoming familiar with the Product Data Sheet (PDS) or American Society for Testing and Material (ASTM) F-718 sheet and Material Safety Data Sheet (MSDS) for a given paint.

g. Mixing and applying the paints.

h. Using a Wet Film Thickness (WFT) gauge to determine if the proper coating thickness was applied.

i. Knowing when to apply overcoats in a two (or more) coat system.

7.2.1 Ship's Force Responsibilities. This document assumes that Ship's Force personnel are being assisted by an FMA and:

a. Will apply all coatings using a brush or roller.

b. Will not be required to measure environmental conditions such as surface temperature, dew point and Relative Humidity (RH). Personnel should be instructed, during the training program established in Chapter 27, paragraph 27.3.2 of this Volume, that environmental conditions are important when painting and to consult a NACE or

NPBI from the FMA if conditions are questionable.

c. Will not be required to measure surface salt contamination, but should be instructed, as part of the Chapter 27, paragraph 27.3.2 of this Volume, training, that excessive surface salt contamination will shorten the service life of a coating system and to consult a NACE or NPBI paint inspector from the FMA to determine if surface salt concentrations are within the acceptable range for paint application. Also ensures that the surface is washed with clean water.

d. Will not use spray equipment to apply paint.

e. Will not use abrasive blast or hydroblasting equipment to prepare the surface.

7.2.2 Fleet Maintenance Activity Responsibilities. This document assumes that the FMA:

a. Will maintain the tools needed by Ship's Force to accomplish the preservation process and instruct Ship's Force in their proper use.

b. Will maintain and be familiar with NACE or Society For Protective Coatings surface preparation and cleanliness standards (NACE Level 1 or NPBI inspectors).

c. Will assist Ship's Force in accomplishing inspections and prioritizing work.

d. Will maintain copies of reference (f) (VIS-2 Standard Method of Evaluating Degree of Rusting on Painted Steel Surfaces) to use when accomplishing inspections.

e. Will assist in the training of Ship's Force in the preservation process.

f. Will be onboard when painting operations are underway to monitor that the various steps of the process are being properly accomplished (NACE Level 1 or NPBI inspector).

g. Will perform spot checks of surface cleanliness, surface profile and WFTs during the coating process (NACE Level 1 or NPBI inspector).

h. Will monitor environmental conditions, temperature, humidity, dew point, to ensure they are within required limits during the coating process (NACE Level 1 or NPBI inspector).

i. Will conduct soluble salt testing when needed (NACE Level 1 or NPBI inspector).

j. Will advise Scheduled Preservation Upkeep Coordinated Effort (SPRUCE) Manager or ship's designated representative if required environmental conditions cannot be met (NACE Level 1 or NPBI inspector).

7.2.3 Quick Reference. A Quick Reference, section 7.10 of this chapter, provides concise steps for surface preparation and coating application in specific areas such as the sail and bilges as well as a "catch all" entitled "Miscellaneous Areas of General Corrosion".

7.3 GENERAL SAFETY PRECAUTIONS.

7.3.1 Hazards. Every painting assignment exposes maintenance personnel to conditions and situations that represent actual or potential danger to them and to others in the area. The frequent necessity to use toxic and flammable materials, pressurized equipment, ladders, scaffolding and rigging always presents a potential hazard. Hazards may also be inherent in the very nature of the environment or caused through ignorance or carelessness of the operator. It is, therefore,

extremely important to be aware of all potential hazards, since continuous and automatic precautionary measures will minimize the problem and improve both efficiency and morale of the painting crew.

NOTE: THE PRECAUTIONS CONTAINED IN THIS MANUAL ARE IN ADDITION TO, AND DO NOT SUPERSEDE, OTHER SAFETY REQUIREMENTS THAT HAVE BEEN ESTABLISHED IN REFERENCE (d), SECTION D AND REFERENCE (e).

7.3.2 Precautions. This document highlights safety precautions for surface preparation and the mixing, handling and application of coatings. The local environmental, safety and health organization has cognizance over the safety precautions to be implemented during all phases of the painting process.

7.4 INSPECTION OF EXISTING PAINT AND BASE METAL.

7.4.1 Required Tools. The purpose of this section is to describe how to report the condition of the coating system in various ship areas. The inspector will need the following tools:

a. Flashlight.

b. Inspection mirror (to see hard-to-reach areas, such as behind beams).

c. Pocket knife.

e. Rag.

f. Paint stick or non-grease marker.

7.4.2 Failure Locations. Where practical, circle areas of failure with a paint stick or non-grease marker. Record location and type of failure on Appendix B. The following failure types should be reported:

7.4.2.1 Percent of General Corrosion. The extent of corrosion in the inspection area will determine how much surface preparation and painting is required. Therefore, the prime objective of the inspection is to accurately report the extent of corrosion. To facilitate accurate evaluation and reporting, reference (f) is available from the FMA and must be used. Reference (f), (VIS-2 Standard Method of Evaluating Degree of Rusting on Painted Steel Surfaces), is a series of photographs showing various extents of corrosion. To use the reference photos, examine the surfaces in the area being inspected and then select one of the reference photographs that most closely resembles the extent of rust in the area being inspected. Enter the percent on Appendix B in the column labeled, “Percent General Corrosion”. If reference (f) is not available, estimate the amount of rust and indicate on the form that the standard was not used in the estimation.

7.4.2.2 Corrosion. After removing the corrosion scale with a scraper, look for structural steel defects such as visible metal loss, pitting or large corroded areas. If any defects are discovered, report findings to cognizant supervisor or hull survey team for further instructions and enter “Y” in column labeled, “Pitting Corrosion”. Mark the pits with a paint stick or non-grease marker and make a note in the “Notes” column on Appendix B.

7.4.2.3 Percent of Blistering. Enter percentage of the total area showing blistering. Even though the pictorial representations contained in reference (f), (VIS-2 Standard Method of Evaluating Degree of Rusting on Painted Steel Surfaces), are intended for evaluating the degree

of rusting, they can also be used as a guide in determining the percentage of an area that has blistered paint. Use the "General Rusting" diagrams (not the photographs) and select the diagram that most closely resembles the pattern of blistering in the area being inspected. Enter the percent on Appendix B in the column labeled "Percent Blistering". Work should be prioritized by:

a. Order of importance for type of failure: pitting > corrosion > blistering.

b. Order of importance for areas: pressure hull > non-pressure hull.

7.4.3 Cosmetic Paint Failure. Cosmetic paint failures may also be observed and should be repaired only after all other types of preservation failures have been repaired. Repeated cosmetic painting can cause excessive film build that will lead to premature paint failure. Stained or discolored paint should first be washed with detergent and lightly hand sanded to attempt to remove stains. If a cosmetic topcoat is applied, it should be applied in as thin a layer as possible to avoid excessive film build over time.

7.4.4 The Difference Between Rust and Rust Staining. It is necessary to know the difference between rust and rust staining. Dirt, residue or rust staining may be mistaken for rust. Stained, intact paint does not require removal and touch-up. Figures 1 and 2 show two photographs taken in the same location. The top photograph shows what may appear to be extensive rust, especially in a poorly lit area. However, the bottom photograph shows that, after rubbing a small circular area with a rag, the discoloration was caused by dirt and residue, not rusted metal.

Figure 1 - Stained area before wiping a small area with a rag

Figure 2 - Stained area after wiping a small, circular area with a rag

7.5 GENERAL SURFACE PREPARATION.

NOTE: POOR SUFACE PREPARATION IS THE CAUSE OF 95% OF COATING FAILURES. PREPARING THE SURFACE PROPERLY MAY WELL PREVENT RE-DOING THE SAME JOB.

7.5.1 Surface Cleaning Methods. The most important factor affecting the service performance of a coating is the degree of care taken in preparing the surface for painting. When scheduling surface preparation work, ensure that sufficient time will be available to paint all surfaces that have been prepared and allow the paint to fully cure before placing the surfaces into service. The goal of surface cleaning is to provide a roughened surface that is free of contamination and gouges or sharp projections. Roughening is necessary to attain the necessary anchor pattern for good paint adhesion. Surface cleaning methods vary with the type of surface preparation needed, location and size of the area being cleaned. These different cleaning methods are described in the following paragraphs. The steps required to prepare a surface for painting are:

a. Solvent cleaning to remove oil, grease, dirt, chemicals and water-soluble contaminants. If solvents are prohibited, use detergent and fresh water.

b. Mechanical cleaning (Hand Tool or Power Tool Cleaning) to remove rust and loose paint and to roughen or profile the surface for better coating adhesion.

c. Feathering edges.

d. Sweeping or vacuuming loosened material.

e. Solvent cleaning, if necessary. Check to see if oil was deposited on the surface during power tool cleaning.

f. Schedule paint application as soon as possible.

7.5.2 Solvent Cleaning. Solvent cleaning prepares surfaces by removing oil, grease, dirt and other foreign matter prior to mechanical cleaning or painting. The simplest procedure is to first remove soil and other dry material with a wire brush. The surface is then scrubbed with rags saturated with solvent. Clean rags are then used to rinse and wipe dry. Solvent cleaning must be

accomplished only when allowed by local air quality regulations. Recommended solvents: Super high-flash naphtha; Mineral spirits, NSN 010-00-558-7026 (alkyd paints). Surface preparation accomplished by solvent cleaning must meet the requirements of reference (f), (SP-1 Solvent Cleaning).

7.5.3 Detergent Cleaning.

a. If solvent cleaning is prohibited, detergent cleaning may be substituted. A recommended detergent is MIL-D-16791, Type 1, Liquid Detergent. The procedure is:

(1) Mix detergent in fresh water according to packaging instructions.

(2) Wash substrate surface.

(3) Rinse with fresh water.

(4) Dry surface with clean dry rags to remove residual water.

b. Several non-specification cleaners such as Simple Green (produced by Sunshine makers, Inc.) have also been used successfully for smaller areas.

7.5.4 Hand Tool Cleaning.

a. Hand tools such as scrapers and wire brushes are used on surfaces in confined spaces (corners) that cannot be reached with power tools. Hand tool cleaning will remove only loose or loosely adhering surface contaminants, including rust scale, loose mill scale, loose rust and loosely adhering paint. Hand tool cleaning is not to be considered an appropriate procedure for removing tight mill scale and all traces of rust. It is primarily recommended for spot cleaning in areas where corrosion is not a serious factor. Surface preparation accomplished by hand tool cleaning must meet the requirements of reference (f), (SSPC-SP-2 Hand Tool Cleaning).

b. Before hand tool cleaning, the surface must be free of oil, grease, dirt, chemicals and water-soluble contaminants, all of which may be removed with solvent cleaners and fresh-water rinsing. For small areas, clean dirt, soil, dust or other surface contaminants by using a detergent wash and freshwater rinse. Wipe the surface with rags or a stiff brush as necessary to remove any residue that does not wash off. Impact tools, such as chipping hammers, chisels or scalers must be used to remove rust scale and any heavy buildup of old coatings. Start painting as soon as possible after cleaning.

c. In those situations where areas are not accessible to power tools, hand tool cleaning methods may have to be used. Since hand tool cleaning will remove only the loosest contamination, careful application of primers is required, preferably by brushing, to thoroughly wet the surface. To achieve satisfactory results, all applied coats must be capable of overcoming the interference of contaminants left behind after hand tool cleaning.

7.5.5 Power Tool Cleaning.

7.5.5.1 Safety Warning. Before power tool cleaning, the surface must be free of oil, grease, dirt, chemicals and water soluble contaminants, all of which may be removed with solvent cleaners

and freshwater rinsing. Never try to remove oil or grease by the use of power tools. This causes the grease to become further imbedded in the metal surface, thus preventing good paint adhesion.

7.5.5.2 Power Tool Cleaning Procedure. The proper procedures for cleaning surfaces prior to the use of power tools are:

a. For small areas, clean dirt, soil, dust or other surface contaminants by using a detergent wash and freshwater rinse. Wipe the surface with rags or a stiff brush as necessary to remove any residue that does not wash off.

b. To remove embedded grease, oil or soil from small areas, clean the surface with a clean cloth wetted with solvent. After final application of the solvent, wipe dry with a clean cloth.

c. Power tool cleaning will prepare surfaces faster and better than hand tool methods. Surface preparation accomplished with power tools must conform to the requirements of reference (f), (SSPC-SP 11, Power Tool Cleaning to Bare Metal). Power tool cleaning to bare metal is defined as removal of all rust, loose mill scale and paint to bare metal (except for slight residue in pits if surface is pitted) by chipping, scraping, sanding or wire brushing. Power tools are used for removing small amounts of tightly adhering contaminants that hand tools cannot remove.

d. If oil residue is detected after power tool cleaning, solvent cleaning should be repeated.

e. Painting must be started and completed as soon as possible after completion of power tool cleaning.

7.5.5.3 Types of Power Tools. Power tools are driven either electronically or pneumatically, and the basic units include a variety of attachments. Chipping hammers are used to remove tight corrosion, mill scale and old paint from large metallic and masonry areas. Wire brushes (cup or radial) are used to remove loose mill scale old paint, weld flux, slag and dirt deposits. Grinders and sanders are used to smooth excessively rough surfaces. As with hand tools, care should be exercised with power impact and grinding tools so they do not remove metal or cut too deeply into the surface, resulting in burrs that are difficult to cover and protect satisfactorily. Care should be taken when using wire brushes and sanders to avoid polishing metal surfaces, which would prevent adequate adhesion of subsequent coatings.

7.5.5.4 Power Tool Allowance. The Master Allowance List, Part II, Group S92-1, contains the base allowances of power preservation tools for all ships. Changes in shipboard allowances may be implemented by direction of the Type Commanders. Common shipboard power tools are shown in Appendix C.

7.5.6 Feathering Edges. After mechanical cleaning (hand, power tool cleaning) is complete, edges of the intact paint surrounding the mechanically prepared area must be “feathered” into the metal. Feathering eliminates the “step” from the intact paint to bare metal. If this “step” is not removed, newly applied paint may crack as it dries leading to premature coating failure. The procedure for feathering an area of exposed metal surrounded by intact paint is:

a. Lightly abrade the edges of intact paint with a power disk sander or rough sandpaper.

b. Taper the edges to make a gradual transition from intact paint to bare metal so that the

underlying coats are exposed at the edges.

c. Solvent (or detergent) clean.

d. Apply paint.

7.5.7 Aged Paint. Old paint in good condition is an excellent base for repainting. When a surface is to be repainted and the old paint is not to be removed, the surface must be roughened with abrasive and thoroughly cleaned and dried before new paint is applied. When only localized areas of spots require repainting, it is essential that the removal of the old paint be carried back around the edges of the spot or area until an area of completely intact and adhering paint film with no rust or blisters is attained. Edges of tightly adherent paint remaining around the area to be recoated must be "feathered". Painting should not be done over loose and cracked paint. When painted surfaces show evidence of corrosion, peeling, blistering, checking, scaling or general disintegration, remove the paint down to the bare surfaces.

7.5.8 Surface Salt Concentration. Coatings will fail prematurely if excess surface salts are not removed prior to coating application. Ship's Force personnel are not expected to measure surface salt concentration. However, Ship's Force is expected to know where to find qualified help (e.g. Quality Assurance personnel (Code 340)) at TRIDENT Refit Facilities.

7.5.9 Equipment Maintenance. To assure the safe and proper operation of surface preparation equipment, the following are provided:

a. Power Tools.

(1) Ensure that no oil or grease is left exposed after completing maintenance work on surface preparation equipment. The slightest amount of oil or grease on the equipment will contaminate the surface and cause poor paint adhesion.

(2) Replace the disk on the disk sander when it no longer cuts through the paint film or when dirty. Replace the head of the wire brush unit when the wires are bent, worn, broken or frayed. Clean wires when dirty.

(3) Replace the head of the needle gun when over one-half of the needles become bent.

b. Hand Tools.

(1) Maintain a sharp and smooth edge on the scraper.

(2) Clean wire brush when dirty.

(3) Discard wire brush when wires become frayed or broken.

c. Care and Maintenance of Paint Brushes.

(1) Brushes that are to be reused the following day should be marked for white, light colors or dark colors.

(2) The weight of the brush should not rest on the bristles.

(3) Brushes not to be immediately reused should be cleaned with at least three washings of thinner or solvent, then washed with detergent and water.

(4) Brushes should be stored by suspending them from the handle on racks or

wrapped in paper and stored flat.

(5) Paint rollers should be disposed.

7.6 GENERAL MIXING AND PAINT APPLICATION.

NOTE: PRIOR TO USING ANY PAINT, THE TWO FOLLOWING DOCUMENTS, ISSUED BY THE PAINT MANUFACTURER, SHOULD BE READ AND UNDERSTOOD.

7.6.1 Product Data Sheet or Material Safety Data Sheet. The PDS (or ASTM F-718 sheet) and MSDS provide the information to use the coating properly and safely. To obtain the PDS (or ASTM F-718 sheet) and MSDS, call the coating manufacturer and request them to FAX the PDS (or ASTM F-718 sheet) and MSDS. ASTM F-718s can also be obtained from the National Surface Treatment Center web site, http://www.nstcenter.biz . Some paint manufacturers may provide an ASTM F-718 sheet instead of a PDS. The use of ASTM F-718 sheets is preferred because they have been approved by NAVSEA. Both documents generally provide similar information.

7.6.1.1 Product Data Sheet. This document provides information about the proper use of the paint including:

a. Mixing instructions including mix ratio (for a two-part system).

b. Induction period (if required).

c. Application methods.

d. Pot life.

e. Drying and over coat times.

f. Wet and Dry Film Thickness (DFT) requirements.

7.6.1.2 Material Safety Data Sheet. This document provides information concerning safe use of the paint including the following sections:

a. Product identification.

b. Hazardous ingredients.

c. Physical data.

d. Fire and explosion data.

e. Health hazard data.

f. Reactivity data.

g. Spill or leak procedures.

h. Special protection information including Personal Protective Equipment (PPE).

i. Special precautions.

7.6.2 Mixing Area.

a. Shore Facilities.

(1) Painters should have detached shops or detached temporary structures where

all paint should be mixed, and where paint buckets, brushes and rags can be temporarily stored.

(2) Only the quantity of paint needed for one day's work must be taken into the mixing area.

b. Forces Afloat.

(1) Paint must not be stowed in the mixing area.

(2) Mixing of paints and their solvents must be confined to the paint mixing room or other designated compartment.

(3) Paint must not be mixed aboard a submarine.

7.7 SPECIFIC PAINTING REGULATIONS FOR SUBMARINES.

7.7.1 Motor Generator Units. Prior to any interior painting, Positive Pressure Unit must be activated if the Motor Generator is not sealed or is open within five days of paint application. This will prevent solvent from damaging motor generators.

7.7.2 Coating Material.

a. Mix all paints BEFORE bringing it aboard the submarine. The use of paint pre-packaged in cartridge dispensing systems is encouraged because the paint is mixed in the static mixer as it is dispensed from the cartridge and open containers of paint are eliminated. MIL-DTL-24441 and VACTAN are currently the only paints that are used by Ship's Force available in cartridges.

b. With the exception of topside boot or other areas that do not vent to the submarine interior, all appreciable painting described in this document must be completed at least five days prior to departure for sea. (The date of departure, as it relates to painting, must be the date of the first dive after departure for a period of operation. The Commanding Officer of the submarine involved should determine the "date of departure" whenever the question arises.)

c. Bring onboard only the amount of paint than can be used in the immediate painting operation. The use of paint pre-packaged in cartridge dispensing systems is encouraged because a partially used cartridge can be capped and reused.

d. Where paint is applied to surfaces that later will be heated (e.g., thermal piping and lagging), the systems must be activated (heated) prior to sealing the boat.

7.7.3 Items Not To Be Painted. The following surfaces are not to be painted and, therefore, should be masked off when paint is applied in the vicinity:

a. Corrosion Resistant Steel (CRES) on decks, CRES galley equipment and CRES bulkheads in wet spaces.

b. Decorative plastic surfaces such as on bulkheads or table tops.

c. Dogs or operating gear of watertight doors, hatches, scuttles and similar items.

d. Hatch and door rubber gaskets.

e. Labels (e.g., identification plates).

f. Insulators.

g. Knife edges of watertight doors and hatches.

h. Tiled areas.

i. Threaded parts, such as adjusting threads and take-up threads that, if painted, would not function properly.

j. Anodic and cathodic protectors (zincs).

k. Composition metal water ends of pumps.

l. Condenser heads and outside surfaces of condensers when of composition metal.

m. Exposed composition metal parts of any machinery.

n. Glands, stems, yokes, toggle gear and all machined external parts of valves.

o. Heat exchange surfaces of heating or cooling equipment.

p. Joint faces of gaskets and packing surfaces.

q. Lubricating gear, such as oil holes, oil or grease cups, lubricators and surfaces in contact with lubricating oil.

r. Lubricating oil reservoirs.

s. Charging water tanks.

t. De-mineralized water tanks.

u. Amine storage tanks.

v. Machined metal surfaces of reciprocating engines or pumps and all "oil wetted" surfaces of internal combustion engines.

w. Metal lagging.

x. Rods, gears, universal joints and couplings of valve operating gear.

y. Expansion joints, pipe hangers, flexible hose connections, items partially fabricated of rubber and rubber resilient elements of isolation mounts.

z. Springs.

aa. Strainers.

ab. Turbine casing joints, nuts and bolts.

ac. Working surfaces.

ad. Brass, bronze, gun metal and copper were used in submarine systems.

ae. Foundation bearing surfaces where alignment or sliding is required.

af. Electrical outlets, terminals, activating mechanisms of electrical safety devices, control switchboards on machinery elevators and grounding contact surfaces.

ag. Joints and contact surfaces of explosion-proof enclosures.

ah. The following interior surfaces (aluminum surfaces may be waxed where desired for

appearance).

ai. Bins, shelves, dressers, drawers, cabinets, battens and fittings.

aj. Interior gratings, handrails and floor plates.

ak. Internal surfaces of ventilation ducts.

al. Sight glasses, gauge faces or identification plates or other markings, which, if painted, would be illegible.

am. Faces of sonar transducers, hydrophones, no-foul rubber shelling, sonar dome rubber windows, rubber sonar domes and glass reinforced plastic domes.

an. Any other components or surfaces where the application of paint would affect the fit, form or function.

ao. When in doubt, contact the technical authority for guidance.

7.7.4 Shelf Life of Paints. Shelf life is the period after manufacture when the paint can be used. The date of manufacture is printed on the paint can. Refer to the PDS (or ASTM F-718 sheet) to determine the shelf life of the paint being used. Do not use paint that has passed the shelf life given on the PDS (or ASTM F-718 sheet). Partially used cartridges can be reused if the paint is still within the shelf life.

7.8 MIXING PROCEDURES.

7.8.1 Pre-Packaged Paint. The use of paint prepackaged in cartridge dispensing systems is encouraged because it eliminates mixing of paint. The cartridges may have to be shaken using a mechanical shaker designed for the cartridges. Cartridges are an alternative form of packaging and the dispensing system eliminates mixing. The properties of the paint remain the same with regard to WFT, spread rates, dry times, overcoat times, etc.

7.8.2 Mixing Observations. The following steps should be observed when mixing paint:

a. Prior to mixing paint, read and understand information in the manufacturer's PDS or ASTM F-718.

b. Mix all paints BEFORE bringing them aboard the submarine.

c. Paints should be thoroughly mixed (3 to 5 minutes with a mechanical mixer) and free of lumps, cakes and sediments prior to use. Multiple component paints require thorough mixing of each component before they are combined.

d. Mixing is best accomplished by the use of mechanical shakers or stirrers. Ground all mixing equipment shakers, stirrers, containers and platforms prior to use.

e. If a mechanical device is not available, a manual method, such as the boxing method, may be used. The boxing method is a manual paint mixing technique that is used in combination with manual stirring as described here:

(1) Pour the top two-thirds of the paint from the original can (#1) into a clean empty can (#2).

(2) Stir the pigment and liquid left in can #1 with a paddle until smooth.

(3) Gradually pour the paint in can #2 into can #1 while stirring.

(4) Pour the paint from can #1 into can #2. Reverse this step and repeat until the paint is uniformly smooth.

(5) If any particles do not dissolve after stirring and mixing, strain the paint through a wire screen or two layers of cheesecloth.

f. The following list of "DO NOTS" should be observed when mixing paints:

(1) DO NOT make any assumptions about the correct procedure for mixing paints. Consult the paint manufacturer's PDS or ASTM F-718 sheet.

(2) DO NOT mix more paint than can be used during the pot life time period. Read PDS (or ASTM F-718 sheet) for pot life.

(3) DO NOT mix components of different paint formulas.

(4) DO NOT use paint with large undissolved particles.

(5) DO NOT dilute paints with solvents (thinners).

(6) DO NOT keep epoxy paints out in the sun in warm weather, including epoxy paint pre-packaged in cartridges.

7.8.3 Mixing and Application Procedures for the Navy Epoxy Paint System. Navy epoxy Formula 150 is a primer coat that can be applied to bare metal or to sound paint. Topcoats of various colors (Formulas 151-156) are used for specific applications. Formula 151 is the gray color most commonly used. The following procedures should be followed in mixing these paints. Read and understand the manufacturer's current PDS or ASTM F-718 sheet.

a. The Navy epoxy paints are supplied in kits containing two components. One container is labeled Component A and the other is labeled Component B. These components are mixed in a 1:1 ratio by volume, i.e., for one gallon of component A add an equal amount of component B. Check the designation on both containers before mixing to ensure that the proper components are being used. The components of the various formula numbers are NOT interchangeable.

b. Both components in an epoxy paint kit must be stirred separately prior to mixing them together. After combining equal volumes of the two components, the mixture must be thoroughly stirred until well blended, and then allowed to react for the appropriate "induction" stand-in time as stated in the PDS (or ASTM F-718 sheet). Type IV does not require an induction period, but earlier formulations (Types I and III) require induction.

c. If an induction period is required, the paint should be stirred or agitated for at least 2 minutes every 30 minutes during the induction period. Two minutes of stirring or agitation are required at 4-hour intervals during the application process.

d. When Navy epoxy paints are used at a work site having temperatures in the range 35° to 50°F, it is essential that the paint components be pre-warmed to 70°F, mixed, and then allowed to stand for 2 hours prior to delivery to the work site. The preferred method of pre-warming is to store unmixed paint at 70°F for 24 hours prior to the job.

e. After being mixed, epoxy paints must be used within the pot life period, as specified in the PDS (or ASTM F-718 sheet).

f. During maintenance painting, brush application is recommended for the first coat of paint over mechanically cleaned surfaces such as hand-cleaned bilges. The brushing forces the paint into surface contaminants or displaces them. The MIL-P-24441 paints do not require thinning before application. Apply the topcoat(s) after the first coat has dried.

g. If more than seven days elapse before over coating, the surface should be cleaned with water and detergent (if required) for grease and oil removal. This should be followed by a fresh water rinse and wiped dry. Then, a tack coat (1 to 2 wet mils) of the last coat applied or Formula 150 is reapplied to the hard epoxy coat and allowed to dry approximately four hours before application of the next full coat of the system.

h. If more than 30 days elapse before over coating, clean and roughen the aged topcoat before new paint application.

7.8.4 Mixing and Application Procedures for Commercial Epoxy Paint Systems. Read and understand the manufacturer's current PDS or ASTM F-718 sheet. Specific items that vary depending on the coating manufacturer include:

a. Mix ratio. Mixing the two components in the proper ratio is absolutely vital.

b. Induction period. Refer to PDS (or ASTM F-718 sheet) for induction times.

c. Both components in an epoxy paint kit must be stirred separately prior to mixing them together. In short, there are several qualified commercial epoxy coating systems that are authorized for touch-up painting. They vary depending on the manufacturer. Follow instructions in the PDS or ASTM F-718 sheet for the particular coating being used.

7.9 PAINT APPLICATION.

7.9.1 General Considerations.

a. Inspect cleaned areas of the ship to determine the suitability of the surfaces for applicable touch-up or repainting operations. Surfaces must be free of rust, deteriorated paint, dust, scale, oil, grease, salt deposits or other surface contaminants.

b. Do not paint over oily, damp or icy surfaces.

c. Never paint over loose, badly cracked or blistered paint. Old paint in good condition is an excellent base and should be cleaned, roughened and dried before repainting.

d. Under normal circumstances, the following environmental conditions apply:

(1) Surface temperature must be at least 5°F higher than the dew point.

(2) Paint should not be applied at temperatures of 35°F or lower; check the PDS or ASTM D-718 sheet for the low temperature application limit.

(3) Wind velocity should be below 15 miles per hour (exterior work).

(4) Relative humidity below 85 percent.

e. When successive coats of the same paint are used, different colors should be applied to visually facilitate complete coverage.

f. Apply paint as soon as possible after surface preparation has been completed. Bare metal surfaces will flash rust soon after exposure to the atmosphere.

g. When painting over a fully cured epoxy paint film, use a "tie coat" to ensure proper adhesion of the overcoat to the existing paint. A tie coat is a thin layer of paint (generally the same type of paint as the preceding coat) that is applied to the surface by brush or roller. The coat should be applied to a DFT of approximately 1 mil (2 mils WFT).

h. When painting over welds or in hard-to-get-at spaces that could not be cleaned to the proper surface cleanliness, brush on the first coat of paint to obtain the best adhesion. This comment applies to corners behind stiffeners or over weld seams. Hidden areas should be inspected with a pocket mirror to ensure total coverage before applying each succeeding coat and after the final coat.

i. Do not store paints and solvents inside submarines. Remove paint from the submarine when painting is completed or interrupted.

j. When replacing anodes, ensure that the area under the anode is adequately painted, but DO NOT PAINT THE ANODES themselves.

7.9.2 Brush Application. In larger areas, start work on overhead areas first, and then work downward. Begin painting at a corner or some other logical vertical division. Cover only that area which can be easily reached without moving ladders. Work downward, painting progressive sections to the deck level, then start at the top of the adjacent area and work down again. Paint trim, doors or similar areas after bulkheads and other major surfaces are completed.

a. Dip the brush into the paint up to ½ the bristle length. Withdraw the brush and tap it against the inside of the bucket to remove excess paint. Hold the brush at a 45o angle to the surface to be painted. Make several light strokes in the area to be painted. This will transfer much of the paint to the surface. Then spread the paint evenly and uniformly. Do not bear down on the brush.

b. When using paint dispensing cartridges, apply a small amount to an area and spread evenly with a brush. It is better to start with a small amount and apply additional paint, than to dispense a large amount which may have to be spread into areas that were not prepared for painting.

c. When one section of the surface is painted, adjacent areas should be painted so that the brush strokes are completed by sweeping the brush into the wet edge of the paint previously applied. This helps eliminate lap marks and provides a more even coating.

d. Finally, cross-brush lightly to smooth the painted surface and to eliminate brush or sag marks. Very fast drying finishes will not permit much brushing and cross-lapping; in such cases, the paint must be applied, spread rapidly and then allowed to dry undisturbed. Going back over a fast drying finish will cause piling up of the coating.

7.9.3 Roller Application. To apply paint with a roller, pour the premixed paint into the tray to about ½ tray depth. Immerse the roller and then roll it back and forth along the ramp to coat the roller cover completely. (A specially designed galvanized mesh screen positioned vertically in a 5-gallon bucket may be used instead of a paint tray.) The first load of paint should be worked out on a newspaper to remove trapped air from the roller cover. It is then ready to apply to a

surface. Always roll paint onto the surface, working from the dry area into the area just painted. Never roll completely in the same direction. One good technique is to roll the paint onto the surface in a "W" pattern while the roller is very wet. Distribute the paint using horizontal or vertical strokes. Pressure must be applied when rolling or the paint will not adhere and will soon peel off. Do not roll too fast. Avoid spinning the roller at the end of a stroke. Always feather out final strokes to pick up any excess paint on the surface. Feathering is done by rolling out the final stroke with minimal pressure. Paint from cartridge dispensing systems can be poured into trays for roller application.

NOTE: FMA PERSONNEL ARE TRAINED IN THE USE OF WFT GAUGES AND SHOULD BE CONSULTED FOR ASSISTANCE.

7.9.4 Wet Film Thickness Check. The performance of the coating depends on applying the proper thickness. The proper thickness, called DFT, is stated in the PDS or ASTM F-718 sheet. In order to obtain the proper DFT, WFT must be measured and controlled during application. The required WFT for a coating is stated in the PDS or ASTM F-718 sheet. A WFT gauge is used to measure the thickness of a coat of paint that is still wet to the touch. A typical wet film gauge (Figure 3) has several legs, with each of the inner legs (measuring legs) of varying known lengths and somewhat shorter than the two outer legs (support posts). When the gauge edge is pressed into the wet film (Figure 4), the two outer legs penetrate through the wet film to the substrate. Depending on the thickness of the wet film, some of the inner legs will dip into the wet film while others will not touch it. The length of longest inner leg that is wetted by the coating is the WFT (Figure 5). Proper use of the wet film gauge includes the following:

a. Measure WFT during coating application to determine if sufficient paint has been applied. The PDS or ASTM F-718 sheet will provide the required WFT.

b. Use the WFT gauge only on a flat surface. Both end legs must be firmly touching the steel surface.

   (1) On a vertical surface, such as a bulkhead, hold the gauge in a north-south (vertical) position with the longer legs at the top.

   (2) On a pipe, place the gauge along the length. Both legs must touch the surface.

c. Lift the gauge from the surface without sliding. Slipping and sliding will give an inaccurate reading because extra paint will be picked up on the legs.

d. Use only a clean, dry gauge. Clean the gauge after each reading. Dirt or old paint on the bottoms of the legs adds to their length giving lower readings.

Figure 3 - Wet Film Thickness Gauge

Figure 4 - WFT Gauge Positioned in Wet Paint Film

Figure 5 - WFT Gauge Showing a Reading of 4-5 Mils

NOTE: **1. Notice black paint on outer support posts and on measuring legs 1, 2, 3 and 4. No paint on measuring legs 5 and 6.**

2. Wet film gauges may be purchased from www.elcometer.com (From home page: "Film Thickness Gauge"; then "Wet Film Thickness".) Elcometer 154 Plastic Wet Film Combs may be an inexpensive option. Also, vendors from various coating companies often offer wet film gauges.

7.9.5 Overcoating. Most paint systems consist of more than one coat of paint. Proper steps for overcoating include the following:

a. Consult the PDS or ASTM F-718 sheet to determine the necessary "wait time" before overcoating.

b. Remember that the time before overcoating is dependent on the temperature. Generally, as the temperature increases, the time before overcoating decreases.

c. Remember - PDS (or ASTM F-718 sheet) guidance for time before overcoating is only an estimate.

d. Always check the applied coating before overcoating. If the applied coating is wet, allow more time.

e. Check the WFT using a WFT gauge (Paragraph 7.9.4 of this chapter).

7.10 QUICK REFERENCE SECTION.

7.10.1 Surface Preparation and Paint Application in Specific Areas. A summary of areas expected to be maintained by Ship's Force is shown in Table 1. Along with each area is a reference for surface preparation and the required coating system. For each area, a summary procedure is provided.

AREA	SURFACE PREP	COATING
Bilge	Paragraph 7.10.2.1	1 ct - F-150, Type IV (MIL-DTL-24441/29A) 1 ct - F-151, Type IV (MIL-DTL-24441/30A)
Sail (interior)	Paragraph 7.10.3.1	1 ct - F-150, Type IV (MIL-DTL-24441/29A) 1 ct - F-151, Type IV (MIL-DTL-24441/30A)
Non-skid (not tiled)	Paragraph 7.10.4.1.1	1 ct - primer (proprietary or F-150, Type IV) 1 ct - MIL-PRF-24667B non-skid
Non-skid (tiled)	Paragraph 7.10.4.2.1	2 cts - F-184 (MIL-DTL-24631/1C) 1 ct - F-187 (MIL-DTL-24631/7)
SHT-Topside, sail and rudder	Paragraphs 7.10.4.3.1 7.10.4.3.2	1 ct - F-187 (MIL-DTL-24631/7)
High temperature piping	Paragraph 7.10.5.1	TT-P-28G (Low VOC heat resisting aluminum)
Underway painting	Paragraph 7.10.6.3	VACTAN or UNITED 303 TRIUMPH
Miscellaneous areas of general corrosion (including high solids coatings)	Paragraph 7.10.7.1	1 ct - F-150, Type IV (MIL-DTL-24441/29A) 1 ct - F-151, Type IV (MIL-DTL-24441/30A)

Painting behind equipment (interior)	Section 7.5	2 cts - F-84 (TT-P-645B)
Exterior of motors, generators and electronic equipment	Section 7.5	1 ct - F-84 (TT-P-645B) 2 cts - F-111 (MIL-DTL-15090D)

Table 1 - Summary of Areas for Touch-Up Painting by Ship's Force

7.10.2 Bilges.

7.10.2.1 Surface Preparation.

a. Required Tools:

(1) Needle gun.

(2) Inspection mirror (for seeing hard-to-reach areas such as the backsides of beams).

(3) Brush and dust pan.

(4) Shop-Vac type vacuum cleaner.

b. Process:

(1) Read and understand Section 7.3 of this chapter, “General Safety Precautions”.

(2) Read and understand Section 7.5 of this chapter, “General Surface Preparation”.

(3) Solvent clean to remove oil, grease, dirt, chemicals and water-soluble contaminants. If solvents are prohibited, use detergent and fresh water. When implementing these procedures, work sections no larger than 6 feet by 6 feet (36 square feet) should be cleaned at a time. Longitudinal and transverse structural members can be used as boundaries to define the work section. Each section should be fully cleaned and primed before starting work on the next section.

(4) Use a needle gun to remove loose paint and rust. A needle gun is most effectively used by holding it perpendicular to the surface, making 2-3 passes about 6-8 inches in length over the same path, then moving over and repeating the process until the entire area is completed. The goal is removal of all rust, loose mill scale and paint to bare metal.

(5) Feather the edges (Paragraph 7.9.3 of this chapter).

(6) Brush and vacuum loose pieces and dust.

(7) Check the surface for oil that may have been deposited during surface preparation. If necessary, solvent clean to remove oil. The presence of excess salts on the surface will cause premature coating failure. Therefore, surface conductivity measurements should be made at this point. Contact the FMA or other knowledgable personnel if help is needed. If excessive surface conductivity is measured, wash the area with fresh water and repeat Step (7).

(8) Apply paint as soon as possible (ideally, the same day) after surface preparation has been completed. Bare metal surfaces will flash rust soon after exposure to the atmosphere. If flash rusting occurs prior to coating application, repeat Steps (3)-(8).

7.10.2.2 Paint Application. Prior to any interior painting, Positive Pressure Unit must be activated. This will prevent solvent from damaging Motor Generators.

a. Required Tools:

(1) Rollers.

(2) Brushes.

(3) Rags.

(4) Manufacturer's PDS or ASTM F-718 sheet for the following paints:

(a) Formula 150, Type IV (MIL-DTL-24441, Formula 150, Type IV, green primer).

(b) Formula 151, Type IV (MIL-DTL-24441, Formula 151, Type IV, haze gray).

(5) Manufacturer's MSDS for the following paints:

(a) Formula 150, Type IV, Component A (MIL-DTL-24441, Formula 150, Type IV, green primer, component A).

(b) Formula 150, Type IV, Component B (MIL-DTL-24441, Formula 150, Type IV, green primer, component B).

(c) Formula 151, Type IV, Component A (MIL-DTL-24441, Formula 151, Type IV, haze gray, component A).

(d) Formula 151, Type IV, Component B (MIL-DTL-24441, Formula 151, Type IV, haze gray, component B).

b. Process:

(1) Read and understand Section 7.6 of this chapter, "General Mixing and Paint application".

(2) Read and understand the PDS (or ASTM F-718 sheet) and MSDS for the two paint systems to be used.

(a) F-150, Type IV, green primer and F-151.

(b) Type IV, haze gray top coat.

(3) Ensure proper ventilation is in place. Maintain ventilation through the curing of the applied coatings.

(4) Check environmental conditions. Ask for help from the FMA personnel.

(5) Surface temperature must be at least 5°F higher than the dew point.

(6) Paint must not be applied at temperatures of 35°F or lower.

(7) Relative humidity must be below 85 percent.

(8) Mix F-150, Type IV, green primer according to manufacturer's instructions. Mix ratio is 1:1 by volume. (Paragraph 7.8.3 of this chapter, Mixing and Application Procedures for the Navy Epoxy Paint System (MIL-DTL-24441)).

7.10.2.3 Summary. Table 2 summarizes mixing, application and re-coat parameters.

Paint	Induction Period (hours)	Mix Ratio (volume)	Pot Life (hours)	Time Before Overcoating (hours)	Time to Handle (hours)	Wet Film Thickness (mils)	Dry Film Thickness (mils)
F-150, green primer	N/A	1 : 1	6 @ 70°F	Minimim of 3 @ 40°F 3 @ 70°F @ 50% RH	Minimum of 24 @ 40°F 5 @ 70°F @ 50% RH	6-7	4-5

F-151, gray topcoat	N/A	1 : 1	6 @ 70ºF	Minimim of 3 @ 40º F 3 @ 70º F @ 50% RH	Minimum of 24 @ 40ºF 5 @ 70ºF @ 50% RH	6-7	4-5

Table 2 - Mixing, Application and Re-Coat Parameters for Bilges

a. Apply by brush. Be certain to force coating into corners, behind beams and areas that are difficult to reach. Pay particular attention to newly installed components such as pipe hangers and clamps. (Paragraph 7.9.2 of this chapter, "Brush Application")

b. Check WFT to assure proper thickness (Paragraph 7.9.4 of this chapter).

c. Wait until the first coat is dry, a minimum of 3 hours, before overcoating. If, after 3 hours, coating is not dry, check hourly by pressing thumbnail into surface. Coating is dry when thumbnail does not penetrate.

d. When first coat is dry, apply a "stripe" coat on welds, corners and edges. The "stripe" coat should be a different color than either the first coat (green) or the topcoat (gray) to facilitate coverage. F-153, Type IV, a black coating, is a good choice. If a different color is not available, use F-151, Type IV, gray as the "stripe" coat.

e. When the "stripe" coat is adequately dry, mix F-151, Type IV, gray topcoat according to manufacturer's instructions. Mix ratio is 1:1 by volume. (Paragraph 7.8.3 of this chapter, Mixing and Application Procedures for the Navy Epoxy Paint System (MIL-DTL-24441.)

f. Apply by brush or roller if a roller can reach all areas that need paint. (Paragraph 7.9.2 of this chapter, "Brush Application"; Paragraph 7.9.3 of this chapter "Roller Application".) If F-151 was used as the "stripe" coat, pay particular attention to completely cover the "stripe" coat since there is no color difference to provide visual contrast.

g. Check WFT to assure proper thickness (Paragraph 7.9.4 of this chapter).

h. Freshly painted areas should be roped off to prevent contamination during the curing process. Allow coating to cure per the curing schedule given in the PDS (or ASTM F-718 sheet).

i. Ventilation should be in place during the curing process as it will facilitate curing and prevent build-up of hazardous vapors.

7.10.3 Sail (Interior).

7.10.3.1 Surface Preparation.

a. Required Tools:

(1) Needle gun.

(2) Long-handled paint scraper.

(3) Coarse sandpaper.

(4) Inspection mirror (for seeing hard-to-reach areas such as the backsides of beams).

(5) Brush and dustpan.

(6) Shop-Vac type vacuum cleaner.

b. Process:

(1) Read and understand Section 7.5 of this chapter, "General Surface Preparation".

(2) Solvent clean to remove oil, grease, dirt, chemicals and water-soluble contaminants. If solvents are prohibited, use detergent and fresh water.

(3) Use the long-handled scraper to remove any areas of exfoliated metal. Because many areas in the sail are difficult to preserve, advanced corrosion, including exfoliation may occur. In the periscope bay, the bulkhead just forward of the bearing frame is a typical area. Exfoliation is the "delamination" of metal into layers. All exfoliated layers must be removed by scraping them off.

(4) Starting at the top of a bay and working to the bottom, use a needle gun to remove loose rust and paint. A needle gun is most effectively used by holding it 90o to the surface, making 2-3 passes about 6-8 inches in length over the same path, then moving over and repeating the process until the entire area is completed. The goal is removal of all rust, loose mill scale and paint to bare metal. In areas not accessible by needle gun, use scrapers followed by coarse sandpaper. Feather the edges.

(5) When needle gunning and sanding are complete, brush and vacuum loose pieces and dust from the area. Be sure to get "shelves" and "throughs" and other "collection points".

(6) Check the surface for oil that may have been deposited during surface preparation. If necessary, solvent clean to remove oil.

(7) The presence of excess salts on the surface will cause premature coating failure. Therefore, surface conductivity measurements should be made at this point (Paragraph 7.5.8 of this chapter) if the area is exposed to seawater. Contact the FMA or other knowledgeable personnel if help is needed. If excessive surface conductivity is measured, wash the area with fresh water and repeat the step.

(8) Apply paint as soon as possible (ideally, the same day) after surface preparation has been completed. Bare metal surfaces will flash rust soon after exposure to the atmosphere. If flash rusting occurs prior to coating application, repeat Steps (4)-(8).

7.10.3.2 Paint Application.

a. Required Tools:

(1) Rollers.

(2) Brushes.

(3) Rags.

(4) WFT gauge.

(5) Manufacturer's PDS or ASTM F-718 sheet for the following paints:

(a) Formula 150, Type IV (MIL-DTL-24441, Formula 150, Type IV, green primer).

(b) Formula 151, Type IV (MIL-DTL-24441, Formula 151, Type IV, haze gray).

(6) Manufacturer's MSDS for the following paints:

(a) Formula 150, Type IV, Component A (MIL-DTL-24441, Formula 150, Type IV, green primer, component A).

(b) Formula 150, Type IV, Component B (MIL-DTL-24441, Formula 150, Type IV, green primer, component B).

(c) Formula 151, Type IV, Component A (MIL-DTL-24441, Formula 151, Type IV, haze gray, component A).

(d) Formula 151, Type IV, Component B (MIL-DTL-24441, Formula 151, Type IV, haze gray, component B).

b. Process:

(1) Read and understand Section 7.6 of this chapter, "General Mixing and Paint Application".

(2) Read and understand the PDS (or ASTM F-718 sheet) and MSDS for the two paint systems to be used.

(a) F-150, Type IV, green primer.

(b) F-151, Type IV, haze gray top coat.

(3) Check environmental conditions. Ask for help from the FMA personnel.

(a) Surface temperature must be at least 5°F higher than the dew point.

(b) Paint must not be applied at temperatures of 35°F or lower.

(c) Relative humidity must be below 85 percent.

(4) Mix F-150, Type IV, green primer according to manufacturer's instructions. Mix ratio is 1:1 by volume. (Paragraph 7.8.4 of this chapter, Mixing and Application Procedures for the Navy Epoxy Paint System (MIL-DTL-24441)).

c. Summary.

(1) Table 3 summarizes mixing, application and overcoat parameters.

Paint	Induction Period (hours)	Mix Ratio (volume)	Pot Life (hours)	Time Before Overcoating (hours)	Time to Handle (hours)	Wet Film Thickness (mils)	Dry Film Thickness (mils)
F-150, green primer	N/A	1 : 1	6 @ 70°F	Minimim of 3 @ 40°F 3 @ 70°F @ 50% RH	Minimum of 24 @ 40°F 5 @ 70°F @ 50% RH	6-7	4-5

F-151, gray topcoat	N/A	1 : 1	6 @ 70°F	Minimim of 3 @ 40°F 3 @ 70°F @ 50% RH	Minimum of 24 @ 40°F 5 @ 70°F @ 50% RH	6-7	4-5

Table 3 - Mixing, Application and Overcoat Parameters for Sail (Interior)

(2) Apply by brush. Be certain to force coating into corners, behind beams and areas that are difficult to reach. (Paragraph 7.9.2 of this chapter, "Brush Application".)

(3) Check WFT to assure proper thickness (Paragraph 7.9.4 of this chapter). Wait until the first coat is dry, a minimum of 3 hours, before overcoating. If, after 3 hours, coating is not dry, check hourly until coating is dry. REMEMBER - PDS (or ASTM F-718 sheet) and Table 3 guidance for overcoating interval is an estimate. You must be able to walk on the first coat without damaging it.

(4) When first coat is dry, apply a "stripe" coat on welds, corners and edges. The "stripe" coat should be a different color than either the first coat (green) or the topcoat (gray) to facilitate coverage. F-153, Type IV, a black coating, is a good choice. If a different color is not available, use F-151, Type IV, gray as the "stripe" coat.

(5) When the "stripe" coat is adequately dry, mix F-151, Type IV, gray topcoat according to manufacturer's instructions. Mix ratio is 1:1 by volume. (Paragraph 7.8.3 of this chapter, Mixing and Application Procedures for the Navy Epoxy Paint System (MIL-DTL-24441)).

(6) Apply by brush or roller (if a roller can reach all areas that need paint). (Paragraph 7.9.2 of this chapter, "Brush Application"; Section 7.9.3 of this chapter "Roller Application".) If F-151 was used as the "stripe" coat, pay particular attention to completely cover the "stripe" coat since there is no color difference to provide visual contrast.

(7) Check WFT to assure proper thickness (Paragraph 7.9.4 of this chapter). Freshly painted areas should be roped off to prevent contamination during the curing process.

(8) Allow coating to cure per the curing schedule given in the PDS (or ASTM F-718 sheet). Ventilation should be in place during the curing process as it will facilitate curing and prevent build-up of hazardous vapors.

7.10.4 Non-Skid Areas.

7.10.4.1 Areas That Are Not Tiled With Special Hull Treatment. Non-skid paints are not to be applied to hatch covers, submarine rescue seating surfaces, safety tracks, life line sockets, deck fittings and gear, faying surfaces of hatches, contact or bearing surfaces, and approximately 1 inch around the periphery of hatches, cleats and access covers.

7.10.4.1.1 Surface Preparation.

a. Required Tools:

(1) Dull putty knife.

(2) Needle gun.

(3) Brush and dust pan.

(4) Shop-Vac type vacuum cleaner.

b. Process:

(1) Read and understand Section 7.5 of this chapter, “General Surface Preparation”.

(2) When a coating failure is detected, the area must be probed with a dull putty knife or similar instrument, to determine the extent of failure. Once the failure area is identified, the area to be repaired must extend slightly (at least 3 inches) outside the perimeter of the failing area to ensure the problem is corrected.

(3) Clean the surface by removing foreign matter such as oil, grease, dirt and other contaminants. Solvent cleaning is recommended. If solvent cleaning is not permitted, use a commercial cleaner, such as Simple Green or Spray 9. Use only clean, white, lint-free rags and change rags often.

(4) Use a needle gun to remove all loose paint and rust from the failed area. A needle gun is most effectively used by holding it 90o to the surface, making 2-3 passes about 6-8 inches in length over the same path, then moving over and repeating the process until the entire area is completed. The goal is removal of all rust, loose mill scale and paint to bare metal.

(5) Feather the edges.

(6) When needle gunning and sanding are complete, brush and vacuum loose pieces and dust from the area. Again, clean the surface. Solvent cleaning is recommended. If solvent cleaning is not permitted, use a commercial cleaner, such as Simple Green or Spray 9. Use only clean, white, lint-free rags and change rags often.

(7) The presence of excess salts on the surface can cause premature coating failure. Therefore, surface conductivity measurements should be made at this point. Contact the FMA personnel if help is needed.

(8) Apply paint as soon as possible (ideally, the same day) after surface preparation has been completed.

7.10.4.1.2 Paint Application.

a. Required Tools:

(1) Rollers.

(2) Brushes.

(3) Rags.

(4) WFT gauge.

(5) Manufacturer’s PDS or ASTM F-718 sheet for the MIL-C-24667 non-skid paint system.

(6) Manufacturer's MSDS for the MIL-C-24667 non-skid paint system.

b. Process:

NOTE: THE USE OF F-150 (MIL-DTL-24441) PRIMER IS PROHIBITED UNLESS A NON-SKID SYSTEM HAS BEEN QUALIFIED WITH A SPECIFIC MANUFACTURER'S F-150 AS A PRIMER.

(1) Read and understand the PDS (or ASTM F-718 sheet) and MSDS for the non-skid paint systems. Most non-skid systems require a primer system. If a primer is required, check with the manufacturer to determine if MIL-DTL-24441, Formula 150, Type IV, green primer is authorized. The qualified products list of the specification being used must be consulted to determine if a particular Formula 150 can be used as a primer. FMA personnel can provide this information.

(2) Check environmental conditions. Ask for help from the FMA personnel.

(a) Surface temperature must be at least 5°F higher than the dew point.

(b) Paint must not be applied at temperatures of 50°F or lower.

(c) Relative humidity must be below 85 percent.

(3) Mix the primer according to manufacturer's instructions. Be sure to check for an induction period. If an induction period is required, mix for one minute after induction. If F-150 is authorized and is being used as a primer, see Paragraph 7.8.3 of this chapter (Mixing and Application Procedures for the Navy Epoxy Paint System (MIL-DTL-24441)).

(4) Apply primer by brush or roller. (Paragraphs 7.9.2, "Brush Application" and 7.9.3 "Roller Application" of this chapter.)

(5) Check WFT to assure proper thickness (Paragraph 7.9.4 of this chapter).

(6) Wait until the primer coat is dry before mixing the MIL-C-24667 non-skid coating system. Thoroughly mix the base material of the non-skid using the type of mixer specified in the manufacturer's ASTM F-718 sheets. Make sure that all materials which may have settled during storage (pigments, fillers, aggregate) are lifted from the bottom of the container and are uniformly mixed. Slowly pour the contents of the can of converter (also called hardener, accelerator or curing agent) into the base material. Scrape the bottom of the base material can. Mix converter and base material for 3 to 5 minutes or until uniform color and appearance. Scrape the bottom of the can and mix again for 3 to 5 minutes. If an induction period is required, stir again for one minute after the induction period. Thinning non-skid is strictly prohibited.

(7) Apply by roller or trowel. If a a roller is used, roll across (not along) welds. Cross-rolling must extend 3 to 6 inches on each side of the weld. If troweling, consult the manufacturer's PDS (or ASTM F-718 sheet) for recommended trowel size.

(8) Check WFT to assure proper thickness (Paragraph 7.9.4 of this chapter).

(9) Freshly painted areas should be roped off to prevent contamination during the curing process.

(10) Allow coating to cure per the curing schedule given in the PDS (or ASTM F-718 sheet).

(11) Ventilation should be in place during the curing process as it will facilitate curing and prevent build-up of hazardous vapors.

7.10.4.2 Special Hull Treatment Tiled Areas (Non-Skid). Non-skid paints are not to be applied to hatch covers, submarine rescue seating surfaces, safety tracks, life line sockets, deck fittings and gear, faying surfaces of hatches, contact or bearing surfaces and approximately one inch around the periphery of hatches, cleats and access covers.

7.10.4.2.1 Surface Preparation.

a. Required Tools:

(1) 80-100 grit aluminum oxide paper.

(2) Shop-Vac type vacuum cleaner.

(3) Manufacturer's MSDS for PF-145 HP solvent.

b. Process:

(1) Read and understand Section 7.3 of this chapter, "General Safety Precautions".

(2) Read and understand Section 7.5 of this chapter, "General Surface Preparation".

(3) Clean the surface of any grease, oil, salt or other residue with a detergent solution and rinse with fresh water.

CAUTION: THE COVERPLY OF THE TILES CONTAINS APPROXIMATELY 10% BY WEIGHT LEAD OXIDE, AN ADDITIVE USED TO CONTROL THE RATE OF WATER ABSORPTION BY THE TILES. WHENEVER SANDING OR GRINDING TILE SURFACES, BE CERTAIN TO WEAR PROPER PPE.

(4) Hand sand the surface using 80-100 grit aluminum oxide paper to roughen the surface of the tiles for better adhesion. Be sure to remove all old paint in the touch-up area.

(5) Vacuum up dust.

(6) Clean surface of remaining dust by wiping with PF-145 HP solvent poured directly onto a clean rag. Do not dip the rag into the solvent. Change rags frequently.

(7) Apply paint as soon as possible (ideally, the same day) after surface preparation has been completed.

7.10.4.2.2 Paint Application.

a. Required Tools:

(1) Short nap rollers.

(2) Brushes.

(3) Rags.

(4) Manufacturer's PDS or ASTM F-718 sheet for MIL-A-22262 abrasive grit material.

(5) Manufacturer's PDS or ASTM F-718 sheet for the following paints:

(a) Formula 184 (black flexible epoxy).

(b) Formula 187 (black polyurethane camouflage).

(6) Manufacturer's MSDS for the following paints:

(a) Formula 184, Component A (black camouflage epoxy).

(b) Formula 184, Component B (black camouflage epoxy).

(c) Formula 187, Component A (black polyurethane camouflage).

(d) Formula 187, Component B (black polyurethane camouflage).

b. Process:

(1) Read and understand Section 7.8 of this chapter, "General Mixing and Paint application".

(2) Read and understand the PDS (or ASTM F-718 sheet) and MSDS for the Formula 184 and Formula 187 paint systems.

(3) Check environmental conditions. Ask for help from the FMA personnel.

(a) Surface temperature must be at least 5°F higher than the dew point.

(b) Paint must not be applied at temperatures of 50°F or lower.

(c) Relative humidity must be below 75 percent.

CAUTION: MIXING SHOULD BE PERFORMED AT A TEMPERATURE OF 50^0 F OR ABOVE.

(4) Thoroughly mix the A and B components of Formula 184 (black epoxy) in their individual containers by hand stirring. Mix the A and B components together in a 1:1 ratio by volume.

c. Summary.

(1) Table 4 summarizes mixing, application and overcoat parameters.

Paint	Induction Period (minutes)	Mix Ratio (volume)	Pot Life (hours)	Time Before Overcoating (hours)	Time to Handle (hours)	Wet Film Thickness (mils)	Dry Film Thickness (mils)
F-184, black epoxy camouflage	30 @ 70-90°F 45 @ 55-70°F	1 : 1 (Mix at 50 °F or above)	2 (maximum)	6 hours (minimum) - 6 months	24 (maximum)	8 - 9	4 -5
F-187, black		4 : 1					

polyurethane camouflage	None	(Mix at 50o or above)	1 (minimum)	18 hours - 7 days	18 (maximum)	4-5	3

Table 4 - Mixing, Application and Overcoat Parameters for Non-Skid Areas

(2) Apply the F-184 paint in a smooth uniform layer using a paint brush or roller. (Paragraphs 7.9.2, "Brush Application" and 7.9.3 "Roller Application" of this chapter.) Due to difficulty in removing old paint from depressed tile seam areas, "stripe" these areas with a wide brush prior to roller application.

(3) Check WFT to assure proper thickness (Paragraph 7.9.4 of this chapter). WFT should be 8-9 mils.

(4) While the epoxy paint is still wet, sprinkle the abrasive grit material onto the freshly painted film to achieve a uniform roughness over the entire area.

(5) When the first coat is dry, apply a second coat of Formula 184 black epoxy paint.

(6) When the second coat of Formula 184 black epoxy is dried, a sealer coat of Formula 187 polyurethane paint must be applied.

(7) Mix the A and B components of the Formula 187 black polyurethane paint together in a 4:1 ratio by volume. Mix entire gallon of A with entire quart of B. The mixture should be thoroughly blended for two minutes after which it can be used immediately. (There is no induction time for the polyurethane paint.)

(8) Due to difficulty in removing old paint from depressed tile seam areas, "stripe" these areas with a wide brush prior to roller application.

(9) Apply the F-187 paint in a smooth uniform layer using a paint brush or roller. (Paragraphs 7.9.2, "Brush Application" and 7.9.3 "Roller Application" of this chapter.)

(10) Allow 24 hours for paint to cure before permitting foot traffic. Freshly painted areas should be roped off to prevent contamination of the coating.

(11) Paint should cure for a minimum of 5 days prior to submerging.

7.10.4.3 Special Hull Treatement Tiles - Topside, Sail and Rudder. Due to poor performance of epoxy camouflage paint (Formula 184, old DTRC 2844-1118 formula) when exposed to sunlight, Formula 187, a non-fading polyurethane camouflage paint is used in areas exposed to sunlight, i.e., topside, sail and rudder. This paint is expected to retain its black color for at least two years. It is therefore NOT recommended to recoat the urethane camouflage for at least two years after application. Within the first two years, only cleaning is recommended. References (g), (h) and (i) clearly identify the potential lead hazard associated with Special Hull Treatment (SHT) work and outlines procedures necessary to mitigate this hazard when preparing exterior submarine surfaces for repainting.

7.10.4.3.1 Cleaning of Formula 187 Urethane Camouflage Coating.

a. Required Tools: "Greenie pads".

b. Process:

(1) Apply fresh water from firehose or other source to dirty SHT surfaces.

(2) Lightly scour the surface with a damp "Greenie Pad" or other similar material to loosen dirt and debris.

(3) Hose down surface with fresh water to restore original black color.

NOTE: AFTER TWO YEARS OF SERVICE OR SIGNIFICANT MECHANICAL DAMAGE, FORMULA 187 MAY BE TOUCHED UP.

7.10.4.3.2 Surface Preparation.

a. Required Tools:

(1) 80-100 grit aluminum oxide paper.

(2) Shop-Vac type vacuum cleaner.

(3) Manufacturer's MSDS for PF-145 HP solvent.

b. Process:

(1) Read and understand Section 7.3 of this chapter, "General Safety Precautions".

(2) Read and understand Section 7.5 of this chapter, "General Surface Preparation".

(3) Clean the surface of any grease, oil, salt or other residue with a detergent solution and rinse with fresh water.

(4) Per reference (c), Ship's Force should only remove paint when required to accomplish preservation of corroded surfaces or when bare metal is necessary for an inspection or welding. SHT tiles on 688 Class submarines contain 10 percent lead by weight. The generation of airborne SHT dust may have an adverse effect on worker health and contaminate the surrounding environment. In the case where removal of SHT coverply paint is authorized, special work controls must be followed to ensure appropriate worker protection and prevent environmental contamination.

(5) Hand sand the surface using 80-100 grit aluminum oxide paper to roughen the surface for adhesion. Polyurethane will not adhere to itself unless the previous coat has been sanded.

(6) Vacuum up dust.

(7) Clean surface of remaining dust by wiping with PF-145 HP solvent poured directly onto a clean rag. Do not dip the rag into the solvent. Change rags frequently.

(8) Apply paint as soon as possible (ideally, the same day) after surface preparation has been completed.

7.10.4.3.3 Paint Application.

a. Required Tools:

(1) Short nap rollers.

(2) Brushes.

(3) Rags.

(4) Manufacturer's PDS or ASTM F-718 sheet for Formula 187, (black polyurethane camouflage).

(5) Manufacturer's MSDS for the following paints:

(a) Formula 187, Component A (black polyurethane camouflage).

(b) Formula 187, Component B (black polyurethane camouflage).

b. Process:

(1) Read and understand Section 7.6 of this chapter, "General Mixing and Paint Application".

(2) Read and understand the PDS (or ASTM F-718 sheet) and MSDS for the F-187 paint system.

(3) Check environmental conditions. Ask for help from the FMA personnel.

(a) Surface temperature must be at least 5°F higher than the dew point.

(b) Paint must not be applied at temperatures of 50°F or lower.

(c) Relative humidity must be below 75 percent.

c. Summary.

(1) Table 5 summarizes mixing, application and overcoat parameters.

Paint	Induction Period (hours)	Mix Ratio (volume)	Pot Life (hours)	Time Before Overcoating (hours)	Time to Handle (hours)	Wet Film Thickness (mils)	Dry Film Thickness (mils)
F-187, black polyurethane camouflage	None	4 : 1 (Mix at 50°F or above)	At least 1	18 hours - 7 days	At least 2	4-5	3

Table 5. Mixing, Application and Overcoat Parameters for Special Hull Treatment Tiles.

CAUTION: MIXING SHOULD BE PERFORMED AT A TEMPERATURE OF 50°F OR ABOVE.

(2) Thoroughly mix the A and B components in their individual containers by hand stirring. Mix the A and B components together in a 4:1 ratio by volume. Mix entire gallon of A with entire quart of B. The mixture should be thoroughly blended for two minutes after which it can be used immediately. (There is no induction time for the polyurethane paint.)

(3) Due to difficulty in removing old paint from depressed tile seam areas, "stripe" these areas with a wide brush prior to roller application.

(4) Apply the F-187 paint in a smooth uniform layer using a paint brush or roller. (Paragraphs 7.9.2, "Brush Application" and 7.9.3 "Roller Application" of this

chapter.)

(5) Check WFT to assure proper thickness (Paragraph 7.9.4 of this chapter). WFT should be 4-5 mils.

(6) Allow 24 hours for paint to cure before permitting foot traffic. Freshly painted areas should be roped off to prevent contamination of the coating. Paint should cure for a minimum of 5 days prior to submerging.

7.10.5 High Temperature Piping (and Components Near the 12k Evaporator).

a. To minimize corrosion of carbon steel piping and other components in the vicinity of the 12k evaporator it is important to reduce the accumulation of salt on the surfaces and ensure the heat-resistant paint is applied at the recommended film thickness.

b. When paint repairs are conducted on high temperature piping or other components in the vicinity of the 12k evaporator, the evaporator MUST NOT BE OPERATING (cool).

7.10.5.1 Surface Preparation.

a. Required Tools:

(1) 180 grit sand paper.

(2) Shop-Vac type vacuum cleaner.

(3) Manufacturer's MSDS for mineral spirits, TT-T-291.

b. Process:

(1) Read and understand Section 7.5 of this chapter, "General Surface Preparation".

(2) Wash the area to be painted with deionized water. This step removes excess salt.

(3) Clean with an approved solvent (mineral spirits, TT-T-291, NSN 8010-00-558-7026) to remove oil and grease.

(4) Remove any loosely adherent paint and rust with a wire brush.

(5) Lightly abrade with 180-grit sandpaper. Take care to minimize the amount of steel removed. Ensure any residual dust from sanding is removed.

(6) Wash the area again with deionized water.

(7) Dry the area and check surface for surface salt concentration. FMA personnel are trained in the measurement of surface salt contamination. If required, consult FMA personnel for help. If the salt concentration limit is exceeded, wash the area again with fresh water. Pay particular attention to crevices, pits and welds. Dry affected area and measure soluble salt level again to verify that salt concentration is below the maximum level. Repeat this step until soluble salt levels are acceptable.

(8) Apply paint immediately after the surface has been prepared to prevent re-contamination.

7.10.5.2 Paint Application.

NOTE: PRIOR TO ANY INTERIOR PAINTING, POSITIVE PRESSURE UNIT MUST BE ACTIVATED. THIS WILL PREVENT SOLVENT FROM DAMAGING MOTOR GENERATORS.

a. Required Tools:

(1) Rollers.

(2) Brushes.

(3) Rags.

(4) WFT gauge.

(5) Manufacturer's PDS or ASTM F-718 sheet for TT-P-28G (Low VOC heat resisting aluminum).

(6) Manufacturer's MSDS for TT-P-28G (Low VOC heat resisting aluminum).

CAUTION: HEAT RESISTANT PAINT IS EXTREMELY FLAMMABLE AND SHOULD NOT BE APPLIED AT TEMPERATURES ABOVE 85°F.

b. Process:

(1) Read and understand Section 7.3 of this chapter, "General Safety Precautions".

(2) Read and understand Section 7.6 of this chapter, "General Mixing and Paint application".

(3) Read and understand the PDS (or ASTM F-718 sheet) and MSDS for the TT-P-28G paint systems.

(4) Check environmental conditions. Ask for help from the FMA personnel.

(a) Surface temperature must be at least 5°F higher than the dew point.

(b) Paint must not be applied at temperatures of 50°F or lower.

(c) Relative humidity must be below 85 percent.

c. Summary.

(1) Table 6 summarizes mixing, application and overcoat parameters.

Paint	Induction Period (hours)	Mix Ratio (volume)	Pot Life (hours)	Time Before Overcoating (hours)	Time to Handle (hours)	Wet Film Thickness (mils)	Dry Film Thickness (mils)
TT-P-28G	N/A	N/A	N/A	1 @ 400°F	7 minutes @ 400°F	2	0.7-1.0

Table 6. Mixing, Application and Overcoat Parameters for High Temperature Piping.

(2) Apply two thin coats of TT-P-28G at a WFT of 2.0 mils per coat. During application (brushing), use a WFT gauge to ensure the film thickness is not exceeded. If the paint is too thick, it will delaminate (pop off) when the system comes up to temperature.

(3) Freshly painted areas should be roped off to prevent contamination during the curing process. This paint does not fully cure until it is heated. Plan painting when all other work in the area is complete to minimize damage to the coating.

7.10.6 Underway Painting - Rust Converters.

7.10.6.1 Maintenance During Operational Cycle. Preservation maintenance performed during the operational cycle should only be performed to arrest and prevent corrosion problems. The two rust converters listed here are approved for use on non-nuclear surfaces with NAVSEA-approved epoxy (MIL-DTL-24441 and MIL-DTL-23236) and enamel (Formula 111) paints.

Rust Converter Paint	Vendor
VACTAN	RAYCO Services, Inc. 2512 Broad Bay Road Virginia Beach, VA 23451 (757) 481-0373
UNITED 303 TRIUMPH	United Laboratories 320 37th Avenue St. Charles, IL 60174 (800) 323-2594

7.10.6.2 Restricted Use. These rust converters are approved under the Submarine Atmosphere Control Program in the LIMITED usage category and may be used with the following restrictions:

a. Rust converters authorized for use on reactor compartment components which are governed by the Reactor Propulsion Plant Schedules are provided by separate correspondence.

b. Rust converters are approved for use on all classes of submarines.

c. Rust converters may be applied to fasteners that are permitted to be painted.

d. Rust converters are water-based products and should not be used on wetted surfaces or on surfaces of continuous immersion.

e. Rust converters are used for touch-up not to exceed 10 square feet of surface area per day.

f. Rust converters are to be applied by brush.

g. VACTAN should not be applied to surfaces that experience a service temperature greater than 149°F.

h. TRIUMPH can be used for temperatures up to 200°F.

i. The minimum temperature during application of TRIUMPH is 38°F; of VACTAN is 50°F.

j. The maximum quantity to be stored on board while underway is 2 gallons.

7.10.6.3 Surface Preparation.

a. Required Tools:

(1) Needle gun.

(2) Inspection mirror (for seeing hard-to-reach areas such as the backsides of beams).

b. Process:

(1) Read and understand Section 7.3 of this chapter, “General Safety Precautions”.

(2) Read and understand Section 7.5 of this chapter, “General Surface Preparation”.

(3) Remove loose rust, scale and other contaminants using power and hand tool cleaning methods.

(4) Detergent wash the area to remove all oil and grease followed by a fresh water wash and rinse to remove any residual detergent and soluble salts.

(5) Allow surface to dry prior to applying rust converter.

7.10.6.4 Paint Application.

a. Required Tools:

(1) Brushes.

(2) Rags.

(3) Manufacturer’s PDS or ASTM F-718 sheet for VACTAN or TRIUMPH.

(4) Manufacturer’s MSDS for VACTAN or TRIUMPH.

b. Process:

(1) Water-based rust converters must be applied on a dry surface by brush only while underway in a closed ship environment.

(2) Two coats of the rust converter should be applied according to manufacturer’s directions.

(3) Freshly painted areas should be roped off to prevent contamination during the curing process.

7.10.6.5 Overcoating Upon Return To Port. Upon return to port, intact properly adhering rust converters must be overcoated with two coats of paint (either epoxy (MIL-DTL-24441, Type IV) or enamel (Formula 111), depending on the area. The following procedure must be followed:

a. Read and understand Section 7.5 of this chapter, “General Surface Preparation”.

b. Use detergents to remove as much oil and grease as possible followed by a fresh water wash and rinse to remove any residual detergent and soluble salts.

c. Allow surface to dry.

d. Sand surface to be overcoated using 80 grit paper to provide adequate surface profile for paint adhesion.

e. Wipe surface and vacuum after sanding to remove any loose paint, dirt or dust.

f. Read and understand Section 7.3 of this chapter, “General Safety Precautions”.

g. Read and understand Section 7.6 of this chapter, "General Mixing and Paint application".

h. Read and understand the PDS (or ASTM F-718 sheet) and MSDS for either epoxy (MIL-DTL-24441, Type IV) or enamel (Formula 111) paint systems.

i. Apply two coats of paint (either epoxy (MIL-DTL-24441, Type IV) or enamel (Formula 111), depending on the surface being painted. The final coat should be the same color as the surrounding area to maintain color uniformity. The combination of rust converter and specified overcoat paint system is considered permanent.

7.10.7 Touch-Up of Miscellaneous Areas of General Corrosion Including New High Solids Coatings.

7.10.7.1 Surface Preparation.

a. Required Tools:

(1) Needle gun.

(2) Inspection mirror (for seeing hard-to-reach areas such as the backsides of beams).

(3) Brush and dust pan.

(4) Shop-Vac type vacuum cleaner.

b. Process:

(1) Read and understand Section 7.5 of this chapter, "General Surface Preparation".

(2) Solvent clean to remove oil, grease, dirt, chemicals and water-soluble contaminants. If solvents are prohibited, use detergent and fresh water.

(3) Use a needle gun to remove loose paint and rust. A needle gun is most effectively used by holding it 90° to the surface, making 2-3 passes about 6-8 inches in length over the same path, then moving over and repeating the process until the entire area is completed. The goal is removal of all rust, loose mill scale and paint to bare metal.

(4) Feather the edges.

(5) When needle gunning and sanding are complete, brush and vacuum loose pieces and dust.

(6) Check the surface for oil that may have been deposited during surface preparation. If necessary, solvent clean to remove oil.

(7) The presence of excess salts on the surface will cause premature coating failure. Therefore surface conductivity measurements should be made at this point. Contact the FMA or other knowledgable personnel if help is needed. If excessive surface conductivity is measured, wash the area with fresh water and repeat Step (7).

(8) Apply paint as soon as possible (ideally, the same day) after surface

preparation has been completed. Bare metal surfaces will flash rust soon after exposure to the atmosphere. If flash rusting occurs prior to coating application, repeat Steps (3)-(8).

7.10.7.2 Paint Application.

a. Required Tools:

(1) Rollers.

(2) Brushes.

(3) Rags.

(4) Manufacturer's PDS or ASTM F-718 sheet for the following paints:

(a) Formula 150, Type IV (MIL-DTL-24441, Formula 150, Type IV, green primer).

(b) Formula 151, Type IV (MIL-DTL-24441, Formula 151, Type IV, haze gray).

(5) Manufacturer's MSDS for the following paints:

(a) Formula 150, Type IV, Component A (MIL-DTL-24441, Formula 150, Type IV, green primer, component A).

(b) Formula 150, Type IV, Component B (MIL-DTL-24441, Formula 150, Type IV, green primer, component B).

(c) Formula 151, Type IV, Component A (MIL-DTL-24441, Formula 151, Type IV, haze gray, component A).

(d) Formula 151, Type IV, Component B (MIL-DTL-24441, Formula 151, Type IV, haze gray, component B).

b. Process:

(1) Read and understand Section 7.6 of this chapter, "General Mixing and Paint Application".

(2) Read and understand the PDS (or ASTM F-718 sheet) and MSDS for the two paint systems to be used.

(a) F-150, Type IV, green primer.

(b) F-151, Type IV, haze gray top coat.

(3) Check environmental conditions. Ask for help from the FMA personnel.

(a) Surface temperature must be at least 5°F higher than the dew point.

(b) Paint must not be applied at temperatures of 35°F or lower.

(c) Relative humidity must be below 85 percent.

(4) Mix F-150, Type IV, green primer according to manufacturer's instructions. Mix ratio is 1:1 by volume. (Paragraph 7.8.3 of this chapter, Mixing and Application Procedures for the Navy Epoxy Paint System (MIL-DTL-24441).

c. Summary.

(1) Table 7 summarizes mixing, application and re-coat parameters.

Paint	Induction Period (hours)	Mix Ratio (volume)	Pot Life (hours)	Time Before Overcoating (hours)	Time to Handle (hours)	Wet Film Thickness (mils)	Dry Film Thickness (mils)
F-150, green primer	N/A	1 : 1	6 @ 70°F	Minimim of 3 @ 40°F 3 @ 70°F @ 50% RH	Minimum of 24 @ 40°F 5 @ 70°F @ 50% RH	6-7	4-5
F-151, gray topcoat	N/A	1 : 1	6 @ 70°F	Minimim of 3 @ 40° F 3 @ 70°F @ 50% RH	Minimum of 24 @ 40°F 5 @ 70°F @ 50% RH	6-7	4-5

Table 7. Mixing, Application and Re-Coat Parameters for Touch-Up of Miscellaneous Areas.

(2) Apply by brush. Be certain to force coating into corners, behind beams and areas that are difficult to reach. Pay particular attention to newly installed components such as pipe hangers and clamps. (Paragraph 7.9.2 of this chapter, "Brush Application".)

(3) Check WFT to assure proper thickness (Paragraph 7.9.4 of this chapter).

(4) Wait until the first coat is dry, a minimum of 3 hours, before overcoating. If, after 3 hours, coating is not dry, check hourly until coating is dry. REMEMBER - PDS (or ASTM F-718 sheet) and Table 7 guidance for overcoating interval is an estimate. You must be able to walk on the first coat without damaging it.

(5) When first coat is dry, apply a "stripe" coat on welds, corners and edges. The "stripe" coat should be a different color than either the first coat (green) or the topcoat (gray) to facilitate coverage. F-153, Type IV, a black coating, is a good choice. If a different color is not available, use F-151, Type IV, gray as the "stripe" coat.

(6) When the "stripe" coat is adequately dry, mix F-151, Type IV, gray topcoat according to manufacturer's instructions. Mix ratio is 1:1 by volume. (Paragraph 7.8.3 of this chapter, Mixing and Application Procedures for the Navy Epoxy Paint System (MIL-DTL-24441.)

(7) Apply by brush or roller (if a roller can reach all areas that need paint). (Paragraphs 7.9.2, "Brush Application" and 7.9.3 "Roller Application" of this chapter.) If F-151 was used as the "stripe" coat, pay particular attention to completely cover the "stripe" coat since there is no color difference to provide visual contrast.

(8) Check WFT to assure proper thickness (Paragraph 7.9.4 of this chapter).

(9) Freshly painted areas should be roped off to prevent contamination during the curing process.

(10) Allow coatings to cure per the curing schedule given in the PDS (or ASTM F-

718 sheet).

(11) Ventilation should be in place during the curing process as it will facilitate curing and prevent build-up of hazardous vapors.

APPENDIX A

SUBMARINE PAINT GUIDE

REFERENCES.

(a) OPNAVINST 5100.19 - NAVOSH Program Manual for Forces Afloat, Chapter D12, Painting and Preservation
(b) Naval Ships Technical Manual (NSTM), Chapter 631 - Preservation of Ships in Service - General
(c) Hazardous Material User's Guide (HMUG), Group 12 - Paint Materials

1. SCOPE. This information is intended for use by Ship's Force when preparing, handling and applying paint to interior submarine surfaces.

NOTE: BE SURE TO FOLLOW THE GENERAL SAFETY PRECAUTIONS SPECIFIED IN REFERENCE (a) OF THIS APPENDIX AND THE DETAILED PROCEDURES AND PRECAUTIONS SPECIFIED IN REFERENCE (b) OF THIS APPENDIX.

2. SURFACE PREPARATION.

a. Inadequate surface preparation is the leading cause of premature exterior paint failures. Paint performance depends on a properly prepared surface, the benefits of which include:

(1) Improved adhesion (less blistering, flaking or peeling).

(2) Longer service life.

(3) Resistance to corrosion.

b. More information on surface preparation for specific substrates and a list of relevant specifications and standards are available at: https://www.nstcenter.biz/, https://www.nace.org/, and https://www.sspc.org along with technical references (a) and (c).

CAUTION: AVOID MIXING PAINT PRODUCTS IN AN ENCLOSED COMPARTMENT WITHOUT ADEQUATE VENTILATION. PER OPNAVINST 5090.1C PARAGRAPH 22-4.3.2.11E, THE USE OF PAINT THINNER IS PROHIBITED. REFERENCE (c) OF THIS APPENDIX PROVIDES A HAZARDOUS MATERIAL USER'S GUIDE.

3. PAINT MIXING. There are numerous considerations for effective paint mixing:

a. Always mix paints and their solvents in a designated compartment or mixing room before boarding the submarine.

b. Prior to mixing paint, read and understand the information in the manufacturer's Product Data Sheet (PDS).

c. Thoroughly mix each component of multiple component paint before combining.

d. Mix in Navy epoxy paint components at a 1:1 ratio by volume (MIL-PRF-24441).

e. Thoroughly mix paints until free of lumps, cakes and sediments.

f. MIL-DTL-24441, Type IV does not require induction, and may be used immediately.

4. PAINT APPLICATION.

a. Apply paints under the following environmental conditions:

(1) Surface temperature at least 5°F higher than the dew point.

(2) Temperature greater than 35°F.

(3) Relative humidity below 85%.

b. Other recommendations for proper paint application include:

(1) Apply paint as soon as possible following surface preparation. Two minutes of stirring or agitating is required at 4-hour intervals during the application process.

(2) To visually facilitate complete coverage, apply different colors of the same paint when successive coats are used.

(3) Use a "tack coat" of Formula 150 when painting over a fully cured epoxy paint film. The coat should be applied to a DFT of 1 mil (2 mils WFT).

(4) Paint trim, doors or similar areas after major surfaces (e.g., bulkheads) are completed.

(5) If more than seven days elapse before overcoating, the surface should be cleaned, rinsed and wiped dry. This should be followed by either: (1) a tack coat (1 to 2 wet mils) of the last coat applied, or (2) a tack coat of Formula 150 to the hard epoxy coat. Allow to dry approximately four hours before application of the next full coat of the system.

(6) If more than 30 days elapse before overcoating, clean and roughen the aged topcoat before new paint application.

5. SAFETY CONCERNS. Painting is an inherently dangerous activity. Remember to always be aware of potential hazards in the area, heed warning signs, and to follow safety guidelines and procedures.

a. Do not store paints and solvents onboard the submarine.

b. Activate the positive pressure unit prior to any interior painting.

c. Terminate all internal painting with oil based paints 5 days prior to sealing the ship. Terminate painting with latex or water based paint 3 days prior to sealing.

d. Consult the Submarine Material Control List (SMCL) for additional restrictions at: https://smcl.dt.navy.mil

6. VOLUME ESTIMATION. Use Table 1 to estimate the volume of paint required to cover a given surface area. For example: 10.0 pints of MIL-PRF-24441 Epoxy topcoat is needed to cover 280 square feet of surface area.

Surface Area in Square Feet	Pints of Paint Required			
	MIL-PRF-24441 Primer	***MIL-PRF-24441 Epoxy Topcoat***	***MIL-PRF-24635 Enamel Topcoat***	***TPD-24607 Enamel Topcoat***
20	0.5	0.7	0.3	0.3
40	1.1	1.4	0.6	0.6
60	1.6	2.1	0.9	0.9
80	2.1	2.9	1.2	1.1
100	2.6	3.6	1.4	1.4
120	3.2	4.3	1.7	1.7
140	3.7	5.0	2.0	2.0
160	4.2	5.7	2.3	2.3
180	4.7	6.4	2.6	2.6
200	5.3	7.1	2.9	2.9
220	5.8	7.9	3.2	3.1
240	6.3	8.6	3.5	3.4
260	6.8	9.3	3.8	3.7
280	7.4	10.0	4.1	4.0
300	7.9	10.7	4.3	4.3
320	8.4	11.4	4.6	4.6
340	8.9	12.1	4.9	4.9
360	9.5	12.9	5.2	5.1
380	10.0	13.6	5.5	5.4
400	10.5	14.3	5.8	5.7
420	11.1	15.0	6.1	6.0
440	11.6	15.7	6.4	6.3
460	12.1	16.4	6.7	6.6
480	12.6	17.1	7.0	6.9
500	13.2	17.9	7.2	7.1

Table 1

7. COMMON PAINTING TERMS.

a. Pot Life - The length of time that a catalyzed resin system retains a viscosity low enough to be used. Also known as working life or usable life.

b. Relative Humidity - The amount of water in the air compared with how much the air can hold at the current temperature.

c. Induction Time - The waiting period required between the time a two-part paint is mixed and the time it can be used. Also known as sweat-in.

d. Dew Point - The temperature at which moisture will begin to condense out of the air.

e. Wet Film Thickness (WFT) - Paint thickness of a wet coating (immediately after application). Measured in mils or thousandths of an inch.

f. Dry Film Thickness (DFT) - Paint thickness of a cured (dried) coating. Measured in

mils or thousandths of an inch.

g. Tack Stage - The point where a slight impression remains when the paint is pressed lightly with a fingertip.

h. Tack coat - A thin layer of paint applied when painting over fully cured epoxy paint.

i. Feathering - The process of making a tapered edge between the edges of intact paint and an area that has been mechanically cleaned to allow for proper adhesion of the paint to all surfaces.

LISTING OF APPENDICES.

A 2M Repair Process
B Sample 2M and MTRF Quarterly Report Message (Naval Air Force Only)

8.1 PURPOSE. To issue policy, guidelines and procedures for the management of the Miniature/Microminiature (2M) Electronic Repair Program, Module Test and Repair (MTR) Program and Fiber Optic Test and Repair (FOTR) Program.

8.1.1 Scope. This chapter applies to all activities engaged in the repair of electronic equipment, assemblies, subassemblies, and modules. This chapter also applies to all activities engaged in the repair of fiber optic cables and components. This chapter does not apply to electronic equipment under the cognizance of Naval Sea Systems Command Nuclear Propulsion Directorate (NAVSEA 08) or the Strategic Systems Project Office.

8.1.2 Policy. All failed Circuit Card Assemblies (CCA) and Electronic Modules (EM) must be screened for 2M and MTR using Automated Test Equipment (ATE), General Purpose Electronic Test Equipment (GPETE), and test bed installations. CCAs and EMs may be certified Ready For Issue (RFI) per reference (a). All failed fiber optic links are candidates for screening and repair using GPETE and approved repair equipment per reference (b).

8.1.3 Background. The 2M and MTR Programs, established by reference (b), supports the test and repair of electronic equipment at the Fleet level. Reference (c) describes 2M and MTR capabilities including the performance of high quality repairs on CCAs and EMs. The 2M and MTR Work Center (WC) repair capability includes training, tools, techniques, technical documentation and certification. The Fiber Optic Test and Repair Program, established by reference (b), supports the test and repair of fiber optic cabling and components at the Fleet Level. References (d) and (e) describe fiber optic repair capabilities. This fiber optic capability includes training, tools, methods, technical documentation and certification.

8.2 RESPONSIBILITIES.

8.2.1 Fleet Commander. Fleet Commanders must operationally administer and promote optimum use of the 2M and MTR Programs per reference (b) (e.g. Electronic Repair, Module Test and Repair, Fiber Optic Test and Repair Programs.)

8.2.2 Type Commander or Immediate Superior In Command. Type Commanders (TYCOM) or Immediate Superiors in Command must:

a. Coordinate and manage the 2M, MTR and FOTR programs.

b. Monitor the effectiveness of the 2M Program and provide recommendations concerning 2M, MTR and FOTR equipment, tools and training.

c. Execute progressive repair procedures.

d. Coordinate logistic support, outfitting requirements and deployment priorities for 2M, MTR and FOTR stations and associated test equipment.

e. Monitor 2M, MTR and FOTR certification status and direct corrective actions as required.

f. Monitor and enforce the utilization of Module Test and Repair Tracking System (MTRTS) only per MTRTS Business Rules.pdf.

8.2.3 Commanding Officer or Officer In Charge. Commanding Officers or Officers In Charge must:

a. Establish a 2M, MTR and FOTR Programs under the cognizance of the Electronics Material Officer (EMO), Combat Systems Maintenance Officer (CSMO) or cognizant Department Head. For Fleet Maintenance Activities (FMA), utilize the Electronics Repair (or cognizant) Officer as the overall coordinator.

b. Maintain certified 2M, MTR or FOTR stations and technicians.

c. Screen and repair all CCAs and EMs using the progressive repair process. Submit CCAs and EMs beyond Ship's Force repair capability to the FMA.

d. Maintain 2M, MTR and FOTR WC. Ensure MTRTS is used to maintain the ship's 2M and MTR screening efficiency, performance, production and quarterly production

or performance reports are submitted. Ensure Fiber Optic maintenance actions are documented in MTRTS supporting utilization statistics.

8.2.4 Miniature/Microminiature Repair Program Coordinator or Module Test and Repair Facility Coordinator. The 2M or MTRF Coordinator (EMO or cognizant repair officer) must:

a. Coordinate and monitor the effectiveness of the 2M Work Center (WC) and the repair program.

b. Provide adequate space with environmental controls to support the 2M WC using the guidance of references (c), (f) and (g).

c. Submit additional or new 2M and test equipment requirements to the TYCOM Representative, providing complete justification (e.g., workload, documented man-hours, or added capabilities with the addition of new equipment).

d. Ensure adequate numbers of 2M and MTR trained and technically qualified personnel support the WC.

e. Ensure 2M and MTR personnel and station requirements are met per references (g) and (h).

f. Ensure 2M and MTR WC personnel are formally trained in the operation and maintenance of all ATE and 2M and MTR equipment.

g. Maintain an updated library of test routines and test documentation for other installed ATE, per TYCOM outfitting requirements. Develop and submit test routines to Naval Undersea Warfare Center, Fleet Engineering Office for CCAs and EMs.

h. Ensure all 2M repair actions are documented per volume VI, chapter 19 of this manual.

i. Ensure the Electrostatic Discharge (ESD) procedures of references (i) and (j) are implemented within the 2M and MTR WCs to provide adequate protection for ESD sensitive CCAs and EMs.

j. Coordinate with supply to ensure all CCAs and EMs meet the packaging requirements of per reference (k).

k. Ensure all CCAs and EMs certified RFI are processed as discussed in section 8.4.

l. Maintain a complete inventory of 2M, MTR and ATE, materials and consumables.

m. Ensure compliance with all applicable safety procedures per reference (l).

n. Ensure that the MTR Tracking System is used to record all maintenance actions and produces required production reports.

o. Ensure the MTRTS Business Rules are used to properly document all screening attempts. Refer to the latest MTR Test Routine ROM for the MTRTS Business Rules.pdf.

8.2.5 Fiber Optic Test and Repair Program Coordinator. The FOTR Coordinator (EMO or cognizant repair officer) must:

a. Coordinate and monitor the effectiveness of the FOTR Work Center (WC) and the

repair program.

b. Provide adequate space with environmental controls to support the FOTR WC using the guidance of references (d) and (e).

c. Submit additional or new FOTR equipment requirements to the TYCOM Representative, providing complete justification (e.g., workload, documented man-hours, or added capabilities with addition of new equipment).

d. Ensure adequate numbers, per FLTMPS requirements of FO trained and technically qualified personnel support the WC.

e. Ensure FO personnel and station requirements meet the criteria of references (g) and (h).

f. Ensure all FO repair actions are documented per volume VI, chapter 19 of this manual.

g. Maintain a complete inventory of FO materials and consumables.

h. Ensure compliance with all applicable safety procedures in accordance with reference (l).

i. Ensure that the MTR Tracking System is used to record all FO maintenance actions and produces required production reports.

8.2.6 Commander, Navy Regional Maintenance Center. The Commander, Navy Regional Maintenance Center (CNRMC) routinely must maintain qualified 2M, MTR and FOTR Fleet Coordinators at Mid-Atlantic Regional Maintenance Center (MARMC), Southwest Regional Maintenance Center (SWRMC). Fleet Coordinators are responsible for administering 2M, MTR and FOTR Program Inspections and Certifications in their respective geographical areas. Appointment of 2M, MTR and FOTR Fleet Coordinators will be coordinated with, and authorized by, the NAVSEA 2M, MTR and FOTR Program Manager.

8.2.6.1 Regional Maintenance Center. The RMC 2M and MTR Inspection and Certification Branch (MARMC, SERMC, SWRMC, FDRMC Rota, Pearl Harbor, Yokosuka, Sasebo and Everett) shall, per reference (g):

a. Maintain a certified laboratory for the purposes of recertifying technicians where 2M, MTR and FOTR Inspectors are assigned.

b. Maintain certified 2M, MTR and FOTR Inspectors.

c. Inspect and certify all 2M, MTR and FOTR facilities and technicians per reference (g) and report inspection results to the commanding officer and TYCOM.

d. Inspectors shall attend the 2M and MTR Inspector and Instructor training workshop each year. Master 2M and MTR inspectors (Atlantic and Pacific Fleet Coordinators) shall attend all the Inspector and Instructor training workshops due to their additional responsibilities related to subordinate Inspector site review certifications.

8.2.7 NAVSEA 2M and MTR Program Manager. The NAVSEA 2M and MTR program manager shall assure the 2M and MTR In Service Engineering Certification Agents are civilian government employees to support inherently government functions per references (b) and (m).

8.3 AUTHORIZED MINIATURE/MICROMINIATURE OUTFITTING. Authorized 2M and MTR outfitting is identified in reference (b). Authorized FOTR outfitting is identified in reference (e).

8.4 MINIATURE/MICROMINIATURE PERSONNEL AND STATION REQUIREMENTS. Conduct 2M and MTR technician recertification and issue operator proficiency cards to qualified 2M and MTR technicians. References (g) and (k) provide certification criteria for all 2M and MTR stations and technicians. References (d) and (e) provide certification criteria for all FOTR equipment and technicians.

8.5 PROGRESSIVE REPAIR PROCESS. The progressive repair process is the sequential attempt to test and repair CCAs and EMs. Reference (m) requires repairs at the lowest possible level. Reference (a) describes Repairables Management for Depot Level Repairables (DLR) and Field Level Repairables (FLR). 2M repair technicians will screen and attempt to repair all CCAs and EMs within their training and capability, regardless of cognizance or the Source Maintenance and Recoverability code.

8.5.1 Repair Process. The 2M repair process, illustrated in Appendix A and defined in reference (m).

8.5.2 Ship's Force Process. An activity's repair capability and the type of 2M station may differ depending upon TYCOM outfitting. Such differences include the type of 2M station (miniature/microminiature) and outfitting of test capability. These factors plus 2M technicians' training or certification dictate Ship's Force ability to screen and repair CCAs and EMs. Regardless of these differences, an attempt shall be made to repair all CCAs and EMs prior to their forwarding to the FMA.

a. The 2M Work Centers must be designated as "CSE3" for surface ships with the exception of the LSD Class as "OE03" and LHA and LHD Classes as "CE03", "CS54" for Aircraft Carriers, and "NE02" for SSBN and SSGN Class submarines. All 2M, MTR and FOTR work will be documented using these WCs. Final action codes will use "7 series" for 2M and "9 series" for FOTR maintenance actions per volume VI, chapter 19 of this manual.

b. Submit Beyond Capability Maintenance to the FMA using a Ship's Maintenance Action Form, OPNAV 4790/2K (2-Kilo), or MJC-OXCA-C028. The WC responsible for the system will forward the CCA and EM to the FMA if the CCA and EM repair is beyond the capability of the 2M WC.

c. Supply Officers have different responsibilities for DLRs or FLRs per references (a) and (n).

(1) DLRs. Carcass tracking procedures are delineated in local command instructions and will identify supply or maintenance personnel responsibilities for tracking CCAs and EMs either at the Ship's Force 2M WC or the FMA WC. Supply Officers are authorized to delay stock issue, replenishment and non-RFI turn-in for up to 72 hours pending testing and repair. Aircraft Carrier WC CS54 MTRF will use the Progressive Repair Program with the MTR Tracking System to support Supply or MTRF interaction.

(2) FLRs. Disposal of FLRs can be accomplished by either Ship's Force or the FMA.

8.5.3 Fleet Maintenance Activity Process. FMAs have additional 2M repair and ATE capabilities exceeding the Ship's Force level. The FMA will conduct repairs to CCAs/EMs that is beyond the maintenance capability of the submitting activity using the appropriate documentation.

a. CASREP driven 2-Kilos will be accepted by the FMA on the same day the job is submitted and worked to support a 24-hour turn-around.

b. Non-CASREP driven 2-Kilos will be screened to support activities and worked to support a 72-hour time limit or deadline date.

c. If the FMA is unable to repair the CCA and EM, it is condemned according to Repairables Management procedures per the requirements of reference (a).

8.5.4 Certification of Miniature/Microminiature Repaired Assets as Ready for Issue. Reference (a) describes the definition and certification criteria for RFI items. Repaired CCAs and EMs will meet the following basic RFI requirements:

a. Packaging and preservation.

(1) Repaired items from the 2M WC or MTRF will be packaged to meet the minimum standards of reference (a).

(2) A repair-unit identification label must be affixed to the body of each repaired unit per reference (a). The label must specify the command or activity performing the repair, the date repaired and the name of the 2M technician.

b. ESD protection. ESD sensitive CCAs and EMs will be handled, prepared and packaged per references (i). Ensure all CCAs and EMs are packaged for shipment per reference (k).

8.5.5 Miniature/Microminiature Module Test and Repair Piece Parts. The MTR In-Service Engineering Agent (ISEA) creates, manages and assigns 2M and MTR piece part Allowance Parts Lists (APL) that are custom tailored for each ship class and shore facility having 2M and MTR repair capability. These APLs supplement existing equipment APLs that support the repair of electronics to the component level. It is encouraged that a part needed for 2M repair be ordered against the applicable equipment APL when possible (order a part for 2M repair against a 2M and MTR piece part APL only when the part is not listed on the equipment APL).

a. 2M and MTR piece part APLs:

(1) Contains the piece parts needed to support 2M repairs to all electronics covered by MTR test routines and other electronics commonly repaired in the 2M and MTR WC.

(2) Lists the piece parts that are supported with an active National Stock Number (NSN) by the Federal Catalog System and parts such as resistors, relays, diodes, capacitors, transistors and integrated circuit chips are included. Parts without an NSN that have documented or expected high

demand will also be provisioned and included in the APL to obtain an NSN to facilitate repairs.

(3) The piece parts are supply coded as Storeroom Inventory (SRI) and are maintained by the supply department. Every part consumed during a 2M repair must be reordered on a one-for-one basis as the usage is reported and is eligible for demand-based stocking.

b. Baseline and Augmented strategies are used to determine range and depth of parts support:

(1) Baseline items are coded with an Allowance Note Code (ANC) of one "1" to ensure that 100% of the listed piece parts are stocked onboard regardless of the inventory presently on hand or past usage. These piece parts are identified as maintenance critical items using data obtained from the Maintenance and Material Management (3-M) System and the MTRTS. The use of ANC coding ensures that parts critical to the repair of electronics are always available.

(2) Augmented items are included on 2M and MTR piece part APLs to ensure that sufficient piece parts are authorized to support increases in 2M and MTR repairs that are associated with the release of new MTR test routines to the fleet and as determined by feedback from the fleet. These parts include at minimum, all piece parts having an active NSN that appear in the latest MTR Test Routines (DVD AKA "Gold Disk" release and are applicable to a ship class and maintenance capability). The allowancing for these piece parts is computed using applicable Fleet Logistics Support Improvement Program (FLSIP) computations.

c. The piece parts that are needed for a 2M and MTR repair, but not listed in a 2M and MTR piece part APL, should be reported by submitting a Fleet Coordinated Shipboard Allowance List Feedback Report.

d. The Fleet Readiness Action Team assists fleet 2M and MTR technicians in identifying and obtaining materials not readily available. Determine interchangeability and source of supply of non-DoW stocked items. Attempt to find alternate sources for CASREP or work stoppages when required materials are not in stock or have a long lead-time for delivery. The Fleet Readiness Action Team will make maximum use of 2M and MTR materials obtained from decommissioned ships in this effort.

8.5.6 Fiber Optic Repair Piece Parts. Piece parts required for fiber optic repairs have formalized APLs for shipboard approved fiber optic repair consumables. These APLs contain unique high usage piece parts such as connectors, termini, epoxy and polishing papers determined from Fleet-wide demand data and TYCOM recommendations. Parts needed for a FO repair not listed in the APLs should be reported by Fleet Coordinated Shipboard Allowance List Feedback Report in accordance with reference (n).

a. Intermediate-Level Baseline APL. The Intermediate-Level Baseline APL is supply coded Operating Space Item. FO piece parts listed in this APL are required for Intermediate-Level repair items.

b. Organizational-Level Baseline APL. The Organizational-Level Baseline APL is supply coded Storeroom Item and contains an Allowance Note Code to ensure that 100% of the listed FO piece parts are stocked on board regardless of stocks presently on hand or past usage.

8.6 CVN MINIATURE/MICROMINIATURE GUIDANCE (NAVAL AIR FORCE ONLY).

a. The mission of the MTRF WC CS54 must be to enhance the parent Aircraft Carrier and Battle Group units' Combat Systems readiness through onboard I-Level electronics repair of CCAs and EMs.

b. Aircraft Carrier Combat Systems Material Officers will issue amplifying procedures by message for Battle Group units to request MTRF WC assistance.

c. Each MTRF must provide Commander, Naval Air Force Atlantic (COMNAVAIRLANT) or Commander, Naval Air Force Pacific (COMNAVAIRPAC) a quarterly summary report of MTRF accomplishments, by message or Naval Telegram, due by the 15th day of the month following the end of each quarter. A sample format is provided in Appendix B.

8.7 SUBMARINE MINIATURE/MICROMINIATURE GUIDANCE (SUBMARINE FORCE ONLY).

8.7.1 Module Screening and Repair Activity. The Module Screening and Repair Activity (MSRA) has been developed to support various submarine systems. MSRAs are located at the Naval Submarine Support Facility New London, CT and Submarine Base Pearl Harbor, HI. MSRAs maintain ATE and special purpose test equipment in support of functional testing and RFI capability.

8.7.2 OHIO Class Organizational Repair Capability.

a. OHIO CLASS SSBNs and SSGNs outfitted with 2M MTR capabilities are to maintain two trained and certified technicians that have completed the AN/USM-674 Operators Training (CIN: A-100-0076) and Miniature Electronic Repair Training (CIN: A-100-0072) for each Blue-Gold crew. Designate one of these technicians from each crew as the 2M MTR Program Coordinator. Responsibilities are cited in paragraph 8.2.4.

b. Per 2M MTR Certification requirements of reference (g), 2M MTR technicians must complete re-certification requirements every 18 months per reference (g). Site reviews must be conducted every 18 months. Site reviews and personnel re-certifications are conducted by certified 2M MTR Inspectors.

c. Additional 2M and MTR program management responsibilities are cited in sections 8.2.

d. Submit Module Test and Repair Tracking System Reports (backup file) to NUWCDET Norfolk after completion of each patrol or crew turnover (2mtrdata@navy.mil).

e. For submarines that possess the organic electronics repair capability (2M), utilize work center NE02.

8.7.3 Reports. FMAs must utilize the appropriate turn-in repairable tracking system to generate a quarterly Mandatory Turn-in Repairable Summary Package, with option (1) of the MTRF accomplishments, forwarded to the TYCOM (N42). This summary package is due by the 15th day of the month following the end of each quarter.

LISTING OF APPENDICES.

A NESD Customer Service

9.1 PURPOSE. To issue policy and assign responsibility for the management of the Navy Test, Measurement and Diagnostic Equipment (TMDE) which includes the associated Metrology and Calibration (METCAL) program, per reference (a).

9.1.1 Scope. This instruction applies to all Navy commands whose maintenance policy and practices fall under the cognizance of references (b), (c) and (d) and Fleet shore activities such as Fleet Area Control and Surveillance Facilities. Excluded are calibration activities and equipment under the technical cognizance of the Radiation Detection, Indication and Computation program.

9.1.2 Policy. The Chief of Naval Operations (CNO), Office of the Chief of Naval Operations (OPNAV) N4, sets policy to ensure all TMDE used for quantitative measurements are

maintained and calibrated at the lowest practical level. Specific CNO policy is stated in reference (a).

NOTE: TMDE IS GENERAL PURPOSE ELECTRONIC TEST EQUIPMENT (GPETE), SPECIAL PURPOSE ELECTRONIC TEST EQUIPMENT (SPETE), SUPPORT EQUIPMENT, CALIBRATION STANDARDS AND INSTALLED INSTRUMENTATION THAT SUPPORT HULL, MECHANICAL AND ELECTRICAL (HM&E), WEAPONS SYSTEMS, ETC.

9.2 RESPONSIBILITIES.

9.2.1 Fleet Commanders.

a. Operationally administer the TMDE and METCAL programs per reference (a).

b. Ensure that TMDE calibration and repair is performed at the lowest level practical using certified laboratories and trained technicians.

c. Calibrate all TMDE within the capability of the Regional Calibration Centers (RCC), Type Commander (TYCOM) and shipboard calibration activities.

d. Assign a Fleet Representative to the TAMS Executive Board.

e. Chair Fleet TMDE - METCAL Working Groups. Commander, Atlantic Fleet chair Test and Monitoring Systems (TAMS) Executive Board Fleet Support Standing Committee.

f. Establish the Shipboard Instrumentation System Calibration (SISCAL) program per reference (e) as required.

g. Provide funding for calibration and repair of TMDE including calibration standards, except for:

(1) Naval Air Systems Command (NAVAIR) will fund for fleet aviation TMDE calibration and repair.

(2) Strategic Systems Programs (SSP) will fund for TRIDENT TMDE calibration and repair.

h. Evaluate Regional Maintenance Center (RMC) and RCC and coordinate with Naval Sea Systems Command (NAVSEA) for standards to support new capabilities.

i. Provide funding for audit and certification of Fleet Navy calibration laboratories and Field Calibration Activities (FCA).

9.2.2 Type Commander.

a. Assign a METCAL Manager to administer TMDE and METCAL program requirements per references (a) and (b). Serve as a voting member to the Fleet TMDE - METCAL Working Group.

b. Review Fleet Forces Allowance Change Requests and forward to the TMDE Allowance Manager. TMDE Allowance Managers are TYCOM for aviation activities, SSP for TRIDENT activities and NAVSEA 04 for all remaining activities.

c. Redistribute excess TMDE. Aviation activities and TRIDENT activities will follow the guidance of NAVAIR and SSP respectively in redistributing TMDE. The Atlantic and Pacific Fleets will use the Consolidated TMDE Readiness Assessment (CTRA) Program.

d. Provide properly trained personnel to authorized calibration activities for the repair and calibration of assigned TMDE. Manage assigned calibration standards and calibration laboratories and FCAs per reference (a) and the guidance provided by the appropriate Systems Command (SYSCOM). Coordinate with the appropriate SYSCOM during pre-commissioning to verify if Establishment of Field Calibration Activity Request has been submitted and approved per reference (a).

e. Perform Quality Assurance reviews of laboratories and ensure compliance with this instruction and appropriate SYSCOM instructions.

f. Budget and manage funds to support calibration overflow for calibration support beyond the capability of RMC, RCC, TYCOM and shipboard calibration activities.

g. Ensure that Regional Loan Pools (RLP) are established in RMC and RCC.

h. Coordinate with NAVSEA 09 for Sub-Category (SCAT) assignments and Ship's Portable Electrical and Electronic Test Equipment Requirements List (SPETERL) revisions.

i. Assist Fleet Commander representatives in managing the Fleet TMDE and METCAL programs.

j. Assist platforms with their Departure From Specification (DFS) requests and coordinate approval of DFSs that require NAVSEA Technical Warrant Holder (TWH) approvals.

9.2.3 NAVSEA Technical Authority.

a. The NAVSEA METCAL TWH is the Technical Authority for all equipment and systems under the NAVSEA technical cognizance.

b. Naval Surface Warfare Center (NSWC) Corona Division is the TWH's Engineering Agent (EA) for metrology and calibration. NSWC Corona performs acceptance tests for new equipment for induction into the METCAL program, sets and modifies calibration intervals for non-installed TMDE and publishes metrology-associated documents such as the Naval Calibration Activity List and the Metrology Requirements List (references (f) and (g)) following SYSCOM directives. NSWC Corona may be contacted by telephone or message for resolution of urgent technical problems related to calibration standards or Instrument Calibration Procedures.

c. Naval Surface Warfare Center, Philadelphia Division, (NSWCPD) is the TWH's EA for all shipboard installed instrumentation. NSWCPD determines shipboard instrumentation calibration workload (cal "YES" or "NO") by applying the principles of Reliability-Centered Maintenance, sets and modifies calibration intervals for shipboard instrumentation and systems, develops and validates associated calibration procedures and publishes related calibration documentation such as ship-specific Calibration Requirements Lists (CRL), calibration procedures that are issued via the

Planned Maintenance System (PMS) (Maintenance Requirement Cards (MRC)), and System Calibration Procedures (SCP) following NAVSEA directives (see paragraph 9.7 of this chapter). NSWCPD may be contacted by telephone or message for resolution of urgent technical problems related to calibration of shipboard instrumentation, calibration PMS or SCPs.

d. Naval Air Warfare Center, China Lake is the TWH EA for TMDE, prepares specifications for new TMDE and makes technical recommendations to the TMDE Program Manager on what instruments are listed in the TMDE Index. Seal Beach Detachment may be contacted by telephone or message for resolution of urgent technical problems related to all Navy TMDE.

9.2.4 Immediate Superior In Command.

a. Monitor calibration readiness status within their respective organizations, especially ships in a pre-deployment status. Forward requests for assistance to the TYCOM METCAL Manager.

b. Monitor the effectiveness of Shipboard Gage Calibration Program (SGCP) FCAs.

c. Ensure that ships with FCAs extend their service to other ships in company, as appropriate, to reduce cost and turn-around time of calibration.

d. Ensure that each ship with an FCA has all the necessary standards, documentation and trained personnel to maintain current certification.

e. Coordinate resolution of calibration problems found by the TYCOM designated support activity for assigned ships.

f. (Submarine Force only) Support and participate in the TYCOM's CTRA process. Ensure corrective actions resulting from the conduct of a CTRA are completed for activities under the Immediate Superior In Command's (ISIC) cognizance.

9.2.5 Commanding Officers All Forces.

a. The Commanding Officer has the overall responsibility for METROLOGY and the Calibration Program under their cognizance and will maintain a high degree of calibration readiness. Calibration Readiness Goal for all forces is 85%.

b. Appoint in writing, a calibration coordinator and test equipment manager responsible for all matters related to the calibration of ship's TMDE. Separate coordinators may be appointed for electronic and mechanical equipment.

9.2.6 Commanding Officers Naval Air Force. Naval Air Force activities must also follow the detailed procedures outlined in reference (h) for TMDE management and for operation of the consolidated FCA.

9.2.7 Regional Maintenance Center Metrology and Calibration Coordinators.

a. Coordinate and schedule off-ship calibration or repair services for ships within their geographic area of responsibility. Specific lack of capability is the only justification for off-ship calibration.

b. Maintain close liaison with the RMC and RCC shipboard calibration coordinators, ISIC and TYCOM to prevent or resolve calibration scheduling and readiness problems.

c. Review ship's calibration work requests to ensure that TMDE within the calibration capability of the ship's FCA are not sent to a higher-level calibration laboratory.

d. Contact all deploying ships that have not delivered a pre-deployment calibration work package at least 45 days before deployment to determine ship's requirements.

e. Notify TYCOM METCAL Managers, as applicable, of all changes in RMC or RCC calibration capability.

f. Assist RMC or RCC calibration laboratories in obtaining calibration or repair services for laboratory standards.

g. Identify TMDE calibration requirements beyond the technical capability of the RMC or RCC. Coordinate with TYCOM METCAL Managers for scheduling of TMDE overflowed to an approved calibration laboratory.

9.2.8 Regional Maintenance Center and Regional Calibration Center.

a. Calibrate and repair TMDE including calibration standards assigned by the RMC METCAL Coordinators. Document all calibration actions using the METBENCH Calibration Management System (MCMS), Metrology Automated System for Uniform Recall and Reporting (MEASURE) or the TYCOM directed data collection method.

b. Ensure that electronic TMDE submitted by the Fleet is standard test equipment listed in reference (i). Contact the submitting activity and the TYCOM METCAL Manager when non-standard TMDE is submitted for calibration. Non-standard TMDE will not be calibrated or repaired unless approved by the TYCOM.

c. Ensure all laboratory standards are properly calibrated at the lowest appropriate level. Notify the TYCOM METCAL Manager of any lost or reduced laboratory capability.

d. Ensure all TMDE repaired by the RMC or RCC are completely recalibrated before being returned to service. Calibration of a repaired instrument will serve as Quality Assurance of an accomplished repair.

e. Prepare and submit Calibration Problem Reports to NSWC Corona for assistance or guidance concerning calibration problems encountered during operation of the calibration laboratory.

f. Refer to Section 9.5 of this chapter for replacing malfunctioning calibration standards certified by a repair facility to be Beyond Economical Repair (BER), (i.e., having a repair cost in excess of 50% of the replacement cost).

9.3 CALIBRATION MANAGEMENT.

9.3.1 Shipboard Gage Calibration Program Field Calibration Activity. The SGCP provides onboard calibration capability for TMDE in the measurement areas of high and low temperature, pressure, vacuum, and torque (selected ship classes only).

a. Maintain SGCP certification per the requirements of reference (j).

b. Ship's Force is responsible for the calibration of all instrumentation within their SGCP FCA capability. Certified FCA technicians are the only authorized personnel to accomplish calibration using SGCP calibration standards (not applicable to CVN, LHA or LHD). SGCP calibration standards allowance quantities are listed in the SPETERL per reference (j).

c. Use the TYCOMs' approved formal recall system (e.g. MCMS. MEASURE, SKED) for scheduling, planning, monitoring and reporting the ship's calibration status. The SGCP Calibration Coordinator or SGCP technicians are responsible for adding the calibration data into the TYCOM directed recall program. Submarine activities using the PMS program of record (SKED) to schedule, track, document and report accomplishment of "O" level calibrations will employ the PMS rules for establishing the accomplishment periodicity. Ideally, the accomplishment of the test instrument's calibration will be performed on the day initially scheduled in SKED. This date should match the due date located on the test instrument's calibration label. The test instrument is out of calibration when the due date listed on the calibration label is exceeded.

d. Ensure all calibration is conducted at the lowest level of calibration feasible. Accomplishment of calibrations beyond SF capabilities should be coordinated with the TYCOM, Regional Calibration Facility and/or RMC Calibration Coordinator.

e. All components being calibrated using a SGCP calibration standard (i.e. PPC, 3604, 3605, etc.) must have a NAVY METCAL calibration sticker affixed. SGCP technicians are responsible for placing the appropriate METCAL label on the installed instruments.

f. The SGCP Calibration Coordinator is responsible for ensuring that the CRL data is aligned with ship's configuration and ensuring that instrumentation identified in the TYCOM calibration recall inventory matches CRL data: system, nomenclature, periodicity, etc. The CRL should be validated annually. Recommended changes (e.g. adds, deletes etc.) must be forwarded to the EA via MCMS, Technical Manual (TM) Feedback, or a PMS TFBR to correct the hull specific CRL

g. Ensure the CRL is used as a technical authority guidance to determine calibration requirements for all installed instruments. The calibration requirement determines whether an installed instrument is either critical or non-critical. Critical instruments are defined as instrumentation that monitors a parameter which is required to be within a specified operating range, or limits, to minimize hazards to human safety or failure of a mission essential equipment or system. These instruments are calibrated at a specific frequency (e.g., 12, 18, 24 or 36 months etc.). All other instruments are classified as non-critical, No Calibration Required (NCR).

h. Non-critical instrumentation will have an NCR METCAL label attached. When a NCR instrument's reliability is suspect, it will be sight compared with a critical instrument or a SGCP standard. When a NCR instrument is repaired or replaced, it will be installed and sight compared with a critical instrument or SGCP standard. If a primary instrument is out of commission, a NCR instrument which is secondary to the primary instrument out of commission may be calibrated to facilitate the validation of

system parameters when approval by higher authority has been granted to deviate from the original test procedure.

i. Individual measurement chain components that are designated as NCR in the CRL such as remote temperature detectors, thermocouples, magnetic pickups, etc., do not require comparison prior to being installed in a system.

j. System calibrations (e.g. a transducer and associated panel meter) in the same measurement chain being calibrated simultaneously) accomplished by ship's force will utilize a "Special Calibration" (black lettering, yellow background) label annotated to reflect system calibration and the components tested. The Special Calibration sticker is to be located on the "readout component". When the "readout component" is a flat panel display, PLC interface display, laptop or similar display method, apply the label to the instrument vice the "readout component". In cases where a component such as a transducer provides input to an alarm or shutdown function but no indication or parameter measurement (i.e., air compressor high pressure shutdown); apply the calibration sticker to the transducer. This requirement is not applicable to Level 2 system calibrations performed by SISCAL teams. SICAL teams use "System Calibrated" labels (black lettering, orange background) to indicate that the measurement chain (e.g. sensor, signal conditioner and display) is within the applicable tolerance on all parameters and there are no qualifying conditions for use.

k. Maintain liaison with the RMC METCAL Coordinator to ensure TMDE scheduled for off-ship calibration is delivered and returned according to the agreed upon schedule.

l. Use the RLP for maintenance requirements while the ship's test equipment is being calibrated or as indicated in the SPETERL (borrow from Regional Loan Pool).

m. Ensure all TMDE has a current calibration sticker, reference (j).

n. Maintain TMDE allowances in the SPETERL. Advise the TYCOM METCAL Manager and contact the CTRA center to fill deficiencies prior to submitting requisitions for replacement test equipment through the supply system.

o. Use only standard test equipment listed in reference (i). Inform the TYCOM METCAL Manager of system maintenance requirements that are not supported by standard test equipment. SPETE that is approved per reference (e) is authorized for designated systems only. SPETE will not be used as general-purpose test equipment.

p. Ensure TMDE is submitted for calibration prior to the calibration due date, with all accessories, power cords and technical manuals required to complete calibration.

q. Submit pre-deployment calibration requirements to the RMC METCAL Coordinator at least 60 days prior to deployment. Conduct an inventory of all SPETE to confirm material condition and calibration due dates.

r. (Submarines only) Interval changes affecting test instruments that are calibrated at the Organizational Level (Ship's Force/Calibration Activity 1) must be implemented upon notification from higher authority. Notification includes but is not limited to Technical Feedback Responses (TFBR), PMS Force Revisions, etc. Documenting the interval change includes updating the TYCOM directed recall program, if not accomplished automatically, as well as re-stickering the instruments affected with the

new calibration due date. Ship's Force is not authorized to re-sticker test instruments calibrated at the Intermediate or Depot level (Calibration Activity 3).

9.3.2 Calibration Accounting. TMDE calibration actions are recorded in the TYCOM directed Calibration Recall Program. Surface force ships use one of the three different programs: MEASURE (LHA and LHD), MCMS, or the TYCOM Calibration Recall Program (TCR).

a. Measure implementation and operation guidance, reference (k).

b. MCMS supports surface force ships and provides shipboard personnel with the capability to update inventory files using LAN access. MCMS also provides the capability to generate reports and upload data to the master server through distance support. Readiness information and inventory status is readily available to Ship's Force and TYCOM METCAL Managers.

c. TCR program (Excel file) is used on those ships that do not yet have MCMS installed. The file provides inventory information to track calibration status.

9.3.3 Shipboard Calibration Recall Inventories for MEASURE, TCR, and MCMS.

a. MEASURE and TCR.

(1) "S" inventory: All installed instrumentation identified in the CRL and mechanical TMDE that is not SCAT coded (i.e., torque wrenches, micrometers, etc.).

(2) "E" inventory: All portable test equipment including electronic and mechanical SCAT coded test equipment that appears in the SPETERL.

b. MCMS.

(1) "S" inventory: All installed instrumentation identified as CAL=Y in the CRL. (All installed instruments i.e., both Cal = Y or N are in the "CRL" tab.)

(2) "E" inventory: All portable test equipment including electronic and mechanical SCAT coded test equipment that appears in the SPETERL

(3) "P" inventory: All mechanical TMDE that is not SCAT coded (i.e., torque wrenches, micrometers, etc.).

9.4 REGIONAL LOAN POOLS. RLPs are established at the RMC or RCC to alleviate shipboard maintenance support shortfalls caused by a lack of shipboard GPETE due to calibration or repair requirements.

a. RLPs include a wide variety of calibrated, Ready For Issue items stocked in sufficient quantity to ensure continuous availability.

b. GPETE from the RLPs may be checked out for a specific purpose (i.e., repair of the AN/SPS-73 Radar, PMS of the AN/WSC-3, etc.) or to satisfy a temporary requirement for special purpose items not normally included in the ship's allowance. Pool items are intended as short-term substitutes for unavailable shipboard items. Pool items may be checked out for ten working days; however, the RMC METCAL Coordinator may authorize an extension of the ten-day limit on a case basis.

c. All GPETE returned to the RLP must be inspected by representatives of the lending RMC or RCC and the borrowing command. The original inventory receipt is checked to see if the GPETE has been damaged or is missing accessories provided at the time of the loan. GPETE lost, damaged beyond repair or destroyed must be surveyed by the borrowing command using procedures established in reference (l). A copy of the completed survey report must be forwarded to the appropriate TYCOM METCAL Manager.

9.5 REPLACEMENT OF GENERAL PURPOSE ELECTRONIC TEST EQUIPMENT OR CALIBRATION STANDARDS.

9.5.1 Depot Level Repairables. GPETE or Calibration Standards (CAL STD) (7Z Cog), certified by a RMC or RCC or a higher-level activity as BER will be turned into the Naval Supply System. (Note: NAVAIR CAL STDs will not fall under these instructions.) For BER NAVAIR CALSTDs, RMC or RCC and Customer activities are required to contact TYCOM METCAL manager.

a. The RMC or RCC certifying the GPETE or CAL STD as BER may turn the defective unit in to the Navy Supply System for the customer activity, provided the customer has given the RMC or RCC a requisition number under which a replacement will be ordered. If the RMC or RCC turns the defective GPETE or CAL STD in to the Naval Supply System, all turn-in data must be given to the customer to assist in any future carcass tracking follow-up investigations by the Naval Supply System.

b. The customer activity may accept return of the defective GPETE or CAL STD from the RMC or RCC and initiate turn-in and replacement procedures through the normal Navy Supply System process.

c. Depot Level Repairable GPETE or CAL STD will not be processed for survey by a RMC or RCC.

9.5.2 Navy Stock Funded. GPETE (1H or 9N Cog), certified by an RMC or RCC or a higher-level authority as BER will be processed for survey.

a. The RMC or RCC certifying the GPETE or CAL STD that is BER must notify the customer of a requirement to survey the defective GPETE or CAL STD. The customer is responsible for initiating a survey action and requisitioning a replacement item through normal Operating Target funded supply channels.

b. The RMC or RCC certifying the GPETE or CAL STD as BER may retain the carcass for cannibalization of repair parts provided the customer has acknowledged that the survey process has been initiated and has provided a copy of the survey document to the RMC or RCC.

9.6 TEST MEASUREMENT DIAGNOSTIC EQUIPMENT MANAGEMENT.

9.6.1 Ship's Portable Electronic Test Equipment Requirements List. The SPETERL is the allowance document for all GPETE, SPETE and FCA calibration standards. Test equipment and FCA calibration standards allowance requirements (quantity and type) are computed on an individual ship's entire configuration of installed electrical and electronic equipment, with due consideration for function, quantity, usage and location of prime equipment. The Allowance

Change Request form, NAVSUP 1220-2, is used to request an increase or decrease in the SPETERL allowance.

9.6.2 Test Measurement Diagnostic Equipment Index. Reference (i) is the primary source for determining test equipment uses and requirements. Consult reference (i) to determine the preferred model of test equipment needed to fill a specific deficiency. Test equipment deficiencies fall into two categories, initial outfitting and replacement.

9.6.3 Sub-Category Code. Defines a family of test and measurements parameters. Test equipment within the SCAT code is prioritized per reference (i), with the lowest priority number assigned to the TMDE currently being procured to fill outstanding deficiencies. SCAT codes are the basis for identifying TMDE on MRCs.

9.6.4 Ship's Configuration and Logistics Support Information System Index. The primary test equipment inventory document for ships. The Ship's Configuration and Logistics Support Information System (SCLSIS) Index must be kept current by the submission of completed Ship's Configuration Change Form, OPNAV 4790/CK.

9.6.5 Consolidated Test, Measurement and Diagnostic Equipment Readiness Assessment.

9.6.5.1 Consolidated Test, Measurement and Diagnostic Equipment Readiness Assessment Program. The CTRA Program is a joint fleet program that improves fleet and shore command non-Aviation TMDE readiness. The CTRA Program also includes the receipt, staging and redistribution of Fleet excess electronic test equipment, mechanical test equipment and calibration standards used to replace equipment that is missing or BER.

9.6.5.2 Type Commander Metrology and Calibration Program Managers. TYCOM METCAL Program Managers are responsible for the following:

a. Scheduling a CTRA during ship Fleet Readiness Training Plan or Integrated Logistics Overhaul and every 18 to 24 months for shore commands.

b. Budget for the CTRA program as necessary.

c. Develop and issue CTRA schedule as required.

d. Maintain excess test equipment and calibration standards at CTRA staging area for redistribution to fleet activities.

9.6.5.2.1 Consolidated Test, Measurement and Diagnostic Equipment Readiness Assessment Review Process.

a. Brief ship's department heads, division officers and technicians.

b. Conduct training for TMDE management and the calibration recall software.

c. Review SPETERL and electronic (E) TMDE inventory with the ship's Combat Systems Test Equipment manager. Review will include: Configuration verification of prime systems and Fleet Supplemental Test Equipment Requirements, verification of shipboard TMDE inventory and revisions to the TYCOM approved calibration recall system inventory, prime system and test equipment updates to Navy configuration database (if during Integrated Logistics Overhaul availability), identification of SPETERL allowance changes based on actual configuration, listing of inoperable items and coordination of repair of items that fill deficiencies, removal of excess

equipment from the ship and filling of deficient equipment from CTRA staging assets. Deficient initial outfitting items will be coordinated through NAVSEA.

d. Review Mechanical "S" inventory with the SGCP Coordinator using the CRL to determine calibration requirements (TCR and MEASURE ships only). Mechanical test equipment will be listed on this mechanical inventory. Use the CRL to validate the recall inventory (TCR and MEASURE ships only).

e. (Submarine Force only) Prior to the completion of a CTRA, coordinate the delivery of identified excess test equipment to the designated CTRA facility.

f. Provide the results of the assessment to the ship.

9.6.5.2.2 Consolidated TMDE Readiness Assessment Test, Measurement and Diagnostic Equipment Redistribution. The CTRA Center manages the redistribution of Fleet TMDE to fill allowance deficiencies or replace equipment that is missing or BER. Excess TMDE and decommissioned ships' assets are received and made available for redistribution to FLEET activities. Fleet activities are required to forward all excess TMDE to the CTRA Center and to utilize the CTRA Center for the initial requests to fill replacement or deficient SCAT coded TMDE.

9.6.5.2.3 Completion and Corrective Action Reporting (Submarines only). Commanding Officer, Submarine Maintenance Engineering, Planning and Procurement (SUBMEPP) Activity issue a CTRA Completion Report, via the parent ISIC with TYCOM on copy, outlining corrective actions to be taken by the assessed command as a result of the CTRA. The assessed command will issue a corrective action letter within 90 days of receipt of the CTRA Completion Report to the parent ISIC and to the TYCOM.

9.7 SHIPBOARD INSTRUMENTATION AND SYSTEM CALIBRATION. The SISCAL Program, which includes SGCP, is responsible for the calibration and maintenance support for installed instrumentation and machinery control system calibration requirements per reference (e). Installed instrumentation calibration support parameters are documented in the ship specific CRL:

a. Calibration Activity. Defines responsibility for calibration of shipboard installed instrumentation for the following three calibration activities.

(1) Calibration Activity 1 (Level 1). Shipboard FCA is responsible for calibrating stand-alone instrumentation (i.e., gages, thermometers and switches). Instruments are typically calibrated onboard (in place or onsite) by the certified SGCP technicians using PMS MIP 9802 calibration procedures per the hull specific CRL. On submarines, shipboard FCA also perform transducer calibrations (system calibration) using H coded calibration cards in the PMS deck.

(2) Calibration Activity 2 (Level 2). (Applicable to Surface Force ships, aircraft carriers and Landing Craft Air Cushion (LCAC)) SISCAL teams perform calibration support for machinery control system components (i.e., pressure transducers, temperature transducers, signal conditioners, display devices, meters, etc.). Except during yard or industrial periods when testing is mandated, these components are not calibrated as individual items. Instead,

the entire measurement chain is calibrated as a single entity using Navy approved calibration standards and SCPs. Only SISCAL teams are authorized to use SCPs. Level 2 calibrations are performed onboard (in place or onsite) by SISCAL teams certified by the SISCAL EA, SSES 953. These teams are:

(a) Surface Ships and aircraft carriers - NSWCPD, NAVSHIPYD and IMF Pearl Harbor and NAVSHIPREPFAC Japan. These teams will be augmented by RMC I-Level Production.

(b) Landing Craft Air Cushion (LCAC) - certified SISCAL teams at Assault Craft Units.

(3) Calibration Activity 3 (Level 3). RCC calibrates those instruments which require the use of unique calibration standards or facilities.

b. SISCAL Team Scheduling. (Not applicable to Sub platforms) SISCAL scheduling begins approximately six months before expiration date and is coordinated between the Port Engineer, CVN Maintenance Manager or SHIPSUP and the SISCAL scheduler. The SISCAL team workload is the Calibration Activity 2 instruments listed in the ship's CRL and is accomplished only by the NAVSEA authorized calibration agents listed in sub-paragraph a. SISCAL visits are scheduled for both triennial SISCALs and subsequent return visits (call-back). If a ship is in an industrial environment, then reference (m) applies until SISCAL effort can commence within the six months postindustrial availability period.

c. SISCAL Dashboard. A bi-weekly document issued by the SISCAL EA via e-mail to all SISCAL stakeholders provides the following:

(1) Triennial SISCAL visit scheduled on or before the calibration due date.

(2) SISCAL Report. A SISCAL report is provided to the ship after the triennial SISCAL visit. The report identifies the results of the calibration effort and includes a listing of all instruments that were not calibrated during the visit. Instruments that were not calibrated are listed under the following categories:

(a) Rejected (broken or out of tolerance).

(b) Previously rejected (PRE_REJ), left over from last SISCAL.

(c) Not Installed (NI), instrument missing.

(d) Not Done Due to Ship Operations (NDSO).

(e) Not Done at Ship's Request (NDSR).

(f) Not Done Due to Shipyard (NDSY).

(g) Could Not Be Isolated (CNI).

(h) Equipment Out Of Commission (OOC).

(i) Not On Site Capable (NOSC), No Procedure (NOPRO) or No Calibration Standard (NS). NSWCPD will coordinate with NAVSEA Program Offices to resolve.

(3) Call-back SISCAL visit. Listed as either a SISCAL call-back or SISCAL II. SISCAL II is used when more than 100 instruments require calibration. Visit is requested by ship, SHIPSUP or Port Engineer or CVN Maintenance Manager via Ship's Maintenance Action Form, OPNAV 4790/2K (2-Kilo), or AWR. Call-back requests citing multiple instruments are preferred to maximize SISCAL manpower availability and minimize cost. Non-specific requests (e.g., calibrate various instruments) should be avoided since the task breadth (quantity of instruments) and scope (type of instruments) cannot be readily determined. The 2K also identifies the deferred maintenance for the instrumentation in the Current Ships Maintenance Project (CSMP).

d. Departure From Specification (DFS). DFS messages are requests for temporary departures and are submitted per Volume V, Part I, Chapter 8 of this manual.

(1) A DFS for deferring SISCAL could be submitted for the following reasons:

(a) Extending the periodicity of the ship's SISCAL requirement. TYCOM approves DFS up to six months. DFS in excess of six months requires NAVSEA 04RM concurrence.

(b) Extending the periodicity for individual Level 2 and 3 instruments with expired calibration due dates or replaced while away from homeport or calibration facility.

(c) Level 2 instruments that were not calibrated during SISCAL due to lack of a calibration procedure or calibration standard.

(d) Other shipboard SISCAL DFS requests will be evaluated on a case-by-case basis.

(2) DFS requests will not be approved for the following:

(a) Instrumentation within the calibration capability of the SGCP FCA.

(b) Instrumentation not calibrated during a SISCAL visit due to an out of commission or rejected status.

e. Shipboard Level 1 calibration workload beyond shipboard FCA capability or capacity must be submitted to their respective TYCOM or RMC calibration coordinator for scheduling and accomplishment. When contracted out to a Commercial Calibration Activity (CCA) or Commercial Service Provider (CSP) or an Original Equipment Manufacturer (OEM), the CCA, CSP or OEM calibrating such instruments must meet the NAVSEA METCAL TWH guidance for certification, accreditation, traceability and Test Accuracy Ratio, Test Uncertainty Ratio or Probability of False Accept. Commercial activities must provide the results of all calibrations performed by them and must use periodicities listed in the CRL for installed instruments. Commercial activities must also provide calibration event data to Ship's Force and TYCOM in a Microsoft Excel format for easy entry into the TYCOM Calibration Recall Program. Entries in the calibration events file must not be abbreviated. For existing, permanently installed instruments, the calibration events file data set must include the nomenclature, CRL reference number, condition received (i.e., In Tolerance (IT) or Out of Tolerance (OOT)), date calibrated, date due, procedure used, calibration

standard used, servicing lab code and service label applied (i.e., calibrated, special calibration, rejected, etc., per reference (j)).

9.7.1 Calibration Requirements List. The CRL is the technical authority document for installed calibration requirements and includes data pertinent to each instrument (e.g., nomenclature, system, periodicity, calibration activity, etc.).

a. The CRL is the specific primary technical authority guidance for shipboard installed instrumentation. CRLs are uploaded and maintained in the MCMS. For those ships that do not have MCMS, a CD-ROM will be distributed.

b. CRL Validation. Ship's Force, TYCOM, or both, validate the CRL to identify any gaps or required modifications for their platform's unique configuration. Submit TM Feedback for CVNs, Technical Feedback Reports for submarines and MCMS feedback for surface ships for conflicts in nomenclature, function, range, location or calibration requirement. SISCAL teams are responsible for validating Level 2 instruments on surface ships and LCACs, LHA, LHDs and CVNs.

(1) (Surface and CVNs) An editable TM Feedback can be downloaded from Navy Forms Online web site at https://forms.documentservices.dla.mil/order/ and submitted hardcopy or completed online from the Navy Enterprise Service Desk (NESD), Service Offering https://nesd-dwp.onbmc.mil/dwp/app/#/catalog/category/11902/SBE/SBE. Refer to Appendix A.

(2) (Submarine) TFBRs are submitted via normal PMS process outline in chapter 19-5 section 19-5.4.13 of this volume.

c. For Calibration Recall and Inventory Systems other than MCMS, Ship's Force should match CRL data to the METCAL Automated Information System or Calibration Recall and Inventory System inventory and submit changes to the MEASURE Operational Control Center if the CRL and METCAL Automated Information System do not have matching data elements. Refer to the CRL CD-ROM Users Guide.

d. The CRL is the technical authority document for all shipboard instrumentation calibration requirements. To preclude continuous and duplicative review of TM Feedbacks, inspecting activities are to coordinate directly with NAVSEA METCAL TWH, regarding any instrument believed to be critical but indicates No Calibration Required in the CRL. **Ship's Force must not calibrate these instruments unless specifically approved by NAVSEA METCAL TWH.**

e. Broken or inoperative Level 2 installed instruments identified as CAL=Y in the CRL that are replaced during deployment must be calibrated prior to use. Broken or inoperative Level 2 instruments replaced during deployment must be calibrated as stand-alone instruments if they cannot be system calibrated prior to use. If unable to calibrate due to lack of Calibration Standard, qualified personnel or calibration procedure, submit a DFS per paragraph 9.7d. of this chapter and use an "Out-of-Cal" label per reference (n). Extreme care should be exercised when using "Out-of-Cal" instruments.

9.7.2 Calibration Interval. Since calibration intervals are identified in different technical documents, use the following order of precedence for determining and assigning the proper calibration interval:

a. Reactor Plant Manual.

b. PMS documentation.

c. CRL.

d. Reference (g) of this chapter. Unless superseded by PMS, the generic calibration intervals for all other instruments found in Section 2 of reference (g) will be used.

e. System or equipment technical manuals.

9.7.2.1 Switch Settings. Switch settings must be following the applicable values listed in the CRL-MCMS for surface ships, Air Capable Ships and PMS system MRCs for submarines. If there is "To Be Determined" or no value listed, consult the applicable equipment technical manual and submit TM Feedback, Technical Feedback Report or MCMS feedback to get the documentation updated. Provide CRL Reference Number, setting used and the reference document used to derive the setting.

9.7.3 Markings for Test, Measurement and Diagnostic Equipment.

a. Installed Instrumentation. All instrumentation will have easily read serial numbers and be clearly labeled with current calibration labels per NAVAIR 17-35-TR8 except the Level 1 instruments that are calibrated by CCAs, CSPs or OEMs meeting the requirements of 9.7e. of this chapter will be affixed with their own labels showing their unique identifiers instead of the Navy METCAL labels. If the instrument does not have a serial number inscribed by the manufacturer, Ship's Force must inscribe a ship-generated serial number in a clearly visible location. Attached tags are acceptable for instruments without space for inscribing a serial number. Serial number should include Hull Number plus CRL reference number (i.e., DDG5100025).

b. Serial Numbers for TMDE other than Installed Instrumentation. All TMDE will have easily read serial numbers and be clearly labeled with current calibration labels per NAVAIR 17-35-TR8 except TMDE that is calibrated by CCAs, CSPs or OEMs meeting the requirements of 9.7e. of this chapter will be affixed with their own labels showing their unique identifiers instead of the Navy METCAL labels. If the TMDE item does not have a serial number inscribed by the manufacturer, Ship's Force must inscribe a ship-generated serial number in a clearly visible location. Attached tags are acceptable for TMDE without space for inscribing a serial number. Serial number should include Hull Number, plus Work Center, plus four-digit sequential number starting with 0001 (i.e., DDG51OE010001). The new serial number should be annotated in the TYCOM Calibration Program, either by the SGCP FCA for mechanical instrumentation or the Test Equipment Petty Officer for electronic test equipment.

c. The "Out-of-Cal" label listed in reference (n) is not a METCAL label but rather an operational label used to make watch standers aware of abnormalities that require additional attention. Please refer to reference (n) for proper use of the label. Extreme care should be exercised when using "Out-of-Cal" instruments.

9.7.4 SISCAL System Level Calibration Guidance for Ship Conversion Navy Platforms and Platforms in CNO or other Maintenance Availabilities.

a. The purpose of this section is to address the calibration of shipboard installed instrumentation requiring system calibration (Level 2) for new construction ships, ships in availability or overhaul and ships in their Fleet Response Training Plan (FRTP). This section does not apply to systems or instruments that are calibrated using the reactor plant manual guidance.

b. For Ship Conversion Navy (SCN) platforms, the CRL is issued within 90 days of delivery and a baseline SISCAL team visit should occur as soon as practicable but must be completed within six months of Post Shake-Down Availability or availability completion. Prior to system or equipment acceptance testing and turnover to the Navy, the SCN program managers must ensure that all installed instrumentation requiring Level 2 calibration has been verified or tested by the shipyard or repair activity to ensure that they meet manufacturer's performance specification.

c. For COMNAVSURFOR and COMNAVAIRFOR FRTP platforms, no changes have been made to the current Level 2 calibration requirements for ships in their FRTP cycle. Ships must submit a work request via 2-kilo or AWR as needed to maintain current periodicity requirements.

d. Any work package authorizing modernization (i.e., accomplishment of a Ship Change Document outside of a scheduled availability), must include a requirement for calibration of Level 1 components as stand-alone individual items before turnover to the Navy and is the responsibility of the sponsor of the specific modernization item. These components must have valid calibration labels per NAVAIR 17-35-TR8 or calibration labels from CCA, CSP or OEM that meet NAVSEA METCAL TWH requirements. In addition, work packages that modify or install either complete or partial "measurement or signal chains" consisting of individual components (e.g., sensors, signal conditioners, displays) must also include a requirement for a Level 2 (system-level) calibration by a NSWCPD certified SISCAL team after completion of system acceptance testing by the Navy. All installed instrumentation requiring Level 2 calibration should be verified or tested by the shipyard or repair activity to ensure that they meet manufacturer's performance specification. The Level 2 calibration must be completed at the end of the maintenance availability. Should this requirement not be identified in existing planned and budgeted modernization efforts, it should be handled individually with sponsor. Work packages which only replace individual measurement chain components that are designated as NCR in the CRL such as Remote Temperature Detectors, thermocouples, magnetic pickups, etc., would not require Level 2 system calibration.

e. To mitigate warranty and contractual issues on ships in industrial availabilities (i.e., maintenance availabilities or SCN overhauls), the NAVSEA Metrology and Calibration TWH has authorized a six-month temporary DFS for system calibration of systems designated as Level 2 per the ship's CRL. To facilitate equipment testing and acceptance by the Navy during the industrial period, the following actions should be taken:

(1) Systems requiring system level calibration which are not affected by the availability or overhaul must be calibrated prior to start of the availability or overhaul to ensure that such systems are not in overdue status upon completion of the yard period.

(2) Systems or equipment that are added or modified with either complete or partial "measurement or signal chains" consisting of individual components (e.g., sensors, signal conditioners, displays) must include a requirement for the components to be verified or tested by shipyard or repair activity to ensure that they meet manufacturer's performance specification before system or equipment acceptance testing and turnover to the Navy. Note that while the TWH has authorized a DFS for system level calibration during the industrial period, the DFS must be approved by the TYCOM per Volume V, Part I, Chapter 8 of this manual.

(3) Validity of all calibration labels must be verified during start-up maintenance.

(4) The Level 2 system calibrations must be scheduled and completed at the end of the maintenance availability.

f. It should be recognized that individually calibrated components, which are part of a measurement chain requiring system calibration, may not adequately represent the measurement accuracy normally provided by the system calibration process. Therefore, care should be exercised when using systems under temporary departure from system level calibration requirements.

g. Inspection teams, assessment organizations and training groups must not require ships coming out of an availability, overhaul or new construction to have Level 2 calibrations completed prior to the ship's first post maintenance period SISCAL visit unless the 6-month period has passed.

9.8 LHA AND LHD CLASS SHIP METROLOGY AND CALIBRATION PROGRAM.

9.8.1 Purpose. To establish the consolidated METCAL program for LHA and LHD class ships. This guidance implements policy and responsibility for the management of TMDE onboard these ship classes. The CNO METCAL policy is published in reference (a).

9.8.2 Background. LHA and LHD class ships have formerly operated three distinct calibration programs: Aviation Intermediate Maintenance Department (AIMD) FCA for aviation Support Equipment; Combat Systems Electronic FCA supporting GPETE and SPETE for the ship's non-aviation electronic or electrical and weapons systems; and the Engineering SGCP for installed instrumentation associated with HM&E systems. This guidance establishes and describes a consolidation of the three programs into a single program for shipboard calibration support. For the purpose of this section, TMDE are considered to be all shipboard GPETE, SPETE, Support Equipment, calibration standards and the installed instrumentation that support HM&E systems.

9.8.3 Discussion. The forces afloat METCAL program for LHA and LHD class ships is intended to improve force readiness and self-sustainability through the consolidation of the three existing, separate calibration programs laboratories into a single management entity under the management of the AIMD Officer. This guidance preserves the positive aspects of all previous

calibration programs and results in a more efficient use of personnel, a conservation of physical space and a reduction of expenditures for calibration standards.

9.8.4 Scope. This guidance is directive in nature and may be cited as authority for actions as the need dictates. Reference (h) is a parallel effort onboard aircraft carriers, and may be used as an authoritative reference for overlapping procedures and responsibilities. Reference (k) provides MEASURE documentation procedures. Reference (g) remains the authoritative reference document for all general procedural issues relating to calibration. Reference (b) addresses CNO concepts, policies, organizations, maintenance support procedures and organizational or intermediate maintenance. In the event the contents of this guidance or reference (h) conflict with any directive issued by higher authority, the latter must prevail.

9.8.5 Applicability. This guidance is applicable for all calibration performed by LHA and LHD class Ship's Force personnel, with the exception of technical matters pertaining to Radiation Detection, Indication and Computation equipment, which are the responsibility of Commander, Naval Sea Systems Deputy for Logistics (SEA 04). Nothing in this directive detracts from these responsibilities.

9.8.6 Action.

a. Commanding Officers must have the overall responsibility for maintaining a high degree of calibration readiness for all TMDE.

b. AIMD Officers must:

(1) Be the shipboard METCAL program manager.

(2) Be the consolidated FCA manager.

(3) Provide calibration, per the intervals and procedures of reference (g), except as noted in paragraph 9.7 of this chapter, where the CRL takes precedence for SISCAL instrumentation calibration intervals and procedures. Provide repair services for all qualifying shipboard TMDE per reference (h.

(4) Maintain custody of, and be accountable for, all shipboard standards for calibration of TMDE.

(5) Use MEASURE to plan, schedule, monitor and document the calibration of all TMDE per reference (k).

(6) Staff the shipboard FCA with qualified calibration technicians and provide training to maintain their proficiency.

(7) Ensure all approved calibration standards are available to support the authorized workload.

(8) Ensure all documentation required to support calibration is current and available to personnel operating the FCA.

(9) Produce appropriate documentation or document the repair requirement and record repair accomplishment into MEASURE and the aviation Maintenance and Material Management system.

(10) Calibrate all TMDE within the capability of the onboard FCA. Calibration standards have first priority for calibration, with all other priorities based on

mission requirements determined in coordination with affected department heads.

(11) Schedule required calibration and repair requirements beyond the capability of the shipboard FCA to another calibration laboratory. Calibration of NAVAIR Standards and Support Equipment beyond the capability of the FCA must be authorized and scheduled per reference (b).

(12) Coordinate the calibration of TMDE that is beyond FCA capability with external resources based on accessibility and cost effectiveness. Five general categories of external resources are available to the FCA. The resources, in order of precedence to be used, are:

(a) Ashore AIMDs and RCCs.

(b) System Command sponsored Navy Calibration Laboratories.

(c) Navy depot level activities.

(d) Other Department of Defense calibration laboratories approved for use by TYCOM.

(e) Navy Certified commercial calibration laboratories.

(13) Coordinate all TMDE repairs with outside resources. The precedence (based on cost effectiveness) for selecting the outside resource for repairs is:

(a) AIMD and RCC.

(b) COMNAVAIRSYSCOM Depot Level Rework Program for Support Equipment and Items (Individual Material Readiness List).

(c) Naval shipyards and ship repair facilities.

(d) Designated Overhaul Points listed in the Master Repairable Item List.

(e) Naval Systems Command field activities.

(f) Navy Certified commercial repair facilities.

NOTE: REPAIR OF NAVAIR STANDARDS AND SUPPORT EQUIPMENT BEYOND THE CAPABILITY OF THE FCA MUST BE AUTHORIZED AND SCHEDULED PER REFERENCE (B).

(14) Submit only operational TMDE for off-ship calibration. All functions and ranges to be calibrated must be operating and usable unless special calibration is requested. Verify all necessary accessories, power cords, and technical manuals, as required to complete the calibration, are included with the instruments at the time of calibration.

(15) Request TYCOM authorization (COMNAVAIRFORCE) for repair of NAVAIR assigned calibration standards per the NAVAIR METCAL Scheduling Letter, NAVAIR Ltr 13640 Ser 3.9.2/series. Contact information for COMNAVAIRFORCE:

Phone - Commercial (757) 445-4434, DSN 565-4434

Fax - Commercial (757) 444-1690, DSN 564-1690
Message - COMNAVAIRFORCE SAN DIEGO CA//N421Q/N421QC//

(16) Coordinate with Commander, Regional Support Center METCAL manager for SISCAL scheduling. AIMD is authorized to calibrate all instrumentation within the capability of the FCA except instruments requiring SCPs per the CRL. SCPs will be performed by SISCAL teams. Ensure SISCAL instrumentation is calibrated at the periodicity with the procedure listed in the CRL.

(17) Ensure the FCA provides support under the Strike Force Intermediate Maintenance Activity concept.

c. Engineer Officers must:

(1) Report all TMDE which require calibration to the AIMD Officer for inclusion in the ship's calibration recall schedule upon request.

(2) Deliver portable TMDE for calibration to the FCA per the AIMD managed calibration recall schedule.

(3) Coordinate in-place calibration requirements for non-portable TMDE with the AIMD Officer.

(4) Ensure only operational TMDE are submitted for calibration. All functions and ranges to be calibrated must be operating and usable unless special calibration is requested. Verify all necessary accessories, power cords, and technical manuals, as required to complete the calibration, are included with the instruments at the time of submission.

(5) Notify the AIMD Officer and, when applicable, the Combat Systems Officer, of any TMDE inventory changes, TMDE configuration changes, CRL changes that may affect the calibration recall schedule or require additional calibration procedures or standards.

(6) Maintain the allowance quantities of authorized TMDE.

(7) Report the inventory and configuration of all TMDE supporting HM&E systems and combat support systems using the SCLSIS.

(8) Maintain a ship specific CRL or Critical Instruments List for ship HM&E systems and combat support systems.

(9) Submit all TMDE repair requirements to the AIMD Officer. A formal repair request, such as a Visual Information Display System/Maintenance Action Form (VIDS/MAF) or a 2-Kilo, is not required for repair by the shipboard FCA. MEASURE METER cards will be provided by the ship's calibration laboratory.

d. Air Officers must:

(1) Report all TMDE eligible for calibration to the AIMD Officer for inclusion in the ship's calibration recall schedule.

(2) Deliver portable TMDE for calibration to the FCA per the AIMD managed calibration recall schedule.

(3) Ensure only operational TMDE are submitted for calibration. All functions and ranges to be calibrated must be operating and usable unless special calibration is requested. Verify all necessary accessories, power cords, and technical manuals, as required to complete the calibration, are included with the instruments at the time of submission.

(4) Coordinate in-place calibration requirements for non-portable TMDE with the AIMD Officer.

(5) Notify the AIMD Officer and, when applicable, the Combat Systems Officer, of any TMDE inventory changes, TMDE configuration changes that may affect the calibration recall schedule, in-place calibration requirements or require additional calibration procedures or calibration standards.

(6) Maintain the allowance quantities of authorized TMDE.

(7) Submit all TMDE repair requirements to the AIMD Officer. A formal repair request, such as a VIDS/MAF or a 2-Kilo, is not required for repair by the shipboard FCA. MEASURE meter cards will be provided by the ship's calibration laboratory.

e. Combat Systems Officers must:

(1) Report all portable and installed GPETE or SPETE eligible for calibration to the AIMD Officer for inclusion in the ship's calibration recall schedule.

(2) Deliver portable TMDE for calibration to the FCA per the AIMD managed calibration recall schedule.

(3) Ensure only operational TMDE are submitted for calibration. All functions and ranges to be calibrated must be operating and usable unless special calibration is requested. Verify all necessary accessories, power cords, and technical manuals, as required to complete the calibration, are included with the instruments at the time of submission.

(4) Notify the AIMD Officer of any TMDE inventory changes, TMDE configuration changes that may affect the calibration recall schedule or require for additional calibration procedures or calibration standards.

(5) Maintain GPETE and SPETE inventories in quantities allowed in the SPETERL. Include funding procurement of TMDE when assets are not available through CTRA programs.

(6) Report the inventory and configuration of all TMDE supporting combat systems using SCLSIS.

(7) Submit all TMDE repair requirements to the AIMD Officer. A formal repair request, such as VIDS/MAF or a 2-Kilo, is not required for repair by the shipboard FCA.

9.9 NUCLEAR PROPULSION CALIBRATION REQUIREMENTS. Nuclear propulsion plant gages, meters, thermometers and other instruments in those reactor plant systems specified by reference (o) must be calibrated following the requirements of the applicable Reactor Plant Manual. Other nuclear-powered ship's system calibration must be performed per the requirements of reference (a).

APPENDIX A

NESD CUSTOMER SERVICE

NESD is the Navy point of entry for technical support and should be the first source of support utilized for technical assistance. NESD provides Fleet users with a centralized source for receiving and routing support requests and is available 24/7/365. NESD issues a tracking number to the requester, coordinates assistance with the appropriate Subject Matter Experts (SME), and monitors the issue until it is successfully resolved.

The NESD Digital Workplace (DWP) is the end user-facing Self-Service (Tier 0) solution to guide users to resolve issues on their own by utilizing Knowledge Articles and is the preferred method of trouble ticket entry. This platform enables user self-sufficiency, multiple communication channels – email, chat, and web form, and is simple to use. Follow the steps below to submit a trouble ticket:

Contact: Navy Enterprise Service Desk (NESD)

DWP: https://nesd-dwp.onbmc.mil (Search Knowledge Article/Ask for help)

Chat: https://nesd-dwp.onbmc.mil (Select Chat with agent)

Email: nesd@nesd-mail.onbmc.mil

Phone: 1-833-NESDNOW (637-3669)

DSN: NESD main menu is: 647-6373

SIPR Email Support: nesd.fct@navy.smil.mil

10.1 PURPOSE. To provide guidance and safety requirements for the storage, handling and loading of Motor Gasoline (MOGAS) aboard ship. In view of the special hazards involved in the handling of MOGAS, Commanding Officers must ensure strict compliance with all MOGAS handling safety instructions, Aviation Fuel Operational Sequencing System (as applicable), references (a) through (f) and this chapter. The Commanding Officer's approval must be obtained prior to any MOGAS operation. The Aviation Fuels Officer, or other officer as may be directed by the Commanding Officer, must be directly responsible for the planning of all MOGAS operations (i.e., loading, off-loading or transfer of gasoline, etc.), including the training of all MOGAS operation and handling personnel. Any deviation from the safety precautions and procedures of reference (a) or this chapter must have the approval of the appropriate Type Commander. Additionally, the Commanding Officer may specify any additional safety precautions to be taken as the situation dictates.

10.2 CHARACTERISTICS.

a. Gasoline is a highly volatile liquid that gives off vapors under all environmental conditions. This vapor, when combined with air in the proper proportion

(approximately 1.4 to 7.6 percent by volume), forms an explosive mixture that can be set off by any ignition source such as a slight spark or flame. If liquid gasoline is present, the violent explosion will be followed by fire.

b. Air, at ordinary atmospheric temperature, can absorb as much as 28 percent gasoline vapor. Gasoline vapors are three to five times heavier than air, and when released, will tend to sink to the lowest level of a compartment. Liquid gasoline will expand 0.7 percent for each ten-degree increase in temperature.

10.3 PERSONNEL HAZARDS. Gasoline and gasoline vapors are extremely toxic; breathing air that is rich in gasoline vapor can and has caused unconsciousness and in some cases death. Gasoline vapors, even in concentrations of less than 1.0 percent, may cause nausea and headaches if inhaled for any length of time. Strong concentrations of gasoline vapors produce an excited state leading to unconsciousness. Gasoline saturated clothing will cause irritation and severe burns to the skin and will ignite if exposed to a source of ignition. Gasoline splashed in the eyes can cause blindness. Severe physical and mental complications may result from inhalation or body absorption. Ship's personnel must be instructed in the characteristics of MOGAS and the necessary precautions to prevent personnel injury by exposure to MOGAS or its vapor.

10.4 STORAGE AND HANDLING.

10.4.1 Drum and Bladders Conditions. Ships capable of carrying MOGAS in jettison racks or lockers, and ships that receive temporary installation of MOGAS jettison rack or locker systems, will maintain them in one of the following conditions at all times.

a. Only Naval Sea Systems Command (NAVSEA) approved storage containers as specified in reference (a) and reference (c) shall be used. All MOGAS containers shall be inspected by ship personnel prior to storage in the MOGAS storage area. Any container that shows signs of wear, leakage, or weeping of fuel will be rejected.

b. Empty bladders may be stacked on top of each other and stored in the MOGAS storage locker. Empty MOGAS containers contain enough residual gasoline liquid and vapors to support ignition or explosion. They will be treated with the same precautions as full containers.

c. All fueling equipment (hand-driven pumps, hoses, faucets, etc.) should be stored on the MOGAS sponson or Air Department equipment locker.

d. When in port, ensure the jettison rack(s) and jettison locker(s) are rendered safe (insert locking pins and stanchion).

e. Reference (c) and reference (g) if assigned contain guidance on the handling of MOGAS and shall be reviewed by personnel prior to all MOGAS operations. All equipment used in these operations shall be kept clean and in good condition and shall be inspected frequently per Planned Maintenance System and current directives

f. Fifty-five gallon stainless steel drums, approved bladders and cans will be used to store MOGAS per reference (a), reference (h), section 172.101, and reference (i), section 147.45.

g. Inspect drums to be filled. Drums must be in good condition and have no structural damage. The drum cap must be intact with good gaskets and treads. Replace gaskets or caps if damaged.

h. Inspect drum vents and faucets. Vents and faucets must be in good working order.

i. Verify all portable bladders have been tested and inspected. Inspect all cans or unit to be fueled. Reject any condition not suitable for MOGAS stowage or in poor condition.

10.4.2 Loading or Off-loading and Transferring

a. References (f), and (g) provide amplifying responsibilities and assigned actions for the safe and efficient on-load or off-load of 55-gallon drums of MOGAS from transport truck or to base Hazardous Material truck at the pier.

b. USS (*SHIP)* will on-load or off-load 55-gallon drums of MOGAS from transport truck or to base Hazardous Material truck on the pier, via Monorail chain fall system to or from MOGAS Storage Platform to or from on the specific date and time identified. The Division will be responsible for planning and coordinating the ship's MOGAS (on-load and off-load) evolution at the pier reference (f).

c. The ship's Officer in Charge will be responsible for proposing a primary and alternate on-loading or off-loading plan and loading dates consistent with the ship's availability by naval message directly to the appropriate manger identified for the ships homeport region.

d. Smoking lamp and all hot work shall cease during this evolution. Ship will on-load or off-load MOGAS only between sunrise and sunset.

f. The Ships Fire party must be on station prior to the truck entering the pier and remain on station until the truck has departing the pier, Aqueous Film Forming Foam hoses must be manned at all times during on-load or off-load.

g. Upon notification that a MOGAS evolution will occur, all personnel involved shall become thoroughly familiar with the evolution through training and indoctrination.

h. Conduct a safety brief on the specific date and time identified on USS (*SHIP*) using reference (f) for all participating members delineated. Brief, mitigate, and implement controls for the hazards specified in the risk assessment.

i. Give a minimum of 24 hours notification to the Naval Base Environmental Department, Base Port Operations, and Base Fire Marshall of the ship's plan to transfer MOGAS.

j. Ensure effective communication via handheld radios is established between personnel stationed at the pier and MOGAS storage platform.

k. Use of non-ferrous (spark-proof) tools.

l. The Base Fire Marshal must be notified and ensure that all firefighting equipment is in position, the truck is grounded to the ship and to the water prior to the hose being placed on the ship.

m. Most MOGAS inventory requirements are controlled by the Landing Force Operating Reserve Material. They will make necessary arrangements for the delivery, pickup or crane assistance of the MOGAS. The ship will be responsible for requesting, by message, an on-load or off-load date and time, and an alternate date and time, for the evolution to commence. This message information will be provided to the local Naval Base Commander.

n. In the event of a MOGAS spill, precautionary measures shall be taken to minimize the danger of a fuel spill by blocking the scupper, assuring the availability of adequate manpower, and having sufficient containment and cleanup equipment, such as the Navy oil spill control kit per reference (j).

10.4.3 Safe Handling of Motor Gasoline.

a. Do not allow drums to be staged unattended outside the dedicated MOGAS storage area

b. Do not allow MOGAS to set staged in hangar bay, sponson, mission deck, or elevator for more time than absolutely necessary. Overnight would be unacceptable.

c. Hold frequent firefighting drills, with particular emphasis on the MOGAS jettison system.

d. Immediately clean up any spilled or leaked gasoline and dispose of any rags or other cleanup material per ship's instructions.

e. Gasoline must not be used for cleaning purposes under any circumstances.

f. Conduct frequent inspections to ensure system integrity and tightness.

10.4.4 Containerized Motor Gasoline. Gasoline shall be stowed in portable containers aboard ship in a manner in which they may be jettisoned overboard in the event of an emergency. Portable containers may be stowed on a rack, ramp, or grated deck, where when the release mechanism is actuated, the containers are jettisoned overboard. Both automatic and manual actuation means are required. Smaller containers, such as 6 or 18 gallon bladders may be stowed in a locker. Similarly, when actuated for release, the containers are jettisoned overboard from the locker. Gasoline stowage shall be located on the weather deck only, except where approved by NAVSEA in accordance with reference (a).

10.4.5 Portable Containers. Approved portable containers are identified in references (a) and (c), but are provided here:

a. Metal or safety cans per reference (k) or reference (l).

b. Fifty-five gallon stainless steel drums per reference (h), section 172.101, and reference (i), section 147.45.

c. Collapsible rubberized fabric drums (bladders) per reference (m) or specifically approved by NAVSEA.

d. Rigid portable fuel containers per reference (k).

10.4.6 Firefighting and Safety Requirements. Ensure all personnel involved in the operation or movement of MOGAS are trained and briefed. During an on-load or off-load evolution station the fire parties per references (g) and (n).

10.5 MOTOR GASOLINE ASSESSMENT PROGRAM. The MOGAS Assessment Program has been established to assist Ship's Force personnel in the operation and maintenance of the installed MOGAS systems. This program requires an assessment to be conducted on each MOGAS equipped ship annually, prior to on-load or off-load of MOGAS evolutions, and prior to an industrial or fleet maintenance availability.

a. To certify ship's personnel in the operation and maintenance of the installed MOGAS system or jettison rack or locker systems. This program calls for an assessment visit to all ships with a MOGAS jettison system by representatives of RMC Code 200, and the applicable ISIC prior to pier-side loading or off-loading of MOGAS. Request for certification or assessment will be coordinated with each ISIC, to ensure optimum scheduling of the certification or assessment. Certification remains in effect for 12 months providing the term be not in conflict with the following mandatory certification inspection requirements.

   (1) After completion of any significant alteration or modifications.

   (2) Following overhaul or extended shipyard availability where MOGAS systems were worked on.

   (3) Upon request from the respective ships through each applicable ISIC.

b. The MOGAS Assessment Program must be conducted by the ISIC, and will consist of the following elements:

   (1) Conducting required assessments, and providing assessment reports to the appropriate Type Commander and Fleet Commander.

   (2) Taking corrective action on minor discrepancies and providing guidance for repairs of major discrepancies.

   (3) Providing on the job training for operators and maintenance personnel, as requested.

   (4) Reviewing and validating the Coordinated Shipboard Allowance List, Aviation Fuel Operational Sequencing System, Planned Maintenance System, Personnel Qualification Standard and the associated technical manuals.

   (5) Providing assistance during MOGAS on-load or off-load evolutions, as requested.

   (6) Performing assist visits when requested by the ship.

c. LPD 17 Class MOGAS Assessment and Certification should be conducted per reference (e).

(j) NAVSEA ltr 4730 Ser 05Z/499 of 1 Nov 23

11.1 PURPOSE. To establish clear guidance and assign responsibilities for the maintenance, repair and modernization of service craft, combatant craft, and boats hereinafter referred to as Service Craft and Boats (SC&B), as defined in references (a) through (j). This policy provides a comprehensive framework for managing an integrated fleet maintenance process, ensuring all craft and boats' quality, safety, and maximum operational readiness throughout their life cycle.

a. Personnel assigned to individual ships, service craft, or responsible shore-based activities must perform all SC&B maintenance within their capabilities.

b. SC&B must be maintained with the same care that naval ships receive. This is particularly true for boats which also serve as ready lifeboats.

c. If there is no Unit Identification Code assigned to the craft or boat, the parent command's Unit Identification Code and a unique Work Center will be used for the Current Ship's Maintenance Project control and any related work notifications Ship's Maintenance Action Form, OPNAV 4790/2K (2-Kilo).

11.2 MATERIAL READINESS.

a. Regular periodic inspections of SC&B must be conducted by the command to which the SC&B is assigned (referred to hereafter as the "parent command"). Parent commands can request assistance with periodic inspections from either the local Regional Maintenance Center (RMC), the Fleet Maintenance Activity (FMA) or the designated In-Service Engineering Agent (ISEA) via their TYCOM (or ISIC if no TYCOM is assigned). The results of these inspections will determine the need to repair, modernize or replace a SC&B. The parent command will submit all planned

repair, modernization and major maintenance items (i.e., engine overhauls and hull repairs beyond the ability of the parent command) to the appropriate Type Commander (TYCOM) (or ISIC if no TYCOM assigned) for the current and following two years by the end of February of each year and the TYCOM or ISIC will provide the plan to the local RMC by the end of March. The plan must cite the boat registry number, the fiscal year and the quarter in which the repair, modernization, or major maintenance availability is desired. Any significant changes to previously submitted maintenance requests must be provided in a timely manner, including the reason for the change (i.e., the material condition of the craft affected by the change, operational commitments requiring hull change, etc.).

b. To conserve repair funds and to maintain SC&B in a satisfactory state of material readiness, Commanding Officers of ships and parent commands must set up a maintenance training program for all personnel connected with the operation and maintenance of SC&B. Craft and boat crews, maintainers, and assigned unit personnel should be instilled with pride of ownership. Fully use available personnel and funds before requesting help from the RMC to perform routine or emergent maintenance, repairs or modernization.

c. Maintenance is scheduled and performed with costs documented and records traceable to each SC&B by official hull registry number per reference (a).

d. TYCOMs (or ISIC if no TYCOM assigned) will aid parent commands with SC&B industrial availabilities by:

(1) Scheduling availabilities.

(2) Establishing overhaul cycles including, budgeting, scheduling, and funding per the requirements of reference (a) and (c).

11.3 MAINTENANCE OF BOATS ASSIGNED TO AFLOAT UNITS.

a. Commanding Officers are urged to take full advantage of the FMA facilities for Ship's Force upkeep and repair of their landing craft and boats. A limited quantity of hand and power tools and air compressors are available at the RMC or FMA for Ship's Force use. Ships may borrow these tools by sending a properly prepared 2-Kilo directly to the Regional Maintenance Center (RMC). Depending on the workload, assist teams from the RMC may be available to assist with the inspection of boats and craft. COMNAVSURFLANT and COMNAVSURFPAC ships and units must obtain tools from the FMA per the requirements of Chapter 30 of this volume.

b. Ship personnel desiring to make use of the RMC facilities should send a 2-Kilo to the RMC. If utilizing local Naval Facilities Engineering Systems Command (NAVFAC) crane services, submit a crane request directly to the NAVFAC crane department. Storage space for accomplishing the work must be arranged via each TYCOM (or ISIC if no TYCOM is assigned). Limited repair material not normally available onboard ship may be obtained from the RMC by submitting a 2-Kilo.

c. If long usage or extensive damage to any boat or landing craft is such that repairs by Ship's Force cannot keep a boat in a proper state of readiness, a 2-Kilo must be

submitted to the RMC via the TYCOM. The work notification must show the following additional information in Section IV of the 2-Kilo:

(1) The boat hull registry number, (not the local or command given name).

(2) Complete description of the work requested, including material and part reference manual, nomenclature, part number, and National Stock Number.

d. The RMC will accept such requests, provided that:

(1) The ship the boat is assigned to is not scheduled for a routine Chief of Naval Operations (CNO) Maintenance Availability in the immediate future.

(2) The repairs are beyond the capacity or capability of Ship's Force to accomplish.

(3) The RMC is allowed enough time before the ship's next scheduled operation to perform the repairs and return the boat or craft to the ship before departure.

e. When a boat is badly damaged, a statement of the circumstances surrounding the damage must be submitted via the TYCOM with the repair request.

f. Before delivery of a boat the RMC for repairs, the custodian must accomplish the following:

(1) Remove all outfitting items and all portable parts invoiced with the boat. Do not remove the backrest, security arch, outfit lights or compass unless directed by the receiving activity.

(2) Reference (d) provides details of hazardous materials to be removed before storage or transportation. Reference (d) must be reviewed and action must be taken to remove the items listed unless otherwise directed by the receiving RMC, ISEA assigned, or the storage facility.

(3) Drain and clean the bilges and ensure the bilges are dry and free of petroleum or other foreign residue. When it is impossible to deliver the craft or boat in this condition, the repair or receiving activity must be notified in advance so that arrangements can be made to remove any liquids and perform any required gas-free inspections.

(4) Boats with bilge plugs must not be transported or delivered with the plugs installed. The custodian must drain or pump all liquids and clean the bilges. The bilge plug must be securely attached to the steering wheel (helm).

(5) Electronic devices must be cleared and removed to the greatest possible extent to support cybersecurity.

g. Reference (c) provides details for transfer, receipt, disposal and survey of boats. Replacement ship's boats are normally available from Naval Sea Systems Command (NAVSEA) Boats and Craft Program Office (PMS300), via the TYCOM, upon receipt of a valid Boat Inspection Report per reference (c).

h. If the RMC cannot accomplish the requested boat or landing craft repairs, the Commanding Officer of the RMC will advise the ship to request an availability from the TYCOM.

11.4 MAINTENANCE OF SERVICE CRAFT ASSIGNED TO SHORE COMMANDS AND SUPPORT ACTIVITIES.

a. This section refers to service craft listed in reference (b) and active service craft hull types identified in reference (d). Proper service craft maintenance is the responsibility of the user command or custodian activity. Each service craft must be maintained to the same level of readiness as U.S. Navy ships. Each user activity must establish a service craft maintenance program following policies and procedures contained in reference (a). Additional service craft maintenance procedures will be established by NAVSEA, as required. Reference (h) requires implementing the Maintenance, Material, and Management (3-M) system per reference (g) for all US Navy service craft except those operated or maintained by civilians. Note that the instructions authorize using the 3-M system for service craft operated and maintained by civilians if the support contract specifically includes using 3-M as a requirement. In the absence of 3-M, reference (i) applies with the tailoring that the term "boat" applies to service craft.

b. Organizations' user command or custodian desiring to use RMC facilities should send a 2-Kilo to the RMC or request the local NAVFAC crane department to request crane services to handle the craft. Stowage space for accomplishing the work must be arranged via each TYCOM (or ISIC if no TYCOM is assigned). Limited repair material not normally available may be obtained from the RMC by submitting a 2-Kilo.

c If long usage or extensive damage to any craft is such that repairs by the Ship's Force cannot keep a craft in a proper state of readiness, a 2-Kilo must be submitted to the RMC via the TYCOM (or ISIC if no TYCOM is assigned). The work notification must show the following additional information in Section IV of the 2-Kilo:

(1) The craft hull or registry number (not the command given name).

(2) A complete description of the work requested, including material and part reference manual, nomenclature, part number and National Stock Number.

d. The RMC will accept such requests, provided that:

(1) The craft is not scheduled for availability in the immediate future.

(2) The repairs are beyond the capacity or capability of the user command's ability to accomplish.

(3) The RMC is allowed enough time before the craft's next scheduled operation to perform the repairs and return the craft to operational readiness.

e. When a craft is badly damaged, a statement of the circumstances surrounding the damage must be submitted via TYCOM (or ISIC if not TYCOM assigned) with the repair request.

f. Before delivery of a craft to the RMC or FMA for repairs, the custodian must:

(1) Secure all outfitting items and portable parts invoiced with the hull, reference (d).

(2) Reference (d) provides details of hazardous materials to be removed before storage or transportation. Reference (d) must be reviewed, and action must be taken to remove the items listed unless otherwise directed by the receiving RMC, ISEA assigned, or the storage facility.

(3) Drain and clean the bilges of dirt, diesel fuel, and oil. When it is impossible to deliver the craft in this condition, the repair or receiving activity must be notified in advance so that arrangements can be made to remove any liquids and gas-free inspections.

(4) Craft with bilge plugs must not be transported or delivered with the plugs installed. The custodian must drain or pump all liquids and clean the bilges. The bilge plug must securely attach to the steering wheel (helm).

g. Reference (d) details the transfer, receipt, disposal, and survey of service craft. Send service craft replacements request to the Service Craft Inventory Manager upon an assessment via the Fleet as per reference (d). Annual updates to support the modernization or replacement of support and service craft should be submitted to Service Craft Inventory Manager.

11.5 SHIP'S BOAT REPAIRS DURING CHIEF OF NAVAL OPERATIONS MAINTENANCE AVAILABILITY.

a. Hull repairs affecting strength and watertight integrity beyond the capability of the Ship's Force are considered urgent repair items. Ship's Force must ensure the required repairs are included in the work package for screening at the Work Definition Conference.

b. Boats that do not require work by an industrial activity must be removed from the ship before entering the industrial activity. Storage areas can usually be made available via the TYCOM.

c. Boat hoisting gear tests must be accomplished during the ship's CNO Maintenance Availability per reference (d), chapter 583, volume 2, and volume IV, chapter 13 of this manual.

11.6 MAINTENANCE OF SERVICE CRAFT AND BOATS ASSIGNED TO SHORE ACTIVITIES, GROUP AND SQUADRON COMMANDERS.

11.6.1 Unit Level Maintenance.

a. Maintenance and repair of SC&B within the capability of the parent command should be budgeted, scheduled, and accomplished to maintain a high state of material readiness. Commands and activities must appoint a Maintenance Officer as a sole point of contact for all matters relating to boat and craft maintenance. The Maintenance Officer must be capable of making maintenance decisions based on engineering and operational parameters and should actively participate in the planning and execution of all maintenance actions affecting the parent command.

b. Annual budget proposals submitted by the parent commands to their TYCOM (or ISIC if no TYCOM is assigned) must address anticipated funding requirements to maintain the material condition of all assigned SC&B. The accomplishment of

approved modifications and modernization work (within the parent command's capability), and must discuss in detail how these funds will be applied to specific SC&B.

c. Request for allowance changes to SC&B inventories, resulting from mission requirement changes, must be assessed in terms of maintenance capabilities and budget constraints.

11.6.2 Regional Maintenance Centers or Fleet Maintenance Activity.

a. Each RMC and FMA has a defined Area of Responsibility (AOR) as outlined in volume VI, chapter 2 of this manual. Each RMC and FMA is responsible for establishing and maintaining open communication lines with the TYCOM (or ISIC if no TYCOM is assigned) and SC&B custodians within the defined AOR to ensure effective craft and boat maintenance support. This open communication will facilitate coordination and collaboration for repairs, maintenance, and modernization, ultimately ensuring the readiness and availability of SC&B within their respective AORs.

b. Repairs to SC&B beyond the parent command's capabilities must be documented on 2-Kilo and submitted to the cognizant RMC for completion. The TYCOM (or ISIC if not TYCOM assigned) budgets repair funds for SC&B for the RMC/FMA activities on a quarterly basis. The TYCOM or ISIC will screen individual craft and boat work packages to ensure completion within allocated funding.

c. Industrial repairs are normally programmed for accomplishment during scheduled SC&B overhauls or other repair availabilities unless the repairs are emergent and have been documented with a Casualty Report. The RMC or FMA will accept emergent work requests to clear the Casualty Report on a case-by-case basis with TYCOM approval.

d. Shore-based commands that have SC&B repairs or overhauls accomplished by industrial activities via the RMC or FMA retain the responsibility for these repairs. The parent command is responsible for maintaining liaison with the industrial activity and keeping the TYCOM informed, via the RMC, or their ISIC, of problems or potential problems. If the parent command and the FMA agree, the FMA will liaise with the industrial activity on a reimbursable cost basis.

11.6.3 Overhaul of Service Craft and Boats.

a. As per reference (a), CNO has established an overhaul cycle for SC&B.

b. After the RMC has developed the work specification and before the contracting authority issues the Invitation for Bids to potential bidders, the TYCOM (or ISIC if not TYCOM assigned) and parent command will review the copies of the work specifications for accuracy and completeness. The TYCOM and parent command must complete the review quickly and report any discrepancies to the RMC. The RMC and TYCOM will resolve any discrepancies in the bid specifications with the contracting authority before releasing the Invitation for Bids.

11.7 RESPONSIBILITIES. For all industrial availabilities the following responsibilities are assigned:

11.7.1 Type Commander.

a. Coordinate all aspects of the advance planning.

b. Authorize all new industrial work items.

c. Authorize all growth (new) work in an existing industrial work item.

d. Provide funding to accomplish inspections, all authorized work and oversight via the RMC or FMA.

(1) For afloat commands, industrial work will be conducted on a cost-reimbursable basis, with RMC and FMA oversight typically funded through mission funds.

(2) For shore-based commands and other non-mission commands, both industrial work and RMC oversight will be via cost-reimbursable.

e. Monitor all changes in established milestones (internal milestones, used by the industrial activity to monitor schedule progress, are not subject to TYCOM approval).

f. Direct appropriate action when the quality or completeness of the industrial activity work is in question.

11.7.2 Immediate Superior In Command. (if not assigned, these functions will revert to the TYCOM)

a. Review overhaul progress reports.

b. Review Ship's Force and RMC concurrent work.

c. Ensure pertinent directives are followed concerning the safety of personnel and equipment.

d. Attend sea trial and overhaul completion review conferences.

e. Assist in all aspects of the planning and monitoring of industrial availabilities.

11.7.3 Commanding Officers of Parent Commands.

a. Coordinate all planning aspects of craft or boat overhauls with the TYCOM and Immediate Superior In Command (where assigned).

b. Prepare and submit overhaul progress reports per volume II, part II, chapter 2 of this manual.

c. Ensure enough trained personnel are assigned to on-site monitoring of craft or boats while in an industrial availability.

d. Fulfill all responsibilities for safety of craft and personnel.

11.8 REPAIR AND OVERHAUL OF SC&B ENGINES.

a. All diesel engines on SC&B must be operated and maintained according to the guidelines outlined in reference (d) and reference (j).

b. SC&B custodians must repair and maintain engines using their Operating Target. When available, replacement parts must be obtained through the Navy Stock System to prevent the potential for erroneous parts and simplify the stocking of parts.

c. The frequency of engine overhauls is determined by the number of operating hours specified in reference (d).

d. When an engine is no longer supported by the supply system or the original equipment manufacturer (OEM), its replacement is authorized by issue of a Boat Alteration Questions about obsolete engines should be directed to NAVSEA PMS300, Naval Surface Warfare Center, Carderock Division, Code 83, and the assigned TYCOM.

e. All spare craft and boat engines or engines being replaced must be preserved according to reference (d). With approval from TYCOM, replaced engines can be turned in for core replacement or disposed of according to regulations.

11.9 BOAT AND SHIP (SERVICE CRAFT) ALTERATIONS.

a. Boat Alterations, as per reference (d), are required for boat configuration changes. Submit Boat Alterations requests to NAVSEA PMS 00, via the chain of command.

b. Service craft configuration changes are known as SHIPALTS and are required for configuration changes. Submit SHIPALT requests as per reference (d) to the applicable In-Service Program Office via the ISEA or Planning Yard.

c. The accomplishment and funding of approved Boat Alteration must be managed by the TYCOM (or ISIC if no TYCOM is assigned).

VOLUME VI
CHAPTER 12
DEGAUSSING

REFERENCES.

(a) OPNAVINST S8950.2 - Electromagnetic and Acoustic Signature Control for Mine Warfare
(b) NAVSEA S9086-QN-STM-010 - NSTM Chapter 475 (Magnetic Silencing)
(c) NAVSEA S9475-AC-PRO-010 - Degaussing Forms, Records and Reporting Procedures
(d) NAVSEA S5475-AL-PRO-010 - Principles and Procedures for Magnetic Treatment of Ships
(e) SSPINST 8950.2 - Procedure for Fleet Ballistic Missile (FBM)/Strategic Weapons System (SWS) Components During Flash-Deperm Treatment of an SSBN

12.1 PURPOSE. To provide magnetic silencing and deperming requirements, and the check ranging and reporting procedures defined by reference (a). Reference (b) provides the basic principles and background of degaussing.

12.2 DEGAUSSING DEFINITIONS.

12.2.1 Check Ranging. The action of a ship making reciprocal range runs over an instrumented array at a Magnetic Silencing Facility (MSF), for purposes of measuring the ship's degaussed magnetic signature. Check ranging is the principle method to determine the effectiveness and reliability of degaussing systems. A satisfactory check range is two range runs on reciprocal headings within a six-week period which are determined to satisfy the requirements of reference (a) while ship's degaussing equipment (if installed) is operating properly and all required on-board information has been provided. Underwater Electromagnetic Measurement Systems for check ranging are available at the following locations:

San Diego, CA	Norfolk, VA
Pearl Harbor, HI	Mayport, FL
Yokosuka, Japan	New London, CT
Kings Bay, GA	Souda Bay, Greece

12.2.2 Degaussing Folder. The Degaussing Folder (NAVSEA 8950/1) is an official ship log which contains all information needed by degaussing authorities. It contains instructions for operation of the degaussing system, degaussing charts, values for current and turn settings, installation forms, compass compensation forms and a log section which documents all pertinent details of magnetic treatment and of actions taken related to the ship's degaussing system. The degaussing folder is issued to a ship by the MSF that renders the initial magnetic treatment and system calibration. Reference (c) provides the detailed requirements for maintaining the degaussing folder.

12.2.3 Degaussing System. A shipboard system which reduces the residual permanent and induced magnetic signature of the ship, and is the ship's primary passive mine countermeasure

system. Different combinations of degaussing coils, types of controls and power supplies comprise a degaussing system.

12.2.4 Degaussing System Calibration. The process whereby the ship's magnetic signature is measured, analyzed and ship-specific signature compensating coil settings are developed and provided to the ship.

12.2.5 Deperming. Deperming is typically performed as part of the ship's degaussing system calibration, as specified in reference (a). It is the magnetic treatment of a ship's hull to minimize permanent magnetism and is also performed to place the ship's permanent magnetization into a standard condition such that it is approximately the same as the other ships in the class. The deperming needs of operational ships are established by check ranging.

12.2.6 Magnetic Compass Compensation. Magnetic field from a ship's degaussing system can interfere with a ship's magnetic compass heading and make the system useless for navigation. Per reference (b), a compensating coil is set up around the magnetic compass to neutralize the effect of degaussing coil field in the vicinity of the compass. Magnetic compasses that use fluxgate technology have a degaussing compensation system that does not rely on compensation coils.

12.3 SURFACE SHIPS AND SUBMARINES WITH DEGAUSSING SYSTEMS.

a. Reference (a) mandates check ranging for all surface ships and submarines with degaussing systems. To meet minimum requirements, a satisfactory check range is required every six or twelve months depending on the type of system installed. Normally, ships are automatically ranged by degaussing facilities (listed in paragraph 12.2.1 of this Chapter) as they transit channels between the hours of 0800-1600 weekdays only. If ranging is required outside of typical hours or on weekends, arrangements must be made with the MSF. In addition to periodicity requirements, check ranging must be performed:

   (1) After new construction.

   (2) Before and after a major dry-docking availability.

   (3) After a major shock to the hull from a nearby explosion.

   (4) After grounding or collision.

   (5) As feasible, before entering mined waters.

   (6) Before issuing a Casualty Corrected of any Casualty Report degaussing equipment.

   (7) At every opportunity, when entering or leaving a U.S. Navy port with ranging facilities (ranging at a non-USN range facility is not permitted without prior CNO approval). **Declining use of range facilities is not an option**.

   (8) After a major alteration to the hull and superstructure.

   (9) Within 90 days prior to deployment

b. Ships forward deployed to areas without ranging facilities are exempted from check range requirements by reference (a).

c. When a ship which receives notification from an MSF of unsatisfactory magnetic condition and the reason for unsatisfactory signature is a degaussing equipment failure, the ship is required by reference (a) to report via Casualty Report as directed by chapter 5 of this volume.

d. A ship's degaussing system must be de-energized (or secured) prior to system calibration, unless degaussing coil settings approved by NAVSEA have been provided. Alternatively, if it is not feasible to secure the system, the degaussing coil power supply outputs must be set to zero Amperes. The degaussing system may temporarily be energized for testing, maintenance and other related work.

e. Calibrated degaussing systems will be operated at all times while underway.

12.3.1 Check Ranging.

a. Before check ranging, contact the range facility by voice radio. Range crossings will be considered invalid unless the range is clear of other traffic (including tugboats) before and during the crossing.

b. Ranging facility requires the following information:

(1) Coil Settings. Once the ship is on course, and before the ship crosses the range, inform the facility of actual ammeter currents and polarities. Ensure the meter readings are correct for both zone and polarity. Actual coil currents in effect during the crossing MUST be recorded and reported to the MSF for satisfactory check ranging.

(2) Ships with Advanced Degaussing systems. Due to the large number of coil currents required to be reported, ships with these systems must make arrangements with the MSF to deliver this information by facsimile or other electronic methods after the crossing occurs. Current values must be recorded while ship is crossing the range on a steady heading.

(3) Ship's Draft. Forward and aft drafts. Provide actual keel drafts, vice navigational drafts.

(4) Ship's heading. Provide the range with the actual ship's heading. Once the course is established, maintain a steady course and constant speed between 8 to 10 knots, or as the range operator directs.

12.3.2 Responsibilities.

12.3.2.1 Type Commander or Immediate Superior In Command.

a. Monitor the degaussing readiness of assigned ships.

b. Ensure that ships "check range" as required by paragraph 12.3.

c. The Type Commander may approve a waiver or a Departure from Specification per volume V, part I, chapter 8 of this manual for inability to meet check ranging or deperming requirements, or both, if necessary. The Technical Warrant Holder (NAVSEA 05P1) may be contacted if advice on impact to ship susceptibility is warranted. NAVSEA 05P1 is the Technical Warrant Holder for Surface Ship Underwater Signatures and Susceptibility.

12.3.2.2 Ship Commanding Officer.

a. Ensure ship's magnetic signature is minimized by periodic check ranging.

b. Maintain ship's degaussing system.

c. Ships unable to check range or unable to establish communications with the MSF must make comments as appropriate in the remarks section of the daily Operational Reports.

d. Ships with installed systems may not decline check ranging.

e. Submit a minor Departure From Specification per volume V, part I, chapter 8 of this manual if range checking requirements of paragraph 12.3 of this chapter are not met.

12.4 SUBMARINES WITHOUT INSTALLED DEGAUSSING SYSTEMS. The submarine force must maintain all units in the best degaussed condition within expected areas of operation. Expected areas of operation include zones .22, .33, .44, and .55 as shown in reference (d). Operations in zone .55 will necessitate additional treatment, since presently used flashing procedures are designed to provide protection only in zones .22, .33, and .44. Normally, submarines are automatically ranged by degaussing facilities as they transit channels between the hours of 0800-1600 weekdays only. If ranging is required outside of typical hours or on weekends, arrangements must be made with the MSF. Reference (a) mandates check ranging for all submarines. To meet minimum requirements, a satisfactory check range is required at least once yearly. In addition to periodicity requirements, check ranging of submarines must be performed:

a. Before and after Post Shakedown Availability (following new construction).

b. After a CNO Maintenance Availability.

c. After a major shock to the hull from a nearby explosion.

d. After grounding or collision.

e. At every opportunity, when entering or leaving a U.S. Navy port with ranging facilities (ranging at a non-USN range facility is not permitted without prior CNO approval). **Declining use of range facilities is not permitted**.

NOTE: THE PRECEDING REQUIREMENTS ARE THE MINIMUM RANGING REQUIREMENTS. RANGING SHOULD BE PERFORMED AT EVERY OPPORTUNITY TO ENSURE EARLY IDENTIFICATION AND CORRECTION OF MAGNETIC SILENCING DEFICIENCIES.

12.4.1 Check Ranging.

a. Before check ranging, contact the range facility by voice radio. Range crossings will be considered invalid unless the range is clear of other traffic (including tugboats) before and during crossing.

b. Ranging facilities require the following information:

(1) Submarine's Draft. Forward and aft drafts. Provide actual keel drafts, vice navigational drafts.

(2) Submarine's heading. Provide the range with the actual submarine's heading. Once the course is established, maintain a steady course and constant safe speed between 8 to 10 knots, or as the range operator directs.

12.4.2 Responsibilities.

12.4.2.1 Type Commander or Immediate Superior In Command.

a. Ensure that submarines check range as required by paragraph 12.4 of this chapter.

b. Issue waivers to check ranging and deperming requirements if necessary. The Technical Warrant Holder (NAVSEA 05P1) may be contacted if advice on impact to ship susceptibility is needed.

c. Schedule ships with unsatisfactory magnetic signatures for flash deperming at the earliest opportunity.

12.4.2.2 Ship Commanding Officer.

a. Ensure ship's magnetic signature is minimized by periodic check ranging.

b. Inform the ISIC upon receipt of an unsatisfactory ranging. Submarines may not decline check ranging.

c. Maintain the ship's Degaussing Folder.

d. Undergo flash deperming as directed by the ISIC or TYCOM.

e. Before flash deperming prepare ship's equipment and off-load or protect material per references (b) and (e). Additional guidance can be obtained from the MSF.

f. Submit a minor Departure From Specification per volume V, part I, chapter 8 of this manual if range checking requirements of paragraph 12.4 of this chapter are not met.

12.5 SURFACE SHIPS WITHOUT DEGAUSSING SYSTEMS. Surface ships not equipped with a degaussing system (except LCS 2 class) are not required to check range per reference (a).

VOLUME VI

CHAPTER 13

SURFACE SHIP CORROSION CONTROL

REFERENCES.

(a) NAVSEA S9086-DA-STM-010 - NSTM Chapter 100, Hull Structures
(b) NAVSEA S9086-VD-STM-010 - NSTM Chapter 631, Preservation of Ships In-Service - General
(c) NAVSEA Technical Manual T-9630-AB-MMD-010 - Corrosion Control Assessment and Maintenance Manual (CCAMM)
(d) COMNAVSURFORINST 3120.1 - Zone Inspections

13.1 PURPOSE. To provide basic guidelines necessary to maintain an effective Corrosion Prevention and Control Program. Guidance for inspection, prevention and repair of corrosion on ships is contained in references (a), (b) and (c), which supersedes all previous class specific Corrosion Control Manuals distributed by Naval Sea Systems Command. In addition, this chapter requires the use of the Corrosion Control Information Management System (CCIMS) as the repository for all inspection and maintenance data. The maintenance of coating integrity to prevent structural degradation is necessary to ensure the safe and proper operation of the ship. Maintenance of areas with severe corrosion require enhanced and targeted surveillance due to the highly corrosive conditions that can lead to higher risk of accelerated structural degradation. Reference (a) provides structural system survey and inspections criteria for surface ships and aircraft carriers. Reference (c) provides process requirements and guidance for the conduct of surveys and inspections, and the disposition of their results used to make coating and structural condition repair or replacement decisions in selected areas on Naval surface ships, craft, and aircraft carriers.

13.2 BACKGROUND. Protective coatings are the most widely used method of corrosion control and have specific applications. Therefore, the physical location and operating environment must be taken into consideration when choosing a coating system. Through the application of improved corrosion prevention and control techniques, procedures, and materials, longer lasting and more effective results can be obtained with a reduction in man-hours spent on preservation. The Department of Defense “Annual Cost of Corrosion for Navy Ships” study identified corrosion control and preservation as a high cost driver for ship life cycle maintenance. In order to reduce this life cycle maintenance cost, CCIMS shall contain the historical and current coating or structural condition data for tanks, voids and general structure to facilitate timely and appropriate maintenance decisions. The failure to identify, track, and repair a preservation system deficiency can result in coating failure and can result in damage to the structure, substantially increase repair costs and adversely impact both the seaworthiness and combat worthiness of the hull. CCIMS was developed to document coating conditions to assist in maintenance planning. In 2018, the CCIMS was integrated with a suite of new maintenance planning systems, and the CCIMS website inactivated. Submit carrier data using the Carrier Structural Survey and Inspection Material Condition Feedback (MCF) form to record the conditions of coatings, structures, and related components for applicable structural systems, and those listed in reference (c). Contact the appropriate TYCOM Corrosion Control Manager to obtain a carrier MCF form. To submit data for other vessels, contact the applicable Maintenance

Planning Activity. Term "CCIMS" refers to the Maintenance Planning Activity data storage location. Contact Surface Maintenance Engineering Planning Program for access request information to the surface ship CCIMS for Surface Force ships.

13.3 POLICY.

a. All Level 1 and 2 corrosion control structural system surveys and inspections must be accomplished per reference (a) and (c).

(1) Level I Structural System Surveys are defined as scheduled inspections per the Class Maintenance Plan specific to each ship class and are focused on ship structure and foundations.

(2) Condition-directed Level 2 structural inspections must be conducted if warranted by deficiencies identified by a Level 1 survey. The Level 2 inspection must include, but is not limited to, thickness gauging measurements and Non-Destructive Testing as applicable to the structural condition to allow for adequate assessment.

b. The CCIMS must be used to document Level 1 and Level 2 inspections for coating and structural condition used in inspections, maintenance and repairs. For Surface Force ships only, the Corrosion Assessment Data Entry Tool (CADET) will be used to enter assessment data and generate tank repair Automated Work Requests (AWR). Type Availability Screening Code One shall be used for all CADET generated AWRs.

c. All inspectors and surveyors must be qualified per reference (c) requirements.

d. Whenever a tank or void is opened for manned entry, an inspection must be performed. If an optional Level 1 survey of opportunity is conducted, it must be performed per reference (c). All inspection results will be entered into the CCIMS.

e. For Surface Force ships and aircraft carriers, the CCIMS will be used for ship maintenance availability planning.

NOTE: ANY OUT-OF-SPECIFICATION CONDITION FOUND IS TO BE MITIGATED PER VOLUME V, PART I, CHAPTER 8 OF THIS MANUAL.

13.4 RESPONSIBILITIES.

13.4.1 Type Commanders.

a. Port Engineers and Maintenance Program Managers (MPM) schedule and screen corrosion control work items to the appropriate repair activities during industrial availabilities and upkeeps with sufficient length to accommodate the work.

b. Port Engineers and MPMs screen tank, void and general structural inspection AWRs in Availability Work Packages to the repair activities capable of performing the inspections including in-house Type Commander resources as applicable.

c. When tasked by Port Engineers and MPMs, inspectors and surveyors assigned by Fleet Maintenance Activity, Regional Maintenance Center (RMC) or Type Commander will perform inspections using references (a) and (c). Inspector or surveyor will ensure all inspection data is entered into CCIMS within three working days upon completion of inspection.

d. (Aircraft Carriers only) Provide to Ship's Force:

(1) Self-help information on corrosion control information.

(2) Technical assistance on setting up and updating a ship's Corrosion Prevention and Control Program.

(3) Coordinate or provide training per reference (c) for inspection personnel assigned by the Repair Officer (Ship's Corrosion Control Officer for Aircraft Carriers).

13.4.2 Fleet Maintenance Activity or Regional Maintenance Center.

a. Maintain facilities and sufficient qualified personnel to apply protective coatings.

b. Conduct Technical Assist Visits upon request from a ship during a fleet maintenance availability, or at other times as the workload permits, to include:

(1) Identification of shipboard topside corrosion problem areas.

(2) Recommendations for methods and means of corrosion problem correction.

(3) Informing Ship's Force of local industrial assets, including local Fleet Maintenance Activity, RMC, other industrial facilities (i.e., industrial activities) or Commercial Industrial Services assets.

(4) Self-help information for Ship's Force.

(5) Technical assistance on setting up and updating a ship's Corrosion Prevention and Control Program.

c. Perform tank, void and general structural inspections as tasked by the Port Engineers and MPMs. Inspections on surface ships and aircraft carriers will use references (a) and (c). Inspector or surveyor will ensure all inspection data is entered into the CCIMS within three working days upon completion of inspection.

13.4.3 Surface Force Ships and Aircraft Carriers.

a. Set up an ongoing corrosion prevention and control program, including all topside structure, equipment, machinery, fixtures, combat and weapons systems, and components.

(1) For Commander, Naval Surface Force, use reference (d) as guidance.

(2) For Commander, Naval Air Force, use chapter 19-1 of this volume as guidance.

(3) Additional guidance can be found in references (a), (b), Maintenance Index Page (MIP) 1500, MIP 6300, and MIP 6641.

b. Take planned or corrective action on all potential discrepancies, and enter all significant discrepancies into the Current Ship's Maintenance Project.

c. Ensure scheduled AWRs requesting tank, void and general structural inspections are conducted by RMC or Type Commander assigned inspectors and surveyors as required by work center Planned Maintenance System. Ensure the AWR includes requirements for cleaning and gas free services as required.

d. (Aircraft Carriers only) Aircraft carrier Type Commanders (TYCOM) must employ Level 1 Surveyors (Coatings Inspectors) certified per the requirements of reference (c). These Certified TYCOM Level 1 Surveyors must train and assist Ship's Force with performance of Level 1 Surveys and documentation of survey findings in support of the availability planning process per reference (c). These certified TYCOM Level 1 Surveyors will also provide additional Shipboard Corrosion Assessment and Reporting training to designated Ship's Force personnel who can assist other Ship's Force personnel in areas of surface preparation, coating selection and application and Quality Control process for the preservation of spaces and equipment. The overall collection, input and management of the CCIMS by certified Level 1 Surveyors at the TYCOM is required throughout the 32-month availability cycle to fully support Maintenance Program Managers in the life cycle management of shipboard preservation.

e. (Aircraft Carriers only) The Repair Officer is designated as the Ship's Corrosion Control Officer and is responsible to ensure divisions, per chapter 19-1 of this volume, have sufficient numbers of Ship's Force personnel certified as Level 1 Surveyors per reference (c) to conduct Level 1 Structural and Coating Condition Surveys. All inspection results will be entered into the CCIMS. Departures From Specifications (DFS) must be submitted per this manual and as defined in reference (c). The Repair Office will accomplish a joint inspection with the Supervisor and the Commanding Officer's designated representative (i.e., either a qualified Ship's Force Level 1 Surveyor or TYCOM Level 1 Surveyor) upon completion, inspection and acceptance, by the contractor, of work within each compartment.

NOTE: PEAK TANKS ARE DESIGNED AS A SEAWATER BALLASTING SYSTEM UTILIZING FIRE MAIN; HOWEVER, THE TYCOM REQUIRES THE USE OF FRESH WATER IN PEAK TANKS TO DIMINISH PREMATURE FAILURE OF THE COATING SYSTEM.

f. (Aircraft Carriers only) For any tanks or voids not designed to be exposed to seawater or not normally filled with seawater, Ship's Force will ensure the following:

(1) Transfer only fresh water to these tanks and voids for the purposes of ballasting or controlling list. Report to the TYCOM which tanks or voids are filled with fresh water.

(2) If seawater must be utilized for any reason, submit a DFS to the TYCOM for adjudication and approval.

VOLUME VI

CHAPTER 14

CANNIBALIZATION

REFERENCES.

(a) COMSUBLANT/COMSUBPACINST 4406.1 - Submarine Supply Procedures Manual
(b) NTRP 1-03.1 - Navy Tactical Reference Publication, Operational Reports
(c) OPNAVINST 4440.19F - Policies and Priority Rules for Cannibalization of Operational Equipment and Diversion of Material at Contractor Plants to Meet Urgent Operational Requirements

LISTING OF APPENDICES.

A Sample Cannibalization Request Message (Aircraft Carriers and Surface Force Ships Only)
B Sample Cannibalization Request E-mail (Surface Force Ships only – based on TYCOM guidance)

14.1 PURPOSE. To provide guidance for active ship cannibalization and the resultant payback process between ships and Type Commander (TYCOM) cannibalization reporting requirements.

14.2 POLICY. Cannibalization between active Fleet units is not a normal peacetime practice and will not occur unless:

a. A significant degraded readiness condition has been reported.

b. All possible actions have been taken to satisfy the material requirement through other means.

c. The impact on maintenance personnel has been considered.

14.2.1 Commander Naval Surface Force Ships.

a. Cannibalization Not Involving Ships in Overhaul. When a system asset is not available and if the degree of readiness degradation (normally a CASREP) warrants such action, the only remaining alternative is to cannibalize from an active ship. Approval of active ship cannibalization request (not involving ships in overhaul) required to satisfy CASREP requirements will be authorized by the appropriate TYCOM.

b. Cannibalization Involving Ships in Availabilities. Cannibalization from ships in availabilities will be minimized since such actions often affect maintenance or operational schedules for several ships. Cannibalization may be initiated only after non-availability of materials through the supply system or alternate sources has been ascertained. Cannibalization from ships in overhaul or availability must be approved through the appropriate TYCOM. Requests must be submitted via the normal chain of command.

c. COMNAVSURFLANT or COMNAVSURFPAC will be included as information addressees for tracking purposes on all cannibalization request messages.

Cannibalization requests may be sent as Naval messages or e-mails, per TYCOM guidance.

14.2.2 Naval Air Force Ships. All cannibalization must be requested from and authorized by the TYCOM. The request and authorizations will be via message. The requesting message will specify the source of replacement parts, and will reference communications indicating the cannibalized ship's Commanding Officer's concurrence with the cannibalization action. The message must further specify the method of replacement.

14.2.3 Submarine Force Ships. In all cases, cannibalization actions must be in strict compliance with Appendix K of reference (a).

14.3 DEFINITIONS.

14.3.1 Self-Cannibalization. When a component is available on board the ship, but in a less essential or already inoperative piece of equipment, it may be desirable for the ship to disable the equipment or system to correct a casualty to a more critical piece of equipment or system. Such self-cannibalization is the prerogative of the Commanding Officer. Self-cannibalization is a temporary measure to return a more critical piece of equipment to an operational status. Replacement of the cannibalized component may or may not be required.

14.3.2 System Cannibalization. System cannibalization is cannibalization of system assets beyond the TYCOM's purview, including other TYCOM end-use material and inactive ship equipment and components. System cannibalizations are a supply system action whereas active cannibalizations are a maintenance action. TYCOM expediters will initiate all system cannibalizations.

14.3.3 Active Ship Cannibalization. Active ship cannibalization is removal of component(s) or equipment installed in an active ship (or component(s) or equipment removed for overhaul from an active ship) for installation in another active ship. Because of the adverse effects of active ship cannibalization, such action will be taken as a last resort and only in exceptional cases when all other sources have been exhausted. When active ship cannibalization is authorized, the primary source for cannibalization is ships in Chief of Naval Operations Maintenance Availabilities, with recourse to operational ships only as a last resort.

14.4 CRITERIA FOR AUTHORIZATION (Active Ship Cannibalization). Conditions upon which authorization decisions are based include the following criteria:

a. There is an urgent operational requirement for the equipment and the existing degradation to the equipment or system is considered to be unacceptable to meet the specific operational commitments.

b. A Casualty Report (CASREP) and a Not Operationally Ready Supply requisition for the material or component to be cannibalized have been issued. The scheduled or estimated delivery date must be such that the parts will not be available from the designated supply stocking point in time to achieve satisfactory material readiness at least seven days prior to an underway date or operational commitment. The required part must not be available from other equipment on board the ship, where such equipment is not essential for the ship to accomplish its mission.

c. All other sources, including screening of all ashore supply support sources, afloat inventory assets, local fabrication and system cannibalization have been exhausted.

d. Operational alternatives such as delays in deployment and gaping requirements have been considered. Routine operations may not be sufficient cause to justify active ship cannibalization.

e. Immediate Superiors in Command (ISIC) will normally initiate the cannibalization when special circumstances or urgent operational commitments exist.

14.5 REQUEST PROCEDURE (Active Ship Cannibalization). The following procedures apply when requesting authorization for active ship cannibalization:

14.5.1 Requesting Ship.

a. Submit a CASREP per reference (b) on equipment involved.

b. Submit a Not Operational Ready Supply requisition for the parts.

c. Specify the required delivery date. Verify, through the supply system, the part will not be available in time to correct the casualty.

d. Determine that the required parts are not available from on board stock, other ships of the force in the same port, or other non-essential equipment on board the requesting ship.

e. Initiate an active ship cannibalization request via naval message. Appendix A of this chapter contains a sample cannibalization message with specific reporting requirements. This format must be utilized when requesting cannibalization.

f. (Surface Force only) Initiate an active ship cannibalization request via naval message or e-mail per TYCOM guidance. Cannibalization correspondence should be addressed to TYCOM via ISIC. Appendix A of this chapter contains a sample cannibalization Naval message and Appendix B contains a cannibalization e-mail format.

g. (Submarines only) INFO the following Plain Language Address Directory (PLAD) for all components that have a Last Maintenance Action Date assigned in the Planned Maintenance Requirements Inventories and Schedule: SUBMEPP PORTSMOUTH NH//DDS/SS//.

14.5.2 ISIC (Surface Force only)

a. Ensure the criteria, specific reporting requirements and proper correspondence format for active ship cannibalization has been met.

b. Nominate possible sources of cannibalization from ships within the force.

c. Confirm that cannibalization is necessary and that all prerequisites for active ship cannibalization, including attempts to supply the components from afloat storeroom spares and system cannibalization, have been met.

NOTE: APPROVAL PROCESS AND AUTHORITY FOR ACTIVE SHIP CANNIBALIZATION IN SUPPORT OF FORWARD-DEPLOYED NAVAL FORCES (FDNF) PATROL COASTAL (PC) AND MINE COUNTERMEASURE (MCM) SHIPS IS DELEGATED TO COMMANDER, NAVAL SURFACE SQUADRON FIVE. NAVAL SURFACE SQUADRON FIVE WILL PROCEED FROM HERE TO EXECUTE TYPE COMMANDER

(TYCOM) RESPONSIBILITIES IN PARAGRAPH 14.6.1 WITH INFORMATIONAL REPORTING TO TYCOM.

d. Request authorization from the TYCOM, as appropriate, to cannibalize from a ship within the force by endorsing the ship's request for cannibalization.

e. Transmit concurrence or non-concurrence Naval message or e-mail to TYCOM.

14.6 CANNIBALIZATION AUTHORIZATION AND EXECUTION (Active Ship Cannibalization).

14.6.1 Type Commander.

a. Monitor all cannibalization actions being carried out by subordinate units.

b. Adjudicate and authorize or disapprove all requests for cannibalizations from ships within the force and provide direction concerning the method of payback to the cannibalized ship.

c. If cannibalization is not feasible from a ship within the force, request assistance from other TYCOMs.

d. Meet the reporting requirements contained in reference (c) by producing a monthly cannibalization report (format or template to be provided by U.S. Fleet Forces Command N41). This monthly cannibalization report is due to the Deputy Chief of Staff, Fleet Ordnance and Supply (N41), U.S. Fleet Forces Command no later than the 10th of the following month.

14.6.2 Type Commander or Immediate Superior In Command. TYCOM (or ISIC when assigned) will perform the actions listed:

a. Monitor the delivery of cannibalized part(s) to the ship to ensure the parts are received as soon as possible.

b. Request the appropriate Regional Maintenance Center to assist in performing the cannibalization, to include the removal of the cannibalized parts and providing rigging services, as appropriate.

14.6.3 Requesting Ship. When directed, the ship requesting the cannibalized part will:

a. Assist the cannibalized ship, as requested, with the removal of the parts from the equipment.

b. Ensure the outstanding requisition for the cannibalized parts remains active unless otherwise directed by the TYCOM or the supply inventory control point. This requisition is the payback and will be diverted to the cannibalized ship.

14.6.4 Cannibalized Ship. When directed, the cannibalized ship will:

a. Remove the requested parts, prepare shipping documents, package the parts for shipment and deliver the items to the shipping activity, or deliver directly to the requesting ship, as appropriate.

b. Keep the chain of command advised of the supply status of the required parts. The cannibalized ship should follow-up the outstanding requisition(s) and acknowledge receipt of payback material.

SUBJ USS *SHIPNAME* ACTIVE SHIP CANNIBALIZATION REQUEST
Body

1. To correct CASREP 15XXX, request active ship cannibalization for (system nomenclature and part nomenclature (i.e., 1A GTM Fuel Oil Purifier)):

A. Requisition number (UIC-Julian date-serial number) and current status
B. Requisition required delivery date (RDD): (Julian date)
C. Equipment system nomenclature or equipment identification code (EIC)
D. CASREP DTG
E. Cognizant symbol, NSN, cage-part number, part nomenclature
F. Acquisition advice code (single digit) or SM&R code (up to 7 digits)
G. APL number
H. Circuit symbol (if applicable or n/a)
I. Job control number (JCN) used in the CASREP PARTS ID or data set
J. Required QTY, allowance QTY or on hand QTY
K. Part carried onboard: yes or no (should coincide with the allowance QTY listed)
L. Part available in the supply system wholesale: yes or no (yes = assets are available in the supply system but will not meet RDD, no = assets are not available in the supply system)
M. Part supports intermediate maintenance or repair: yes or no: (intermediate maintenance: cannibalization was performed to support intermediate level maintenance or repair. Ships must check the SM&R code to validate the appropriate maintenance level)
N. If assets are available in the supply system, provide the estimated shipping or delivery date (ESD or EDD Julian date)
O. Provide justification for cannibalization when assets are available in the supply system (reason or justification or n/a)
P. Reason part not in stock at operational unit (e.g., consumed, insufficient QTY, not carried, etc.)
Q. Reason for not replenishing (e.g., insufficient funding, not carried, etc.)

2. Recommended source is (proposed donor ship's name)
3. Cannibalization action necessary for (cannibalizing ship's name) to meet (e.g., underway operational commitment, light off, etc.). (This justification must match the CASREP)

NOTE: DEFAULT TO NAVAL MESSAGE IF NECESSARY E-MAIL ADDRESSES ARE NOT KNOWN.

CHAPTER 15

AMMUNITION OFF-LOAD

REFERENCES.

(a) NAVSEA OP-4 - Ammunition and Explosive Safety Afloat
(b) NAVSEA S9086-CH-STM-030 - NSTM Chapter 074 V3 (Gas Free Engineering)

15.1 PURPOSE. This chapter provides guidance and actions to be taken concerning the status of shipboard ammunition and explosives for ships and craft entering an availability.

15.2 POLICY. Except for those instances where operational requirements dictate the exception, the policies of reference (a) must be adhered to. Operational requirements dictating non-compliance with reference (a) will be addressed in a Type Commander (TYCOM) request for waiver.

15.2.1 Chief of Naval Operations Scheduled Maintenance Availabilities. For availabilities executed in accordance with chapter 2, parts I, II, or III, of volume II of this manual, ammunition will be off-loaded.

15.2.2 Fleet Maintenance Availabilities. For availabilities executed in accordance with chapter 3, parts I, II, or III, of volume II of this manual, the Maintenance Team will review the work package for work requiring ammunition off-load or retained during the Work Package Execution Review.

15.3 ACTION. Pyrotechnics (except those within life raft containers) and any ammunition which cannot be stowed in sprinkler-protected magazine spaces will be offloaded. Such magazine spaces need not be located below the main deck or waterline of the ship. All ammunition and pyrotechnics must be removed from ready service locations, launchers, and boats. Retention of other ammunition on board may be authorized on a case basis by the Naval Base Commander, Shipyard Commander or Supervisor of Shipbuilding (SUPSHIP), as applicable, provided the following mandatory requirements are met:

NOTE: TYCOM CONCURRENCE IS REQUIRED BEFORE AMMUNITION OFF-LOAD FOR AN AVAILABILITY.

a. If an overriding operational requirement exists, precluding the off-load of all ammunition, the TYCOM will certify that requirement to the cognizant Shipyard Commander, SUPSHIP or Naval Base Commander, as applicable.

b. Concurrence of the cognizant Shipyard Commander, SUPSHIP or Naval Base Commander must be obtained. This concurrence is based on an evaluation of the work to be done, the spaces involved, the security and damage control capabilities to be maintained on board during the availability, as well as other environmental factors.

c. Within the ship, hot work of any type will not be performed in a space or compartment containing ammunition, or adjacent to a compartment or space containing ammunition. If either condition is expected to exist during the availability, the ammunition in the affected compartment must be off-loaded before starting the

availability. For hot work required on external parts of the ship, the requirement for one intervening compartment may be waived by the Shipyard Commander or SUPSHIP, as applicable, if satisfied with the safety precautions to be taken. For all hot work in the ship, observe the safety and fire precautions in reference (b).

d. Notification must be made to the base or industrial activities emergency services, including fire, security, safety and medical organizations, what ammunition remains on board.

e. There must be no handling, re-stowage, test sampling or on or off-loading of ammunition while the ship is within an industrial activity.

f. The ship's fire prevention and damage control organizations must remain in effect at all times throughout the availability.

g. Placards and warning signs must be properly posted per reference (a) for specific spaces containing ammunition.

15.4 NOTIFICATION. When a ship or craft is scheduled to enter a commercial industrial activity, and approval has been granted to allow ammunition to remain on board, the United States Coast Guard Captain of the Port within whose jurisdiction the industrial activity is located, must be informed as to name and hull number of the ship, and the types and quantities of ammunition remaining on board. Should there be no cognizant Captain of the Port office, notify the cognizant Coast Guard District Commandant.

(e) COMNAVAIRFORINST 9640.1 - Control of Habitability Improvements in Aircraft Carriers

LISTING OF APPENDICES.

A Table of Habitability Project Technical Requirements and Actions
B Sample Habitability OPTAR Augment Funding Request
C Advance Planning Milestones

16.1 PURPOSE. To provide guidance in the requirements for implementing various habitability programs, and to identify the sources of assistance available for these programs.

16.1.1 Policy. The Chief of Naval Operation's shipboard habitability policy, as set forth in reference (a), sets specific minimum standards for new construction and commissioned naval ships, establishes procedures for attainment, and assigns responsibility for implementation.

a. Expenditure of ship's Operating Target (OPTAR) on habitability improvements, tools, and shipboard furniture and fixtures is considered a part of this program. Funds allocated to habitability must be obligated wisely to ensure the maximum, positive impact on shipboard quality of life.

b. For the procurement of furnishings, food service equipment and laundry equipment, every effort must be taken to use the Navy approved equipment identified in the NAVSEA Warfare Center – Philadelphia (NAVSEAWARCEN PD) Code 434 online catalog identified in paragraph 16.2.2.1.4.o.

c. Unauthorized alterations and rearrangements are prohibited.

d. Changes to spaces or systems covered by references (b) and (c) must be approved by Naval Sea Systems Command (NAVSEA) and conform to the requirements of Chapter 3 section 3.8 of this volume.

e. (Surface Force Ships and Aircraft Carriers only) All changes to Ship Configuration as a result of habitability improvements, repair or replacement, regardless of the accomplishing activity, must meet the requirements of reference (d), Section 2 and Appendix A of this chapter.

16.1.2 Discussion. Shipboard habitability encompasses ship's systems and facilities which satisfy the basic human needs of the crew. Included are facilities and systems for eating, sleeping, personal hygiene, ventilation, climate control, and recuperative or leisure activity. Since funds are severely limited, a well-managed habitability program is essential to ensure ships conform to the minimum standards of shipboard habitability.

16.2 HABITABILITY IMPROVEMENT PROGRAMS.

16.2.1 Ship's Force Habitability Improvement Projects. A short-range program, initiated, planned and scheduled by the ship. This program uses ship's OPTAR funds, not to exceed $25,000 per project, with the majority of the work being accomplished by Ship's Force.

a. These projects are intended to be practical, workable, short-range projects representing the individual Commanding Officer's strategy for the enhancement of living quarters and personnel services areas on board ship.

b. The emphasis of this program is to improve existing living conditions and the quality of life to meet the standards of reference (a) using Ship's Force labor and, when approved, special habitability fund augmentation. Allocation of these limited funds will be on a "fair share" basis in relation to Force requirements.

c. Not all livability items fall within the purview of ship's habitability improvement projects or qualify for special habitability fund augmentation. Items of the following nature are not within the scope of this program.

    (1) Replacement of consumable items such as mattresses, pillows, or utensils. These items should be programmed for regular OPTAR funding on an incremental basis.

    (2) Improvements such as furnishings and lighting in working spaces and passageways which are more properly categorized as improvements in safety or operations.

    (3) Unauthorized modifications or alterations. These modifications include alterations which affect compartment size or location, adding false bulkheads, overheads, or new equipment not previously installed.

    (4) Normal ship maintenance and organizational repair responsibilities.

    (5) The Deck coverings such as tile, terrazzo, etc. which are available via the Regional Maintenance Center (RMC) or Immediate Superior In Command (ISIC) Commercial Industrial Services contracts.

d. Ship's OPTAR funds may be used to renew existing bulkhead sheathing and false overheads in food preparation, medical, dental, flag, Commanding Officer, Executive Officer, chapel, wardroom, and Chief Petty Officer (CPO) messing and lounge areas. Existing sheathing and false overheads in crew messing areas may be replaced when unserviceable. Sheathing and false overheads in all other areas will be removed when unserviceable and will not be replaced. There will be no new installations of bulkhead sheathing or false overheads.

e. Due to the fiscal and physical limitations on this program, individual ships should develop a sensible, realistic and continuing plan for improving overall living conditions, with most of the work to be accomplished by Ship's Force.

f. Commanding Officers may request funds to support an emergent Habitability Improvement Project through the chain of command at any time. The request should contain an itemized listing, in prioritized order, with location, nomenclature, National Stock Number (NSN), cost estimate, and other clarifying information.

g. When requesting funds to replace food service equipment, comply with Type Commander (TYCOM) supply procedures. All requests must have clear and concise justification. Appendix B of this chapter provides a sample request letter.

16.2.2 Habitability Programs Under the Technical Sponsorship of Naval Sea Systems Command. These are programs under various titles that have evolved from the NAVSEA Habitability Program originally established in 1975. The common program element is approved NAVSEA title block drawings that define the scope and details for projects accomplished there under. These formalized programs are executed following long-range plans with the established goal of achieving and maintaining the Habitability Standards issued by reference (a) over the life of each ship.

a. The TYCOM must authorize and fund individual habitability upgrade and refurbishment projects. For aircraft carriers, projects are per reference (e). Contractor services may be utilized for design and engineering support, procurement development and monitoring, and on board installation support. Installation support may be provided in the form of a Customer Contract Team (CCT) that accomplishes the full scope of the project or as professional technical advisor who assists untrained and inexperienced Ship's Force personnel with accomplishment of the work.

b. The TYCOM is responsible for developing and maintaining the long-range five-year NAVSEA Habitability Life Cycle Program plan. Ships are selected for initial induction into the Program based on years in-service. Specific ensuing projects are based on non-compliance with criteria specified by reference (a), the general scope of habitability deficiencies as noted by the Board of Inspection and Survey, planned life cycle furniture replacement schedules, and other available documentation. Ship's Force input is encouraged.

c. Design surveys are normally accomplished during Chief of Naval Operation's maintenance availabilities. Follow-on installation projects will be scheduled during subsequent maintenance availabilities until all designated compartments in each ship have been upgraded or new furniture has been received. Once all the designated compartments in any ship have been upgraded or refurnished, the process will repeat itself. That is, each compartment, after the initial upgrade, will be, per the TYCOM life cycle plan, scheduled for second and subsequent upgrades at specified intervals until such time that ship is removed from the program pending decommissioning.

d. While the routine replacement of habitability hardware usually does not generate the requirement for changes to arrangements for ventilation, power and lighting, steam, support foundations, etc., more extensive projects such as upgrades may well generate these requirements. Where these changes result in requirements to increase the

capacity of the "hotel" systems providing support, a concurrent Ship Change Document (SCD) per reference (d) for upgrade of the "hotel" systems must be executed at TYCOM expense concurrent with the individual Program project. More detailed guidance in this area is provided by Appendix A of this chapter. Verification of whether or not SCDs are required to support individual projects may be made via the following TYCOM Codes:

(1) COMNAVAIRPAC Shipboard Habitability Manager, Code N434A8.

(2) COMNAVAIRLANT Shipboard Habitability Manager, Code N431HE.

(3) COMNAVSURFPAC Shipboard Habitability Manager, Code N43TH.

(4) COMNAVSURFLANT Shipboard Habitability Manager, Code N436E6.

e. Program projects should be prioritized in the following order.

(1) Crew and CPO Berthing.

(2) Crew and CPO Sanitary Spaces.

(3) Troop Spaces.

(4) Food Preparation and Service Spaces.

(5) Laundry Spaces

f. Per the authority of reference (a), the TYCOM may task and fund various agents including an RMC to accomplish the following:

(1) Design habitability improvements for accomplishment by Forces Afloat or a CCT.

(2) Procure installation materials.

(3) Perform other management and engineering services.

(4) Provide installation or installation support services.

16.2.2.1 Program Responsibilities.

16.2.2.1.1 Chief of Naval Operations.

a. Authorize Program.

b. Establish shipboard habitability standards based on recommendations of Habitability Working Groups.

16.2.2.1.2 Naval Sea Systems Command.

a. Establish technical policy.

b. Approve furnishings, fixtures, materials, food service equipment and laundry equipment.

c. Develop installation procedures.

16.2.2.1.3 Type Commander.

a. The Habitability Program Manager must follow the Technical Requirements of Appendix A.

b. Develop the Long Range Plan and establish priorities for attainment of standards. Provide these plans to the appropriate Expanded Planning Yard (EPY) updating plans as required.

c. Plan, schedule, coordinate and monitor projects.

d. Authorize, budget and fund the Program.

16.2.2.1.4 Regional Maintenance Center or Other Agent as Tasked and Funded by Type Commander.

a. Solicit, award and administer contracts to support Program requirements for design, engineering and technical support and installation. Perform the duties of a Contracting Officer's Representative for the monitoring and oversight of Program contractors.

b. Provide project coordination throughout the life of each project.

c. Provide liaison with Fleet and TYCOMs, COMNAVSEASYSCOM, NAVSEAWARCEN PD In-Service Engineering Agents (ISEA), Life Cycle Managers (LCM), Planning Yards, other RMCs and other naval activities.

d. Upon induction of the first ship of each class into the Program, submit preliminary habitability space arrangement concepts or drawings to COMNAVSEA's NAVSEAWARCEN PD ISEA or LCM for verification of conformance to applicable ship habitability specifications and criteria (e.g., reference (a)). Submittal of concepts or drawings for follow-on ships of the class is not required, unless different space arrangements are proposed. Submit the final habitability space arrangement drawings for NSWCPD ISEA review (prior to Planning Yard signature).

e. Prepare, approve or task approval by the EPY NAVSEA drawings for the Program as required by Appendix A of this chapter. Provide copies of locally approved drawings to the EPY. (For nuclear-powered ships, drawings are submitted to the Hull Planning Yard or Reactor Planning Yard for review and approval.)

f. Maintain a chronological record of all projects accomplished on each ship from the induction of the ship into the Program through decommissioning. This record includes initial ship check data, copies of all installation drawings, red-line drawings (if any) and other pertinent data.

g. Identify and oversee the procurement of all required installation material. Maintain a material commodity database identifying all material approved for use under the Program.

h. Prepare and update procurement specifications for habitability material.

i. Identify requirements for Indefinite Delivery Indefinite Quantity Contracts to provide material for frequently used material items. (Contracts are normally awarded and administered by the Fleet Logistics Centers.)

j. Operate material staging centers for the receipt, staging and shipping of project material.

k. Perform quality assurance checks at material staging centers and onboard ships of new material and hardware. Prepare Quality Deficiency Reports and Reports of Discrepancy on requisitioned material as needed.

l. Provide administrative assistance to the TYCOM in the preparation of long-range habitability improvement plans and related correspondence.

m. Maintain a habitability web site to facilitate the dissemination of Program information.

n. Respond to fleet requests for habitability assistance or support.

o. Use NAVSEAWARCEN PD's web site to access the Navy online catalog for approved furniture, food service and laundry equipment at https://navlogtd.navy.mil/habitability.

p. When required, request NAVSEAWARCEN PD ISEA or LCM support for approval of alternative food service, laundry equipment and furniture not found in the online catalog. When required, request NAVSEAWARCEN PD ISEA or LCM to conduct equipment selection, evaluation and testing. Also, request NAVSEAWARCEN PD support for equipment Integrated Logistics Support packages (parts support via Allowance Parts Lists, Tech Manuals and Maintenance Index Pages, Maintenance Requirement Cards) and Coordinated Shipboard Allowance List support.

16.2.2.1.5 Supply Activity.

a. Prepare, contract, and procure materials.

b. Administer other associated contracts.

16.2.2.1.6 Ship Commanding Officer. (When projects are accomplished by Ship's Force.)

a. Assign project manager and petty officer supervision for projects.

b. Assign an adequate labor force for removal, space preparation, installation and required fire watches working under technical advisor supervision.

c. Conduct training programs.

d. Account for, coordinate all movement of, and store all project material as it is received on board.

e. Coordinate all required tag-out or in paperwork and Work Authorization Forms.

f. Dispose of all retrograde material generated by the project.

g. Report changes affecting repair parts support to Naval Inventory Control Point. Technical data will be provided to the ship by the Agent preparing installation drawings.

h. Report completion to the TYCOM with summary of lessons learned.

i. Ensure Ship's Selected Records are updated, as appropriate. Technical data will be provided to the ship by the Agent preparing installation drawings.

16.2.2.2 Project Milestones. Advanced Planning milestones for scheduled projects are listed in appendix C of this chapter for aircraft carriers and submarine forces and volume II, part II, Chapter 2, Appendix A of this manual for surface force ships.

16.2.2.2.1 Advance Planning Notice (Surface Force Ships only). This TYCOM generated notice identifies Projects proposed for accomplishment, and provides work scope details including, if applicable, Ship's Force manpower requirements. This notice also requests Commanding Officer's comments, concurrence, and commitment of resources to the proposed projects.

16.2.2.2.2 Advance Planning Notice (Aircraft Carriers only). Habitability projects are entered into the Availability Work Package. Volume II, part I, chapter 2 of this manual provides guidance in the development and revision of the Availability Work Package.

16.2.2.2.3 Project Confirmation Notice. Following receipt of the Commanding Officer's concurrence with the proposed work scope and commitment of resources, the TYCOM confirms the projects. Thereafter, any modification or change to the scope of the projects will adversely affect scheduled milestones and could result in project deferral or cancellation.

16.2.2.2.4 Project Authorization. (Applicable to projects accomplished by Ship's Force.) Upon receipt of the Commanding Officer's project start request, normally about two weeks before the start of the maintenance availability, the TYCOM evaluates readiness to begin the project and authorizes the project to be started. Rip-out must not proceed until receipt of this authorization.

16.2.2.3 Project Completion Report. (Applicable to projects accomplished by Ship's Force.) Following completion of the project, the Commanding Officer must prepare a letter describing the project experience, which will be used by the TYCOM to update planning and installation practices. The letter should include the name and designation of the project, funds expended, certification that Integrated Logistics Support procedures have been followed, and any significant problems encountered, improvement recommendations, or lessons learned. Completion letters on all authorized projects should be forwarded via the chain of command to the TYCOM.

16.2.2.4 Integrated Logistics Support Reporting. For projects accomplished by Ship's Force, the ship is responsible for submitting any necessary Ship's Configuration Change Form, OPNAV 4790/CK, for Coordinated Shipboard Allowance List support. Technical data will be provided to the ship by the Agent preparing installation drawings. For projects accomplished by a CCT, the requirements of NAVSEA Standard Item 009-21 must be invoked.

16.3 NEW CONSTRUCTION SHIPS. U.S. Navy ships are built to meet the habitability standards of reference (a). Prior to certifying the ship's readiness for In-Service, the ISIC will conduct a Habitability Inspection to determine that the ship is materially ready for the crew to move aboard. The results of the Habitability Inspection must be reported to the TYCOM by message per volume I, chapter 3 of this manual.

16.4 NAVAL AIRPAC AND AIRLANT SPECIFIC HABITABILITY IMPROVEMENT PROGRAMS.

16.4.1 Aircraft Carrier Climate Control Improvement Team.

a. The Aircraft Carrier Climate Control Improvement Team (ACCCIT) provides technical assistance to improve aircraft carrier habitability through specific improvements to air conditioning, heating, and ventilation systems serving manned spaces. The TYCOM schedules an ACCCIT visit every 12 to 15 months, but no greater than 24 months.

b. 30 days prior to the visit, the ship will provide a list of 50 spaces the ship requests to be inspected to the Commander, Naval Air Force Program Manager. Criteria for the spaces to be nominated are:

(1) Normally manned.

(2) Spaces are being utilized as designated. Voids and storerooms that have been converted to offices or workshops by Ship's Force without alteration authorization will not be investigated.

(3) Space has not been investigated during a previous ACCCIT unless all discrepancies were corrected and a problem still exists.

(4) Main Propulsion and Auxiliary machinery spaces.

(5) Food Device and Laundry Spaces.

c. During the visit, the team will provide On the Job Training for Ship's Force, validate alteration requirements, validate Planned Maintenance System coverage and assist in the preparation of Current Ship's Maintenance Project (CSMP) deferrals to document discrepancies found. Additionally, with Ship's Force assistance, the team will correct deficiencies as they are discovered if within their capability. Upon completion of the visit, a formal report will be issued listing discrepancies discovered, status of each, correction responsibility and recommended alterations. All corrected and uncorrected discrepancies identified during each survey will be submitted in electronic format (M0001 file) for submission into the ship's CSMP. The TYCOM will utilize this report to conduct follow-up ship checks to track completion of discrepancies.

16.4.2 Food Service and Laundry (Commander Naval Air Force Pacific) and Enhanced Quality Of Life Program (Commander, Naval Air Force Atlantic).

a. The Food Service and Laundry (FS&L) and the Enhanced Quality Of Life (EQOL) Programs were developed to achieve and maintain high standards of material and operational readiness of food and hotel services equipment through intensified work definition, configuration analysis, corrective maintenance, and programmed and emergent equipment replacements.

b. The FS&L and EQOL programs are a cooperative teaming effort involving the Aircraft Carrier TYCOM and Ship's Supply Department. The TYCOM will provide program management, labor funding and administer material procurement. The TYCOM will provide funding and oversight for material procurement. Ship's Force is instrumental in determining the requirements and opportunity for correction of material deficiencies. The FS&L and EQOL programs key objectives are:

(1) Advance planning.

(2) Technical expertise and continuity.

(3) Standardization of approved shipboard food service and laundry equipment.

(4) Achievement of full Allowance Parts List supportability.

(5) Maintenance and grooming support planning.

(6) Maintenance training for Ship's Force personnel.

c. The replacement of food service or laundry equipment usually does not generate the requirement for changes to arrangements of ventilation, electrical, piping systems, and support foundations, etc. However, where changes result in net compartment increase to the capacity of the "hotel" systems providing support, or change the physical configuration of the ship's structure, an SCD per reference (g) for upgrade of the "hotel" systems must be executed at TYCOM expense. The FS&L and EQOL programs are not intended to supplant the SHIPMAIN Entitled Process. All equipment replacements will consist of equipment that has been approved for shipboard use per the online catalog or by NSWCPD ISEA or LCM, including the interchangeability of like equipment.

d. Not all food service or laundry equipment falls within the purview of the FS&L and EQOL programs. Items of the following nature are not within the scope of this program.

(1) Repair or replacement of non-approved equipment.

(2) Unauthorized modifications or alterations. These modifications include alterations which affect compartment size or location, adding false bulkheads, overheads, or new equipment not previously installed.

(3) Normal ship maintenance and organizational repair responsibilities.

(4) Deck coverings in spaces other than food service and laundry spaces.

APPENDIX A

TABLE OF HABITABILITY PROJECT TECHNICAL REQUIREMENTS AND ACTIONS

REQUIREMENT ATTRIBUTE	HABITABILITY IMPROVEMENT PROJECT TYPE			MODERNIZATION SCD REQUIRED	MINIMUM ACTION REQUIRED
	REPAIR	UPGRADE	REPLACEMENT		
Requires change in berthing capacity below CNO requirements		X	X	X	Process and execute SCD
Requires new berthing arrangement or design within existing compartment		X	X		For non-nuclear powered ships, provide drawings to Planning Yard. For nuclear powered ships, comply with NAVSEAINST C9210.4.
Requires new Head arrangement or design within existing compartment		X	X		For non-nuclear powered ships, provide drawings to Planning Yard. For nuclear powered ships, comply with NAVSEAINST C9210.4.
Requires new Lounge Area arrangement or design within existing compartment		X	X		For non-nuclear powered ships, provide drawings to Planning Yard. For nuclear powered ships, comply with NAVSEAINST C9210.4.
Replace lockers, berths, furniture, fixtures, food service or laundry equipment of exact same design within same frames, power supply and footprint	X				Use existing drawings to generate Bill of Material
Requires increased ventilation capacity to compartment		X	X	X	Process SCD, install in conjunction with Habitability Improvement Project
Requires rerouting of ventilation within existing capacity		X	X		For non-nuclear powered ships, provide drawings to Planning Yard. For nuclear powered ships, comply with NAVSEAINST C9210.4.

REQUIREMENT ATTRIBUTE	HABITABILITY IMPROVEMENT PROJECT TYPE			MODERNIZATION SCD REQUIRED	MINIMUM ACTION REQUIRED
	REPAIR	UPGRADE	REPLACEMENT		
Requires increased electrical capacity to compartment		X	X	X	Process and execute SCD
Requires use of spare breaker		X	X		Task Expanded Planning Yard to review and approve drawings
Requires rerouting of electrical cables within existing capacity		X	X		For non-nuclear powered ships, provide drawings to Planning Yard. For nuclear powered ships, comply with NAVSEAINST C9210.4.
Requires increased steam capacity, chill water capacity, etc. to compartment		X	X	X	Process and execute SCD
Requires rerouting of steam piping, chill water piping, etc. within existing capacity		X	X		For non-nuclear powered ships, provide drawings to Planning Yard. For nuclear powered ships, comply with NAVSEAINST C9210.4.
Requires modification of living space sprinkler system within existing capacity		X	X		For non-nuclear powered ships, provide drawings to Planning Yard. For nuclear powered ships, comply with NAVSEAINST C9210.4.
Requires additional sprinkler heads(s) to maintain adequate coverage (Per PY review)		X		X	Process SCD, install in conjunction with Habitability Improvement Project

APPENDIX B

SAMPLE HABITABILITY OPTAR AUGMENT FUNDING REQUEST

From: Commanding Officer, USS (Ship's Name and Hull No.)
To: TYCOM (as appropriate)

Subj: HABITABILITY OPTAR AUGMENT FUNDING REQUEST

Ref: (a) (Cognizant Fleet and TYCOM Instructions)

1. Request approval of a special OPTAR augmentation per reference (a) in the amount of (dollar amount) for the quality of life improvement project(s) as listed:

PRIORITY	NOMENCLATURE or NSN	QTY	COST EST
1	(Item description, location, etc.)		
2			
3			
	TOTAL COST EST:		

2. JUSTIFICATION (Conditions necessitating accomplishment of projects)
3. POINT OF CONTACT (Name, DSN or Comm telephone number, e-mail address, etc.)

COPY TO:
ISIC (as appropriate)

APPENDIX C

ADVANCE PLANNING MILESTONES

MILESTONE (A-MO)	ACTION	EVENT
A - 23	TYCOM	ESTABLISH PLANNING ESTIMATE. TASK RMC WITH DESIGN SHIPCHECK
A - 22	RMC or AGENT	SHIP VALIDATION AND COMMENCE DESIGN
A - 14	TYCOM	SEND HABITABILITY PROJECT ADVANCE PLANNING NOTICE (SURFACE SHIPS)
A - 13	SHIP	INDICATE CONCURRENCE OR COMMITMENT TO PROJECT(S) TO TYCOM. ENTER PROJECTS(S) IN CSMP
A - 12	TYCOM	CONFIRM PROJECT
A - 9	TYCOM (AIRCRAFT CARRIERS)	ENTER PROJECTS IN AVAILABILITY WORK PACKAGE (AWP)
A - 8	PMS 312C (CVNs), SHIP, TYCOM (AIRCRAFT CARRIERS)	PROJECT REVIEW CONFERENCE (PRC)
A - 8	RMC OR AGENT	PREPARE SPECIFICATION DEVELOPMENT PACKAGE AND FORWARD TO APPROPRIATE PLANNING ACTIVITY
A - 8	RMC OR AGENT	PREPARE MATERIAL REQUISITIONS
A - 7	RMC OR AGENT	SEND REQUISITIONS TO FLEET LOGISTICS CENTER
A - 6	RMC OR AGENT (SURFACE SHIPS)	ISSUE DRAWINGS TO EPY
A - 2	RMC, AGENT OR SHIP	PROJECT KICK-OFF BRIEFING
A	SHIP OR RMC AGENT	START AVAILABILITY OR PROJECTS
COMP	SHIP (APPLICABLE TO PROJECTS ACCOMPLISHED BY SHIP'S FORCE)	SEND COMPLETION REPORT

VOLUME VI

CHAPTER 17

IMPRESSED CURRENT CATHODIC PROTECTION

REFERENCES.

(a) NAVSEA S9086-VF-STM-010 - NSTM Chapter 633 (Cathodic Protection)
(b) NAVSEA STD DWG. 803-8436646 – Temporary Sacrificial Anode Cathodic Protection System

17.1 PURPOSE. To provide guidance for the submission of Cathodic Protection Logs, as required by reference (a) and post dry-docking system activation. The contents of this chapter are applicable to all classes of ships that are outfitted with Impressed Current Cathodic Protection (ICCP).

17.2 CATHODIC PROTECTION LOGS. Logs must be maintained as part of the system operating procedures and be retained by the ship for a period of two years.

17.2.1 Surface Force Ships. All ships with installed ICCP systems must submit logs monthly per reference (a), using Naval Sea Systems Command (NAVSEA) Form 9633/1 or equivalent, no later than 15 days after the last day of the reporting month to the Cathodic Protection In-Service Engineering Activity (ISEA), Naval Surface Warfare Center, Philadelphia Division (NAVSEAWARCEN PD). NAVSEAWARCEN PD will review the ICCP log data and provide an electronic mail response to each ship within 15 working days indicating log receipt and system operational status.

17.2.2 Naval Air Force Ships. All aircraft carriers with installed ICCP systems must submit logs monthly per reference (a), using NAVSEA Form 9633/1 or equivalent, to the Cathodic Protection ISEA NAVSEAWARCEN PD no later than 15 days after the last day of the reporting month. NAVSEAWARCEN PD will review the ICCP log data and provide an electronic mail response to each ship within 15 working days indicating ICCP log receipt and system operational status.

17.2.3 Submarine Force Ships. All submarines with installed ICCP systems must submit monthly logs using NAVSEA form 9633/2 or equivalent to the Performance Monitoring Team (PMT) no later than 10 days after the last day of the reporting month, or upon return to homeport. PMT will then upload data to Submarine Maintenance Monitoring Information Systems (SMMIS). NAVSEAWARCEN PD Code 332 will review the data and provide feedback to PMT to initiate the OSAR process to correct any necessary deficiencies or optimize system operational status.

17.3 IMPRESSED CURRENT CATHODIC PROTECTION SYSTEM ACTIVATION. Guidance on the activation of the ICCP systems (e.g. following undocking or system maintenance):

a. The Cathodic Protection System must be activated as soon as electrical power is available. Early activation is encouraged to counteract stray electrical currents from waterborne welding or other industrial activity evolutions which may cause hull deterioration by electrolysis. If the ICCP system cannot be actuated within two hours

following undocking, the Type Commander and Immediate Superior In Command must be notified.

b. If the cathodic protection components have been removed or power to all components is not available within 24 hours after undocking, alternate provisions should be made for activating part of the system if possible. Hull potentials can be monitored using the ship's controller reference electrode (silver-silver chloride) in conjunction with a multimeter.

NOTE: ALL VOLTAGES REFERENCED ARE DIRECT CURRENT.

c. If the system cannot be activated within three days of undocking, provisions should be made to ensure hull integrity including the potential use of a temporary ICCP system. An example of a temporary system is the Temporary Sacrificial Anode Cathodic protection system can be found on reference (b). Additional readings must be taken daily to ensure hull potential readings are more electronegative than -0.75V vs Ag/AgCl (silver chloride) reference cell until restoration of ship's ICCP system. If daily readings are more electropositive than -0.55V or if changes in hull potentials greater than 0.10V occur, welding practices should be checked or a temporary system capable of maintaining the hull at -0.85V plus or minus 0.05V should be provided.

VOLUME VI

CHAPTER 18

INFLATABLE LIFE RAFTS

REFERENCES.

(a) NAVSEA S9086-TX-STM-010 - NSTM Chapter 583 (Boats and Small Craft)
(b) NAVSEA S9008-AA-PRO-010 - Lifeboat, Inflatable, MK6, MK7 and MK8 Inspection, Test and Repair Procedures
(c) NAVAIR 13-1-6.1 - Aviation Crew Systems, Chapter 7 (LRU 13/A)
(d) NAVSEA TW024-AA-ORD-010 - Unserviceable, Suspended, and Limited Use Ammunition
(e) NAVSUP Publication 485 - Afloat Supply Procedures

18.1 PURPOSE. To provide guidance for the maintenance, repair, certification and procurement of life rafts used onboard naval ships and craft. An inflatable life raft is one constructed of a coated fabric and inflated to its design shape by air or other gas. The raft is stowed aboard ship for use only as a life raft, when and as directed by the Commanding Officer or Officer In Charge.

18.2 FLEET LIFE RAFT PROGRAM. The United States Fleet Forces Command Maintenance Officer has delegated Fleet Life Raft Program management responsibilities to the Type Commanders (TYCOM) including the establishment of policy guidelines. Policy will be disseminated to the Fleet and Naval Sea Systems Command certified Regional Maintenance Centers (RMC), Ship Repair Facilities (SRF) and Fleet Maintenance Activities (FMA) for the scheduling, planning, and recertification of life rafts. For Surface Force Ships only, TYCOMs will have a designated Life Raft Program Manager (LRPM) assigned. Commander Naval Surface Force Atlantic (Code N43E) and Commander Naval Surface Force Pacific (Code N43SB) are designated Fleet Life Raft Program Managers.

18.3 TYPES OF INFLATABLE LIFE RAFTS. There are three basic Navy type inflatable life rafts for use throughout the fleet (ships, aircraft carriers, boats, service craft and aircraft):

a. 25-Person (MK-7 Mod 1 and Mod 2) air inflated life raft - currently carried by surface force ships and service craft, encapsulated in a fiberglass container.

b. 50-Person (MK-8 Mod 1 and Mod 2) air inflated life raft - currently carried by aircraft carriers, amphibious assault and littoral combat ships encapsulated in a fiberglass container.

c. Person (LRU 13/A (formerly MK-2)) CO_2 inflated life raft currently carried by aircraft, certified to Naval Air Systems Command (NAVAIR) requirements.

18.4 COMMERCIAL LIFE RAFTS. Various commercial Coast Guard approved life rafts are installed on board certain craft, aircraft and navy ships for service and in-service evaluation testing. The cognizant command is responsible for recertification requirements for their commercial life rafts.

18.5 RECERTIFICATION. The periodicity of recertification will be as designated by Planned Maintenance System requirements.

a. Recertification is based on Planned Maintenance System periodicity starting from the recertification date stamped on the outside of the life raft container.

b. If the certification date is not present on the data plate on the outside of the life raft container or verified from the ship's life raft log inspection, recertification records, or unavailable by scanning and electronic remote identification, life raft certification will be considered expired.

18.6 LRU 13/A LIFE RAFTS. The responsible NAVAIR command will provide guidance for the procurement, certification, and disposition of LRU 13/A life rafts (aircraft).

18.7 AUTOMATED TRACKING SYSTEM. A U.S. Navy life raft data base is maintained by Naval Surface Warfare Center, Carderock Division Detachment, Norfolk VA (NAVSURFWARCEN CDDN), for tracking the Navy MK-7 and MK-8 life raft population and certification. Life raft records and information may be accessed at https://watercraft.dc3n.navy.mil80. Submit e-mail request to W_CRDR_LC_NAVY_WatercraftAdmin@us.navy.mil for access.

18.8 RESPONSIBILITIES.

18.8.1 Commanding Officer or Officer In Charge.

a. Submitting a Ship's Maintenance Action Form, OPNAV 4790/2K (2-Kilo) to the RMC, SRF or FMA for any life raft requiring replacement or recertification. For recertification, the 2-Kilo should be submitted no sooner than 6-months prior to the expiration date present on the outside of the life raft container (or date verified by the ship's life raft log). Arrange with the RMC, SFR or FMA for transfer and shipping of rafts to facilitate schedules.

b. Maintaining a log of all life rafts on board per PMS.

c. Send a report to NAVSURFWARCEN CDDN, at CRDR_LC_NavyLifeRafts@us.navy.mil, the respective Type Commander (LRPM) and the recertification or repair facility upon receipt of new life rafts, if any life raft is lost , unaccounted for, damaged, or transferred to another ship. Reports should include the life raft serial number, manufacturer's name, recertification facility and a description of the circumstances.

d. Ensure life raft fiberglass containers are handled with care using appropriate certified lifting slings. Life rafts are not to be rolled or stood on-end. Life rafts will be placed with the top up, in racks, with the container seal or canister joint in the horizontal position.

e. Upon notification of decommissioning, contact the respective TYCOM LRPM, for life raft disposition instructions.

NOTE: ONLY AUTHORIZED LIFE RAFT REPAIR FACILITIES ARE APPROVED TO MAINTAIN AND OPERATE A LIFE RAFT CONTINGENCY POOL.

18.8.2 Fleet RMC, SRF, and FMA Life Raft Repair Facility.

a. Manage and dispose of life raft contingency pool assets. A contingency pool is not to exceed 100 life rafts unless approved by TYCOM LRPM. Restock life rafts for the contingency pool from decommissioning assets, as available. If no assets are available, procure life rafts using Operational Target . Ships should submit additional funding request via their respective TYCOM to support procurement.

b. Life rafts lost or considered beyond economical repair may be replaced with contingency pool assets. If contingency pool assets are not available, ships shall requisition replacement life rafts.

c. Interface with the TYCOM LRPM, as required, in support of scheduling, coordinating recertification, repair and the contingency pool.

d. Upon receipt of screened 2-Kilo, repair or recertify life rafts to a Level "C" Plan in accordance with references (a), (b), PMS or volume V of this manual, as applicable.

e. Maintain an equipped Life Raft Facility with qualified repair personnel to conduct repairs or recertification of life rafts as indicated below:

NOTE: FACILITY CAPABILITIES AND PERSONNEL QUALIFICATIONS WILL BE AUDITED BY NAVSURFWARCEN CDDN AND TYCOM REPRESENTATIVES ON AN ANNUAL BASIS OR AS A SITUATION DICTATES.

(1) Ensure that a minimum of 75 percent of all personnel assigned to the life raft shop have received formal NAVSURFWARCEN CDDN training and certification in Level "C" repair.

(2) Conduct and document annual training and the level of On-the-Job Training in Level "C" repair of all shop personnel.

(3) Appoint in writing, two life raft repair coordinators, E-6 or above, or equivalent civilian grade, who has received formal NAVSURFWARCEN CDDN training in Level "C" repair.

(4) Appoint in writing, a signal flare coordinator, E-4 or above, or equivalent civilian grade, who is trained in handling ordnance and is responsible for the coordination and installation of signal flares in all life rafts.

(5) Maintain copies of all technical manuals, maintenance bulletins, correspondence and messages pertaining to life raft maintenance and repair.

(6) Maintain accountability of signal flare kits per reference (d).

18.8.3 TYCOM Life Raft Program Manager.

a. Establish contingency pool requirements for MK-7 and MK-8 life rafts and communicate fleet requirements to respective Fleet RMC, SRF, or FMA.

b. Set priorities for the disposition of life rafts throughout service life.

c. Interface, and coordinate with United States Fleet Forces Command, NAVSURFWARCEN CDDN, RMC, SRF, FMA, NAVSUP WSS, and Ship's maintenance in the management of the Fleet Life Raft Program.

d. Resolve issues requiring final decisions involving TYCOM ships and crafts.

18.9 UNSERVICEABLE OR REJECTED LIFE RAFTS. RMC, SRF, FMA life raft repair facility, ship or craft will process unserviceable or rejected life rafts in this manner:

a. Life rafts that have reached the end of service life are considered unserviceable per reference (a) and should be turned in to respective RMC, SRF or FMA for disposal. Procure new life rafts using ship or craft Operational Target funds. Ships and crafts are not authorized to dispose of life rafts.

b. Mark-7 and Mark-8 life rafts typically have a 25-year service life. Mark-7 and Mark-8 life rafts manufactured by Inflatable Survival Systems Inc. (ISSI)/RFD Beaufort prior to July 2015 will be removed from service upon reaching 15-years of age or a total of four repacks, whichever occurs first.

c. Report survey results to NAVSURFWARCEN CDDN.

18.10 DEPARTURES FROM SPECIFICATIONS. Departures from Specifications will be submitted per volume V, part I, chapter 8 of this manual. Departures greater than six months beyond certification periodicity will be classified as major.

18.11 RECORDS. The RMC, SRF or FMA life raft repair facility must maintain an auditable record for five years of all life raft transactions, including repairs, replacements, and recertification. These records must include:

a. Copies of all Inflatable Life Raft Recertification Records issued for recertified life rafts.

b. Job Sequence Numbers, serial numbers, and the manufacturer’s name of each rejected life raft.

c. The condition of the rejected life rafts.

d. The disposition of the rejected life rafts and components salvaged.

e. Lot Sample Record.

CHAPTER 19

MAINTENANCE AND MATERIAL MANAGEMENT

REFERENCES.

(a) OPNAVINST 4790.4 – Ship's Maintenance and Material Management System Policy
(b) NAVSEAINST 4790.8 – Ships' Maintenance and Material Management (3-M) Manual

19.1 PURPOSE. To provide guidance for the implementation of Maintenance and Material Management (3-M) program policies as set forth in references (a) and (b).

19.2 POLICY. Material readiness, a key component of warfighting readiness, must be supported throughout the chain of command with clear and concise directives, maintenance requirements and maintenance procedures. The foundation of a positive shipboard or unit maintenance culture, a precursor to sound material readiness, is proactive leadership. Senior leadership (commanding officer or officer in charge, executive officer, command master chief or chief of the boat and the 3-M coordinator) is responsible for establishing this culture by promoting critical self-assessments, faithfully conducting zone inspections, accurately reporting the accomplishment of maintenance, maintaining an accurate Current Ship's Maintenance Project, and aggressively working to correct Current Ship's Maintenance Project reported deficiencies.

19.3 SCOPE. This chapter applies to all ships, service craft, small boats, Type Commander cognizant shore activities and non-aviation fleet test and support equipment, except as exempted in paragraph 19.3.c. of this chapter. This includes, but is not limited to, Navy Meteorological Equipment, Naval Air Traffic Control Equipment, Air Navigation and Landing Systems Equipment, Aviation Launch and Recovery Equipment and activities under the cognizance of Navy Expeditionary Combat Command. This chapter also applies to Commander Naval Information Forces, Commander Navy Installations Command, Commander Naval Reserve Force, Naval Personnel Development Command, Training Commands and Mission Package Support Facility.

a. Maintenance and Material Management is divided into Type Commander specific chapters; chapter applicability is defined in paragraphs 19.3.a.(1) through (8) of this chapter:

(1) Chapter 19-1 Naval Air Forces

(2) Chapter 19-2 Navy Expeditionary Combat Command

(3) Chapter 19-3 Naval Information Forces

(4) Chapter 19-4 Naval Installations Command

(5) Chapter 19-5 Naval Submarine Forces

(6) Chapter 19-6 Naval Surface Forces

(7) Chapter 19-7 Maintenance Data System (applicable to all)

b. Any departure from the policies, procedures or responsibilities delineated in the 3-M Manual are not authorized without prior Naval Sea Systems Command approval and Chief of Naval Operations concurrence.

c. This chapter does not apply to:

(1) Fleet Ballistic Missile systems under the cognizance of Strategic Systems Programs Office.

(2) Nuclear power plants and associated test equipment under the cognizance of Naval Sea Systems Command Nuclear Propulsion Directorate (NAVSEA 08).

(3) Aeronautical equipment used in support of the aviation maintenance mission.

(4) Civilian operated and maintained ships, small boats, and service craft, unless specifically included in a base operating contract or another similar document.

(5) Navy Expeditionary Combat Command damage control equipment. In instances where damage control equipment is not under contract for maintenance from civil entities and falls under the responsibility of a given work center, it must be maintained per command-generated instruction.

LISTING OF APPENDICES.

A 3-MTT Grade Sheets
B 3-M Inspection Criteria
C Zone Inspection Deficiency List, Zone Inspection Material Guide and Flow Charts
D SKED 3.2 Settings and Preferences
E Format for Reporting 3-M Inspections

19-1.1 APPLICABILITY. This section is a joint Commander, Naval Air Force Pacific and Commander, Naval Air Force Atlantic (COMNAVAIRLANT) instruction.

19-1.2 ROLES AND RESPONSIBILITIES.

a. Type Commander. The Type Commander (TYCOM) exercises primary responsibility for the effective operation and support of the Ships' Maintenance and Material Management (3-M) System. Areas of responsibility include but are not limited to the following:

(1) Afloat Maintenance Data System (MDS).

(a) Organizational Maintenance Management System (OMMS).

(b) R-Admin, R-Supply, Organizational Maintenance Management System – Next Generation (OMMS-NG).

(c) Mission Readiness Assessment System.

(2) Ashore MDS.

(a) Maintenance Figure of Merit Family of Systems.

(b) Advanced Industrial Management for Regional Maintenance Centers.

(c) Regional Maintenance Automated Information System. This will be replaced by Validation, Screening and Brokering.

(d) Maintenance Resource Management System.

(3) Planned Maintenance System (PMS) Scheduling (SKED) software.

(4) Alteration Management System.

(a) Navy Data Enterprise.

(b) Type Commander Alteration Management System.

(5) Current Ship's Maintenance Project (CSMP).

(6) Master Job Catalog (MJC).

(7) The screening and processing of Feedback Reports (FBR).

(8) Maintaining an inspection data file per paragraph 19-1.6.5.i.

(9) Providing program enhancement requirements to the respective Fleet Commander via N43.

(10) Ensuring ships and units are manned with Navy Enlisted Classification (NEC) qualified 3-M Coordinators (3MC).

(11) Analyzing 3-M Inspection (3MI) and self-assessment data, identifying common concerns, conducting problem root cause analysis with the development and implementation of solutions.

(12) Ensuring TYCOM inspection team members are qualified to inspect assigned areas.

(13) Ensuring subordinate commands comply with standard work center (WC), division, and department structure as published on the JFMM TYCOM website https://www.navsea.navy.mil/Home/SUBMEPP/Products/JFMM/TYCOM/.

b. TYCOM 3-M Officer. Commander, Naval Air Force Pacific N436 and Commander, Naval Air Force Atlantic N436 are the Force 3-M Officers (3MOs) and responsible for administration of the 3-M system within the TYCOMs. The 3MO is the single point of contact for shipboard 3-M matters.

c. TYCOM 3-M Team. The 3-M Team consists of the N436 3MO, senior enlisted personnel of appropriate technical ratings, and N432 MDS subject matter experts. This team is responsible for:

(1) Assisting and advising commands in administration of the 3-M system.

(2) Conducting reviews of Planned Maintenance System (PMS) feedback reports and responses.

(3) Conducting 3-M system training, assists, and inspections.

(4) Monitoring overall implementation and effectiveness of the 3-M system on all aircraft carriers.

(5) Reviewing self-assessment results to identify trends and providing prompt support to ships as required.

(6) Training the ship's 3-M Training Team (3-MTT).

(7) Maintaining liaison with Commander, Fleet Forces Command, Commander, Pacific Fleet, Naval Sea Logistics Center (NSLC), and other commands on 3-M matters.

(8) Providing onboard and off-ship assistance or training in OMMS-NG operations.

(9) Conducting OMMS-NG and Propulsion – Organizational Maintenance Management System (P-OMMS) evaluations and software grooms in conjunction with scheduled 3-M assists and inspections.

(10) Coordinating OMMS-NG and P-OMMS external source inputs to ship's CSMP to ensure quality of information.

(11) Coordinating and providing application administrator training for OMMS-NG Functional Area Supervisors (FAS).

(12) Coordinating and providing CSMP management training.

(13) Assisting and providing support for TYCOM CSMP validations.

(14) Ensuring 3-M Inspections are current.

(15) Ensuring subordinate commands conduct rigorous quarterly 3-M Self-Assessments and report results to the TYCOM 3-M Coordinator (3MC).

(16) Monitoring the status of troubled systems and Top Management Attention items using the quarterly 3-M Self-Assessment.

(17) Ensuring subordinate commands comply with standard work center (WC), division, and department structure as published on the JFMM TYCOM website https://www.navsea.navy.mil/Home/SUBMEPP/Products/JFMM/TYCOM/.

(18) Tracking and monitoring 3-M major milestones and training events, overseeing, and providing inspection teams and conducting 3-M spot checks.

d. TYCOM Maintenance Logistics Branch Managers (N432). To enhance the operation and effectiveness of OMMS-NG, Commander Naval Air Force Atlantic and Commander Naval Air Force Pacific N432s will:

(1) Conduct MDS evaluations in conjunction with 3-M inspections.

(2) Provide onboard and off-ship user and administrative assistance or training in the operations of the ship's Maintenance Support Center (MSC).

(3) Conduct MSC assist and audit evaluations yearly.

e. Commanding Officer. The Commanding Officer (CO) is responsible for establishing an aggressive Self-Assessment Program that validates the administration and

execution of maintenance and detects improperly conducted maintenance or falsely reported accomplishments. In addition, the CO is overall responsible for the ship's Zone Inspection Program and will participate in zone inspections as an inspector. Whenever possible, the CO will inspect a different zone during each inspection to ensure that they inspect the whole unit within a reasonable period. COs should assure themselves that zone inspections are being conducted and the correction of deficiencies is being satisfactorily pursued.

f. Executive Officer:

(1) The Executive Officer (XO) is the command's 3-M System manager responsible to the CO for the overall management of the 3-M Program. The XO will:

(a) Brief the CO on the status of 3-M.

(b) Designate in writing the 3MC (NEC qualified) and an officer to be the ship's 3MO.

(c) Chair quarterly 3-M System meetings with Department Heads (DH), Ship's Maintenance Manager (SMM), Reactor Maintenance Officer (RMO), 3MO, Repair Officer, 3MC(s), and 3-MTT.

(d) Integrate 3-M System training into the command's training and qualification program.

(e) Ensure personnel receive adequate and effective 3-M System training.

(f) Ensure the effectiveness of the command's 3-M Self-Assessment Program.

(g) Act as the final review officer for shifts of maintenance responsibility between departments.

(h) Lead the 3-MTT.

(2) The XO also has overall responsibility for execution of the ship's Zone Inspection program. In this capacity the XO will:

(a) Schedule and publish zone inspection dates and times and designated zones to be inspected.

(b) Assign DHs, Division Officers (DIVO), Chief Petty Officers, or other senior officers as inspecting officers.

(c) Participate in zone inspections as an inspector.

(d) Review reports of discrepancies and corrective actions and make appropriate reports to the CO.

(e) Maintain an auditable record indicating that all spaces have been inspected by zone at least once a quarter. This record should be maintained to show all inspections for the last 12 months.

(f) Train Officers and Chief Petty Officers in the conduct of zone inspections.

g. 3-M Training Team. The 3-MTT will:

(1) Monitor and observe weekly spot-checks performed by designated spot checkers. Critique spot checker and maintenance personnel performance upon completion using Appendix A, Section I. The maintenance check should include at least one of the following:

(a) Working aloft.

(b) Tag-out.

(c) Hazardous Material (HAZMAT).

(d) Personal protective equipment (PPE).

(2) Evaluate spot checkers based on adherence to and knowledge of directives required to complete the maintenance action.

(3) Provide divisional training and Personal Qualification Standard (PQS) qualification support as requested, or as directed by the 3MO based on 3-MTT trend data.

(4) Support the 3MO in conducting 3-M self-assessments or audits.

(5) Meet monthly (at a minimum) to discuss performance trends, performance improvement recommendations and strategies and to conduct training of 3-MTT members.

(6) Conduct quarterly 3-M training for E-7 and above. Training topics should focus on mitigating negative trend data.

(7) Provide training attendance sheets for all training that 3-MTT members provide. Training must be documented and retained for 24 months by the 3MO. Attendance sheets will have the following information:

(a) Lecturer

(b) Attendees

(c) Date of training

(d) Topics covered

(e) Senior member present at the training

(f) Location and length of training

(8) Conduct CSMP review to ensure compliance with the standards set forth in this chapter.

(9) Conduct OMMS-NG or P-OMMS Practical Exams.

h. 3-M Officer.

(1) The 3MO acts as the XO's principal assistant regarding 3-M matters. The 3MO will:

(a) Coordinate all administrative facets of the 3-M Program.

(b) Evaluate command's 3-M program and keep the XO advised of operational effectiveness.

(c) Monitor the Spot Check Program and report program's effectiveness weekly to the XO.

(d) Manage 3-MTT and maintain designation letters.

(e) Coordinate, maintain, train, and monitor the performance of the 3-MTT.

(f) Maintain a weekly 3-M report that will display both ship's Spot Check Accomplishment Rate (SCAR) and 3-MTT SCAR as separate columns for comparison.

(g) Provide 3-M Program advice and assistance to DHs, DIVOs, Departmental 3-M Assistants (D3MA), Leading Chief Petty Officers (LCPO) and Work Center Supervisors (WCS).

(h) Maintain a file of current 3-M instructions and directives (may be electronic); disseminate changes.

(i) Ensure timely submission of FBRs.

(j) Maintain a master file of submitted FBRs, Responses, Advance Change Notices (ACN) and Document Information Transmittals.

(k) Conduct 3-M Self-Assessments.

(l) Coordinate and conduct 3-M training. (Weekly at a minimum)

(m) Coordinate and conduct 3-M qualification program.

(n) Ensure that PMS improvement plans are prepared and executed.

(o) Ensure that a Scheduling and Execution Effectiveness Review (SEER) is completed and maintained for 24 months for every WC upon implementation of a Force Revision (FR). Reviewers (E-7 or above) are to utilize the SEER worksheet from Appendix B section I-A.

(2) The 3MO is also directly responsible to the XO for deck-plate execution of Zone Inspections and the annual review of the Zone Inspection Program instruction. The 3MO will:

(a) Designate the zones, zone boundaries, number of zones, and spaces assigned to each zone subject to the review of appropriate DHs and XO approval.

(b) Coordinate assignment of inspectors and escorts with the XO and departmental LCPOs.

(c) Muster and brief zone inspectors, escorts, and recorders prior to inspections.

(d) Furnish the inspecting party with binders containing blank Zone Inspection Deficiency Lists (ZIDL) (Appendix C Section I), Zone

Inspection Material Guide (Appendix C Section II) and a copy of the last four inspection ZIDLs.

(e) Collect and maintain completed ZIDLs:

1. Ensure all ZIDLs are entered into Maintenance Onboard Data Exchange System (MODES) module located in the Total Ship Information Management System (TSIMS) by Departmental 3MAs.

2. Ensure Departmental 3MAs assist in correcting unsatisfactory conditions noted on inspection reports for their departments.

3. Forward the MODES and the zone inspection discrepancy report to the XO, DHs, Damage Control Assistant (DCA), Electrical Officer and Safety Officer.

(f) Maintain the ZIDL database in the MODES module to include accurate up-to-date space ownership assignments.

(g) After XO approval, distribute zone inspection discrepancy reports to DHs, DIVOs, and department LCPOs. Report will contain at a minimum any space that is inspected (UNSAT) and a list of all repair, "level one" category discrepancies.

(h) Maintain an auditable record indicating that all spaces have been formally inspected by zone at least once every quarter. It will be maintained to show all zone inspections and assessment reports for the last year (the ZIDL Metrics Report generated in MODES is used for this purpose).

(i) Monitor an active, self-critical assessment program and report program effectiveness quarterly to the XO per paragraph 19-1.5.8 program assessment and Appendix B Section IV-D, Zone Inspection Program Check Sheet.

i. Safety Officer. The Safety Officer in support of zone inspections will:

(1) Review MODES and all zone inspection discrepancy reports sent out by the 3MO for safety related discrepancies after each zone inspection.

(2) Assist and track immediate correction of safety violations or issues arising from zone inspections and make recommendations as appropriate to the CO and XO concerning any trends or major safety issues.

(3) Provide zone inspection safety discrepancy "lessons learned" at Safety Petty Officer, Safety Committee and Safety Council training meetings.

(4) Verify discrepancies originated by safety department remain open until corrected. Verify discrepancies are corrected and close out entries in either MODES, the CSMP or both.

(5) Ensure a safety department representative, E-7 or above, is present to brief inspectors and DIVOs on ship wide safety hazard concerns prior to commencement of the zone inspection.

(6) Utilize the term "SAFO" as the rate when entering Safety Department walk through discrepancies into MODES.

j. Electrical Officer. The Electrical Officer in support of zone inspections will:

(1) Review MODES and all zone inspection discrepancy reports sent out by the 3MO for electrical safety related discrepancies after each zone inspection.

(2) Assist and track immediate correction of electrical safety violations and issues arising from zone inspections through the trouble call MODES database per 19-1.7 and make recommendation(s) as appropriate to the Chief Engineer (CHENG) concerning trends or major safety issues.

(3) Ensure an electrical division representative, E-7 or above, is present to brief inspectors and DIVOs on ship wide electrical safety concerns prior to commencement of the zone inspection.

k. Repair Officer. The Repair Officer in support of zone inspections will:

(1) Provide assistance and advice to all levels of the Chain of Command (CoC) for correcting discrepancies that require organizational level TA-4 engineering attention.

(2) Verify, assist, and track immediate correction of all repair "level one" safety violations or issues arising from zone inspections through the trouble call MODES database.

l. Command Master Chief. The Command Master Chief (CMC) will:

(1) Attend the XO's quarterly 3-M System meetings providing senior enlisted feedback.

(2) Conduct PMS Spot Checks following the command's policy to ensure required maintenance is being properly performed and documented.

m. Command 3-M Coordinator. The 3MC reports to the 3MO on all 3-M matters. The 3MC will:

(1) Support the ship's 3MO in management of the 3-M program.

(2) Maintain copies of the current FR NAVY PMS Digital Video Disk (DVD), List of Effective Pages (LOEP) for every WC, changes issued between FRs in their original format and classified Maintenance Requirement Cards (MRC). Digital copies are allowed unless there have been changes between FRs.

(3) Manage PMS Master File per the requirements of this document, maintain a locater card for all primary and secondary classified MRCs as part of the PMS Master File.

(4) Advise, monitor, and assist DHs, DIVOs, LCPOs and WCS in matters concerning the 3-M System.

(5) Monitor the Ship's 3-M PQS Program and maintain an auditable record of personnel qualified in 3-M PQS.

(6) Maintain a master accountability log of all PMS changes.

(7) Develop and maintain a Split Maintenance Index Page (MIP) Log.

(8) Administer the configuration management program onboard the ship or unit.

(9) Supervise the command's 3-M Self-Assessment program and provide a weekly status to the 3MO.

(10) Develop and administer the Ship or Unit's PMS Spot Check Program.

(11) Maintain a matrix to select and track spot-checks to be performed at the executive level by the following personnel:

(a) CO

(b) XO

(c) 3MO

(d) 3MC

(e) 3-MTT

(f) CMC

(12) Serve as 3-MTT Coordinator. Ensure all 3-MTT members are fully qualified. Maintain a roster and qualification record of all 3-MTT members.

(13) Coordinate weekly general administrative duties and spot check requirements for the ship's 3-MTT.

(14) Maintain a current roster of all D3MAs and WCSs.

(15) Ensure corrective actions are taken on all unsatisfactory PMS Spot Checks and report same to the 3MO as part of weekly PMS reporting.

(16) Ensure backups of SKED database are produced daily and maintained in Automated Data Processing (ADP).

(17) Ensure ship's Maintenance Outlook Report is generated weekly for a minimum of 60 days out.

(18) Ensure Global Events are triggered in SKED and completed based on unit events such as flight quarters, drills, or underway replenishment.

(19) Ensure that Global States and Triggers are properly set at the Command level.

(20) Screen all FBRs, verify content, validity, serialize and forward within seven days of origination.

(21) Maintain accountability of all submitted FBRs and actions taken until corrected or new PMS documentation is received.

(22) Ensure the FBR originator and all applicable WCs are appraised of action taken and that changes or corrections are implemented when received.

(23) Ensure 3-M documents such as Ship's Maintenance Action Form, OPNAV 4790/2K (2-Kilo), Ship's Configuration Change Form, OPNAV 4790/CK (CK), etc. that require forwarding to a data processing activity are forwarded within seven days of origination or as operationally feasible.

(24) Validate 3-M MDS data elements following the 3-M validation specifications.

(25) Ensure 3-M documents returned for the correction of data are promptly revised and resubmitted.

(26) Track the reporting of completed maintenance actions related to an alteration or because of a configuration change with timely processing of Automated Shore Interface (ASI) configuration and logistic data.

(27) Report up-line CSMP maintenance transactions and command equipment file corrections at least once a week.

(28) Maintain any outstanding paper copies of message work candidates and 2-Limas, either paper or electronic.

n. Reactor Maintenance Officer. The RMO has cognizance of the Reactor Plant. The RMO will:

(1) Notify the SMM of cross boundary maintenance.

(2) Coordinate all facets of shipboard corrective maintenance.

(3) Coordinate industrial and shipboard maintenance during availabilities.

(4) Coordinate with and aid the 3MO and 3MC in monitoring the Configuration Validation Program. Ensure all departments are aware that equipment validation forms and configuration or logistic support problems must be submitted to the MSC for review, research, and input into OMMS-NG per reference (b).

(5) Ensure all documentation deferring maintenance on newly created, unreported Job Control Numbers (JCN) is reviewed and approved in a timely manner by the responsible DH. Time from work candidate origination to DH approval will not exceed seven working days.

(6) Monitor the operation of MDS.

(7) Act as the Immediate Unit Commander (IUC) representative for IUC screening and programming.

o. Ship's Maintenance Manager. The SMM has cognizance over topside maintenance. The SMM will:

(1) Notify the RMO of cross boundary maintenance. The SMM has cognizance of the material condition of the ship except for the Reactor Plant.

(2) Coordinate all facets of shipboard corrective maintenance.

(3) Coordinate industrial and shipboard maintenance during availabilities.

(4) Coordinate with and aid the 3MO and 3MC in monitoring the Configuration Validation Program. Ensure all departments are aware that equipment validation forms and configuration or logistic support problems must be submitted to the MSC for review, research, and input into OMMS-NG per reference (b).

(5) Ensure all documentation deferring maintenance on newly created, unreported JCNs is reviewed and approved in a timely manner by the responsible DH. Time from work candidate origination to DH approval will not exceed seven working days.

(6) Monitor the operation of MDS.

(7) Act as the IUC representative for IUC screening and programming.

(8) In support of zone inspections:

(a) Provide assistance and advice to all levels of the CoC for correcting discrepancies that require outside repair activity assistance.

(b) Coordinate with the Ship's Repair Officer, CNAL/CNAP N43 Maintenance Program Manager (MPM) and the PMS312, Carrier Planning Activity for all depot level Corrosion Control Information Management System conditions 2 through 4 per reference (c).

p. 3-M Functional Area Supervisor. The FAS will be designated in writing by the CHENG or RMO, hold the 3MC NEC (811A) and be a Chief Petty Officer or above. Functional Area Supervisors report directly to the SMM or RMO on all 3-M MDS matters. Primary responsibilities include the proper operation and maintenance of the OMMS-NG and P-OMMS systems, as well as training of users. The FAS will:

(1) Coordinate all administrative facets of the 3-M MDS program per current directives.

(2) Support the SMM and RMO in the management of the program.

(3) Serve as 3-MTT Coordinator for all MDS matters. Ensure all 3-MTT members are fully qualified in MDS.

(4) Produce updated OMMS-NG documents (CSMP up-line reports, ASI reports, etc.) to TYCOM as required.

(5) Process customer feedback files from the TYCOM.

(6) Monitor and process all external interface transactions. Process bulk load files into OMMS-NG. Forward a copy of the Bulk Load Report to the CNAL/CNAP N43 MDS specialist.

(7) Coordinate use of OMMS-NG to support Strike Force Intermediate Maintenance Activity (SFIMA).

(8) Act as primary point of contact for off ship training provided by CNAL/CNAP N43.

(9) Train Ship's Force personnel at the appropriate level for the billet in which they

are serving.

(10) Maintain a "Ship Availability Listing" for distribution to Ship's Force personnel. Ensure availability listing is co-located with the WC CSMP MJB516 (CSMP Detail Listing by Job Sequence Number (JSN)) report.

(11) Monitor and correct work candidates in the OMMS-NG import correction queue.

(12) Maintain OMMS-NG site parameters per TYCOM directives.

(13) Process OMMS-NG system utilities and data alignment programs as required.

(14) Maintain tracking of Board of Inspection and Survey discrepancies in OMMS-NG.

(15) Maintain a log tracking significant OMMS-NG down time.

(16) Ensure all work candidates assigned to the "REJ" availability, rejected, or requiring more information from TYCOM, are processed, and returned to the TYCOM MPM.

(17) Maintain a log of submitted OMMS-NG trouble reports and change proposals.

(18) Maintain a log to track OMMS-NG up line reporting.

(19) Conduct review and approval screening of all open and completed work candidates. Ensure all "New" not previously reported work candidates are approved by OMMS-NG FAS within seven working days.

(20) Ensure, in support of the Automated Consolidated Shipboard Allowance List Improvement Program, only MSC personnel are given access to order repair parts using the "Parts Not Listed" ordering capability in OMMS-NG.

q. Maintenance Support Center. The MSC will support the ship's Configuration Validation Program. Specific responsibilities include:

(1) Assign problem worksheet numbers and use problem worksheets to track configuration database changes.

(2) Update the ship's configuration database with additions and changes as identified through validation efforts.

(3) Assist departments in identification of configuration items requiring validation.

(4) Conduct research on requests for the ordering of parts not listed on an Allowance Parts List (APL) or Allowance Equipage List and take action as required. Action will include placing the part on order for the WC as a part not listed on the APL or Allowance Equipage List.

r. Command Maintenance Availability Coordinator. The Command Maintenance Availability Coordinator will be responsible for the coordination of all Fleet Maintenance Activity (FMA) repairs and coordinate closely with the 3MC. The Command Maintenance Availability Coordinator will also provide a single working

level point of contact and coordinate the command's requirements with the requirements of the FMA. These duties include:

(1) Technical review of work requests submitted for FMA accomplishment.

(a) Ensure readability and technical correctness.

(b) Prevent duplication of work requests for ship alterations, and other MJC originated deferrals.

(c) Collect supplemental 2-LIMA requests for routine work (i.e., lagging, painting, label plates, tiling, etc.) from all WCs and prepare an integrated priority list for each type of routine work to maximize the FMA's effectiveness.

(2) Ensuring command preparations for an FMA availability are conducted per volume II, part I, chapter 4 of this manual.

(3) Meeting daily, during an availability, with the assigned ship superintendent to discuss the status of all active jobs.

(4) Attending all FMA production, night work and management meetings.

(5) Providing a daily FMA job status to each DH, DIVO and Leading Petty Officer (LPO).

(6) Establishment of a Planning Board for Maintenance.

s. Department Head.

(1) The DH is responsible to the XO for the operation and execution of the 3-M System within the department. Delegating review and approval authority does not relieve the DH of their duties and responsibilities in maintaining an effective 3-M program. The DH will:

(a) Ensure all Principal Assistants (PA), D3MAs, DIVOs, LCPOs and WCSs are fully qualified and designated in writing.

(b) Ensure all maintenance personnel are fully qualified.

(c) Delegate review and approval authority, if desired, to a 3-M Principal Assistant. The 3-M Principal Assistant must be an officer, with the same 3-M qualifications as the DH, designated in writing, and provides oversight and assistance to the DH.

(d) Ensure maintenance is prioritized to facilitate accomplishment.

(e) Review and approve all department PMS schedules and revisions.

(f) Review maintenance action annotations.

(g) Review weekly PMS alerts.

(h) Implement a Self-Assessment Program within the department to validate properly accomplished and reported maintenance.

(i) Take corrective action on all "Unsatisfactory" PMS Spot Checks and report to the 3MO via 3MC as part of weekly PMS reporting.

(j) Ensure all material deficiencies are documented and promptly reported.

(k) Review and verify the content and validity of all FBRs, digitally sign FBRs within four days of origination.

(l) Ensure the Configuration Management Database accurately reflects equipment changes whether the action is performed by command personnel or outside activities.

(m) Authorize placement of equipment into an Inactive Equipment Maintenance (IEM) status, ensure PMS scheduling is annotated accordingly.

(n) Review and approve department work candidates within four days of creation; ensure completeness, accuracy, and the correct assignment of priority.

(o) Review all work candidates in the departmental CSMP every 90 days.

(p) Ensure that no classified data or Navy Nuclear Propulsion Information is reflected on 3-M documents designated for off-hull distribution.

(q) Conduct quarterly meetings with DIVOs, LCPOs and WCSs and provide status of departmental 3-M System to the 3MO.

(2) In support of the ship's zone inspection program, the DH will:

(a) Ensure on time participation of all required zone inspectors, escorts, recorders, and space presenters.

(b) Ensure Department LCPOs review the weekly zone plan and assign qualified inspectors. Provide names of qualified substitutes when required to the 3-M Office one day prior to the zone inspection.

(c) Ensure DIVOs prepare and report divisional spaces ready for inspection prior to the time published for zone inspection.

(d) Review MODES and the zone inspection discrepancy report sent out by the 3MO after each zone inspection and follow up on all reported discrepancies. Ensure repair "level one" safety discrepancies are resolved immediately by the division responsible for the space or corrected per paragraph 19-1.7 and reported to the XO and 3MO within 24 hours.

(e) Keep the XO apprised by ensuring discrepancies in the MODES database are routinely updated to reflect the status of corrective action. The MODES database is to be updated no later than the week following the previous week's zone inspection.

(f) Ensure D3MA submits a completed maintenance action without prior deferral into OMMS-NG or P-OMMS to document the total man-hours expended in the accomplishment of the zone inspection deficiencies for

the entire month. One JCN will be submitted for the entire department under the department administrative work center. The "Zone Inspection Program" XSYSTEMITEM APL will be used. For example:

APL	HSC	EFD	ESD
XSYSTEMITEM	13011SFZIP	Zone Inspection Program	Zone Inspection

t. Departmental 3-M Assistant. The D3MAs should be E-7 or above. Stellar E-6s (except for Weapons, Combat, Air, Reactor and Engineering departments) may be considered but must be approved in writing by the XO. The D3MA will:

(1) Assist the DH in coordinating and supervising all administrative aspects of the department's 3-M Program.

(2) Serve as the department's 3-M Program technical expert and advisor.

(3) Assist the 3MC in the proper execution of the 3-M Program within the department.

(4) Supervise and coordinate quarterly departmental 3-M Self-Assessments.

(5) Assist the 3MO and 3MC in administering an effective 3-M Certification Program for the qualification of 3-M personnel.

(6) Assist in the development and execution of the short and long-range 3-M training plan.

(7) Assist the 3MC in maintaining a high-quality Spot Check Program.

(8) Generate a weekly PMS spot check assignment matrix for officers, CPOs, and designated supervisory personnel.

(9) Monitor the department's CSMP for accuracy and effectiveness, review, and report job status to the DIVO and DH.

(10) Coordinate repair activities within the department to ensure timely resolution of material deficiencies.

(11) Provide the DH with a weekly status of the department's:

(a) 3-M Self-Assessment Program.

(b) CSMP.

(c) PMS Performance Report (from SKED).

(d) Equipment file validations (as scheduled by MSC).

(12) Use SKED's Revision Editor to ensure that all PMS changes have been properly annotated and applied to the schedule prior to DH review and finalization.

(13) Oversee and assist WCSs in the implementation of FRs, updates and changes.

(14) Review each WC's lineouts and all 3-M documentation supporting PMS and MDS prior to submission to the DH.

(15) Ensure all equipment changes, adds and removals, regardless of whether the action is performed by command personnel or outside activities, is reflected in the Configuration Management Database; if not, report via CK to the Configuration Data Manager (CDM) and utilize a PMS FBR to affect LOEP changes.

(16) Manage the departmental TSIMS and MODES program requirements.

u. Department Leading Chief Petty Officer. The department LCPO is responsible for the proper operation of the 3-M System within their department. The department LCPO will:

(1) Provide 3-M System guidance and training to DIVOs and division LCPOs within their department.

(2) Participate in quarterly Self-Assessments.

(3) Review all quarterly Self-Assessments and promptly correct discrepancies found within the department.

(4) Support the DH with Zone Inspection responsibilities.

v. Division Officer.

(1) The DIVO is responsible to the DH for the execution of maintenance within the division. The DIVO will:

(a) Ensure all PMS scheduling changes have been properly annotated and applied prior to DH review and finalization.

(b) Review the 13-Week Accountability Log at the beginning of the PMS week and sign at the end of the week (if not using electronic accountability in SKED or when SKED is not available).

(c) Review and verify the content and validity of PMS FBRs within three days of origination.

(d) Ensure 3-M documents generated within the division are complete, accurate and promptly submitted to the DH.

(e) Conduct 3-M Self-Assessments as directed by the command's policy.

(f) Provide weekly updates to the DH concerning the status of the 3-M System within the division.

(g) Incorporate 3-M System training into the Divisional Training Plan.

(h) Review divisional work candidates and the CSMP for validity and accuracy.

(i) Conduct monthly briefings for the DH on the status of all work candidates.

(j) Acknowledge weekly PMS Alerts.

(2) In support of the ship's zone inspection program, the DIVO will:

(a) Ensure zone inspection escorts and space presenters are familiar with locations of their assigned areas. Space presenters will normally be the individuals responsible for the space.

(b) Ensure zone inspection escorts and recorders attend training with department LCPO the day prior to the inspection and be knowledgeable of the spaces to be inspected.

(c) Ensure applicable compartments, gear lockers, drawers, stowage lockers, and other enclosures are unlocked and accessible for inspections.

(d) Maintain a zone inspection folder for each space within their division containing ZIDLs (Appendix C Section I) from the last four inspections.

(e) Ensure spaces assigned are ready for zone inspection, paying particular attention to safety, damage control, material condition, preservation, and cleanliness. Report results to the DH and ensure divisional CSMP reflects current material condition of all spaces.

(f) Review MODES and the zone inspection discrepancy report sent out by the 3MO after each zone inspection and follow up on all reported discrepancies. Ensure repair "level one" safety discrepancies are resolved immediately by the division responsible for the space or corrected per paragraph 19-1.7 and reported to the DH and 3MO within 24 hours.

(g) Ensure discrepancies that are within the division's capability that cannot be corrected by the division within 30 days, are submitted by originating WC with a JCN. Discrepancies that cannot be completed by the division responsible for the space, but within Ship's Force capability, must have a Ship's Force organizational JCN submitted. Discrepancies that are beyond Ship's Force capability must have an outside activity JCN assigned. JCNs that require parts or cannot be completed by the originating WC must be submitted within seven days via the CSMP.

(h) Keep the DH apprised by ensuring zone inspection discrepancies in the MODES database are routinely updated to reflect the status of corrective action. The MODES database is to be updated no later than the week following the previous week's zone inspection.

w. Division Leading Chief Petty Officer. The division LCPO is responsible for the proper operation of the 3-M System within their division. The division LCPO will:

(1) Supervise WCSs in the execution of daily maintenance.

(2) Ensure WCSs are properly trained, equipped and are knowledgeable of all WC divisional equipment maintenance requirements.

(3) Ensure divisional personnel are properly trained and qualified to conduct maintenance.

(4) Verify all divisional WC equipment is covered by PMS.

(5) Ensure PMS is properly scheduled and conducted, including all underway and special evolution situational "R" checks.

(6) Review WC PMS records (e.g., FRs, ACNs and PMS FBRs and Responses), approve all lineouts and additions on the LOEP, MIP, and PMS schedules prior to DIVO and DH reviews. Ensure proper justification is noted on each lineout.

(7) Review and approve non-applicable procedural steps lined-out on MRCs.

(8) Review and sign the 13-Week Accountability Log at the end of the PMS week and ensure checks added that week are hand-written into the blank accountability log. (if not using electronic accountability in SKED or when SKED is not available).

(9) Review the PMS Scheduling Forecasting Report to ensure that all Tools, Parts, Material and Test Equipment (TPMTE) are available to support upcoming maintenance actions.

(10) Provide the DIVO a weekly status of the division's Self-Assessment Program, CSMP and PMS.

(11) Ensure the Configuration Management Database reflects current ship's configuration.

(12) Ensure FBRs are submitted requesting LOEP changes to reflect system, equipment and component installs or removals.

(13) Review and verify the content and validity of PMS FBRs within two days of origination.

(14) Ensure the divisional CSMP accurately reflects material conditions.

(15) Review and approve work candidates, act as the second point of contact for work candidates and provide the DIVO a weekly brief on the status of all work candidates in the CSMP.

(16) Ensure proper testing and inspection of work done by outside activities prior to job acceptance.

(17) Coordinate repair activities within the division.

(18) Review, approve, and close out weekly schedules. This closeout of the previous week's schedules must occur on the first day of the following week (i.e., Monday).

(19) Review Check Notes for required and updated information.

(20) Write PMS Alert details to include why planning allowed loss of periodicity and the plan to complete PMS.

(21) Support the DIVO with Zone Inspection responsibilities.

x. Work Center Supervisor. The WCS must be an E-6 or above unless waived in writing by the XO. The WCS of a 40 series work center must be Damage Control Petty Officer (DCPO) qualified and recommended in writing by the DCA. The WCS will:

(1) Record all equipment deficiencies within their WC, utilizing OMMS-NG and P-OMMS to ensure all required 3-M System documents are submitted to the division LCPO.

(2) Ensure work center personnel have completed 3-M PQS training commensurate with position held.

(3) Ensure PMS covers all maintenance worthy equipment in the WC.

(4) Maintain an accurate and current LOEP.

(5) Ensure 3-M System WC files and publications are complete, current, and available to WC personnel.

(6) Ensure WC initiated 3-M documentation is correct, legible, promptly prepared and submitted.

(7) Maintain a 13-Week Accountability Log containing the current and previous 13-Week Log (if not using electronic accountability in SKED or when SKED is not available).

(8) Prepare weekly WC schedule, obtain required approval, assign maintenance personnel, and update schedule to reflect status.

(9) Ensure equipment changes, adds and removals are reflected in the Configuration Management Database and, if not, report via a CK to the CDM.

(10) Ensure FBRs are submitted whenever:

(a) Maintenance requirements are not fully understood.

(b) Errors are believed to exist.

(c) Entries in the TPMTE block are wrong or inadequate.

(d) Additional coverage is needed.

(e) Performance of the maintenance requirement would cause a hazardous condition to exist.

(11) Ensure prompt reporting of all material deficiencies and completed maintenance actions.

(12) Ensure test and measurement equipment or other portable support equipment is delivered for test or calibration as scheduled.

(13) Ensure the DIVO and division LCPO or LPO are advised of all 3-M System activity within the WC.

(14) Review the PMS Scheduling Forecasting Report to ensure that all TPMTE is available to support upcoming maintenance actions.

(15) Ensure all WC weekly schedules are updated daily.

(16) Ensure WC personnel make necessary preparations and ensure presenters and spaces are ready for zone inspection.

y. Damage Control Assistant.

(1) The DCA will be the principal advisor to the XO for all matters pertaining to damage control maintenance including scheduling, performance, and the technical aspects of planned maintenance for all Damage Control (DC) equipment. The DCA will:

(a) Provide a comprehensive weekly training and qualification program for DCPOs.

(b) Schedule and control the performance of planned and corrective maintenance of DC equipment requiring outside or off hull assistance.

(c) Advise DHs of scheduled dates for maintenance actions requiring coordination between departments or throughout the ship.

(d) Coordinate PMS on DC gear not assigned to a WC, division, or department.

(2) In support of the ship's zone inspection program, the DCA will:

(a) Review MODES and all zone inspection discrepancy reports sent out by the 3MO for damage control related discrepancies after each zone inspection.

(b) Assist and track immediate correction of damage control violations or issues arising from zone inspections. DCA will make recommendation(s) as appropriate to the CO, XO via the CHENG concerning any trends or major safety issues.

(c) Report serious or long-standing repair or firefighting discrepancies to the CHENG and XO. Additionally, provide these "lessons learned" at DCPO training.

(d) Track corrections of damage control discrepancies with the ship's Fire Marshall (FM).

(e) Ensure a damage control division representative, E-7 or above, is present to brief inspectors and DIVOs on ship wide damage control concerns prior to commencement of the zone inspection.

(f) Utilize "Duty FM" as the rate when entering Duty Fire Marshall walk through discrepancies into MODES. This is to allow for easier identification when reviewing the system-generated reports.

z. Maintenance Personnel. Maintenance Personnel will perform all PMS as assigned utilizing PMS documents in SKED and ensure "Check Notes" contain amplifying information and tagout identifiers as required. Maintenance personnel will:

(1) Perform assigned maintenance.

(2) Notify the WCS when:

(a) An MRC is not fully understood, appears to be incorrect or cannot be accomplished as written.

(b) There are issues with the TPMTE block of the MRC.

(c) The technician has doubts concerning their ability to perform the maintenance.

(d) Equipment deficiencies or casualties are discovered.

(e) Factors exist which would make performance of the maintenance unwise or dangerous.

(3) Initiate FBRs when discrepancies are discovered during the performance of an MRC.

(4) Inform the WCS when planned maintenance requirements are complete.

(5) Annotate PMS schedule to reflect accomplishment of maintenance.

(6) Sign 13-Week Accountability Log. (If not using electronic accountability in SKED or when SKED is not available).

aa. Zone Inspectors. Zone Inspectors will:

(1) Provide their individual flashlight and PPE.

(2) Inspect assigned spaces expeditiously and completely. Annotate results on the ZIDL forms (Appendix C Section I) and ensure the escort and recorder:

(a) Clearly understands what is being reported

(b) Annotates discrepancies

(c) Understands repair “level one” safety discrepancies must be corrected by the division or corrected per paragraph 19-1.7 and reported to the DIVO and 3MO within 24 hours.

(3) Contact responsible DIVO or LCPO immediately when repair “level one” unsafe conditions are found and remain on station until sufficient action is taken or other personnel arrive to resolve the unsafe condition.

bb. Zone Inspector Escorts and Recorders. Zone inspector escorts and recorders will:

(1) Attend training per this section with the department LCPO the day prior to the inspection and be knowledgeable of the spaces to be inspected.

(2) Plan an efficient route for the inspection and make sure all spaces are unlocked. Record all information into the inspection binder.

cc. Zone Inspection Space Presenters. Space presenters will:

(1) Be knowledgeable of the spaces to be inspected and have keys or combinations to applicable compartments, gear lockers, drawers, stowage lockers and other enclosures. The space presenter should be the individual responsible for the cleanliness and maintenance of the space.

(2) Present both, a current CSMP (Automated Work Request or 516 Report) and a MODES report identifying existing deficiencies to the inspector and have the divisional space ZIDL folder containing the last four ZIDLs for each space.

(3) Route completed ZIDL forms via the CoC.

19-1.3 QUALIFICATIONS. All personnel assigned to billets associated with the 3-M system must be 3-M PQS qualified for the assigned billet per reference (d).

a. Evidence of qualification in support of 3-M requirements must be maintained by the command in an auditable fashion. In addition to 3-M PQS qualifications, all personnel assigned to accomplish 3-M related maintenance on systems listed in Volume V, Part 1, Chapter 2 paragraph 2.2.1 of this manual, must be qualified per reference (e)." Table 19-1-1 reflects the PQS qualifications required to fill 3-M billets.

Table 19-1-1 - Required PQS Qualifications

3-M Coordinator	PQS-307
3-M Assistant	PQS-305
Department Head	PQS-306
Department LCPO	PQS-305
3-MTT Members	PQS-304
Division Officer	PQS-304
Division LCPO	PQS-304
Work Center Supervisor	PQS-303
Repair Parts Petty Officer	PQS-302 or RPPO Continuing Training and Qualifications Software
Maintenance Personnel	PQS-301

b. Personnel checking into the command with a 3-M qualification obtained from a previous command may be required to re-qualify. They may re-qualify directly to the highest level previously obtained and they do not have to re-qualify at lower levels. Prerequisites, however, for all qualifications must be documented in Relational Administration (RADM).

19-1.4 PLANNED MAINTENANCE.

19-1.4.1 Minimum Standards. MRC accomplishment is critical for maintaining equipment in a ready state and achieving expected service life. The maintenance tasks directed by MRCs are the minimum standards for organizational, shipboard planned maintenance, and therefore equipment degradation can be assumed if maintenance is deferred. The following provisions are provided

to maximize on time performance of PMS and provide increased fleet latitude in maintaining equipment.

a. MRCs are prepared as instructions to complete a maintenance task based upon the premise that the personnel assigned to perform the task have sufficient knowledge of the rate listed on the card and are qualified to perform maintenance as directed by the MRC. The MRC will be accomplished in sequential order, adhering to all Warnings, Cautions and Notes. Routine sub-steps (e.g., fastener removal, steps to don and remove PPE, turning on a vacuum) may or may not be included in the MRC and their absence should not prevent the maintainer from completing the maintenance task.

b. Per Naval Sea Systems Command (NAVSEA), procedures are written at a level of detail based on the assumption maintenance personnel are trained, qualified, and supervised by experienced leadership to execute the maintenance consistently and expertly. They exist to provide a common standard, specify acceptance criteria, communicate warnings, and cautions specific to the maintenance and provide proven maintenance practices. They are not intended to:

   (1) Supplement or duplicate rules and procedures that must be followed for hazards generally associated with the equipment (Hazardous Material Handling, Electrical Shock Risk Management, etc.) but not specifically associated with a step of the procedure.

   (2) Identify every process and every warning associated with the maintenance environment of the component being maintained (aloft, in tanks, near an active flight deck, in a heat stress area, etc.)

   (3) Specify every possible action of the maintainer.

c. Leadership will uphold standards for complying with maintenance procedures. This standard does not mean the maintainer is expected to robotically follow the MRC word-by-word. Leadership, trainers, monitors, auditors, and inspectors should not expect it. The key word here is intent. The objective is to perform the intent of each step, not necessarily step-by-step performance.

d. If a step is missing that is necessary to complete the task, and that step is not obvious to the maintenance person, an FBR should be submitted.

e. MRC completion status is dependent on the accomplishment of all procedural steps on all the equipment listed on the MRC or its accompanying Location Guide List.

f. The performance of additional rational actions during the accomplishment of an MRC is authorized. Examples of such actions include turning on and off items utilized during the performance of the MRC (vacuum cleaners, test equipment, etc.) and general housekeeping (cleaning up or containing spilled fluids or dirt).

g. The substitution of any tools, materials or test equipment not held by the activity should be considered prior to deciding to defer the maintenance until the exact tools, materials or test equipment listed on the MRC are procured. This is especially critical for frequently required maintenance where several performance cycles can be missed while waiting for supply to provide the correct items. Substitution requirements are provided by reference (a) and other technical documents.

19-1.4.2 Functional Components.

a. PMS Master File. The Master File, maintained by the units 3MC, contains information relative to PMS requirements that are specific to equipment for which the command is responsible. The Master File provides for duplicate issue of missing MIPs and MRCs, contains supplementary information provided by NSLC Detachments Norfolk or San Diego and serves as a repository for changes received between FR distributions, which must be retained on file until the changes are reflected in a subsequent FR. Master File content is delineated in Appendix B, Section I-B, Command Level Effectiveness Review (CLER).

b. Work Center PMS File. The WC File provides a ready reference of planned maintenance requirements and information to be retained in the working area for use by the WCS and maintenance personnel. The WC File contains only the documents and information applicable to a specific WC. The content of the WC File is delineated in Appendix B Section I-A (SEER).

(1) CNAL and CNAP require documenting qualifications within the WC File with a RADM PQS finder, by watch station print out, showing WC personnel qualification dates for all required qualifications necessary for completion of WC maintenance.

(2) The following additional qualifications may be required in some WCs:

(a) Safety Petty Officer (SPO).

(b) DCPO.

(c) Quality Assurance (QA) craftsman.

(d) Any qualification or NEC designation specified by the MIP or MRC.

In SPO required maintenance, for example, the MP must be SPO (NAVEDTRA 43460 series) watch station 301 and 3-M 301 MP qualified.

(3) Designation letters for the PA (if assigned), DIVO, D3MA, LCPO and WCS must be in the WC File and include designated individual's signature and initials.

(4) Printed copies of MRCs used by the WC on a routine basis (specifically quarterly, monthly, weekly, and daily) will be maintained. All applicable situational maintenance requirements (R-checks) will also be included.

(5) If a WCS or higher position is turned over, all line outs within the WC File for that position will be reviewed and re-initialed as soon as possible or no later than implementation of the next FR.

c. PMS Administrative Requirements. In lieu of a WC or a Master File the following should be retained:

(1) Work Center

(a) Current classified MRCs.

(b) Current Tailored Force Revision (TFR) reports.

(2) 3MO

(a) SKED 3.2 Help file.

(b) Split MIP Tracking Log, updated to current FR.

(c) Applicable 3-M Instructions, both Ship and TYCOM.

(d) Current 3-M messages and guidance.

(e) Current 3MC TFR Reports.

(f) Master classified MRCs.

(g) Current SKED Database back-up files on DVD or CD-R and an Excel spread sheet from the SKED report Checks and Maintenance Outlook Report of all WCs, for the current and next future quarter.

(h) 3-M Program short and long range training plan approved by the XO.

d. Interim MRC Procedures. The ship may develop interim MRC procedures based on experience and applicable technical manuals in support of equipment or systems without PMS coverage until formal documentation is received. Before scheduling preliminary MIP requirements, the WCS and the DH must verify their applicability to installed equipment.

e. Weekly Status Report. The weekly PMS monitoring status reports will be retained, electronically if desired, by the 3MC for the current and previous quarter. These reports from the 3MC to the 3MO will contain, as a minimum, the information cited in paragraphs 19-1.4.2.d.(1) through (6).

(1) Completed Spot-Check and Monitored MRC results.

(2) Completed WC audits and results.

(3) The number of FBRs over 7 days old that have not been reviewed by the CoC.

(4) Abatement and corrective actions completed because of a monitoring program finding.

(5) IEM Details Summary Report.

(6) Overdue (Alerting) MRCs and plan of corrective action.

f. Change Service Accountability Log. The Change Service Accountability Log (CSAL), Table 19-1-2, provides a definitive record of all changes to a command's 3-M program. Whenever a change to a command's 3-M program is directed, be it from an FR, FBR, TYCOM direction, etc., the change will be routed to the concerned WCS via a memorandum. Whenever such a memorandum is issued, it must be recorded in the CSAL. Once the WCS reports the directed change has been completed, the 3MC will file the WCS's response and annotate in the CSAL that the action is complete.

(1) The CSAL is comprised of the actual log sheet, a copy of all memos routed to the WCS and the memo from the WCS to the 3MC indicating completion.

(2) The importance of the CSAL cannot be overstated. Basically, it provides for a day-to-day, year-to-year record of changes to a command's planned

maintenance program. It is also a turnover document at deployment sites, allowing a current command to quickly identify all changes from a previous command. Finally, it will be inspected during all command 3-M assessments and inspections, providing visibility as to how well a command manages 3-M from one inspection to another.

Table 19-1-2 - Change Service Accountability Log

FR Change Number or Authority	Date RCVD	Cognizant Dept. or WC	Date Cover Sheet Issued	Date Cover Sheet Returned	Date Master File Updated or Item Closed	Summary of Change

g. 3-M Training Team. The 3-MTT is formed to enhance and maintain a peak level of PMS and MDS performance by providing focused training and evaluation of the ship's 3-M program.

(1) The 3-MTT will be a minimum of 30 members led by the XO with the 3MO and 3MC(s) serving as primary assistants. Team membership will be comprised of officers, CPOs, and D3MAs. The 3-MTT will have representation from all departments but should be proportionally represented

by the four major departments which are identified as Reactor, Engineering, Combat Systems and Air.

(2) Each week, one third of the 3-MTT will conduct maintenance person spot checks, one third of the 3-MTT will conduct spot check the spot checker and one third will complete administrative 3-M duties as assigned by 3MC.

(3) The OMMS-NG and P-OMMS FASs will provide evaluation and training for all matters related to MDS to the 3-MTT.

(4) 3-MTT members must be 3-M (304) DIVO PQS qualified, E-7 or above and have extensive experience in administering and monitoring the 3-M program. All 3-MTT members will be designated in writing and the 3MO will maintain designation letters.

(5) 3-MTT objectives:

(a) Elevate level of PMS and MDS performance and sustain PMS and MDS proficiency through self-critical evaluation and deck-plate involvement.

(b) Monitor spot-check performance and provide feedback to spot-checkers and maintenance personnel.

(c) Provide data to support establishment and tracking of trend data by the 3-M Office.

(d) Ensure compliance with CSMP requirements and the standards set forth in this manual.

(e) Ensure personnel have sufficient knowledge of maintenance software to perform assigned duties.

19-1.4.3 PMS Functional Operations.

a. PMS Documentation Verification. The WCS will ensure that all WC MIPs and MRCs are verified against installed equipment. The WCS's signature on the Records of Changes Page indicates review of the LOEP, MIPs and MRCs has been completed. Any line-out of an MRC or a MIP requires the scheduling aid, approved FBR response, Document Information Transmittals, ACN number or split MIP annotation to be recorded with the line-out.

b. Date Format. All PMS recording documents (i.e., 13-Week Accountability Log, Carbon Dioxide (CO2) or Aqueous Film Forming Foam record sheets, electrical safety checks, battery service life) must utilize the following format for recording dates: DD, MMM, YYYY (i.e., 11 OCT 2020). This will ensure correct interpretation of dates.

c. Tag Out. Reference (f) will be the sole source for tag-out procedural guidance. Commands will not generate local instructions. All personnel must strictly adhere to reference (f) procedures and those called out in this manual. Electronic tag-out is currently installed on all carriers relieving the administrative burden of tag-outs; therefore, laminated PMS danger tags are not authorized for use. Commands may generate local guidance to define qualifications and designate administrative responsibilities.

(1) Tag-Out Logs. The following departments are authorized to maintain a Department Tag-Out Log as identified in Table 19-1-3 in the location specified:

Table 19-1-3 - Tag-Out Logs		
Department	Space	Prefix Code
Air	V-2 Office or V-4 Office	AIR
Combat Systems	CS Maintenance Office	CS
Engineering	Damage Control Central	ENG
Weapons	Weapons Elevator Shop	WEP
Reactor	1 and 2 EOS	1Reactor or 2Reactor

(2) Tag-Out Use. Table 19-1-4 is a breakdown of departments indicating which Tag-Out Logs to be used:

Table 19-1-4 - Tag-Out Log Usage	
Department	Tag-Out Log
Air	Air
Combat Systems, Navigation, Operations, Embarked Staff	Combat Systems
Engineering, DCPOs, Aircraft Intermediate Maintenance Department (Advanced Industrial Management Department), Supply, Admin, Dental, Medical, Deck, Training, Command Religious Ministries Department, Legal, Media and all others not listed.	Engineering
Weapons	Weapons
Reactor, In-Plant DCPO	Reactor

19-1.4.4 Related Maintenance. Related maintenance, so designated by the In Service Engineering Activity (ISEA) or Technical Warrant Holder, is determined from the MIP. The ”RELATED MAINT” column of the MIP reflects related maintenance requirements. Related requirements are positioned on the MIP to line up directly across from the MRC to which they

are related. Related maintenance requirements are also identified in the TPMTE section of the MRC under "MISCELLANEOUS".

NOTE: MANDATORY RELATED REQUIREMENTS MUST BE LINKED IN SKED TO BE AUTOMATICALLY SCHEDULED.

a. Related Maintenance Categories.

(1) Mandatory Related. Mandatory related maintenance requirements are those maintenance actions that must be accomplished concurrently with another maintenance requirement. The mandatory relationship is indicated with the use of the # sign. If the mandatory related maintenance resides on the same MIP, it will be reflected in the RELATED MAINT column as "periodicity#" (e.g., M-3#). If the related maintenance resides on another MIP, it will be reflected as "MIP:periodicity#" (e.g., IC-013/033:M-4#). Mandatory related maintenance requirements are automatically scheduled by SKED.

(2) Convenience Related. Convenience related maintenance requirements are those maintenance actions that can be accomplished concurrently with another maintenance requirement to save time (preliminary steps and tag-outs already accomplished) or for work force considerations. If the convenience related maintenance resides on the same MIP, it will be reflected in the RELATED MAINT column as "Periodicity" (e.g., M-5). If the related maintenance resides on another MIP, it will be reflected as "MIP:periodicity" (e.g., EL-010/001:M-4)). In both cases, the # symbol is omitted. The WCS manually schedules convenience related requirements.

(3) Conditional Related. Conditional related maintenance requirements are those maintenance actions that are performed when specific conditions are present or specified parameters are not met on the referencing MRC. Conditional related maintenance will appear on the MIP in the same manner as convenience related maintenance. The WCS manually schedules conditional related requirements.

(4) None. No related maintenance is reflected as "None" in the RELATED MAINT column.

b. Work Center Supervisors Actions. WCSs are encouraged to review their schedules on a regular basis for opportunities to perform other PMS when an equipment or system has maintenance actions scheduled. Rescheduling of PMS to take advantage of other system maintenance if convenience related is highly recommended.

(1) If an MRC has related maintenance from another MIP, review the related MIP and MRC and determine if it requires assistance from another WC.

(2) If the related MIP and MRC does not require assistance from another WC and is not on the lead WC LOEP, submit an FBR to have it added to the LOEP.

(3) If the related MIP and MRC requires assistance or completion by another WC and is mandatory, convenience or conditional related then it should also be on the lead WC LOEP. If it is not on the lead WC LOEP, submit an FBR to have it added to the LOEP. If the related MRC requires technical assistance, a

special NEC, or another rating that is not part of the lead WC, then the person with the technical training, special NEC or required rating should be temporarily added to the lead WC "Crew List" and assigned the related maintenance in either an assist or performance role. All WCSs involved will collaboratively plan the required maintenance and may adjust schedules based upon individual workload. When the maintenance is completed, the lead WCS will mark the MRC as completed.

19-1.4.5 Inactive Equipment Maintenance.

a. Inactive Equipment. A piece of equipment or system intentionally placed in a hibernated state for a specific period with the intention of reactivating that equipment or system at the end of that period.

(1) Status I. Equipment that will:

(a) Remain onboard.

(b) Is not scheduled for corrective maintenance or overhaul.

(c) Will be inactive during extended shutdown periods and maintenance availabilities as determined by the DH.

(2) Status II. Equipment that is inactive and:

(a) Subject to corrective maintenance, overhaul, or removal for safe storage.

(b) Temporarily transferred to another activity for maintenance responsibility for extended shutdown periods as determined by the DH.

(c) When system(s) components are scheduled for replacement.

b. Implementation and Responsibility. While inactive, minimum maintenance is performed to ensure the success of the reactivation. The IEM section of the MIP will cover this maintenance. However, consideration should also be given to active PMS maintenance checks (e.g., M-1, Q-1, A-1) that can be manually added and performed during this period of inactivity.

(1) The ship will develop an IEM plan for all inactive equipment during availabilities lasting 21 days or longer. The plan will include reason for inactivation, duration, impact to division maintenance schedule and reflect integration with the Lead Maintenance Activity work schedule and operational recovery. DH approval of this plan will be documented in the SKED IEM remarks.

(2) Carriers in availabilities will negotiate operational control requirements with the maintenance activity at the arrival conference, to define responsibility for IEM. IEM periodic maintenance requirements (PM-1, PM-2, PM-3) and any applicable active PMS maintenance checks (M-1, Q-1, S-1) must be added manually at the appropriate frequency.

(3) To implement procedures for the accomplishment of PMS for equipment declared in an inactive status, current PMS schedules are modified to annotate

the requirements listed in the IEM section of the MIP. For advance planning and scheduling of maintenance to take place, it is necessary to determine and identify the extent to which unit or Ship's Force personnel will conduct PMS during an inactive period. MIPs in each WC will be reviewed to determine if equipment has IEM coverage (e.g., Lay-up (LU), Periodic Maintenance (PM), Start-up (SU) and Operational Test, if the coverage is adequate, and what procedures to follow if there is no IEM coverage on the MIP or provided coverage appears inadequate. The DH is responsible for determining equipment IEM status. When placing a system or equipment in IEM status, the DH will also determine the IEM start date to be reflected in SKED. The IEM end date will not be applied in SKED until the system or equipment is ready to be brought out of IEM status. All periodic PMS that would have been scheduled during the IEM period should be reviewed for applicability, with applicable maintenance accomplished prior to operating equipment.

(4) IEM procedures are listed on MIPs and separated from operational PMS by a horizontal line. The IEM section is titled "Inactive Equipment Maintenance" and is prefaced by the following statement: "The following requirements will be scheduled when equipment is inactivated for periods of prolonged idleness." When there are no IEM requirements the words "None required" will appear under the IEM section of the MIP. When IEM procedures are inadequate, submit an FBR. The unit or ship should consider all factors that affect equipment deterioration and take necessary precautionary measures. These factors include environmental conditions, equipment location, susceptibility to damage or other factors that cannot be anticipated when IEM procedures were originally developed by the cognizant ISEA or design activity.

(5) The lack of IEM requirements on a MIP does not prohibit placing that system or equipment into an inactive state. Additionally, certain locations require precautions and maintenance not required force-wide. The unit or ship should consider all factors that affect equipment deterioration and take necessary precautionary measures. The WCS or LCPO is responsible for identifying factors that are inadequate and may require additional preparation and maintenance of the inactive equipment while reporting same to the DH for approval. Factors may include environmental conditions, equipment location or susceptibility to damage. For those actions that are recurring in nature, the WCS should submit an FBR for possible MRC development.

c. IEM Scheduling. SKED provides the capability to perform IEM scheduling.

(1) Status I. The scheduling of maintenance for Status I inactive equipment utilizes conventional PMS scheduling techniques. LU checks will automatically be added to the schedule at the beginning of IEM by SKED. PM checks will be manually added to the schedule by the WCS for the period of IEM following the guidelines of the MIP. At the conclusion of IEM, SU checks and routine PMS will automatically be added to the schedule by SKED. SU checks must be accomplished the week IEM ends. All periodic checks added at the end of IEM, can be moved to the right, not to exceed the allowable

date range. Since the MRC date range cannot be applied to the left (into the IEM period), the MRC date range can only be moved to the right and therefore only the plus value of the specific range, i.e., the date range for a monthly is 21-41 days. The requirement can only be moved (scheduled) 10 days to the right and will not go into "alert" until after the 10th day. This allows the MP or WCS scheduling flexibility within the plus side of the date range of the MRC.

(2) Status II. The scheduling of maintenance for Status II inactive equipment utilizes conventional PMS scheduling techniques, however, not all scheduled IEM PMS may need to be accomplished by the unit or Ship's Force. LU checks will automatically be added to the schedule at the beginning of IEM by SKED and may be marked "N/A" if the LU check did not support the equipment being removed from the ship or unit or "Accomplished by Higher Authority" symbol if completed by the intermediate or depot level maintenance activity. PM checks may be required to be schedule during the IEM period. At the conclusion of IEM, SU checks and routine PMS will automatically be added to the schedule by SKED. SU checks must be accomplished the week IEM ends and may be marked with the "Accomplished by Higher Authority" symbol if they were completed by the Intermediate or depot level maintenance activity. Routine PMS added at the end of IEM may also be marked with the "Accomplished by Higher Authority" symbol if they were completed by the intermediate or depot level maintenance activity. All periodic checks added at the end of IEM, can be moved to the right, not to exceed the allowable date range. Since the MRC date range cannot be applied to the left (into the IEM period), the MRC date range can only be moved to the right and therefore only the plus value of the specific range, i.e., the date range for a monthly is 21-41 days. The requirement can only be moved (scheduled) 10 days to the right and will not go into "alert" until after the 10th day. This allows the MP or WCS scheduling flexibility within the plus side of the date range of the MRC.

19-1.4.6 Deactivated Equipment. Deactivated equipment is defined as a piece of equipment or system intentionally placed out-of-service with no intention of reactivating the equipment or system per reference (k). Equipment that has been deactivated but not physically removed is often referred to as equipment that has been "retired in place.

a. Occasionally, in preparation for removal from the ship or when retired in place due to obsolescence, equipment may be deactivated. The Program Office or Ship Design Manager (SDM) will provide direction to deactivate a piece of equipment or system to the TYCOM. The Program Office or SDM will provide specific direction concerning placement of the equipment in a deactivated state. This guidance could be as simple as direction to tag-out physical and electrical isolations or as complex as a formal configuration change for the physical divorcing of the equipment or system from other equipment or systems on the ship or unit. No maintenance will be performed after it has been deactivated. Equipment that has been retired in place may also be programmed for removal via a Ship Change Document per reference (c).

b. Should the ship or unit seek to deactivate a system or equipment, appropriate

Department Head will provide a detailed request to the TYCOM, including a general history of the system or equipment and justification as to how its removal will not be detrimental to the ship's mission areas. The TYCOM will issue a Liaison Action Record (LAR) to the SDM and Carrier Engineering Team for guidance concerning the deactivation. The SDM and Carrier Engineering Team will perform a technical review of the request and coordinate with the SDM and Program Office for the LAR response with guidance to dispose the affected equipment. TYCOM will task the requesting ship to deactivate the affected equipment utilizing guidance from the LAR response. For record keeping purposes, the CVN LAR Action Number should follow this convention: RIP – CVNXX or CVNXXCL – SERIAL NUMBER, starting at 0001. Class-wide deactivation requests should receive concurrence from the opposite coast TYCOM before LAR submittal.

NOTE: WHERE THE GOAL OF 100% ACCOMPLISHMENT CANNOT BE REACHED, THE UNIT'S COC MUST BE KEPT INFORMED OF THE CIRCUMSTANCES THAT PREVENT ACCOMPLISHMENT OF SCHEDULED MAINTENANCE.

19-1.4.7 Scheduling. PMS is a portion of the command's 3-M program that provides, in one authoritative system, the scheduling information and technical procedures governing planned maintenance. PMS provides a simple method for scheduling and documenting the execution of planned maintenance procedures. Fleet policy is listed in paragraph 19A.2 with the scope identified in paragraph 19A.3.

a. Situational maintenance scheduling will be managed utilizing the tools provided by the computer based PMS scheduling software employed by the activity. All event driven situational requirements will be "triggered" when required and performed per reference (a).

b. The creation and use of generic crew members such as "Engineering Laboratory Technicians" is not authorized. For those instances where the watch-stander performs the MRC, the senior watch-stander's name will be indicated in SKED.

c. The MP will be assigned prior to commencing the week and must complete the maintenance as directed. If a different person is required, the WCS will reassign the PMS accordingly.

d. Check Notes are required in SKED under the following circumstances.

(1) When PMS is marked as "lost".

(2) When PMS is marked as not applicable.

(3) When PMS is marked with the '¢' symbol, "satisfied by Higher Level Maintenance."

(4) When PMS requires a tag-out, the tag-out program of record identifier will be entered.

e. Alert Notes will be in the format of paragraph 19-1.4.11.

f. After the FR is approved, the 3MC will conduct quarter archival to maintain one completed quarter, one current quarter, and at least two future quarters. This permits the ability to review past records and forecasting of upcoming maintenance actions.

19-1.4.8 SKED. The use of SKED version 3.2 or subsequent versions for PMS Scheduling constitutes full compliance with all administrative provisions of the 3-M Manual.

a. Guidance for use of SKED is provided via the SKED users guide with help menus, and wizards associated with SKED functionality.

b. The Navy PMS DVD or CD-ROM is used to update the command or unit's SKED PMS data.

c. The SKED program uses days to schedule and keep track of calendar periodicities. MRCs are displayed as out of periodicity when they fall outside the established date ranges in the SKED program. These date ranges are as reflected in Table 19-1-5:

d. Appendix D provides SKED 3.2 User Settings, Global Preferences and UIC Preferences.

Table 19-1-5 - SKED Periodicity – Date Ranges

Periodicity	Date Range
Daily	None
2D	None
3D	None
Weekly	None
2W	9 - 19 days
3W	14 - 28 days
Monthly	21 - 41 days
2M	41 - 83 days
Quarterly	61 - 121 days
4M	83 - 165 days
Semi-Annually	121 - 243 days
8M	165 - 331 days
9M	+ or - 90 days from scheduled date

Table 19-1-5 - SKED Periodicity – Date Ranges

Periodicity	Date Range
Annual	+ or - 90 days from scheduled date
Multi-month after annual	+ or - 90 days from scheduled date

19-1.4.9 SKED Server Failure. In the event of a SKED server failure, operation of PMS performance and tracking is as follows:

a. Retrieve most recent Maintenance Outlook Report.

b. The WCS or LCPO will maintain the assignment of PMS with the Maintenance Outlook Report until server is restored.

c. Document and retain accomplished maintenance on printed blank 13-Week Reports that are in the documents folder on the FR DVD.

d. When the server is restored, update SKED based on accomplished maintenance documented on 13-Week Reports.

19-1.4.10 Accomplishing PMS. Maintenance personnel use MRCs to accomplish assigned planned maintenance as described in subparagraphs 19-1.4.10.a through 19-1.4.10.h.

a. From SKED "My Task" view, review the 13-Week Report.

b. Determine maintenance tasks assigned.

c. Determine when the maintenance task(s) are due.

d. Determine what tools, parts, material, test equipment or supplies are needed. For MRCs that contain inspections and then maintenance actions based upon the inspection findings, the TPMTE needed to perform the follow-on maintenance caused by the inspection findings does not need to be obtained prior to performing the MRC but rather, may be obtained as needed.

e. Perform the maintenance on schedule.

f. Notify the WCS immediately whenever one or more of the following conditions exist:

(1) Anything on an MRC is not fully understood, appears to be incorrect or cannot be accomplished as written.

(2) TPMTE prescribed by the MRC is not available, is not correct or questions about substitutions arise.

(3) Any doubt exists about your capability, training, or experience to properly perform the maintenance requirement as prescribed.

(4) Factors exist which would make performance of the maintenance requirement unwise or dangerous (e.g., disassembly of equipment needed for operations, radiation when prohibited, situations causing safety hazard to exist, etc.).

(5) Equipment deficiencies or casualties are discovered.

(6) Any provisions or requirements on the MRC cannot be accomplished as prescribed. See paragraph 19-1.4.1 for clarification.

g. If an MRC can be completed step by step as written, then the maintenance action can be signed off as completed. Report completed planned maintenance actions to the WCS, update the PMS schedule to reflect the completed maintenance, annotate and sign the 13-Week Report (if used). If multiple maintenance personnel are assigned to a single maintenance action, the most senior person assigned must update the PMS schedule, annotate, and sign the 13-Week Report or Check Note if using SKED 3.2 electronic accountability.

h. If inspection criteria or a threshold inspected by the MRC does not meet the intended criteria, then those maintenance actions cannot be signed off as completed until the discrepancies are corrected. The only allowable maintenance actions that can be signed off as complete are those discrepancies where the PMS documents (MRC or MIP) have an actual statement that directs a CSMP, Material Condition Assessment Process (MCAP), or Equipment Deficiency Log (EDL) entry to be made if there are discrepancies. The statement to inform the WCS of discrepancies, by itself, is not sufficient to sign the maintenance action as complete when discrepancies exist. Maintenance actions not fully completed will be reported to the WCS. However, if material deficiencies or casualties, which are unrelated to that MR, are discovered, the MR can be checked off (provided the MR was fully completed) but the discrepancy must be reported via MDS.

19-1.4.11 Non-Accomplished PMS Categories. The WCS or LCPO will add a brief description for each Alert Note for non-accomplished categories using subparagraphs 19-1.4.11.a through 19-1.4.11.g.

a. System or Equipment Failure. System or equipment is not operational or in a reduced operational status thus preventing maintenance from being accomplished. CSMP Job Sequence Number (JSN) required in additional text description.

b. Inadequate Maintenance Procedures. MRC procedure or steps cannot be accomplished to a point where the maintenance can be considered accomplished. FBR number required in additional text description.

c. Ship Operational Requirements. Operations prevent the maintenance from being accomplished. Requires additional text description.

d. System or Equipment Operational Requirements. Required operation of system or equipment prevents maintenance from being accomplished. Requires additional text description.

e. Lack of Hazardous Material. Correct HAZMAT not available at the time maintenance was to be performed. CSMP JSN required in additional text description.

f. Missing or Incorrect TPMTE. Correct or calibrated TPMTE was not available at the time maintenance was to be performed. CSMP JSN required in additional text description.

g. Other. Requires additional text description.

19-1.4.12 Accountability. The credibility of the Navy PMS program relies heavily on the individual accomplishing the maintenance. The required dedication and integrity of that individual cannot be overstressed.

a. To maintain accountability, personnel are required to sign for the completion of assigned maintenance in an Accountability Log if used. The WCS is required to review and sign the Accountability Log weekly to verify the accuracy and completeness of entries. Accountability sheets will be maintained in the WC PMS File for a period of not less than 13 weeks.

b. Electronic accountability will be utilized by ships employing SKED 3.2. When an individual updates the disposition of a check, this is the same as signing and dating a check completion on a 13-Week Accountability Sheet. The disposition of a check will become permanent when the weekly closeout is performed. All PMS maintenance assigned to a MP is presented to them immediately upon SKED 3.2 log-on; and CoC review can be tracked on the Weekly Closeout Signature Sheet. Therefore, there is no need to print and sign the 13-Week Accountability Form.

19-1.4.13 Force Revision Implementation. In addition to the requirements of reference (a), the following steps ensure the most efficient and thorough implementation of an FR:

a. MRC deletions on MIPs will be marked to indicate the reason for deletion:

(1) Scheduling Aids (SA). Indicate applicable scheduling aid "(e.g., SA-.").

(2) Split MIP. Indicate responsible WC (e.g., "EA01") if the MRC is applicable to the ship, the responsible WC designation will be used versus a scheduling aid.

(3) "Other" includes approved responses to FBRs, ACNs (e.g., "NSWC ltr Ser 4790.005."), Message Date Time Group (e.g., "NUWC R124535Z AUG 05."), dual periodicity. Indicate guiding notation for deletion such as "SA-1" or "Note 1", configuration change number.

b. The FR will be completed on or before the first Monday of the new calendar quarter. When operational schedules do not provide adequate time to implement the revision prior to the start of the quarter, the XO may direct an alternate implementation date. This deferred FR will be reported to the TYCOM. If two or more FRs were not available while the unit was deployed, only the most recent FR will be installed and implemented.

c. It is advisable to complete the FR process through DH approval before conducting quarterly audits by a chief or more senior.

d. The 3MC will:

(1) Update PMS and TFR data into SKED prior to routing the change documentation to WCs.

(2) Route the FR to WCS for implementation. See Figure 19-1-1 and Figure 19-1-2 for an example of a routing memorandum and an FR implementation checklist)

(3) Delete SKED FBRs after reflection within the FR.

e. The WCS, upon receipt of the change document from the 3MC, will:

(1) Make the appropriate entry in the WC of Change Log.

(2) Make appropriate LOEP, MIP, MRC, etc. changes to the WC PMS File.

(3) Apply changes to the WC PMS schedule utilizing SKED Revision Editor.

(4) Route revision changes to division LCPO for review and concurrence.

f. The division LCPO will:

(1) Verify that all PMS changes have been properly applied to the WC schedule utilizing SKED Revision Editor.

(2) Review line outs on LOEPs, MIPs and MRCs. Initial all such line-outs to indicate concurrence.

(3) Submit PMS schedule to the DIVO for review and concurrence.

g. The DIVO will:

(1) Verify that all PMS changes have been properly applied to the WC schedule utilizing SKED Revision Editor.

(2) Submit PMS schedule to DH for review and approval.

h. The DH will:

(1) Verify that all PMS changes have been properly applied to the WC schedule utilizing SKED Revision Editor.

(2) Review and approve WC PMS Schedules.

i. The WCS makes final entries in the WC Record of Change Log, completes the PMS Change Documentation Routing Memorandum, and returns it to the 3MC.

j. The 3MC updates the CSAL and notifies the XO that the FR has been installed after receiving all FR PMS Change Documentation Routing Memorandums from the WCs.

Figure 19-1-1 - Force Revision Routing Memorandum

MEMORANDUM

From: 3-M Coordinator

To: _____ Work Center Supervisor

Subj: FORCE REVISION PACKAGE X-XX

Encl: (1) Force Revision Implementation Checklist

(2) List of Effective Pages (LOEP)

1. Force Revision Serial: X-XX has arrived from NSLC.

2. The SKED Force Revision (FR) update is complete. Begin your work center FR implementation using enclosures (1) and (2); complete through your Department Head no later than (Day Month Year).
3. Corrections, including those to LOEP, MIP and MRC, should be made immediately. Make certain ACNs and FBR responses are reflected in the FR. If not, maintain the copies and changes to your MIP(s) and MRC(s) until reflected in a subsequent FR.
4. MRCs with procedural line-outs previously approved by the LCPO must again be reviewed by the LCPO to confirm they continue to meet the requirements of the JFMM Volume VI, Chapter 19. Specifically, in the procedure block, Work Center Supervisors may line-out the non-applicable line items or alternate procedures that do not pertain to current equipment or configuration when the step includes the words “if applicable” or a note identifies steps to be omitted. These items must be reviewed and approved by the division LCPO. As these changes are work center and maintenance item specific, submission of an FBR is not required.

3MC

Figure 19-1-2 - Force Revision Implementation Checklist

MEMORANDUM

From Work Center Supervisor

To: 3-M Coordinator

Subj: FORCE REVISION IMPLEMENTATION CHECKLIST COMPLETION

1. The following actions have been accomplished in SKED to implement Force Revision X-XX.

Task Description	Initial
Verified all equipment is listed under each MIP.	
Verified new or changed MRCs (green or yellow) are added to the correct Maintenance Item (equipment).	
Verified all applicable MRCs for each piece of equipment are active.	
Verified all MRC's have associated "Related Maintenance" attached.	
Verified that Safety of Ship is toggled to "YES" if applicable.	
Verified that all MIP lineout's have a technical reason documented for deletion. (Select the "Pencil" Icon on top row)	
Verify Maintenance Item Serials & Locations are correct.	
Upon completion of implementation Marked Complete for digital approval by: LCPO, Division Officer and Department Head.	LCPO
	DIVO
	DH

2. After DH approval:

LCPO run SKED report PMS Documents and Customized MRCs – Line-outs. Verify each procedural lineout meets the requirements of paragraph 19-1.4.14.k of this manual.	
WCS create an excel spread sheet from the Maintenance Outlook Report as a minimum electronic backup forecasting as many quarters in advance as available and store it on your hard drive (not a LAN drive) in the event of the LAN crashing.	
WCS select "Work Center" from the upper menu and "Update Unassigned Slots." Initially, any MRC without ownership will be assigned to the WCS. Reassignment by the WCS or LCPO will follow.	

3. Printing requirements for MRCs are determined by individual command policy. Printed MRCs must come from "PMS Documents" (not PMS Viewer).
4. The only required documents in the WC PMS File are:
   a. Classified MRCs.
   b. MRCs required by the command.
   c. MRCs with pen & ink changes authorized by ACNs or answered FBRs.
5. Approval Signatures:

19-1.4.14 Planned Maintenance System Feedback Reports. PMS FBRs are used to identify problems with PMS documentation or to request the addition or deletion of PMS coverage. Issues with the periodicity, rates, man-hours, TPMTE and procedure may all be reported via an FBR. An FBR is also used to request copies of classified MRCs, request the addition or deletion of an MRC to or from a MIP, splitting a MIP between WCs, shifting of maintenance responsibility or to request PMS coverage for newly installed systems or equipment. Paragraphs 19-1.4.14.a through 19-1.4.14.j provide amplifying information dealing with the issues that may prompt the submission of an FBR.

a. Periodicity. An FBR can be used to request the increase or decrease in the frequency of a maintenance action, i.e., an MRC. However, the originator needs to keep in mind that the ship or unit has the prerogative to increase the frequency because of harsh weather, unusual operating conditions or corrective maintenance and associated testing requirements. A 726 Class submarine submitted an FBR requesting the frequency of cleaning a specific electronics cabinet filter be increased from quarterly to monthly. Research revealed this MRC was applicable to all 726 Class units and no other ship had submitted a similar request. In fact, two other units had requested the frequency be decreased to semi-annual. It was determined that the submitting unit was in an extended upkeep period and increased foot traffic by shipyard personnel near the electronic cabinet was the most likely cause of the filter becoming clogged. The ship was authorized to increase the frequency to support the extended upkeep period and the periodicity of the MRC was not changed.

b. Rates. The Rates block on the MRC represents the developer's recommendation of the skill level (rate and rank) best suited to accomplish the maintenance action. The key word is recommendation. Qualified personnel other than the rate and ranking specified may be assigned. When an NEC is assigned or DCPO or Safety Petty Officer (SPO), substitution of other personnel is not allowed other than those

exceptions as noted in reference (a). An FBR requesting the rate on an MRC be changed from an ET2 to an FT2 will probably not pass TYCOM screening, yet an FBR requesting the addition or deletion of personnel will generally pass to the cognizant technical activity for review.

c. Man-hours. The MRC reflects the average time per equipment, per person. It does not reflect or account for gathering and putting away tools, tag-outs or time removing and replacing interferences. From a maintainer's perspective, this is not an accurate representation of the time required to accomplish the maintenance action. The Future of PMS initiative will attempt to do a better job of accounting for this additional time but until then, FBRs should be submitted only when the allotted time per equipment is significantly out of synch with the actual time required. For example, an MRC calls out 0.5 man-hours per equipment, but it takes 1.0 man-hours.

d. Tools, Parts, Material and Test Equipment. TPMTE FBRs should be submitted when the procedure calls for an item not listed in the TPMTE block or when the TPMTE block lists an item not called out in the procedure. Updating the MRC to reflect common hand tools, administrative or office supplies and basic housekeeping items is addressed in paragraph 19-1.4.14.k.(1).

e. Procedure. Procedures are written at a level of detail based on the assumption maintenance personnel are trained, qualified, and supervised by experienced leadership to execute the maintenance consistently and expertly. MRCs exist to provide standardized proven procedures, specify consistent acceptance criteria and to communicate warnings and cautions relative to the specific maintenance action. They are not intended to specify every possible action of the maintainer. There may be instances where an obvious typographical error exists on the MRC (example: Turn switch to ON; however, switch may already be ON and the intent of the step is to turn unit off, the card should read Turn switch to OFF). This type of error should not prevent the scheduling or performance of maintenance. However, in this situation, the accomplishment of the MRC is not possible until the WCS reviews the error and concurs that it is safe to proceed. A temporary notation including the reason for the correction must be made on the MRC, initialed by the WCS and an FBR submitted. Extreme caution will be taken when reviewing MRCs for this type of error. Errors must be obvious typographical errors and a PMS FBR must be submitted immediately upon discovered. Do not permanently alter the MRC until authorized by the applicable Systems Command, ISEA or NSLC Detachment. If a step is missing that is necessary to complete the task, and that step is not obvious to the MP, submit an FBR to have it added. An FBR submitted to request procedural changes should include the originators contact information and supporting rationale or justification. If, however, a step is missing that is clearly obvious (a ladder was used to install a fixture, but steps were not provided to put the ladder back in stowage) an FBR only serves to overload a process that should be focused on more technical issues.

f. Duplicate MRCs. Unclassified MIPs and MRCs are now available from the DVD. Copies of classified MRCs still require an FBR request due to handling requirements.

g. Addition or Deletion of an MRC. During the life cycle of a system, equipment, or component it may become necessary to add a maintenance action to prevent an age-

related functional failure or to delete a maintenance action due to inherent reliability not foreseen during maintenance development. An FBR submitted to request the addition or deletion of an MRC should include the originator's contact information and supporting rationale or justification.

h. Newly Installed or Removed Equipment. While an FBR request for PMS coverage will provide initial maintenance coverage or deletion of a MIP because of equipment removal, submission of a CK is still required to initiate the rest of the logistic support change process. This point cannot be overstressed; the submission of the FBR does not relieve the ship or unit from initiating a CK. The CK initiates supply support, CDMD-OA changes, ship selected record drawing updates and class maintenance plan updates.

i. Splitting a MIP. There are instances in which a MIP includes MRCs for more than one WC to perform. When this occurs, a decision is required by the command as to whether the MIP will be split or will be scheduled singly by one WC. Only the XO can authorize the splitting of a MIP if an MRC requires another WC to perform the entire maintenance action. If the decision is made not to split the MIP, then the MRs will be accomplished through the coordination of WCSs.

(1) If the MIP is split, the following procedures apply:

(a) Submit to the XO a non-technical PMS FBR requesting approval to split the maintenance responsibility.

(b) Upon receipt of the XO's concurrence, the 3MC will make an annotation in the remarks block of the FBR stating, "XO concurs with splitting MIP maintenance responsibility".

(2) Upon receipt of the FBR approval:

(a) Utilizing the SKED Revision Editor, delete the MRC from the MIP and show the reason for deletion as the designation of the WC assuming responsibility (e.g., EE01).

(b) If the WC assuming responsibility does not reflect the MIP and maintenance items, utilize the SKED Revision Editor to add them. Schedule only the MRC(s) that pertain to the WC. Reflect remaining as deleted with the reason for deletion the designation of the parent (lead) WC (e.g., EA01).

(3) If the situation occurs where a WC removes a split MIP, the following procedures apply:

(a) Submit an XO approved, non-technical PMS FBR reporting the decision to remove the split maintenance responsibility. Upon receipt of the XO's concurrence, the 3MC will make an annotation in the remarks block of the FBR "XO concurs with removing split MIP maintenance responsibility".

(b) Upon receipt of FBR approval, utilize the SKED Revision Editor, remove the MIP, MRC(s) and maintenance item(s) from the WC no

longer involved. Ensure that the lead WC assumes full responsibility for the MIP and MRC(s) and annotates their schedules accordingly.

j. Shift of Maintenance Responsibility. Individual ships sometimes consider it necessary to shift maintenance responsibility from one WC to another, to combine two or more existing WCs or to split an existing WC. These requests for changes of PMS maintenance responsibility require XO concurrence and may require final approval by the applicable TYCOM. Due to the considerable administrative burden, requests for this type of change should not be submitted to accommodate a temporary situation such as short-term assignment of two (2) WCs to one supervisor.

(1) The following factors should be carefully considered before submitting such requests:

(a) Composition of WCs by size and ratings.

(b) Scope of maintenance responsibilities.

(c) WC workload.

(d) Ease of administration of a WC as a cohesive maintenance group.

(e) Importance of WC Grouping to equipment maintenance responsibilities, PMS scheduling, MDS reporting, and CSMP listings.

(2) When changes in maintenance responsibility are considered necessary, the following procedures apply:

(a) Submit a PMS FBR (non-technical). Indicate from which WC(s) equipment is to be deleted and to which it is to be transferred. Upon receipt of the XO's concurrence, the 3MC will make an annotation in the remarks block of the FBR "XO concurs with the shift of maintenance responsibility."

(b) WC or equipment changes will also be reported in the OMMS-NG system via a CK through the CSMP up-line reporting process.

(3) Upon receipt of the FBR approval, perform the following actions:

(a) The PMS Master File is updated to reflect deletion of the MIP from one WC and addition to the WC receiving the responsibility. The originating FBR serial number is annotated on the affected line item on the LOEP for both WCs. The PMS Master File must contain a record of deleted equipment until the change is reflected in a future FR.

(b) Utilizing the SKED Revision Editor, load the affected MIP(s) and MRC(s) to the WC receiving maintenance responsibility. Delete the MIP(s) and MRC(s) from WC shifting responsibility.

(c) Utilizing SKED, perform a revision to move the equipment from the original WC's current schedule to the WC receiving the maintenance responsibility. Data is exported from one and imported to the other maintaining equipment history.

k. MRC Changes Not Requiring Feedback Reports. The only MRC modifications shipboard or unit personnel may make without submitting a PMS feedback report are as listed in subparagraphs 19-1.4.14.k.(1) and (2).

(1) TPMTE Block.

(a) Common hand tools, administrative or office supplies and basic housekeeping items may be substituted or added by the WCS. The WCS may add notes to the MRC to reflect these substitutions. In the case where specific common tools are called out by description, substitutions are not authorized. For example, substitutions such as using synthetic fiber brushes in place of animal hairbrushes or rags and paper towels in place of lint free cloths are not allowed.

(b) Approved parts, materials and miscellaneous item substituted from the supply system, technical manual, or Military Specification, etc., which meet or exceed the requirements may be used. Ensure that substitutions satisfy both the basic maintenance and safety requirements of the MRC. If there is any doubt, a PMS FBR should be submitted specifying substitution desired and reason.

(c) Test equipment or certified tools, which meet or exceed the Sub-Category code requirement, may be used.

(d) When an MRC pertains to multiple configurations of equipment and the TPMTE block contains tools, parts, test equipment and materials for each unique configuration, the TPMTE block may be tailored for the unit's specific configuration by lining out the items that do not pertain to equipment held.

(e) Exception to TPMTE block change: If an item listed in the TPMTE block is not called for in the procedures block, submit an FBR explaining the circumstances. Conversely, if a tool, piece of test equipment, part or material is called for in the procedure block and is not listed in the TPMTE block an FBR should be submitted.

(2) In the procedure block, WCSs may line-out the non-applicable line items or alternate procedures that do not pertain to current equipment or configuration when the step includes the words "if applicable" or a note identifies steps to be omitted. These items must be reviewed and approved by the division LCPO. As these changes are WC and maintenance item specific, submission of an FBR is not required. If a step or steps in the procedure block have been lined out and tools, parts, material, and test equipment in the TPMTE block pertain only to that step or steps, then they will be lined out as well with a reference to the step or steps lined out and approved by the division LCPO. Warnings, cautions, and notes associated with the lined out step or steps will also be lined out.

l. Types of Feedback Reports. There are two types of FBRs, Technical and Non-Technical.

(1) Technical. These FBRs are used to report technical discrepancies inhibiting PMS performance. Technical feedbacks, normally adjudicated by an ISEA responsible for the system or equipment covered by the PMS documentation, require all the supporting information the originator can provide. The originator should identify the issue, providing as much supporting technical information (APL, Reparable Identity Code, drawing or Hierarchical Structure Code (HSC)) as available and a proposed response or solution if known. Most importantly, provide Point of Contact information, including name and phone number, so that the ISEA can contact the originator should they have questions. Bottom line, the FBR must be accurate and complete to "stand alone", that is, the FBR will be understood without additional explanation. The better the FBR describes the problem, the more likely the originator will receive a timely response. There are two sub-categories of technical FBRs:

(a) Routine. An FBR will be considered routine when it relates to the technical requirements of PMS. It is used to report technical discrepancies or request clarification of procedures.

(b) Urgent. An FBR will be considered urgent when it relates to the technical requirements of PMS and involves safety of personnel, safety of ship or the potential for equipment damage. Urgent FBRs will be forwarded by naval message containing a PMS FBR serial number, to both NSLC Detachments Norfolk and San Diego, with info to the cognizant Systems Command, TYCOM and the Naval Safety Center. The message must describe the unsafe procedures or conditions, must identify the MIP and MRC involved and reflect the serial number of the FBR generated in SKED or Planned Maintenance System – Management Information System (PMS-MIS). Once the message has been sent, include the date time group of the message in the FBR and submit.

(2) Non-technical. These FBRs are intended to support PMS requests that do not require technical review, including WC changes and shift of maintenance responsibility. Non-technical FBRs are submitted to request classified or other PMS documentation which cannot be obtained locally or to request clarification of issues not of a technical nature.

m. Feedback Report Submission. All SKED users will submit FBRs via SKED using the Feedback Report Wizard. Non-SKED users may submit FBRs via PMS-MIS web site at https://algol.pmsmis.navy.mil/PMSMIS by selecting the Feedback Tab and Feedback Report Wizard from the drop-down tab. Non-SKED users accessing this web site for the first time will need to request an account. Click on File Manager and select New User Account Request. This displays options to select a form and readme file, which can be downloaded, filled out and sent via e-mail as directed in the readme file. An e-mail will be sent confirming your account and providing access to the main screen. The Anchor Desk web site can also be used to submit FBRs.

n. Feedback Report Screening (Shipboard or Activity).

(1) Initial screening is accomplished by the originator or WCS who is responsible for ensuring all data is accurate and complete.

(2) The division LCPO or DIVO accomplishes the second level screening and verifies the content and validity of the FBR within three days of origination.

(3) The DH, next to screen the FBR, is responsible for verifying the content and validity of the FBR and digitally signing FBRs within five days of origination.

(4) The 3MC is responsible for screening, serializing, and forwarding FBRs within seven days of origination. The 3MC will also:

(a) Maintain accountability for all PMS FBRs submitted and actions taken until updated PMS documentation is received.

(b) Ensure that the originator and all applicable WCs are kept apprised of action taken and ensure the originating and other applicable WCSs implement the changes or corrections when received.

o. Feedback Report Screening (External to Hull or Activity). FBRs are next processed by the TYCOM. The TYCOM will verify the content and validity of the FBR and either return the document to the originator or pass it on for further processing and resolution

p. Feedback Processing Activities.

(1) The central control points for processing FBRs are the Planned Maintenance System Coordinating Activity (PMSCA). Depending on the type of FBR and level of technical authority necessary to answer the FBR, the PMSCA will either respond to the originator with a resolution or forward the FBR to the appropriate technical authority for action.

(2) ISEAs are those activities designated by NAVSEA as the technical experts for specific systems or equipment. Naval Surface Warfare Center, Philadelphia Detachment is the ISEA for the majority of non-nuclear hull, mechanical and electrical equipment installed on most ships. ISEAs under the direction of the NAVSEA Technical Warrant Holder adjudicate the FBR request and forward the response to the PMSCA. The PMSCA provides the final response to the originator and updates the PMS database to reflect ISEA changes. PMS changes are issued with the next available FR.

NOTE: IT IS POSSIBLE AN FBR RESPONSE MAY NOT MAKE A SPECIFIC FR BASED ON THE DATE THE RESPONSE WAS RECEIVED BY NAVSEALOGCEN. PROCESSING TIME AND HANDLING MAY CAUSE THE REVISED DOCUMENTATION TO MISS AN FR CUTOFF DATE. HOWEVER, SINCE ALL FRS ARE NOW RECEIVED QUARTERLY, IF A REVISION MISSES THE CURRENT FR CUTOFF WINDOW, THE REVISED DOCUMENTATION WILL BE AVAILABLE WITHIN THE NEXT THREE (3) MONTHS.

q. Feedback Processing. FBRs are processed per NAVSEA policy:

(1) Urgent FBRs.

(a) The PMSCA will provide a message response to all Urgent FBRs within one (1) working day of receipt. If the FBR is forwarded to a Design Activity or ISEA for resolution, then the Design Activity or ISEA will provide a message response informing the originator of specific actions or required changes because of the adjudication of the FBR within one working day of receipt. This message response must be addressed to the originator and distributed to all TYCOMs of units holding the affected documentation. TYCOMs will forward this message to all commands that could be affected by the PMS change.

(b) The PMSCA will distribute revised PMS documentation to all affected users within 30 calendar days of receipt of the FBR, via special issue or ACN.

(2) Routine FBRs.

(a) The PMSCA will perform technical reviews, research, and provide a response to routine FBRs where resolution does not require technical authority action.

(b) FBRs that the PMSCA cannot resolve will be sent to the cognizant Design Activity or ISEA. The cognizant Design Activity or ISEA will provide the response to the appropriate PMSCA describing the action taken. The PMSCA will provide the response to the originator by electronic means.

(c) Distribution of the revised MRC to the originator and other affected users will be accomplished via ACN or the next available FR.

(d) NAVSEA's existing policy calls for Technical Review Activities and ISEAs to provide FBR responses in less than 21 working days from time of receipt. In addition, NAVSEA has established a goal of providing answers to FBRs in one day. While some FBRs will require extensive research and days, weeks or in some cases months to resolve, the vast majority of FBRs can and should be answered much sooner. One day may be overly optimistic, but the intent is to put the emphasis back on the timely resolution of FBRs.

(e) If no revision to PMS documentation is required, pertinent comments will be provided in the response to the PMSCA. When not concurring with the feedback report, the rationale for the non-concurrence must be provided to the PMSCA.

r. Feedback Response Implementation. Units will implement responses to FBRs based on the category and content as determined by the unit's 3MC.

(1) Urgent FBR. Within 24 hours of receipt of FBR response.

(2) Urgent FBR with an ACN. Within 24 hours of receipt, the ship will implement an administrative change to incorporate the new PMS documentation. These revised documents will be utilized to conduct maintenance until the revised PMS document is incorporated into the next FR.

(3) Routine FBR:

(a) Technical. The response deals with content such as a revision to technical specifications, tolerances, test equipment, materials, acceptance criteria or the sequence of procedural steps. These changes need to be implemented within two weeks of receipt of the FBR response or prior to the next scheduled accomplishment date should that date fall within the two-week window.

(b) Administrative. The response deals with issues that do not affect the technical content or procedural steps. Administrative changes might be added steps to provide a better degree of clarity, formatting revisions to tables or figures that do not change technical content, or updating of Notes, Warnings or Cautions that do not impact the performance of the MRC. These changes do not need to be implemented prior to receipt of the next FR. If the next FR does not reflect the revised documentation, implementation is required before the next scheduled accomplishment date of the MRC.

(4) Routine FBR with an ACN:

(a) Technical. These changes need to be implemented via an administrative change within two weeks of receipt of the FBR response or prior to the next scheduled accomplishment date should that date fall within the two-week window. These revised documents will be utilized to conduct maintenance until the revised PMS document is incorporated into the next FR.

(b) Administrative. These changes do not need to be implemented prior to receipt of the next FR. If the next FR does not reflect the revised documentation, implementation is required via an Administrative Change before the next scheduled accomplishment date of the MRC.

19-1.4.15 Assessment Procedure MRCs. Assessment Procedure (AP) MRCs need not be scheduled within SKED, but they will be maintained "active" through the FR and TFR process. AP MRCs need only be printed on an "as needed" basis for use by assessment personnel or Ship's Force. The record of completed AP MRCs by off-ship personnel is recorded on the work candidate and Ship's Force participation is recorded in their completion remarks of that work candidate. There is no need for recording Ship's Force participation in an assessment event on their PMS schedule within SKED. FBRs submitted requesting deletion of a MIP that only contains AP MRCS will be disapproved and returned to the originator.

19-1.4.16 Self-Assessments. The ability of an activity to perform critical self-assessments is instrumental to the success of the command's PMS program. The PMS Self-Assessment Program needs to address all aspects of 3-M.

a. TYCOM Self-Assessment Polices. Each ship must perform a quarterly Self-Assessment utilizing the shipboard 3 MTT and onboard 3-M organization personnel per Appendix B. Additionally, assessments are to be conducted as determined necessary by ship's 3-M organization, 60 days prior to a scheduled 3MA or 3MI and when directed by the TYCOM. The completed report will be retained by the 3MO for 12 months and provided to CNAL or CNAP 3-M Team one week prior to arrival for the conduct of a 3MA or 3MI, or 14 days after completion of a TYCOM directed assessment. The XO via the 3MO will ensure that personnel performing the audits have adequate 3-M knowledge to ensure a thorough review. The CO will receive a formal briefing of the findings of the Self-Assessment and intended corrective actions. Self-assessment results will be documented via message format provided by the TYCOM.

b. Self-Assessment Elements. The major program elements of a Self-Assessment include an evaluation of the PMS Performance Rate (PPR) and CSMP Validity, monitoring MRC performance, monitored MRC, and conducting PMS Spot-Checks, WC audits, and deficiency abatement. 3MCs will retain monitored PMS results, Spot Checks and WC audits from the last completed quarter in either hard copy or digital format for review supporting the self-assessment.

(1) Monitored MRC. Supervisory personnel must periodically monitor the performance of PMS to provide feedback and training to maintenance personnel and to enforce command maintenance standards. This will be conducted by the LCPO, E-6 LPO, or a 3-M PQS 304 qualified system matter expert of each work center. Personnel charged with monitoring must be System Matter Experts for the system, equipment, or component for which the MRC applies and qualified 3-M PQS 304. Concerns and recommendations from monitored maintenance actions will be turned into the D3MA for analysis and training. Monitored checks can be used for on-the-job training to teach the "right way" to conduct maintenance. These monitored MRCs will be documented as a monitored evolution and findings will be provided to the WC's CoC for inclusion into training and deficiency abatement. The value of monitor maintenance cannot be overstated, and commands are encouraged to establish a robust monitored maintenance program.

(a) Every work center will have at a minimum one monitored maintenance action per week when maintenance is scheduled and if it has not already been monitored.

(b) Monitored maintenance should only be accomplish once per quarter on a specific MRC per maintenance person, to avoid repetition.

(2) PMS Spot Check. PMS Spot Checks are utilized to validate that previously scheduled and accomplished MRCs were performed and the degree to which they were performed. The checklist contained in Appendix B Section II, is the tool supervisory personnel utilize to determine the accomplishment status of a completed MRC. Deficiencies noted and the final grade will be provided to the WC's CoC for abatement. The WCS will record the Spot Check grade into SKED to generate the SCAR for the quarterly PMS Performance Report. Spot

Checks will involve all elements of the CoC to include the CO, CMC, XO, 3MC, DHs, DLCPOs, DIVOs, divisional LCPOs, and first-class petty officers. By following the checklist, the inspector can determine if the sailor is competent, the maintenance was accomplished, required TPMTE was available and used, and safety precautions were followed. The focus should be less on administration and more on the condition of the gear.

(a) Avoid Spot-Checks of MRCs with insufficient complexity. Performing a Spot-Check on a 3 or 5 step MRC does not provide the CoC an accurate picture of the health of the command's maintenance program. Selected MRCs should be of sufficient content to provide the auditor with evidence of satisfactory performance (e.g., tag-outs, QA packages, parts required, off-hull reporting, test equipment, safety equipment, etc.).

(b) Spot-Checks evaluated as "below standards" will require immediate training and re-performance as determined by the 3MO. Any re-accomplishment of the MRC must be monitored by the LCPO to ensure noted deficiencies are not repeated.

(c) The spot-checker or monitor will ensure that the Spot-Check or monitored data is immediately entered into SKED. When applicable, a brief synopsis of any deficiencies resulting from the Spot-Check will be indicated within the Spot Check.

(d) The minimum number of Spot-checks is reflected in Table 19-1-6.

(e) The 3-M Office will establish, and track spot-check trend data records for the following areas: Maintenance Person Knowledge and Performance, Tag-out, Safety, HAZMAT and PPE. This data will be kept for a minimum of 24 months.

(3) Work Center Audits. Each WC must receive an audit once per quarter by a supervisory individual, Chief Petty Officers or above. Deficiencies noted from this audit will be reported to the WC's CoC for abatement. The 3MC will report recurring deficiencies to the XO for further investigation and corrective action.

(4) Deficiency Abatement. The status of discovered deficiencies will be kept current within the monitoring program. Recurring deficiencies must be reported to the XO for further investigation and corrective action. Deficiencies that have been reported as corrected will be subject to follow-up monitoring to ensure corrective action was effective and results of the follow up monitoring will be reported to the XO. The ship's 3-M Abatement Program will include the previous quarter's audits, Spot-Checks, monitored evolutions and CSMP validity audits noting trends and corrective actions.

Table 19-1-6 - Aircraft Carrier Spot Checks

Management Level	Number of Checks	Interval
CO	1	Weekly
XO	1	Weekly
CMC	1	Weekly
DH*	1	Weekly
DLCPO	1	Weekly
3MO	1	Weekly
3MC**	1	Weekly
1/3 of 3-MTT	1	Weekly
DIVO	1	Weekly

* If the department has a designated 3-M PA, then the PA will be assigned a spot check along with the DH. The DH cannot delegate the weekly spot check requirement.

** The number of spot checks to be conducted by the 3MC is set by the number of 3MCs assigned to the 3-M Office.

19-1.5 ZONE INSPECTION PROGRAM.

19-1.5.1 Purpose. To set forth the responsibilities and procedures for the Zone Inspection Program. Reference (g) requires every command to conduct periodic zone inspections to ensure proper measures are taken to keep machinery, spaces, and equipment operational, clean and in a satisfactory state of preservation. Each space will be formally inspected at least once per calendar quarter.

19-1.5.2 Background.

a. Zone inspections will emphasize safety, preservation, damage control readiness, material condition, cleanliness, and specific items of interest. They will be structured to ensure rapid correction of major discrepancies that could cause injury to personnel, damage to equipment or constitute a fire hazard. Special emphasis must be placed on the elimination of fire hazards, safety hazards and the proper stowage of hazardous materials. To ensure documentation and standardization, the ZIDL, Appendix C Section I, will be used and must be entered into the MODES module located in the TSIMS Program.

b. The reactor officer is responsible for conducting MCAP inspections inside main propulsion spaces per nuclear note. The reactor officer will keep the XO apprised of results of these inspections.

c. Reference (c) states the following spaces will not be under the Zone Inspection Program: all tanks, voids, sponson voids, catapult trough wing voids, aircraft electrical service stations, catwalks, bilges, underwater hull, freeboard, and the

exterior surface of the island, ventilation plenums, and cold weather openings and closures for supply and exhaust systems. Inspection results will be entered into the Corrosion Control Information Management System database. Inspection results provide Carrier Planning Activity and CNAL/CNAP N43 the proper tools for planning future availabilities.

19-1.5.3 Zone Designation.

a. To accomplish the inspection of all spaces each quarter, the 2,000-plus available spaces must be divided up into zones to coincide with 13-week quarters. A different zone will be inspected each week on a rotating basis. They are further sub-divided into smaller sets within each zone.

b. The number of inspectors and escorts from a given department is determined by the number of groups each department has within a given zone.

c. Zone inspection deficiencies will be entered and tracked in MODES module accessed through the TSIMS Program.

19-1.5.4 Zone Space Assignment. The responsibility for each space of the ship will be assigned to a specific division and WC per space database maintained by the 3MO. This will normally be the WC located in or responsible for maintaining the majority of the equipment in the space. Spaces are to be grouped into inspection zones according to WC cognizance whenever possible, rather than in geographical slices from several WCs. The designated WCS, or group supervisor if utilized, will retain overall responsibility for the space and for the proper administration of inspection deficiencies.

19-1.5.5 Procedures.

a. Department LCPOs will be notified by the 3-M Office each week identifying the zone scheduled for inspection the following week and are responsible to provide the 3-M Office qualified inspectors.

b. Department LCPOs will provide replacement names of qualified zone inspector substitutes (when required) to the 3-M Office one day prior to the zone inspection.

c. Zone inspection escorts will attend training per this section with the Department LCPO the day prior to the inspection and be knowledgeable of the spaces to be inspected. Escorts will be provided a list of the spaces that they will be responsible for. Training will be given on escort responsibilities to include the expectation that escorts will find all the spaces on their list and plan a logical and efficient route for the inspection.

d. Thirty minutes prior to the scheduled time of the zone inspection, escorts and inspectors will assemble at the designated muster location for zone inspection administrative instructions.

e. Zone Inspectors will include the CO, XO, CMC, DHs, PAs, Limited Duty Officers, Chief Warrant Officers, DIVOs and all CPOs. Inspectors will be trained in requirements of this section. All officers and CPOs must be qualified PQS-304, DHs to PQS 306 and all need to be knowledgeable of damage control space requirements.

Other officers or CPOs may be assigned as assistant inspectors to gain experience and assist in identifying discrepancies.

f. Zone inspectors will receive specific direction on safety, damage control and other inspection criteria or points of interest from the XO or their designated representative.

g. Zone inspection escorts and recorders will provide a folder that will contain a list of spaces to inspect, blank ZIDL forms and inspection guidelines.

h. Zone inspectors will meet their assigned escort and commence a thorough and expeditious inspection of their assigned spaces. Zone inspection escorts will guide the zone inspector through department spaces.

i. Space presenters will be standing by the entrance to each space and be equipped with clipboard and black ink pen. The space presenter will greet the inspector and present the space by saluting and saying, "Good morning or afternoon Sir or Ma'am. (Rank), (Last Name), compartment (number), (number) Division, standing by for zone inspection." Presenters will also have the division's space ZIDL folder containing the last four ZIDLs.

j. All spaces will be open and ready for inspection. Locked spaces are unacceptable and require immediate action by the CoC for inspection to proceed.

k. Embarked air wing personnel will comply with zone inspection program as set forth in this instruction and work with primary space owners to correct material deficiencies.

l. Zone inspectors will ensure ZIDL forms are filled out correctly. A mark of "NA" will be given for all active discrepancies identified on previous inspections if the space presenter provides a current MODES database or CSMP report identifying existing deficiencies to the inspector.

m. At the conclusion of an inspection, the inspector and escort must sign the ZIDL and ensure the zone inspection folder is immediately returned to the 3-M Office.

n. The 3-M Office will collect, review, and maintain completed ZIDLs. The 3-M Office will ensure all ZIDLs are entered into MODES module located in the TSIMS program by the D3MA for appropriate action by the departments and divisions.

o. The 3MO will forward the weekly zone inspection discrepancy report summarizing the results of the week's inspection to the XO, copy to DHs, PAs, and department LCPOs. Report will contain at a minimum any space that is inspected UNSAT and a list of all repair "priority one" category discrepancies.

p. DHs, PAs, and department LCPOs will review MODES and the zone inspection discrepancy report sent out by the 3-M Office after each zone inspection and follow up on all reported discrepancies.

(1) Ensure repair "level one" safety discrepancies are resolved immediately by the division responsible for the space or corrected per paragraph 19-1.7 and reported to the XO and 3-M Office within 24 hours.

(2) All discrepancies generated by Safety Department will be documented in the TSIMS via MODES for one shipboard deficiency list. Discrepancies

originated by the Safety Department will remain open in MODES until completed. These discrepancies may have dual documentation in MODES and the CSMP. They will remain open until closed and verified by the Ship's Safety Officer. These JCNs are excluded from the 30-day policy but will be a discrepancy if there is not a corresponding work candidate in OMMS-NG after 30 days. Properly managed safety discrepancies will not be counted or included as part of the 5% delinquent threshold.

(3) All discrepancies originated by the FM or Duty FM will be documented in MODES for one shipboard deficiency list. The ship's FM discrepancies will remain open until completed. These discrepancies may have dual documentation in MODES and the CSMP and will remain open until closed and verified by the Ship's FM. These JCNs are excluded from the 30-day policy but will be a discrepancy if there is not a corresponding work candidate in OMMS-NG after 30 days. Properly managed DC discrepancies will not be counted or included as part of the 5% delinquent threshold.

(4) Discrepancies that are within a division's capability to correct but cannot be corrected by the division within 30 days, must have an originating WC JCN established. Discrepancies that cannot be completed by the division responsible for the space, but the discrepancies are within Ship's Force capability, must have a Ship's Force organizational JCN established per paragraph 19-1.8. Discrepancies that are beyond Ship's Force capability must have an outside activity JCN established. JCNs that require parts or cannot be completed by the originating WC must be submitted within seven days via the CSMP.

(5) Additionally, safety and damage control zone inspection discrepancies should be entered in the departmental 8 o'clock reports as appropriate.

(6) Any discrepancy that results in a grade of "UNSAT" will be corrected on the day of the inspection. Any safety or damage control discrepancy not corrected on the day of the inspection will be reported by the DH to the XO via the 3MO for further transmission to the CO.

NOTE: FOR EXCELLENT AND SATISFACTORY GRADES, LARGE SPACES NEED TO BE TAKEN INTO CONSIDERATION FOR NUMBER OF MINOR REPAIR "PRIORITY 2" DISCREPANCIES SUCH AS THE SIZE OF A SMALL CLEANING GEAR LOCKER TO A LARGE HANGER BAY. IF THE SPACE PRESENTER PROVIDES A CURRENT JCN FOR A PREVIOUSLY DOCUMENTED DISCREPANCY THAT REQUIRES OUTSIDE ASSISTANCE, THE DISCREPANCY IS NOT TO BE RECORDED.

19-1.5.6. Inspection Criteria. Zone inspection parties should use Appendix C Section II, the zone inspection material guide, as a minimum requirement. Each space will be assigned an objective grade on each ZIDL, Appendix C Section I as follows:

a. Outstanding. Space has no discrepancies in any repair priority category and space gives immediate impression of continuous maintenance with cleanliness above standards. Presenter has good working knowledge of space.

b. Excellent. Space has one minor repair "priority 2" discrepancy, no discrepancies in repair "priority 1" category and a good history of maintenance. Presenter has good working knowledge of space.

c. Satisfactory. Space has multiple minor repair "priority 2" discrepancies, no discrepancies in repair "priority 1" category and space is clean but not exceptional. Presentation of space is poor.

d. Unsatisfactory (UNSAT). Any major repair "priority 1" discrepancy or previously documented discrepancies that could have been corrected but were not handled at divisional level. After an UNSAT, a re-inspection with DH and department LCPO will be conducted within seven days.

19-1.5.7 Repair Priorities. Repair priorities are defined as follows:

a. Repair Priority 1. Immediate danger to personnel or equipment.

b. Repair Priority 2. Presenting a hazard affecting crew health, safety, or having a direct impact on the ship's mission.

c. Repair Priority 3. Minor material deficiency.

19-1.5.8 Program Assessment.

a. Zone inspection assessments will be used to determine the performance level of the ship's zone inspection program. They will also provide data that will be used to develop an improvement plan to address Zone Inspection Program weaknesses per the Zone Inspection Program Check Sheet, Appendix B Section IV-D.

b. Ship's Force assessments will be conducted per Appendix B on the following occasions:

(1) Quarterly or when determined necessary by the ship's 3MO.

(2) Sixty days prior to a scheduled CNAL or CNAP Team visit.

(3) When directed by the TYCOM.

c. Ship's Force assessment and reports will be maintained for one year. Results that reveal areas where performance did not meet established standards will drive the development of an improvement plan. After implementing the corrective actions developed in the improvement plan, Ship's Force will conduct follow up assessment to determine effectiveness of corrective actions. Ship's Force will maintain the last four Zone Inspection Program assessments.

d. If an evaluation is conducted off site, Ship's Force will provide in electronic format, the following documentation to the 3-M Team the 1st and 3rd quarter of the year (January and July), before the 10th day of the month:

(1) Completed Ship's Force assessments as per Appendix B.

(2) The last six months MODES ZIDL Program export report. (ZIDL, TC and ZIDL Metric)

(3) If a TYCOM 3-M Team evaluation is conducted onboard, the 3-M Team will brief the scheduled sequence of events with the XO and 3MO.

(a) N432 MDS Specialist will check MODES and OMMS-NG to ensure conformity with TYCOM direction.

(b) The 3-M Team will assess a ship Zone Inspection Program per Appendix B Section IV-D. The 3MO will provide to the 3-M Team the time, the zone, list of spaces to be inspected and a list of zone inspectors.

(c) Assessment results will be submitted to the 3-M Team Leader, CNAL or CNAP and an official copy to the ship.

19-1.6 3-M ASSISTS, TRAINING, ASSESSMENTS, AND INSPECTIONS.

19-1.6.1 Accommodations and Transportation. The team in the scheduling message will request transportation assistance. Adequate working space for team members is required, with tables, desks, and chairs. Wardrooms, wardroom lounges, mess decks if not in use and large classrooms are usually adequate. E-mail accounts and tier one internet access may be required for team members. A message will be provided to the ship with a detailed listing of accommodations required for the visit. If flying on or off the ship, team members will be categorized as Priority 1.

19-1.6.2 3-M Assist Visit. 3-M Assist visits (3-MAT) are an opportunity to train personnel in specific areas of 3-M. The purpose of the assist visit is to identify areas where improvements may be made. Prior to the arrival of the 3-M Team, the ship will respond appropriately to identify areas that need attention and ascertain the type of assistance desired. The CO will be debriefed on the visit results prior to departure. The report will be provided to the cognizant CNAL or CNAP Assistant Chief of Staff for Maintenance and Materiel (N43) for review. There will be at least one assist visit between formal inspections. Since the primary focus of the assist visit is training, no assist visit will be upgraded to an inspection. Ships will routinely have one 3-MAT prior to or at the beginning of a major CNO availability and an additional 3-MAT close to the end of an availability. Routine visits will be coordinated by the ship's 3MO and the TYCOM 3-M team. Assist visits will not be scheduled within 90 days of an inspection.

NOTE: ALL ASSESSED GRADING CRITERIA DURING THE SHIP'S 3-MTT WILL BE USED IN CALCULATING PURPLE-E POINTS FOR THE CALENDAR YEAR PER REFERENCE (I).

19-1.6.3 3-MTT Training Visit. 3-MTT Training Visits provide an opportunity for evaluation and training of the ship's 3-MTT.

a. The TYCOM 3-M Team will evaluate the effectiveness of 3-MTT members in conducting and evaluating spot checks using Appendix A Section I.

b. The 3-M Team will evaluate the overall effectiveness of the 3-M training organization using Appendix A Sections I and II.

c. The 3-M Team will provide training for the ship's 3-MTT concerning their duties and responsibilities as a 3-MTT member.

d. The 3-M Team will provide spot check training. This training may be classroom oriented, deck-plate oriented (i.e. monitored maintenance), or a combination of both.

e. At the conclusion of the training visit, the ship will be provided a written report detailing findings, a summary of the 3-M Team training provided and any recommendations for improvement.

f. The 3-MTT will be considered below standards if the ship fails to achieve a 3-MTT SCAR of 85 percent or greater.

19-1.6.4 3-M Assessment. A 3MA will be scheduled and conducted by the TYCOM 3-M Team. Commands will receive notification of their 3MA prior to the arrival of the 3-M team. Coordination with the TYCOM staff will eliminate conflicts with other major evolutions. Internal ship evolutions will be coordinated with the team leader on arrival, normally, a four day in-port visit.

a. Required Documents. Required documents provided upon arrival of the assessment team:

(1) Shipboard Instructions:

(a) 3-M Instruction.

(b) Hazardous Material Instruction.

(c) Personnel Working Aloft Instruction.

(d) Electrical Safety Instruction.

(2) Ship's last quarter report.

(3) WC PMS file.

(4) List of WCs to include:

(a) WC noun name.

(b) WC designation.

(c) Location.

(d) Telephone number.

(e) Name of WCS.

(5) List of WCs that have no PMS responsibilities.

(6) Copy of the ship's split MIP log.

(7) Current roster of D3MAs.

(8) List of zone inspectors. (For that week's zone inspection)

b. 3MA Grade Computation.

(1) Maintenance Accomplishment Rate. Maintenance Accomplishment Rate (MAR) is the ratio of accomplished (both situational and periodic), lost, alerted, and omitted maintenance requirements over the ship's last reported

quarter. Periodic Accomplishment Rate (PAR) and Situational Accomplishment Rate (SAR) values are provided via SKED.

MAR = (PAR COMP + SAR COMP)

÷

(PAR COMP + SAR COMP + ALERTS + LOST + OMITTED)

(2) Spot Check Accomplishment Rate. SCAR is the ratio of total points earned and the total points available of all spot checks completed following Appendix B, Section II. TYCOM inspectors will select and conduct approximately 100 spot checks.

SCAR = (TOTAL POINTS EARNED)

÷

(TOTAL POINTS AVAILABLE)

NOTE: THE ZONE INSPECTION PROGRAM IS EVALUATED AS PER APPENDIX B, SECTION IV-D (ZONE INSPECTION PROGRAM CHECK SHEET). FINAL GRADE IS NOT APPLIED FOR 3MA SCORING.

(3) Zone Inspection Program Evaluation. Zone Inspection Program Evaluation (ZIPE) determines the ship's ability to conduct thorough space inspections, and document and fix deficiencies. ZIPE is defined by the following formula:

ZIPE = (Total Number of Satisfactory Questions X 4 Points)

÷

(Total Number of Points Available (100))

NOTE: SRE PROGRAM IS EVALUATED AS PER APPENDIX B SECTION IV-B (SELF REPAIR EFFICIENCY FORM). THREE AREAS ARE EVALUATED: TROUBLE CALL PROGRAM (TCP), SHIP SELF-REPAIR PROGRAM (SSRP) AND PRACTICAL EXAMINATIONS (PRAT). FINAL GRADE IS NOT APPLIED FOR 3MA SCORING.

(4) Self-Repair Efficiency. Self-Repair Efficiency (SRE) determines the ship's ability to self-assess and conduct ship repair operations. SRE is defined by the following formula:

SRE = (TCP x .30) + (SSRP x .50) + (PRAT x .20)

(5) CSMP Validity Factor. CSMP Validity Factor (CVF) is the overall qualitative measure of the accuracy and completeness of ship's material deficiencies and deferred corrective maintenance as represented by the complete CSMP. CVF is defined by the following formula:

CVF = Average Score (from Attribute 1-1) - CSMP Management Score (Attribute 12)

CVF will be evaluated following the guidelines of Appendix B Section IV-A.

(a) 10 percent of entries (minimum of 2, maximum of 15) per WC are selected from the Ship's Force generated CSMP. In addition, all Casualty Report (CASREP) JCN's for the ship will be validated.

(b) Selected entries from the CSMP are verified utilizing the Work Candidate Evaluation Sheet in Appendix B, section IV-A, CSMP Validity Factor Form.

(c) All jobs in Ship's Force Work List (SFWL) Programs, which are over 30 days old, will be entered into OMMS-NG or P-OMMS. SFWL programs include EDL, MCAP, TSIMS and MODES. All SFWL jobs over 30 days old not entered in either OMMS-NG or P-OMMS will be counted as invalid work candidates during the 3MA. An exception to the 30-day requirement will be made for MCAP and EDL deficiencies identified from the Pre-Availability Materiel Condition Assessment Inspection prior to a Planned Incremental Availability (PIA) or Drydocking Planned Incremental Availability (DPIA) and through the end of the PIA or DPIA, which do not require the ordering of repair parts or the writing of a control work package. Thirty days after the PIA or DPIA, all open MCAP and EDL deficiencies over 30 days old and not documented in either OMMS-NG or P-OMMS will be counted as invalid. All SFWL items identified and entered because of the duty FM or safety department evaluation are excluded from the 30-day policy and will be maintained in the SFWL program as open until completed. After 30 days these deficiencies still require entry into the CSMP. Final grade is not applied for 3MA scoring.

NOTE: ALL ASSESSED GRADING CRITERIA THAT ARE NOT FIGURED INTO THE SHIP'S 3MA SCORE ARE FOR CALCULATING PURPLE-E POINTS FOR THE CALENDAR YEAR PER REFERENCE (I).

(6) Below Standards Criteria. The 3MA will be considered below standards if:

(a) Ship does not meet the minimum for SCAR (85 percent) assessed by TYCOM.

(b) Greater than five percent omitted maintenance is discovered by TYCOM.

(c) The difference between the ship's evaluated SCAR and that assessed by the TYCOM is greater than 15 percent of the TYCOM value.

(d) A Plan of Action and Milestones will be submitted to the TYCOM within 30 days for all discrepancies noted in TYCOM's final report.

19-1.6.5 3-M Inspections. The goal of the 3MI is to evaluate the effectiveness of the ship's 3-M program. It is critical that the inspection be conducted in a similar fashion in every homeport and across the force. Inspections will be completed once commenced. Early below-standards indications will not be used to change an inspection into an assistance visit. Commands will receive notification of their 3-M Inspection prior to the arrival of the 3-M team. Coordination

with the TYCOM staff will eliminate conflicts with other major evolutions. Internal ship evolutions will be coordinated with the team leader on arrival. Normally conducted in-port.

a. Frequency of Inspections. The TYCOM will conduct a complete inspection of each command under their cognizance as follows:

(1) When deemed necessary by the TYCOM.

(2) Not to exceed 36 months. The 36-month requirement can be waived by TYCOM on a case-by-case basis, normally when a ship is in a CNO availability longer than six months.

(3) Time spent in CNO Maintenance Availabilities will be counted when determining when inspections are to be scheduled. However, the availability of maintenance data required for review purposes needs to be considered prior to scheduling an inspection

b. Inspection Team Composition.

(1) Senior Member. The senior member will be the TYCOM 3-M OIC.

(2) Team Leader. The inspection team leader will be the TYCOM 3-M Representative who will concur with the assignment of inspection team members. The team leader will ensure inspection attributes are evaluated in a manner consistent with current guidance and directives provided by Commander, Naval Air Force and provide guidance to the inspection team members to ensure a common process.

(3) Team Members. Team members will consist of the assigned Commander, Naval Air Force 3-M Mobile team who are adequately trained in the area to which they are assigned to assess. They will report findings to the Team Leader.

c. Required Documentation. To be provided upon arrival of the inspection team.

(1) Shipboard Instructions:

(a) Command 3-M directives.

(b) Hazardous Material Instruction.

(c) Personnel Working Aloft Instruction.

(d) Electrical Safety Instruction.

(e) Tag-out instruction.

(2) Ship’s most recent Self-Assessment.

(3) PMS alert details from SKED 3.2 for the designated 13-week period.

(4) SKED 3.2 back-up file on dates selected by TYCOM for selection of spot checks. This item may be requested earlier to facilitate spot check selection and coordination.

(5) Schedule promulgated by the ship for CSMP review and DIVO practical exams.

(6) List of WCs to include:

(a) WC noun name,

(b) WC designation,

(c) Location,

(d) Telephone number,

(e) Name of WCS.

(7) List of WCs that have no PMS responsibilities.

(8) Copy of current CSMP (MJB516 Detailed CSMP Report with RPPO Log) and Ship Availability Listing. These reports will be kept with the work centers and brought with them to the CSMP review. Reactor department will also include a current copy of the MCAP log sorted by date, displaying the JCN field. This requirement can also be fulfilled by reviewing this report on-line prior to the CSMP review.

(9) Copy of the ship's split MIP log.

(10) Current roster of D3MAs.

(11) List of zone inspectors. (For that week's zone inspection)

d. Formula Acronyms. Acronyms used in the various formulas are defined as follows:

(1) CLER = Command Level Effectiveness Review

(2) CTS = Command Total Score

(3) CVS = CSMP Validity Factor

(4) DTS = Department Total Score

(5) MAR = Maintenance Accomplishment Rate

(6) MDS = Maintenance Data System

(7) MPR = MDS Performance Rate

(8) PAR = Periodic Accomplishment Rate

(9) PPR = PMS Performance Rate

(10) SAR = Situational Accomplishment Rate

(11) SEER = Scheduling and Execution Effectiveness Review

(12) SCAR = Spot Check Accomplishment Rating

(13) SRE = Self Repair Efficiency

(14) ZIDL = Zone Inspection Deficiency List

e. Final Grade Computation.

(1) Approximately 250 spot checks are accomplished during a 3MI (100 of those are DCPO "40 Work Center" type checks). Every WC gets at least one (1)

spot check. The CNAL or CNAP inspection team determines the number of spot checks to be conducted per WC based on PAR and SAR reports exported from the ship prior to inspection. Numbers reflect the WC accomplishment load. The five "majors" (Weapons, Combat, Air, Reactor and Engineering) receive the most while the rest are spread out according to the numbers.

(2) CTS Formula: CTS = Average of DTS

DTS = Average of Work Center Score

Work Center Score= (PPR X .50) + (MPR X .50)

PPR = MAR X SCAR ÷ 100

MPR = MCF 20% + CVF 30% + RAF 5% + SRE 20% + ZIDL 25%

(3) Ranking Standards.

(a) Commands and WCs will be evaluated as "Above Standards" overall in 3-M if the unit's total score is 90% or higher.

(b) Commands and WCs will be evaluated as "At Standards" overall in 3-M if the unit's total score is between 85% and 89.99%.

(c) Commands and WCs will be evaluated as "Below Standards" overall in 3-M if the unit's total score is less than 85%.

(d) All calculations will be rounded to two decimal places.

(4) A ship that scores "below standards" for a 3MI will be awarded zero Purple-E points for that quarter in which the 3MI place per reference (i).

f. Below Standards Criteria. The 3MI will be considered below standards if:

(1) Ship does not achieve an overall final grade (CTS) of 85 percent or greater.

(2) Ship does not meet the overall minimum for MAR (85 percent), SCAR (85 percent), MPR (85 percent) or greater.

(3) Two major departments fail to receive minimum MAR, SCAR or MPR. Major departments are Air, Combat Systems, Engineering and Reactor.

(4) Ship does not meet the overall minimum SCAR (85 percent) for damage control.

(5) Departmental Failure Criteria:

(a) Department does not achieve a DTS of 85 percent or greater.

(b) Department does not meet the overall minimum grade for MAR (85 percent), SCAR (85 percent) or MPR (85 percent) or greater.

(c) A department that fails a 3MI will not be eligible for their departmental awards for the calendar year of the failure.

g. Inspection Reporting. Significant deficiencies and numerical assessments are reported to the assessed unit's CO, and TYCOM using the format shown in Appendix E. Reporting may be accomplished on the entire unit or on a departmental basis.

h. Re-Inspection Criteria.

(1) A ship that fails to meet minimum requirements for overall command or damage control criteria or both will require a re-inspection in the failed areas.

(2) If a ship fails due to two or more major departments failing to meet minimum requirements, only the major departments that failed will be re-inspected in the failed areas.

(3) 3-M performance graded as "Below Standards" will be re-inspected, not to exceed six months, following the completion of corrective actions. Subsequent repeat "Below Standards" will include a CO summary discussing the inadequacy of applied corrective action in correcting the deficient area.

(4) If a ship or department is re-inspected in an area that failed to meet the minimum criteria, then that area will only receive the minimum passing score for departmental award calculation.

i. Inspection Data Retention. CNAL and CNAP are to maintain an inspection data file for each unit. As each command is evaluated, the individual evaluation standards and calculated values identified will be recorded in the data file with a copy of the inspection report provided to the inspected command. Sections I through VI of Appendix B provide specific criteria to be used in the assessment of each command.

19-1.7 ENGINEERING TROUBLE CALL.

19-1.7.1 Purpose. To set forth the responsibilities and procedures for the trouble call program.

19-1.7.2 Background. Zone inspection discrepancies and trouble calls are the first lines of defense in eliminating small repairs. Seventy percent of trouble calls can be validated and completed when noted within 24 hours. Twenty percent are discrepancies that can be completed during SF Self Repair Program. Five percent are deferred and re-screened as beyond SF capable that need multiple skills and are material TA 1, 2 or 3 work candidates. The remaining five percent are found to be invalid.

19-1.7.3 Policy. The repair officer or a designated representative will assign qualified engineering personnel as Engineering Trouble Call Watch (ETCW). The ETCW will act on behalf of the repair officer in all trouble call matters and will be responsible for the security and proper functioning of the trouble call computer, logbook and records and materials in the space the watch is posted. The ETCW will know and understand the trouble call program and procedures and be able to correctly receive and distribute trouble calls. The ETCW will normally only perform the tasks specified in this section while in an on-watch status.

19-1.7.4 Duties and Responsibilities.

a. Engineering Trouble Call Watch. The ETCW will be located in damage control central or MSC and will be manned continuously. The repair officer and their representatives are always available for assistance. The general duties and

responsibilities of all ETCWs are set forth below but are not all encompassing. Good judgment is always expected to be exercised.

(1) The ETCW will document all trouble calls into the MODES module located in the TSIMS program. Leaving this area requires a formal watch relief. The watch may be temporarily secured for the following reasons:

(a) General Quarters.

(b) In-port emergency team called away when the watch stander is a member of the response team.

(c) Training team briefs when the watch stander is a member of the training team. Briefs are normally planned well in advance therefore the watch bill should be written to avoid this case if possible.

(2) Answer the phone in a professional manner as the engineering department representative for trouble calls.

(3) When receiving a trouble call, ask questions per flow charts for lighting and power, AC and ventilation, fan room flooding and toilets in Appendix C Section III. Record the following information per the MODES trouble call database:

(a) Name, rank, WC and J-dial of person placing the trouble call.

(b) Equipment description and location.

(c) Priority and safety if required.

(d) A detailed problem description of the trouble call.

(e) The trouble call watch will process the trouble call to an engineering WC for correction or deferral.

(4) Immediately call and forward trouble calls to the responsible repair shop for action.

(5) Inform Chief of the Watch (COW) and Engineering Duty Officer (EDO) of repair “priority 1”, critical trouble calls (e.g., issues that are a danger to personnel or equipment). Critical trouble calls require immediate attention and are defined as trouble calls made by any of the following:

(a) Immediate danger to life or health.

(b) Ship’s CO or their representatives (i.e. ship’s secretary, administration officer, CO’s galley staff).

(c) Flight deck issues affecting the ship’s ability to launch or recover aircraft when underway.

(d) Engineering issues that impact normal routine or ship’s ability to perform the mission.

(6) Inform COW or EDO of repair “priority 2”, urgent trouble calls. Urgent priority is defined as trouble calls received requiring immediate attention due

to hazards affecting crew health, safety, or having a direct impact on the ship's mission. Examples include:

(a) Major habitability issues.

(b) Galley issues affecting sanitation or ability to serve meals.

(c) Ship's laundry.

(d) Medical or dental issues that impact normal routine.

(7) Repair "priority 3", routine trouble calls. Routine priority is defined as trouble calls made by an E-5 or above that present a minor material deficiency in a head, lighting, air conditioning, heat, or general habitability issue. Routine trouble calls will still receive prompt service. Examples include:

(a) One water closet (toilet) or sink clogged.

(b) Rack light or a passage-way light out.

(c) Ventilation to non-vital space not operating.

(8) When informing the cognizant repair WC of a trouble call, relay the nature and priority accurately. Print trouble call ticket and give to the repair WC that picks up the trouble call ticket.

(9) Minimize the amount of time the watch station phone is in use.

(10) When the repair WC has completed and returns the signed off trouble call ticket, the watch will:

(a) Close out the ticket, document total amount of hours taken and update the trouble call database ticket with all appropriate information.

(b) Enter signed trouble call ticket into divisional WC completed binder.

(11) Report any problems with the trouble call computer or MODES trouble call program to the COW/EDO, repair officer, or repair officer designated representative.

(12) Maintain the divisional trouble call binders in a neat and organized manner.

(13) Conduct a daily audit of all open trouble call tickets; inform repair WCs of trouble calls older than seven days per this section. Report completion to the COW or EDO and annotate the audit in the watch station logs (i.e., daily audit entry in the Engineering Log indicating "An audit of the open engineering trouble calls was completed this date and time. A total of # trouble calls were completed and there are # of trouble calls seven days old.").

(14) The first trouble call watch for the oncoming duty section will update the contact information for that day's Duty A, DC, E, R, and the COW/EDO.

(15) Conduct watch relief in a formal manner. Any issues should be resolved prior to the oncoming watch relieving. Issues that cannot be resolved will be brought to the attention of the COW or EDO.

b. Chief of the Watch and Engineering Duty Officer. The COW and EDO will conduct a daily audit of all open and closed trouble call tickets in MODES and in the divisional trouble call binders. Annotate the audit in the trouble call index sheet.

c. Repair Officer. Every six months the repair officer or designated representative will e-mail the CNAL or CNAP N43 MDS Team a TYCOM report. This report is created through MODES trouble call reports. This report will be used by CNAL or CNAP N43 MDS Team for the off site assessment of the ship's trouble call program that runs concurrent with the Carrier Maintenance Efficiency Award. The repair officer must maintain a copy of this report for one year.

d. Division Technical Assistants. Every Friday: A, DC, E, and R Division technical assistants will conduct an audit of the open trouble calls for their respective divisions. This audit will be annotated on the trouble call log index sheet. For trouble calls outstanding for more than seven working days:

(1) Notify originating WC to submit a job through OMMS-NG.

NOTE: WHEN GENERATING WORK CANDIDATE FOR GALLEY AND LAUNDRY EQUIPMENT, THE REPAIR WORK CENTER RESPONSIBLE FOR THE CORRECTIVE AND PLANNED MAINTENANCE OF THE EQUIPMENT WILL BE RESPONSIBLE IN DOCUMENTING THE JSN UNDER THE REPAIR WORK CENTER. THE GALLEY WATCH CAPTAINS AND LAUNDRY SUPERVISORS CAN CONTACT THE REPAIR WORK CENTER VIA THE SHIP'S TROUBLE CALL PROGRAM TO SUBMIT TROUBLE CALLS.

(2) Direct the watch to close the trouble call in the MODES database, detailing the reason it was not completed and that the originating WC was instructed to submit a job through OMMS-NG or P-OMMS. The WC should provide a JCN to the watch for entry into MODES when closing the trouble call.

(3) Make an entry in the watch station logs that the audit was completed.

e. Repair Work Centers. All repair WCs must document expended total man-hours on accomplished trouble calls every month. To do this a completed maintenance action item without prior deferral is entered into OMMS-NG with the repair WC as a lead or assist JCN.

(1) Table 19-1-7 identifies APLs created to assist the trouble call WC when entering these work candidates in OMMS-NG.

Table 19-1-7

APL	HSC	EFD	ESD
XSYSTEMITEM	89751SFADP	ADP TROUBLE CALL DESK	TROUBLE DESK
XSYSTEMITEM	89751SFALR	ALRE TROUBLE CALL DESK	TROUBLE DESK

XSYSTEMITEM	89751SFCSS	COMBAT SYSTEM TROUBLE CALL DESK	TROUBLE DESK
XSYSTEMITEM	89751SFENG	ENGINEERING TROUBLE CALL DESK	TROUBLE DESK
XSYSTEMITEM	13011SFZIP	ZONE INSPECTION PROGRAM	ZONE INSPECTION

(2) When a call is found to be beyond Ship's Force capabilities, the repair WC responding will assist the submitting WC on how to properly write the work candidate.

19-1.8 REPAIR SERVICES ORGANIZATION.

19-1.8.1 Purpose. To set forth the responsibilities and procedures for the aircraft carrier repair services program.

19-1.8.2 Background.

a. To support carrier self-sufficiency and carrier SFIMA capabilities, this section standardizes maintenance screening procedures to be followed by CNAL and CNAP activities.

b. In addition to those listed in references (a) through (k) the objectives of MDS are to provide aircraft carriers the tools and resources to accurately assess and report ship's material condition while performing corrective maintenance at the lowest echelon level.

c. The shipboard MDS system is unique within the structure of the naval organization in that it is a program which encompasses the most junior personnel up to and including senior directors. Overall fleet readiness can be directly affected by changes within MDS and how readily they are implemented.

d. Command involvement, process awareness and TYCOM oversight are driving factors in a successful program. The key components of a successful program are:

(1) Vibrant Ship's Force Self- Repair Program, driven by an engaged repair officer.

(2) Standardized work candidate screening process and clear communication by the SMM, RMO, repair organization and TYCOM.

(3) Recurring shipboard training program conducted by the SMM office in areas of OMMS-NG usage and CSMP management.

e. The ability of a ship to self-repair requires a continuous screening process. The repair officer develops a master repair schedule. The repair schedule provides a specific time frame for focusing on each department's needs approximately three times per year. Supply department typically is reviewed every quarter due to the volume of spaces and the fact that everyone uses their facilities for quality of life (i.e., messing, heads & beds, laundry, and other service spaces). Departmental emergent and or safety related work candidates outside of the master repair schedule are handled case by case and scheduled through the repair officer.

19-1.8.3 Aircraft Carrier CNO Availability Repair Teams. SMM screening of work candidates is designed to allow for the development of a CNO Availability, Ship's Force work package. Screening work candidates for the teams is continuous and concurrent with the Ship's Force Self Repair Availability Program. As the SMM conducts IUC screening, work candidates are categorized such as vent cleaning, door repair, and habitability using the local work candidate status drop down list. CNO team leaders review these deficiencies, tagged by the SMM. As the CNO availability draws closer, these lists can be exported into an Excel spreadsheet. The team leader checks and provides feedback to the SMM on any work candidate beyond Ship's Force capabilities. If found to be within team capability, the team leader assigns a specific PMXX WC as an assist WC code per reference (h).

19-1.8.4 Engineering Repair Mission. The mission of the Engineering Repair Organization is to provide facilities for accomplishment of high-quality maintenance onboard aircraft carriers and to provide repair services to conventionally powered surface ships while deployed. Aircraft carriers are equipped to provide organizational and intermediate level maintenance and services for almost all of their own requirements and those of surface ships including repair and maintenance of machinery and electrical and electronic equipment.

19-1.8.5 Meetings. The repair officer routinely holds the following meetings for respective department's repair period:

a. Self-Repair Arrival Conference. The repair officer conducts the conference, at a minimum, two weeks prior to the start of a department's repair availability period. The repair officer will provide a CSMP file from OMMS-NG of all organizational level work three weeks prior to the department's repair availability period. The department scheduled for the repair period will bring a copy of their eight o'clock report and a prioritized list of work to be accomplished. Personnel from each of the WCs that are knowledgeable of their CSMP, usually PAs, LCPO or LPO and 3MA, and engineering repair organizations such as repair officer, repair division technicians and repair division LPOs will be present to discuss particular job needs, manpower, WC support and other items of interest to ensure job accomplishment.

b. Production Meetings. The repair officer will conduct production meetings daily for integration issues during the availability.

c. Departure Report. The repair officer at the end of each repair period will provide a completion report to the department. Work candidates which are not accomplished are deferred to a future repair period or re-screened to an external maintenance activity with IUC comments explaining reason that Ship's Force cannot accomplish. These comments allow a better understanding of the work that is to be re-screened and

continue communications between the Ship's Force repair officer, SMM and the TYCOM MPM.

d. Daily Status and Liaison. Repair technicians routinely liaise with the repair officer on specific status of any work integration problems.

19-1.8.6 Maintenance Screening and Repair Organization.

a. CNAL or CNAP MDS Team. The MDS Team assists in the following:

(1) Advising commands in the administration of Ship's Force Continuous Maintenance Screening Program.

(2) Conducting review of work candidate processing in support of the continuous maintenance screening process.

(3) Conducting Ship's Force continuous maintenance screening training, assists, installations, and assessments.

(4) Monitoring the overall implementation and effectiveness of the Ship's Force Continuous Maintenance Screening Program on all aircraft carriers.

(5) Reviewing Ship's Force assessment results to identify trends and provide prompt support to ships as required.

b. Commanding Officer. The CO has overall responsibility for ensuring that maintenance of equipment and systems is accomplished per 3-M procedures contained in reference (a). The CO will ensure a program review conducted by the ship's repair officer is in place to effectively monitor the command's program.

c. Chief Engineer. The CHENG is responsible to the CO for execution and management of the Repair Service Organization. The CHENG will:

(1) Ensure maintenance personnel receive adequate Ship's Force continuous maintenance screening training.

(2) Conduct regular meetings with the XO, SMM, repair officer and DHs to discuss Ship's Force Self-Repair Continuous Maintenance Screening Program and provide necessary guidance and coordination.

(3) Ensure a program review conducted by the ship's repair officer is in place to effectively monitor the command's program.

d. Ship's Maintenance Manager. The SMM is directly responsible to the CHENG. Responsibilities are assigned in writing. The SMM will:

(1) Monitor operation of the MDS to ensure correct documentation procedures are followed.

(2) Coordinate industrial maintenance during designated CNO Availabilities.

(3) Ensure all documentation deferring maintenance for outside assistance is reviewed and approved in a timely manner per the requirements of this manual.

(4) Conduct IUC screening.

e. Repair Officer. The repair officer is normally a senior surface chief warrant officer or limited duty officer who is directly responsible to the CHENG. The repair officer works together with the SMM for all authorized screening, planning, scheduling, accomplishment, and inspection of Ship's Force self-repair periods and for ensuring timely and satisfactory completion of engineering repair work per prescribed methods and standards. The repair officer is also responsible for upkeep and maintenance of all Industrial Plant Equipment (IPE) and those spaces supporting the repair capabilities within the repair organization. The ship's repair officer will:

(1) Review all work candidates screened by the SMM. These work candidates are evaluated and either sent to the repair technicians – departmental LCPO or rejected back to the SMM. Rejected work candidates are accompanied by remarks documenting reason for rejection and will be rescreened to the TYCOM for accomplishment by an outside repair activity. A screened work candidate must be accepted or rejected by a ship's repair organization within seven working days.

(2) Coordinate all administrative facets of the Ship's Force Continuous Maintenance Screening Program (i.e., Trouble Call Program, SFIMA and Ship's Force Self-Repair Program) per TYCOM directives.

(3) Evaluate command's use of the Ship's Force Continuous Maintenance Screening Program and keep the CHENG advised of its operational effectiveness.

(4) Monitor an active, self-critical assessment program and report program effectiveness monthly to the SMM per self-assessment evaluation sheet.

(5) Advise and assist DHs, DIVOs, D3MAs and WCSs in matters concerning the Ship's Force Continuous Maintenance Screening Program including coordination and conduct of training and proper documentation of material deficiencies.

(6) Ensure planning list reports are generated prior to execution of the inactive utility in OMMS-NG. Reports will be submitted to CNAL or CNAP MDS Team upon request and retained onboard for a period of one year. CNAL or CNAP MDS Team will provide format.

f. Engineering and Deck Repair Technicians. Billeted in auxiliary, deck, electrical and repair divisions, the repair technicians are responsible to the repair officer for all authorized non-nuclear screening, accomplishment, and inspection of repairs and for ensuring timely and satisfactory completion of engineering repair work per prescribed methods and standards. Duties include:

(1) Assign work candidates to repair WCs and coordinate with other technical assistants when multiple WCs are involved. Those work candidates found to be beyond Ship's Force capabilities are sent back to the SMM via the ship's repair officer with remarks per the requirements of this manual. A screened work candidate must be accepted or rejected by a ship's repair organization within seven working days.

(2) Continuously ensure their divisional repair WCs complete assigned work candidates and properly close out each item at the end of departmental repair periods.

(3) Serve as the primary liaison between their division and the applicable department or ship.

g. Hull Repair Division. As per reference (j).

h. Electrical Repair Division. As per reference (j).

i. Outside Auxiliary Machinery Repair Division. As per reference (j).

j. Deck Repair Division. As per reference (j).

k. Lead Work Center Planners. Lead Work Center (LWC) planners work in the engineering department and are responsible for planning repairs to machinery, components and associated systems and preparing Controlled Work Packages and Formal Work Packages. The division works with the MSC in researching drawings and technical manuals. Functions include:

(1) Ship-checking, planning man-hours and developing detailed worksheets and ordering of propulsion plant non-nuclear work. Nuclear level work is not included in this process.

(2) Upon ship-checking the job, work candidate information will be verified.

(3) Evaluate all jobs as to work package requirements, such as Work Packages and Formal Work Packages, and identify the proper procedure to be used or develop one if necessary.

(4) Responsible for submitting Steam Plant Action Requests to obtain technical resolution after LWC or division composes.

l. Maintenance Division. The MSC provides ship's maintenance technicians with the logistics support elements required to effectively plan, manage, and perform maintenance. MSC functions include:

(1) Managing and maintaining the ship's equipment configuration database via OMMS-NG. Additionally, MSC maintains the ship's technical documentation libraries, such as ship's drawing indexes, equipment installation drawings, technical specifications and manuals, shipyard process instructions and technical repair standards.

(2) Providing customer assistance and support to research or troubleshoot Integrated Logistics Support issues or problems involving carrier maintenance requirements.

m. Quality Assurance Division. The QA Division, led by the ship's QA officer, is responsible to the XO for directing and administering the QA Program. The division

performs Non-Destructive Testing services and provides QA training for supervisors and oversees divisional QA craftsman for ship's personnel. Services include:

(1) Non-Destructive Testing T Lab. Performs visual, ultrasonic, magnetic particle and dye penetrate testing of materials per applicable standards and specifications.

(2) QA Shop. Performs inspections, in-process surveillances, training, and audits to ensure that materials, workmanship, and testing are per plans, specifications, and technical directives. This shop supervises overall QA processes for all repair work and oversees LWC or divisional Quality Assurance Inspectors.

n. CNO Availability Team Leaders. Responsibilities are noted in the Aircraft Carrier Availability Planning Guide for Ship's Force resources. Work candidates are categorized using the Local Work Candidate Status drop down list. Process is documented in reference (a). Assignment to one of these categories enables the SMM to build the Ship's Force authorized work package.

o. Safety and Industrial Hygiene. The Safety Department provides comprehensive occupational health and safety support to the aircraft carrier and supports requests from accompanying ships. Services provided include:

(1) Industrial hygiene assessments.

(2) Navy Occupational Safety and Health Program Reviews.

(3) Sound level surveys.

(4) Asbestos identification.

(5) Respirator fit testing and training. It is imperative that personnel are medically qualified to wear respirators before fit testing is requested.

(6) Navy Occupational Safety and Health training.

(7) Ventilation measurement.

(8) Occupational safety and health technical assistance.

p. Safety Office. The Safety Office is manned during regular working hours. After working hours, questions or concerns should be forwarded to the Command Duty Officer.

q. Asbestos Analysis Laboratory. The asbestos analysis laboratory provides asbestos identification and fiber counting services to the aircraft carrier and tended ships. The laboratory maintains ongoing proficiency through participation in Research Triangle Institute and Proficiency Analytical Testing programs.

19-1.8.7 Program Assessment. SRE assessments will be used to determine performance level of the Ship's Force Continuous Maintenance Screening Program. They will also provide data that will be used to develop an improvement plan to address program weaknesses per the CNAL and CNAP Aircraft Carrier Self Evaluation Check Sheet and Practical Exam.

a. Frequency. Ship's Force assessments will be conducted on the following occasions:

(1) Semi-annually or when determined necessary by the ship's repair office.

(2) One month prior to a scheduled CNAL or CNAP N43 MDS Team visit.

(3) When directed by TYCOM.

b. Improvement Plan. Ship's Force assessment results that reveal areas where performance did not meet established standards will drive an improvement plan. After implementing the corrective actions developed in the improvement plan, Ship's Force will conduct another assessment to determine effectiveness of corrective actions.

c. N43 MDS Team Assessment. Two N43 MDS assessments will be conducted each year. SRE assessments will be scheduled and conducted by the CNAL or CNAP N43 MDS team to run concurrent with the Carrier Maintenance Efficiency Award off-site program assessment. If there is a 3-M assessment or inspection conducted during the calendar year, then one of two scheduled N43 MDS evaluations will be conducted onboard in conjunction with the 3-M assessment or inspection.

(1) If the N43 MDS evaluation is conducted off site, Ship's Force will provide in electronic format:

(a) Completed Ship's Force assessments as per paragraph 19-1.8.7.

(b) The last six months MODES CNAL or CNAP Ship Trouble Call Program export report by the 1st and 3rd quarter of the year (January and July), before the 15th day of the month.

(c) Planning list reports as directed by CNAL or CNAP N432.

(2) No practical examinations will be required. Items that are unable to be evaluated off site will receive maximum points allowed during the evaluation. Ship's Force should still conduct practical exams to verify repair personnel maintain proficiency.

(3) If the MDS evaluation is conducted onboard, CNAL or CNAP N43 MDS Team will meet with the SMM and repair officer to first evaluate the proper usage of the Ship Trouble Call and Self Repair programs. N43 MDS specialist will check tables and drop down lists in OMMS-NG to ensure conformity with CNAL or CNAP direction. CNAL or CNAP Aircraft Carrier Evaluation Check Sheet and Practical Examinations will be conducted during the assessment. The SMM and repair officer will provide the N43 MDS Team a list of repair organization personnel and a schedule of where and when each member's practical examination will be administered.

(4) Assessment results will be submitted to CNAL or CNAP N43 MDS Team Leader.

3-MTT SPOT CHECKER FORM

Planned Maintenance System (PMS) 3-MTT, CNAL or CNAP Spot Check Form						
Ship	Depart	Equipment	Work Center	Date Performed	MIP	MRC
3-MTT Member				Spot Check Date:		

*If attributes are evaluated as unsatisfactory, all subsequent attributes will be graded as "0".
+If major safety violation (loss of life, limb, eyesight) deduct 5 pts and all subsequent attributes will be graded as "0". For minor safety violation, only deduct 5 pts.
NOTE: ASSESSMENT ATTRIBUTES WILL BE GRADED ZERO OR FULL VALUE. NO PARTIAL VALUE.

		Assessment Attribute	Value	Grade	Notes
1	**Observe the 3-MTT member conducting the spot check and determine the following by questions and personal observation.**				
*	a.	3-MTT member verified the MP PQS qualified to perform the MR?	2		
	b.	3-MTT member verified the MP presented the correct tools, Personal Protective Equipment (PPE) parts (NSN), material (Military Specification (MILSPEC) and test equipment (Calibrated).	3		
	c.	3-MTT member verified the MP identified the equipment (location, equipment validation).	4		
	d.	3-MTT member verified there were not any unauthorized changes or corrections to the MRC?	3		
	e.	3-MTT member verified the correct MRC for the equipment maintained?	3		
2*	**Observe all steps of MR including all notes, warnings and cautions according to the MRC.**				
*	a.	3-MTT member verified the MP followed all steps of the MRC.	5		
*	b.	3-MTT member verified the equipment Tagout.	5		
+	c.	3-MTT member verified all safety precautions.	5		
3	**Verify the equipment condition reflects accomplishment of the MRC?**				
	a.	3-MTT member assessed that maintenance was performed recently.	10		
	b.	3-MTT member observed proper use and disposal of Hazardous Material.	3		
	c.	3-MTT member verified the MRC was within the capability of the assigned individual to perform as written.	5		
4	**Verify PMS Reporting**				
	a.	3-MTT member verified the Maintenance person reported the status of the MR to the WCS if Completed or Not Fully Accomplished and makes appropriate updates.	2		
	b.	3-MTT member reviewed TFBR for any problem with MRC. (if applicable)	2		

	c.	3-MTT member verified material deficiencies detected by the PMS action were recorded in MDS. (if applicable)	2

APPENDIX B
3-M INSPECTION CRITERIA

APPENDIX B

SECTION I-A

SCHEDULING AND EXECUTION EFFECTIVENESS REVIEW (SEER)

Complete the SEER checklist below for each WC. Enter a numeric evaluation of each inspection attribute and provide amplifying information to describe the deficiencies driving point deductions on the "Remarks" page provided. Significant deficiencies will be reported via the final inspection report.

Command	**Department**	**Division**	**Work Center**	**Date**

		General Attributes	Value	Points
1.	Does the WC PMS file contain:			
	a.*	Current Service Brief?	1	
	b.*	Current and applicable 3-M messages and notices?	2	
2.		Do MIPs and MRCs accurately reflect equipment configuration; are non-applicable MRCs correctly lined out and are applicable MRCs active? (May be MIP standardization violations)	10	
3.	*	Does the WC retain an auditable record of personnel PMS qualifications and designation letters?	5	
		Maintenance Requirement Card (MRC) Deck		
4.	*	Is the WC deck of MRCs, including classified MRC locator cards, complete and current? (Per TYCOM direction)	2	
5.		Are classified MRCs complete and current?	3	
6.		Are blanks requiring Ship's Force data filled in prior to use?	3	
		Chain of Command SKED Administration		
7.		Are all administrative changes approved at the appropriate level?		
	a.	Is the FR approved by DH? (Verify using journal tab.)	2	
	b.	Are weekly Closeouts performed by COB on the first day of the week at the appropriate level?	2	
	c.	All lineouts and MRC customization approved at the appropriate level.	2	
	d.	Check notes reviewed and alerts approved by the DIVO?	2	
		Location Guide Lists		
8.	a.*	Do LGLs contain required information (e.g., equipment name, equipment location, equipment serial number or unique identifier)?	3	
	b.*	Are maintenance items in SKED associated to the existing equipment configuration?	3	
		Situational Requirements		
9.	*	Are all situational (states, triggers, metered) events being scheduled and executed in SKED?	8	
		PMS Execution and Accountability		
10.		Are check note entries accurate, valid, and complete?	3	
11.	*	Was maintenance assigned only to qualified maintenance personnel?	4	

12.		Was currently scheduled, previously completed, situational requirements and unscheduled maintenance entered into SKED?	10	
13.		Is a unique identifier or tag-out serial number recorded in "check notes" for maintenance actions marked as complete that required Tag-outs?	2	
14.		Have the minimum number of spot checks and monitored checks been accomplished?	3	
FBR File				
15.		Are FBRs being tracked in SKED, "Action Taken" block update by WCS?	2	
Inactive Equipment Maintenance (IEM)				
16.		Is the start of an inactive period correctly annotated and approved by DH?	2	
17.		Are IEM requirements properly scheduled?	5	
18.		Is the completion of the inactive period correctly annotated?	2	

Totals (Attributes evaluated as "NA" are not calculated)	Total Points Available: **81**	Total Points Awarded _____
SAT ☐		UNSAT ☐
Inspector Name and Command (Print and Sign)		

* Electronic Versions Acceptable

Sat = 85 percent or better

Attribute Scoring:

> 85% = Satisfactory = Full Credit

< 85% = Unsatisfactory = No Credit

Example - Attribute 17: If 85% or better of IEM requirements were properly scheduled, points awarded would be five (5). If less than 85% of IEM requirements were properly scheduled, points awarded would be zero (0).

SEER REMARKS

Provide amplifying information to describe the deficiencies driving point deductions. Significant deficiencies must be reported via the final inspection report.

Attribute #	Amplifying Information
Print Name:	Signature:
Command:	Date:

APPENDIX B

SECTION I-B

COMMAND LEVEL EFFECTIVENESS REVIEW (CLER)

Using the attributes and grading criteria described here, conduct the CLER for the ship. Provide amplifying information for deficiencies causing point reduction on the remarks page.

Command:			**Date:**	
General Attributes			**Value**	**Points**
1.	Does the 3MC: maintain:			
a.		A Change Accountability Log?	2	
b.	*	A log (approved by the XO) tracking the assignment of MRCs from split MIPs to ensure all applicable MRCs are assigned?	3	
c.		A master classified MRC file?	2	
d.	*	A current PMS (and where applicable TFR) DVD or downloaded file?	3	
2.		Does the command have a reliable system for backing up MDS and PMS data?	5	
3.	*	Does the 3MC have an effective system in place to track, route, and explain externally provided PMS changes?	3	
4.		Is there an effective system in use (Spot Check Program) whereby supervisory personnel periodically and routinely monitor PMS performance?	8	
5.		Have all FBRs entered in SKED been properly reviewed by the CoC and submitted off hull within seven (7) days?	3	
6.	*	Does the ship or activity conduct internal audits (Quarterly Self-Assessments) of all WC? (Retain latest copies of deficiencies, corrections, and abatement for current and previous quarter)	15	
7.	*	Does the 3MC provide weekly status reports to the XO per specific TYCOM directive?	3	
8.	*	Does the 3MC have an approved master copy of 3-M PQS specifically tailored for the command?	3	
9.	*	Does the 3MC maintain an auditable record of PMS PQS for the command (e.g., copy of service record entries, signed copy of PQS cover letter, officer verified divisional training record, RADM)?	3	
10.		Does the 3MC maintain the status of command FBRs, responses and follow up actions taken in SKED?	3	
11.		Does the 3MC track assessment MRCs (800/AP series) and verify completion with the local agency?	10	
12.		Is the 3MC triggering GLOBAL events and STATES across the unit? Does the 3MC have an updated major event listing?	10	
13.		Does the ship or activity conduct 3-M program training per directives?	8	
3-M Training Team				

14.		Does the ship's 3MO serve as manager of the 3-MTT and designate members in writing?	3	
15.		Does the ship's 3MO maintain copies of 3-MTT designation letters on file?	3	
16.		Does the 3MC serve as the 3-MTT Coordinator?	3	
17.		Does the 3MC maintain a matrix to select and track spot checks to be performed by the 3-MTT?	4	
18.		Does the 3-M office track spot check trend data for Hazmat, PPE, Tag-out, Safety, and keep this data for 24 months?	4	
19.		Is the 3-MTT led by the XO with the 3MO and 3MC as primary assistants?	3	
20.		Is the 3-MTT composed of a minimum of 30 members from officers, chiefs, and departmental 3-M Assistants?	5	
21.		Are there a proportionate number of members from the 4 major departments?	4	
22.		Are 3-MTT members qualified 3-M 304 LCPO or DIVO, and designated in writing?	7	
23.		Do 3-MTT members provide divisional training and PQS support as requested or directed by the 3MO based on 3-MTT trends?	10	
24.		Does the 3-MTT support the 3MO in conducting self-assessments?	5	
25.		Does the 3-MTT meet monthly to discuss performance trends, improvement recommendations, and conduct training?	10	
26.		Does the 3-MTT conduct quarterly training for the E-7 and above?	10	
Totals (Attributes evaluated as "NA" are not calculated) Total Points Available **155**			Total Points Awarded	
SAT ☐			UNSAT ☐	
Inspector Name and Command (Print and Sign)				

*** Electronic Version Acceptable** **Sat = 85 percent or better**

Attribute Scoring:

All scoring will be done in a "yes" or "no" format.

Example: If yes to the block all points will be awarded. If no to the block, zero points will be awarded.

CLER REMARKS

Provide the attribute number and amplifying information describing the deficiency that has caused a deduction of points.

APPENDIX B

SECTION II-A

SPOT CHECK ACCOMPLISHMENT RATING (SCAR)

Using the basic definitions and guidelines described, determine the PMS Spot Check Accomplishment Rating (SCAR) for each WC. Enter the values determined on the SCAR Check Sheet, section II-A of this Appendix.

Approximately 250 spot checks are accomplished during a 3MI (100 of those are DCPO "40 Work Center" type checks). Every WC gets at least one spot check. The CNAL/CNAP inspection team determines the number of spot checks to be conducted per WC based on PAR and SAR reports exported from the ship prior to inspection. Numbers reflect the WC accomplishment load. The five "majors" (Weapons, Combat, Air, Reactor and Engineering) receive the most while the rest are spread out according to the numbers.

1. Complete an MRC evaluation, SCAR Check Sheet, section II-A of this Appendix, for each MRC selected. Based on the results, evaluate the overall effectiveness of the accomplishment of each MR selected. Enter a numeric evaluation of each assessment attribute (zero or full credit) and provide amplifying information to describe the deficiencies. Significant deficiencies must be reported via the final inspection report.
2. The SCAR Check Sheet is a series of inspection attributes to determine the accomplishment status of an MRC that had previously been reported as accomplished. Although the sheet may be used as a reference for conducting a real time monitored MRC evaluation, for the purposes of conducting a 3MI, all spot checks will be conducted on accomplished (historic) MRCs.
3. Due to the nature of MRC completion, supporting programs such as Tag-Outs and HAZMAT are encountered. Care should be taken to avoid expanding the spot check to a review of the processes of those programs thereby preventing the assessor from determining the accomplishment status of the MRC under review.
4. The following is expanded guidance for completion of the SCAR Check Sheet. Best practices or other policies not supported by source documentation must not be included in evaluating compliance:

    a. (1.a) Determine if the MP is qualified to perform the maintenance task. PQS 301 is required for all MRCs but attention should also be paid to other qualifications required such as Quality Maintenance. See Volume 5, Part I, Chapter 3, paragraph 3.4 of this manual or graduation from a required school such as gage calibration technician.

    b. (1.b) Determine if the correct TPMTE were used during the performance of the MRC. If the MP did not have the required TPMTE, it is unlikely that they would have been able to complete all the procedural steps of the MRC as required. If an item of TPMTE was required to perform a conditional step and that step was not required to be accomplished, it is not considered deficient. If the required test equipment required calibration, ensure that the calibration is within date and the equipment is of sufficient scale to accomplish the MRC.

c. (1.c) Determine if the MP maintained the correct equipment.

d. (1.d) Examine the MRC to determine that any locally applied changes are authorized by procedural notes, external correspondence or allowed by reference (a).

e. (1.e) Determine applicability of the MRC to the component that the MP signed for completion.

NOTE: IF A PROCEDURAL STEP WAS NOT COMPLETED, THE MRC SHOULD NOT HAVE BEEN REPORTED AS COMPLETE AND THEREFORE THE ATTRIBUTE GRADE SHOULD BE ZERO AND ALL SUBSEQUENT ATTRIBUTES SHOULD ALSO BE ZERO, EFFECTIVELY "FAILING" THE SPOT CHECK.

f. (2.a) From a variety of potential techniques, determine if the MP performed all the required steps of the MRC. This may be accomplished via re-enactment, or re-performance. The inspector should come away with a clear impression that all the steps of the MRC were either fully accomplished or not.

NOTE: IF A REQUIRED TAG-OUT WAS NOT CONDUCTED IN SUPPORT OF ACCOMPLISHING THE MRC, THE MRC SHOULD NOT HAVE BEEN CONDUCTED AND REPRESENTS A SERIOUS SAFETY VIOLATION. THEREFORE, THE ATTRIBUTE GRADE SHOULD BE ZERO AND ALL SUBSEQUENT ATTRIBUTES SHOULD ALSO BE ZERO, EFFECTIVELY "FAILING" THE SPOT CHECK.

g. (2.b) If required by the MRC, verify that a tag-out was hung before the maintenance was performed. Ensure the isolation boundaries were appropriately identified and correctly positioned to ensure complete isolation of the maintained equipment. If no tag-out was required, write NA on the sheet.

NOTE: FAILURE TO ADHERE TO A SAFETY PRECAUTION PROVIDED ON THE MRC CONSTITUTES A SERIOUS SAFETY VIOLATION AND THE FAILURE TO PERFORM THE MRC AS WRITTEN. THE ATTRIBUTE GRADE WILL BE ZERO AND ALL SUBSEQUENT ATTRIBUTES WILL ALSO BE ZERO, EFFECTIVELY "FAILING" THE SPOT CHECK.

h. (2.c) Determine compliance with all specific safety precautions listed on the MRC. If no safety requirements were invoked, write NA on the sheet.

i. (3.a) By physical examination of the maintained equipment, determine if maintenance of the nature required by the MRC had been performed. Take note of fasteners that would have had to be disturbed, dirt in filters, fresh oil, etc., to make a judgment as to whether the maintenance has been performed.

j. (3.b) Determine through questioning and record verification that HAZMAT was properly used and disposed of as a means of determining whether the MRC was accomplished. Once the inspector has determined that the HAZMAT was used and disposed of correctly, this attribute is considered fulfilled. If no HAZMAT was required to be utilized, write NA on the sheet.

k. (3.c) Determine if the MP could have performed the MRC from a standpoint of being trained and proficient in the tasks called out for by the procedure.

l. (4.a) Determine if the MP filled out the 13-Week Accountability Log or annotated proper disposition of maintenance in SKED correctly for the accomplished MRC with the appropriate accomplishment date. Ensure if a tag-out isolation was used, the tag serial number is recorded in the space allowed or as a check note in SKED. Ensure that the printed name and legal signature of the MP who performed the maintenance is recorded or, in case of group performed PMS, the MP in charge of the group.

m. (4.b) From reviewing the discussions and findings during the spot check, determine if an FBR had been submitted if required. If no FBR was required, write NA on the sheet.

n. (4.c) Determine if a material deficiency was noted during the PMS; if so, examine the CSMP to ensure the deficiency was documented. If no material deficiency was noted, write NA on the sheet. If material discrepancies are properly documented in the CSMP attribute graded as a two (2). Material discrepancies that are not documented in the CSMP will receive an automatic grade of zero.

5. When a Spot Check is determined to be below standards, the command undergoing inspection is likely to have numerous questions. To facilitate root cause analysis and the formulation of an effective corrective action plan, care should be taken to clearly identify factors contributing to deficiencies that led to the conclusion that the MRC was not conducted as written or not conducted at all.

APPENDIX B

SECTION II-B

SPOT CHECK ACCOMPLISHMENT RATING (SCAR) CHECK SHEET

Planned Maintenance System (PMS) 3-M Spot Check Form						
SHIP	DEPARTMENT	EQUIPMENT	WORK CENTER	DATE PERFORMED	MIP EVALUATED	MRC EVALUATED
Maintenance Person:				**Spot Check Date:**		

NOTES:
"*" is evaluated as unsatisfactory, all subsequent attributes will be graded as "0".
"+" If major safety violation (loss of life, limb, eyesight) deduct 5 pts and all subsequent attributes will be graded as "0". For minor safety violation, only deduct 5 pts.
Inspection Attributes will be graded zero or full value. No partial value.
Inspection Attributes that are Not Applicable will be marked NA and no value given.

		Inspection Attribute	Value	Grade	Notes
Contact the MP assigned responsibility for the accomplishment of the MRC, have the individual deliver MRC, and determine the following by questions, personal observation, or both.					
1.	**a.***	**Is the MP qualified (PQS) to perform the MR?**	**2**		
	b.	**Did the MP present the correct tools, Personal Protective Equipment (PPE), parts (NSN), material (Military Specification) and calibrated test equipment?**	**3**		
	c.	**Did the MP properly identify the equipment (location, equipment validation)?**	**4**		
	d.	**Are there unauthorized changes or corrections to the MRC?**	**3**		
	e.	**Is the MRC correct for the equipment maintained?**	**3**		
Demonstrated all steps of MR including all Notes, Warnings and Cautions according to the MRC.					
2.	**a.***	**Followed all steps of the MRC.**	**5**		
	b.*	**Correctly performed equipment Tag-Out.**	**5**		
	c.+	**Followed all safety precautions.**	**5**		
Does the equipment condition reflect accomplishment of the MRC?					
3.	**a.**	**Is it apparent that maintenance was performed recently?**	**10**		
	b.	**Correctly demonstrated use and disposal of Hazardous Material.**	**3**		
	c.	**Was the MRC within the capability of the assigned individual?**	**5**		
PMS Reporting					
4.	**a.**	**MP reported status of MR to the WCS if Completed or Not Fully Accomplished and made appropriate updates.**	**2**		

	b.	**WC generated FBR for any problem with MRC.**	**2**		
	c.	**Material deficiencies detected by the PMS action were recorded in MDS.**	**2**		

Attributes Evaluated as "NA" are not Calculated

Total Points Available: **Total Points Awarded:**

Spot Check (SCAR) (Grade = Points Awarded ÷ Points Available): SCAR =

Above Standards (90% or greater) **At Standards (85-89.99%)** **Below Standards (less than 85%)**

☐ **Above Standards** ☐ **At Standards** ☐ **Below Standards**

Below Standard grade requires immediate accomplishment (if 3-M Manager determines re-performance is required) monitored by a Chief Petty Officer

Additional Remarks:

Command: _____ Date: _____

APPENDIX B

SECTION III

MAINTENANCE ACCOMPLISHMENT RATE (MAR)

1. The Maintenance Performance formula captures maintenance that was not scheduled.
2. The PAR and SAR reports are automatically generated by SKED.
3. The MAR grade will be determined utilizing the formula reflected in a specified date range.

$$\text{MAR} = \frac{\text{PAR COMP} + \text{SAR COMP}}{\text{PAR COMP} + \text{SAR COMP} + \text{ALERTS} + \text{LOST} + \text{OMITTED}}$$

4. “Omitted” is defined as any maintenance action that should have been performed on any and every maintenance item and no matter the reason did not get scheduled. For example:
   a. Situational or state maintenance that did not get scheduled when the situation dictated.
   b. Improperly lined out periodic checks.
   c. Non-accomplished IEM checks.
   d. Non-accomplished maintenance added via ACN, FBR, Preliminary PMS, etc.

APPENDIX B

SECTION IV-A

CURRENT SHIP'S MAINTENANCE PROJECT VALIDITY FACTOR (CVF) WORK CANDIDATE WORKSHEET

WC	JSN	EQUIP	CASREP	MCAP	1	2	3	4	5	6	7	8	9	10	11		Score

	a.	Are all Originating Work Center Level (PNXX avail) jobs over 180s days from creation close out or resolve? Exemptions are those JSN with outstanding or awaiting for ordered parts.	5
	b.	Is the REJ availability used to track jobs rejected/questioned by the TYCOM TRIAD empty?	2
	c.	Have Work Candidates been removed from past availabilities C+60 Days?	3
	d.	Is there any completed jobs that were still in CSMP that were closed out past 30 days?	5
	e.	Is there any Self-Repair Avail (SXX avail) jobs that are over 365 days old from job creation?	5

Notes: (1) TYCOM Off-Site Evaluation: Items 1 – 11 apply to each JCN evaluated.

(2) Item 12 apply to all active JCN in each work center evaluated.

Ships Force - Name and Rank

Work Centers: _____ _____ _____ _____ _____ _____

This is a targeted review of shipboard CSMP entries - 10 percent of every WC's CSMP (minimum of 2, maximum of 15 JCNs) and accomplished ashore prior to a visit by TYCOM MDS specialists. Targeted JCNs consist of TA 1, 2 and 3, Safety and EOCs of 2, and TA 4s. As per the items listed on the CVF form, the TYCOM inspection team should check for accuracy to include problem description, recommended solution blocks, does the maintenance level requested match the write up, EOC and Safety codes match write up, etc. Finally, for each work center, the assessors will determine any CSMP management deficiency on attribute 12a thru 12e and will be subtracted from the CSMP job writing average score.

CSMP Validity Factor (CVF). CVF is the overall qualitative measure of the accuracy and completeness of ship's material deficiencies and deferred corrective maintenance as represented by the complete CSMP. CVF is defined by the following formula:

CVF = Average Score (From Attribute 1-11) – CSMP Management Score (Attribute 12)

All jobs in Ship's Force Work List (SFWL) Programs, which are over 30 days old, will be entered into OMMS-NG or P-OMMS. SFWL programs include Equipment Deficiency Log (EDL), Material Condition Assessment Process (MCAP) and TSIMS/MODES. All SFWL jobs over 30 days old not entered in either OMMS-NG or P-OMMS will be counted as invalid work candidates during the 3-M inspection. An exception to the 30-day requirement will be made for MCAP and EDL deficiencies identified from the Pre-Availability Materiel Condition Assessment Inspection prior to a PIA or DPIA and through the end of the PIA or DPIA, which do not require the ordering of repair parts or the writing of a control work package. Thirty days after the PIA or DPIA, all open MCAP and EDL deficiencies over 30 days old and not documented in either OMMS-NG or P-OMMS will be counted as invalid. All SFWL items identified and entered because of the Duty FM or Safety Department evaluation are excluded from the 30-day policy and will be maintained in the SFWL program as open until completed. After 30 days these deficiencies still require entry into the CSMP.

CSMP Validity Factor (CVF) grade sheets are subject to change as new versions of automated maintenance management systems are implemented on-line.

APPENDIX B

SECTION IV-B

SELF-REPAIR EFFICIENCY (SRE) REVIEW

ADMINISTRATIVE SECTION GUIDELINE FOR PROGRAM EVALUATION:			
Trouble Call Program (TCP) 30%			
		Points Available	**Points Awarded**
1.	Total Number of trouble calls submitted from last evaluation _____ Total Number of trouble calls completed from last evaluation _____	**20**	
	NOTE: TCP – THE CONVERSION OF DELINQUENT TROUBLE CALL DISCREPANCIES MUST NOT EXCEED 5 PERCENT OF THE TOTAL OPEN TROUBLE CALL DISCREPANCIES EVALUATED DURING THE INSPECTION PERIOD PER 4790.1 INST, GUIDELINES.		
2.	Are any trouble calls older than 7 days?	**20**	
3.	Are repair technicians creating a work candidate at least monthly to account for trouble call hours? (Repair officer maintains 6 months)	**10**	
4.	Are Engineering Trouble Call Watch (ETCW) standers reviewing open and completed trouble calls in MODES daily? (annotate the audit in watch station logs)	**10**	
5.	Are COW and EDOs conducting a daily audit of all open and closed trouble call tickets in TC MODES and in the divisional trouble call binders? (Annotate the audit in the trouble call index sheet.)	**10**	
6.	TC MODES database has adequate information describing the deficiency or problem of the equipment. Fields display the correct type of information required.	**10**	
7.	Are designated engineering personnel qualified as ETCW?	**10**	
8.	Are completed trouble call tickets signed and kept in the divisional trouble call binder?	**5**	
9.	Are Division Technical Assistants conducting an audit of the open trouble calls for their respective divisions every Friday? (Annotated on the trouble call log index sheet.)	**5**	
	TCP		
Ship Self Repair Periods (SSRP) 50%			
1.	Are JCNs completed at ship level approval with lead and assist hours taken?	**15**	
2.	Are JCNs in the repair organizations queue, reviewed within 7 days of SHIP level approval?	**15**	
3.	Are WC codes (SHOP) listed on the planning list, correct?	**15**	
4.	Are completed work candidates signed and kept by repair organization for one quarter?	**5**	
5.	Is there a long-range master repair schedule developed?	**5**	
6.	Are repair period EXCEL spreadsheets kept by the repair officer for one quarter?	**5**	
7.	Is the repair officer conducting arrival conferences two (2) weeks prior to the start of a department's availability period that includes training on proper documentation of material deficiencies and assigning priority to the work request?	**20**	
8.	Is the repair officer conducting daily production meetings with departments in avail to include discussions of scheduling of work, parts status, completion, and acceptance of work?	**20**	
	SSRP		
NOTES:			

Practical (PRAT) 20%

										PRAT		

1. Create list of assigned JCNs using the Maintenance Assignment filter.	**10**
2. Process JCNs utilizing the Maintenance Assignment drop down list.	**10**
3. Add, update and complete lead and assist WC data.	**10**
4. Reject JCNs with rejection remarks.	**10**
5. Generate and print single and multiple AWRs	**10**
6. Create planning list based on repair WC assigned.	**10**
7. Export a planning or work candidate list.	**10**
8. Utilize Variations Tab to add planning information when creating list.	**10**
9. Identify ship level approved, completed JCN's with no task total MN-HRS documented.	**10**
10. Utilize Parts Tab to review part status.	**10**

SRE Total = (TCP x .3) + (SSRP x .5) + (PRAT Avg. x .2) SRE = _____

ADMINISTRATIVE SECTION GUIDELINE FOR PROGRAM EVALUATION:

EFFECTIVE: PROGRAM IS WORKING CORRECTLY WITH FEW MINOR DEFICIENCIES AND IS ADMINISTERED BY PERSONNEL COMPLETELY FAMILIAR WITH THEIR RESPONSIBILITIES. (GRADE > 90%)

PARTIALLY EFFECTIVE: PROGRAM HAS A FEW SIGNIFICANT DEFICIENCIES BUT IS MEETING THE BASIC GOAL OF THE PROGRAM. (GRADE 85 – 89.99%)

NOT EFFECTIVE: PROGRAM HAS NOT BEEN PROPERLY IMPLEMENTED; A PROGRAM THAT HAS THE APPROPRIATE DIRECTIVES PUBLISHED WITH SHIPBOARD INFRASTRUCTURE IN PLACE, BUT NOT CORRECTLY EXECUTED, OR A PROGRAM WITH SIGNIFICANT DEFICIENCIES. (GRADE < 85%)

Ships Information Management System. Within this program is a module called MODES. MODES is a program on the ships LAN that provides command wide visibility and tracks all shipboard trouble calls through a central watch. This watch prescreens all trouble calls, and if determined to be valid, is entered into MODES and farmed out to a repair WC for disposition. If trouble calls cannot be rectified within 30 days, they must be entered on the CSMP. TSIMS tracks material deficiencies by displaying past repairs that would not normally be entered in the CSMP (SFWL). Man-hours are captured by entering a man-hour roll up at the end of the month, utilizing special XSYSTEMITM APLs created by CNAL and CNAP. This input to the CSMP is captured and graded using an SRE grading form.

APPENDIX B

SECTION IV-C

REPORTING AND ASI PROCESSING CONFIDENCE FACTOR (RAF) REVIEW

	OMMS-NG OR P-OMMS SYSTEM MAINTENANCE REVIEW	Points Available	Points Awarded
1.	Is the Import Correction queue empty?	**5**	
2.	Has Archive & Inactive been run in the last 15 days?	**5**	
3.	Is the OMMS-NG batch que process for completed processes in the last 3 days been deleted?	**5**	
4.	Have work candidates been removed from past availabilities C+30 days? Have old availabilities been removed from OMMS-NG or P-OMMS?	**5**	
5.	Is the REJ availability used to track jobs rejected or questioned by the TYCOM TRIAD empty?	**5**	
6.	Is there any S/F written JCN for OWC Maintenance Level (PNXX avail) that are over 180s days from creation that were not close out or resolve? Exemptions are those JSN with outstanding or awaiting for ordered parts.	**5**	
7.	Is a current, up to date, Ship Availability Listing readily available to the ship?	**5**	
8.	Does FAS have a tracking system for up-line reporting? Is last 13 weeks of .uru and .pts on file?	**5**	
9.	Does FAS have a tracking system for bulk loaded MM0001 files? Is last 13 weeks of bulk loads on file?	**5**	
10.	Does FAS have a tracking system for customer feedback files? Is last 13 weeks of feedbacks on file?	**5**	
11.	Does FAS maintain a log tracking significant OMMS-NG or P-OMMS down time?	**5**	
12.	Are current OMMS DAPs installed, and does the FAS know under what conditions they are utilized?	**5**	
13.	Is the Reports Release queue being managed and cleared of obsolete reports? (Any reports over 14 days)	**5**	
14.	Are values in the Site Parameter set per TYCOM directives?	**5**	
15.	Is the Maintenance Assignment dropdown list populated per TYCOM directives?	**5**	
16.	Is the Work Candidate Status dropdown list populated per TYCOM directives?	**5**	
17.	Are WCs per the Standard Work Center Codes published on the JFMM TYCOM website https://www.navsea.navy.mil/Home/SUBMEPP/Products/JFMM/TYCOM/	**5**	
18.	Is there an effective process in place that deletes users as they transfer from the command?	**5**	
19.	Does the Review and Approval queue have work candidates older than seven days below Ship Level Approval?	**5**	
20.	Does the FAS have the current TYCOM directives and are they readily available to the ship? (i.e., Current CNAL User Guide, CNAP OMMS-NG User Guide, Ship's Force Resource Manual for Aircraft Carrier Availability Planning, TSIMS/MODES User Guide, CNAF 3M Gazette Newsletter (4 Quarters)).	**5**	
	Total Points Available	**100**	
	Total Points Awarded		

Inspector Notes:

Reporting and Automated Shore Interface (ASI) Processing Confidence Factor (RAF). RAF is the ability of ship's maintenance and logistics personnel to make sure up-line reporting and ASI processing are done correctly and promptly, and system management of OMMS-NG is within CNAL/CNAP parameters. RAF is defined by the following formula:

$$\text{RAF} = \frac{\text{Total Number of Points Awarded}}{\text{Total Possible Points}} \div$$

Determining RAF: RAF will be evaluated following the guidelines of appendix A (Engineering/Reactor Reporting ASI Processing Confidence Factor (RAF)). P-OMMS will be evaluated using a separate RAF sheet on those ships configured with P-OMMS. Reactor department will receive the P-OMMS RAF grade.

APPENDIX B

SECTION IV-D

ZONE INSPECTION ASSESSMENT

OVERALL PROGRAM EVALUATION: Each attribute valued at four points.

GUIDELINE FOR PROGRAM EVALUATION:

ABOVE STANDARDS: Program is working correctly with few minor deficiencies and is administered by personnel completely familiar with their responsibilities (scoring 90 – 100%).

AT STANDARDS: Program has a few significant deficiencies but is meeting the basic goal of the program (scoring 85-89.99%).

BELOW STANDARDS: Program has not been properly implemented; a program that has the appropriate directives published with shipboard infrastructure in place, but not correctly executed, or a program with numerous significant deficiencies (scoring < 85%).

NOTES:

1. The CNAF 3-M Team senior inspector can determine BELOW STANDARD based on a single major repair level-one safety discrepancy noted during assessment.
2. The conversion of delinquent zone inspection discrepancies to work candidates will not exceed 5% of the total open zone inspection discrepancies evaluated during the inspection period per 4790.1 guidelines.
3. CNAF 3-M Team will randomly select zone inspectors for observation during the zone inspection. Eighty percent (80%) of the selected inspectors and spaces should meet the criteria required to receive a satisfactory in line items 9, 13, 14, 15, 20 and 21.

Zone Inspection Program Check Sheet			
#	ATTRIBUTE	SAT	UNSAT
1.	Are all spaces of the ship inspected at least once a quarter?		
2.	Does the CO participate in zone inspections as an inspector?		
3.	Are the ZIDLs in TSIMS/MODES database correctly prioritized?		
4.	Are ship's officers and CPOs trained in the conduct of zone inspections?		
5.	Does the XO participate in zone inspections as an inspector?		
6.	Does the XO maintain an auditable record for the last 12 months indicating that all spaces have been inspected at least once a quarter?		
7.	Does the 3MO designate zones, zone boundaries, number of zones and the spaces assigned to each zone?		
8.	Does the 3MO furnish inspecting party with inspection binders containing blank ZIDLs appendix C section I, zone inspection material guide appendix C section II, and a copy of the last inspection ZIDLs?		
9.	Are all compartments, gear lockers, drawers, stowage lockers & other enclosures unlocked?		
10.	Do XO, DCA, safety officer, electrical officer (ELO) or designated representative (E-7 or above) provide specific direction on points of interest or other inspection criteria prior to commencement of zone inspection?		
11.	ZIDLs in MODES database have adequate information describing the deficiency or problem of the equipment (s).		
12.	Do DHs, DIVOs or LCPOs ensure all repair level one safety discrepancies are resolved immediately and reported to XO within 24hrs?		
13.	Do inspectors document all discrepancies on ZIDL?		
14.	Do inspectors show up on time with flashlight and conduct inspection properly?		
15.	Do inspectors understand inspection criteria?		
16.	Does the 3-M Office collect, review, and maintain completed ZIDLs and enter them into MODES module located in TSIMS program?		
17.	Does the 3-M Office and D3MAs correctly document discrepancies into MODES?		
18.	Are open ZIDLs in MODES older than 30 days for originating WC deficiencies or older than 7 days for discrepancies beyond the division's capabilities?		
19.	Does the 3-M Office and 3MAs take hours on closed ZIDLs in MODES?		
20.	Does each division have a ZIDL folder or binder containing ZIDLs from the last year’s inspections and blank ZIDL forms for each space assigned?		
21.	Does each division have a CSMP that reflects current condition and discrepancies for each space assigned?		
22.	Does the 3MO forward the MODES and the Zone Inspection Discrepancy Report to the XO, DHs, PAs DCA, ELO, Safety Officer, DEPT LCPOs, DIVOs and LCPOs for review?		
23.	Does the XO, DHs, DCA, ELO and Safety Officer review MODES and the Zone Inspection Discrepancy Report for action routed by the 3-M Officer?		
24.	When corrections are complete, does the department ensure the MODES database is routinely updated to reflect the status of corrective action via the 3-M Office?		
25.	Does the ship maintain a copy of the Ship's Force assessment for one year and the last three (3) CNAF assessments?		
FINAL GRADE			
Printed Name: _____ Signature: _____			
Command: _____ Date:_____			

Zone Inspection Program Evaluation determines the ship's ability to conduct thorough space inspections, and document and fix deficiencies. ZIPE is defined by the following formula:

$$ZIPE = \frac{\text{Total Number of Satisfactory Questions X 4 Points}}{\text{Total Number of Points Available (100)}}$$

Determining ZIPE: ZIPE program is evaluated as per Zone Inspection Program Check Sheet. Final grade is applied across all departments.

APPENDIX B

SECTION V

OMMS-NG PRACTICAL (MCF FOR LCPO/DIVO)

SHIP:	**DEPARTMENT:**
DIVISION:	**LEVEL of ACCESS:**

If the results of line item 1 or 2 = NO, Automatic Failure ZERO points awarded.

1. 3-M PQS Qualified.	YES	NO
2. Can user log into OMMS-NG or P-OMMS application using own login?	YES	NO

	Points	Awarded
3. Display a list of configuration items (equipment).	10	
4. Display a list of work candidates.	10	
5. Demonstrate adding a work candidate.	10	
6. Demonstrate changing or updating a work candidate.	10	
7. Demonstrate closing a work candidate.	10	
8. Review work candidate history.	10	
9. Order maintenance parts.	10	
10. Generate and print CSMP reports.(MJB516 or MJB512)	10	
11. CSMP print out review of work candidates - SF demonstrates knowledge and current status. (2 points is rewarded in each attribute).:		
a. Familiar with JCN and current repair status.	2	
b. Could identify what "Maintenance Level" was originally requested by WC.	2	
c. Did WCS know who conducts the IUC and TYCOM screening and what the codes represent?	2	
d. Did WCS know where the availability code is listed on the CSMP report and what it represents?	2	
e. Did WCS have the ship's availability listing to use as a reference tool?	2	
f. MJB516 CSMP report printed correctly, not missing information or have RPPO Log. (MJB512 Report or parts status included on MJB516).	2	
g. Was WCS aware of any IUC or TYCOM remarks on CSMP report?	2	
h. Was WCS aware that a lead or assist WC had been assigned?	2	
i. Was WCS proactive in seeking repair (an extended period on the CSMP with no action taken)?	2	
j. Parts on order for Ship's Force JSN within a reasonable amount of time. (1 week).	2	
Totals	100	
	Percentage	

Ship's Force Name and Rate:

Inspector's Name: _____ Date:_____

MDS Confidence Factor (MCF). The cornerstone of the program is the ability of ship's maintenance personnel to initiate complete and accurate MDS documents. MCF will be determined based on a practical test of a user's skill in basic OMMS-NG or P-OMMS system navigation. MCF is defined by the following formula:

$$\text{MCF} = \frac{\text{Total Number of Satisfactory Practical Exams}}{\text{Total Number of Practical Exams}}$$

Determining MCF: An MDS practical will be conducted for each work center. The work center test sample will include maintenance personnel, RPPOs, WCSs, LCPOs, DIVOs, DHs, and MSC personnel. Those personnel tested who have access levels above WCS will have their grade applied to all WCs under their cognizance.

APPENDIX B

SECTION VI

3-M INSPECTION COMMAND TOTAL SCORE

1. The FINAL GRADE consists of two parts. (PPR x .50) + (MPR x .50). A minimum grade point of 85 is required for a passing score. In addition, a CVN **WILL FAIL** if any of the following are true:
   a. Two or more "major departments" (Combat, Air, Reactor, Engineering) fail.
   b. The overall RAR, SCAR or MPR score is under 85.
   c. The overall Damage Control (DCPO type checks in "40" Work Centers) SCAR is under 85.
2. PPR (PMS Performance Rate). PPR = (MAR x SCAR) divided by 100. This is the overall MAR (combination of PAR and SAR) multiplied by total SCAR (spot check validation) divided by 100 and expressed as a RATE. In other words, if a ship is properly scheduling only 90% of the checks assigned from NAVSEA, and then properly accomplishing those checks at a grade of 90%. Then PPR would be 90 x 90= 8100 divided by 100= 81 PMS Performance RATE. The PMS side counts as HALF of the overall grade.
3. MPR (MDS Performance Rate). The MDS portion gets an overall 50% weight of the overall 3-M Inspection grade. This comes from the weight fleet commanders (CNAL or CNAP) place on CSMP accuracy and validity. This leads to proper planning and budgeting for complex refueling overhauls, extensive yard periods, and getting CVNs out on time and at the lowest cost. The 5 sections detailed in section IV are weighted as:

   MPR = (MCF x .20) + (ZIDL x .25) + (CVF x .30) + (SRE x .20) + (RAF x .05).

4. OVERALL GRADE is computed as

   CTS Formula: CTS = Average of DTS

   DTS = Average of Work Center Score

   Work Center Score = (PPR X .50) + (MPR X .50)

   PPR = MAR X SCAR ÷ 100

SECTION II

ZONE INSPECTION MATERIAL GUIDE

This is provided as a general guideline for inspections and is not all-inclusive. It is not intended and cannot replace experience, expertise, and good common sense.

Material Checklist		Grade		
1. Bull's-Eye Visible and Correct		**SAT**	**UNSAT**	**N/A**
a.	Compartment number matches CCOL.			
b.	Forward frame number (1st line) matches frame number (2nd line). (Some passageways may be an exception.)			
c.	Accurate dimensions (12" high X 15" wide).			
d.	Photo luminescent paint (with exception of spaces open to topside).			
e.	Frame numbering accurate and visible at each access.			
2. Egress Markings		**SAT**	**UNSAT**	**N/A**
a.	Photo luminescent escape.			
b.	No obstruction.			
3. NTD Doors		**SAT**	**UNSAT**	**N/A**
a.	Compartment information and number on both sides of door.			
b.	Listed on CCOL.			
4. DC Equipment		**SAT**	**UNSAT**	**N/A**
a.	CCOL(s) are computer generated, current and inside a CCOL holder (single, duplicate, and partial).			
b.	CCOL posted and visible at each entrance.			
c.	Compartment number on Bull's-Eye and CCOL match.			
d.	CCOL is stamped duplicate or partial (as applicable).			
e.	Partial CCOL item numbers match CCOL.			
f.	All DC fittings in space listed per NSTM 079 Vol II.			
g.	Valve hand wheels color coded, properly labeled, DC classified with frame number and listed on CCOL per NSTM 505 and 079 Vol II.			

h.	Valves properly lubricated and remote operators connected and operable.			
i.	Deck drains open and close properly, T-wrench available as required, labeled and DC classified, posted on CCOL, all screws must be installed and properly maintained.			
5. Lighting		**SAT**	**UNSAT**	**N/A**
a.	Lighting fixtures are properly mounted, and all fasteners are installed.			
b.	Lighting covers are not cracked, covered with paint and all fasteners installed.			
c.	No frayed wiring.			
d.	Darken ship switches work properly.			
e.	No deteriorated gaskets.			
f.	All red and white lights work.			
g.	Check for light leaks throughout space (turn lights off to inspect).			
6. Additional Items		**SAT**	**UNSAT**	**N/A**
a	Lagging intact, painted.			
b.	Air test fitting caps secured.			
c.	Fire main jumper hoses hydrostatically tested per MRC.			
d.	Sounding tube fittings, classification, and numbering.			
e.	First aid, decontamination and traffic markings are clearly visible.			
f.	Porthole, hatch, dogging wrench, T-wrenches, and ventilation weather closure open or closed, end wrenches on station (as applicable).			
g.	Damage control shoring, present and in good condition.			
h.	Medical stretchers properly stowed (if applicable).			
i.	Posted safety precautions, warning signs, and operating instructions.			
j.	Posted First Aid instructions (4 step).			
k.	Safety nets installed, properly tagged, no tears or worn straps and all hooks or eyes in place.			
l.	First aid boxes are properly marked, tamper-proof seal intact.			
m.	Inspect for unauthorized flammable materials.			
n.	Frame numbering at least once in a compartment < 24 ft in length and every 24 ft in compartments > 24 ft in length.			
o.	Installed and portable eye-wash stations operational, PMS current, alarms operational.			

p.	Verify any Danger and Caution tags are filled out properly per TUMS and JFMM.			
7. Battle Lanterns		**SAT**	**UNSAT**	**N/A**
a.	Rubber boot free of cracks and tears.			
b.	Operates, in good physical condition.			
c.	Correctly positioned to illuminate vital gage boards and escape routes.			
d.	Properly mounted (fixed units not able to be removed from bracket).			
e.	Battery power sufficient, no leaks.			
8. CO_2 Bottle		**SAT**	**UNSAT**	**N/A**
a.	Record tag attached and correctly filled out.			
b.	Tamper seal intact and snug.			
c.	Bracket secured to bulkhead.			
d.	CO_2 decal in place.			
e.	Horn and hose assembly free of paint, no deterioration.			
f.	No electrical tape on metal fitting at valve.			
9. PKP Bottle		**SAT**	**UNSAT**	**N/A**
a.	Record tag per MRC.			
b.	Tamper seal intact and snug.			
c.	Hinged securing strap with lanyard and pin are attached to mount.			
d.	Bracket secured to bulkhead.			
e.	PKP decal in place.			
10. Fire Station		**SAT**	**UNSAT**	**N/A**
a.	Hose neatly stowed 6" off deck, on camel.			
b.	No verdigris on interior or exterior of nozzles, strainers, hose couplings and Y- gates.			
c.	Current hydrostatic date stenciled on hose per MRC.			
d	Fire plug (FPL) bull's-eye correct, red and white characters only (8-1/2"H X 18"W) and lists FPL and all COVs for FPL.			
e	Navy Vari-Nozzle on hose and in bracket.			
f	Y-gate connection to hose is secured and connection without hose is open.			
g	Necessary equipment to operate FPL must be on station per MRC.			

11. Bulkheads and Decks		SAT	UNSAT	N/A
a.	General cleanliness and no rust.			
b.	Paint condition (no runs, good condition).			
c.	No holes or missing rivets.			
d.	Angle irons clean.			
e.	No unused brackets.			
f.	Penetrations sealed properly (turn lights off to inspect).			
g.	Proper insulation and lagging for hot or cold (as applicable).			
h.	Tanks and voids properly DC classified, marked, closed, and safety precautions posted (as applicable); listed on CCOL.			
i.	Deck covering material intact and maintained.			
j.	Pad-eyes weight test data plate installed and within periodicity.			
12. Berthing		**SAT**	**UNSAT**	**N/A**
a.	All lockers and bunk drawers locked.			
b.	TV(s) operational.			
c.	Watch, Quarter and Station Bill posted.			
d.	Racks made.			
e.	Rack curtains installed, clean and in good condition.			
f.	Bedding and linen clean.			
g.	Rack lights in working order (no unauthorized modifications).			
h.	No personal gear adrift.			
i.	Ironing board and legal iron present.			
j.	Tables and chairs in good condition.			
k.	General cleanliness.			
l.	Space secured for sea.			
13. Archways and Ladders		**SAT**	**UNSAT**	**N/A**
a.	Three nonskid strips (no gaps) on the deck of both sides of archways and on the deck above and below each ladder.			
b.	Hand-rails and chains in good condition.			
c.	Photo luminescent paint along frame of ladder per NSTM.			
d.	Ladder treads not worn.			

e.	Handrail and ladder pins intact.			
14. Machinery Spaces		**SAT**	**UNSAT**	**N/A**
a.	Valve hand wheels attached, labeled, painted appropriate color, and not leaking.			
b.	Valves, piping vents properly marked.			
c.	Flange shields properly installed.			
d.	Noise hazard warning signs posted.			
e.	Deck grating, hand-rails clean, in place and secured.			
f.	Deck free of grease.			
g.	No equipment lubricants leaking.			
h.	Lagging intact and painted.			
i.	Flexible hoses have correct hydrostatic test data tag, in periodicity, and correctly filled out.			
j.	All panel indicator lights working.			
k.	No excess HAZMAT.			
l.	Fixed firefighting equipment properly maintained for type of space.			
m.	Bilges dry.			
15. Overheads, Piping and Ventilation		**SAT**	**UNSAT**	**N/A**
a.	Pipes stenciled with functional name of system, have appropriate color and flow arrow every 15' but at least once in space per NSTM (arrows will be no less than 4" in length, pipes with outer diameter greater than 2" will be stenciled with 1" characters, pipes smaller will be stenciled but will not use 3/8" characters or smaller. Pipes too small will have label plates or tags indicating system).			
b.	Cableways clean.			
c.	All penetrations sealed.			
d.	General cleanliness, no rust.			
e.	Vent ducting properly lagged (cold or hot), properly stenciled with functional name of system and flow arrow every 15' but at least once in space per NSTM.			
f.	Ventilation filters and screens clean and all fasteners installed.			
g.	Pad-eyes and mono-rails weight test data plate installed and within periodicity.			
16. Equipment and Gear		**SAT**	**UNSAT**	**N/A**

a.	No oily, combustible material or excess gear adrift.			
b.	Flammable liquids in proper stowage, labeled "FLAMMABLE/COMBUSTIBLE LIQUIDS", will have inventory posted, only one week's worth, and cans properly sealed.			
c.	Space secure for sea.			
d.	Equipment foundations and supports properly preserved.			
e.	Gage calibration within periodicity.			
f.	Gage pointers properly set (red).			
g.	LP air station oil lubricator filled.			
17. Electrical Safety		**SAT**	**UNSAT**	**N/A**
a.	Extension cords, appliance and tools safety checked.			
b.	High voltage warnings posted (as applicable).			
c.	Casualty power terminals posted and T-wrenches available.			
d.	Emergency casualty power cables properly identified with number of cables, lengths and stowed.			
e.	No frayed or exposed dead ended electrical cables.			
f.	Electrical outlets labeled and intact.			
g.	Sound powered phone receptacles covered, labeled, intact and wire lanyard installed to cover.			
h.	Stuffing tube packed.			
i.	One wire per stuffing tube, cables penetrate via stuffing tubes only.			
j.	Power and lighting distribution panels labeled and intact.			
k.	No unauthorized electrical or electronic equipment (refrigerators, coffee pots, fans, air conditioners, microwave, water cooler, etc. without proper authorization forms).			
m.	Power panel megger holes plugged.			
n.	Circuit breaker boxes have no voids.			
o.	Vent controllers DC classified and listed on CCOL.			
p.	Electrical panels, controllers, boxes cover bolts in place.			
18. EEBDs		**SAT**	**UNSAT**	**N/A**
a.	Sufficient number in space. 100% in work-spaces and berthing. 150% in main spaces.			
b.	Inspection port shows BLUE.			

c.	One per rack in berthing areas.			
19. Office and Work Shops		**SAT**	**UNSAT**	**N/A**
a.	Chairs in good condition, arms and backs intact.			
b.	Cabinets open properly, door handles intact.			
c.	Shelving installed properly, holding bar in place.			
d.	Desk installed or mounted, drawers operate properly and in good condition.			
e.	All lockers open and accessible.			
f.	Space secured for sea with no horizontal or vertical movement.			
g.	Rubber matting or dielectric sheet associated electrical gear and or testing equipment.			
h.	Electrical or electronic equipment safety checked.			
i.	HAZMAT stowed in proper locker.			
20. Heads		**SAT**	**UNSAT**	**N/A**
a.	All plumbing operable and pipes have no cracks or leaks.			
b.	No odors.			
c.	General cleanliness.			
d.	Toilets must be clean, free of buildup and toilet paper available.			
e.	Shower curtains and stalls clean and free of mold.			
f.	Hand soap dispenser available and filled.			
g.	Electric hand dryer or paper towel dispenser filled and operational.			
21. Access Closures		**SAT**	**UNSAT**	**N/A**
a.	All dogs on center of strike plates on WTDs or QAWTDs when secured.			
b.	All dogs present and able to be secured on WTHs.			
c.	Hand wheels tight within ¼ turn of WTSs when secured.			
d.	No paint on knife edges or gaskets, dogs, and striker plates.			
e.	No loose dogs when WTH or WTD secured.			
f.	No gap on gasket.			
g.	No paint on moving parts.			
h.	DC classification on both sides of door.			
i.	Photo luminescent paint outlining door leading to egress.			

j.	Photo luminescent exit sign on bottom of door and within 5' of access.			
k.	Label on both sides of hatch or scuttle.			
l.	Door opens and shuts completely.			
m.	Adequate non-skid strips (no gaps) on the deck on both sides of door.			
n.	Listed on CCOL.

APPENDIX E

FORMAT FOR REPORTING 3-M INSPECTIONS

4790
Ser
Date

From: Accomplishing Activity
To: Commanding Officer (Command Name and Hull Number (if applicable.)

Subj: REPORT OF 3-M INSPECTION OF

Ref: (a) NAVSEAINST 4790.8 (series); Ships' Maintenance and Material Management (3-M) Manual

(b) COMUSFLTFORCOMINST 4790.3; Joint Fleet Maintenance Manual, Volume VI, Chapter 19

Encl: (1) (as required)

1. Per references (a) and (b), a 3-M Inspection of (_____) was conducted during the period (Date) to (Date).

2. During this inspection, the following significant deficiencies were discovered:

   a. (List)

Specific department and WC deficiencies are provided in enclosure(s) (1) through ( ).

3. The following overall ship or department numerical assessments are assigned:

   a. 3-M Total Score _____

   b. 3-M Inspection _____

(Above, At or Below Standards)

Copy to:
Type Commander (with enclosures)

CHAPTER 19-2

NAVY EXPEDITIONARY COMBAT COMMAND 3-M POLICIES

REFERENCES.

(a) NAVSEAINST 4790.8 - Ships' Maintenance and Material Management (3-M) Manual
(b) NAVEDTRA 43241 - Personnel Qualification Standard for Ship's Maintenance and Material Management (3-M) System
(c) NAVEDTRA 43523 - Personnel Qualification Standard for Quality Maintenance Program

LISTING OF APPENDICES.

A 3-M Inspection Criteria
B Format for Reporting 3-M Inspections

19-2.1 ROLES AND RESPONSIBILITIES.

a. Type Commander. Exercises primary responsibility for the effective operation and support of the Ships' Maintenance and Material Management (3-M) System. Areas of responsibility include but are not limited to the following:

(1) Ashore Maintenance Data System (MDS).

(a) R-Supply, Organizational Maintenance Management System – Next Generation (OMMS-NG).

(b) Validation, Screening and Brokering (VSB).

(2) Planned Maintenance System (PMS) Scheduling (SKED) software.

(3) Current Ship's Maintenance Project (CSMP).

(4) The screening and processing of Feedback Reports (FBR).

(5) Maintaining an inspection data file per 19-2.4.2.e of this chapter.

(6) Providing program enhancement requirements to the respective Fleet Commander via N43.

(7) Ensuring units are manned with Navy Enlisted Classification (NEC) qualified Type Commander (TYCOM) 3-M Coordinators (3MC) via N1.

(8) Analyzing 3-M Inspection (3MI) and Self-Assessment data, identifying common concerns, conducting root cause analysis, with the development, and implementation of solutions.

(9) Ensuring TYCOM inspection team members are qualified to inspect assigned areas.

b. Immediate Superior In Command. The Immediate Superior in Command (ISIC) is responsible for the routine monitoring and evaluation of the 3-M System for all

assigned activities. Areas of responsibility include but are not limited to the following:

(1) Designating a 3-M Officer in writing. The 3-M Officer is responsible for the satisfactory administration of 3-M Programs, per reference (a) and this section, for subordinate commands or activities

(2) Monitoring and evaluating 3-M Program for all assigned units.

(3) Ensuring 3MIs are current.

(4) Ensuring subordinate commands conduct rigorous quarterly 3-M Self-Assessments and report results to the 3MC.

(5) Monitoring the status of troubled systems and Top Management Attention items using the quarterly 3-M Self-Assessment.

(6) Ensuring subordinate commands comply with standard Work Center (WC), division and department structure as published on the JFMM TYCOM website https://www.navsea.navy.mil/Home/SUBMEPP/Products/JFMM/TYCOM/.

(7) Tracking and monitoring 3-M major milestones and training events, overseeing, or providing inspection teams and conducting 3-M Spot Checks during ISIC or staff visits.

c. Inspection Teams. Areas of responsibility include but are not limited to the following:

(1) Scheduling and conducting 3MIs and training events as directed.

(2) Reporting of training status and certification recommendations to the TYCOM to include any perceived barriers to effective and timely completion of 3-M events.

(3) Ensuring material failures are adequately examined to detect 3-M System inadequacies.

d. Commanding Officer and Officer In Charge. The Commanding Officer (CO) or Officer in Charge is responsible for establishing an aggressive Self-Assessment Program that validates the administration and execution of maintenance and detects improperly conducted maintenance or falsely reported accomplishments.

e. Executive Officer. The Executive Officer (XO) is the command's 3-M System Manager responsible to the CO for the overall management of the 3-M Program. The XO will:

(1) Chair quarterly 3-M System meetings with Department Heads (DH) and the 3MC.

(2) Brief the CO on the status of 3-M.

(3) Integrate 3-M System training into the command's training and qualification program.

(4) Ensure personnel receive adequate and effective 3-M System training.

(5) Ensure the effectiveness of the command's 3-M Self-Assessment Program.

(6) Act as the final review officer for shifts of maintenance responsibility between departments.

(7) Establish a command Zone Inspection Program.

f. Command Master Chief. The Command Master Chief (CMC) will:

(1) Attend the XO's quarterly 3-M system meetings providing senior enlisted feedback.

(2) Conduct PMS Spot Checks following the command's policy to ensure required maintenance is being properly performed and documented.

g. Command 3-M Coordinator. The 3MC will:

(1) Serve as the key 3-M System assistant to the XO.

(2) Maintain a file of 3-M System directives, newsletters, notes, and correspondence containing current 3-M Program information and ensure distribution to WC personnel.

(3) Maintain copies of the current Force Revision (FR) NAVY PMS Digital Video Disk (DVD), List of Effective Pages (LOEP) for every WC, changes issued between FRs in their original format and classified Maintenance Requirement Cards (MRC). Digital copies are allowed unless there have been changes between FRs.

(4) Advise, monitor, and assist Department Heads (DHs), Division Officers (DIVO), Leading Chief Petty Officers (LCPO) and Work Center Supervisors (WCS) in matters concerning the 3-M System.

(5) Monitor the Ship's 3-M Personnel Qualification Standard (PQS) Program and maintain an auditable record of personnel qualified in 3-M PQS.

(6) Maintain a master accountability log of all PMS changes.

(7) Develop and maintain a split Maintenance Index Page (MIP) Log.

(8) Administer the configuration management program.

(9) Supervise the command's 3-M Self-Assessment Program and provide a weekly status to the XO.

(10) Develop and administer the PMS Spot Check Program.

(11) Generate a weekly PMS spot check assignment matrix for officers, Chief Petty Officers (CPOs), and designated supervisory personnel.

(12) Ensure corrective actions are taken on all unsatisfactory PMS Spot Checks and report same to the XO as part of weekly PMS reporting.

(13) Ensure a complete back-up of the SKED system is made on removable media (i.e., DVD or Compact Disk (CD) following completion of the FR update and retain as part of the PMS Master File.

(14) Ensure situational requirements are triggered in SKED and completed based on unit events.

(15) Ensure that Global States and Triggers are properly set at the command level.

(16) Screen all FBRs, verify content, validity, serialize and forward within seven days of origination.

(17) Maintain accountability of all submitted FBRs and actions taken until corrected or new PMS documentation is received.

(18) Ensure the FBR originator and all applicable WCs are apprised of action taken and that changes or corrections are implemented when received.

(19) Ensure 3-M documents such as Ship's Maintenance Action Form, OPNAV 4790/2K (2-Kilo), Ship's Configuration Change Form, OPNAV 4790/CK (CK), etc. that require forwarding to a data processing activity are forwarded within seven days of origination or as operationally feasible.

(20) Validate 3-M MDS data elements following the 3-M validation specifications.

(21) Ensure 3-M documents returned for the correction of data are promptly revised and resubmitted.

(22) Track the reporting of completed maintenance actions related to an alteration or because of a configuration change with timely processing of Automated Shore Interface (ASI) configuration and logistic data.

(23) Report up-line CSMP maintenance transactions and command's equipment file corrections at least twice a month.

(24) Ensure current external backups of the command's Configuration Management Database are created on removable media (i.e., DVD or CD).

(25) Maintain any outstanding paper copies of message work candidates and Supplemental Form, OPNAV 4790/2L (2-Lima), either paper or electronic.

h. Maintenance Officer. The command Maintenance Availability Coordinator will be responsible for the coordination of all Fleet Maintenance Activity (FMA) repairs and coordinate closely with the 3MC. The Maintenance Availability Coordinator will also provide a single working level point of contact and coordinate the command's requirements with the requirements of the FMA. These duties include:

(1) Technical review of work requests submitted for FMA accomplishment.

(a) Ensure readability and technical correctness.

(b) Prevent duplication of work requests for ship alterations, and other Master Job Catalog (MJC) originated deferrals.

(c) Collect supplemental 2-Lima requests for routine work (i.e., lagging, painting, label plates, tiling, etc.) from all WCs and prepare an integrated priority list for each type of routine work to maximize the FMAs effectiveness.

(2) Ensuring command preparations for an FMA availability are conducted per volume II, part I, chapter 3 of this manual.

(3) Meeting daily during an availability with the assigned Ship Superintendent to discuss the status of all active jobs.

(4) Attending all FMA production, night work and management meetings.

(5) Provide a daily FMA job status to each DH, DIVO and Leading Petty Officer (LPO).

(6) Establishment of a Planning Board for Maintenance (PB4M).

i. Department Head. The DH is responsible to the XO for the operation and execution of the 3-M System within the department. Duties and responsibilities assigned to the DH are not to be delegated. The DH will:

(1) Designate departmental 3-M personnel as applicable.

(2) Ensure maintenance is prioritized to facilitate accomplishment.

(3) Review and approve all department PMS schedules and revisions.

(4) Review maintenance action annotations.

(5) Acknowledge weekly alerts.

(6) Implement a Self-Assessment Program within the department to validate properly accomplished and reported maintenance.

(7) Take corrective action on all "Unsatisfactory" PMS Spot Checks and report to the XO via 3MC as part of weekly PMS reporting.

(8) Ensure all material deficiencies are documented and promptly reported.

(9) Review and verify the content and validity of all FBRs, digitally sign FBRs within five days of origination.

(10) Ensure the Configuration Management Database accurately reflects equipment changes whether the action is performed by command personnel or outside activities.

(11) Authorize placement of equipment into an Inactive Equipment Maintenance (IEM) status, ensure PMS scheduling is annotated accordingly.

(12) The review and approval of all department work candidates within four days of creation; ensure completeness, accuracy, and the correct assignment of priority.

(13) Review all work candidates in the departmental CSMP every 90 days.

(14) Ensure that no classified data or Navy Nuclear Propulsion Information is reflected on 3-M documents designated for off hull distribution.

(15) Conduct quarterly meetings with DIVOs, LCPOs and WCS and provide status of departmental 3-M System to the XO.

j. Department Leading Chief Petty Officer. The department LCPO is responsible for the proper operation of the 3-M System within their department. The department LCPO will:

(1) Provide 3-M System guidance and training to DIVOs and division LCPOs within their department.

(2) Participate in quarterly Self-Assessments.

(3) Review all quarterly Self-Assessments and promptly correct discrepancies found within the department.

(4) Ensure the proper testing and inspection of work done by outside activities prior to job acceptance.

k. Division Officer. The DIVO is responsible to the DH for the execution of maintenance within the division. The DIVO will:

(1) Ensure all PMS scheduling changes have been properly annotated and applied prior to DH review and finalization.

(2) Review the 13-Week Accountability Log at the beginning of the PMS week and sign at the end of the week if not using electronic accountability in SKED or when SKED is not available.

(3) Review and verify the content and validity of PMS FBRs within three days of origination.

(4) Ensure 3-M documents generated within the division are complete, accurate and promptly submitted to the DH.

(5) Conduct 3-M Self-Assessments as directed by the command's policy.

(6) Provide weekly updates to the DH concerning the status of the 3-M System within the division.

(7) Incorporate 3-M System training into the Divisional Training Plan.

(8) Review divisional work candidates and the CSMP for validity and accuracy.

(9) Conduct monthly briefings for the DH on the status of all work candidates.

l. Division Leading Chief Petty Officer. The division LCPO is responsible for the proper operation of the 3-M System within their division. The division LCPO will:

(1) Supervise WCSs in the execution of daily maintenance.

(2) Ensure WCSs are properly trained, equipped and are knowledgeable of all WC divisional equipment maintenance requirements.

(3) Ensure divisional personnel are properly trained and qualified to conduct maintenance.

(4) Verify all divisional WC equipment is covered by PMS.

(5) Ensure PMS is properly scheduled and conducted, including all underway and special evolution situational "R" checks.

(6) Review WC PMS records (i.e., FRs, Advanced Change Notices (ACN) and PMS FBRs and Responses), approve all lineouts and additions on the LOEP, MIPs, and PMS schedules prior to DIVO and DH reviews. Ensure proper justification is noted on each lineout.

(7) Review and approve non-applicable procedural steps lined-out on MRCs.

(8) Review and sign the 13-Week Accountability Log at the end of the PMS week (if not using electronic accountability in SKED or when SKED is not available). Ensure checks added that week are hand-written into the blank accountability log.

(9) Review the PMS Scheduling Forecasting Report to ensure that all Tools, Parts, Material and Test Equipment (TPMTE) are available to support upcoming maintenance actions.

(10) Provide the DIVO a weekly status of the division's Self-Assessment Program, CSMP and PMS.

(11) Ensure the Configuration Management Database reflects current ship's configuration.

(12) Ensure FBRs are submitted requesting LOEP changes to reflect system, equipment and component installs or removals.

(13) Review and verify the content and validity of PMS FBRs within two days of origination.

(14) Ensure the divisional CSMP accurately reflects material conditions.

(15) Review and approve work candidates, act as the second point of contact for work candidates and provide the DIVO a weekly brief on the status of all work candidates in the CSMP.

(16) Ensure proper testing and inspection of work done by outside activities prior to job acceptance.

(17) Coordinate repair activities within the division.

(18) Review, approve, and close out weekly schedules.

m. Work Center Supervisor. The WCS will be a senior petty officer assigned to the work center and qualified per reference (b). The WCS will:

(1) Maintain a detailed working knowledge of all equipment deficiencies within the WC.

(2) Ensure WC personnel have completed 3-M PQS training commensurate with position held.

(3) Ensure PMS covers all maintenance worthy equipment in the WC.

(4) Maintain an accurate and current LOEP.

(5) Ensure 3-M System WC files and publications are complete, current, and available to WC personnel.

(6) Ensure WC initiated 3-M documentation is correct, legible, promptly prepared and submitted.

(7) Maintain a 13-Week Accountability Log containing the current and previous 13-Week Log if not using electronic accountability in SKED or when SKED is not available.

(8) Prepare weekly WC schedule, obtain required approval, assign maintenance personnel, and update schedule to reflect status.

(9) Ensure equipment changes, add ons and removals are reflected in the Configuration Management Database and, if not, report via a CK to the Configuration Data Manager (CDM).

(10) Provide MRCs reflecting procedural step lineouts and a listing of non-applicable R-Checks for review by the division LCPO or LPO.

(11) Ensure FBRs are submitted whenever:

(a) Maintenance requirements are not fully understood.

(b) Errors are believed to exist.

(c) Entries in the TPMTE block are wrong or inadequate.

(d) Additional coverage is needed.

(e) Performance of the maintenance requirement would cause a hazardous condition to exist.

(12) Ensure prompt reporting of all material deficiencies and completed maintenance actions.

(13) Ensure Periodic Maintenance Requirements scheduled for command accomplishment are completed and reported as required.

(14) Ensure test and measurement equipment or other portable support equipment is delivered for test or calibration as scheduled.

(15) Ensure the DIVO and division LCPO or LPO are advised of all 3-M System activity within the WC.

(16) Spot check completed equipment file validations; ensure accuracy of the information and PMS scheduling equipment associations.

(17) Review the PMS Scheduling Forecasting Report to ensure that all TPMTE is available to support upcoming maintenance actions.

(18) Ensure all WC weekly schedules are updated daily.

n. Maintenance Personnel. Maintenance personnel will perform all PMS as assigned utilizing PMS documents in SKED and ensure Check Notes contain amplifying information and tagout identifiers as required. Maintenance personnel will:

(1) Perform assigned maintenance.

(2) Notify the WCS when:

(a) An MRC is not fully understood, appears to be incorrect or cannot be accomplished as written.

(b) There are issues with the TPMTE block of the MRC.

(c) The technician has doubts concerning his or her ability to perform the maintenance.

(d) Equipment deficiencies or casualties are discovered.

(e) Factors exist which would make performance of the maintenance unwise or dangerous.

(3) Initiate FBRs when discrepancies are discovered during the performance of an MRC.

(4) Inform the WCS when planned maintenance requirements are complete.

(5) Annotate PMS schedule to reflect accomplishment of maintenance.

(6) Sign 13-Week Accountability Log if not using electronic accountability in SKED or when SKED is not available.

19-2.2 QUALIFICATIONS. All personnel assigned to billets associated with the 3-M system must be 3-M PQS qualified for the assigned billet per reference (b). Evidence of qualification in support of 3-M requirements must be maintained by the command in an auditable fashion. In addition to 3-M PQS qualifications, all personnel assigned to accomplish 3-M related maintenance on systems listed in Volume V, Part 1,Chapter 2 paragraph 2.2.1 of this manual, must be qualified per reference (c). Table 19-2-1 reflects the PQS qualifications required to fill 3-M billets.

Table 19-2-1 - Required PQS Qualifications

3-M Coordinator	PQS-307
3-M Assistant	PQS-306
Department Head	PQS-306
Department LCPO	PQS-305
Division Officer	PQS-304
Division LCPO	PQS-304
Work Center Supervisor	PQS-303
Repair Parts Petty Officer	PQS-302 or RPPO Continuous Training and Qualifications Software
Maintenance Personnel	PQS-301

19-2.3 PLANNED MAINTENANCE.

19-2.3.1 Minimum Standards. MRC accomplishment is critical for maintaining equipment in a ready state and achieving expected service life. The maintenance tasks directed by MRCs are the minimum standards for organizational (shipboard) preventative maintenance and therefore

equipment degradation can be assumed if maintenance is deferred. The following provisions are provided to maximize on time performance of PMS and provide increased fleet latitude in maintaining equipment.

a. MRCs are prepared as instructions to complete a maintenance task based upon the premise that the personnel assigned to perform the task have sufficient knowledge of the rate listed on the card and are qualified to perform maintenance as directed by the MRC. The MRC will be accomplished in sequential order, adhering to all Warnings, Cautions and Notes. Routine sub-steps (i.e., fastener removal, steps to don and remove Personnel Protective Equipment (PPE), turning on a vacuum) may or may not be included in the MRC and their absence should not prevent the maintainer from completing the maintenance task.

b. Per Naval Sea System Command (NAVSEA), procedures are written at a level of detail based on the assumption maintenance personnel are trained, qualified, and supervised by experienced leadership to execute the maintenance consistently and expertly. They exist to provide a common standard, specify acceptance criteria, communicate warnings, and cautions specific to the maintenance and provide proven maintenance practices. They are not intended to:

   (1) Supplement or duplicate rules and procedures that must be followed for hazards generally associated with the equipment, such as Hazardous Material Handling, Electrical Shock Risk Management, etc., but not specifically associated with a step of the procedure.

   (2) Identify every process and every warning associated with the maintenance environment of the component being maintained, such as aloft, in tanks, near an active flight deck, in a heat stress area, etc.

   (3) Specify every possible action of the maintainer.

c. Leadership will uphold standards for complying with maintenance procedures. This standard does not mean the maintainer is expected to robotically follow the MRC word-by-word. Leadership, trainers, monitors, auditors, and inspectors should not expect it. The key word here is intent. The objective is to perform the intent of each step (not necessarily step-by-step performance).

d. If a step is missing that is necessary to complete the task, and that step is not obvious to the Maintenance Person (MP), a FBR should be submitted.

e. MRC completion status is dependent on the accomplishment of all procedural steps on all equipment listed on the MRC or its accompanying items listed on the Location Guide List (LGL) section of the MRC.

f. The performance of additional rational actions during the accomplishment of an MRC is authorized. Examples of such actions include turning on and off items utilized during the performance of the MRC, such as vacuum cleaners, test equipment, etc., general housekeeping, cleaning up or containing spilled fluids or dirt.

g. The substitution of any tools, materials or test equipment not held by the activity should be considered prior to deciding to defer the maintenance until the exact tools, materials or test equipment listed on the MRC are procured. This is especially critical

for frequently required maintenance where several performance cycles can be missed while waiting for supply to provide the correct items. Substitution requirements are provided by reference (a) and other technical documents.

19-2.3.2 Functional Components.

a. PMS Master File. The Master File, maintained by the units 3MC, contains information relative to PMS requirements that are specific to equipment for which the command is responsible. The Master File provides for duplicate issue of missing MIPs and MRCs, contains supplementary information provided by Naval Sea Logistics Center Detachments Norfolk or San Diego and serves as a repository for changes received between Navy FR distributions, which must be retained on file until the changes are reflected in a subsequent FR. Master File content is delineated in Appendix A, Section II, Command Level Effectiveness Review (CLER).

b. Work Center PMS File. The WC File provides a ready reference of planned maintenance requirements and information to be retained in the working area for use by the WCS and maintenance personnel. The WC File contains only the documents and information applicable to a particular WC. The content of the WC File is delineated in Appendix A, Section I-B, Scheduling and Execution Effectiveness Review.

c. Interim MRC Procedures. The command may develop interim MRC procedures based on experience and applicable technical manuals in support of equipment or systems without PMS coverage until formal documentation is received. Before scheduling preliminary MIP requirements, the WCS and the DH must verify their applicability to installed equipment.

d. Weekly Status Report. The weekly PMS Monitoring status reports will be retained (electronically if desired) by the 3MC for 12 months. These reports from the 3MC to the XO will contain, as a minimum, the information cited in paragraphs 19-2.3.2.d.(1) through (6) of this chapter.

(1) Completed Spot Check and Monitored MRC results.

(2) Completed WC audits and results.

(3) The number of FBRs over seven days old that have not been reviewed by the Chain Of Command (CoC).

(4) Abatement and corrective actions completed because of a monitoring program finding.

(5) IEM Details Summary Report.

(6) Overdue (Alerting) MRCs and plan of corrective action.

e. Change Service Accountability Log. The Change Service Accountability Log (CSAL) (Figure 19-2-1) provides a definitive record of all changes to a command's 3-M Program. Whenever a change to a command's 3-M Program is directed (be it from an FR, FBR, ISIC direction, etc.), the change will be routed to the concerned WCS(s) via a memorandum. Whenever such a memorandum is issued, it must be recorded in

the CSAL. Once the WCS reports the directed change has been completed, the 3MC will file the WCS's response and annotate in the CSAL that the action is complete.

(1) The CSAL is comprised of the actual log sheet, a copy of all memos routed to the WCS and the memo from the WCS to the 3MC indicating completion.

(2) The importance of the CSAL cannot be overstated. Basically, it provides for a day-to-day, year-to-year record of changes to a command's planned maintenance program. It is also a turnover document at deployment sites, allowing a current command to quickly identify all changes from a previous command. Finally, it will be inspected during all command 3-M assessments and inspections, providing visibility as to how well a command manages 3-M from one inspection to another.

Figure 19-2-1 - Change Service Accountability Log

FR Change Number or Authority	Date RCVD	Cognizant Dept. or WC	Date Cover Sheet Issued	Date Cover Sheet Returned	Date Master File Updated or Item Closed	Summary of Change

19-2.3.3 Related Maintenance. Related maintenance, so designated by the ISEA or Technical Warrant Holder, is determined from the MIP. The RELATED MAINT column of the MIP reflects related maintenance requirements. Related requirements are positioned on the MIP to line up directly across from the MRC to which they are related. Related maintenance requirements are also identified in the TPMTE section of the MRC under MISCELLANEOUS.

a. Related Maintenance Categories.

(1) Mandatory Related. Mandatory related maintenance requirement(s) are those maintenance actions that must be accomplished concurrently with another maintenance requirement. The mandatory relationship is indicated with the use of the # sign. If the mandatory related maintenance resides on the same MIP, it will be reflected in the RELATED MAINT column as "periodicity#" (i.e., M-3#). If the related maintenance resides on another MIP, it will be reflected as "MIP:periodicity#" (i.e., IC-013/033:M-4#). Mandatory related maintenance requirements are automatically scheduled by SKED.

NOTE: MANDATORY RELATED REQUIREMENTS MUST BE LINKED IN SKED TO BE AUTOMATICALLY SCHEDULED.

(2) Convenience Related. Convenience related maintenance requirements are those maintenance actions that can be accomplished concurrently with another maintenance requirement to save time (preliminary steps and tag-outs already accomplished) or for work force considerations. If the convenience related maintenance resides on the same MIP, it will be reflected in the RELATED MAINT column as "periodicity" (i.e., M-5). If the related maintenance resides on another MIP, it will be reflected as "MIP:periodicity" (i.e., EL-010/001:M-4)). In both cases, the # symbol is omitted. The WCS manually schedules convenience related requirements.

(3) Conditional Related. Conditional related maintenance requirements are those maintenance actions that are performed when specific conditions are present or specified parameters are not met on the referencing MRC. Conditional related maintenance will appear on the MIP in the same manner as convenience related maintenance. The WCS manually schedules conditional related requirements.

(4) None. No related maintenance is reflected as "None" in the RELATED MAINT column.

b. Work Center Supervisors Actions. WCSs are encouraged to review their schedules on a regular basis for opportunities to perform other PMS when an equipment or system has maintenance actions scheduled. Rescheduling of PMS to take advantage of other system maintenance, convenience related, is highly recommended.

(1) If an MRC has related maintenance from another MIP, review the related MIP and MRC and determine if it requires assistance from another WC.

(2) If the related MIP and MRC does not require assistance from another WC and is not on the lead WC LOEP, submit a FBR to have it added to the LOEP.

(3) If the related MIP and MRC requires assistance or completion by another WC and is mandatory, convenience or conditional related then it should also be on the lead WC LOEP. If it is not on the lead WC LOEP, submit an FBR to have it added to the LOEP. If the related MRC requires technical assistance, a special NEC, or another rating, that is not part of the lead WC, then the person with the technical training, special NEC or required rating should be temporarily added to the lead WC "Crew List" and assigned the related maintenance in either an assist or performance role. All WCSs involved will collaboratively plan the required maintenance and may adjust schedules based upon individual workload. When the maintenance is completed, the lead WCS will mark the MRC as completed.

NOTE: WHEN EQUIPMENT IF FULLY OPERATIONAL AND WILL NOT BE UTILIZED FOR EXTENDED SHUTDOWN PERIOD.

19-2.3.4 Inactive Equipment Maintenance.

a. Inactive Equipment. A piece of equipment or system intentionally placed in a hibernated state for a specific period with the intention of reactivating that equipment or system at the end of that period.

(1) Status I. Equipment that will:

(a) Remain onboard,

(b) Is not scheduled for corrective maintenance or overhaul, or

(c) Will be inactive during extended shutdown periods and maintenance availabilities as determined by the DH.

(Example: Caterpillar 120M Road Grater.)

(2) Status II. Equipment that is inactive and:

(a) Subject to corrective maintenance, overhaul, or removal for safe storage,

(b) Temporarily transferred to another activity for maintenance responsibility for extended shutdown periods as determined by the DH, (Example: Combatant Craft.)

(c) When craft is going into an availability for engine overhaul.

b. Implementation and Responsibility. While inactive, minimum maintenance is performed to ensure the success of the reactivation. The IEM section of the MIP will cover this maintenance. However, consideration should also be given to active PMS maintenance checks (i.e., M-1, Q-1, A-1) that can be manually added and performed during this period of inactivity.

(1) To implement procedures for the accomplishment of PMS for equipment declared in an inactive status, current PMS schedules are modified to annotate the requirements listed in the IEM section of the MIP. For advance planning and scheduling of maintenance to take place, it is necessary to determine and identify the extent to which unit or Ship's Force personnel will conduct PMS

during an inactive period. MIPs in each WC will be reviewed to determine if equipment has IEM coverage (i.e., Lay-Up (LU), Periodic Maintenance (PM), Start-Up (SU) and Operational Test (OT)), if the coverage is adequate, and what procedures to follow if there is no IEM coverage on the MIP or provided coverage appears inadequate. The DH is responsible for determining equipment IEM status. When placing a system or equipment in IEM status, the DH will also determine the IEM start date to be reflected in SKED. The IEM end date will not be applied in SKED until the system or equipment is ready to be brought out of IEM status. All periodic PMS that would have been scheduled during the IEM period should be reviewed for applicability, with applicable maintenance accomplished prior to operating equipment.

(2) IEM procedures are listed on MIPs and separated from operational PMS by a horizontal line. The IEM section is titled "Inactive Equipment Maintenance" and is prefaced by the following statement: "The following requirements will be scheduled when equipment is inactivated for periods of prolonged idleness." When there are no IEM requirements the words "None required" will appear under the Inactive Equipment Maintenance Section of the MIP. When IEM procedures are inadequate, submit an FBR. The unit should consider all factors that affect equipment deterioration and take necessary precautionary measures. These factors include environmental conditions, equipment location, susceptibility to damage or other factors that cannot be anticipated when IEM procedures were originally developed by the cognizant ISEA or design activity.

(3) The lack of IEM requirements on a MIP does not prohibit placing that system or equipment into an inactive state. Additionally, certain locations require precautions and maintenance not required force-wide. The unit should consider all factors that affect equipment deterioration and take necessary precautionary measures. The WCS or LCPO is responsible for identifying factors that are inadequate and may require additional preparation and maintenance of the inactive equipment while reporting same to the DH for approval. Factors may include environmental conditions, equipment location or susceptibility to damage. For those actions that are recurring in nature, the WCS should submit a FBR for possible MRC development.

c. IEM Scheduling. SKED provides the capability to perform IEM scheduling.

(1) Status I. The scheduling of maintenance for Status I inactive equipment utilizes conventional PMS scheduling techniques. LU checks will automatically be added to the schedule at the beginning of IEM by SKED. Preventative maintenance checks will be manually added to the schedule by the WCS for the period of IEM following the guidelines of the MIP. At the conclusion of IEM, SU checks and routine PMS will automatically be added to the schedule by SKED. SU checks must be accomplished the week IEM ends. All periodic checks added at the end of IEM, can be moved to the right, not to exceed the allowable date range. Since the MRC date range cannot be applied to the left into the IEM period, the MRC date range can only be

moved to the right and therefore only the plus value of the specific range. For example, the date range for a monthly is 21-41 days. The requirement can only be moved (scheduled) ten days to the right and will not go into "alert" until after the 10th day. This allows the MP or WCS scheduling flexibility within the plus side of the date range of the MRC.

(2) Status II. The scheduling of maintenance for Status II inactive equipment utilizes conventional PMS scheduling techniques, however, not all scheduled IEM PMS may need to be accomplished by the unit or Ship's Force. LU checks will automatically be added to the schedule at the beginning of IEM by SKED and may be marked "NA" if the LU check did not support the equipment being removed from the unit or "Accomplished by Higher Authority" symbol if completed by the intermediate or depot level maintenance activity. Preventative maintenance checks may be required to be scheduled during the IEM period. At the conclusion of IEM, SU checks and routine PMS will automatically be added to the schedule by SKED. SU checks must be accomplished the week IEM ends and may be marked with the "Accomplished by Higher Authority" symbol if they were completed by the intermediate or depot level maintenance activity. Routine PMS added at the end of IEM may also be marked with the "Accomplished by Higher Authority" symbol if they were completed by the intermediate or depot level maintenance activity. All periodic checks added at the end of IEM, can be moved to the right, not to exceed the allowable date range. Since the MRC date range cannot be applied to the left (into the IEM period), the MRC date range can only be moved to the right and therefore only the plus value of the specific range, i.e., the date range for a monthly is 21-41 days. The requirement can only be moved (scheduled) ten days to the right and will not go into "alert" until after the tenth day. This allows the MP or WCS scheduling flexibility within the plus side of the date range of the MRC.

NOTE: WHERE THE GOAL OF 100% ACCOMPLISHMENT CANNOT BE REACHED, THE UNIT'S COC MUST BE KEPT INFORMED OF THE CIRCUMSTANCES THAT PREVENT ACCOMPLISHMENT OF SCHEDULED MAINTENANCE.

19-2.3.5 Scheduling. PMS is a portion of the command's 3-M Program that provides, in one authoritative system, the scheduling information and technical procedures governing planned maintenance. PMS provides a simple method for scheduling and documenting the execution of planned maintenance procedures. Fleet policy and scope are listed in Chapter 19 of this Volume with the scope identified in Chapter 19, paragraph 19.3 of this Volume.

a. Situational maintenance scheduling will be managed utilizing the tools provided by the computer-based PMS scheduling software employed by the activity. All event driven situational requirements will be "triggered" when required and performed per reference (a).

b. Check Notes are required in SKED under the following circumstances.

(1) When PMS is marked as "lost".

(2) When PMS is marked as not-applicable.

(3) When PMS is marked with the '¢' symbol, "satisfied by Higher Level Maintenance."

(4) When PMS requires a tag-out, the tag-out program of record identifier will be entered.

c. Alert Notes will be in the format of paragraph 19-2.3.8 of this chapter.

19-2.3.6 SKED. The use of SKED version 3.2 or subsequent versions for PMS Scheduling constitutes full compliance with all administrative provisions of the 3-M Manual.

a. Guidance for use of SKED is provided via the SKED users guide with help menus, and wizards associated with SKED functionality.

b. The Navy PMS DVD or CD-ROM is used to update the command or unit's SKED PMS data.

c. The SKED program uses days to schedule and keep track of calendar periodicities. MRCs are displayed as out of periodicity when they fall outside the established date ranges in the SKED program. These date ranges are as reflected in Table 19-2-2:

Table 19-2-2 - SKED Periodicity – Date Ranges

Periodicity	Date Range
Daily	None
2D	None
3D	None
Weekly	None
2W	9 - 19 days
3W	14 - 28 days
Monthly	21 - 41 days
2M	41 - 83 days
Quarterly	61 - 121 days
4M	83 - 165 days
Semi-Annually	121 - 243 days
8M	165 - 331 days
9M	+ or - 90 days from scheduled date
Annual	+ or - 90 days from scheduled date
Multi-month after annual	+ or - 90 days from scheduled date

19-2.3.7 Accomplishing PMS. Maintenance personnel use MRCs to accomplish assigned planned maintenance as described in subparagraphs 19-2.3.7.a through 19-2.3.7.h of this chapter.

a. From SKED "My Task" view, review the 13-week report.

b. Determine maintenance task(s) assigned.

c. Determine when the maintenance task(s) are due.

d. Determine what tools, parts, material, test equipment or supplies are needed. For MRCs that contain inspections and then maintenance actions based upon the inspection findings, the TPMTE needed to perform the follow-on maintenance caused by the inspection findings does not need to be obtained prior to performing the MRC but rather, may be obtained as needed.

e. Perform the maintenance on schedule.

f. Notify the WCS immediately whenever one or more of the following conditions exist:

(1) Anything on an MRC is not fully understood, appears to be incorrect or cannot be accomplished as written.

(2) TPMTE prescribed by the MRC is not available, is not correct or questions about substitutions arise.

(3) Any doubt exists about your capability, training, or experience to properly perform the maintenance requirement as prescribed.

(4) Factors exist which would make performance of the maintenance requirement unwise or dangerous (i.e., disassembly of equipment needed for operations, radiation when prohibited, situations causing safety hazard to exist, etc.).

(5) Equipment deficiencies or casualties are discovered.

(6) Any provisions or requirements on the MRC cannot be accomplished as prescribed. See paragraph 19-2.4.1 of this chapter for clarification.

g. If an MRC can be completed step by step as written, then the maintenance action can be signed off as completed. Report completed planned maintenance actions to the WCS, update the PMS schedule to reflect completed maintenance, annotate, and sign the 13-Week Report if used. If multiple maintenance personnel are assigned to a single maintenance action, the most senior person assigned must update the PMS Schedule, annotate, and sign the 13-Week Report or Check Note if using SKED 3.2 electronic accountability.

h. Maintenance actions not fully completed will be reported to the WCS. If material deficiencies or casualties, which are unrelated to that MR, are discovered, the MR can be checked off provided the MR was fully completed, but the discrepancy must be reported via MDS.

19-2.3.8 Non-Accomplished PMS Categories. During weekly closeout a brief description will be added for each Alert Note generated for non-accomplished maintenance categories using sub-paragraphs 19-2.3.8.a through 19-2.3.8.g of this chapter.

a. System or Equipment Failure. System or Equipment is not operational or in a reduced operational status thus preventing maintenance from being accomplished. CSMP Job Sequence Number (JSN) required in additional text description.

b. Inadequate Maintenance Procedures. MRC procedure or steps cannot be accomplished to a point where the maintenance can be considered accomplished. FBR number required in additional text description.

c. Unit Operational Requirements. Operations prevent the maintenance from being accomplished. Requires additional text description.

d. System or Equipment Operational Requirements. Required operation of system or equipment prevents maintenance from being accomplished. Requires additional text description

e. Lack of Hazardous Material. Correct Hazardous Material (HAZMAT) not available at the time maintenance was to be performed. CSMP JSN required in additional text description.

f. Missing or Incorrect TPMTE. Correct or calibrated TPMTE was not available at the time maintenance was to be performed. CSMP JSN required in additional text description.

g. Other. Requires additional text description.

19-2.3.9 Accountability. The credibility of the Navy PMS program relies heavily on the individual accomplishing the maintenance. The required dedication and integrity of that individual cannot be overstressed.

a. To maintain accountability, personnel are required to sign for the completion of assigned maintenance in an Accountability Log if used. The WCS is required to review and sign the Accountability Log weekly to verify the accuracy and completeness of entries. Accountability sheets will be maintained in the WC PMS File for a period of not less than 13 weeks.

b. Electronic accountability will be utilized by commands employing SKED 3.2. When an individual updates the disposition of a check, this is the same as signing and dating a check completion on a 13-Week Accountability Sheet. The disposition of a check will become permanent when the weekly closeout is performed. All PMS maintenance assigned to a MP is presented to them immediately upon SKED 3.2 log-on; and CoC review can be tracked on the Weekly Closeout Signature Sheet. Therefore, there is no need to print and sign the 13-Week Accountability Form.

19-2.3.10 Force Revision Implementation. In addition to the requirements of reference (a), the following steps ensure the most efficient and thorough implementation of an FR:

a. The 3MC will:

(1) Route the Service Brief to the CoC for review.

(2) Enter the FR number from the Automatic Library Issue Document in the PMS Supersedure and New Issue Accountability Log.

(3) Update PMS and TFR data into SKED prior to routing the change documentation to WCs.

(4) Route the FR to WCS for implementation. See Figures 19-2-2 and 19-2-3 of this chapter for an example of a routing memorandum and an FR implementation checklist, respectively.

(5) Delete SKED FBRs after reflection within the FR.

b. The WCS, upon receipt of the change document from the 3MC, will:

(1) Make the appropriate entry in the WC Record of Change Log.

(2) Make appropriate LOEP, MIP, MRC, etc. changes to the WC PMS File.

(3) Apply changes to the WC PMS schedule utilizing SKED Revision Editor.

(4) Route revision changes to division LCPO for review and concurrence.

c. The division LCPO will:

(1) Verify that all PMS changes have been properly applied to the WC schedule utilizing SKED Revision Editor.

(2) Review line outs on LOEPs, MIPs and MRCs. Initial all such line-outs to indicate concurrence.

(3) Submit PMS schedule to the DIVO for review and concurrence.

d. The DIVO will:

(1) Verify that all PMS changes have been properly applied to the WC schedule utilizing SKED Revision Editor.

(2) Review and concur with the lined-out MIPs on the LOEP, MRCs on the MIPs.

(3) Submit PMS schedule to DH for review and approval.

e. The DH will:

(1) Verify that all PMS changes have been properly applied to the WC schedule utilizing SKED Revision Editor.

(2) Review and approve with the lined-out MIPs on the LOEP, MRCs on the MIPs.

(3) Review and approve WC PMS Schedules.

f. The WCS makes final entries in the WC Record of Change Log, completes the PMS Change Documentation Routing Memorandum, and returns it to the 3MC.

g. The 3MC updates the CSAL and notifies the XO that the FR has been installed after receiving all FR PMS Change Documentation Routing Memorandums from the WC.

Figure 19-2-2 - Force Revision Routing Memorandum

MEMORANDUM

From: 3-M Coordinator

To: _____ Work Center Supervisor

Subj: FORCE REVISION PACKAGE X-XX

Encl: (1) Force Revision Implementation Checklist

(2) List of Effective Pages (LOEP)

1. Force Revision Serial: X-XX has arrived from NSLC.

2. The SKED Force Revision (FR) update is complete. Begin your WC FR implementation using enclosures (1) and (2); complete through your Department Head no later than (Day Month Year).

3. Corrections, including those to LOEP, MIP and MRC, should be made immediately. Make certain ACNs and FBR responses are reflected in the FR. If not, maintain the copies and changes to your MIP(s) and MRC(s) until reflected in a subsequent FR.

4. MRCs with procedural line-outs previously approved by the LCPO must again be reviewed by the LCPO to confirm they continue to meet the requirements of the JFMM volume VI, chapter 19. Specifically, in the procedure block, Work Center Supervisors may line-out the non-applicable line items (alternate procedures) that do not pertain to current equipment or configuration when the step includes the words “if applicable” or a note identifies steps to be omitted. These items must be reviewed and approved by the division LCPO. As these changes are WC and maintenance item specific, submission of an FBR is not required.

R/

MC

Figure 19-2-3 - Force Revision Implementation Checklist

MEMORANDUM

From _____ Work Center Supervisor
To: 3-M Coordinator
Subj: FORCE REVISION IMPLEMENTATION CHECKLIST COMPLETION

1. The following actions have been accomplished in SKED to implement Force Revision X-XX.

Task Description	Initial
Verified all equipment is listed under each MIP.	
Verified new or changed MRCs (green or yellow) are added to the correct Maintenance Item (equipment).	
Verified all applicable MRCs for each piece of equipment are active.	
Verified all MRC's have associated "Related Maintenance" attached.	
Verified that Safety of Ship is toggled to "YES" if applicable.	
Verified that all MIP lineout's have a technical reason documented for deletion. (Select the "Pencil" Icon on top row)	
Verify Maintenance Item Serials & Locations are correct.	
Upon completion of implementation Marked Complete for digital approval by: LCPO, Division Officer and Department Head.	LCPO
	DIVO
	DH

2. After DH approval:

LCPO run SKED report PMS Documents and Customized MRCs – Line-outs. Verify each procedural lineout meets JFMM volume VI chapter 19, paragraph 19.6.11 requirements.	
WCS create an excel spread sheet from the Maintenance Outlook Report as a minimum electronic backup forecasting as many quarters in advance as available and store it on your hard drive (not a LAN drive) in the event of the LAN crashing.	
WCS select "Work Center" from the upper menu and "Update Unassigned Slots." Initially, any MRC without ownership will be assigned to the WCS. Reassignment by the WCS or LCPO will follow.	

3. Printing requirements for MRCs are determined by individual command policy. Printed MRCs must come from "PMS Documents" (not PMS Viewer).

4. The only required documents in the WC PMS file are:
   a. Classified MRCs.
   b. MRCs required by the command.
   c. MRCs with pen & ink changes authorized by ACNs or answered FBRs.

5. Approval Signatures:

Position	Signature
LCPO	
DIVO	
DH	
3MC	

19-2.3.11 Planned Maintenance System Feedback Reports. PMS FBRs are used to identify problems with PMS documentation or to request the addition or deletion of PMS coverage. Issues with the periodicity, rates, man-hours, TPMTE and procedure may all be reported via an FBR. An FBR is also used to request copies of classified MRCs, request the addition or deletion of a maintenance requirement to or from a MIP, splitting a MIP between WCs, shifting of maintenance responsibility or to request PMS coverage for newly installed systems or equipment. Paragraphs 19-2.3.11.a through 19-2.3.11.j of this chapter provide amplifying information dealing with the issues that may prompt the submission of an FBR.

a. Periodicity. An FBR can be used to request the increase or decrease in the frequency of a maintenance action, (i.e., MRC). However, the originator needs to keep in mind that the unit has the prerogative to increase the frequency because of harsh weather, unusual operating conditions or corrective maintenance and associated testing requirements.

b. Rates. The Rates block on the MRC represents the developer's recommendation of the skill level (rate and rank) best suited to accomplish the maintenance action. The key word is recommendation. Qualified personnel other than the rate and ranking specified may be assigned. When a DCPO, Safety Petty Officer (SPO) or NEC is assigned, substitution of other personnel is not allowed other than those exceptions as noted in reference (a). An FBR requesting the rate on an MRC be changed from an ET2 to an FT2 will probably not pass TYCOM screening, yet a FBR requesting the addition or deletion of personnel will generally pass to the cognizant technical activity for review.

c. Man-hours. The MRC reflects the average time per equipment, per person. It does not reflect or account for gathering and putting away tools, tag-outs or time removing and replacing interferences. From a maintainer's perspective, this is not an accurate representation of the time required to accomplish the maintenance action. The Future of PMS initiative will attempt to do a better job of accounting for this additional time but until then, FBRs should be submitted only when the allotted time per equipment is significantly out of synch with the actual time required. For example, an MRC calls out 0.5 man-hours per equipment, but it takes 1.0 man-hours.

d. Tools, Parts, Material and Test Equipment. TPMTE FBRs should be submitted when the procedure calls for an item not listed in the TPMTE block or when the TPMTE block lists an item not called out in the procedure. Updating the MRC to reflect common hand tools, administrative or office supplies and basic housekeeping items is addressed in paragraph 19-2.3.11.k.(1) of this chapter.

e. Procedure. Procedures are written at a level of detail based on the assumption maintenance personnel are trained, qualified, and supervised by experienced leadership to execute the maintenance consistently and expertly. MRCs exist to provide standardized proven procedures, specify consistent acceptance criteria and to communicate warnings and cautions relative to the specific maintenance action. They are not intended to specify every possible action of the maintainer. There may be instances where an obvious typographical error exists on the MRC (example: Turn switch to ON; however, switch may already be ON and the intent of the step is to turn unit off, the card should read Turn switch to OFF). This type of error should not

prevent the scheduling or performance of maintenance. However, in this situation, the accomplishment of the MRC is not possible until the WCS reviews the error and concurs that it is safe to proceed. A temporary notation including the reason for the correction must be made on the MRC, initialed by the WCS and a FBR submitted. Extreme caution will be taken when reviewing MRCs for this type of error. Errors must be obvious typographical errors and a PMS FBR must be submitted immediately upon discovered. Do not permanently alter the MRC until authorized by the applicable SYSCOM, ISEA or NSLC Detachment. If a step is missing that is necessary to complete the task, and that step is not obvious to the MP, submit a FBR to have it added. A FBR submitted to request procedural changes should include the originators contact information and supporting rationale or justification. If, however, a step is missing that is clearly obvious, such as a ladder that was used to install a fixture, but steps were not provided to put the ladder back in stowage, a FBR only serves to overload a process that should be focused on more technical issues.

f. Duplicate MRCs. Unclassified MIPs and MRCs are now available from the DVD. Copies of classified MRCs still require a FBR request due to handling requirements.

g. Addition or deletion of an MRC. During the life cycle of a system, equipment, or component it may become necessary to add a maintenance action to prevent an age-related functional failure or to delete a maintenance action due to inherent reliability not foreseen during maintenance development. A FBR submitted to request the addition or deletion of an MRC should include the originator's contact information and supporting rationale or justification.

h. Newly Installed or Removed Equipment. While a FBR request for PMS coverage will provide initial maintenance coverage or deletion of MIP(s) because of equipment removal, submission of a CK is still required to initiate the rest of the logistic support change process. This point cannot be overstressed; the submission of the FBR does not relieve the unit from initiating a CK. The CK initiates supply support, CDMD-OA changes, command selected record drawing updates and class maintenance plan updates.

i. Splitting a MIP. There are instances in which a MIP includes MRCs for more than one WC to perform. When this occurs, a decision is required by the command as to whether the MIP will be split or will be scheduled singly by one WC. Only the XO can authorize the splitting of a MIP if an MRC requires another WC to perform the entire maintenance action. If the decision is made not to split the MIP, then the MRs will be accomplished through the coordination of WCSs.

(1) If the MIP is split, the following procedures apply:

(a) Submit to the XO a Non-Technical PMS FBR requesting approval to split the maintenance responsibility.

(b) Upon receipt of the XO's concurrence, the 3MC will make an annotation in the remarks block of the FBR stating, "XO concurs with splitting MIP maintenance responsibility".

(2) Upon receipt of the FBR approval:

(a) Utilizing the SKED Revision Editor, delete the MRC from the MIP and show the reason for deletion as the designation of the WC assuming responsibility (i.e., EE01).

(b) If the WC assuming responsibility does not reflect the MIP and maintenance items, utilize the SKED Revision Editor to add them. Schedule only the MRC(s) that pertain to the WC. Reflect remaining as deleted with the reason for deletion the designation of the parent (lead) WC (i.e., EA01).

(3) If the situation occurs where a WC removes a split MIP, the following procedures apply:

(a) Submit an XO approved, non-technical PMS FBR reporting the decision to remove the split maintenance responsibility. Upon receipt of the XO's concurrence, the 3MC will make an annotation in the remarks block of the FBR "XO concurs with removing split MIP maintenance responsibility.

(b) Upon receipt of FBR approval, utilize the SKED Revision Editor, remove the MIP, MRC(s) and maintenance item(s) from the WC no longer involved. Ensure that the lead WC assumes full responsibility for the MIP and MRC(s) and annotates their schedules accordingly.

j. Shift of Maintenance Responsibility. Individual units sometimes consider it necessary to shift maintenance responsibility from one WC to another, to combine two or more existing WCs or to split an existing WC. These requests for changes of PMS maintenance responsibility require XO concurrence and may require final approval by the applicable TYCOM. Due to the considerable administrative burden, requests for this type of change should not be submitted to accommodate a temporary situation such as short-term assignment of two WCs to one supervisor.

(1) The following factors should be carefully considered before submitting such requests:

(a) Composition of WCs by size and ratings.

(b) Scope of maintenance responsibilities.

(c) WC workload.

(d) Ease of administration of a WC as a cohesive maintenance group.

(e) Importance of WC grouping to equipment maintenance responsibilities, PMS scheduling, MDS reporting and CSMP listings.

(2) When changes in maintenance responsibility are considered necessary, the following procedures apply:

(a) Submit a PMS FBR (Non-technical). Indicate from which WC(s) equipment is to be deleted and to which it is to be transferred. Upon receipt of the XO's concurrence, the 3MC will make an annotation in

the remarks block of the FBR "XO concurs with the shift of maintenance responsibility.

(b) WC or equipment changes will also be reported in the OMMS/SNAP system via a CK through the CSMP up-line reporting process.

(3) Upon receipt of the FBR approval, perform the following actions:

(a) The PMS Master File is updated to reflect deletion of the MIP from one WC and addition to the WC receiving the responsibility. The originating FBR serial number is annotated on the affected line item on the LOEP for both WCs. The PMS Master File must contain a record of deleted equipment until the change is reflected in a future FR.

(b) Utilizing the SKED Revision Editor, load the affected MIP(s) and MRC(s) to the WC receiving maintenance responsibility. Delete the MIP(s) and MRC(s) from WC shifting responsibility.

(c) Utilizing SKED, perform a revision to move the equipment from the original WC's current schedule to the WC receiving the maintenance responsibility. Data is exported from one and imported to the other maintaining equipment history.

k. MRC Changes Not Requiring Feedback Reports. The only MRC modifications shipboard or unit personnel may make without submitting a PMS feedback report are as listed in sub-paragraphs 19-2.3.11.k.(1) and (2) of this chapter.

(1) TPMTE block.

(a) Common hand tools, administrative or office supplies and basic housekeeping items may be substituted or added by the WCS. The WCS may add notes to the MRC to reflect these substitutions. In the case where specific common tools are called out by description, substitutions are not authorized. For example, substitutions such as using synthetic fiber brushes in place of animal hairbrushes or rags and paper towels in place of lint free cloths are not allowed.

(b) Approved parts, materials and miscellaneous item substituted from the supply system, technical manual, or Military Specification, etc., which meet or exceed the requirements may be used. Ensure that substitutions satisfy both the basic maintenance and safety requirements of the MRC. If there is any doubt, a PMS FBR should be submitted specifying substitution desired and reason.

(c) Test equipment or certified tools, which meet or exceed the Sub-Category (SCAT) code requirement, may be used.

(d) When an MRC pertains to multiple configurations of equipment and the TPMTE block contains tools, parts, test equipment and materials for each unique configuration, the TPMTE block may be tailored for

the unit's specific configuration by lining out the items that do not pertain to equipment held.

(e) Exception to TPMTE block change: If an item listed in the TPMTE block is not called for in the procedures block, submit an FBR explaining the circumstances. Conversely, if a tool, piece of test equipment, part or material is called for in the procedure block and is not listed in the TPMTE block an FBR should be submitted.

(2) In the procedure block, WCSs may line-out the non-applicable line items, such as alternate procedures, that do not pertain to current equipment or configuration when the step includes the words "if applicable" or a note identifies steps to be omitted. These items must be reviewed and approved by the division LCPO. As these changes are WC and maintenance item specific, submission of a FBR is not required. If a step or steps in the procedure block have been lined-out and tools, parts, materials, or test equipment in the TPMTE block pertain only to that step or steps, then they will be lined-out as well with a reference to the step or steps lined-out and approved by the division LCPO. Warnings, cautions, and notes associated with the lined-out step or steps will also be lined-out.

l. Types of Feedback Reports. There are two types of FBRs, Technical and Non-Technical.

(1) Technical. These FBRs are used to report technical discrepancies inhibiting PMS performance. Technical feedbacks normally adjudicated by an ISEA responsible for the system or equipment covered by the PMS documentation require all the supporting information the originator can provide. The originator should identify the issue, providing as much supporting technical information (Allowance Parts List (APL), Reparable Identity Code, drawing or Hierarchical Structure Code) as available and a proposed response or solution if known. Most importantly, provide point of contact information (name and phone number) so that the ISEA can contact the originator should they have questions. Bottom line, the FBR must be accurate and complete to "stand alone", that is, the FBR will be understood without additional explanation. The better the FBR describes the problem, the more likely the originator will receive a timely response. There are two sub-categories of technical FBRs:

(a) Routine. An FBR will be considered routine when it relates to the technical requirements of PMS. It is used to report technical discrepancies or request clarification of procedures.

(b) Urgent FBR. An FBR will be considered urgent when it relates to the technical requirements of PMS and involves safety of personnel, safety of ship or the potential for equipment damage. Urgent FBRs will be forwarded by naval message containing a PMS FBR serial number, to both NSLC Detachments Norfolk and San Diego, with info to the cognizant SYSCOM, TYCOM and the Naval Safety Center. The

message must describe the unsafe procedure(s) or condition(s), must identify the MIP and MRC involved and reflect the serial number of the FBR generated in SKED or Planned Maintenance System - Management Information System (PMS-MIS). Once the message has been sent, include the date time group of the message in the FBR and submit.

(2) Non-technical. These FBRs are intended to support PMS requests that do not require technical review, including WC changes (shift of maintenance responsibility). Non-technical FBRs are submitted to request classified or other PMS documentation which cannot be obtained locally or to request clarification of issues not of a technical nature.

m. Feedback Report Submission. All SKED users will submit FBRs via SKED using the Feedback Report Wizard. Non-SKED users may submit FBRs via the PMSMIS web site at https://pmsmis.navy.mil/ by selecting the Feedback Tab and Feedback Report Wizard from the drop-down tab. Non-SKED users accessing this web site for the first time will need to request an account. Click on File Manager and select New User Account Request. This displays options to select a form and readme file, which can be downloaded, filled out and sent via e-mail as directed in the readme file. An e-mail will be sent confirming your account and providing access to the main screen. The Anchor Desk web site can also be used to submit FBRs.

n. Feedback Report Screening (Shipboard or Activity).

(1) Initial screening is accomplished by the originator or WCS who is responsible for ensuring all data is accurate and complete.

(2) The division LCPO or DIVO accomplishes the second level screening and verifies the content and validity of the FBR within three days of origination.

(3) The DH, next to screen the FBR, is responsible for verifying the content and validity of the FBR and digitally signing FBRs within five days of origination.

(4) The 3MC is responsible for screening, serializing, and forwarding FBRs within seven days of origination. The 3MC will also:

(a) Maintain accountability for all PMS FBRs submitted and actions taken until updated PMS documentation is received.

(b) Ensure that the originator and all applicable WCs are kept apprised of action taken and ensure the originating and other applicable WCSs implement the changes or corrections when received.

o. Feedback Report Screening (External to Hull or Activity). FBRs are next processed by the TYCOM. The TYCOM will verify the content and validity of the FBR and

either return the document to the originator or pass it on for further processing and resolution.

p. Feedback Processing Activities.

(1) The central control points for processing FBRs are the Planned Maintenance System Coordinating Activities (PMSCA). Depending on the type of FBR and level of technical authority necessary to answer the FBR, the PMSCA will either respond to the originator with a resolution or forward the FBR to the appropriate technical authority for action.

(2) ISEAs are those activities designated by NAVSEA as the technical experts for specific systems or equipment. Naval Surface Warfare Center, Philadelphia Detachment is the ISEA for the majority of non-nuclear hull, mechanical and electrical equipment installed on most ships. ISEAs under the direction of the NAVSEA Technical Warrant Holder adjudicate the FBR request and forward the response to the PMSCAs. The PMSCA provides the final response to the originator and update the PMS database to reflect ISEA changes. PMS changes are issued with the next available FR.

q. Feedback Processing. FBRs are processed per NAVSEA policy:

(1) Urgent FBRs.

(a) The PMSCAs will provide a message response to all urgent FBRs within one (1) working day of receipt. If the FBR is forwarded to a Design Activity or ISEA for resolution, then the Design Activity or ISEA will provide a message response informing the originator of specific actions or required changes because of the adjudication of the FBR within one working day of receipt. This message response must be addressed to the originator and distributed to all TYCOMs of units holding the affected documentation. TYCOMs will forward this message to all commands that could be affected by the PMS change.

(b) The PMSCA will distribute revised PMS documentation to all affected users within 30 calendar days of receipt of the FBR, via special issue or ACN.

(2) Routine FBRs.

(a) The PMSCA will perform technical review, research, and provide a response to routine FBRs where resolution does not require technical authority action.

(b) FBRs that the PMSCA cannot resolve will be sent to the cognizant Design Activity or ISEA. The cognizant Design Activity or ISEA will provide the response to the appropriate PMSCA describing the action taken. The PMSCA will provide the response to the originator by electronic means.

(c) Distribution of the revised MRC to the originator and other affected users will be accomplished via ACN or the next available FR.

(d) NAVSEA's existing policy calls for technical review activities and ISEAs to provide FBR responses in less than 21 working days from time of receipt. In addition, NAVSEA has established a goal of providing answers to FBRs in one day. While some FBRs will require extensive research and days, weeks or in some cases months to resolve, the vast majority of FBRs can and should be answered much sooner. One day may be overly optimistic, but the intent is to put the emphasis back on the timely resolution of FBRs.

(e) If no revision to PMS documentation is required, pertinent comments will be provided in the response to the PMSCA. When not concurring with the feedback report, the rationale for the non-concurrence must be provided to the PMSCA.

NOTE: IT IS POSSIBLE AN FBR RESPONSE MAY NOT MAKE A SPECIFIC FR BASED ON THE DATE THE RESPONSE WAS RECEIVED BY NSLC. PROCESSING TIME AND HANDLING MAY CAUSE THE REVISED DOCUMENTATION TO MISS AN FR CUTOFF DATE. HOWEVER, SINCE ALL FRS ARE NOW RECEIVED QUARTERLY, IF A REVISION MISSES THE CURRENT FR CUTOFF WINDOW, THE REVISED DOCUMENTATION WILL BE AVAILABLE WITHIN THE NEXT THREE (3) MONTHS.

r. Feedback Response Implementation. Units will implement responses to FBRs based on the category and content as determined by the unit's 3MC.

(1) Urgent FBR. Within 24 hours of receipt of FBR response.

(2) Urgent FBR with an ACN. Within 24 hours of receipt, the unit will implement an administrative change to incorporate the new PMS documentation. These revised documents will be utilized to conduct maintenance until the revised PMS document is incorporated into the next FR.

(3) Routine FBR:

(a) Technical. The response deals with content such as a revision to technical specifications, tolerances, test equipment, materials, acceptance criteria or the sequence of procedural steps. These changes need to be implemented within two weeks of receipt of the FBR response or prior to the next scheduled accomplishment date should that date fall within the two-week window.

(b) Administrative. The response deals with issues that do not affect the technical content or procedural steps. Administrative changes might be added steps to provide a better degree of clarity, formatting revisions to tables or figures that do not change technical content, or updating of Notes, Warnings or Cautions that do not impact the performance of the MRC. These changes do not need to be implemented prior to receipt of the next FR. If the next FR does not reflect the revised documentation, implementation is required before the next scheduled accomplishment date of the MRC.

(4) Routine FBR with an ACN:

(a) Technical. These changes need to be implemented via an administrative change within two weeks of receipt of the FBR response or prior to the next scheduled accomplishment date should that date fall within the two-week window. These revised documents will be utilized to conduct maintenance until the revised PMS document is incorporated into the next FR.

(b) Administrative. These changes do not need to be implemented prior to receipt of the next FR. If the next FR does not reflect the revised documentation, implementation is required via an administrative change before the next scheduled accomplishment date of the MRC.

19-2.3.12 Assessment Procedure MRCs. Assessment Procedure (AP) MRCs need not be scheduled within SKED, but they will be maintained "active" through the FR and TFR process. AP MRCs need only be printed on an "as needed" basis for use by assessment personnel or Ship's Force. The record of completed AP MRCs by off-ship personnel is recorded on the work candidate and Ship's Force participation is recorded in their completion remarks of that work candidate. There is no need for recording Ship's Force participation in an assessment event on their PMS schedule within SKED. FBRs submitted requesting deletion of a MIP that only contains AP MRCs will be disapproved and returned to the originator.

19-2.4 MAINTENANCE AND MATERIAL MANAGEMENT AFLOAT AND ASHORE EVALUATION CRITERIA.

19-2.4.1 Self-Assessments. The ability of an activity to perform critical self-assessments is instrumental to the success of the command's PMS program. The PMS Self-Assessment Program needs to address all aspects of 3-M.

a. TYCOM Policy. 3-M Self-Assessments will be conducted at least once during the command's O-FRP, or once every 24 months where commands do not operate under an Optimized Fleet Response Plan (O-FRP). Additional 3-M Self-Assessments may be conducted at the CO's discretion but are neither required nor reported to the TYCOM Maintenance Officer. 3-M Self-Assessment events are not limited to a set duration but will have a set completion date when originally directed by the CO. Commands must conduct a 3-M Self-Assessment within the first 90 days of deployment to a Remain in Place Table of Allowance site.

b. Self-Assessment Elements. The major program elements of a Self-Assessment include an evaluation of the PMS Performance Rate (PPR) and CSMP Validity, monitoring MRC performance (monitored MRC), and conducting PMS Spot Checks, WC audits, an Administrative Performance Rate (APR) review and deficiency abatement. 3MCs will retain monitored PMS, Spot Checks and WC audits from the

last completed quarter in either hard copy or digital format for review supporting the Self-Assessment.

(1) Administrative Performance Rate. The APR consists of all administrative actions within a command. It is comprised of the average of all SEER scores + the CLER score divided by 2.

$$APR = (SEER\ average + CLER) \div 2$$

(2) Monitored MRC. Supervisory personnel must periodically monitor the performance of PMS to provide feedback and training to maintenance personnel and to enforce command maintenance standards. Personnel charged with monitoring must be System Matter Experts (SME) for the system, equipment, or component for which the MRC applies. LCPOs, LPOs or personnel with similar system knowledge are appropriate. Monitored checks can be used for on-the-job training to teach the "right way" to conduct maintenance. These monitored MRCs will be documented as a monitored evolution and findings will be provided to the WC's CoC for inclusion into training and deficiency abatement. The value of monitor maintenance cannot be overstated, and commands are encouraged to establish a robust monitored maintenance program.

(3) PMS Spot Check. PMS Spot Checks are utilized to validate that previously scheduled and accomplished MRCs were performed and the degree to which they were performed. The checklist contained in Appendix A Section III of this chapter, is the tool supervisory personnel utilize to determine the accomplishment status of a completed MRC. Deficiencies noted and the final grade will be provided to the WC's CoC for abatement. The WCS will record the Spot Check grade into SKED to generate the Spot Check Accomplishment Rating (SCAR) for the quarterly PMS Performance Report. Spot Checks will involve all elements of the CoC to include the CO, CMC, XO, 3MC, department CPOs, DHs, DIVOs, divisional CPOs, and first-class petty officers. By following the checklist, the inspector can determine if the sailor is competent, the maintenance was accomplished, required TPMTE was available and used, and safety precautions were followed. The focus should be less on administration and more on the condition of the gear.

(a) Avoid Spot Checks of MRCs with insufficient complexity. Performing a Spot Check on a 3 or 5 step MRC does not provide the CoC an accurate picture of the health of the command's maintenance program. Selected MRCs should be of sufficient content to provide the auditor with evidence of satisfactory performance (i.e., tag-outs, QA packages, parts required, off-hull reporting, test equipment, safety equipment, etc.).

(b) Spot Checks evaluated as "below standards" will require immediate training and re-performance as determined by the XO. Any re-accomplishment of the MRC must be monitored by the LCPO to ensure noted deficiencies are not repeated.

(c) The spot checker or monitor will ensure that the Spot Check or monitor data is immediately entered into SKED. When applicable, a brief synopsis of any deficiencies resulting from the Spot Check will be indicated within the Spot Check.

(d) The minimum number of Spot Checks are reflected in Tables 19-2-5 and 19-2-6 of this chapter.

Table 19-2-5 - NECC Active Duty or Mobilized Commands Spot Checks

Management Level	Number of Checks	Interval
CO, XO, CMC or CSE	1	Weekly
DH or Dept LCPO	1 per department	Weekly
DIVO or LCPO	1 per division	Weekly
3MC	1	Weekly

Table 19-2-6 - NECC Non-Mobilized Reserve Units Spot Checks

Management Level	Number of Checks	Interval
CO, XO or CSO	1	Quarterly
CMC or SEL	1	Quarterly
DH	1 per department	Quarterly
DIVO or LCPO	1 per division	Quarterly
3MC	1	Monthly

(e) NECC Reserve Component 3MCs can request modification of the Spot Check matrix if it is believed that due to the size of the command and location of their WC, they are unable to accomplish that requirement. Requests must be submitted in writing to NECC N43 staff (via Echelon IV 3MC if applicable) and include their proposed Spot Check matrix for review. If approved, the command 3MC will maintain a copy of the request approval.

(4) Work Center Audits. Each WC must receive an audit once per quarter by a supervisory individual, CPO or above. Deficiencies noted from this audit will be reported to the WC's CoC for abatement. The 3MC will report recurring deficiencies to the XO for further investigation and corrective action.

(5) Deficiency Abatement. The status of discovered deficiencies will be kept current within the monitoring program. Recurring deficiencies must be reported to the XO for further investigation and corrective action. Deficiencies that have been reported as corrected will be subject to follow up monitoring to ensure corrective action was effective and results of the follow

up monitoring will be reported to the XO. The command's 3-M Abatement Program will include the previous quarter's audits, Spot Checks, monitored evolutions and CSMP validity audits noting trends and corrective actions.

19-2.4.2 Inspections. The goal of the 3MI is to evaluate the effectiveness of the unit's 3-M Program. It is critical that the inspection be conducted in a similar fashion in every command and detachment across the force. Inspections will be completed once commenced; early below-standards indications will not be used to change an inspection into an assistance visit.

a. Frequency of Inspections. The TYCOM or ISIC (command exercising administrative control) will conduct a complete inspection of each command under their cognizance as follows:

(1) Every Fleet Response Training Plan or Optimize Report Plan (ORP) cycle.

(2) When deemed necessary by the TYCOM, ISIC or the unit's CO.

(3) Not to exceed 36 months.

(4) The ISIC will submit a 3MI periodicity extension request to the TYCOM if a 3MI will exceed the Fleet Response Training Plan or ORP cycle or 24 months has elapsed since the last inspection. The TYCOM, when replying to the request for extension, will include Commander, United States Fleet Forces Command N43 or Commander Pacific Fleet N43, as applicable, as information addressees. Only the TYCOM can authorize such an extension.

b. Method for Assignment of Numerical Evaluations. The minimum performance requirements are as identified below:

(1) Formula Acronyms:

(a) APR = Administrative Performance Review

(b) CLER = Command Level Effectiveness Review

(c) CTS = Command Total Score

(d) CVF = CSMP Validity Factor

(e) DTS = Department Total Score

(f) MAR = Maintenance Accomplishment Rate

(g) MDS = Maintenance Data System

(h) MPR = MDS Performance Rate

(i) PAR = Periodic Accomplishment Rate

(j) PPR = PMS Performance Rate

(k) SAR = Situational Accomplishment Rate

(l) SEER = Scheduling and Execution Effectiveness Review

(m) SCAR = Spot Check Accomplishment Rating

(2) The CTS consists of three parts and weighted as follows:

(a) APR = (SEER average + CLER) divided by 2

(b) Weighted PPR = (MAR x SCAR) divided by 100.

(c) Weighted MPR = (Weighted CVF x RAF) divided by 100

(d) CTS = (APR x .2) + (PPR x .4) + (MPR x .4)

(3) Criteria for grading MDS and CSMP:

MPR = (CVF x RAF) divided by 100

(4) Ranking Standards.

(a) Commands, departments, and WCs will be evaluated as "Above Standards" overall in 3-M if the unit's total score is 90% or higher.

(b) Commands, departments, and WCS will be evaluated as "At Standards" overall in 3-M if the unit's total score is between 80% and 89.99%.

(c) Commands, departments, and WCs will be evaluated as "Below Standards" overall in 3-M if the unit's total score is less than 80%.

(d) All calculations will be rounded to two decimal places.

c. Inspection Procedures. Appendix A provides a standard means for evaluating the 3-M Program. These procedures, centered on a set of core attributes applicable to all, are used to conduct 3-M Inspections. Inspection procedures are divided into five major areas:

(1) Section I - Administrative Performance Review. The APR consists of all administrative actions within a command. It is comprised of the average of all SEER + CLER divided by 2.

(2) Section II – Assessment of Command Level Effectiveness Review. The CLER is an evaluation of the XO's management of the command's maintenance as executed by the 3MC and the DHs.

(3) Section III. PPR is calculated using a command's MAR and SCAR.

(4) Section IV - Maintenance Data System.

(5) Section V - 3-M Inspection Command Total Score.

d. Inspection Reporting. Significant deficiencies and numerical assessments are reported to the assessed unit's CO, ISIC and TYCOM using the format shown in appendix B of this chapter. Reporting may be accomplished on the entire unit or on a departmental basis.

(1) Significant deficiencies require a report of corrective actions taken by the unit to be forwarded to the TYCOM via the ISIC within 30 days following the inspection.

(2) Any command or department receiving an overall evaluation of below standard in either CTS, MDS, and PPR must be re-evaluated within a

reasonable period, not to exceed six months, to ensure below standard areas have been corrected.

(3) Each TYCOM will report the findings of the previous year's inspections to Commander, United States Fleet Forces Command or Commander Pacific Fleet N43, as applicable, at the end of the calendar year.

e. Inspection Data Retention. NECC is to maintain an inspection data file for each unit. As each command is evaluated, the individual evaluation standards and calculated values identified will be recorded in the data file with a copy of the inspection report provided to the inspected command. Section I through Section V of Appendix A of this chapter provide specific criteria to be used in the assessment of each command.

.

APPENDIX A

SECTION I-A

ADMINISTRATIVE PERFORMANCE REVIEW (APR)

The APR consists of all administrative actions within a command. It is comprised of the average of all SEER + CLER divided by 2.

APR= (SEER average + CLER) divided by 2

1. Assessment of Scheduling Execution and Effectiveness Review (SEER)

   The SEER is an evaluation of PMS documentation at the WC level. The SEER focuses on PMS documentation within the WC PMS File, the scheduling of maintenance requirements in SKED and the documentation of accomplished PMS. Specific criteria for SEER evaluation is established by the TYCOM.
   Calculate each WC's SEER as required by the SEER check sheet provided on the NECC Portal under the N43 tab. Calculate the command's average SEER by calculating the sum of all WCs' SEER scores and dividing by the number of WCs evaluated.

2. Assessment of Command Level Effectiveness Review (CLER)

   The CLER is an evaluation of the XO's management of the command's maintenance as executed by the 3MC and the DHs.

Specific criteria for CLER evaluation is established by the TYCOM and the command's CLER is calculated by the CLER check sheet provided on the NECC Portal under the N43 tab.

APPENDIX A

SECTION I-B

SCHEDULING AND EXECUTION EFFECTIVENESS REVIEW (SEER)

Command	Department	Division	Work Center	Date

		General Attributes	Value	Points
1.		Does the WC maintain:		
	a.	Current and applicable 3-M messages and notices?	2	
	b.	Listing of personnel qualifications for personnel completing maintenance in the WC? (i.e., PQS, ASM, NEC, Training Completion)?	5	
2.		Is the WCS, and any assistant(s), designated in writing?	2	
		Maintenance Requirement Card (MRC) Deck		
3.		Does the LOEP and PMS Schedule reflect all PMS-worthy equipment? (Validate against authoritative database)	10	
4.		Do MRCs accurately reflect assigned MIPs?	10	
5.		Are LGL tables on MRC properly filled out?	2	
6.		Are inapplicable MRC lined out with the appropriate reference (FBR, Scheduling Aid, etc.).	3	
7.		Is mandatory related maintenance properly associated in accordance with the MIP?	10	
8.		Are all MRCs, if printed, the current version?	3	
		Chain of Command SKED Administration		
9.		Administrative functions:		
	a.	AAR (percentage from SKED divided by 10):	10	
	b.	Are all PMS changes implemented and approved as required?	2	
	c.	Are previous quarters archived as required?	2	
	d.	Are check note entries accurate, valid, and complete?	5	
		Situational Requirements		
10.		Was situational PMS (pre & post op, metered, triggered and state events) accomplished when required?	10	
11.		Are meters updated to reflect reading when PMS was last accomplished?	5	
		PMS Execution and Accountability		
12.		Is maintenance assigned only to qualified maintenance personnel?	5	
13.		Are 13-Week Reports retained for the current week and 13 previous weeks? (13-Week Accountability Logs can be electronic or hard copy.)	2	
14.		Does the maintenance on the accountability sheets match maintenance listed in SKED?	2	
15.		Are Tag-Out serial numbers recorded as required?	2	
		Feedback Report Management		

16.		Are all Feedback responses applicable to the WC properly managed in the WC?	5	
17.		Are the "Response" blocks in SKED updated as appropriate?	3	
Inactive Equipment Maintenance (IEM)				
18.		Is the start of IEM approved as required?	2	
19.		Are all IEM requirements properly scheduled?	5	
20.		Upon completion of IEM period, was all required IEM maintenance assigned (LU, SU, PM, OT) and mandatory related maintenance scheduled prior to use?	5	
Totals (Attributes evaluated as "NA" are not calculated)		Total Points Available **112**	Total Points Awarded _____	
☐ Above Standards		☐ At Standards	☐ Below Standards	
Above Standards (90% or greater)		At Standards (80-89.99%)	Below Standards (less than 80%)

NECC SEER REMARKS

Provide amplifying information to describe the deficiencies driving point deductions. Significant deficiencies must be reported via the final inspection report.

Attribute #	Amplifying Information
Print Name:	Signature:
Command:	Date:

SEER CHECKLIST ATTRIBUTE GRADING

1. **Attribute 1**: Does the WC PMS File contain:

2. **Attribute 1a**.: Current and applicable 3-M messages?
   Are the latest released 3-M messages applicable in the WC PMS File? Applicable 3-M messages are messages that affect the performance of maintenance. It may vary based on assigned TOA. ISIC should provide guidance and requirements to subordinate units as to which messages are applicable.

3. **Attribute 1b.**: Listing of personnel qualifications for personnel completing maintenance in the WC? (i.e., PQS, ASM, NEC, Training Completion)?

   a. This means, generally, that the WCS maintains a list of personnel conducting preventative maintenance within the WC and their commensurate qualifications necessary to do so. This can either be an accurate ASM report, copies of PQS watch station cover sheets, training certificates, or other authoritative record of qualification. This list must be kept current by the WCS and should reflect "real-time" status.

   b. Additional items to consider are special qualifications, such as NECC Armorer's Course, or NEC's, as required.

4. **Attribute 2**: Is the WCS, and assistant(s), designated in writing? (Self-explanatory)

5. **Attribute 3**: Does the LOEP and PMS Schedule reflect all PMS-worthy equipment?

   Verify SKED and OMMS against current authoritative database (RCRP).

6. **Attribute 4:** Do MRCs accurately reflect assigned MIPs?

   a. Review SKED LOEP Manager, FBR Responses, and Local (ISIC) Guidance.
   b. Verify through an authoritative database for onboard equipment (NSW Crane Inventory, EXMIS, CBSS, EKMS RCRP).
   c. Does LOEP FR number match the entry on the WC change page and journal?
   d. Is the LOEP the most current one issued?

NOTE: ISIC GUIDANCE FOR WC STANDARDIZATION BY TOA ASSIGNED SHOULD BE PROVIDED TO THEIR UNITS. IF NOT, THEN IT IS THE DISCRETION OF THE TYCOM 3MI TO DETERMINE IF MAINTENANCE GROUPS ARE

1. **BUILT PROPERLY BASED ON TOA**
2. **CONTAIN ALL EQUIPMENT ASSIGNED TO THE WC.**

7. **Attribute 5**: Are LGL tables on MRC properly filled out?
   Does the LGL contain equipment name, accurate equipment location, and equipment unique identifier (if required)?

8. **Attribute 6**: Does the 3MC maintain:

a. Current PMS DVD and Master LOEP? (Self-explanatory)

b. Master LOEP is found on the PMS DVD and may be maintained hard-copy or electronically by the 3MC.

(1) If changes (MIP additions or deletions) for a WC LOEP are authorized by approved FBR, an up-to-date copy of the altered LOEP must be maintained by the 3MC.

NOTE: THE CSAL IS COMPRISED OF THE ACTUAL LOG SHEET, A COPY OF ALL MEMOS ROUTED TO THE WCS AND THE MEMO FROM THE WCS TO THE 3MC INDICATING COMPLETION.

(2) Are all pen and ink changes on the LOEP, MIPs and MRCs (except where allowed by scheduling aid) annotated with the reference for the change (FBR serial number, ACN, etc.) and properly noted by the correct authority and initialed by LCPO?

(3) Are all additions and deletions on LOEP, MIP and MRCs noted in SKED with the applicable authorization for the change?

c. Current SKED database back-up files?

9. Attribute 7: Is mandatory related maintenance properly associated in accordance with the MIP? Calculate omitted checks, checks that should have been scheduled and completed but were not due to mandatory related maintenance not properly associated in SKED that should have been scheduled based on criteria set forth in the MRC of parent check. (Verify satisfactory condition of parent maintenance check requiring measurements or testing by way of documentation, i.e., AWR, logs)

10. Attribute 8: Are all MRCs, if printed, the current version?

a. Verify that hard-copy MRCs are current and validated by the WCS as required.

b. Verify that MRCs changes recorded to the Journal are reflected on the applicable MRC, when applicable.

11. Attribute 9: Administrative functions:

a. AAR:

(1) AAR (percentage from SKED divided by 10):

(2) Awarded value will be the AAR from the SKED dashboard, sorted by WC, for the period covered by the inspection, divided by 10 and rounded to the nearest whole number. For example, if the AAR is a 76.54% then 8 points are awarded.

(3) On the WC dashboard, double click the AAR, and it will generate a breakdown of all administrative actions within the WC. If AAR is not 100%, document items that negatively affected the percentage.

b. Are all PMS changes implemented and approved as required?

(1) Ensure the FR was approved by the DH using WC Journal entries.

(2) If FR was not implemented on first Monday of the quarter, did the XO authorize late implementation?

(3) ACNs properly installed.

(4) MIP and MRC lineouts or customization approved by LCPO or DIVO?

c. Are previous quarters archived as required?

(1) Should be completed as part of the FR process.

(2) Can be reviewed via drop down menu in the WC view.

d. Are check note entries accurate, valid, and complete?

(1) Check notes are submitted for all maintenance not accomplished within periodicity.

(2) Check notes should be detailed enough to explain why non-accomplishment.

12. Attribute 10: Was situational PMS (pre & post op, metered, triggered and state events) accomplished when required?

a. If there are no situational or conditional checks in the last 13 weeks, marked NA.

b. Is all required situational maintenance listed on the accountability logs, and in SKED?

(1) Pre and post operational maintenance required but not documented?

(2) Meter based or "As Required" (i.e., M-2R or R-7D) maintenance required but not documented?

c. Are all required LU, PM, SU, and OT on the Accountability Logs and in SKED as required?

d. Are meters up to date for WC equipment?

13. Attribute 11: Are meters updated to reflect reading when PMS was last accomplished? Check "Meters" under the Situational Tab. Compare the values entered against equipment currently in use or listed on the 13-Week Report for situational maintenance ("as required" or R-Checks).

14. Attribute 12: Is maintenance assigned only to qualified maintenance personnel?

a. Was maintenance assigned to personnel with 3-M 301 qualification or above?

b. ASM is single authoritative qualification program for NECC 3-M PQS. If held at previous command FLTMPS printout will suffice if original PQS cover page is unavailable.

c. For MRCs that indicate or require unique qualifications or NECs, such as: SPO, DCPO, or a specific NEC(s), does the name listed on the 13-Week Accountability Log MP responsible block and signature block hold that qualification?

NOTE: SOME WEEKS (CURRENT, AND POSSIBLY PREVIOUS) MAY STILL BE IN ROUTING THROUGH COC.

15. Attribute 13: Are 13-Week Accountability Logs retained for the current week and 13 previous weeks? (Self-explanatory) 13-Week Accountability Logs can be electronic or hard copy.

NOTE: THE COLUMNS FOR ANY REPORT GENERATED IN SKED CAN BE MANIPULATED (DRAGGED FROM LEFT TO RIGHT) TO HELP THE INSPECTOR LOCATE PERTINENT INFORMATION NEXT TO EACH OTHER FOR EASIER REVIEW.

16. Attribute 14: Does the maintenance on the accountability sheets match maintenance listed in SKED?

a. Do the maintenance requirements from the completed and signed accountability sheets match the maintenance scheduled and marked completed within SKED?

b. The number listed on the Forecasting Tab in the WC menu will display total number of completed checks, or a completed checks report can be generated in the Reports Tab under the Admin menu.

17. Attribute 15: Are Tag-Out serial numbers recorded as required?

a. Does all maintenance with the tag-out icon and marked completed in SKED have the tag-out serial number annotated on the check note, or does all maintenance listed and marked completed on the WC's 13-Week Accountability log annotate Tag-Out serial number or N/A?

b. N/A is not required for maintenance not completed.

c. Tag-Out serial numbers should be validated in the assigned Tag-Out binder.

18. Attribute 16: Are all FBR responses applicable to the WC properly managed in the WC?

a. Has the WC received any PMS change notifications or memorandums, ACNs, or FBR responses?

b. Have the required changes been installed properly (i.e., revision made and approved, pen and ink changes made to MIPs or MRCs as required) and documented on the Journal or Change Page?

c. Are authorized changes maintained until corrected and installed by the NECC Force Revision Disc?

19. Attribute 17: Are the "Response" blocks in SKED updated as appropriate? The response block should be updated as part of the change memorandum workflow, if not, verify memorandums are being received from the 3MC to document changes.

20. Attribute 18: Is the start of IEM approved as required? Did the DH, or designated representative, approve equipment in IEM status?

NOTE: IF THE EQUIPMENT IS IN IEM II PLANNED MAINTENANCE IS NOT REQUIRED TO BE COMPLETED. VERIFY IEM CATEGORY WITH "IEM" TAB.

21. Attribute 19: Are all IEM requirements properly scheduled?

a. Does the WC SKED contain proper scheduling of all applicable IEM maintenance?

(1) The “Review” Tab contains a history of maintenance history.

(2) Compare date equipment was placed in IEM to date of last completed IEM maintenance. If maintenance has not been completed IAW the MIP or MRC the grade for this attribute is a zero.

b. If WC has a system or equipment in IEM Category II and is an IMA or depot level repair, are JSN(s), Work Documentation for Outside Activity or Repair Center annotated?

c. If there is no equipment in IEM in the last 13 weeks, mark as NA.

d. Do maintenance items in IEM status II have valid documentation in the IEM remarks? (i.e., JCN, SSIC, 1149)?

e. Use OMMS-NG to validate the JCN or availability listed in the IEM remarks that correspond to the actual reason for IEM status II.

f. Does the WC maintain a listing of all IEM (IEM log) equipment if not using SKED 3.2 in accordance with TYCOM or ISIC policy?

22 Attribute 20: Upon completion of IEM period, was all required IEM maintenance assigned (LU, SU, PM, OT) and mandatory related maintenance scheduled prior to use?

a. Does the WC’s SKED properly annotate the completion of the IEM period?

b. Did the WCS schedule all missed periodic maintenance once out of IEM? All planned maintenance due during the IEM period must be scheduled at a reasonable time following IEM period, generally within the quarter depending on maintenance material availability, but ISIC policy may be more stringent.

c. If there is no equipment in IEM in the last 13 weeks, mark as NA.

APPENDIX A
SECTION II
COMMAND LEVEL EFFECTIVENESS REVIEW (CLER)

Command:			**Date:**	
General Administration			**Value**	**Points**
1.		Are the 3MC and 3-M Assistant Coordinator PQS Qualified, and designated in writing by the CO?	3	
2.		Does the 3MC maintain oversight of the unit's 3-M qualification program as required?	5	
3.		Are the unit's 3-M qualifications commensurate to meet mission requirements?	10	
4.		Does the 3MC provide weekly status reports to the 3-M Manager?	5	
5.		Does the unit conduct a Planning Board for Maintenance (PB4M)?	10	
PMS Master File				
6.		Does the 3MC maintain:		
	a.	Current PMS DVD?	2	
	b.	Master LOEP reflecting approved pen-and-ink changes?	3	
	c.	Current SKED database back-up files?	5	
PMS Changes				
7.		Does the 3MC:		
	a.	Maintain a standardized, sequential system for tracking FBRs?	5	
	b.	Export and transmit FBRs as required?	5	
	c.	Have an effective system for explaining, routing, and tracking PMS changes?	10	
	d.	Does the CSAL or WC Journal(s) accurately reflect changes to the command's 3-M documentation?	5	
Self-Assessment				
8.		Does the 3MC:		
	a.	Promulgate Spot Check requirements?	5	
9.		Did the unit conduct:		
	a.	Ensure Spot Checks are accomplished as required? (proportionally graded. i.e., if 9 of 10 completed = 10 x .9	10	
	b.	Audits of all WCs? (proportionally graded. i.e., if 9 of 10 completed = 10 x .9)	10	
	c.	Self-Assessment?	10	

Totals (**Attributes evaluated as" NA" are not calculated**)		
Total Points Available: **95**		Total Points Awarded:
☐ Above Standards	☐ At Standards	☐ Below Standards
Inspector Name and Command (Print and Sign)		

Attribute Scoring: **Sat = 80 percent or better**

Attributes will be assessed as YES, NO, or NA except those specifically annotated as proportionally graded.

CLER CHECKLIST GRADING ATTRIBUTES

1. **Attribute 1**: Are the 3MC and 3-M Assistant Coordinator PQS Qualified, and designated in writing by the CO?
   a. Is the 3MC NEC and PQS qualified, does the 3MC have a Letter of Designation signed by the CO?
   b. Is the 3MA PQS qualified to 3-M 305 at a minimum, and have a Letter of Designation signed by the CO?

2. **Attribute 2**: Does the 3MC maintain a current ASM report of 3-M PQS? Does the 3MC maintain real-time oversite of 3-M qualifications for all personnel? This can be via direct access to ASM or some other means, but with the result being the 3MC tracks who aboard the command has what 3-M qualification(s) and who does not?

3. **Attribute 3**: Are the unit's 3-M qualifications commensurate to meet mission requirements as required? Ensure that all personnel aboard greater than 90 days have obtained the 3-M watch station qualification MP (301) and that personnel filling a 3-M management role (i.e., RPPO to 3MC) and aboard greater than 90 days have obtained all requisite 3-M watch station qualifications for that position."

4. **Attribute 4**: Does the 3MC provide weekly status reports to the XO?
   a. Does the 3MC report the status of the command's 3-M Self-Assessment Program to the XO each week? Validate that the weekly reports report status of and changes to the Self-Assessment Program elements. These include spot checks (updated weekly), monitored MRCs (as they occur), WC audits (quarterly), bi-annual self-assessment (as it occurs), and deficiency abatement (status changes to POA&Ms as they occur).
   b. Is the XO report retained for at least one (1) year? (Can be electronic or hard-copy.)
   c. Ensure to check dates on Weekly XO Report for continuity.

5. **Attribute 5**: Does the activity conduct a PB4M?

6. **Attribute 6**: Does the 3MC maintain:
   a. Current PMS DVD and Master LOEP? (Self-explanatory)
   b. Master LOEP is found on the PMS DVD and may be maintained hard-copy or electronically by the 3MC. If changes (MIP additions or deletions) for a WC LOEP are authorized by approved FBR, an up-to-date copy of the altered LOEP must be maintained by the 3MC.

NOTE: THE CSAL IS COMPRISED OF THE ACTUAL LOG SHEET, A COPY OF ALL MEMOS ROUTED TO THE WCS AND THE MEMO FROM THE WCS TO THE 3MC INDICATING COMPLETION.

   c. Does the CSAL or WC Journal accurately reflect changes to the command's 3-M program?
      (1) CSAL should be in accordance with the example provided in 19-2.3.2.e of this chapter.

(2) All PMS changes that would affect the command level should be annotated on the CSAL or WC Journal (i.e., AAMH, ACNs and DITs).

d. Current SKED Database back-up files on external media?

(1) External media includes but is not limited to DVD-R(W), and external hard drives.

(2) If the back-up file is located on the "H", "S" or "C" drive (local disc) of the 3MC's machine, this attribute will be graded as a zero (0).

7. Attribute 7: Does the 3MC:

a. Maintain a standardized, sequential system for tracking FBRs?

(1) If the command is not utilizing a split database configuration, the sequential serialization is completed automatically by SKED, but FBRs should be entered on CSAL.

(2) If the command is utilizing a split database configuration, the sequential serialization needs to be done manually by opening the preferences of the FBR.

(3) A log will be maintained by the 3-M staff to ensure no duplicate FBR serial numbers are exported.

b. Export and transmit FBRs as required?

(1) Check "FBR" tab in the WC SKED. All FBRs submitted are listed there, and information for status, date submitted, date exported is readily available. Receipt of exported report by PMSMIS (via RADWEB) must also be verified. This is accomplished by reviewing the serial numbers of unanswered FBRs in PMSMIS to ensure they were received. If the transmitted FBR doesn't exist in PMSMIS 72 hours after transmittal, the 3MC likely did not upload it.

(2) Double click to open details if further information is required.

c. Have an effective system for explaining, routing, and tracking PMS changes?

d. Does the CSAL or WC Journal(s) accurately reflect changes to the command's 3-M documentation?

(1) Check CSAL for received and completed PMS changes.

(2) Check change memorandums verifying WC installation.

(3) Ensure all received and applicable changes have a change memorandum completed from applicable WCs.

(4) Verify using "FBR" tab in the WC view.

8. Attribute 8: Does the 3MC: Promulgate Spot Check requirements? Ensure Spot Check matrix is inclusive of all levels of the 3-M CoC from the CO to the LCPO.

9. Attribute 9: Did the unit conduct:

a. Does the command ensure Spot Checks are accomplished as required?

(1) Compare spot check matrix to number of spot checks completed. Completed spot checks must be recorded into SKED. However, consideration must be made for SKED outages where paper copies may have been used, as well as the exporting of maintenance items when transferred or removed from custody. Maintenance items exported from SKED retain their spot check history. The WC leadership, 3MC or both should have record of maintenance item exported from SKED.

(2) Proportionally graded. If 9 of 10 required spot checks are completed, then the multiplier is .9. The attribute is worth 20 points, so the attribute will be graded as (20 x .9 = 18), and 18 points will be awarded.

(3) If a non-accomplished or below standard Spot Check is reported, was appropriate follow-up action and abatement conducted to correct deficiency?

b. Audits of all WCs? (proportionately graded. i.e., if 9 of 10 completed = 10 x .9)

(1) Audits are required once quarterly to be conducted by a 3-M 304 qualified E-7 or above.

(2) Are findings and discrepancies reported to the WC's CoC?

(3) Audits are to be retained for one year (4 QTRS).

c. Self-assessments?

(1) Is the CO debriefed on results of the self-assessment and intended corrective actions?

(2) Is the report of self-assessment made via a memorandum from the 3-M Manager to the CO?

APPENDIX A

SECTION III-A

PMS PERFORMANCE RATE (PPR)

PPR (PMS Performance Rate) is calculated using a Command's Maintenance Accomplishment Rate (MAR) and Spot Check Accomplishment Rate (SCAR). The MAR is a combination of the adjusted PAR and SAR, if applicable, multiplied by total SCAR divided by 100 and expressed as a RATE. For example, if a unit is properly scheduling and completing 90% of the checks assigned based on equipment configuration, and the average of Spot Checks conducted is 90%. Then PPR would be (90 x 90) ÷ 100 = 81% PMS Performance RATE.

$$PPR = (MAR \times SCAR) \div 100$$

Assessment of Maintenance Accomplishment Rate (MAR)

The MAR is an evaluation of a command's accomplishment of PMS maintenance requirements within periodicity and as required by situational requirements (R-Checks) and supporting Administrative Actions Rate (AAR) within the previous 13 weeks prior to the inspection. Omitted maintenance is maintenance that was supposed to be scheduled and accomplished but was not, no matter the reason. Lost maintenance is scheduled maintenance that was not completed prior to the expiration of periodicity. Omitted maintenance and lost maintenance will be deducted from the WC's MAR in the following manner:

PAR = Completed divided by (Completed + Lost + Omitted).

SAR = Completed divided by (Completed + Lost + Omitted).

$$MAR = (PAR \times .5) + (SAR \times .5).$$

Calculate the command's average MAR by calculating the sum of all WCs' MAR scores and dividing by the number of Work Centers evaluated. Null values - WCs that did not receive a Periodic Accomplishment Rate evaluation - will not be calculated into the CTS.

APPENDIX A

SECTION III-B

SPOT CHECK ACCOMPLISHMENT RATING (SCAR)

The SCAR is a measure of the inspector's confidence that PMS maintenance requirements have been fully accomplished in accordance with PMS requirements. This is evaluated with one major consideration: PMS Spot Checks at the WC level by the inspector.

Inspectors randomly select PMS maintenance requirements that have been recorded as accomplished at the organizational level within the previous 13 weeks until at least two percent of the total number of accomplished maintenance requirements have been selected with a minimum of one per WC. The total number of PMS Spot Checks per WC may be limited to 10 when the two percent results in more than 10 Spot Checks. In the event that no maintenance was completed in the past 13 weeks in a WC or if maintenance personnel whom have signed for completed maintenance in the past 13 weeks are not available to perform a Spot Check, the WC will receive a "Not Applicable" or "NA" evaluation and this will not be calculated toward the Command Total Score.

Calculate each WC's SCAR by dividing the total number of PMS Spot Checks assessed as fully accomplished by the total quantity of PMS Spot Checks conducted in that WC. Calculate the command's average SCAR by calculating the sum of all WCs' SCAR scores and dividing by the number of WCs evaluated. Null values (WCs that did not receive a SCAR evaluation) will not be calculated into the CTS.

1. Complete an MRC Evaluation SCAR Check Sheet equivalent from SKED 3.2 or higher, for each MRC selected. Based on the results, evaluate the overall effectiveness of the accomplishment of each MR selected. Enter a numeric evaluation of each assessment attribute and provide amplifying information to describe the deficiencies driving point deductions. Significant deficiencies must be reported via the final inspection report.
2. Due to the nature of MRC completion, supporting programs such as Tag-Outs and HAZMAT are encountered. Care should be taken to avoid expanding the spot check to a review of the processes of those programs thereby preventing the assessor from determining the accomplishment status of the MRC under review.
3. The following is expanded guidance for completion of the assessment attributes of the Spot Check sheet. Best practices or other policies not supported by source documentation must not be included in evaluating compliance:
    a. (1.a) Determine if the MP is qualified to perform the maintenance task. PQS 301 is required for all MRCs but attention should also be paid to other qualifications required such as SPO, DCPO or graduation from a required school such as NECC Armorer.
    b. (1.b) Determine if the correct TPMTE were used during the performance of the MRC. If the MP did not have the required TPMTE, it is unlikely that they would have been able to complete all the procedural steps of the MRC as

required. If an item of TPMTE was required to perform a conditional step and that step was not required to be accomplished, it is not considered deficient. If the required test equipment required calibration, ensure that the calibration is within date and the equipment is of sufficient scale to accomplish the MRC.

c. (1.c) Determine if the MP maintained the correct equipment.

d. (1.d) Examine the MRC to determine that any locally applied changes are authorized by procedural notes, external correspondence or allowed by reference (a).

e. (1.e) Determine applicability of the MRC to the component that the MP signed for completion.

NOTE: IF A PROCEDURAL STEP WAS NOT COMPLETED, THE MRC SHOULD NOT HAVE BEEN REPORTED AS COMPLETE AND THEREFORE THE ATTRIBUTE GRADE SHOULD BE ZERO AND ALL SUBSEQUENT ATTRIBUTES SHOULD ALSO BE ZERO, EFFECTIVELY "FAILING" THE SPOT CHECK.

f. (2.a) From a variety of potential techniques, determine if the MP performed all the required steps of the MRC. This may be accomplished via re-enactment, a discussion regarding the steps or re-performance. The inspector should come away with a clear impression that all the steps of the MRC were either fully accomplished or not.

NOTE: IF A REQUIRED TAG-OUT WAS NOT CONDUCTED IN SUPPORT OF ACCOMPLISHING THE MRC, THE MRC SHOULD NOT HAVE BEEN CONDUCTED AND REPRESENTS A SERIOUS SAFETY VIOLATION AND THEREFORE THE ATTRIBUTE GRADE SHOULD BE ZERO AND ALL SUBSEQUENT ATTRIBUTES SHOULD ALSO BE ZERO, EFFECTIVELY "FAILING" THE SPOT CHECK.

g. (2.b) If required by the MRC, verify that a tag-out was hung on the day the maintenance was performed. Ensure the isolation boundaries were appropriately identified and correctly positioned to ensure complete isolation of the maintained equipment. If no Tag-Out was required, write "NA" on the sheet.

NOTE: FAILURE TO ADHERE TO A SAFETY PRECAUTION PROVIDED ON THE MRC CONSTITUTES A SERIOUS SAFETY VIOLATION AND THE FAILURE TO PERFORM THE MRC AS WRITTEN. THE ATTRIBUTE GRADE WILL BE ZERO AND ALL SUBSEQUENT ATTRIBUTES WILL ALSO BE ZERO, EFFECTIVELY "FAILING" THE SPOT CHECK.

h. (2.c) Determine compliance with all specific safety precautions listed on the MRC. If no safety requirements were invoked, write "NA" on the sheet.

i. (3.a) By physical examination of the maintained equipment, determine if maintenance of the nature required by the MRC had been performed. Take note of fasteners that would have had to be disturbed, dirt in filters, fresh oil, etc., to make a judgment as to whether the maintenance has been performed.

If unable to make this determination with absolute certainty, write "NA" on the sheet.

NOTE: DUE TO THE POTENTIAL LIABILITY INCURRED BY IMPROPER USE AND DISPOSAL OF HAZMAT, SOME WCS HAVE ASSIGNED SPECIALLY TRAINED PERSONNEL TO PROVIDE HAZMAT AND DISPOSAL SERVICES FOR SURPLUS MATERIAL INSTEAD OF THE MP. THIS IS ACCEPTABLE PROVIDED THE INSPECTOR CAN DETERMINE FULL COMPLIANCE.

j. (3.b) Determine through questioning and record verification that HAZMAT was properly used and disposed of as a means of determining whether the MRC was accomplished. Once the inspector has determined that the HAZMAT was used and disposed of correctly, this attribute is considered fulfilled. If no HAZMAT was required to be utilized, write "NA" on the sheet.

k. (3.c) Determine if the MP could have performed the MRC from a standpoint of being trained and proficient in the tasks called out for by the procedure.

l. (4.a) Determine if the MP filled out the 13-Week Accountability Log correctly or annotated proper disposition of maintenance in SKED for the accomplished MRC with the appropriate accomplishment date. If a tag-out isolation was used, ensure the tag serial number is recorded in the space allowed or as a check note in SKED. Ensure that the printed name and legal signature of the MP who performed the maintenance is recorded or, in case of group performed PMS, the MP in charge of the group.

m. (4.b) From reviewing the discussions and findings during the spot check, determine if a FBR had been submitted if required. If no FBR was required, write "NA" on the sheet.

n. (4.c) Determine if a material deficiency was noted during the PMS; if so, examine the CSMP to ensure the deficiency was documented. If no material deficiency was noted, write "NA" on the sheet. If material discrepancies are properly documented in the CSMP attribute graded as a two. Material discrepancies which are not documented in the CSMP will receive an automatic grade of zero.

4. When a Spot Check is determined to be below standards, comments must be made in the "additional remarks" section of the sheet. Detailed descriptions will facilitate root cause analysis, the formulation of an effective corrective action plan and assist to clearly identify factors contributing to deficiencies that led to the conclusion that the MRC was not conducted as written or not conducted at all.

Remarks:

CSMP VALIDITY FACTOR (CVF) GRADING ATTRIBUTES

NOTE: SEVERAL ATTRIBUTES CONTAINED ON THE CSMP VALIDITY CHECKLIST ARE NOT INCORPORATED INTO THE GRADE AND ARE DESIGNED TO CAPTURE CSMP DATA FOR FURTHER ANALYSIS.

1. **Attribute 1**: Number of Type Availability (T/A) 1 Work Candidates. Defined as Depot level work candidates.
2. **Attribute 2**: Number of Type Availability (T/A) 2 Work Candidates. Defined as Intermediate Maintenance Activity (IMA) level work candidates.
3. **Attribute 3**: Number of Type Availability (T/A) 3 Work Candidates. Defined as Technical Support request work candidates in the CSMP.
4. **Attribute 4**: Number of Type Availability (T/A) 4 Work Candidates. Defined as Ships Force level work candidates.
5. **Attribute 5**: Total Work Candidates (sum of attributes 1 thru 4). Defined as All work candidates in the CSMP.
6. **Attribute 6**: Number of TA-2 Work Candidates over 180 Days old.
7. **Attribute 7**: Number of TA-4 Work Candidates over 180 Days old.
8. **Attribute 8**: Aged Work Candidates (WCO) sum of 6 and 7.
9. **Attribute 9**: Material Correction Rate WCO/3 (Aged TA-4) (#7/3)/#4. Defined as total TA2 and TA4 work candidates in the CSMP over 180 days old, divided by 3. That total is divided by Attribute 4: Number of TA-4 Work Candidates. This numerically defines if command is managing CSMP and maintenance.
10. **Attribute 10**: CSMP Validity review results from CVF Sheet Enter score from CVF Worksheet. CVF Work Candidate Worksheet is used for this score.
11. **Attribute 11**: Ship's Force WC over seven days old that require parts and the parts are not ordered. RPPO log (submitted by the command prior to assessment) along with actual R-supply verification will be utilized to determine this attribute.
12. **Attribute 12**: Total Work Candidate Deficiencies (WDC) Sum (#11/#4). Place the result from Attribute 11: Ship's Force WC over seven days old that require parts and the parts are not ordered divided by Attribute 4: Number of TA-4 Work Candidates.
13. **Attribute 13**: Work Candidate Multiple Average, #10 minus (#9 + #12) = CSMP Validity

1. The work candidate written against the correct configuration item?	#1 QTY	**15**
2. Problem description was adequate.	#2 QTY	**10**
3. Recommended solution was adequate.	#3 QTY	**15**
4. Deferral reason was incorrect.	#4 QTY	**10**
5. 1st and 2nd contact not assigned. (Cannot be the same person)	#5 QTY	**10**
6. Write-up does not reflect maintenance level assigned. (Originating WC, Intermediate Maintenance Activity, Depot Level Maintenance)	#6 QTY	**10**
7. Incorrect CSMP summary. (Does not state the problem)	#7 QTY	10
8. Priority code incorrect.	#8 QTY	5
9. Does the Work Candidate Equipment Status Code match problem description? (Operational or Non-Operational)	#9 QTY	15
10. Does the work candidate reflect the current and correct status of the material deficiency?	#10 QTY	Yes or No

Enter only numeric portion of JSN after ensuring that Department and WC header is filled in.

NOTE: IF ITEM #10 IS "NO", THE WORK CANDIDATE WILL BE ZERO.

Assessment of CSMP Validity Factor (CVF). The CVF is an evaluation of a WC's ability to accurately record deferred and corrective maintenance actions in the MDS. This is evaluated at the command level utilizing both the CVF Work Candidate (2-Kilo) check sheet. Inspectors will evaluate between 25 and 100 percent of deferred maintenance actions, per WC recorded on the CSMP. The results of the work candidate evaluation are then transferred to the CVF Score Sheet for

incorporation with other attributes evaluated. Calculate each WC's CVF as required by the CVF check sheet provided on NECC Portal under the N43 tab. Calculate the command's average CVF by calculating the sum of all WCs' CVF scores and dividing by the number of WCs evaluated. Null values (WCs that did not receive a CVF evaluation) will not be calculated into the CTS.

APPENDIX A

SECTION IV-B

REPORTING AND ASI PROCESSING CONFIDENCE FACTOR (RAF) REVIEW

UNIT:		
MDS Administration	**Points Available**	**Points Awarded**
1. Does the 3MC have a mechanism to track and remove users from MDS as they depart the command?	2	
Configuration Management		
2. Does the 3MC maintain a master file to track Configuration Item record validations?	3	
3. Have all Parent-Level configuration items validated within prescribed timelines?	10	
4. Is monthly follow-up action initiated with the CDM for CKs awaiting response in excess of 60 days?	5	
5. Is the Review and Approval queue free of configuration transactions older than 7 days?	10	
Work Candidate Management		
6. Is each Department conducting monthly CSMP review?	10	
7. Are there any approved Work Candidates with a Priority Designator of 1-3, without a CASREP as required?	5	
8. Are Work Candidates, older than 180 days, forwarded to ISIC for assistance, if required?	3	
9. Is the Review and Approval queue free of Work Candidates with no approval, over 7 days?	10	
OMMS-NG System Maintenance		
10. Are completed reports regularly deleted?	2	
11. Is the Import Correction queue empty?	2	
12. Has "Inactivate" been run in the past 15 days?	2	
13. Has "Archive" been run in the past 15 days?	2	
ASI Processing & Upline Reporting		
14. Does the 3MC maintain an up-to-date ASI or Upline log?	5	
15. Is the OMMS-NG Batch Job Queue routinely purged of completed processes?	5	
16. Are .uru, .pts, and error report files kept for one year?	3	
17. Are ASI_CDM error reports forwarded to the CDM following completion of each ASI?	3	

Attributes Evaluated as "NA" are not Calculated			
Total Points Available:		82	
Total Points Awarded:		[redacted]	
RAF % = TP Awarded divided by TP Available	**RAF****	120	
Inspector's Name and Rate:_____ Date:_____			
Inspector Notes:			

**** SAT = 80% or better**

All attributes are assessed with a YES, NO or NA status. No partial points will be awarded.

APPENDIX A

SECTION IV-C

MAINTENANCE DATA SYSTEM PERFORMANCE RATE (MPR)

MDS Performance Rate (MPR) is an evaluation of the Current Ship's Maintenance Project Validity Factor (CVF) and Reporting and Automated Shore Interface (ASI) Processing Confidence Factor (RAF) calculated by multiplying the CVF and RAF score divided by 100 and expressed as a RATE. For example, if a unit has a CVF of 90% and a RAF of 90%, then the MPR would be (90 x 90) ÷ 100 = 81% MPR.

$$MPR = (CVF \times RAF) \div 100$$

The MPR has an overall 40% weight of the overall 3M Inspection grade. This comes from the weight commanders place on CSMP accuracy and validity. This leads to proper maintenance action planning at the lowest cost, drives manning, and budget requirements.

Specific criteria for MPR evaluation is established by the TYCOM and the approved MPR check sheet is provided on the NECC Portal under the N43 tab.

Assessment of Current Ship's Maintenance Project Validity Factor (CVF). The CVF is an evaluation of a WC's ability to accurately record deferred and corrective maintenance actions in MDS. This is evaluated at the command level utilizing both the CVF Work Candidate (2-Kilo) check sheet.

Inspectors will evaluate between 25 and 100 percent of deferred maintenance actions, per WC recorded on the CSMP. The results of the work candidate evaluation are then transferred to the CVF Score Sheet for incorporation with other attributes evaluated.

Calculate each WC's CVF as required by the CVF check sheet provided on NECC Portal under the N43 tab. Calculate the command's average CVF by calculating the sum of all WCs CVF scores and dividing by the number of WCs evaluated. Null values - WCs that did not receive a CVF evaluation - will not be calculated into the CTS.

Reporting and ASI Processing Confidence Factor (RAF). The RAF is an evaluation of a command's ability to accurately report MDS records and ASI processing. Specific criteria for RAF is established by the TYCOM and the command's RAF is calculated by the RAF check sheet provided on the NECC Portal under the N43 tab.

APPENDIX A
SECTION V
COMMAND TOTAL SCORE

1. The CTS consists of three (3) parts and weighted as follows:

APR = (SEER average + CLER) divided by 2

Weighted PPR = (MAR x SCAR) divided by 100.

Weighted MPR = (Weighted CVF x RAF) divided by 100

CTS = (APR x .2) + (PPR x .4) + (MPR x .4)

2. A minimum grade point of 80 is required for a satisfactory score. The final grade is awarded based on final scores as established utilizing grading check sheets.

19-3.1 ROLES AND RESPONSIBILITIES.

a. Type Commander. The Type Commander (TYCOM) exercises primary responsibility for the effective operation and support of the 3-M System. Areas of responsibility include but are not limited to the following:

(1) Ashore Maintenance Data System (MDS).

(a) Automated Work Notification (AWN).

(b) Maintenance Figure of Merit family of systems.

(2) Planned Maintenance System (PMS) Scheduling (SKED) software.

(3) Configuration Data Managers Database - Open Architecture (CDMD-OA) and Model Based Product Support (MBPS).

(4) Scheduling and conducting 3-M Inspections (3MI), Training Assist Visits (TAV), and Evaluation Visits to be conducted by both TYCOM and Immediate Superior In Commands (ISIC).

(5) Master Job Catalog.

(6) The screening and processing of PMS feedback reports (FBR).

(7) Maintaining inspection data files.

(8) Providing program enhancement requirements to the respective Fleet Commander via N43.

(9) Ensuring units are manned with Navy Enlisted Classification (NEC) qualified 3-M Coordinators (3MC).

(10) Analyzing 3-M and self-assessment data, identifying common concerns, conducting problem root cause analysis with the development and implementation of solutions.

(11) Ensuring TYCOM inspection team members are qualified to inspect assigned areas.

b. Immediate Superior In Command. The ISIC is responsible for the routine monitoring and evaluation of the 3-M System for all assigned activities. Areas of responsibility include but are not limited to the following:

(1) Designating a 3-M Officer (3MO) in writing. The 3MO is responsible for the satisfactory administration of 3-M programs, per reference (a) and this subchapter, for subordinate commands or activities. The 3MO will maintain staff PMS and Personnel Qualification Standards (PQS) records.

(2) Monitoring and evaluating 3-M program for all assigned units. Responsible for all TAVs as assigned by the TYCOM.

(3) Ensuring 3MI are current.

(4) Ensuring subordinate commands conduct rigorous quarterly 3-M Self-Assessments and report results to the TYCOM 3MC.

(5) Monitoring the status of troubled systems and Top Management Attention items using the quarterly 3-M Self-Assessment.

(6) Ensuring subordinate commands comply with standard Work Center (WC), division and department structure as published on the JFMM TYCOM website https://www.navsea.navy.mil/Home/SUBMEPP/Products/JFMM/TYCOM/.

(7) Tracking and monitoring 3-M major milestones and training events, overseeing, and providing inspection teams and conducting 3-M Spot Checks during ISIC or staff visits.

(8) Forward all ISIC conducted 3MIs and TAVs to the TYCOM, and 30-day updates from post 3MI and TAV Plan of Action and Milestones (POA&M).

c. Inspection Teams. Areas of responsibility include but are not limited to the following:

(1) Scheduling and conducting 3MIs and training events as directed.

(2) Reporting of training status and certification recommendations to the TYCOM to include any perceived barriers to effective and timely completion of 3-M events.

(3) Ensuring material failures are adequately examined to detect 3-M system inadequacies.

d. Commanding Officer or Officer In Charge. The Commanding Officer (CO) or Officer In Charge (OIC) or site Technical Director is responsible for establishing an aggressive Self-Assessment Program that validates the administration and execution of maintenance and detects improperly conducted maintenance or falsely reported accomplishments.

e. Executive Officer. The Executive Officer (XO) is the command's 3-M System Manager responsible to the CO or OIC for the overall management of the 3-M Program. For sites with no on-site executive officer, the OIC or technical director will ensure locally the below functions are conducted, and briefed to the ISIC Executive Officer. The XO will:

(1) Chair quarterly 3-M System meetings with Department Heads (DH) and the 3MC.

(2) Brief the CO on the status of 3-M.

(3) Integrate 3-M System training into the command's training and qualification program.

(4) Ensure personnel receive adequate and effective 3-M System training.

(5) Ensure the effectiveness of the command's 3-M Self-Assessment Program.

(6) Act as the final review officer for shifts of maintenance responsibility between departments.

(7) Establish a command Zone Inspection Program.

f. Command Master Chief. The Command Master Chief will:

(1) Attend the XO's scheduled 3-M System meetings providing senior enlisted feedback.

(2) Conduct PMS Spot Checks following the command's policy to ensure required maintenance is being properly performed and documented.

g. Command 3-M Coordinator. The 3MC will:

(1) Serve as the key 3-M System assistant to the XO.

(2) Maintain a file of 3-M System directives, newsletters, notes, and correspondence containing current 3-M program information and ensure distribution to WC personnel.

(3) Maintain copies of the current Force Revision (FR) NAVY PMS Digital Video Disk (DVD), List of Effective Pages (LOEP) for every WC, changes issued between FRs in their original format and classified Maintenance Requirement Cards (MRCs). Digital copies are allowed unless there have been changes between FRs.

(4) Advise, monitor, and assist DHs, division officers (DIVOs), leading chief petty officers (LCPOs) and work center supervisors (WCS) in matters concerning the 3-M System.

(5) Monitor the 3-M PQS Program and maintain an auditable record of personnel qualified in 3-M PQS.

(6) Maintain a master accountability log of all PMS changes.

(7) Develop and maintain a Split Maintenance Index Page (MIP) Log.

(8) Administer the configuration management program.

(9) Supervise the command's 3-M Self-Assessment Program and provide a weekly status to the XO.

(10) Develop and administer the PMS Spot Check Program.

(11) Generate a weekly PMS Spot Check assignment matrix for officers, Chief Petty Officers (CPO) and designated supervisory personnel.

(12) Ensure corrective actions are taken on all unsatisfactory PMS Spot Checks and report same to the XO as part of weekly PMS reporting.

(13) Ensure a complete back up of the SKED system is made on removable media (e.g., DVD or Compact Disk (CD)) following completion of the FR update and retain as part of the PMS Master File.

(14) Ensure situational requirements are triggered in SKED and completed based on unit events.

(15) Ensure that Triggers are properly set at the command level.

(16) Screen all FBRs, verify content, validity, serialize and forward within seven days of origination.

(17) Maintain accountability of all submitted FBRs and actions taken until corrected or new PMS documentation is received.

(18) Ensure the FBR originator and all applicable WCs are apprised of action taken and that changes or corrections are implemented when received.

(19) Ensure 3-M documents such as Ship's Maintenance Action Form OPNAV 4790/2K (2-Kilo), Ship's Configuration Change Form, OPNAV 4790/CK (CK), etc. that require forwarding to a data processing activity are forwarded within seven days of origination or as operationally feasible.

(20) Validate 3-M MDS data elements following the 3-M validation specifications.

(21) Ensure 3-M documents returned for the correction of data are promptly revised and resubmitted.

(22) Track the reporting of completed maintenance actions related to an alteration or because of a configuration change with timely processing of Automated Shore Interface configuration and logistic data (as applicable).

(23) Report up-line CSMP maintenance transactions and command equipment file corrections at least once a week.

(24) Ensure current external backups of the command's Configuration Management Database are created on removable media (e.g., DVD or CD).

(25) Maintain any outstanding paper copies of message work candidates and 2-Kilos (paper or electronic).

(26) Maintain a record of account creation documents as per volume II part II chapter 1 of this manual.

(27) Ensure the sites in which responsible are conducting equipment validations in such a manner that one hundred percent of configuration items are validated in a 36-month period.

(28) Review all shore installation packages for Configuration, PMS, or Locally Generated Maintenance requirements in the shore installation program SPIDER.

h. Department Head. The DH is responsible to the XO for the operation and execution of the 3-M System within the department. Duties and responsibilities assigned to the DH are not to be delegated. The DH will:

(1) Designate departmental 3-M personnel as applicable.

(2) Ensure maintenance is prioritized to facilitate accomplishment.

(3) Review and approve all department PMS schedules and revisions.

(4) Review maintenance action annotations.

(5) Acknowledge weekly alerts if no DIVO is assigned to the WC.

(6) Implement a Self-Assessment Program within the department to validate properly accomplished and reported maintenance.

(7) Take corrective action on all "Unsatisfactory" PMS Spot Checks and report to the XO via 3MC as part of weekly PMS reporting.

(8) Ensure all material deficiencies are documented and promptly reported.

(9) Review and verify the content and validity of all FBRs, digitally sign FBRs within five days of origination.

(10) Ensure the Configuration Management Database accurately reflects equipment changes whether the action is performed by command personnel or outside activities.

(11) Authorize placement of equipment into an Inactive Equipment Maintenance (IEM) status, ensure PMS scheduling is annotated accordingly.

(12) Review and approve department work candidates within four days of creation; ensure completeness, accuracy, and the correct assignment of priority.

(13) Review all work candidates in the departmental CSMP every 90 days.

(14) Ensure that no classified data is reflected on 3-M documents designated for off hull distribution.

(15) Conduct quarterly meetings with DIVOs, LCPOs and WCSs and provide status of departmental 3-M System to the XO.

i. Department Leading Chief Petty Officer. The department LCPO is responsible for the proper operation of the 3-M System within their department. The department LCPO will:

(1) Provide 3-M System guidance and training to DIVOs and division LCPOs within their Department.

(2) Participate in quarterly Self-Assessments.

(3) Ensure the proper testing and inspection of work done by outside activities prior to job acceptance.

j. Division Officer. The DIVO is responsible to the DH for the execution of maintenance within the division. The DIVO will:

(1) Ensure all PMS scheduling changes have been properly annotated and applied prior to DH review and finalization.

(2) Review the 13-Week Accountability Log at the beginning of the PMS week and sign at the end of the week (if not using electronic accountability in SKED or when SKED is not available).

(3) Review and verify the content and validity of PMS FBRs within three days of origination.

(4) Ensure 3-M documents generated within the division are complete, accurate and promptly submitted to the DH.

(5) Conduct 3-M Self-Assessments as directed by the command's policy.

(6) Provide weekly updates to the DH concerning the status of the 3-M System within the division.

(7) Incorporate 3-M System training into the Divisional Training Plan.

(8) Review divisional work candidates and the CSMP for validity and accuracy.

(9) Conduct monthly briefings for the DH on the status of all work candidates.

(10) Acknowledge PMS Alerts.

(11) Conduct weekly close-outs when the LCPO is not available.

(12) When no LCPO is designated perform the functions of the LCPO, as well.

k. Division Leading Chief Petty Officer. The division LCPO is responsible for the proper operation of the 3-M System within their division. The division LCPO will:

(1) Supervise WCSs in the execution of daily maintenance.

(2) Ensure WCSs are properly trained, equipped and are knowledgeable of all WC divisional equipment maintenance requirements.

(3) Ensure divisional personnel are properly trained and qualified to conduct maintenance.

(4) Verify all divisional WC equipment is covered by PMS.

(5) Ensure PMS is properly scheduled and conducted, including all underway and special evolution situational "R" checks.

(6) Review WC PMS records (e.g., FRs, Advanced Change Notices (ACN) and PMS FBRs and Responses), approve all lineouts and additions on the LOEP, MIP, and PMS schedules prior to DIVO and DH reviews. Ensure proper justification is noted on each lineout.

(7) Review and approve non-applicable procedural steps lined-out on MRCs.

(8) Review and sign the 13-Week Accountability Log at the end of the PMS week and ensure checks added that week are hand-written into the blank accountability log. (If not using electronic accountability in SKED or when SKED is not available.

(9) Review the PMS Scheduling Forecasting Report to ensure that all Tools, Parts, Material and Test Equipment (TPMTE) are available to support upcoming maintenance actions.

(10) Provide the DIVO a weekly status of the division's Self-Assessment Program, CSMP and PMS.

(11) Ensure the Configuration Management Database reflects current configuration.

(12) Ensure FBRs are submitted requesting LOEP changes to reflect system, equipment and component installs or removals.

(13) Review and verify the content and validity of PMS FBRs within two days of origination.

(14) Ensure the divisional CSMP accurately reflects material conditions.

(15) Review work candidates, act as the second point of contact for work candidates and provide the DIVO a weekly brief on the status of all work candidates in the CSMP.

(16) Ensure proper testing and inspection of work done by outside activities prior to job acceptance.

(17) Coordinate repair activities within the division.

(18) Review all quarterly Self-Assessments and promptly correct discrepancies found within the division.

(19) Review, approve, and close out weekly schedules. This closeout of the previous week's schedules must occur on the first day of the following week.

(20) Review Check Notes for required and updated information.

(21) Write PMS Alert details to include why planning allowed loss of periodicity and the plan to complete PMS.

(22) When no DIVO is designated perform the functions of the DIVO as well.

l. Work Center Supervisor. The WCS should be a senior petty officer assigned to the WC and qualified per reference (b) or civilian equivalent. The WCS will:

(1) Maintain a detailed working knowledge of all equipment deficiencies within the WC. Record all equipment deficiencies within their WC, utilizing AWN to ensure all required 3-M System documents are submitted to the division LCPO.

(2) Ensure WC personnel have completed 3-M PQS training commensurate with position held.

(3) Ensure PMS covers all maintenance worthy equipment in the WC.

(4) Maintain an accurate and current LOEP.

(5) Ensure 3-M System WC files and publications are complete, current, and available to WC personnel.

(6) Ensure WC initiated 3-M documentation is correct, legible, promptly prepared and submitted.

(7) Maintain a 13-Week Accountability Log containing the current and previous 13-Week Log (if not using electronic accountability in SKED or when SKED is not available).

(8) Prepare weekly WC schedule, obtain required approval, assign maintenance personnel, and update schedule to reflect status.

(9) Ensure equipment changes, adds and removals are reflected in the Configuration Management Database and, if not, report via CK to the Configuration Data Manager (CDM).

(10) Ensure FBRs are submitted whenever:

(a) Maintenance requirements are not fully understood.

(b) Errors are believed to exist.

(c) Entries in the TPMTE block are wrong or inadequate.

(d) Additional coverage is needed.

(e) Performance of the maintenance requirement would cause a hazardous condition to exist.

(11) Ensure prompt reporting of all material deficiencies and completed maintenance actions.

(12) Ensure Periodic Maintenance Requirements scheduled for command accomplishment are completed and reported as required.

(13) Ensure test and measurement equipment or other portable support equipment is delivered for test or calibration as scheduled.

(14) Ensure the DIVO and division LCPO or LPO are advised of all 3-M System activity within the WC.

(15) Spot check completed equipment file validations; ensure accuracy of the information and PMS scheduling equipment associations.

(16) Review the PMS Scheduling Forecasting Report to ensure that all TPMTE is available to support upcoming maintenance actions.

(17) Ensure all WC weekly schedules are updated daily.

(18) Use the Edit Equipment Details function of SKED to the maximum extent possible to associate maintenance items to the CDMD-OA database embedded in SKED 3.2 for configuration Items. The association should be made to the highest level or piece of the applicable equipment being maintained.

m. Repair Parts Petty Officer. RPPO personnel are responsible to support the supply acquisition process for the shore site. Due to Naval information Forces' (NAVIFOR) unique nature and not having a RSUPPLY back-end to AWN. RPPO will:

(1) Order all NSN based parts per reference (c).

(2) Ensure all funding expenditures are captured as outlined in section 19-3.4.2 of this chapter.

(3) Maintain a RPPO log, to ensure accurate transactions with Supply Staff.

n. Maintenance Personnel. Maintenance personnel will perform all PMS as assigned utilizing PMS documents in SKED and ensure Check Notes contain amplifying information and tagout identifiers as required. Maintenance personnel will:

(1) Perform assigned maintenance.

(2) Notify the WCS when:

(a) An MRC is not fully understood, appears to be incorrect or cannot be accomplished as written.

(b) There are issues with the TPMTE block of the MRC.

(c) The technician has doubts concerning his or her ability to perform the maintenance.

(d) Equipment deficiencies or casualties are discovered.

(e) Factors exist which would make performance of the maintenance unwise or dangerous.

(3) Initiate FBRs when discrepancies are discovered during the performance of an MRC.

(4) Inform the WCS when planned maintenance requirements are complete.

(5) Annotate PMS schedule to reflect accomplishment of maintenance.

(6) Sign 13-Week Accountability Log (if not using electronic accountability in SKED or when SKED is not available).

(7) Open a Work Notification in AWN when any discrepancy is annotated.

o. Other Roles and Responsibilities

(1) Memorandum of Agreements (MOA) must be in place, per reference (f), when two sites are operating outside of the single site structure or tenant commands of one another to clearly define the responsibilities of both sites

(2) Entities not covered by traditional 3M roles and responsibilities but are either required or contracted to conduct maintenance, whether hardware or software, must have those roles clearly defined by either a contract or MOA per reference (i). The site must still utilize the Navy's 3M system to track the completion of this maintenance. If the utilized entity is outside of the site, the site will utilize a cent sign as dictated in this instruction to accomplish the maintenance actions.

(3) Commands that may not have the PMS portion of 3-M, are still required to utilize MDS for mission readiness when the unavailability of the services effects mission capability, configuration management, facility issues, funding expenditures of Operation and Maintenance dollars, and man-hour expenditures for equipment driven and equipment supporting tasks.

(4) Base Communications Operations (BCO) as defined in reference (d) have configurations such as but not limited to Universal Power Supplies (UPS), Generators, and Definity Servers that are to be maintained in accordance with this manual. All BCO deficiencies and updated configurations are to be documented and maintained in accordance with section 19-3.4.2 and chapter 19-7 of this volume.

(5) NAVIFOR has a large amount of small boats, all small boats maintenance will follow in addition to this chapter and chapter 11 of this volume.

(6) For equipment supporting and installed on Military Sealift Command ships by NAVIFOR activities, will use volume VI of this manual in the performance of their maintenance and deficiency reporting.

19-3.2 QUALIFICATIONS. All personnel assigned to billets associated with the 3-M system must be 3-M PQS qualified for the assigned billet per reference (b).

a. All military, civilian, or contract, who are on-site contractors providing maintenance coverage, assigned or contracted to billets associated with performing 3-M must complete required 3-M PQS, which coincides with their position or billet. All military, Department of Defense civilian, and contractors are required to re-qualify when directed by a PQS revision, or if the member's qualification date has exceeded 5 years. For Local National (LN) personnel, where the LN cannot be qualified a Military or Government employee must perform a quality review of the work, and sign-off the maintenance as the government official.

b. 3MCs are responsible for maintaining an effective 3-M training program designed to equip personnel with the knowledge and skills required for their designated position incorporated into the long term and short-term training plans, to include but not limited to requirements outlined in reference (a).

c. Evidence of qualification in support of 3-M requirements must be maintained by the command in an auditable record. Fleet Training Management and Planning System (FLTMPS) reporting is the required method to reflect qualifications and NEC requirements.

d. Cyber security work force qualification and certifications for system administrator maintenance must be maintained as applicable to the user or system administration role of the performance of maintenance, further delineated below and in reference (g)

(1) Minimum qualification NAVEDTRA 43469, Personnel Qualification Standard for Cybersecurity, is required at all levels of cybersecurity workforce and directs the training necessary prior to qualifying as a technician or manager as per reference (g).

(2) For Host Based Security System (HBSS), all personnel with privileged access must be trained with "F" school or Network Security Vulnerability Technician (NSVT) NEC, with certification on file as per reference (g).

(3) For cyber security operating system certifications, and requirements for system utilization required baselines are outlined in reference (g).

e. Evidence of qualification in support of 3-M requirements must be maintained by the command in an auditable fashion. In addition to 3-M PQS qualifications, all personnel assigned to accomplish 3-M related maintenance on systems listed in Volume V, Part 1, Chapter 2 paragraph 2.2.1 of this manual, must be qualified per reference (c). Table 19-3-1 reflects the PQS qualifications required to fill 3-M billets.

Table 19-3-1 - Required PQS Qualifications

3-M Coordinator	PQS-307
3-M Assistant	PQS-306
Department Head	PQS-306
Department LCPO	PQS-305
Division Officer	PQS-304
Division LCPO	PQS-304
Work Center Supervisor	PQS-303
Repair Parts Petty Officer	PQS-302

Maintenance Personnel	PQS-301

f. Personnel checking into the command with a 3-M qualification obtained from a previous command may be required to re-qualify. They will re-qualify directly to the highest level previously obtained and they do not have to re-qualify at lower levels.

g. Completion of SKED training videos provided on the FR disk equivalent to 3-M PQS qualification is required.

h. Commands will utilize a written test, and the appendix a Sked Proficiency, and MDS proficiency sheets to ensure as the baseline for oral board signatures for every qualification and re-qualification.

i. Training resources include but not limited to the following:

(1) NAVIFOR 3-M Milsuite course at https://www.milsuite.mil/university/navifor3-m

(2) 3-M University

(3) SKED training modules in the SKED 3.2 program

(4) Training Assist Visits from the ISIC or TYCOM, this is not a requirement prior to an inspection.

19-3.3 PLANNED MAINTENANCE.

19-3.3.1 PMS Functional Operation:

a. PMS execution is conducted in accordance reference (a), and no other Preventive Maintenance system supersedes the 3-M system, other than those dictated in chapter 19 of this instruction. PMS execution begins Ashore with the Fleet Readiness Certification Board (FRCB) process, and the preventive maintenance can be found in the logistics section for User Logistic Support Summary (ULSS) packages. This will list out the required MIPS or point to the technical manuals to be utilized for locally generated maintenance procedures for PMS.

b. Change Service Accountability Log (CSAL) provides a definitive record to all work center changes and is kept in the master PMS File by the 3MC. For sites where the 3MC is not co-located, the site must also maintain a CSAL. The CSAL includes all changes no matter how minor including MRC changes in the command or sites 3M Program. An example of items in the CSAL include, but not limited to FR, ACN, FBR, locally generated maintenance changes, or Document Information Transmittal (DIT).

(1) The CSAL is comprised of the actual log sheet, a copy of all memos routed to the WCS and the memo from the WCS to the 3MC indicating completion.

(2) The importance of the CSAL cannot be overstated. In essence, it provides for a day-to-day, year-to-year record of changes to a command's planned maintenance program. It is also a turnover document at deployment sites, allowing a current command to quickly identify all changes from a previous command. Finally, it will be inspected during all command 3-M assessments

and inspections, providing visibility as to how well a command manages 3-M from one inspection to another.

Figure 19-3-1 Change Service Accountability Log

FR Change Number or Authority	Date RCVD	Cognizant Dept. or WC	Date Cover Sheet Issued	Date Cover Sheet Returned	Date Master File Updated or Item Closed	Summary of Change

c. Planning Board for Maintenance (PB4M). Each unit will have a formally structured PB4M which will meet monthly at minimum. For Echelon 5 and below ISIC representation should be present for the PB4M. This forum provides a review of current/future planned installs and updates, organizational maintenance, CSMP quality and accuracy, future maintenance, and fiscal concerns. Attendees must include XO, 3MC, all DH's, and additional personnel as desired.

d. A SKED forecasting report will be used to ensure all future requirements such as tools, parts, and test equipment are available for maintenance checks. Any items with NSN must be ordered from the primary means of Military Standard Requisitioning and Issue Procedures (MILSTRIP) ONETOUCH.

e. Standard entries will be utilized for all SKED 3.2 check notes reports or alert details.

(1) SKED 3.2 Check note report entries must begin with rescheduled, out of periodicity, non-accomplished, lost or n/a

(2) Detailed remarks explaining why check note was not completed to include date, Job sequence number, and/or supply requisition numbers.

(3) For units using SKED Electronic

f. Cent (¢) sign Check note entries will begin with "PERFORMED BY" and followed by the detailed information of the individual completing the maintenance, job sequence number (JSN), Work order, or applicable documentation used to complete the maintenance. Due to the unique nature of NAVIFOR units, this mark is utilized for outside activities performing maintenance such as engine repair shops, NAVFAC,

not to be utilized with internal contractors that are conducting the maintenance as part of the command. In cases where the completing activity is not available to sign the accountability log, the DH will sign into SKED 3.2 to document the completion of the MRs by outside activities after reviewing the Check Note ensuring the LCPO has annotated satisfactory completion of the maintenance action (For example: "PERFORMED BY –Captain's Marina and Boat Shop, Contractor John Smith, JSN BCIC-0124 Work Order #2018-031).

g. The substitution of any tools, materials or test equipment not held by the activity should be considered prior to deciding to defer the maintenance until the exact tools, materials or test equipment listed on the MRC are procured. This is especially critical for frequently required maintenance where several performance cycles can be missed while waiting for supply to provide the correct items. Substitution requirements are provided by reference (a) and other technical documents.

h. The minimum requirement for the testing and maintenance of facility mission support equipment that is government owned and maintained by NAVIFOR components, is listed in reference (e). Examples of facility mission support equipment include but are not limited to: Uninterruptable Powers Supply (UPS) systems, generators, and Heating, Ventilation, and Cooling (HVAC) systems.

i. Locally generated maintenance must be in place if no maintenance procedures exist for the mission support equipment. Following the TFBR process for Equipment not covered by PMS section dictated in reference a. This process details the designations for Maintenance requirement substantiated, and No Maintenance required. Maintenance requirement substantiated can be further defined below for PMS and MDS clarification.

   (1) Government owned equipment that is maintained by military, civilian, or contractor will fall into both PMS and MDS programs

   (2) Contractor owned equipment as per the contract that is maintained by contractors that affects readiness or degradation of mission will fall into the MDS program only.

   (3) Contractor owned equipment as per the contract that is maintained by contractors that does not affect readiness or degradation of mission will not fall into either the PMS or MDS programs.

j. All maintenance and testing procedures must be scheduled, and accomplished in SKED, whether conducted by outside contractor or local command representative.

k. COMSEC maintenance, ashore COMSEC sites will utilize PMS SKED program in order to maintain and record COMSEC equipment maintenance. When transferring the COMSEC from the ashore site to another, the site will utilize the import/export feature to ensure the maintenance history of the equipment is going to where the Controlled Cryptographic Item is being transferred to. 2-Kilos will be submitted for the accomplishment of those items.

l. Where a difference between requirements or procedures of PMS and other technical documentations exist, PMS requirements will take precedence.

m. For equipment not currently supported by Naval Sea Systems Command (NAVSEA), command subject matter experts will develop local PMS procedures. Commands are required to search the FR Reference disk, and PMSMIS prior to locally generating maintenance procedures. These procedures can be pointer cards that point to procedures already created, and meet the intent, and training required to maintain the system whether hardware or software.

19-3.3.2 Functional Components.

a. PMS Master File. The Master File, maintained by the units 3MC, contains information relative to PMS requirements that are specific to equipment for which the command is responsible. The Master File provides for duplicate issue of missing MIPs and MRCs, contains supplementary information provided by Naval Sea Logistics Center (NSLC) Detachments Norfolk or San Diego and serves as a repository for changes received between FR distributions, which must be retained on file until the changes are reflected in a subsequent FR. Master File content is delineated in Appendix A Section I-B the Command Level Effectiveness Review (CLER) of this subchapter.

b. Work Center PMS File. The WC File provides a ready reference of planned maintenance requirements and information to be retained in the working area for use by the WCS and maintenance personnel. The WC File contains only the documents and information applicable to a specific WC. The content of the WC File is delineated in Appendix A Section I-A the Scheduling and Execution Effectiveness Review (SEER) of this subchapter.

c. PMS Administrative Requirements. In lieu of a WC or a Master File the following should be retained:

(1) Work Center: Current locally generated LOEP and MRCs.

(2) 3-M Coordinator

(a) SKED 3.2 Help file

(b) Split MIP Tracking Log (updated to current FR).

(c) Applicable 3-M Instructions (Activity, ISIC or TYCOM).

(d) Current 3-M messages and guidance.

(f) Master classified MRCs

(g) Current SKED Database back-up files on DVD or CD-ROM and an Excel spread sheet from the SKED report Checks and Maintenance Outlook Report of all WCs, for the current and next future quarter.

(3) 3-M Program short and long range training plan approved by the XO.

(4) The following post-quarter SKED reports will be generated by the 3MC and forwarded to the ISIC by the 3rd Monday of the quarter (as conditions permit). These reports will be analyzed and electronically routed through the applicable DH to the XO. These reports will be retained as Objective Quality Evidence, by the 3MC for four quarters.

(a) PMS Analysis Spreadsheet and the virtual snap shot .pdf file.

(b) Calibration METBENCH Calibration Management System (MCMS Report).

(c) Spot Checks – Passed & Failed Reports.

d. Interim MRC Procedures. The activity may develop interim MRC procedures based on experience and applicable technical manuals in support of equipment or systems without PMS coverage until formal documentation is received. Before scheduling preliminary MIP requirements, the WCS and the DH must verify their applicability to installed equipment.

e. Weekly Status Report. The weekly PMS monitoring status reports will be retained (electronically if desired) by the 3MC for six months. These reports from the 3MC to the XO will contain, as a minimum, the information cited in paragraphs 19-3.4.2.e.(1) through (6) of this chapter:

(1) Completed Spot-Check and Monitored MRC results.

(2) Completed WC audits and results.

(3) The number of FBRs over seven days old that have not been reviewed by the Chain of Command (CoC).

(4) Abatement and corrective actions completed because of a monitoring program finding.

(5) IEM Details Summary Report.

(6) Overdue or alerting MRCs and plan of corrective action.

(7) For commands that have been moved over to the virtual snap shot tool, this will become the weekly status report with attached sections for line item 2, 3, 4, and 5.

19-3.3.3 Related Maintenance. Related maintenance, so designated by the In-Service Engineering Activity (ISEA) or Technical Warrant Holder, is determined from the MIP. The RELATED MAINT column of the MIP reflects related maintenance requirements. Related requirements are positioned on the MIP to line up directly across from the MRC to which they are related. Related maintenance requirements are also identified in the TPMTE section of the MRC under MISCELLANEOUS.

a. Related Maintenance Categories.

(1) Mandatory Related. Mandatory related maintenance requirements are those maintenance actions that must be accomplished concurrently with another maintenance requirement. The mandatory relationship is indicated with the use of the # sign. If the mandatory related maintenance resides on the same MIP, it will be reflected in the RELATED MAINT column as “periodicity#” (e.g., M-3#). If the related maintenance resides on another MIP, it will be reflected as “MIP:Periodicity#” (e.g., IC-013/033:M-4#). Mandatory related maintenance requirements are automatically scheduled by SKED.

NOTE: MANDATORY RELATED REQUIREMENTS MUST BE LINKED IN SKED TO BE AUTOMATICALLY SCHEDULED.

(2) Convenience Related. Convenience related maintenance requirements are those maintenance actions that can be accomplished concurrently with another maintenance requirement to save time (preliminary steps and tag-outs already accomplished) or for work force considerations. If the convenience related maintenance resides on the same MIP, it will be reflected in the RELATED MAINT column as "periodicity" (e.g., M-5). If the related maintenance resides on another MIP, it will be reflected as "MIP:Periodicity" (e.g., EL-010/001:M-4)). In both cases, the # symbol is omitted. The WCS manually schedules convenience related requirements.

(3) Conditional Related. Conditional related maintenance requirements are those maintenance actions that are performed when specific conditions are present or specified parameters are not met on the referencing MRC. Conditional related maintenance will appear on the MIP in the same manner as convenience related maintenance. The WCS manually schedules conditional related requirements.

(4) None. No related maintenance is reflected as "None" in the "RELATED MAINT" column.

b. Work Center Supervisor Actions. WCSs are encouraged to review their schedules on a regular basis for opportunities to perform other PMS when an equipment or system has maintenance actions scheduled. Rescheduling of PMS to take advantage of other system maintenance (convenience related) is highly recommended.

(1) If an MRC has related maintenance from another MIP, review the related MIP and MRC and determine if it requires assistance from another WC.

(2) If the related MIP and MRC does not require assistance from another WC and is not on the lead WC LOEP, submit an FBR to have it added to the LOEP.

(3) If the related MIP and MRC requires assistance or completion by another WC and is mandatory, convenience or conditional related then it should also be on the lead WC LOEP. If it is not on the lead WC LOEP, submit an FBR to have it added to the LOEP. If the related MRC requires technical assistance, a special NEC, or another rating, that is not part of the lead WC, then the person with the technical training, special NEC or required rating should be temporarily added to the lead WC "Crew List" and assigned the related maintenance in either an assist or performance role. All WCSs involved will collaboratively plan the required maintenance and may adjust schedules based upon individual workload. When the maintenance is completed, the lead WCS will mark the MRC as completed.

19-3.3.4 Inactive Equipment Maintenance.

a. Inactive Equipment. A piece of equipment or system intentionally placed in a hibernated state for a specific period with the intention of reactivating that equipment or system at the end of that period.

(1) Status I. Equipment that will:

(a) Remain onboard,

(b) Is not scheduled for corrective maintenance or overhaul, or

(c) Will be inactive during extended shutdown periods and maintenance availabilities as determined by the DH.

Example: Submarine CO_2 Removal Plant in wet or dry lay-up.

NOTE: PERFORM A "WET LAY-UP" (CO_2 REMOVAL PLANT FILLED WITH DISTILLED OR DEMINERALIZED WATER) PRIOR TO ENTERING PORT WHEN THE SHIP IS EXPECTED TO BE IN PORT FOR 7 TO 45 DAYS OR A "DRY LAY-UP" (CO_2 REMOVAL PLANT LEFT EMPTY AFTER FLUSHING AND DRAINING), PRIOR TO ENTERING PORT WHEN THE SHIP IS EXPECTED TO BE IN PORT FOR GREATER THAN 45 DAYS, OR PRIOR TO ENTERING PORT WHEN MAINTENANCE REQUIRING THE REMOVAL OF ALL CO_2 REMOVAL PLANT FLUID IS EXPECTED.

(2) Status II. Equipment that is inactive and:

(a) Subject to corrective maintenance, overhaul, or removal for safe storage, or

(b) Temporarily transferred to another activity for maintenance responsibility for extended shutdown periods as determined by the DH. (Example: Submarine Refrigeration Compressor removed for Depot level overhaul.)

(c) When system(s) components are scheduled for replacement.

b. Implementation and Responsibility. While inactive, minimum maintenance is performed to ensure the success of the reactivation. The IEM section of the MIP will cover this maintenance. However, consideration should also be given to active PMS maintenance checks that can be manually added and performed during this period of inactivity.

(1) The activity will develop an IEM plan for all inactive equipment. The plan will include reason for inactivation, and duration. DH approval of this plan will be documented in the SKED IEM remarks. Use Appendix B of this chapter.

(2) To implement procedures for the accomplishment of PMS for equipment declared in an inactive status, current PMS schedules are modified to annotate the requirements listed in the IEM section of the MIP. For advance planning and scheduling of maintenance to take place, it is necessary to determine and identify the extent to which unit personnel will conduct PMS during an

inactive period. MIPs in each WC will be reviewed to determine if equipment has IEM coverage (e.g., Lay-up (LU), Periodic Maintenance (PM), Start-up (SU) and Operational Test (OT)), if the coverage is adequate, and what procedures to follow if there is no IEM coverage on the MIP in question or provided coverage appears inadequate. The Department Head is responsible for determining equipment IEM status. When placing a system or equipment in IEM status, the DH will also determine the IEM start date to be reflected in SKED. The IEM end date will not be applied in SKED until the system or equipment is ready to be brought out of IEM status. All periodic PMS scheduled at the end of IEM should be reviewed for applicability, with applicable maintenance accomplished prior to operating equipment.

(3) IEM procedures are listed on MIPs and separated from operational PMS by a horizontal line. The IEM section is titled "Inactive Equipment Maintenance" and is prefaced by the following statement: "The following requirements will be scheduled when equipment is inactivated for periods of prolonged idleness." When there are no IEM requirements the words "None required" will appear under the IEM section of the MIP. When IEM procedures are inadequate, submit an FBR. The unit should consider all factors that affect equipment deterioration and take necessary precautionary measures. These factors include environmental conditions, equipment location, susceptibility to damage or other factors that cannot be anticipated when IEM procedures were originally developed by the cognizant ISEA or design activity.

(4) The lack of IEM requirements on a MIP does not prohibit placing that system or equipment into an inactive state. Additionally, certain locations require precautions and maintenance not required force-wide. The unit should consider all factors that affect equipment deterioration and take necessary precautionary measures. The WCS or LCPO is responsible for identifying factors that are inadequate and may require additional preparation and maintenance of the inactive equipment while reporting same to the DH for approval. Factors may include environmental conditions, equipment location or susceptibility to damage. For those actions that are recurring in nature, the WCS should submit an FBR for possible MRC development.

c. IEM Scheduling. SKED provides the capability to perform IEM scheduling.

(1) Status I. The scheduling of maintenance for Status I inactive equipment utilizes conventional PMS scheduling techniques. LU checks will automatically be added to the schedule at the beginning of IEM by SKED. PM checks will be manually added to the schedule by the WCS for the period of IEM following the guidelines of the MIP. At the conclusion of IEM, SU checks and routine PMS will automatically be added to the schedule by SKED. SU checks must be accomplished the week IEM ends. All periodic checks added at the end of IEM, can be moved to the right, not to exceed the allowable date range. Since the MRC date range cannot be applied to the left (into the IEM period), the MRC date range can only be moved to the right and therefore only the plus value of the specific range, i.e., the date range for a

monthly is 21-41 days. The requirement can only be moved (scheduled) ten days to the right and will not go into "alert" until after the 10th day. This allows the Maintenance Person (MP) or WCS scheduling flexibility within the plus side of the date range of the MRC.

(2) Status II. The scheduling of maintenance for Status II inactive equipment utilizes conventional PMS scheduling techniques, however, not all scheduled IEM PMS may need to be accomplished by activity personnel. LU checks will automatically be added to the schedule at the beginning of IEM by SKED and may be marked "N/A" if the LU check did not support the equipment being removed from the activity or "Accomplished by Higher Authority" symbol if completed by the intermediate or depot level maintenance activity. PM checks may be required to be schedule during the IEM period. At the conclusion of IEM, SU checks and routine PMS will automatically be added to the schedule by SKED. SU checks must be accomplished the week IEM ends and may be marked with the "Accomplished by Higher Authority" symbol if they were completed by the intermediate or depot level maintenance activity. Routine PMS added at the end of IEM may also be marked with the "Accomplished by Higher Authority" symbol if they were completed by the intermediate or depot level maintenance activity. All periodic checks added at the end of IEM, can be moved to the right, not to exceed the allowable date range. Since the MRC date range cannot be applied to the left (into the IEM period), the MRC date range can only be moved to the right and therefore only the plus value of the specific range, i.e., the date range for a monthly is 21-41 days. The requirement can only be moved (scheduled) ten days to the right and will not go into "alert" until after the tenth day. This allows the MP or WCS scheduling flexibility within the plus side of the date range of the MRC.

19-3.3.5 Scheduling. PMS is a portion of the command's 3-M program that provides, in one authoritative system, the scheduling information and technical procedures governing planned maintenance. PMS provides a simple method for scheduling and documenting the execution of planned maintenance procedures. Fleet policy and scope are listed in chapter 19 of this volume.

NOTE: WHERE THE GOAL OF 100% ACCOMPLISHMENT CANNOT BE REACHED, THE UNIT'S CoC MUST BE KEPT INFORMED OF THE CIRCUMSTANCES THAT PREVENT ACCOMPLISHMENT OF SCHEDULED MAINTENANCE.

a. Situational maintenance scheduling will be managed utilizing the tools provided by the computer based PMS scheduling software employed by the activity. All event driven situational requirements will be "triggered" when required and performed per reference (a).

b. The MP will be assigned prior to commencing the week and must complete the maintenance as directed. If a different person is required, the WCS will reassign the PMS accordingly.

c. Check Notes are required in SKED under the following circumstances.

(1) When PMS is marked as “lost”.

(2) When PMS is marked as not-applicable.

(3) When PMS is marked with the ‘¢’ symbol, “satisfied by Higher Level Maintenance.”

(4) When PMS requires a tag-out, the tag-out program of record identifier will be entered.

d. Alert Notes will be in the format of paragraph 19-3.4.8 of this chapter.

e. After the FR is approved, the 3MC will conduct quarter archival to maintain one completed quarter, one current quarter, and at least four future quarters. This permits the ability to review past records and forecasting of upcoming maintenance actions.

19-3.3.6 SKED. The use of SKED version 3.2 or subsequent versions for PMS scheduling constitutes full compliance with all administrative provisions of the 3-M Manual.

a. Guidance for use of SKED is provided via the SKED users guide with help menus, and wizards associated with SKED functionality.

b. The Navy PMS DVD or CD-ROM is used to update the command or unit’s SKED PMS data

c. The SKED program uses days to schedule and keep track of calendar periodicities. MRCs are displayed as out of periodicity when they fall outside the established date ranges in the SKED program. These date ranges are as reflected in Table 19-3-2:

Table 19-3-2 - SKED Periodicity – Date Ranges

Periodicity	Date Range
Daily	None
2D	None
3D	None
Weekly	None
2W	9 - 19 days
3W	14 - 28 days
Monthly	21 - 41 days
2M	41 - 83 days
Quarterly	61 - 121 days
4M	83 - 165 days

Table 19-3-2 - SKED Periodicity – Date Ranges	
Periodicity	Date Range
Semi-Annually	121 - 243 days
8M	165 - 331 days
9M	+ or - 90 days from scheduled date
Annual	+ or - 90 days from scheduled date
Multi-month after annual	+ or - 90 days from scheduled date

19-3.3.7 SKED Server Failure. In the event of a SKED server failure, operation of PMS performance and tracking is as follows:

a. Retrieve Maintenance Outlook Report that was created following approval of current FR.

b. The WCS or LCPO will maintain the assignment of PMS with the Maintenance Outlook Report until server is restored.

c. Print assigned MRCs from the PMS viewer program that is located on the FR DVD.

d. Document and retain accomplished maintenance on printed blank 13 Week Reports that are in the documents folder on the FR DVD.

e. When the server is restored, update SKED based on accomplished maintenance documented on 13-Week Reports.

19-3.3.8 Accomplishing PMS. Maintenance personnel use MRCs to accomplish assigned planned maintenance as described in subparagraphs 19-3.3.8.a through 19-3.3.8.h of this chapter.

a. From SKED “My Task” view, review the 13-Week Report.

b. Determine maintenance tasks assigned.

c. Determine when the maintenance task is due.

d. Determine what tools, parts, material, test equipment or supplies are needed. For MRCs that contain inspections and then maintenance actions based upon the inspection findings, the TPMTE needed to perform the follow-on maintenance caused by the inspection findings does not need to be obtained prior to performing the MRC but rather, may be obtained as needed.

e. Perform the maintenance on schedule.

f. Notify the WCS immediately whenever one or more of the following conditions exist:

(1) Anything on an MRC is not fully understood, appears to be incorrect or cannot be accomplished as written.

(2) TPMTE prescribed by the MRC is not available, is not correct or questions about substitutions arise.

(3) Any doubt exists about your capability, training, or experience to properly perform the maintenance requirement as prescribed.

(4) Factors exist which would make performance of the maintenance requirement unwise or dangerous (e.g. disassembly of equipment needed for operations, radiation when prohibited, situations causing safety hazard to exist, etc.).

(5) Equipment deficiencies or casualties are discovered.

(6) Any provisions or requirements on the MRC cannot be accomplished as prescribed. See paragraph 19-3.4.1 of this chapter for clarification.

g. If an MRC can be completed step by step as written, then the maintenance action can be signed off as completed. Report completed planned maintenance actions to the WCS, update the PMS schedule to reflect the completed maintenance, and annotate and sign the 13-Week Report if used. If multiple maintenance personnel are assigned to a single maintenance action, the most senior person assigned must update the PMS schedule, annotate, and sign the 13-Week Report or Check Note if using SKED 3.2 electronic accountability.

h. If inspection criteria or a threshold inspected by the MRC does not meet the intended criteria, then those maintenance actions cannot be signed off as completed until the discrepancies are corrected. The only allowable maintenance actions that can be signed off as complete are those discrepancies where the PMS documents (MRC or MIP) have an actual statement that directs a CSMP, MCAP, or EDL entry to be made if there are discrepancies. The statement to inform the WCS of discrepancies, by itself, is not sufficient to sign the maintenance action as complete when discrepancies exist. Maintenance actions not fully completed will be reported to the WCS. However, if material deficiencies or casualties, which are unrelated to that MR, are discovered, the MR can be checked off, provided the MR was fully completed, but the discrepancy must be reported via the MDS.

19-3.3.9 Non-Accomplished Categories. The WCS or LCPO will add a brief description for each check note or alert for non-accomplished categories using paragraphs 19-3.3.9.a through 19-3.3.9.g of this chapter.

a. System or Equipment Failure. System or equipment is not operational or in a reduced operational status thus preventing maintenance from being accomplished. CSMP JSN required in additional text description.

b. Inadequate Maintenance Procedures. MRC procedure or steps cannot be accomplished to a point where the maintenance can be considered accomplished. FBR number required in additional text description.

c. Ship and Unit Operational Requirements. Operations prevent the maintenance from being accomplished. Requires additional text description, with a JSN for the ships force backlog, and deferral.

d. System or Equipment Operational Requirements. Required operation of system or equipment prevents maintenance from being accomplished. Requires additional text description.

e. Lack of Hazardous Material. Correct Hazardous Material (HAZMAT) not available at the time maintenance was to be performed. CSMP JSN required in additional text description.

f. Missing or Incorrect TPMTE. Correct or calibrated TPMTE was not available at the time maintenance was to be performed. CSMP JSN required in additional text description.

g. Other. Requires additional text description.

19-3.3.10 Accountability. The credibility of the Navy PMS program relies heavily on the individual accomplishing the maintenance. The required dedication and integrity of that individual cannot be overstressed.

a. To maintain accountability, personnel are required to sign for the completion of assigned maintenance in an Accountability Log, if used. The WCS is required to review and sign the Accountability Log weekly to verify the accuracy and completeness of entries. Accountability sheets will be maintained in the WC PMS File for a period of not less than 13 weeks.

b. For commands utilizing electronic accountability by activities employing SKED 3.2, the following will be used.

(1) When an individual updates the disposition of a check, this is the same as signing and dating a check completion on a 13-Week Accountability Sheet. The disposition of a check will become permanent when the weekly closeout is performed.

(2) All PMS maintenance assigned to a maintenance person is presented to them immediately upon SKED 3.2 log-on.

(3) CoC review can be tracked on the Weekly Closeout Signature Sheet. There is no need to print and sign the 13-Week Accountability Form.

19-3.3.11 Force Revision Implementation. In addition to the requirements of reference (a), the following steps ensure the most efficient and thorough implementation of an FR:

a. MRC deletions on MIPs must be marked to indicate the reason for deletion:

(1) Scheduling Aids (SA). Indicate applicable scheduling aid "(e.g., SA-.").

(2) Split MIP. Indicate responsible WC (e.g., "EA01") if the MRC is applicable to the activity, the responsible WC designation must be used versus a scheduling aid.

(3) "Other" includes approved responses to FBRs, ACNs (e.g., "NSWC ltr Ser 4790.005."), Message Date Time Group (e.g., "NUWC R124535Z AUG 05."), and dual periodicity. Indicate guiding notation for deletion: "SA-1" or "Note 1", configuration change number.

b. The FR should be completed on or before the first Monday of the new calendar quarter. When operational schedules do not provide adequate time to implement the revision prior to the start of the quarter, the XO may direct an alternate implementation date. This deferred FR will be reported to the ISIC unless deployed. If two or more FRs were not available while the unit was deployed, only the most recent FR will be installed and implemented.

c. It is advisable to complete the FR process through DH approval before conducting quarterly audits by a chief or more senior.

d. The 3MC will:

(1) Route the Service Brief to the CoC for review.

(2) Enter the FR number from the ALID in the PMS Supersedure and Accountability Log.

(3) Update PMS data into SKED prior to routing the change documentation to WCs.

(4) Route the FR to WCS for implementation. See Figures 19-3-2 and 19-3-3 of this chapter for an example of a routing memorandum and an FR implementation checklist respectively.

(5) Delete SKED FBRs after reflection within the FR.

e. The WCS, upon receipt of the change document from the 3MC, will:

(1) Make the appropriate entry in the WC Record of Change Log

(2) Make appropriate LOEP, MIP, MRC, etc. changes to the WC PMS File.

(3) Apply changes to the WC PMS schedule utilizing SKED Revision Editor.

(4) Route revision changes to division LCPO for review and concurrence.

Figure 19-3-2 - Force Revision Routing Memorandum

MEMORANDUM

From: 3-M Coordinator

To: _____ Work Center Supervisor

Subj: FORCE REVISION PACKAGE X-XX

Encl: (1) Force Revision Implementation Checklist

(2) List of Effective Pages (LOEP)

1. Force Revision Serial: X-XX has arrived from NSLC

2. The SKED Force Revision (FR) update is complete. Begin your WC FR implementation using enclosures (1) and (2); complete through your Department Head no later than (Day Month Year).

3. Corrections, including those to LOEP, MIP and MRC, should be made immediately. Make certain ACNs and FBR responses are reflected in the FR. If not, maintain the copies and changes to your MIP(s) and MRC(s) until reflected in a subsequent FR.

4. MRCs with procedural line-outs previously approved by the LCPO must again be reviewed by the LCPO to confirm they continue to meet the requirements of the JFMM volume VI, chapter 19. Specifically, in the procedure block, Work Center Supervisors may line-out the non-applicable line items (alternate procedures) that do not pertain to current equipment or configuration when the step includes the words “if applicable” or a note identifies steps to be omitted. These items must be reviewed and approved by the division LCPO. As these changes are WC and maintenance item specific, submission of an FBR is not required.

R/

3MC

Figure 19-3-3 - Force Revision Implementation Checklist

MEMORANDUM

From _____ Work Center Supervisor

To: 3-M Coordinator

Subj: FORCE REVISION IMPLEMENTATION CHECKLIST COMPLETION

1. The following actions have been accomplished in SKED to implement Force Revision X-XX.

Task Description	Initial
Verified all equipment is listed under each MIP.	
Verified new or changed MRCs (green or yellow) are added to the correct Maintenance Item (equipment).	
Verified all applicable MRCs for each piece of equipment are active.	
Verified all MRC's have associated "Related Maintenance" attached.	
Verified that Safety of Ship is toggled to "YES" if applicable.	
Verified that all MIP lineout's have a technical reason documented for deletion. (Select the "Pencil" Icon on top row)	
Verify Maintenance Item Serials & Locations are correct.	
Upon completion of implementation Marked Complete for digital approval by: LCPO, Division Officer and Department Head.	LCPO
	DIVO
	DH

2. After DH approval:

   LCPO run SKED report PMS Documents and Customized MRCs – Line-outs. Verify each procedural lineout meets JFMM volume VI chapter 19, paragraph 19.6.11 requirements.

   WCS create an excel spread sheet from the Maintenance Outlook Report as a minimum electronic backup forecasting as many quarters in advance as available and store it on your hard drive (not a LAN drive) in the event of the LAN crashing.

   WCS select "Work Center" from the upper menu and "Update Unassigned Slots." Initially, any MRC without ownership will be assigned to the WCS. Reassignment by the WCS or LCPO will follow.

3. Printing requirements for MRCs are determined by individual command policy. Printed MRCs must come from "PMS Documents" (not PMS Viewer).
4. The only required documents in the WC PMS file are:
   a. Classified MRCs.
   b. MRCs required by the command.
   c. MRCs with pen & ink changes authorized by ACNs or answered FBRs.
5. Approval Signatures:

Position	Signature
LCPO	
DIVO	
DH	
3MC	

f. The division LCPO will:
   (1) Verify that all PMS changes have been properly applied to the WC schedule utilizing SKED Revision Editor.
   (2) Review line outs on LOEPs, MIPs and MRCs. Initial all such line-outs to indicate concurrence.
   (3) Submit PMS schedule to DIVO for review and concurrence.

g. The DIVO will:
   (1) Verify that all PMS changes have been properly applied to the WC schedule utilizing SKED Revision Editor.
   (2) Review line outs on LOEPs, MIPs and MRCs. Initial all such line-outs to indicate concurrence.
   (3) Submit PMS schedule to DH for review and approval.

h. The DH will:
   (1) Verify that all PMS changes have been properly applied to the WC schedule utilizing SKED Revision Editor.
   (2) Review and approve lined out MIPs on the LOEP, and MRCs on the MIPs.
   (3) Review and approve WC PMS Schedules.

i. The WCS makes final entries in the WC Record of Change Log, completes the PMS Change Documentation Routing Memorandum, and returns it to the 3MC.

j. The 3MC updates the CSAL and notifies the XO that the FR has been installed after receiving all FR PMS Change Documentation Routing Memorandums from the WCs.

19-3.3.12 Planned Maintenance System Feedback Reports. PMS FBRs are used to identify problems with PMS documentation or to request the addition or deletion of PMS coverage. Issues with the periodicity, rates, man-hours, TPMTE and procedure may all be reported via an FBR. An FBR is also used to request copies of classified MRCs, request the addition or deletion of an MRC (maintenance requirement) to or from a MIP, splitting a MIP between WCs, shifting of maintenance responsibility or to request PMS coverage for newly installed systems or equipment. Paragraphs 19-3.3.12.a. through 19-3.3.12.j of this chapter provide amplifying information dealing with the issues that may prompt the submission of an FBR.

a. Periodicity. An FBR can be used to request the increase or decrease in the frequency of a maintenance action, i.e., an MRC. However, the originator needs to keep in mind that the ship or unit has the prerogative to increase the frequency because of harsh weather, unusual operating conditions or corrective maintenance and associated testing requirements. A 726 Class submarine submitted an FBR requesting the frequency of cleaning a specific electronics cabinet filter be increased from quarterly to monthly. Research revealed this MRC was applicable to all 726 Class units and no other ship had submitted a similar request. In fact, two other units had requested the frequency be decreased to semi-annual. It was determined that the submitting unit was in an extended upkeep period and increased foot traffic by shipyard personnel near the electronic cabinet was the most likely cause of the filter becoming clogged. The ship was authorized to increase the frequency to support the extended upkeep period and the periodicity of the MRC was not changed.

b. Rates. The Rates block on the MRC represents the developer's recommendation of the skill level (rate and rank) best suited to accomplish the maintenance action. The key word is recommendation. Qualified personnel other than the rate and ranking specified may be assigned. When an NEC is assigned or Damage Control Petty Officer (DCPO) or Safety Petty Officer (SPO), substitution of other personnel is not allowed other than those exceptions as noted in reference (a). An FBR requesting the rate on an MRC be changed from an ET2 to an FT2 will probably not pass TYCOM screening, yet an FBR requesting the addition or deletion of personnel will generally pass to the cognizant technical activity for review.

c. Man-hours. The MRC reflects the average time per equipment, per person. It does not reflect or account for gathering and putting away tools, tag-outs or time removing and replacing interferences. From a maintainer's perspective, this is not an accurate representation of the time required to accomplish the maintenance action. The Future of PMS initiative will attempt to do a better job of accounting for this additional time but until then, FBRs should be submitted only when the allotted time per equipment

is significantly out of synch with the actual time required. For example, an MRC calls out 0.5 man-hours per equipment, but it takes 1.0 man-hours.

d. Tools, Parts, Material and Test Equipment. TPMTE FBRs should be submitted when the procedure calls for an item not listed in the TPMTE block or when the TPMTE block lists an item not called out in the procedure. Updating the MRC to reflect common hand tools, administrative or office supplies and basic housekeeping items is addressed in paragraph 19-3.3.12.k.(1) of this chapter.

e. Procedure. Procedures are written at a level of detail based on the assumption maintenance personnel are trained, qualified, and supervised by experienced leadership to execute the maintenance consistently and expertly. MRCs exist to provide standardized proven procedures, specify consistent acceptance criteria and to communicate warnings and cautions relative to the specific maintenance action. They are not intended to specify every possible action of the maintainer. There may be instances where an obvious typographical error exists on the MRC (example: Turn switch to ON; however, switch may already be ON and the intent of the step is to turn unit off, the card should read Turn switch to OFF). This type of error should not prevent the scheduling or performance of maintenance. However, in this situation, the accomplishment of the MRC is not possible until the WCS reviews the error and concurs that it is safe to proceed. A temporary notation including the reason for the correction must be made on the MRC, initialed by the WCS and an FBR submitted. Extreme caution will be taken when reviewing MRCs for this type of error. Errors must be obvious typographical errors and a PMS FBR must be submitted immediately upon discovered. Do not permanently alter the MRC until authorized by the applicable SYSCOM, ISEA or NSLC Detachment. If a step is missing that is necessary to complete the task, and that step is not obvious to the maintenance person, submit an FBR to have it added. An FBR submitted to request procedural changes should include the originators contact information and supporting rationale or justification. If, however, a step is missing that is clearly obvious (a ladder was used to install a fixture, but steps were not provided to put the ladder back in stowage) an FBR only serves to overload a process that should be focused on more technical issues.

f. Duplicate MRCs. Unclassified MIPs and MRCs are now available from the DVD. Copies of classified MRCs still require an FBR request due to handling requirements.

g. Addition or Deletion of an MRC. During the life cycle of a system, equipment, or component it may become necessary to add a maintenance action to prevent an age related functional failure or to delete a maintenance action due to inherent reliability not foreseen during maintenance development. An FBR submitted to request the addition or deletion of an MRC should include the originator’s contact information and supporting rationale or justification.

h. Newly Installed or Removed Equipment. While an FBR request for PMS coverage will provide initial maintenance coverage or deletion of MIP(s) because of equipment removal, submission of a CK or Not In Model for AWN, is still required to initiate the rest of the logistic support change process. This point cannot be overstressed; the submission of the FBR does not relieve the ship or unit from initiating a CK. The CK

initiates supply support, CDMD-OA/MBPS changes, selected record drawing updates and class maintenance plan updates.

i. Splitting a MIP. There are instances in which a MIP includes MRCs for more than one WC to perform. When this occurs, a decision is required by the command as to whether the MIP will be split or will be scheduled singly by one WC. Only the XO can authorize the splitting of a MIP if an MRC requires another WC to perform the entire maintenance action. If the decision is made not to split the MIP, then the MRs will be accomplished through the coordination of WCSs.

(1) If the MIP is split, the following procedures apply:

(a) Submit to the XO a non-technical PMS FBR requesting approval to split the maintenance responsibility.

(b) Upon receipt of the XO's concurrence, the 3MC will make an annotation in the remarks block of the FBR stating, "XO concurs with splitting MIP maintenance responsibility".

(2) Upon receipt of the FBR approval:

(a) Utilizing the SKED Revision Editor, delete the MRC from the MIP and show the reason for deletion as the designation of the WC assuming responsibility (e.g., EE01).

(b) If the WC assuming responsibility does not reflect the MIP and maintenance items, utilize the SKED Revision Editor to add them. Schedule only the MRC(s) that pertain to the WC. Reflect remaining as deleted with the reason for deletion the designation of the parent or lead WC (e.g., EA01).

(3) If the situation occurs where a WC removes a split MIP, the following procedures apply:

(a) Submit an XO approved, non-technical PMS FBR reporting the decision to remove the split maintenance responsibility. Upon receipt of the XO's concurrence, the 3MC will make an annotation in the remarks block of the FBR "XO concurs with removing split MIP maintenance responsibility".

(b) Upon receipt of FBR approval, utilize the SKED Revision Editor, remove the MIP, MRC(s) and maintenance item(s) from the WC no longer involved. Ensure that the lead WC assumes full responsibility for the MIP and MRC(s) and annotates their schedules accordingly.

j. Shift of Maintenance Responsibility. Individual ships or units sometimes consider it necessary to shift maintenance responsibility from one WC to another, to combine two or more existing WCs or to split an existing WC. These requests for changes of PMS maintenance responsibility require XO concurrence and may require final approval by the applicable TYCOM. Due to the considerable administrative burden,

requests for this type of change should not be submitted to accommodate a temporary situation such as short-term assignment of two WCs to one supervisor.

(1) The following factors should be carefully considered before submitting such requests:

(a) Composition of WCs by size and ratings.

(b) Scope of maintenance responsibilities.

(c) WC workload.

(d) Ease of administration of a WC as a cohesive maintenance group.

(e) Importance of WC grouping to equipment maintenance responsibilities, PMS scheduling, MDS reporting and CSMP listings.

(2) When changes in maintenance responsibility are considered necessary, the following procedures apply:

(a) Submit a Non-technical PMS FBR. Indicate from which WC(s) equipment is to be deleted and to which it is to be transferred. Upon receipt of the XO's concurrence, the 3MC will make an annotation in the remarks block of the FBR "XO concurs with the shift of maintenance responsibility

(b) WC or equipment changes will also be reported in the OMMS or SNAP system via a CK through the CSMP up-line reporting process.

(3) Upon receipt of the FBR approval, perform the following actions:

(a) The PMS Master File is updated to reflect deletion of the MIP from one WC and addition to the WC receiving the responsibility. The originating FBR serial number is annotated on the affected line item on the LOEP for both WCs. The PMS Master File must contain a record of deleted equipment until the change is reflected in a future FR.

(b) Utilizing the SKED Revision Editor, load the affected MIP(s) and MRC(s) to the WC receiving maintenance responsibility. Delete the MIP(s) and MRC(s) from WC shifting responsibility.

(c) Utilizing SKED, perform a revision to move the equipment from the original WC's current schedule to the WC receiving the maintenance responsibility. Data is exported from one and imported to the other maintaining equipment history.

k. MRC Changes Not Requiring Feedback Reports. The only MRC modifications shipboard or unit personnel may make without submitting a PMS feedback report are as listed in paragraphs 19-3.3.12.k.(1) and (2) of this chapter.

(1) TPMTE Block

(a) Common hand tools, administrative or office supplies and basic housekeeping items may be substituted or added by the WCS. The

WCS may add notes to the MRC to reflect these substitutions. In the case where specific common tools are called out by description, substitutions are not authorized. For example, substitutions such as using synthetic fiber brushes in place of animal hairbrushes or rags and paper towels in place of lint free cloths are not allowed.

(b) Approved parts, materials and miscellaneous item substituted from the supply system, technical manual, or Military Specification (MIL-SPEC), etc., which meet or exceed the requirements may be used. Ensure that substitutions satisfy both the basic maintenance and safety requirements of the MRC. If there is any doubt, a PMS FBR should be submitted specifying substitution desired and reason.

(c) Test equipment or certified tools, which meet or exceed the Sub-Category (SCAT) code requirement, may be used.

(d) When an MRC pertains to multiple configurations of equipment and the TPMTE block contains tools, parts, test equipment and materials for each unique configuration, the TPMTE block may be tailored for the unit's specific configuration by lining out the items that do not pertain to equipment held.

(e) Exception to TPMTE block change: If an item listed in the TPMTE block is not called for in the procedures block, submit an FBR explaining the circumstances. Conversely, if a tool, piece of test equipment, part or material is called for in the procedure block and is not listed in the TPMTE block an FBR should be submitted.

(2) In the procedure block, WCSs may line-out the non-applicable line items (alternate procedures) that do not pertain to current equipment or configuration when the step includes the words "if applicable" or a note identifies steps to be omitted. These items must be reviewed and approved by the division LCPO. As these changes are WC and maintenance item specific, submission of an FBR is not required. If a step or steps in the procedure block have been lined out and tools, parts, materials, and test equipment in the TPMTE block pertain only to that step or steps, then they will be lined out as well with a reference to the step or steps lined out and approved by the division LCPO. Warnings, Cautions and Notes associated with the lined-out step or steps will also be lined out.

l. Types of Feedback Reports. There are two types of FBRs, Technical and Non-Technical.

(1) Technical. These FBRs are used to report technical discrepancies inhibiting PMS performance. Technical feedbacks normally adjudicated by an ISEA responsible for the system or equipment covered by the PMS documentation require all the supporting information the originator can provide. The originator should identify the issue, providing as much supporting technical information (Allowance Parts List, Reparable Identity Code, drawing or Hierarchical Structure Code) as available and a proposed response or solution

if known. Most importantly, provide point of contact information (name and phone number) so that the ISEA can contact the originator should they have questions. Bottom line, the FBR must be accurate and complete to "stand alone", that is, the FBR will be understood without additional explanation. The better the FBR describes the problem, the more likely the originator will receive a timely response. There are two sub-categories of technical FBRs:

(a) Routine. An FBR will be considered routine when it relates to the technical requirements of PMS. It is used to report technical discrepancies or request clarification of procedures.

(b) Urgent. An FBR will be considered urgent when it relates to the technical requirements of PMS and involves safety of personnel, safety of ship or the potential for equipment damage. Urgent FBRs will be forwarded by naval message containing a PMS Feedback Serial Number, to both NSLC Detachments Norfolk and San Diego, with info to the cognizant SYSCOM, TYCOM and the Naval Safety Center. The message must describe the unsafe procedure(s) or condition(s), must identify the MIP and MRC involved and reflect the serial number of the FBR generated in SKED or Planned Maintenance System – Management Information System. Once the message has been sent, include the date time group of the message in the FBR and submit.

(2) Non-technical. These FBRs are intended to support PMS requests that do not require technical review, including WC changes (shift of maintenance responsibility). Non-technical FBRs are submitted to request classified or other PMS documentation which cannot be obtained locally or to request clarification of issues not of a technical nature.

m. Feedback Report Submission. All SKED users will submit FBRs via SKED using the Feedback Report Wizard. Non-SKED users may submit FBRs via the Planned Maintenance System – Management Information System web site at https://algol.pmsmis.navy.mil/PMSMIS by selecting the Feedback Tab and Feedback Report Wizard from the drop-down tab. Non-SKED users accessing this web site for the first time will need to request an account. Click on File Manager and select New User Account Request. This displays options to select a form and readme file, which can be downloaded, filled out and sent via e-mail as directed in the readme file. An e-mail will be sent confirming your account and providing access to the main screen.

n. Feedback Report Screening.

(1) Initial screening is accomplished by the originator or WCS who is responsible for ensuring all data is accurate and complete.

(2) The division LCPO or DIVO accomplishes the second level screening and verifies the content and validity of the FBR within three days of origination.

(3) The DH, next to screen the FBR, is responsible for verifying the content and validity of the FBR and digitally signing FBRs within five days of origination.

(4) The 3MC is responsible for screening, serializing, and forwarding FBRs within seven days of origination. The 3MC will also:

(a) Maintain accountability for all PMS FBRs submitted and actions taken until updated PMS documentation is received.

(b) Ensure that the originator and all applicable WCs are kept apprised of action taken and ensure the originating and other applicable WCSs implement the changes or corrections when received.

o. Feedback Report Screening (External to Hull or Activity). FBRs are next processed by the TYCOM. The TYCOM will verify the content and validity of the FBR and either return the document to the originator or pass it on for further processing and resolution.

p. Feedback Processing Activities.

(1) The central control points for processing FBRs are the Planned Maintenance System Coordinating Activities (PMSCA). Depending on the type of FBR and level of technical authority necessary to answer the FBR, the PMSCAs will either respond to the originator with a resolution or forward the FBR to the appropriate technical authority for action.

(2) ISEAs are those activities designated by NAVSEA as the technical experts for specific systems or equipment. Naval Surface Warfare Center, Philadelphia Detachment (NAVSURFWARCEN-PD) is the ISEA for the majority of non-nuclear hull, mechanical and electrical equipment installed on most ships. ISEAs under the direction of the NAVSEA Technical Warrant Holder adjudicate the FBR request and forward the response to the PMSCAs. The PMSCAs provide the final response to the originator and update the PMS database to reflect ISEA changes. PMS changes are issued with the next available FR.

q. Feedback Processing. FBRs are processed per NAVSEA policy:

(1) Urgent FBRs.

(a) The PMSCA will provide a message response to all urgent FBRs within one working day of receipt. If the FBR is forwarded to a Design Activity or ISEA for resolution, then the Design Activity or ISEA will provide a message response informing the originator of specific actions or required changes as a result of the adjudication of the FBR within one working day of receipt. This message response must be addressed to the originator and distributed to all TYCOMs of units holding the affected documentation. TYCOMs will forward this message to all commands that could be affected by the PMS change.

(b) The PMSCA will distribute revised PMS documentation to all affected users within 30 calendar days of receipt of the FBR, via special issue or ACN.

(2) Routine FBRs.

(a) The PMSCA will perform technical review, research, and provide a response to routine FBRs where resolution does not require technical authority action.

(b) FBRs that the PMSCA cannot resolve will be sent to the cognizant Design Activity or ISEA. The cognizant Design Activity or ISEA will provide the response to the appropriate PMSCA describing the action taken. The PMSCAs will provide the response to the originator by electronic means.

(c) Distribution of the revised MRC to the originator and other affected users will be accomplished via ACN or the next available FR.

(d) NAVSEA's existing policy calls for technical review activities and ISEAs to provide FBR responses in less than 21 working days from time of receipt. In addition, NAVSEA has established a goal of providing answers to FBRs in one day. While some FBRs will require extensive research and days, weeks or in some cases months to resolve, the vast majority of FBRs can and should be answered much sooner. One day may be overly optimistic, but the intent is to put the emphasis back on the timely resolution of FBRs.

(e) If no revision to PMS documentation is required, pertinent comments will be provided in the response to the PMSCA. When not concurring with the feedback report, the rationale for the non-concurrence must be provided to the PMSCA.

NOTE: IT IS POSSIBLE AN FBR RESPONSE MAY NOT MAKE A SPECIFIC FR BASED ON THE DATE THE RESPONSE WAS RECEIVED BY NAVSEALOGCEN. PROCESSING TIME AND HANDLING MAY CAUSE THE REVISED DOCUMENTATION TO MISS AN FR CUTOFF DATE. HOWEVER, SINCE ALL FRS ARE NOW RECEIVED QUARTERLY, IF A REVISION MISSES THE CURRENT FR CUTOFF WINDOW, THE REVISED DOCUMENTATION WILL BE AVAILABLE WITHIN THE NEXT THREE MONTHS.

r. Feedback Response Implementation. Units will implement responses to FBRs based on the category and content as determined by the unit's 3MC.

(1) Urgent FBR – within 24 hours of receipt of FBR response.

(2) Urgent FBR with an ACN – within 24 hours of receipt, the ship or unit will implement an administrative change to incorporate the new PMS documentation. These revised documents will be utilized to conduct maintenance until the revised PMS document is incorporated into the next FR.

(3) Routine FBR:

(a) Technical. The response deals with content such as a revision to technical specifications, tolerances, test equipment, materials, acceptance criteria or the sequence of procedural steps. These changes need to be implemented within two weeks of receipt of the FBR

response or prior to the next scheduled accomplishment date should that date fall within the two-week window.

(b) Administrative. The response deals with issues that do not affect the technical content or procedural steps. Administrative changes might be added steps to provide a better degree of clarity, formatting revisions to tables or figures that do not change technical content, or updating of Notes, Warnings or Cautions that do not impact the performance of the MRC. These changes do not need to be implemented prior to receipt of the next FR. If the next FR does not reflect the revised documentation, implementation is required before the next scheduled accomplishment date of the MRC.

(4) Routine FBR with an ACN:

(a) Technical. These changes need to be implemented via an administrative change within two weeks of receipt of the FBR response or prior to the next scheduled accomplishment date should that date fall within the two-week window. These revised documents will be utilized to conduct maintenance until the revised PMS document is incorporated into the next FR.

(b) Administrative. These changes do not need to be implemented prior to receipt of the next FR. If the next FR does not reflect the revised documentation, implementation is required via an administrative change before the next scheduled accomplishment date of the MRC.

19-3.3.13 Assessment Procedures MRCs. Assessment Procedure (AP) MRCs need not be scheduled within SKED, but they will be maintained "active" through the FR process. AP MRCs need only be printed on an "as needed" basis for use by assessment personnel or Ship's Force. The record of completed AP MRCs by off-ship personnel is recorded on the work candidate and Ship's Force participation is recorded in their completion remarks of that work candidate. There is no need for recording Ship's Force participation in an assessment event on their PMS schedule within SKED. FBRs submitted requesting deletion of a MIP that only contains AP MRCs will be disapproved and returned to the originator.

19-3.4 MAINTENANCE AND MATERIAL MANAGEMENT ASHORE EVALUATION CRITERIA.

19-3.4.1 Self-Assessments. The ability of an activity to perform critical self-assessments is instrumental to the success of the command's PMS program. The PMS Self-Assessment Program needs to address all aspects of 3-M.

a. TYCOM Policy. Each command and subordinate command(s) must conduct a rigorous quarterly 3-M Self-Assessment. The 3-M checklists contained in appendix A will be utilized and retained for 12 months. In addition, the Maintenance Accomplishment Rate (MAR) and Spot Check Accomplishment Rating (SCAR) percentages will be reported to Commander, Naval information Forces (CNIF) no later than the 25th day of January, April, July, and October. The CO will receive a

formal briefing of the findings of the Self-Assessment and intended corrective actions.

b. Self-Assessment Elements. The major program elements of a Self-Assessment include an evaluation of the PMS Performance Rate (PPR) and CSMP Validity, monitoring MRC performance (monitored MRC), and conducting PMS Spot-Checks, WC audits, and deficiency abatement. 3MCs will retain monitored PMS results, Spot Checks and WC audits from the last completed quarter in either hard copy or digital format for review supporting the self-assessment.

(1) PMS Performance Rate. The PPR is made up of the MAR multiplied by the SCAR divided by 100.

$$PPR = MAR \times SCAR \div 100$$

(2) CSMP Validity. The CSMP Validity factor is evaluated utilizing the check sheets provided via section IV (MDS) of the TYCOM's 3-M Inspection Criteria, appendix A.

(3) Monitored MRC. Supervisory personnel must periodically monitor the performance of PMS to provide feedback and training to maintenance personnel and to enforce command maintenance standards. Personnel charged with monitoring must be system matter experts for the system, equipment, or component for which the MRC applies. LCPOs, LPOs or personnel with similar system knowledge are appropriate. Monitored checks can be used like on the job training to teach the "right way" to conduct maintenance. These monitored MRCs will be documented as a monitored evolution and findings will be provided to the WC's CoC for inclusion into training and deficiency abatement. The value of monitor maintenance cannot be overstated.

(4) PMS Spot Check. PMS Spot Checks are utilized to validate that previously scheduled and accomplished MRCs were performed and the degree to which they were performed. The checklist contained in Appendix A section II of this chapter, is the tool supervisory personnel utilize to determine the accomplishment status of a completed MRC. Deficiencies noted and the final grade will be provided to the WC's CoC for abatement. The WCS will record the Spot Check grade into SKED to generate the SCAR for the quarterly PMS Performance Report. Spot Checks will involve all elements of the CoC to include the CO, Command Master Chief, XO, 3MC, department CPOs, DHs, DIVOs, divisional CPOs, and first class petty officers. By following the checklist, the inspector can determine if the sailor is competent, the maintenance was accomplished, required TPMTE was available and used, and safety precautions were followed. The focus should be less on administration and more on the condition of the gear.

(a) Avoid Spot-Checks of MRCs with insufficient complexity. Performing a Spot-Check on a 3 or 5 step MRC does not provide the CoC an accurate picture of the health of the command's maintenance program. Selected MRCs should be of sufficient content to provide the auditor with evidence of satisfactory performance (e.g., tag-outs,

QA packages, parts required, off-hull reporting, test equipment, safety equipment, etc.).

(b) Command 3MCs can request modification of the Spot Check matrix if it is believed that due to the size of the command and location of their WCs, they are unable to accomplish that requirement. Requests must be submitted in writing to CNIF 3-M staff (via Echelon IV 3MC if applicable) and include their proposed Spot Check matrix for review. If approved by CNIF, the command 3MC will retain a copy of the request approval.

(c) Spot-Checks evaluated as "below standards" will require immediate training and re-performance as determined by the XO. Any re-accomplishment of the MRC must be monitored by the LCPO to ensure noted deficiencies are not repeated.

(d) Table 19-3-3 represents the minimum number of Spot Checks and Monitored Checks for CNIF activities.

(e) Utilize the Spot Check Randomizer located in the Weekly Virtual Snap-Shot Report. Use is mandated unless Sailor or equipment is unavailable in which 3MC will select another Spot Check to be conducted.

(f) Spot Check Randomizer. The Spot Check Randomizer is the last section of the Virtual Snap-Shot Report. It produces a list of random spot checks based upon criteria such as periodicity, troubled systems, and when the check was accomplished. The program will reduce the number of times the same maintenance check is selected. The list of spot checks is for the next week. The program will choose a single check for each work center but will not assign a spot checker. 3MC will still create a list of spot checkers and assign the work center they are to inspect. The spot checker will then conduct a spot check on the maintenance action selected by the program. The 3MC will ensure that spot checkers are inspecting checks selected by the program.

(5) Work Center Audits. Each WC must receive an audit once per quarter by a supervisory individual, (CPO) or above. Deficiencies noted from this audit will be reported to the WC's CoC for abatement. The 3MC will report recurring deficiencies to the XO for further investigation and corrective action.

(6) Deficiency Abatement. The status of discovered deficiencies will be kept current within the monitoring program. Recurring deficiencies must be reported to the XO for further investigation and corrective action. Deficiencies that have been reported as corrected will be subject to follow up monitoring to ensure corrective action was effective and results of the follow up monitoring will be reported to the XO. The unit's 3-M Abatement

Program will include the previous quarter's audits, Spot-Checks, monitored evolutions and CSMP validity audits noting trends and corrective actions.

(7) The Virtual Snap-Shot Report is an Excel workbook that creates a 20-page graphical representation for the health of the MAR and Spot Check program pillars of performance. The report uses a drill down method to identify strengths and weaknesses with the two pillars.

(a) This report is to be conducted at a minimum monthly by all commands, and should be utilized weekly.

(b) Required documents are the PMS analysis Spreadsheet and Spot Check – All reports.

(8) The Virtual Snap-shot report Cover Sheet breakdown

(a) Cover sheet, automatically fills in the ship's name and date. The user will enter the below information for the command's 3-M program.

(b) FR#. Enter the current Force Revision the SKED implemented at the commands. (Ex. 4-21, 1-22, 2-22)

(c) 3-M Cert Date. Enter the date for your last 3-M Certification event. If the certification even is not known, contact your TYCOM 3-M team to provide.

(d) CSMP Reconciliation. Enter the date of the last CSMP reconciliation was conducted, ex: during a PB4M.

(e) Attachments. There are two mandatory attachments that must be submitted with the Virtual Snap-Shot Report. The IEM Details Report,

(f) Acknowledgement blocks: The use of these blocks are voluntary. It contains a place for the CO/XO/OIC/TD to initial stating they have received the document.

(9) PMS Performance Rate (PPR). The PPR page provides an overview of both the command's MAR and Spot Check Average to create a PPR for the command and each of the departments within.

(10) Maintenance Accomplishment Summary. The Maintenance Accomplishment Summary provides a three-page executive level evaluation of the MAR for the command. The major sections of the report as follows:

(a) Maintenance Accomplishment by Week Graph. A graphical representation of the MAR for the last 13 weeks. The graph provides a trend analysis for the command's maintenance accomplishment. The Fleet Requirement of 80% is identified by a red dotted line on the graph.

(b) Each department at the command has the maintenance accomplishment number identified. This is listed as #COMPL, #ALERTS, #LOST, #NA, TOTAL # CHKS, PAR %, SAR %, WEIGHT %, MAR%.

(c) Work Centers for the Last Quarter. This section is identical to the department section except data is for a specific Work Center over the last 13 weeks.

(d) Alerts Report. A two-page section that graphically displays the command's alerts over the last 13 weeks. It is important to understand that a check will not start alerting until the check is beyond its maximum scheduling range. For example, an A-1 check will not alert as soon as the check is due. The check can still be moved out six months. After 18 months the check will start alerting. This section contains the Alerts by Week, Number of Alerts per Work Center, Top 50 longest alerts by # of weeks alerted, W/C, MIP, Periodicity, Equipment name.

(e) Lost Checks report. A two-page section that graphically displays the command's lost checks over the last 13 weeks. This is listed by Lost Checks per Week, Lost Checks per Work Center, Top 50 Equipment with the most lost checks by W/C, # of times lost, and Equipment.

(f) NA Checks Report. A two-page section that graphically displays the command's Not Applicable checks over the last 13 weeks. Although NA checks are not counted against the command's MAR, the command should be aware of the checks marked NA as it could indicate maintenance that should have been accomplished and was not.

(g) Top 50 Equipment items with the most NA checks. This is a list of the top 50 NA checks based upon the equipment and work center.

(11) Spot Check Analysis Report. A summary of the Spot Check Program health via actionable metrics.

(a) Number of Spot Checks per Week. A graph that displays the number of Spot Checks conducted at the command over the last 13 weeks

(b) Department Spot Check Program Health. A list of each department and their respective Spot Check Metrics by # of Spot Checks, # Fail, Pass %, Weight %, and AVG Score %.

(c) Work Center Spot Check Pogrom Health. A list of each Work Center and their Respective Spot Check metrics by Work Center, #Spot Checks, #Fail, Pass %, Weight %, and AVG Score %.

(d) Top 10 Spot Checks Conducted. A list of the maintenance checks that were spot checked the most in the last 13 weeks. The "# of SCs" block indicates the number of times a spot check was completed. Line items highlighted in green indicate a troubled system check as specified by TYCOM. These are checks mostly identified as leading to 3MI discrepancies.

(e) Toughest Spot Checkers. This list contains the names of the 10 personnel that have failed the most spot checks. The list will only contain the names of Spot Checkers that have conducted more than the

average number of spot checks for the command and have failed at least one spot check.

(f) The 100% Club. A list of Spot Checkers that have conducted the over the average number of spot checks and have found zero discrepancies. While grading one or more spot checks at 100% may be legitimate, this list may indicate personnel that need to have a more critical eye during spot checks.

(g) Partial Spot Checkers. A list of personnel that have conducted one or more spot checks with a partial grade. CNIF does not authorize partial grading during spot checks. Each attribute on the Spot Check form is an all or nothing score. For Example, an attribute worth 10 points will either be 10, 0, or NA as applicable. A grade of 1 through 9 will not be used for any reason for this attribute.

(12) Spot Check Completion Report. A list of the command spot checkers and the number of spot checks the personnel conducted for each week for the last 13 weeks. Because this list is derived directly from SKED data, the personnel paygrade is unavailable. Due to this limitation, the list is sorted based upon the number of historical checks conducted in the last 13 weeks.

(13) Spot Check Randomizer. A list of randomly selected checks to be spot checked for each work center that has conducted maintenance in the last 13 weeks. Checks are randomly selected based upon periodicity, troubled system status, when the check was accomplished, and how many times the spot check was previously conducted. All units are directed to utilize the Spot Check Randomizer to the maximum extent possible. If a maintenance person or equipment is unavailable and the randomly selected check cannot be performed, the spot checker will select another check within that work center with a moderate level of difficulty.

c. Zone Inspection. The XO will establish a zone inspection program

(1) Zone inspections will be all areas utilized by the command, and if there are any tenant commands, they must conduct zone inspections on their cognizant spaces. Examples include but not limited to, working areas, electronic spaces, server communication rooms, UPS rooms, or generator areas.

(2) The XO will designate command personnel to perform the zone inspections on every space outlined above at minimum quarterly periodicity.

(3) All discrepancies annotated during the zone inspection will be recorded as part of the CSMP by the owning work center in AWN, utilizing the Zone Inspection Deficiency List (ZIDL) status code for the AWN 2-Kilo.

d. 3MC will ensure a quarterly Virtual Snap-shot report is forwarded to the ISIC with POAM for discrepancies identified.

(1) Virtual Snap Shot template reports can be found on the CNIF 3-M Forcewide Teams Page, or ISIC.

Table 19-3-3 - CNIF Spot Checks		
Management Level	Periodicity of Number of Spot Checks	Periodicity of Monitored Maintenance
CO or OIC	One per Month	N/A
XO or AOIC or Technical Director	Two Per Month	Monthly
DH	Two Per Month	Monthly
DIVO	Two Per Month	Monthly
3MC	One a week	Weekly
LCPO	Two Per Month	Monthly
LPO	N/A	Two Per Month
WCS	N/A	Two Per Month

19-3.4.2 Maintenance Data System . This section is to provide greater clarity for the Maintenance Data System and does not supersede but provides more detail in MDS processes ashore.

a. All commands under NAVIFOR administrative control will utilize AWN as their MDS program. All sites are required to use MDS for documenting man hour expenditures pertaining to network administration, cyber hygiene, locally generated maintenance, corrective maintenance, and all monetary expenditures whether contractual, tools, parts or otherwise. The use of the MDS is baselined and dictated from volume VI chapters 5 and 19-7 and volume II part II chapter 4 of this manual.

b. Weekly bulk jobs are authorized to account for man hour expenditures mentioned above utilizing the tasks completed against the configuration or if no configuration the “Support Services” category. Care should be taken to ensure appropriate work center association and info provided meets grading criteria per appendix a. These type of jobs must have enough detail, the purpose is to right size, to ensure the right amount of Sailors, Civilians, and Contractors are on site. This type of job is not for recording watchstanding hours, only the equipment driven and equipment supporting tasks that may have occurred during that time frame.

c. In order to ensure proper readiness reporting for the E-Pillar all sites are required to have their configuration whether Program of Record or not to be put into CDMD-OA/MBPS that refreshes AWN for equipment validations. This can be done either through the shore side installation process FRCB through work files for Program Executive Office (PEO) or Program Manager, Warfare (PMW) installation entities, or

using Not In Models (NIM) inside of AWN for 3rd party and other than command funded installations done by the command.

d. Equipment validations must be conducted on a weekly basis by each work center to ensure proper logistics support, and accurate configuration management. The goal is to validate all equipment in a five-year period in AWN. The 3MC will maintain a master listing of all configuration items, assign all validations, and track validation completion. The person conducting the equipment validation will sign and date the validation sheet obtained from AWN upon completion. All validation information, including completion date, will be entered into AWN. All validations will be provided to the 3MC who will verify changes. The 3MC will also maintain validations on file for a minimum of 13 weeks.

e. Sailors, civilians, and contractors will only be granted access up to their 3-M qualification level, and designation letter. For example, a WCS does not warrant 3MC access even though they may be 3MC qualified, and a DIVO that is not qualified DIVO, even if designated, must not have DIVO access in AWN unless qualified or interim qualified.

f. AWN Management is imperative and for each 2-Kilo the following is done.

(1) Proper configuration is identified whether hardware or software.

(2) Correct codes are used for Cause Codes, discovery codes, deferral codes, and type availability.

(3) The CoC reviews each 2-Kilo and approves at the appropriate level.

(4) Proper supply documents are generated to ensure correct part tracking, and expenditure is in the 2-Kilo. This means for the majority of NAVIFOR units a manual entry from ONETOUCH as the primary MILSTRIP process, secondarily through open purchase requests.

g. Examples of equipment driven and equipment supporting tasks that require the use of a 2-Kilo.

(1) Fleet Technical Support per chapter 2 of this volume, intermediate, and Depot level work requests for both hardware and software requires the initial Job Control Number (JCN) before the use of Navy Enterprise Service Desk (NESD), Service Offering. Refer to Appendix D. This same concept will utilize for NAVFAC's MAXIMO program, and any other PARM ticketed system will utilize this concept in ensuring 2-Kilo are entered into the command CSMP.

(2) Installations of new equipment whether PEO, Other than Command Funded, or 3rd/site installed equipment.

(3) Accounting for locally generated maintenance man-hours expenditures.

h. CNIF Ashore funding expenditure process due to the lack of a supply back-end and to connect maintenance data to the configuration, and command the following processes must be used.

(1) OPNAV as the resource sponsor and liaison for funding for Operation and Maintenance dollars requires an accounting method inside of AWN.

(2) All AWN CSMP entries will include the cost of the maintenance action which is to be entered in the AWN comment section under ships force.

(3) The requirement to document cost in the Supply comment section applies to all corrective maintenance and logistics actions (including one-touch or any other program being utilized for navy standard stock repair parts, command contracts for systems maintenance, casualty report (CASREP) support, open purchase for non-standard stock parts and maintenance services).

(4) Maintenance Contracts (FOR NAVWAR, NIWC, CIV or GOV contractor support) and open purchase documentation must incorporate the AWN assigned JCN.

(5) Recording cost data in AWN and applying the JCN to financial documentation will support NAVIFOR budget discussions with OPNAV. Failure to document all maintenance actions and associated costs in AWN will limit NAVIFOR ability to support command unfunded requirements submissions and seek additional funding from OPNAV resource sponsors.

(6) All commands without an AWN account will use their parent commands AWN account to submit CSMP entries. For commands without an AWN account and no parent command AWN account, contact NAVIFOR points of contact for additional guidance.

(7) Financial documentation includes documents used for open purchase items and contracting maintenance actions or contracting support services. E.G. Infrastructure upkeep, system administration. If you are purchasing services for maintenance, it requires a CSMP entry. General office supply purchases, servmart, and command operating expenditures such labor and utilities (salary, electric, vehicles, water, sewer, etc.) are exempt from AWN CSMP entries.

(8) Open AWN CSMP entries for maintenance contracts entering Statement of Work (SOW) and Period of Performance (POP) in the narrative, adding the cost to the AWN comments section under ships force. After entry is made and approved by 3MC, after contract is awarded and funds executed, the job can be closed. Subsequent contract renewals, option year extensions, or if a current fiscal year contract (shorter than full fiscal year POP) is extended, will require new AWN CSMP entries with costs applied to AWN comment section under Supply comments.

(9) The goal is to capture maintenance actions and associated costs to support budget submissions and verifications with OPNAV N2N6. Your documented maintenance data is the authoritative record to eliminate budget shortfalls and restore funding to modernize based on traceable and supportable documentation pulled from the authoritative source.

i. CNIF MDS Supply Process. All NAVIFOR units will utilize the ref n that is for both shipboard and ashore for ordering processes, and Material Obligation Verification processes.

(1) For non-RSUPPLY connected AWN, NSN ordering process will be, to enter a 2-Kilo into AWN.

(2) NSN will be verified via ONETOUCH.

(3) Site will check the MILSTRIP requisition tracking spreadsheet, which is created and maintained by the site, for which document number to use next. W requisitions tracking spreadsheets for CASREPs.

(4) Site will input the NSN into ONETOUCH, verify it is correct. Once verified to be correct they will generate the MILSTRIP for the requisition along with the supporting 1348.

(5) Site will send an email attaching the 1348 to the email and will input the full MILSTRIP Requisition into the body of the email as well. The E-mail will go to the COMPCONTROLLER for funding verification and MILSTRIP recording.

(6) Once MILSTRIP is verified to be correct and funding has been approved, site will open ONETOUCH, navigate to the Requisition Functions menu, select MILSTRIP upload, paste the MILSTRIP into the File Contents box and hit the submit button.

(7) COMPCONTROLLER will record the MILSTRIP into Command Financial Management System and Standard Accounting, Budgeting, and Reporting System.

(8) Site will continue to follow any carcass turn-in and documentation record procedures.

(9) Update the AWN JCN with funding expenditure in supply comments, and requisition into the recommended solution block.

(10) If the site cannot find the required item via NSN, then an Open Purchase Request (OPR) be utilized. All OPRs will be verified with a JCN prior to ordering and funding expenditures outlined in Supply Comments.

(11) If items need to be added to the APL/AEL. The site will utilize the COSAL FBR process per reference (c).

j. To ensure proper job Verification, Screening, and Brokeraging NAVIFOR follows volume II, part II, chapter 4 of this manual.

k. Configuration management is a key component of all maintenance, material management, and readiness reporting across the Navy. Configuration management is dictated from volume VI chapter 19-7 of this manual and its associated references.

19-3.4.3 Programmatics:

a. Calibration and Test Equipment. All Test, Measurement, and Diagnostic Equipment (TDME) that is within the NAVIFOR force must utilize volume VI chapter 9 of this

manual, and utilize MCMS to track all government owned calibration equipment for calibration readiness and reporting. For any test equipment item that requires calibration, a job in AWN must be entered to account for the item's degradation.

b. 2-M Processes will be utilized from chapter 8 of this volume, all CCA/ECMs will be screened that are owned by the platform, and a subsequent 2-Kilo will be processed for the screening and repairing against the configuration.

c. A lock out and tag out program shall be used if an energy-isolating device is capable of being locked out. Shore activities will pattern their lock out tag out program after Occupational Safety and Health Administration (OSHA) regulations as delineated in reference (h), utilizing NAVSEA Form 9210/9, Tag Out Record Sheet (TORS). Lock out tag out procedures are necessary to prevent the unexpected startup of machinery or equipment, or the release of stored or residual energy that could cause material damage, serious injury, or death. Lock out tag out is achieved through the installation of locking devices and tags to isolate energy sources so maintenance can be accomplished safely. Per references (h), (i), and (j), lock out procedures will be used for all corrective and preventive maintenance requiring electrical or mechanical isolation, including maintenance performed by repair activities or contractors. When energy isolating devices are not lockable, technicians will follow tag out procedures outlined in references (i) and (j). Kirkey lock-out/tag-out Systems will follow NAVIFOR Safety Professional guidance.

19-3.4.4 Inspections and Training Assist Visits. The goal of the 3MI is to evaluate the effectiveness of the unit's 3-M program. It is critical that the inspection be conducted in a similar fashion in every command and detachment across the force. Inspections will be completed once commenced; early below-standards indications will not be used to change an inspection into an assistance visit. Current instructions are available on the COMNAVIFOR portal page at https://usff.navy.deps.mil/sites/NAVIFOR/N4/N42/Pages/N421.aspx, and the NAVIFOR 3-M Teams Page. 3-M is the foundation of a well-executed, effective maintenance program. Therefore, configuration, PMS, and MDS must be vigorously prosecuted and thoroughly monitored. The standards of PMS performance must remain high.

a. Frequency of Inspections and TAVs. The TYCOM or ISIC will conduct a complete inspection of each command under their cognizance as follows:

(1) When deemed necessary and scheduling allows outside of the normal inspection window by the TYCOM, ISIC or the unit's CO.

(2) Not to exceed 36 months. The governing factor is that every unit will be inspected every 24 months, and a maximum of 36 months

(3) The ISIC will submit a 3MI periodicity extension request to the TYCOM if a 3MI will exceed 24 to 36 months has elapsed since the last inspection. The TYCOM, when replying to the request for extension, will include Commander, United States Fleet Forces Command N43 or Commander, Pacific Fleet N43 (as applicable) as information addressees. Only the TYCOM can authorize such an extension.

(4) TAVs will be conducted by the ISICs as dictated from the TYCOM, or the by the TYCOM if the ISIC is the TYCOM. TAVs are an opportunity to train

personnel in specific areas of 3-M. The purpose of the assist visit is to identify areas where improvements may be made, this is not a direct translation of a 3MI. Prior to the arrival of the 3-M Team, the ship will respond appropriately to identify areas that need attention and ascertain the type of assistance desired. This is not required to conduct an inspection

(5) An evaluation visit may be determined or required when a command has during a previous assessment was deemed as having no configuration whether hardware or software. This visit will occur once every 36 months to determine that the command has not gained any configurations during that timeframe, whether program of record or not. Once determined the TYCOM will include Commander, United States Fleet Forces Command N43 or Commander, Pacific Fleet N43 (as applicable) as concurrences.

b. Inspection Team Composition.

(1) Team Leader. The inspection team leader will be the TYCOM 3-M Representative who will concur with the assignment of inspection team members. The team leader will ensure inspection attributes are evaluated in a manner consistent with current guidance and directives provided by COMNAVIFOR and provide guidance to the inspection team members to ensure a common process.

(2) Team Members. Team members will consist of Commander, Naval Forces or ISIC staff personnel or both who are adequately trained in the area to which they are assigned to assess. They will report findings to the team leader.

c. Method for Assignment of Numerical Evaluations. The minimum performance requirements are as identified below:

(1) Formula Acronyms:

(a) CLER = Command Level Effectiveness Review

(b) CTS = Command Total Score

(c) CVF = CSMP Validity Factor

(d) DTS = Department Total Score

(e) MAR = Maintenance Accomplishment Rate

(f) MDS = Maintenance Data System

(g) MPR = MDS Performance Rate

(h) PAR = Periodic Accomplishment Rate

(i) PPR = PMS Performance Rate

(j) SAR = Situational Accomplishment Rate

(k) SEER = Scheduling and Execution Effectiveness Review

(l) SCAR = Spot Check Accomplishment Rating

(2) CTS must 80 percent or higher, 50 percent of the score is the PMS effectives, and 50% is the MDS effectiveness. Any CTS score evaluated below 80 percent will be re-evaluate.

CNIF CTS = ((SCAR X .15) + (MAR X .10) + (SEER X .15) + (CLER X .10) + (SPF X .5)) + ((CVF X .40) + (MPF .5))

* For commands without a billeted or collateral duty 3MC:

CTS = ((SCAR X .20) + (MAR X .10) + (SEER X .20) + (SPF X .5)) + ((CVF X .40) + (MPF .5))

(3) MAR = PAR (.5) + SAR (.5) MAR = PAR (If Work Center holds no situational maintenance)

PAR = Completed / (Completed + Lost + Alerts + Omitted)

SAR = Completed / (Completed + Lost + Omitted)

(4) Each Department is required to meet the DTS minimum of 80 percent.

DTS = Work Center Score X Weighted Factor

Work Center Score= (PPR X .50) + (CVF/MDS X .50)

PPR = 50% of the Work Center Score

CVF/MDS = 50% of the Work Center Score

PPR = MAR X SCAR ÷ 100

(5) Ranking Standards.

(a) Commands, departments, and WCs will be evaluated as “Above Standards” overall in 3-M if the unit’s total score is 90% or higher.

(b) Commands, departments, and WCs will be evaluated as “At Standards” overall in 3-M if the unit’s total score is between 80% and 89.99%.

(c) Commands, departments, and WCs will be evaluated as “Below Standards” overall in 3-M if the unit’s total score is less than 80%.

(d) All calculations will be rounded to two decimal places.

d. Inspection Procedures. Appendix A provides a standard means for evaluating the 3-M program. These procedures, centered on a set of core attributes applicable to all, are used to conduct 3-M Inspections. Inspection procedures are divided into six major areas, and three programmatic scores for CNIF:

(1) Section I - Work Center and Command Effectiveness Reviews

(a) Scheduling and Execution Effectiveness Review.

(b) Command Level Effectiveness Review.

(2) Section II - Spot Check Accomplishment Rating.

(3) Section III - Maintenance Accomplishment Rate.

(4) Section IV - Maintenance Data System.

(5) Section V - Proficiency

(6) Section VI - 3-M Inspection Command Total Score.

(7) Section VII – Test Equipment

(8) Section VIII – 2-M

(9) Section IX - Lock-out/Tag-out

e. Inspection Reporting. Significant deficiencies and numerical assessments are reported to the assessed unit's CO, ISIC and TYCOM using the format shown in appendix C. Reporting may be accomplished on the entire unit or on a departmental basis.

(1) Significant deficiencies require a report of corrective actions taken by the unit to be forwarded to the TYCOM via the ISIC within 30 days following the inspection.

(2) Any command or department receiving an overall evaluation of below standard in either PPR or CVF and MDS must be re-evaluated.

(3) Each TYCOM will report the findings of the previous year's inspections to Commander, United States Fleet Forces Command or Commander, Pacific Fleet N43, as applicable, at the end of the calendar year.

f. Inspection Data Retention. CNIF will maintain an inspection data file for each unit. As each command is evaluated, the individual evaluation standards and calculated values identified will be recorded in the data file with a copy of the inspection report provided to the inspected command. Sections I through VI of Appendix A provides specific criteria to be used in the assessment of each command. Section VII is evaluated based on test equipment readiness from chapter 9 of this manual. Section VIII is evaluated based on chapter 8 of this manual. Section IX is evaluated based on reference (h).

APPENDIX A
INSPECTION CRITERIA

APPENDIX A

SECTION I-A

SCHEDULING AND EXECUTION EFFECTIVENESS REVIEW (SEER)

Complete the SEER checklist below for each WC. Enter a numeric evaluation of each inspection attribute and provide amplifying information to describe the deficiencies driving point deductions on the "Remarks" page provided. Significant deficiencies must be reported via the final inspection report.

Command	Department	Division	Work Center	Date

		General Attributes	Value	Points
1.	Does the WC PMS file contain:			
	a.*	The current Service Brief?	1	
	b.*	Current and applicable 3-M messages, notices, and supplementary information are available?	2	
2.		Do MIPs and MRCs accurately reflect equipment configuration; are non-applicable MRCs correctly lined out and are applicable MRCs active?	10	
3.	*	Does the WC retain an auditable record of 3-M personnel qualification standards and designation letters?	5	
		Maintenance Requirement Card (MRC) Deck		
4.		Is the WC deck of MRCs, including classified MRC locator cards, complete and current? (Per TYCOM direction)	2	
5.		Are locally generated MRCs complete and current?	3	
6.		Are blanks requiring installation data (including MRC location block) filled in prior to use? Specific location must reflect BLDG # with Room #.	3	
		Chain of Command SKED Administration		
7.	Are all administrative changes approved at the appropriate level?			
	a.	Is the FR approved by DH? (Verify using Journal tab.)	2	
	b.	Are weekly closeouts are performed by close of business on the first workday of the week by the LCPO?	2	
	c.	Are lineouts and MRC customization approved by the LCPO?	2	
	d.	Are check notes reviewed, and alerts approved by the DH?	2	

Location Guide Lists (LGL)				
8.	a.	Do LGLs contain required information (e.g., equipment name, equipment location, equipment serial number or unique identifier)?	3	
	b.	Are maintenance items in SKED associated to the existing equipment configuration?	3	
Situational Requirements				
9.	*	Are all situational (states, triggered or metered) events being scheduled and executed in SKED?	8	
PMS Execution and Accountability				
10.		Are check note entries accurate, valid, and complete?	3	
11.	*	Was maintenance assigned only to qualified maintenance personnel for MRCs requiring unique qualifications, NECs, or billet?	4	
12.		Is a check note made for maintenance actions not completed or rescheduled during the week and retained in SKED?	2	
13.		Is a unique tag out serial number or "tag out not required" entered as a "check note" for maintenance actions requiring a lock out or tag out and marked as complete?	2	
14.		Have the minimum number of spot checks and monitored checks been accomplished?	3	
FBR File				
15.		Are FBRs tracked in SKED, "Action Taken" block updated by WCS?	3	
Inactive Equipment Maintenance (IEM)				
16.	*	Is the start of an inactive period correctly annotated and approved by DH?	2	
17.		Are all IEM requirements properly scheduled?	5	
18.		Is the completion of the inactive period correctly annotated?	2	
Totals (Attributes evaluated as NA are not calculated)		Total Points Available:_____	Total Points Awarded:_____	
SAT ☐ **SAT is 80% or better UNSAT ☐ (Score = Points Awarded Divided by Points Available)				

* **Electronic Versions Acceptable**

Attribute Scoring:

≥ 85% = Satisfactory = Full Credit

< 85% = Unsatisfactory = No Credit

Example - Attribute 17 – If 85% or better of IEM requirements were properly scheduled, points awarded would be five. If less than 85% of IEM requirements were properly scheduled, points awarded would be zero.

APPENDIX A

SECTION I-A2

SEER REMARKS

Provide amplifying information to describe the deficiencies driving point deductions. Significant deficiencies must be reported via the final inspection report.

Attribute #	Amplifying Information
Print Inspector's Name: _____ Signature: _____	
Command: _____ Date: _____	

APPENDIX A

SECTION I-A3

SKED 3.2 SEER CHECKLIST GRADING ATTRIBUTES

*** Indicates electronic versions acceptable.**

1. **Attribute 1**: Does the WC PMS file contain:
2. **Attribute 1a. (*)**:
   (1). Current Service Brief?
   (2). Is the latest FR PMS Service Brief available?
3. **Attribute 1b. (*):**
   (1). Current and applicable 3-M messages, notices, and supplementary information?
   (2). Are applicable messages and bulletins that provide additional guidance, information or areas of focus that pertain to MIPs or MRCs available?
   (3). Have the 3-M team at the activity, read and initialed the 3-M messages, notices, and supplementary information? Digital copy may be retained after initialed up to DH.
4. **Attribute 2:** Do MIPs and MRCs accurately reflect equipment configuration; are non-applicable MRCs correctly lined out and are applicable MRCs active? (May be MIP standardization violations)
   a. Does WC meet TYCOM MIP standardization requirements? Are any MRCs listed on MIP lined out that are applicable to installed equipment configuration and within the cognizance of the WC to perform maintenance? (Split MIP log will be verified against the LOEP and MIP.)
   b. Are applicable MRCs active on all applicable maintenance items?
   c. Are non-applicable MRCs lined out? MRCs that are not applicable to the WC's installed equipment configuration.
   d. Are line out justifications on MIPs accurate?
   e. Has activities configuration been verified against available maintenance requirements? Does the shore Installation Process packages dictate that locally generated maintenance be required or identified maintenance requirements in technical manuals provided?
5. **Attribute 3 (*):**
   a. Does the WC retain an auditable record of personnel PQS qualifications and designation letters?
   b. Does the WC have record of:

(1) Department. 3MA and WCS designation letters for 3-M (301) Maintenance Person PQS, 3-M (303) WCS PQS, and 3-M (304) Division Officer PQS?

(2) FLTMPS report, if available, must be used. If FLTMPS is not available, PQS watch station cover sheets signed by the XO must be used.

6. **Attribute 4**: Is the WC deck of MRCs, including classified MRC locator cards, complete and current? (Per TYCOM direction)

   a. Does WC MRC deck contain all MRCs that are not lined out on MIP? As a minimum, the deck will contain all quarterly checks and below, all R-checks, and all MRCs with fill in the blanks or pen and ink changes. Any MRC completed within the previous 13 weeks must be retained in the WC MRC deck. Verify SYSCOM MRC control number against MIPs per the 3-M Manual or TYCOM guidance?

   b. Does MRC location block contain one of the following entries, as appropriate?

      (1) BLDG # with room #;

      (2) "See LGL,"

      (3) "See METBENCH Calibration Management System (MCMS)"

      (4) "See Account Inventory Summary (AIS),"

      (5) "LGL attached."

   c. Is the MRC SYSCOM correct and matches the SYSCOM number on the MIP?

7. **Attribute 5:** Are locally generated MRCs complete and current?

   a. Does the command perform local maintenance?

   b. Has the local maintenance been recently updated?

   c. Is there a locally generated LOEP with MIPs associated to these MRCs?

   d. Do antenna's that do not have maintenance been verified again the Ashore Red HF, Ashore Green VHF/UHF/HF, and Ashore Yellow LF/VLF books?

   e. Shore stations that do not have a locally generated MRC documentation mark as "N/A".

8. **Attribute 6:**

   a. Are blanks requiring installation data (including MRC location block) filled in prior to use? Specific location must reflect BLDG # with Room #.

   b. Are all WC MRCs with blank fields or tables within the MRC procedure block requiring data completed?

9. **Attribute 7:** Are all administrative changes approved at the appropriate level?

10. **Attribute 7a**: FR approved by DH. (Verify using Journal tab.) Has the final approval of revisions (FR, ACNs, FBR, Document Information Transmittals (DIT), and administrative changes) been completed by DH?

11. **Attribute 7b:**

a. Are weekly closeouts performed by close of business on the first workday of the week by the LCPO?

b. Is the weekly closeout completed on the first workday of the week?

c. Is the weekly closeout completed by LCPO?

12. Attribute 7c: All lineouts and MRC customization approved by the LCPO. Are all lineouts approved and initialed by LCPO?

13. Attribute 7d:

a. Are check notes reviewed, and alerts approved by the DH?

b. Are check notes and alert details approved by DH?

14. Attribute 8a (*):

a. Do LGLs contain required information (e.g., equipment name, equipment location, equipment serial number or unique identifier)?

b. WCs with LGLs: Does the LGL have equipment nomenclature, serial number or unique identifier, and location (BLDG # and Room #) block completed for each line item?

c. If equipment manufacture serial number is available, it must be used.

15. Attribute 8b:

a. Are maintenance items in SKED associated to existing equipment configuration?

b. Are maintenance items in SKED correctly associated with equipment configuration?

16. Attribute 9 (*):

a. Are all situational (states, triggers, metered) events being scheduled and executed in SKED?

b. Are all local triggers and states executed as required?

c. Are all required R-Checks listed on the accountability logs and scheduled in SKED?

d. Are metered readings entered and tracked in SKED (if applicable)?

17. Attribute 10:

a. Are check note entries accurate, valid, and complete?

b. For all entries on the WC schedule that are not marked complete, is there a corresponding check note entry?

c. Does the check note entry begin with either: rescheduled, out of periodicity, non-accomplished, not applicable (NA) for situational checks and with the date the check went out of periodicity, the reason why the MR was not accomplished, or the reason check was not applicable?

d. Cent (¢) sign entries will begin with “Performed by” and followed by the detailed information of the outside activity completing the maintenance, JSN, work order or applicable documentation used to complete the maintenance. Proof of the completion

will be maintained in the WC PMS file until the next accomplishment of the maintenance action. DH will sign for accountability of all maintenance actions completed by outside activities.

18. Attribute 11:

a. Was maintenance assigned only to qualified maintenance personnel for MRCs requiring unique qualifications, NECs, or billet? For example, a system administrator requires NAVEDTRA 43469 for privileged access into the system.

b. For MRCs that indicate or require unique qualifications such as: SPO, DCPO, gage calibration or NECs, does the assigned individual(s) hold that qualification or billet? Utilize school completion certificates, position descriptions or FLTMPS for verification.

19. Attribute 12:

a. Is a check note made for maintenance actions not completed or rescheduled during the week and retained in SKED?

b. Do all check note entries match all entries in SKED?

c. Do check notes that require a JCN or Requisition number accurately placed into SKED?

20. Attribute 13:

a. Is a unique tag out serial number or "tag out not required" entered as a "check note" for maintenance actions requiring a lock out or tag out and marked as complete?

b. No entry is required for maintenance not completed.

21. Attribute 14:

a. Have the minimum number of spot checks and monitored checks been accomplished?

b. Are all required spot checks completed per this instruction?

22. Attribute 15:

a. Are FBRs being tracked in SKED, "Action Taken" block updated by WCS?

b. Does the WC retain copies of FBR responses requiring changes to PMS documents until reflected in the FR?

c. Are FBRs being tracked in SKED?

d. Are FBR responses entered in SKED when received and action taken updated within seven days?

e. If no outstanding FBRs, mark as NA.

23. Attribute 16 (*):

a. Is the start of an inactive period correctly annotated and approved by DH?

b. Does WC IEM tab annotate the proper IEM status?

c. If WC has systems or equipment in IEM status II, is a JSN, work documentation, DH authorization and outside activity or repair WC annotated?

d. Did the WC obtain DH written authorization prior to placing equipment in IEM?

e. Does the equipment in IEM for being sunset or retired in place, have an appropriate Divestment or sunset message?

e. If there is no equipment in IEM in the last 13 weeks, mark as NA.

24. Attribute 17:

a. Are all IEM requirements properly scheduled?

b. Does the WC annotate the proper scheduling of all applicable IEM maintenance (e.g., LU and PM)?

c. If there is no equipment in IEM in the last 13 weeks, mark as NA.

25. Attribute 18:

a. Is the completion of the inactive period correctly annotated?

b. Does the WC schedule annotate the proper scheduling when removing equipment from IEM (e.g., SU and OT)?

c. If there was no equipment removed from IEM in the last 13 weeks, mark as NA.

APPENDIX A

SECTION I-B1

COMMAND LEVEL EFFECTIVENESS REVIEW (CLER)

Using the attributes and grading criteria described below, conduct the CLER. Provide amplifying information for deficiencies causing point reduction on the remarks page.

Command:			**Date:**	
General Attributes			**Value**	**Points**
1.	Does the 3MC maintain:			
a.		A Change Accountability Log (including FBR Accountability Log in SKED)?	2	
b.	*	A log tracking the assignment of MRCs from split MIPs to ensure all applicable MRCs are assigned (if applicable)?	3	
c.		A LOEP containing locally generated MIPs and a record of the associated MRC files?	2	
d.	*	A current PMS DVD or downloaded file?	3	
2.		Does the command have a reliable system for backing up MDS and PMS data?	5	
3.	*	Does the 3MC have an effective system in place to track, route and explain externally provided PMS changes?	3	
4.		Is there an effective system in use (Spot Check Program) whereby supervisory personnel periodically and routinely monitor PMS performance?	10	
5.		Have all FBRs entered in SKED been properly reviewed by the CoC and submitted off station within seven days?	3	
6.		Have CSMP reconciliations been conducted per JFMM and TYCOM instructions?	5	
7.	*	Does the activity conduct internal audits (Quarterly Self-Assessments) of all WCs and retain for one year copies of deficiencies, corrections, and abatements? Are copies of assessments forwarded to the ISIC and TYCOM on a quarterly basis?	15	

8.	*	Does the 3MC provide weekly status reports to the 3-M Manager per specific TYCOM directives?	3	
9.	*	Does the 3MC have an approved master copy of 3-M PQS?	3	
10.	*	Does the 3MC maintain an auditable record of PMS PQS for the command (e.g., copy of service record entries, signed copy of PQS cover letter, officer verified divisional training record or FLTMPS report)?	3	
11.		Does the 3MC maintain the status of command FBRs, responses and follow up actions taken in SKED?	3	
12.		Does the activity conduct 3-M program training per directives?	10	
13.		Does the 3MC have an active AWN account with proper permissions?	2	
14.		Does the activity conduct equipment validations via AWN?	3	
15.		Are changes annotated on validation and entered in AWN?	3	
16.		Does the 3MC retain 13 weeks' worth of validations?	2	
17.		Does the 3MC retain one years' worth of quarterly reports?	2	
18.		Are the quarterly reports signed and dated by the CoC?	2	
19.		Are the Check Note Reports included?	1

Command: _____ Date: _____	

APPENDIX A

SECTION I-B3

CLER CHECKLIST GRADING ATTRIBUTES

* Indicates electronic versions acceptable.

1. Attribute 1: Does the 3MC maintain:
2. Attribute 1a. Does the 3MC maintain:
   (1) A Change Accountability Log (including FBR Accountability Log in SKED)?
   (2) Is the Accountability Log and FBR record in SKED updated?
3. Attribute 1b. Does the 3MC maintain:
   (1) A log tracking the assignment of MRCs from split MIPs to ensure all applicable MRCs are assigned (if applicable)?
   (2) Is a log available and approved by the XO to track the assignment of MRC(s) from split MIPs?
4. Attribute 1c. Does the 3MC maintain:
   a. A LOEP containing locally generated MIPs and a record of the associated MRC files?
   b. Does the 3MC maintain a LOEP that contains locally generated MIPs?
   c. Does the 3MC maintain a master file with the locally generated MRC documentation?
   d. Shore stations that do not have a locally generated LOEP or associated locally generated MRC documentation mark as “NA”.
5. Attribute 1d (*). Does the 3MC maintain:
   a. A current PMS DVD or downloaded file?
   b. The latest PMS FR loaded and finalized on the first Monday of the quarter or on the later date as authorized by TYCOM?
   c. The latest version of SKED implemented?
6. Attribute 2 (*):
   a. Does the command have a reliable system for backing up MDS and PMS data?
   b. Are back-ups and daily systems checks conducted?
   c. Are external back-ups available?
   d Are multiple data points saved on NMCI or ONE-NET servers as required?
7. Attribute 3 (*):
   a. Does the 3MC have an effective system in place to track, route and explain externally provided PMS changes?
   b. Does the 3MC route, maintain and track externally provided PMS changes?

8. Attribute 4:
    a. Is there an effective system in use (Spot Check Program) whereby supervisory personnel periodically and routinely monitor PMS performance?
    b. Does the 3MC maintain a Spot Check Matrix for the current week and the past 13 weeks?
9. Attribute 5:
    a. Have all FBRs entered in SKED been properly reviewed by the CoC and submitted off hull within seven days?
    b. Are all FBRs entered in SKED?
    c. Are all FBRs reviewed and processed off station (Planned Maintenance System – Management Information System) within seven days?
10. Attribute 6:
    a. Have CSMP reconciliations been conducted per JFMM and TYCOM instructions?
    b. Does the command or activity routinely submit CSMP reports to the ISIC and TYCOM per TYCOM direction?
    c. Does the command conduct CSMP Reconciliations during PB4M?
11. Attribute 7 (*):
    a. Does the activity conduct internal audits (Quarterly Self-Assessments) of all WCs and retain for a one (1) year the copies of deficiencies, corrections, and abatement? Are copies of assessments forwarded to the ISIC and TYCOM on a quarterly basis?
    b. Does the unit conduct quarterly internal audits or self-assessments of all WC PMS?
    c. Are quarterly self-assessments retained for one year?
    d. Are complete quarterly self-assessment deficiencies and POAM submitted to ISIC and TYCOM?
12. Attribute 8 (*):
    a. Does the 3MC provide weekly status reports to the 3-M Manager per specific TYCOM directive?
    b. Does 3MC provide weekly status reports to the 3-M Manager as per this instruction?
    c. Does 3MC retain the last 13 weeks of weekly reports plus the current week?
    d. Does 3MC retain the cover pages of one years' worth of weekly reports signed by the CoC?
13. Attribute 9:
    a. Does the 3MC have an approved master copy of 3-M PQS specifically tailored for the command?
    b. Does 3MC have a master copy of 3-M PQS specifically tailored for the command that is approved by the CO?

c. Is the command using the latest version of 3-M PQS?

14. Attribute 10 (*):
    a. Does the 3MC maintain an auditable record of PMS PQS for the command (e.g., copy of service record entries, signed copy of PQS cover letter, officer verified divisional training record, or FLTMPS report)?
    b. Does the 3MC will maintain a list of all assigned 3-M positions and PQS qualifications?
    c. Are all personnel qualified for their assigned 3-M positions?
15. Attribute 11:
    a. Does the 3MC maintain the status of command FBRs, responses and follow up actions taken in SKED?
    b. Are the FBR response actions noted in SKED Feedback Report Manager?
    c. Are command generated FBRs, responses and action taken tracked in SKED.
    d. Is the latest PMS 22 available? (Reports issued monthly.)
16. Attribute 12:
    a. Does the activity conduct 3-M program training per directives?
    b. Is 3-M training included in PB4T (Planning Board for Training).
    c. Is 3-M training scheduled and published in the POW or POD?
    d. Does the 3MC retain copies of 3-M training muster sheets for a minimum of one (1) year?
17. Attribute 13:
    a. Does the 3MC have an active AWN account with proper permissions?
    b. Can the 3MC demonstrate creating a new AWN account?
18. Attribute 14: Does the activity conduct equipment validations via AWN?
19. Attribute 15:
    a. Are changes annotated on validation and entered in AWN?
    b. Does the 3MC ensure that pen and ink changes annotated on the validation aid are entered in AWN?
20. Attribute 16:
    a. Does the 3MC retain 13 weeks' worth of validations?
    b. Does 3MC ensure all required validations are completed?
21. Attribute 17: Does the 3MC retain one years' worth of quarterly reports?
22. Attribute 18: Are the quarterly reports signed and dated by the CoC?
23. Attribute 19: Are the Check Note Reports included?

APPENDIX A

SECTION II-A

SPOT CHECK ACCOMPLISHMENT RATING (SCAR)

Using the basic definitions and guidelines described, determine the PMS Spot Check Accomplishment Rating (SCAR) for each WC. Enter the values determined on the Spot Check Monitor Form, section II-A of this appendix. The number of Spot Checks has been established:

Periodic= 2%

Situational= 0.5%

For all completed maintenance (including daily, weekly, and bi-weekly) from the last 13 weeks. Every WC will receive at least one periodic and one situational documented spot check. The maximum spot checks accomplished during the inspection will be five per WC.

1. Complete an MRC Evaluation, SCAR Check Sheet, Section II-A of this appendix, for each MRC selected. Based on the results, evaluate the overall effectiveness of the accomplishment of each MR selected. Enter a numeric evaluation of each assessment attribute and provide amplifying information describing the deficiencies and associated point deductions. Significant deficiencies will be reported via the final inspection report.
2. The SCAR Check Sheet reflects a series of questions to be asked to determine the accomplishment status of an MRC previously reported as accomplished. Although, the sheet may be used as a reference for conducting a real time monitored MRC evaluation, for the purposes of conducting a 3MI, all spot checks will be conducted on accomplished (historic) MRCs.
3. Due to the nature of MRC completion, supporting programs such as Tag-Outs and HAZMAT are encountered. Care should be taken to avoid expanding the spot check to a review of the processes of those programs thereby preventing the assessor from determining the accomplishment status of the MRC under review.
4. The following is expanded guidance for completion of the SCAR check sheet. Items identified in ( ) are the SCAR check sheet inspection attributes. Best practices or other policies not supported by source documentation will not be included in evaluating compliance:
    a. (1.a.) Determine if the MP is qualified to perform the maintenance task. PQS 301 is required for all MRCs but attention should also be paid to other qualifications required such as Quality Maintenance (see Volume 5, Part I, Chapter 3, paragraph 3.4 of this manual) or graduation from a required school such as gage calibration technician.
    b. (1.b.) Determine if the correct TPMTE were used during the performance of the MRC. If the MP did not have the required TPMTE, it is unlikely that the maintenance person would have been able to complete all the procedural steps of the MRC as required. If an item of TPMTE was required to perform a conditional step and that step was not required to be accomplished, it is not considered deficient. If the required test equipment required calibration, ensure that the calibration is within date and the equipment is of sufficient scale to accomplish the MRC.
    c. (1.c.) Determine if the MP maintained the correct equipment.

d. (1.d.) Examine the MRC to determine that any locally applied changes are authorized by procedural notes, external correspondence, or allowed by reference (a).

e. (1.e.) Determine applicability of the MRC to the component that the MP signed for completion on the 13-Week Accountability Log.

NOTE: IF A PROCEDURAL STEP WAS NOT COMPLETED, THE MRC SHOULD NOT HAVE BEEN REPORTED AS COMPLETE AND THEREFORE THE ATTRIBUTE GRADE SHOULD BE ZERO AND ALL SUBSEQUENT ATTRIBUTES SHOULD ALSO BE ZERO, EFFECTIVELY "FAILING" THE SPOT CHECK.

f. (2.a.) From a variety of potential techniques, determine if the MP performed all the required steps of the MRC. This may be accomplished via re-enactment, a discussion regarding the steps or re-performance. The inspector should come away with a clear impression that all the steps of the MRC were either fully accomplished or not.

NOTE: IF A REQUIRED TAG-OUT WAS NOT CONDUCTED IN SUPPORT OF ACCOMPLISHING THE MRC, THE MRC SHOULD NOT HAVE BEEN CONDUCTED AND REPRESENTS A SERIOUS SAFETY VIOLATION. THEREFORE, THE ATTRIBUTE GRADE SHOULD BE ZERO AND ALL SUBSEQUENT ATTRIBUTES SHOULD ALSO BE ZERO, EFFECTIVELY "FAILING" THE SPOT CHECK.

g. (2.b.) If required by the MRC, verify that a Tag-Out was hung before the maintenance was performed. Ensure the isolation boundaries were appropriately identified and correctly positioned to ensure complete isolation of the maintained equipment. If no tag-out was required, write NA on the sheet.

NOTE: FAILURE TO ADHERE TO A SAFETY PRECAUTION PROVIDED ON THE MRC CONSTITUTES A SERIOUS SAFETY VIOLATION AND THE FAILURE TO PERFORM THE MRC AS WRITTEN. THE ATTRIBUTE GRADE WILL BE ZERO AND ALL SUBSEQUENT ATTRIBUTES WILL ALSO BE ZERO, EFFECTIVELY "FAILING" THE SPOT CHECK.

h. (2.c.) Determine compliance with all specific safety precautions listed on the MRC. If no safety requirements were invoked, write NA on the sheet.

i. (3.a.) By physical examination of the maintained equipment, determine if maintenance of the nature required by the MRC had been performed. Take note of fasteners that would have had to be disturbed, dirt in filters, fresh oil, etc. to make a judgment as to whether the maintenance has been performed.

NOTE: DUE TO THE POTENTIAL LIABILITY INCURRED BY IMPROPER USE AND DISPOSAL OF HAZMAT, SOME WCS HAVE ASSIGNED SPECIALLY TRAINED PERSONNEL TO PROVIDE HAZMAT AND DISPOSAL SERVICES FOR SURPLUS MATERIAL INSTEAD OF THE MP. THIS IS ACCEPTABLE PROVIDED THE INSPECTOR CAN DETERMINE FULL COMPLIANCE.

j. (3.b.) Determine through questioning and record verification that HAZMAT was properly used and disposed of as a means of determining whether the MRC was

accomplished. Once the inspector has determined that the HAZMAT was used and disposed of correctly, this attribute is considered fulfilled. If no HAZMAT was required to be utilized, write NA on the sheet.

k. (3.c.) Determine if the MP could have performed the MRC from a standpoint of being trained and proficient in the tasks called out for by the procedure.

l. (4.a.) Determine if the MP filled out the 13-Week Accountability Log or annotated proper disposition of maintenance in SKED correctly for the accomplished MRC with the appropriate accomplishment date. Ensure that if a tag-out isolation was used; the tag serial number is recorded in the space allowed or as a check note in SKED. Ensure that the printed name and legal signature of the MP who performed the maintenance is recorded or, in case of group performed PMS, the MP in charge of the group.

m. (4.b.) From reviewing the discussions and findings during the spot check, determine if an FBR had been submitted if required. If no FBR was required, write NA on the sheet.

n. (4.c.) Determine if a material deficiency was noted during the PMS; if so, examine the CSMP to ensure the deficiency was documented. If no material deficiency was noted, write NA on the sheet. If material discrepancies are properly documented in the CSMP attribute graded as a two. Material discrepancies which are not documented in the CSMP will be entered with an automatic grade of zero.

5. When a Spot Check is determined to be below standards, the command undergoing inspection is likely to have numerous questions. To facilitate root cause analysis and the formulation of an effective corrective action plan, care should be taken to clearly identify factors contributing to deficiencies that led to the conclusion that the MRC was not conducted as written or not conducted at all.

APPENDIX A

SECTION II-B

SCAR CHECK SHEET

Planned Maintenance System (PMS) 3-M Spot Check Form						
COMMAND	DEPARTMENT	EQUIPMENT	WORK CENTER	DATE PERFORMED	MIP EVALUATED	MRC EVALUATED
Maintenance Person:				Spot Check Date:		

NOTES:

1. If an attribute marked with an "*" is evaluated as unsatisfactory, all subsequent attributes will be graded as "0".

2. Attribute marked with a pound sign "#". Due to the potential liability incurred by improper use and disposal of HAZMAT, some WCs have assigned specially trained personnel to provide HAZMAT and disposal services for surplus material instead of the MP. This is acceptable provided the inspector can determine full compliance.

		Inspection Attribute	**Value**	**Grade**	**Notes**
Contact the MP assigned responsibility for the accomplishment of the MRC, have the individual deliver MRC, and determine the following by questions, personal observation, or both.					
1.	a.*	Is the MP qualified (PQS) to perform the MR?	2		
	b.	Did the MP present the correct tools, Personal Protective Equipment, parts (NSN), material (Military Specification (MIL-SPEC)) and calibrated test equipment?	3		
	c.	Did the MP properly identify the equipment (location, equipment validation)?	4		
	d.	Are there unauthorized changes or corrections to the MRC?	3		

	e.	Is the MRC correct for the equipment maintained?	3		
Demonstrated all steps of MR including all Notes, Warnings and Cautions according to the MRC.					
2.	a.*	Followed all steps of the MRC.	5		
	b.*	Correctly performed equipment Tag-Out.	5		
	c.*	Followed all safety precautions.	5		
Does the equipment condition reflect accomplishment of the MRC?					
3.	a.	Is it apparent that maintenance was performed recently?	10		
	b.#	Correctly demonstrated use and disposal of Hazardous Material.	3		
	c.	Was the MRC within the capability of the assigned individual?	5		
PMS Reporting					
4.	a.	MP reported status of MR to the WCS if Completed or Not Fully Accomplished and made appropriate updates in SKED.	2		
	b.	WC generated FBR for any problem with MRC.	2		
	c.	Material deficiencies detected by the PMS action were recorded in MDS.	2		

Attributes Evaluated as NA are not Calculated

Printed Name:_____ Signature:_____
Command:_____ Date:_____

APPENDIX A

SECTION III

MAINTENANCE ACCOMPLISHMENT RATE (MAR)

1. The Maintenance Performance formula has been redefined to more effectively capture maintenance that was not scheduled.
2. The PAR and SAR reports are automatically generated by SKED.
3. The MAR grade will be determined utilizing the formula reflected and a date range consisting of the previous 13 weeks of maintenance.

MAR = PAR (.5) + SAR (.5)

MAR = PAR (If WC holds no situational maintenance)

PAR = Comp ÷ (Comp + Lost + Alerts + Omitted)

SAR = Comp ÷ (Comp + Lost + Omitted)

4. Omitted is defined as any maintenance action that should have been performed on any and every maintenance item and no matter the reason did not get scheduled. For example:
   a. Situational or state maintenance that did not get scheduled when the situation dictated.
   b. Improperly lined out periodic checks.
   c. Non-accomplished IEM checks.
   d. Non-accomplished maintenance added via ACN, FBR, Preliminary PMS, etc.

COMMENTS

APPENDIX A

SECTION V-A2

SPF DESCRIPTION AND GRADING ATTRIBUTES

1. **Ability to log on**.
   a. Click on SKED 3.2 desktop icon.
   b. Enter username and password.
   c. Click "**Enter**".
2. **Ability to open a Work Center**.
   a. On the view tab bar, click "**WORKCENTER**". A box should open.
   b. Click to highlight the WC to be opened.
   c. Click "**Open**" or double click the highlighted WC to open it.
3. **Ability to view the Schedule, Review, Forecast, Situational, IEM, Journal and PMS Document display**.
   a. From the WC toolbar, click "**Schedule**".
   b. From the WC toolbar, click "**Review**".
   c. From the WC toolbar, click "**Forecast**".
   d. From the WC toolbar, click "**Situational**".
   e. From the WC toolbar, click "**IEM**".
   f. From the WC toolbar, click "**Journal**".
   g. From the WC toolbar, click "**PMS Documents**".
4. **Ability to annotate disposition of maintenance**. (Mark a check as complete etc.)
   a. From an open WC, in the grid, click to highlight the desired check.
   b. Right click the selected item and select the "**Complete** (Green X) **Check**" icon from the menu.
   c. The icon (Green X) will be displayed in the grid.
   d. To unmark the check, right click the same item and click the (Green X) again.

NOTE: WHEN THE PIN ACCOUNTABILITY FEATURE IS ENABLED THE CREW MEMBER THAT WAS ASSIGNED THE MAINTENANCE MUST BE PRESENT TO INPUT PIN WHEN WCS MARKS THE CHECK COMPLETE.

5. **Ability to view previous 13-Weeks**.
   a. From an open WC, in Schedule display view, on the secondary tool bar, click on the "**Quarterly**" icon drop down arrow.
   b. Click one of the available quarters in the past to be reviewed.

c. Once done reviewing, click on the "**Quarterly**" icon drop down arrow and select the current quarter.

6. Ability to view Check Details.

a. From an open WC, in Schedule display view, highlight a check in the grid and right click it.

b. From the menu, select "**View Details**".

c. From the "**Check Details**" window, select the desired tab, such as General, SPMIG, MIP Document and MRC Document.

d. Close when done.

7. Ability to schedule Spot Checks and update Spot Check results.

a. **Ability to update Spot Check results**:

(1) From an open WC, in Schedule display view, highlight a check that has been scheduled for a spot check. A circle with a yellow ✓ (check mark), is the spot check icon.

(2) Double click it.

NOTE: A SPOT CHECK MUST HAVE BEEN ALREADY ASSIGNED ON THE SCHEDULE.

(3) The check details box opens, select the "Spot Checks", click on the "**Edit Spot Check**" icon and a spot check window displays.

(4) Fill in the scores of the spot check. The task will be in your task list.

(5) Double click the task to edit the spot check results.

b. **Ability to Schedule Spot Check**.

(1) On the view bar tab, click "**SPOT CHECK**".

(2) On the secondary tool bar select "**Schedule Spot Check**".

(3) The Spot Check scheduling wizard will appear**.** Click "**Next**".

(4) Select "**Spot Check**".

(5) Select the person that will be conducting the spot check, then click "**Next**".

(6) Select the date the spot check will be conducted and the WC the spot check will be conducted in.

(7) Select the check, click "**Next**".

(8) Review the information and click "**Finish**".

8. Ability to view and enter Check Note remarks.

a. From an open WC, in Schedule display view, click to highlight the desired check.

b. Right click the highlighted check.

c. Select the "**Check Note**" icon from the menu.

d. Enter your remarks (Lost, Not Applicable, Reschedule etc.).

e. Click "**OK**".

9. Ability to add, delete or modify MIPs and MRCs in Revision Mode.

NOTE: THE WC MUST BE PUT IN REVISION MODE, DONE BY THE LCPO (STEP #25 LCPO OR 3MC ONLY). PROCEDURES 12 THROUGH 16 ARE PERFORMED FROM THE REVISION EDITOR.

a. Ability to add a New MIP**.**

(1) On the Revision Editor toolbar, click "**New MIP"** icon.

(2) The Add MIP dialog box opens.

(3) Select the MIP to be added to your WC.

NOTE: IF YOUR MIP IS NOT LISTED, ENTER THE MIP NUMBER IN THE BLANK PROVIDED IN THE LOWER PORTION OF THE SCREEN. THIS WILL ONLY BE AN ADMINISTRATIVE CHANGE UNTIL THE NEW MIP IS ADDED TO THE FR DVD. CLICK "OK". THE NEW MIP WILL BE GREEN.

b. Ability to make a maintenance item active or inactive (Delete).

(1) Follow the MIP outline to the desired maintenance item and highlight it.

(2) On the toolbar, click the "**Make Active or Inactive**" icon. The maintenance item icon in the outline will become blue for active and gray for inactive. Clicking the button will toggle back and forth.

NOTE: MAKING A MAINTENANCE ITEM ACTIVE OR INACTIVE WILL AUTOMATICALLY MAKE ALL MRCS FOR THAT MAINTENANCE ITEM ACTIVE OR INACTIVE TO MATCH THE MAINTENANCE ITEM.

c. Ability to add MRCs (Same as add cross MIP related MRCs). Follow the MIP outline to the desired maintenance item and highlight the item.

(1) On the toolbar, click the "**New MRC**" icon. The add MRC wizard opens.

(2) Click "**Next".**

(3) Click the check box next to Check to select an MRC from the reference data. A check appears and the MIP Outline on the screen becomes active.

(4) Follow the MIP Outline to the MRC to be added. Highlight the MRC and click "**Next**".

(5) Review the MRC details and make needed adjustments. Click "**Next**".

(6) Click "**Finish**" and the MRC is added to the WC's MIP Outline.

NOTE: STEPS 4 AND 5 MAY BE SKIPPED BUT THE INDIVIDUAL BEING EVALUATED NEEDS TO MANUALLY ENTER ALL DETAILS OF THE MRC IN STEP 6.

d. Ability to modify the details of a maintenance item or MRCs.

(1) Follow the MIP outline to the desired maintenance item or MRC and highlight the item.

(2) Modify or add data in the white grids only on the right pane of the window. The maintenance item or MRC icon on the MIP outline and the grid that has changed becomes yellow.

NOTE: "BOLD" TEXT INDICATES A STATUS CHANGE FOR THAT MRC. THE MRC SYSCOM CONTROL NUMBERS (MRC CODE) MAY NOT BE EDITED. IF A REVISED DOCUMENT IS RECEIVED BECAUSE OF AN FBR OR DIT REPLY, THE "ADD MRC" FUNCTIONALITY IS USED TO ADD THE DOCUMENT.

10. Ability to perform MRC lineout.

NOTE: DHS MUST APPROVE LINEOUTS BEFORE THEY ARE PRINTED.

a. From an open WC, click "**PMS Documents**".

b. Expand the appropriate MIP folder and follow the path to the MRC.

c. On the secondary toolbar, click "**Customize MRC**". The Customize MRC Document dialog box opens.

d. Scroll through the MRC and double click and highlight the procedure lines that are to be omitted.

e. To remove a lineout, double click the procedure line again.

f. Type the notes to appear on the MRC in the Tools, Parts and Materials Custom Note field. Click "**OK**".

g. Your custom note is now part of the MRC and all the icons in the organizational outline become red. (**Not yet approved.**)

11. Ability to modify MRC line out justification.

a. From an open WC, click the "**PMS Documents**" button on the top of the screen.

b. Expand the MIP for the MRC that needs changes.

c. Expand the tree for that MIP to get to the list of MRC(s) under that MIP.

d. Highlight the MRC that needs modification.

e. Click on the "**Pencil**" icon on the top left-hand corner of the screen (this the "customize MRC" icon).

f. A "Customize MRC Document" box will come up containing the MRC selected.

(1) Scroll through the MRC and click on the procedural step(s) that need(s) to be lined out. The affected procedural step will have a red line going through it. The red line indicates that the lineout has been performed but not yet approved. Lineouts approved by LCPO or higher turn the lineout from red to blue.

(2) In the Tools, Parts, and Materials Custom Note on the bottom, refer to the specific procedural step lined out and provide detailed justification for lineout (e.g., Step 1.a.(2)(a) – Step omitted per FBR 2025-18).

(3) To reverse a lineout marked in red, click on the procedural step again. As long as the lineout is not yet approved, this will clear the lineout.

12. Ability to approve MRC lineout.

a. "MY TASKS" displays MRCs that have custom review and omit line outs which require lineout for a WC in your role in the CoC. Since multiple users may belong to the same role in the CoC, only one of the user's needs to approve the lineout to remove it from everyone's list. Lineouts appear in red, indicating they are not yet approved. When approving or disapproving lineouts, the requirement is to approve All or None of the lineouts. Partial lineouts are not allowed.

b. Expand the Lineout approval list.

c. Highlight the desired row.

d. Double click the row. The Approve Customizations details screen displays for the selected item.

e. On the "View Details" toolbar, click "**Approve and Close or Reject and Close"**. The task is removed from your "My Task" list.

13. **Ability to perform weekly closeout**.

a. From an open WC, on the "Toolbar", click to open the WC menu.

b. Scroll down to "Weekly Closeout" and click it. A window opens, if there are no issues in the WC to resolve, the "**Close Out**" icon at the top of the window will be active.

c. Select it and the week will be closed out.

d. If there are issues, they must be resolved prior to the week being closed out.

14. Ability to acknowledge PMS Alerts.

a. "MY TASKS" displays PMS Alerts for MRCs that are out of periodicity. When PMS cannot be accomplished before going out of periodicity, the WCS must provide a reason, which should be specific and include well-defined details. The CoC, from the LCPO to the 3MC sees the alerts displayed in their "MY TASKS" list. Only one user needs to acknowledge the alert to remove it from everyone's list.

b. On the secondary toolbar at the top of the screen click on "**Tasks**".

c. Expand the PMS Alert list.

d. Highlight the desired row, double click it, or on the tool bar select "**VIEW DETAILS**" icon.

e. Click "**OK**".

NOTE: IF "CANCEL" IS SELECTED, THE PMS ALERT IS NOT ACKNOWLEDGED AND THEREFORE NOT REMOVED FROM THE TASK LIST.

15. Ability to Reschedule Checks. Checks that are manually added or reschedule checks when the periodicity is **weekly or greater**.

a. From an open WC in the grid, right click a check. A menu will open.

b. Scroll down to the "**Reschedule**" calendar icon and click it.

c. A calendar opens with the originally scheduled date highlighted.

d. Click the date the check is to be rescheduled. (**Only the white dates are available for the check to be rescheduled to.)**

e. Click "**Next**". Click "**Finish**".

NOTE: PER COMNAVIFOR 4790.1, A CHECK NOTE MUST BE ENTERED FOR RESCHEDULED, OUT OF PERIODICITY, NON-ACCOMPLISHED CHECKS.

16. Ability to assign maintenance responsibilities.

a. From an open WC, in Schedule display view.

b. In the grid, click to highlight the desired check.

c. On the "Toolbar", click "**Assign Crew Member**" icon, or right click the desired check and select "**Assign Crew**" from the menu.

d. Under the column heading for Crew Member, click the drop-down arrow to view available crew members.

e. Click the crewmember's name.

f. Click the small box to apply changes. A checkmark will appear in this box.

g. Click "**OK**".

17. Ability to modify equipment associations.

a. From an open WC, on the toolbar, click to open the WC menu.

b. Select "**Edit Equipment Details**".

c. Follow the MIP outline to the desired maintenance item and highlight the item.

d. Click the ellipses button in the SHIP RIN or CDM RIN row, which is found in the white grids. A dialog box will open. Use the drop-down menus to locate criteria or enter search text. Click "**GO**". Highlight the row of data needed. Click "**OK**".

e. Alternately, from the Revision Editor:

f. Follow the MIP outline to the desired maintenance item and highlight the item.

g. Click the ellipse button in the SHIP RIN or CDM RIN row, which is found in the white grids.

h. A dialog box will open. Use the drop-down menus to locate criteria or enter search text. Click "**GO**". Highlight the row of data needed. Click "**OK**".

18. Ability to archive 13-weeks.

NOTE: THIS IS PERFORMED ONLY BY THE 3MC. ALL WCS MUST BE UP TO DATE WITH THE LAST WEEK OF THE CURRENT QUARTER CLOSED OUT FOR THE QUARTER BEING ARCHIVED. WHEN THE 3MC ARCHIVES A QUARTER, A NEW QUARTER WILL BE CREATED.

a. On the view tab bar, click "**ADMIN**".

b. From the "Admin" drop down on the top of screen, click "**Archive Quarter**".

c. If any WC has not closed out a week in the quarter being archived, a message will appear, and the archive process will not be allowed to continue until close issues are resolved.

19. Ability to create an Event List.

a. Local Event List.

(1) Click on **"Reports tab".**

(2) Double click **"Local Events"** from the left-side menu**.**

(3) Click **"Next".**

(4) Select your WC from the drop-down menu. Click **"Next".**

(5) Select your date ranges when prompted. Click **"Next".**

(6) Click **"Finish"** to run your report.

b. Situational "**Event List**".

(1) Click on "**Reports tab**".

(2) Double click "**Situational Events**" from the left-side menu. Click "**Next"**.

(3) Select your WC from the drop-down menu. Click "**Next"**.

(4) Select your situational event from the drop-down menu. Click "**Next"**.

(5) Click "**Finish**" to run your report.

20. Ability to add checks to an Event List.

a. Click "**Add Trigger"** on the toolbar. A dialog box opens.

b. Select a trigger from the menu. Use the scroll bar to view all selections.

c. Click the date the trigger is to occur. The trigger icon now displays on the EVENTS calendar.

21. Ability to trigger a Local Event.

a. From the Situational view, on the secondary toolbar, click "**Events"**.

b. In the left pane, open the desired MIP outline.

c. Click to highlight the maintenance item.

d. Click the **"ADD TRIGGER"** icon to launch the Add Trigger Wizard.

e. From the list, highlight a trigger. Then select the date for the trigger to occur.

f. Click "**OK**".

22. Ability to trigger a Global Event.

NOTE: THIS IS PERFORMED ONLY BY THE 3MC.

23. Ability to generate an FBR.

NOTE: THERE ARE SEVERAL WAYS TO CREATE AN FBR IN SKED 3.2. THE FOLLOWING IS JUST ONE WAY OF DOING IT.

a. From an open WC, highlight a check from the grid.

b. On the WC toolbar menu, scroll down to "**Submit Feedback Report**" and click it.

c. Select "**Technical MIP Changes** or **Technical MRC Changes**".

d. The Feedback Report Wizard opens.

e. Several choices will be available for your selection. Choose one. Click **"Next"**.

f. Enter any additional comments. Click "**Next"**.

g. Your information will be displayed. If changes are required, click the back button, or click "**Finish".**

24. Ability to review and approve an FBR.

a. "My Tasks" displays FBRs awaiting your review and approval.

b. Expand the FBR list.

c. Highlight the desired row.

d. Double-click the row. The FBR Details block opens.

e. The ability to view, approve, modify, make urgent or reject the FBR is here.

f. The LCPO, DIVO, and DH must review and sign the FBR before it goes to the 3MC.

NOTE: THE 3MC CAN BYPASS THE CoC IF REQUIRED TO GET THE FBR TRANSMITTED ASAP.

25. Ability to start a revision.

NOTE: THE LCPO WILL PUT THE WC IN REVISION MODE FOR THE WCS.

a. Open the WC, on the "Toolbar". Click to open the "Work Center" menu.

b. Scroll down to "**Start Revision**" and click it. The Start Revision wizard opens.

c. Click "**Next**". The Start Revision dialog box opens.

d. Select the Revision Type.

e. Enter a valid Revision Name. Click "**Next**".

f. Provide a revision reason. A reason for starting a revision for anything other than an FR is required. Click "**OK**", then click "**Finish**".

g. The Revision editor will load. The evaluated individual should now be in **Revision Editor Mode**.

26. Ability to approve a revision.

a. "MY TASKS" displays revisions ready for approval.

b. Expand the revision approval list. Highlight the desired row.

c. Double click the row. The Revision Editor opens. Expand the path to the revision.

d. On the toolbar, click "**Approve**" (Star icon)

e. The Revision Editor screen closes and is removed from your task list.

27. Ability to finalize a revision.

a. Same as paragraph 26, except that if performed by the DH or 3MC once they click on "**Approve**" (Star icon), the revision is finalized.

b. Revisions should be approved (signed) by the LCPO and DIVO before being approved by the DH. When the DH goes in to approve the revision, they will see a window indicating whether the revision was approved by the LCPO and DIVO. The DH can choose to approve the revision regardless.

28. Ability to generate and view PMS Reports.

a. Open the "REPORTS" tab at the bottom right of the SKED 3.2 program.

b. A window opens with two panes. The left-hand pane has all the reports available to view. The right-hand pane is blank. This is where your data will be displayed.

c. Double click the report of your choice and follow the report wizard to display your requested data.

29. Able to add users.

a. Select the Admin tab (Last tab on the lower right).

b. Select User Management from the top menu.

c. Click "**Add User"** icon. The Edit User Details, New User dialog box opens.

d. Enter pertinent information for the new user.

e. Click the General, Feedback Reports, and Work Center tabs to check allowed permissions.

30. Ability to edit users.

a. Select the Admin tab (Last tab on the lower right).

b. Select User Management from the top menu.

c. Highlight a crewmember from the display grid, and double click it.

d. The User Details box opens.

e. Update User information in the appropriate fields.

f. Click "**OK**" to save changes.

31. Ability to disable users.

a. Select the Admin tab (Last tab on the lower right).

b. Select User Management from the top menu.

c. Highlight a crewmember from the display grid, and double click it.

d. The User Details box opens.

e. Click the Status Field arrow. Select disabled.

f. Click "**OK**" to save changes.

32. Ability to view or modify the CoC.

a. Select the Admin tab (Last tab on the lower right).

b. Select chain of command from the top menu.

c. A screen displays for the activity and lists the username, role, rate, last name, first name, and signature.

d. Click the plus sign at the far left to view by department, division, and WC.

e. Select the "**Edit Chain of Command**" icon (top left corner, under File menu). An Edit CoC display box opens. Edit accordingly (add or delete) DH, DIVO, LCPO, or WCS.

APPENDIX D

NESD CUSTOMER SERVICE

NESD is the Navy point of entry for technical support and should be the first source of support utilized for technical assistance. NESD provides Fleet users with a centralized source for receiving and routing support requests and is available 24/7/365. NESD issues a tracking number to the requester, coordinates assistance with the appropriate Subject Matter Experts (SME), and monitors the issue until it is successfully resolved.

The NESD Digital Workplace (DWP) is the end user-facing Self-Service (Tier 0) solution to guide users to resolve issues on their own by utilizing Knowledge Articles and is the preferred method of trouble ticket entry. This platform enables user self-sufficiency, multiple communication channels – email, chat, and web form, and is simple to use. Follow the steps below to submit a trouble ticket:

Contact: Navy Enterprise Service Desk (NESD)

DWP: https://nesd-dwp.onbmc.mil (Search Knowledge Article/Ask for help)

Chat: https://nesd-dwp.onbmc.mil *(Select Chat with agent)*

Email: nesd@nesd-mail.onbmc.mil

Phone: 1-833-NESDNOW (637-3669)

DSN: NESD main menu is: 647-6373

SIPR Email Support: nesd.fct@navy.smil.mil

CHAPTER 19-4

NAVAL INSTALLATIONS COMMAND 3-M POLICIES

REFERENCES.

(a) OPNAVINST 4790.4 - Ships Maintenance and Material Management System Policy
(b) NAVSEAINST 4790.8 - Ships' Maintenance and Material Management (3-M) Manual
(c) NAVEDTRA 43241 - Personnel Qualification Standard for Ship's Maintenance and Material Management (3-M) System

LIST OF APPENDICES.

A Inspection Criteria
B Division Inactive Equipment Maintenance (IEM) Plan
C Format for Reporting 3-M Inspections

19-4.1 ROLES and RESPONSIBILITIES.

a. Type Commander. The Type Commander (TYCOM) exercises primary responsibility for the effective operation and support of the Maintenance and Material Management (3-M) System. Areas of responsibility include but are not limited to the following:

(1) Ashore Maintenance Data System (MDS).

(a) Maintenance Figure of Merit family of systems.

(b) Maintenance Data Analysis Tool.

(2) Planned Maintenance System (PMS) Scheduling (SKED) software.

(3) Configuration Data Managers Database - Open Architecture (CDMD-OA).

(4) Current Shore Maintenance Project (CSMP).

(5) The screening and processing of feedback reports (FBR).

(6) Maintaining an inspection data file per paragraph 19-4.4.2.f of this chapter.

(7) Ensuring units are manned with Navy Enlisted Classification (NEC) qualified 3-M Coordinator (3MC) (as required).

(8) Analyzing 3-M inspection and self-assessment data, identifying common concerns, conducting problem root cause analysis with the development and implementation of solutions.

(9) Ensuring TYCOM inspection team members are qualified to inspect assigned areas.

b. TYCOM 3-M Team. The 3-M team consists of representatives from Port Operations (N31), Air Operations (N32), and Force Protection (N34). This team is responsible for:

(1) Assisting and advising Commander Naval Installations Command (CNIC) commands in administration of the 3-M System.

(2) Conducting reviews of PMS feedback reports and responses.

(3) Conducting 3-M System training, assists and inspections.

(4) Monitoring overall implementation and effectiveness of the 3-M System.

(5) Review of self-assessment results to identify trends and provide prompt support to stations as required.

(6) Maintaining liaison with Commander, U.S. Fleet Forces Command, Naval Sea Logistics Centers (NSLC) and other commands on 3-M matters.

c. Immediate Superior In Command and Regional Commander. The Immediate Superior In Command (ISIC) and Regional Commander are responsible for the routine monitoring and evaluation of the 3-M System for all assigned activities. Areas of responsibility include but are not limited to the following:

(1) Monitoring and evaluating 3-M Program for all assigned units in accordance with reference (a) and (b).

(2) Ensuring 3-M Inspections (3MI) are current.

(3) Ensuring subordinate commands conduct rigorous quarterly 3-M Self-Assessments and report results to the TYCOM 3-M team.

(4) Monitoring the status of troubled systems using the quarterly 3-M Self-Assessment.

(5) Ensuring subordinate commands comply with standard Work Center (WC), division and department structure as published on the JFMM TYCOM website https://www.navsea.navy.mil/Home/SUBMEPP/Products/JFMM/TYCOM/.

(6) Tracking and monitoring 3-M major milestones, training events, and conducting 3-M Spot Checks during ISIC or staff visits.

d. Commanding Officer or Officer In Charge. The Commanding Officer (CO) or Officer In Charge is responsible for establishing an aggressive Self-Assessment Program that validates the administration and execution of maintenance and detects improperly conducted maintenance or falsely reported accomplishments. The designate the 3MC in writing as the primary duty of an officer, Chief Petty Officer (CPO) or Petty Officer First Class (who has been assigned a secondary Navy Enlisted Classification (NEC) of 9517). As an exception to this policy, commands not having

an allowance for a 3MC will assign these duties in writing as the most significant collateral duty of an appropriately qualified officer, CPO or Petty Officer First Class.

e. Executive Officer. The Executive Officer (XO) is the command's 3-M System Manager responsible to the CO for the overall management of the 3-M Program. The XO will:

(1) Chair quarterly 3-M System meetings with Department Heads (DH) and the 3MC.

(2) Brief the CO on the status of 3-M.

(3) Ensure personnel receive adequate and effective 3-M System training.

(4) Ensure the effectiveness of the command's 3-M Self-Assessment Program.

f. Command Master Chief. The Command Master Chief (CMC) will:

(1) Attend the XO's quarterly 3-M System meetings providing senior enlisted feedback.

(2) Conduct PMS Spot Checks following the command's policy to ensure required maintenance is being properly performed and documented.

g. Command 3-M Coordinator. The 3MC will:

(1) Serve as the key 3-M System assistant to the XO.

(2) Maintain a file of 3-M System directives, newsletters, notes, and correspondence containing current 3-M Program information and ensure distribution to WC personnel.

(3) Maintain copies of the current Force Revision (FR) NAVY PMS Digital Video Disk (DVD), List of Effective Pages (LOEP) for every WC, changes issued between FRs in their original format and classified Maintenance Requirement Cards (MRCs). Digital copies are allowed unless there have been changes between FRs.

(4) Advise, monitor, and assist DHs, Division Officers (DIVOs), Leading Chief Petty Officers (LCPOs) and Work Center Supervisors (WCS) in matters concerning the 3-M System.

(5) Monitor the 3-M Personnel Qualification Standard (PQS) Program and maintain an auditable record of personnel qualified in 3-M PQS.

(6) Maintain a master accountability log of all PMS changes.

(7) Develop and maintain a Split Maintenance Index Page (MIP) Log.

(8) Administer the configuration management program.

(9) Supervise the command's 3-M Self-Assessment Program and provide a weekly status to the XO.

(10) Develop and administer the PMS Spot Check Program.

(11) Generate a weekly PMS Spot Check assignment matrix for officers, CPOs, and designated supervisory personnel.

(12) Ensure corrective actions are taken on all unsatisfactory PMS Spot Checks and report same to the XO as part of weekly PMS reporting.

(13) Ensure a complete back up of the SKED system is made on removable media (e.g., DVD or CD-ROM) following completion of the FR update and retain as part of the PMS Master File.

(14) Ensure two complete backups of the SKED database are produced weekly and saved in two separate locations (e.g., local hard drive, share drive).

(15) Ensure situational requirements are triggered in SKED and completed based on unit events.

(16) Ensure that Triggers are properly set at the command level.

(17) Screen all FBRs, verify content, validity, serialize and forward within seven days of origination.

(18) Maintain accountability of all submitted FBRs and actions taken until corrected or new PMS documentation is received.

(19) Ensure the FBR originator and all applicable WCs are apprised of action taken and that changes or corrections are implemented when received.

(20) Ensure 3-M documents such as Ship's Maintenance Action Form OPNAV 4790/2K (2-Kilo), Ship's Configuration Change Form, OPNAV 4790/CK (CK), etc. that require forwarding to a data processing activity are forwarded within seven days of origination or as operationally feasible.

(21) Ensure 3-M documents returned for the correction of data are promptly revised and resubmitted.

h. Department Head. The DH is responsible to the XO for the operation and execution of the 3-M System within the department. Delegating review and approval authority will not relieve the DH of his or her duties and responsibilities in maintaining an effective 3-M Program. The DH will:

(1) Ensure departmental 3-M assistant, DIVOs, LCPOs and WCSs are qualified in accordance with reference (c) and designated in writing as applicable.

(2) Ensure maintenance is prioritized to facilitate accomplishment.

(3) Review and approve all department PMS schedules and revisions.

(4) Review maintenance action annotations.

(5) Implement a Self-Assessment Program within the department to validate properly accomplished and reported maintenance.

(6) Take corrective action on all "Unsatisfactory" PMS Spot Checks and report to the XO via 3MC as part of weekly PMS reporting.

(7) Ensure all material deficiencies are documented and promptly reported.

(8) Review and verify the content and validity of all FBRs, digitally sign FBRs within five days of origination.

(9) Ensure the Configuration Management Database accurately reflects equipment changes whether the action is performed by command personnel or outside activities.

(10) Authorize placement of equipment into an Inactive Equipment Maintenance (IEM) status, ensure PMS scheduling is annotated accordingly.

(11) Review and approve department work candidates within four days of creation; ensure completeness, accuracy, and the correct assignment of priority.

(12) Review all work candidates in the departmental CSMP every 90 days.

(13) Ensure that no classified data is reflected on 3-M documents.

(14) Conduct quarterly meetings with DIVOs, LCPOs and WCSs and provide status of departmental 3-M System to the XO.

i. Department Leading Chief Petty Officer or Departmental 3M Assistant. The department LCPO is responsible for the proper operation of the 3-M System within their department. The department LCPO will:

(1) Provide 3-M System guidance and training to DIVOs and division LCPOs within their department.

(2) Participate in quarterly Self-Assessments.

(3) Ensure the proper testing and inspection of work done by outside activities prior to job acceptance.

j. Division Officer. The DIVO is responsible to the DH for the execution of maintenance within the division. The DIVO will:

(1) Ensure all PMS scheduling changes have been properly annotated and applied prior to DH review and finalization.

(2) Review the 13-Week Accountability Log at the beginning of the PMS week and sign at the end of the week if not using electronic accountability in SKED or when SKED is not available.

(3) Review and verify the content and validity of PMS FBRs within three days of origination.

(4) Ensure 3-M documents generated within the division are complete, accurate and promptly submitted to the DH.

(5) Conduct 3-M Self-Assessments as directed by the command’s policy.

(6) Provide weekly updates to the DH concerning the status of the 3-M System within the division.

(7) Incorporate 3-M System training into the Divisional Training Plan.

(8) Ensure divisional personnel are properly trained and qualified to conduct maintenance.

(9) Review divisional work candidates and the CSMP for validity and accuracy.

(10) Conduct monthly briefings for the DH on the status of all work candidates.

(11) Acknowledge PMS Alerts.

k. Division Leading Chief Petty Officer. The division LCPO is responsible for the proper operation of the 3-M System within their division. The division LCPO will:

(1) Supervise WCSs in the execution of daily maintenance.

(2) Ensure WCSs are properly trained, equipped and are knowledgeable of all WC divisional equipment maintenance requirements.

(3) Verify all divisional WC equipment is covered by PMS.

(4) Ensure PMS is properly scheduled and conducted, including all special evolution situational "R" checks.

(5) Review WC PMS records (e.g., FRs, Advanced Change Notices (ACN) and PMS FBRs and Responses), approve all lineouts and additions on the LOEP, MIP, and PMS schedules prior to DIVO and DH reviews. Ensure proper justification is noted on each lineout.

(6) Review and approve non-applicable procedural steps lined-out on MRCs.

(7) Review and sign the 13-Week Accountability Log at the end of the PMS week and ensure checks added that week are hand-written into the blank accountability log (if not using electronic accountability in SKED or when SKED is not available).

(8) Review the PMS Scheduling Forecasting Report to ensure that all Tools, Parts, Material and Test Equipment (TPMTE) are available to support upcoming maintenance actions.

(9) Provide the DIVO a weekly status of the division's Self-Assessment Program, CSMP and PMS.

(10) Ensure the Configuration Management Database reflects current configuration.

(11) Ensure FBRs are submitted requesting LOEP changes to reflect system, equipment and component installs or removals.

(12) Review and verify the content and validity of PMS FBRs within two days of origination.

(13) Ensure the divisional CSMP accurately reflects material conditions.

(14) Review and approve work candidates, act as the second point of contact for work candidates and provide the DIVO a weekly brief on the status of all work candidates in the CSMP.

(15) Ensure proper testing and inspection of work done by outside activities prior to job acceptance.

(16) Coordinate repair activities within the division.

(17) Review all quarterly Self-Assessments and promptly correct discrepancies found within the division.

(18) Review, approve, and close out weekly schedules. This closeout of the previous week's schedules must occur on the first day of the following week (i.e., Monday).

(19) Review Check Notes for required and updated information.

(20) Write PMS Alert details to include why planning allowed loss of periodicity and the plan to complete PMS.

l. Work Center Supervisor. The WCS will be a Senior Petty Officer assigned to the WC and qualified per reference (c) or civilian equivalent. The WCS will:

(1) Maintain a detailed working knowledge of all equipment deficiencies within the WC. Record all equipment deficiencies within their WC, utilizing AWN or authorized equivalent to ensure all required 3-M System documents are submitted to the division LCPO.

(2) Ensure WC personnel have completed 3-M PQS training commensurate with position held.

(3) Ensure PMS covers all maintenance worthy equipment in the WC.

(4) Maintain an accurate and current LOEP.

(5) Ensure 3-M System WC files and publications are complete, current, and available to WC personnel.

(6) Ensure WC initiated 3-M documentation is correct, legible, promptly prepared and submitted.

(7) Maintain a 13-Week Accountability Log containing the current and previous 13-Week Log if not using electronic accountability in SKED or when SKED is not available.

(8) Prepare weekly WC schedule, obtain required approval, assign maintenance personnel, and update schedule to reflect status.

(9) Ensure equipment changes, adds and removals are reflected in the Configuration Management Database and, if not, report via CK to the Configuration Data Manager (CDM).

(10) Ensure FBRs are submitted whenever:

(a) Maintenance requirements are not fully understood.

(b) Errors are believed to exist.

(c) Entries in the TPMTE block are wrong or inadequate.

(d) Additional coverage is needed.

(e) Performance of the maintenance requirement would cause a hazardous condition to exist.

(11) Ensure prompt reporting of all material deficiencies and completed maintenance actions.

(12) Ensure test and measurement equipment or other portable support equipment is delivered for test or calibration as scheduled.

(13) Ensure the DIVO and division LCPO or LPO are advised of all 3-M System activity within the WC.

(14) Spot check completed equipment file validations. Ensure accuracy of the information and PMS scheduling equipment associations.

(15) Review the PMS Scheduling Forecasting Report to ensure that all TPMTE is available to support upcoming maintenance actions.

(16) Ensure all WC weekly schedules are updated daily.

(17) Use the Edit Equipment Details function of SKED to the maximum extent possible to associate maintenance items to the CDMD-OA database embedded in SKED 3.2 for configuration items. The association should be made to the highest level (piece) of the applicable equipment being maintained (i.e., #1 Torpedo Tube vice the Slide Valve).

m. Maintenance Personnel. Maintenance personnel will perform all PMS as assigned utilizing PMS documents in SKED and ensure Check Notes contain amplifying information and tag-out identifiers as required. Maintenance personnel will:

(1) Perform assigned maintenance.

(2) Notify the WCS when:

(a) An MRC is not fully understood, appears to be incorrect or cannot be accomplished as written.

(b) There are issues with the TPMTE block of the MRC.

(c) The technician has doubts concerning his or her ability to perform the maintenance.

(d) Equipment deficiencies or casualties are discovered.

(e) Factors exist which would make performance of the maintenance unwise or dangerous.

(3) Initiate FBRs when discrepancies are discovered during the performance of an MRC.

(4) Inform the WCS when planned maintenance requirements are complete.

(5) Annotate PMS schedule to reflect accomplishment of maintenance.

(6) Sign 13-Week Accountability Log (if not using electronic accountability in SKED or when SKED is not available).

19-4.2 QUALIFICATIONS. All personnel assigned to billets associated with the 3-M System must be 3-M PQS qualified for the assigned billet per reference (c) and Table 19-4-1.

a. Evidence of qualification in support of 3-M requirements must be maintained by the command in an auditable fashion.

b. Personnel checking into the command with a 3-M qualification obtained from a previous command may be required to re-qualify. They may re-qualify directly to the highest level previously obtained and they do not have to re-qualify at lower levels.

Table 19-4-1 - Required PQS Qualifications	
3-M Coordinator	PQS-307
Departmental 3-M Assistant	PQS-305
Department Head	PQS-306
Department LCPO	PQS-305
Division Officer	PQS-304
Division LCPO	PQS-304
Work Center Supervisor	PQS-303
Repair Parts Petty Officer	PQS-302 or RPPO Continuing Training and Qualifications Software
Maintenance Personnel	PQS-301

19-4.3 PLANNED MAINTENANCE

19-4.3.1 Minimum Standards. MRC accomplishment is critical for maintaining equipment in a ready state and achieving expected service life. The maintenance tasks directed by MRCs are the minimum standards for organizational (activity) planned maintenance and therefore equipment degradation can be assumed if maintenance is deferred. The following provisions are provided to maximize on time performance of PMS and provide increased fleet latitude in maintaining equipment.

a. MRCs are prepared as instructions to complete a maintenance task based upon the premise that the personnel assigned to perform the task have sufficient knowledge of the rate listed on the card and are qualified to perform maintenance as directed by the MRC. The MRC will be accomplished in sequential order, adhering to all Warnings, Cautions and Notes. Routine sub-steps (e.g., fastener removal, steps to don and remove personnel protective equipment, turning on a vacuum) may or may not be included in the MRC and their absence should not prevent the maintainer from completing the maintenance task.

b. Per Naval Sea Systems Command (NAVSEA), procedures are written at a level of detail based on the assumption maintenance personnel are trained, qualified, and supervised by experienced leadership to execute the maintenance consistently and expertly. They exist to provide a common standard, specify acceptance criteria,

communicate warnings, and cautions specific to the maintenance and provide proven maintenance practices. They are not intended to:

(1) Supplement or duplicate rules and procedures that must be followed for hazards generally associated with the equipment (Hazardous Material Handling, Electrical Shock Risk Management, etc.) but not specifically associated with a step of the procedure.

(2) Identify every process and every warning associated with the maintenance environment of the component being maintained (aloft, in tanks, near an active flight deck, in a heat stress area, etc.)

(3) Specify every possible action of the maintainer.

c. Leadership will uphold standards for complying with maintenance procedures. This standard does not mean the maintainer is expected to robotically follow the MRC word-by-word. Leadership, trainers, monitors, auditors, and inspectors should not expect it. The key word here is intent. The objective is to perform the intent of each step (not necessarily step-by-step performance).

d. If a step is missing that is necessary to complete the task, and that step is not obvious to the Maintenance Person (MP), an FBR should be submitted.

e. MRC completion status is dependent on the accomplishment of all procedural steps on all the equipment listed on the MRC or its accompanying Equipment Guide List or items listed on the Location Guide List (LGL) section of the MRC.

f. The performance of additional rational actions during the accomplishment of an MRC is authorized. Examples of such actions include turning on and off items utilized during the performance of the MRC (vacuum cleaners, test equipment, etc.) and general housekeeping (cleaning up or containing spilled fluids or dirt).

g. The substitution of any tools, materials or test equipment not held by the activity should be considered prior to deciding to defer the maintenance until the exact tools, materials or test equipment listed on the MRC are procured. This is especially critical for frequently required maintenance where several performance cycles can be missed while waiting for supply to provide the correct items. Substitution requirements are provided by reference (b) and other technical documents.

19-4.3.2 Functional Components.

a. PMS Master File. The Master File, maintained by the units 3MC, contains information relative to PMS requirements that are specific to equipment for which the command is responsible. The Master File provides for duplicate issue of missing MIPs and MRCs, contains supplementary information provided by NSLC Detachments Norfolk or San Diego and serves as a repository for changes received between FR distributions, which must be retained on file until the changes are reflected in a subsequent FR. Master File content is delineated in appendix A, section I-B the Command Level Effectiveness Review (CLER).

b. Work Center PMS File. The WC File provides a ready reference of planned maintenance requirements and information to be retained in the working area for use

by the WCS and maintenance personnel. The WC File contains only the documents and information applicable to a specific WC. The content of the WC File is delineated in appendix A section I-A, Scheduling and Execution Effectiveness Review (SEER).

c. PMS Administrative Requirements. In lieu of a WC or a Master File the following should be retained:

(1) Work Center

(a) Current locally generated LOEP and MRCs.

(b) Current Tailored Force Revision reports.

(2) 3-M Coordinator

(a) SKED 3.2 Help file.

(b) Split MIP Tracking Log (updated to current FR).

(c) Applicable 3-M instructions (Activity, ISIC, or TYCOM).

(d) Current 3-M messages and guidance.

(e) Current 3MC Tailored Force Revision (TFR) Reports.

(f) Master classified MRCs.

(g) Current SKED Database back-up files on DVD or CD-ROM and an Excel spread sheet from the SKED report Checks and Maintenance Outlook Report of all WCs, for the current and next future quarter.

(3) 3-M Program short and long range training plan approved by the XO.

(4) The following post-quarter SKED reports will be generated by the 3MC and forwarded to the ISIC by the third Monday of the quarter as conditions permit. These reports will be analyzed and electronically routed through the applicable DH to the XO. These reports will be retained as objective quality evidence, by the 3MC for four quarters.

(a) PMS Analysis Spreadsheet.

(b) Spot Checks – Passed & Failed Reports.

d. Interim MRC Procedures. The activity may develop interim MRC procedures based on experience and applicable technical manuals in support of equipment or systems without PMS coverage until formal documentation is received. Before scheduling preliminary MIP requirements, the WCS and the DH must verify their applicability to installed equipment.

e. Weekly Status Report. The weekly PMS monitoring status reports will be retained, electronically if desired, by the 3MC for six months. These reports from the 3MC to the XO will contain, as a minimum:

(1) Completed Spot-Check and Monitored MRC results.

(2) Completed WC audits and results.

(3) The number of FBRs over seven days old that have not been reviewed by the Chain of Command (CoC).

(4) Abatement and corrective actions completed because of a monitoring program finding.

(5) IEM Details Summary Report.

(6) Overdue (Alerting) MRCs and plan of corrective action.

f. Change Service Accountability Log. The Change Service Accountability Log (CSAL) (Figure 19-4-1) provides a definitive record of all changes to a command's 3-M Program. Whenever a change to a command's 3-M Program is directed, be it from an FR, FBR, ISIC direction, etc., the change will be routed to the concerned WCS(s) via a memorandum. Whenever such a memorandum is issued, it must be recorded in the CSAL. Once the WCS reports the directed change has been completed, the 3MC will file the WCS's response and annotate the CSAL that the action is complete.

(1) The CSAL is comprised of the actual log sheet, a copy of all memos routed to the WCS and the memo from the WCS to the 3MC indicating completion.

(2) The importance of the CSAL cannot be overstated. In essence, it provides for a day-to-day, year-to-year record of changes to a command's planned maintenance program. It is also a turnover document at deployment sites, allowing a current command to quickly identify all changes from a previous command. Finally, it will be inspected during all command 3-M assessments and inspections, providing visibility as to how well a command manages 3-M from one inspection to another.

Figure 19-4-1 - Change Service Accountability Log

FR Change Number or Authority	Date RCVD	Cognizant Dept. or WC	Date Cover Sheet Issued	Date Cover Sheet Returned	Date Master File Updated or Item Closed	Summary of Change

19-4.3.3 Related Maintenance. Related maintenance, so designated by the ISEA or Technical Warrant Holder, is determined from the MIP. The "RELATED MAINT" column of the MIP reflects related maintenance requirements. Related requirements are positioned on the MIP to line up directly across from the MRC to which they are related. Related maintenance requirements are also identified in the TPMTE section of the MRC under "MISCELLANEOUS".

NOTE: MANDATORY RELATED REQUIREMENTS MUST BE LINKED IN SKED TO BE AUTOMATICALLY SCHEDULED.

a. Related Maintenance Categories.

(1) Mandatory Related. Mandatory related maintenance requirements are those maintenance actions that must be accomplished concurrently with another maintenance requirement. The mandatory relationship is indicated with the use of the # sign. If the mandatory related maintenance resides on the same MIP, it will be reflected in the "RELATED MAINT" column as "periodicity#" (e.g., M-3#). If the related maintenance resides on another MIP, it will be reflected as "MIP:Periodicity#" (e.g., IC-013/033:M-4#). Mandatory related maintenance requirements are automatically scheduled by SKED.

(2) Convenience Related. Convenience related maintenance requirements are those maintenance actions that can be accomplished concurrently with another maintenance requirement to save time, such as preliminary steps and tag-outs already accomplished, or for work force considerations. If the convenience related maintenance resides on the same MIP, it will be reflected in the "RELATED MAINT" column as "periodicity" (e.g., M-5). If the related maintenance resides on another MIP, it will be reflected as "MIP:Periodicity" (e.g., EL-010/001:M-4)). In both cases, the # symbol is omitted. The WCS manually schedules convenience related requirements.

(3) Conditional Related. Conditional related maintenance requirements are those maintenance actions that are performed when specific conditions are present or specified parameters are not met on the referencing MRC. Conditional related maintenance will appear on the MIP in the same manner as convenience related maintenance. The WCS manually schedules conditional related requirements.

(4) None. No related maintenance is reflected as "None" in the "RELATED MAINT" column.

b. Work Center Supervisor Actions. WCSs are encouraged to review their schedules on a regular basis for opportunities to perform other PMS when an equipment or system has maintenance actions scheduled. Rescheduling of PMS to take advantage of other system maintenance (convenience related) is highly recommended.

(1) If an MRC has related maintenance from another MIP, review the related MIP and MRC and determine if it requires assistance from another WC.

(2) If the related MIP and MRC does not require assistance from another WC and is not on the lead WC LOEP, submit an FBR to have it added to the LOEP.

(3) If the related MIP and MRC requires assistance or completion by another WC and is mandatory, convenience or conditional related then it should also be on the lead WC LOEP. If it is not on the lead WC LOEP, submit an FBR to have it added to the LOEP. If the related MRC requires technical assistance, a special NEC, or another rating, that is not part of the lead WC, then the person with the technical training, special NEC or required rating should be temporarily added to the lead WC "Crew List" and assigned the related maintenance in either an assist or performance role. All WCSs involved will collaboratively plan the required maintenance and may adjust schedules based upon individual workload. When the maintenance is completed, the lead WCS will mark the MRC as completed.

19-4.3.4 Inactive Equipment Maintenance.

a. Inactive Equipment. A piece of equipment or system intentionally placed in a hibernated state for a specific period with the intention of reactivating that equipment or system at the end of that period.

(1) Status I. Equipment that will:

(a) Remain onboard.

(b) Is not scheduled for corrective maintenance or overhaul.

or

(c) Will be inactive during extended shutdown periods and maintenance availabilities as determined by the DH.

(2) Status II. Equipment that is inactive and:

(a) Subject to corrective maintenance, overhaul, or removal for safe storage.

or

(b) Temporarily transferred to another activity for maintenance responsibility for extended shutdown periods as determined by the DH.

(c) When system(s) components are scheduled for replacement.

b. Implementation and Responsibility. While inactive, minimum maintenance is performed to ensure the success of the reactivation. The IEM section of the MIP will cover this maintenance. However, consideration should also be given to active PMS maintenance checks (e.g., M-1, Q-1, A-1) that can be manually added and performed during this period of inactivity.

(1) The activity will develop an IEM plan for all inactive equipment. The plan will include reason for inactivation, and duration. DH approval of this plan will be documented in the "SKED IEM" remarks. Use Appendix (B)

(2) To implement procedures for the accomplishment of PMS for equipment declared in an inactive status, current PMS schedules are modified to annotate the requirements listed in the IEM section of the MIP. For advance planning and scheduling of maintenance to take place, it is necessary to determine and identify the extent to which unit personnel will conduct PMS during an inactive period. MIPs in each WC will be reviewed to determine if equipment has IEM coverage (e.g., Lay-up (LU), Periodic Maintenance (PM), Start-up (SU) and Operational Test (OT)), if the coverage is adequate, and what procedures to follow if there is no IEM coverage on the MIP in question or provided coverage appears inadequate. The Department Head is responsible for determining equipment IEM status. When placing a system or equipment in IEM status, the DH will also determine the IEM start date to be reflected in SKED. The IEM end date will not be applied in SKED until the system or equipment is ready to be brought out of IEM status. All periodic PMS scheduled at the end of IEM should be reviewed for applicability, with applicable maintenance accomplished prior to operating equipment.

(3) IEM procedures are listed on MIPs and separated from operational PMS by a horizontal line. The IEM section is titled "Inactive Equipment Maintenance" and is prefaced by the following statement: "The following requirements will be scheduled when equipment is inactivated for periods of prolonged idleness." When there are no IEM requirements the words "None required" will appear under the IEM section of the MIP. When IEM procedures are inadequate, submit an FBR. The unit should consider all factors that affect equipment deterioration and take necessary precautionary measures. These factors include environmental conditions, equipment location, susceptibility to damage or other factors that cannot be anticipated when IEM procedures were originally developed by the cognizant ISEA or design activity.

(4) The lack of IEM requirements on a MIP does not prohibit placing that system or equipment into an inactive state. Additionally, certain locations require precautions and maintenance not required force-wide. The unit should consider all factors that affect equipment deterioration and take necessary precautionary measures. The WCS or LCPO is responsible for identifying factors that are inadequate and may require additional preparation and maintenance of the inactive equipment while reporting same to the DH for approval. Factors may include environmental conditions, equipment location or susceptibility to damage. For those actions that are recurring in nature, the WCS should submit an FBR for possible MRC development.

c. IEM Scheduling. SKED provides the capability to perform IEM scheduling.

(1) Status I. The scheduling of maintenance for Status I inactive equipment utilizes conventional PMS scheduling techniques. LU checks will automatically be added to the schedule at the beginning of IEM by SKED. PM checks will be manually added to the schedule by the WCS for the period of IEM following the guidelines of the MIP. At the conclusion of IEM, SU checks and routine PMS will automatically be added to the schedule by

SKED. SU checks must be accomplished the week IEM ends. All periodic checks added at the end of IEM, can be moved to the right, not to exceed the allowable date range. Since the MRC date range cannot be applied to the left (into the IEM period), the MRC date range can only be moved to the right and therefore only the plus value of the specific range, i.e., the date range for a monthly is 21-41 days. The requirement can only be moved (scheduled) ten days to the right and will not go into "alert" until after the tenth day. This allows the MP or WCS scheduling flexibility within the plus side of the date range of the MRC.

(2) Status II. The scheduling of maintenance for Status II inactive equipment utilizes conventional PMS scheduling techniques, however, not all scheduled IEM PMS may need to be accomplished by activity personnel. LU checks will automatically be added to the schedule at the beginning of IEM by SKED and may be marked "NA" if the LU check did not support the equipment being removed from the activity or "Accomplished by Higher Authority" symbol if completed by the intermediate or depot level maintenance activity. PM checks may be required to be schedule during the IEM period. At the conclusion of IEM, SU checks and routine PMS will automatically be added to the schedule by SKED. SU checks must be accomplished the week IEM ends and may be marked with the "Accomplished by Higher Authority" symbol if they were completed by the intermediate or depot level maintenance activity. Routine PMS added at the end of IEM may also be marked with the "Accomplished by Higher Authority" symbol if they were completed by the intermediate or depot level maintenance activity. All periodic checks added at the end of IEM, can be moved to the right, not to exceed the allowable date range. Since the MRC date range cannot be applied to the left (into the IEM period), the MRC date range can only be moved to the right and therefore only the plus value of the specific range, i.e., the date range for a monthly is 21-41 days. The requirement can only be moved (scheduled) ten days to the right and will not go into "alert" until after the tenth day. This allows the MP or WCS scheduling flexibility within the plus side of the date range of the MRC.

NOTE: WHERE THE GOAL OF 100% ACCOMPLISHMENT CANNOT BE REACHED, THE UNIT'S CoC MUST BE KEPT INFORMED OF THE CIRCUMSTANCES THAT PREVENT ACCOMPLISHMENT OF SCHEDULED MAINTENANCE.

19-4.3.5 Scheduling. PMS is a portion of the command's 3-M Program that provides, in one authoritative system, the scheduling information and technical procedures governing planned maintenance. PMS provides a simple method for scheduling and documenting the execution of planned maintenance procedures. Fleet policy and scope are listed in Chapter 19 of this volume.

a. Situational maintenance scheduling will be managed utilizing the tools provided by the computer based PMS scheduling software employed by the activity. All event driven situational requirements will be "triggered" when required and performed per reference (a).

b. The MP will be assigned prior to commencing the week and must complete the maintenance as directed. If a different person is required, the WCS will reassign the PMS accordingly.

c. Check Notes are required in SKED under the following circumstances.

(1) When PMS is marked as "lost".

(2) When PMS is marked as not-applicable.

(3) When PMS is marked with the '¢' symbol, "satisfied by Higher Level Maintenance."

(4) When PMS requires a tag-out, the tag-out program of record identifier will be entered.

d. After the FR is approved, the 3MC will conduct quarter archival to maintain one completed quarter, one current quarter, and at least four future quarters. This permits the ability to review past records and forecasting of upcoming maintenance actions.

19-4.3.6 SKED. The use of SKED version 3.2 or subsequent versions for PMS scheduling constitutes full compliance with all administrative provisions of the 3-M Manual.

a. Guidance for use of SKED is provided via the SKED users guide with help menus, and wizards associated with SKED functionality.

b. The Navy PMS DVD or CD-ROM is used to update the command or unit's SKED PMS data

c. The SKED program uses days to schedule and keep track of calendar periodicities. MRCs are displayed as out of periodicity when they fall outside the established date ranges in the SKED program. These date ranges are as reflected in Table 19-4-2.

Table 19-4-2 - SKED Periodicity – Date Ranges

Periodicity	Date Range
Daily	None
2D	None
3D	None
Weekly	None
2W	9 - 19 days
3W	14 - 28 days
Monthly	21 - 41 days
2M	41 - 83 days
Quarterly	61 - 121 days
4M	83 - 165 days

Table 19-4-2 - SKED Periodicity – Date Ranges	
Periodicity	Date Range
Semi-Annually	121 - 243 days
8M	165 - 331 days
9M	+ or - 90 days from scheduled date
Annual	+ or - 90 days from scheduled date
Multi-month after annual	+ or - 90 days from scheduled date

19-4.3.7 SKED Server Failure. In the event of a SKED server failure, operation of PMS performance and tracking is as follows:

a. Retrieve Maintenance Outlook Report that was created following approval of current FR.

b. The WCS or LCPO will maintain the assignment of PMS with the Maintenance Outlook Report until server is restored.

c. Print assigned MRCs from the PMS viewer program that is located on the FR DVD.

d. Document and retain accomplished maintenance on printed blank 13-Week Reports that are in the documents folder on the FR DVD.

e. When the server is restored, update SKED based on accomplished maintenance documented on 13-Week Reports.

19-4.3.8 Accomplishing PMS. Maintenance personnel use MRCs to accomplish assigned planned maintenance as described in sub-paragraphs 19-4.3.8.a. through 19-4.3.8.h of this chapter.

a. From SKED “My Task” view, review the 13-Week Report.

b. Determine maintenance task(s) assigned.

c. Determine when the maintenance task(s) are due.

d. Determine what tools, parts, material, test equipment or supplies are needed. For MRCs that contain inspections and then maintenance actions based upon the inspection findings, the TPMTE needed to perform the follow-on maintenance caused by the inspection findings does not need to be obtained prior to performing the MRC but rather, may be obtained as needed.

e. Perform the maintenance on schedule.

f. Notify the WCS immediately whenever one or more of the following conditions exist:

(1) Anything on an MRC is not fully understood, appears to be incorrect or cannot be accomplished as written.

(2) TPMTE prescribed by the MRC is not available, is not correct or questions about substitutions arise.

(3) Any doubt exists about your capability, training, or experience to properly perform the maintenance requirement as prescribed.

(4) Factors exist which would make performance of the maintenance requirement unwise or dangerous (e.g., disassembly of equipment needed for operations, radiation when prohibited, situations causing safety hazard to exist, etc.).

(5) Equipment deficiencies or casualties are discovered.

(6) Any provisions or requirements on the MRC cannot be accomplished as prescribed.

g. If an MRC can be completed step-by-step as written, then the maintenance action can be signed off as completed. Report completed planned maintenance actions to the WCS, update the PMS schedule to reflect the completed maintenance, annotate and sign the 13-Week Report. If multiple maintenance personnel are assigned to a single maintenance action, the most senior person assigned must update the PMS schedule, annotate, and sign the 13-Week Report or Check Note if using SKED 3.2 electronic accountability.

h. If inspection criteria or a threshold inspected by the MRC does not meet the intended criteria, then those maintenance actions cannot be signed off as completed until the discrepancies are corrected. Maintenance actions not fully completed will be reported to the WCS. However, if material deficiencies or casualties, which are unrelated to that MR, are discovered, the MR can be checked off (provided the MR was fully completed) but the discrepancy must be reported via the MDS. The only exceptions are:

(1) Systems designed with redundancy capability (e.g., AN/GPN-30, AN/URN 32, AN/FPN63, etc.) if one channel or stack meets the MRC criteria then maintenance action can be signed off as complete. However, the discrepancy must be recorded via MDS (Maintenance Data Analysis Tool for Air Operations).

(2) Maintenance actions that can be signed off as complete are those discrepancies where the PMS documents (MRC or MIP) have an actual statement that directs a CSMP entry(s) to be made if there are discrepancies. The statement to inform the WCS of discrepancies, by itself, is not sufficient to sign the maintenance action as complete when discrepancies exist.

19-4.3.9 Non-Accomplished Categories. The WCS or LCPO will add a brief description for each check note or alert for non-accomplished categories using subparagraphs 19-4.3.9.a through 19-4.3.9.g of this chapter.

a. System or Equipment Failure. System or equipment is not operational or in a reduced operational status thus preventing maintenance from being accomplished. CSMP Job Sequence Number (JSN) required in additional text description.

b. Inadequate Maintenance Procedures. MRC procedure or steps cannot be accomplished to a point where the maintenance can be considered accomplished. FBR number required in additional text description.

c. Unit Operational Requirements. Operations prevent the maintenance from being accomplished. Requires additional text description.

d. System or Equipment Operational Requirements. Required operation of system or equipment prevents maintenance from being accomplished. Requires additional text description.

e. Lack of Hazardous Material. Correct Hazardous Material (HAZMAT) not available at the time maintenance was to be performed. CSMP JSN required in additional text description.

f. Missing or Incorrect TPMTE. Correct or calibrated TPMTE was not available at the time maintenance was to be performed. CSMP JSN required in additional text description.

g. Other. Requires additional text description.

19-4.3.10 Accountability. The credibility of the Navy PMS program relies heavily on the individual accomplishing the maintenance. The required dedication and integrity of that individual cannot be overstressed.

a. To maintain accountability, personnel are required to sign for the completion of assigned maintenance on the 13-Week Accountability Sheet. The WCS is required to review and sign the Accountability Sheet weekly to verify the accuracy and completeness of entries. Accountability sheets will be maintained in the WC PMS Manual for the current and previous quarter.

b. Electronic Accountability may be utilized by commands employing SKED 3.2. When an individual updates the disposition of a check, this is the same as signing and dating a check completion on a 13-Week Accountability Sheet. The disposition of a check will become permanent when the weekly closeout is performed. All PMS maintenance assigned to a MP is presented to them immediately upon SKED 3.2 log-on; and CoC review can be tracked on the Weekly Closeout Signature Sheet. However, commands must still print, sign, and retain 13-Week Accountability Sheets as prescribed in para 19-4.3.10.a. of this chapter to retain accomplishment record in the event of a database loss.

19-4.3.11 Force Revision Implementation. In addition to the requirements of reference (a), the following steps ensure the most efficient and thorough implementation of an FR:

a. MRC deletions on MIPs will be marked to indicate the reason for deletion:

(1) Scheduling Aids (SA). Indicate applicable scheduling aid "(e.g., SA-.").

(2) Split MIP. Indicate responsible WC (e.g., "EA01") if the MRC is applicable to the activity, the responsible WC designation will be used versus a scheduling aid.

(3) "Other" includes approved responses to FBRs, ACNs (e.g., "NSWC ltr Ser 4790.005."), Message Date Time Group (e.g., "NUWC R124535Z AUG 05."), dual periodicity. Indicate guiding notation for deletion: "SA-1" or "Note 1", configuration change number.

b. The FR will be completed on or before the first Monday of the new calendar quarter. When operational schedules do not provide adequate time to implement the revision prior to the start of the quarter, the XO may direct an alternate implementation date. This deferred FR will be reported to the ISIC.

c. It is advisable to complete the FR process through DH approval before conducting quarterly audits by a chief or more senior.

d. The 3MC will:

(1) Route the Service Brief to the CoC for review.

(2) Enter the FR number from the ALID in the PMS Supersedure and Accountability Log.

(3) Update PMS and TFR data into SKED prior to routing the change documentation to WCs.

(4) Route the FR to WCS for implementation. See Figure 19-4-2 and Figure 19-4-3 of this chapter for an example of a routing memorandum and an FR implementation checklist, respectively)

(5) Delete SKED FBRs after reflection within the FR.

e. The WCS, upon receipt of the change document from the 3MC, will:

(1) Make the appropriate entry in the WC Record of Change Log

(2) Make appropriate LOEP, MIP, MRC, etc. changes to the WC PMS File.

(3) Apply changes to the WC PMS schedule utilizing SKED Revision Editor.

(4) Route revision changes to division LCPO for review and concurrence.

f. The division LCPO will:

(1) Verify that all PMS changes have been properly applied to the WC schedule utilizing SKED Revision Editor.

(2) Review line outs on LOEPs, MIPs and MRCs. Initial all such line-outs to indicate concurrence.

(3) Submit PMS schedule to DIVO for review and concurrence.

g. The DIVO will:

(1) Verify that all PMS changes have been properly applied to the WC schedule utilizing SKED Revision Editor.

(2) Review line outs on LOEPs, MIPs and MRCs. Initial all such line-outs to indicate concurrence.

(3) Submit PMS schedule to DH for review and approval.

h. The DH will:

(1) Verify that all PMS changes have been properly applied to the WC schedule utilizing SKED Revision Editor.

(2) Review and approve lined-out MIPs on the LOEP, and MRCs on the MIPs.

(3) Review and approve WC PMS Schedules.

i. The WCS makes final entries in the WC Record of Change Log, completes the PMS Change Documentation Routing Memorandum, and returns it to the 3MC.

j. The 3MC updates the CSAL and notifies the XO that the FR has been installed after receiving all FR PMS Change Documentation Routing Memorandums from the WCs.

Figure 19-4-2 - Force Revision Routing Memorandum

MEMORANDUM

From: 3-M Coordinator

To: _____ Work Center Supervisor

Subj: FORCE REVISION PACKAGE X-XX

Encl: (1) Force Revision Implementation Checklist

(2) List of Effective Pages

1. Force Revision Serial: X-XX has arrived from NSLC

2. The SKED Force Revision (FR) update is complete. Begin your WC FR implementation using Enclosures (1) and (2). Complete through your Department Head no later than Day/Month/Year.

3. Corrections, including those to LOEP, MIP and MRC, should be made immediately. Make certain ACNs and FBR responses are reflected in the FR. If not, maintain the copies and changes to your MIP(s) and MRC(s) until reflected in a subsequent FR.

4. MRCs with procedural line-outs previously approved by the LCPO must again be reviewed by the LCPO to confirm they continue to meet the requirements of COMUSFLTFORCOMINST 4790.3, Volume VI, Chapter 19. Specifically, in the procedure block, Work Center Supervisors may line-out the non-applicable line items (alternate procedures) that do not pertain to current equipment or configuration when the step includes the words “if applicable” or a note identifies steps to be omitted. These items must be reviewed and approved by the division LCPO. As these changes are WC and maintenance item specific, submission of an FBR is not required.

MEMORANDUM

From _____ Work Center Supervisor

To: 3-M Coordinator

Subj: FORCE REVISION IMPLEMENTATION CHECKLIST COMPLETION

1. The following actions have been accomplished in SKED to implement Force Revision X-XX.

Task Description	Initial
Verified all equipment is listed under each MIP.	
Verified new or changed MRCs (green or yellow) are added to the correct Maintenance Item (equipment).	
Verified all applicable MRCs for each piece of equipment are active.	
Verified all MRC's have associated "Related Maintenance" attached.	
Verified that all MIP lineout's have a technical reason documented for deletion. (Select the "Pencil" Icon on top row)	
Verify Maintenance Item Serials & Locations are correct.	
Upon completion of implementation Marked Complete for digital approval by: LCPO, Division Officer and Department Head.	LCPO
	DIVO
	DH

2. After DH approval:

LCPO run SKED report PMS Documents and Customized MRCs – Line-outs. Verify each procedural lineout meets JFMM volume VI chapter **19-4.3.12.** requirements.	
WCS create an excel spread sheet from the Maintenance Outlook Report as a minimum electronic backup forecasting as many quarters in advance as available and store it on your hard drive (not a LAN drive) in the event of the LAN crashing.	
WCS select "Work Center" from the upper menu and "Update Unassigned Slots." Initially, any MRC without ownership will be assigned to the WCS. Reassignment by the WCS or LCPO will follow.	

3. Printing requirements for MRCs are determined by individual command policy. Printed MRCs must come from "PMS Documents" (not PMS Viewer).

4. Approval Signatures:

19-4.3.12 Planned Maintenance System Feedback Reports. PMS FBRs are used to identify problems with PMS documentation or to request the addition or deletion of PMS coverage. Issues with the periodicity, rates, man-hours, TPMTE and procedure may all be reported via an FBR. An FBR is also used to request copies of classified MRCs, request the addition or deletion of an MRC (maintenance requirement) to or from a MIP, splitting a MIP between WCs, shifting of maintenance responsibility or to request PMS coverage for newly installed systems or equipment. Paragraphs 19-4.3.12.a. through 19-4.3.12.j of this chapter. provide amplifying information dealing with the issues that may prompt the submission of an FBR.

a. Periodicity. An FBR can be used to request the increase or decrease in the frequency of a maintenance action, i.e., an MRC. However, the originator needs to keep in mind that the ship or unit has the prerogative to increase the frequency because of harsh weather, unusual operating conditions or corrective maintenance and associated testing requirements. A 726 Class submarine submitted an FBR requesting the frequency of cleaning a specific electronics cabinet filter be increased from quarterly to monthly. Research revealed this MRC was applicable to all 726 Class units and no other ship had submitted a similar request. In fact, two other units had requested the frequency be decreased to semi-annual. It was determined that the submitting unit was in an extended upkeep period and increased foot traffic by shipyard personnel near the electronic cabinet was the most likely cause of the filter becoming clogged. The ship was authorized to increase the frequency to support the extended upkeep period and the periodicity of the MRC was not changed.

b. Rates. The Rates block on the MRC represents the developer's recommendation of the skill level (rate and rank) best suited to accomplish the maintenance action. The key word is recommendation. Qualified personnel other than the rate and ranking specified may be assigned. When an NEC is assigned or Damage Control Petty Officer or Safety Petty Officer, substitution of other personnel is not allowed other than those exceptions as noted in reference (a). An FBR requesting the rate on an MRC be changed from an ET2 to an FT2 will probably not pass TYCOM screening, yet an FBR requesting the addition or deletion of personnel will generally pass to the cognizant technical activity for review.

c. Man-hours. The MRC reflects the average time per equipment, per person. It does not reflect or account for gathering and putting away tools, tag-outs or time removing and replacing interferences. From a maintainer's perspective, this is not an accurate representation of the time required to accomplish the maintenance action. The Future of PMS initiative will attempt to do a better job of accounting for this additional time but until then, FBRs should be submitted only when the allotted time per equipment is significantly out of synch with the actual time required. For example, an MRC calls out 0.5 man-hours per equipment, but it takes 1.0 man-hours.

d. Tools, Parts, Material and Test Equipment. TPMTE FBRs should be submitted when the procedure calls for an item not listed in the TPMTE block or when the TPMTE block lists an item not called out in the procedure. Updating the MRC to reflect

common hand tools, administrative or office supplies and basic housekeeping items is addressed in paragraph 19-4.3.12.k.(1) of this chapter.

e. Procedure. Procedures are written at a level of detail based on the assumption maintenance personnel are trained, qualified, and supervised by experienced leadership to execute the maintenance consistently and expertly. MRCs exist to provide standardized proven procedures, specify consistent acceptance criteria and to communicate warnings and cautions relative to the specific maintenance action. They are not intended to specify every possible action of the maintainer. There may be instances where an obvious typographical error exists on the MRC (example: Turn switch to ON; however, switch may already be ON and the intent of the step is to turn unit off, the card should read Turn switch to OFF). This type of error should not prevent the scheduling or performance of maintenance. However, in this situation, the accomplishment of the MRC is not possible until the WCS reviews the error and concurs that it is safe to proceed. A temporary notation including the reason for the correction must be made on the MRC, initialed by the WCS and an FBR submitted. Extreme caution will be taken when reviewing MRCs for this type of error. Errors must be obvious typographical errors and a PMS FBR must be submitted immediately upon discovered. Do not permanently alter the MRC until authorized by the applicable Systems Command (SYSCOM), ISEA or NSLC Detachment. If a step is missing that is necessary to complete the task, and that step is not obvious to the maintenance person, submit an FBR to have it added. An FBR submitted to request procedural changes should include the originators contact information and supporting rationale or justification. If, however, a step is missing that is clearly obvious, such as a ladder was used to install a fixture, but steps were not provided to put the ladder back in stowage, an FBR only serves to overload a process that should be focused on more technical issues.

f. Duplicate MRCs. Unclassified MIPs and MRCs are now available from the DVD. Copies of classified MRCs still require an FBR request due to handling requirements.

g. Addition or Deletion of an MRC. During the life cycle of a system, equipment, or component it may become necessary to add a maintenance action to prevent an age related functional failure or to delete a maintenance action due to inherent reliability not foreseen during maintenance development. An FBR submitted to request the addition or deletion of an MRC should include the originator's contact information and supporting rationale or justification.

h. Newly Installed or Removed Equipment. While an FBR request for PMS coverage will provide initial maintenance coverage or deletion of MIP(s) because of equipment removal, submission of a CK is still required to initiate the rest of the logistic support change process. This point cannot be overstressed; the submission of the FBR does not relieve the ship or unit from initiating a . The CK initiates supply support, CDMD-OA changes, selected record drawing updates and class maintenance plan updates.

i. Splitting a MIP. There are instances in which a MIP includes MRCs for more than one WC to perform. When this occurs, a decision is required by the command as to whether the MIP will be split or will be scheduled singly by one WC. Only the XO

can authorize the splitting of a MIP if an MRC requires another WC to perform the entire maintenance action. If the decision is made not to split the MIP, then the MRs will be accomplished through the coordination of WCSs.

(1) If the MIP is split, the following procedures apply:

(a) Submit to the XO a non-technical PMS FBR requesting approval to split the maintenance responsibility.

(b) Upon receipt of the XO's concurrence, the 3MC will make an annotation in the remarks block of the FBR stating, "XO concurs with splitting MIP maintenance responsibility".

(2) Upon receipt of the FBR approval:

(a) Utilizing the SKED Revision Editor, delete the MRC from the MIP and show the reason for deletion as the designation of the WC assuming responsibility (e.g., EE01).

(b) If the WC assuming responsibility does not reflect the MIP and maintenance items, utilize the SKED Revision Editor to add them. Schedule only the MRC(s) that pertain to the WC. Reflect remaining as deleted with the reason for deletion the designation of the parent (lead) WC (e.g., EA01).

(3) If the situation occurs where a WC removes a split MIP, the following procedures apply:

(a) Submit an XO approved, non-technical PMS FBR reporting the decision to remove the split maintenance responsibility. Upon receipt of the XO's concurrence, the 3MC will make an annotation in the remarks block of the FBR "XO concurs with removing split MIP maintenance responsibility".

(b) Upon receipt of FBR approval, utilize the SKED Revision Editor, remove the MIP, MRC(s) and maintenance item(s) from the WC no longer involved. Ensure that the lead WC assumes full responsibility for the MIP and MRC(s) and annotates their schedules accordingly.

j. Shift of Maintenance Responsibility. Individual units sometimes consider it necessary to shift maintenance responsibility from one WC to another, to combine two or more existing WCs or to split an existing WC. These requests for changes of PMS maintenance responsibility require XO concurrence and may require final approval by the applicable TYCOM. Due to the considerable administrative burden, requests for this type of change should not be submitted to accommodate a temporary situation such as short-term assignment of two WCs to one supervisor.

(1) The following factors should be carefully considered before submitting such requests:

(a) Composition of WCs by size and ratings.

(b) Scope of maintenance responsibilities.

(c) WC workload.

(d) Ease of administration of a WC as a cohesive maintenance group.

(e) Importance of WC grouping to equipment maintenance responsibilities, PMS scheduling, MDS reporting and CSMP listings.

(2) When changes in maintenance responsibility are considered necessary, the following procedures apply:

(a) Submit a PMS FBR (Non-technical). Indicate from which WC(s) equipment is to be deleted and to which it is to be transferred. Upon receipt of the XO's concurrence, the 3MC will make an annotation in the remarks block of the FBR "XO concurs with the shift of maintenance responsibility

(b) WC or equipment changes will also be reported in the OMMS or SNAP system via a configuration change request CK through the CSMP up-line reporting process.

(3) Upon receipt of the FBR approval, perform the following actions:

(a) The PMS Master File is updated to reflect deletion of the MIP from one WC and addition to the WC receiving the responsibility. The originating FBR serial number is annotated on the affected line item on the LOEP for both WCs. The PMS Master File must contain a record of deleted equipment until the change is reflected in a future FR.

(b) Utilizing the SKED Revision Editor, load the affected MIP(s) and MRC(s) to the WC receiving maintenance responsibility. Delete the MIP(s) and MRC(s) from WC shifting responsibility.

(c) Utilizing SKED, perform a revision to move the equipment from the original WC's current schedule to the WC receiving the maintenance responsibility. Data is exported from one and imported to the other maintaining equipment history.

k. MRC Changes Not Requiring Feedback Reports. The only MRC modifications shipboard or unit personnel may make without submitting a PMS feedback report are as listed in subparagraphs 19-4.3.12.k.(1) and (2) of this chapter.

(1) TPMTE Block

(a) Common hand tools, administrative or office supplies and basic housekeeping items may be substituted or added by the WCS. The WCS may add notes to the MRC to reflect these substitutions. In the case where specific common tools are called out by description, substitutions are not authorized. For example, substitutions such as using synthetic fiber brushes in place of animal hairbrushes or rags and paper towels in place of lint free cloths are not allowed.

(b) Approved parts, materials and miscellaneous item substituted from the supply system, technical manual, or Military Specification, etc., which meet or exceed the requirements may be used. Ensure that substitutions satisfy both the basic maintenance and safety requirements of the MRC. If there is any doubt, a PMS FBR should be submitted specifying substitution desired and reason.

(c) Test equipment or certified tools, which meet or exceed the Sub-Category code requirement, may be used.

(d) When an MRC pertains to multiple configurations of equipment and the TPMTE block contains tools, parts, test equipment and materials for each unique configuration, the TPMTE block may be tailored for the unit's specific configuration by lining out the items that do not pertain to equipment held.

(e) Exception to TPMTE block change: If an item listed in the TPMTE block is not called for in the procedures block, submit an FBR explaining the circumstances. Conversely, if a tool, piece of test equipment, part or material is called for in the procedure block and is not listed in the TPMTE block an FBR should be submitted.

(2) In the procedure block, WCSs may line-out the non-applicable line items (alternate procedures) that do not pertain to current equipment or configuration when the step includes the words "if applicable" or a note identifies steps to be omitted. These items must be reviewed and approved by the division LCPO. As these changes are WC and maintenance item specific, submission of an FBR is not required. If a step or steps in the procedure block have been lined-out and tools, parts, materials, and test equipment in the TPMTE block pertain only to that step or steps, then they will be lined-out as well with a reference to the step or steps lined-out and approved by the division LCPO. Warnings, Cautions and Notes associated with the lined-out step or steps will also be lined-out.

l. Types of Feedback Reports. There are two types of FBRs, Technical and Non-Technical.

(1) Technical. These FBRs are used to report technical discrepancies inhibiting PMS performance. Technical feedbacks normally adjudicated by an ISEA responsible for the system or equipment covered by the PMS documentation require all the supporting information the originator can provide. The originator should identify the issue, providing as much supporting technical information (Allowance Parts List, Reparable Identity Code, drawing or Hierarchical Structure Code) as available and a proposed response or solution if known. Most importantly, provide point of contact information (name and phone number) so that the ISEA can contact the originator should they have questions. Bottom line, the FBR must be accurate and complete to "stand alone", that is, the FBR will be understood without additional explanation. The better the FBR describes the problem, the more likely the originator will receive a timely response. There are two sub-categories of technical FBRs:

(a) Routine. An FBR will be considered routine when it relates to the technical requirements of PMS. It is used to report technical discrepancies or request clarification of procedures.

(b) Urgent. An FBR will be considered urgent when it relates to the technical requirements of PMS and involves safety of personnel, safety of ship or the potential for equipment damage. Urgent FBRs will be forwarded by naval message containing a PMS Feedback Serial Number, to both NSLC Detachments Norfolk and San Diego, with info to the cognizant SYSCOM, TYCOM and the Naval Safety Center. The message must describe the unsafe procedure(s) or condition(s), must identify the MIP and MRC involved and reflect the serial number of the FBR generated in SKED or Planned Maintenance System – Management Information System (PMS-MIS). Once the message has been sent, include the date time group of the message in the FBR and submit.
