Subj: JOINT FLEET MAINTENANCE MANUAL

Ref: (a) NAVSEA S0005-AA-PRO-010/TMMP, NAVSEA Technical Manual Management Program, Operations and Life Cycle Support Procedures
(b) NAVSEAINST 4160.3B, Technical Manual Management Program
(c) COMUSFLTFORCOM NORFOLK VA Msg R041949Z MAR 26, Joint Fleet Maintenance Manual Advance Change Notice 01-26
(d) COMUSFLTFORCOM NORFOLK VA Msg R041703Z APR 26, Joint Fleet Maintenance Manual Advance Change Notice 02-26
(e) SECNAV M-5210.1, Records Management Program

1. Purpose. To promulgate Revision E of the Joint Fleet Maintenance Manual.

2. Discussion.

a. Joint Fleet Maintenance Manual (JFMM) Revision E adjudicated over 100 change requests submitted by JFMM users, and is issued to clarify requirements, update procedures reflecting current practice, reduce redundancies to the instruction, and support the overall objectives of the JFMM.

b. Submarine Force activities will receive updated JFMM via the Technical Manual Management Program (TMMP) per references (a) and (b). Activities should retain a superseded version of the JFMM for training and process comparison.

c. All ashore and Surface Force activities are directed to the NAVSEA SUBMEPP JFMM public web page at https://www.navsea.navy.mil/Home/SUBMEPP/Products/JFMM/ to download the entire JFMM searchable or zip file per Type Commander direction.

d. The JFMM is confirmed to be Distribution Statement A and approved for public release, previous digital and printed copies should be destroyed accordingly when no longer required. Previous versions of the JFMM can be obtained from NAVSEA SUBMEPP JFMM public web page.

3. Action.

a. Replace Revision D Change 5 of COMUSFLTFORCOMINST 4790.3, Joint Fleet Maintenance Manual, with Revision E of COMUSFLTFORCOMINST 4790.3 in its entirety. JFMM Revision E incorporates and supersedes references (c) and (d).

b. All activities will conduct a detailed review of JFMM Revision E using the Change Synopsis provided with the JFMM. Training will be conducted for all personnel whose work assignments may require them to be familiar with the requirements of the JFMM. PowerPoint training file with an associated Word Note file highlighting the major changes are located within the JFMM.

1) Specifically, Volume II, Fleet Integrated Maintenance, has been completely restructured into TYCOM specific parts to streamline individual TYCOM maintenance policies. All users of Volume II will need to familiarize themselves with the new structure and policies provided within their TYCOM specific part and chapters.

2) Three new chapters have been added to the JFMM while multiple other chapters have been completely updated and rewritten, users of the JFMM are encourage to familiar themselves with these new specific chapters and all other changes listed in the synopsis and training.

4. Responsibilities.

a. TYCOMs will establish an implementation date for Forces Afloat, subordinate units, and TYCOM-directed maintenance activities as soon as practical and promulgate via naval message.

b. As operators of the Regional Maintenance Centers and Naval Shipyards for the Fleet Commanders, CNRMC and NAVSEA 09 are requested to direct Naval Supervising Authorities to implement this change as soon as practical.

c. Ensure implementation direction does not create delay and disruption or unnecessary costs to the government for ongoing ship maintenance work.

d. Implementation direction is expected within 30 days of receipt of this letter. Request notification if implementation cannot be achieved within 60 days of providing direction and follow-on status, as necessary thereafter, until completely implemented.

5. Records Management. Records created as result of this instruction, regardless of media and format, must be managed per reference (e).

6. Point of Contact. Questions regarding JFMM distribution or Life Cycle Management should be directed to the JFMM Program Manager, Mr. Doug Vogel, commercial (207) 438-6052, or via e-mail: douglas.e.vogel.civ@us.navy.mil.

D JFMM Change Request Form
E Record of Revisions and Changes

1 MANUAL DEVELOPMENT. The development of the Joint Fleet Maintenance Manual (JFMM) has been a dedicated effort by all Naval Type Commanders (TYCOM) to establish a single, unified source of maintenance requirements across all platforms.

2 VOLUME TOPICS. The JFMM is made up of seven distinct volumes.

Volume I	-	New Construction
Volume II	-	Integrated Fleet Maintenance
Volume III	-	Deployed Maintenance
Volume IV	-	Tests and Inspections
Volume V	-	Quality Maintenance
Volume VI	-	Maintenance Programs
Volume VII	-	Contracted Ship Maintenance

3 PURPOSE. This manual serves as:

a. A standardized, basic set of minimum requirements to be used by all TYCOMs and subordinate commands.

b. Clear, concise technical instructions to ensure maintenance is planned, executed, completed and documented within all Fleet commands.

c. A vehicle for implementing Regional Maintenance policies across all platforms.

d. A comprehensive set of process descriptions for use by schools such as Surface Warfare Officer School, Senior Officer Ship Maintenance and Repair Course (SOSMRC), Engineering Duty, Technical Training, etc.

4 CANCELLATION. The Joint Fleet Maintenance Manual supersedes all existing TYCOM Maintenance and Quality Assurance manuals and all associated correspondence and clarifications thereto. The following is a list of manuals that are cancelled as a result of this manual:

a. COMNAVAIRLANTINST 4700.1/COMNAVAIRPACINST 4700.1 (Naval Air Force Ship Material Manual)
b. COMNAVSURFLANTINST 9000.1 (Naval Surface Force, U.S. Atlantic Fleet, Maintenance Manual)

c. COMNAVSURFPACINST 4700.1 (Naval Surface Force, U.S. Pacific Fleet, Maintenance Manual)
d. COMSUBLANT/COMSUBPACINST 4790.4 (Submarine Force Maintenance Manual)
e. COMNAVAIRLANTINST 9090.1/COMNAVAIRPACINST 9090.1 (Naval Air Force Quality Assurance Manual)
f. COMSUBLANT/COMSUBPACINST 4855.2 (Submarine Force Quality Assurance Manual)
g. COMNAVSURFLANT/COMNAVAIRLANTINST 4855.3/COMNAVSURFPAC/ COMNAVAIRPACINST 4855.3 (Nuclear Surface Forces Afloat Quality Assurance Instruction)
h. COMNAVSURFPACINST 4855.1 (Naval Surface Force, U.S. Pacific Fleet, Quality Assurance Manual)
i. COMNAVSURFLANTINST 9090.1/COMNAVSURFPACINST 4855.22 (Naval Surface Force Quality Assurance Manual)
j. COMNAVSURFLANTINST 9090.2 (IMA Quality Assurance Manual)
k. CINCLANTFLT/CINCPACFLTINST 4355.1 (Quality Assurance Program)
l. COMSUBPACINST 4855.3 (Deep Submergence Systems Quality Assurance Manual)

5 DISCUSSION.

5.1 Platform Considerations. Throughout this manual, certain requirements apply only to specific platforms. To point these out, the terms (Submarines Only), (Aircraft Carriers Only), (Surface Force Only), (Aegis Ashore wherever fielded) and specific hull designators (e.g., DDG 1000 Class, LCS Class, SSN 725, Aegis Ashore) are used in parentheses within the paragraph to which they apply. When no specific platform is mentioned, the requirements apply to all platforms. The term "ship" (alone) should be related to the context of the paragraph in which it is mentioned. The term "Submarines" applies to all ships under the responsibility of Submarine Forces, Atlantic and Pacific Fleets; the term "Aircraft Carriers" applies to all ships under the responsibility of Naval Air Forces, Atlantic and Pacific Fleets; and the term "Surface Force" applies to all ships under the responsibility of Naval Surface Forces, Atlantic and Pacific Fleets. Additionally, the term "Aegis Ashore" applies to ballistic missile defense systems, where fielded, under the Commander, Naval Surface Force, Atlantic. The use of the term "surface ship" includes all non-submersible ships disregarding the TYCOM (i.e. tenders from the submarine community, CVNs from the air community, and all the Surface Force ships).

5.2 Maintenance Considerations. In the development of this manual, considerable effort was put forth to standardize work practices, incorporate accepted Regional Maintenance philosophies, and make allowances for future changes resulting from new Regional Maintenance policies. With respect to this, the term Intermediate Maintenance Activity (IMA) has been replaced by Fleet Maintenance Activity (FMA) operated by NAVSEA. Subsequently, the management of Regional Maintenance Centers and the Regional Maintenance Center function in the Naval shipyards has shifted to NAVSEA, but a Flag-level decision was made to maintain guidance for the Regional Maintenance Centers in this manual for continuity. Thus, Commander, Navy Regional Maintenance Center (CNRMC) and NAVSEA 06 (previously NAVSEA 04 and 09) representatives were invited to become members of the Joint Fleet Maintenance Manual Board of Directors (JFMMBOD) to address RMC and Naval Shipyard management or business issues

associated with JFMM change requests. Navy Expeditionary Combat Command (NECC) was added to the JFMMBOD in 2020.

5.3 Terminology Considerations. Use of the term "TYCOMs or Immediate Superior in Command (ISIC)" throughout this manual is defined as:

a. For Submarine and Surface Forces, the "TYCOM" or "ISIC" refers to the Squadron or Group.

b. For Aircraft Carriers, the "TYCOM" or "ISIC" refers to the Type Commander for maintenance issues.

c. For Submarine and Surface Forces, the term "ISIC", used by itself, refers to the Squadron or Group. The term "ISIC" does not apply to Aircraft Carriers for maintenance issues but refers to the Permanent Battle Group Commander for operational issues and non-maintenance certifications.

d. For Aegis Ashore (wherever fielded), the term "TYCOM" and "ISIC" refers to Commander Naval Surface Force Atlantic.

5.4 Administrative Considerations.

5.4.1 Master List of References. Appendix A of this foreword is a Master List of References used throughout the manual. This Master List should be reviewed to ensure that the necessary technical manuals, instructions, etc. are readily available prior to using the manual.

5.4.2 Table of Responsibilities. Appendix B provides a table of responsibilities associated with specific positions or functions located within the manual. Each position listed identifies the major responsibilities for that position and provides a link to the Chapter and paragraph where the responsibility is detailed.

5.4.3 Acronyms. Appendix C provides a listing of common acronyms used throughout this manual. Acronyms appearing four or more times in a chapter or those considered "common acronyms" (i.e., words that are known better by their acronym than by their spelled-out word, for example, CD-ROM) will be spelled out the first time an acronym is used within a chapter, and the acronym listed in parentheses after the word. Terms not meeting these conditions will not be considered as acronyms within the text and the words will be spelled out.

5.4.4 Appendices. Numerous chapters throughout this manual contain Appendices for the purpose of providing further detail or examples of required reports and correspondence. In all cases the Appendices are intended as examples only and may not reflect the most current guidance or format. Higher authority source documents should be consulted. Sample correspondence provided as Naval messages may be communicated in letter format to facilitate timely transmission by electronic facsimile.

5.4.5 Volume Structure. Volumes II and V of this manual have been divided into specific parts.

5.4.5.1 Volume II is made up of four parts:

a. Part I is for aircraft carriers only and contains requirements to implement and execute the management of an integrated maintenance process, along with common validation, screening and brokering process, maintenance and modernization, work package preparation process, and work close out process;

b. Part II is for surface force ships only and contains requirements to implement and execute the management of an integrated maintenance process, along with common validation, screening and brokering process, maintenance and modernization, work package preparation process, and work close out;

c. Part III is for submarine force only and contains requirements to implement and execute the management of an integrated maintenance process, along with common validation, screening and brokering process, maintenance and modernization, work package preparation process, and work close out process;

d. Part IV provides procedures and guidance necessary to accurately allocate cost for work performed on or for Navy ships, ship classes or customer projects by FMA.

5.4.5.2 Volume V is made up of two parts:

a. Part I contains requirements and procedures necessary to establish and maintain a Quality Maintenance Program.

b. Part III contains requirements which apply to Scope of Certification for all ships and Deep Submergence Systems in the fleet.

5.4.6 Digital Signatures. Digital or Electronic signatures are authorized on all Forms and Quality Assurance Records. Electronic signatures will be per reference (a) and must be defined and approved for use by local instruction.

6 CHANGES TO THE MANUAL. A formal change process has been established for the Foreword and all seven volumes of the manual. The processes are described in Figure 1 for routine change requests and Figure 2 for urgent change requests. Users of this manual are encouraged to submit change requests. All change requests must be submitted using the Change Request Form, Appendix D. If changes are submitted in electronic format, facsimile or E-mail, each change request must contain the information required on the Change Request Form. Your participation in this change process is both important and appreciated. Appendix E provides a listing of this manuals archived revisions and changes.

7 LIFE CYCLE MAINTENANCE PROCESS FOR THE JOINT FLEET MAINTENANCE MANUAL.

7.1 Purpose. To establish a management plan for life cycle maintenance of the JFMM. This plan describes the change process requirements and identifies the related responsibilities and requirements for maintaining all volumes of the JFMM.

7.2 Background. This manual was developed with the objective of providing a standard set of clear and concise maintenance requirements for the Fleet. The establishment of a formal life cycle maintenance process is necessary to ensure successful accomplishment of this objective. Utilizing a formal process will ensure effective coordination and management of the JFMM and will ensure:

a. Standardized format for all change request responses.

b. Timely evaluation and incorporation of change request.

c. Automated tracking system for all review comments.

d. Consistent distribution of all changes to the manual.

e. A historical database containing all background information that led to changes and revisions to the JFMM.

7.3 Responsibilities and Requirements. This section defines the responsibilities and requirements of all activities involved in supporting the life cycle maintenance process of the JFMM.

7.3.1 Fleet Commanders. The Fleet Commanders are responsible for the following:

a. Designating a single Commander, U.S. Fleet Forces Command (USFLTFORCOM) and Commander, U.S. Pacific Fleet (USCOMPACFLT) point of contact to act as JFMM Coordinators.

b. Establishing a Joint Fleet Maintenance Manual Board of Directors (JFMMBOD). The JFMMBOD will be co-chaired by the Fleet coordinators and made up of TYCOM Quality Assurance and Maintenance representatives, the Submarine Maintenance Engineering, Planning and Procurement (SUBMEPP) JFMM Program Manager, NAVSEA and CNRMC representatives.

c. Providing final approval and promulgation letter for all JFMM changes and revisions issued to the Fleet.

d. Providing funding for the life cycle maintenance of the JFMM.

e. Approving all Advanced Change Notices (ACN), either by message or letter, for urgent changes to the JFMM. Develop and distribute all message ACNs. Forward all ACNs approved via letter to SUBMEPP for distribution.

f. Convening periodic JFMMBOD review meetings. The purpose of these meetings is to review all proposed changes that may be incorporated into the manual in preparation of issuing an official change or revision to the manual.

g. The Fleet, TYCOM or NAVSEA representatives may invite Subject Matter Experts (SME) to assist in answering proposed changes. The following rules apply for SMEs:

(1) All SMEs must have an advocate. The advocate will be one of the JFMMBOD members. For JFMMBOD members other than Fleet Commander representatives, a Fleet Commander member's concurrence for the SME to attend the JFMM Board of Directors Meeting is required. USFLTFORCOM and USCOMPACFLT will determine if other members will be polled and notify SUBMEPP of the result. The advocate is responsible to ensure the SME complies with the established norms of the meeting.

(2) Access to the JFMM Electronic Change web site is generally limited to the Fleet Commanders, TYCOMs and NAVSEA representatives. When necessary, other SMEs will be sent a proposed change for comment concurrent with member review, by e-mail and outside of the electronic change web site. At the request of a member, an SME with a creditable need to know as determined by USFLTFORCOM and USCOMPACFLT may be granted limited access. Access is associated with individuals, not organizations or positions within organizations. Normally access will not be granted to individuals at commands subordinate to members.

7.3.2 Type Commander. The Type Commander (TYCOM) will:

a. Review and evaluate all JFMM change requests by the due date of electronic posting for review, in order to provide users with timely responses. Electronic postings not reviewed by the date of the JFMMBOD will automatically be evaluated as not applicable for the respective TYCOM.

b. For changes which affect ship and personnel safety, notify Fleet Commanders and request a message ACN be distributed.

c. For all other changes requiring ACNs, TYCOMs will review the ACN and forward to Fleet Commanders for approval.

d. Review and endorse all change packages in preparation of issuing an official change or revision to the manual. Notify the Fleet Commanders of this endorsement via letter.

e. Designate representatives to be members of the JFMMBOD.

f. Identify changes to the JFMM distribution list.

7.3.3 Naval Sea Systems Command. NAVSEA will:

a. Review and evaluate all JFMM change requests provided by the designated NAVSEA representatives within due date of electronic posting for review.

b. For changes which affect ship and personnel safety, notify TYCOMs and request a message ACN be distributed.

c. For all other changes requiring ACNs, NAVSEA will review the ACN and forward to TYCOMs.

d. Designate one representative, each, from NAVSEA and CNRMC to be members of the JFMMBOD to address Naval Shipyard and RMC management, NAVSEA policy, technical issues, or both associated with JFMM change requests.

7.3.4 Joint Fleet Maintenance Manual Board of Directors. The JFMMBOD will:

a. Adjudicate all JFMM change requests not unanimously resolved by TYCOMs.

b. Continue collaboration to standardize maintenance requirements across platforms.

c. Determine the frequency of official changes or revisions to the JFMM. The frequency of these changes or revisions may be dictated by the number of JFMM change requests submitted and approved.

7.3.5 Submarine Maintenance Engineering, Planning and Procurement. SUBMEPP will:

a. Issue a letter of acknowledgement to submitting activity when the change request is entered into the system.

b. Perform a preliminary review of all JFMM change requests including an assessment of the impact on other volumes and provide background information and additional recommendations, when necessary, to applicable TYCOMs and NAVSEA within seven calendar days of receiving change request.

c. Manage an automated tracking system for all JFMM change requests and provide a periodic status report of changes to the TYCOMs and Fleet Commanders.

d. Incorporate approved changes into the JFMM and forward all change packages to the JFMMBOD for review in preparation of issuing an official change or revision to the manual.

e. Develop all ACNs not requiring a message and forward to TYCOM for review. Distribute all ACNs approved by Fleet Commanders via letter.

f. Forward any unresolved change requests to the JFMMBOD for adjudication.

g. Maintain the JFMM distribution list.

h. Support the TYCOM in the performance of customer surveys and audits, as requested.

i. Adjudicate all editorial change requests (as defined in paragraph 7.4.b. of this foreword) with the Fleet Commander representatives on behalf of the JFMMBOD.

j. Identify yearly budget requirements for life cycle maintenance of the JFMM to the Fleet Commanders.

k. Attend all JFMMBOD Review Meetings.

7.3.6 Other Systems Commands. Other Systems Commands (SYSCOM) will:

a. Provide technical evaluation for change requests when requested.

b. Review JFMM revisions when requested.

7.3.7 User Activities.

a. User Activities will submit change requests to SUBMEPP, using the required change request form, Appendix D, and provide the following information on the change request form:

(1) A clear description of the problem including volume number, part number, chapter, and applicable paragraph(s).

(2) The recommended change containing the specific text, table or figure to be added, deleted or modified.

(3) Rationale for the recommended change.

b. When changes are issued to this manual, conduct a detailed review of all changes using the change synopsis. Training will be conducted for all personnel whose work assignments may require them to be familiar with the requirements of this manual.

7.4 Change Process. This section defines the change process for the JFMM. The change process is an integral part of JFMM life cycle maintenance. The process is described in detail here and relates to the flow chart shown in Figure 1.

a. All User Activities (e.g., FMAs, Squadrons, Ships Force, etc.), will submit JFMM change requests using the change request form located in Appendix D.

b. Upon receipt of this change request, SUBMEPP will send a letter to the original submitter notifying them that the change request has been received. SUBMEPP will log the change request into a database and conduct a preliminary review, assess the impact of the change on other volumes of the JFMM, gather all appropriate background information and provide additional recommendations when necessary. SUBMEPP will adjudicate all editorial change requests where an editorial change is generally limited to spelling, grammar or punctuation or, for example, where published office codes, Activity names, acronyms or web site URLs have changed. For non-editorial change requests, SUBMEPP will determine the applicable TYCOM(s), and post them electronically for their review and approval. Change requests pertaining to Naval Shipyards and RMCs will also be posted electronically for NAVSEA and CNRMC, respectively, to review before and concurrent with TYCOM review. All change requests sent to TYCOMs after SUBMEPP review will include the following:

(1) Change Request Response Form.

(2) Appropriate reference material (e.g., previous change requests, applicable instructions, etc.).

(3) Applicable marked up pages showing the requested change incorporated.

(4) SUBMEPP's preliminary evaluation and recommendation, when applicable.

c. TYCOMs will review the change request and provide a resolution to SUBMEPP electronically. NAVSEA and CNRMC will review the change request for Naval Shipyard and RMC management, NAVSEA policy, technical issues, or both, and provide input to SUBMEPP and TYCOMs electronically. Other SYSCOMs will provide technical assistance when requested. If the TYCOM should approve a change request and desire the use of an ACN, they will indicate this on the Change Response Form and provide any additional information for the ACN. For changes which affect ship and personnel safety, TYCOMs will notify Fleet Commanders when a message ACN is required. Fleet Commanders will develop and distribute all message ACNs. For all other ACNs, SUBMEPP will develop the ACN and submit the ACN to the TYCOMs for review. TYCOMs will forward the ACN to the Fleet Commanders for approval. Upon approval, SUBMEPP will distribute the ACN.

d. SUBMEPP will forward all unresolved change requests to the JFMMBOD. An unresolved change request is a change request that does not receive unanimous approval or disapproval from all applicable TYCOMs.

e. The JFMMBOD will adjudicate all unresolved change requests and will forward the resolution to SUBMEPP.

f. SUBMEPP will provide a formal response to the original submitter based upon the TYCOM(s) or JFMMBOD final resolution.

g. SUBMEPP will incorporate the approved change into a JFMM change package. This change package will contain both approved changes and ACNs incorporated into the applicable pages of the manual and will be sent to the JFMMBOD, for review in preparation of an official change or revision to the manual.

h. The JFMMBOD will review this change package and make a recommendation to the Fleet Commanders regarding approval and promulgation.

i. Fleet Commanders will provide final approval and promulgation letter for all JFMM changes and revisions. Fleet Commanders will forward promulgation letter to SUBMEPP.

j. SUBMEPP will provide distribution of the approved JFMM change or revision according to the approved distribution list.

JOINT FLEET MAINTENANCE MANUAL CHANGE PROCESS

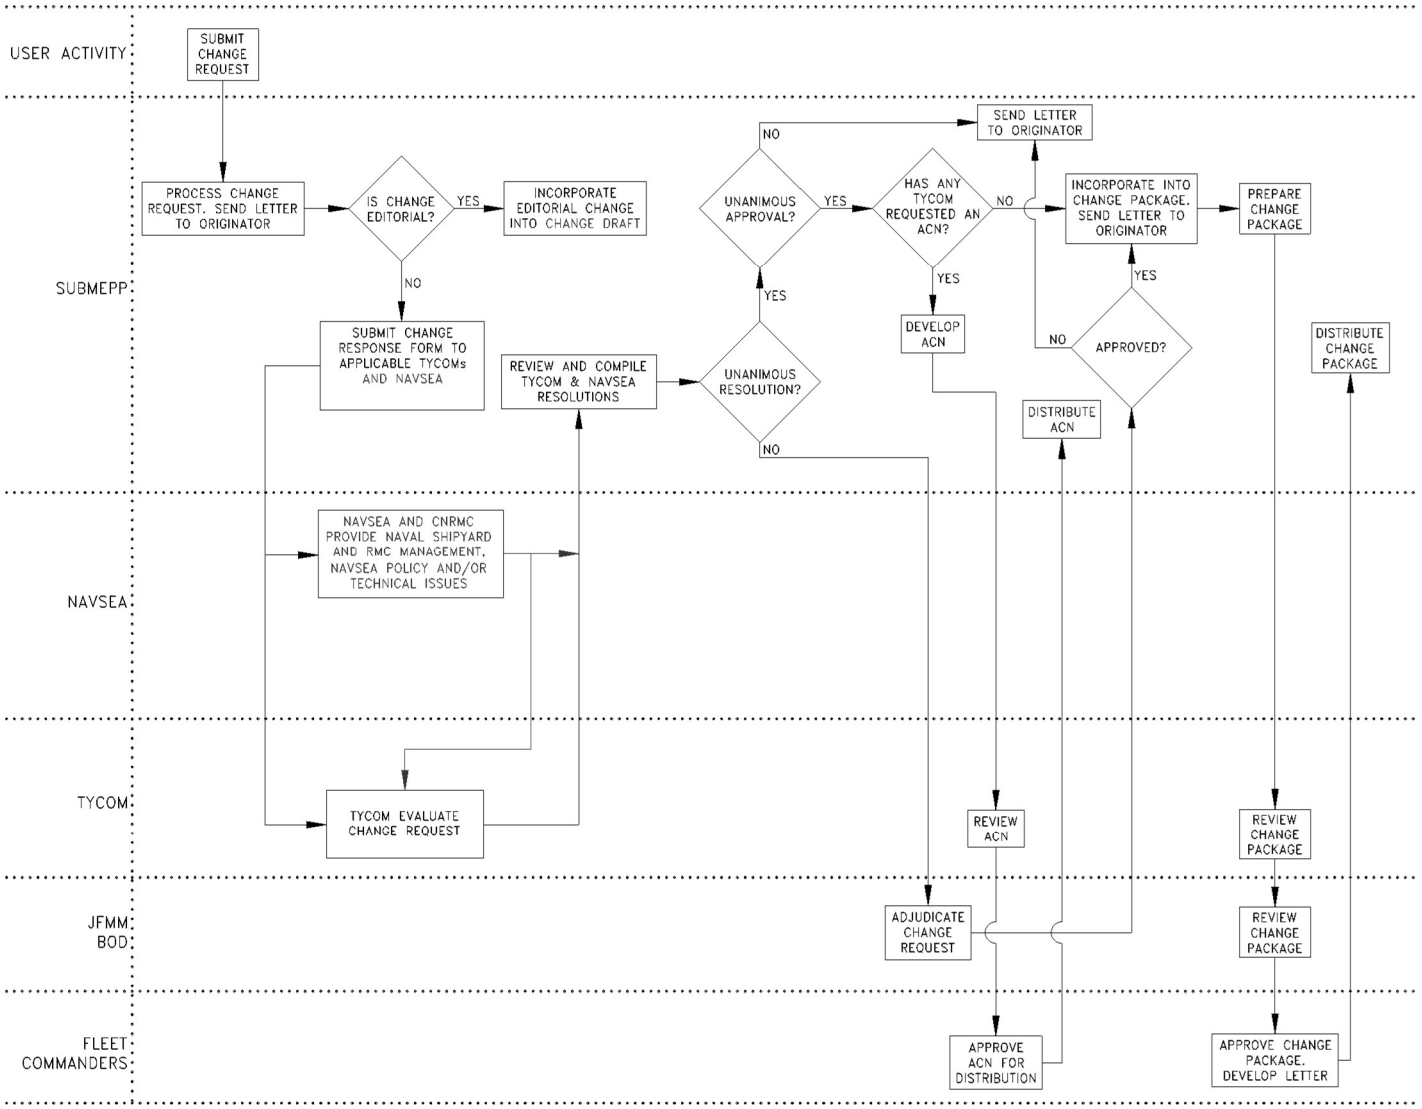

FIGURE 1

URGENT JOINT FLEET MAINTENANCE MANUAL CHANGE PROCESS

Purpose: To publish the process to be followed in the event that a requirement of the JFMM must be modified, cancelled or implemented prior to the next regularly scheduled change.

Process: The following process will be used to issue urgent changes to the JFMM

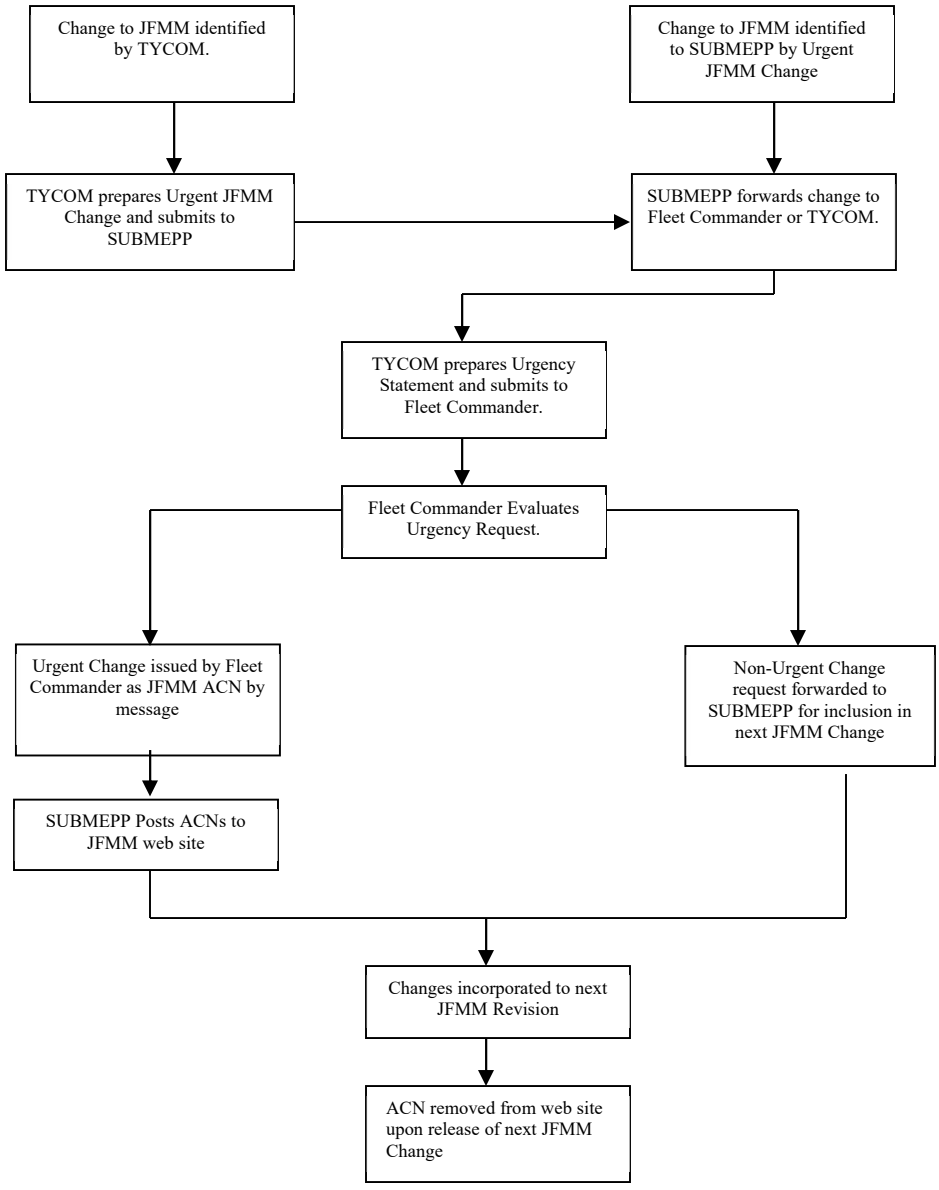

FIGURE 2

NAVSEA S9095-AD-TRQ-010/TSTP - Total Ship Test Program Manual
NAVSEA S9165-AC-HBK-010 - Submarine Sonar Dome Handbook
NAVSEA S9200-BD-PRO-010 – Integrated Propulsion Plant Alignment Manual LSD 41 and 49 Class Ships
NAVSEA S9213-33-MMA-000 - Radiological Controls for Ships
NAVSEA S9213-41-MAN-000 - Engineering Department Manual for Naval Nuclear Propulsion Plants
NAVSEA S9213-45-MAN-000 - Naval Nuclear Material Management
NAVSEA S9221-C1-GTP-010/020 - Main Boiler Repair and Overhaul, Volumes 1 and 2
NAVSEA S9221-D2-MMA-010 - Steam Generating Plant Inspection (Non-Nuclear)
NAVSEA S9223-AC-OMP-010, Battery, Submarine Main Storage - Submarine Valve Regulated Lead Acid (SVRLA) Technical Manual
NAVSEA S9223-AJ-OMP-010, Battery, Submarine Main Storage - Submarine Valve Regulated Lead Acid (SVRLA) Technical Manual

NAVSEA S9233-CJ-HBK-010/020 - U.S. Navy Diesel Engine Inspectors Handbook, Parts 1 and 2
NAVSEA S9233-EK-HBK-010 – Diesel Readiness System Handbook
NAVSEA S9233-FL-HBK-010 – Diesel Maintenance Strategy
NAVSEA S9233-FP-HBK-010 - Submarine Emergency Diesel Generator Readiness and Trend Analysis
NAVSEA S9407-AA-GYD-010/(S) OP-3840 - Electromagnetic Compatibility Criteria For Navy Systems
NAVSEA S9425-AW-PRO-010 - Submarine Pressure Test, Evacuation/Charge and Dew Point Test Procedures
NAVSEA S9425-CF-STD-010 - Submarine Antenna/Periscope and Mast Materials
NAVSEA S9425-CG-STD-010 - Installation Standards for Submarines
NAVSEA S9475-AC-PRO-010 - Degaussing Forms, Records and Reporting Procedures
NAVSEA S9505-AF-MMA-010 - Submarine Non-Nuclear Piping Systems Test Manual
NAVSEA S9505-AM-GYD-010 - Submarine Fastening Criteria (Non-Nuclear), Description, Design and Maintenance
NAVSEA S9510-AB-ATM-010/020 - Nuclear Powered Submarine Atmosphere Control Manual, Volumes 1 and 2
NAVSEA S9515-A1-MMO-010/020/030 - Automated Electrolytic Oxygen Generator (AEOG) Treadwell Corporation Preliminary Technical Manual, Volumes 1, 2 and 3
NAVSEA S9515-A4-MMA-010/020 - Low Pressure Electrolyzer (LPE) Oxygen Generator Technical Manual, Volumes 1 and 2
NAVSEA S9515-A6-MMA-010 - Advance Integrated Low Pressure Electrolyzer (AILPE) Technical Manual
NAVSEA S9515-AA-MMO-010/020/030/040 - Electrolytic Oxygen Generator 6L16; Volumes 1, 2, 3 and 4
NAVSEA S9515-AL-MMA-010/020 - Integrated Low Pressure Electrolyzer (ILPE) Preliminary Technical Manual, Volumes 1 and 2
NAVSEA S9520-AA-MMA-010 - Repair of Submarine Seawater Ball Valves (Non-Nuclear)
NAVSEA S9522-AA-HBK-010 - Description, Operation and Maintenance Handbook for Magazine Sprinkler Systems
NAVSEA S9534-AD-MMA-010 - Steam Reboiler Maintenance
NAVSEA S9560-CH-SCB-010 - *VIRGINIA* Class Submarine Fly-By-Wire Ship Control System Certification Boundary Book
NAVSEA S9560-CK-SCB-010 - *SEAWOLF* Class Submarine Fly-By-Wire Ship Control System Certification Boundary Book
NAVSEA S9587-AT-MMA-010 - Electronic Controls Charging System Tech Manual
NAVSEA S9587-B1-MMA-010 - Catapult Steam Support Systems for CV/CVN Class Ships; Description, Operation and Maintenance
NAVSEA S9592-B3-MAN-010 - Dry Deck Shelter Systems Scope of Certification Notebook, Volume I
NAVSEA S9600-AD-GTP-010 - U.S. Navy Shipboard Furniture Catalog
NAVSEA S9810-AA-GTP-010 - Intermediate Maintenance Activity Work Center Requirements Manual
NAVSEA S9AA0-AB-GOS-010 - General Specifications for Overhaul of Surface Ships (GSO) 2004 Edition
NAVSEA S9AA0-AB-GOS-030 - General Specifications for Overhaul of Surface Ships (GSO)

AEGIS Supplement
NAVSEA S9SSN-W4-SSM-PA0/C688CLV7 - SSN688 Class Ship Systems Manual, Vol 7
NAVSEA SE004-AK-TRS-010 - Standard Maintenance Practices 2M Electronic Assembly Repair
NAVSEA SE300-AZ-MMA-010 - Description, Operation and Maintenance SSN 21 Class Sonar Bow Dome
NAVSEA SE300-MA-MMA-011 - Glass Reinforced Plastic (GRP) Bow Sonar Dome
NAVSEA SE400-DA-MMO-010 - Passive Countermeasure System (PCMS) Technical Manual
NAVSEA SG420-AP-MMA-010 - Periodic Testing Arrangements for Ordnance Handling Equipment
NAVSEA SG420-EG-IEM-190 – Weapon Delivery System Equipment Manual, Vol 6
NAVSEA SI009-01 - General Criteria; Accomplish
NAVSEA SI009-04 - Quality Management System
NAVSEA SI009-07 - Procedures and Equipment Required for the Prevention of Fire
NAVSEA SI009-08 - Fire Fighting and Fire Prevention
NAVSEA SI009-20 - Government Property; control

APPENDIX B

RESPONSIBILITIES

Fleet Commander

Section	Area of Responsibility	Responsibility
FWD-7.3.1	Life Cycle Maintenance Process for JFMM	• Establish a JFMM Board of Directors (BOD). • Provide final approval and promulgation letter. • Provide funding for life cycle maintenance. • Approve all Advanced Change Notices (ACN). • Convene periodic JFMM BOD review meetings. • Designate Atlantic and Pacific Fleet JFMM Coordinators.
II-I-1.1.1.b	Naval Supervisory Authority	• Maintain the Availability Intervals and Cycles. • Inform the Chief of Naval Personnel of any significant changes which would affect ship manning requirements during an extended CNO Maintenance Availability. • Coordinate with the Program Executive Office, Direct Reporting Program Manager or Ship Program Manager, as applicable, in the accomplishment of CNO Maintenance Availability planning. • Implement Docking Officer Qualification and Certification requirements. • Plan for and monitor availability execution. • Plan for and provide berthing, messing, offices, classrooms, equipment stowage space, and Ship's Force repair shop.
II-I-2.3.8.1	Maintenance Policies and Procedures for CVN CNO Scheduled Availabilities	• Maintain the Availability Intervals and Cycles. • Inform the Chief of Naval Personnel of any significant changes which would affect ship manning requirements during an extended CNO Maintenance Availability. • Coordinate with the Program Executive Office, Direct Reporting Program Manager or Ship Program Manager, as applicable, in the accomplishment of CNO Maintenance Availability planning. • Implement Docking Officer Qualification and Certification requirements. • Plan for and monitor availability execution. • Plan for and provide berthing, messing, offices, classrooms, equipment stowage space, and Ship's Force repair shop.
II-I-2.6.1.1	CVN Availability Execution	• Monitor availability execution to achieve a balance of cost and schedule for the scope of work authorized. Ensure that any growth in the scope of work authorized is necessary to ensure safe, reliable operation of the ship during the subsequent operating cycle. • Ensure that testing of all systems and equipment installed or repaired during the availability, which require at sea testing, is conducted prior to availability completion. • Provide berthing, messing, offices, classrooms, equipment stowage space, and Ship's Force repair shops, when shipboard facilities are unusable or uninhabitable.

Fleet Commander

Section	Area of Responsibility	Responsibility
II-II-2.3.9.1	Maintenance Policies and Procedures for Surface Force Ship CNO Scheduled Availabilities	• Maintain the Availability Intervals and Cycles issued in reference (c) to the maximum extent practical within operational requirements. • Inform the Chief of Naval Personnel of any significant changes which would affect ship manning requirements during an extended CNO Maintenance Availability. • Coordinate with the Program Executive Offices, Direct Reporting Program Manager or Ship Program Manager, as applicable, in the accomplishment of CNO Maintenance Availability planning. • Implement Docking Officer Qualification and Certification requirements as issued in NAVSEA instructions. • Plan for and monitor availability execution to achieve a balance of cost and schedule for the scope of work authorized. Ensure any growth in the scope of work authorized is necessary to reasonably assure safe, reliable operation of the ship during the subsequent operating cycle. • Plan for and provide berthing, messing, offices, classrooms, equipment stowage space, and SF repair shop per reference (d) when shipboard facilities are expected to become unusable or uninhabitable.
II-II-2.6.1.1	Surface Force Ship Availability Execution	• Monitor availability execution to achieve a balance of cost and schedule for the scope of work authorized. Ensure any growth in the scope of work authorized is necessary to ensure safe, reliable operation of the ship during the subsequent operating cycle. • Ensure testing of all systems and equipment installed or repaired during the availability, which require at sea testing, is conducted prior to availability completion. • Provide berthing, messing, offices, classrooms, equipment stowage space, and SF repair shops when shipboard facilities are unusable or uninhabitable.
II-III-2.3.8.1	Maintenance Policies and Procedures for Submarine CNO Scheduled Availabilities	• Maintain the Availability Intervals and Cycles to the maximum extent practical within operational requirements. • Inform the Chief of Naval Personnel of any significant changes which would affect ship manning requirements during an extended CNO Maintenance Availability. • Coordinate with the Program Executive Office, Direct Reporting Program Manager or Ship Program Manager, as applicable, in the accomplishment of CNO Maintenance Availability planning. • Implement Docking Officer Qualification and Certification requirements as issued in NAVSEA instructions. • Plan for and monitor availability execution to achieve a balance of cost and schedule for the scope of work authorized. Ensure that any growth in the scope of work authorized is necessary to reasonably assure safe, reliable operation of the ship during the subsequent operating cycle. • Plan for and provide berthing, messing, offices, classrooms, equipment stowage space, and Ship's Force repair shop when shipboard facilities are expected to become unusable or uninhabitable.

Fleet Commander

Section	Area of Responsibility	Responsibility
II-III-2.6.1.1	Submarine Availability Execution	• Monitor availability execution to achieve a balance of cost and schedule for the scope of work authorized. Ensure that any growth in the scope of work authorized is necessary to ensure safe, reliable operation of the ship during the subsequent operating cycle. • Ensure that testing of all systems and equipment installed or repaired during the availability, which require at sea testing, is conducted prior to availability completion. • Provide berthing, messing, offices, classrooms, equipment stowage space, and Ship's Force repair shops, when shipboard facilities are unusable or uninhabitable.
II-III-3.7.1.2	Major Maintenance Period	• Establish or confirm availability dates for the MMP with input from the ISIC, Maintenance Team or LMA.
II-III-3.10.1	IDD or PIRA Availabilities	• Authorize new items and growth industrial work items. • Monitor and approve all changes in established milestones, not internal to industrial activity completion dates. • Issue direction when the quality or completeness of industrial activity work is in question. • Notify the TYCOM when essential Ship's Force work cannot be completed on the scheduled contract or Key Event completion date. Make recommendations for assistance where appropriate. • Periodically assess and monitor shipboard conditions during the availability. • Prior to Fast Cruise, the ISIC Quality Assurance Officer must conduct a formal audit of Ship's Force REC and DFS Records. • Conduct a material inspection of the ship prior to Fast Cruise.
II-III-3.10.9	Sea Trials	• Authorize the ISIC to allow the ship to get underway for Sea Trials.
II-IV-3.2.5	Funding	• Fleet Maintenance Officers, are responsible for the budgeting, scheduling and executing CNO-scheduled ship maintenance and modernization availabilities plus emergent maintenance requirements.
III-6.4	Strike Force Intermediate Maintenance Activity	• Be responsible for the administration and updates of this chapter to include the widest dissemination and implementation of requirements pertaining to SFIMA and organic repair. • Participate in the development and implementation of the SFIMA program for each Force Level ship class and coordinate with Strike Groups to develop an instruction following Appendix A to meet the requirements of the Strike Group SFIMA to complete its mission of Strike Group self-sufficiency. • Coordinate with CSGs and ESGs and other commands to ensure the development of metrics and key performance indicators (KPI) to be utilized during the optimized fleet response plan (OFRP) in assessing the Strike Group's ability to perform assigned duties related to SFIMA actions. Metrics and KPIs will be included in readiness and after-action reporting.

Fleet Commander

Section	Area of Responsibility	Responsibility
		• Approve changes, additions, and deletions to the CSG and ESG capabilities matrices as recommended by the Type Commanders (TYCOMs). • Numbered Fleet Commanders will coordinate with CSG and ESG Commanders to track SFIMA deployment readiness during the OFRP phases to ensure readiness for deployment.
IV-3.3.3	Boiler Inspections	• Identify and designate those fleet activities which have inspection responsibilities and maintain a base of certified SGPIs within those activities. • Ensure availability of "school ships". • Host semi-annual SGPI seminars.
IV-23.3.2.3	Gas Turbine Engine Inspection	• Identify and designate fleet activities having inspection responsibilities. • Maintain a base of MGTIs. • Ensure availability of "school ships" to support MGTI training. • Host semi-annual MGTI seminars.
V-I-1.3	Organizational Responsibilities	• Promulgate QA Program through guidelines of Volume V of JFMM. • Promote use of Volume V of JFMM by TYCOMs. • Ensure the scope of training through fleet schools provides the necessary skills. • Jointly authorize changes to Volume V of JFMM. • Review TYCOM QA program by annual conference. • Ensure assessments of FMAs and RMCs occur.
VI-6.4.1	Industrial Plant Equipment	• Review all PEPs submitted by cognizant afloat and shore activities for technical accuracy and completeness. • Review each PEP that requests replacement of currently installed equipment to ensure there is no conflict with other maintenance actions (e.g., separate repair, rebuild or replacement action). • Prioritize all PEPs and evaluate each project to ensure compatibility with the requesting activity's maintenance capability requirements and site configuration. • Forward the approved requests to the Fleet Commander for consolidation. Return unapproved requests to the submitting activity. • Schedule an annual assessment of assigned activity's IPE and coordinate repairs. • Evaluate all procurement requirements.
VI-8.2.1	Miniature/Micro-miniature Electronic Repair Program	• Operationally administer 2M and module test repair programs.
VI-9.2.1	Metrology and Calibration Program	• Operationally administer TMDE and METCAL program. • Ensure TMDE calibration performed at lowest level practical.

Fleet Commander

Section	Area of Responsibility	Responsibility
		• Calibrate all TMDE within the capability of the Regional Calibration Centers (RCC), Type Commander (TYCOM) and shipboard calibration activities. • Assign a Fleet Representative to the TAMS Executive Board. • Chair Fleet TMDE - METCA working groups and committees. • Establish the Shipboard Instrumentation System Calibration (SISCAL) program per reference (e) as required. • Provide funding for calibration and repair of TMDE. • Evaluate Regional Maintenance Center (RMC) and RCC and coordinate with Naval Sea Systems Command (NAVSEA) for standards to support new capabilities. • Provide funding for audit and certification of Fleet Navy calibration laboratories and Field Calibration Activities (FCA).
VI-35.3.1	RMC I-Level Maintenance Capabilities	• Approve changes, additions and deletions to the I-Level Capabilities Matrix. • Approve recommended changes to the NAMTS NEC At-Sea Requirements Matrix. • Approve and forward, with endorsement, NAMTS NEC modifications as developed and recommended by CNRMC. • Review, approve and submit Billet Change Requests developed by CNRMC to support sea/shore rotation requirements. • Request additions and deletions to the I-Level capabilities and/or corresponding capacities at each RMC based on utilization metrics and written Business Case Analysis to the cognizant Fleet Commander. • Ensure full utilization of the full range of organic RMC I-Level capability. • Establish and communicate work priorities to CNRMC and cognizant RMCs. Resolve work priority conflicts as necessary. • Regularly assess NAMTS maintenance skills required on respective afloat units. • Approve CNRMC recommended, or recommend additional changes to specific NAMTS maintenance skills and required training for billets on respective afloat units. • In collaboration with CNRMC, review and recommend NAMTS NEC At-Sea Requirements Matrix revisions to the cognizant Fleet Commander(s). • Review and approve establishment and disestablishment of MATs, as recommended by CNRMC. Optimize utilization of MATs capacity within existing total I-Level workload in each cognizant RMC.
VI-42.6.1	Material Assessment	• Maintain a common material assessment process and policy. • Be the Fleet's advocate and single point of contact for all material assessment issues. • Provide and support a standard material assessment tool set.

Fleet Commander

Section	Area of Responsibility	Responsibility
		• Review the personnel and monetary resources required. • Establish minimum standards of continuous program improvements for the TYCOMs.

Type Commander (TYCOM)

Section	Area of Responsibility	Responsibility
FWD-7.3.2	Life Cycle Maintenance Process for JFMM	• Review and evaluate JFMM changes (by the due date). • Notify Fleet Commanders of changes which affect ship and personnel safety. • Review ACNs and forward to Fleet Commanders. • Review and endorse all change packages. • Designate representatives of JFMM BOD. • Identify changes to JFMM distribution list.
I-2.3	New Construction	• Major construction pre-commissioning phase. • Trials. • Post-Shakedown Availability.
II-I-1.9.3	CVN Availabilities	• Budget and plan for correction of both typical recurring deficiencies and other material deficiencies during all upkeeps, availabilities, Planned Incremental Availabilities and Docking Planned Incremental Availabilities. • Assign groom teams as necessary, to assist SF in maintaining the material condition of the propulsion plant. • Provide the maintenance and inspection training requested by SF. This provisioning of training will include funding a shipyard MCAP team requested by the RMO in support of the Pre-Deployment MCAI. • Provide training for RMOs. • For CNO Availabilities, maintain, with SF and shipyard input, an Availability Parts Support List. • Meet periodically with the Reactor Officer or RMO to review the ship's material condition. • Provide timely review and scheduling of deficiency correction for items identified during the inspections and grooms.
II-I-2.3.8.2	Maintenance Policies and Procedures for CVN CNO Scheduled Availabilities	• Coordinate the scheduling of availabilities at industrial activities with Fleet Commander, NAVSEA and CNO. • Coordinate the scheduling of availabilities at industrial activities with Fleet Commander, NAVSEA and CNO. • Coordinate the work assignments between the FMA and the industrial activity. • Seek resolution of all class and major technical problems and coordinate industrial requirements for modernization and repair. • Seek resolution of all class and major technical problems and coordinate industrial requirements for modernization and repair. • Designate a TYCOM representative for the Work Definition Conference (WDC), Project Review Conference (PRC), Quality of Service Council (QoSC) meetings, and Pre-Arrival Conference (PAC) when such conferences or meetings are scheduled. • Recommend to CNO any high priority fleet modernization desired to be accomplished.

Type Commander (TYCOM)

Section	Area of Responsibility	Responsibility
		• Conduct a QA audit of Ship's Force and FMA Controlled Work Packages. • Provide fire safety oversight for all ships while in a maintenance availability. • Assist CPA in the preparation of the AWP. • Monitor corrective maintenance action taken by industrial activities and Regional Maintenance Centers. • Schedule and conduct inspections of Forces Afloat. • Monitor progress of CNO Maintenance Availabilities. • Ensure that applicable strategies and MOAs are executed prior to availability start.
II-I-2.6.1.2	CVN Availability Execution	• Authorize new items and growth industrial work items. • Monitor and approve all changes in established milestones, not internal to industrial activity, including LOA and completion dates. • Issue direction when the quality or completeness of industrial activity work is in question. • Monitor off-ship crew messing and berthing arrangements when required. • Notify the TYCOM when essential Ship's Force work cannot be completed on the scheduled contract or Key Event completion date. • Monitor Ship's Force or CAST (if assigned) preparation for LOA (if applicable). • Conduct a Pre-Critical Inspection of the Engineering Department to determine the ship's readiness for either the Reactor Safeguards Examination or the Fleet Commander Post-Overhaul Reactor Safeguards Examination as applicable. • Conduct formal Phase I crew certification inspection(s) of the Ship's Force per the TYCOM Training Manual (when required). • Conduct Phase II crew certification. • Conduct a material inspection of the ship. • Receive from the ship's CO or Supervising Authority the scope, schedule and agenda of tests for Sea Trials for review and approval. • Monitor the progress of the availability.
II-I-3.4.1.1	Fleet CVN Maintenance Availabilities	• Coordinate scheduling of availabilities at LMAs with TYCOMs. • Initiate the required budgetary actions for funding availabilities. • Ensure all authorized alterations are identified by priority based on material availability. • Identify the routine package to be accomplished based on Master Specification Catalog or Master Job Catalog (MJC) review (as appropriate). • Review results of scheduled monitoring inspections and testing that could result in significant new work or could impact scheduled work.

Type Commander (TYCOM)

Section	Area of Responsibility	Responsibility
		• Identify required special evolutions associated with availabilities in support of Pre-Overseas Movement preparations and pre-availability test and inspection requirements. • Issue availability planning message. • Ensure the requirements of the Industrial Ship Safety Manual For Fire Prevention and Response manual are implemented in all Continuous Maintenance Availabilities based on complexity, scope of work and duration of the CMAV.
II-I-4.6.2	Maintenance Policies and Procedures for Surface Force Ship CNO Scheduled Availabilities	• Coordinate the scheduling of availabilities at industrial activities with Fleet Commander, NAVSEA and CNO. • Initiate the required budgetary actions for funding availabilities. • Coordinate the work assignments between the FMA and the industrial activity. • Seek resolution of all class and major technical problems and coordinate industrial requirements for modernization and repair. • Authorize AWPs prepared by Surface Maintenance Engineering Planning Program Activity with recommendations from the ship's CO, Maintenance Manager and ISIC (if applicable). Exercise all work candidate screening and follow up actions relating to the availability directly with the ship concerned. Assume the lead role in managing the AWP from the Baseline Availability Work Package developed by SURFMEPP. • Designate a TYCOM representative for the Work Definition Conference, Project Review Conference , Quality of Service Council (meeting, and Pre-Arrival Conference) when such conferences or meetings are scheduled. • Recommend to CNO any high priority fleet modernization desired to be accomplished. • Conduct a QA audit of SF and FMA Controlled Work Packages. • TYCOM Force Damage Control will provide fire safety oversight for all ships while in a maintenance availability. • Provide final endorsement via Fleet Maintenance Officer of any exceptions to end of availability key event.
II-II-2.3.9.2	Group or Squadron	• Assist SURFMEPP in the preparation of the AWP. • Monitor corrective maintenance action taken by industrial activities and Regional Support Groups or RMC. • Schedule and conduct inspections of Forces Afloat. • Monitor progress of CNO Maintenance Availabilities. • Ensure that a MOA is executed prior to availability start. • Designate an ISIC representative to participate in QoSC. • In coordination with the RMC Chief Engineer, submit Change Deferral Requests and Change Notifications to SURFMEPP. • Maintain mandatory BAWP requirements proposed for non-accomplishment in an active planning status until adjudicated.

Type Commander (TYCOM)

Section	Area of Responsibility	Responsibility
		• Coordinate with SURFMEPP to update the AWP when Class Maintenance Plan changes drive a change to the BAWP after 100% D-Level Package Lock. • Coordinate meetings as required at key milestones and as required to support resolution of major issues. • Provide fire safety oversight for all surface ships while in a maintenance availability.
II-II-2.6.1.2	Surface Force Availability Execution	• Authorize new and growth industrial work items. • Monitor and approve all changes in established milestones, not internal to industrial activity, including LOA and completion dates. • Issue direction when the quality or completeness of industrial activity work is in question. • Monitor off-ship crew messing and berthing arrangements when required. • Notify the TYCOM when essential SF work cannot be completed on the scheduled contract or Key Event completion date. Make recommendations for assistance where appropriate. • Periodically assess and monitor shipboard conditions. • Monitor SF or MST (if assigned) preparation for LOA (if applicable). • Conduct formal Phase I crew certification inspection(s) of the SF per the TYCOM Training Manual (when required). • Conduct Phase II crew certification. Witness and certify to the TYCOM the state of crew training is satisfactory for at sea operations per the TYCOM Training Manual. • Conduct a material inspection of the ship. • Receive from the ship's CO or Supervising Authority the scope, schedule and agenda of tests for Sea Trials for review and approval. When approved, forward copies of the agenda to the TYCOM. • Monitor the progress of the availability.
II-II-2.10	Post-Availability Analysis	• TYCOM will participate in the post-availability analysis process and attend CNO Availability completion Maintenance and Modernization Performance Reviews.
II-II-3.6.4	Lessons Learned Conference	• TYCOM must attend the Lessons Learned Conference
II-II-4.6.2		• Develop and execute a Memorandum of Agreement per volume II, part II, chapter 2 of this manual with each supporting RMC to define reporting and administrative relationships between the TYCOM and the RMCs.
II-II-5.1.2	Prorated Business Rules	• The TYCOM is responsible for the planning, budgeting and execution of the approved Fleet Ship Modernization, ship repair and ship maintenance.
II-III-2.3.8.2	Submarine Availability Execution	• Coordinate the scheduling of availabilities at industrial activities with Fleet Commander, NAVSEA and CNO.

Type Commander (TYCOM)

Section	Area of Responsibility	Responsibility
		• Initiate the required budgetary actions for funding availabilities. • Coordinate the work assignments between the FMA and the industrial activity. • Seek resolution of all class and major technical problems and coordinate industrial requirements for modernization and repair. • Authorize AWPs prepared by SUBMEPP Activity with recommendations from the ship's CO, Maintenance Manager and ISIC (if applicable). Exercise all work candidate screening and follow up actions relating to the availability directly with the ship concerned • Coordinate the interface of the 3-M system with the PMR scheduling and feedback reporting system. • Designate a TYCOM representative for the Work Definition Conference, Project Review Conference, Quality of Service Council meeting, and Pre-Arrival Conference when such conferences or meetings are scheduled. • Recommend to CNO any high priority fleet modernization desired to be accomplished. • Send a Sea Trials Support Services message, if required, to specify SRDRS "modified-alert" requirements. • For minor CNO Maintenance Availabilities send a Waiver of Escort Requirements Message to NAVSEA when requested by the ISIC. • Conduct a QA audit of Ship's Force and FMA Controlled Work Packages. • For major CNO Maintenance Availabilities issue the required messages for Fast Cruise, Sea Trials and Unrestricted Operations Certification. • For CNO scheduled availabilities of less than six months in duration issue the required message for Sea Trials. • Verify that all Submarine Flight Critical Component - certified On Board Repair Parts are loaded out by Fast Cruise following any major or minor CNO availability.
II-III-2.6.9.1	Trials and Inspections	• Schedule the Fleet Commander PORSE as recommended by the industrial activity in the Key Events Schedule and confirmed by the parent TYCOM or ISIC representative upon completion of the ISIC Pre-Critical Inspection. • Provide Fast Cruise, Sea Trial and completion prerequisites message to the ship approximately 90 days prior to the start of Sea Trials. • Assign material representatives to be embarked during trials. • Inform the CNO and Fleet Commander of the scope and schedule of the trials. • Provide escorts as required. Send a Sea Trials Support Services message to specify SRDRS "modified alert" requirements. • Approve Sea Trial Agenda.

Type Commander (TYCOM)

Section	Area of Responsibility	Responsibility
		• Report, by message, to NAVSEA crew readiness for Sea Trials and request NAVSEA 08 authorization for critical operations. • Prior to each Sea Trial, following certification from the Supervising Authority and NAVSEA that the material condition of those parts of the ship installed, repaired or tested by the industrial activity is satisfactory for Sea Trials and TYCOM verification that the SUBSAFE certification of those parts of the ship not affected by the industrial activity AWP has been sustained, report by message to the ship, with copies to CNO and NAVSEA, reporting that the status of the SUBSAFE Certification Boundary is satisfactory and authorizing the conduct of Sea Trials and dives to specified depth. If the ship had Upgrades, Alterations or Major Repair Work of the FBW SCS, and following a recommendation from NAVSEA, the ISIC, or both, authorize underway operation of the FBW SCS. • Following verification from NAVSEA of satisfactory completion of all Sea Trials, completion of controlled dives, correction of all mandatory Sea Trial deficiencies, certification that the SUBSAFE material condition of those parts of the ship installed, repaired or tested by the industrial activity is satisfactory, and upon confirmation of maintenance of SUBSAFE certification of portions of ship not affected by the industrial activity, report by message to the ship, with copies to CNO and NAVSEA, reporting status of SUBSAFE certification and authorizing URO to test depth.
III-6.4.3	Strike Force Intermediate Maintenance Activity	• Codify the baseline requirements ships will be measured against and will develop into CSG and ESG metrics and KPIs with input from the Fleet Commanders. • Establish assessment schedules. • Coordinate with NAVSEA 00 for services and support. • Coordinate with NAVSEA 06M and Naval Air Systems Command Metrology and Calibration programs to receive a SFIMA calibration support plan. • Perform data analysis on mission limiting Casualty Reports. • Report assessment results to the Fleet Commander. • Manage emergent IPE maintenance. • Utilize lessons learned to revise SFIMA strategies and upgrade SFIMA capabilities.
IV-2.4.1	FMA Assessment	• Promulgate assessment schedule. • Forward precepts letter or message to FMA's Commanding Officer. • Conduct in-brief and out-brief with designated personnel. • Issue the Assessment Report.
IV-5.3.1	Marine Sanitation Devices	• Ensure surface ships participate in pollution abatement program. • Ensure MSD systems are properly installed, operated and maintained.
IV-16.2.3d	Aircraft Launch and Recovery Systems	• Provide ALRE Maintenance Management Teams to conduct assist visits and annual audits of all units.

Type Commander (TYCOM)

Section	Area of Responsibility	Responsibility
IV-17.4.3	Steam Catapult Inspection	• Fund catapult accumulator system inspections. • Assist with coordination of inspections . • Provide mission tasking and funding for SGPIs and ISEA Inspectors. • Assist COs in arranging for corrective action of deficient items. • Review the SCIRMIS. • Review inspection summary naval message major discrepancies and recommended repairs, Repair Before Operate (RBO) actions, and safety concerns and take appropriate actions. • Attend or direct staff to attend all SGPI RTE Inspection and ISEA Inspector 5YR-SI Inspection Cycle In-Briefs and Out-Briefs as required.
IV-26.2.1	Board of Inspection and Survey Material Inspections Policy	• Act as cognizant authority for the conduct of INSURV inspections. • Nominate active ships for MIs by the INSURV board. • Schedule inspections/assessments within 60 days of MI. • Review Safety Survey results and corrective action status report. • Track and work to resolve historical issues identified by INSURV. • Coordinate with the ISIC to disseminate the best practices and lessons learned.
IV-27.4.3	Steam Reboiler Inspection	• Fund steam reboiler inspections. • Assist with coordination of inspections with the Naval Supervisory Authority (NSA) and local repair activities. • Provide mission tasking and funding for SGPIs and ISEA inspectors. • Assist Commanding Officers in arranging corrective action of deficient items beyond the capability of Ship's Force to perform. Monitor follow-up action to correct deficiencies. • Review the RIRMIS to ensure deferred inspection deficiencies are entered into the CSMP.
V-I-1.4	Organizational Responsibilities	• (Submarines) Obtain NAVSEA approval for exception to REC requirements. • Administer a departure from specification system. • Perform assessment of nuclear FMAs annually. • (Submarines) Perform assessment of ISICs annually. • Perform assessment of FMA's non-nuclear programs annually. • Perform random, unannounced assessments and monitor visits. • Review and evaluate FMA and ISIC reports of corrective actions. • (Submarines) Maintain system to provide SUBSAFE certification. • Provide annual self-evaluation of QA program. • Evaluate and analyze proposed changes to this volume. • (Submarines) Perform annual SUBSAFE/Scope of Certification/Fly By Wire awareness training.

Type Commander (TYCOM)

Section	Area of Responsibility	Responsibility
		• (Submarines) Develop and implement necessary instructions and procedures to meet requirements of reference (a). • (Submarines) Maintain FBW SCS certification. • Approve at-sea testing developed by the ISEA following Upgrades/Alterations or Major Repair Work. • Issue a message to the ship certifying the FBW SCS and authorize FBW SCS unrestricted use in support of Submarine unrestricted operations. • (Submarines) For assigned activities, provide NAVSEA 07Q informational copies of critiques, trouble reports and incident reports for SUBSAFE/FBW SCS/DSS/SOC issues that result in a problem severity level of Level 1 (critical) or Level 2 (serious).
V-I-9.3.4	Assessments	• Conduct annual assessments of ISICs and FMAs.
V-III-1.2.1	Organizational Responsibilities	• Obtain SCA approval for REC requirements in SOC systems. • Administer DFS system. • Perform assessment of ISICs responsible for DSSs annually. • Perform random, unannounced Sustaining Activity Quality Assurance assessments. • Review and evaluate ISIC reports of corrective action taken on QA assessments. • Perform an annual self-evaluation of the QA program. • Evaluate and analyze proposed changes to JFMM Volume V. • Recommend to SCA suspension and reinstatement of DSS certification. • Perform annual SOC awareness training.
VI-1.3	Waterborne Underwater Hull Cleaning	• Schedule periodic cleaning.
VI-4.9.a	Shipboard Electromagnetic Compatibility	• Coordinate to identify, solve and correct operational EMI deficiencies. • Review and authorize documents prepared by technical agencies. • Evaluate comments and recommendations regarding EMI reduction. • Ensure participation of each aircraft carrier, surface force and submarine EMC technician in at least one EMI survey every 6 months.
VI-5.2.4	Deficiency Documentation and Reporting	• Validate, screen and broker all 2-Kilos. • Broker all 2-Kilos associated with any outstanding C3/C4 CASREP during the next scheduled maintenance availability. • Enforce compliance with the policy of updating a CASREP.
VI-6.4.2	Industrial Plant Equipment	• Review all PEPs submitted by the TYCOMs. • Prioritize and assign a Project Number to PEPs • Upon notification from NAVSEA PMS 335, forward the information regarding disposition (approval or disapproval), acquisition status and

Type Commander (TYCOM)

Section	Area of Responsibility	Responsibility
		delivery dates for PEPs to the submitting activities with an information copy to the cognizant TYCOM.
VI-8.2.2	Miniature/Micro-miniature Electronic Repair Program	• Coordinate and manage 2M, MTR and FOTR program. • Monitor effectiveness of 2M program. • Execute progressive repair procedures. • Coordinate logistic support, outfitting requirements and deployment priorities. • Monitor 2M, MTR and FOTR certification status. • Monitor and enforce the utilization of Module Test and Repair Tracking System.
VI-9.2.2	Metrology and Calibration Program	• Assign a METCAL program single point of contact. • Review and submit TAMS allowance change requests to TAMS allowance manager. • Redistribute excess TAMS. • Provide properly trained personnel to authorized calibration activities. • Periodically perform Quality Assurance reviews of laboratories. • Budget and manage calibration overflow program. • Ensure Regional Loan Pools are established. • Evaluate FMA/Regional Calibration Laboratories. • Coordinate for SCAT assignments and SPETERL revisions. • Assign Fleet Commander representatives. • Assist platforms with their Departure From Specification requests.
VI-11.7.1	Maintenance, Repair and Overhaul of Service Craft, Landing Craft and Small Boats	• Coordinate all aspects of advanced planning. • Authorize all new industrial work items. • Authorize all growth (new) work in existing industrial work item. • Provide funding to accomplish inspections, all authorized work and oversight via the RMC or FMA. • Monitor and approve changes in established milestones. • Direct action when quality or completeness of industrial activity work is in question.
VI-12.3.2.1	Degaussing (ships with degaussing systems)	• Monitor degaussing readiness of assigned ships. • Ensure ships “check range” as required. • Issue waivers or DFS for inability to meet check ranging and deperming requirements, or both, if necessary.
VI-12.4.2.1	Degaussing (submarines without installed degaussing systems)	• Ensure that ships check range as required. • Ensure that ships “check range”. • Approve waivers to check ranging and deperming requirements if necessary.

Type Commander (TYCOM)

Section	Area of Responsibility	Responsibility
VI-13.4.1	Surface Ship Corrosion Control	• Ensure Port Engineers and Maintenance Program Managers schedule and screen corrosion control work items to the appropriate repair activities during industrial availabilities and upkeeps with sufficient length to accommodate the work. • Ensure Port Engineers and MPMs screen tank, void and general structural inspection AWRs in Availability Work Packages to the repair activities capable of performing the inspections. • Aircraft Carrier Type Commanders will provide Ship's Force Self-help information on corrosion control information and technical assistance on setting up and updating a ship's Corrosion Prevention and Control Program.
VI-14.6.1	Cannibalization	• Monitor all cannibalization actions being carried out by subordinate units. • Adjudicate and authorize or disapprove all requests for cannibalizations. • Request assistance from other TYCOMs if required. • Meet the monthly reporting requirements.
VI-16.2.2.1.3	Habitability Improvement/ Self Help Responsibilities	• Develop Long Range Plan, establish priorities for attainment of standards. • Plan, schedule, coordinate and monitor projects. • Authorize, budget and fund habitability program.
VI-19.1.2 VI-19-2.1 VI-19-3.1 VI-19-4.1 VI-19-5.2 VI-19-6.3	Ship Maintenance and Material Management	• Afloat Maintenance Data System. • Ashore Maintenance Data System. • Alteration Management System. • Maintain Inspection Data File. • PMS Scheduling (SKED software). • CSMP. • Provide Program Enhancement Requirements. • Master Job Catalog. • Screening and Processing FBRs. • Ensure ships and units are manned with a Ship's Maintenance Management Officer. • Ensure shops and units are manned with NEC qualified 3MCs. • Analyze 3-M Inspection and Self-Assessment data, identify concerns, conduct root cause analysis, develop and implement solutions. • Ensure TYCOM inspection team members are qualified to inspect assigned areas.
VI-21.6.1.1	C3 Shore Site Organization	• Initiate the budgetary actions for funding material condition assessment tasks (I-tasks), corrective repairs, mandatory technical requirements (MTR), or Fleet alterations. • Recommend to USFLTFORCOM and numbered fleets any high

Type Commander (TYCOM)

Section	Area of Responsibility	Responsibility
		priority fleet modernization desired to be accomplished. • Issue fleet alteration Letters of Authorization (LOA), and FRCB Letters of authorization for C3 Shore Sites still going through C3 FRCB processes. • Ensure all authorized alterations are identified by priority based on material availability. • Assume the lead roles in managing Availability Work Packages developed by Shore Maintenance Engineering, Planning and Procurement. • Assist Shore Maintenance Engineering, Planning and Procurement in preparation of AWPs as required. • Coordinate with Shore Maintenance Engineering, Planning and Procurement to update the AWP when Class Maintenance Plans changes alter the Baseline Availability Work Package after A-360. • Identify the routine package to be accomplished based on Master Specification Catalog (MSC) or Master Job Catalog review (as appropriate). • Plan for and monitor availability execution to stay within cost and schedule for the scope of work authorized. Ensure any growth in the scope of work authorized is necessary to reasonably assure safe, reliable operation. • Authorize new items and industrial growth work items. • Issue direction when the quality or completeness of industrial activity work is in question. • Seek resolution of all mission set and major technical problems and coordinate industrial requirements for modernization and repair. • Exercise all work candidate screening and follow up actions relating to the availability directly with the unit concerned. • Participate in key milestones as required to support resolution of issues. • Schedule and conduct inspections of C3 Shore forces. • Preparing budget submissions and managing budget execution in support of modernization, repair, and maintenance availabilities as well as the material readiness and training of their assigned units.
VI-24.8.1	Periodic Maintenance Requirement Program	• Provide overall scheduling system for accomplishment of PMRs. • Perform periodic audits of ISICs and FMAs. • Provide guidance to ISICs obtaining NAVSEA concurrence.
VI-25.3.1	Unrestricted Operations	• Perform periodic audits of ISICs and FMAs. • Provide guidance to ISICs when deviating from schedules due to DFS requests.
VI-27.3.1	Scheduled Preservation Upkeep Coordinated Effort	• Administer the SPRUCE program. • Maintain and distribute file of SPRUCE lessons learned.

Type Commander (TYCOM)

Section	Area of Responsibility	Responsibility
VI-31.3.4	Surface Ship Maintenance Placement and Oversight Business Rules	• Establish force maintenance policies and directives. • Provide list of Fleet Alteration requirements for execution year as input to RMC business plan. • Issue spending controls to RMC and update on quarterly basis. • Recapture spending controls previously issued, as a last resort. • If not funding an availability, must approve removal of funds before RMC initiates this action. • Evaluate Maintenance and Modernization Business Plan adjustment requests. • Evaluate RMCs end of month financial status report.
VI-33.2.3	MMBP Responsibilities (Surface Force Ships only)	• Align Surface Warfare Enterprise processes with established waterfront support organizations and establish the readiness and cost control processes. • Support the ISIC with warships ready for tasking. • Assess current readiness, analyze metrics across ships of a class, examine class trends, determine root causes, establish lessons learned and provide recommendations and solutions. • Provide the NSA with Target Controls in March of each year. • Establish Force maintenance policies, directives and authorize the NSA to execute those policies and directives. • Ensure the established modernization plan is accurate and issue Fleet Alteration Letters of Authorization. • Validate MMBPs and issue approved CNO availability and Continuous Maintenance funding controls. • Provide the RMCs with Target Controls in March of each year.
VI-33.2.4	MMBP Responsibilities (Aircraft Carriers and Submarines)	• Establish Force maintenance policies and directives and authorize the NSA to execute them. • Ensure that established modernization plan is accurate and issue Fleet Alteration Letters of Authorization. • Final approval of all MMBPs.
VI-33.4.2	Initial Budget Guidance (March)	• Establish an initial estimate of the expected funding controls for the next Fiscal Year. • Develop a common maintenance funding strategy. • Establish initial TYCOM Target Controls for each ship's CNO Availability and each ship's CM budget. • Ensure Letters of Authorization accurately reflect the modernization plan.
VI-33.4.4	Execution Strategy Adjustments (May)	• Determine if adjustments to the TYCOM Target Controls are required.
VI-33.4.6	Approve MMBPs (July)	• Approve MMBPs and issue final approved CNO availability and CM controls.

Type Commander (TYCOM)

Section	Area of Responsibility	Responsibility
		• Provide final CNO budget controls and CM controls to the Maintenance Teams.
VI-33.4.7	Submit Phasing Plans (August)	• Submit Phasing Plans to the Fleet Commander.
VI-37.5c	Regional Maintenance Center Passive Countermeasure System Support Requirements	• Coordinate in identifying, solving and correcting PCMS deficiencies. • Refer all PCMS related Departures from Specifications to NAVSEA for adjudication. • Fund PCMS RIPs to provide for the additional RMC labor and materials. • Ensure that proper corrosion control procedures are employed. • Review and authorize documents that contain procedures relative to PCMS. • Evaluate comments and recommendations regarding Fleet PCMS program.
VI-38.3.1	DSS Hull Integrity Procedures	• Perform periodic audits of ISICs and FMAs. • Provide guidance to ISICs for DFS request and resolution. • Review requests for HIP accomplishment as required.
VI-40.5.1	(SUBS) Messages	• Review (SUBS) message traffic. • Assist and support the ISIC. • Track (SUBS) messages initiated by the TYCOM department generating the message. • Track (SUBS) messages generated by submarines under its cognizance.
VI-41.2.3d	Maintenance Team	• Enter CNO availabilities, assessments, associated routine tasks and authorized Fleet and Programmed Alterations into the appropriate Maintenance Automated Information System.
VI-41.5	Planning Process Support	• Provides planning process support in the planning and execution of engineered maintenance.
VI-41.6	Planning Board for Maintenance	• Attend regularly scheduled meetings to discuss ship-wide maintenance issues.
VI-42.6.2	Material Assessment	• Schedule and authorize material assessments. • Define the scope of material assessment. • Provide funding for execution and support. • Conduct periodic reviews of the material assessment process. • Establish standards of effectiveness to ensure program improvement. • Evaluate unit's ability to self-assess and report training deficiencies.
VII-1.3.8	Contracted Ship Repair Functions, Tasks And Standards Of Conduct	• Responsible for budgeting to support modernization, repair and maintenance availabilities and for the material readiness and training of their assigned ships.

Type Commander (TYCOM)

Section	Area of Responsibility	Responsibility
		• Provide advanced planning funding to the respective ships Maintenance Team for availability planning.
VII-6.6.3	Funding And Accounting	• Provide a list of Fleet Alteration requirements for the execution year. • Issue spending controls to the RMC and update them on a quarterly basis. • Recapture spending controls previously issued to the RMCs. • Provided to Maintenance Teams early enough to avoid premiums associated with late contract award or assignment of work. • Evaluate MMBP adjustment requests forwarded by the RMC. • Evaluate the RMCs end of quarter financial status report to assess the degree of conformance to the approved RMC consolidated spending plan.

Immediate Superior in Command (ISIC)

Section	Area of Responsibility	Responsibility
I-2.5.1	Pre-Commissioning	• Provide crew support prior to initial man-up. • Conduct an inspection of the crew at the building yard. • Conduct periodic monitoring of ships. • Ensure personnel arrive in support of initial crew man-up. • Conduct Habitability and Livability Inspections. • Make recommendations to the TYCOM for placing the ship "In Service". • Contact TYCOM Metrology and Calibration Point of Contact to verify if establishment of Field Calibration Activity Request has been submitted. • Ensure that assigned New Construction Units operate and maintain installed diesel engines. • (Nuclear Powered Ships only) Conduct a Pre-RSE of the Engineering/Reactor Department. • (Nuclear Powered Ships only) Review Pre-RSE findings, the CO's training plan and progress evaluations. • (Submarines only) Prior to Fast Cruise, report ship's preparations to assume responsibility for Re-entry Control. • (Submarines only) Schedule distressed submarine and salvage inspections. • (Submarines only) Designate the distressed submarine and salvage inspection team. • For CVNs, conduct crew certification. • For all other hulls, conduct Phase I crew certification. • Conduct Phase II crew certification. • Conduct a material inspection of the ship. • Report satisfactory completion of the inspections to the TYCOM. • Message reporting requirements.
I-2.5.2	Post Shakedown Availability	• Conduct periodic monitoring. • (Nuclear Powered Ships only) Conduct a Pre-critical inspection of the Engineering/Reactor Department. • Witness and certify to the TYCOM that the state of crew training is satisfactory for at-sea operations. • (Aircraft Carriers only) Receive from the CO/Supervising Authority the scope, schedule and agenda of the tests for Sea Trials for review and approval. • Arrange for the embarkation of technical personnel to observe tests or trials. • Arrange for the assignment of operating areas and communications frequencies. • (Submarines only) Schedule a distressed submarine and salvage inspection.

Immediate Superior in Command (ISIC)

Section	Area of Responsibility	Responsibility
		• (Submarines only) Prior to Fast Cruise, audit Ship's Force Re-Entry Control and Departure from Specification records. • (Submarines only) Conduct a material inspection consisting of a vertical audit of Ship's Force and FMA SUBSAFE work and URO completion status. • Advise the TYCOM if deficiencies exist or extension of time is required to correct training and material deficiencies.
I-3.3.1d	Arrival Assist	• Inform the TYCOM in the event that progress in preparations is evaluated as unsatisfactory.
I-3.3.2b	Periodic Monitoring/ Inspections/Visits	• Determine the extent, type and frequency of periodic monitoring inspections and visits.
I-3.3.2d	Periodic Monitoring/ Inspections/Visits	• Advise the TYCOM of situations where the completion of Key Events is in jeopardy.
I-3.3.3c	Pre-RSE Safeguard Examination	• (Nuclear Powered Ships only) Schedule the Pre-RSE approximately six to eight weeks prior to criticality.
I-3.3.3d(3)	Pre-RSE Safeguard Examination	• Initiate arrangements for the participation of TYCOM Staff members at least one month prior to the inspection date.
I-3.3.11	Habitability Inspection	• Conduct Habitability Inspection. • Verify livability requirements for crew move aboard.
I-3.3.14a	Light-Off Assessment	• Determine if ship's training procedures and status support safe plant operations.
II-II-1.8.1	Critical Time Period (Surface Force Ships)	• Partially responsible for coordinating the 100-hour plan.
II-II-2.6.7	Trials, Inspections and Crew Certification (Surface Force Ships)	• The ISIC, assisted by an assessment team provided by Fleet Commander N7, will conduct the LOA. • Ensure industrial activities and ships maintain current copies of Maintenance Standards, PMR schedules and inventories. • Review Ship's Force submitted deferrals for industrial activity assistance. • Ensure industrial activities provide 3-M and SMS feedback for analysis by SUBMEPP. • Request SUBMEPP assistance as necessary for assistance with PMR scheduling and software. • Report to SUBMEPP inability to perform PMRs. • Designate Availability Coordinator. • Provide updated Sea Trials status to COMSUBDEVRON FIVE. • For minor CNO maintenance availabilities issue required messages as applicable. • Report that all SFCC-certified On Board Repair Parts are loaded out by Fast Cruise following any major or minor CNO availability.

Immediate Superior in Command (ISIC)

Section	Area of Responsibility	Responsibility
II-II-2.6.7.4.n	End of Maintenance Phase (Surface Force Ships)	• Coordinate with SF to verify those systems and equipment not worked during the maintenance availability and operationally tested to ensure the ship is ready to transition from the maintenance phase to the training phase.
II-III-2.4.1	Planning Sources (Submarines)	• Load scheduled PMRs into each ship's CSMP for a specific availability. • Enter alterations on the ship's CSMP which the TYCOM has authorized for accomplishment.
II-III-2.6.1.2	Availability Execution (Submarines)	• Prior to fast Cruise, QA Officer must conduct a formal audit of the Ship's Force REC and Departure from Specification Records.
II-III-2.6.8.9	Sea Trials (Submarines)	• Authorizes the ship to get underway for Sea Trials.
II-III-3.4.1.1	Maintenance Policies and Procedures (Submarines)	• Task the Ship or Regional Maintenance Center to submit the Fast Cruise, Sea Trials, or both, agendas for ISIC approval. • Ensure all requirements of the Industrial Ship Safety Manual For Fire Prevention and Response instruction are implemented to the maximum extent practical based these considerations.
II-III-3.6.1.2	CMAVs (Submarines)	• Input any message work candidates received by message into the Maintenance Data System.
II-III-3.10.1	IDD or Pira Availabilities (Submarines)	• Authorize new items and growth industrial work items. • Monitor and approve all changes in established milestones, not internal to industrial activity completion dates. • Issue direction when the quality or completeness of industrial activity work is in question. • Notify the TYCOM when essential Ship's Force work cannot be completed on the scheduled contract or Key Event completion date. • Periodically assess and monitor shipboard conditions during the availability. • Prior to Fast Cruise, the ISIC Quality Assurance Officer must conduct a formal audit of Ship's Force Re-Entry Control and DFS Records. Ensure all required "D"-Level PMR and URO MRC accomplishment is current. Conduct a material inspection of the ship prior to Fast Cruise.
II-III-3.10.6.1	Pre-Critical Inspection (Submarines)	• Schedule a Pre-Critical Inspection about four weeks prior to criticality.
II-III-3.10.6.3	Reports of Inspections (Submarines)	• Review the Pre-Critical Inspection findings, the CO's training plan and progress evaluations and direct follow-up reviews and inspections necessary to verify the ship's readiness for criticality.
II-III-3.10.9	Sea Trials (Submarines)	• Notify the TYCOM of satisfactory completion of Fast Cruise and readiness for Sea Trials.

Immediate Superior in Command (ISIC)

Section	Area of Responsibility	Responsibility
II-III-3.10.10	Interrupted Sea Trials (Submarines)	• Report by message (format of Appendix V) to the TYCOM that the material condition of those SUBSAFE Certification boundaries that were installed, repaired or tested by Ship's Force is satisfactory for resuming Sea Trials.
II-IV-4.3	Record Retention	• Copies of documents used to provide maintenance funds to FMAs and Immediate Superiors In Command will be retained. • Records of command evaluation reviews related to financial management will be retained for 5 years after cutoff of corrective actions. • Copy of last independent audit (if any) of FMA financial management procedures and processes will be retained. • Records of assessments and evaluation for the past 24 months (unless otherwise stated)will be retained.
IV-3.3.6	Boiler Inspections	• Maintain overall cognizance of SGPI Program. • Schedule routine inspections. • Arrange for availability of SGPI during CAI. • Monitor follow-up action. • Assist COs in arranging for corrective action when requested.
IV-18.3.1	Distressed Submarine and Salvage Inspection	• Schedule Distressed Submarine and Salvage Inspection.
IV-21.2.1	Submarine Oxygen Generating Plants	• Ensure assigned units are in compliance with Type Commander policy. • Conduct periodic inspections and audits. • Ensure PMT inspectors perform material inspections of the ship's oxygen generators.
IV-23.3.2.6	Gas Turbine Engine Inspection	• Monitor the follow-up action to correct noted discrepancies by randomly sampling ship's files and reports. • Assist Commanding Officers in arranging for corrective action items beyond the capability of Ship's Force.
IV-26.2.2	Board of Inspection and Survey Material Inspections Policy	• (Surface Force Ships only) The ISIC, if deployed, will request assistance with inspection preparations. • Monitor ship's preparation for MI. • Surface Ships ISIC conduct an inspection readiness assessment prior to submitting reports. • Ensure post inspection reporting procedures followed • Attend post-INSURV inspection critiques. • Ensure subordinate commands are prepared for scheduled INSURV. • Ensure ship is prepared to discuss deficiencies not corrected and items removed from CSMP. • Ensure preparation for the sequence of accomplishing inspection underway demonstrations is conducted in advance of inspection.

Immediate Superior in Command (ISIC)

Section	Area of Responsibility	Responsibility
		• Monitor reporting and correction of MI deficiencies.
V-I-1.5	Organizational Responsibilities	• Organize and implement a QA program. • (Submarines) Organize and implement program to verify performance of required maintenance. • Organize and implement a work request screening process. • (Submarines) Review Ship's Force Controlled Work Packages. • (Submarines) Ensure ship's certification continuity report is received before ship is underway. • Review and sign MOA. • (Submarines) Administer a DFS system. • Monitor QA program and procedures. • Schedule and conduct QA program assessment. • Review and endorse TYCOM audit report. • Conduct periodic monitoring of Ship's Force work and QA program. • (Submarines) Perform annual SUBSAFE/SOC/FBW SCS awareness training. • (Submarines) Conduct oral interview with Ship's Force relieving QAO. • Ensure fact-finding critiques are held to establish causes of errors during maintenance. • Provide sufficient time for crew training during Upgrades/Alterations or Major Repair Work on the FBW SCS. • (Submarines only) Contact the TYCOM immediately for issues which will result in a SUBSAFE, FBW SCS, DSS or SOC critique, SUBSAFE, FBW SCS, DSS or SOC trouble report, or SUBSAFE, FBW SCS, DSS or SOC fact-finding. On the same calendar day, the ISIC will provide the TYCOM an email outlining the issue reported by the Ship or Activity. • Conduct FBW SCS certification audits. • Report by message, crew readiness and verification from the ISEA/activity performing work that work necessary for at-sea testing is complete. • Certify to the TYCOM the FBW SCS material condition of parts installed, repaired and/or tested by the ISEA is satisfactory. • Transmit a Submarine Material Transfer Message to the gaining ISIC for deploying/ deployed submarines when the unit out chops.
V-I-2D-1	Formal Work Package Approval	• Review Ship's Force and RMC/FMA prepared CWPs. • (Submarines) At the end of every FMA upkeep, verify all SUBSAFE deficiencies in the ship's CSMP have been corrected or have an appropriate DFS.

Immediate Superior in Command (ISIC)

Section	Area of Responsibility	Responsibility
		• (Submarines) Prior to submerged underway operations when submarines are in a port with an ISIC, the ISIC QAO must complete a QA Pre-Underway Checklist.
V-I-5.9.4c	Objective Quality Evidence to Support Controlled FBW SCS Work	• Perform 100% audit of FBW SCS Upgrades, Alterations or Major Repair Work.
V-I-8.3.1g	Departure from Specification Procedures	• Responsible for all DFSs which have been approved or forwarded to TYCOM for approval until the DFS is cleared, canceled or formally transferred to another TYCOM. • Responsible for ensuring that the CSMP entry is annotated on the DFS for temporary repairs.
V-I-9.3.3	Assessments, Audits and Surveillance	• Schedule and conduct a QA Program assessment of all assigned ships. • Conduct additional periodic audits and surveillance. • Conduct 100% audit of CWPs for SUBSAFE work accomplished by Forces Afloat. • Conduct audit of UROs assigned to Forces Afloat. • Conduct review of all outstanding Forces Afloat DFSs. • Vertical audits of all Forces Afloat CWPs. • Perform 100% audit of FBW SCS Upgrades/Alterations or Major Repair Work
V-III-1.2.2	Organizational Responsibilities	• Organize and implement a QA program • Organize and implement a program to verify performance of required maintenance. • (Submarines only) Organize and implement a work request screening process. • Ensure DSS certification continuity report is received and reviewed before DSS manned use. • Review and approve User/Sustaining Activity requests prior to conducting manned operations. • Review and sign the Memorandum of Agreement. • Administer a DFS system. • (Submarines only) Monitor the QA program and procedures of assigned FMA and monitor corrective actions. • (Submarines only) Schedule and conduct a QA program assessment. • (Submarines only) Review and endorse TYCOM audit report of assigned FMA(s). • Conduct periodic monitoring of Ship's Force work and QA program. • Properly maintain certification on assigned DSS. • Review and evaluate User/Sustaining Activity reports of corrective action. • Ensure Sustaining Activities perform internal surveys.

Immediate Superior in Command (ISIC)

Section	Area of Responsibility	Responsibility
		• Ensure Sustaining Activities process requests for sustaining certification. • Perform QA assessments associated with the DSS and host submarines. • Route appropriate DSS SOC DFSs for approval. • Conduct vertical audit of assigned DSS unit's OQE. • Perform annual SOC awareness training. • Ensure fact-finding critiques are held.
VI-3.2.1	Submarine Fleet Modernization Program	• Inform FMA of upcoming availabilities. • Monitor FMA modernization and availability planning. • Establish installation priorities. • Ensure no action is taken to accomplish alterations which are not authorized for accomplishment. • Maintain a file of alteration briefs. • Assist units in preparation of alteration requests. • Identify deficiencies and changes to hull applicability of alterations. • Ensure only TYCOM authorized or partially completed alterations appear on CSMP. • Ensure MJC contains all alterations authorized for accomplishment. • Ensure all OPNAV4790/CKS are collected 3 days prior to end of availability. • Ensure RPCCRs are distributed to ship's CO. • Ensure situational alterations are accomplished. • Inform ships of alterations planned during an availability. • Verify reports of alteration completions during CNO availabilities. • Ensure Forces Afloat alterations are completed to maximum extent prior to CNO availability. • For deploying units, provide to FMA a list of alterations to be completed during deployment upkeep. • Allocate portion of FMA ROV for procuring alteration material for installation by Forces Afloat. • Before installation begins, ensure MOA is in place for any alteration accomplished by industrial activity. • Ensure installation of TEMPALTs/OPALTs is per reference (f). • Ensure alteration by AIT following reference (g). • Ensure FMA obtains TYKITs RFI. • Ensure Ready for Accomplishment (RFA) Category "A" Mandatory Safety A&Is and Mandatory Safety Title D SHIPALTs are completed at the next appropriate availability of sufficient duration . • Ensure that category "B" A&I's are completed within 24 months of the date of authorization.

Immediate Superior in Command (ISIC)

Section	Area of Responsibility	Responsibility
		• Prepare and forward TAMs. • Ensure FBW SCS alterations follow reference (h).
VI-5.2.2	Deficiency Documentation and Reporting	• Screen and technically review all submitted 4790/2Ks • Technically review all submitted CASREPs.
VI-8.2.2	Miniature/Micro-miniature Electronic Repair Program	• Coordinate and manage 2M, MTR and FOTR programs. • Monitor effectiveness of 2M, MTR and FOTR programs. • Execute progressive repair procedures. • Coordinate logistic support, outfitting requirements and deployment priorities. • Monitor 2M certification status. • Schedule 2M, MTR and FOTR certifications in conjunction with C5RA/TSRA.
VI-9.2.4	Metrology and Calibration Program	• Monitor calibration readiness status within their respective organizations. • Monitor effectiveness of electronic and SGCP FCAs. • Ensure that ships with FCAs extend their service to other ships in company. • Ensure each ship has necessary standards, documentation and trained personnel to maintain certification. • Coordinate resolution of calibration problems. • (Submarines) Ensure each activity supports the TYCOM Calibration Program of Record. • (Submarines) Support and participate in the TYCOM's CTRA process.
VI-11.7.2	Maintenance, Repair and Overhaul of Service Craft, Landing Craft and Small Boats	• Review overhaul progress reports. • Review Ship's Force and RMC concurrent work. • Ensure directives are followed concerning safety. • Attend Sea Trial and overhaul completion review conferences. • Assist in all aspects of planning and monitoring of industrial availabilities.
VI-12.3.2.1	Degaussing (ships and submarines with degaussing systems)	• Monitor degaussing readiness of assigned ships. • Ensure ships "check range" as required. • Issue waivers or DFS for inability to meet check ranging and deperming requirements, or both, if necessary.
VI-12.4.2.1	Degaussing (submarines without installed degaussing systems)	• Ensure ships "check range" as required. • Schedule ships with unsat magnetic signatures for flash deperming. • Issue waivers to check ranging and deperming requirements if necessary.

Immediate Superior in Command (ISIC)

Section	Area of Responsibility	Responsibility
VI-19.4.1.6	Ship Maintenance and Material Management	• Designate 3M Officer. • Monitor and Evaluate 3-M Program for assigned units. • Ensure 3-M Inspections are current. • Ensure subordinate commands conduct quarterly 3-M Self Assessments and report results to the TYCOM 3MC. • Monitor status of troubled systems/Top Management Attention items. • Ensure subordinate commands comply with standard Work Center/Division/Department structure. • Track and monitor 3-M major milestones and Training Events, oversee or provide Inspection Teams and conduct 3-M spot checks during ISIC and/or staff visits.
VI-22.2.2.3b	Unplanned TRIPER Change Out	• Assign the job to an FMA.
VI-23.3.1	Submarine Noise Reduction	• Assign a Staff Noise Reduction Officer. • Oversee and supervise Noise Reduction Program within Squadron. • Submit requests for Beartrap Acoustic Radiated Trials. • Schedule acoustic surveys during operating cycles of submarines. • Recommend or authorize corrective actions. • Review records, results, procedures and equipment during material readiness inspections. • Schedule divers for underwater hull and propeller surveys. • Report propeller replacements. • Ensure support personnel trained in noise reduction.
VI-24.8.3	Periodic Maintenance Requirement Program	• Schedule and ensure completion of PMR work within planned periodicity in the CMP. • For Submarines, call-down all PMRs planned for accomplishment into the CSMP by availability dates. • Maintain auditable records of PMR accomplishment for each submarine or DDS. • Maintain automated database of Logistic Data System, Planned/Refit Maintenance Management System. • Notify SUBMEPP Code 1814 of non-receipt of quarterly PMR Inventories and schedules. • Keep local scheduling system correct and accurate. • Make every attempt to accomplish PMRs on or before the next scheduled due date. Ensure PMRs not completed by SUBMEPP due date are rescheduled. • Ensure all I-Level PMRs are scheduled for accomplishment by FMA prior to end of availability. • Review completed AWRs prior to closeout. • Transfer PMRs to other FMAs as necessary.

Immediate Superior in Command (ISIC)

Section	Area of Responsibility	Responsibility
		• Non-scheduled repairs of PMR components. • Provide assigned ship's training in TYCOM PMR scheduling system.
VI-25.3.3	Unrestricted Operations	• Maintain auditable records of URO MRC accomplishment. • Conduct periodic audits of assigned FMAs. • Maintain a file of current URO MRC inventories and schedules as provided by SUBMEPP. • Coordinate accomplishment of URO MRCs following SUBMEPP provided PMR inventories and schedules. Monitor the URO MRC/DSS HIP Status web site periodically. • Control input of SUBMEPP scheduling file. • Ensure all URO MRC requirements are in the CSMP. • Request approval from TYCOM for deviations from required periodicities. • Establish procedures to affect routing of completed AWRs. • Ensure accomplishing activity immediately reports conditions that would result in reduced inspection periodicity. • Monitor timely submission of URO MRC data reports and reports of accomplishment. • Review ship's certification continuity report prior to underway period. • Parent ISIC of deploying ships: ensure URO MRC due for accomplishment during deployment is in CSMP transfer file, provide message to applicable deployed FMA. • Deployed squadrons will review URO MRC status of deployed submarines at in-chop. • Prior to start of CNO availability: assign JCNs as necessary, reassign URO MRCs not completed. • During availability, URO MRCs not accomplished during depot period will be placed on guarantee list or reassigned. • Prior to CNO availability completion, audit URO MRCs assigned to Forces Afloat by the AWP. • Following availability completion ensure all MRCs were reported and subsequently updated by SUBMEPP.
VI-27.3.2	Scheduled Preservation Upkeep Coordinated Effort	• Schedule and coordinate SPRUCE upkeeps. • Coordinate submarine crew training. • Monitor effectiveness of program. • Chair a debrief with Ship's Force and FMA to review effectiveness of SPRUCE.
VI-28.6.1	Cableway Assessment	• Ensure assigned ships are scheduled to receive cableway assessments and training.
VI-33.4.3b	Provide Controls to Maintenance Team (April)	• Provide ship operational schedule information to the Maintenance Team.

Immediate Superior in Command (ISIC)

Section	Area of Responsibility	Responsibility
VI-37.5d	Regional Maintenance Center Passive Countermeasure System Support Requirements	• Submit requests to schedule PCMS core activities for each unit. • Review and take the appropriate action to correct PCMS discrepancies for subordinate units.
VI-38.3.3	DSS Hull Integrity Procedures	• Maintain auditable records of DSS HIP accomplishments. • Conduct periodic audits of assigned FMAs. • Maintain a file of DSS HIP inventories and schedules. • Assist in preparation and approve DSS HIP performance schedule. • Ensure review and implementation of DSS HIP procedural inventories and schedules. • Ensure all DSS HIP requirements are in the CSMP. • Request approval from Program Manager with Sustaining Certification Authority for deviations from DSS HIP requirements and periodicities. • Establish procedures for routing of completed DSS HIP AWRs. • Monitor the timely submission of DSS HIP data report forms and report of accomplishment. • Review vehicle's certification continuity report prior to underway period. • Ensure DSS HIPs due for accomplishment during deployment are in the transfer of custody message. • Audit DSS HIPs assigned to Forces Afloat by the AWP.
VI-40.5.2	(SUBS) Messages	• Review and take for action all (SUBS) messages. • Track (SUBS) messages sent or initiated by submarines under its cognizance. • Track (SUBS) messages initiated by the ISIC.
VI-41.6	Planning Board for Maintenance	• Attend regularly scheduled Planning Board for Maintenance meetings between the ship's Maintenance Team members and stakeholders.
VI-42.6.2	Material Assessment	• Schedule and authorize material assessments. • Define the scope of material assessment. • Provide funding for execution and support.. • Conduct periodic reviews of the material assessment process • Establish standards of effectiveness to ensure program improvement. • Evaluate unit's ability to self-assess and report training deficiencies.

Regional Maintenance Center Commander

Section	Area of Responsibility	Responsibility
II-I-1.8.1	Technical assistance	• Provide direct support to Fleet and TYCOMS in matters of waterfront technical assistance, maintenance training and logistics services associated with the installation, operation, maintenance, and readiness of shipboard equipment and systems.
II-I-3.4.1.2	Fleet Surface Force Ship Maintenance Availabilities	• Develop recommended Key Event schedule and present to the ISIC and Ship's Force. • Conduct ship checks, plan work candidates and order required material. • Recommend returned work candidates to the RMC ISIC, as applicable. • Develop strategy using the guidance found in volume VI, chapter 9 of this manual to accomplish calibration of systems, gages, instruments and tools in support of Ship's Force requested work and the availability milestones. • Identify and order Long Lead Time Material. • Review the Availability Work Package, write Formal Work Package (or Technical Work Documents), identify critical jobs and develop an Integrated Work Schedule to aid in tracking and coordination of all work. • Conduct the WPER. • Conduct arrival conference. • Conduct daily and weekly meetings. • Issue Departure and Assessment report. • Review the requirements of the Industrial Ship Safety Manual For Fire Prevention and Response manual and make recommendations for implementation and exceptions to ISIC during the WPER.
II-II-3.4.1.4	Availability Work Package	• The RMC or ISIC assigns work responsibility for each maintenance and modernization item in an availability work package.
II-II-3.6.1.1	Alterations	• The RMC or ISIC will enter alterations on the ship's CSMP the TYCOM has authorized for accomplishment.
II-II-3.6.4	Lessons Learned Conference	• RMC must attend the Lessons Learned Conference.
II-IV-3.2.7	Funding	• TYCOMs and RMCs are responsible for preparing budget submissions and managing budget execution in support of ship modernization, repair and maintenance availabilities as well as the material readiness and training of their assigned ships.
II-IV-4.5	Lost Records	• The RMC or FMA Commanding Officer will appoint, in writing, an investigating officer. The written appointment will identify, in detail, the lost records and the circumstances, as they are known. The investigating officer will make sufficient inquiries to determine the most likely disposition of the records.
II-IV-5.3.3	Financial Management Program	• The ISIC must schedule and conduct a financial management program assessment periodically.

Regional Maintenance Center Commander

Section	Area of Responsibility	Responsibility
III-2.3.2	Contract Maintenance Support	• RMCs provide contract maintenance support in all ports when assigned. RMC functions include shipcheck of screened work packages, specification writing, contract technical representation and Quality Assurance of contracted work. • Ensure all work accepted for accomplishment as VR is completed on time and per specifications.
IV-3.3.5	Boiler Inspections	• Coordinate inspections in cognizant maintenance areas. • Maintain an up-to-date status of required steam generating plant inspections.
IV-17.4.4	Steam Catapult Inspection	• Provide a SGPI when requested by a ship or TYCOM to conduct inspections. • Ensure SRF or RMC SGPI and Steam System SME's attend semi-annual SGPI and SME Refresher Training to maintain their certification. • Provide resources to ensure SRF or RMC SGPI and Steam System SME's maintain certification.
IV-23.3.2.4	MGTIs	• Provide certified MGTIs to perform inspection. • Review the guidelines and inspection requirements for all gas turbine inspections required by this instruction and ensure that each inspection report is recorded and updated into the Gas Turbine Management Information System. • Schedule and coordinate inspections of all marine gas turbine systems required by this instruction with the appropriate technical activities to avoid the unnecessary opening of gas turbines. • Provide a qualified MGTI when requested by the ship, Immediate Superior In Command (ISIC) or TYCOM.
IV-23.3.2.5	Gas Turbine Engine Inspection	• Coordinate inspections in cognizant maintenance areas. • Maintain an up-to-date status of required marine gas turbine system inspections.
IV-27.4.4	Steam Boiler Inspection	• Provide certified SGPIs to conduct inspections. • Ensure SRF or RMC SGPI and steam system SME's attend semi-annual SGPI or SME refresher training as applicable to maintain their certification. • Provide resources to ensure SRF or RMC SGPI and steam system SME's meet all requirements to maintain certification.
V-I-1.7.1	Quality Assurance for Maintenance, Repair and Alteration	• Designate the RMC/FMA QAO. • (Submarines only) Provide a written report of certification. • Certify the qualifications of QA personnel. • Ensure the RMC/FMA has an effective audit and surveillance program. • Initiate a semi-annual evaluation of the RMC/FMA QA Program.

Regional Maintenance Center Commander

Section	Area of Responsibility	Responsibility
		• (Submarines) Implement all aspects of the SUBSAFE and FBW-SCS programs.
V-I-1.7.3m	RMC/FMA Responsibilities	• (Submarines only) Ensure fact-finding critiques are held. • Contact the ISIC for issues that will result in a SUBSAFE critique. Copies of critiques and incident reports for SUBSAFE, FBW-SCS, DSS or SOC issues that result in a problem severity level of Level 1 (critical) or Level 2 (serious) will be sent to the TYCOM electronically.
VI-2.6.2	Operations Center	• Ensure a physical Operations Center is established and maintained within the CNRMC command building or within close proximity.
VI-2.6.3	Technical Assistance	• Ensure sufficient capability exists to provide timely response to all requests for technical assistance. • Ensure RMC mission funds are used to fund all FTA efforts. • Ensure technical support is provided to Fleet units. • Ensure the initial response to every FTA request is via Distance Support. • Ensure personnel responding to a request for technical assistance are thorough in their review of the specific technical problem. • Ensure acknowledgment and response to all FTA requests. • Ensure personnel providing on-site technical assistance keep the cognizant ship's department head or designated representative informed. • Ensure FTA data is required to be entered into the Common Submarine Problem/Maintenance Reporting System. • Ensure a TAVR is submitted at the completion of an on-site FTA. • Ensure an E-mail TAVR is required at the completion of an on-site FTA on Surface Force Ships/Carriers. • Task other Source of Support provider who responds to an on-site FTA submit a TAVR or task them to provide the technical information for the cognizant RMC to generate a TAVR. • Ensure submission of a message report if an on-site assist visit is terminated. • Track all requests for FTA using approved FTA software. Ensure a physical Operations Center is established and maintained within the CNRMC command building or within close proximity. • Ensure technicians providing FTA to submarines are eligible for access to Sensitive Compartmented Information.
VI-8.2.6	2M/MTR Fleet Coordinators	• Maintain qualified 2M/MTR Fleet Coordinators.

Regional Maintenance Center Commander

Section	Area of Responsibility	Responsibility
VI-31.3.3	Business Responsibilities	• Execute surface ship maintenance. • Develop a consolidated spending plan for the execution year. • Issue quarterly spending controls to all of the Maintenance Teams. • Evaluate Maintenance and Modernization Business Plan adjustment requests. • Redistribute controls across the surface ship Maintenance Teams. • Provide an impact statement to the TYCOM regarding the effect on the execution of maintenance. • Provide a recommendation to minimize the impact on Force readiness. • Evaluate the financial status of each of the Maintenance Teams on a monthly basis. • Submit end of quarter financial summary reports to the respective surface TYCOM. • Use Emergency Maintenance funds to execute CNO availability or CM maintenance. • Determine when Emergency Maintenance funds should be used for the correction of C2 CASREPs or other non-CASREP related, but nonetheless urgent maintenance. • Approve any planned delay of action on a CASREP. • Generate monthly reports for all assigned ships planning for a CNO availability and ships in a CNO availability.
VI-35.3.2	RMC I-Level Maintenance Capabilities	• Provide the capabilities identified in Appendix A per all applicable policy, regulations and technical requirements. Ensure detailed capability manuals are issued by each RMC. • Coordinate with the TYCOMs to ensure full utilization of the funded capacity. • Provide cost estimates and implementation plans to the Fleet Commanders for proposed additions and deletions to capabilities as well as increases or decreases to capacity at any/all RMCs. • Establish policy, requirements and direction for NAMTS program management and execution at RMCs. • As MAT Program Manager, establish requirements and guidance for the execution of MATs at the RMCs including reporting requirements. • Coordinate with the cognizant TYCOM on the establishment, disestablishment and utilization of MATs.
VI-37.5e	Countermeasure System Support Requirements	• Maintain qualified PCMS personnel and ensure assets are available to perform PCMS core activities • Provide technical assistance via distance support/on site visit as appropriate. • Conduct PCMS core activities.

Regional Maintenance Center Commander

Section	Area of Responsibility	Responsibility
		• Ensure all personnel assigned to PCMS responsibilities meet the requirements. • Ensure that RMC PCMS SMEs are involved in planning of all PCMS equipped ship topside maintenance where PCMS is affected. • Ensure that RMC QA personnel, certified by the PCMS ISEA, are actively involved in the QA of all I and D-Level PCMS related repairs and installations. • Ensure that contracted or I-Level jobs activities, facilities and personnel are certified. • Include in contracted I and D-Level jobs the provision of PCMS tiles for planned PCMS repairs and interference areas.
VI-41.6	Workforce Development Program	• Serves as the Work Force Development Program sponsor. • Serves as the Curriculum Control Authority for all WFD training courses and curricula.
VII-6.6.2	Maintenance Center Funding	• Develop a consolidated spending plan for the execution year. • Determine when Emergency Maintenance funds should be used for the correction of C2 CASREPs or other non-CASREP related, but nonetheless urgent maintenance.

Ship's Commanding Officer

Section	Area of Responsibility	Responsibility
I-5.6	Post Delivery Deficiencies	• Reporting deficiencies not otherwise identified by INSURV, until the end of the SCN period per the following procedures.
I-2.8.2	Pre-Commissioning	• Ensure Habitability and Livability requirements are being met for ship's force.
II-I-3.3.9.6	Maintenance Policies and Procedures	(All Ships) • Review AWPs and provide comments to TYCOM, ISIC and SUBMEPP. • Assign a Ship's Selected Records Coordinator. • Publish policies concerning the ship status and crew before availability starts. • Ensure non-conformances submitted during the availability are approved prior to Sea Trials and not later than the completion of the availability. • Designate a ship's force QoSC representative. (Submarines Only) • Review status of PMR maintenance schedules and CSMP reports with ISIC prior to CNO availability. • Maintain a current SUBMEPP PMR inventory . • Provide the Force Afloat Work Package to the NSA Project Team for review and integration.
II-I-3.6.8.3.11b	Availability Completion Prerequisites	• Verify satisfactory completion of all Sea Trial evolutions.
II-I-3.6.8.4.1e	Responsibilities for trials and inspections	• Carry out responsibilities per reference (e). • Develop and execute training plans and documents. • Supervise operation of nuclear propulsion plant. • Prepare ship's engineering personnel; and propulsion plant spaces for inspection. • Maintain PMS, SUBSAFE re-entry control, RPPMS, per applicable references. • Participate in at-sea periods prior to the first Sea Trials. • Review Sea Trial agenda and concur. • Undergo distressed submarine and salvage inspection. • Conduct one day Ship's Force dock trials. • Demonstrate state of training of the crew. • Ensure all alongside tests, inspections, and trials are conducted. • Certify to designated ISIC/TYCOM representative that all distressed submarine and salvage inspections discrepancies have been corrected. • Concur with Supervising Authority message.

Ship's Commanding Officer

Section	Area of Responsibility	Responsibility
		• Report by message to TYCOM that ship and crew are ready for Sea Trials. • When authorized conduct a Fast Cruise. • Concur with Supervising Authority message. • Report completion of Fast Cruise to TYCOM. • When requirements of this instruction are complete and permission is received proceed to sea.
III-6.4.7	SFIMA	• Designate a SFIMA Coordinator. • Ensure command leadership is thoroughly familiar with SFIMA instructions. • Coordinate with TYCOMs throughout the OFRP cycle • Submit an end of deployment report identifying all SFIMA capabilities utilized. • Exhaust all possible SFIMA support options prior to requesting assistance outside the Strike Group. • Ensure that all off-ship requests for FTA and OBTA are screened. • Coordinate with CNRMC ish ship as a NATA
IV-3.3.7	Boiler Inspections	• Request inspections and recommend desired dates to ISIC. • Prepare for scheduled inspections. • Review inspection results and initiate corrective actions. • Assess impact of corrective actions on operating schedules. • Submit reports per paragraph 3.7.2. • Conduct boiler inspections by appropriate PMS item.
IV-5.3.2	Marine Sanitation Devices	• Oversee correction of discrepancies on MSD system installations. • Prevent food stuffs from being stored in areas below sanitation valves, flanges, or take-down joints. • Log each unavoidable discharge of prohibited sewage in restricted waters.
IV-14.2.1	Magazine Sprinkler Inspection Requirements	• Sprinkler systems tested per PMS. • Magazine temperatures checked and recorded daily. • Magazines are properly maintained. • Cognizant industrial activities provide written verification that system is operational. • System inspection requirements per reference (a) and PMS. • System verification inspection prior to weapons on-load. • Take action to correct discrepancies noted during inspection. • Ensure design discrepancies reported to TYCOM and entered in CSMP.

Ship's Commanding Officer

Section	Area of Responsibility	Responsibility
IV-16.5.1	Aircraft Launch and Recovery Systems for Aviation Ships	• Request CAFSU technical assistance when required. • Provide berthing and messing for CAFSU representatives. • Pass to TYCOM any comments concerning performance of CAFSU representatives. • Upon completion of CAFSU ensure timely departure from ship.
IV-17.4.5	Steam Catapult Inspections	• Request inspections and recommend dates for accomplishment. • Prepare for scheduled inspections and operational tests. • Conduct Ship's Force responsible inspections. • Review inspection results and initiate corrective actions. • Initiate requests for assistance on repair actions beyond Ship's Force capabilities. • Assess impact of corrective action on ship's operating schedule. • Submit reports. • Schedule inspections as required by appropriate PMS/Class Maintenance Plan items.
IV-18.3.2	Distressed Submarine and Salvage Inspection	• Request ISIC to conduct distressed submarine and salvage inspection. • Coordinate support requirements as needed by inspection team. • Complete and forward a pre-inspection information letter. • Assemble all ship's data indicated in applicable appendix. • Take action to correct discrepancies found and report corrections to ISIC. • Submit CASREP if applicable.
IV-21.2.3	Submarine Oxygen Generating Plants	• Report reduced status following established procedures. • Maintain oxygen generator personnel qualifications. • Prohibit operation of oxygen generators if necessary. • Maintain oxygen generator material maintenance log. • Ensure oxygen generator material maintenance log is periodically reviewed. • Safety related deficiencies promptly entered into ESL. • Prior to availability, ensure PMT conducts material inspection of oxygen generators. • Ensure PMT conducts post-availability material inspection. • Ensure PMT conducts operational inspection. • Ensure electrolysis is secured and oxygen generator is in safe condition prior to drills involving loss of power.
IV-23.3.2.7	Gas Turbine Engine Inspection	• Request gas turbine inspections. • Prepare for scheduled inspections.

Ship's Commanding Officer

Section	Area of Responsibility	Responsibility
		• Review inspection results and initiate corrective action for those items within Ship's Force capability. • Assess the impact of corrective action on operating schedules. Decide the optimum timing of repair actions. • Submit reports. • Schedule gas turbine inspections as required by PMS/Class Maintenance Plan item.
IV-27.4.7	Steam Reboiler Inspection	• Request inspections via Naval message to the TYCOM. • Prepare for the scheduled inspections. • Conduct Ship's Force responsible (Annual) inspections. • Review inspection results and initiate corrective action for deficiencies within Ship's Force capability. Initiate requests for actions beyond Ship's Force capability and for deferred items. Submit a CASREP for discrepancies that will impact operational schedule. • Assess the impact of corrective action on the ship's operating schedules. Advise the TYCOM and operational commanders of adverse effects. • Submit reports.
V-I-1.6.1	Organizational Responsibilities	• Designate QAO in writing. • Approve TWD as required. • (Submarines) Provide ISIC written report of ship's certification continuity prior to underway. • (Submarines) Maintain material condition necessary to support URO to authorized operating depth. • (Submarines) Organize and implement a program to ensure performance of required maintenance to support FBW unrestricted operations. • (Submarines) Organize and implement a program to ensure performance of required maintenance to support DSS-SOC. • (Submarines) Approve and sign recertification RPWAR. • Certify QA personnel qualifications. • Review and sign MOA prior to start of SUBSAFE, nuclear, FBW SCS, Level I work. • Approve DFSs.
V-I-5.10.7	Reactor Plant Configuration Change Report	• Commanding Officers are directed to forward RPCCR(s) to NAVSEA 08 by official letter, similar to the sample in Appendix E of this chapter, using ship's letterhead with copies to the TYCOM, ANSTR Pittsburgh and A4W/A1G RPPY. The command is responsible to utilize the appropriate distribution, destruction control statements and markings to the RPCCR.
VI-2.6.1	Fleet Technical Assistance	• Ensure FTA requests are accurate, complete and timely.

Ship's Commanding Officer

Section	Area of Responsibility	Responsibility
		• Ensure FTA requests reference a JCN and contain a detailed problem description. • Ensure associated CASREP and/or 2-Kilo address whether or not on-site assistance will be required if Distance Support is unable to resolve the issue for FTA requests associated with systems that are not required to meet current/projected mission tasking. • Ensure TYCOM/ISIC are informed of technical issues. • Ensure distance support alternatives are exhausted before requesting on-site technical assistance. • Ensure qualified Ship's Force technicians are available for support. • Upon completion of technical assistance visit, release FTA personnel. • Establish secure, central e-mail account to all RMC techs who visit ship. • Issue arrival/departure message.
VI-4.9.d	Shipboard Electromagnetic Compatibility	• Ensure EMS PMS is conducted. • Request EMI survey within six months of deployment or when any new indications of EMI occur. • Transmit EMC departure message to cognizant activities. • Maintain up-to-date file of EMI/EMC information.
VI-8.2.3	Miniature/Micro-miniature Electronic Repair Program	• Establish 2M program under cognizance of Electronics Material Officer and Combat Systems Officer. • Maintain certified 2M stations and technicians. • Screen and repair all CCAs/Ems. • (Aircraft Carriers) establish MTRF with an overall coordinator. • (Aircraft Carriers) maintain an active MTRF.
VI-9.2.5 (All Forces)	Metrology and Calibration Program	• Maintain overall responsibility for METROLOGY and the Calibration Program. • Maintain a degree of calibration readiness, goal 85%.
VI-9.2.6 (Naval Air Force)	Metrology and Calibration Program	• Follow the detailed procedures outlined in reference (j) for TMDE management and operation of the consolidated FCA.
VI-11.7.3	Maintenance, Repair and Overhaul of Service Craft, Landing Craft and Small Boats	• Coordinate planning aspects of craft and/or boat overhauls with TYCOM/ISIC. • Prepare and submit overhaul progress reports. • Ensure enough trained personnel are assigned to on-site monitoring of crafts and boats. • Fulfill responsibilities for safety of craft and personnel.
VI-12.3.2.2	Degaussing (ships and submarines with degaussing systems)	• Maintain ship's installed degaussing system. • Maintain ship's degaussing folder.

Ship's Commanding Officer

Section	Area of Responsibility	Responsibility
		• Submit a minor Departure From Specification if range checking requirements are not met.
VI-12.4.2.2	Degaussing (submarines without installed degaussing systems)	• Ensure magnetic signature minimized by periodic check ranging. • Inform ISIC of unsat ranging. • Maintain ship's degaussing folder. • Undergo flash deperming as directed. • Before flash deperming prepare ship's equipment and off-load sensitive material. • Submit a minor Departure From Specification if range checking requirements are not met.
VI-16.2.2.1.6	Habitability Improvement	• Assign project manager and petty officer supervision. • Assign labor force for removal, space preparation and installation. • Conduct training programs. • Accept delivery, store and account for materials. • Coordinate all required tag-out/in paperwork and Work Authorization Forms. • Dispose of all retrograde material generated by the project. • Report changes to Naval Inventory Control Point. • Report completion to TYCOM. • Ensure ship's selected records are updated .
VI-18.8.1	Inflatable Life Rafts	• Submit OPNAV 4790/2K for any life raft requiring replacement or recertification. • Maintain log or database of all life rafts onboard. • Send report to NSWCCD/TYCOM if life raft is lost or transferred to another ship. • Ensure life raft fiberglass containers are handled with care. • Upon decommissioning contact designated Life Raft Contingency Pool. • Requisition replacement life rafts when necessary.
VI-19.4.1.8	Ship Maintenance and Material Management	• Establish a Self-Assessment program that validates the administration and execution of maintenance.
VI-23.3.3	Submarine Noise Reduction	• Establish and maintain Ship's Noise Reduction program. • Appoint Senior Department Head as Noise Reduction Officer
VI-24.8.5	Periodic Maintenance Requirement Program	• Responsible for execution of PMR work on ship. • Document discovered maintenance deficiencies. • Maintenance deficiencies will reflect block 46 of OPNAV 4790/2K. • Review Depot Availability Work Packages. • Review status of PMR maintenance in SUBMEPP quarterly PMR schedules.

Ship's Commanding Officer

Section	Area of Responsibility	Responsibility
		• Deficiencies in equipment covered by PMR should be documented. • Ensure quarterly PMR schedules and inventories are carried onboard. • Ensure MRCs, SMSs and TRSs are referenced and used during equipment maintenance. • Report repairs to PMR covered components to ISIC. • Ensure completed AWRs and PMRs are signed as completed by Ship's Force. • At the conclusion of an availability, provide to the ISIC the reason that any PMRs could not be accomplished.
VI-24.8.6 (DDS CO)	Periodic Maintenance Requirement Program	• Ensure PMRs are accomplished within the required periodicity. • Review Depot Availability Work Packages. • Review status of PMR maintenance in the SUBMEPP Quarterly PMR inventories and schedules. • Ensure MRCs, SMSs and TRSs are referenced and used during equipment maintenance. • At the conclusion of an availability, review the COC in order to verify scheduled PMR work was accomplished.
VI-25.3.4	Unrestricted Operations (submarine only)	• Ensure URO MRCs are accomplished within required periodicity. • For visual inspections between URO MRC 003 inspections use Volume V, Part I, paragraph 5.4.3.d. • Maintain auditable records of accomplishment of URO MRCs .
VI-27.3.4	Scheduled Preservation Upkeep Coordinated Effort (submarine only)	• Ensure preservation is performed using procedures in references (c) and (e). • Ensure Ship's Force are relieved of all requirements except those necessary to maintain safety and security of ship. • Designate SPRUCE manager. • Ensure ship is divided into preservation zones. • Submit completion letter to TYCOM.
VI-28.6.5	Cableway Assessment	• Assign Ship's Force personnel for FMA cableway assessment repair training. • Correct outstanding discrepancies. • Within 30 days of completion enter all unrepaired category I discrepancies in CSMP.
VI-37.5f	Regional Maintenance Center Passive Countermeasure System Support Requirements	• (Surface) Scheduling of PCMS activities within periodicity. • Obtaining RMC SME assistance in reviewing work packages. • Establishment and maintaining the following shipboard organization: PCMS Department Head; Command PCMS coordinator.
VI-38.3.4 (DDS CO)	DSS Hull Integrity Procedures	• Ensure DSS HIPs are accomplished within required periodicity. • Maintain auditable records of accomplishment of DSS HIPs.
VI-40.5.3	(SUBS) Messages	• Track (SUBS) messages initiated by the ship.

Ship's Commanding Officer

Section	Area of Responsibility	Responsibility
		• Respond to technical assistance (SUBS) messages. • Use guidance of Chapter VI-2 to request technical assistance. • Issue TEMPALT and SHIPALT (SUBS) messages. • All technical assistance (SUBS) requests must include the Ship's job sequence number (JSN).
VI-41.2.4.2a	Specific Duties of Maintenance Team Members	• Reports progress weekly to the TYCOM. • Works with the Ashore Ship's Maintenance Manager to develop the final work package submission for the ship. • Directs efforts to identify all shipboard maintenance requirements. • Initiates requests for technical assistance. • Determines the effect of material deficiencies on mission capability and releases Casualty Reports. • Integrates maintenance planning in the Ship's Operational Schedule. • Ensures the ship is prepared for and ready to conduct propulsion plant PCD/LOA events (and Command, Control Communications, Computer, Combat Systems, Intelligence Light Off (C5ILO) event for Surface Ships). • Chairs the Planning Board for Maintenance meeting.
VI-41.2.4.2b	Specific Duties of Maintenance Team Members	• Verifies technical assistance final resolution satisfies ship's maintenance issue. • Ensures Ship's Force assists with the management and oversight of work execution by maintenance activities and AITs. • Executes shipboard DFS process. • Ensures ship properly supports 25%/50%/75% reviews. • Consolidates software delivery. • Ensures Integrated Logistics Support is provided. • Assists in scheduling and execution of mid-deployment shipcheck. • Collaborates in the authorization of growth/new work. • Supports the Integrated Test Plan execution and work certification. • Assists in achieving maintenance phase exit criteria. Ensures proper space turnover, Ship's Force AWP collection and management of OQE, and availability technical closeout.
VI-42.6.4	Material Assessment	• Prepare for assessments events. • Designate the unit's assessment event coordinator. • Send a readiness to commence assessment message. • Provide support for assessment team. • Prepare systems/equipment, tag outs, Work Authorization Form, request support services, generate Quality Assurance packages. • Ensure there are no conflicting evolutions, training, drills, etc. • Defer scheduling of preventive maintenance requirements.

Ship's Commanding Officer

Section	Area of Responsibility	Responsibility
		• Host assessment event briefings. • Ensure the 3-M Coordinator, Functional Area Supervisors, and the Supply Officer are available as needed. • Ensure divisional personnel are assigned to work closely with the Assessment Team Subject Matter Experts. • Remove key maintenance personnel from the watch bill. • Correct material discrepancies as time permits. • Send a Quicklook completion message.

Quality Assurance Officer

Section	Area of Responsibility	Responsibility
V-I-FWD-App B	Loss of Traceability	• Initiate action to restore traceability or use alternate traceable material.
V-I-1.6.12	Ship Responsibilities	• Administer ship's QA program. • Review TWDs. • Review FWPs. • Verify the FWP specifies the correct OQE. • Verify the testing requirements for controlled work are correct. • Verify completed test results. • Review and close out TWDs as required. • Maintain record files as required. • Determine suitability for use of material from another ship. • Provide disposition instructions for rejected material. • Obtain documentation for certified material. • Provide technical services to Supply Officer. • Authorize downgrading of material. • Review requests for DFS. • Maintain auditable file of outstanding DFS; audit active DFSs prior to underway. • Maintain DFS files. • Verify ship's mapping plans, selected records and drawings are updated as required. • Submit DFS clearance reports. • Manage ship's internal QA surveillance program. • Ensure that QA training is conducted as required. • Assess QA training. • Implement formal qualification program. • Conduct oral qualification interviews. • Maintain master qualification list as required. • (Submarines only) Verify reactor plant hull integrity area maintenance. • (Submarines only) Verify REC is initiated for SUBSAFE boundary work as required. • (Submarines only) Maintain SUBSAFE REC records including log. • (Submarines only) Coordinate with ISIC and FMA to ensure URO MRC program is per requirements. • (Submarines only) Retain QA form 34 as required. • Review as many non-nuclear weld records as possible. • Verify an active Job Control Number exists for all active temporary DFSs.

Quality Assurance Officer

Section	Area of Responsibility	Responsibility
V-I-1.6.12 (Cont'd)	Ship Responsibilities	• (Submarines) At the end of a scheduled FMA upkeep, verify all SUBSAFE deficiencies in the ship's CSMP have been corrected or have an appropriate DFS.
V-I-1.7.11	RMC/FMA Responsibilities	• Organize and implement QA program within the RMC/FMA as required. • Provide guidance and evaluate efforts to produce work of acceptable standards. • Prepare QA procedures as required. • Assist in QA audits as required. • Provide QA training as required. • Approve downgrading of controlled material. • Determine suitability for use of controlled material as required. • Provide disposition instructions for rejected material. • Institute a formal qualification program for QA personnel. • Train and qualify work center CMPOs/CMHs. • Review RMC/FMA generated DFSs as required. • Obtain documentation for certified material. • Establish and coordinate procedures for material control. • Review, open and close out TWDs as required. • Review FWPs. • (Submarines only) Review and sign RPWAR. • Develop QA training program. • Maintain current master list of qualifications as required. • Establish and administer RMC/FMA QA audit and surveillance program. • Maintain QA records and files. • Ensure all testing required for completion of TWD is complete and reviewed as required. • Perform opening and closing reviews of CWPs as required. • Supervise QASs, QAIs, Cleanliness Inspectors/Certifiers, CMPOs/CMHs. • Conduct QA audits. • Maintain QA records and files.
V-I-2.3.4g	FWP Approval	• Review all FWPs for components or systems assembled as a controlled assembly and performed as a REC/MCR exception.
V-I-2.3.7.3	CWP Revisions	• Concur with addition of material.
V-I-2.3.7.8	CWP Closeout	• Review CWP for correctness and completeness. • Retain closed CWP.

Quality Assurance Officer

Section	Area of Responsibility	Responsibility
V-I-3.5.1	Maintenance Personnel Training	• Provide a list of training topics to ship's departments.
V-I-3.5.2	Quality Assurance Training	• Create a LRTP to track and include specific topics required.
V-I-5.4.5.1c	Reactor Plant Cleanliness	• Upon loss of cleanliness, approve recovery procedures.
V-I-5.4.5.2c	Nuclear Steam Plant Cleanliness	• Upon loss of cleanliness, approve recovery procedure.
V-I-5.6.4b(13)	Re-Entry Control	• Establish and maintain CWP/REC log.
V-I-6.3.9.1g	Controlled Material Storage Areas	• The QAO will, at a minimum of frequency of semi-annually, assign a surveillance of all work center controlled material storage areas.
V-I-8.3.1c	Departure From Specification	• Ensure repair for DFS is entered in ship's CSMP.
V-I-10.5.4	Qualification Records	• Maintain a master list of various qualified supervisors, planners, inspectors and instructors.
V-I-10.7	FMA QA Record Retention	• Retain material certification and CWP log for life of ship. • Maintain records not associated with CWPs as required. • Maintain records of assessments, audits, surveillance and evaluations as required. • Retain a copy of the last end of fleet maintenance availability certification report to tended submarines. • Maintain a master list of qualified CMPOs, Controlled Material Handlers, Cleanliness Inspectors, QAIs, QASs, Oxygen Clean Workers and Oxygen Clean Instructors.
V-I-10.7.9	Qualification Record	• Maintain a master list of qualified CMPOs, Controlled Material Handlers, Cleanliness Inspectors, QAIs, QASs, Oxygen Clean Workers and Oxygen Clean Instructors and a qualification file on each CMPO, Controlled Material Handler, Cleanliness Inspector, QAI and QAS. The records will be retained for the duration the individual is onboard.
V-III-6.3.4c V-III-6.3.4d	Receipt of SOC Material	• Certify MCD-A and MCD-B materials.
V-III-6.5.4	Material Re-certification Following Transfer to Outside Agency	• Review vendor data, COC and test data.
VI-34.4.2	Flight Deck Non-Skid	• (Where assigned) Refer to Non-skid Quality Assurance Officer (QAO) for disposition of failed non-skid requiring submission of Work Request to Industrial Activity to repair or replace failed non-skid.

Quality Assurance Officer

Section	Area of Responsibility	Responsibility
V-III-8.2.4a	Departure From Specification	• Ensure repair for DFS is entered in ship's CSMP.
VII-11.5.7.1c	Corrective Action Request	• Issue Method C letter when required.

Quality Assurance Supervisor

Section	Area of Responsibility	Responsibility
V-I-1.6.14	Organizational Responsibilities	• Ensure all testing required for completion of CWP is complete and reviewed. • Perform opening reviews of CWP. • Perform closing reviews of CWP. • Train and supervise QAIs, Cleanliness Inspectors/Certifiers, CMPOs/CMHs and other personnel. • Conduct QA audits, surveillance and coordinate corrective actions. • Maintain QA records and files including completed CWPs. • Review DFS for accuracy and technical merit and forward to QAO.
V-I-2.3.7.1	Formal Work Package Changes	• Make pen and ink changes to the QA forms in a CWP.
V-I-2.3.7.3	Formal Work Package Revisions	• For FWPs executed as a part of the CWP, the QAO/QAS will concur with the addition of material.
V-I-2.3.7.9	Emergent Controlled Work	• Continuously monitor the task and record all actions taken, if a FMA is involved.
V-I-5.6.7	Re-Entry Control	• Inspect controlled assemblies.
V-I-6.3.5.1b	Material Control	• File QA form 1 with all applicable documents.
V-III-6.3.4c	Material Control	• File QA form 1 with all applicable documents.

Controlled Material Petty Officer

Section	Area of Responsibility	Responsibility
III-3.4.1.h.(2)(h)	Voyage Repair Policy - Surface Ship	• Provide face to face turnover of MIC Level I material to SRU Surveyor.
III-3.4.1.i.(2)(f)	Voyage Repair Policy - Surface Ship	• Perform joint inspection of MIC Level I material with Ship's Force QAI prior to turnover to contractor.
V-I-1.6.16	Ship Responsibilities	• Ensure all material under their cognizance is stored and controlled as required. • Receipt inspect all LI stock program material, SFCC and NRP received. • Request disposition instructions for rejected material. • Control previously rejected and now accepted controlled material as required. • Maintain custody of controlled material in segregated stowage in accordance as required. • Inspect controlled material storage areas as required. • Ensure controlled material is properly stowed and handled. • Ensure nuclear material received without Ready for Issue tags is certified to the required "Level of Essentiality". • Reject unsatisfactory material. • Send any material certification documents for material which has been provided by the ship to the RMC/FMA QA office as required. • Perform receipt inspection of package alteration kits that contain controlled material when ready for use. • Ensure controlled material markings are on all pieces when cutting a smaller piece from a larger one. • Ensure controlled material markings are moved to an unaffected area, if the controlled material item will lose the markings due to a fabrication process (e.g., welding, machining) prior to the fabrication process. • Ensure all controlled material is identified, color coded, marked and tagged as required.

Controlled Material Petty Officer

Section	Area of Responsibility	Responsibility
V-I-1.7.15	RMC/FMA Responsibilities	• Receipt inspect all controlled material received. • Ensure all material under their cognizance is stored and controlled as required. • Inspect controlled material storage areas as required. • Ensure controlled material is properly stowed and handled. • Reject unsatisfactory material. • Send any material certification documents for material which has been provided by a ship along with the QA form 1 to the QA office. • Receipt inspect package alteration kits that contain controlled material when ready for use. • Control previously rejected and now accepted controlled material as required. • Retain custody of controlled material when it is not in the custody of a craftsman or in a controlled material storage area. • Ensure controlled material markings are on all pieces when cutting a smaller piece from a large one.. • Ensure controlled material markings are moved to an unaffected area, if the controlled material item will lose the markings due to a fabrication process (e.g., welding, machining) prior to the fabrication process.
V-I-6.3.4	Receipt Inspection of Controlled Material	• Receipt inspect controlled materials as required.
V-I-6.3.5	Receipt Inspection of Open Purchase or Locally Manufactured Material or Upgrading Supply System Material to Level I	• Receipt inspect materials as required.
V-I-6.3.8	Level I Stock Program Material Downgrading	• Remove markings as required.
V-I-6.3.9	Storage, Issue, and Handling of Level I/Submarine Flight Critical Component Stock Program Material	• Inspect controlled material storage areas as required. • Maintain custody of controlled material as required. • Verify transfer of MIC markings as required.
V-I-9.3.1c	Storage Areas	• CMPOs will inspect controlled material storage areas of their work center, quarterly.
V-III-6.3.1	Control of SOC Material	• Maintain custody of SOC material as required.
V-III-6.3.4	Receipt of SOC Material	• Receipt inspect SOC material as required.

APPENDIX C

LIST OF ACRONYMS

2-Kilo	Ship's Maintenance Action Form OPNAV 4790/2K
2-Lima	Supplemental Form OPNAV 4790/2L
2M	Miniature/Microminiature
3-M	Maintenance and Material Management
3MA	3-M Assistant
3MC	3-M Coordinators
3MI	3-M Inspection
3MO	3-M Officer
3-MPR	3-M Performance Rate
3-MTT	3-M Training Team
A&I	Alteration and Improvement
AA	Aegis Ashore
AAA	Authorized Accounting Agency
AAMDS	Aegis Ashore Missile Defense System
AAR	Advisory Audit Report
AAR	After Action Report
ABC	Automatic Boiler Control
ABM	Acquisition and Business Management
ABO	Aviators Breathing Oxygen
ABR	Agreement for Boat Repair
ACAT	Acquisition Category
ACCCIT	Aircraft Carrier Climate Control Investigating Team
ACCMP	Aircraft Carrier Class Maintenance Plan
ACF	Accomplishment Confidence Factor
ACN	Advance Change Notice
ACO	Administrative Contracting Officer
ACRN	Accounting Classification Reference Number
ACU	Assault Craft Unit
ACWP	Actual Cost of Work Performed
ADP	Automated Data Processing
ADS	Atmospheric Diving System
AEL	Allowance Equipage List
AEOG	Automated Electrolytic Oxygen Generator
AER	Alteration Equivalent to a Repair
AERP	Advanced Equipment Repair Program
AF	Advance Funding
AFMA	Afloat Fleet Maintenance Activity (Submarine Tender)
AFOM	Alteration Figure of Merit

AIM	Advanced Industrial Management
AIM4RMC	Advanced Industrial Management for Regional Maintenance Centers
AIMD	Aviation Intermediate Maintenance Department
AIMXP	Advanced Industrial Management Express
AIPS	Alteration Installation Planning System
AIS	Automated Information Systems
AIT	Alteration Installation Team
ALRE	Aircraft Launch and Recovery Equipment
ALREMP	Aircraft Launch and Recovery Equipment Maintenance Program
AM	Additive Manufacturing
AMCA	Automated Machinery Condition Analysis
AMPS	Afloat Master Planning System
AN	Army-Navy
Ao	Operational Availability
AOE	Fast Combat Support Ship
AOR	Area of Responsibility
AP	Advance Planning Assessment Procedure
APL	Allowance Parts List
APPN/PE	Appropriation/Preliminary Engineering
APR	Administrative Performance Rate
AQAO	Assistant Quality Assurance Officer
ARRS	Analysis, Record and Report Section
ASF	Assist Ship's Force
ASI	Automated Shore Interface
ASN	Assistant Secretary of the Navy
ASR	Availability Status Report
ASTM	American Society for Testing and Materials
ASW	Auxiliary Sea Water
AT	Acceptance Trial
ATC Web	Air Traffic Control Community Website
ATE	Automated Test Equipment
ATG	Afloat Training Group
ATIS	Advanced Technical Information Support
AUKUS	Australia, the United Kingdom, and the United Sates Submarine Transfer Authorization Act
AWN	Automated Work Notification
AWP	Availability Work Package
AWPM	Availability Work Package Manager
AWR	Automated Work Request
AWS	Attack Weapons Systems

BAC	Budgeted Availability Cost
BAF	Business Adjustment Factor
BART	Beartrap Acoustic Radiated Trials
BAWP	Baseline Availability Work Package
BCA	Business Case Analysis
BCP	Ballast Control Panel
BCR	Billet Change Request
BCWP	Budgeted Cost of Work Performed
BCWS	Budgeted Cost of Work Scheduled
BDA	Battle Damage Assessment
BDAR	Battle Damage Assessment and Repair
BDAT	Battle Damage Assessment Team
BDT	Builder's Dock Trial
BER	Beyond Economical Repair
BIRMIS	Boiler Inspection and Repair Maintenance Information System
BOA	Basic Ordering Agreement
BLE	Baseline Lock Event
BQC	Emergency Underwater Telephone
BSC	Balanced Score Card
BSR	Bid Specification Review

B_3 Delivery Messages Scenario
C Glossary of Terms

1.1 PURPOSE. Volume I of this manual summarizes maintenance related information for all units of the Fleet during Ship construction and through the completion of Post Shakedown Availability (PSA). The time span is from initial crew man-up to departure from the PSA facility.

1.2 SCOPE.

a. New Construction ships require a succession of inspections and tests followed by a series of underway trials. The philosophy and sequencing of these inspections, tests, and trials are set forth in references (a), (b) and (c) and are graphically represented in Appendices A and B of this chapter. This Volume provides information, guidance, policies and procedures for maintenance related topics during the Ship's construction period. Reference (d) must be used in conjunction with the Joint Fleet Maintenance Manual (JFMM) to establish an effective maintenance program. The requirements of this manual do not supersede or take precedence over directives issued by higher authority. Where conflicts exist with previously issued Type Commander (TYCOM) letters and transmittals, this manual takes precedence. Conflicts should be reported to the applicable TYCOM.

b. The development of this and subsequent volumes to the Joint Fleet Maintenance Manual (JFMM) has required the study of numerous reference documents, many of which are referenced as source or governing documents in specific chapters. The

Foreword of this Manual contains a Master Listing of all the references called out in the JFMM. These references are arranged in an alphanumeric sequence to facilitate the ordering of documentation to support the use of the JFMM. References used in specific chapters are called out at the beginning of that chapter.

c. Appendix C of this chapter contains a glossary of terms used throughout volume I of the JFMM.

d. Equipment under the cognizance of the Strategic Systems Programs and Naval Sea Systems Command (NAVSEA) Nuclear Propulsion Directorate (08) are maintained following the Strategic Systems Programs and NAVSEA 08 directives, respectively.

1.3 CHANGES AND CORRECTIONS. Changes and corrections will be issued as required. Comments and suggestions for improving or changing this volume are invited. Address comments, recommendations, and requested changes to Submarine Maintenance Engineering, Planning and Procurement (SUBMEPP) Activity utilizing the change request form located in the front of this manual. If changes are submitted in electronic format, facsimile or E-mail, each change request must contain the information required on the change request form.

1.4 REQUEST FOR COPIES OF THE MANUAL. The JFMM is posted on the JFMM public web page located at https://www.navsea.navy.mil/Home/SUBMEPP/Products/JFMM/ and is distributed via the Technical Manual Management Program.

APPENDIX A_1

SUMMARY OF TYPICAL NEW CONSTRUCTION MAJOR MILESTONES AND MESSAGE REPORTING REQUIREMENTS FOR SUBMARINES

Event	Cognizance	Approximate Schedule (see Note)
A. Arrival Assist	Immediate Superior in Command (ISIC)	Crew Arrival +2 months
B. Periodic Monitoring Inspections	ISIC	Start to completion
C. Pre-Reactor Safeguard Examination (RSE)	ISIC (TYCOM Assist)	Criticality -6 to -8 weeks
D. RSE per OPNAVINST 3540.3	Naval Sea Systems Command (NAVSEA) Nuclear Propulsion Directorate (08)	Criticality -4 to -6 weeks
E. Criticality	Prospective Commanding Officer (PCO)	
F. Escort Recommendation Message	ISIC or Supervising Authority	-60 days
G. Habitability Inspection for In-Service per OPNAVINST 9080.3	ISIC	-60 days
H. Phase I Crew Certification	ISIC	-35 days
I. Distressed Submarine and Salvage Inspection	ISIC	-30 days
J. Approve Sea Trial Agendas * * Only Alpha Trial Agenda is approved 30 days before trial date	NAVSEA for Propulsion Trials; Director, Strategic Systems Programs for Ballistic Missile Trials; Board of Inspection and Survey (INSURV) for Acceptance Trial (AT); TYCOM for Operational Aspects all Trials	-30 days
K. In-Service per OPNAVINST 4700.8 and OPNAVINST 9080.3	Supervising Authority NAVSEA, ISIC and TYCOM	-28 days
L. Dock Trial	Officer in Charge (OIC)	-21 days
M. Phase II Crew Certification Message (Volume I, Chapter 2, Appendix B_1)	ISIC	-10 days
N. Crew Certification Message (Volume I, Chapter 2, Appendix B_3)	TYCOM	-9 days

Event	Cognizance	Approximate Schedule (see Note)
O. Readiness for Fast Cruise or Sea Trial Message (Volume I, Chapter 2, Appendix B_4)	Supervising Authority or OIC concurrence	-7 days
P. Certify Material Condition for Alpha Sea Trial Message (Volume I, Chapter 2, Appendix B_8)	NAVSEA	-7 days
Q. Authorize Commencement of Sea Trial Message	TYCOM to ISIC to Ship	-7 days
R. Fast Cruise	OIC	-7 days (2 days on, 1 day off, 2 days on)
S. Report Completion of Fast Cruise and Readiness for Sea Trial Message (Volume I, Chapter 2, Appendix B_7)	Supervising Authority (with OIC concurrence) to TYCOM	-2 days
T. Depth Authorization Message (Volume I, Chapter 2, Appendix B_9)	TYCOM	-1 day
U. Alpha Sea Trial	OIC	0
V. Readiness for Bravo Sea Trial Message (Volume I, Chapter 2, Appendix C_1)	Supervising Authority	Bravo Sea Trial -1 day
W. Readiness for Bravo Sea Trial Message (Volume I, Chapter 2, Appendix C_2)	NAVSEA	Bravo Sea Trial -1 day
X. Bravo Sea Trial Authorization Message (Volume I, Chapter 2, Appendix C_3)	TYCOM	Bravo Sea Trial -1 day
Y. Bravo Sea Trial	OIC	+3 days
Z. Readiness for Charlie Sea Trial Message (Volume I, Chapter 2, Appendix C_1)	Supervising Authority	Charlie Sea Trial -1 day
AA. Readiness for Charlie Sea Trial Message (Volume I, Chapter 2, Appendix C_2)	NAVSEA	Charlie Sea Trial -1 day

Event	Cognizance	Approximate Schedule (see Note)
AB. Charlie Sea Trial Authorization Message (Volume I, Chapter 2, Appendix C_3)	TYCOM	Charlie Sea Trial -1 day
AC. Charlie Sea Trial	OIC	+45 days
AD. Readiness for INSURV Sea Trial Message (Volume I, Chapter 2, Appendix C_1)	Supervising Authority	INSURV Sea Trial -1 day
AE. Readiness for INSURV Sea Trial Message (Volume I, Chapter 2, Appendix C_2)	NAVSEA	INSURV Sea Trial -1 day
AF. INSURV Sea Trial Authorization Message (Volume I, Chapter 2, Appendix C_3)	TYCOM	INSURV Sea Trial -1 day
AG. INSURV	Supervising Authority and OIC	+60 days
AH. Recommendation for Unrestricted Operations Certification Message (Volume I, Chapter 2, Appendix D_1)	Supervising Authority	
AI. Unrestricted Operations Certification Message (Volume I, Chapter 2, Appendix D_2)	NAVSEA	
AJ. Unrestricted Operation Authorization Message (Volume I, Chapter 2, Appendix D_3)	TYCOM	

NOTE: UNLESS OTHERWISE INDICATED, SCHEDULED DATES ARE REFERENCED TO THE ALPHA SEA TRIAL UNDERWAY DATE.

APPENDIX A_2

SUMMARY OF TYPICAL NEW CONSTRUCTION MAJOR MILESTONES AND MESSAGE REPORTING REQUIREMENTS FOR AIRCRAFT CARRIERS

Event	Cognizance	Approximate Schedule (see Note)
A. Periodic Monitoring Inspections	TYCOM	Start to Completion
B. Pre-RSE	TYCOM	
C. Habitability Inspection for In-Service per OPNAVINST 9080.3	TYCOM	-180 days
D. Phase I Crew Certification	ISIC	-120 days
E. RSE per OPNAVINST 3540.3	NAVSEA 08	
F. Criticality	PCO	-90 and -60 days
G. Approve Sea Trial Agenda	NAVSEA (for Builder's Trials (BT)) INSURV (for AT)	-70 days
H. In-Service per OPNAVINST 4700.8 and OPNAVINST 9080.3	Supervising Authority, NAVSEA, TYCOM	-65 days
I. Dock Trial	PCO	-60 days
J. Phase II Crew Certification Message	ISIC	-55 days
K. Crew Certification Message	ISIC	-50 days
L. Readiness for Fast Cruise or Sea Trial Message	Supervising Authority, with PCO concurrence	-50 days
M. Authorize Commencement of Sea Trial Message	TYCOM	-46 days
N. Fast Cruise	PCO	-45 days
O. Report Completion of Fast Cruise and Ready for Sea Trial Message	Supervising Authority, with PCO concurrence	-40 days
P. Builder's Trials	PCO	-30 days
Q. Acceptance Trials	PCO	-21 days
R. Readiness for Final Contract Trials (FCT) Message	NAVSEA	+59 days
S. Final Contract Trials	CO	+60 days
T. Operational Reactor Safeguards Examination (ORSE)	NAVSEA 08	

NOTE: UNLESS OTHERWISE INDICATED, SCHEDULED DATES ARE REFERENCED TO THE DELIVERY DATE.

APPENDIX A3

SUMMARY OF TYPICAL NEW CONSTRUCTION MAJOR MILESTONES AND MESSAGE REPORTING REQUIREMENTS FOR SURFACE FORCES

Event		Cognizance	Approximate Schedule (see Note)				
			AOE	DDG	LHD	LPD and LSD	MHC
A.	Arrival Inspection	ISIC or TYCOM	Crew Arrival				
B.	Periodic Monitoring Inspections	ISIC or TYCOM	Start To Completion				
C.	AEGIS Light-Off (If applicable)	NAVSEA or Supervising Authority		-300 days			
D.	Main Engine Light-Off	NAVSEA or Supervising Authority		-210 days			
E.	Builder's Dock Trial	Supervising Authority	-141 days	-210 days		-180 days	-180 days
F.	Builder's Trial (Alpha)	Supervising Authority	-120 days	-120 days	-130 days	-150 days	-90 days
G.	Review and update Out of Commission List	Ship's Force	-90 days	-90 days	-90 days	-90 days	-90 days
H.	Builder's Trial (Bravo) "Combat Systems"	Supervising Authority		-60 days			
I.	Builder's Trial (Charlie) "Acceptance"	Supervising Authority	-60 days	-30 days	-60 days	-90 days	-30 days
J.	Prepare OPNAV 4790/2Ks for all deficiencies to be presented to the INSURV at the AT or Combined Trial (CT)	Supervising Authority	-21 days	-21 days	-21 days	-21 days	-21 days
K.	Conduct AT or CT	INSURV Board	-21 days	-21 days	-21 days	-21 days	-21 days
L.	Identify and resolve controversies over responsibility and timing for correction of deficiencies	Ship Program Manager, Supervising Authority, Shipbuilder, or Ship's Force	-21 days	-21 days	-21 days	-21 days	-21 days
M.	Provide the ship with one copy of each documented INSURV item for input at delivery into the Current Ship's Maintenance Project (CSMP)	Supervising Authority	-21 days	-21 days	-21 days	-21 days	-21 days
N.	Habitability Inspection for In-Service per OPNAVINST 9080.3	ISIC	-14 days	-14 days	-3 days	-14 days	-14 days
O.	Phase I Crew Certification	ISIC	+14 days			-120 days	+10 days
P.	Phase II Crew Certification	ISIC	+60 days	+60 days	+80 days	+8 days	+65 days
Q.	Light-Off Assessment (LOA)	ISIC or TYCOM	+70 days	-15 days	+70 days	+45 days	+60 days

Event	Cognizance	Approximate Schedule (see Note)				
		AOE	DDG	LHD	LPD and LSD	MHC
R. In-Service per OPNAVINST 4700.8 "Delivery"	NAVSEA, Supervising Authority, TYCOM	0	0	0	0	0
S. Issue Section B of Consolidated Report	Ship Program Manager	0	0	0	0	0
T. Submit OPNAV 4790/2Ks for all INSURV items and for all other material deficiencies that quality for CSMP	Ship's Force	0	0	0	0	0
U. Issue Delivery Letter	Shipbuilder	+10 days	+10 days	+10 days	+10 days	+10 days
V. Submit Comments on Delivery Letter	Supervising Authority	+20 days	+20 days	+20 days	+20 days	+20 days
W. Dock Trial	PCO					
X. Establish PSA work package from input to date and identify required advance planning actions via PSA Planning Conference	Ship Program Manager, Supervising Authority, TYCOM, Ship's Force or Shipbuilder	+27 days	+27 days	+27 days	+27 days	+27 days
Y. Submit Priority list of AT or CT deficiencies	Ship's Force	+30 days	+30 days	+30 days	+30 days	+30 days
Z. Make comments on ship's priority list	TYCOM	+35 days	+35 days	+35 days	+35 days	+35 days
AA. Issue a list of Shipbuilding and Conversion, Navy (SCN) funded items authorized for accomplishment during PSA	Ship Program Manager	+40 days	+40 days	+40 days	+40 days	+40 days
AB. Assign availability	TYCOM	+42 days	+42 days	+42 days	+42 days	+42 days
AC. Issue initial PSA work package	Supervising Authority	+45 days	+45 days	+45 days	+45 days	+45 days
AD. Prepare for FCT or Guarantee Material Inspection (GMI)	Ship's Force	+50 days	+50 days	+50 days	+50 days	+50 days
AE. Place ship in "INSURV Window" and call down ship's Pre-INSURV package	TYCOM	+50 days	+50 days	+50 days	+50 days	+50 days
AF. FCT or GMI	INSURV Board	+54 days	+54 days	+54 days	+54 days	+54 days
AG. Conference following FCT or GMI critique to assign responsibility for correction of deficiencies and to assign priorities	Ship Program Manager, Supervising Authority, Shipbuilder, TYCOM or Ship's Force	+54 days	+54 days	+54 days	+54 days	+54 days
AH. Issue Section "B" of Consolidated Report	Ship Program Manager	+54 days	+54 days	+54 days	+54 days	+54 days

Event	Cognizance	Approximate Schedule (see Note)				
		AOE	DDG	LHD	LPD and LSD	MHC
AI. Fast Cruise	PCO	+85 days	+30 days		+50 days	
AJ. Commissioning	CO	+120 days	+14 days	+90 days	+60 days	+70 days
AK. Issue final list of SCN funded items authorized for accomplishment during PSA	Ship Program Manager	+90 days	+90 days	+90 days	+90 days	+90 days
AL. Sail Away	CO	+90 days		+95 days	+90 days	+80 days
AM. Issue final PSA work package	Supervising Authority	+100 days	+100 days	+100 days	+100 days	+100 days
AN. Pre-Arrival Conference	Supervising Authority, Ship Program Manager, Shipbuilder, TYCOM, ISIC or Ship's Force	+149 days	+149 days	+149 days	+149 days	+149 days
AO. Commence PSA or Arrival Conference	Supervising Authority, Shipbuilder or Ship's Force (TYCOM and Ship Program Manager not required unless specifically requested)	+154 days	+154 days	+154 days	+154 days	+154 days
AP. Final Contract Trials	Supervising Authority	+330 days	+120 days	+270 days	+210 days	+90 days
AQ. Operational Propulsion Plant Examination (OPPE)	ISIC or TYCOM	+345 days	+180 days	+345 days	+225 days	+105 days
AR. End PSA and Submit final status report of all deficiencies (Completion Date Varies with platform)	Ship's Force	+214 to +274 days	+214 to +274 days	+214 to +274 days	+214 to +274 days	+214 to +274 days
AS. Comment on final status report from ship and submit recommendations for Ship Program Manager Action	TYCOM	*	*	*	*	*
AT. Issue follow-up letter requesting Ship Program Manager final resolution and action on government responsible uncorrected deficiencies	TYCOM	**	**	**	**	**

NOTE: UNLESS OTHERWISE INDICATED, SCHEDULED DATES ARE REFERENCED TO THE DELIVERY DATE AND ARE APPROXIMATE. SIGNIFICANT ADJUSTMENT MAY BE REQUIRED FOR PSAS THAT COMMENCE AT OTHER TIMES AFTER DELIVERY.

* 30 days after completion of PSA

** 45 days after completion of PSA

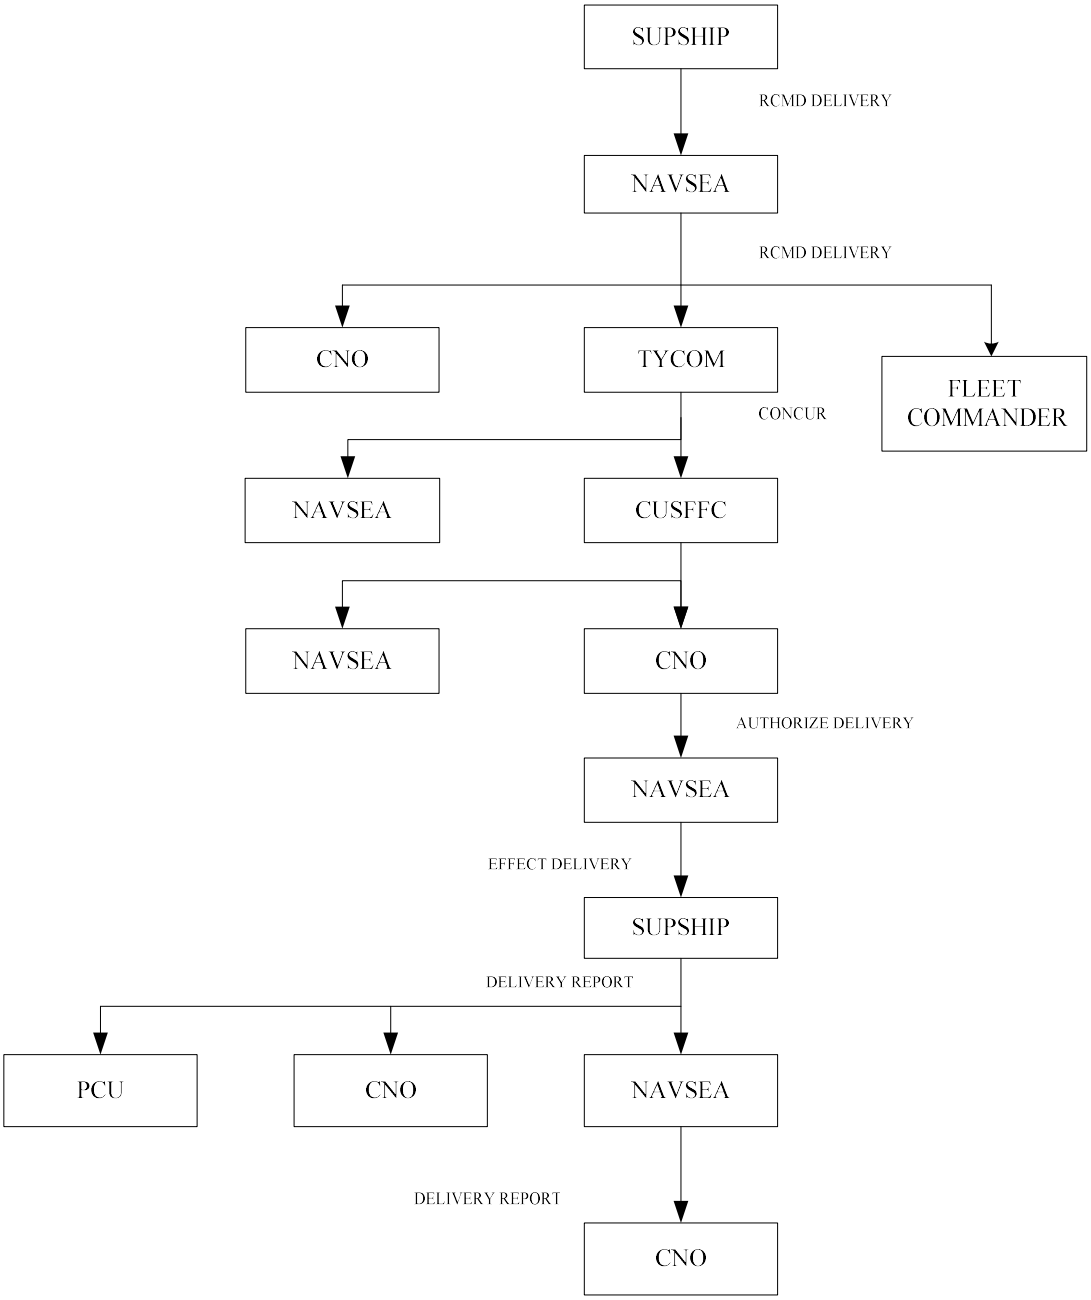
APPENDIX B3

DELIVERY MESSAGES SCENARIO



APPENDIX C

GLOSSARY OF TERMS

TERM	DEFINITION
Alpha Trial	Builder's Propulsion Trial; Acceptance Trial for SSN, SSBN, SSGN Propulsion Plant; Initial Tightness Dive (SSN, SSBN, SSGN); Dive to Maximum Authorized Depth (Selected SSN platforms).
Acceptance Trials (AT)	Trials and material inspections conducted underway by the INSURV Board for ships constructed in a private industrial activity to determine suitability for acceptance of a ship by the Navy.
Accepting Authority	The officer designated by the Chief of Naval Operations (CNO) to accept a vessel for the Navy, normally NAVSEA.
Aircraft Carriers Only	All ships under the responsibility of Naval Air Forces, Atlantic and Pacific Fleets. Includes all CVNs and supporting activities.
Bravo Trial	Normally the initial Dive to Test Depth; Noise Trial (SSN, SSBN, SSGN); Strategic Weapons System Missile Testing (SSBN); Weapons testing (Surface Combatants).
Builder's Trials (BT)	Evaluation trials and inspections conducted underway by the builder to assure the builder and the Navy that the ship is, or will be, ready for Acceptance Trials. These trials should be a comprehensive test of all ship's equipment and be similar in scope to Acceptance Trials. For nuclear powered surface ships, this is the Acceptance Trial for the Nuclear Propulsion plant.
Charlie Trial	Combat Systems and retesting (SSN, SSBN, SSGN); Acceptance Trials (DDG).
Combined Trials (CT)	Combined Trials are a combination of an Acceptance Trial with a Final Contract Trial. The INSURV Board normally conducts Combined Trials for nuclear powered submarines.
Common Assessment Procedures	Common assessment procedures are assessments that, to the maximum extent possible, are common across platforms and serve all users for assessments, inspections and certifications. Common assessment procedures are RCM applicable and effective maintenance procedures that can be properly and consistently executed. They deliver accurate assessment and measurement of, determine and document discrepancies to, and specify repairs required to restore satisfactory material condition. Common assessment procedures satisfy the needs of work definition, inspections and certifications in a common document used both across ship classes and by all activities. The two types of commonality

	invoked are common across functional use and common across platforms with similar systems and equipment.
Deep Dive	The first dive to maximum operating depth. This depth will not necessarily coincide with the design test depth of the hull. See definition of Maximum Operating Depth.
Delivery	The date the Navy accepts the ship from the shipbuilder. This requires a recommendation from the INSURV Board to accept or deliver the ship. Delivery of the ship is based on Acceptance Trials and satisfactory correction or resolution of deficiencies.
Dock Trial	Dock Trials are those ship trials conducted at the Industrial Activity to determine the ability of the ship, from a material standpoint, to conduct Sea Trials safely.
Executive Agent	A term used in Department of Defense and Service regulations to indicate a delegation of authority by a superior to a subordinate to act on behalf of the superior. An agreement between equals does not create an executive agent.
Fast Cruise	A period immediately prior to underway trials during which Ship's Force operates the ship for dockside training. Fast Cruise must, as far as is practical, simulate at-sea operating conditions.
Final Contract Trials (FCT)	Trials that are conducted prior to the end of the guarantee period to determine if there are any defects, failures, or deterioration other than that due to normal wear and tear.
Fleet Introduction Team (FIT)	A team of personnel assembled to support a pre-commissioning crew by monitoring progress of construction and coordinating training and facilities. They provide administrative support in all facets of new construction.
Fleet Maintenance Activity (FMA)	FMAs include tenders, shore-based maintenance activities (Regional Maintenance Centers, Naval Ship Repair Facilities, Naval Submarine Support Facilities, Naval Intermediate Maintenance Facilities (NAVIMFAC), TRIDENT Refit Facilities, Weapons Repair Facilities and other activities of that type) and supporting activities (port services, etc. that perform maintenance on Fleet assets).
Group	Normally that first 1-Star organization or Command above the Squadron before to TYCOM.
Guarantee Material Inspection (GMI)	A material inspection conducted inport prior to Post Shakedown Availability (PSA) by a Trial Board prior to the end of the guarantee period when CNO has authorized a Combined Trial to determine if

	contractor responsible equipment has operated satisfactorily during the guarantee period. It must include the opening and inspection of equipment designated by the Board together with the operation and visual inspection of equipment and the review of material maintenance records.
Guarantee Period (New Construction)	The period of time immediately following preliminary acceptance (delivery), normally eight or nine months (six months for nuclear powered ships), for which the industrial activity is responsible for the correction of deficiencies.
Guarantee Period (PSA)	The guarantee period following PSA varies with the type of contract. Historically, a “cost plus” type contract has had a guarantee period of six months and a “fixed price” type contract a period of 90 days. The Supervising Authority will advise at the time of PSA the guarantee that applies.
In-Service	Nuclear powered ships are assigned an active status of In-Service approximately two to four weeks (two to four months for aircraft carriers) prior to the commencement of Sea Trials and maintain this status until commissioning.
Industrial Activity	The activity responsible for accomplishing construction or repair of ships whether private or public. This includes Naval shipyards, private shipyards, shipbuilders, vendors, Naval Aviation Depots, Naval Ship Repair Facilities, and other Naval Repair or Technical Activities (Naval Underwater Weapons Center, Naval Ships Weapons Center, etc.).
Initial Dive	For purposes of seawater valve and system testing, as defined in NAVSEAINST C9094.2, the first dive to a depth not previously reached during the trials.
Initial Tightness Dive	First submergence (a submarine's Alpha Trial).
INSURV	Prior to the acceptance and delivery of a new ship, whether built by a private or a naval industrial activity, all machinery, electronics and weapons systems installed must be subjected to acceptance trials to determine that the installations are capable of meeting performance specifications. Depending upon your platform, these trials are referred to as either Acceptance Trials, Combined Trials or INSURV. This independent verification of the ship’s readiness for acceptance and recommendation for fleet introduction is the responsibility of the President, Board of Inspection and Survey.
Lead Maintenance Activity	The single activity responsible for integrating all maintenance and modernization on U.S. Naval ships during any type of availability.

Maintenance Manager	Those persons, such as Port Engineers, Ship Superintendents, Ship's Coordinators, and Maintenance Planning Managers, assigned to assist Ship's Force in the tracking of work candidates, development of work packages, and tracking of FMA or Industrial Activities assigned jobs.
Maintenance Team	The Maintenance Team (MT), led by the Ashore Ships Maintenance Manager, is responsible for validating, scheduling and tracking through execution of all maintenance candidates. The primary responsibility of the Maintenance Team is to execute the maintenance policies, directives and regional business rules of this manual, the TYCOM and the RMC.
Maximum Operating Depth (Also Maximum Authorized Operating Depth)	The depth to the keel for a particular submarine which is authorized by Commander Submarine Forces Atlantic or Commander Submarine Forces Pacific upon the recommendation of NAVSEA, as the depth not to be exceeded in operations. This depth is normally the Test Depth but may be reduced in specific cases. The depth authorized may be less than, but in no case exceed, the depth recommended by NAVSEA.
Mid-Cycle	Intermediate meeting held between Fleet Weeks to discuss a limited number of Technical Ticklers and pending action items.
Moderate Speed	The range of speed that allows the submarine optimum recovery (as shown on applicable submerged operating envelope curves) if loss of stern plane control, flooding, or both occurs. Normally 8-15 knots.
Naval Supervisory Authority or Supervisory Authority	The officer designated to represent the Navy Department at an industrial activity; normally a Supervisor of Shipbuilding (new construction), Regional Maintenance Center (Conversion and Repair), or the Commander of a Naval Shipyard.
Post Shakedown Availability (PSA)	An industrial activity availability following Final Contract Trials or Guarantee Material Inspection assigned to correct deficiencies found during the shakedown period or to accomplish other authorized improvements.
Regional Maintenance Team (RMT)	A site specific, multi-disciplined group of people normally accomplishing "outside shop" or on-platform work. An RMT may be platform or technology specific (e.g., submarines or nuclear) to facilitate necessary worker training and competency. An RMT is generally comprised of both military and civilian workers.
Regional Repair Center (RRC)	An "inside shop" focusing on a particular product line (e.g., motors) or technology (e.g., machinery). An RRC is generally comprised of both military and civilian workers.
Reliability Centered	A methodology to develop or revise a maintenance approach with the objective of maintaining the inherent reliability of the system or

Maintenance	equipment, recognizing that changes in inherent reliability may be achieved only through design changes.
Submarines Only	All ships under the responsibility of Submarine Forces, Atlantic and Pacific Fleets. Includes all submarine classes (e.g., SSN, SSBN, SSGN) and supporting activities: ARDMs, ASs, and UUVs.
Surface Force Only	All ships under the responsibility of Naval Surface Forces, Atlantic and Pacific Fleets. Includes all surface ship classes and supporting activities that are NOT under the responsibility of Submarine Forces or Naval Air Forces (e.g., Aegis Ashore, CG, DDG, ESB, LCC, LCS, LHA, LHD, LPD, LSD, MCM).
Technical Data	Recorded information (regardless of the form or method of recording) of a scientific or technical nature (including computer databases and computer software documentation). This term does not include computer software or financial, administrative, cost or pricing, or management data or other information incidental to contract administration. The term includes recorded information of a scientific or technical nature that is included in computer databases. For these purposes, technical data includes the characteristic of a particular science, trade or profession.
Technical Tickler	A “living document” submitted by the Commander, United States Fleet Forces Command Maintenance Officer to present the Fleet's top material readiness issues to COMNAVSEASYSCOM and Office of the Chief of Naval Operations Resource Sponsors and used subsequently to record and track their planned corrective action.
Test Depth (TD)	For the purpose of the proper method of measuring and specifying Test Depth, the requirements are: Test Depth must be measured to the bottom of the keel for all types of submarine operations. Builder’s trials and trials following major industrial activity availabilities greater than six months, must be at a tolerance of plus zero (0), minus twenty (20) feet of Test Depth when specified. All other trials can be conducted at 95% to 100% of Test Depth to satisfy all the requirements specified for 100% Test Depth.
Top Management Attention Fleet Week	Top Management Attention (TMA) O-6 level panel meeting to discuss the Technical Ticklers, review action items, close issues where action is complete and refer issues to Top Management Issues that require Flag level action. TMA Fleet Week is held twice a year, generally in October and April.
Top Management Issues (TMI)	Top Management Issues, flag level panel meeting to discuss those issues requiring identification or realignment of resources (funding or

manpower), or flag level participation to resolve.

Valve Repair, Restoration or Overhaul

a. Repair. Any work done to improve the material condition or operation of the valve correcting deficient conditions such that the component may be returned to service, but which, in total does not meet the full intent of the applicable restoration or overhaul technical standard, is considered a repair.

b. Restoration or Overhaul. All valve parts replaced or restored to the requirements of the applicable technical standard (e.g., the full intent of the restoration or overhaul technical standard is invoked).

Voyage Repairs

A Voyage Repair availability is assigned solely for the accomplishment of corrective maintenance of mission or safety essential items necessary for a ship to deploy or continue on its deployment. Repairs accomplished during a VR availability are frequently referred to as Voyage Repairs.

Waterline

The term "waterline" in this manual refers to where the hull of a ship meets the surface of water when afloat.

Work

a. Any action that actually or potentially changes (including disassembly for the purposes of inspection or repair) the approved configuration of any part, component or ship's system.

b. Any action that removes or affects the ship's ability to operate ship's systems or components following ship's systems, operating manuals or reactor plant manuals.

c. Any testing or inspections required to establish, maintain or reestablish certification.

d. Any design, engineering, planning or configuration management functions that involve the final review or approval of technical information.

Examples of work include:

1. Action which disassembles or removes any part, component or ship's system.

2. Action specified in a Technical Work Document.

3. Any action that removes or affects the ship's ability to operate ship's systems or components following ship's systems manuals, operating manuals or reactor plant manuals, excluding tagout following the guidance of the Tagout User's Manual, including but not limited to:

   (a) Component or system tests.

(b) Intrusive inspections (such as breaking the plane of electrical panels requiring electrical safety).

(c) Valve line-ups that alter the normal system line up not governed by operating procedures.

(d) Removing valve hand wheels, disconnecting of reach rods.

2.1 NAVY SHIPBUILDING PROGRAM MANAGERS. The various Naval Sea Systems Command (NAVSEA), Program Executive Office for Carriers, Littoral Warfare and Auxiliary codes designated as Navy Shipbuilding Program Managers provide the specifications for the building and testing of all ships. These codes are initially established to get the shipbuilding program and development of logistic support programs up and running.

2.1.1 Pre-Commissioning. Navy Shipbuilding Program Manager responsibilities during the Pre-Commissioning phase of New Construction are delineated in references (a) and (b). The following is a summation of those responsibilities and is intended to be used as a guide, not to be considered all-inclusive. Questions concerning a Navy Shipbuilding Program Manager's specific functions should be directed to the applicable NAVSEA code.

a. Provide supervision and direction concerning all non-nuclear aspects of ship construction.

b. Provide written instructions to the Supervising Authority regarding the conduct and scheduling of all non-nuclear ship testing.

c. Generate the correspondence (message or letter traffic) as indicated in Appendix A of this chapter recommending the Habitability Inspection and In-Service dates.

d. The assignment of deficiency responsibility and ensuring the correction of those deficiencies identified during Combined Trials (CT), Acceptance Trials (AT), Final Contract Trials (FCT) and Guarantee Material Inspections (GMI).

e. Report to the Type Commander (TYCOM), with information copies to Chief of Naval Operations (CNO) and Fleet Commander, that the material condition of the ship is certified satisfactory for Alpha Sea Trials and recommend authorization to dive the ship be granted under deliberate and controlled conditions to a specified depth for accomplishment of the approved Sea Trials agenda. Appendix B_{SHIPS} of this chapter provides a sample message flowchart for surface force ships and aircraft carriers. Appendix B_{SUBS} of this chapter provides a sample message flowchart for submarines.

f. (Submarines only) Report to the TYCOM that the material condition of the ship is certified satisfactory for Bravo, Charlie, and CTs. Appendix C of this chapter provides a sample message.

g. (Submarines only) After completion of all Sea Trials, report to the TYCOM that the material condition of the ship is certified for Unrestricted Operations (URO). Appendix D of this chapter provides a sample message.

h. Ensure compliance of habitability and livability standards into ship specifications.

2.1.2 Post-Shakedown Availability (Submarines only). Navy Shipbuilding Program Manager responsibilities during Post Shakedown Availability (PSA) are defined in volume II, part III, chapter 2 of this manual.

2.2 NAVAL SEA SYSTEMS COMMAND NUCLEAR PROPULSION DIRECTORATE. (Nuclear Powered Ships only).

2.2.1 Pre-Commissioning. NAVSEA Nuclear Propulsion Directorate (08) responsibilities for the Pre-Commissioning period are as follows:

a. Provide specifications for the building and testing of the nuclear propulsion plant.

b. Provide supervision and direction of nuclear propulsion plant testing and trials.

c. Approve the sequencing and scheduling of nuclear propulsion plant tests and trials.

d. Arrange for technical assistance from the U.S. Department of Energy, including the Pre-Critical Examination by the Director, Division of Naval Reactors.

e. Provide written instructions to the Supervising Authority regarding the conduct and scheduling of all dockside tests and underway trials involving operation of the nuclear propulsion plant.

f. Authorize critical operation of the reactor.

g. Authorize commencement of Fast Cruise after receiving notification from the Supervising Authority that the ship has demonstrated a satisfactory state of training.

2.2.2 Reactor Safeguard Examination. A Pre-critical Reactor Safeguard Examination (RSE) will be conducted by NAVSEA 08 prior to initial reactor criticality. NAVSEA 08 will approve operation of the Nuclear Propulsion Plant during dockside testing and underway trials. Volume I, Chapter 3, Appendix C of this manual provides information on Pre-RSE preparations.

2.2.3 Criticality and Power Range Testing. Upon receiving the request for initial criticality from the Supervising Authority, NAVSEA 08 will authorize critical operation of the reactor, with subsequent power range testing. Appendix E of this chapter provides a listing of the events leading up to the authorization for critical operation of Naval Nuclear Propulsion plants, with sample request messages or letters.

2.2.4 Post-Shakedown Availability. NAVSEA 08 responsibilities for the PSA period are as follows:

a. Provide approved test procedures for the verification of reactor plant repairs and alterations accomplished in the availability.

b. Arrange for technical assistance by the U.S. Department of Energy as required.

2.3 TYPE COMMANDER. Reference (a) states the TYCOM is responsible for monitoring the construction and acceptance process to ensure "customer" input is provided. Reference (c) describes the TYCOM's responsibilities during new construction for Submarine Fly-By-Wire Ship Control Systems (FBW SCS). The following summarizes major TYCOM responsibilities during the Pre-Commissioning, FCT, GMI and PSA periods.

2.3.1 Pre-Commissioning. During the construction phase, major TYCOM responsibilities include but are not limited to:

a. Designating an Immediate Superior in Command (ISIC) for all units being built within the TYCOM's geographical area of responsibility.

b. Ensuring that the Pre-Commissioning Unit (PCU) is placed on distribution for all message traffic applicable to the platform and platform's operational environment.

c. Reviewing all incoming correspondence for PCU applicability and forwarding platform related documentation as required.

d. Conducting the Habitability Inspection when requested by the Accepting Authority (may be delegated to the ISIC). Sample messages relating to Habitability and In-Service are contained in Appendix A of this chapter. If the habitability and livability inspection has been delegated to ISIC, then ensure the ISIC conducts habitability and livability inspections prior to placing the ship In-Service in accordance with this instruction chapter 3 of this volume.

e. Recommending to the CNO that the ship be placed "In-Service Active" upon receiving satisfactory results of the Habitability Inspection. Appendix A of this chapter provides sample messages.

f. (Nuclear Powered Ships only) Conducting or assisting the ISIC with the Pre-RSE.

g. (Surface Force Ships only) Establishing Light-Off Assessment (LOA) dates via liaison with the ISIC, the Ship and the Afloat Training Group (ATG).

h. Conducting or directing the conduct of the arrival assist and periodic monitoring inspections as defined in chapter 3, paragraph 3.3.1 and 3.3.2 of this volume.

i. (Nuclear Powered Ships only) Conducting an inspection to certify crew training per the requirements of reference (b).

j. (Nuclear Powered Ships only) Exercising operational control during underway trials either directly or through the designated ISIC.

k. (Submarines only) Reviewing the schedule and sequence of Sea Trial Agendas and concurring by message to the Supervising Authority concerning the operational aspects of the specific trial. Appendix F of this chapter provides a sample message.

l. (Submarines only) Providing escorts as may be required. Send Sea Trial support services message to specify Submarine Rescue Diving Recompression System "modified alert" requirements. Appendices BA and CA of volume II, part III, chapter 2 of this manual provides a sample message.

m. (Submarines only) Assigning an unrestricted Line Officer (a former Commanding Officer (CO) senior to the Officer In Charge (OIC)) as the TYCOM Embarked Representative who has authority to act for the TYCOM, making on-the-spot changes to approved Sea Trial Agendas.

n. (Submarines only) If desired, assign an officer to act as the TYCOM material representative on selected trials. The material representative's duties include:

(1) Serving as a technical advisor to the TYCOM Embarked Representative on matters pertaining to Sea Trial Agenda modifications, compliance with this instruction and disposition of emergent material problems.

(2) Acting for the TYCOM in making on-the-spot changes to approved Sea Trial Agendas in the absence of the TYCOM Embarked Representative.

o. (Submarines only) Reporting to the CNO and the Navy Shipbuilding Program Manager that the crew is ready for underway trials, prior to Fast Cruise and upon receipt of the ISIC message certifying the operational readiness of the submarine crew.

Appendix B_{SUBS} of this chapter reflects the message scenario and contains sample messages for Fast Cruise or Alpha Trials.

p. (Submarines only) Promulgating of the Alpha Sea Trial Depth Authorization upon receipt of the Supervising Authority message reporting completion of Fast Cruise and the Navy Shipbuilding Program Manager message promulgating the authorized depth for the Alpha Trial. Appendix B_{SUBS} of this chapter provides sample messages.

NOTE: SUBSEQUENT TO THE NAVY SHIPBUILDING PROGRAM MANAGER AND SUPERVISING AUTHORITY MESSAGES PROMULGATING DEPTH AUTHORIZATION AND REPORTING THE SHIP'S MATERIAL READINESS TO COMMENCE FAST CRUISE AND SEA TRIALS, ANY DEFICIENCY DISCOVERED AND CORRECTIVE ACTION TAKEN WHICH AFFECTS THE WATERTIGHT INTEGRITY, THE RECOVERABILITY OF THE SHIP, THE OPERATIONS OF THE SHIP'S CONTROL SURFACES OR THE SHIP'S SALVAGE CAPABILITY MUST BE REPORTED TO THE NAVY SHIPBUILDING PROGRAM MANAGER, THE TYCOM AND FLEET COMMANDER BY THE SUPERVISING AUTHORITY, ISIC OR TYCOM REPRESENTATIVE AND PCU BY MESSAGE. PREVIOUS CERTIFICATION MESSAGES MUST BE SUSPENDED. WHEN THE NAVY SHIPBUILDING PROGRAM MANAGER'S REVIEW OF THE MESSAGE IS COMPLETED, THE NAVY SHIPBUILDING PROGRAM MANAGER WILL CERTIFY TO THE TYCOM THAT THE MATERIAL CONDITION OF THE SHIP IS SATISFACTORY FOR SEA TRIALS TO A SPECIFIED DEPTH.

q. (Submarines only) Promulgating by message the Bravo, Charlie and Combined Trials Depth Authorization after receipt of the Supervising Authority message confirming readiness for the test depth dive and the Navy Shipbuilding Program Manager message promulgating Sea Trial Depth Authorization. Appendix C of this chapter provides sample messages.

r. (Submarines only) Promulgating by message to the PCU the final URO Material Certification upon receipt of the Supervising Authority message concerning material condition for URO and the Navy Shipbuilding Program Manager message recommending URO. Appendix D of this chapter provides sample messages.

s. (Submarines only) Prior to Alpha Sea Trials and following NAVSEA certification that the submarine FBW SCS is satisfactory for sea trials and Supervising Authority report that the FBW SCS is satisfactory for commencement of Alpha Sea Trials, report by message to ship authorizing conduct of sea trials per the approved Sea Trial Agenda and specifically identify any operating restrictions of the ship or system. Repeat the routine for each subsequent sea trial. Appendix G of this chapter provides a sample message.

t. (Submarines only) After all builder's sea trials, and following NAVSEA certification that the submarine FBW SCS is satisfactory for unrestricted use, report by message to ship authorizing FBW SCS unrestricted use in support of submarine unrestricted operations or specifically identify any operating restrictions of the ship or system. Appendix H of this chapter provides a sample message.

2.3.2 Combined Trials, Acceptance Trials, Final Contract Trials or Guarantee Material Inspection. The TYCOM's responsibilities for these trials are documented in references (a), (d), and (e). The most significant action from the ship's perspective is the TYCOM's presenting of the ship for GMI or FCT.

2.3.3 Post-Shakedown Availability. The TYCOM's responsibilities as related to PSA are as follows:

a. (Surface Force Ships only) Assist with LOA as shown in volume I, chapter 6, Appendix C.

b. (Nuclear Powered Ships only) Conduct or assist the ISIC in conducting the Pre-Critical Inspection (only required when reactor has been shut down greater than 16 weeks). Schedule the Fleet Commander Post-Overhaul RSE as recommended by the Industrial Activity in the Key Events Schedule and confirmed by the parent ISIC or TYCOM representative (required if the availability is scheduled for more than six months) upon completion of the ISIC's Pre-Critical Inspection.

c. (Submarines only) TYCOM responsibilities are defined in volume II, part IIII, chapter 2 of this manual.

d. (Submarines only) For the first ship of a class or when directed by NAVSEA, ship control trials are planned and conducted under the direction of NAVSEA 05 to support verification that the FBW SCS automatic control algorithms performance is per Section 4 of reference (c). Upon successful completion of these trials, the Navy Shipbuilding Program Manager issues to TYCOM, the ship's final FBW SCS certification message with NAVSEA 07 concurrence and in support of the submarine class FBW SCS design. TYCOM issues to the ship a final FBW SCS certification message. When required, by message or letter, the NAVSEA Navy Shipbuilding Program Manager via separate correspondence must identify impact to the FBW SCS Certification of other ships in the submarine class. Appendix I of this chapter provides a sample message.

2.4 SUPERVISING AUTHORITY. References (a), (b), (c) and (f) describe the Supervising Authority's responsibilities during new construction. The following is a synopsis of those functions with additional amplification. Platform unique functions are identified by indicating the applicable class (if any) or group covered (i.e., Nuclear Powered Ships).

2.4.1 Pre-Commissioning. The Supervising Authority's responsibilities as related to Pre-Commissioning are as follows:

a. Provide crew support as directed by the Navy Shipbuilding Program Manager. This support may include facility support requirements such as berthing, administration, officer and crew training spaces, vehicles for transportation, computers for development of training programs and ship's directives.

b. Ensure PCU office spaces have been certified to the appropriate classification for storage of classified documentation.

c. Provide the required safety training and gear to the crew for working in an industrial area.

d. Provide initial briefing to Prospective Commanding Officer (PCO) or crew to provide an overview of the Supervisor's role during construction.

e. Provide to the PCO or crew with the planning documents necessary for establishing goals during New Construction, such as a Master Construction Schedule, an Operational Control Transfer schedule, testing schedules, and all other schedules that would require crew support and coordination.

f. Act as liaison for the ship in resolving conflicts in construction schedules.

g. Ensure that at least ten copies of reference (g) are available to support Phase 1 and Phase 2 of the Planned Maintenance System (PMS) installation.

h. Provide the PCU with at least one set of all the technical manuals required to support the equipment installed on the particular platform.

i. Provide the PCU with, or access to a complete set of ship's drawings and contract specifications.

j. Monitor the ship's familiarization training conducted by the Industrial Activity or Fleet Introduction Team (FIT) for fulfillment of the contract. For familiarization training conducted using computer-aided instruction, the Supervising Authority is responsible only for ensuring sufficient resources are available to the PCU to utilize the training. Provide feedback to the Navy Shipbuilding Program Manager and the Industrial Activity concerning content and value of this training.

k. Recommend to the Navy Shipbuilding Program Manager the commencement date for the Habitability Inspection. Appendix A of this chapter provides sample documentation. Monitor habitability and livability conditions during construction. Work with the shipbuilder to correct deficiencies.

l. Recommend to the Navy Shipbuilding Program Manager the date for placing the ship "In-Service". In-Service for submarines should occur approximately two to four weeks prior to underway trials and for aircraft carriers two to four months prior to underway trials. Appendix A of this chapter provides sample documentation.

m. Recommend to the Accepting Authority the date for placing the ship "In Commission". The "In Commission" date is normally on or about the date of delivery.

n. Request necessary services for each trial from the Fleet Commander per reference (a), with an informational copy to the TYCOM.

o. (Nuclear Powered Ships only) Accept custody of special nuclear material upon delivery from the U.S. Department of Energy.

p. (Nuclear Powered Ships only) Transfer custody of, and responsibility for, special nuclear material to the OIC when the ship is placed "In-Service".

q. (Nuclear Powered Ships only) Coordinate the schedule for dockside and underway tests and trials per the requirements of the Navy Shipbuilding Program Manager and the Builder.

r. (Nuclear Powered Ships only) Provide sufficient time for crew training and Fast Cruise during the building period to permit Ship's Force to attain a state of training adequate to ensure proper operation and safety of the ship and its personnel during Sea Trials. Provide sufficient time for the correction of deficiencies after the completion of the final Dock Trials and before the start of the operational training period.

s. (Nuclear Powered Ships only) Submit for approval the schedule and sequence of any dockside tests or Sea Trials involving operation of the nuclear propulsion plant to NAVSEA 08, except where such tests and trials have been approved in the written instructions provided by NAVSEA 08.

t. (Submarines only) Coordinate with ISIC for support personnel to perform distressed submarine and salvage inspection.

u. (Nuclear Powered Ships only) Submit the schedule and sequence of all Sea Trials to the ISIC for approval and to the TYCOM for concurrence with the operational aspects of the trial.

v. (Nuclear Powered Ships only) Report to the Navy Shipbuilding Program Manager when the ship is ready for Fast Cruise and Alpha Sea Trial (Builder's Trials for aircraft carriers). Appendix B_{SHIPS} of this chapter provides a sample message.

w. (Nuclear Powered Ships only) Report the successful completion of Fast Cruise and readiness for Alpha Sea Trial (Builder's Trials for aircraft carriers), with the concurrence of the OIC, to the TYCOM, with an information copy to the Navy Shipbuilding Program Manager, the Fleet Commander and the ISIC. Appendix B_{SHPS} of this chapter provides a sample message for submarines.

x. (Nuclear Powered Ships only) Report to the Navy Shipbuilding Program Manager the satisfactory completion of Alpha Sea Trials (Builder's Trials for aircraft carriers). For submarines, the material status of the ship is certified to support operations to test depth. Appendix C of this chapter provides a sample message.

y. (Submarines only) Certify to the Navy Shipbuilding Program Manager the completion of all Sea Trials, reporting the status of all Sea Trial deficiencies and all Category 1A Audit Items. Certify the material condition of the ship is satisfactory for URO to test depth. Appendix D of this chapter provides a sample message.

z. Retain responsibility for the material condition of the ship until it reports for duty in the fleet.

aa. Maintain "Lessons Learned Logs" from the CO of previously built ship for delivery to the next PCO or OIC.

ab. (Submarines only) Report by message to NAVSEA Navy Shipbuilding Program Manager, in advance of the scheduled start of Fast Cruise, that all FBW SCS work necessary for Alpha Sea Trials, including resolution of NAVSEA FBW SCS Certification Audit Category I recommendations, has been completed, provide the status of all incomplete NAVSEA FBW SCS Certification Audit Category IA recommendations, and that the FBW SCS is ready for commencement of Fast Cruise. The message must also state that there are no conditional FBW SCS Deviations or

Waivers which have not been satisfied or cite those that exist, identify any operating restrictions of the ship or system, and that, subject to satisfactory completion of Fast Cruise and resolution of mandatory FBW SCS deficiencies, the submarine FBW SCS is satisfactory for commencement of sea trials. Make a similar report prior to each subsequent sea trial. Appendix J of this chapter provides a sample message.

ac. (Submarines only) Report by message to the NAVSEA Navy Shipbuilding Program Manager and TYCOM, with the concurrence of the ship's Commanding Officer, successful completion of Fast Cruise as a prerequisite for the start of sea trials. Appendix K of this chapter provides a sample message.

ad. (Submarines only) Report by message to the NAVSEA Navy Shipbuilding Program Manager the satisfactory completion of Alpha Sea Trials and report the status of all incomplete NAVSEA FBW SCS Certification Audit Category IA recommendations. Appendix L of this chapter provides a sample message.

ae. (Submarines only) Report by message to the NAVSEA Navy Shipbuilding Program Manager the satisfactory completion of all shipbuilder's sea trials, correction of all mandatory sea trial deficiencies, and resolution of all NAVSEA FBW SCS Certification Audit Category IA recommendations. Report that the submarine FBW SCS is satisfactory for unrestricted use in support of submarine unrestricted operations. Identify all deferred FBW SCS work and conditionally approved deviations and waivers to date which have not had the condition satisfied and specifically identify any operating restrictions of the ship or system. Appendix M of this chapter provides a sample message.

af. Prior to Ship's Force assuming operational control, ensure that assigned New Construction units operate and maintain installed diesel engines per established procedures. Specifically, the Supervisor must:

(1) Schedule a routine diesel inspection prior to initial start-up by Ship's Force.

(2) Observe diesel engine operations during shipboard visits per Volume IV, Chapter 4 of this manual.

(3) Ensure that the Automated Diesel Engine Trend Analysis Program addressed by reference (g) and TYCOM directive is in place.

ag. Prior to Ship's Force assuming operational control, ensure that assigned New Construction units operate and maintain an installed gas turbine per established procedures. The Supervisor must schedule a gas turbine inspection prior to start-up by Ship's Force.

2.4.2 Acceptance Trials or Combined Trials. The Supervising Authority is responsible for presenting the ship for AT or CTs. References (d), (e), and (f) delineate the Supervising Authority's responsibilities concerning these trials. Several of the more significant issues are:

a. Submit for approval the schedule and sequence of AT or CT to the President, Board of Inspection and Survey.

b. Request necessary services for each trial from the Fleet Commander per reference (a), with an informational copy to the TYCOM.

c. Provide riders to assist and provide system or historical expertise.

2.4.3 Post-Shakedown Availability. During PSA, the Supervising Authority is responsible for the following:

a. Determining, in conjunction with the CO, the type and extent of post-repair dockside and at-sea tests or trials, in addition to those described in Volume I, Chapter 6, section 6.4 of this manual. Submit the following for approval:

(1) The schedule and sequence of post-repair nuclear propulsion plant trials to NAVSEA for concurrence and the ISIC or TYCOM Representative for approval.

(2) The schedule and sequence of post-repair trials subsequent to the nuclear propulsion plant trials to the ISIC for approval. Include the TYCOM as a "Copy To" addressee.

b. Providing sufficient time for crew training to support Fast Cruise and to ensure the proper operation and safety of the ship.

c. Coordinating the schedule for Fast Cruise and post repair trials with the ISIC or TYCOM representative. Submit the Sea Trials Agenda to the Navy Shipbuilding Program Manager for approval.

d. (Submarines only) Additional Supervising Authority responsibilities are defined in volume II, part III, chapter 2 of this manual.

e. Reporting to the TYCOM the completion of Fast Cruise and the correction of all mandatory deficiencies. Recommend commencement of Sea Trials with the CO's concurrence per volume II, part I, chapter 2 for aircraft carriers, volume II, part II, chapter 2 for surface force ships, or volume II, part III, chapter 2 for submarines of this manual.

f. (Submarines only) Reporting to the Navy Shipbuilding Program Manager or the TYCOM (PSA less than six months) that Sea Trials have been completed, and for submarines, that the material condition of those parts of the ship installed, prepared or tested by the Industrial Activity is satisfactory for URO to design test depth, concurrence per volume II, part III, chapter 2 of this manual.

2.4.4 Deficiencies. The Supervising Authority's primary functions involve the building of ships and the correction or resolution of deficiencies discovered during the building and trials portion of construction. Reference (f) and locally generated Supervising Authority Instructions provide specific and detailed information pertaining to deficiencies, their identification, tracking and resolution. Contact the Supervising Authority for more information. Volume I, chapter 5 of this manual also provides additional guidance.

2.5 IMMEDIATE SUPERIOR IN COMMAND. The ISIC is the TYCOM's delegate.

2.5.1 Pre-Commissioning. During the Pre-Commissioning period, the ISIC is responsible for the following:

a. Providing crew support prior to initial man-up. Personnel arriving prior to initial manning will be tasked with coordinating with the Supervising Authority to start the

necessary preparations for initial man-up. Appendix N of this chapter provides a checklist of areas that need to be addressed several months before personnel start arriving.

b. Conducting an inspection approximately two months following the arrival of the first increment of the crew at the building yard, using volume I, chapter 3, paragraph 3.3.1 of this manual as a guide.

c. Conducting periodic monitoring of ships per volume I, chapter 3, paragraph 3.3.2 of this manual to include:

(1) Technical, administrative or training assistance visits (Tech Assists) directed toward improvements in the management and conduct of maintenance and training tasks.

(2) Evaluation visits (Work-ups) to determine the state of administration and training.

(3) Spot checks (Monitor Visits) to monitor the progress and effectiveness in specific material, training and administrative areas.

d. Coordinating with the Bureau of Personnel to ensure personnel arrive in support of initial crew man-up.

e. Conduct a Habitability and Livability Inspections when directed by the TYCOM. Volume I, chapter 3, Appendix D of this manual provides information concerning the Habitability and Livability Inspection and a sample Compartment Surveillance Guide. Volume I, chapter 3, Appendix E of this manual provides a sample checklist.

f. Making recommendations to the TYCOM for placing the ship “In-Service”. Appendix A of this chapter provides a sample message.

g. Contact TYCOM Metrology and Calibration Point of Contact to verify if Establishment of Field Calibration Activity Request has been submitted per references (h) and (i).

h. When Ship’s Force has assumed operational control, ensuring that assigned New Construction units operate and maintain installed diesel engines per established procedures. Specifically, the ISICs will conduct follow-up action to ensure that any unsatisfactory conditions found are corrected at an early date.

i. (Nuclear Powered Ships only) Conducting a Pre-RSE of the Engineering or Reactor Department to determine the ship’s readiness for the Naval Reactors Pre-Critical RSE. The TYCOM will assist in this examination. Volume I, chapter 3, Appendix C of this manual provides administrative guidelines for the conduct of the Pre-RSE.

j. (Nuclear Powered Ships only) Reviewing Pre-RSE findings, the CO’s training plan, and progress evaluations, and direct follow-up reviews or inspections necessary to verify the ship’s readiness for the RSE.

k. (Submarines only) Prior to Fast Cruise, reporting ship’s preparations to assume responsibility for Re-entry Control in the Crew or Material Certification message. Appendix B_{SUBS} of this chapter provides a sample message.

l. (Submarines only) Scheduling distressed submarine and salvage inspections per volume IV, chapter 18 of this manual.

m. (Submarines only) Designating the distressed submarine and salvage inspection team using the guidance provided in volume IV, chapter 18 of this manual.

n. For CVNs, conduct crew certification per reference (j).

o. For all other hulls, conduct formal Phase I crew certification inspection(s) of the Ship's Force following the TYCOM Training Manual (when required). The purpose of this inspection must be to audit the readiness and training of the Ship's Force, particularly in the areas of watch stander qualifications, damage control readiness, status of operational and emergency bills, presence on board of essential technical manuals and general operational knowledge. This inspection must be scheduled about one month prior to Fast Cruise and should include written examinations and personal interviews with officers and key enlisted personnel to determine their readiness and status of training as outlined for Phase I. A comparison of personnel allowance (including Navy Enlisted Classification requirements) versus onboard count must be made to ensure that the ship is adequately manned.

p. Conduct Phase II crew certification. Witness and certify to the TYCOM that the state of crew training is satisfactory for at-sea operations following the TYCOM Training Manual. This will be done during a two-day period, subsequent to Dock Trials and Phase II crew certification, and prior to Fast Cruise. This two-day period must be scheduled so that there is normally a 48-hour period between the end of this event and the beginning of Fast Cruise. This two-day Phase II crew certification period is divided into a 40-hour crew work-up and rest period and an eight-hour modified dockside Operational Readiness Inspection. The entire period should be scheduled to minimize interference with industrial activity work. However, since the certification must be conducted carefully to be meaningful, the officer scheduling the certification should coordinate industrial activity interference during the eight-hour modified Operational Readiness Inspection. This certification should be thorough and meticulous. Pressure from the industrial activity or any other source to compromise ship safety must not be permitted to influence the judgment of the certifying officers. The desired overall sequence of these events is shown in Appendix B of this chapter.

q. Conduct a material inspection of the ship.

r. Satisfactory completion of the inspections of paragraphs 2.5.1.n. through 2.5.1.p. of this chapter should be reported to the TYCOM in one "PRIORITY" crew certification message following the sample message format of Appendix B of this chapter paralleled by a telephone call to the TYCOM Watch Officer reporting the date-time group of the message. If significant deficiencies exist or it appears that an extension of time is required to correct training or material deficiencies, the TYCOM must be immediately advised by telephone and by message. The Supervising Authority will be included as an information addressee.

s. A summary of typical New Construction major milestones and message reporting requirements as they apply to the ISIC is listed in Volume I, Chapter 1, Appendix A of this manual.

2.5.2 Post-Shakedown Availability. During PSA, the ISIC is responsible for the following:

a. Conducting periodic monitoring similar to that described in paragraph 2.5.1.c of this chapter, placing the emphasis on the management and conduct of PSA.

b. (Nuclear Powered Ships only) Conducting a Pre-Critical Inspection of the Engineering or Reactor Department per volume I, chapter 6, paragraph 6.3 of this manual. Review inspection findings, the CO's training plan and progress evaluations, and direct follow-up reviews or inspections as necessary to verify ship's readiness for criticality.

c. Witnessing and certifying to the TYCOM that the state of crew training is satisfactory for at-sea operations per the Force Training Manual.

d. (Aircraft Carriers only) Receiving from the CO or Supervising Authority the scope, schedule and agenda of the tests for Sea Trials for review and approval. When approved, forward copies of the agenda to the TYCOM.

e. Arranging for the embarkation of technical personnel who may be assigned by the Navy Shipbuilding Program Manager to observe tests or trials.

f. Arranging for the assignment of operating areas and communications frequencies.

g. (Submarines only) Scheduling a distressed submarine and salvage inspection in time to have discrepancies corrected prior to Fast Cruise.

h. (Submarines only) Prior to Fast Cruise, auditing Ship's Force Re-entry Control and Departure from Specification Records. Using the Submarine Maintenance Engineering, Planning and Procurement (SUBMEPP) Activity URO Maintenance Requirement Card (MRC) scheduling reports and current Industrial Activity and Ship's Force updates to the latest report, ensure URO MRC accomplishment is current.

i. (Submarines only) Conducting a material inspection consisting of a vertical audit of Ship's Force and Fleet Maintenance Activity Submarine Safety (SUBSAFE), Deep Submergence Systems Scope of Certification and FBW work and URO completion status per Volume V, Part I, Chapter 9 of this manual.

j. (Submarines only) Additional ISIC responsibilities are defined in volume II, part IIII, chapter 2 of this manual.

k. If deficiencies exist or it appears that extension of time is required to correct training or material deficiencies, the TYCOM must be immediately advised by telephone and message. The Supervising Authority will be included as an information addressee. The TYCOM retains the prerogative to authorize corrective action by the Industrial Activity in the case of material deficiencies.

l. When authorized by the TYCOM, direct the ship to get underway for Sea Trials.

2.6 BUILDING YARD. The building yard is an industrial activity responsible for construction of the ship, correction of shipbuilder responsible deficiencies and additional logistic support products as delineated in the contract. The following is a sample listing of the shipbuilder's products and responsibilities.

a. Technical Manuals for Contractor Furnished Equipment.

b. Ship Information Book or Ship Systems Manual.

c. PMS for new systems when tasked by Navy Shipbuilding Program Managers or cognizant NAVSEA code.

d. Selected Familiarization Training.

e. Ship Drawings.

f. Advising the Accepting Authority and the TYCOM of the date of initial criticality.

g. Builder's Trials (non-nuclear) to include:

(1) Taking the ship to sea.

(2) The testing of all equipment and systems with the exception of weapons.

2.7 DESIGN YARD or PLANNING YARD. The Design Yard or Planning Yard, which may also be the Building Yard, is an industrial activity responsible for maintaining the Ship's Drawing Index current with configuration. The Planning Yard is responsible for updating ship's drawings to reflect PSA changes.

2.8 COMMANDING OFFICER, PROSPECTIVE COMMANDING OFFICER, or OFFICER IN CHARGE.

2.8.1 General.

a. The responsibilities of a PCO for a new construction ship are set forth in U.S. Navy Regulations. In the case of a nuclear-powered ship under construction, the PCO has additional responsibilities associated with the operation of the nuclear propulsion plant as specified in references (a) and (b). In order to provide the PCO with authority commensurate with this responsibility, the PCO will be designated in their orders as CO of the PCU, a separate and detached command, with responsibilities as specified in references (a) and (b) and U.S. Navy Regulations.

b. Following completion of the required training and material readiness certification, the CO, PCO or OIC must keep the ISIC fully informed of any changes in personnel, training or material status which could affect the validity of certification. Prompt notification is required to permit revision of Operational Orders and services required.

2.8.2 Pre-Commissioning. Specific responsibilities of the PCO during the primary construction phase are as follows:

a. The preparation and execution of training plans, operational and emergency bills, procedures and organization manuals in support of their responsibilities.

b. The demonstration of their crew's operational and administrative readiness per the inspections required by chapter 3, paragraph 3.3.4 of this volume.

c. Verifying that all required Navy Enlisted Classification Codes or other skill requirements are met by Bureau of Personne or by the ship's training programs.

d. The presentation of the crew for the platform applicable inspections described within this volume.

e. The designation of a Miniature or Microminiature Repair or Module Test and Repair Manager.

f. The designation in writing of a Calibration Coordinator.

g. Ensuring that at least two NAVSEA or Naval Air Systems Command certified Field Calibration Activity or Aircraft Intermediate Maintenance Department technicians, as required, are available to support certification.

h. Verifying that all pertinent alongside tests, inspections and trials are completed.

i. The establishment of "Lessons Learned Files". These files are to be turned over to the incoming PCO of the next ship of the class to be built. DDG 51 Class Destroyers should pass their files to the PMS 400 tasked contractor. MHC Class ships can provide this data to the FIT while all others should pass Lessons Learned to the Supervising Authority if the next PCO has not yet arrived.

j. The establishment of PMS per reference (g) and chapter 3, paragraph 3.4.1 of this chapter.

k. Concurring with the Navy Shipbuilding Program Manager's request to the TYCOM for the conduct of a Habitability Inspection.

l. The designation of system or space experts to assist the ISIC with the Habitability Inspection.

m. The establishment of early liaison with the ATG team OIC to define training needs and the agenda for assist visits in preparation for LOA and Initial Light-Off.

n. Ensure Habitability and Livability requirements are being met for ship's force.

(1) Report habitability and livability concerns to the Supervising Authority.

(2) Ensure crew awareness of habitability and livability standards.

o. (Nuclear Powered Ships only) The development and execution of training plans and documents in support of their responsibilities for inspection and operation of the nuclear propulsion plant. These plans and documents must be in conformance with the instructions and procedures approved by NAVSEA.

p. (Nuclear Powered Ships only) The preparation of ship's engineering or reactor personnel for examination by the Nuclear Propulsion Directorate (NAVSEA 08).

q. (Nuclear Powered Ships only) Review the findings of the ISIC's Pre-RSE Inspection Team and make necessary adjustments to the ship's training program to ensure the crew's readiness for the RSE. Keep the ISIC advised of the ship's training plan and provide an assessment of the crew's progress.

r. (Nuclear Powered Ships only) Maintain the Reactor Plant per reference (k). Ensure records are ready for the ISIC's audit prior to Fast Cruise.

s. (Nuclear Powered Ships only) Review test and trial schedules and agendas and signify concurrence to the TYCOM and the designated ISIC. Copies of detailed schedules and agendas for underway trials will be forwarded to the designated ISIC, the escort ship (Submarines) and the TYCOM Embarked Representative.

t. (Nuclear Powered Ships only) Assume duty as the OIC and accept custody and responsibility for special nuclear material, after the ship is placed "In-Service". Report to the Fleet Commander In-Service status. Appendix A of this chapter provides a sample message.

u. (Nuclear Powered Ships only) The preparation of Ship's Force Dock Trial Agenda.

v. (Nuclear Powered Ships only) Per the specifications and information in this volume, the conduct of dockside and underway trials. Critical operation of the reactor will be conducted per reference (l).

w. (Nuclear Powered Ships only) When authorized by the Navy Shipbuilding Program Manager, conduct Fast Cruise per chapter 4, section 4.3 of this volume.

x. (Nuclear Powered Ships only) During Sea Trials, assume the duties of Officer in Tactical Command unless otherwise designated by the ISIC. For submarines, ISICs must comply with directions found in Annex C of reference (m).

y. (Nuclear Powered Ships only) Provision for adequate crew rest time during Sea Trials. Six uninterrupted hours in each twenty-four-hour period is a minimum for each crew member.

z. (Nuclear Powered Ships only) In the absence of a TYCOM and ISIC representative, act for the TYCOM in approving on-the-spot changes to approved Sea Trial Agendas.

aa. (Nuclear Powered Ships only) When all platform applicable requirements of this instruction are completed to the OIC's satisfaction and when permission has been received from the ISIC, proceed to sea following the operations order and carry out the approved Sea Trial Agenda.

ab. (Aircraft Carriers only) Prior to Fast Cruise, report to the TYCOM the successful completion of Crew Certification and recommend commencement of Fast Cruise and Builder's Trials via message. Appendix B_{SHIPS} of this chapter provides a sample message.

ac. (Submarines only) If possible, participate in two at sea periods prior to initial Sea Trials as follows:

(1) Accompany the preceding ship of the class on the first Sea Trial to learn how the propulsion trial is run (except first ship of class).

(2) Participate in an underway period of at least five days duration approximately six months prior to the final phase of Crew Certification. The purpose of this ride is to re-familiarize the PCO with those functions unique to being underway so as to ensure the safe conduct of their own initial Sea Trials and shakedown. This underway period also allows the PCO to validate their crew's training program. This underway period should be on a ship, preferably of the same class, which is concentrating on basic ship or submarine operations, such as Selected Refresher Training or Independent Ship Exercise (ISE), so the PCO can witness such evolutions as: coming to periscope depth, snorkeling, ventilating, casualty training, etc. If the new construction schedule has 10-12 weeks between Power Range testing and the final phase of Crew

Certification, the PCO should go to sea approximately two months before initial criticality. The intent is for the PCO to go to sea after having been in the Industrial Activity for a fair amount of time (normally one year or more), but with sufficient time remaining to improve their own training program if necessary. During these underway periods, the PCO should spend time on the bridge and also observe piloting and navigation.

NOTE: IF NOT POSSIBLE TO PARTICIPATE IN TWO AT-SEA PERIODS AS DESCRIBED ABOVE, THE ISIC AND TYCOM WILL COORDINATE REQUIRED TRAINING.

ad. (Submarines only) Request that the ISIC conduct a distressed submarine and salvage inspection following the policies set forth in Volume IV, Chapter 18 of this manual.

(1) Coordinate distressed submarine and salvage inspection support requirements as may be needed by the inspecting team to fulfill the requirements of Volume IV, Chapter 18, Appendix D of this manual.

(2) Ensure Volume IV, Chapter 18, Appendix D of this manual is completed and furnished to the Senior Inspecting Officer prior to the commencement of the distressed submarine and salvage inspection.

(3) Ensure all ship's data called out in Volume IV, Chapter 18, Appendix D of this manual is assembled and staged prior to the inspection for ease of reference by the inspecting team.

(4) Take corrective action on all discrepancies found during the distressed submarine and salvage inspection. Inform the ISIC of corrective action prior to commencement of Fast Cruise.

ae. (Submarines only) Ensure a copy of the salvage plan has been provided to the escort ship designated for Sea Trials. Coordinate communications and operational procedures with the escort ship to ensure the escort is fully informed of the submarine's condition and intentions.

af. (Submarines only) Concur with the Supervising Authority message that the material condition of the ship is satisfactory to commence Fast Cruise.

ag. (Submarines only) Upon successfully completing Fast Cruise and after having exercised their crew thoroughly and operated all machinery, equipment and systems to their satisfaction, concur in the Supervising Authority's message recommending commencement of Alpha Trials. Appendix B_{SUBS} of this chapter provides an example of this message.

ah. (Submarines only) Maintain Planned Maintenance Management Plan per reference (n). Ensure records are ready for the ISIC's audit conducted prior to Fast Cruise.

2.8.3 Trials and Inspections. PCO responsibilities are delineated in references (d) and (e).

2.8.4 Post-Shakedown Availability. Specific responsibilities of the PCO during PSA are as follows:

a. Determine, in conjunction with the Supervising Authority, the nature and extent of PSA Sea Trials. Prepare, in conjunction with the Supervising Authority, the Sea Trial Agenda, including the sequence and duration of each test. The Supervising Authority will submit it to the Navy Shipbuilding Program Manager and the ISIC or TYCOM representative for approval as described herein. Provide copies of the approved detailed schedule and agenda for underway trials to the local ISIC and, if appropriate, the escort ship and the TYCOM Embarked Representative. This schedule and agenda must include:

(1) The minimum requirements shown in chapter 6, section 6.4 of this volume (volume II, part IIII, chapter 2 for submarines) of this manual.

(2) A firm time scheduled for conducting all tests and trials showing their sequence and duration.

(3) General prerequisites for conducting each test. Detailed prerequisites should be itemized as part of individual test requirements.

(4) Responsibility for conducting each test (Industrial Activity or Ship's Force).

(5) Ship's Force support required for conducting each test.

(6) Provision for adequate crew rest time during Sea Trials. Six uninterrupted hours in each twenty-four-hour period is a minimum for each crew member.

(7) (Submarines only) Provision for a minimum of six hours of uninterrupted ISE for crew training following the initial tightness dive and prior to the deep dive.

(8) Underway tests may be run during ISE and rest periods on a not-to-interfere basis. Specifically, tests which can be conducted underway under normal operating conditions without manning special watch stations that require extra military personnel may be scheduled during rest periods. Tests which will not interfere with Ship's Force drills and training exercises may be conducted during ISE periods.

b. Prepare Dock Trial Agenda.

c. Conduct one-day Ship's Force Dock Trials per volume II, part I chapter 2 for aircraft carriers, volume II, part II chapter 2 for surface force ships, or volume II, part III, chapter 2 for submarines.

d. Demonstrate the crew's state of training.

e. Ensure that all pertinent alongside tests, inspections, and trials are conducted.

f. (Nuclear Powered Ships only) Supervise operation of the nuclear propulsion plant. Conduct critical operations as set forth in reference (l).

g. (Nuclear Powered Ships only) When authorized by the TYCOM, conduct Fast Cruise per volume II, part I, chapter 2 for aircraft carriers or volume II, part III, chapter 2 for submarines.

h. (Nuclear Powered Ships only) Review the findings of the Pre-Critical Inspection (if performed) and adjust the training plan to ensure the crew's readiness for criticality.

Advise the ISIC of training plan adjustments and provide an assessment of the crew's progress.

i. (Nuclear Powered Ships only) Maintain Reactor Plant Maintenance per reference (k). Ensure records are ready for an ISIC audit conducted prior to Fast Cruise.

j. (Submarines only) Undergo a distressed submarine and salvage inspection per volume IV, chapter 18 of this manual.

k. (Submarines only) Maintain Planned Maintenance Management Plan per reference (n) and Scope of Certification, FBW Controlled Work Packages and SUBSAFE Re-entry Control per Volume V, Part I, Chapter 5 of this manual. Ensure records are ready for an ISIC audit prior to Fast Cruise.

l. (Submarines only) Additional PCO or CO responsibilities are defined in volume II, part IIII, chapter 2 of this manual.

2.9 PRE-COMMISSIONING UNIT. The PCO and crew will monitor the ship's construction, prepare ship's directives, regulations and administrative programs, and observe and demonstrate the operation of installed systems to ensure the ship is safe and habitable prior to commissioning. The shipyard period is an opportunity for the crew to familiarize themselves with the ship. The ship will be required to complete various certifications leading up to introduction into the fleet. This section provides some insight into the administrative requirements and personnel related issues associated with the initial man-up.

2.9.1 Initial Man-up. New construction ships are manned based on a Crew Scheduling and Phasing Plan. Dependent upon the platform type, crew manning is accomplished in two, three, four or as many as eight increments. The quantitative and qualitative requirements of these increments are based on the platform type, test and construction schedule. The objectives of the Crew Scheduling and Phasing Plan are to:

a. Ensure adequacy of schooling for personnel assigned.

b. Ensure appropriate course convening dates.

c. Ensure there are no conflicts or redundancies between Navy and contractor courses.

d. Ensure sufficient training for anticipated maintenance and operating skill requirements.

e. Ensure the optimization of training opportunities for personnel in the pipeline enroute to the ship. A senior crew member from the first increment must be assigned with the responsibility of tracking and reviewing manning issues. For some ships, the Navy Shipbuilding Program Manager has provided support contractors to assist either partially or entirely in the management of the Crew Scheduling and Phasing Plan. Regardless of the class or type of ship, the initial increment of personnel must quickly organize. If a detachment concept is used, Appendix O of this chapter provides a basic listing of requirements that the first increment of personnel should be pursuing. Appendix P of this chapter provides similar information for the non-detachment approach.

2.9.2 Training

2.9.2.1 Shipboard Training. The Industrial Activity presents a unique environment with special circumstances not routinely encountered by operating forces. The incremental assignment of personnel to PCUs and the pace of new construction demands a comprehensive training strategy. A well-established training program is the key to the ship being ready for introduction into the Fleet. Consistent with the objectives of a shipboard training program, the TYCOM training manuals and references (j), (o) and (p), a new construction training program will ensure that:

a. (Nuclear Powered Ships only) The qualification of all Engineering and Reactor Department personnel in strict accordance with reference (q). Included is the CO's responsibility to personally conduct an RSE of each key propulsion plant watch stander.

b. Personnel are trained in any special Quality Assurance procedures that may be used during the construction period.

c. Personnel assigned are knowledgeable of the platform, system and equipment installations and operation of installed equipment.

d. Watch stander qualifications support a watch section of fully or provisionally qualified personnel for all scheduled events.

e. Training designated for assigned personnel supports the platform and equipment configuration.

f. Intensified special training is provided to support:

(1) Cold Operations.

(2) Hot Operations.

(3) RSE.

(4) LOA.

(5) Criticality or Power Range Testing.

(6) Combat Systems Installation Certification.

(7) Crew Certification.

(8) Fast Cruise and Sea Trials.

(9) Piloting Party or Navigation Detail.

(10) Damage Control Team.

(11) Fire Fighting Team.

(12) Tactical Team.

(13) Special details.

g. All billets requiring specific Navy Enlisted Classifications are filled.

h. Established Naval Schools and Trainers are used to the maximum extent possible.

i. Factory training on systems and equipment for which Naval Schools are not established is provided.

j. Special training following TYCOM directives is provided for provisional certification to load, handle, stow and maintain a weapons load-out specific to the class of ship.

k. Weapons or Combat Systems training is sufficient to enable the Weapons or Combat Systems Department to operate its systems while complying with existing safety rules, technical directives and governing operating procedures issued by the CNO, the Defense Nuclear Agency, NAVSEA, Naval Information Warfare Systems Command, the TYCOM or other commands as applicable.

l. Industrial Activity or contractor familiarization training courses are monitored for content and value. Provide supplemental instruction where necessary and inform the Supervising Authority and Navy Shipbuilding Program Manager of significant problems or shortfalls.

m. The enlisted training program is started as soon as the Leading Petty Officers for the major divisions arrive. The Officers and senior enlisted personnel will develop the content and scope of the training programs for implementation with the arrival of the first large increment of enlisted personnel.

n. Aircraft Launch and Recovery Equipment Maintenance Program training must be conducted per reference (r).

2.9.2.2 Industrial Activity Training. The Industrial Activity or FIT will provide familiarization training following the shipbuilding contract on ship's characteristics and systems. This training generally is not sufficient for "System Expert" qualification, but will provide an excellent opportunity for School of the Boat or Ship, and at the same time provide an opportunity for Divisional Training Petty Officers to develop a more detailed and in-depth training program. In most cases, the Industrial Activity will allow the ship to control the scheduling of topics.

2.9.2.3 Training Support Center. Surface ships utilizing the Pre-Commissioning Detachment Concept at a Training Support Center (TSC), either in Norfolk, VA or San Diego, CA, are provided with an outstanding opportunity to ensure pipeline training is obtained. This concept also provides for easy access to many of the basic courses such as firefighting, damage control, Repair Parts Petty Officer training, Drug and Alcohol Program Advisors, Component Change Control, etc., which are needed to ensure assigned personnel can effectively function as a ship's crew upon delivery. For ships not utilizing the TSC Detachment Concept, such as submarines, an individual should be assigned to monitor and track training and manning issues as they develop.

2.9.3 Ship's Qualification Program. The implementation and operation of the Ship's Qualification or Personnel Qualification Standard (PQS) should ensure a logical process for training Ship's Force for watch standing and ship's qualification. TYCOM instructions that cover Ship's Qualification or PQS requirements are found in references (j), (o) and (p). The department organization manual should establish prerequisites for watch stander qualification. Qualification goals should be established and the program should support completion of goals within each division. Fleet wide training and qualification goals are:

a. Underway Watchbills; 3 Section Enlisted, 4 Section Officer or Chief Petty Officer.

b. Inport Watchbills; 4 Section Enlisted, 5 Section Officer or Chief Petty Officer (6 Section for all personnel on Aircraft Carriers).

2.9.4 Deficiency Identification and Correction. The establishment of procedures by which Ship's Force reports and tracks the correction of deficiencies cannot be overstressed. The Supervising Authority relies heavily upon PCU involvement to augment their efforts. Inspections of systems, equipment and spaces by PCU personnel are extremely important in the identification of unsatisfactory work and material deficiencies. Each shipbuilder and associated Supervising Authority have their own established system for tracking shipbuilder responsible deficiencies. Those deficiencies which are not corrected during the construction cycle will be submitted to the Board of Inspection and Survey just prior to FCT, AT or CT (the type of trial dependent on platform). These deficiencies, depending on their seriousness, may impact a ship's delivery to the Navy. Deficiencies cited must either be resolved, corrected or waived by the Navy Shipbuilding Program Manager.

2.9.5 Establishment of Engineering and Reactor Department. This paragraph addresses the Engineering or Reactor Department establishment and tasks which are to be accomplished during the pre-commissioning phase of new construction. The tasks defined in this section incorporate experience gained and lessons learned from previously completed ships. The objective is to provide guidance which will assist in the ship's readiness, from an Engineering or Reactor Department standpoint, to successfully complete contract milestones and to prepare for fleet introduction.

2.9.5.1 Requirements. The PCU should monitor and report on the ship's construction progress to the PCO, and dependent upon platform, conduct, witness and participate in the ship's dockside and at-sea testing, attend periodic documentation reviews, assessments, and validations, and provide recommendations regarding manpower, training, watch standing and related shipboard engineering requirements. Tasks and responsibilities include items discussed in the following paragraphs.

2.9.5.2 Shipboard Inspections. Shipboard inspections by the ship's Engineering, Reactor Department and cognizant Supervising Authority personnel are necessary during the ship construction phase. There is no precise pattern or timetable for these inspections, but they should be thorough and conducted frequently. Ship's Force personnel need to become familiar with the contract specifications and system drawings. This will ensure the prompt identification, and documenting, of discrepancies discovered when comparing "as built" conditions to the actual specification.

2.9.5.3 Personnel Qualification Standards. Theoretical portions of PQS should be implemented during the training pipeline at the specific Training Centers and at the TSCs using available technical manuals and training material. Ship-wide PQS should be implemented prior to the arrival of the final crew increment at the shipbuilder's yard. The ship's Engineer Officer should establish interim watch qualifications to set the training goals for Engineering and Reactor Department personnel as they arrive at the Industrial Activity. Additionally, PQS sign-off authority should be specified in writing by the ship's Engineer Officer, in order to ensure that the provisional qualifications and sign-off procedures function smoothly.

2.9.5.4 Outfitting Support (as applicable). The PCU must ensure that engineering spaces are completely outfitted. Routine progress inspections must be made in this area, and the PCU will participate in completing Compartment Completion Inspection Reports. It is important that personnel involved with Compartment Completion Inspection Reports are fully aware of all

implemented Engineering Change Proposals and Engineering Change Notices to ascertain that outfitting materials and Operating Space Items support the ship as revised by Engineering Change Proposals and Engineering Change Notices. Configuration Change Requests must be drafted with full recognition of the guidance contained in both the General Specifications for Building Naval Vessels and the specific Class Building Specifications.

2.9.5.5 Operational Sequencing System (Surface Force Ships and Aircraft Carriers only). The Operational Sequencing Systems (OSS) (Engineering Operational Sequencing System, Sewage Disposal Operational Sequencing System, etc.) establish the operational procedures for various shipboard equipment, including applicable Casualty Control procedures. Validation of Engineering Department OSS manuals is the responsibility of the ship's Engineering Department personnel, with assistance provided by the Navy Shipbuilding Program Manager and contractor support personnel (if available). This validation will ensure that procedural requirements are current, well-defined and correct. OSS validation is a Key Event that must be accomplished by the PCU prior to arrival of the final crew increment. EOSS installation (under the cognizance of Naval Surface Warfare Center Philadelphia Division involves the following sequence of events, which may be modified for other OSS installations:

a. Develop the preliminary EOSS package.

b. Submit the preliminary EOSS to the PCU, the Supervising Authority and the Navy Shipbuilding Program Manager.

c. The PCU, the Supervising Authority and the Navy Shipbuilding Program Manager review the preliminary EOSS.

d. Conduct cold plant check to validate equipment for correct system operation.

e. Revise EOSS to pre-hot check package and submit EOSS to the PCU, the Supervising Authority and the Navy Shipbuilding Program Manager.

f. Conduct pre-hot check.

g. Conduct hot system ship check.

h. Submit final EOSS to the PCU, the Supervising Authority and the Navy Shipbuilding Program Manager for review and comment.

i. Deliver electronic copy of EOSS to Navy Shipbuilding Program Manager.

j. Print, laminate, assemble EOSS.

k. Install final EOSS.

2.9.5.6 Engineering and Reactor Department Organization and Regulations Manual. The Engineering Department Organization Regulations Manual (EDORM) or the Reactor Department Organization and Regulations Manual (RDORM) is the responsibility of the ship's Engineer or Reactor Officer, however, basic EDORM or RDORMs have been established as guidelines. Reference (s) provides EDORM development guidance for Surface Forces, reference (t) provides guidance for submarines, and reference (q) provides EDORM or RDORM development guidance for aircraft carriers.

2.10 SUPPORT ACTIVITIES.

2.10.1 Technical Support. The Regional Maintenance Centers (RMC) have numerous functions and responsibilities, some of which will further be discussed in volume I, chapter 3 of this manual, but for the purpose of this section only those functions and responsibilities related to new construction will be discussed. Naval Sea Logistics Center (Detachment Norfolk or Detachment San Diego).

a. TYCOMs are responsible for ensuring the proper installation and operation of PMS within the ships under their command. The importance of the PMS installation cannot be overemphasized.

b. Prior to the PMS installation, equipment configuration information will be verified by the Configuration Data Manager. The PMS Maintenance Index Page or MRC documentation will be certified by the Naval Sea Logistics Center Detachment Norfolk or Detachment San Diego (NAVSEALOGCEN Detachment Norfolk or NAVSEALOGCEN Detachment San Diego), as appropriate. Following the validation, the applicable NAVSEALOGCEN Detachment Norfolk or NAVSEALOGCEN Detachment San Diego will assemble the PMS documentation, equipment listings, schedules and forms required for the installation package. Each PMS installation package is ship tailored.

c. NAVSEALOGCEN Detachment Norfolk or NAVSEALOGCEN Detachment San Diego has the responsibility for installing PMS aboard ship. The installation of PMS is done in two phases: preliminary and final.

d. Supporting information can be found in reference (g).

2.10.2 Submarine Maintenance Engineering, Planning and Procurement Activity. The SUBMEPP Activity is located in Portsmouth, NH. SUBMEPP functions are related to submarines and selected submarine support activities. As was the case with the RMCs, SUBMEPP's functions are numerous and deal with a submarine's maintenance at all levels of accomplishment (Organizational, Intermediate, Depot) from construction to inactivation. For the purpose of this section SUBMEPP's responsibilities and functions include:

a. Tracking the configuration of ships under construction.

b. Assisting local RMC with the PMS installation on all new construction submarines.

c. Assisting the Supervisor of Shipbuilding, Groton with the resolution of INSURV deficiencies concerning PMS related issues.

d. Providing Ship's Force with a Master Equipment Guide List (EGL) for all non-nuclear and non-missile related equipment (component to MRC).

e. Providing Ship's Force with their URO and Maintenance Standard documentation at PMS installation.

f. Providing Maintenance and Material Management Coordinator Training at SUBMEPP concerning *Virginia* and *Seawolf* Maintenance philosophy.

g. Processing all shipbuilder developed Submarine PMS to the In-Service Engineering Activity for review and approval.

2.10.3 Carrier Planning Activity, PMS312C (Aircraft Carriers only). The Carrier Planning Activity (CPA) provides centralized Aircraft Carrier life-cycle management, maintenance and modernization planning, closely aligned to Fleet and Program Executive Officer Aircraft Carriers needs and priorities. Operationally, CPA reports to the Navy Shipbuilding Program Manager, In-Service Aircraft Carriers (PMS 312). Per NAVSEAINST 5400.130, CPA responsibilities are as follows:

a. Development, maintenance and monitoring of the Carrier Incremental Maintenance Plan (IMP), including tracking the backlog of IMP and modernization work.

b. Developing Carrier Baseline Availability Work Packages (BAWP) including integration of the IMP sequencing plan and the Modernization Plan for presentation to the TYCOMs.

c. Capturing and analyzing maintenance data history for use in updating the IMP Sequencing Plan and supporting the TYCOMs in assessing the value of ongoing material assessments.

d. Supporting the TYCOMs and Executing Activities in the development of continuous maintenance requirements including life cycle input from the IMP to the continuous maintenance process.

2.10.4 Surface Maintenance Engineering Planning Program (Surface Force only). Surface Maintenance Engineering Planning Program (SURFMEPP) must provide centralized surface ship lifecycle maintenance engineering, class maintenance planning and management closely aligned to the Surface TYCOM and NAVSEA needs and priorities per reference (u). For the purpose of this section, SURFMEPP's responsibilities and functions include:

a. Serve as the authorized engineering agent for Surface Ship Lifecycle maintenance engineering, planning and management.

b. Act as the surface ship Class Maintenance Program development and management activity.

c. Capture and analyze maintenance data history, to include cost, for use in updating the Class Maintenance Plan.

d. Review the material assessments in order to modify the technical content of the Class Maintenance Plan.

e. Develop and issue BAWPs for CNO availabilities after PSA.

f. Develop and issue a Mandatory Material List Letter prior to 50% Package Lock.

2.10.5 Naval Information Warfare Centers.

a. Naval Information Warfare Center (NIWC) Atlantic designs, develops, implements and provides life cycle support for standard fleet non-tactical automated information systems, afloat and ashore. NIWC Atlantic is the software development and support activity for applications automated under the Naval Tactical Command Support System and remaining legacy systems. The Naval Tactical Command Support System automates supply, inventory, ship, submarine, aviation maintenance and configuration management; food services, retail operations, personnel administration and watch,

quarter, and station bills, for fleet and fleet-like activities. In all, NIWC Atlantic's customers number over 1200 separate activities, many of which operate with multiple functional systems.

b. NIWC Atlantic Tidewater facilities, located on Naval Station Norfolk, VA, manage all software development. Naval Station Norfolk is also home to NIWC Atlantic's In-Service Engineering Activity for hardware and software support, along with Atlantic Fleet implementations. NIWC Pacific San Diego, CA is responsible for Pacific Fleet implementations and support. NIWC Pacific maintains a detachment in Yokosuka, Japan to provide on-site assistance for commands and units deployed to their Area of Responsibility.

2.10.6 Fleet Introduction Team (Surface Forces Ships only). Per reference (v), Commander Naval Surface Force Atlantic assumes the responsibility of instituting and managing a fleet introduction program for Commander Naval Surface Force Atlantic ships. FITs provide support to pre-commissioning crews by monitoring the progress of construction, coordinating training, providing continuity in the management and administration of facilities at the building site and providing administrative support. The Navy Shipbuilding Program Manager provides this support in the form of support contractors. The specific responsibilities of individual FITs will vary dependent upon the platform and the requirements peculiar to that platform. Appendix Q of this chapter provides a generic base line of services available if a FIT is established.

2.10.7 Afloat Training Group (Surface Force only). The ATG is chartered by reference (s) to assist ships in tailoring a training program for the conduct of pre-light-off cold checks and evaluations, program management and firefighting. This assistance is rendered through formal visits, scheduled at the request of the ship's ISIC via the quarterly scheduling process. ATG teams will conduct tailored training, defined in consonance with the CO, the ISIC and the team OIC which best meets the needs of the ship.

2.10.8 Surface Nuclear Propulsion Mobile Training Team (Aircraft Carriers only). The Surface Nuclear Propulsion Mobile Training Team will conduct training and assessment of Reactor Departments for ships undergoing extended availabilities and for PCUs. These assessments must include Reactor Department administration, qualifications, operations, cleanliness, preservation, material condition, radiological controls, chemistry controls and damage control. The Maintenance Training Group will conduct pre-availability training with Reactor Department personnel, conduct in-process quality assurance assessments and training visits, and train the crew in life cycle management.

2.10.9 Fitting Out Supply Assistance Team (surface ships only).

a. Fitting Out Supply Assistance Team (FOSAT), a function under Naval Supply Weapons Systems Support-Mechanicsburg, will assist Prospective Supply Officers (PSO) in attaining maximum administrative and material readiness of the Supply Department prior to delivery of a ship to the Navy. The team is involved in monitoring the provisioning process, material availability, inventory validity, Supply Department administrative readiness and establishment of Supply Department spaces. Additionally, the team provides pre-commissioning training and assistance in all areas of Supply Department organization. The primary focus of the FOSAT team is to provide assistance and evaluation. Assistance is rendered to the PSO through training

and as a result of each of the PSO's divisions communicating their areas requiring assistance. Evaluation is accomplished by reviewing each division's operating procedures. Evaluation is also accomplished through regular communication to ascertain each division's progress based upon the most current Supply Management Certification checklist. In addition, assistance and evaluation are accomplished by performing visits to the PCUs.

b. Services provided by FOSAT includes:

(1) Storeroom Bin Validation.

(2) Review of General Use Consumable List.

(3) RSUPPLY Implementation and Validation.

(4) Culinary Specialist Assistance.

(5) Ship's Serviceman Assistance.

(6) Disbursing Assistance.

(7) Postal Assistance.

(8) Critical Path Visits.

2.11 NAVAL SEA SYSTEMS COMMAND. (Submarines Only) Reference (c) describes NAVSEA's responsibilities during new construction for Submarine FBW SCS. NAVSEA's responsibilities for the Pre-Commissioning period are as follows:

a. Supervising Authority sends message to NAVSEA in advance of the scheduled start of Fast Cruise stating the status of all incomplete NAVSEA FBW SCS Certification Audit Category IA recommendations, that all FBW SCS work necessary for sea trials, including resolution of all NAVSEA FBW SCS Certification Audit Category I recommendations, has been completed and that the FBW SCS is ready for commencement of Fast Cruise. The message must also state that there are no conditional FBW SCS Deviations or Waivers which have not been satisfied or cite those that exist, identify any operating restrictions of the ship or system, and that, subject to satisfactory completion of Fast Cruise and resolution of mandatory deficiencies, the FBW SCS is satisfactory for commencement of Alpha Sea Trials. Appendix R of this chapter provides a sample message.

b. NAVSEA Navy Shipbuilding Program Manager message to TYCOM certifying that the submarine FBW SCS is satisfactory for sea trials per the approved Sea Trial Agenda. The message must also state that there are no conditional FBW SCS Deviations or Waivers which have not been satisfied or cite those that exist, identify any operating restrictions of the ship or system, and that, subject to satisfactory completion of Fast Cruise and resolution of mandatory deficiencies, the FBW SCS is satisfactory for commencement of Alpha Sea Trials. Appendix S of this chapter provides a sample message.

c. NAVSEA Navy Shipbuilding Program Manager must provide a report documenting the resolution of sea trial deficiencies to NAVSEA 07TC for review in support of

NAVSEA 07 concurrence on final system certification. Appendix T of this chapter provides a sample message.

2.12 INTEGRATION OF CLASS MAINTENANCE PLAN AND BASELINE AVAILABILITY WORK PACKAGE. (Surface Force Ships Only)

a. SURFMEPP has lead responsibility for BAWP development for new construction ships entering the Fleet Readiness Plan cycle.

b. Initial BAWP generation for new construction ships is dependent on PSA completion and Class Maintenance Plan development. Once the BAWP is issued, see volume II, part II, chapter 3, Appendix A Continental United States of Hawaii availabilities or volume III, chapter 4, Appendices B and G for Forward Deployed Naval Forces availabilities of this manual for the remaining BAWP to Availability Work Package (AWP) process.

2.12.1 Life Cycle Planning Conference. SURFMEPP will coordinate the date, location and agenda for the Life Cycle Planning Conference (LCPC). SURFMEPP will be responsible for planning and conducting the conference, attendees should include: TYCOM, RMC Assessment Directors, Program Manager Representatives, representatives from NAVSEA 05, NAVSEA 21 Modernization, Planning Activity and the ship's MT.

2.12.2 BAWP Pre-Pushed to Maintenance Team. SURFMEPP will send a list of the Fleet Readiness Plan Maintenance Cycle Class Maintenance Plan requirements to the ship's Port Engineer for review. This list is a preview of the initial BAWP and will be discussed in detail at the LCPC. Upon request, SURFMEPP will provide a list of Class Maintenance Plan required assessments to TYCOM, Navy Regional Maintenance Center and RMC.

2.12.3 BAWP Upload.

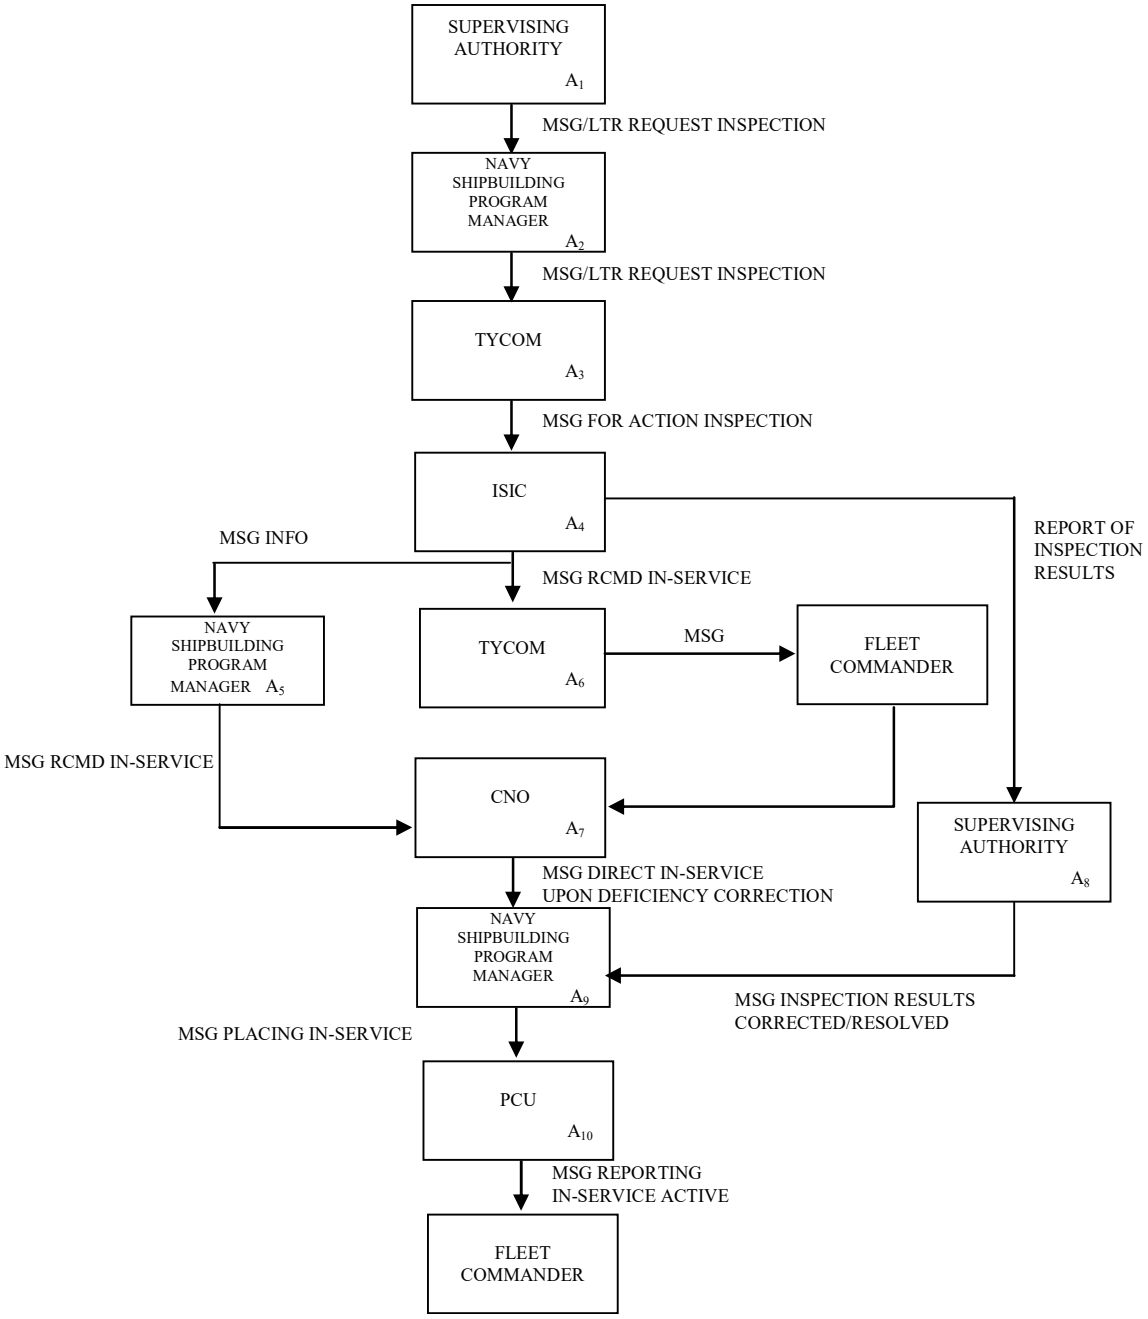
a. SURFMEPP will upload a data file (MM0001 file) with all mandatory requirements and expected CNO Availability services into the appropriate IT system in support of ship-specific MT screening and brokering requirements.

b. SURFMEPP will issue formal correspondence detailing the planning schedule and outstanding action items from the LCPC.

2.12.4 Other BAWP to AWP Process Milestones. All other BAWP to AWP process milestones are germane (refer to volume III of this manual) for in-service non-Forward Deployed Naval Forces ships.

APPENDIX A

MESSAGE SCENARIO AND SAMPLE MESSAGES OR LETTERS FOR HABITABILITY INSPECTIONS AND IN-SERVICE



APPENDIX A_1

SAMPLE SUPERVISING AUTHORITY LETTER TO NAVY SHIPBUILDING PROGRAM MANAGER RECOMMENDING HABITABILITY INSPECTION AND IN-SERVICE

From: Supervisor of Shipbuilding, Conversion and Repair, USN, (Applicable Supervising Authority)

To: Commander, Naval Sea Systems Command (Attn: Navy Shipbuilding Program Manager)

Subj: PLACING (SHIP NAME) (HULL NUMBER) IN-SERVICE

Ref: (a) OPNAVINST 9080.3
(b) OPNAVINST 4700.8

1. Per references (a) and (b), recommend Habitability Inspection of (Ship Name) (Hull Number) commence on (Date) with active status of In-Service on or about (Date).

APPENDIX N

PRE MAN-UP CHECKLIST FOR TYCOM OR ISIC

The TYCOM or ISIC is responsible for:

1. Contacting the Supervising Authority and establishing the date of initial man-up.
2. Coordinating with the Supervising Authority to ensure that crew facilities will be available on man-up.
3. Coordinating with the Supervising Authority and BUPERS on manning issues involving slippage or delays in schedule.
4. Upon man-up, coordinating with the PCO the dates for arrival inspection and monitoring watches.
5. Providing the ship with the necessary Fleet and TYCOM directives, instructions, notices, training memorandums, etc.
6. Reporting personnel arriving early onboard.
7. Ensuring personnel arriving early get pay accounts established and entitlements started.
8. Ensuring personnel arriving early have been screened for New Construction and meet all the requirements. Personnel not meeting the New Construction requirements should be brought into compliance, if possible, or made available for further assignment per the Enlisted Transfer Manual.
9. Ensuring the reporting personnel satisfy the requirements as outlined in the manning directive (i.e., Crew Scheduling and Phasing plans, Manning Letter, Enlisted Distribution and Verification Report, etc.). Areas that are deficient should be identified to BUPERS to correct deficiencies. In the case of submarines, submit a Personnel Deficiency Report.
10. For submarines, ensuring personnel are medically screened for submarine duty.
11. If the Detachment Concept is used, establishing a Point of Contact with TSC and obtain phone numbers for PCU office spaces.
12. Inspecting the PCU's office spaces prior to the arrival of the initial manning detachment. Immediately upon the PCU's arrival, coordinating with the PCO to arrange for the certification of office spaces to receive classified material.
13. Providing the requirements for storage of classified material in office spaces.
14. Assisting the PCU in developing a management system for handling classified material.

APPENDIX O

BASIC REQUIREMENTS FOR INITIAL MAN-UP PERSONNEL OF THE PCU (DETACHMENT CONCEPT) (AIRCRAFT CARRIERS AND SURFACE FORCE SHIPS)

1. The following is a list of actions that should be undertaken by the Detachment within the first two months.

   a. Establish Fiscal Account with TSC Logistics.

   b. Provide accounting data for telephone service to Naval Station Public Works, Communications Department.

   c. Establish Temporary Plain Language Address with the communications facility.

   d. Obtain administrative supplies from SERVMART.

   e. Make Basic Enlisted Quarters arrangements with Naval Station Billeting.

   f. Establish Basic Enlisted Quarters Watch Bill.

   g. Acquire Government Vehicle from Public Works.

   h. Create Ship’s Pre-Commissioning Indoctrination Manual.

   i. Designate Drug and Alcohol Program Advisors and obtain school quota from TSC.

   j. Designate Urinalysis Coordinator and establish program.

   k. Designate Key Sub-Custodian.

   l. Designate two Electrical Safety Petty Officers.

   m. Designate Ombudsman.

   n. Create or Start Pre-Commissioning Training schedule (Formal, School of the Ship, Afloat).

   o. Establish program for monitoring security clearance requirements.

   p. Write authorization letters for "By Direction," mail and paycheck pickup authority.

   q. Acquire software programs from the ship’s allowance for use on computers.

   r. Set up office spaces and obtain the necessary instructions and publications necessary to function as an Administrative Office.

   s. Establish a Personnel Office to assist and check-in newly reporting personnel.

   t. Arrange a meeting with the local Personnel Support Detachment to formulate a memorandum of agreement to include Service Record maintenance, Pay Account maintenance, assignment of disbursing support personnel from the ship, liquidation of travel claims, authorization for travel advances and other personnel related matters.

   u. Arrange for maintenance of Medical and Dental records based on local military medicine procedures. The TSC will provide details.

   v. Compile a Recall List.

w. Submit the Inaugural Diary to establish the manpower accounts and activate the Unit Identification Code in the Source Data System. This requires the reporting of one Enlisted and one Officer, using a gain Transaction Code with the use of a Diary Message Reporting System message. This should be done in advance of the initial manning date.

x. Coordinate with the TSC to establish the Security Certification of office spaces for retention of classified material.

y. Request of NAVSEA Non-Judicial Punishment (NJP) and Special Court Martial authority for the PCO. If the PCO is ordered in as OIC, NJP authority is limited.

z. Develop a planning schedule to incorporate Department Head training and the overall command planning schedule.

2. The following is a list of actions that must occur to support activity at the Construction Site.

a. Obtain office space for the Prospective Commanding Officer or Prospective Executive Officer, Command Master Chief, and other crew personnel.

b. Arrange for installation and access to telephone service. The Supervising Authority will provide details.

c. Obtain phone listing for key Industrial Activity and Supervising Authority personnel.

d. Obtain Master Construction Schedule from the Supervising Authority Project Officer.

e. Make arrangements for the crew to receive badges for access to the industrial area.

f. Make arrangements for the crew to receive all necessary safety equipment (hard hats, safety glasses, safety shoes, etc.).

g. Arrange for the crew at the Construction Site to receive safety briefings.

h. Arrange for crew briefings on necessary Radiological Control procedures.

i. Arrange for the Supervising Authority to take action to add the PCU to the Standard Navy Distribution List.

j. Obtain copies of Supervising Authority instructions related to new construction activities.

k. Obtain a System Testing Schedule and Turnover Schedule. The Supervising Authority will provide assistance.

l. Request authorization for the crew to draw Basic Allowance for Subsistence if government messing is not available at the Construction Site. The BUPERS Manual provides direction.

m. Coordinate with the ISIC the Security Certification of office spaces to be used for the retention of classified material.

APPENDIX P

BASIC REQUIREMENTS FOR INITIAL MAN-UP PERSONNEL OF THE PCU

The following is a list of actions that should be undertaken upon the arrival of the first members of a PCU:

1. Obtain office space for the Prospective Commanding Officer or Prospective Executive Officer, Command Master Chief, and other crew personnel.
2. Arrange for installation and access to telephone service. The Supervising Authority will provide details.
3. Obtain phone listing for key Industrial Activity and Supervising Authority personnel.
4. Obtain Master Construction Schedule from the Supervising Authority Project Officer.
5. Make arrangements for the crew to receive badges for access to the industrial area.
6. Make arrangements for the crew to receive all necessary safety equipment (hard hats, safety glasses, safety shoes, etc.).
7. Arrange for the crew at the Construction Site to receive safety briefings.
8. Arrange for crew briefings on necessary Radiological Control procedures.
9. Arrange for the Supervising Authority to take action to add the PCU to the Standard Navy Distribution List.
10. Obtain copies of Supervising Authority instructions related to new construction activities.
11. Obtain a System Testing Schedule and Turnover Schedule. The Supervising Authority will provide assistance.
12. Request authorization for the crew to draw Basic Allowance for Subsistence, if government messing is not available at the construction site. The BUPERS Manual provides direction.
13. Request of NAVSEA NJP and Special Court Martial authority for the PCO. If the PCO is ordered in as OIC, NJP authority is limited.
14. Develop a planning schedule to incorporate Department Head training and the overall command planning schedule.
15. Submit the Inaugural Diary to establish the manpower account and activate the Unit Identification Code in the Source Data System. This requires the reporting of one Enlisted and one Officer, using a gain Transaction Code with the use of a Diary Message Reporting System message. This should be done in advance of the initial manning date.
16. Set up office spaces and obtain the necessary instructions and publications necessary to function as an Administrative Office.
17. Establish a Personnel Office to assist and check-in newly reporting personnel.

18. Arrange a meeting with the local Personnel Support Detachment to formulate a memorandum of agreement to include Service Record maintenance, Pay Account maintenance, assignment of disbursing support personnel from the ship, liquidation of travel claims, authorization for travel advances and other personnel related matters.

19. Arrange for maintenance of Medical and Dental records based on local military medicine procedures. The TSC will provide details.

20. Compile a Recall List.

21. Coordinate with the ISIC the Security Certification of office spaces to be used for the retention of classified material.

22. Upon completion of the Security Certification coordinate with the Supervising Authority mailroom for delivery of the ship's mail.

APPENDIX Q

GENERIC BASE LINE OF FLEET INTRODUCTION TEAM FUNCTIONS AND RESPONSIBILITIES

1. Perform all tasks normally assigned to the PCO until the PCO has reported to the Construction Site and assumed duties.
2. Provide assistance to the PCO in carrying out duties according to Navy Regulations.
3. Provide continuity in the management and administration of pre-commissioning facilities at the Construction Site.
4. Coordinate the overall pre-commissioning crew training program for both nucleus and balance crews.
5. Schedule and conduct crew training at the Construction Site. Such training must be structured to support the Force Commander's standard for Crew Certification. Additional training provided will consist of:
   a. Basic Damage Control Training (100, 200 and 300 series).
   b. Ship Familiarization Training.
   c. Enlisted Surface Aviation Warfare Specialist Qualification and Requalification Training.
6. Provide each ship with standardized tailored Lesson Training Guides (where appropriate) in the areas of:
   a. Engineering.
   b. Mess Specialist.
   c. Supply.
   d. Communications.
   e. Operations.
   f. Weapons.
   g. Deck.
   h. Air.
7. Provide each PCO with standardized administrative, organizational and procedural manuals, bills, and directives for the ship class.
8. Monitor the progress of construction, outfitting, test and trials of each ship.
9. Perform the specific functions as assigned by the Force Commander or higher authority.
10. Provide familiarization training if directed.
11. Provide continuity between successive PCUs.

a. Maintain results of significant trials, inspections, assist visits, design and progress meetings, etc., in order to provide lessons learned and a corporate history to each successive pre-commissioning crew.

b. Detailed reports of government and contractor material and operational tests and inspections are maintained by the Supervising Authority.

c. Develop a Plan of Action and Milestones (POAM) for each ship to support the mission objectives to consist of actions and milestones to be accomplished by the FIT and the ship before sail-away.

d. Tailor the POAM to each specific ship based on the delivery date. The POAM will start approximately one year before delivery and end upon sail-away. (Start date will vary depending on FIT establishment and crew manning).

e. Maintain copies of the POAMs at the FIT, PCU and Pre-Commissioning Detachment.

f. Update and perform quarterly reviews of the POAM.

12. Maintain a Standard Products POAM.

a. Ensure that each ship receives their initial outfit of standard products such as directives, publications, forms, instructions, charts, etc. These products will be ordered by the FIT per the POAM, maintained at the FIT, and given to ship upon delivery.

b. In addition, locally developed standard administrative products such as the Standard Organization and Regulations Manual, Standard Operating Procedures, instructions, notices, etc., in support of the mission goals, will be tailored to each specific ship by the FIT with Ship's Force assistance.

13. Conduct Familiarization Training.

a. Training will consist of lectures and ship tours which cover:

(1) Ship Capabilities.

(2) Characteristics and Mission.

(3) Damage Control.

(4) Propulsion.

(5) Electrical.

(6) Auxiliaries.

(7) Deck.

(8) Communications.

(9) Navigation.

(10) Combat Systems.

b. Familiarization Training will be performed in a manner that will also encompass Enlisted Surface Aviation Warfare Specialist qualification and requalification training.

c. Provide each student a detailed and comprehensive Training Guide of each topic, for reference and study purposes.

14. Assist the ship in preparations for LOA to include:

a. Assist in preparations for the ISIC and ETG visits (Pre-industrial, Industrial and Pre-LOA) to include the areas of administration, material, level of knowledge and firefighting.

b. Provide plans (in the form of ships' notices) for the Pre-Industrial and Pre-LOA visits.

c. Assist in EOSS validation (cold and hot checks to include hand over hand verification of piping systems and components) performed by the Navy Shipbuilding Program Manager.

d. Provide a standard package of cold and hot checks (schedule and procedures) required to support material checks for LOA. Conduct training in the execution of cold and hot checks.

e. Provide standard engineering administration (EDORM, Standing Orders, Main Space Fire Doctrine, Restricted Maneuvering Doctrine, logs, management programs, etc.).

f. Provide a standard ship engineering training plan which will include Lesson Topic Guides, Lesson Topic Matrix, Evolution Training Matrix, Casualty Control Training Matrix, Watch Team Replacement Plan, Quadrant Training Plan, Month Training Plan and Watchstander Proficiency Logs. Conduct training on implementation and execution of the engineering training plan.

g. Conduct training (lectures, seminars, drills, etc.) to improve the level of knowledge and firefighting capability of the crew in support of LOA. Conduct Damage Control training to combat a Main Space Fire. Provide procedures, drill packages and training for the Engineering Casualty Control Training Team and Damage Control Training Team.

15. Assist the ship in preparations for Crew Certification to include:

a. Provide plans (in the form of ship's notices) for Crew Certification.

b. Provide procedures, drill packages and training (lectures, seminars, drills, etc.) for the Seamanship Training Team and Combat Systems Training Team.

16. Assist with the implementation of PMS to include:

a. Provide training to the ship's 3-M Coordinator concerning ship specific or unique PMS, Waterfront Maintenance Management System Net and SNAP.

b. Assist in Phase I and II PMS installation by local RMC.

17. Order forms and publications.

a. Order per the ship POAM and turn over to the crew upon delivery of the ship.

b. Include Initial Outfit List of publications and forms as well as Technical Manuals, SIBs, Naval Warfare Publications, Naval Telecommunication Procedures (NTP), charts, command-specific instructions and notices, etc.

18. Assist the ship in the load out of storerooms and operating spaces to include:
    a. Assist in developing load out plan.
    b. Assist in the coordination between ship, Supervising Authority, contractor and FOSSAC.
    c. Act as technical advisor to the Supply Officer in matters concerning load out.
    d. Provide training to Supply Department personnel in support of load out.
19. Maintain a reference library.
    a. A master reference library will be located in the FIT building and will include general and ship specific directives, forms, publications, instructions, notices, Technical Manuals, PQS, Naval Warfare Publications, NTPs, SIBs, charts, EOSS, PMS, message correspondence, etc.
    b. A satellite reference library will be located within the pre-commissioning building. This library will consist of immediate reference materials, Naval Ships' Technical Manuals, SIBs, Technical Manuals, instructions and notices.
    c. A basic set of unclassified reference material will be maintained at the PCU for the pre-commissioning crews. Classified reference material for the pre-commissioning crews will be maintained at the FIT facilities due to the lack of adequate security at the PCU.
    d. Liaison with the Supervising Authority to obtain technical documents such as contract specifications, drawings, test and inspection results, etc. when required.
    e. Provide access to various electronic bulletin boards throughout the Navy via computer-modem hookup.
20. Provide audio and visual support consisting of projectors (overhead, slide), screen, video cassette recorder (VHS, BETA), and marker boards.
21. Provide situational administrative support as required.
    a. Provide supplemental administrative support for events such as LOA, Crew Certification, Commissioning, etc.
    b. Support may include word processing as well as E-mail, laminating, fax and copier service.
22. Maintain communication guard for PCUs until delivery.
    a. Assist PCU Radiomen in processing (receiving and transmitting) standard naval messages up to and including Secret.
    b. Locate the GATEGUARD terminals in the classified material storeroom at the FIT.
23. Provide secure stowage for classified material.
    a. Store classified material for the FIT and PCU in General Services Administration approved safes located in the FIT's facilities.
    b. Restrict access to those personnel authorized by the OIC or PCO.

c. Maintain security through a combination of General Services Administration approved storage containers, controlled access (key and cipher locks) and intrusion detection systems.

24. Coordinate off-site training such as schools for pre-commissioning crew between the Ship, BUPERS and Navy Shipbuilding Program Manager.

THERE ARE NO FLY-BY-WIRE SHIP CONTROL SYSTEM DEVIATIONS AND WAIVERS WITH CONDITIONS NOR FLY-BY-WIRE SHIP CONTROL SYSTEM or RELATED SHIP OPERATING RESTRICTIONS/LIMITS WHICH HAVE NOT BEEN SATISFIED. <or identify operating restrictions/limits and list conditional Deviations and Waivers including Deviation Number, Short Title, and Expected Clearance Date/Key Event(1)>.
3. THIS CERTIFICATION IS VALID THROUGHOUT TRIALS UNLESS A DEFICIENCY HAS BEEN DISCOVERED. SHIP SPEED IS RESTRICTED TO LESS THAN 20 KNOTS WHEN A FBW SCS FAULT CONDITION RESULTS IN A MAJOR NON-CONFORMANCE AFFECTING CONTROL OF SHIPS PITCH, HEADING, DEPTH OR CONTROL SURFACES. THESE DEFICIENCIES MUST BE REPORTED TO NAVSEA AND THE

APPROPRIATE FLEET AND TYPE COMMANDERS. PREVIOUS NAVSEA CERTIFICATION OF THE FBW SCS MATERIAL CONDITION SHALL BE SUSPENDED UNTIL NAVSEA REVIEWS THE REPORT AND CERTIFIES TO THE TYCOM THAT THE FBW SCS MATERIAL CONDITION IS SATISFACTORY FOR SEA TRIALS IN ACCORDANCE WITH THE SEA TRIAL AGENDA APPROVED BY REFERENCE E. THE SHIP'S SPEED IS RESTRICTED TO LESS THAN 20 KNOTS UNTIL SATISFACTORY RESOLUTION OF THE MAJOR NON-CONFORMANCE AND TYCOM APPROVAL TO OPERATE THE FBW SCS TO PREVIOUSLY AUTHORIZED CONDITIONS IS GRANTED, UNLESS SPECIFICALLY ADDRESSED IN THE SEA TRIAL AGENDA.
4. REQUEST NAVSEA PMS< > BE INFO ADDEE ON ALL SEA TRIAL SITREPS.
5. RECOMMENDATION TO AUTHORIZE DIVING WILL BE ADDRESSED BY SEPCOR.
BT

(1) Subject to Navy Shipbuilding Program Manager approval, cumulative lists of conditional Deviations and Waivers which are deemed too lengthy for messages may be communicated in a letter format, with the letter referenced by the applicable message.

NOTE: ENSURE MESSAGES ARE PER CURRENT MESSAGE FORMAT AND CURRENT PLAD IS UTILIZED.

LISTING OF APPENDICES.

A Areas to be Evaluated During Arrival Assists
B Areas to be Evaluated During Monitoring Inspections
C Sample Pre-Reactor Safeguard Examination Notice
D In-Service Compartment Surveillance Guide (Aircraft Carriers and Submarines Only)
E Sample Pre-Commissioning Habitability Inspection Checklist for New Construction Ships

3.1 PURPOSE. This chapter addresses the major evolutions confronting the crew from initial man-up through Dock Trials, Fast Cruise and the commencement of Sea Trials.

3.2 SHIPBUILDER'S TEST PROGRAM. Throughout the building phase, the Shipbuilder is responsible for the testing and certification of installed equipment and systems. Reference (a) establishes the Test and Evaluation policy for all phases of a ship's life cycle. This guide contains information concerning the documentation and procedural requirements for a ship's Acquisition, Test and Evaluation Program. Reference (a), in conjunction with the Navy Shipbuilding Program Manager's prepared System Acquisition, Test and Evaluation Handbooks, provides familiarization and an understanding of the total Ship Test Program.

3.3 INSPECTIONS, CERTIFICATIONS AND ASSISTS. There are numerous inspections and certifications associated with new construction. Reference (b), which can be obtained from the Supervising Authority, identifies all the certification requirements which have been approved for accomplishment during surface ship industrial periods. The following paragraphs deal with generic inspections or platform unique certifications.

3.3.1 Arrival Assist.

a. Purpose. To determine that adequate plans have been developed and implemented to support the requirements of Ship's Force training, administration and testing during new construction and to evaluate the ship's ability to conduct various evolutions.

b. Conduct. The arrival assist visit may be conducted as a single visit or as a series of visits. Appendix A of this chapter provides sample areas to be reviewed during the arrival assist visit.

c. Scheduling. The arrival assist should be scheduled for accomplishment within a two-month period following the arrival of the first crew increment.

d. Reports. Formal reports are not required. However, the Immediate Superior in Command (ISIC) should inform the Type Commander (TYCOM) in the event that progress in preparations is evaluated as unsatisfactory.

3.3.2 Periodic Monitoring, Inspections and Visits.

a. Purpose.

(1) To provide ships in new construction with training and administrative assistance as required by references (c) and (d). The focus will be to improve Ship's Force involvement with the construction process, maintenance and training tasks. Visits of this nature are defined as Tech Assists.

(2) To evaluate the effectiveness of the ship's administration and training policies. Inspections of this nature are defined as "Work-ups" and normally require the addition of at least two officers to the inspection team.

(3) To conduct spot checks to monitor progress in specific material, administrative and training areas. Visits of this nature are defined as Monitoring Visits.

b. Conduct. The extent, type, and frequency of periodic monitoring inspections and visits should be determined by the ISIC. Submarine monitoring inspections may be combined with those required by reference (e). The initial inspection should be broad in scope in order to apprise the ISIC of the adequacy of the ship's performance and progress.

c. Scheduling. The initial inspection should be conducted within a 45-day time period after the arrival inspection. The initial visit will indicate the frequency and scope of subsequent Tech Assists and Monitoring Visits. Some inspections should be conducted on an unannounced basis. In general, any required work-ups should be scheduled in advance of Key Events. All inspections should be scheduled to minimize interference with industrial activity and Ship's Force work.

d. Reports. Formal reports are not required. However, the ISIC should advise the TYCOM of situations where the completion of Key Events is in jeopardy due to a lack of progress in any of the subject areas identified in Appendix B of this chapter.

e. Inspection Areas. Initial inspections normally examine the effectiveness of Ship's Force follow-up actions as a result of the arrival assist. Subsequent inspections and visits should review the areas designated in Appendix B of this chapter as appropriate.

3.3.3 Pre-Reactor Safeguard Examination (Nuclear Powered Ships only).

a. Purpose. To evaluate the readiness of the Engineering or Reactor Department to undergo a Reactor Safeguard Examination (RSE) by representatives of Naval Sea Systems Command Nuclear Propulsion Directorate (NAVSEA 08). Appendix C of this chapter provides a sample Pre-RSE Notice which should be tailored to fit your specific platform.

b. Conduct. The Pre-RSE performed by the ISIC with TYCOM assistance is not intended to duplicate the inspections for which readiness is being evaluated. It is prudent, however, to use an inspection plan similar to that employed by NAVSEA 08. Normally the crew's readiness can be assessed within two days using such a plan. The Supervising Authority will arrange for minimum industrial activity work interference during this inspection.

c. Scheduling. The ISIC must conduct a Pre-RSE within six weeks of intended criticality. The Pre-RSE will be scheduled such that the qualification program and material condition of the ship are sufficiently complete to allow for a thorough inspection, but early enough to allow time for the correction of identified deficiencies prior to criticality. The TYCOM should be advised approximately two months prior to the tentative date and confirmed dates should be established approximately one month prior to the inspection.

d. Composition of the Inspection Team. The Pre-RSE Inspection Team should consist of:

(1) A nuclear trained member of the ISIC Staff, usually the Deputy Commander for Readiness or Training.

(2) A qualified nuclear engineer with experience in the billet.

(3) A nuclear trained officer from the TYCOM Staff. Arrangements for the participation of TYCOM Staff members should be initiated by the ISIC at least one month prior to the anticipated inspection date.

(4) The Prospective Commanding Officer (PCO) of the next local ship in a new construction status.

(5) The TYCOM industrial activity representative.

e. Reports. The Senior Inspector should provide the ship with an informal report of the findings with a copy to the ISIC and TYCOM.

f. Inspection Areas. The Pre-RSE should, as a minimum, encompass the following:

(1) An administrative review.

(2) Observation of basic drills and evolutions not requiring reactor operation or special conditions.

(3) Personnel interviews and written tests.

(4) Material inspection.

3.3.4 Crew Certification. Crew certification is required for new construction ships. Depending upon the platform and TYCOM policy, crew certification will be accomplished in two, three or four phases.

a. Purpose. Initial phases determine the state of readiness and training of Ship's Force, particularly in the areas of watch stander qualifications, damage control readiness, status of operational and emergency bills, onboard supply of essential technical manuals and general operational knowledge. Later phases are structured to certify that the state of crew training is satisfactory for at-sea operations.

b. Scope. Certifications for submarines and surface ships will be conducted using the guidance of the applicable TYCOM training manual, references (f), (g), and (h). Reference (i) provides additional direction for aircraft carriers.

3.3.5 Sonar Certification (Applicable Surface Force Ships and Submarines). Sonar certification for Surface Force ships is accomplished per reference (b). Submarine sonar certification is accomplished per reference (h), during a designated Sea Trial just prior to the Combined Trial. Sonar certification is a prerequisite for Antisubmarine Warfare certification on surface ships and the Weapons and Tactical Readiness Evaluation on submarines.

3.3.6 Aviation Facility Certification (Air Capable Ships only). Reference (j) requires that all aviation facilities aboard naval ships which operate aircraft be formally inspected and certified adequate and safe for flight operations. It further directs, as implemented by references (k) and (l), that Commander, U.S. Pacific Fleet and Commander, U. S. Fleet Forces will establish responsibilities and procedures for mandatory certification of all ships with aviation facilities. Reference (j) also directs the Chief of Naval Operations (CNO) to establish responsibilities and procedures for mandatory certification of all ships' aviation facilities, provide for certification inspection teams and issue approved standards for certification. Naval Air Systems Command (NAVAIRSYSCOM) has overall responsibility for certification of aviation facilities and equipment in Naval ships. Aviation facility and equipment certification is a procedure which verifies and documents that the aviation facilities and equipment aboard ships are properly installed, operational, and adequate for the safe conduct of aircraft operations. Details for certifications can be found in reference (m), and in TYCOM specific instructions such as reference (n).

a. Management Structure.

(1) The Navy Shipbuilding Program Manager is responsible for budgeting for the certification of ships involved in construction and modernization programs.

(2) Naval Air Warfare Center (NAVAIRWARCEN) administers the aviation facilities and equipment certification programs and will establish test programs and procedures for each aviation facility and equipment component.

b. Certification Procedures.

(1) Requests. Submit requests for certification directly to NAVAIRWARCEN. The ship's TYCOM will be advised of all requests for equipment and facility certification. Individual ships desiring certification inspections should submit requests via their TYCOM to ensure optimum scheduling of the certification team. Automatic Carrier Landing System certification requests will be submitted per reference (o).

(2) Inspection and Testing. The ship's aviation facilities and equipment will be inspected and tested by a team coordinated by a NAVAIRWARCEN

representative. Upon completion, the NAVAIRWARCEN team coordinator will, (via message to NAWC, the TYCOM, and other appropriate commands) make a recommendation to either grant, rescind, or withhold certification. This recommendation is to be predicated upon all aviation facility systems or equipment being properly installed, configured, operational, and maintained as prescribed by applicable technical manuals or directives. The message will also specify the ship's current certification status, including deficiencies that preclude full certification for the operational capabilities specified by the CNO.

(3) Certification. NAVAIR or NAVAIRWARCEN grants or rescinds certification via message after review of the recommendation from the NAVAIRWARCEN team coordinator and any other information that may be available. The certification message will be addressed to the TYCOM and other appropriate commands. It will specify the ship's present aviation status, including any corrections that must be accomplished to achieve full certification for the operational capabilities specified by the CNO. Certifications granted will remain in effect until such time that major equipment modifications or alterations are accomplished or until the next overhaul (not to exceed two years on Air Capable Ships and Amphibious Assault Ships unless rescinded by NAVAIR or NAVAIRWARCEN.

c. Technical Publications. A listing of technical publications required for Air Certification can be obtained from the TYCOM. References (b) and (m) list specific certifications required for aviation platforms.

3.3.7 Distressed Submarine and Salvage Inspection (Submarines only).

a. Purpose. To determine the readiness of submarine rescue and salvage equipment.

b. Conduct. Distressed Submarine and Salvage Inspections will be conducted following the direction of volume IV, chapter 18 of this manual.

3.3.8 NAVSEA Calibration Activity or Aircraft Intermediate Maintenance Department Calibration Laboratory Initial Certification (Submarines, Aircraft Carriers and Surfaces Forces, as appropriate).

a. Purpose. To verify the NAVSEA or NAVAIR Designated Command has in place the necessary documentation, facilities, equipment and trained personnel to support calibrations of Test, Measurement and Diagnostic Equipment (TMDE) as specified in references (p), (q) and (r).

b. Conduct. Initial certification is conducted by the NAVSEA or NAVAIR Metrology and Calibration (METCAL) Technical Representatives per the requirements of references (r) and (s). NAVSEA METCAL Technical Representatives are the NAVSEA METCAL Quality Manager and NAVSEA METCAL Engineering Agent.

c. Scheduling. Initial certification should be accomplished after approval of Establishment of Field Calibration Activity Request and prior to or concurrent with delivery. Coordination between the TYCOM METCAL Point of Contact, METCAL Technical Representative, the Navy Shipbuilding's Program Manager and Ship's

Calibration Coordinator is required to insure all participants can support the certification date and that all required TMDE is available.

d. Reports. Reports will be per the requirements of reference (r) and submitted by letter to the applicable TYCOM and Commanding Officer (CO).

e. Additional information concerning calibration can be found in volume VI, chapter 9 of this manual.

3.3.9 National Policy on the Control of Compromising Emanations Inspection.

a. Reference (t) published the Navy's implementation of the National Policy on the Control of Compromising Emanations (TEMPEST). Reference (u) provides installation criteria for shipboard secure electrical information processing systems.

b. All ships are considered to be operating under an "acceptable risk" category until such time as they have been certified to meet National Policy. Two types of inspections are conducted to certify ships:

(1) Instrumented TEMPEST Survey. The Instrumented TEMPEST Survey is a comprehensive inspection which will only be done on selected ships to certify the ship class.

(2) Visual TEMPEST Inspection (VTI). The VTI is a less comprehensive inspection to certify compliance with class and CNO standards. VTIs can be conducted by Regional Maintenance Centers (RMC), industrial activities and Navy Command, Control, and Ocean Surveillance Center Naval In-service Engineering.

c. A VTI will be accomplished on all new construction ships. This inspection will be scheduled upon the completion of the installation of all Radio Room or secure electrical information processing equipment. In addition, a TEMPEST file needs to be established to include all actions pertaining to installations, modifications or alterations to secure electrical information processing equipment or centers. The specific information to be retained is identified in reference (t).

3.3.10 Diesel Inspection.

a. Purpose. To validate and certify engine alignment, foundation integrity, engine frame integrity, shimming and stressing requirements, hold down bolts, blower operation and engine performance.

b. Conduct. Diesel inspections will be conducted per volume IV, chapter 4 of this manual.

3.3.11 Habitability and Livability Inspection. Navy ships are built to meet habitability and livability standards for berthing areas, messing areas, water closets, laundry and barber facilities as set forth in reference (v).

a. Quality of Service (QoS).

(1) Quality of Service is the combination of the quality of life - the experience of a Sailor and their family outside the workplace and quality of work - the Sailor's experience in the workplace.

(2) Habitability of the ship, alternative quarters, berthing or messing barge are all major components of the sailor's experience in the workplace in New Construction and CNO maintenance availabilities.

b. Habitability.

(1) Habitability defines all equipment necessary to provide a normal environment for duty section personnel during their after-hours duties aboard a naval vessel.

(2) Habitability is satisfied by ensuring adequate:

(a) Ambient temperature control.

(b) Noise and vibration levels.

(c) Ship's compartment lighting.

(d) Ship's announcing circuits.

(e) Furnishings.

(f) Egress and access.

(g) Fresh water.

(h) Potable water temperatures control.

(i) Sanitary fixtures.

(j) Laundry and Food Service.

c. Livability.

(1) Livability requires all equipment necessary to provide a normal life environment and residence aboard a naval vessel for the entire crew.

(2) Livability is satisfied by ensuring adequate:

(a) Scullery equipment is available to serve on normal dinnerware (no paper or plastic).

(b) Barber services, Ship's store and vending services.

(c) Fitness facilities.

(d) Library and computer access.

(e) Medical and Dental services.

(f) WiFi and associated policy, cell phone service and associated policy.

(g) Televisions and television services.

d. Prior to certifying readiness for In-Service, the ISIC will conduct a Habitability Inspection to determine whether the ship is materially ready for the duty section to move aboard. The results of the Habitability Inspection will be reported to the TYCOM via naval message (see Volume I, Chapter 2, Appendix A4 of this manual for sample message).

(1) The Habitability Inspection for submarines is conducted two to four weeks prior to certifying the ship's readiness for In-Service, two to four months prior to this certification for aircraft carriers and just prior to delivery and crew move aboard for all others.

(2) Compartment Surveillance Guide. Appendix D of this chapter has been included to serve as a guide when preparing for the Habitability Inspection and In-Service. Appendix E of this chapter is a sample checklist which can be tailored to any platform.

e. TYCOM N4 will verify livability requirements for crew move aboard utilizing TYCOM specific instructions. Livability verification will be performed no later than 30 days prior to Dock Trials (DT00).

3.3.12 Requirements for In-Service. Assigned Ship's Force constitutes the only group of personnel authorized to operate naval nuclear powered ships during dockside testing and Sea Trials. Because of this requirement, references (c) and (d) specify that nuclear powered ships in construction are assigned an active status of In-Service prior to commencement of the first Sea Trial (two to four weeks for submarines, two to four months for aircraft carriers) and retains that status until delivery of the ship. To support this event, the contractor is required to make the ship available to the Navy for a period of two days for a Habitability Inspection two to four weeks prior to In-Service. At In-Service, the responsibility for, and custody of, fissionable materials is transferred from the Supervising Authority to the Officer in Charge (OIC) of the ship. The PCO becomes the OIC of the ship and continues in this capacity until Commissioning at which time the OIC becomes the CO.

a. Responsibilities for Safety of the Ship. Placing the ship In-Service has an impact upon the established responsibilities for safety of the ship.

(1) Prior to In-Service, or Delivery for surface ships, the industrial activity's responsibilities for the safety of the ship are all inclusive. The Supervising Authority is responsible for monitoring the industrial activity's safety and fire protection program.

(2) At In-Service the PCO assumes the duties of OIC and the responsibility for the safety of the ship. Reference (w) states that the OIC of a ship In-Service has the same responsibilities for the safety of the ship as a CO of a commissioned ship.

b. Division of Responsibility. In order to establish clear lines of responsibility at In-Service and to eliminate unnecessary duplication of effort, the following will apply:

(1) Ship's Force. At In-Service, Ship's Force must have operational control of all ship's systems required to maintain ship safety (i.e., ventilation, firefighting and flood control) in the ship and will stand all shipboard watches, making all security patrols of the ship, the moorings, and the immediate adjacent pier.

(2) Industrial Activity. The industrial activity continues to perform all contract requirements until delivery. The industrial activity will support Ship's Force in the performance of those requirements assumed by Ship's Force as required.

(3) Supervising Authority. During preparations for In-Service, conduct liaison between Ship's Force and the industrial activity to ensure the above division of responsibility is understood and agreed to. Verify that a schedule of compartment or space and system turnover is prepared, mutually agreed to, and that a means to identify deficiencies in systems and spaces turned over to Ship's Force is executed.

3.3.13 Degaussing or Deperming. Reference (x) establishes the provision for checking, operating and maintaining degaussing systems. Reference (y) contains basic principles and background information concerning degaussing.

a. Deperming, a method of neutralizing the magnetic field of a ship's hull to minimize permanent magnetism, is required for all new construction ships.

b. A listing of degaussing or deperming facilities currently available is contained in the Degaussing Folder (NAVSEA Form 8950/1) which is issued to individual ships.

c. Degaussing or deperming requirements must be accomplished per volume VI, chapter 12 of this manual.

3.3.14 Light-Off Assessment (Surface Force Ships only).

a. Light-Off Assessments (LOA) for boilers, Main Propulsion diesel and gas turbine ships will be conducted before propulsion plant operations at an appropriate time before completion of the fitting out availability. The ISIC, with the assistance of Afloat Training Group Atlantic or Pacific, will determine if ship's training procedures and status support safe plant operations, if management programs are effective, if the propulsion plant is ready for light-off and Ship's Force ability to combat a main space fire.

b. References (z) and (aa) address propulsion plant LOAs administered by the ISIC, with the assistance of Afloat Training Group Atlantic or Pacific, and recommend that Ship's Force is to have a minimum of two weeks after completion of industrial activity work in the engineering spaces prior to the LOA. Experience has shown this two-week period is crucial, not only to successful completion of the LOA but to the operation of the ship subsequent to construction. If it appears the two-week interval is in jeopardy, the ship's OIC should discuss ways to speed up the industrial activity work with the Ship Superintendent or this subject should be addressed at Supervising Authority progress conferences.

c. Completion of industrial activity work should be interpreted as meaning that all known work and testing authorized for accomplishment by other than Ship's Force, and which is necessary to support LOA, is complete, including the removal of associated staging and equipment, reinstallation of access doors and hatches, cleanup and painting. Fuel and lube oil, and feedwater should be on board. Partial or temporary installations do not meet completion criteria except as necessary to support the LOA itself or, in the case of lagging pads, as necessary to allow readjustment upon light-off to hot settings of regulators, reducers, and relief valves. The systems and spaces involved in LOA vary from ship to ship, but normally include all systems and spaces needed to support the plant(s) being inspected. This would include main and auxiliary machinery spaces, switchboards, diesels, shaft alleys, uptakes, repair lockers,

oil laboratories and calibration laboratories for Automatic Boiler Control systems, etc. Confirm spaces subject to inspection with the Afloat Training Group.

d. Emergent work items or additional discrepancies requiring industrial activity work that become apparent during the pre-LOA period need to be accommodated. Normally these requirements can be worked during night shifts or inclusive weekends. However, any industrial activity work during this period will be permitted only with the consent of the Supervising Authority and the OIC.

e. This Key Event is largely an exercise in attention to detail and coordination at and between all three levels of maintenance activity (Ship's Force, the Shipbuilder and the Supervising Authority). LOA preparations should begin months before the availability.

f. First-hand inspections of main and auxiliary machinery spaces are most effective when industrial activity personnel are not on board (weekends and holidays). During these periods, joint inspections by the Engineer Officer with Leading Petty Officers are recommended for every main space. Similar inspections of the auxiliary spaces should be conducted by either the CO or the Executive Officer, along with the Leading Petty Officers of those spaces. Discrepancy lists convert readily to work lists. Night repair teams (primarily composed of duty section personnel) can work discrepancies when industrial activity workers are not in the way.

g. The Plan of Action and Milestones for a successful LOA must be written in detail, at the minor equipment or minor task level, and the more detailed, the better. It is a dynamic document and requires updating and revision daily as the LOA date approaches.

3.3.15 Shipboard Crane Certification Program (Surface Force Ships and Aircraft Carriers as appropriate). The Shipboard Crane Certification Program established by reference (ab) is intended to improve the reliability and safety of all shipboard cranes and is applicable to all cranes mounted on board and cranes assigned to forces afloat (exceptions are listed in reference (ab)). Initial crane certification should be accomplished per reference (ab).

3.3.16 Marine Gas Turbine Inspection.

a. Purpose. To validate and certify engine alignment, foundation integrity, engine frame integrity, engine resilient mounts, fluid system cleanliness, intake and uptake cleanliness, compressor and turbine blade integrity, fluids leakage, controls and instrumentation functionality and engine starting and performance.

b. Conduct. Marine Gas Turbine inspections must be conducted per volume IV, chapter 23 of this manual.

3.3.17 Hull, Mechanical, and Electrical Control Systems Certification Process. (Surface Force and Aircraft Carriers). Reference (ac) provides Hull, Mechanical, and Electrical Hierarchical Control Systems (HCS) (e.g., ship control systems and machinery control systems) certification process requirements, established to provide maximum reasonable assurance that HCSs installed on surface ships, including aircraft carriers, will operate in a safe and reliable manner. HCS certifications must be established and maintained in accordance with reference (ac).

3.4 MAINTENANCE AND MATERIAL MANAGEMENT PROGRAM.

3.4.1 Planned Maintenance System.

a. The installation of the Planned Maintenance System (PMS) on new construction ships should be scheduled to provide maintenance documentation to support the Operational Control Transfer (OCT) of systems and equipment from the shipbuilder to Ship's Force. This early load out of PMS allows Ship's Force personnel to become familiar with the maintenance procedures and facilitates the identification of problems with the Maintenance Requirement Cards (MRC) prior to the ship being placed in operation. Local RMC coordinates the scheduling of PMS installations with the ship's Maintenance and Material Management (3-M) Coordinator. In addition, Naval Sea Logistics Center is responsible for:

(1) Generating a preliminary List of Effective Pages (LOEP) for Phase I validation.

(2) Conducting Phase I of the PMS installation.

(3) Generating a final LOEP based on Phase I and 3-M Coordinator Feedback.

(4) Notifying local RMC of the required PMS documentation (LOEP requirements) and the date the documentation is required to support Phase II PMS installation.

(5) Compile Phase II PMS package and forward to ship.

(6) Conduct Phase II PMS installation.

(7) Effect additional LOEP corrections as a result of Phase II.

(8) Outbrief with ship's PCO or OIC concerning status of ship's 3-M program.

b. PMS installation for nuclear powered ships will be conducted approximately six months prior to initial reactor plant criticality. The installation for Surface Force Ships will be conducted at least three months prior to delivery. Installation of PMS is accomplished in two phases.

(1) Phase I. Phase I results in the establishment of a ship's LOEP. Local RMC, utilizing either the LOEP from the previous ship of the class or configuration information provided by Submarine Maintenance Engineering, Planning and Procurement (SUBMEPP) Activity (Submarines only), Supervisor of Shipbuilding Newport News PMS 312C, (Aircraft Carriers) or applicable TYCOM (Surface Force Ships), generates a preliminary LOEP for Ship's Force review. This preliminary LOEP and copies of the listed Maintenance Index Pages (MIP) are delivered to the new construction unit for a review by the ship's 3-M Coordinator, Work Center Supervisors and maintenance personnel. Ship's Force personnel review the documentation, verify MIP to Work Center assignments and approve the preliminary LOEP. Phase I occurs approximately two months prior to Phase II.

(2) Phase II. Phase II is the actual load out of PMS documentation, final verification of the LOEP, generation of preliminary schedules for local RMC review and a Ship's Force validation of provided documentation. Depending upon the ship class, quantity of documentation, and Ship's Force preparation,

Phase II can last from two to four days. Additionally, maintenance support organizations such as Naval Surface Warfare Center, Philadelphia Division, SUBMEPP or Submarine Monitoring, Maintenance and Support Program Office may be participants.

c. The preparation of preliminary Cycle, Quarterly, or Weekly schedules to support PMS load out prior to the preparation of First Quarter after Overhaul schedules is recommended. As a minimum, the development of a cycle schedule for each work center should be accomplished prior to Phase II PMS installation. As systems or equipment is turned over, Ship's Force maintenance should be scheduled to support. This preliminary quarterly schedule (schedule "A") is utilized to track maintenance prior to the official First Quarter after Overhaul start date. Additional preliminary quarterly schedules identified as "B", "C", etc. may be developed as required.

d. The "official" PMS start date depends upon several factors: OCT of equipment, available manpower, availability of supporting documentation and the availability of tools, parts, test equipment, and material. The start date is also an arbitrary date arrived at by the ship's 3-M Manager and 3-M Coordinator. A start date should be selected that causes as little disruption and preparation of schedules as possible. Utilization of preliminary schedules as discussed in paragraph 3.4.1.c of this chapter will allow for the flexibility to start PMS "officially" at the beginning of a quarter. However, should this approach not support your situation, the starting of PMS should be indicated on your quarterly schedule with a yellow vertical line, top to bottom, indicating your start date.

e. Inactive Equipment Maintenance.

(1) Inactive Equipment Maintenance, per the direction of reference (ad), may be implemented anytime an equipment will be out of service for thirty days or longer. The implementation of Inactive Equipment Maintenance may be appropriate for those systems or equipment which was transferred to ship's custody early in the construction cycle. Ship's Force should follow the guidance of reference (ad) when implementing.

(2) In deciding whether to place equipment in layup, consideration should be given to the training opportunity lost. As long as equipment is in an active status, Ship's Force will be performing PMS. By virtue of accomplishing those maintenance tasks, they will become more familiar with the equipment, its operation and the maintenance procedures. Maintaining equipment in an active status also allows for the identification of procedural problems within the MRCs.

3.4.2 Technical Feedback Reports. Ship's Force should start using Technical Feedback Reports (TFBR) to report problems with PMS as soon as the PMS package is installed. TFBRs should be submitted per the requirements of reference (ad). The TFBR tracking log should be established, even if PMS has not officially started. TFBRs are processed through the ISIC for further processing to RMC. If an ISIC is not available, TFBRs are to be processed through the TYCOM or directly to RMC. New construction ships will provide their TFBRs to the local RMC. The current contact information for the RMCs is listed in volume VI, chapter 2, appendix A of this manual.

3.4.3 Establishment of Current Ship's Maintenance Project. The ship's Current Ship's Maintenance Project (CSMP) will be initialized at delivery. That does not mean however, that significant maintenance related events do not happen during the construction period. In fact, every industrial activity has their own deficiency tracking programs, all of which contain a certain degree of data that should be retained in the ship's CSMP. The problem is that this data resides on industrial activity computers which for the most part do not "talk" to Navy computers. When the ship leaves the industrial activity, it generally leaves without this data. Ship's Force will load into the CSMP any deficiencies not adjudicated at delivery and any historical construction related maintenance data deemed worthy of future retrieval.

3.4.4 Naval Tactical Command Support System. Space & Naval Warfare Systems Center Atlantic (SSC Atlantic) and Space & Naval Warfare Systems Center Pacific (SSC Pacific) are responsible for the software installation, installation training, hardware support and software support. Ship's Force should initiate liaison with the appropriate SSC Atlantic and Pacific team to facilitate installation or installation training. All support requests are initiated via the Navy Enterprise Service Desk. Additional details describing the SSC Atlantic and Pacific support functions are addressed in chapter 2of this volume.

3.5 EQUIPMENT LOAD OUT.

3.5.1 Test Equipment. The General Purpose Electronic Test Equipment load out involves personnel from the ship, the Supervising Authority, NAVAIRWARCEN, China Lake, CA. The actual load-out will vary dependent upon the platform. Generally, the equipment arrives during the construction phase and is stored by the shipbuilder until load out. Ship's Force, if not requested to do so by the Supervising Authority, should inventory and identify shortages while the General Purpose Electronic Test Equipment is in storage. Coordinate with TYCOM METCAL Point of Contact to assist in resolving TMDE deficiencies.

3.5.2 Hand Tools and Weight Handling Equipment. Hand tools and weight handling equipment will also be arriving. Inventory of this equipment against Allowance Equipage Lists or Allowance Parts Lists or class specific load lists at the earliest opportunity ensures the required support material is available when maintenance of equipment begins. Weight handling equipment requires certification prior to use and while it may be months before this equipment is required, a recall schedule should be developed to get the equipment certified.

3.6 LOGISTIC SUPPORT.

3.6.1 Technical Manuals and Drawings. Technical manuals and drawings are provided by the Supervising Authority and the Navy. The shipbuilder develops and provides manuals and drawings for all Contractor Furnished Equipment, including equipment furnished by subcontractors. In the case of Government Furnished Equipment, the shipbuilder will identify the required manuals to the Navy Publication and Printing Service Manuals Office, Washington, D.C., via the Supervising Authority and the Navy Shipbuilding Program Manager. Navy Publication and Printing Service Manuals Office will deliver the manuals to the shipbuilder. For the first ship of a class, equipment manuals for new design Government Furnished Equipment may not be immediately available from the Navy Publication and Printing Service Manuals Office. These manuals will be shipped with the equipment by the vendor. The shipbuilder will provide stowage and custody of this documentation until actual shipboard load-out. To ensure all required technical manuals and drawings are received, initial documentation validation should be accomplished on a random sampling basis with emphasis placed on low visibility items such

as power supplies and electronic subsystem manuals. Final validation will occur during load out. Each Navy Shipbuilding Program Manager has assigned an activity with the responsibility for loading out of Technical Manuals and Drawings. Contact the Supervising Authority or the Navy Distance Support Anchor Desk to determine the Navy Shipbuilding Program Manager. The Anchor Desk can be reached at 1-877-418-6824 or by e-mail help@anchordesk.navy.mil.

a. Ship Systems Manual (SSM) or Ship Information Book (SIB). The SSM or SIB (SSM for submarines and SIB for Surface Force ships and aircraft carriers) are the primary descriptive and operating manuals for non-propulsion plant ship systems. They are designed as a class manual and are the basic source of information for locating, describing and operating the following non-propulsion plant systems:

(1) Mechanical.

(2) Piping.

(3) Electrical.

(4) Electronic.

(These manuals do not provide detailed maintenance information but do reference sources of information on maintaining, testing, troubleshooting, installing and removing these systems and equipment. SSMs and SIBs must be turned over to the ship prior to or at OCT or custody transfer of the system or equipment.).

b. Engineering Drawings. All engineering drawings belong to one of two groups: ship construction drawings or equipment drawings. Each group is made up of several types of drawings.

(1) Ship Construction Drawings. These drawings are developed for building the ship and to reflect installed systems. These drawings are each assigned a seven-digit NAVSEA number and depending upon the platform a three-digit Component Identification Number, Ship Work Breakdown Structure or Expanded Ship Work Breakdown Structure may appear on the drawing. The NAVSEA number identities the drawing and the Component Identification Number, Ship Work Breakdown Structure or Expanded Ship Work Breakdown Structure assigns the drawing to a group of related drawings. Ship construction drawings are usually “class drawings” however, ships of a class, built at different times, may vary from the original design as improvements are made. This necessitates the development of hull unique construction drawings which have been verified by the shipbuilder and Supervising Authority to reflect an individual ship’s configuration. Systems requiring these Selected Record Drawings (SRD) are identified in the ship’s building specifications.

(2) Equipment Drawings. Equipment drawings describe equipment shown on ship construction drawings. They are prepared by industrial activities or equipment manufacturers and may be called vendor drawings. Equipment drawings are rarely assigned NAVSEA or any other government-controlled number. These drawings are identified by a Commercial and Government Entity code with a manufacturer’s drawing number.

c. Drawing Types. Engineering practices have developed common titles that are used on most drawings. By understanding the kind of technical information associated with each title, the drawing needed for a given job can be determined. The following is a list of common drawing types (they may be either equipment or ship construction drawing group types).

(1) System diagrams - A system diagram shows how a system is designed and describes the relationship among system components. System diagrams do not include physical or dimensional data but normally refer to other drawings and documents that contain detailed information.

(2) Arrangement drawings - Arrangement drawings show locations, dimensions, and other system component information necessary to make correct installation on the ship.

(3) Assembly and subassembly drawings - Assembly and subassembly drawings show how individual parts fit together to form a larger component or equipment.

(4) Installation drawings - Installation drawings show piping, foundations, ventilation ducting, and other installation details. Installation drawings are used to install systems and equipment in the ship.

(5) Outline drawings - Outline drawings show the outward appearance of major system components and contain dimensions and service requirements necessary to install the component.

(6) Detail drawings - Detail drawings show dimensions and other manufacturing data for individual parts of components.

(7) Electrical drawings - Electrical drawings have a family of titles similar to those of other engineering drawings. Proceeding from the general to the detailed the following are the common electrical drawing types:

(a) Electrical system wiring diagrams - Electrical system wiring diagrams show how the overall system is intended to function.

(b) Cabling drawings - Cabling drawings describe cable runs in greater detail (similar to piping system diagrams).

(c) Wireway drawings - Wireway drawings show how cables are routed from one point to another in the ship (similar to system arrangement drawings).

(d) Schematic wiring diagrams - Schematic wiring diagrams describe individual wires inside the cables and how they connect to components.

(e) Wiring tables - Wiring tables provide detailed point-to-point data for connecting ship’s wiring between components.

d. Technical Variance Documentation (TVD). Drawings may be amended with supplementary information called TVD. A set of TVDs is a collection of documents describing how the as-built configuration of a ship differs from the class drawing design. TVD is not intended to be a revision to a drawing. Liaison Problem and

Solution Sheets, Engineering Notices, Waivers and Deviations are some of the documents that make up TVD.

e. Format of Onboard Drawings. Very few drawings are provided to ships and shore facilities in hard copy form. Most are on microfilm aperture cards or microfiche, collectively known as microform. For selected platforms, Compact Disc Read Only Memory is being utilized. However, some of the more important SRDs are provided in hard copy as well as in other mediums.

f. Ship Drawing Index (SDI). The SDI lists all drawings for a ship class. Using the SDI is the only way to determine a drawing's applicability. In addition to drawing applicability, it provides drawing revision applicability and TVD applicability. The SDI will also identify whether a drawing contains Submarine Safety (SUBSAFE) information, Noise Control information or is an SRD.

3.6.2 Unrestricted Operations Maintenance Requirement Cards (Submarines only).

a. Reference (ae) establishes the maintenance requirements and identifies the responsibilities and actions required to support continued unrestricted submarine operations to design test depth. This program is invoked on all SUBSAFE certified submarines. To support this program, the Navy Shipbuilding Program Manager issues individual manuals containing required, periodic SUBSAFE maintenance actions for each class and in some instances particular ships.

b. Load out of Unrestricted Operations (URO) MRCs will be accomplished at delivery. The ISIC SUBMEPP Representative will provide to the ship's Quality Assurance Officer the ship's copy of the "URO Compact Disc Read Only Memory". SUBMEPP manages the URO program for Navy Shipbuilding Program Managers.

c. Upon receipt of the naval certification message of new ship delivery to the fleet, SUBMEPP will update the URO Last Maintenance Accomplishment (LMA) dates to reflect the first day of the month following ship's delivery.

d. Upon receipt of the naval certification message of a new Nuclear Powered Attack Submarine (SSN) completing Post Shakedown Availability (PSA), SUBMEPP will update the UROs LMA dates to reflect the first day of the month following PSA End Date. URO tracking by SUBMEPP and the ISIC will commence at the completion of delivery.

e. Additional information concerning the URO program can be found in volume VI, chapter 25 of this manual.

3.6.3 Preventive Maintenance Requirement (Submarines only).

a. The integration of the Class Maintenance Plan forms the basis of the Preventive Maintenance Requirement (PMR) program. The PMR program is developed and managed for Navy Shipbuilding Program Managers by SUBMEPP Activity.

b. Load out of PMR Inventories and Schedules will be made available from the Maintenance & Ship Work Planning program at delivery. These are provided by the shipbuilder via the URO MRCs on the ship's Advanced Technical Information System drive.

c. Upon receipt of the naval certification message of new ship delivery to the fleet, SUBMEPP will update the PMR LMA dates to reflect the first day of the month following ship's delivery.

d. Upon receipt of the naval certification message of new construction submarines completing PSA, SUBMEPP will update the non-flask recertification PMRs LMA dates to reflect the first day of the month following PSA End Date. PMR tracking by SUBMEPP and the ISIC will commence at the completion of PSA delivery.

e. Additional information concerning the PMR program can be found in volume VI, chapter 24 of this manual.

3.7 OPERATIONAL CONTROL TRANSFER. OCT, depending on the platform, will happen in one of several ways. The entire ship is turned over at one specific time (ship custody transfer), compartments or spaces are turned over as completed, or systems are turned over as completed without regard to space completion.

a. The shipbuilder will:

(1) Ensure all testing is complete to the most practical extent possible.

(2) Provide Ship's Force and the Supervising Authority with a turnover schedule.

(3) Conduct a review of all existing work and deficiencies with Ship's Force and the Supervising Authority and determine those items that must be cleared or resolved to support a safe and operational system turnover.

(4) Verify system, space or ship ready for turnover.

(5) Conduct walk-through with Ship's Force.

(6) Execute turnover.

b. Ship's Force should be prepared to:

(1) Provide system experts for walk-throughs.

(2) Address concerns regarding turnover to the Supervising Authority's Ship Manager.

(3) Ensure all work and deficiencies are cleared or resolved to ship's satisfaction prior to acceptance.

(4) Assume maintenance responsibility upon receipt. (PMS installation should be scheduled to support OCT).

NOTE: IN SOME INSTANCES, SYSTEMS MAY BE TURNED OVER THAT REQUIRE TEMPORARY SUPPORT SYSTEMS. THE INDUSTRIAL ACTIVITY WILL PROVIDE OPERATING INSTRUCTIONS, DRAWINGS (AS NECESSARY) AND OPERATING INDOCTRINATION TO SHIP'S FORCE. FOLLOWING THE REMOVAL OF TEMPORARY SUPPORT SYSTEMS, SHIP'S FORCE AND THE SHIPBUILDER SHOULD BE PREPARED TO CONDUCT ADDITIONAL WALK-THROUGHS.

3.8 SOUND SILENCING PROGRAMS UNIQUE TO NEW CONSTRUCTION (MHC AND SSN ONLY).

a. Isolation System Survey. During the construction process, the shipbuilder, through Noise Reduction Program requirements, periodically inspects the ship to identify incorrect installation and poor construction techniques relating to the silencing nature of the ship. It is imperative that no sound shorts exist between sound isolated systems or components and the hull structure. Ship's Force can play a major role in the inspection process by identifying deficiencies. This survey is the basis for acoustic measurements to be completed in subsequent surveys. Additional information concerning submarine noise reduction surveys is addressed in volume VI, chapter 23 of this manual.

b. (Submarines only) Topside and Housekeeping Survey. During the construction process, this survey is completed to accomplish two aspects of silencing. First, the topside inspection checks the outside of the pressure hull, especially flow exposed areas, to ensure that tones or rattles are not caused by loose gear, fairing plates, and other discontinuities. Secondly, the housekeeping inspection checks the inside of the pressure hull to ensure sound shorts do not occur as a result of installation of lockers and locker doors, stowage, clogged ventilation ducts or filters, etc. This survey usually identifies problems associated with items not covered by ship design, but those items typically handled by the ship.

c. Structure borne and Overside Surveys. Upon installation of Noise Critical components and their associated operating systems, structure-borne noise surveys are accomplished to check the acoustic nature of the installation. Proper installation of isolation features and proper maintenance of the component during any layup is crucial to the success of this survey. Ship's Force must continually be aware of the installation practices of the shipbuilder and thoroughly inspect the installation for sound shorts and proper alignment prior to system or component turnover. The Overside Survey is accomplished outside the hull (pressure hull for submarines) as an indication of radiated noise. Proper operation of systems and components during this process is crucial to satisfactory acoustic levels. Reference (af) provides additional information concerning acoustic surveys for submarines.

APPENDIX A

AREAS TO BE EVALUATED DURING ARRIVAL ASSISTS

1. As a minimum, the following areas should be evaluated. Duplicate inspection of areas covered by other inspections need not be made.

1.1 Training program which should include instructions in the following:

a. Industrial activity organization, including management and working levels.

b. Industrial activity procedures and practices, including:

(1) OCT.

(2) Tag-Out.

(3) Rip out.

(4) Industrial Activity Deficiency Correction.

(5) General Testing Requirements. Personnel should be familiar with references (ag) and (ah).

(6) The industrial activity system for accomplishing planned maintenance on equipment under their cognizance.

c. General schedule of Key Events and phases of work and testing.

d. Safety requirements including Ship's Force and industrial activity responsibilities for:

(1) Dry Dock Safety.

(2) Fire Watches.

(3) Watertight Integrity.

(4) Reactor Plant Safety.

1.2 Status of administrative preparations, including:

a. Ship and department organization manuals and directives to ensure administration is following current requirements.

b. Ship and departmental training plans for implementation during construction.

c. Procedures for qualifying underway or steaming watch standers and maintaining proficiency for inport watch standers, including:

(1) Formal provisional qualification procedures.

(2) Qualification goals for Key Events, such as undocking or launching, operational testing of ship and propulsion plant systems, steam testing, initial criticality, etc. The goals for Fast Cruise should include a three-section watch capability for the entire crew.

d. Procedures for maintenance and security of Ship's Force barge or office spaces.

e. General plan for Ship's Force responsible actions including provisions for:

(1) Barge, berthing and messing facilities.

(2) Routine ship and barge watch bill.

(3) Scheduling of required shore based schools and leave for personnel.

(4) Ship's Force planned maintenance routines.

(5) Provisions for shift work during known periods of intensive testing (e.g., Hot Ops, Power Range Testing).

(6) Target dates for completion of key ship and department directives and procedures.

1.3 Evaluate the capability of the crew to perform industrial activity type evolutions including:

a. Ability to review industrial activity Work Authorization Forms, major system tag-outs, and test procedures.

b. Inport and dry dock watch standing procedures including special inspection requirements for systems in abnormal lineups or partially removed.

c. Ability to inspect and monitor ship conditions in relation to the special requirements for watertight integrity. This evaluation should include observation of a trim or draft change calculation by the Ship's Safety Council representative.

1.4 Ensure that Ship's Force has a satisfactory understanding of the following:

a. Relationship with the industrial activity and Supervising Authority including ship's responsibility regarding weekly management meetings.

b. Relationships with the ISIC and the TYCOM Type Desk, including the ship's responsibility for reporting problem areas.

c. Relationship with the local Naval Reactors Representative.

d. Functions and responsibilities of the Joint Test Groups (Nuclear, Hull, Propulsion and Auxiliaries and Weapons) and the Ship's Safety Council.

e. Control mechanisms for work or tests affecting ships' condition.

f. Relationship with the TYCOM industrial activity representative (if assigned).

APPENDIX B

AREAS TO BE EVALUATED DURING MONITORING INSPECTIONS

1. Procedures and administrative steps for provisional watch station qualifications.
2. Department organization manuals.
3. Department instructions and administrative procedures.
4. Ship's instructions and administrative procedures.
5. Equipment logs, operating instructions and casualty procedures.
6. Ship's standard operating procedures and the Ship's Organization and Regulations Manual.
7. Training planned and conducted to support initial qualifications for watch stander proficiency.
8. Watch standing performance.
9. Spot checks of ships' records and logs in use.
10. Status of Ship's Force work.
11. Status of Ship's Force responsible planned maintenance.
12. Inspect installed equipment for cleanliness and adequate protection from damage.
13. Tag-Out and Work Authorization Logs. Spot-check for compliance following current directives.
14. Inspect ship for hazards.
15. Inspect provisions for casualty control including watertight integrity.
16. Verify that items are drawn from the ship's Coordinated Shipboard Allowance List (COSAL) stock only on an emergency basis and that such issues are well documented with appropriate adjustments to the inventory records.
17. Evaluate general safety practices.
18. Evaluate the response of the Supply System to requisitions in support of Ship's Force work. (Post Shakedown Availability requirement only).
19. Status of technical manuals, drawings, maintenance documentation, etc., onboard.

APPENDIX C

SAMPLE PRE-REACTOR SAFEGUARD EXAMINATION NOTICE

(Ship Name) NOTE 3540

PCU (Ship Name and Hull No.) NOTICE 3540

Subj: PRE-REACTOR SAFEGUARDS EXAMINATION (RSE)

Encl: (1) Schedule of Examination
(2) Officer Roster
(3) Crew Roster
(4) Initial Criticality and Power Range Testing Watch bill
(5) Interview Schedule
(6) ELT Evolution Schedule
(7) Status of Propulsion Plant Systems and Spaces for Initial Criticality

1. Purpose. To issue information pertinent to the conduct of the Pre-RSE.

2. Discussion. A Pre-RSE is scheduled for PCU (Ship Name) on (Date). All examination activities will be conducted in the crew spaces in Building ___ at _____ Shipyard with the exception of observed drills and evolutions which are to be conducted onboard.

3. Inspection Team Conference Rooms. The Wardroom in Building ___ will be available for the private use of the Inspection Team throughout the examination. During the drill periods, the Wardroom aboard (Ship Name) will be available for use by the Inspection Team.

4. Responsibilities.

a. The Executive Officer is responsible for the overall coordination and execution of the examination per the schedule contained in enclosure (1). Crewmembers as designated by enclosures (2) and (3) will participate.

b. Enclosure (4) provides the intended watch bill for manning watches throughout initial criticality preparations and power range testing.

5. Interviews. All interviews will be conducted following the schedule contained in enclosure (5). Personnel must not discuss the interviews until all interviews are complete.

Interview (Subject Area)	Locations	Groups Interviewed
A Fluids	WEPS or SUP Office	EOOW/EWS and M Div
B Reactor Theory	NAV Office	EOOW/EWS, RC Div, 2 EPCP and 2 SPCP Operators
C Electrical	ENG Office	EOOW/EWS, E Div and RC Div
D CHEM/RADCON	XO Office	EOOW/EWS and all ELTs

(Ship Name) NOTE
3540

E	Integrated Plant Ops	CO Office	EOOW

6. Records Review. Record reviews will be conducted in a large classroom. Records will be pre-staged in the log room or designated area and moved to the classroom just prior to the scheduled review.

7. Meals. The (Name & Location of Mess Facility) will be available for meals. Working lunches in the (Name & Location of Mess Facility) are available.

SIGNIFICANT ENGINEERING DEPARTMENT ADMINISTRATIVE DEFICIENCIES

Departmental

1. Qualifications. Due to significant shiftwork delays for Post-Core Fill and Hot-Ops, Phase II (Initial Criticality) qualifications are not complete. They will be completed by (Date).

2. CO RSE Interviews and Qualifications. Due to delays in qualifications noted in paragraph (1), these are not complete. The CO has issued a letter (Date) to the Engineering Department detailing the scope and conduct of these interviews. A copy of this letter has been provided to the Senior Member.

3. Change 11 to the qualification instruction is not implemented in all qualification cards (to be issued (Date)).

4. Some Department and EOOW/EWS exams from (Date) do not have a re-exam for exam failures.

Machinery Division

1. Material History.

   a. Hull and tank information recorded on Material History Cards vice Hull Cards.

   b. No QA records - no QA work performed, no QAIs qualified.

Reactor Controls Division

1. Material History. Rod Control and SVFC Material History has not been updated with data that has just been received from recent Hot Operation Testing.

Electrical Division

1. Superseded cyclic primary PMS schedule has been accidentally destroyed.

Reactor Laboratory

(List deficiencies concerning the Reactor Laboratory.)

Enclosure (7)

APPENDIX D

IN-SERVICE COMPARTMENT SURVEILLANCE GUIDE (AIRCRAFT CARRIERS AND SUBMARINES ONLY)

1. As directed by OPNAVINST 4700.8, approximately two to four weeks for submarines, or two to four months for aircraft carriers, prior to the first Sea Trial, a nuclear ship is to be placed "In-Service". A prerequisite to placing the ship "In-Service" is satisfactory habitability conditions. There still remains industrial and fitting out work prior to ship completion and readiness for Sea Trials. The accepting authority must take this action into consideration when scheduling the habitability inspection prior to the crew moving on board. The purpose of this inspection is to ascertain whether the spaces within which the crew will live, primarily berthing and messing, are clean, safe, and ready to receive the crew.

2. Spaces that are considered finished and have been inspected by Ship's Force should be complete to approved plans.

3. The following is a list of attributes which should be checked for completeness during "In-Service" inspections of spaces in the final phases of construction.

a. Cable hanger and banding - properly installed.

b. Cleanliness - equipment, equipment space, and bilge area free of industrial dirt and debris (there may be areas of light dust).

c. System completeness - handwheels, spray shields, etc. are installed.

d. Bilges - free of standing oil.

e. Compartment free of damage - pipe scars, arc strikes, etc.

f. Grounding straps - properly installed.

g. Lockers - stowage and shelving solidly attached and operable.

h. Compartment lighting - installed and operable.

i. Compartments - to be free from construction material and any unsecured objects that may cause a threat to personnel safety.

j. Safety chains, ladders, and handrails - installed, fastened in place, and per plan.

k. Permanent deck plates - corners bolted down, well fitted, and do not present a tripping hazard (deck plates over bilge areas need not be bolted at this time).

l. Welding - all structures complete.

m. Preservation paint - neat and complete, with approved color schemes. Basic preservation applied to all structures and equipment (areas of minor rust and bare ferrous metal are acceptable at this time in compartments in the final phases of construction).

n. Appearance paint (applied for cosmetics rather than preservation) - applied to routinely visible surfaces and presents a neat appearance.

o. Accessibility of equipment - convenient for operation, repairs, replacement, maintenance, testing, and visible use.

p. Storerooms - complete (installations and painting).

q. Marking of equipment - valve labels, name plates, instruction and warning plates installed and readable.

r. Protection of equipment from any damage - as required by plans or planned maintenance guidance (e.g., Scott Foam).

s. Berthing and Messing arrangement - proper type, accessibility, clearance, seating capacity, etc. per plan.

t. Joiner work - compartment bulkheads, overhead structures, moldings, and furniture installation complete and presents a neat appearance; Formica will be free of damage.

u. Condition of deck coverings (Tile and Terrazzo) - free of any damage and major discoloration.

v. Watertight and non-watertight doors - installation complete, well fitted, with proper operation (ease of opening and closing) and protection devices installed.

APPENDIX E

SAMPLE PRE-COMMISSIONING HABITABILITY INSPECTION CHECKLIST FOR NEW CONSTRUCTION SHIPS

Ref: (a) OPNAVINST 4700.8 - Trials, Acceptance, Commissioning, Fitting Out, Shakedown and Post Shakedown Availability of U.S. Naval Ships Undergoing Construction or Conversion

1. A pre-commissioning habitability inspection is required for new construction ships by reference (a). The purpose of the inspection is to verify that living and messing spaces are clean, safe and ready to receive the crew. Upon completion of the inspection, the inspection team leader will provide copies of the deficiency list to the Navy Shipbuilding Program Manager's representative, the Supervising Authority, the Commanding Officer of the ship's pre-commissioning unit and the TYCOM.
2. This assessment is not of the magnitude or detail required by the Supervising Authority to ensure shipbuilder compliance with all building specifications in the contract or by the Board of Inspection and Survey during acceptance trials. This assessment is a qualitative judgment of the ability of the crew to live on board safely and comfortably during the fitting out period. This assessment does not fulfill shipboard system certification requirements or other inspection requirements related to food service sanitation, laundry and dry cleaning, potable water and marine sanitation devices.
3. Areas to be inspected include general safety and sanitation, galley, scullery, messing, dry food storage spaces, refrigerated food storage spaces, berthing spaces, washrooms, showers, heads, lounges and potable water. Only spaces designated to support initial crew move aboard will be inspected. For example, if only the aft galley will be used at move aboard, the forward galley will not be inspected.
4. It is understood that not all equipment, spaces and systems aboard the ship will be completed and transferred to Ship's Force at the time of the assessment. If a space or system to be inspected has not been transferred to the crew, the shipbuilder and Supervising Authority will present the space or system to the inspector. If a space or system has been accepted by the crew, the crew will present the space; cognizant shipbuilder and Supervising Authority personnel should be present. As remaining habitability related spaces or systems are completed after crew move aboard, the Supervising Authority and Ship's Force are responsible for inspecting spaces or systems per the turnover procedure specified in the contract.
5. The pre-commissioning habitability inspection team will evaluate the following areas utilizing the enclosed inspection checklists:

   A. General.
   B. Food Service.
   C. Living Spaces.
   D. Freshwater.
   E. Collection, Holding and Transfer (CHT) System. (See Note).
   F. Laundry and Dry Cleaning. (See Note).

NOTE: OPERATIONAL LAUNDRY FACILITIES AND WASTE REMOVAL SYSTEMS ARE CONSIDERED DESIRABLE TO SUPPORT CREW MOVE ABOARD. IF REQUESTED BY THE SUPERVISING AUTHORITY, THE INSPECTION TEAM WILL ASSESS THE READINESS OF THESE AREAS DURING THE HABITABILITY INSPECTION. OTHER CREW SUPPORT SPACES, SUCH AS BARBER SHOPS, MAY ALSO BE INCLUDED IN THE INSPECTION IF REQUESTED BY THE SUPERVISING AUTHORITY AND AGREED UPON BY THE INSPECTION TEAM.

SAMPLE PRE-COMMISSIONING HABITABILITY INSPECTION CHECK LIST FOR NEW CONSTRUCTION SHIPS (Cont'd)

Compartment Number: _____ Division: _____

A.	GENERAL	YES	NO
	1. All trash and rubbish removed.		
	2. Spaces are neat, clean and in a usable condition.		
	3. Wireways and other exposed areas that could serve as a path for rats are free of foreign matter.		
	4. Electrical wires or plugs are not located to be easily tripped over.		
	5. Drains open with covers attached.		
	6. Ventilation (heating and cooling) and lighting adequate to maintain healthful and comfortable conditions.		
	7. Electrical outlets required for habitability are installed and operable.		
	8. Spaces are free of major safety discrepancies.		
	9. Damage Control equipment installed per ship plan and labeled.		

GENERAL

Inspector: _____ Date: _____

B.	FOOD SERVICE	YES	NO
	1. Facility		
	a. Decks sloped properly to allow drainage into deck drains. (S9AA0-AB-GOS-010/GSO Section 528. NAVMED P-5010-1 Article 5-204.11)		
	b. Adequate and convenient hand washing facilities with hot and cold running water, dispensed soap and single service disposable towels and waste receptacle for used paper towels are provided in or adjacent to the food service facility. (OPNAVINST 5100.19, Section D CH4, T9640-AC-DSP-HAB; and NAVMED P-5010-1, article 6-301.20).		
	c. Drain lines from refrigerators, ventilator hoods and other food service equipment drain through an air gap into a deck drain or funnel with removable grating (if cited in the contract). (S9AA0-AB-GOS-010/GSO Section 528. NAVMED P-5010-1 Article 5-202.13)		
	d. Signs posted reminding personnel to wash hands and not smoke. (NAVMED P-5010, Article 6-301.14)		
	e. Equipment operating and safety instructions are prominently posted on or conspicuously near the equipment to which it relates. (OPNAVINST 5100.19, Section D, Chapter 8; S9AA0-AB-GOS-010/GSO section 602)		
	f. Steam and hot water lines properly lagged and sheathed. (S9086-RK-STM-010/505 and S9AA0-AB-GOS-010/GSO section 508)		
	g. Furniture is installed in prescribed arrangement and neat, clean and in usable condition. (S9AA0-AB-GOS-010/GSO section 651)		
	h. Racks and bins are installed in storerooms. (S9AA0-AB-GOS-010/GSO section 670)		
	2. Equipment		
	a. Deck mounted equipment sealed to the deck or elevated on legs that provide at least 8 inches of clearance between the deck and equipment. (NAVMED P-5010, chapter 4; and T9640-AC-DSP-010/HAB)		
	b. Decks in food service areas maintained in good repair. (NAVMED P-5010-a article 6-201)		
	c. All equipment accessible.		

	d. Food contact surfaces made of smooth, corrosion resistant, non-toxic (FDA Food, Drug and Cosmetic Act guidelines), stable non-absorbent materials that will not impart odors, color or taste, nor contribute to adulteration of food. (NAVMED P-5010 -1 article 6-101)		
	e. Vegetable peelers, vegetable slicers, can openers, meat slicers, ranges, ovens, grills, deep fat fryers, microwave ovens, toasters, mixing machines, pressure cookers, steam jacketed kettles, steam tables, steam table and salad bar inserts, soft ice cream machines, baking and roasting pans, cooking and serving utensils, food carts, storage racks and shelving properly installed, sanitized and operationally tested. (NAVMED P-5010-2 Chapter 4)		
	f. On and off toggle switches on food service equipment have toggle switch guards installed to prevent inadvertent operation. (NAVMED P-5010-2 Chapter 4)		
	g. Safety interlocks on food preparation equipment maintained in proper operating condition.		
	h. Steam Jacketed Kettles.		
	(1) Equipped with functional steam safety release valve, if applicable. (S9AA0-AB-GOS-010/GSOs. 65)		
	(2) Chains at least 18 inches long attached to steam safety release valves to allow for operation from a safe location for direct steam heated kettles (GEN SPECS, Section 528, Article C1905 g(4)), if applicable.		
	(3) Steam discharge piped down to kettle coamings and directed away from operator's feet (GEN SPECS, Section 651 b), if applicable.		
	i. Equipment free from salt-water connections except NAVMEDCOM approved garbage grinders or refrigeration units. (NAVMED P-5010-6, article 6-6.8)		
	j. Food service spaces and equipment are free from cross connections with non-potable liquids or submerged freshwater inlets. (NAVMED P-5010-6, article 6-6.8)		
	3. Ventilation		
	a. Hoods serving deep fat fryers are fitted with a fire extinguishing system. (S9AA0-AB-GOS-010/GSO, section 512 and S9AA0-AB-GOS-010/GSO, section 555)		

	b. Grease filters and hoods are installed over convection ovens, combination ovens, range, griddles, deep fat fryers, steamers, skittles, and kettles are free from grease buildup and can be washed at least weekly. (S9AA0-AB-GOS-010/GSO, section 512 and 0938-LP-018-0010)		
	c. Hoods and filters are free from grease buildup and can be washed daily or weekly, as required. (S9AA0-AB-GOS-010/GSO, section 512)		
	d. Spaces adequately ventilated to keep them free of excessive heat, steam, condensation, vapors, smoke or gases. (S9AA0-AB-GOS-010/GSO, section 512 and 0938-LP-018-0010)		
	e. Vent ducts free of excessive grease and debris which could be a fire hazard. (S9AA0-AB-GOS-010/GSO, section 512 and 0938-LP-018-0010)		
	4. Lighting		
	a. Illumination levels adequate. (MIL-STD-1472, DOD-HDBK-289, and T9640-AC-DSP-010/HAB)		
	b. Lighting fixtures in food service areas shielded.		
	5. Refrigeration		
	a. Frost build-up no more than 1/4 of an inch (NAVMED P-5010, article 1-34).		
	b. Refrigeration spaces clean. (NAVMED P-5010-1, article 4-602.11)		
	c. One portable or built-in air measurement thermometer provided in all refrigerated storage spaces which is accurate to ±3°F. (NAVMED P-5010-1, articles 4-204.112 and 4-203.12)		
	d. Refrigerated spaces maintained at:		
	(1) Freezers 0°F or lower.		
	(2) Chilled Bulk Storage 33-36°F.		
	(3) Thaw Boxes 36-38°F.		
	(4) Dairy Products Box 32-34°F.		
	(5) Milk Dispenser Cabinet 32-40°F.		
	(6) Reach-in Refrigerator 34-40°F.		
	e. Interior safety release latches installed and operable in all bulk refrigeration and freezer units.		

	6. Serving Lines and Salad Bars		
	a. Serving line areas clean. (NAVMED P-5010-1, articles 4-204.112 and 4-203.12)		
	b. Equipment food-contact surfaces and utensils shall be clean to sight and touch. (NAVMED P-5010-1, article 4-601.11)		
	c. Functional sneeze shields installed on serving lines and salad bars. (NAVMED P-5010, Article 1-40)		
	d. Hot TCS foods shall be held at 135 °F (57 °C) or above throughout the meal period. (NAVMED P-5010-1, article 9-502.12)		
	e. Salad bars capable of being maintained at 40°F or below. (NAVMED P-5010-1, article 3-501.16)		
	7. Milk Dispensers and Holding Cabinets		
	a. Bulk milk dispenser is capable of maintain storage compartment at 41°F (5°C) or below during storage, display, and service. (NAVMED P-5010-1, article 9-502.16)		
	b. Dispenser and holding cabinets have accurate temperature gages or thermometers. (NAVMED P-5010-1, article 4-204.112)		
	c. Dairy box capable of being maintained at 33°-34°F. (NAVMED P-5010, article 1-34)		
	8. Ice Machines		
	a. Ice scoop made of smooth, corrosion resistant, non-toxic (FDA Food, Drug and Cosmetic Act guidelines), stable, non-absorbent materials. (NAVMED P-5010-1, article 4-101.11).		
	b. Ice compartment drains are aligned to the deck drains with an air gap. Air gap is at least twice the diameter of the drain served, but not less than 2 inches. (NAVMED P-5010-1, article 5-203.14, NAVMED P-5010-1, article 5-202.13, NAVMED P-5010-1, article 5-203.14 and NAVMED P-5010-1, article 5-202.13)		
	c. Ice scoop, stored handle up, in a covered and freely draining bracket outside ice storage compartment or inside the ice machine on a bracket above the highest level of the ice. (NAVMED P-5010-1, article 3-304.12)		
	9. Manual Dishwashing		

	a. Utensils move from dirty to clean side of wash area without risk of cross contamination by handling or splashing. (NAVMED P-5010-1, article 4-904)		
	b. A three-compartment sink is installed for washing pots, pans and utensils. (NAVMED P-5010-1, article 4-301.12 and T9640-AC-DSP-010/HAB)		
	c. Booster heater capable of supplying final rinse water at least 171°F. (NAVMED P-5010-1, article 4-301.16, NAVMED P-5010-1, article 4-501.111, and T9640-AC-DSP-010/HAB)		
	d. Temperature gage installed or thermometer used to monitor wash and rinse temperatures. (NAVMED P-5010-1, article 4-204.115)		
	e. The temperature of the wash solution in manual warewashing equipment shall be maintained at not less than either 110°F (43°C) or the temperature specified on the cleaning agent manufacturer's label instructions. (NAVMED P-5010-1, article 4-501.19)		
	f. If immersion in hot water is used for SANITIZING in a manual operation, the temperature of the water shall be maintained at 171°F (77°C) or above. (NAVMED P-5010-1, article 4-501.111)		
	g. Long-handled dip baskets available. (T9640-AC-DSP-010/HAB)		
	10. Dishwashing Machine		
	a. Center and end curtains installed. (S9AA0-AB-GOS-010/GSO, section 651)		
	b. Temperature gages accurate to ±3°F. (NAVMED P-5010-1, article 4-501.112)		
	c. Multiple tank conveyor dishwashing machine meets the following requirements (NAVMED P-5010, Article 1-9):		
	(1) Wash temperature 150-165°F for 7 seconds. (NAVMED P-5010-1, article 4-501.110)		
	(2) Rinse temperature 165-194°F for 7 seconds. (NAVMED P-5010-1, article 4-501.112)		
	(3) Final rinse temperature 180-194°F with a conveyor speed of 15 feet per minute at 15-25 psi or as specified in the machine technical manual. (NAVMED P-5010-1, article 4-501.112 (temperature) and NAVMED P-5010-1, article 4-501.113 (pressure))		

	d. Operating instructions posted on, or conspicuously near, the machine. (OPNAVINST 5100.19, Section V. 16)		

FOOD SERVICE

Inspector: _____ Date: _____

C.	LIVING SPACES	YES	NO
	1. Bunks and lockers neat and in usable condition and bunk curtains installed. (S9AA0-AB-GOS-010/GSO, sections 640, 641, 642, and 643)		
	a. Floor space appropriate to rank of individual(s) occupying room and a minimum of 72 square feet of floor space per person, including a minimum of 3 feet between sleeping arrangements (racks, bunks, beds). (T9640-AC-DSP-010/HAB and NAVMED P-5010-2)		
	b. Each rack has an Emergency Escape Breathing Device installed within 3 feet from the head of the berth. (S9000-AD-SPN-010/NCDS, section 664 and T9640-AC-DSP-010/HAB)		
	c. Head-to-foot sleeping arrangements for occupants of adjacent beds or Privacy curtains installed at each bed. (NAVMED P-5010-2)		
	d. Hot bunking is prohibited. (T9640-AC-DSP-010/HAB, NAVMED P-5010-2)		
	e. Floor space is appropriate to rank of individual(s) occupying room and a minimum of 72 square feet of floor space per person, including a minimum of 3 feet between sleeping arrangements (racks, bunks, beds). (T9640-AC-DSP-010/HAB, NAVMED P-5010-2)		
	2. Sanitary Spaces - Facility		
	a. Plumbing fixtures installed in washrooms, showers and water closets, including showerheads and soap dishes and other necessary items. (S9AA0-AB-GOS-010/GSO, section 644)		
	b. Sinks, urinals, and commodes are clean, odor free, and operable. (NAVMED P-5010-2)		
	c. There are separate sanitary spaces for males and females. (T9640-AC-DSP-010/HAB)		
	d. During sewage backflow and overflowing toilet units, spaces are immediately secured until fixed then cleaned and sanitized. (NAVMED P-5010-2)		
	e. Adequate number of fixtures are provided per accommodation. (NAVMED P-5010-2T9640-AC-DSP-010/HAB)		
	3. Prescribed deck covering installed. (S9AA0-AB-GOS-010/GSO, section 634, NAVSEA Standard Item 009-26)		
	4. Adequate furniture and equipment installed to provide reasonable comfort, relaxation and entertainment in lounge areas.		

	5. Berthing spaces are clean, adequately ventilated and well illuminated. (OPNAVINST 9640.1, NAVMED P-5010, Chapter 2)		
	6. Drinking fountains are of the jet-angle type with clean bowls, orifices and orifice guards. (NAVMED P-5010-6)		
	7. No Category I flammables, combustibles or aerosol containers stored in berthing spaces. (NSTM Chapter 670, S9AA0-AB-GOS-010/GSO, section 671, S9AA0-AB-GOS-010/GSO, section 672)		
	8. Sinks, urinals and commodes are clean, odor free and operable. (NAVMED P-5010, Chapter 2)		
	9. The temperature of the hot water supplied for personal use of the crew does not exceed 130°F. (S9086-SE-STM-010/533)		
	10. Temperatures in berthing and messing spaces do not exceed 78°F. (T9640-AC-DSP-010/HAB)		
	11. Temperatures in living, sanitary, messing, medical, control spaces, and normal working stations are not lower than 65°F. (T9640-AC-DSP-010/HAB)		
	12. There are separate sleeping quarters for males and females. (OPNAVINST 1300.17, T9640-AC-DSP-010/HAB)

D.	FRESHWATER	YES	NO
	1. Surveillance		
	a. Halogen residual present. (NAVMED P-5010-6, article 6-8.2.d and article 6-7.5)		
	b. Bacterial analysis obtained from points representative of the entire distribution system. (NAVMED P-5010-6, article 6-7.4)		
	c. Ice machines tested for bacterial contamination. (NAVMED P-5010-6, article 6-45)		
	d. Potable water processed or obtained from an approved source. (S9AA0-AB-GOS-010/GSO, section 532 NAVMED)		
	2. Bromination System and Equipment (when applicable).		
	a. Brominators are properly installed and functional. (NAVMED P-5010, Chapter 6, Article 21)		
	b. Warning plate installed next to unit. (S9AA0-AB-GOS-010/GSO, sections 532 and 507)		
	c. A four-foot hose with quick opening valve and vacuum breaker installed nearby. (S9AA0-AB-GOS-010/GSO, sections 532)		
	d. Bromine cartridges stored in dry, clean, well-ventilated storeroom. (S9AA0-AB-GOS-010/GSO, sections 532)		
	e. Locker or bin has label plate inscribed “Bromine Cartridges”. (S9AA0-AB-GOS-010/GSO, sections 532)		
	f. Storage locker has warning plate. (S9AA0-AB-GOS-010/GSO, sections 532)		
	3. Chlorination System and Equipment.		
	a. HTH stored in a metal box with three 1/4” holes, painted gray and labeled with red letters on white or black background “HAZARDOUS MATERIAL, CALCIUM HYPOCHLORITE”. (OPNAVINST 5100.19, Chapter 23)		
	b. HTH lockers not installed in machinery space, flammable liquids storeroom, berthing space or oil and water test lab area). (OPNAVINST 5100.19, Chapter 23)		
	4. Sounding Tubes		
	a. Equipped with screw caps. (NAVMED P-5010-6, Article 6-18.3)		
	b. Screw caps have keeper chains attaching them to sounding tubes. (NAVMED P-5010-6, Article 6-18.3)		

	c. Padlocks secure caps. (NSTM, Chapter 533, Section 2.3.6)		
	d. Label plates present. (NAVMED P-5010-6, Article 6-17)		
	e. Caps are color coded dark blue. (NAVMED P-5010-6, Article 6-17)		
	5. Potable Water Hoses		
	a. New hoses are disinfected with a solution not less than 100 ppm FAC for at least 2 minutes. (NSTM, Chapter 533, Section 3.3.3)		
	b. Labeled "Potable Water Only" at 10-foot intervals. (NAVMED P-5010-6 article 6-30 and S9086-SE-STM-010/533, section 533-2.1.3)		
	c. End couplings color coded dark blue. (NAVMED P-5010, Article 6-19)		
	d. Stored with ends capped or coupled together. (NSTM, Chapter 533, Section 2.1.3)		
	e. Hoses not used for any other purpose. (NAVMED P-5010, article 6-8 and NSTM Chapter 533, Section 2.1.3).		
	6. Potable Water Hose Lockers		
	a. Located at least 18 inches off deck and hose disinfecting instructions posted in a conspicuous location in the hose storage areas. (NAVMED P-5010-6, article 6-19 and S9086-SE-STM-010/533, section 533-2.1.3)		
	b. Padlocked, vermin proof and labeled "Potable Water Hose". (NAVMED P-5010-6, article 6-19 and S9086-SE-STM-010/533, section 533-2.1.3)		
	7. Potable Water Receiving Connections		
	a. Located at least 18 inches off deck, are not cross connected with any non-potable waterline or system and are turned down to protect against contamination. (NAVMED P-5010, article 6-8 and NSTM 533, Section 2.1.2)		
	b. Conspicuously designated by warning plate "POTABLE WATER ONLY", closed with screw cap when not in use, and cap has keeper chain attached to riser. (NAVMED P-5010, Article 6-8 and NSTM 533, Section 2.1.2)		
	c. Valve handwheel color-coded dark blue. (NSTM 505)		
	8. Cross Connections		

	a. Potable water connections to the following equipment provided with either an air gap of at least two supply pipe diameters, or a vacuum breaker backflow preventer installed at least six inches above the maximum potable fill level: (NSTM, Chapter 533, Sections 2.3.3.1 and 2.3.5.2)		
	(1) X-ray and photo developing equipment and associated chemical mixing tanks.		
	(2) Laundry washing machines.		
	(3) Diesel engine cooling jackets.		
	(4) Garbage disposals.		
	(5) Gaylord hood automatic wash down system (vacuum breaker installed upstream from detergent injector) (GEN SPECS, Section 532b3), if applicable.		
	(6) Steam tables, steam kettles, potato peelers, sinks and other food service equipment.		
	(7) Bridge or helicopter control tower window washer tanks.		
	(8) Other equipment containing non-potable liquids.		
	b. Continuous pressure backflow preventer with intermediate vent provided wherever a permanent or hose connection is made below the overflow level of equipment containing non-potable liquids and a manual or automatic cutout valve is installed downstream of the vacuum breaker (GEN SPECS, Section 532bl), if applicable.		
	c. Reduced pressure backflow preventer provided wherever a permanent or hose connection is made to equipment or a system that could subject the potable water system to a positive pressure such as the chill water expansion tank (GEN SPECS, Section 532bl), if applicable.		
	d. Sink and space faucets with standard 3/4-inch hose threads equipped with a hose connection vacuum breaker. (NSTM 533, Section 2.3.5.1)		
	e. Laboratory and shop (photo and battery shop) sinks with non-standard hose connections equipped with either an integral vacuum breaker or hose vacuum breaker. (NSTM 533, Section 2.3.5.2)		
	f. Hose connections to the potable water system disconnected when not in use. (NSTM 533, Section 2.3.4)		

	g. Label plate having the following wording in one-inch-high red letters installed in a conspicuous location near each hose connection to the potable water system: "CAUTION DISCONNECT HOSE WHEN NOT IN USE". (NSTM 533, Section 2.3.4)		
	h. Two check valves installed in the potable water supply to carbonated beverage dispensers with no copper, brass or bronze pipe, valves or fittings downstream of check valves, if applicable. (GEN SPECS 532, Section 532bl)		

FRESHWATER

Inspector: _____Date: _____

E.	CHT SYSTEM	YES	NO
	1. Personal Hygiene		
	a. Handwashing facilities located in or near pump rooms or comminutor spaces. (S9086-T8-STM-010/593, section 593-8.3.7.4.2.g)		
	b. Signs posted in CHT spaces near each sewage pump controller requiring hand washing with soap and water prior to leaving area, and prohibiting eating, drinking and smoking while work is in progress. (NAVMED P-5010, Chapter 7, Article 19(6) and NSTM 593)		
	2. Pump Room Safety		
	a. Slightly negative pressure exhaust ventilation with duct installed 9 inches from the deck in CHT pump rooms. (NAVMED P-5010, Chapter 7, Article 22 and NSTM 512)		
	b. Is there a locker stocked with personal protective equipment located at the entrance to the sewage pump room or comminutor space? (S9086-T8-STM-010/593, section 593-8.3.7.4.2)		
	c. Are there leaks present in sanitary fixtures or sanitary fixture piping in use? (S9086-T8-STM-010/593, section 593-8.3.7.4.3.f)		
	d. Are the intended sanitary spaces to support crew, readily accessible and clear of equipment and debris?		
	e. Indicator light installed outside compartment indicating ventilation system is operating. (NAVMED P-5010, Chapter 7, Article 22)		
	f. Two emergency escape breathing devices (EEBD) placed in each CHT pump room. (S9086-T8-STM-010/593, section 593-8.3.7.1.1.d)		
	g. Placard installed at the access of each CHT pump room outlining safety precautions to be followed if a sewage spill occurs. (NAVMED P-5010, Chapter 7, Article 22d)		
	h. Warning sign posted near each sewage pump controller: "CAUTION, WHEN HIGH LEVEL ALARM SOUNDS DIVERT UPPER DECK DRAINS OVERBOARD AND CLOSE ISOLATION VALVES ON DRAINS BELOW OVERBOARD DSCHARGE" , if applicable. (GEN SPECS 593a)		

	i. Audible and visual alarms for high and low sewage tank levels wired to signal in a continuously manned station and in the CHT pump room. (NSTM 593, Section 4.2.5 and GEN SPECS 593a)		
	3. Ship-Shore Transfer		
	a. Sewage fuser properly labeled. (GEN SPECS 593a)		
	b. Label plates at each deck discharge connection with warning against disconnecting sewage hose while it is pressurized, hose hook-up and disconnect procedures and sanitary and health precautions, if applicable. (GEN SPECS 593a)		
	4. Surveillance		
	a. Removable drip pans installed beneath comminutors mounted off deck, or a two-to-four-inch coaming around deck-mounted comminutors to aid in detection of possible leakage. (NSTM 593, Section 4.2.14)		
	b. Removable drip pans provided in health sensitive areas under valves and takedown joints to detect possible leakage. (NSTM 593, Section 4.2.14)		
	5. General Requirements		
	a. CHT space capable of containing sewage spills. (NSTM 593, Section 4.2.14 and GEN SPECS 593a)		
	b. Proper color-coding of handwheels, valves, fusers and caps. (NSTM 505, Table 505-16)		
	c. Functional eductor or sump pump installed in CHT spaces. (NSTM 593, Section 4.2.14)		

CHT SYSTEM

Inspector: _____Date: _____

F.	LAUNDRY AND DRY CLEANING	YES	NO
	1. Laundry and dry-cleaning facilities are operational. (OPNAVINST 9640.1 and S9AA0-AB-GOS-010/GSO, section 655)		
	2. Adequate ventilation available. (NAVMED P-5010-2, Article 2-46)		
	3. Fixtures and appliances connected to prevent backflow or cross-connection with the potable water supply. (NAVMED P-5010, Article 2-37.3)		
	4. Adequate drinking water furnished by drinking fountain. (T9640-AC-DSP-010/HAB)		
	5. Rooms or spaces designed, and machines and equipment arranged, so that a separate flow of clean and soiled garments will be maintained through the laundry or cleaning process. (NAVMED P-5010, Article 2-37.8)		
	6. All steam and hot water pipes are insulated with approved (non-asbestos) lagging. (T9640-AC-DSP-010/HAB)		
	7. Adequate lighting levels are provided. (NAVMED P-5010, Article 2-40.3)		
	8. Automatic safety devices on all equipment clearly identified and operational. (NAVMED P-5010, Article 2-40.7)		
	9. Ensure NAVSEA 1995/93 preventing laundry dryer fires are posted (stock number 0118-LF-981-6600).		
	10. Guard rails are installed for ironers, compressors, and other dangerous pieces of equipment. Drive shafts, exposed belts, and gears should be enclosed. (T9640-AC-DSP-010/HAB)

LISTING OF APPENDICES.

A Specific Dock Trial Test Areas
B Minimum Fast Cruise Requirements
C Listing of Tests to Be Performed During Aircraft Carrier Builder's Trials
D Listing of Tests to Be Performed During Submarine Initial Tightness Dive
E Escort Ship Capabilities for Submarine Sea Trials
F Listing of Tests to be Performed Prior to, During and Following Submarine First Dive to Test Depth

4.1 PURPOSE. To identify the Trials incident to new construction, provide a brief description of each, identify unique support requirements and list specific test areas.

4.2 DOCK TRIALS.

4.2.1 Purpose. To demonstrate that major systems and equipment is ready to support Fast Cruise and Sea Trials.

4.2.2 Conduct. Dock Trials are conducted by Ship's Force per reference (a) for nuclear powered ships and following the Builder's Contract for Surface Force Ships. Normally a period of one day is assigned for integrated Dock Trials, tests and evolutions.

4.2.3 Scheduling. Dock Trials must take place prior to crew certification for submarines, prior to Fast Cruise for aircraft carriers and prior to the first Ship's Force underway period for Surface Force Ships. Dock Trials should be scheduled by mutual agreement between the ship, shipbuilder and the Supervising Authority. Dock Trials should be completed with adequate time allowed to correct deficiencies.

NOTE: THE SHIPBUILDER OR SUPERVISING AUTHORITY MAY DESIRE TO CONDUCT "MACHINERY CHECKOUT" OR SYSTEM CHECKS PRIOR TO DOCK TRIALS IN ORDER TO TEST SHIP SYSTEMS. COMPLETION OF REPAIRS AND MODIFICATIONS ARE NOT REQUIRED EXCEPT FOR SYSTEMS THAT DIRECTLY SUPPORT THE TESTS. IN ORDER TO SUPPORT THESE EVOLUTIONS, CLOSE LIAISON BETWEEN THE PROSPECTIVE COMMANDING OFFICER (PCO) OR OFFICER IN CHARGE (OIC) AND THE SHIPBUILDER OR SUPERVISING AUTHORITY WILL BE REQUIRED.

NOTE: SHIP'S FORCE MUST HAVE OPERATIONAL CONTROL OF ALL SHIP'S SYSTEMS REQUIRED FOR SEA TRIALS PRIOR TO THE CONDUCT OF DOCK TRIALS.

4.2.4 Specific Test Areas. There are specific tests which relate to both system and ship safety which must be conducted in preparation for Fast Cruise and Sea Trials. Appendix A of this chapter lists the minimum alongside tests to be conducted by Ship's Force during Dock Trials. References (b) and (c) provide additional information for aircraft carriers.

4.3 FAST CRUISE.

4.3.1 Purpose. To train the crew and determine the crew's ability to safely take the ship to sea.

4.3.2 Conduct.

a. Fast Cruise is conducted per references (a), (d), and (e).

b. In addition to the normal underway routine, the Commanding Officer (CO) or OIC must have all equipment operated to check for proper operation and to determine the state of training of the crew. Fast Cruise must, as far as is practical, simulate at-sea operating conditions. It is to be conducted by Ship's Force and is to be unhampered by construction or repair work or by movement of industrial activity personnel through the ship. Neither the shipbuilder nor the Supervising Authority will schedule any trials, tests or other work on the ship during this period.

c. The ship will be operated as if underway, simulating the various evolutions required for safe operation. Each underway watch section must be exercised in the evolutions which are normally performed on a section basis. Check out all communication systems during each evolution. Ensure that each is in proper working order and that, where duplicate systems exist, a priority system is designated.

d. (Submarines only) The Fast Cruise should be a minimum of four days in duration. It should be completed within a five-day period. It should end not more than three days prior to underway trials. Normally, the ship will go to sea for underway trials within a day after completion of Fast Cruise. Should the 72-hour period be exceeded, the Type Commander (TYCOM) may direct an additional Fast Cruise.

4.3.3 Scheduling. Fast Cruise is scheduled immediately prior to underway trials. Approximately 7 days prior to the first underway trial, the Supervising Authority with the concurrence of the CO or OIC notifies the Navy Shipbuilding Program Manager that the ship is ready to commence Fast Cruise (chapter 2, paragraph 2.4.1.v. of this volume).

4.3.4 Specific Test Areas. Appendix B of this chapter lists the minimum evolutions and drills to be conducted during Fast Cruise. Additional drills and evolutions are at the discretion of the PCO or OIC. References (b) and (c) provide additional information for aircraft carriers, reference (e) for Surface Force Ships.

4.3.5 Reports (Nuclear Powered Ships only). The Supervising Authority with concurrence from the PCO or OIC reports the successful completion of Fast Cruise using the format of volume I, chapter 2, Appendix B$_7$ of this manual (submarines only). chapter 2, paragraph 2.4.1 of this volume refers.

4.4 SEA TRIALS.

4.4.1 General.

a. The policies, procedures and responsibilities pertaining to Sea Trials for ships undergoing construction are set forth with reference (d). References (a), (f), (g) and (h) augment the basic instruction.

b. Sea Trials for the various platforms undergoing construction differ in complexity, conduct and scope of Ship's Force involvement. Surface Force Ship platforms such as the DDGs or LHDs go through Builder's Trials (BT) which for the most part are conducted with little to no involvement by Ship's Force. Industrial activity employees take the ship to sea and perform the majority of system or equipment testing. Paragraph 4.4.2 of this chapter provides additional information concerning BTs.

c. Nuclear powered ships' Sea Trials, however, are much more orientated to Ship's Force involvement. Ship's Force is responsible for taking the ship to sea and operating all shipboard equipment. The terms Alpha Trial, Bravo Trial, Charlie Trial, Combined Trial (CT) and Guarantee Material Inspection (GMI) are most often associated with submarine Sea Trials whereas aircraft carriers undergo BTs prior to Acceptance Trials (AT). Subsequent paragraphs provide amplifying information concerning these trials.

d. Underway trials following construction, particularly initial submerged and test depth trials for submarines, must be undertaken with the knowledge that the crew lacks

recent experience operating as a unit and that the ship's structure and fittings have not been tested in an at-sea environment. All tests and procedures must be conducted carefully and methodically. In the case of submarines, systems and components designed to operate at test depth should not be exercised at test depth for the sole purpose of proving the design. They should be operated at the deepest depth at which they might be used. Trials and tests which are inherently hazardous should not be conducted. For example, a submarine's hovering system should not be demonstrated at test depth. Reference (i) provides additional information concerning the testing of submarine seawater systems during underway Sea Trials. Sea Trials following new construction are normally conducted with a significant number of "riders". These riders represent Naval Sea Systems Command (NAVSEA), TYCOM, Shipbuilder and Board of Inspection and Survey (INSURV) personnel onboard to observe various tests and trial evolutions. The ship's normal load out of Lithium Hydroxide canisters, Lithium Hydroxide curtains, Emergency Air Breathing (EAB) masks, Submarine Escape and Surface Survival Personnel Equipment (SESSPE) suits and Oxygen candles is not sufficient to support this increase in personnel. Therefore, an additional four Lithium Hydroxide canisters, four Lithium Hydroxide curtains, one EAB mask, one SESSPE suit (as applicable), and two oxygen candles must be carried for each rider exceeding normal crew manning. Lithium Hydroxide canisters, EABs, SESSPE suit (as applicable) and Lithium Hydroxide curtains are to be obtained from the industrial activity.

e. The following general conditions apply:

(1) A shipbuilder generated, Supervising Authority, Navy Shipbuilding Program Manager or TYCOM approved agenda is required for each Sea Trial.

(2) All trial periods must be organized such that each member of the crew has an opportunity to get six uninterrupted hours of sleep during each 24-hour period. Sea Trial elements which can be accomplished by a normal watch section may be conducted concurrently with crew rest periods.

(3) Sea Trials should normally be scheduled to allow at least three weeks between CT or AT and the scheduled delivery date.

(4) The prerequisites for aircraft carrier and submarine Sea Trials are a Pre-Critical Reactor Safeguard Examination, Crew Certification, Dock Trials and Fast Cruise.

(5) Each submarine watch section must be provided with approximately two hours' experience submerged at moderate speeds prior to the deep dive or full power run.

(6) Critical operation of reactors while naval nuclear powered ships are in a Naval or private industrial activity will be governed by reference (j). Prior to delivery, permission to conduct critical reactor plant operations must be obtained by the Supervising Authority from NAVSEA Nuclear Propulsion Directorate (08).

(7) During inspections, deficiencies should be limited to those items for which a correction is mandatory to ensure safe operation during Sea Trials.

(8) At the start of Fast Cruise the ship should be ready in all respects for the commencement of Sea Trials with the exception of the additional training the crew will receive during Fast Cruise.

(9) Inspectors must determine that all work and testing necessary to support Sea Trials has been completed or identified for completion prior to commencement of Fast Cruise including the following:

(a) All ship systems which affect safe operation during Sea Trials must be operable.

(b) All work necessary for safe operation of the ship during Sea Trials has been satisfactorily completed and tested. Included must be a check for any special configuration or installations ensuring that they have been authorized by the proper authority (NAVSEA and TYCOM), that their impact has been fully assessed and that the Sea Trial agenda addresses these impacts or limitations.

(10) NAVSEA and the Supervising Authority are expected to properly discharge their responsibilities for quality assurance and control of authorized industrial work (e.g., it is not necessary for the Immediate Superior in Command (ISIC) inspections to inspect the quality of the pressure hull radiographs or other nondestructive test records of the industrial activity).

(11) Following completion of the required training and material readiness certification, the CO or OIC must keep the ISIC fully informed of any changes in personnel, training or material status which could affect the validity of certification. Prompt notification is required to permit revision of Operational Orders and services required.

(12) (Submarines only) Prior to getting underway for Sea Trials, Shipyard, Ship's Force and Type Commander must jointly agree that the required seven day supply of Oxygen and seven day supply of Carbon Dioxide (CO_2) removal capacity will be available in each compartment, based upon the number of expected occupants of that compartment, independent of the supply and removal capacity in the other compartment(s).

(13) Sea Trial Situation Reports (SITREP) (Submarines only). Ships executing Sea Trials associated with a new construction program must submit daily SITREPs using the message format in volume II, part III, chapter 2, Appendix BD of this manual following the SITREP guidelines contained in volume II, part III, chapter 3, paragraph 2.6.8.9 of this manual.

4.4.2 Builder's Trials. BTs conducted by a private shipbuilder are normally comprised of a Builder's Dock Trial (BDT) and one or more Builder's Sea Trials (BST). Some DDGs are currently undergoing three BSTs. The first BST, referred to as an Alpha Trial by the DDG community, is primarily a propulsion plant trial. The second BST, referred to as a Bravo Trial, primarily covers Combat System evolutions and the third BST is the AT. While the actual content of BSTs will be dependent upon the platform, the primary purpose is still the same; the validation of ship's equipment and systems in preparation for Charlie Trials or AT. Appendix C of this chapter provides a sample listing of tests to be performed during an aircraft carrier's BT.

4.4.3 Alpha Sea Trial (Submarines only). A submarine's first underway period primarily conducted for propulsion plant testing and the initial tightness dive. (First ship of each class normally conducts a dive to Test Depth during this trial).

a. Testing. The tests and evolutions to be carried out while on the surface en-route to the test dive area, just prior to the initial dive and during the initial dive are identified in Appendix D of this chapter.

b. Restrictions. The following rules apply to the conduct of trials and tests associated with ship construction, Navy Shipbuilding Program Manager sponsored Trials and Tests or any other situation where the ship is requested to conduct trials or tests:

(1) No test or trial event will be conducted that requires crew intervention to avoid exceeding normal operating limits. Trial agendas will be based on the expectation that the ship will remain within normal operating limits of the Submerged Operating Envelope (SOE) and at angles less than 30 degrees.

(2) The trial director must be prepared to project whether the next event might exceed normal operating limits based on the empirical results of the previous event. A run that is predicted to exceed normal operating limits should be deleted along with the more demanding runs of that sequence.

(3) Any run which will result in exceeding normal limits of the SOE or 30 degree angles but which is essential to provide adequate test data must be specifically approved by the TYCOM. The test or trial sponsor will obtain this permission.

(4) A violation of the SOE limit or exceeding a 30-degree angle, not previously approved, must be reported by unit Situation Report (SITREP). No further testing or trials will be conducted until TYCOM concurrence is obtained.

(5) Specific written approval by the TYCOM is not required to operate outside the upper limits of the SOE, i.e., shallow and fast, while conducting the following operations during Sea Trials or tests following an agenda approved by the ISIC, Navy Shipbuilding Program Manager or higher authority:

(a) Conducting full power runs or cavitation curves.

(b) Navy Shipbuilding Program Manager sponsored acoustic trials following an approved acoustic trial agenda.

(6) The first underway will be limited in scope. The initial tightness dive will be a deliberate, planned, step-by-step evolution as defined in Appendix D of this chapter, using conservative angles and moderate speed. The maximum water depth for this dive must be 400 feet, as prescribed by Appendix D of this chapter.

c. Escort. The submarine must be accompanied by an escort properly equipped with sonar communication equipment. The escort ship must have the capabilities identified in Appendix E of this chapter. Specifically, an escort is required for:

NOTE: FOR ALPHA SEA TRIAL, A BACK-UP ESCORT WILL BE ASSIGNED AND READY IN CASE OF FAILURE OF THE PRIMARY ESCORT.

(a) Initial tightness dive after construction and the first dive to any deeper depth.

(b) Initial deep dive after construction.

(c) Emergency Main Ballast Tank (EMBT) blow test under the following conditions:

1 Blow for first time from each depth. Trial agenda will specify depths.

2 Any blow from greater than 400 feet. Rationale is to give submarine added protection to prevent interference from any surface contact.

NOTE: IN ALL CASES, HULL STRENGTH, TIGHTNESS AND VALVE OPERATIONS WILL HAVE BEEN TESTED TO A DEPTH EQUAL TO OR GREATER THAN EMBT BLOW DEPTH BEFORE TESTING EMBT BLOW SYSTEM.

(d) The second and subsequent underway periods if major hull and system work has been accomplished since the last Sea Trial.

(2) Alternate Escort. If a surface ship meeting the requirements of Appendix E of this chapter is not available, then a submarine with the required capabilities will be assigned. In any event, each situation must be examined on a case basis and approval by the TYCOM must be obtained to conduct the initial tightness or test depth dives.

(3) When an escort ship is other than a submarine, an officer qualified in submarines (Gold Dolphins) must be embarked during the escort duty.

(4) Assignment of Submarine Rescue Diving Recompression System (SRDRS). A SRDRS consisting of a designated SRDRS support ship, will be placed in a modified alert status at the beginning of those Sea Trials requiring an escort for:

(a) Ship's initial tightness and deep dive events.

(b) Subsequent Sea Trials until the completion of the initial dive to design test depth.

(c) If, in the TYCOM's judgement, a Sea Trial requires an escort due to major hull cuts, etc., the TYCOM must obtain Navy Shipbuilding Program Manager concurrence when determining the need for escort and SRDRS services. The ship conducting Sea Trials will notify Commander, Submarine Development Squadron Five and Commander Naval Sea Systems Command (COMNAVSEASYSCOM) when SRDRS is no longer required due to completion of the events necessitating the alert status or due to delays in completing Sea Trials.

(d) The cognizant shipyard activity and Commander Submarine Force Atlantic or Commander Submarine Force Pacific must notify COMNAVSEASYSCOM and Commander, Submarine Development Squadron Five 30 Days prior to the SRDRS need date. All changes in the requested modified alert date will be immediately identified to COMNAVSEASYSCOM and Commander, Submarine Development Squadron Five. Sample messages in Volume II, Part III, chapter 2, Appendices BI and CG of this manual.

(e) Commander Submarine Force Atlantic or Commander Submarine Force Pacific must identify the SRDRS support ship in the tasking message. The TYCOM must ensure Airport and Seaport verification checks are current or accomplished to support SRDRS activation.

(f) The SRDRS is not required to be placed in a modified alert status for those Sea Trials requiring an escort solely for the accomplishment of an EMBT blow from depths greater than 400 feet.

d. Reporting Criteria. The Supervising Authority is responsible for reporting the satisfactory completion of Alpha Sea Trial to the Navy Shipbuilding Program Manager. Volume I, chapter 2, Appendix C1 of this manual refers.

4.4.4 Bravo Sea Trial (Submarines only). Bravo Sea Trial is generally the submarine's second underway period and first dive to Test Depth.

NOTE: THE FIRST SHIP OF EACH CLASS NORMALLY CONDUCTS ITS FIRST DIVE TO TEST DEPTH DURING ALPHA TRIAL.

a. Testing.

(1) The tests and evolutions to be carried out following the initial tightness dive and prior to the deep dive, during the deep dive, submerged following the deep dive, and on the surface following the deep dive, are identified with Appendix F of this chapter.

(2) Shutter Stall Speed. Run ahead at maximum speed allowed by SOE. Operate torpedo tube shutters and ejection pump shutters. If shutters do not open, gradually reduce speed until shutters open. This establishes "stall speed" for each shutter.

b. Restrictions. As specified in paragraph 4.4.3.b of this chapter.

c. Escort. As specified in paragraph 4.4.3.c of this chapter.

d. Reporting Criteria. With the exception of reporting the deficiencies during the trial, reporting of the completion of Bravo Trial is not required. Daily SITREPs to the Supervising Authority and the Supervising Authority's message concerning the completion of all trials (Volume I, Chapter 2, Appendix D1 of this manual refers) satisfies the reporting requirements.

4.4.5 Charlie Sea Trial (Submarines only). Charlie Sea Trials are conducted prior to CT. Bravo Trial retest items are also included in this trial. The standard restrictions and escort requirements as specified per paragraphs 4.4.3.b and 4.4.3.c of this chapter apply.

4.4.6 Acoustic Trials (Platform and Radiated) (Submarines only). New construction acoustic trials, performed by the shipbuilder, are accomplished to determine, under various conditions of operation, the radiated and platform acoustic signatures of the submarine, the controlling noise offenders including those which are speed dependent, and whether or not the submarine meets its underway noise objectives. Proper operation of systems and components and the use of proper personnel quieting techniques is vital for successful acoustic measurements. Acoustic trials performed by Naval Surface Warfare Center Carderock Division (NAVSURFWARCEN CD) are used to establish the ship's baseline signature for normal operating conditions by performing independent measurements under preset conditions of speed, depth, aspect angle, and machinery line up. It is imperative that Ship's Force understand that this trial will determine its future operating conditions during various "patrol quiet" conditions.

4.4.7 Shock Trials. Shock Trials are designed to test the survivability characteristics of a ship under deliberate and controlled conditions. Normally scheduled for the first ship of a class just before Post Shakedown Availability (PSA); Shock Trials satisfy Congressionally mandated Live Fire Test and Evaluation requirements. Navy Shipbuilding Program Managers are responsible for the development of a management plan for the conduct of Shock Trials.

4.4.8 Acceptance Trials, Combined Trials, Final Contract Trials and Guarantee Material Inspection.

a. Reference (d) tasks the INSURV with conducting an independent verification of the readiness of a newly constructed ship prior to its acceptance into Naval Service. Reference (k) states that the procedures for conducting trials and inspections must be specified by the President, INSURV. References (f) and (h) provide those procedures for submarines and surface ships respectively. References (f) and (h) are augmented by reference (a) in their application to nuclear powered ships. References (l) and (m) provide detailed information concerning the documentation of deficiencies. In addition, each Supervising Authority, TYCOM, the Naval Ships' Technical Manual (NSTM) and reference (n) all provide additional information concerning AT, CT, GMI and Final Contract Trials (FCT). TYCOM directives are identified in the applicable TYCOM 5215 Notice.

b. Prior to the acceptance and delivery of a new ship, all machinery, electronics and weapons systems installed must be subjected to ATs to determine that the installations are capable of meeting performance specifications. Depending upon the platform type, these trials are referred to as either ATs, or CTs. This independent verification of the ship's readiness for acceptance and recommendation for fleet introduction, as specified in reference (d), is the responsibility of the President, INSURV.

c. These trials are generally two part evolutions. There is an underway portion during which time the INSURV observes the performance of the ship and all equipment and systems. Upon completion of the underway portion, trial board designated equipment and associated components are disassembled for post-trial examination (the open and inspect evolution). References (f) and (h) provide amplifying information concerning this issue.

d. CTs, usually the norm for submarines, are a combination of ATs and FCTs. The AT for non-submarine platforms results in a conditional acceptance primarily based on the

fact that the ship still requires fitting out. Submarines go through the fitting out period during the construction phase which produces a completed ready for sea vessel at delivery. The standard restrictions and escort requirements as specified per paragraphs 4.4.3.b and 4.4.3.c of this chapter apply.

e. FCTs are conducted after the ship has been fully equipped, armed, made complete and ready for service. These trials are normally held just prior to PSA and prior to the end of the guarantee period. Their objective is to determine if there are any defects, failures or deterioration, other than that due to normal wear and tear, directly related to shipbuilder fault which have not been corrected or resolved. The scope of FCTs is essentially the same as AT.

f. A GMI is a material inspection, conducted on submarines prior to PSA by an INSURV per reference (f).

g. INSURV reports from previous ships as held by the Supervising Authority provide familiarity with problems and corrective actions already taken. In addition, these reports provide a baseline for conducting shipboard inspections and generating inputs for the PCO’s monthly progress reports.

APPENDIX A

SPECIFIC DOCK TRIAL TEST AREAS

Test Area (SPECIFIC DOCK TRIAL TEST AREAS)	Class of Ship			
	MSC Ships	**CVN**	**Surface Force Ships**	**SSN**
1. Check all sound powered and interior communications circuits between all stations.	X	X	X	X
2. Test all alarms, i.e., General Quarters, Collision, etc.	X	X	X	X
3. Test each indication on Ballast Control Panel.				X
4. Test whistle.	X	X	X	X
5. Check emergency lights.	X	X	X	X
6. Operate all hydraulic plants using each installed pump.	X	X	X	X
7. Conduct a complete air charge using only ship's compressors.				X
8. Conduct a normal battery charge using only ship's power and equipment.				X
9. Conduct low-pressure blow of all MBTs. Thereafter conduct dockside operation portion of URO MRC 022.				X
10. Flood sanitary tanks and then blow or pump them.				X
11. Operate each main vent valve in hand and power. Following operation, with vent valves shut, conduct a controlled removal of MBT vent covers, one at a time, to check MBT vents for leaks.				X
12. Operate the outboard induction valve in hand and power.				X
13. Operate the diesel engine exhaust valve in hand and power.				X
14. Operate inboard induction valves.				X
15. Raise, train and lower periscopes, snorkel, radar and antenna masts and fairings.				X
16. Test operation of all radio transmitters and receivers using all antennas.	X	X	X	X
17. Operate all radar equipment at rated conditions.	X	X	X	X
18. Operate all sonar equipment at rated conditions.			X	X
19. Take and plot fixes using all navigation equipment and	X	X	X	X

Test Area (SPECIFIC DOCK TRIAL TEST AREAS)	Class of Ship			
	MSC Ships	**CVN**	**Surface Force Ships**	**SSN**
each antenna.				
20. Test operation of drain pump(s) from all operating locations using each bilge suction.				X
21. Test operation of trim, ballast control and list control system and pump by pumping to and from each tank and by pumping to and from sea (from all operating locations).	X	X	X	X
22. Calculate and enter the diving trim compensation.				X
23. Test operation of portable submersible pump from each installed outlet.	X	X	X	X
24. Fire water slugs from torpedo room.				X
25. Fire water slugs from weapons launch console.				X
26. Test magazine and pyro flooding system.	X	X	X	X
27. Operate each lube oil system, including pumps, controllers, purifiers and indicators.	X	X	X	X
28. Energize the Navigation System and gyrocompass; determine that they settle out; take azimuth; check all repeaters.	X	X	X	X
29. Check fresh water system, have water samples analyzed.	X	X	X	X
30. Test capstans.	X	X	X	X
31. Test bow and stern planes in all modes following applicable class operating procedures.				X
32. Operate steering system. Test normal and emergency rudder angle indicators, if applicable.	X	X	X	X
33. Check alignment of periscopes, TBTs and all bearing and range repeaters.				X
34. Test engine order telegraphs.	X	X	X	X
35. Test ABTs.	X	X	X	X
36. Operate each watertight door and hatch.	X	X	X	X
37. Check operation of escape hatch or scuttle fittings.	X	X	X	X
38. Operate each bulkhead flapper and each inter-compartment air salvage valve.				X

Test Area (SPECIFIC DOCK TRIAL TEST AREAS)	Class of Ship			
	MSC Ships	**CVN**	**Surface Force Ships**	**SSN**
39. Operate Signal Ejector by impulse and by hand. Demonstrate satisfactory operation of the Signal Ejector both locally and remotely by firing water slugs and operating the hand rammer through one complete cycle.				X
40. Turn on and check navigation and running lights for brightness and proper lenses (to be done at night). Includes Flight Deck lighting.	X	X	X	X
41. Check air conditioning, chill water, ventilation, and heating systems.	X	X	X	X
42. Check underwater log.	X	X	X	X
43. Check operation of all 400 cycle generating equipment.	X	X	X	X
44. Check out all galley, messing, and ship's service equipment.	X	X	X	X
45. Check fathometer.	X	X	X	X
46. Check bilge flooding alarms.	X	X	X	X
47. Check dummy log.	X	X	X	X
48. Check all HP and LP air system.	X	X	X	X
49. Operate distilling units.	X	X	X	X
50. Check out anchor windlass and brake operation.	X	X	X	X
51. Check out atmosphere monitoring equipment, both installed and portable.		X		X
52. Operate oxygen generator, CO_2 scrubbers, CO burners, and emergency air breathing system.				X
53. If possible, lower, train (if applicable), operate and raise secondary propulsion motor(s).				X
54. Ensure that all required planned maintenance to ship depth detectors is complete.				X
55. Operate the diesel.	X	X	X	X
56. Engage and disengage the clutch.			X	X
57. Test Main Engines; Submarines jack main engines.	X	X	X	X
58. Ensure 7-day supply of oxygen onboard.				X

Test Area (SPECIFIC DOCK TRIAL TEST AREAS)	Class of Ship			
	MSC Ships	**CVN**	**Surface Force Ships**	**SSN**
59. Check out all TV monitoring systems.	X	X	X	X
60. Check out SASS upper and lower trolley cars.		X		
61. Check out small arms lockers and security devices.	X	X	X	X
62. Check out all IFF equipment.	X	X	X	X
63. Check out degaussing equipment (where applicable).	X	X	X	X
64. Check out Hangar Bay doors.	X	X	X	
65. Check out damage control equipment.	X	X	X	X
66. Inspect and operate oxygen and nitrogen systems.	X	X	X	X
67. Check out all tank level indicating systems.	X	X	X	X
68. Check out Flight Deck communications.	X	X	X	
69. Check out meteorological equipment.	X	X	X	
70. Check out graphics preparation and display equipment.	X	X	X	
71. Check out Weapon Systems. Check to include loading of dummy missile at each launch station, transmission of fire control signals and operation of launchers in all modes.	X	X	X	X
72. Operate all electrical and mechanical medical equipment.	X	X	X	X
73. Inspect all compartments for proper stowage and cleanliness.	X	X	X	X
74. Inspect boiler and diesel fuel oil systems.	X	X	X	X
75. Test and inspect jet blast deflectors.		X		
76. Test and inspect JP-5 fuel systems.	X	X	X	
77. Test and inspect all aircraft starting and handling equipment.	X	X	X	
78. Test and inspect aircraft landing equipment including landing signal officer equipment, arresting gear, crash barriers, as applicable.	X	X	X	
79. Operate all RAS equipment.	X	X	X	
80. Inspect paint lockers and sprinkling systems.	X	X	X	
81. Operate all accommodation ladders.	X	X	X	
82. Operate all conveyors.	X	X	X	

Test Area (SPECIFIC DOCK TRIAL TEST AREAS)	**Class of Ship**			
	MSC Ships	**CVN**	**Surface Force Ships**	**SSN**
83. Launch and raise motor whaleboat.	X	X	X	
84. Operate all boats.	X	X	X	
85. Test and inspect lifeboat, life raft stowage and launch equipment.	X	X	X	
86. Test and inspect all elevators in all modes of operation.	X	X	X	
87. Test and inspect all firefighting systems.	X	X	X	X
88. Test and inspect refrigeration systems.	X	X	X	X
89. Test and inspect all seawater cooling systems.	X	X	X	X
90. Operate stern gate doors.			X	
91. Operate boat handling cranes.			X	
92. Conduct URO MRC 029.				X
93. Test and inspect Torpedo Handling System.				X
94. Test and inspect aircraft elevators.		X	X	
95. Test and inspect aircraft launching equipment including catapults.		X		
96. Record megger readings of all antennas where meggering is permissible. (Note: This evolution is not required for PSA unless antennas or hull fittings are specifically worked during PSA.)				X

APPENDIX B

MINIMUM FAST CRUISE REQUIREMENTS

Test Area (MINIMUM FAST CRUISE REQUIREMENTS)	Class of Ship			
	MSC Ships	**CVN**	**Surface Force Ships**	**SSN**
1. Make all preparations for getting underway.	X	X	X	X
2. Station the maneuvering watch, sea and anchor detail.	X	X	X	X
3. Station the normal underway watch (section watches).	X	X	X	X
4. Simulate getting underway and return to port. (Day and Night)	X	X	X	X
5. Walk through all major Sea Trial evolutions.	X	X	X	X
6. Walk through the cycling of hull and back-up valves to be tested during the deep dive.				X
7. Exercise the reduced visibility detail.	X	X	X	X
8. Spot check storage and availability of spare parts and tools. Verify adequacy of stores and provisions.	X	X	X	X
9. Rig for dive and rig for surface.				X
10. Simulate diving and surfacing.				X
11. Rig for deep submergence.				X
12. Conduct the following emergency drills:				
a. Fire	X	X	X	X
b. Collision	X	X	X	X
c. Flooding	X	X	X	X
d. Toxic Gas				X
e. Abandon Ship	X	X	X	X
f. Man Overboard	X	X	X	X
g. Submarine Escape				X
h. Loss of AC Power	X	X	X	X
i. Emergency Ventilation				X
j. Loss of Air Conditioning or ACW		X		X
k. Loss of Lighting	X	X	X	X

Test Area (MINIMUM FAST CRUISE REQUIREMENTS)	Class of Ship			
	MSC Ships	**CVN**	**Surface Force Ships**	**SSN**
l. Loss of Interior Communications	X	X	X	X
m. Loss of Steering	X	X	X	X
n. Engine Casualty Control	X	X	X	X
o. Flight deck and hangar deck crash drills, fire drills, barricade drills, and MOVLAS drills		X		
13. Set General Quarters. Exercise the crew at battle stations.	X	X	X	X
14. Conduct communication and ECM drills.	X	X	X	X
15. Conduct an air charge to all air banks.				X
16. Bleed oxygen and ventilate ship. Ensure 7-day supply of oxygen onboard.				X
17. Anchor (walk-through).	X	X	X	X
18. Exercise damage control party with emergency and damage control equipment.	X	X	X	X
19. Operate atmosphere control equipment and take air samples.				X
20. Perform the minimum Fast Cruise requirements for nuclear propulsion plants contained in reference (o).		X		X
21. Operate air conditioning plants to demonstrate ability to carry the maximum existing ship's air conditioning load or 100% capacity.	X	X	X	X
22. Operate fresh water and seawater heat exchangers at sufficient load to demonstrate proper operation.				X
23. Simulate underway conditions, performing all evolutions and operating all equipment.	X	X	X	X
24. Simulate boat transfer at sea.	X		X	
25. Conduct competitive and non-competitive drills and exercises such as aircraft tracking and aircraft control.	X	X	X	
26. Light-off main propulsion plant, shift to ship's power and run all engines with steam for a short period of time.	X	X	X	X
27. Man Towing, Salvage and Fueling Stations.	X	X	X	
28. Set Flight Quarters as applicable.	X	X	X	

APPENDIX C

LISTING OF TESTS TO BE PERFORMED DURING AIRCRAFT CARRIER BUILDER'S TRIALS

1. The following systems and components will be tested during Aircraft Carrier Builder's Trials:

   a. Auxiliaries

      Emergency Diesel Generators
      O_2N_2 Plants (Forward and Aft)
      Steering Gears
      Motor Driven Fire Pumps and Eductors
      Anchor Windlass
      Stores Conveyors
      Hot Water Heaters
      HP Air Compressors
      Ship Service and Control Air Compressors
      Air Filter Cleaning
      Air Conditioning and Refrigeration Systems
      Turbine Generator and Diesel Generator (Load Transfer Operations)

   b. Aviation

      Aircraft Elevators 1, 2, 3, 4
      Aircraft Starting and Servicing Power
      Boat and Airplane Crane
      Flight Deck Night Lighting
      Arresting Gear
      Aircraft Barricade
      Jet Engine Test Facility
      Elevator Doors and Hangar Bay Division Doors
      Landing Officer's Console and Windscreen
      Visual Landing Aid
      Catapults (No Load Launching)
      Jet Blast Deflectors
      Integrated Catapult Control Stations
      Hangar Bay Darken Ship Switches
      JP-5 Filling, Transfer and Service System

   c. Combat Systems

      Upper Stage Weapons Elevators
      Flight Deck Hatches
      Magazine Sprinkling and Alarms
      Lower Stage Weapons Elevator 7 Hatches
      Inspect Masts

   d. Damage Control

      Halon Fire Protection System

Machinery Space and Pump Rooms 2 and 3 AFFF
Diesel Driven Portable Pumps
Aqueous Potassium Carbonate System
Miscellaneous Sprinkling Systems
Electrical Driven Portable Pumps
List Control Pumps
Magazine Sprinkling and Alarms Systems
CO_2 Hose Reels
Hydraulically Operated Valves
Hangar Bay and Weapons Elevator AFFF
Turbine Driven Fire Pumps

e. Deck

Ship's Boats
Boat and Airplane Crane
Anchor Windlass
Sliding Padeyes
Replenishing-At-Sea Winches
Trash Burners
Mooring and Warping Capstans
Replenishing-At-Sea Support Legs

f. Electrical

Ship Service and Coolant Turbine Generators
Aircraft Elevators 1, 2, 3, 4
Emergency Diesel Generators
Aircraft Starting and Servicing Power
Steering Gear
Gyro-Compass Standby Power Supply
Anchor Windlass
Miscellaneous Alarms (Non-Navigational)
IC CKTs: BZ or JB, CX, DA, 1DL, 3DL, 4FD, 14FD
Degaussing System
General, Chemical and Collision Alarms From All Stations
Flight Deck Crash Alarms
Flight Deck Night Lighting
Navigation Lights
Hangar Bay Darken Ship Switches:
Turbine Generator and Diesel Generator Load Transfer Operations
Mooring and Warping Capstans
400 HZ MG Set Parallel Operations

NOTE: ALL SCUPPERS MUST BE OPERATED FOR CHT CERTIFICATION

g. Environmental Protection

Collection, Holding and Transfer (CHT) Dockside Pumping
CHT SYS - Switch To Holding Mode

CHT SYS - Switch To At-Sea Mode
CHT Valve Rooms 3 Through 9 Valve Operations (4th Deck)

h. Main Propulsion

Shaft Seals Including Inflatable Seals

i. Medical and Dental

Brominators

j. Navigation

Steering Gear
Engine Order Telegraph
Rudder Angle Indicating System
Gyro-Compass Standby Power Supply
General Announcing System
Bridge Announcing System
Ship's Whistles
Pelorus, Signal Lights and Big Eyes
Degaussing System
Visibility - Pilot House, Bridge and Lookout Stations
Navigation Lights
AN/SRN-25 Radio Navigation
AN/SRN-9 Satellite Navigation
AN/SPS-64 Navigation Radar
AN/WRN-6 GPS
Wind Direction
DRTs and DRAI
Magnetic Compass
AN/WSN-1 Navigation System
MK 19 Compass

k. Supply

Stores Conveyors
Laundry
Dumbwaiter
Bridge Crane
Scullery

APPENDIX D

LISTING OF TESTS TO BE PERFORMED DURING SUBMARINE INITIAL TIGHTNESS DIVE

1. The following tests and evolutions will be carried out on the surface en route to the test dive area and prior to the initial tightness dive:

a. Underway. Rig for dive (for Alpha Trial, rig for deep submergence is required for the initial dive). Compensate. Start-up reverse osmosis units.

b. Ship's Force instruct Sea Trial riders on the proper use of EAB masks.

c. Conduct operational test of rudder in normal and emergency modes.

d. Navigation system check. Take fixes by all electronic, celestial, and visual means and compare.

e. Test underwater log(s) using the base course and reciprocal course method (i.e., inertial reference method) or other approved functional procedures to determine accuracy.

f. Check accuracy of all bearing transmitters and indicators. Compare sonar, visual and radar bearings.

g. Check operation of all radar.

h. Check all radio transmitters, receivers and electronic equipment.

i. Inspect stern tube packing glands, seals and circulating water flow for excessive heating, leakage and audible noise.

j. Check Dead Reckoning Analyzer Indicator (DRAI), Dead Reckoning Analyzer (DRA), Dead Reckoning Tracers (DRT) and RPM indication. If certified for electronic navigation, verify satisfactory operation of the Voyage Management System including the ability to receive inputs from the Navigation System, Electromagnetic Logs, Radar bearings, Sonar bearings, fathometer and Gyrocompass, as applicable.

k. Test fathometer(s) and compare with charted soundings.

l. Run ahead at full power long enough for temperatures to reach a stable value. After readings have stabilized, operate rudder through full throw in each direction in normal and emergency power. Time evolution and compare with design values. Check out hand modes.

m. Ahead flank to back emergency.

n. Fire Control System operation.

o. Check operation and accuracy of ship's gyrocompass.

p. Check operation of magazine and pyro locker flooding if not tested in industrial activity.

q. Rendezvous with escort. Conduct radio and sonar communications checks. (See Note 1).

r. Test all bottomside sonar.

s. Test bow plane, sail plane and stern plane operations in all modes.

t. Flood variable tanks to computed compensation.

u. Record megger readings of all antennas where meggering is permissible. (See Note 8).

v. Operate trim and drain pumps.

w. Test variable ballast system for proper operation.

NOTE: CONDUCT PARAGRAPHS 1 AND 3 OF URO MRC 022 (DOCKSIDE OPERATION OF EMBT BLOW SYSTEM VALVES) OR EQUIVALENT SHIPYARD TEST PROCEDURE DURING DOCK TRIALS PER APPENDIX A OF THIS CHAPTER FOR THE TEST OF THE EMBT BLOW SYSTEM. ENSURE THE REMAINING PORTIONS OF URO MRC 022, OR AN EQUIVALENT NAVSEA APPROVED TEST PROCEDURE, THE TEST OF THE EMBT BLOW SYSTEM, ARE COMPLETED PRIOR TO INITIAL DIVE TO TEST DEPTH ON ALPHA SEA TRIAL (INITIAL BUILDER'S SEA TRIAL).

x. Perform a low pressure, normal and EMBT blow for as long as necessary to verify system operability. A static blow must not be used to test the EMBT blow system.

y. Operate on the Emergency Propulsion Motor (EPM) for 10 minutes.

z. Motor generator set operation.

aa. Ventilate ship.

ab. Start atmosphere control equipment.

ac. Additional requirements may be imposed at the discretion of the CO.

NOTE: REQUIRED SYSTEMS ARE LISTED IN PARAGRAPH 4B OF REFERENCE (I). OBSERVE RESTRICTIONS ON OPERATION OF SYSTEMS LISTED IN PARAGRAPH 4D OF REFERENCE (I). BALL VALVE TRASH DISPOSAL UNITS (TDU) (WITHOUT REMOTE CLOSURES) WILL NOT BE OPERATED BELOW 200 FEET.

2. The following tests and evolutions will be carried out immediately prior to or during the initial tightness dive:

a. Obtain navigational fix and take sounding. Maximum depth of water is 400 feet as specified in reference (p).

b. Conduct a dive to periscope depth. Obtain stop trim, if practical, at periscope depth. If sea state requires deeper submergence, proceed slowly to 150 feet for SSN 688 Class submarines (155 feet for SSN 774 Class submarines), (160 feet for SSN 21 and SSBN or SSGN 726 Class submarines) to obtain stop trim. Maximum keel depth must be per Table 1 of Appendix F.

c. Inspect the discharge of all automatic drains in each EMBT Blow quadrant for seawater leakage prior to the first dive when the ballast tanks are flooded (e.g., at periscope depth).

d. Check operation of ship control systems, including depth indication. (See Note 2).

e. Shoot pyrotechnics from each ejector by hand and impulse methods, as applicable (see Notes 3 and 4).

f. Communicate with escort on WQC at each depth increment or at ten-minute intervals, whichever is sooner. If communications are lost, return to depth at which communications can be established before continuing (see Note 1).

g. All hands inspect for leaks and report them to the Sea Trial coordinator.

h. Operate all periscopes, checking optics and for leakage. Operate all masts.

i. Test full throw of rudder and planes at slow speeds.

j. Test operation of trim and drain systems.

k. Check all sonar equipment on each hydrophone.

l. At 155 feet for SSN 774 Class submarines and at 160 feet for SSBN 726 Class submarines (if installed), verify operation of each BQN-13 transmitter using the ship's own SONAR.

m. Comply with the Command Control Systems (CS or CCS) Test Program regarding the shooting of water slugs. This event is not required by the TYCOM if not required by the CS or CCS Test Program (see Notes 3 and 4).

n. Snorkel, test operation of stills and air compressors (see Notes 4 and 5).

o. Operate all hull and back-up valves and equalize sea pressure on all systems designed for test depth (see Notes 4, 6 and 7).

p. Check hovering system (where applicable) (see Note 4).

q. Ensure air banks are charged to within 200 psi of full pressure.

r. Line up MBT blow system for maximum blow rate.

s. Conduct EMBT blow from 200 feet keel depth. Check bank pressure before and after surfacing. Surfacing with EMBT blow may be delayed to permit additional testing, commencing pre-transit valve operating cycling or transit submerged. However, first surface after initial tightness dive must be by EMBT blow from 200 feet.

t. Additional requirements may be imposed at the discretion of the CO.

NOTES

1. In the execution of any Sea Trial, whether escorted or not, submarine COs are reminded of their responsibility to communicate with escorts or shore authorities, or both, within prescribed, previously agreed upon time limits to avoid initiation of inadvertent lost contact or submarine disaster procedures.

2. Compare all depth and pressure gages. Depth and pressure gages should be checked as soon as the next specified depth is reached.
3. Integrity of launchers or signal ejectors must be established by admitting sea pressure through equalizing lines or flooding connection and the muzzle valve or door operated before conducting operational tests. Shoot water slugs from specified launchers or signal ejectors, at specified depths, as required by the CS or CCS test program. Shoot pyrotechnics on initial dive and at test depth on the deep dive. Shooting of pyrotechnics during the initial dive must be accomplished in conjunction with the 200 foot EMBT Blow. Shooting of pyrotechnics at test depth during the deep dive must be accomplished in conjunction with the test depth EMBT blow.
4. Those seawater systems which are not required for normal safe operation of the ship at test depth but which have been designed for and may be subjected to test depth pressure should not be subjected to submergence pressure during the initial dive to any specified depth (e.g., a blown sanitary tank). (See reference (i)).
5. Check operation of electrodes; head valve and each snorkel safety circuit.
6. Depth increments for cycling vital sea valves are as set forth in reference (i).
7. This evolution (initial operation of hull and back-up valves in fully submerged condition) at depths other than specified in reference (i) is intended for crew training and is not technically required. Evolution may be abbreviated or deleted on a case basis with concurrence of the embarked TYCOM representative.
8. Meggering of antenna may be accomplished during dock trials but must be accomplished prior to initial deep dive.

APPENDIX E

ESCORT SHIP CAPABILITIES FOR SUBMARINE SEA TRIALS

1. Radio Communication:
   a. Ability to transmit and receive on two Ultrahigh Frequency (UHF) and on High Frequency (HF) circuits simultaneously including 243.0 MHZ or equivalent system capabilities (Very High Frequency (VHF) and INMARSAT-C).
   b. Equipped to tape record all non-secure radio transmissions between the submarine and the escort.
   c. Capability to communicate on the submarine UHF, HF or equivalent system capabilities (VHF or INMARSAT-C) circuits.
2. Sonar and Sonar Communications:
   a. Equipped with underwater telephone capable of communicating to the submarine's test depth or equivalent system capabilities.
   b. Sufficient operators to man underwater telephone on a continuous basis, including a Continuous Wave (CW) capable operator on call if the requirement for CW communication develops.
   c. Equipped to tape record (installed or portable) all transmissions between the submarine and the escort by underwater telephone.
   d. Explosive charge signals or active sonar called for by AXP-1.
3. Navigation:
   a. Equipped with an operable LORAN C, Global Positioning System (GPS) or the latest accurate off-the-shelf navigational equipment.
   b. Equipped with an operable DRT or equivalent system capability.
   c. Possess navigational capability to fix his position to two miles' average accuracy.
   d. Fathometer.
   e. Gyrocompass.
   f. Underwater log or equivalent system capability.
4. Sea keeping and speed:
   a. Ability to remain at sea for one week in State 6 seas.
   b. Be capable of making 10 knots. Escorts will keep the submarine informed of any speed or sea state limitations. In addition, if the escort has an unfaired WQC hydrophone, it must notify the submarine of the maximum sea state and speed which will not restrict WQC communications. If the submarine requires a speed above this limit, the submarine should run a track about the escort within WQC range.

APPENDIX F

LISTING OF TESTS TO BE PERFORMED PRIOR TO, DURING AND FOLLOWING SUBMARINE FIRST DIVE TO TEST DEPTH

1. The following tests and evolutions, as summarized in Table 1 of this appendix, will be carried out following the initial tightness dive and prior to the deep dive:

a. Six hours of Independent Ship Exercise for crew training. (See Note 1).

b. Charge air banks and battery if necessary. The ship may be submerged while charging air banks provided the depth of the ship does not exceed other guidelines in this instruction, or those of the flooding bill or ship's operating procedures.

c. Operate IFF and ESM equipment. If possible, use aircraft. (See Note 2).

2. The following tests and evolutions, as summarized in Table 1 of this appendix, will be carried out immediately prior to or during the first deep dive. Per Volume V of this manual, a second deep dive must be performed to complete valve cycling and operation of systems not required for normal safe operation of the ship, i.e., torpedo tubes, Trash Disposal Unit (TDU), hovering, plumbing. (See Note 3).

a. Ensure that air banks are charged to within 200 psi of full pressure.

b. Ensure all MBT blow systems are fully operational and in a normal line up configuration.

c. Take sounding. Maximum water depth is given in reference (p). Accurately fix the ship's position within the specified dive area (reference (p)).

d. Conduct a dive to periscope depth. Obtain speed trim, if practical, at periscope depth. If sea state requires deeper submergence, proceed slowly to (150 feet for SSN 688 Class submarines), (155 feet for SSN 774 Class submarines), (160 feet for SSN 21 and SSBN or SSGN 726 Class submarines) to obtain speed trim. (See Note 4).

e. Obtain stop trim. Take readings and water samples required to make a check of ballasting. Stop trim should be conducted at the most desirable time during the trials.

f. Trim ship to maintain neutral buoyancy. (See Note 5).

g. Line up propulsion plant for maximum reliability following ship's instructions.

h. Rig ship for deep submergence, except reverse osmosis units. All systems should be in the maximum secure condition with unnecessary sea systems isolated. (See Note 6).

i. Station personnel throughout the ship to inspect for leaks.

j. At depths specified in reference (i):

(1) Inspect for leaks.

(2) Adjust trim. (See Note 5).

(3) Communicate with escort at each 100 feet depth increment or at 10-minute intervals, whichever is sooner. If communications are lost, return to depth at which communications can be reestablished before continuing. (See Note 7).

NOTE REQUIRED SYSTEMS ARE LISTED IN PARAGRAPH 4B OF REFERENCE (i). OBSERVE RESTRICTIONS ON OPERATION OF SYSTEMS LISTED IN PARAGRAPH 4D OF REFERENCE (I). BALL VALVE TRASH DISPOSAL UNITS (TDU) (WITHOUT REMOTE CLOSURES) WILL NOT BE OPERATED BELOW 200 FEET.

k. At depths listed for hull valve cycling in reference (i) (as applicable) per NAVSEA approved Deep Dive Test Form:

(1) Check accuracy of gages and repeaters.

(2) Conduct operational test of signal ejectors. (See Note 8).

(3) Check shaft bearings and stern tubes for excessive heating, leakage and noise. Shaft seals must be tested at each depth and for the required time, as specified in the approved class test form.

(4) Cycle rudder and planes through full throw to check for binding. (See Note 9).

(5) Operate all hull and back-up valves (using remote closures, as applicable, from flooding control stations) of seawater systems required to maintain propulsion and other functions vital to the ship's operation at increments of depth specified in reference (i). Required systems are listed in paragraph 4.b. of reference (i). Observe restrictions on operation of systems listed in paragraph 4.d. of reference (i).

(6) Check operation of bulkhead flappers and watertight doors for binding.

(7) Operate trim and drain pumps, discharging to sea.

(8) Cycle components of each torpedo tube. Check for leakage. Establish integrity of torpedo tubes by admitting sea pressure through equalizing lines or flooding connection before cycling components (see Notes 3, 8 and 16).

(9) Vent negative tank inboard (if installed). (See Notes 3 and 10).

(10) Cycle main vents to check for binding.

l. At maximum authorized operating depth:

(1) Repeat item 2.k.(1) of this appendix - Depth gages and repeaters.

(2) Operate each signal ejector by impulse and hand, as applicable. (See Notes 3 and 8).

(3) Repeat item 2.k.(3) of this appendix - Shafting and bearings.

(4) Repeat item 2.k.(5) of this appendix - Hull and back-up valves.

(5) Repeat item 2.k.(6) of this appendix - Bulkhead flappers and watertight doors.

(6) Repeat item 2.k.(7) of this appendix - Trim and drain pumps.

(7) Repeat item 2.k.(8) of this appendix - Torpedo tubes. (See Notes 3 and 16).

(8) Repeat item 2.k.(9) of this appendix - Negative tank (if applicable).

(9) Equalize TDU with sea pressure through trim line. During conduct of the Deep Dive Test Form on new construction submarines, the TDU Hull Valve will be cycled at depths specified by reference (i) in order to meet material certification requirements. (See Note 3).

(10) Equalize sea systems and cycle hull and back-up valves as specified in reference (i).

(11) Repeat item 2.k.(10) of this appendix - Cycle main vents and check for binding.

m. After the deep dive, surface fully with EMBT blow from the depth required per the NAVSEA approved EMBT Test Procedure and the approved Sea Trial Agenda. Check air bank pressures before and after blow.

n. Additional requirements may be imposed at the discretion of the CO.

3. The following tests and evolutions will be carried out submerged following the deep dive:

a. Steering and diving operation at full speed. (See Notes 4 and 11).

b. Full power run. (See Notes 11, 12 and 13).

c. Steep angles - operate the ship through several depth changes using large up and down angles to check operation of ship machinery. (See Notes 11 and 14).

d. Time raising each periscope and mast at maximum depth and speed for which they were designed. Check training feature where applicable.

e. Run and observe air conditioning plants throughout trials. Operate the air conditioning plant to demonstrate ability to carry entire maximum existing ship's air conditioning load, or 100 percent capacity.

f. Run and observe refrigeration plant throughout trials.

g. Missile fire control erection performance tests (Vertical Launch System (VLS) on SSN).

h. Missile fire control alignment (VLS on SSN).

i. Missile tube muzzle hatch operation (VLS on SSN).

j. Missile compensation system operation submerged (VLS on SSN).

k. Additional requirements may be imposed at the discretion of the CO.

l. Comply with the CS or CCS test program with regard to firing of water slugs and testing of torpedo tubes. (See Notes 3, 8 and 16).

4. The following tests and evolutions will be carried out on the surface following the deep dive:

a. Note condition of periscope optics.

b. Measure resistance to ground of all external electrical cables.

c. Take radio antenna megger readings immediately after surfacing, again in one-half hour, and compare with readings obtained in Appendix D, step 1.v. of this chapter.

d. With ship proceeding at full speed, conduct low-pressure blow (if installed) to check whether circulation water systems and machinery become air bound.

e. Measure resistance, across and to ground from each side, of all sonar hydrophones, projectors and transducers. (See Note 15).

TABLE 1. SUMMARY OF SIGNIFICANT UNDERWAY TRIAL REQUIREMENTS

Sea Trials	Initial Tightness Dive	Transit	Deep Dive
Policy References	Appendix D, paragraph 2 of this chapter.	Appendix F, paragraph 1 of this chapter.	Appendix F, paragraph 2 of this chapter.
Start Depth	Surface	Surface to 400 ft.	Surface to 400 ft.
Conduct Depth	Periscope depth or about 150 ft for SSN 688 Class (155 ft for SSN 774 Class), (160 ft for SSN 21 and SSBN or SSGN 726 Class) if sea state dictates for trim. Remaining events of Appendix D, paragraph 2 of this chapter no deeper than 200 ft.	Surface to 400 ft but not to exceed deepest depth previously escorted or valve cycling accomplished. Additional trials and testing permitted within the Independent Ship Exercise, crew rest and other requirements of this instruction.	200 ft increments to one half Maximum Authorized Operating Depth, then 100 ft increments to Maximum Authorized Operating Depth.
Maximum Keel Depth	200 ft.	One half test depth.	Maximum Authorized Operating Depth.
Finish Event	Surface from 200 ft with EMBT blow.*	Rendezvous with escort.	Deep dive will be terminated with an EMBT blow from Maximum Authorized Operating Depth Appendix F section 2.
Escort Required	Yes**	No	Yes**
Water Depth	400 ft per reference (p)	Unlimited.	Reference (p).

* May be delayed to permit additional testing, commencing pre-transit valve operating cycling or transit submerged. However, first surface after initial tightness dive must be by EMBT blow from 200 feet.

** An escort is required on the initial tightness dive and on subsequent first dive to any deeper depths, i.e., the first dive to any depth requires an escort. EMBT blow escort requirements given in paragraph 4.4.3.c of this chapter.

NOTES

1. Each person involved in Sea Trials should be allowed a minimum of six hours of continuous, uninterrupted sleep during any 24-hour period encompassed by the Sea Trial.
2. Event is optional with regard to sequence. May be conducted at any time during Sea Trials and is not a prerequisite to the deep dive. If listed with initial tightness dive events, completion is not mandatory prior to proceeding with remainder of trials.
3. Those seawater systems which are not required for normal safe operation of the ship at test depth but which have been designed for and may be subjected to test depth pressure should not be subjected to submergence pressure during the initial dive to any specified depth (e.g., a blown sanitary tank). (See reference (i)).
4. At maximum safe speed, operate the rudder and planes through full throw in both directions in normal and emergency power. Time evolutions and check against design values.
5. Deep dive should be conducted using moderate speed, or as approved by NAVSEA, and constantly adjusting trim, at depths specified in reference (i), to maintain neutral buoyancy. Moderate speed must be defined as that range of speed that allows the ship to recover from a loss of stern plane control or flooding casualty.
6. Reference (i) prescribes procedures for systems operation during deep dive.
7. In the execution of any Sea Trial, whether escorted or not, submarine COs are reminded of their responsibility to communicate with escorts or shore authorities, or both, within prescribed, previously agreed upon time limits to avoid initiation of inadvertent lost contact or submarine disaster procedures.
8. Integrity of launchers or signal ejectors must be established by admitting sea pressure through equalizing lines or flooding connection and the muzzle valve or door operated before conducting operational tests. Shoot water slugs from specified launchers or signal ejectors, at specified depths, as required by the CS or CCS test program. Shoot pyrotechnics on initial dive and at test depth on the deep dive. Shooting of pyrotechnics during the initial dive must be accomplished in conjunction with the 200 foot EMBT Blow. Shooting of pyrotechnics at test depth during the deep dive must be accomplished in conjunction with the test depth EMBT blow.
9. Cycling of rudder and planes through full throw should be limited to 90% of test depth.
10. Test to demonstrate the ability of the tank to withstand external pressure.
11. The required sequence of events is initial dive, deep dive, full power run submerged, then high speed maneuverability and steep angle tests. On initial propulsion plant trials for new construction nuclear powered submarines, the deep dive will be to test depth minus 300 feet unless otherwise approved by NAVSEA or the TYCOM and reflected in the Sea Trial Agenda.
12. Run full power submerged for at least two hours. COs may schedule the full power run for four hours if deemed necessary. Operate at minimum non-cavitating depth but not to exceed 400 feet. Water depth is not limited for this event.

13. Propulsion Plant Tests. The full power trial for new construction submarines will follow building specifications or directions from the Navy Shipbuilding Program Manager. Submarine depth during the submerged full power trials should be limited to 400 feet. The submerged full power ahead test for commissioned nuclear powered submarines must be terminated by a back emergency bell. The duration of the back emergency bell must be limited to 45 seconds, to be followed immediately by an appropriate ahead bell. Caution must be exercised to avoid stern way.
14. Completion of full power, deep dives and EMBT Blow Test Forms are prerequisites for the high-speed maneuverability and steep angle tests. Initial high-speed ship control tests, steep angle tests and exercises of major casualties must be conducted in water that does not exceed one and one-half times design test depth, which equates to collapse depth.
15. The spherical array need not be done if an array purge or power into the array measurements are scheduled at a later date.
16. Fire water slugs from torpedo tubes at the depths and speeds required by the CS or CCS test program (or Combat Systems Assessment or Non-Propulsion Electronic System Operability, Verification and Evaluation, as applicable).

LISTING OF APPENDICES.

A Sample Page of 4760-1 Report with Representative Data
B Legend and Explanation of Symbols Used in Report 4760-1
C Preparation for Guarantee Material Inspection or Final Contract Trials

5.1 PURPOSE. The purpose of this chapter is to provide a procedure to identify and document deficiencies found in new construction ships. This chapter focuses on the period from initial Acceptance Trials (AT) until the termination of funding responsibility under the Shipbuilding and Conversion, Navy (SCN) appropriation. Proper management of these deficiencies is necessary to ensure:

a. Final settlement of the construction contract with the shipbuilder.

b. Correction of the maximum number of shipbuilder responsible deficiencies under terms of the construction contract.

c. Correction of the maximum number of government responsible deficiencies under the SCN appropriation.

d. Identification of all new construction deficiencies which must be corrected subsequent to the guarantee period under appropriations other than SCN, and identification of improvement items which have class application.

Deficiency items not adjudicated prior to Combined Trials (CT) and the Guarantee Material Inspection (GMI) for submarines or during ATs and Final Contract Trials (FCT) for all other ships are identified to the Navy by the Board of Inspection and Survey (INSURV). Additional items are identified during Naval Sea Systems Command (NAVSEA) Acoustic Trials, Underwater Electromagnetic Trials, Combat System Certification Trials (CSCT) and by the Commanding Officer (CO) of the ship during the contract guarantee period and reported to the Supervising Authority.

5.2 DEFICIENCY CORRECTION. Deficiencies are addressed in terms of three general categories. The procedure for initiating corrective action for a deficiency is determined by the category.

5.2.1 Government Responsible Items. The obligation and work limiting date for all shipbuilding programs under the SCN appropriation will normally be at the end of the 11th month following completion of the fitting out period. For submarines, the fitting out period ends at delivery. Government responsible work accomplished in support of a new construction ship and funded

under SCN is limited to work which can be completed prior to the end of this 11-month period. Authorization for correction of non-reactor plant government responsible deficiencies is provided by the Navy Shipbuilding Program Manager based on a priority assignment by the ship and recommendations from the Type Commander (TYCOM). Authorization for correction of reactor plant government responsible deficiencies is provided by NAVSEA Nuclear Propulsion Directorate (08).

5.2.2 Shipbuilder Responsible Items. Construction contracts with private industrial activities contain a guarantee clause. The rights of the government concerning deficiencies identified during the guarantee period are set forth in the contract. Deficiencies must be identified and reported to the shipbuilder and cognizant government agencies prior to the end of the guarantee period in order for corrective action to be established. Correction of deficiencies designated shipbuilder responsible can be accomplished during any subsequent period that the ship is made available to the shipbuilder. Availability of the ship is usually limited to the Post Shakedown Availability (PSA), except under special circumstances when immediate corrective action prior to PSA is required to permit the ship to meet operational commitments. The ship may also be made available to the shipbuilder after PSA to permit follow-up corrective action on shipbuilder responsible deficiencies identified during the guarantee period but not satisfactorily corrected during PSA.

5.2.3 Recommended Changes in Characteristics, Design Specifications, or Plans. Improvements to the ship recommended by INSURV will be investigated by the Navy Shipbuilding Program Manager. Action, as appropriate, will be initiated by a government approved change. This change may be in the form of a Field Modification Request, Headquarters Modification Request (HMR), Ship Change, Strategic Systems Programs Alteration, Service Change and Field or Engineering Change Proposal. Changes of this nature usually have application to more than one ship of the class. Improvements to the ship recommended by Ship's Force should be forwarded by the CO per volume VI, chapter 3 (submarines) or volume VI, chapter 36 (surface force ships and aircraft carriers), as appropriate, of this manual to the Navy Shipbuilding Program Manager via the Supervising Authority.

5.3 REQUIRED REPORTS. The responsibility for ensuring deficiencies are corrected rests jointly with the CO, the Supervising Authority and the Navy Shipbuilding Program Manager. The method of corrective action varies with the type of deficiency and may involve the coordinated action of several activities. In order to effectively prosecute each deficiency, special reporting and handling procedures are necessary. The Ship's Maintenance Data System must be implemented not later than delivery per reference (a). This will provide a smooth transition into the appropriate ship and shore-based data management systems and permit Maintenance and Material Management documentation of all INSURV deficiencies for use with the Consolidated Report. The Consolidated Report provides follow-up action on all deficiencies and minimizes administrative effort.

a. Consolidated Report. A Consolidated Report, compiled by the Navy Shipbuilding Program Manager, combines into one document the screening actions, reports of completed actions and significant information listed (as applicable):

   (1) AT or CT INSURV Report.

   (2) FCT or GMI INSURV Report.

(3) Post Delivery Deficiency Items (PDDI).

(4) CSCT.

(5) Silencing Deficiencies.

(6) HMRs.

(7) Navy Shipbuilding Program Manager action on all deficiencies.

(8) Shipbuilder Delivery Letter.

(9) Supervising Authority evaluation of shipbuilder comments on Deficiency Items.

(10) Priority assignment of all deficiencies.

(11) TYCOM action on all deficiencies.

(12) Authorized action for PSA for appropriate items.

(13) Final status of all deficiencies at the end of the SCN funding period (PSA Completion Report).

(14) TYCOM final action on each item uncorrected at the end of the SCN funding period.

(15) Identification of deficiencies requiring Navy Shipbuilding Program Manager action to develop corrective action.

(16) Estimated cost to the government for correction by Forces Afloat of shipbuilder responsible deficiencies.

(17) Antenna Inspection Deficiency Items.

b. Report Format. Appendix A of this chapter is an example of a completed page of the Consolidated Report, containing sample entries from various parts. The symbols used in defining the action taken by each activity are described in Appendix B of this chapter along with a discussion of the use of each column. The Consolidated Report typically consists of the following parts:

(1) Part A Key Definitions for Symbols used in the PSA Work Package.

(2) Part B INSURV Deficiencies.

(3) Part C-I Non-Nuclear HMRs.

(4) Part C-II Other Non-Nuclear Items.

(5) Part C-III Non-Nuclear CSCT Items.

(6) Part D Antenna Inspection Deficiency Items.

(7) Part E PDDIs.

(8) Part F Silencing Deficiencies.

c. Preparation.

(1) Part B:

(a) List of INSURV deficiency items: Prepared by the Navy Shipbuilding Program Manager and distributed following CT or AT.

(b) List of INSURV GMI or FCT items: Prepared by the ship per Appendix C of this chapter immediately following the GMI or FCT for use by NAVSEA at the GMI or FCT Card Conference. The Navy Shipbuilding Program Manager will distribute a finalized GMI or FCT list following the GMI or FCT Card Conference.

(2) Part C-I, C-II, C-III, D and F: Prepared and distributed by the Navy Shipbuilding Program Manager.

(3) Part E: Prepared by the ship as discussed in section 5.6 of this chapter.

d. Reporting.

(1) Thirty days after delivery, the ship will submit marked up copies of Part B indicating the priority assignment of each uncorrected CT or AT deficiency (Navy Shipbuilding Program Manager, TYCOM, Immediate Superior in Command (ISIC), Supervising Authority).

(2) The Navy Shipbuilding Program Manager will prepare and distribute marked up copies of Parts C-I, C-II, C-III, D and F as the information becomes available.

(3) Priority assignment for Part B deficiencies (including review of all uncorrected CT or AT deficiencies) is determined at the GMI or FCT Card Conference. Marked up copies are retained by all participants. (Navy Shipbuilding Program Manager, TYCOM, ISIC, Ship, Supervising Authority).

(4) The ship will report deficiencies discovered after GMI or FCT and before the end of the SCN period per section 5.6 of this chapter.

(5) Deficiencies listed in the Consolidated Report which are corrected by Forces Afloat are to be reported in writing to the Navy Shipbuilding Program Manager with copies to the TYCOM, the Supervising Authority as appropriate, and the scheduled PSA activity. This report will normally be submitted by the ship at the end of a refit or maintenance period. Negative reports are not required.

(6) The ship will submit a marked up copy of the Consolidated Report to the TYCOM; copy to the ISIC, Navy Shipbuilding Program Manager, Supervising Authority, Submarine Maintenance Engineering, Planning and Procurement Activity (for submarines), Surface Maintenance Engineering, Planning Program (for surface force ships) and the President of the INSURV Board thirty days after PSA or at the end of the guarantee period, whichever is later. This report will indicate the final status of all deficiencies identified during the guarantee period.

5.4 COMBINED TRIALS or ACCEPTANCE TRIALS. The CT or AT is scheduled by the Supervising Authority and conducted by the INSURV Board. The Supervising Authority in

conjunction with the ship's CO will present to the INSURV Board known deficiencies which require correction.

5.5 GUARANTEE MATERIAL INSPECTION or FINAL CONTRACT TRIALS. GMIs or FCTs are scheduled by the TYCOM and conducted by the INSURV Board after shakedown, prior to the end of the guarantee period. These inspections or trials provide a formal evaluation of the material condition of each newly constructed ship after limited service. GMIs or FCTs are conducted sufficiently in advance of PSA to allow "lead time" for the procurement of material and the advanced planning required for the correction of deficiencies during the availability. The CO will present the ship's material status to the INSURV Board following the guidance in Appendix C of this chapter. GMIs are conducted for submarines; all other ships will undergo an FCT.

5.6 POST DELIVERY DEFICIENCY ITEMS. The CO is responsible for reporting deficiencies not otherwise identified by INSURV, until the end of the SCN period per the following procedures. By using the same format for PDDI reporting as for INSURV items and by extending the use of the Consolidated Report to include these items, the same management attention is afforded to all construction deficiencies.

a. The following types of problems should be reported as PDDIs:

(1) Recurring failures in a piece of equipment or machinery such that the reliability is considered unsatisfactory.

(2) Major equipment or component malfunction which requires outside assistance to correct (vendor or industrial activity).

(3) Symptoms of major machinery problems which require investigation to determine the extent of the problem. (Improper temperatures, pressures, leakage, vibration, noise, etc.).

(4) Insufficient supply support for specific equipment or machinery based on operational experience. Allowance deficiencies reported as PDDIs should be supplemented by submission of Allowance Change Requests or Configuration Change Reports as appropriate.

(5) Excessive or accelerated wear, erosion, or corrosion determined through inspection.

(6) Improper bonding of preservation on surfaces that must be protected.

(7) Any casualty which results in a Casualty Report (CASREP). Insert an amplification data set immediately after the Parts Identification data set consisting of "AMPN/PDDI: ___- ___//", ensuring that the CASREP includes all appropriate PDDI addressees. A separate PDDI must also be submitted.

(8) Identification of any condition or defect which requires a Departure from Specification request.

(9) Improper alignment, clearance, or resistance to ground which indicates an unaccounted for change from baseline data.

(10) Significant internal and external valve leakage. (Primary, seawater, steam, air, hydraulics, etc.).

(11) Any significant AT or CT deficiency item reported corrected which has recurred. Refer to the AT or INSURV number in the text of the deficiency description.

(12) Any AT or CT deficiency item reported corrected by the shipbuilder which is not considered by the ship to be complete. Refer to the AT or INSURV number in the text of the deficiency description.

NOTE: DEFICIENCIES AND MATERIAL PROBLEMS WHICH ARE CORRECTED BY SHIP'S FORCE WITHOUT ASSISTANCE SHOULD NOT BE REPORTED AS PDDIs.

b. Reporting.

(1) Between delivery and GMI or FCT, uncorrected deficiencies of the nature described in paragraph 5.6 of this chapter should be documented in the Current Ship's Maintenance Project and presented to the INSURV Board for consideration during GMI or FCT.

(2) Problems requiring corrective action prior to PSA, or of such significance that planning will have to commence as early as possible, should be reported by OPNAV 4790/2K without delay. The OPNAV 4790/2K must contain the sequential identification number of the PDDI and a brief description of the problem being reported. Multiple PDDIs per report are encouraged. Items reported by OPNAV 4790/2K should be included in the next regular PDDI report. The OPNAV 4790/2K should also be sent by message, or e-mail where appropriate, and must be addressed to the Supervising Authority, with information copies to the Navy Shipbuilding Program Manager, TYCOM (N40), the ISIC, and NAVSEA 08 (for items with nuclear cognizance).

(3) Routine PDDIs must be reported by OPNAV 4790/2K and summarized at least monthly after the GMI or FCT.

(4) All PDDIs must be assigned a sequential number identifying the item for administrative purposes and a priority in the "ship" column of the 4760-1 Report. This forms Part E of the Consolidated Report. Report Form 4760-1 will be provided to the ship at the GMI or FCT Card Conference.

(5) Distribution of the PDDI report by the ship will be:

(a) Advance copy to the Supervising Authority.

(b) Advance copy to the Navy Shipbuilding Program Manager. (Nuclear deficiencies to NAVSEA 08).

(c) Copy to the ISIC.

(d) Original to the Supervising Authority via the TYCOM and the Navy Shipbuilding Program Manager.

(6) All PDDIs must be assigned a Job Sequence Number (JSN) in the ship's JSN log prior to input into the ship's CSMP. The CSMP summary line (Block 37, OPNAV 4790/2K) will contain the PDDI sequential number for cross reference.

APPENDIX A

APPENDIX B

LEGEND AND EXPLANATION OF SYMBOLS USED IN REPORT 4760-1

1. Each activity will enter in the applicable column the appropriate symbol to indicate status, position, priority, responsibility or authorization for each item.

2. Extra pages may be added to the package as necessary to provide history, results of investigations or comments to clarify the position or the item itself.

3. The action taken for each item in each of the columns from the "N/S Action" column through the "PSA" column will be an integrated action by all concerned following INSURV CT or AT, GMI or FCT, and PSA related conferences.

4. The following is a brief description of the purpose of each column:

   a. Column "N/S Action" - Indicates Navy Shipbuilding Program Manager assignment of responsibility. No government SCN funded work is authorized in this column. Authorization of work will be as stated under the "PSA" column for each line item in the work package.

   b. Column "K" - Column "K" is used to indicate the position of the shipbuilder for an item indicated in column "N/S Action" as being the responsibility of the shipbuilder to correct. The shipbuilder may prepare insert pages for comments as appropriate. A rationale is to be provided for all items not accepted (marked "KZ") by the shipbuilder.

   c. Column "SOS" - This column is used to indicate the position of the Supervising Authority for each of the items as feasible but especially for those items on which the shipbuilder has responded in column "K".

   d. Column "Ship" - This column is used by the ship to indicate the status or action desired for each item still considered open, including a priority assignment regardless of the responsibility or action indicated by INSURV or assigned by the Navy Shipbuilding Program Manager or reported corrected by the Supervising Authority. Comments from Ship's Force providing further information and clarification as insert pages are especially helpful in planning correction of any item.

   e. Column "TY" - This column indicates the position of the TYCOM on the priority assignment of the ship.

   f. Column "PSA" - This column is used by NAVSEA. Authorization of SCN funded work appears only in this column.

   g. Column "Final" (Ship and Supervising Authority) - This column is used to indicate the final status of each deficiency at the end of the SCN funded period. This column may be used by the shipbuilder to report to the Supervising Authority the status of deficiencies at the end of the guarantee period. This column is used by Supervising Authority to provide the final status of all authorized work (government and shipbuilder) as reported by the shipbuilder at completion of PSA. This information should be used as a portion of the Departure Report which is to be forwarded to the Navy Shipbuilding Program Manager not later than 50 days following the end of the

ship's PSA. Comments and recommendations by the Supervising Authority advising correction or non-correction of open items are required.

h. Column "TYCOM" (Final) - This column is used to indicate the action desired by the TYCOM on all items still open at the end of the PSA period. This data will be reviewed at a "Disposition Conference" to be convened and chaired by the Navy Shipbuilding Program Manager.

i. Column "N/S" (Final) - This column will be used by the Ship Program Manager to report on agreements made between the TYCOM and the Navy Shipbuilding Program Manager during the "Disposition Conference" for each open deficiency item.

5. The following list of symbols is provided in alphabetical order for ease of use. In the interest of simplification, many symbols have been combined.

Key	Used In The Following Columns	Definition
A	Ship, TY, PSA	Navy Shipbuilding Program Manager authorize correction of the item by the industrial activity as an item for first priority.
B	Ship, TY, PSA	Navy Shipbuilding Program Manager authorize correction of the item by the industrial activity as a highly desirable second priority item of work.
C	Ship, TY, PSA	Navy Shipbuilding Program Manager authorize correction of the item by the industrial activity within available funds as third order of priority.
F	N/S Action thru N/S	Forces Afloat to correct using TYCOM funds. This includes TYCOM Alteration and Improvement (A&I) Items.
FL	Final, TYCOM	Ship's Force submit request for alteration or request for change to Ship's allowance.
FU	Ship, Final	Forces Afloat will follow up on material through procurement and correct the deficiency.
FV	Ship thru Final	Forces Afloat will correct with technical assistance from equipment manufacturer, vendor or the Navy Shipbuilding Program Manager.
G	N/S Action	Government responsible to correct condition noted as necessary to comply with shipbuilding specifications. No work authorized except by specific Navy Shipbuilding Program Manager action.
G/F	N/S Action, PSA	Government responsible to approve for accomplishment for Forces Afloat. Navy Shipbuilding Program Manager or Supervising Authority will provide material, technical or design assist as required.
GI	All	Navy Shipbuilding Program Manager investigate and authorize correction as appropriate.

Key	Used In The Following Columns	Definition
G/V	N/S Action, PSA	Government responsible - equipment still under guarantee. Vendor responsible for correcting condition as noted. Supervising Authority responsible to ensure vendor is available and correction is taken under vendor supervision.
K	N/S Action, PSA	Shipbuilder responsible, authorized to correct condition noted as necessary to comply with shipbuilding specifications.
KA	K	Shipbuilder accepts responsibility for correction with or without comment. Comment on attached supplementary page.
K/F	N/S Action, PSA	Shipbuilder responsible to make installations and all repair work. Shipboard testing approved for accomplishment by Forces Afloat.
K/G	N/S	Shipbuilder responsible, authorized to investigate and correct condition noted as necessary to comply with shipbuilding specifications. Government responsible for defects in Government Furnished Equipment (GFE) or Government Furnished Information (GFI). No work authorized for government portion of item without separate specific Navy Shipbuilding Program Manager action.
KI	K	Shipbuilder accepts item for investigation with determination of responsibility to be made after investigation.
KZ	K	Shipbuilder does not accept the item as his responsibility. Rationale to be provided on attached supplementary page.
NA	N/S Action	Not authorized using SCN funds: 1. Cost not commensurate with gain. 2. No longer considered a deficiency. 3. Recommend correction be accomplished by a Ship Alteration (SHIPALT) during future availability.
SA	Final, TYCOM, N/S	Recommend SHIPALT be developed to correct.
SC	SOS	Comments of shipbuilder are accepted and concurred with by the Supervising Authority.
SI	N/S Action	Silencing deficiency items with responsibility and authorization to be determined by separate Navy Shipbuilding Program Manager action.
SM	PSA	Supervising Authority is authorized to procure material and turn same over to Ship's Force for installation. A copy of the requisitioning document will be provided to Ship's Force to allow supply follow-up action if necessary.

Key	Used In The Following Columns	Definition
SZ	SOS	Item remains controversial. Comments of the Supervising Authority are provided on attached supplementary page.
TY	PSA	Approved for correction by the industrial activity when authorized and funded by the TYCOM.
V	Ship, TY, PSA	Government provide vendor service for Forces Afloat to assist during PSA.
XF	SOS thru Final	Item was corrected by Forces Afloat.
XG	SOS thru Final	Item was corrected by shipbuilder or other industrial activity under a work specification, job order, or Field Modification Request funded by the government.
XK	SOS thru Final	Shipbuilder has completed corrective action.
#	N/S Action, PSA	Changes to Navy Shipbuilding Program Manager action.
*	PSA	Authority to be provided separately by NAVSEA 08 action.

APPENDIX C

PREPARATION FOR GUARANTEE MATERIAL INSPECTION OR FINAL CONTRACT TRIALS

1. To properly prepare for and document deficiencies for the GMI or FCT conducted by the INSURV Board and conduct the GMI Card Conference, the following guidance is provided.

a. Pre-GMI or FCT Documents

(1) Ship's Force provide to the INSURV Board:

(a) For previously reported CT or AT items, provide two copies of the Navy Shipbuilding Program Manager's Initial PSA Consolidated List with all INSURV items considered complete by Ship's Force lined out. Do not obliterate items lined out.

(b) Document all new deficiencies which have occurred since CT or AT on OPNAV 4790/2Ks per reference (a).

(2) Upon arrival, Ship's Force provide to Navy Shipbuilding Program Manager representative(s) one complete set of each of the Pre-GMI or FCT documents as outlined in paragraph 1.a.(1).

(3) Ship's Force submit required number of copies of all documents for entry into the CSMP per reference (a).

b. Action on Final GMI or FCT Documents

(1) The INSURV Board will return the complete listing of GMI or FCT findings to the Navy Shipbuilding Program Manager representative(s) for follow-up action. This listing will include all items in format per paragraph 1.a.(1). The Navy Shipbuilding Program Manager will assemble this listing and prepare the GMI or FCT Consolidated Report, Section B, as required by this instruction. Type only the new documented findings from the OPNAV 4790/2Ks (1.a.(1)(b)).

(2) Ship's Force will provide working spaces and administrative support as required by references (b) and (c).

LISTING OF APPENDICES.

A Major Funding Milestones During Construction or Conversion
B Post Shakedown Availability Planning Events Milestone Schedule
C Summary of Major Milestones for Post Shakedown Availability

6.1 PURPOSE.

a. Post Shakedown Availability (PSA) is an industrial activity availability assigned to correct deficiencies found during the shakedown cruise or to accomplish other authorized improvements. PSAs are scheduled to commence after delivery and to be completed prior to the Shipbuilding and Conversion, Navy (SCN) obligation work limiting date. This date occurs at the end of the 11th month after the month in which the Fitting-Out Period completed for surface units or at the end of the 11th month after the month in which delivery occurs for submarines. Appendix A of this chapter, taken from reference (a), reflects the Major Milestones during Construction related to funding. Funding guidelines for PSA are outlined in reference (b) or as required by the shipbuilder availability start date. Continuous Maintenance Availability rules following volume II, part I, chapter 3 for aircraft carriers, volume II, part II, chapter 3 for Surface Force ships and volume II, part III, chapter 3 for submarines of this manual shall be followed by the Immediate Superior in Command (ISIC), where on regular Continuous Maintenance Availability is conducted every 3 to 4 months while awaiting PSA start date.

b. The length of time designated for PSAs will vary dependent on the platform. Acceptance Trial (AT), Final Contract Trial (FCT), Combined Trial (CT) and Guarantee Material Inspection (GMI) related deficiencies constitute the majority of the PSA workload. Navy Shipbuilding Program Manager planned, authorized and funded modifications may also be included.

6.2 PLANNING AND EXECUTION. The events leading to a successful completion of PSA involve several activities and a variety of actions and reports. Appendix B of this chapter outlines the schedule of PSA planning events.

6.3 TRIALS, INSPECTIONS AND CREW CERTIFICATION. For nuclear and Surface Force Ships, Appendix C of this chapter provides a summary of major milestones required for PSA. For submarines, Appendices BE and CE in volume II, part III, chapter 3 for submarines, Appendix A in volume II, part II, chapter 3 for Surface Force ships and Appendix C in volume II, part I, chapter 3 for aircraft carriers of this manual provide a summary of major milestones.

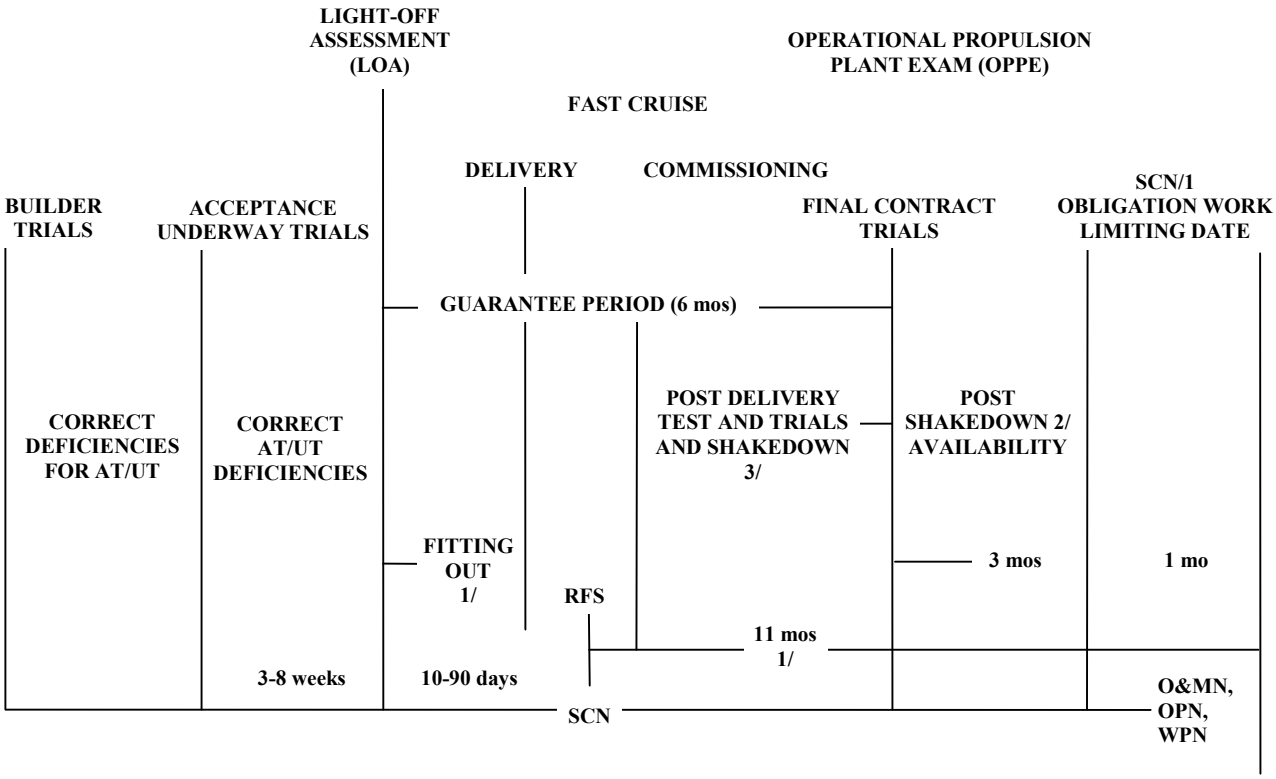
6.4 SEA TRIALS. Sea Trials are required to test work completed during PSA. The mandatory submarine requirements for PSA Sea Trials are identified in volume II, part IIII, chapter 2 of this manual. Volume II, part II, chapter 2, Appendix S of this manual provides a list of the minimum tests to be performed during Sea Trials for Surface Force Ships. The industrial activity must include at least two days in the availability for Sea Trials. The industrial activity must prepare an agenda for Sea Trials conducted after a PSA. Extensions or reductions of the Sea Trial period may be granted where warranted by the scope of work accomplished. Where an extension of Sea Trial and a change in the availability schedule is required, requests for such extensions must be submitted by the industrial activity to the Type Commander (TYCOM) as early as practical. All deficiencies resulting from Sea Trials must be satisfactorily resolved prior to completion of the availability. If no Sea Trial deficiencies are found, the availability may be completed with TYCOM concurrence at the completion of Sea Trials.

6.5 DEFICIENCY CORRECTION PERIOD. A deficiency correction period will be scheduled after Sea Trials and prior to PSA completion. The scheduled length of this deficiency correction period will be determined by the type and magnitude of the remaining deficiencies.

6.6 PERIOD FOLLOWING POST SHAKEDOWN AVAILABILITY. Depending on the PSA contract, the industrial activity will normally guarantee work accomplished during an availability for a period of 90 days from the completion of the availability. This does not include responsibility for malfunctioning machinery and equipment due to normal wear, improper adjustment, or tuning by Ship's Force and failure of limited life components. Ship's Force is required to report guarantee items to the industrial activity prior to the guarantee period expiration date. If operational commitments prohibit reporting prior to the 90-day period, the ship should report problems as soon as operations permit. A message is the preferred method of reporting these items. The message outlining specific deficiencies should be submitted to the Supervising Authority with a copy to the TYCOM, the ISIC and the Navy Shipbuilding Program Manager who will pass a copy to Naval Sea Systems Command (NAVSEA) 04, and to NAVSEA 08 for nuclear cognizant issues. Additionally, any Casualty Reports submitted during the guarantee period must also be addressed to the Supervising Authority and the Navy Shipbuilding Program Manager with passing instructions to NAVSEA 04, and to NAVSEA 08 for nuclear cognizant issues.

APPENDIX A

MAJOR FUNDING MILESTONES DURING CONSTRUCTION OR CONVERSION



NOTE:

1. **SSN or CVN fitting out is complete prior to delivery. Hence, the SCN obligation work limiting date is at the end of the 11th month after the month in which delivery occurs.**
2. **PSA is normally scheduled to complete approximately one month prior to the obligation limiting date.**
3. **Total period of PDT&T and Shakedown must be a minimum of six months. A waiver may be granted for a period greater than eight months; a request to extend SCN obligation limiting date may be required.**

APPENDIX B

POST SHAKEDOWN AVAILABILITY PLANNING EVENTS MILESTONE SCHEDULE

NOTE: EVENT TIMES ARE IN DAYS BEFORE AND AFTER DELIVERY AND ARE APPROXIMATE. SIGNIFICANT ADJUSTMENT MAY BE REQUIRED FOR PSAs THAT COMMENCE AT OTHER TIMES AFTER DELIVERY.

Time	Event
-90	a. Ship review and update Out of Commission List.
-30	a. Ship review and update Maintenance Data System and Equipment Deficiency Log per reference (c).
-21	a. Supervising Authority prepare OPNAV 4790/2Ks for all deficiencies to be presented to the Board of Inspection and Survey (INSURV) at AT or CT per reference (d). b. AT or CT conducted by the INSURV Board. c. Conference following critique of AT or CT. (1) Purpose - to identify and resolve controversies over responsibility and timing for correction of deficiencies. (2) Participants - Navy Shipbuilding Program Manager, Supervising Authority, Shipbuilder and Ship. d. Supervising Authority provide ship one copy of each documented INSURV item for input at delivery into the Current Ship's Maintenance Project per reference (c).
0	a. Delivery. b. Navy Shipbuilding Program Manager issue Section B of Consolidated Report. c. Ship's Force submit OPNAV 4790/2Ks for all INSURV items and for all other material deficiencies that qualify for the Current Ship's Maintenance Project.
10	a. Shipbuilder issues delivery letter.
20	a. Supervising Authority comments on delivery letter.
27	a. PSA Planning Conference. (1) Purpose - To establish PSA work package from input to date and to identify required advance planning actions. (2) Participants - Navy Shipbuilding Program Manager, Supervising Authority, TYCOM, Ship and Shipbuilder.
30	a. Ship submits priority list of AT or CT deficiencies.
35	a. TYCOM comments on ship's priority list.
40	a. Navy Shipbuilding Program Manager issue list of SCN funded items authorized for accomplishment during PSA.

Time	Event
42	a. TYCOM assign availability.
45	a. Supervising Authority issue initial PSA work package. b. (Submarines only) Latest date for the conduct of Navy Shipbuilding Program Manager sponsored Acoustic and Combat System Certification Trials in order to present to the INSURV Board at the GMI.
50	a. Prepare for FCT or GMI per reference (c). b. TYCOM representative places ship in "INSURV Window" and calls down ship's Pre-INSURV Package.
54	a. FCT or GMI by the INSURV Board. b. Conference following FCT or GMI critique (may coincide with Planning or Pre-Arrival Conference). (1) Purpose - To assign responsibility for correction of deficiencies and to assign ship or TYCOM priorities. (2) Participants - Navy Shipbuilding Program Manager, Supervising Authority, Shipbuilder, TYCOM, Ship, and ISIC (optional). c. Navy Shipbuilding Program Manager issue Section B of Consolidated Report. d. Ship comply with reference (c) for documenting INSURV items.
75	a. (Submarines only) Silencing Deficiency Conference: (1) Purpose - Naval Surface Warfare Center Carderock Division presents results of acoustic trials data analysis. (2) Participants - Naval Surface Warfare Center Carderock Division, Navy Shipbuilding Program Manager, Shipbuilder, TYCOM, Ship.
90	a. Navy Shipbuilding Program Manager issue final list of SCN funded items authorized for accomplishment during PSA.
100	a. Supervising Authority issue final PSA work package.
149	a. Pre-Arrival Conference: (1) Purpose - To review all work authorized by all customers with available cost estimates and to establish arrival procedures and conditions for the ship. Review and take action on Post Delivery Deficiency Items. (2) Participants - Navy Shipbuilding Program Manager, Supervising Authority, Shipbuilder, TYCOM, ISIC and Ship.
154	a. Commence PSA. b. Arrival Conference (Navy Shipbuilding Program Manager and TYCOM participation not required unless specifically requested).
214-274	a. End PSA. (Completion date varies with platform).

Time	Event
	a. Ship submits final status report of all deficiencies (Departure Report).
*	a. TYCOM comment on final status report from ship and submit recommendations for Navy Shipbuilding Program Manager action.
**	b. TYCOM issue follow-up letter requesting Navy Shipbuilding Program Manager final resolution and action on government responsible uncorrected deficiencies.
***	a. Work limiting date for SCN appropriation.

* 30 days after completion of PSA.

** 45 days after completion of PSA.

*** Refer to Appendix A of this chapter, Note (1).

APPENDIX C

SUMMARY OF MAJOR MILESTONES FOR POST SHAKEDOWN AVAILABILITY

Event	Cognizance	Approximate Schedule (Note 1)
A. Periodic Monitoring Inspections	ISIC or TYCOM	Start to completion
B. (Nuclear Powered Ships only) Pre-Criticality Inspection (required if reactor shutdown greater than 16 weeks)	ISIC or TYCOM	Criticality -4 weeks
C. (Nuclear Powered Ships only) Post-Overhaul Reactor Safeguard Examination (per reference (e) if reactor shutdown greater than 6 months)	Fleet Commander	Criticality -4 weeks
D. Light-Off Assessment (if propulsion plant shut down greater than 120 days)	Fleet Commander or TYCOM	-30 days
E. (Nuclear Powered Ships only) Approve Sea Trials Agenda	ISIC or TYCOM	-30 days
F. Dock Trials	Commanding Officer (CO) of ship	-21 days
G. Crew Certification	ISIC or TYCOM	-9 days
H. (Nuclear Powered Ships only) Message Certifying Crew and Material Readiness to Navy Shipbuilding Program Manager	TYCOM	-8 days
I. (Nuclear Powered Ships only) Authorize Ship to Commence Fast Cruise upon receipt of NAVSEA Permission to Conduct Critical Operations	TYCOM	-8 days
J. Commence Fast Cruise	CO of Ship	-7 days (2 days on, 1 off, 2 on) (length of Fast Cruise may be reduced based on length and extent of availability)
K. Report Completion of Fast Cruise and Ready for Sea Trials Message	Supervising Authority to TYCOM (CO of Ship concur)	-1 day
L. Authorize Commencement of Sea Trials Message	TYCOM to ISIC or TYCOM to Ship	-1 day

Event	Cognizance	Approximate Schedule (Note 1)
M. Commence Sea Trials	CO of Ship	0
N. Sea Trials Completion Message	Supervising Authority	+1 day

NOTE 1: Unless otherwise indicated, scheduled date referenced to Sea Trials underway date.

CHAPTER 3 - FLEET MAINTENANCE AVAILABILITIES

3.1 Purpose II-III-3-2

3.2 Definitions II-III-3-2
3.2.1 Fleet Maintenance Activity II-III-3-2
3.2.2 Lead Maintenance Activity II-III-3-3
3.2.3 Executing Activity II-III-3-3
3.2.4 Business Case Analysis II-III-3-3
3.2.5 Planning Board for Maintenance II-III-3-3

3.3 Fleet Maintenance Availabilities II-III-3-3
3.3.1 Ship's Force Upkeep II-III-3-3
3.3.2 Scheduled Continuous Maintenance Availability II-III-3-3
3.3.3 Major Maintenance Period II-III-3-4
3.3.4 Unscheduled Continuous Maintenance Availability II-III-3-4
3.3.5 Emergent Availability II-III-3-4

3.4 Common Elements II-III-3-4
3.4.1 Responsibilities II-III-3-4
3.4.2 Submission of Work Candidates II-III-3-8
3.4.3 Critical Jobs II-III-3-8
3.4.4 Integrated Work Schedule II-III-3-8
3.4.5 Technical Assistance and Assessment II-III-3-9

3.4.6 Late Work and Scope Control II-III-3-9
3.4.7 Memorandum of Agreement II-III-3-9
3.4.8 Radiological Controls II-III-3-9
3.4.9 Ship to Shop Material Control II-III-3-10
3.4.10 Ship-checks II-III-3-10
3.4.11 Lead Maintenance Activity Daily Production Meeting II-III-3-10
3.4.12 Lead Maintenance Activity Progress Review II-III-3-11
3.4.13 100 Hour Transition Periods II-III-3-12

3.5 Ship's Force Upkeep II-III-3-13
3.5.1 Upkeep Work Planning II-III-3-13
3.5.2 Ship's Force Upkeep Work Execution II-III-3-14
3.5.3 Ship's Force Upkeep Work Completion II-III-3-14
3.5.4 Ship Certification Prior to Underway II-III-3-14

3.6 Scheduled Continuous Maintenance Availability II-III-3-14
3.6.1 Scheduled Continuous Maintenance Availability Planning II-III-3-14
3.6.2 Continuous Maintenance Availability Execution II-III-3-20
3.6.3 Continuous Maintenance Availability Completion Procedures II-III-3-21
3.6.4 Lessons Learned II-III-3-23
3.6.5 Maintenance Management Performance Goals II-III-3-24

3.7 Major Maintenance Period II-III-3-27
3.7.1 Major Maintenance Period Planning II-III-3-27
3.7.2 Major Maintenance Period Execution II-III-3-34
3.7.3 Major Maintenance Period Completion Procedures II-III-3-34
3.7.4 Lessons Learned II-III-3-36
3.7.5 Activity Performance Summary II-III-3-37

3.8 Year Long Continuous Maintenance II-III-3-37
3.8.1 Year Long Continuous Maintenance Planning II-III-3-37
3.8.2 Year Long Continuous Maintenance Work Execution II-III-3-37
3.8.3 Continuous Maintenance Completion II-III-3-38

3.9 Emergent Availability II-III-3-38
3.9.1 Emergent Availability Planning II-III-3-38
3.9.2 Work Execution II-III-3-38
3.9.3 Availability Completion II-III-3-38

3.10 Interim Drydocking or Pre-Inactivation Restricted Availabilities II-III-3-38
3.10.1 TYCOM or ISIC (Group or Squadron) Responsibilities II-III-3-39
3.10.2 Certification Availabilities (Less Than Six Months) II-III-3-39
3.10.3 Operating Depth Policy II-III-3-42
3.10.4 Propulsion Plant Tests (If Required) II-III-3-42
3.10.5 Phase II Crew and Material Condition Inspection II-III-3-42
3.10.6 Pre-Critical Inspections II-III-3-42
3.10.7 Dock Trials II-III-3-43
3.10.8 Fast Cruise II-III-3-43
3.10.9 Sea Trials II-III-3-44

3.10.10 Interrupted Sea Trials II-III-3-46

Appendices

A Message to TYCOM from ISIC Requesting Concurrence to Defer, Delete or Shorten a Scheduled CMAV II-III-3A-1
B1 Availability Milestone Schedule – CMAV (SSNs and SSGNs Only) .. II-III-3B-1
B2 Availability Milestone Schedule – CMAV (SSBNs Only) II-III-3B-8
B3 Availability Milestone Schedule – CMAV (XLUUVs Only) II-III-3B-11
B4 Availability Milestone Schedule – MMP (SSGNs Only)..... II-III-3B-16
C TYCOM Message Concerning Escort Services for IDD or PIRA Availabilities II-III-3C-1
D Suggested Format for a Message Work Candidate II-III-3D-1
E Business Case Analysis Tool..... II-III-3E-1
F CMAV Key Event Codes II-III-3F-1
G Availability Planning Message..... II-III-3G-1
H Final 100 Hours for Scheduled CMAV..... II-III-3H-1
I Ammunition Off-Load Requirement Message..... II-III-3I-1
J Availability Planning Response Message II-III-3J-1
K Major Trial and Inspection Milestones for IDD and PIRA Availabilities..... II-III-3K-1
L ISIC Message to TYCOM Concerning Crew Certification and Material Condition for Fast Cruise and Sea Trials for IDD or PIRA Availabilities II-III-3L-1
M Ship Message to ISIC and TYCOM Concerning Material Certification Upon Completion of Sea Trials for IDD or PIRA Availabilities..... II-III-3M-1
N Dock Trials Guidelines for IDD or PIRA Availabilities II-III-3N-1
O Fast Cruise Requirements for IDD or PIRA Availabilities II-III-3O-1
P ISIC Message to TYCOM Concerning Final Material Certification Prior to Sea Trials for IDD or PIRA Availabilities..... II-III-3P-1
Q TYCOM Message to Ship Concerning Sea Trials Depth Authorization for IDD or PIRA Availabilities II-III-3Q-1
R Minimum Sea Trials Requirements for IDD or PIRA Availabilities II-III-3R-1
S Submarine Sea Trial Situation Report (SITREP)..... II-III-3S-1
T Ship Message to TYCOM Concerning Readiness for Follow-On Sea Trials for IDD or PIRA Availabilities..... II-III-3T-1
U ISIC Message to TYCOM Concerning Material Certification for Follow-On Sea Trials in Cases Where a Previous Sea Trial was Aborted or Corrective Actions for Sea Trial Deficiencies Require an Additional Deep Dive for IDD or PIRA Availabilities II-III-3U-1
V TYCOM Message to Ship Concerning Follow-On Sea Trials Depth Authorization for IDD or PIRA Availabilities II-III-3V-1
W Ship Message to ISIC Concerning Readiness for Fast Cruise for IDD or PIRA Availabilities II-III-3W-1
X ISIC Message to Ship Authorizing Commencement of Fast Cruise for IDD or PIRA Availabilities..... II-III-3X-1

Y Ship Message to ISIC and TYCOM Concerning Readiness for Sea Trials for IDD or PIRA Availabilities II-III-3Y-1
Z TYCOM Message to Ship Concerning URO for IDD or PIRA Availabilities II-III-3Z-1

CHAPTER 4 - SHIP MAINTENANCE VALIDATION, SCREENING AND BROKERING

4.1 Purpose II-III-4-1

4.2 Maintenance Management Automated Information System Management II-III-4-1
4.2.1 Unit and Shipboard Databases Afloat and Ashore II-III-4-1
4.2.2 Shore Databases II-III-4-2
4.2.3 Process for Account Requests NESD II-III-4-2

4.3 Maintenance II-III-4-4
4.3.1 Regional Maintenance Centers II-III-4-4
4.3.2 Maintenance Team II-III-4-4
4.3.3 Class Maintenance Plan II-III-4-4

4.4 Work Candidates II-III-4-5
4.4.1 Current Ship's Maintenance Project Composition II-III-4-5
4.4.2 Requirements II-III-4-5
4.4.3 Elements II-III-4-6
4.4.4 Guidelines II-III-4-7
4.4.5 Validation II-III-4-8
4.4.6 Verification II-III-4-8

4.5 Screening and Brokering II-III-4-8
4.5.1 Screening and Brokering Work Candidates II-III-4-8
4.5.2 Screening and Brokering II-III-4-9
4.5.3 Key Data II-III-4-9
4.5.4 Guidelines II-III-4-10

4.6 Assessments II-III-4-11
4.6.1 Maintenance Team II-III-4-11
4.6.2 Type Commander II-III-4-12

Appendices
A Availability Creation and Numbering II-III-4A-1
B NESD Customer Service II-III-4B-1

CHAPTER 5 - MAINTENANCE WORK CLOSEOUT

5.1 Purpose II-III-5-1

5.2 Scope II-III-5-1

5.3 Background II-III-5-1

5.4 Work Closeout Procedures II-III-5-1
5.4.1 Depot Maintenance Activity Responsibilities II-III-5-1
5.4.2 Fleet Maintenance Activity Responsibilities II-III-5-2
5.4.3 Maintenance Team Responsibilities II-III-5-3

PART IV

FOREWORD - MISSION FUNDED FLEET MAINTENANCE ACTIVITIES

1 Purpose II-IV-FWD-1

2 Scope II-IV-FWD-1
2.1 Applicability II-IV-FWD-1
2.2 Authority II-IV-FWD-1

3 Organization II-IV-FWD-1
3.1 Basic Principles for Costing Maintenance II-IV-FWD-1
3.2 Special Requirements Associated with Maintenance Costing II-IV-FWD-2

4 Benefits of Capturing Costs II-IV-FWD-2

CHAPTER 1 - UNIFORM COSTING POLICIES AND PROCEDURES FOR FLEET MAINTENANCE ACTIVITIES

1.1 Purpose II-IV-1-1

1.2 Uniform Costing Policies and Procedures II-IV-1-1
1.2.1 Function II-IV-1-1
1.2.2 Classification II-IV-1-1
1.2.3 Uniformity II-IV-1-1
1.2.4 Control II-IV-1-1
1.2.5 Proration II-IV-1-1
1.2.6 Unique or New Requirements II-IV-1-1
1.2.7 Performance II-IV-1-2
1.2.8 Direct Cost Basic Definition II-IV-1-2
1.2.9 Mission Overhead Costs Basic Definition II-IV-1-2

CHAPTER 2 - DETAILED COSTING GUIDANCE FOR FLEET MAINTENANCE ACTIVITIES

2.1 Purpose II-IV-2-1

2.2 Types of Costs II-IV-2-1
2.2.1 Accommodation Storage and Handling II-IV-2-1
2.2.2 Administrative Assistance to Managers and Supervisors II-IV-2-2
2.2.3 Administrative Services for Tenants II-IV-2-2
2.2.4 Allowance List Outfit Material Items - Outfit Supply Activity Furnished Material II-IV-2-2
2.2.5 Issue and Return of Anti-Contamination Clothing II-IV-2-2
2.2.6 Funding Support of Board of Inspection and Survey II-IV-2-2
2.2.7 Calibration of Instruments II-IV-2-3
2.2.8 Clerical and Office Automation Staff II-IV-2-3
2.2.9 Administration and Review of Contractor Work II-IV-2-3
2.2.10 Crane Operators II-IV-2-3
2.2.11 Special Test and Certification of Cranes II-IV-2-4
2.2.12 Continuous Process Improvement II-IV-2-4

2.2.13 Data Processing Resources....II-IV-2-4
2.2.14 Decontamination of Equipment and Tools....II-IV-2-5
2.2.15 Delay Time....II-IV-2-6
2.2.16 Dive Lockers....II-IV-2-6
2.2.17 Dosimetry Issuing and Processing....II-IV-2-7
2.2.18 Drills - Conducting and Participation....II-IV-2-7
2.2.19 Dry Dock Blocks and Dock Caps....II-IV-2-7
2.2.20 Dry Dock Operation....II-IV-2-7
2.2.21 Preparation of Engineering Procedures for Specific Authorized Work....II-IV-2-7
2.2.22 Equipment Maintenance....II-IV-2-8
2.2.23 Equipment Rental....II-IV-2-8
2.2.24 Disposal of Excess Plant Property....II-IV-2-9
2.2.25 Fuel....II-IV-2-9
2.2.26 Guarantee Work....II-IV-2-9
2.2.27 Incentive Awards Program for Civilian and Military Personnel Assigned to the Activity....II-IV-2-9
2.2.28 Inspection, Including Non-Destructive Testing....II-IV-2-10
2.2.29 Inspection Services....II-IV-2-10
2.2.30 Installation of Equipment....II-IV-2-11
2.2.31 Janitorial Services and Work Area Clean-Up....II-IV-2-11
2.2.32 Laundry Service....II-IV-2-11
2.2.33 Lean....II-IV-2-12
2.2.34 Lost and Damaged Tools....II-IV-2-12
2.2.35 Lost Time....II-IV-2-12
2.2.36 Upkeep of Maintenance Equipment....II-IV-2-12
2.2.37 Maintenance of Nuclear Equipment....II-IV-2-12
2.2.38 Management and Industrial Engineering Studies....II-IV-2-13
2.2.39 Material Handling and Expediting....II-IV-2-13
2.2.40 Fitness for Duty Medical Examination....II-IV-2-14
2.2.41 Metal Stock Cutting (Bar, Pipe, Plate, Cable, etc.)....II-IV-2-14
2.2.42 Acquisition of Minor Property....II-IV-2-14
2.2.43 Miscellaneous Expenses of the Production Resources Department Shops....II-IV-2-14
2.2.44 Mock-Up Work....II-IV-2-14
2.2.45 Pilot and Tug Service....II-IV-2-15
2.2.46 Planning and Estimating Services....II-IV-2-15
2.2.47 Acquisition of Plant Property Equipment....II-IV-2-16
2.2.48 Pollutant Clean-Up....II-IV-2-17
2.2.49 Pre-Expended Bins....II-IV-2-17
2.2.50 Printing, Reproduction and Duplication....II-IV-2-17
2.2.51 Programming Effort for Numerically-Controlled Machines....II-IV-2-17
2.2.52 Purchase of Gas, Liquid or Solid....II-IV-2-17
2.2.53 Radiological Control Engineering....II-IV-2-17
2.2.54 Radiological Waste Processing....II-IV-2-18
2.2.55 Refueling Equipment....II-IV-2-19
2.2.56 Ripout Material....II-IV-2-19

2.2.57 Satellite Steam Boiler II-IV-2-19
2.2.58 Security Furnished by the Fleet Maintenance Activity II-IV-2-19
2.2.59 Service Craft and Floating Equipment (Other than Nuclear) II-IV-2-19
2.2.60 Services in Support of Centralized Tools and Equipment II-IV-2-20
2.2.61 Temporary Service II-IV-2-20
2.2.62 Severance Pay II-IV-2-21
2.2.63 Special Programs (External/Claimant Authorized) II-IV-2-21
2.2.64 Supervision II-IV-2-21
2.2.65 Consumable Supplies II-IV-2-22
2.2.66 Operation and Maintenance of Tank Cleaning System II-IV-2-22
2.2.67 Telephone Services II-IV-2-22
2.2.68 Issue of Uncontaminated and Contaminated On Return Tools II-IV-2-23
2.2.69 Training of Personnel II-IV-2-23
2.2.70 Traumatic Injuries - Continuation of Pay II-IV-2-24
2.2.71 Utilities for Ships II-IV-2-25

CHAPTER 3 - UNIFORM COSTING POLICIES AND PROCEDURES RESPONSIBILITIES

3.1 Direct and Indirect Cost Identification Functions and Tasks Overview II-III-3-1

3.2 Organizational Relationships for Financial Management of Maintenance Activities II-IV-3-1
3.2.1 General II-IV-3-1
3.2.2 Chief of Naval Operations II-IV-3-1
3.2.3 Systems Commands II-IV-3-2
3.2.4 Naval Sea Systems Command II-IV-3-2
3.2.5 The Atlantic and Pacific Fleets II-IV-3-3
3.2.6 Type Commanders II-IV-3-3
3.2.7 Regional Maintenance Centers and Fleet Maintenance Activities II-IV-3-3
3.2.8 User Commands or Activities (Users) II-IV-3-4
3.2.9 Naval Inactive Ship Maintenance Facilities II-IV-3-4
3.2.10 Naval Reserve Force Vessels II-IV-3-4
3.2.11 Foreign Governments II-IV-3-4
3.2.12 Private Companies - Demilitarizing and Stripping II-IV-3-5

3.3 Standards of Conduct II-IV-3-5

Appendices
A Foreign Ship Repair Request II-IV-3A-1
B Foreign Ship Repair Reply II-IV-3B-1

CHAPTER 4 - RETENTION OF FINANCIAL RECORDS

4.1 Purpose II-IV-4-1

4.2 General II-IV-4-1
4.2.1 Maintenance Cost Record Requirements II-IV-4-1
4.2.2 Record Retention in General II-IV-4-2

4.3 Immediate Superior In Command Record Retention II-IV-4-2

4.3.1 Financial Record Retention II-IV-4-2
4.3.2 Inspection Record Retention II-IV-4-2
4.3.3 Command Evaluation and Independent Audit Record Retention II-IV-4-2
4.3.4 Assessments, Evaluations and Audits II-IV-4-2
4.3.5 Training II-IV-4-3

4.4 Fleet Maintenance Activity Financial Management Record Retention II-IV-4-3

4.5 Lost Records II-IV-4-3

CHAPTER 5 - FINANCIAL AUDITS, EVALUATIONS AND ASSESSMENTS

5.1 Purpose II-IV-5-1

5.2 General II-IV-5-1
5.2.1 Audits II-IV-5-1
5.2.2 Evaluation II-IV-5-2
5.2.3 Assessments II-IV-5-2
5.2.4 Key Elements of an Effective Command Evaluation Review II-IV-5-2
5.2.5 Record Retention II-IV-5-3
5.2.6 Signatures II-IV-5-3

5.3 Responsibilities and Procedures II-IV-5-3
5.3.1 Fleet Maintenance Activity Audit and Evaluation Program II-IV-5-3
5.3.2 Management Metrics for Direct Versus Indirect Costing II-IV-5-4
5.3.3 Immediate Superior In Command Financial Management Assessments and Audits II-IV-5-6

5.4 Reporting Audit Results and Corrective Action II-IV-5-6
5.4.1 Reporting Requirements for External Audits and Assessments II-IV-5-6
5.4.2 Correcting Deficiencies in Job Order Numbers or Financial Records II-IV-5-7
5.4.3 Assessments, Evaluations and Audits II-IV-5-7

Appendices
A Vertical Audits II-IV-5A-1
B Horizontal Audits II-IV-5B-1
C Checklist for Evaluating Direct Versus Indirect Costing II-IV-5C-1
D Financial Management Audit Discrepancy Form II-IV-5D-1
E Financial Management Discrepancy Form II-IV-5E-1

VOLUME II

(i) SSPINST 4720.1 - Policies and Procedures for Alteration of Strategic Weapon System Equipment

LISTING OF APPENDICES.

A Glossary of Terms

1. PURPOSE. The purpose of this volume is:

   a. To provide guidance for implementing and executing the management of an integrated fleet maintenance process for all Navy ships throughout their life cycle. This includes establishing policies and responsibilities for determining, authorizing, planning, scheduling, performing and evaluating maintenance of ships, to ensure quality, safety and maximum operational and material readiness. References (a) through (i) must be used in conjunction with this volume in establishing an effective maintenance program.

   b. To outline current maintenance process policies and responsibilities for all maintenance availabilities and delineate programs and associated data management systems required for accomplishing this maintenance.

2. SCOPE.

   a. This volume applies to all ships of the Navy (active and reserve); it does not apply to civilian operated ships assigned to the Military Sealift Command. Throughout this manual, the term "ship" refers to all surface ships, aircraft carriers, submarines and those patrol and service craft specified in reference (a). Reference (b) provides policy and guidance for maintenance of service craft and boats not addressed in reference (c).

   b. Appendix A of this chapter contains a glossary of terms used in this specific volume.

   c. Equipment under the cognizance of Naval Sea Systems Command Nuclear Propulsion Directorate (NAVSEA 08) is maintained following NAVSEA 08 directives.

d. Nuclear-Powered Ballistic Missile Submarine (SSBN) Strategic Weapon System (SWS) and Nuclear-Powered Guided Missile Submarine (SSGN) Attack Weapons Systems (AWS) equipment under the cognizance of Strategic Systems Programs (SSP) is operated, maintained, modified or modernized following approved SSP directives, instructions or both.

(1) Reference (i) defines policies, controls, processes and procedures for the accomplishment of all SSP Alterations (SPALT) issued by the Director, Strategic Systems Programs for all SSP cognizant equipment on both SSBNs and SSGNs. Reference (i) further defines the methodology and processes to plan, document, coordinate, install, and test SWS hardware, AWS hardware, software and modernization SPALTs.

(2) Adherence to reference (i) ensures that all related or affected Equipment, Fleet Documentation, Training, Logistic and Maintenance functions under the cognizance of SSP are fully integrated as part of the SPALT. Only SSP authorized SWS or AWS SPALTs are installed on SSBNs and SSGNs.

(3) Applicable and required local support services such as Crane, Riggers, Power Isolation, Tag-Out, Hazardous Material, Quality Assurance, Critical Skill requirements, etc., for the conduct of a SPALT must be identified within the Director, Strategic Systems Programs SPALT document, related Ordnance Document or SPALT installation pre-briefings (as appropriate). This information must be communicated and provided to all involved and affected local activities following the SPALT process no later than forty-five (45) days prior to the conduct of a SPALT, as outlined and defined within reference (i).

(4) An SSP Contractor or Government Team will provide the required operational and engineering support for all SPALT, Maintenance and Repair Activities to SWS or AWS equipment under the cognizance of SSP. The respective responsibilities of SSP Contractor or Government Teams, the Fleet Maintenance Activity and other local Commands for the execution of the SSP SPALT program will be documented in an overarching Memorandum of Agreement in order to define areas of responsibility for all activities involved in the accomplishment of authorized alterations in a timely, efficient and coordinated manner.

3. CHANGES AND CORRECTIONS. Changes and corrections will be issued as required. Comments and suggestions for improving or changing this volume are invited. Address comments, recommendations and requested changes to Submarine Maintenance Engineering, Planning and Procurement Activity utilizing the change request form located in the front of this manual. If changes are submitted in electronic format, facsimile or E-mail, each change request must contain the information required on the change request form.

APPENDIX A

GLOSSARY OF TERMS

TERM	DEFINITION
Aircraft Carriers Only	All ships under the responsibility of Naval Air Forces, Atlantic and Pacific Fleets. Includes all CVNs and supporting activities.
Charging to a Unit Identification Code (UIC)	The action describing a person, who is normally categorized as direct support labor, charging his or her time to a ship's UIC and while not working on a specific work item or Maintenance and Material Management Maintenance Action Form (4790/2K). When recording charges in this manner, support labor will charge to a Maintenance Work Order (MWO) that was created for that specific purpose. The nature of that MWO will be directly related to production but not to one specific job or 2-Kilo.
Deep Dive	The first dive to maximum operating depth. This depth will not necessarily coincide with the design test depth of the hull. See definition of Maximum Operating Depth.
Direct Labor Category	Assigned to those production personnel who charge their time to a MWO that originated from a specific 2K.
Direct Support Labor Category	Assigned to those personnel who are first line supervisors of direct personnel or who directly support production and charge to a UIC use Direct Support Labor. Also includes administrative personnel assigned to production; however, they will normally charge to overhead. Some examples of personnel likely to charge as Direct Support Labor: Port Engineer, Ship Supervisors, Production Quality Assurance, Engineers, Technical Assist Personnel, Planners.
Dock Trials	Dock Trials are those ship trials conducted at the industrial activity to determine the ability of the ship, from a material standpoint, to conduct Sea Trials safely.
Fast Cruise	A period immediately prior to underway trials during which Ship's Force operates the ship for dockside training. Fast Cruise must, as far as is practical, simulate at-sea operating conditions.
Fleet Maintenance Activity (FMA)	FMAs include tenders, shore based maintenance activities (Regional Maintenance Centers, Naval Ship Repair Facilities, Naval Submarine Support Facilities, Naval Intermediate Maintenance Facilities, TRIDENT Refit Facilities, Weapons Repair Facilities and other activities of that type) and supporting activities (port services, etc. that perform maintenance on Fleet assets).
Fleet Technical Support	Software application used by Commander, Navy Regional Maintenance Center to manage and track surface and submarine technical assists.

Habitability	All equipment necessary to provide a normal environment for living aboard a Naval vessel for duty section personnel. To provide this, ensure adequate temperature controllability, noise and vibration levels, lighting, ship's announcing circuits, furnishings, egress and access, fresh water, water temperature control, sanitary fixtures, laundry and food service.
Indirect Labor Category	Assigned to those personnel who charge their time to a cost center as overhead and do not charge to a UIC or MWO. Some examples of personnel that are considered Indirect: Master At Arms, Training, Career Counselor.
Industrial Activity	The activity responsible for accomplishing construction or repair of ships whether private or public. This includes Naval shipyards, private shipyards, shipbuilders, vendors, Naval Aviation Depots, Naval Ship Repair Facilities and other Naval Repair or Technical Activities (Naval Underwater Weapons Center, Naval Ships Weapons Center, etc.).
Initial Dive	For purposes of seawater valve and system testing, as defined in reference (e), the first dive to a depth not previously reached during the trials.
Lead Maintenance Activity	The single activity responsible for integrating all maintenance and modernization on U.S. Naval ships during any type of availability.
Livability	All equipment necessary to provide a normal life environment and residence aboard a Naval vessel for all assigned personnel. To provide this, in addition to habitability standards, ensure adequate scullery equipment available to serve on normal dinnerware (no paper or plastic), barber services, ship's store and vending services, fitness facilities, library and computer access, medical and dental services, WiFi and associated policy, cell phone service and associated policy, and televisions and television service.
Long Lead Time Material	Any material with a delivery date in excess of 30 days.
Maintenance Manager	Those persons, such as Port Engineers, Ship Superintendents, Ship’s Coordinator and Maintenance Planning Managers, assigned to assist Ship’s Force in the tracking of work candidates, development of work packages and tracking of FMA or Industrial Activities assigned jobs.
Maintenance Support Team	Military team that performs the function of Ship’s Force, and reports to the supported ship’s Immediate Superior In Command and the Operational Commander.
Maintenance Work Order (MWO)	The Automated Information System object that personnel use in order to charge time to a work item or 4790/2K.

Major Chief of Naval Operations (CNO) Maintenance Availability	An availability of six months or greater duration performed by industrial activities under Nava Sea System Command (NAVSEA) management or contract administration or as designated by the Type Commander (TYCOM) or NAVSEA.
Master Specification Catalog	Database of templates for all Naval Ship Classes. It is a module located within Navy Maintenance Database.
Maximum Operating Depth (Also Maximum Authorized Operating Depth)	The depth to the keel for a particular submarine which is authorized by Commander Submarine Force, U.S. Atlantic Fleet (COMSUBLANT) or Commander Submarine Force, U.S. Pacific Fleet (COMSUBPAC) upon the recommendation of NAVSEA, as the depth not to be exceeded in operations. This depth is normally the test depth but may be reduced in specific cases. The depth authorized by COMSUBLANT or COMSUBPAC may be less than, but in no case exceed, the depth recommended by NAVSEA.
Minor CNO Maintenance Availability	An availability of less than six months in duration scheduled by and under TYCOM management.
Moderate Speed	The range of speed that allows the submarine optimum recovery (as shown on applicable submerged operating envelope curves) if loss of stern plane control or flooding occurs. Normally 8-15 knots.
Naval Supervisory Authority	The officer designated to represent the Navy Department at an industrial activity, normally a Supervisor of Shipbuilding (new construction), Regional Maintenance Center (Conversion and Repair) or the Commander of a Naval Shipyard.
Navy Maintenance Database	Worldwide database used for all repairs across Naval Ship Classes. Used to develop work items for repair or modernization.
Quality of Service (QoS)	The combination of the quality of life, which is the experience of a sailor and their family outside the workplace, and quality of work which is the sailor's experience in the workplace. Habitability of the ship, alternative quarters, and berthing or messing barges are a major component to the sailor's experience in the workplace in CNO maintenance availabilities.
Quality of Service Council (QoSC)	Council established during each CNO availability comprised of ship's force, TYCOM, NSA, and ISIC in order to ensure issues affecting sailor QoS while shipboard or on berthing, duty, or messing barges are adequately addressed and briefed prior to and during execution of CNO availabilities.

Refurbishment Level Maintenance	The actions taken to return a component to "A" condition (like-new condition). Normally done under rotatable pool (Advanced Equipment Repair Program, TRIDENT Planned Equipment Replacement, etc.) programs by Designated Overhaul Points. Designated Overhaul Points must be certified to have the industrial capability to meet the program requirements for performing quality work and have the capacity to meet established Refurbishment Turnaround Times.
Regional Maintenance Team	A site specific, multi-disciplined group of people normally accomplishing "outside shop" or on-platform work. A regional maintenance team may be platform or technology specific (e.g., submarines or nuclear) to facilitate necessary worker training and competency, and is generally comprised of both military and civilian workers.
Regional Repair Center	An "inside shop" focusing on a particular product line (e.g., motors) or technology (e.g., machinery). A Regional Repair Center is generally comprised of both military and civilian workers.
Restoration Level Maintenance	The minimum planned inspection, maintenance and testing criteria to be applied to ensure a component will function satisfactorily until the next planned accomplishment of the maintenance requirement.
Ship's Force	Members assigned as a ship's permanent or rotational crew.
Submarines Only	All ships under the responsibility of Submarine Forces, Atlantic and Pacific Fleets. Includes all submarine classes (e.g., SSN, SSBN, SSGN) and supporting activities: ARDMs, ASs, and UUVs.
Surface Force Only	All ships under the responsibility of Naval Surface Forces, Atlantic and Pacific Fleets. Includes all surface ship classes and supporting activities that are NOT under the responsibility of Submarine Forces or Naval Air Forces (e.g., Aegis Ashore, CG, DDG, ESB, LCC, LCS, LHA, LHD, LPD, LSD, MCM).
Technical Data	Recorded information (regardless of the form or method of recording) of a scientific or technical nature (including computer databases and computer software documentation). This term does not include computer software or financial, administrative, cost or pricing or management data or other information incidental to contract administration. The term includes recorded information of a scientific or technical nature that is included in computer databases. For these purposes, technical data includes the characteristic of a particular science, trade or profession.

Test Depth	For the purpose of the proper method of measuring and specifying test depth, the following applies: Test depth must be measured to the bottom of the keel for all types of submarine operations. Builders' trials and trials following major industrial activity availabilities greater than six months must be at a tolerance of plus zero (0), minus twenty (20) feet of test depth when specified. All other trials can be conducted at 95% to 100% of test depth to satisfy all the requirements specified for 100% test depth.
Waterline	The term "waterline" in this manual refers to where the hull of a ship meets the surface of water when afloat.
Work	a. Any action that actually or potentially changes (including disassembly for the purposes of inspection or repair) the approved configuration of any part, component or ship's system. b. Any action that removes or affects the ship's ability to operate ship's systems or components following ship's systems, operating manuals or reactor plant manuals. c. Any testing or inspections required to establish, maintain or reestablish certification. d. Any design, engineering, planning or configuration management functions that involve the final review or approval of technical information. Examples of work include the following: 1. Action which disassembles or removes any part, component or ship's system. 2. Action specified in a technical work document. 3. Any action that removes or affects the ship's ability to operate ship's systems or components following ship's systems manuals, operating manuals or reactor plant manuals, excluding tagout per the Tagout User's Manual, including but not limited to: (a) Component or system tests. (b) Intrusive inspections (such as breaking the plane of electrical panels requiring electrical safety). (c) Valve line-ups that alter the normal system line up not governed by operating procedures. (d) Removing valve hand wheels, disconnecting of reach rods.

LISTING OF APPENDICES.

A Material Condition Assessment Process Timeline
B Propulsion Plant Material Condition Assessments
C System Certification Checklist for CNO Availability Key Events
D Scope of Visual Inspections of Reactor Plant Fluid Systems

1.1 PURPOSE. The purpose of this chapter is to provide Fleet Commanders' guidance for the maintenance of ships throughout their operating cycle per references (a) through (w). This includes maintenance levels, strategies, programs and modernization which define and support all maintenance accomplished per technical specifications and standards during a ship's operating cycle.

1.1.1 Naval Supervisory Authority.

a. Naval Supervisory Authority Definition. The Naval Supervisory Authority (NSA) is the single Naval activity, as indicated in Table 1-1 of this chapter, responsible for the integration, oversight and verification of all work accomplished by all activities (i.e., Naval Shipyards (NSY), Regional Maintenance Centers (RMC), Supervisors of Shipbuilding (SUPSHIP) contractors, Type Commander (TYCOM) sponsored contractors, Intermediate Maintenance Activities, Alteration Installation Teams (AIT) and Ship's Force (SF)) working within the assigned availability, and acts as the single point of contact for this work. The NSA will provide the oversight required to ensure that all work in the assigned availability (e.g., Chief of Naval Operations (CNO) availabilities, Carrier Incremental Availability, Continuous Maintenance Availability, Emergent Availability) is authorized and completed in compliance with applicable technical requirements and maintenance and modernization policy, and that all work meets schedule, quality, environmental, and safety requirements. The NSA must possess a Naval Sea Systems Command (NAVSEA) technical warrant.

b. NSA Assignment. In most cases, the NSA is assigned by the Fleet Maintenance Officer and TYCOM per Table 1-1 of this chapter. An NSA must be assigned to all CNO availabilities and to all contracted work where the majority of the work is performed onboard the ship. Local Technical Authority for the Lead Maintenance Activity (LMA) is delegated by their assigned Chief Engineer per reference (a) as defined in a Memorandum of Agreement (MOA) between the responsible organizations. When such an MOA exists, the LMA executes the specific NSA responsibilities when no NSA is assigned.

(1) Alterations installed by AITs per reference (b) can only be executed in availabilities having a designated NSA.

(2) A NSA is not required if the work is being performed by a U.S. Navy LMA outside a CNO availability.

(3) The NSA is normally assigned based on the geographic area covered by the assigned RMC, NSY or SUPSHIP, as indicated in volume VI, chapter 2, RMC Area of Responsibility Assignment, Table 1-1 of this manual. If this is not practical, the NSA assignment is made based on the area of responsibility of the cognizant Chief Engineer as delineated in reference (a).

(4) The NSA designation does not apply to alterations to modernization exemptions specified in reference (c).

c. NSA Qualification. The NSA must have a Chief Engineer holding a NAVSEA Technical Warrant. For this reason, the only organizations qualified to perform the NSA functions are the NSYs, the RMCs and the SUPSHIPs.

NOTE: DELEGATION OF NSA RESPONSIBILITIES CAN BE ACCOMPLISHED THROUGH A MOA THAT IDENTIFIES DUTIES, RESPONSIBILITIES AND OVERSIGHT FUNCTIONS. THE NSA IS RESPONSIBLE FOR ALL WORK ACCOMPLISHED BY ALL ACTIVITIES AND ACTS AS THE SINGLE POINT OF CONTACT.

d. NSA Responsibilities. These responsibilities include but are not limited to:

(1) Coordination with other Maintenance Activities (e.g., NSY, RMC, SUPSHIP, AIT, Ordnance Alteration or Temporary Alteration Installation Teams) through an authorized MOA. NSA representative must sign MOA(s) as assurance that any civilian contractor requirements detailed in the MOA are contained within applicable contracts.

(2) Single point of contact for the LMA and shipboard personnel.

(3) Verify completion of work for milestones, key events, end of availability, availability departure report based on documentation provided by all maintenance activities.

(4) Based on the amount of work accomplished, the NSA may also assume the LMA role per paragraph 1.1.2 of this chapter.

(5) For CNO availabilities, the NSA must:

(a) (For NSY only) Also serve as the LMA.

(b) Participate in all work definition, planning and completion conferences.

(c) Facilitate planning efforts. Ensure detailed planning and integration of the work package is accomplished to provide a schedule that incorporates the work and testing of all organizations involved in the availability. The schedule must address work definition, key events, ship-checks, job summary, material preparations and strategy preparations. Identify milestones with sufficient detail to measure intermediate progress toward each key event. Ensure orientation briefings and training are conducted as necessary so that personnel understand applicable project processes and requirements. Identify their appropriate points of contact.

(d) Prior to Fast Cruise, Sea Trials and availability completion, verify all authorized work has been completed or waived. For work performed by contractors, ensure all provisions of the contract have been fully executed.

(e) During work execution, review all changes to specifications and work items impacting propulsion plant or designated areas of nuclear powered ships to ensure requirements are met.

(f) Participate in critiques and problem investigations (e.g., Trouble Reports) as necessary.

(g) Participate in Quality of Service Council per chapter 2 of this part and volume.

(6) For alterations installed by AITs, the NSA, as provided in Table 1-1, as required by reference (b) must:

(a) Initiate the AIT MOA with the AIT Manager and engage all assigned activities to support development of the MOA as detailed in reference (b). The MOA will state that the on-site QA Workbook, surveillances conducted by the On-site Installation Coordinator and any Corrective Action Requests issued will be provided to the NSA upon request. Additionally, the MOA must specify that the NSA be notified of and allowed to attend all critiques associated with the alteration as well as be notified of all stop work orders issued to the AIT.

(b) Monitor the effectiveness and the quality of AIT managers' execution of Quality Assurance oversight responsibilities by assessing their execution of Quality Assurance oversight responsibilities and by Quality Sampling. Request Qualification Records as needed in support of spot checks.

(c) Perform surveillances of AIT installations, on a sampling basis, and use the sampling evidence to indicate conformance or nonconformance with NAVSEA requirements. Document nonconformances per reference (b).

NOTE: THE SF OR NSA OUT-BRIEF SHOULD BE CONDUCTED INDEPENDENT OF COMPLETION STATUS AT THE END OF AVAILABILITY.

(d) Participate in SF AIT In-Briefs, and SF and NSA Out-Briefs.

(e) Coordinate with the AIT Manager, On Site Installation Coordinator and SF to ensure satisfactory completion of alterations.

(f) Verify delivery of Integrated Logistics Support deliverables from the AIT.

(g) Ensure completion reports are issued and for any work not accomplished, assure a Current Ship's Maintenance Project (CSMP) Job Control Number is issued.

Maintenance Availability	NSA	LMA
CNO Public [1]	NSY	NSY

CNO Private [1]	RMC or SUPSHIP [2]	Contractor
Non-CNO Public [3]	RMC or NSY	RMC, NSY or Fleet Maintenance Activity (FMA)
Non-CNO Private [3]	RMC or SUPSHIP [2]	Contractor
Emergent or Voyage repair	RMC, SUPSHIP or NSY	FMA, RMC, NSY or Contractor
Maintenance Availability	NSA	LMA
New Construction	SUPSHIP	Contractor
AIT availabilities	RMC, SUPSHIP or NSY	FMA, RMC, NSY, AIT or Contractor

NOTES:

1. Per reference (d).
2. Pearl Harbor NSY and Intermediate Maintenance Facility and Puget Sound NSY and Intermediate Maintenance Facility also considered RMCs.
3. Examples of Non-CNO availabilities are located in part I, chapter 4 of this volume.

Table 1-1 RMC Area of Responsibility Assignment

NOTE: THE LMA IS RESPONSIBLE TO THE NSA WHEN AN NSA IS ASSIGNED OR THE TYCOM IF NO NSA IS ASSIGNED.

1.1.2 Lead Maintenance Activity. The single activity responsible for work being accomplished on U.S. Naval ships during any type of industrial availability. For work conducted during periods in which the NSYs or RMCs do not have oversight, an LMA will be designated. LMAs are responsible for:

a. Conduct or attend routine progress review meetings with all assigned repair activities. Identify and resolve coordination problems and work conflicts. Advise the appropriate maintenance activities (e.g., NSA, NAVSEA, TYCOM, AIT Manager, Ship's Program Manager, etc.) of significant quality, cost and schedule impacts and problems.

b. Integrate the work of all repair activities. This includes an integrated schedule. The schedule must ensure adequate time is provided for crew training.

c. Report work status to Maintenance Brokers.

d. Request assistance via Maintenance Broker as needed for outside activity performance.

e. Track progress of all maintenance activities.

f. Maintain a list of activities authorized to work on the ship the LMA is responsible for and ensure the list is updated weekly or on an as-needed basis. Ensure activities working on ship have the proper credentials, work schedule and pedigree (authorized maintenance activity) prior to being added on the work authorization list (e.g., Radiological).

g. Ensure maintenance activities performing maintenance on assigned ships have proper MOA, Standard Work Practices, or NAVSEA standard items in place and that the MOA, Standard Work Practices, and NAVSEA standard items authorization address required support for work authorizations and work control. NSA representative must sign MOA(s) as assurance that any civilian contractor requirements detailed in the MOA are contained within applicable contracts.

h. Direct maintenance providers to their proper points of contact.

i. Attend all production and maintenance management meetings to communicate and resolve priorities, problems, job interferences and issues.

j. Define, identify and provide resolution to coordination problems and work conflicts between the Maintenance Managers, Maintenance Activities, Maintenance Brokers and the ship.

k. Provide a copy of all Departures From Specifications (DFS) to SF Quality Assurance Officer and TYCOM N43.

l. Participate in critiques and problem investigations (e.g., Trouble Reports) as necessary.

m. Conduct SF and contractor orientation briefings and training per references (b) or (e), as applicable, prior to commencement of shipboard work.

n. A Ship Safety Council is not required during non-CNO availabilities, but a Ship Safety Officer will be appointed and on site to oversee any high-risk evolutions per Section 046 of reference (f). Appointing an on-site Ship Safety Officer to oversee any high-risk evolutions per Section 046 of reference (f). A Ship Safety Council is not required. For all Non-CNO availabilities, a Ship Safety Council is not required, but a Ship Safety Officer will be appointed and on site to oversee any high-risk evolutions per Section 046 of reference (f).

o. For CNO Availabilities, the LMAs are additionally responsible for:

(1) Respond to findings of the Quality of Service Council per chapter 2 of this part and volume, as requested.

(2) Appoint a Ship Safety Officer to chair the Ship Safety Council and coordinate work and testing that affects ship's conditions (i.e., buoyancy, list, trim, stability and watertight integrity) and prevention and protection from fire and flooding.

(3) Provide sea trials agenda, with all repair activity input, for ship Commanding Officer's concurrence and Type Commander approval.

(4) Coordinate crane operations, pier laydown areas, dry dock work areas and resolve other real estate conflicts which may impede efficient execution of the availability.

(5) Coordinate preparations by assigned repair activities for all key events (e.g., docking, undocking, hot ops, dock trials, fast cruise, sea trials, etc.) to include verification signature checklists of readiness to start.

(6) Coordinate work and testing controls to include Work Authorization Forms, tagouts and test sequencing per volume IV, chapter 10 of this manual.

1.1.3 Ship's Responsibility. The ship is responsible to:

a. Monitor all maintenance activities to ensure they are on the master authorization list.

b. Ensure a current master authorization list is maintained by the Ship's Duty Officer.

c. Provide the LMA with information on ship-brokered work, so all activities are placed on the master authorization list.

1.2 MAINTENANCE ACCOMPLISHMENT LEVELS.

1.2.1 Fleet Maintenance. Fleet maintenance encompasses Organizational and Intermediate level maintenance as defined in reference (d). It includes, but is not limited to:

a. SF maintenance that is planned and corrective maintenance which is within the capability and the responsibility of the ship's crew or Maintenance Support Team (if assigned). The work is a blend of equipment operation, condition monitoring, planned maintenance, and repairs ranging from simple equipment lubrication to component change-out and in some cases complete disassembly and repair in-place. The thrust of SF maintenance is to take advantage of operator experience and onboard rating skills and to ensure the ship is as maintenance self-sufficient as possible.

b. FMA maintenance is that requiring specialized ratings, skill, training in special maintenance processes and technical proficiency or equipment or instrumentation not available to SF. FMA maintenance normally consists of calibration, repair, refurbishment, or replacement of damaged or unserviceable parts, components or assemblies, the emergency manufacture of unavailable parts within the FMA capability and technical assistance.

(1) FMAs will accomplish refurbishment level maintenance beyond SF capability to the maximum extent possible within the policies of this chapter and other directives consistent with the availability of funds, material and skilled manpower.

(2) FMAs include Regional Repair Centers and Regional Maintenance Teams which are capable of conducting in-depth maintenance on their assigned components using the latest available technology.

c. Strike Force Intermediate Maintenance Activity is composed of the collective Strike Force elements capable of performing maintenance beyond the organizational level. A Strike Force Intermediate Maintenance Activity maximizes the Strike Force's ability to operate and sustain itself at sea during extended periods in forward areas through improved repair capabilities and material self-sufficiency.

d. The Commercial Industrial Services program accomplishes fleet maintenance for essential fleet repairs that the FMAs have the capability to accomplish but lack the shop capacity. The Commercial Industrial Services concept, as further described in reference (g), provides a means of using commercial industrial activities to provide maintenance services on a rapid response basis while observing approved commercial

contracting procedures. Reference (g) fully describes policies and procedures for Commercial Industrial Services.

1.2.2 Industrial Maintenance. Industrial maintenance is that restoration level maintenance which encompasses Depot level maintenance as defined in reference (d). It includes but is not limited to:

a. Industrial maintenance that is restoration level work requiring complex industrial processes, journeyman level technician skills, facilities, capabilities or manpower capacity not available at FMAs or to SF. This capability is provided within the Navy by naval industrial activities, ship repair facilities, Naval Aviation Depots and commercial industrial activities and repair facilities under contract.

b. Ship maintenance work scheduled for accomplishment by industrial facilities that in the judgment of the TYCOM, Commander NAVSEA or Commander, Naval Information Warfare Systems Command in their specific areas of responsibility, is not feasible to be accomplished by FMAs or SF, due to:

(1) Insufficient time or manpower.

(2) Insufficient capabilities of the FMAs.

(3) Split responsibility between Fleet and industrial maintenance activities may occur.

1.3 RELIABILITY CENTERED MAINTENANCE.

a. Reliability Centered Maintenance (RCM), per reference (h), is a systematic analysis approach where the system design is evaluated for possible failures, the consequences of these failures and the recommended maintenance procedures that should be implemented to prevent the failure. The objective is to design a directive maintenance program to address possible failure consequences, vice corrective maintenance program.

b. The objective is to design a planned maintenance program to address possible failure consequences. The emphasis here is on the establishment of planned maintenance requirements (versus corrective maintenance requirements).

c. Maintenance plans for in-service ships, systems and equipment should be reviewed and modified to incorporate RCM principles in areas where it can be determined that the expected results will be commensurate with associated costs.

1.4 CONDITION BASED MAINTENANCE. Condition Based Maintenance (CBM) is maintenance based on objective evidence of actual or predictable failure of ship's installed systems or components. This includes condition-directed maintenance and periodicity adjustments to time-directed planned maintenance.

a. A thorough knowledge and assessment of actual equipment condition in relation to its designed condition is the basis for most maintenance decisions. Equipment condition is a broad term which includes static parameters, such as size and shape, and dynamic parameters, such as speed, temperature, pressure, voltage, etc. While each SF is in the best position to know the condition of its ship and equipment, the complexities of modern design and engineering dictate that specialized assistance be utilized to

determine the condition of much of the equipment. Diagnostics, inspections, non-intrusive monitoring for trending, analyses and tests must be utilized to the maximum extent possible to determine performance and material condition of, and to predict and schedule required corrective maintenance action on, ships systems and equipment.

b. Programs and organizations that are available to assess equipment conditions are described under Machinery Condition Analysis. Deficiencies identified by these assessments must be documented in the CSMP.

c. Further information on CBM is provided by reference (d).

1.4.1 Machinery Condition Analysis.

1.4.1.1 General. The TYCOM Machinery Condition Analysis (MCA) and SF Machinery Vibration Analysis programs provide an objective assessment of the mechanical condition of propulsion plant and auxiliary rotating machinery. MCA surveys and SF Machinery Vibration Analysis and testing directly support the CBM strategy by determining specific maintenance requirements and priorities.

1.4.1.2 Automated Machinery Condition Analysis. The advent of real-time machinery digital sensors, analysis tools, data recording and data transfer has brought Automated Machinery Condition Analysis (AMCA) to the forefront of CBM. AMCA systems are being employed and installed on new ships-of-the-line and backfitted where practicable on existing ships. The AMCA tools and systems support the MCA programs and MCA surveys. The systems are implementing prognostic, diagnostic and maintenance capabilities for both shipboard and off-ship personnel to utilize to enhance understanding of the mechanical condition of propulsion plant and auxiliary rotating machinery.

1.4.1.3 Machinery Condition Analysis Surveys. MCA surveys combine vibration analysis, visual inspections and a review of operating and maintenance records to objectively determine each machine's condition. Consideration of technical manuals, Navy Standard Items, and General Specifications for Overhaul should be made when determining the machine's condition. For example, the Navy tech manual for centrifugal pumps states the life of the pumps is 30 years at a certain usage rate.

a. Surveys are conducted before and after each scheduled CNO maintenance availability period. The survey preceding the availability provides a comprehensive list of machines which require repair. The MCA survey after the availability allows time for corrective maintenance actions prior to the ship's deployment and, if applicable, repairs while machinery is still under the availability warranty period. The post-availability survey also establishes a baseline to which future surveys can be compared.

b. The key to the MCA program is onboard analysis of vibration data. MCA surveys identify machinery problems. A written report details prioritized repair recommendations with appropriate diagnostic and visual inspection data for all machines tested. The report also summarizes machinery repair history.

c. Reports of failure trends and recurring or continuing mechanical problems are available along with MCA history reports. These reports can be generated based on machine type, ship, ship class and Fleet.

1.4.1.4 Ship's Force Machinery Vibration Analysis Program. The SF Machinery Vibration Analysis program, per reference (i), uses a fully capable automated diagnostics system to provide many ships with the ability to perform vibration testing. A set of computer programs in the diagnostics system provides the equivalent of a full-time vibration engineer so that SF can test and analyze machinery at any time. Periodic training is provided to SF.

1.4.2 Ship Assessment, Groom and Evaluation. Ship Assessment, Groom and Evaluation is an existing TYCOM program which provides assessment of the material condition of selected shipboard systems and equipment. Ship Assessment, Groom and Evaluation includes identification of discrepancies to support development of a comprehensive conditioned based industrial availability work package. This program is fully described in volume VI, chapter 42 of this manual.

1.4.3 Command, Control, Communications, Computers and Combat Systems Readiness Assessment Program. The Command, Control, Communications, Computers and Combat Systems Readiness Assessment program, per reference (j), is a TYCOM program which provides maintenance training and a comprehensive review and assessment of a ship's Combat Systems prior to deployment. It includes identification of discrepancies to support development of a comprehensive condition-based availability work package for a ship's Combat Systems.

1.5 SYSTEM OR COMPONENT MAINTENANCE PROGRAMS. The Aircraft Carrier Planned Equipment Replacement provides a pool of historically critical, hard-to-get equipment and components available for planned or emergent replacement.

1.6 MODERNIZATION. The Navy Modernization Process is a CNO managed program to develop, plan, fund and accomplish Ship Changes and alterations following policies mandated in reference (c). It is executed per volume VI, chapter 36, of this manual.

1.7 INTEGRATED FLEET MAINTENANCE MANAGEMENT.

1.7.1 Integrated Fleet Maintenance Management. Integrated Fleet Maintenance Management is the business management model that allows for continuous maintenance by providing a seamless interface between all associated processes. It provides for processing work candidates including storage and retrieval of historical data and feedback to improve the process. The intent is to have a standard management model applicable to all platforms at all maintenance levels encompassing the following:

a. Discover and document work.

b. Validate and diagnose work.

c. Integrate and screen work.

d. Estimate and task work.

e. Plan work.

f. Execute work.

g. Collect feedback and analyze data.

1.7.2 Maintenance Continuum. The maintenance continuum defines Fleet strategy for maximizing fleet readiness by optimizing the continuous screening, planning, and execution of maintenance per reference (c). It builds upon continuous maintenance principles of which all

scheduling opportunities are aggressively utilized, resulting in the ship's work candidates being expeditiously resolved at every maintenance opportunity (e.g, CMAVs, Windows of Opportunities (WOOs), etc.) outside of the ship's CNO availability. The core tenet is moving all feasible jobs out of CNO availabilities, reserving these events solely for work requiring shipyard-level equipment, facilities, or the extended duration afforded by that environment. Adherence to the maintenance continuum is essential for achieving shorter, more frequent availabilities and preventing delays to ship's training, certification, and operational schedules.

1.7.2.1 Implementing the Maintenance Continuum. Ashore ships maintenance managers, intermediate level ship superintendents, and project managers are expected to aggressively advance continuous screening and planning processes to ensure jobs are ready for execution as quickly as possible after discovery and entry into the ship's CSMP. Ashore ships maintenance manager, intermediate level ship superintendents, and project managers are also expected to identify and implement innovative approaches to utilizing in-port and even underway time to accomplish these jobs. The goal is to fully operationalize maintenance, modernization and repairs, making them continuous, everyday activities throughout the ship's lifecycle. The average time a job spends on the CSMP, from initial entry to completion, is a key metric that ship and shore maintenance managers must continuously work to minimize.

1.7.2.2 Continuous Planning Process. Continuous Planning is a process in which work is planned when tasked. Continuous Planning:

a. Begins with tasking of a work candidate to a planning activity for preparation of a work specification and cost estimate.

b. Ends when the specification is approved for execution. There is overlap between Continuous Screening and Continuous Planning.

1.7.2.3 Continuous Execution Process. Continuous Execution is a process in which selected emergent and non-emergent work candidates are executed outside of scheduled availabilities. Continuous Execution will not replace the current availability system. Availabilities will still be necessary to accomplish major repairs and extensive configuration changes, as well as provide the ship with a specific period of time to concentrate on maintenance and training. Continuous Execution will assist planning activities and repair activities in leveling their workload while providing the ships with a means of accomplishing repairs when needed with a minimum level of interruption to the ships' in port routine that is acceptable to the ship. The process is used when:

a. The work candidate is ready for execution.

b. Capacity exists in the selected repair activity.

c. Ship's in-port schedule supports the required level of repair effort.

1.8 TECHNICAL ASSISTANCE.

1.8.1 Regional Maintenance Center.

a. The RMCs provide direct support to Fleet and TYCOMs in matters of waterfront technical assistance, maintenance training and logistics services associated with the installation, operation, maintenance, and readiness of shipboard equipment and systems. The RMCs promote Fleet readiness and maintenance self-sufficiency in shipboard systems and equipment through direct technical help in troubleshooting,

maintenance and repair, on-the-job maintenance training, logistics reviews, and technical documentation support. These services help correct operational and maintenance problems which are beyond the technical capability or capacity of fleet units or FMAs.

b. Volume VI, chapter 2 of this manual fully describes policies and procedures for the RMCs.

1.8.2 Ship Assessment, Groom and Evaluation.

a. This program is managed and funded by the TYCOM and provides technical assistance to SF personnel in maintaining a select list of shipboard equipment and systems.

b. Volume VI, chapter 42 of this manual provides further explanation of this program.

1.8.3 Carrier and Field Service Unit.

a. Carrier and Field Service Unit is a branch of the Naval Air Warfare Center Aircraft Division designed to provide technical assistance to Fleet personnel for all launch, recovery and visual landing aids systems.

b. Volume IV, chapter 16 of this manual provides further explanation of this program.

1.8.4 Elevator Support Unit.

a. Elevator Support Unit is an element of NAVSEA's Weapons, Aircraft and Cargo Elevator Improvement Program funded and scheduled by the TYCOM to provide technical assistance for the maintenance, modernization and repair of weapons, aircraft, and cargo handling elevators.

b. Volume IV, chapter 8 of this manual provides further explanation of this program.

1.8.5 Propulsion Plant Engineering Activity. Technical assistance is available from the Propulsion Plant Engineering Activity (PPEA) for non-nuclear propulsion plant systems. The PPEA provides an additional technical resource for assisting operating aircraft carriers with technical or operational issues, or both, not associated with SHIPALT installation and configuration control. PPEA Liaison services are requested using the Steam Plant Action Request (SPAR) per reference (k). SPAR is not intended to replace the Liaison Action Request (LAR) or DFS processes described in volume V, part I, chapter 8 of this manual. The PPEA, using the Steam Plant Liaison Inquiry described in reference (k), will request information, disseminate technical information and direct work that does not require a drawing change or affect system configuration control.

a. CVN 68 Class aircraft carrier non-nuclear propulsion plant systems technical assistance is available from the PPEA for operating aircraft carriers with technical or operational issues, or both, not associated with Ship Alteration (SHIPALT) installation and configuration control. PPEA liaison services are requested using the SPAR per reference (k). SPARs are not intended to replace the LAR or DFS processes described in volume V, part I, chapter 8 of this manual. The PPEA requests information, disseminates technical information and directs work not requiring a drawing change or affecting system configuration control using the Steam Plant Liaison Inquiry process described in reference (k).

b. CVN 78 Class aircraft carrier propulsion plant systems technical assistance is available from the Propulsion Plant Planning Yard for operating aircraft carriers with technical or operational issues, or both, not associated with SHIPALT installation and configuration control. PPEA liaison services are requested using the SPAR per reference (k). SPARs are not intended to replace the LAR or DFS processes described in volume V, part I, chapter 8 of this manual. The PPEA requests information, disseminates technical information and directs work not requiring a drawing change or affecting system configuration control using the Steam Plant Liaison Inquiry process described in reference (k).

1.8.6 Waterfront Corrective Action Program.

a. Waterfront Corrective Action Program is a subprogram of the Shipboard Electromagnetic Compatibility Improvement Program, and is part of the RMCs, designed to provide training and technical assistance to SF in Electromagnetic Interference recognition and reduction.

b. Volume VI, chapter 4 of this manual provides further explanation of this program.

1.8.7 Fleet Maintenance Support Branch.

a. Fleet Maintenance Support Branches' charter is to improve the Fleets ability to perform nuclear maintenance. This is accomplished by the following:

(1) Training.

(2) Providing on-site technical support.

(3) Acting as corporate memory.

b. Fleet Maintenance Support Branch support should be coordinated through the respective Surface Nuclear Maintenance Training Group.

1.9 PROPULSION PLANT MATERIAL CONDITION.

1.9.1 Purpose. This section presents a comprehensive approach to assessing and maintaining propulsion plant material condition on Nuclear Powered Aircraft Carriers (CVN). The cornerstone of this program is the Material Condition Assessment Process (MCAP) which employs incremental maintenance concepts to apply inspections, maintenance, training and both depot and afloat assets toward the consistent identification, evaluation, tracking and correction of propulsion plant material condition deficiencies. The program assigns specific duties to both SF and the TYCOM staff to ensure the ship has the assets, processes and support in place to effectively manage propulsion plant material condition over the life of the ship. The effectiveness of this process is measured by the material condition of the propulsion plants.

1.9.2 Ship's Force Requirements.

1.9.2.1 Reactor Maintenance Officer. The Reactor Maintenance Officer (RMO) is responsible for the long-range planning and management of propulsion plant maintenance throughout the ship's cycle. Specific responsibilities include:

a. Coordinate with other Reactor Department Principal Assistants to ensure divisions are continuously identifying, evaluating and correcting material deficiencies in the propulsion plants. The RMO will periodically review the MCAP Database,

Equipment Deficiency Log (EDL) and the Equipment Status Logs to ensure deficiencies are being identified and documented.

b. Coordinate with other Reactor Department Principal Assistants to ensure divisions are submitting work requests for inclusion into future availabilities and up-keeps, as necessary to correct significant or overly burdensome material deficiencies.

c. Function as the ship's liaison for all outside maintenance activities. The RMO will be the primary point of contact for all matters pertaining to maintenance of the propulsion plants to include coordinating with the TYCOM in the planning, prioritizing and execution of scheduled repairs.

d. Request assistance as necessary, via the TYCOM, to accomplish nuclear and non-nuclear planned maintenance inspections.

e. Coordinate with Reactor Training Assistant or Training Officer all required shipyard and TYCOM training for the Reactor Department prior to the start of availabilities.

f. Request training, via the TYCOM, on the execution of material inspections. The training, conducted by a small (a notional five-person team consisting of shipyard nuclear and non-nuclear engineers and a MCAP Zone Manager or Coordinator) group of shipyard MCAP experts, is normally conducted in conjunction with the Pre-Deployment Material Condition Assessment Inspection (MCAI). The primary goal of the training is to provide focused information and training to SF personnel on MCAP inspection attributes and techniques. The RMO will be the single point of contact for scheduling TYCOM provided or funded maintenance and inspection training.

g. Coordinate, via the TYCOM, the use of groom teams, as needed. Groom teams may be shipyard or contractor personnel who can be scheduled to find and fix discrepancies associated with specific systems or components. Groom teams employ standard tests to evaluate system performance and may assist in the correction of deficiencies as well as their identification and documentation.

h. Coordinate, with other Reactor Department Principal Assistants, to ensure that deficiency lists generated by groom and inspection teams are incorporated into the MCAP Database EDL.

i. During CNO availabilities, perform actions necessary for certification of Reactor Plant Support Systems required to support principal propulsion plant evolutions per reference (l). Prior to performing work on these components or systems, the RMO must consult with the shipyard project team to ensure that a clear path to re-certification (or interim certification) is identified.

j. Assist the Reactor Officer and the other Principal Assistants in the planning and management of SHIPALTS and modifications to reactor plant systems and support systems.

k. Ensure that non-propulsion plant deficiencies identified as part of the MCAP are passed to the Ship's Maintenance Manager for action. The Ship's Maintenance Manager is responsible for coordinating and reporting the correction of these deficiencies in a timely manner. Increased emphasis on deficiency correction and

reporting may be required by the Ship's Maintenance Manager during key event readiness periods.

1.9.2.2 Material Condition Assessment Process. Appendix A presents a notional, 27 to 36-month, MCAP Timeline. This timeline provides visibility of the many areas requiring consideration and action by both the ship and associated Project Team, both inside and outside of CNO availabilities. The timeline provides a template capturing the minimum efforts that should be undertaken throughout the ship's operational cycle to support improvement of propulsion plant material condition. It was developed by a detailed review of associated source documents and experience in MCAP implementation across the fleet and should be tailored by the RMO to suit the ship's individual schedule and circumstances. The following are events from the MCAP Timeline that are of particular significance to SF that are not specifically addressed in other source documents:

a. Pre-Deployment Material Condition Assessment Inspection. The Pre-Deployment MCAI is a non-intrusive walk-through inspection of propulsion plant spaces conducted by SF (with shipyard support) prior to deployment. This inspection is conducted as a joint effort in conjunction with pre-inspection training provided by shipyard engineers and inspectors. The scope of the Pre-Deployment MCAI exceeds that of the ship's periodic zone inspections and is intended to be a mid-cycle assessment of propulsion plant material condition.

(1) The objectives of the inspection are:

(a) To validate the standards used in the material condition assessment process. This is accomplished through the pre-inspection training provided by shipyard engineers and inspectors. This training is intended to be the most significant opportunity to train and educate SF personnel with regard to inspection attributes and material standards.

(b) To identify deficiencies prior to deployment in time to order and receive material before departure. This ensures that SF has the material on hand to correct deficiencies while on deployment.

(c) To provide a mid-cycle review and validation of the health of the MCAP.

(d) To set the tone for continuing inspections during the ship's deployment. Aggressive identification and correction of deficiencies during deployment will result in an overall improved propulsion plant material condition and reduce work package churn in the subsequent CNO availability.

(2) Scheduling of the Pre-Deployment MCAI must balance the benefits of early identification of material issues against operational requirements. However, whenever possible, the inspection should be completed no later than three months prior to deployment. The TYCOM Maintenance Program Manager will fund a shipyard MCAP training team (notionally five to ten people in size), when requested by the RMO, to assist in the performance of the MCAI. The training team provides targeted training and deck-plate feedback to SF in support of the inspection, and acts as an independent check for both the ship

and the TYCOM that the ship's MCAP program is being administered in a manner that supports the intent of the program. The ship's Commanding Officer retains responsibility for determining the impact and required actions for deficiencies identified during this inspection.

b. Production Completion Date. Production Completion Date (PCD) is a CNO availability key event that is scheduled two weeks prior to the respective plant hot-operations key event and marks the Project Team's transition from production work to preparations for test events and plant operations. It is intended that all propulsion plant work, deficiency correction and associated testing required for hot-operations be completed by PCD. However, PCD requires a subjective evaluation by the ship's Commanding Officer, Reactor Officer and Project Superintendent that production work, testing and deficiency correction has been reduced to a level or area of the plant such that required key event preparations can proceed satisfactorily, to completion, in the ensuing two- week period. Upon reaching PCD, the Reactor Officer and the rest of the Project Team must be able to shift their focus away from production work and testing to preparations for plant operations. These preparations include but are not limited to:

(1) Pre-event certifications and resulting discrepancy correction.

(2) Danger Tag removal and system restoration.

(3) SF Startup Maintenance.

(4) System Valve lineups.

(5) Continued deep cleaning and small valve maintenance.

(6) Use of Groom Teams in areas requiring special emphasis.

(7) Temporary Service Removal.

(8) Training on Hot Operations or Non-Critical Steaming.

c. Transition to an operational environment and focus.

(1) Previous availabilities have shown that if excessive production work and testing is still ongoing at the time PCD is evaluated as complete, key event preparations will be adversely affected and the hot operations key event date will usually be negatively impacted.

(2) If it is necessary to delay PCD, strong consideration should be given to moving the hot operations key event accordingly, to protect the integrity of the two-week preparation period. Otherwise, it must be recognized that the transition from a maintenance intensive environment to an operationally focused environment may be negatively impacted.

(3) In the event that some production work and testing will be ongoing, the Project Team will generate an exceptions list detailing all work and associated testing that is intended to continue after PCD. The Project Team must **formally** agree that the intensity or volume of the items on the exceptions list will not

adversely impact the Project's ability to complete preparations for the upcoming event, in an orderly and timely manner.

(4) Some specific questions that should be considered when determining whether a project has reached PCD include:

(a) Are major system piping and valves intact?

(b) Are propulsion plant damage control and fire-fighting systems and the associated repair lockers stocked and operational?

(c) Are ladders installed? Are space accesses and at least one of the two escape trunks in each space clear for passage?

(d) Are doors, hatches and scuttles installed and operational?

(e) Are temporary services removed with the exception of essential support systems and systems installed to support remaining work?

(f) Are all deck plates and associated supports installed?

(g) Has loose industrial material and debris been removed?

(h) Have major lagging repairs been completed? Is the extent of any remaining lagging work minimal (not including temporary lagging installed to support later testing)?

(i) Are pre-test inspections and correction of associated deficiencies complete?

(j) Has major preservation and painting been completed? Is the extent of remaining touch-up painting acceptable?

(k) Have deficiencies identified by the MCAI, weekly walk-throughs, associated cold plant testing, and any rework or retest associated with the testing, been completed or resolved? If not, are the remaining deficiencies at a low enough level that they can be corrected without impacting event preparations?

(l) If applicable, has System Turnover been completed? Have all discrepancies identified during the turnover process been corrected?

d. Deficiency Identification and Correction. The basic organization of a CVN Reactor Department has long established programs in place to support the day-to-day identification and tracking of material deficiencies (3M system, Zone Inspection Programs, MCAP Database, EDL, CSMP, etc.). However, experience has shown that successful programs are those that support continuous identification and correction of propulsion plant deficiencies that have incorporated the timelines of Appendix A and have placed increased emphasis on known problem areas. Some propulsion plant maintenance areas historically required special attention are listed in sub-paragraphs (1) and (2) here. Each CVN may identify additional areas as they progress through the maintenance cycle.

(1) Valve Maintenance and Inspection. All valves in the propulsion plant are required to be inspected and maintained per the applicable chapters of the

component technical manual. Special emphasis should be placed on the early identification and correction of stem packing leakage in conjunction with the MCAP inspection program. All valves having less than two valve isolation from high-energy systems should be inspected annually at a minimum. Prior to availabilities that will include a plant cool down, particular attention should be given to steam generator isolation valves, safety valves, blowdown and sampling system valves and all 500 series main feed and main steam system valves. Any valve that shows signs of packing leakage or has minimal packing gland adjustment remaining should be entered into the MCAP Database EDL for further evaluation.

(2) Structural Preservation. Areas of the propulsion plant are to be inspected for structural corrosion on a rotating basis in conjunction with the ship's MCAP inspection plan. Particular emphasis should be placed on areas exposed to salt spray (ventilation spaces, weather deck fittings), equipment foundations, low traffic areas, and all out of plant spaces owned by Reactor Department or that contain reactor support equipment. References (m), (n) and (p) provide additional guidance on applying and resurfacing plant structural components and coating color schemes.

(3) Lagging and Insulation. Damaged or worn lagging or insulation should be inspected and upgraded using the guidance of reference (d), reference (g), and the CVN 68 Class Incremental Maintenance Plan, Sequencing Plan in conjunction with the ship's MCAP inspection program. Ships should consider maintaining a separate list of lagging removed by SF as a result of maintenance, wetting or becoming oil soaked. Guidance for installing and maintaining insulation can be found in reference (p). Painting of insulation is covered by the aforementioned Reactor Plant Paint Schedule.

NOTE: REFERENCE (O) WAS DISTRIBUTED TO ALL CVNs BY NAVSEA LTR 92T124/0418 DATED 5 NOV 01 AND PROVIDES AN EXCELLENT STANDARDIZED GUIDE OF THE VISUAL CONDITION OF PAINTED COMPONENTS AND SURFACES IN THE INTERIOR OF SHIPS DURING MAINTENANCE AVAILABILITIES OR CONTRACTED PRESERVATION TEAMWORK. ADDITIONAL COPIES ARE AVAILABLE IN SPIRAL BOUND BOOK FORM AND ON CD-ROM FROM THE NAVAL LOGISTICS LIBRARY (https://www.navsup.navy.mil/Naval-Logistics-Library/). ACCESS THE P2003 SHOPPING CART AND INPUT EITHER TECH MANUAL NUMBER SL700-AB-GYD-010 OR NSN 0910-LP-100-4420.

(4) Paint and Preservation. In conjunction with the structural preservation and bilge preservation inspections discussed in this section, the ship must ensure that the paint and preservation status of general propulsion plant spaces is maintained over time with emphasis placed on the work that will be done during availabilities. The CVN 68 Class Incremental Maintenance Plan, Sequencing Plan provides guidance on rotation plans for propulsion plant spaces. Ships should consider maintaining a list of spaces annotating the dates when spaces were last painted or preserved to assist in long term planning.

References (m), (n) and (o) provide additional guidance on applying and resurfacing plant structural components and coating color schemes.

(5) Bilge Preservation. Invasive, below the deck level, inspections are the key to maintaining the integrity of bilges and bilge structural members. Ships should ensure that regular bilge inspections are scheduled in conjunction with the ship's MCAP inspection program with increased emphasis during the Pre-Availability inspection and Pre-Deployment MCAI. Progressive maintenance techniques are required for coatings in the propulsion plant bilges to wear as projected and must be resurfaced at the appropriate intervals. Guidance on inspection criteria and establishment of inspection zones can be found in CVN 68 Class Depot Maintenance Requirement Card MRC 631-01. References (m), (n), (o) and (q) provide additional guidance on applying and resurfacing plant structural components and coating color schemes.

(6) Oil Leak Identification and Correction. Ships should aggressively identify and correct oil leaks, with particular attention to areas underneath the main engines, turbine generators, lube oil purifiers and in the vicinity of lube oil pumps. Inspection plans should divide the propulsion plant spaces into zones to ensure all areas are inspected annually at a minimum. The list of identified oil leaks can then be prioritized in the MCAP Database EDL for correction.

(7) Electrical Cableway Inspection. Shipboard electrical cableways for the most part are taken for granted. Improperly installed cables in the propulsion plant can not only damage existing cables but may also impact watertight or airtight integrity. Cableways must be properly installed and maintained per the requirements of references (r) and (s). Additional guidance for conducting cableway assessments in conjunction with the ship's MCAP inspection program is available in volume VI, chapter 28 of this manual.

(8) Typical Recurring Deficiencies. The ship should actively pursue the identification, documentation and correction of typical recurring deficiencies through the periodic MCAP inspections. Listed in sub-paragraphs (a) through (j) and reference (t) are examples of the types of items that should be continuously identified and corrected. TYCOM will provide funding during availabilities, Planned Incremental Availabilities and Docking Planned Incremental Availabilities for the shipyard or other activity to provide assistance in resolution, as required.

(a) defective or missing spray shields.

(b) missing deck plate screws.

(c) lockwire or locking cable deficiencies.

(d) mixed, missing or corroded fasteners.

(e) small valve maintenance deficiencies.

(f) loose or damaged stuffing tubes.

(g) missing or damaged pipe hangers.

(h) missing, misaligned or leaking funnels.

(i) missing gage fasteners and gage line supports.

(j) electrical cable and lighting deficiencies.

(k) missing or damaged label plates.

e. "Acceptable As-Is" items. The MCAP database has the ability to provide the ship with information concerning material conditions that have been previously classified as "Acceptable As-Is". Each entry should identify the equipment and its location, provide a description of the acceptable condition and a reference to the technical documentation that accepted the condition. Shipyards can use this data during depot availabilities to preclude repetitive research for acceptable, existing conditions that would otherwise be considered deficiencies. The shipyard will provide the ship with electronic copies of all waiver letters, LAR responses, DFS and any other acceptance documentation generated during an availability. The RMO, with the assistance of the Reactor Plant Planning Yard, should ensure the data is kept up to date between depot availability periods.

1.9.2.3 Methods for Assessment of Material Condition. Appendix B provides a compilation of propulsion plant inspections and references.

1.9.2.3.1 There are several methods used to periodically assess and improve the material condition of the propulsion plants for CVN outside of depot availabilities. The existing programs provided by the fleet commanders to improve material condition are addressed in volume VI, chapter 42, of this manual. Other methods include:

a. Material inspections conducted by the Surface Nuclear Propulsion Mobile Training Teams (MTT).

b. Material inspections conducted by the Board of Inspection and Survey (INSURV).

c. Material inspections conducted by the Nuclear Propulsion Examining Board (NPEB).

d. Periodic inspections conducted by shipyard engineering and inspection groups, usually in conjunction with availability planning. These inspections include Carrier Availability Planning System, Point of Entry Testing (POET), MCAIs and zone inspections of the propulsion plant spaces.

e. Carrier Engineering Material Assessment Team coordinators groom systems to include Leslie valves, high pressure air compressors, low pressure air systems, governor control systems, distilling plants, etc.

f. Periodic SF Zone Inspections.

g. Pre-Deployment MCAI.

1.9.2.3.2 Attributes and Acceptance Standards for Material Condition Inspections. The inspection criteria used for material inspections throughout the ship's operational cycle must be uniform and consistent to provide an accurate assessment of the material condition of the propulsion plant.

a. Reference (l) must be used to inspect non-nuclear propulsion systems and components. The checklist provided in Appendix C is to be used as a guide during

CNO Availabilities when reference (k) is invoked for determination of system readiness to support execution of a Key Event. This checklist may also be used outside of availabilities to determine system readiness to support ship operations.

b. References (k), (u), and (v) must be used to inspect nuclear propulsion systems and components. Inspection criteria for nuclear mechanical systems are listed in Appendix D. Inspection criteria for nuclear electrical systems are listed in reference (v).

1.9.2.4 Propulsion Plant Planned Maintenance. Reference (w) lists the planned maintenance pertinent to reactor systems and includes numerous inspections and checks to review material condition. It can be advantageous for the ship to request shipyard quality control inspector or production shop assistance when conducting the annual inspections of the Reactor Compartment and Pressurizer Shed. In addition, the ship should consider requesting assistance when performing periodic inspections of piping hangars, piping and supports in bilges, load centers and reactor vessel shielding.

1.9.2.5 Training for Ship's Force. The TYCOM, in conjunction with other activities (e.g., NSY, Fleet Maintenance Support Branch, RMC) has developed specific training courses to enhance technical maintenance capabilities and inspection techniques. In addition, shipyard personnel can provide training on subjects such as lagging replacement, lockwire or locking cable installation and inspection techniques. SF requests for specific training topics (e.g., shipyard inspection training prior to conducting the Pre-Deployment MCAI) must be processed through the TYCOM. SF should schedule this training early and ensure sufficient personnel are trained.

1.9.3 Type Commander Responsibilities.

a. Budget and plan for correction of both typical recurring deficiencies and other material deficiencies during all upkeeps, availabilities, Planned Incremental Availabilities and Docking Planned Incremental Availabilities.

b. Assign groom teams as necessary, to assist SF in maintaining the material condition of the propulsion plant.

c. Provide the maintenance and inspection training requested by SF. This provisioning of training will include funding a shipyard MCAP team requested by the RMO in support of the Pre-Deployment MCAI. This small team (five to ten-person notional size) provides targeted training and deck-plate feedback to SF in support of the inspection, and acts as an independent check for both the ship and the TYCOM that the ship's MCAP program is being administered in a manner that supports the intent of the program.

d. Provide training for RMOs through the TYCOM N9 and N43 organizations to ensure they understand common maintenance problems among carriers, the requirements of this chapter and how to better plan for availabilities.

e. For CNO Availabilities, maintain, with SF and shipyard input, an Availability Parts Support List containing special parts and routinely required support equipment necessary to support SF work (e.g., breaker locking clips, valve locking devices, Tygon tubing, flexes, thread protectors, foreign material exclusion plugs, valve stems). These material items can then be ordered and procured early so that production work will not be disrupted.

f. Meet periodically with the Reactor Officer or RMO to review the ship's material condition. The need for TYCOM support in identifying and correcting material deficiencies should be addressed at this time.

g. Provide timely review and scheduling of deficiency correction for items identified during the inspections and grooms during assessment of material condition within of this chapter.

h. Type Commander Mobile Training Team Visits. The Mobile Training Team (MTT) should periodically evaluate the ship's material condition including a review of the ship's MCAP Database EDL to ensure the ship has an effective program for identifying and correcting material condition deficiencies. It is important that the MTT does not critique lists that are too large, since this chapter specifically encourages ships to document deficiencies that are beyond the capability of the ship or are too numerous to fix considering the ship's operational commitments. Attributes that should be checked include:

(1) Ensure that the MCAP Database EDL is current and accurate based on MTT material condition inspections (i.e., is the ship's MCAP Database EDL an accurate representation of propulsion plant material condition based on the number, type and severity of items identified by the MTT? Are the plans for corrections realistic)?

(2) Ensure that deficiencies have not remained in the MCAP Database EDL for an excessive amount of time (i.e., the turnover rate of the deficiencies). Large backlogs indicate the need for increased SF attention or TYCOM assistance to correct deficiencies.

1.9.4 Assessing Deficiency Impact and Scheduling Corrective Action. During scheduled CNO availabilities, shipyard personnel must review applicable plans and specifications in order to determine whether correction of a deficiency is required to support propulsion plant testing key events. Factors that must be considered in making this determination are type and severity of the defect, service of the component involved, accessibility of the defect for repair during shipyard availability versus upkeep period, effect on personnel or equipment safety, impact on system operation and cleanliness or preservation (i.e., required to restore cosmetic appearance versus resistance to corrosion). Every attempt should be made to correct all deficiencies during scheduled CNO availabilities. However, propulsion plant testing key events must not be delayed in order to correct deficiencies that are not required to support that event. Such deficiencies can be deferred and may be scheduled for correction outside of the availability. Deficiencies that are primarily cosmetic are ideal candidates for deferral consideration. When material condition deficiencies are identified outside of CNO scheduled availabilities, the Reactor Officer determines whether corrective action is necessary and when it should be accomplished. Appendix A provides guidance regarding deficiency disposition in either case.

APPENDIX A

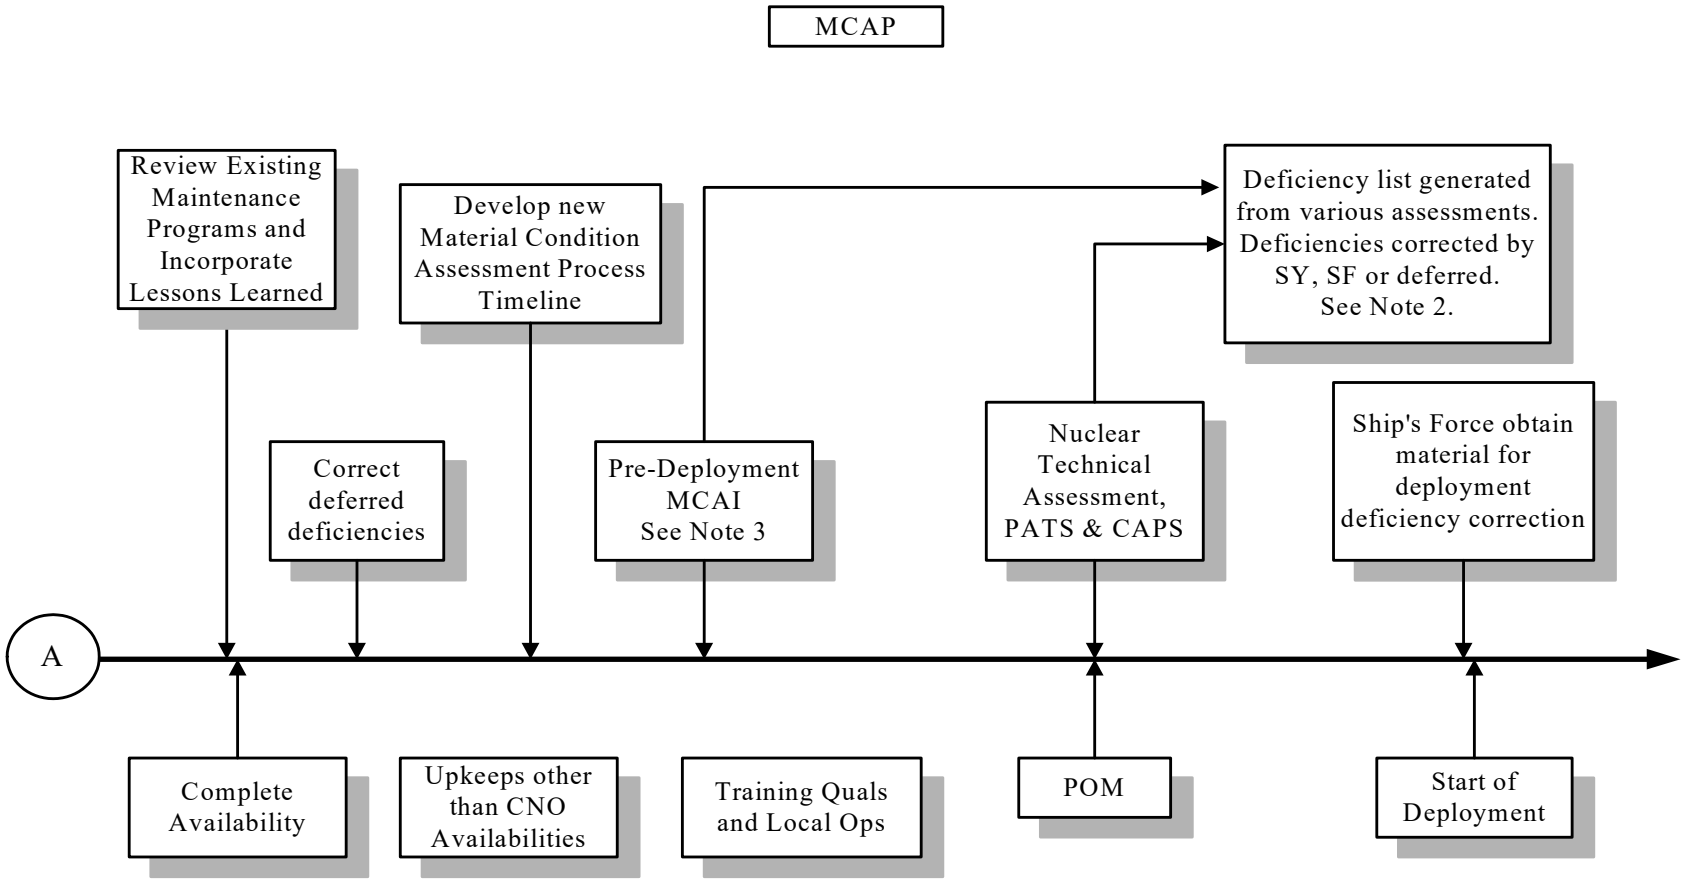
MATERIAL CONDITION ASSESSMENT PROCESS TIMELINE

PURPOSE: The timeline of this Appendix lays out the material condition assessment process throughout the ships' Fleet Readiness Training Plan. The plan also includes descriptions of the various events that occur and who is responsible for the actions outlined. With this information, the various stakeholders in the project team can develop a clear understanding of the process. This will encourage better communication, planning and completion of all required actions.

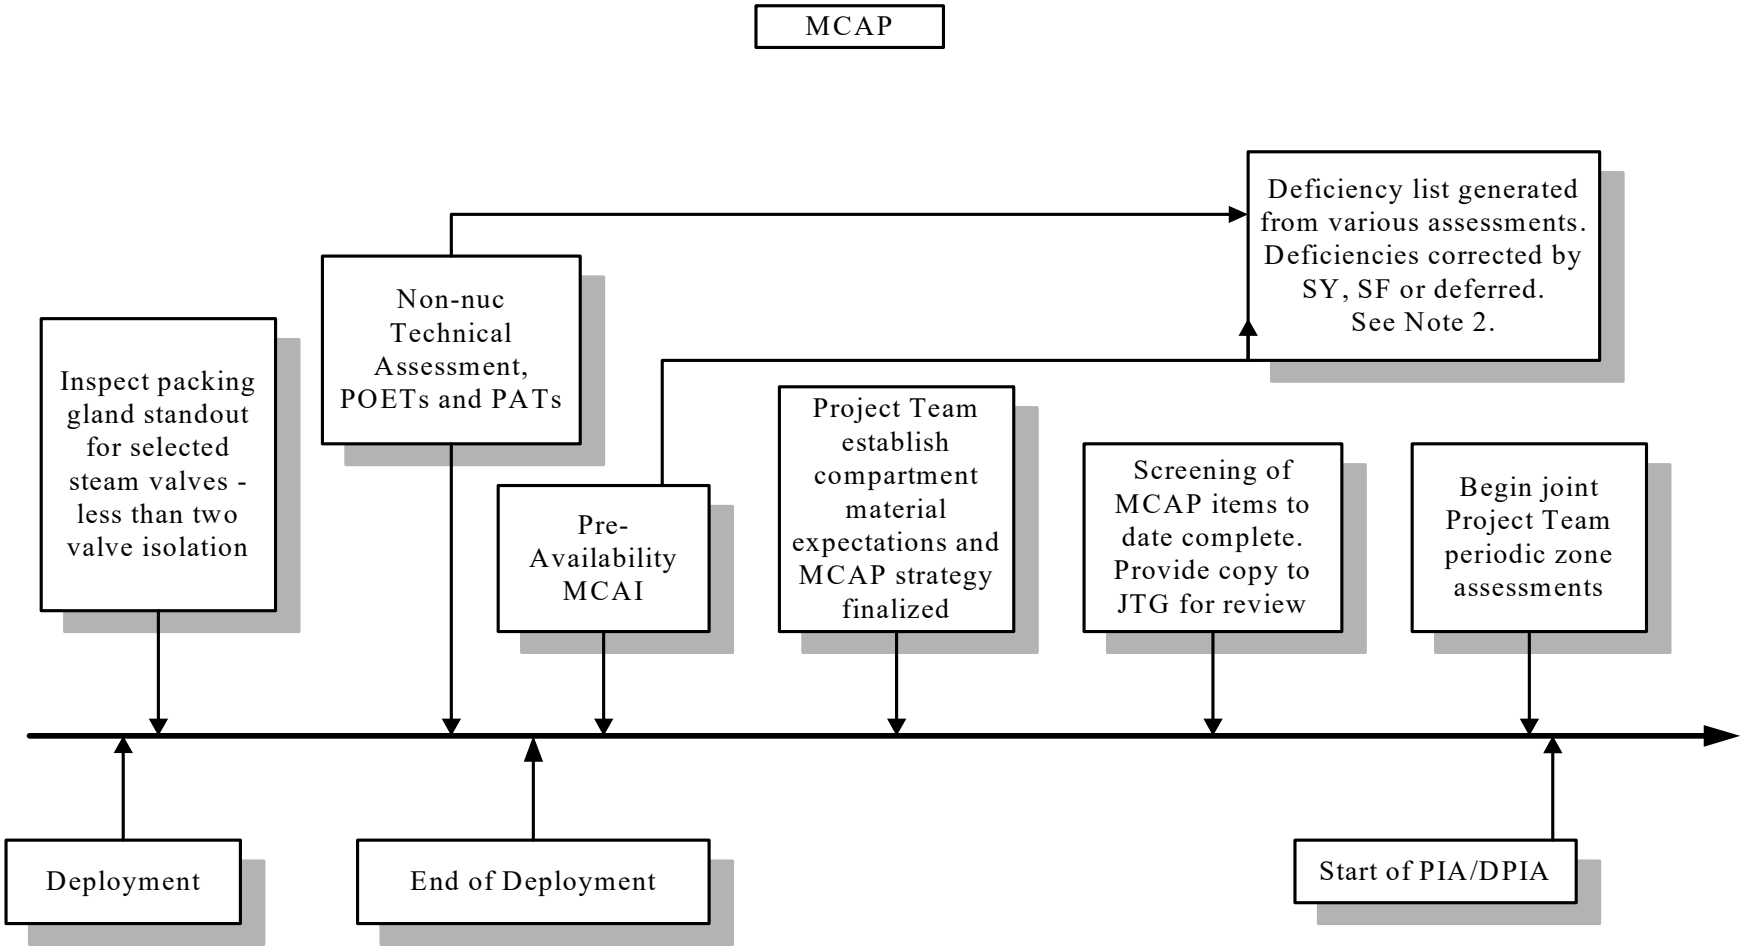
This timeline is provided as a guide to be used for development of a CVN 68 class ship specific timeline for a Planned Incremental Availability or Docking Planned Incremental Availability. The timeline is not applicable to a Refueling Complex Overhaul availability.

Notes:

1. The following timeline is a generic version of a Project Material Condition Assessment Process. The project team will develop a timeline and plan specific to each availability taking into account the ship's schedule (deployment, transit periods, upkeeps and early start periods). The plan includes descriptions of the events (purpose of inspection or action, which activity performs the action, results, etc.). The timeline and plan allows the Project Team (shipyards, SF, TYCOM) to develop a clear understanding of the process. Timeline should be developed to present at the first project planning meeting (target 15 months prior to start of availability).
2. Deficiencies identified during the MCAI and following assessments will be evaluated per the attached Deficiency Evaluation Flowchart.
3. The Pre-Deployment MCAI may be required more than once in an MCAP "cycle" given that two (more) deployments may be planned for a carrier in the interval between CNO availabilities. In this instance, the RMO should request the shipyard MCAP training team in conjunction with each performance of the Pre-Deployment MCAI.

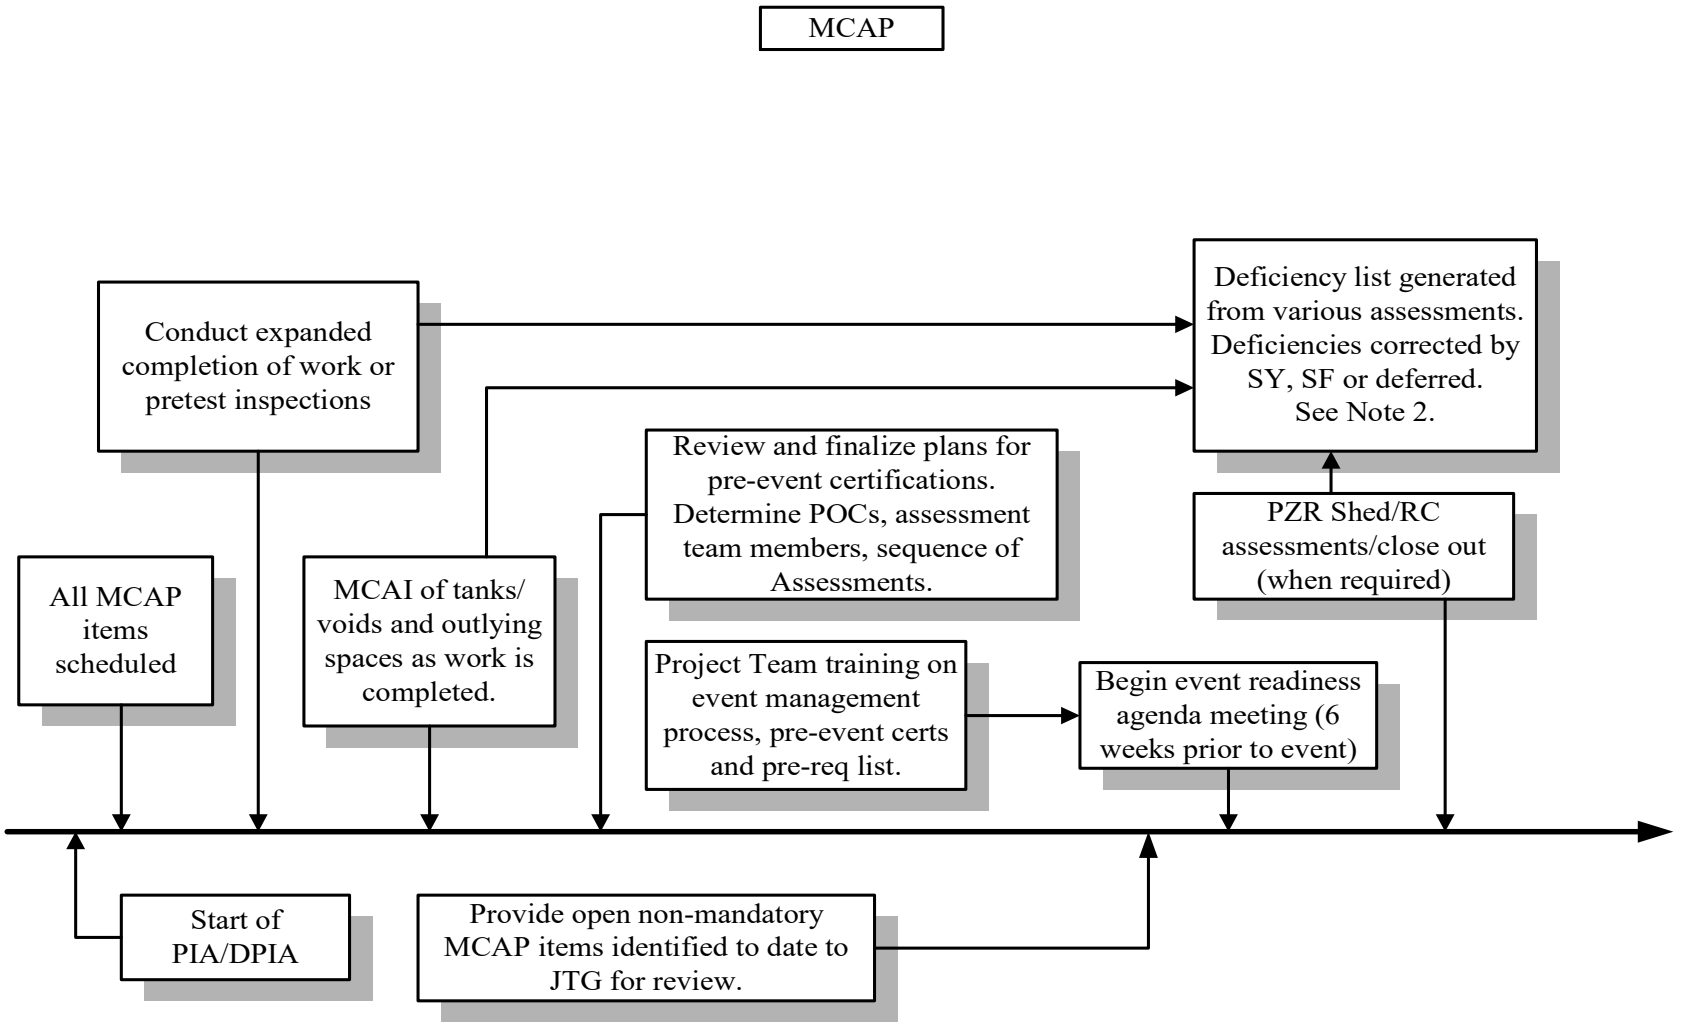


MCAP
Review Existing Maintenance Programs and Incorporate Lessons Learned
Develop new Material Condition Assessment Process Timeline
Deficiency list generated from various assessments. Deficiencies corrected by SY, SF or deferred. See Note 2.
Correct deferred deficiencies
Pre-Deployment MCAI See Note 3
Nuclear Technical Assessment, PATS & CAPS
Ship's Force obtain material for deployment deficiency correction
A
Complete Availability
Upkeeps other than CNO Availabilities
Training Quals and Local Ops
POM
Start of Deployment
1



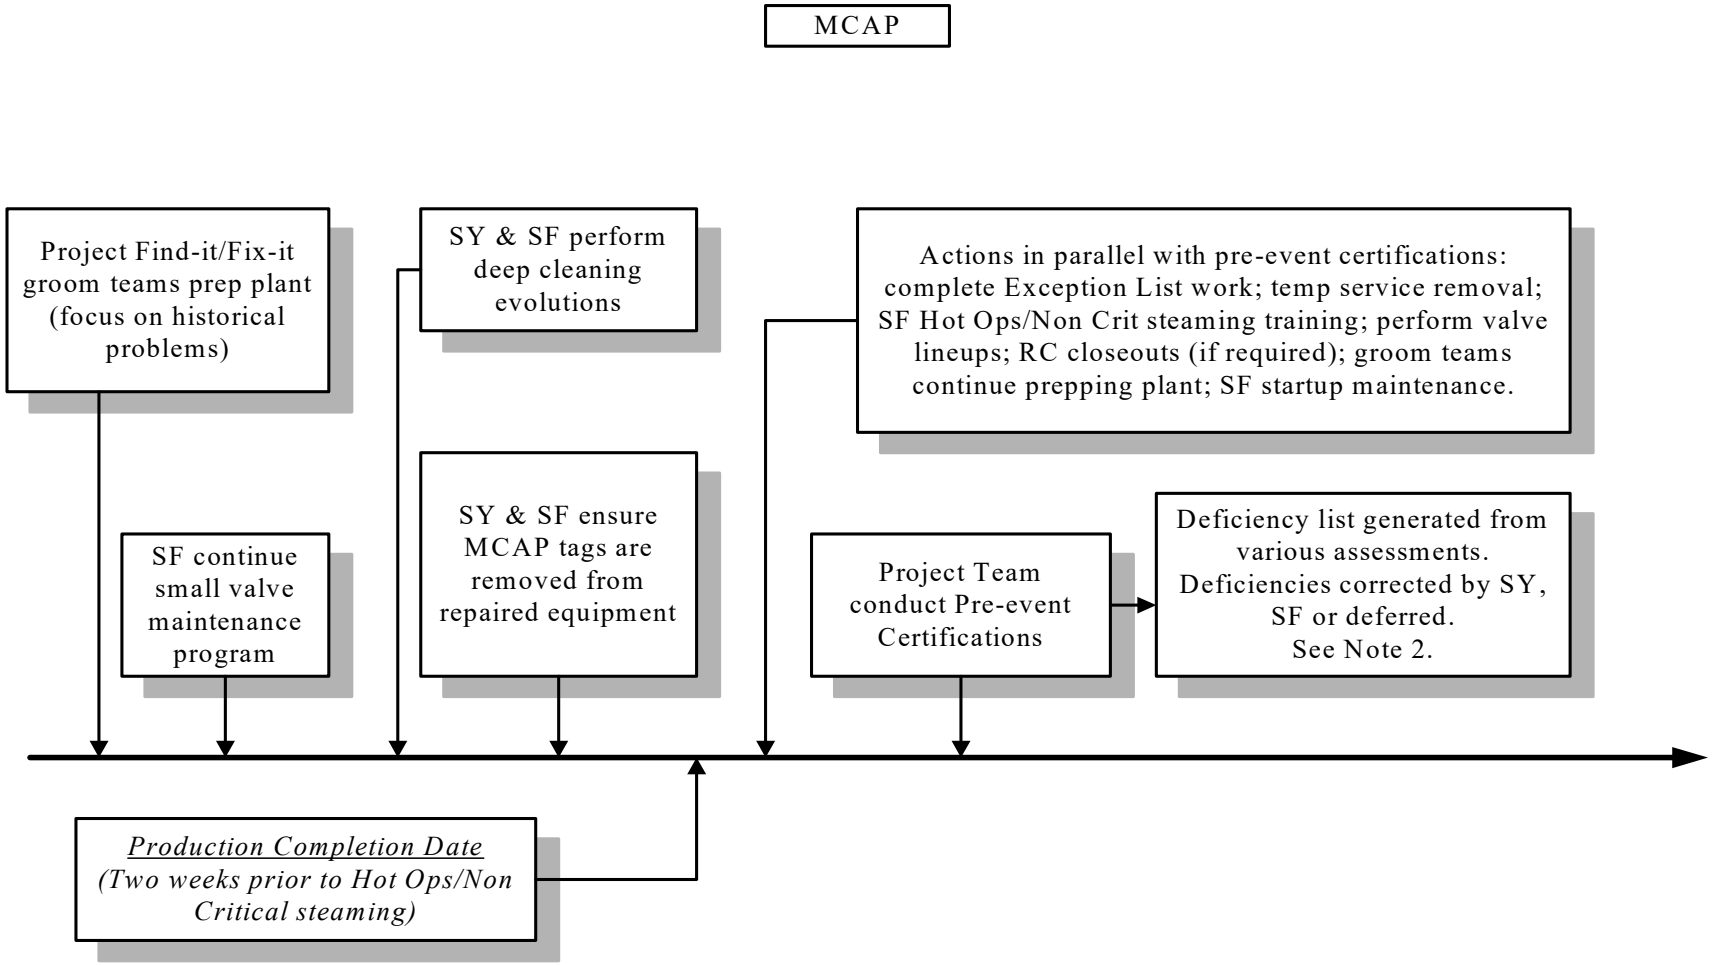
MCAP
Deficiency list generated from various assessments. Deficiencies corrected by SY, SF or deferred. See Note 2.
Non-nuc Technical Assessment, POETs and PATs
Inspect packing gland standout for selected steam valves - less than two valve isolation
Pre-Availability MCAI
Project Team establish compartment material expectations and MCAP strategy finalized
Screening of MCAP items to date complete. Provide copy to JTG for review
Begin joint Project Team periodic zone assessments
Deployment
End of Deployment
Start of PIA/DPIA

2



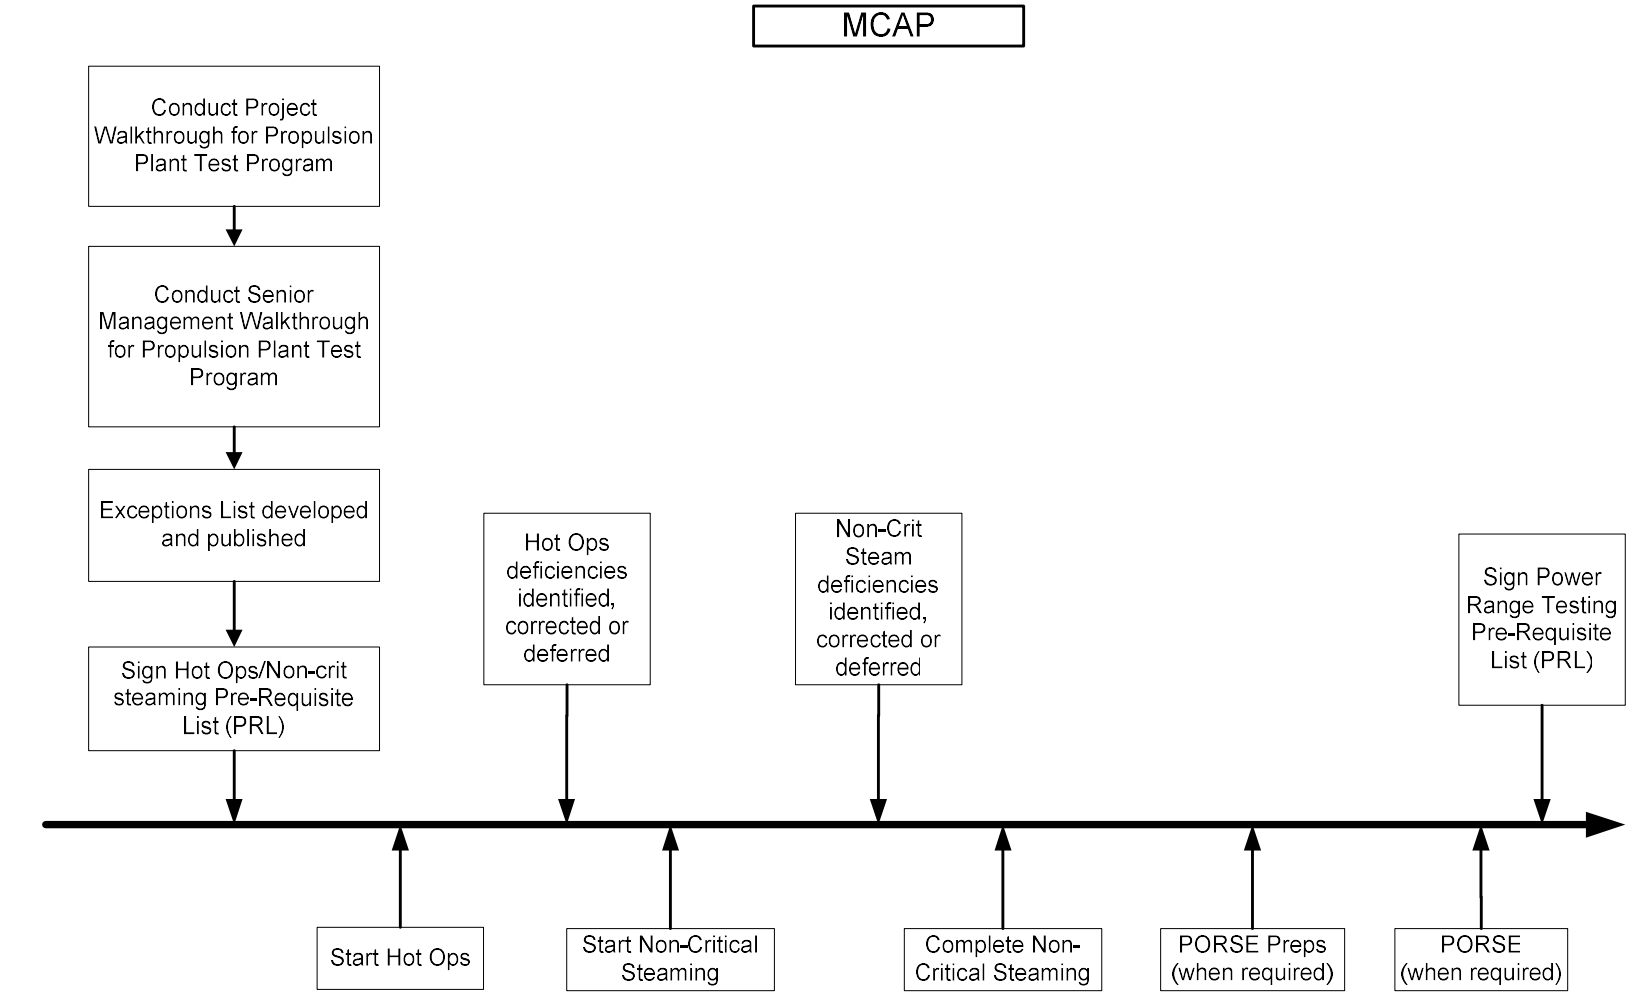
MCAP
Conduct expanded completion of work or pretest inspections
Deficiency list generated from various assessments. Deficiencies corrected by SY, SF or deferred. See Note 2.
Review and finalize plans for pre-event certifications. Determine POCs, assessment team members, sequence of Assessments.
PZR Shed/RC assessments/close out (when required)
All MCAP items scheduled
MCAI of tanks/ voids and outlying spaces as work is completed.
Project Team training on event management process, pre-event certs and pre-req list.
Begin event readiness agenda meeting (6 weeks prior to event)
Start of PIA/DPIA
Provide open non-mandatory MCAP items identified to date to JTG for review.

3



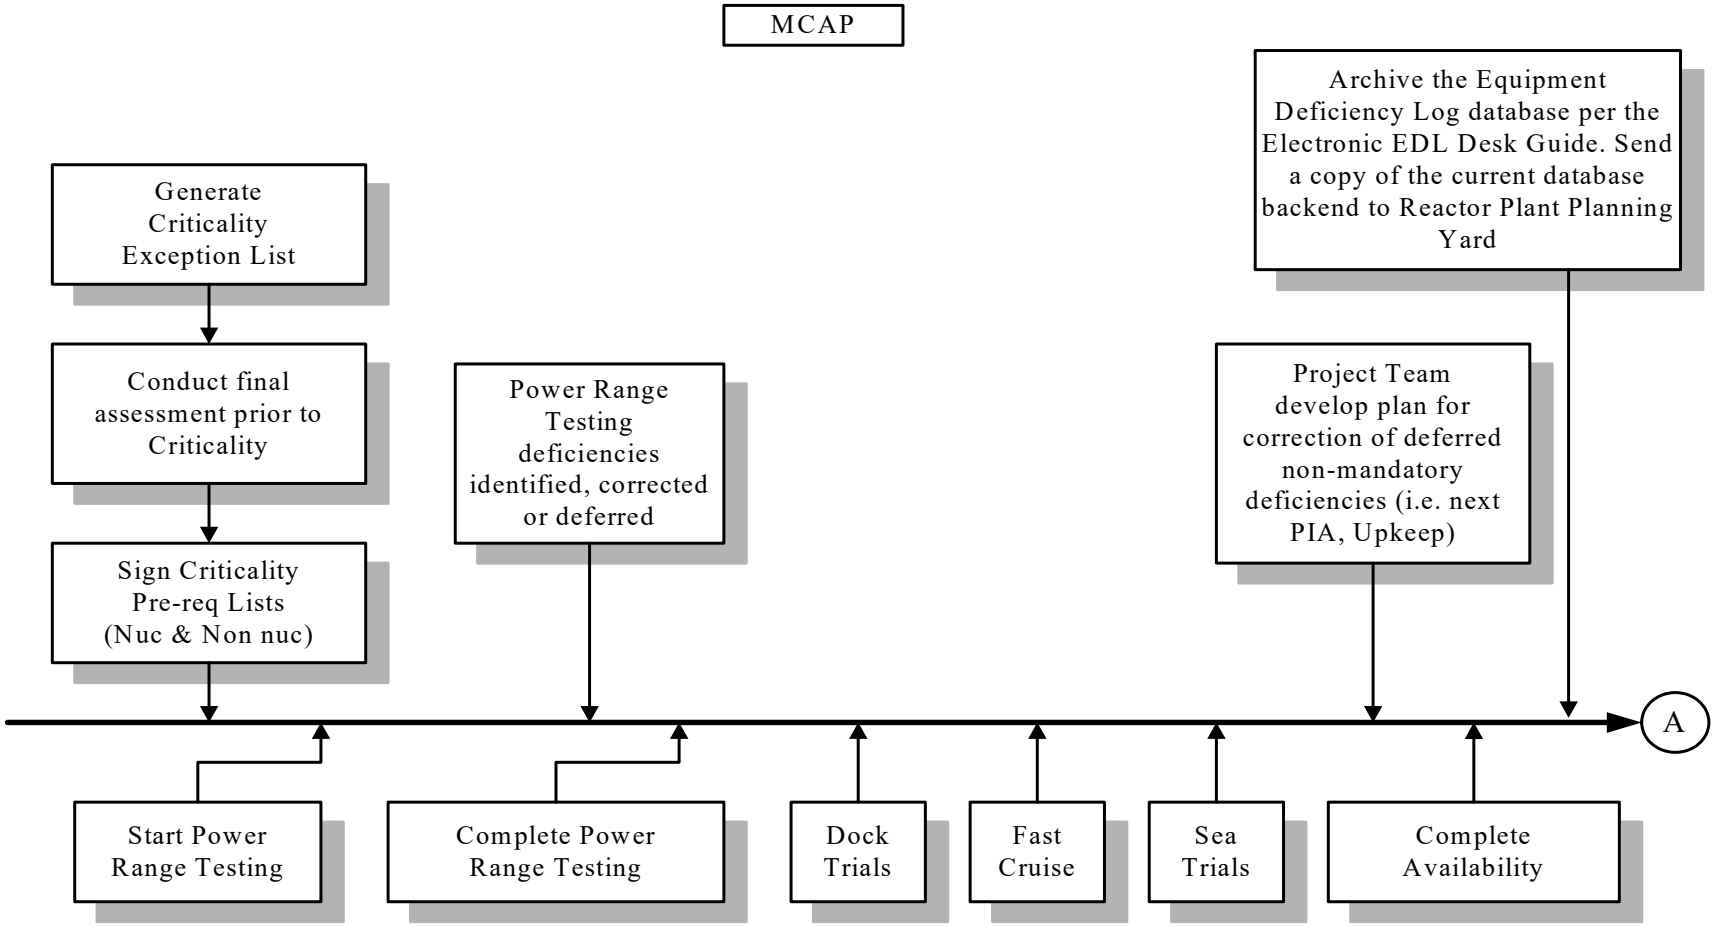
MCAP
Project Find-it/Fix-it groom teams prep plant (focus on historical problems)
SY & SF perform deep cleaning evolutions
Actions in parallel with pre-event certifications: complete Exception List work; temp service removal; SF Hot Ops/Non Crit steaming training; perform valve lineups; RC closeouts (if required); groom teams continue prepping plant; SF startup maintenance.
SF continue small valve maintenance program
SY & SF ensure MCAP tags are removed from repaired equipment
Project Team conduct Pre-event Certifications
Deficiency list generated from various assessments. Deficiencies corrected by SY, SF or deferred. See Note 2.
Production Completion Date
(Two weeks prior to Hot Ops/Non Critical steaming)

4



MCAP
Conduct Project Walkthrough for Propulsion Plant Test Program
Conduct Senior Management Walkthrough for Propulsion Plant Test Program
Exceptions List developed and published
Sign Hot Ops/Non-crit steaming Pre-Requisite List (PRL)
Hot Ops deficiencies identified, corrected or deferred
Non-Crit Steam deficiencies identified, corrected or deferred
Sign Power Range Testing Pre-Requisite List (PRL)
Start Hot Ops
Start Non-Critical Steaming
Complete Non-Critical Steaming
PORSE Preps (when required)
PORSE (when required)

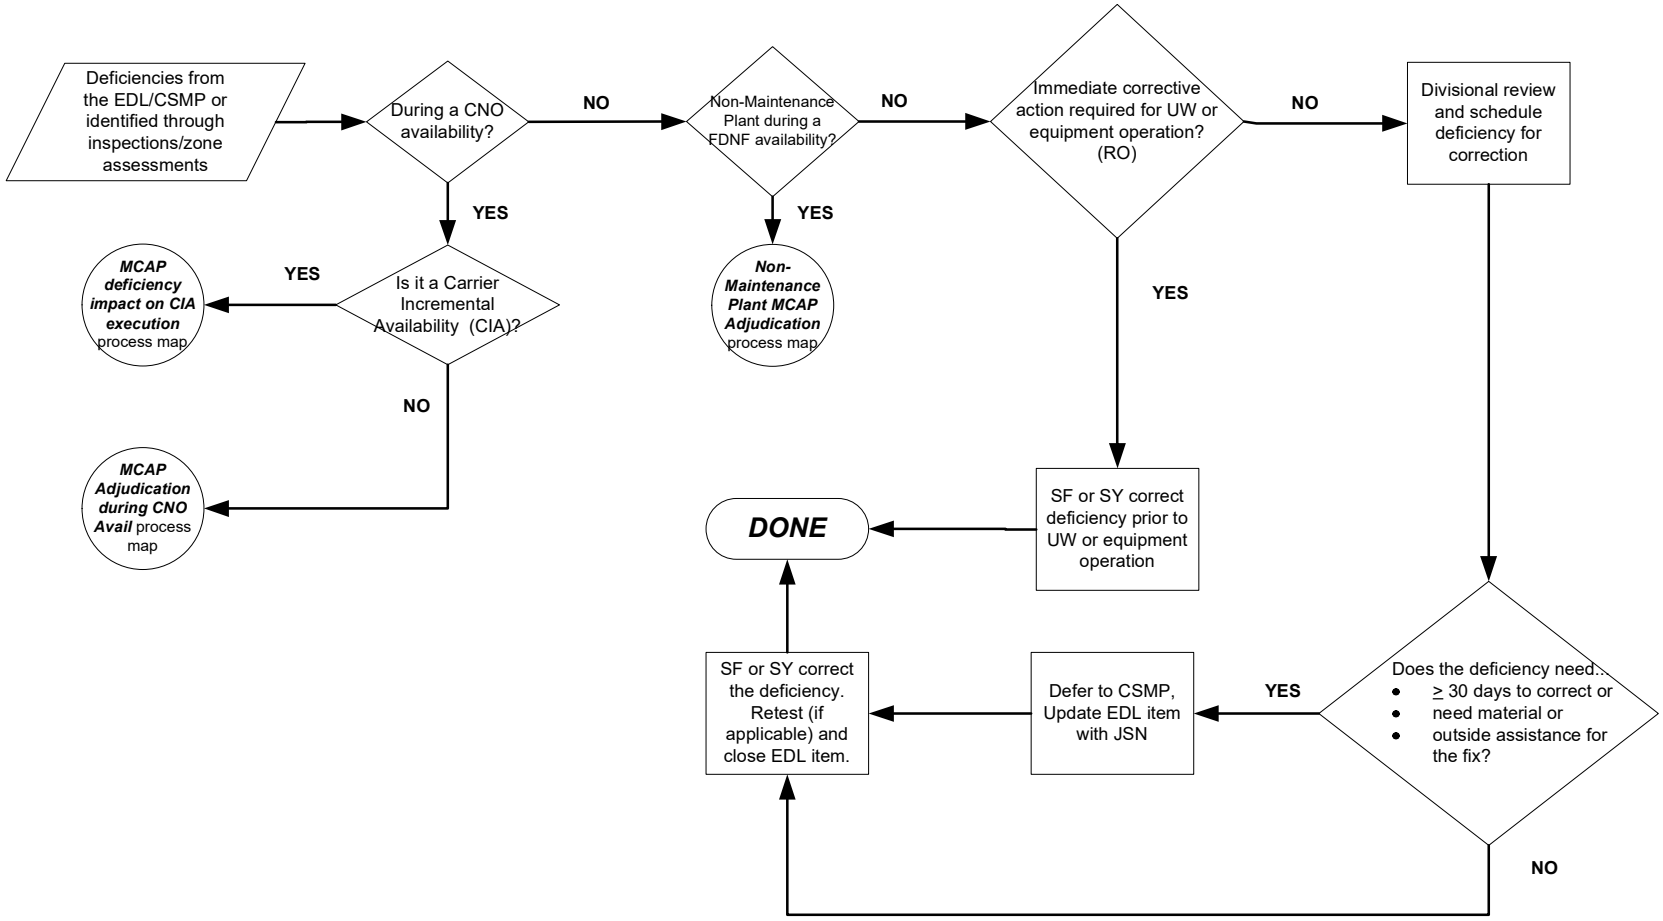
5



MCAP
Archive the Equipment Deficiency Log database per the Electronic EDL Desk Guide. Send a copy of the current database backend to Reactor Plant Planning Yard
Generate Criticality Exception List
Conduct final assessment prior to Criticality
Sign Criticality Pre-req Lists (Nuc & Non nuc)
Power Range Testing deficiencies identified, corrected or deferred
Project Team develop plan for correction of deferred non-mandatory deficiencies (i.e. next PIA, Upkeep)
A
Start Power Range Testing
Complete Power Range Testing
Dock Trials
Fast Cruise
Sea Trials
Complete Availability

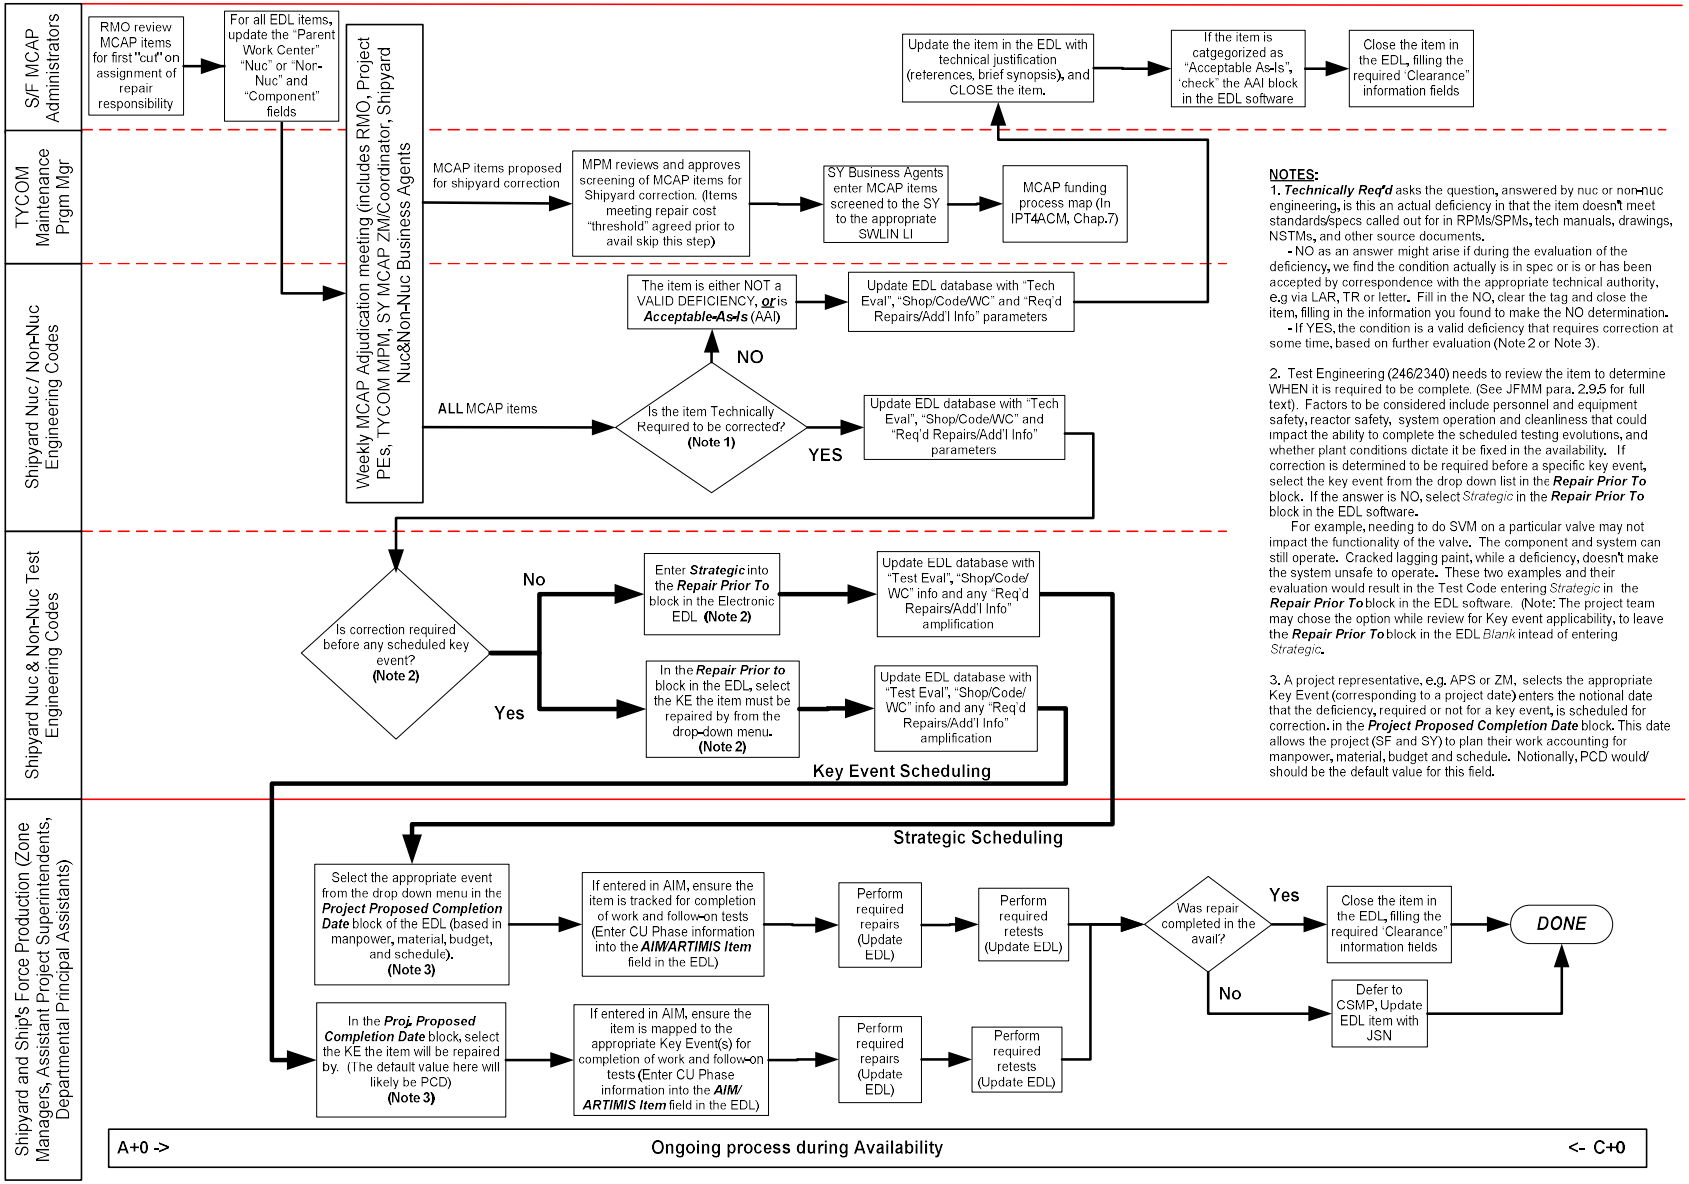
6

MCAP Deficiency Evaluation Flowchart



General Notes:
An effort should be made to fix any and all deficiencies as soon as possible. Generally, deficiency correction will fall within one of three general, generic "paths"...
1. The item doesn't meet technical requirements in one or more parameters, and must be fixed prior to the next startup, or a Key Event in a maintenance period.
2. The item doesn't meet technical requirements, and it's preferable to fix the item during the maintenance period in question. You could, however, operate the plant safely with the item as it stands.
3. While not meeting technical requirements, it's an item requiring a small (usually < 8 hours to fix) expenditure of time/labor to correct. Examples include minor paint touchup, small lagging tears, a lagging "button" missing from a sheet of bulkhead lagging.

MCAP Adjudication Process Map (during a CNO availability)



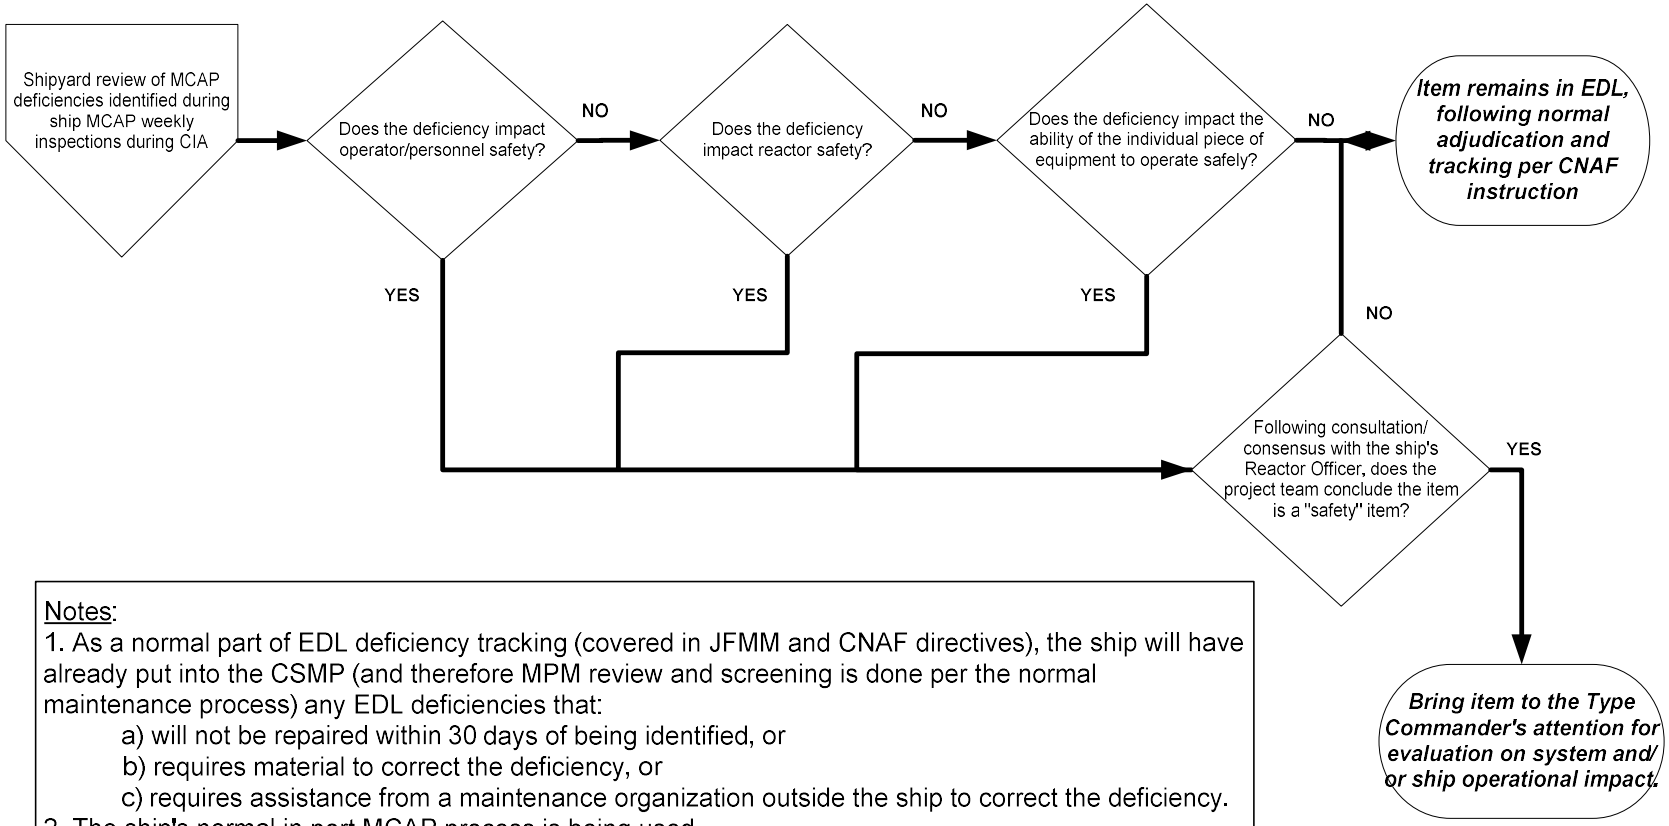
NOTES:

1. ***Technically Req'd*** asks the question, answered by nuc or non-nuc engineering, is this an actual deficiency in that the item doesn't meet standards/specs called out for in RPMs/SPMs, tech manuals, drawings, NSTMs, and other source documents.
   - NO as an answer might arise if during the evaluation of the deficiency, we find the condition actually is in spec or is or has been accepted by correspondence with the appropriate technical authority, e.g via LAR, TR or letter. Fill in the NO, clear the tag and close the item, filling in the information you found to make the NO determination.
   - If YES, the condition is a valid deficiency that requires correction at some time, based on further evaluation (Note 2 or Note 3).

2. Test Engineering (246/2340) needs to review the item to determine WHEN it is required to be complete. (See JFMM para. 2.9.5 for full text). Factors to be considered include personnel and equipment safety, reactor safety, system operation and cleanliness that could impact the ability to complete the scheduled testing evolutions, and whether plant conditions dictate it be fixed in the availability. If correction is determined to be required before a specific key event, select the key event from the drop down list in the ***Repair Prior To*** block. If the answer is NO, select *Strategic* in the ***Repair Prior To*** block in the EDL software.
   For example, needing to do SVM on a particular valve may not impact the functionality of the valve. The component and system can still operate. Cracked lagging paint, while a deficiency, doesn't make the system unsafe to operate. These two examples and their evaluation would result in the Test Code entering *Strategic* in the ***Repair Prior To*** block in the EDL software. (Note: The project team may chose the option while review for Key event applicability, to leave the ***Repair Prior To*** block in the EDL *Blank* intead of entering *Strategic*.

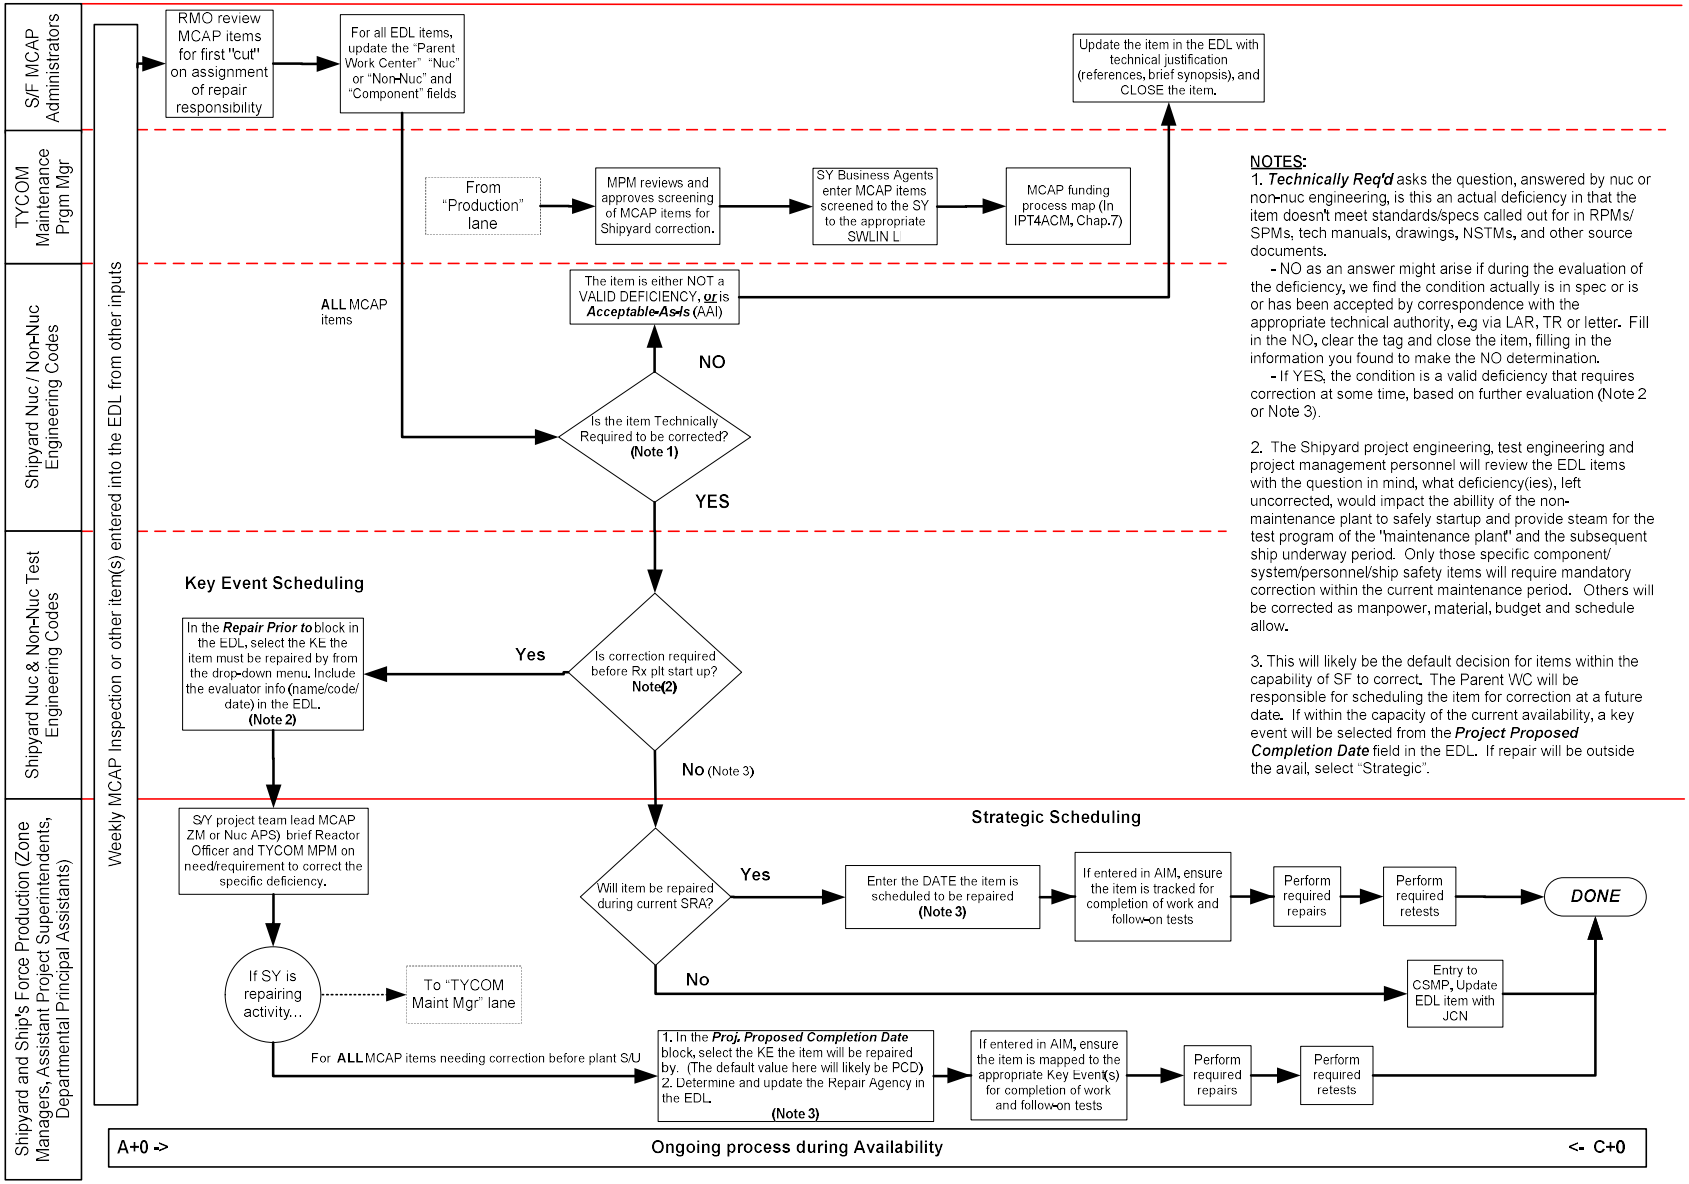
3. A project representative, e.g. APS or ZM, selects the appropriate Key Event (corresponding to a project date) enters the notional date that the deficiency, required or not for a key event, is scheduled for correction. in the ***Project Proposed Completion Date*** block. This date allows the project (SF and SY) to plan their work accounting for manpower, material, budget and schedule. Notionally, PCD would/ should be the default value for this field.

MCAP deficiency impact on CIA execution



Notes:
1. As a normal part of EDL deficiency tracking (covered in JFMM and CNAF directives), the ship will have already put into the CSMP (and therefore MPM review and screening is done per the normal maintenance process) any EDL deficiencies that:
   a) will not be repaired within 30 days of being identified, or
   b) requires material to correct the deficiency, or
   c) requires assistance from a maintenance organization outside the ship to correct the deficiency.
2. The ship's normal in-port MCAP process is being used.
3. The shipyard is assigned NSA roles and responsibilities for the maintenance period (CIA).
4. The shipyard's engineering and test engineering codes (246/2340) will review MCAP items identified from the weekly ship walkthroughs to determine if any items discovered require repair prior to the end of the inport maintenance period (CIA). Following consultation and consensus with the Reactor Officer/ Commanding Officer, the item is brought to the attention of the Type Commander to schedule the repair and evaluate it's impact on ship's schedule.

Non-Maintenance Plant MCAP Adjudication Process Map (during a CNO availability)

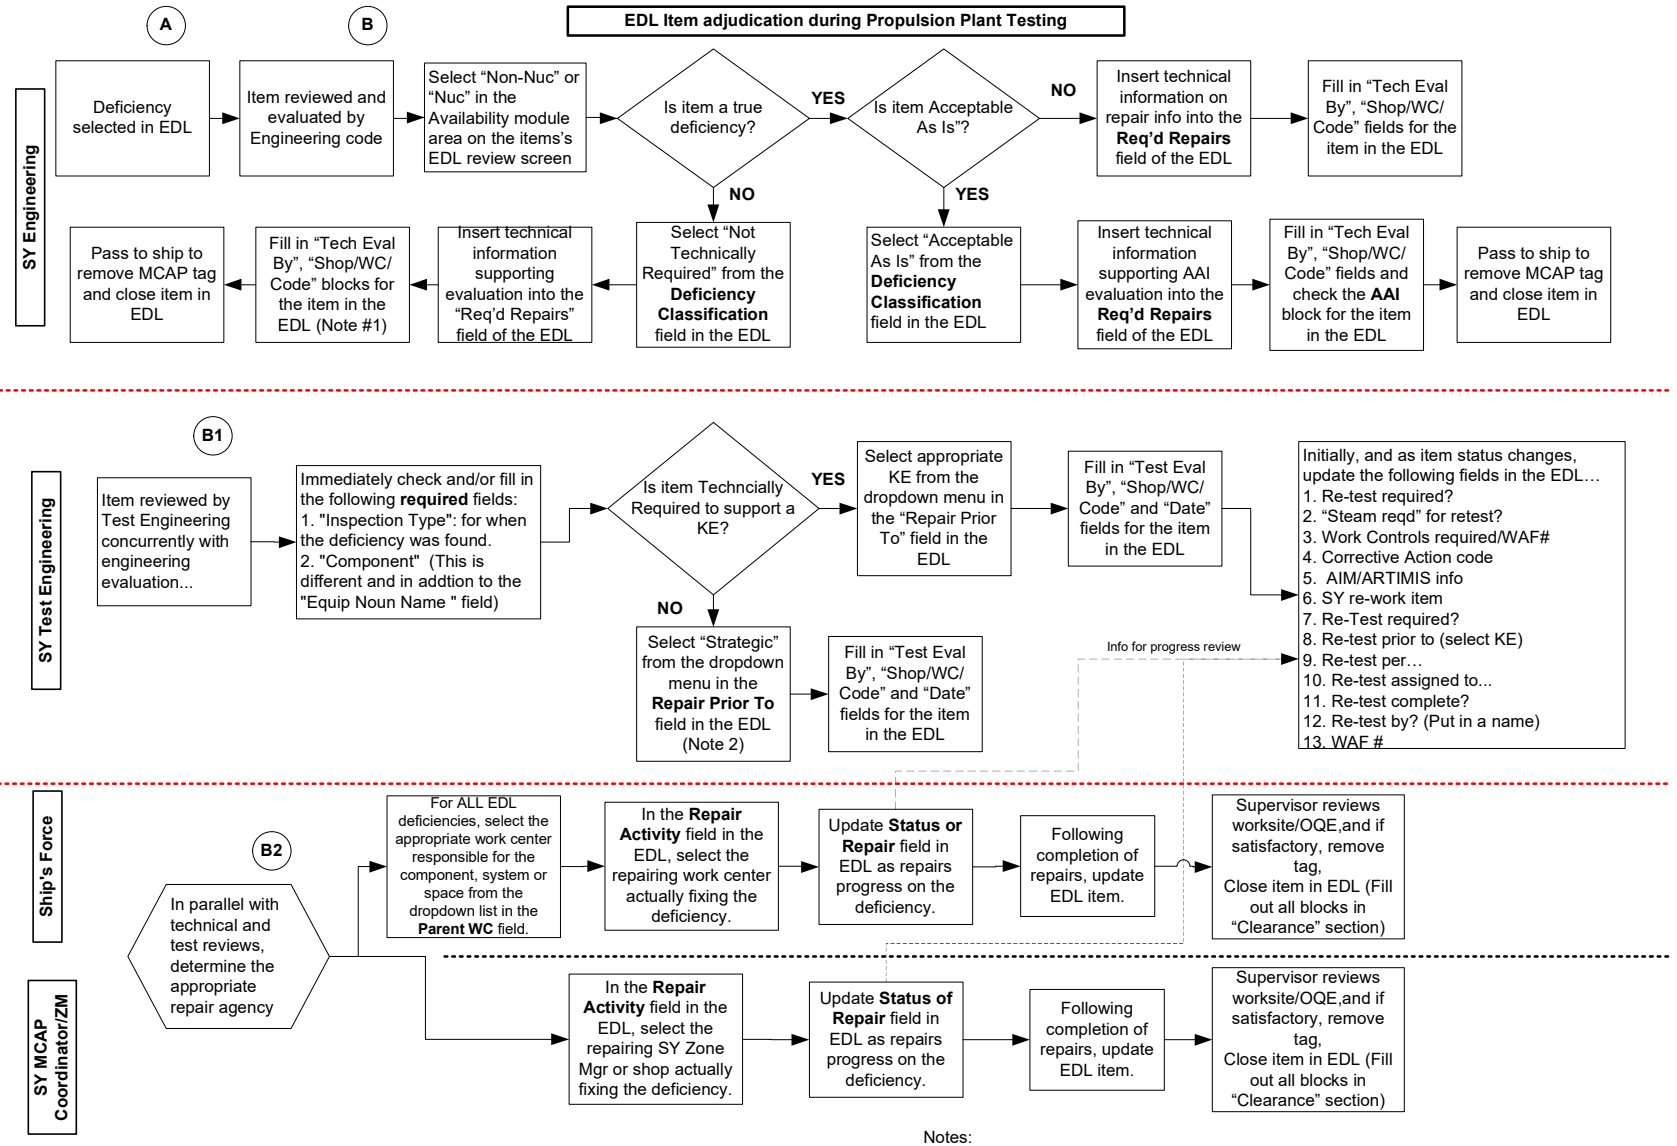


NOTES:

1. ***Technically Req'd*** asks the question, answered by nuc or non-nuc engineering, is this an actual deficiency in that the item doesn't meet standards/specs called out for in RPMs/ SPMs, tech manuals, drawings, NSTMs, and other source documents.
   - NO as an answer might arise if during the evaluation of the deficiency, we find the condition actually is in spec or is or has been accepted by correspondence with the appropriate technical authority, e.g via LAR, TR or letter. Fill in the NO, clear the tag and close the item, filling in the information you found to make the NO determination.
   - If YES, the condition is a valid deficiency that requires correction at some time, based on further evaluation (Note 2 or Note 3).

2. The Shipyard project engineering, test engineering and project management personnel will review the EDL items with the question in mind, what deficiency(ies), left uncorrected, would impact the ability of the non-maintenance plant to safely startup and provide steam for the test program of the 'maintenance plant' and the subsequent ship underway period. Only those specific component/ system/personnel/ship safety items will require mandatory correction within the current maintenance period. Others will be corrected as manpower, material, budget and schedule allow.

3. This will likely be the default decision for items within the capability of SF to correct. The Parent WC will be responsible for scheduling the item for correction at a future date. If within the capacity of the current availability, a key event will be selected from the ***Project Proposed Completion Date*** field in the EDL. If repair will be outside the avail, select "Strategic".



Notes:
1. If authorized to sign as Project Engineer, check the "SY PE" review block and enter the date in the "Review" area of the EDL screen for the item being reviewed.
2. Items coded as "Strategic" can continue to be repaired if manpower, material , budget and schedule permit.

APPENDIX B

APPENDIX C

SYSTEM CERTIFICATION CHECKLIST FOR CNO AVAILABILITY KEY EVENTS

PURPOSE: This checklist is provided as a guide during CNO Availabilities when reference (k) is invoked for determination of system readiness to support execution of a Key Event. This checklist may also be used outside of availabilities to determine system readiness to support ship operations.

NOTE: THIS CHECKLIST IS FOR USE TO CERTIFY SYSTEMS OR COMPONENTS LISTED IN REFERENCE (K) ENCLOSURES (1) THROUGH (3) WHERE SHIPYARD RESPONSIBLE WORK WAS NOT PERFORMED IN ORDER TO MAKE SIGNATURES ON KEY EVENT PREREQUISITE LISTS. SPECIFIC ATTRIBUTES ARE LISTED IN REFERENCE (K) ENCLOSURE (4) AS A GUIDE.

System _____

Attribute	Yes or No
AWP reviewed to ensure all authorized work has been performed and any incomplete work (adjudicated at the appropriate supervisory level) does not affect certification.	
EDL, CSMP, Nuc and Non-Nuc DR Logs and DFS Log reviewed for unresolved deficiencies.	
WAF Log reviewed to ensure all authorized work is completed, tested or ready for testing.	
CWPs and FWPs reviewed for accuracy and completeness.	
Preventive maintenance complete and up to date (i.e., SU maintenance complete, PMS within periodicity).	
All standing orders, including temporary standing orders in effect for system, have been reviewed and adjudicated by the JTG.	
NOTE: THE INTENT OF THIS STEP IS FOR THE ZONE MANAGER AND PRINCIPAL ASSISTANT TO DETERMINE WHICH SYSTEM OR PORTIONS OF A SYSTEM OR CIRCUIT REQUIRE AN INSPECTION USING HISTORICAL FAILURES AND TESTING TO BE PERFORMED. System inspection, based on history and deficiencies noted, completed and operating deficiencies resolved.	
Instrument (i.e., gages, pressure, temperature switches, meters) calibration is within periodicity and will not expire within two months of ship delivery.	
Operating logs are updated and approved for configuration changes or modifications.	
System or component safety features are set, tested, operational, and all automatic controls necessary to support the planned testing are calibrated, tested and operational.	

APPENDIX D

SCOPE OF VISUAL INSPECTIONS OF REACTOR PLANT FLUID SYSTEMS

INSULATION	- Wetted. - Damaged. - Missing.
HANGERS	- Installed hangers are connected or welded and not damaged. - Verify correct thread engagement on fasteners. - Liners are acceptable.
PIPING AND COMPONENTS	- Leakage. - Arc strikes. - Significant surface discontinuities. - Corrosion or pitting. - Dents, bends, visible cracks. - Missing or damaged locking devices. - Sound shorts (if applicable). - Missing, damaged or incorrect label plates. - Proper clearance between vent and drain lines and associated funnels, funnel misalignment and clogged screens. - Damaged or out of calibration gauges and thermometers. - Inadequate preservation. - Foreign material on outside of piping or components.
MECHANICAL CONNECTIONS	- Leaks. - Missing or loose fasteners. - Incorrect material (e.g., dissimilar materials). - Proper thread engagement. - Misaligned flanged joints.
VALVES	- Missing or damaged valve caps or vent plugs. - Leaks. - Loose, missing or non-functional handwheels. - Damaged valve position indicators. - Missing or damaged fasteners. - Permanent identification of handwheels by system number and color coding (if required). - Bent stems. - Packing glands with little or no remaining adjustment. - Cocked packing glands. - Corrosion.

FOUNDATIONS	- Obvious damage. - Corrosion or cracks. - Integrity of attachment welds. - Missing or loose fasteners or locking devices.
LOCKING DEVICES	- Damaged, where installed. - Serve intended function.
SHIELDING	- Damaged shielding. - Damaged or missing radiation area exclusion barriers (if applicable). - Corrosion or leaking of canning plate materials. - Damaged viewing windows or periscopes. - Missing or loose fasteners.

2.1 PURPOSE. This chapter provides guidance in support of advanced planning, preplanning, execution and close out of Chief of Naval Operations (CNO) Scheduled Maintenance Availabilities. The implementation of policies as set forth in references (a) through (am) provide additional guidance as required. Requirements listed here apply unless otherwise approved by

Naval Sea Systems Command (NAVSEA). Where differences may exist, NAVSEA requirements take precedence.

2.2 CHIEF OF NAVAL OPERATIONS SCHEDULED MAINTENANCE AVAILABILITIES.

a. CNO scheduled maintenance availabilities greater than six months in duration. An availability scheduled primarily for industrial maintenance and installation of major, high priority alterations. Types of these availabilities include:

(1) Planned Incremental Availability.

(2) Docking Planned Incremental Availability.

(3) Post Shakedown Availability.

b. CNO scheduled maintenance availabilities less than six months in duration. Short, labor intensive availabilities scheduled for accomplishment of industrial maintenance and modernization. Types of these availabilities include:

(1) Selected Restricted Availability (SRA).

(2) Post Shakedown Availability.

(3) Carrier Incremental Availabilities.

c. Carrier Incremental Availabilities are CNO availabilities for scheduling and budgeting purposes only. To meet the intent of the Aircraft Carrier Class Maintenance Plan (CNO Availability Risk buy-down, key modernization and condition-based maintenance reduction) the requirements listed below will be met. However, based on the Carrier Incremental Availabilities work package, below sections (3)(a) through (3)(i) may be excluded if agreed upon by stakeholders in the Executive Agreement Letter.

(1) Work package development, modernization and contracting milestones will be defined in the Executive Agreement Letter required by reference (b).

(2) Ready-for-Sea requirements and waiver requests will be processed according to standard procedures.

(3) Standard CNO availability teaming, reporting, milestone and key events will not be accomplished unless agreed upon by stakeholders and included in the Executive Agreement Letter. Example items include but are not limited to:

(a) Integrated Project Team Development meetings.

(b) Risk Letter.

(c) Readiness to Start Brief.

(d) Project Review Conference 1.

(e) Project Review Conference 2.

(f) 50% Review Brief.

(g) Execution Strategy.

(h) Lessons Learned (also known as, hotwash).

(i) Retrospect's.

(4) Planning Milestones will be in accordance with reference (b).

(5) Lessons Learned, when appropriate, will be conducted per reference (a).

2.2.1 Early Start. An "early start" is defined as that time when ships are made available by Type Commanders (TYCOM) for the execution of maintenance or modernization, including dry-docking, prior to a scheduled CNO availability start date.

2.2.2 Early Start Concurrence. The Naval Supervisory Authority (NSA) (e.g., Naval Shipyard, Ship Repair Facility, Regional Maintenance Center, Supervisor of Shipbuilding) must request an "early start" period via Naval Message no later A-365 days from scheduled availability start. TYCOMs must provide concurrence to execute an "early start" period. The cognizant maintenance activity will formally document each "early start" period using applicable availability management control tools (e.g., Navy Data Environment, Final Review Estimate provided to the TYCOM, etc.), and include NSA acknowledgement that the availability cost to the TYCOM will be the same, as if no "early start" period was utilized, within that documentation.

2.2.3 Readiness to Start Availability. The Project will conduct a Readiness to Start brief per the appropriate milestones listed in Appendix A_1 and Appendix A_2. The purpose of this briefing is for the Project Team to demonstrate its readiness to execute, test and certify the maintenance availability. The Project Team must review the Availability Work Package (AWP) for risks that would threaten the Project Team's ability to accomplish the work to the expected level of quality within the scheduled time and budget. The Project Team must develop risk mitigation strategies that eliminate or minimize risks. These risk mitigation strategies must be outlined in a letter provided to the TYCOM and the NSA (e.g., Commander, Navy Regional Maintenance Center, NAVSEA 04X, Program Executive Officer (PEO)).

2.2.3.1 Readiness to Start Brief.

a. All required Technical Work Documents are complete, reviewed and approved by the NSA Engineering Department. Any unfinished Technical Work Documents will be discussed.

b. The Quality Management Plan is complete and signed.

c. The initial conditions can be established to support the work (e.g., drained, depressurized, de-energized, tag out and Work Authorization Form).

d. The required repair parts, materials (including pre-fabrication) and test equipment are available or will be available to support the work.

e. Assigned project team personnel are knowledgeable, trained and qualified. The Executing Activity must provide appropriate written documentation to support the qualifications or certifications prior to personnel performing any work.

f. The milestones and key events schedule, critical path jobs and budget (including the overtime plan).

g. All required Memorandum of Agreements (MOA) are signed and a communications plan has been established between the key participants of the availability.

h. A risk management plan is developed to mitigate or reduce risk. These mitigation or risk reduction options will be continuously evaluated throughout the availability.

i. A Fast Start strategy must be developed and monitored. A 100-hour beginning of the availability strategy will be part of this plan.

j. Ship's Force availability related training plan.

k. Arrival Preparations. Items to be discussed must include adequacy of workspace, computer and telephone connectivity, completion of training and Ship's Force watchbill qualifications.

2.3 MAINTENANCE POLICIES AND PROCEDURES.

2.3.1 Critical Path Jobs. Critical Path Jobs (CPJ) are those jobs or series of jobs that require special management attention and normally present the greatest risk to on time completion of the Key Event or availability. Industrial activities should be judicious in designating jobs as CPJs to prevent diverting management attention from those jobs which are, in fact, critical to on time completion of the availability. Consideration must be given to, but not limited to, the following in determining the CPJs:

a. Little or no room for delay exists.

b. Establishing plant conditions.

c. Long Lead Time Material.

d. Complexity of job or special skills or resources required.

e. Significant test requirements.

f. Not previously accomplished by a Fleet Maintenance Activity (FMA) (alterations, etc.).

2.3.2 Work Sequence Schedule. The Work Sequence Schedule is an integrated timeline (Pert Chart, Gantt Chart, etc.) that includes plant conditions, major work steps, tests and recertifications used to identify and progress CPJs. The Work Sequence Schedule should include:

a. Staging.

b. Establishing plant conditions.

c. Issuing work procedures.

d. Identifying major production steps.

e. Testing or Recertifying.

f. Closing out work procedures.

2.3.3 Milestones.

a. Appendix A_1 is representative of typical CNO Maintenance Availability milestones.

b. Appendix A_2 is representative of typical Refueling Complex Overhaul Planning milestones.

c. The full list of typical milestones can be viewed in reference (a).

d. For specific availabilities, a listing of milestones is included as an enclosure to the Maintenance Planning Tasking letter. Subsequent to this, the TYCOM sends out periodic revisions until availability completion. Various activities which have specific responsibilities for the maintenance of aircraft carriers, composite listings of milestones for the TYCOM, NAVSEA, Carrier Planning Activity (CPA), planning yard and the CO of the ship, imposed by the TYCOM and higher authority are found in reference (a). The milestones are arranged in order of occurrence through the planning, execution, and post-repair phases of CNO Maintenance Availabilities.

2.3.4 Production Completion Date. Production Completion Date (PCD) for the Engineering Plant is an availability key event that provides sufficient time for the necessary steps to be taken by Ship's Force to shift from a maintenance environment back to operations. It is the intent that all work and testing in engineering and auxiliary spaces will be complete and certified up through Stage 2 testing per reference (c) by the scheduled PCD. PCD includes all work planned for accomplishment during the maintenance availability by all maintenance and modernization providers including, but not limited to, the LMA, Alteration Installation Team (AIT), Commercial Industrial Services and FMA. The time reserved between PCD and propulsion plant light off is set aside to allow Ship's Force to complete pre-event certifications, clearance of tagouts, complete any remaining discrepancy corrections, continued deep cleaning, small valve maintenance, Ship's Force startup maintenance, valve lineups, temporary service removal, and, if required, any groom teams in areas requiring special emphasis. This time is necessary to allow Ship's Force to transition to an operational environment and focus necessary training and complete final preparations for the assessments. For availabilities in excess of 140 days for forward deployed CVNs, PCD will be scheduled for a minimum of 14 days prior to the assessments. For availabilities 140 days or less for forward deployed CVNs, PCD will be scheduled between 3-14 days prior to assessments. The ship's CO, Chief Engineer and the NSA Project Manager will determine the number of days needed between PCD and assessments for availabilities 140 days or less for forward deployed CVNs based on the scope of work, length of availability and other pertinent factors. PCD will not be less than three days prior to propulsion plant light off regardless of whether an assessment is scheduled. Generally, assessments will be scheduled for availabilities greater than 120 days. For availabilities 140 days and less for forward deployed CVNs, the requirement for an assessment will be determined by the TYCOM. The following list contains examples of items to be considered when deciding whether or not the ship is ready to call PCD and begin the shift from a maintenance environment back to operations:

a. Temporary services removed, except for those required by Ship's Force or late emergency industrial activity work required for assessments.

b. Access openings and ladders installed and clear for passage.

c. All damage control or firefighting systems operational.

d. Lagging repairs completed. As required for operational testing, minimal minor lagging repairs may be deferred until completion of hot plant testing.

e. All machinery in-place, and assembled, and certified complete through Stage 2 testing per current instructions.

f. All deck plates and supports installed.

g. Boiler work completed including hydrostatic testing, with boiler under appropriate lay-up.

h. Industrial tools, material and debris removed.

i. All main propulsion and auxiliary piping, valves, and systems intact, hydrostatic tightness tests completed satisfactorily and remote valve operator and associated or indicator tests completed satisfactorily.

j. Engineering and auxiliary space turnover complete.

k. Ship distributed systems that impact engineering or auxiliary spaces are intact and operational.

2.3.5 Delayed Production Completion Date. In the event that the decision is made to delay the scheduled PCD, careful consideration should be given to ensure that the times allotted for Ship's Force between PCD and the assessments are preserved, even if the availability end date would be adversely affected. The ship's CO, TYCOM, NSA Chief Engineer and the NSA Project Manager should carefully evaluate any and all work remaining within the engineering spaces that could impact Ship's Force ability to be successful in preparing for the assessments. An exceptions list will be generated and agreed to by the ship's CO, TYCOM, NSA Chief Engineer and the NSA Project Manager listing all outstanding engineering or auxiliary space and other plant affecting work, which will continue after PCD while the ship is preparing for the assessments.

2.3.6 Habitability. Key Event (HB00) at which the ship meets habitability standards by completion of Habitability Inspection per Quality of Service Council (QoSC) Execution Guidance and its subsequent paragraphs to determine that the ship is materially ready. Exceptions must be approved by the NSA Commanding Officer based on the Chief Engineers' Risk Assessment.

2.3.7 Memorandum of Agreement. The MOA must be executed and jointly signed by the ship's CO, the NSA, the AIT Manager, the TYCOM representative (if applicable) and the FMA representative (if applicable) prior to commencing authorized intrusive work. Reference (a) delineates the alignment process and agreements between the industrial activity and Ship's Force concerning the responsibilities of each party during the availability. It deals with a number of areas in which Ship's Force generally provides support to the industrial activity and vice versa. Reference (b) contains training requirements and additional guidance for MOAs. As a minimum, the MOA must include:

a. Purpose. Include:

(1) Availability Type.

(2) Period of Performance.

(3) Geographic Location of Maintenance (e.g. CMAV, 2-30 Jun 2019, Norfolk, VA).

b. Applicability. List all parties involved in the MOA and include:

(1) Point of Contact Department or Code for each activity involved.

(2) The NSA and LMA.

(3) The AIT (if applicable) to include the Sponsor, Manager, Contractor(s) and Subcontractor(s) for alteration work.

c. Responsibilities for control of plant conditions and work area isolation.

d. Responsibilities for accomplishment of work.

e. Responsibilities for Quality Assurance (QA).

f. Responsibilities for support services or equipment.

g. Responsibilities for testing requirements.

h. Responsibilities for waivers, deviations, or Departure from Specifications.

j. Responsibilities for training.

k. Miscellaneous responsibilities (as required) (i.e., Radiological Control, Hazardous Material, etc.).

l. Signatures of all activities (signifying agreement with the terms and responsibilities of the MOA).

m. Responsibilities for reports or notifications for Emergency Planning and Community Right-to Know Act requirements (Sections 302, 304, 311, 312, and 313).

n. For Alterations installed by AITs, the NSA will initiate the MOA and engage all assigned activities to support development of the MOA as detailed in reference (d) and part I, chapter 1, paragraph 1.1.1.d of this volume.

2.3.8 Responsibilities. Responsibilities for the Maintenance Policies and Procedures for CNO scheduled availabilities are:

2.3.8.1 Fleet Commander.

a. Maintain the Availability Intervals and Cycles issued in reference (e) to the maximum extent practical within operational requirements.

b. Inform the Chief of Naval Personnel of any significant changes which would affect ship manning requirements during an extended CNO Maintenance Availability.

c. Coordinate with the Program Executive Office, Direct Reporting Program Manager or Ship Program Manager, as applicable, in the accomplishment of CNO Maintenance Availability planning.

d. Implement Docking Officer Qualification and Certification requirements as issued in NAVSEA instructions.

e. Plan for and monitor availability execution to achieve a balance of cost and schedule for the scope of work authorized. Ensure that any growth in the scope of work authorized is necessary to reasonably assure safe, reliable operation of the ship during the subsequent operating cycle.

f. Plan for and provide berthing, messing, offices, classrooms, equipment stowage space, and Ship's Force repair shop per reference (f) when shipboard facilities are expected to become unusable or uninhabitable.

2.3.8.2 Type Commander.

a. Coordinate the scheduling of availabilities at industrial activities with Fleet Commander, NAVSEA and CNO.

b. Initiate the required budgetary actions for funding availabilities.

c. Coordinate the work assignments between the FMA and the industrial activity.

d. Seek resolution of all class and major technical problems and coordinate industrial requirements for modernization and repair.

e. Authorize AWPs prepared by CPA with recommendations from the ship's CO and LMA. Exercise all work candidate screening and follow up actions relating to the availability directly with the ship concerned.

f. Designate a TYCOM representative for the Work Definition Conference (WDC), Project Review Conference (PRC), QoSC meetings, and Pre-Arrival Conference (PAC) when such conferences or meetings are scheduled.

g. Recommend to CNO any high priority fleet modernization desired to be accomplished.

h. Conduct a QA audit of Ship's Force and FMA Controlled Work Packages per volume V, part I, chapter 9 of this manual.

i. TYCOM Force Damage Control will provide fire safety oversight for all ships while in a maintenance availability per reference (g).

j. Assist CPA in the preparation of the AWP.

k. Monitor corrective maintenance action taken by industrial activities and Regional Maintenance Centers (RMC).

l. Schedule and conduct inspections of Forces Afloat.

m. Monitor progress of CNO Maintenance Availabilities.

n. Ensure that applicable strategies and MOAs are executed per reference (a) prior to availability start.

2.3.8.3 Ship's Commanding Officer. The CO is the ISIC representative for monitoring the progress and quality of industrial work. As such, the CO should review availability progress during weekly conferences with Department Heads and others as necessary. The Supervising Authority meets weekly with the CO and other industrial activity officials following the Weekly Management Meetings guidance. The CO should be prepared to discuss and assist in the resolution of scheduling, design, material, and production problems. The CO's responsibilities are defined in reference (e). Additionally, COs must:

a. Review AWPs and provide comments to the TYCOM and CPA during the Intergrated Planning Conference (IPC) and PRC events.

b. Assign a Ship Selected Records (SSR) Coordinator to perform the functions of paragraph 2.6.6.

c. Publish policy concerning the number of duty sections, liberty, ship cleanliness, tagout procedures, tank closeout and blanking of otherwise exposed fluid systems, waveguides and air systems before availability start.

d. Ensure non-conformances (Waivers, Deviations or Departures from Specification) submitted during the availability by any activity are approved prior to trials at sea (if held) and not later than the completion of the availability.

e. Designate a ship's force QoSC representative to participate in QoSC meetings.

2.4 AVAILABILITY WORK PACKAGE PLANNING.

2.4.1 Forces Afloat Planning Sources. The majority of the Forces Afloat Work Package can be identified in advance from the following sources:

a. Ship's CSMP Integrated with the Life Cycle Maintenance Plan. This document contains work items deferred during the previous maintenance availabilities, outstanding Departures from Specifications, dry dock requirements, etc. To ensure the CSMP accurately reflects the required ships maintenance, the TYCOM will review each ship's CSMP in detail with the ship prior to the IPC or PRC for CNO Maintenance Availabilities. The TYCOM 3-M Coordinator should provide the necessary technical assistance and training to facilitate CSMP updates.

(1) Alterations. The Maintenance Document Control Office or TYCOM will enter alterations on the ship's CSMP which the TYCOM has authorized for accomplishment. The TYCOM calls out alterations for a specific availability based on material availability as identified by the industrial activity. Within funding constraints and TYCOM guidance, all alterations authorized on the TYCOM Alteration Management System or Navy Modernization Process are candidates for accomplishment during each availability.

(2) Condition Based Maintenance. (Machinery Condition Analysis or Technical Assessment, Repair, Groom and Evaluation Team, Combat System Readiness Review, etc.). The TYCOM Material Officer and Ship's Force must ensure that all material deficiencies identified by Condition Based Maintenance programs as identified in part I, chapter 1 of this volume are loaded into the CSMP for a specific availability.

b. Work Routines. A set of Master Job Catalog standard work routines should be developed for every availability. The TYCOM tailors each work routine package to the needs of the ship by calling out additional work routines to document periodic, interim dry-docking, and calibration recall requirements, as applicable.

c. Pre-Availability Tests and Inspections. Ship's Force and industrial activity inspectors perform and submit the results of these pre-availability tests and inspections to the industrial activity, CPA for evaluation and inclusion in the AWP, as applicable.

d. Additional requirements for nuclear powered ships are contained in reference (h).

2.4.2 Forces Afloat Planning Actions. Ship's Force must take the following maintenance availability planning actions, as applicable:

a. Develop a Ship's Force concurrent Work Package that includes all major maintenance actions such as Planned Maintenance System (PMS), Reactor Plant PMS, repairs, PMRs, alterations and testing to be conducted by Ship's Force during the availability, as applicable.

b. Identify CPJs per paragraph 2.3.1, and submit to the planning or industrial activity for integration into the availability schedule.

c. Establish a strategy for calibration of gages, instruments, and tools based on the Calibration Recall List and Calibration Support Plan.

d. Identify all industrial activity provided production and testing support equipment needed to accomplish Ship's Force work, or to recertify systems following Ship's Force work. Identify this equipment to the industrial activity prior to the start of the availability. This support equipment includes the following, as applicable:

(1) Reactor Plant PMS support equipment.

(2) System hydrostatic test equipment.

(3) Calibration equipment.

(4) Special tools.

e. Ship's Force should use Appendix A_1 or Appendix A_2 as guidance to prepare for availabilities. This appendix provides Typical CNO Maintenance Availability Planning Milestones, deployed and Forward Deployed Naval Forces homeported maintenance availability milestones can be found in volume III of this manual.

2.4.3 Availability Work Packages.

2.4.3.1 Availability Work Package Content. The AWP includes all nuclear and non-nuclear authorized industrial work and associated Forces Afloat work for modernization, maintenance and repair during the availability. The work described is developed from NAVSEA and TYCOM instructions. Forces Afloat actions in the AWP scheduled to complete prior to availability start are critical in defining additional work candidates per Appendix B.

2.4.3.2 Availability Work Package Sources.

a. Class Maintenance Plan.

b. NAVSEA authorized alterations.

c. TYCOM authorized alterations, repairs, PMRs, Engineering for Reduced Maintenance Costs items and baseline AWPs.

d. Results of pre-availability tests and inspections.

e. CSMP.

f. Fleet Technical Support records.

2.4.3.3 Availability Work Package Development. The five stages of AWP development include Baseline, Preliminary, Proposed, Approved and Completed.

a. CPA develops and maintains Baseline AWPs for each ship class and type of availability.

b. CPA consolidate the Baseline AWP (BAWP) with NAVSEA authorized alterations and TYCOM authorized alterations, repairs, PMRs and Engineering for Reduced Maintenance Costs items to produce the draft BAWP. This draft BAWP is issued 36 months prior to the start of the availability.

c. Systems Command (SYSCOM), TYCOM, and the Core Project Team should review the draft BAWP to ensure that it includes known work candidates and authorized alterations that will not be accomplished prior to availability start and for proposed work candidates, which in their opinion, are unnecessary. Appendix B provides suggested guidelines for review of the BAWP. Following the initial review of the Preliminary BAWP, Ship's Force will host a meeting with the TYCOM and CPA, as applicable to consolidate comments and recommendations for the IPC or PRC. This meeting is normally held early in the same week as the IPC or PRC. Executing Shipyard, TYCOM, and the ship's CO or CO's representative should review the Preliminary AWP to ensure that it includes known work candidates and authorized alterations that will not be accomplished prior to availability start and for proposed work candidates, which in their opinion, are unnecessary. Appendix B provides suggested guidelines for review of the AWP. Following the initial review of the Preliminary AWP, Ship's Force will host a meeting with the TYCOM and CPA, as applicable to consolidate comments and recommendations for the WDC or PRC. This meeting is normally held early in the same week as the WDC or PRC.

d. CPA will host a IPC or PRC attended by NAVSEA, the Supervising Authority, FMA (if applicable), TYCOM, and Ship's Force when practical. TYCOM will host a WDC or PRC, also known as the Initial Maintenance Planning Meeting (IMPM), attended by NAVSEA, the Supervising Authority, FMA (if applicable), TYCOM, and Ship's Force when practical. During this meeting, the Preliminary AWP is carefully reviewed and the SYSCOM and the TYCOM authorize the work. When actions are required before a decision is made, those actions are identified and subsequently monitored. The goal is to issue the Proposed AWP (one which represents all SYSCOM or TYCOM authorized work integrated and specifically tailored to the ship involved) within two months following this meeting. At this meeting, the SYSCOM or TYCOM authorizes the industrial activity to continue with planning on the basis of the work identified in the AWP. During this meeting, any activity may submit new work candidates for consideration by the SYSCOM or TYCOM. The SYSCOM or TYCOM will authorize or reject each new work candidate submitted. A reason for rejecting a work candidate will be provided.

e. SYSCOM or TYCOM and the ship's CO should review the Proposed AWP to ensure that it contains all agreements made at the WDC or PRC. Appendix B also provides suggested guidelines for review of this AWP.

f. The Supervising Authority will host a PAC attended by NAVSEA, FMA (if applicable), TYCOM, CPA, and Ship's Force when practical. During this meeting, the Proposed AWP, with results of the pre-availability tests and inspections incorporated where possible, will be carefully reviewed and the SYSCOM or TYCOM will approve the work. The goal is to issue the Approved AWP at the conclusion of this meeting. During this meeting, any activity may submit new work candidates for

consideration by the SYSCOM or TYCOM and NSA Chief Engineer. The SYSCOM or TYCOM will authorize or reject each new work candidate submitted. A reason for rejecting a work candidate will be provided.

g. Within six months after the completion of the availability, the applicable TYCOM will issue the Completed AWP.

2.5 AVAILABILITY PLANNING.

2.5.1 Ship's Force Pre-Planning.

a. To effectively complete the Ship's Force and Carrier Availability Support Team (CAST) (if assigned) responsibilities during the months preceding the start of the availability, it is necessary to assign an Officer or Chief Petty Officer as the Availability Coordinator, responsible for coordinating the completion of the milestones. The quality of the availability will be reflected in the preparations done by Ship's Force and CAST (if assigned).

b. Prior to commencement of the availability, the industrial activity will request the ship to provide personnel Temporary Assigned Duty to the activity (approximately one month prior to the start date). The industrial activity will identify the personnel requirements of this pre-arrival team based on the type of availability and ship class.

2.5.2 Industrial Activity Visit. The ship's CO, Executive Officer, CAST Officer In Charge (OIC) (if applicable) and department heads will visit the industrial activity as soon as practical prior to the start of the availability. The CO will meet key industrial activity managers involved in the availability, other COs of ships in availabilities at the same industrial activity and if applicable, the local Naval Reactors Representative. The Executive Officer, CAST OIC (if applicable) and department heads will meet their counterparts within the industrial activity Project Team and counterparts assigned to other ships in an availability at the same industrial activity. The Executive Officer will also check available crew quarters and barge accommodations, if applicable. Ship's Force will:

a. Coordinate with the industrial activity to conduct pre-availability training and indoctrination. The following are suggested topics for training:

(1) Industrial activity organization and Ship's Force or CAST (if assigned) interface.

(2) Industrial activity procedures and practices, including:

(a) Operational Control Transfer.

(b) Tagout, Rip-Out and Work Authorization Form. This training must address the Work Authorization Form and tagout process described in volume IV, chapter 10 of this manual.

(c) Deficiency Reporting and Correcting.

(d) Radiological Controls Agreement.

(e) General Testing Requirements.

(f) Defueling or Fueling Requirements (Nuclear Reactor and Fossil Fuel).

(g) Industrial Activity Procedures for Accomplishing PMS of Equipment

Under Their Cognizance.

(h) Nuclear Reactor or Radiological Accident Plan.

(i) Maintenance of Ship's Cleanliness.

(j) QA Interface with the Industrial Activity.

(3) General schedule of Key Events and phases of work and testing.

(4) Safety requirements including Ship's Force or CAST (if assigned) industrial activity responsibilities for:

(a) Dry Dock Safety.

(b) Fire Watches.

(c) Watertight Integrity.

(d) Reactor Plant Safety.

(e) Personal Protective Equipment.

(5) Relationship with industrial activity management including responsibility regarding weekly management meetings.

(6) Functions and responsibilities of the joint test groups (Nuclear, Hull, Mechanical, Electrical and Combat Systems) and the Ship's Safety Council including the designation of Ship's Force group and council members.

(7) Control mechanism for work and tests affecting ship's conditions.

(8) Special evolutions and procedures to be conducted early in the availability such as dry-docking and establishing plant conditions.

(9) QA.

(10) Inactive Equipment Maintenance (IEM).

(11) Hazardous Material Requirements.

(12) Special Environmental Requirements.

(13) Support of Trials and Inspections.

(14) System Experts.

(15) Space Turnover.

b. Develop training plan and watch station requalification program per TYCOM directives.

c. Develop Plan of Action and Milestones for Ship's Force or CAST (if assigned) responsibilities during the availability.

d. Review and prepare SSRs for turnover to the planning yard or industrial activity at the start of the availability (see paragraph 2.6.6 of this chapter).

e. Support the industrial activity's pre-availability ship checks, tests and inspections.

2.5.3 Docking Conference. For availabilities involving a ship's dry-docking, the industrial

activity will conduct a Docking Conference prior to the ship entering the activity if scheduled to go directly into dry dock.

2.5.4 Ship's Force Administrative Preparations. Ship's Force administrative preparations for availabilities will include:

a. Necessary revisions to ship and department organization manuals to ensure compliance with established requirements.

b. Preparation of necessary ship and department directives to ensure that administration is formally supported per current requirements.

c. Formulation of procedures for qualification of underway or steaming watchstanders and maintenance of proficiency of in-port watchstanders, including:

(1) Implementation of formal provisional qualification procedures.

(2) Establishment of qualification goals for Key Events, such as undocking, operational testing of ship and propulsion plant systems, steam testing, initial criticality, space turnover, etc.

(3) Incorporation of qualification requirements necessitated by alterations to ship or propulsion plant systems.

d. Procedures for maintenance and security of Ship's Force or CAST (if assigned) barge or office spaces.

e. General overhaul plan for Ship's Force or CAST (if assigned) responsible actions including provisions for:

(1) Ship off-load.

(2) Establishment of barge, berthing and messing facilities.

(3) Establishment of routine ship and barge watch bills.

(4) Scheduling of required shore based schools and leave for personnel.

(5) Provision for accomplishment of known Ship's Force or CAST (if assigned) corrective maintenance.

(6) Establishment of Ship's Force PMS routines.

(7) Establishment of Integrated Logistics Overhaul (ILO) procedures.

(8) Provisions for shift work during known periods of intensive testing (e.g., Engine Room Steaming Operations, Hot Operations, Power Range Testing).

(9) Ship load-out.

(10) Target dates for completion of key ship and department directives and procedures.

f. Assignment of ship system experts, or QA Inspectors, capable of monitoring industrial activity work on assigned systems.

2.5.5 Quality of Service Council. The QoSC is tasked with ensuring issues affecting habitability, livability, and QoS, as defined within this volume and references (i), (j) and (k), are

properly communicated between the ship, maintenance team, and TYCOM. The QoSC should also discuss the implications of out of homeport availabilities, Coast Wide Bid availabilities, and impending homeport shift issues, as applicable. Refer to paragraph 2.6.3 for additional QoSC Execution Guidance.

a. Ship's CO must request a berthing barge per either reference (l) or (m), as applicable, via Naval message to the TYCOM. Appendix C is a sample berthing barge request Naval message and should sufficiently outline impacts to space and requirements.

b. Ships in depot maintenance availabilities must establish a QoSC consisting, at a minimum, of representatives from the TYCOM, NSA, and ship. The council shall meet no later than A-90 prior to availability start, quarterly following the initial meeting, in the event of a substantial delay or extension to the availability, and as requested by the command to address habitability concerns.

c. The QoSC must establish a chairperson, normally the Ship's Force representative, and consider all aspects of crew's QoS during the CNO availability in accordance with references (i), (h), and (j).

d. QoSC must establish a process no later than A-30 by which Ship's Force can report impacts to berthing habitability (i.e. hotline, email account, quarter deck log). Ship's representative is responsible for communicating the process to the crew and CO and be flexible to account for multiple berthing situations (shipboard, barge, and alternative quarters). QoS Reporting system should be monitored daily to ensure QoS standards are maintained and restored in a timely manner.

e. QoSC must agree upon regularly occurring meetings after availability start to assess reported berthing impacts; once per month at a minimum and weekly after Habitability Key Event HB00.

f. Prior to availability start, the QoSC must designate a representative from the council to attend Weekly Management Meeting following the QoSC Execution Guidance. This will normally be the chairperson.

g. QoSC must review Habitability Work Items and document all compartments that have the potential to affect quality of life or habitability during the availability.

2.6 AVAILABILITY EXECUTION.

2.6.1 Responsibilities. Responsibilities for CNO scheduled Maintenance Availabilities are:

2.6.1.1 Fleet Commander.

a. Monitor availability execution to achieve a balance of cost and schedule for the scope of work authorized. Ensure that any growth in the scope of work authorized is necessary to ensure safe, reliable operation of the ship during the subsequent operating cycle.

b. Ensure that testing of all systems and equipment installed or repaired during the availability, which require at sea testing, is conducted prior to availability completion.

c. Provide berthing, messing, offices, classrooms, equipment stowage space, and Ship's Force repair shops per reference (f), when shipboard facilities are unusable or uninhabitable.

2.6.1.2 Type Commander or Immediate Superior In Command (Group or Squadron).

a. Authorize new items and growth industrial work items.

b. Monitor and approve all changes in established milestones, not internal to industrial activity, including LOA and completion dates.

c. Issue direction when the quality or completeness of industrial activity work is in question.

d. Monitor off-ship crew messing and berthing arrangements when required.

e. Notify the TYCOM when essential Ship's Force work cannot be completed on the scheduled contract or Key Event completion date. Make recommendations for assistance where appropriate.

f. Monitor Ship's Force or CAST (if assigned) preparation for LOA (if applicable).

i. Conduct a Pre-Critical Inspection of the Engineering Department to determine the ship's readiness for either the Reactor Safeguards Examination (RSE) or the Fleet Commander Post-Overhaul Reactor Safeguards Examination (PORSE) as applicable.

g. Conduct formal Phase I crew certification inspection(s) of the Ship's Force per the TYCOM Training Manual (when required). The purpose of this inspection must be to audit the readiness and training of the Ship's Force, particularly in the areas of watch stander qualifications, damage control readiness, status of operational and emergency bills, presence on board of essential technical manuals and general operational knowledge. This inspection must be scheduled about one month prior to Fast Cruise and should include written examinations and personal interviews with officers and key enlisted personnel to determine their readiness and status of training as outlined for Phase I. A comparison of personnel allowance (including Navy Enlisted Classification requirements) versus onboard count must be made to ensure that the ship is adequately manned.

h. Conduct Phase II crew certification. Witness and certify to the TYCOM that the state of crew training is satisfactory for at sea operations per the TYCOM Training Manual. This will be done during a two-day period subsequent to Dock Trials and Phase I crew certification and prior to Fast Cruise. This two-day period will be scheduled so that there is normally a 48-hour period between the end of this event and the beginning of Fast Cruise. This two-day Phase II crew certification period is divided into a 40-hour crew work-up and rest period and an eight-hour modified dockside Operational Readiness Inspection. The entire period should be scheduled to minimize interference with industrial activity work. However, since the certification must be conducted carefully to be meaningful, the officer scheduling the certification should coordinate industrial activity interference during the eight hour modified Operational Readiness Inspection. This certification should be thorough and meticulous. Pressure from the industrial activity or any other source to compromise ship safety must not be permitted

to influence the judgment of the certifying officers. The desired overall sequence of these events is shown in volume I, chapter 2, Appendix B of this manual.

i. Conduct a material inspection of the ship.

j. Satisfactory completion of crew certification (Phase I and Phase II) should be reported to the TYCOM in one "PRIORITY" crew certification message paralleled by a telephone call to the TYCOM Watch Officer reporting the date-time group of the message. If significant deficiencies exist or it appears that an extension of time is required to correct training or material deficiencies, the TYCOM must be immediately advised by telephone and by message. The Supervising Authority will be included as an information addressee.

k. Receive from the ship's CO or Supervising Authority the scope, schedule and agenda of tests for Sea Trials for review and approval. When approved, forward copies of the agenda to the TYCOM. The concurrence of NAVSEA is required for the sequencing and scheduling of nuclear propulsion plant Sea Trials for CNO Maintenance Availabilities.

l. Monitor the progress of the availability.

2.6.1.3 Fleet Maintenance Activity. A scheduled CNO Maintenance availability may involve concurrent FMA repairs. During such availabilities, it is imperative that the industrial activity and the FMA involved maintain a close working relationship, both between themselves and Ship's Force, to ensure a successful, on-time availability completion. As a minimum, the FMA must:

a. Carry out all FMA work consistent with the procedures described in part I, chapter 4 of this volume.

b. Participate in all Weekly Management Meetings.

c. Provide information on FMA Job Status for ship's SITREP. (See Appendix D.)

d. Closely coordinate all jobs affecting Key Event or Milestone completion dates with the industrial activity and Ship's Force.

e. Assist the industrial activity and Ship's Force by maintaining good housekeeping on all job sites.

2.6.1.4 Ship's Force and CAST (if assigned).

a. Support work authorization and tagout programs.

b. Monitor the quality of the industrial activity's performance.

c. Support industrial activity test programs and witness equipment testing.

d. Perform IEM.

e. Ensure Ship's Force work is integrated into the industrial activities schedule.

NOTE: FLEET POLICY DOES NOT PROHIBIT SHIP'S FORCE FROM ACCOMPLISHING WORK ON EQUIPMENT, COMPONENTS OR SYSTEMS NOT OTHERWISE ASSIGNED TO THE INDUSTRIAL ACTIVITY AS LONG AS SUCH WORK DOES NOT IMPEDE THE INDUSTRIAL

ACTIVITY SCHEDULE OR IMPACT PRIMARY SHIP'S FORCE RESPONSIBILITIES. THE MAJORITY OF PERSONNEL LEAVE, PARTICULARLY FOR THE WEAPONS AND ENGINEERING DEPARTMENTS, SHOULD BE PROGRAMMED EARLY IN THE AVAILABILITY SO THAT NECESSARY PERSONNEL WILL BE AVAILABLE FOR SUCH THINGS AS COMBAT SYSTEM TESTING, HOT OPERATIONS, ENGINE ROOM STEAMING, POWER RANGE TESTING AND FAST CRUISE.

f. Train and qualify personnel to support the Key Event schedule.

g. Perform site visits where contractor services are being used for equipment refurbishment.

h. Ensure LOA preparations are progressing on schedule.

i. Attend weekly progress meetings.

j. Ensure that equipment returned to the ship has passed required shop tests.

k. For dry docking availabilities:

(1) Make sure that bilges are properly preserved. To avoid moisture from condensation, plan to complete bilge painting before the ship undocks.

(2) Make sure that air testing scheduled for tanks below the water line is completed before the ship undocks.

(3) Make sure that all hull valves are reinstalled and tested before the ship undocks.

(4) Make sure that underwater preservation is completed, that water line boot is painted evenly and draft marks restored before the ship undocks.

l. Arrange for a post repair boiler inspection by Naval Surface Warfare Center Philadelphia Division (NSWCPD), and TYCOM representatives. Detailed information concerning this inspection can be found in volume IV, chapter 3 of this manual.

m. Develop a Plan of Action and Milestones for LOA.

2.6.2 Arrival Conference Scheduling and Conducting. The arrival conference is scheduled shortly after the start of an availability and conducted by the industrial activity and attended by the CO, Executive Officer, CAST OIC (if applicable), heads of department and their principal assistants, key shipboard personnel and a TYCOM representative. This meeting also provides an excellent opportunity for Ship's Force to meet key industrial activity personnel.

a. The conference agenda should include, as a minimum, the following topics:

(1) Resolve problems not completed at the WDC, PRC or PAC.

(2) A discussion of work scheduling and production planning requiring close cooperation between Ship's Force and industrial activity personnel. Changes to dates for Key Events such as dry docking, Dock Trials, Fast Cruise, and Sea Trials must be made known and agreed upon at this time.

(3) Dissemination of planning information, such as job orders that have resulted from the deferral actions approved for industrial activity accomplishment.

(4) Resolution of any problems regarding work to be undertaken or material or scheduling problems.

(5) Reporting of plans and material status on Key Events or CPJs.

(6) Discussion of industrial activity regulations and other pertinent requirements affecting the ship.

(7) Dissemination of general administrative information of interest to Ship's Force, such as industrial activity and local facilities for training, recreation, housing accommodation, parking, etc.

b. Activities may submit new work items for consideration.

c. Industrial activity schedule daily or weekly meetings.

d. Submit an Availability Start Message to cognizant Fleet Commander at the start of an industrial availability.

2.6.3 Routine Meetings and Conferences.

2.6.3.1 Weekly Management Meetings. Senior industrial activity management officials should meet weekly with the CO of the ship during the availability.

a. Purpose. These meetings provide a formal means by which attendees can address important specific issues with the senior industrial activity official to obtain appropriate resolution. Questions not answered relative to the conduct of this meeting should be addressed by the CO through the TYCOM.

b. Execution.

(1) The industrial activity Senior Officer or Manager will designate the time and day of the week for the meeting.

(2) Attendees will submit agenda items normally within 24 hours before the meeting. The industrial activity will collect, collate, and prepare all agenda items in writing and distribute them to attendees at the meeting.

(3) Attendees will discuss agenda items at the meeting.

c. Attendees. The industrial activity chairs the meeting. The following personnel must attend and participate:

(1) The CO of the ship being repaired. The Executive Officer should attend if the CO cannot be personally present for any meeting.

(2) At some industrial activities, the TYCOM may designate a representative to attend. If so, CO may submit agenda items in addition to those submitted by CO's that may be broadly applicable to all ships in specific availabilities. In the record, there shouldn't be any "TYCOM Position" on any items. The CO has the responsibility to deal with the senior industrial activity official on problems relating to his ship.

(3) The industrial activity Project Manager or equivalent.

(4) The Naval Reactor Representative at industrial activities authorized to conduct naval nuclear work.

(5) Industrial Activity Senior Management (e.g., Engineering Department Head, QA Head, Production Officer).

(6) Any industrial activity personnel as required to support specific agenda items.

(7) CAST OIC (if applicable).

d. General Guidelines.

(1) Before submitting an agenda item, the ship CO should have made an attempt to resolve the problem at an appropriate level within the industrial activities organization.

(2) When agenda items are general subjects such as overall schedule adherence, overall industrial activity manning of ships, overall ship cleanliness, performance of workers and overall ship safety, sufficient factual data should be included to substantiate them.

(3) Ship COs should not routinely submit their agenda items to the Naval Reactors Representative Office (NRRO) for review prior to giving them to the industrial activity's Senior Manager. This does not mean that specific questions related to agenda items cannot be discussed with the NRRO. They should be. Ship COs should not expect the NRRO to be a screen for checking the appropriateness of the item.

(4) Ship COs in private activities must be extremely careful in wording their agenda items, in the discussions at the meeting and in agreeing to words in the minutes to assure that they do not introduce or give tacit agreement to contractual matters.

(5) Ship COs should not submit items for the management meeting as a means to merely determine the status of a job.

(6) If required by the TYCOM, ship COs will provide a copy of the minutes of each meeting to their TYCOM.

e. The Weekly Management Meeting is used as a forum to produce a Progress Report, which is intended to form a brief word picture of the availability progress and identify problems that may require action or resolution. (Paragraphs 1 and 2 in Appendix D should not exceed one typewritten page).

(1) If required by the TYCOM, COs will submit weekly Progress Reports by message of the overall status of work. As a minimum, quality of work, progress, significant problem areas, and action taken towards their resolution must be addressed. COs shall include status of Ship's Force compliance with reference (g). In addition, if the availability completion or readiness-for-sea dates appear to be in jeopardy, the estimated period and reasons for delay will be reported and identified. The Progress Reports will be routed via the

industrial activity and FMA (if applicable) for comments and transmitted in time to reach the TYCOM by the first workday of each week. Appendix D is the desired format for the report.

(2) If, as a result of their inspections, the CO considers that the progress or the quality of work is unsatisfactory, they will promptly bring the matter to the attention of the industrial activity. If satisfactory corrective measures are not taken, they will report by letter, or if time is critical, by message, to the TYCOM with a copy to the industrial activity stating specifically in what respects the work is unsatisfactory. If the condition reported is not corrected to the CO's satisfaction, a report will be made to CNO via the TYCOM per reference (n). Copies of this report will be sent to the industrial activity and appropriate Fleet Commander.

(3) During the course of the availability, periodic progress reviews are conducted at the 25, 50 and 75 percent points of elapsed time of the availability. As a minimum, discussion should include the actions towards resolution of previously reported significant problem areas not yet resolved, upcoming Key Events that may be in jeopardy, update from the QoSC, any significant changes that may be required to meet availability milestones, status of new work and any other issues deemed necessary. The report of the periodic review will be annotated in the weekly SITREP.

2.6.3.2 QoSC Execution Guidance. Unless specified, the requirements below apply to all berthing situations during CNO availabilities. Example: If berthing barge is in use, all berthing barge requirements below apply until crew has moved aboard, at which point all shipboard requirements apply for the remainder of the availability.

a. QoSC will review the QoS Reporting system log daily. Ship's Force reported habitability discrepancies that cannot be corrected within three days must be reported by the QoSC to the TYCOM and captured in the Weekly CNO Availability SITREP or by equivalent weekly reporting process.

(1) For berthing barge discrepancies contact the regional program berthing barge manager for correction per reference (l) or reference (m).

(2) Shipboard discrepancies should be documented via 2-Kilo and follow continuous screening and work authorization processes.

(3) For discrepancies with alternate berthing (e.g., hotel, BEQ, BOQ, NGIS, Navy Lodge), the QoSC and ship's CO will coordinate with contracting agent for berthing as required.

b. The SF QoSC representative must attend the Weekly Management Meeting to ensure that QoS updates are included in the SITREP.

(1) The SF QoSC representative will communicate any changes to the documented compartments to the ship's CO.

(2) Any new work or growth work affecting habitability must be discussed to ensure ships force understands the timeline and impacts.

c. Inspect messing and berthing barges per reference (i) monthly when occupied per reference (j) and reference (k). Prioritized corrective action plan for deficiencies found must be executed following reference (l) or reference (m), as applicable. Inspections must be documented electronically and made available by request of Fleet Berthing Barge Program Managers. Completion of the monthly inspection will be noted in the QoSC section of the Weekly CNO Availability SITREP or by equivalent weekly reporting process following the QoSC Execution Guidance of this chapter.

NOTE: TYCOMS MUST DEVELOP AND MAINTAIN ENTERPRISE SPECIFIC INSTRUCTIONS TO SUPPORT COMPLETION OF INSPECTIONS, ADHERENCE TO REFERENCES (AH), (AJ) OR (AK), AS WELL AS ADDITIONAL DIRECTIONS NEEDED TO CERTIFY KEY EVENTS SUPPORTING QOS. ADDITIONAL KEY EVENTS, SUCH AS LIVABILITY, MAY BE ESTABLISHED BY THE TYCOM.

d. Maximum of three (3) weeks and minimum of one week prior to the Habitability Key Event HB00, the SF QoSC representative, with assistance from the NSA, must conduct a Habitability Inspection of the ship using reference (i) or (k), as applicable. Appendix E provides a sample inspection list.

(1) Ship's CO must report completion and results of the Habitability Inspection to the TYCOM via Naval Message, with copy to the LMA. If shipboard discrepancies are discovered that cannot be corrected within three days or prior to HB00; the CO, with NSA, QoSC, LMA, and TYCOM will develop a corrective action plan included in the Naval Message with mitigating actions and identifying temporary services available.

(2) The corrective action plan (as applicable) will note any exceptions and be approved by the Maintenance Team and agreed to in writing by the Ship's CO and TYCOM.

(3) Appendix F provides sample SF message reporting completion of habitability inspection.

(4) Appendix G provides sample TYCOM message certifying habitability aboard.

e. QoSC and the established QoS Reporting system log will remain in place and active until availability completion.

f. Berthing and Messing barges must be transferred back to the Fleet Berthing and Messing Program per reference (i) or reference (j), if in use.

g. Habitability Key Event HB00 is intended to support readiness for duty section move aboard.

2.6.3.3 Docking or Undocking Conferences. For availabilities involving a ship's dry docking, the industrial activity will conduct both a Docking and Undocking Conference, normally within one week prior to the expected evolution. These conferences will be conducted by the assigned industrial activity Docking Officer. Requirements for the conference agenda, attendees, and Ship's Force support are found in reference (o).

2.6.4 Assist Ship's Force Funds. The TYCOM may set aside a portion of the maintenance funds for CNO availabilities as an Assist Ship's Force (ASF) fund. This fund is controlled by the CO and is used to obtain minor industrial activity assistance in the nature of services or labor, or both, to assist in completing assigned Ship's Force work. The following restrictions apply to the use of ASF funds:

a. No work in the nature of an alteration will be undertaken, unless authorized by the TYCOM.

b. No work using ASF funding will be undertaken in which Ship's Force is not the main participant.

c. Only incidental material will be purchased with ASF funds. "Incidental Material" cost, when measured against the cost of labor on each specific ASF work item, will not exceed ten percent of the total job cost without TYCOM permission.

d. A detailed account of ASF expenditures will be maintained. This account may be audited periodically by the TYCOM to ensure compliance with the restrictions of this section.

2.6.5 Integrated Logistics Overhaul.

a. The ILO concept was developed to provide improved maintenance support to the Fleet in response to the need for complete on board logistics support. An ILO focuses on both maintenance and supply requirements by ensuring that technical documentation and repair parts support the equipment which is actually on board. During an ILO, both maintenance and supply personnel are trained in the use and maintenance of shipboard logistics support documentation and systems to enable them to sustain the effects of the ILO during the operating cycle. The objective of an ILO is to improve readiness by providing a ship completing a specified availability with logistics support that accurately reflects the ship's configuration. A secondary objective is to train Ship's Force in the use of on board support documents and in recognizing and correcting support deficiencies.

b. An ILO is a process which improves ship's readiness and equipment availability through verification of configuration status accounting data, ordering of proper logistics support, and training of Ship's Force in the use and maintenance of its logistics support documentation. An ILO is comprised of five functional elements:

(1) Configuration Analysis and Coordinated Shipboard Allowance List (COSAL) QA consists of verification of start of availability configuration data (including planned changes) with Weapons System File data and other documentation to ensure that the Start of Overhaul COSAL fully supports the projected end of availability equipment configuration. In addition, changes in configuration reported by the accomplishing activity are verified to ensure final COSAL documents include required support.

(2) PMS Analysis. Includes verification of applicable Maintenance Index Pages with ship's existing configuration and all changes to this configuration reported by the accomplishing activity. Resolution of discrepancies with PMS managers is accomplished as required. Analysis of individual MRCs is

performed to ensure that required PMS repair parts and special tools are identified, included in the applicable documents, and ordered.

(3) Technical Manual Analysis. Ensures that the technical manuals required to support the end of availability configuration are identified and requisitioned. Technical manuals, both those off-loaded and those received during the availability, are inventoried and reviewed for applicability, correct change level, and status of changes. Technical manuals applicable to final configuration are retained. All discrepancies are reported as individual Technical Manual Feedbacks in MBPS, the Technical Manual Manager will be responsible for update. Technical manuals missing from the required inventory are requisitioned as are any changes needed to upgrade manuals already held. The ship's Technical Manual Applicability Report is updated to reflect the final configuration, this report is available from MBPS. Also provided are the Technical Manual requisitions still outstanding. Finally, to ensure minimum deterioration of stock after the availability, selected ship personnel are trained in technical manual maintenance procedures.

(4) Repair Parts Analysis. Ensures the accuracy of the repair parts inventory to be back-loaded to the ship at the conclusion of the availability. This analysis includes a complete inventory of all parts aboard and identification of any parts for which there is incomplete data. It also includes recomputation of allowances based on usage or new equipment installation, turn-in of parts no longer allowed and numerous location or quality checks prior to back-loading.

(5) Training. Focuses on proper accomplishment of the first four functional elements of the ILO to ensure that correct logistics support is identified and delivered for shipboard equipment. Efforts are made to ensure that shipboard personnel are fully able to utilize and maintain the ship's logistics support and configuration documentation, both for ILO purposes and for ongoing operating cycle requirements. COSAL use and maintenance training provides shipboard personnel with a working knowledge of the COSAL, its relationship to other maintenance documents and the procedures to ensure that logistics support remains current, (e.g., use of OPNAV 4790/CK Forms).

c. The Ship's Force team will develop an off-load schedule of all ship's spare parts. The ship's spare part stowage plan will be updated to reflect changes in the desired location of individual spare parts. Additionally, provisions must be made for the Aviation Consolidated Allowance List to support the embarking air wing.

d. A ship load-out schedule, including stores, repair parts, yellow gear, and removal of industrial activity equipment, will be prepared by the ship with the assistance of the industrial activity.

e. During a CNO maintenance availability, the ship will ensure that new or removed equipment is reflected in the COSAL and that the required spare parts are added or subtracted as applicable. Allowance changes are to be requested per reference (p).

f. Spare parts, test equipment, and special tools are the hardware portion of new and old equipment. The other portions are software: drawings, technical manuals, allowance

lists, operating instructions, and any other technical documentation. Prior to commencement of an availability, NAVSEA will task the industrial activity with providing a listing and schedule, for installation on board the ship, of all technical documentation for new equipment, including changes to SSR drawings and data. The ship is responsible for the installation and maintenance of technical documentation for all existing equipment.

g. The status of the installation of technical documentation will be reported in the Material Condition or Crew Readiness Status Report.

2.6.6 Ship's Selected Records.

a. The SSRs include various tables, charts, drawings, damage control books and plates, technical manuals and other data selected for their reference value and kept current throughout the life of the ship. Accurate SSRs are necessary for configuration control, maintenance support and troubleshooting. SSR items are:

(1) Ship's Information Books.

(2) Technical Manuals.

(3) Damage Control Books and Plates.

(4) Propulsion Operating Guides or Engineering Operational Sequencing System.

(5) Ship's Drawing Index.

(6) Index of Technical Publications.

(7) Docking Drawings (plan showing each of the docking positions).

(8) Booklet of General Drawings.

(9) Tank Capacity and Vehicle Center of Gravity Curves.

(10) Tank Sounding Tables.

(11) Other tables, charts, allowance lists, etc.

(12) Docking Reports (most recent two industrial availability dockings, and any interim reports).

b. The ship should appoint a SSR Coordinator for the availability. The coordinator should review the SSRs, determine which items will be affected by work candidates listed in the approved work package, and send copies of these SSRs to the industrial activity responsible for executing the availability. The copies sent must include markups showing any changes accomplished during previous availabilities since last update. The ship must retain a master copy of each SSR item and keep it current. If SSR is on microfilm or electronic media, mark up hard copy prints.

c. The SSR Coordinator will serve as the ship point of contact for dispatch, receipt and monitoring status of SSR items during the availability.

2.6.7 New Work.

a. New work is any maintenance requiring industrial level assistance which is not authorized until after contract award or definitization.

b. New work must be requested by message or letter to the appropriate TYCOM (information copy to the Supervising Authority, or CPA, as applicable). Sample letter or message formats are provided in Appendices H and I for requesting new work authorization. Work not currently in ship's CSMP must be added to CSMP prior to requesting new work approval.

c. All new work candidates must be reviewed by and agreed to by the assigned MPM, Project Manager or Program Manager. MPM and Program Manager recommendations regarding requirement to perform repairs, risk assessment, and schedule impact are mandatory. The TYCOM, or the formally designated TYCOM representative, must be the final approving authority for all new work. In the case of private industrial activity availabilities, the TYCOM will certify that, per Federal Acquisition Regulations, the accomplishment of the new work is of such unusual and compelling urgency so as to require waiving of Competition In Contracting Act public law regulations.

2.6.8 Trials, Inspections and Crew Certification.

a. Crew Certification. Crews in ships undergoing major CNO Maintenance Availabilities must be effectively trained in standard operating procedures, emergency bills, casualty drills, etc., and are thoroughly cognizant of equipment either newly installed or relocated during the availability. Based on the length and type of availability, Crew Certifications will be conducted per references (q) and (r).

b. Steam Testing. All steam systems or equipment worked by the industrial activity must be tested following the Testing Plan developed by the industrial activity. Ship's Force must work closely with the industrial activity, providing necessary assistance and support, to carry out the Test Plan.

c. PORSE or RSE. Based on the length of the availability, crew turnover and cold iron time, a PORSE or RSE will be scheduled and conducted per reference (s).

d. Dock Trials. During an industrial availability and prior to conducting post-repair trials, the engineering plant must be tested to ensure its readiness for sea. All special sea details and required general quarters will be manned throughout the trials. Ordinarily, dock trials can be completed in one day or less. The minimum requirements for Dock Trials are listed in Appendix J.

e. Fast Cruise.

(1) All ships completing a CNO maintenance availability must conduct a Fast Cruise where the ship assumes, insofar as practical, an "at-sea" posture while in port with all equipment or systems utilized to the maximum extent possible. The primary purpose of the Fast Cruise is to determine and certify the state of training of ship's company as adequate to conduct at-sea operations. The progress toward this goal is a critical evolution ongoing throughout the availability requiring TYCOM and ship's CO attention. The training program must be designed to have completed all training necessary to safely operate the ship at sea prior to Fast Cruise. The Fast Cruise provides the opportunity to measure ship's preparedness; it is not a basic training period. Commencement of Fast Cruise requires TYCOM permission. Appendix K provides a sample

message format for Ship's Request for Permission to Commence Fast Cruise. For ships completing Complex Overhaul or Complex Refueling Overhaul, additional requirements for obtaining permission to commence Fast Cruise are contained in reference (c).

(2) The following procedures pertain to the conduct of Fast Cruise:

(a) Fast Cruise will be included as a major event and scheduled for at least two days duration by the industrial activity in the case of ships undergoing a CNO maintenance availability greater than six months in duration or at least one day for ships undergoing a CNO maintenance availability less than six months in duration. The Fast Cruise must follow Dock Trials and precede Sea Trials.

(b) A schedule of proposed events must be published by the ship to all activities concerned and must be concurred with by the industrial activity.

(c) Limited numbers of industrial activity personnel may be permitted to be aboard as necessary to continue testing and production work on systems as required. Shop and technical personnel must be permitted on board as instructors, troubleshooters and QA representatives of the industrial activity. Equipment that is not complete must not be included in the Fast Cruise. Settlement of the foregoing provisions must be reached by mutual agreement between the ship's CO and industrial activity, as warranted.

(d) As a minimum standard, system operation tests and drills described in Appendix L must be conducted in all Fast Cruises. It is intended that the necessary prerequisite training must have already been accomplished.

(e) Fast Cruise will be included as a major event and scheduled for at least four days (usually two days of operation, one day of shutdown to allow shipyard, contractors, or both, to correct deficiencies, and two more days of operation) for CNO maintenance availabilities scheduled for greater than 9 months in duration. For ships undergoing a CNO maintenance availability less than nine months, but greater than 6 months, a two-day Fast Cruise is required. For ships undergoing a CNO maintenance availability less than six months, a one-day Fast Cruise is required. The Fast Cruise must follow Dock Trials and precede Sea Trials. Additional requirements pertaining to nuclear powered ship Fast Cruises are contained in reference (c).

(3) Ship's CO must report completion of Fast Cruise to the TYCOM. Appendix M is a sample message format for Ship's Report of Fast Cruise Completion.

f. Sea Trials.

(1) Sea Trials (or Post Repair Trials) constitute the final determination of a ship's material readiness and ability to rejoin the Fleet as a fully operational unit.

Each Sea Trial will be conducted following an agenda prepared by the industrial activity, concurred with by the ship's CO, and approved by the TYCOM. The Sea Trial Agenda will contain the minimum requirements of Appendix N, a time-oriented sequence of events required to support the trial. The requesting ship or industrial activity will arrange for these Fleet services per Fleet Commander Instructions. Since the purpose of the trial is to determine the material readiness of the ship, all systems or equipment overhauled by the industrial activity will be tested following an industrial activity prepared test procedure which will document the results of the test and require operation of the system or equipment in all modes. A Ship's Force Trial Officer will be appointed to coordinate with the industrial activity Trial Coordinator throughout the Sea Trial. The Trial Officer will accept the results of all tests for the ship. Ship's Force personnel will operate all equipment during the Sea Trial per standard operating instructions or Sea Trial test procedures as appropriate. Commencement of Sea Trials requires TYCOM permission. Appendix O is a sample message format.

(2) During Sea Trials the ship's CO will advise the TYCOM of major events accomplished or significant problems encountered or outstanding on a daily basis. Appendix D provides the desired format for this report.

2.7 COMPLETION OF AVAILABILITY. In order to standardize reporting practices, the official end of a CNO Availability will be upon Certification of work per "Availability Work Certification" dictated in this chapter and completion of the TYCOM approved Sea Trials Agenda. Ships must report Sea Trial Agenda Completion in the form of Appendix D. Availability Certification Completion can occur with agreed to exceptions as discussed in volume VII, chapters 7 and 8 of this manual. The TYCOM, Contractor, FMA and NSA should consider Work Certification Requirements and the definition of "Availability Completion" when adjudicating New or Growth work in any availability. If scope, time and cost are impacted by New or Growth work, the impact should be addressed and documented in writing (by the RMC Project Manager) to the TYCOM.

2.8 DAYS OF MAINTENANCE DELAY.

a. Days of Maintenance Delay (DoMD) is a metric used to track extensions to CNO availabilities caused by maintenance or modernization decisions or performance. Extensions beyond the planned availability length take away from training in the Optimized Fleet Response Plan. DoMD is defined as the number of days that an availability extends beyond the originally established end of the availability or completion date at the start of the availability. The original availability completion date is documented in the Navy Data Environment at the official start of the availability. Additionally, the A-35 (days) Readiness to Start message for private shipyard availabilities and the Final Review Estimate (FRE) for public shipyard availabilities document CNO availability start and end dates prior to availability start. Should the actual availability start date differ from the Readiness to Start message or FRE, all stakeholders will need to agree on the date to be used for the original start and completion dates. For a public shipyard availability, the final completion date will match the end of availability completion message. For a private shipyard

availability, the end of availability date will match the end of availability completion message.

b. Total DoMD is the sum of Unrealized DoMD and Realized DoMD that accumulates in the fiscal year in which the day of delay is realized.

c. Unrealized DoMD are defined as the number of days that an availability is projected to extend beyond the originally scheduled availability completion date but have yet to occur as they are in the future from time now (today's date). If today's date is equal to or earlier than the originally scheduled availability completion date, the Unrealized DoMD is the delta between the projected end date and the originally schedule availability completion date. If today's date is later than the originally scheduled availability completion date, the Unrealized DoMD is the delta between the projected end date and today's date.

d. Realized DoMD are defined as the actual number of days that an availability has extended beyond the originally scheduled availability completion date that has already occurred. At the end of the availability, all days of maintenance delay are realized, though they may accumulate in different fiscal years.

(Example: If an availability was scheduled to complete on 10 August 2021 at availability start and was extended to 28 August, the Total DoMD is 18 Days. On 24 August 2021, the availability had 14 Realized DoMD and 4 Unrealized DoMD. For comparison, on 15 July 2021 (i.e., today's date at or earlier than originally schedule availability completion data), the availability had 0 Realized DoMD and 18 Unrealized DoMD).

2.9 AVAILABILITY COMPLETION DEPARTURE CONFERENCE. At the end of the availability, the Supervising Authority, FMA (if applicable), and Ship's Force will conduct a Departure Conference to finalize the status of all work performed during the availability. The conduct of this conference is similar to that of the Progress Reviews conducted per paragraph 2.6.3, and should be used to gather all necessary information to draft and send the Availability Completion Message. Further policy on availability completion can be found in volume VII, chapters 7 and 8 of this manual. As a minimum, the Availability Completion Message should address all areas addressed in the Weekly Progress Message, Appendix D, as well as the following:

a. Unresolved maintenance issues and guarantee work items.

b. Report of configuration changes resulting from alterations installed during the availability.

c. Summarize the NAVSEA waivers issued during the availability.

d. Identify those work candidates that will be deferred until the next industrial availability.

2.10 POST AVAILABILITY. Within six months after the completion of the availability, CPA will issue the Completed Work Package.

2.11 BASELINE AVAILABILITY WORK PACKAGE CLOSEOUT.

2.11.1 Fleet Readiness Plan Maintenance Cycle BAWP Closeout. The following procedures will be utilized to close-out and complete the FRP Maintenance Cycle and associated BAWP.

2.11.2 BAWP Closeout Verification and Assessment Meeting. No later than 45 days after CNO Availability completion, CPA will conduct a BAWP Close-Out Verification and Assessment Meeting. This meeting will determine the status of all "A" branded BAWP items. A list of all BAWP work items that were not accomplished and the reason(s) for non-accomplishment will be compiled for inclusion in the BAWP Close-Out Report.

2.11.2.1 Attendees. The BAWP Close-Out Verification and Assessment Meeting will be chaired by a CPA representative. The following personnel are encouraged to attend this meeting:

a. Ship's CO (or designated representative).

b. Engineer Officer and Availability Coordinator.

c. Project Engineer and Combat Systems Project Engineer.

d. Project Manager or Class Team Lead.

e. PSIA, LMA or Planning Activity Representative.

f. TYCOM Representative.

g. Planning Yard Representative.

h. Program Manager's Representative.

i. Navy Regional Maintenance Center Representative.

j. NRMC Assessment Director.

k. NAVSEA 05D Representative.

2.11.2.2 BAWP Closeout Letter. This letter is a deliverable due at the BAWP Close-Out Verification Meeting per part II, chapter 2, Appendix D of this volume. This meeting is used to ascertain the final disposition of each BAWP mandatory requirement ("A" branded JCN in the FRP maintenance cycle) and a BAWP Close-Out Report to summarize all changes for SURFMEPP, Technical Warrant Holders, Ship Design Managers, engineering authorities and other stakeholders as applicable. Maintenance requirement status will be reviewed at the meeting for deferred, accomplished or non-accomplished-no deferral authorized status. At the conclusion of the meeting, all non-accomplished-not authorized for deferral JCNs will require adjudication via the deferral letter process. The NSA, RMC and TYCOM will coordinate this effort as described in paragraph 2.5.4.5 of this chapter, which discusses the technical deferral and adjudication process for post-AWP definitization.

APPENDIX A1

TYPICAL CNO AVAILABILITY PLANNING MILESTONES

MILESTONE	RESPONSIBILITY	PIA or DPIA	FDNF
1. DELIVER DRAFT BAWP to TYCOM & NAVSHIPYD	CPA	A-37	A-25
2. CONDUCT PRE-RELEASE BAWP REVIEW	CPA TYCOM MPM NAVSHIPYD	A-36.5	A-24.5
3. BAWP ISSUANCE	CPA	A-36	A-24
4. DELIVER A-32 EXECUTABILITY ASSESSMENT PACKAGE TO SHIPYARD	CPA	A-32	A-32
5. PERFORM AVAILABILITY A-30 EXECUTABILITY ASSESSMENT	NAVSHIPYD	A-30	A-30
6. ISSUE FINAL DISPOSITION REPORT (FDR) TO TYCOM	CPA	A-30	A-20
7. DELIVER A-20 EXECUTABILITY ASSESSMENT PACKAGE TO SHIPYARD	CPA	A-20	A-20
8. MODERNIZATION PLANNING CONFERENCE	CPA	A-20*	A-18*
9. PERFORM AVAILABILITY A-18 EXECUTABILITY ASSESSMENT	NAVSHIPYD	A-18	A-18
10. COMMENCE MRA ISSUANCE	CPA	A-18	A-16
11. INITIAL MAINTENANCE PLANNING MEETING	TYCOM MPM	A-17	A-16
12. SCREEN & AUTHORIZE BAWP & CORE WORK	TYCOM MPM	A-16	A-16
13. A-12 CONFERENCE	TYCOM MPM NAVSHIPYD	A-12	A-12
14. START CAPS PROCESS & MCA	TYCOM MPM NAVSHIPYD	A-12	A-12
15. BAWP & MODERNIZATION PACKAGE LOCK	PMS312 CPA	A-12	A-12
16. COMPLETE CAPS PROCESS	TYCOM MPM NAVSHIPYD	A-10	A-10
17. ESTIMATES BACK FROM SHIPYARD	TYCOM MPM NAVSHIPYD	A-9	A-9
18. CONDUCT PRC 1	TYCOM MPM NAVSHIPYD	A-9	A-7

MILESTONE	RESPONSIBILITY	PIA or DPIA	FDNF
19. SCREEN AND AUTHORIZE TO MAINTENANCE PROVIDERS – 70% KNOWN WORK	TYCOM MPM NAVSHIPYD	A-9	A-7
20. MRA 1	TYCOM MPM PROJECT TEAM CPA	A-7	A-7
21. ISSUE RISK LETTER	PROJECT TEAM	A-6	A-6
22. SUBMIT CONTINUOUS COMPLETION REPORT TO CPA AND TYCOM	PROJECT TEAM	A-6	A-6
23. CONVENE PRC 2	TYCOM MPM PROJECT TEAM	A-5.5	A-4
24. SCREEN AND AUTHORIZE TO MAINTENANCE PROVIDERS – 90% PUBLIC SECTOR WORK & 100% OF KNOWN PROME CTR WORK	TYCOM MPM	A-5.5	A-3
25. SPM AUTHORIZATION MESSAGE	PMS312	A-4	A-4
26. CONDITION BASED MAINTENANCE (CBM) PACKAGE LOCK	TYCOM	A-4**	A-4**
27. MRA 2	TYCOM MPM PROJECT TEAM CPA	A-3	A-3
28. POETS OR MCAI COMPLETE	TYCOM MPM NAVSHIPYD RMC	A-2	A-2
29. PSIA WORK CONTRACTED	TYCOM MPM NAVSHIPYD RMC	A-2	A-2
30. INCORPORATE RESULTS OF POET OR MCAI INTO AWP	TYCOM MPM NAVSHIPYD RMC	A-2	A-2
31. FINAL REVIEW ESTIMATE (FRE) ESTABLISHED	TYCOM MPM NAVSHIPYD	A-1***	A-1***
32. SUBMIT CONTINUOUS COMPLETION REPORT TO CPA OR TYCOM	PROJECT TEAM	A-1	A-1
33. ISSUE UPDATED FINAL DISPOSITION REPORT (FDR) TO TYCOM	CPA	A-0	A-0
34. START AVAILABILITY		A-0	A-0
35. SUBMIT CONTINUOUS COMPLETION REPORT TO CPA OR TYCOM	PROJECT TEAM	A+1 to C+0	A+1 to C+0
36. SUBMIT CONTINUOUS COMPLETION REPORT TO CPA OR TYCOM	PROJECT TEAM	C+1	C+1

MILESTONE	RESPONSIBILITY	PIA or DPIA	FDNF

38. ISSUE AVAILABILITY DEPARTURE REPORT	NAVSHIPYARD	C+2	C+2
39. SUBMIT CONTINUOUS COMPLETION REPORT TO CPA AND TYCOM	PROJECT TEAM	C+2	C+2
40. CONDUCT CAMPR	CPA	C+2	A-24
41. ISSUE ADVANCED PLANNING GUIDANCE LETTER OF AUTHORIZATION	CPA	C+3	A-23
42. ISSUE BAWP ADDENDUM	CPA	C+4	C+4
*Due to critical events in preceding availability flexibility is offered on this date but the conference should occur no later than A-16.			
**Post CBM package lock work items are considered New Work.			
***The Final Review Estimate (FRE) is delivered 30 days prior to execution of industrial work, but no later than 30 days prior to the CNO availability start date.			

APPENDIX A_2

TYPICAL REFUELING COMPLEX OVERHAUL (RCOH) PLANNING MILESTONES

MILESTONE	RESPONSIBILITY	RCOH
1. BAWP ISSUANCE	CPA	A-48
2. DEVELOP PLANNING CONTRACT STATEMENT OF WORK (SOW)	PMS312D	A-41
3. PERFORM REVIEW OF BAWP	SUPSHIPNN	A-38
4. PROVIDE PRELIMINARY AWP TO NNS	SUPSHIPNN	A-36
5. DELIVER A-32 EXECUTABILITY ASSESSMENT PACKAGE TO SUPSHIPNN	CPA	A-32
6. PERFORM A-30 EXECUTABILITY ASSESSMENT	SUPSHIPNN	A-30
7. ISSUE FINAL DISPOSITION REPORT (FDR) TO TYCOM	CPA	A-30
8. REVIEW AND REFINE RCOH SFWP PLANNING PROCESS AND MILESTONES.	SUPSHIPNN SF Work Package (SFWP) Mgr	A-24
9. DELIVER A-20 EXECUTABILITY ASSESSMENT PACKAGE TO SHIPYARD	CPA	A-20
10. MODERNIZATION PLANNING CONFERENCE	CPA	A-20
11. DEVELOP EXECUTION CONTRACT SOW	PMS312D	A-20
12. DELIVER A-20 EXECUTABILITY ASSESSMENT PACKAGE TO SUPSHIPNN	CPA	A-20
13. PERFORM AVAILABILITY A-18 EXECUTABILITY ASSESSMENT	SUPSHIPNN	A-18
14. MODERNIZATION PACKAGE LOCK		A-16
15. BAWP PACKAGE LOCK	CPA	A-12
16. START AVAILABILITY		A-0
17. SUBMIT BAWP FINAL DISPOSITION REPORT (FDR) TO CPA OR RPPY	TYCOM SUPSHIPNN	C+1
18. ISSUE BAWP ADDENDUM FOR FOLLOW ON AVAILABILITY	CPA	C+4
NOTE: The above RCOH milestones are only some of the milestones associated with RCOH's. There are multiple milestones that are contained in the RCOH Handbook that is available on the Carrier Team One SharePoint and those need to be reviewed for determination of whether they need to be codified in the JFMM.		

APPENDIX B

SUGGESTED GUIDELINES FOR FORCES AFLOAT REVIEW OF AVAILABILITY WORK PACKAGES

1. The preliminary AWP includes information which CPA and Maintenance Program Manager (MPM) extracts from the CSMP prior to the availability. CPA and MPM only reviews items in the CSMP which are coded 1 under the type availability column. CPA and MPM continues to monitor the CSMP until submission of the first Supplementary Work List. It is essential that the CSMP be up-to-date and reflect what work the ship requires the industrial activity to accomplish. The CSMP is the primary means of communicating unique work items not already covered by the AWP until submission of the first Supplementary Work List.
2. Ship's Force should review each maintenance item on the CSMP deferred for accomplishment to ensure that the deficiency reported and the work involved to correct it are complete and accurate.
3. To the maximum extent possible, work items that are within the capability of an FMA to accomplish should be accomplished as TA-2 work prior to the CNO Maintenance Availability.
4. Ship's Force will identify CSMP repair items previously deferred for other than industrial activity action which Forces Afloat will not likely accomplish prior to the availability and change the type availability code to TA-1, with TYCOM concurrence, on these items.
5. Ship's Force will review each outstanding alteration for applicability and ensure that the record of completed alterations is correct. Alterations erroneously reported complete result in plans and tests which do not fit the ship. Completed alterations not reported as complete will cause unnecessary expenditure of shipcheck funds, duplication or both, of effort during the availability.
6. During AWP review meetings, Ship's Force should mark-up both the index and applicable SWLIN as an aid in recalling information.
7. Ship's Force will review the AWP to see if any component or equipment requiring attention of any kind has been omitted.
8. On receipt of the Proposed AWP, Ship's Force should review each Ship System Work Description. Ship's Force should prepare comments as to whether the extent of planned restoration, maintenance or repairs is sufficient or excessive. Additional comments regarding abnormal operation or configuration will be of interest to the industrial activity even if the AWP covers the particular component for repair because the scope of the job can be exactly defined early, avoiding "growth within scope" and schedule slippage later in the availability.
9. Ship's Force should review the General Information Section, "zero" series SWLINs and the glossary for a definition of terms used in the AWP to obtain a general understanding of availability procedures, philosophy and the pre-availability planning requirements.

10. Ship's Force should review all outstanding Departures from Specification to ensure they identify, for correction during the availability, all known non-standard repairs or installations not per class plans.
11. Ship's Force should identify any recently completed repair actions on components assigned to industrial activities and alterations that may negate the need for, or reduce the extent of, industrial activity refurbishment.
12. Ship's Force should identify any equipment not presently addressed in the AWP. CPA, TYCOM (as applicable) and MPM are interested in identifying special or temporary equipment installations which may need maintenance during the availability.
13. Ship's Force should identify any equipment listed for restoration, that is in exceptionally good material condition.
14. Ship's Force should review, "Forces Afloat Actions to be Accomplished Prior To or At Arrival" index in the AWP to ensure these actions are understood.

GENTEXT/1. IAW REF A, REQUEST TYCOM APPROVE <SHIP NAME/HULL NO.>
REQUEST FOR A BERTHING BARGE DURING <SHIP NAME/HULL NO.> (AVAIL
TYPE) MAINTENANCE PERIOD FROM DY MON YEAR UNTIL DY MON YEAR.
2. BARGE MUST BE LOCATED LESS THAN XXX YARDS FROM <SHIP NAME/HULL
NO.> IN ORDER FOR <SHIP NAME/HULL NO.> TO SUPPORT IMMEDIATE CASUALTY
RESPONSE ON THE BARGE.
3. BERTHING REQUIREMENTS ARE AS FOLLOWS:
MALE OFFICERS - ( )
FEMALE OFFICERS – ( )
MALE CPO - ( )
FEMALE CPO - ( )
MALE E-6 AND BELOW - ( )
FEMALE E-6 AND BELOW - ( )
TOTAL PERSONNEL - ( )
4. REQUEST THE FOLLOWING FOR USE DURING BARGE OCCUPANCY (AS
APPLICABLE, NOT LIMITED TO):
A. SECURE OFFICE SPACE FOR COMMANDER WITH SVTC AND VOSIP
CAPABILITIES
B. SECURE OFFICE SPACE FOR CHIEF OF STAFF WITH SVTC AND VOSIP
CAPABILITIES
C. SECURE OFFICE SPACE FOR COMMAND MASTER CHIEF
D. SECURE OFFICE SPACE FOR MARITIME OPERATIONS CENTER DIRECTOR

E. SECURE OFFICE FOR INFORMATION WARFARE COMMANDER
F. SECURE CONFERENCE ROOM WITH SVTC AND VOSIP CAPABILITIES
G. VAULTED SERVER ROOM WITH CRYPTOGRAPHIC DEVICE AND SWITCHES

APPENDIX E

HABITABILITY INSPECTION CHECKLIST FOR SHIPS IN CNO AVAILABILITIES

1. This checklist is a sample for QoSC the ship's force representative, with assistance from the NSA, to qualitatively determine the minimum required standards to the ability of the crew to live on board safely and comfortably during CNO availability. This assessment does not fulfill shipboard system certification requirements or other inspection requirements related to food service sanitation, laundry and dry cleaning, potable water and marine sanitation devices.
2. The purpose of the inspection is to verify that living and messing spaces are clean, safe and ready to receive the crew, and meet habitability requirements per references (i), (j), and (k), and references (l) or (m), as applicable. Upon completion of the inspection, Ship's CO must report completion and results of the Habitability Inspection to the TYCOM via Naval Message (Appendix F), with copy to the LMA.
3. Areas to be inspected include general safety and sanitation, galley, scullery, messing, dry food storage spaces, refrigerated food storage spaces, berthing spaces, washrooms, showers, heads, lounges and potable water.
4. It is understood that not all equipment, spaces and systems aboard the ship will be completed and transferred to ship's force at the time of the assessment. If a space or system to be inspected has not been transferred to the crew, the LMA will present the space or system to the inspector. If a space or system has been accepted by the crew, the crew will present the space. As remaining habitability related spaces or systems are completed after crew move aboard, the QoSC is responsible for inspecting spaces or systems per the agreed upon turnover plan.
5. The inspection team will evaluate the following areas utilizing their TYCOM approved checklist which must include, but not limited to, the following areas or services as they were affected during the CNO availability:
   A. General
   B. Food Service
   C. Living Spaces
   D. Freshwater
   E. Collection, Holding and Transfer (CHT) System
   F. Laundry and Dry Cleaning

HABITABILITY AND LIVABILITY INSPECTION CHECKLIST FOR SHIPS IN CNO AVAILABILITIES (Cont'd)

Compartment Number: _____ Division: _____

A.	GENERAL	YES	NO
	1. All trash and rubbish removed.		
	2. Spaces are neat, clean and in a usable condition.		
	3. Wireways and other exposed areas that could serve as a path for rats are free of foreign matter.		
	4. Electrical wires or plugs are not located to be easily tripped over.		
	5. Drains open with covers attached.		
	6. Ventilation (heating and cooling) and lighting adequate to maintain healthful and comfortable conditions.		
	7. Electrical outlets required for habitability are installed and operable.		
	8. Spaces are free of major safety discrepancies.		
	9. Damage Control equipment installed per ship plan and labeled.		

GENERAL

Inspector: _____Date: _____

B.	FOOD SERVICE	YES	NO
	1. Facility		
	a. Decks sloped properly to allow drainage into deck drains. (S9AA0-AB-GOS-010/GSO Section 528. NAVMED P-5010-1 Article 5-204.11)		
	b. Adequate and convenient hand washing facilities with hot and cold running water, dispensed soap and single service disposable towels and waste receptacle for used paper towels are provided in or adjacent to the food service facility. (OPNAVINST 5100.19, Section D CH4, T9640-AC-DSP-HAB; and NAVMED P-5010-1, article 6-301.20).		

	c. Drain lines from refrigerators, ventilator hoods and other food service equipment drain through an air gap into a deck drain or funnel with removable grating (if cited in the contract). (S9AA0-AB-GOS-010/GSO Section 528. NAVMED P-5010-1 Article 5-202.13)		
	d. Signs posted reminding personnel to wash hands and not smoke. (NAVMED P-5010, Article 6-301.14)		
	e. Equipment operating and safety instructions are prominently posted on or conspicuously near the equipment to which it relates. (OPNAVINST 5100.19, Section D, Chapter 8; S9AA0-AB-GOS-010/GSO section 602)		
	f. Steam and hot water lines properly lagged and sheathed. (S9086-RK-STM-010/505 and S9AA0-AB-GOS-010/GSO section 508)		
	g. Furniture is installed in prescribed arrangement and neat, clean and in usable condition. (S9AA0-AB-GOS-010/GSO section 651)		
	h. Racks and bins are installed in storerooms. (S9AA0-AB-GOS-010/GSO section 670)		
	2. Equipment		
	a. Deck mounted equipment sealed to the deck or elevated on legs that provide at least 8 inches of clearance between the deck and equipment. (NAVMED P-5010, chapter 4; and T9640-AC-DSP-010/HAB)		
	b. Decks in food service areas maintained in good repair. (NAVMED P-5010-a article 6-201)		
	c. All equipment accessible.		
	d. Food contact surfaces made of smooth, corrosion resistant, non-toxic (FDA Food, Drug and Cosmetic Act guidelines), stable non-absorbent materials that will not impart odors, color or taste, nor contribute to adulteration of food. (NAVMED P-5010 -1 article 6-101)		
	e. Vegetable peelers, vegetable slicers, can openers, meat slicers, ranges, ovens, grills, deep fat fryers, microwave ovens, toasters, mixing machines, pressure cookers, steam jacketed kettles, steam tables, steam table and salad bar inserts, soft ice cream machines, baking and roasting pans, cooking and serving utensils, food carts, storage racks and shelving properly installed, sanitized and operationally tested. (NAVMED P-5010 -2 Chapter 4)		

	f. On and off toggle switches on food service equipment have toggle switch guards installed to prevent inadvertent operation. (NAVMED P-5010-2 Chapter 4)		
	g. Safety interlocks on food preparation equipment maintained in proper operating condition.		
	h. Steam Jacketed Kettles.		
	(1) Equipped with functional steam safety release valve, if applicable. (S9AA0-AB-GOS-010/GSOs. 65)		
	(2) Chains at least 18 inches long attached to steam safety release valves to allow for operation from a safe location for direct steam heated kettles (GEN SPECS, Section 528, Article C1905 g(4)), if applicable.		
	(3) Steam discharge piped down to kettle coamings and directed away from operator's feet (GEN SPECS, Section 651 b), if applicable.		
	i. Equipment free from salt-water connections except NAVMEDCOM approved garbage grinders or refrigeration units. (NAVMED P-5010-6, article 6-6.8)		
	j. Food service spaces and equipment are free from cross connections with non-potable liquids or submerged freshwater inlets. (NAVMED P-5010-6, article 6-6.8		
	3. Ventilation		
	a. Hoods serving deep fat fryers are fitted with a fire extinguishing system. (S9AA0-AB-GOS-010/GSO, section 512 and S9AA0-AB-GOS-010/GSO, section 555)		
	b. Grease filters and hoods are installed over convection ovens, combination ovens, range, griddles, deep fat fryers, steamers, skittles, and kettles are free from grease buildup and can be washed at least weekly. (S9AA0-AB-GOS-010/GSO, section 512 and 0938-LP-018-0010)		
	c. Hoods and filters are free from grease buildup and can be washed daily or weekly, as required. (S9AA0-AB-GOS-010/GSO, section 512)		
	d. Spaces adequately ventilated to keep them free of excessive heat, steam, condensation, vapors, smoke or gases. (S9AA0-AB-GOS-010/GSO, section 512 and 0938-LP-018-0010)		
	e. Vent ducts free of excessive grease and debris which could be a fire hazard. (S9AA0-AB-GOS-010/GSO, section 512 and 0938-LP-018-0010)		

	4. Lighting		
	a. Illumination levels adequate. (MIL-STD-1472, DOD-HDBK-289, and T9640-AC-DSP-010/HAB)		
	b. Lighting fixtures in food service areas shielded.		
	5. Refrigeration		
	a. Frost build-up no more than 1/4 of an inch (NAVMED P-5010, article 1-34).		
	b. Refrigeration spaces clean. (NAVMED P-5010-1, article 4-602.11)		
	c. One portable or built-in air measurement thermometer provided in all refrigerated storage spaces which is accurate to ±3°F. (NAVMED P-5010-1, articles 4-204.112 and 4-203.12)		
	d. Refrigerated spaces maintained at:		
	(1) Freezers 0°F or lower.		
	(2) Chilled Bulk Storage 33-36°F.		
	(3) Thaw Boxes 36-38°F.		
	(4) Dairy Products Box 32-34°F.		
	(5) Milk Dispenser Cabinet 32-40°F.		
	(6) Reach-in Refrigerator 34-40°F.		
	e. Interior safety release latches installed and operable in all bulk refrigeration and freezer units.		
	6. Serving Lines and Salad Bars		
	a. Serving line areas clean. (NAVMED P-5010-1, articles 4-204.112 and 4-203.12)		
	b. Equipment food-contact surfaces and utensils shall be clean to sight and touch. (NAVMED P-5010-1, article 4-601.11)		
	c. Functional sneeze shields installed on serving lines and salad bars. (NAVMED P-5010, Article 1-40)		
	d. Hot TCS foods shall be held at 135 °F (57 °C) or above throughout the meal period. (NAVMED P-5010-1, article 9-502.12)		
	e. Salad bars capable of being maintained at 40°F or below. (NAVMED P-5010-1, article 3-501.16)		
	7. Milk Dispensers and Holding Cabinets		

	a. Bulk milk dispenser is capable of maintain storage compartment at 41°F (5°C) or below during storage, display, and service. (NAVMED P-5010-1, article 9-502.16)		
	b. Dispenser and holding cabinets have accurate temperature gages or thermometers. (NAVMED P-5010-1, article 4-204.112)		
	c. Dairy box capable of being maintained at 33°-34°F. (NAVMED P-5010, article 1-34)		
	8. Ice Machines		
	a. Ice scoop made of smooth, corrosion resistant, non-toxic (FDA Food, Drug and Cosmetic Act guidelines), stable, non-absorbent materials. (NAVMED P-5010-1, article 4-101.11).		
	b. Ice compartment drains are aligned to the deck drains with an air gap. Air gap is at least twice the diameter of the drain served, but not less than 2 inches. (NAVMED P-5010-1, article 5-203.14, NAVMED P-5010-1, article 5-202.13, NAVMED P-5010-1, article 5-203.14 and NAVMED P-5010-1, article 5-202.13)		
	c. Ice scoop, stored handle up, in a covered and freely draining bracket outside ice storage compartment or inside the ice machine on a bracket above the highest level of the ice. (NAVMED P-5010-1, article 3-304.12)		
	9. Manual Dishwashing		
	a. Utensils move from dirty to clean side of wash area without risk of cross contamination by handling or splashing. (NAVMED P-5010-1, article 4-904)		
	b. A three-compartment sink is installed for washing pots, pans and utensils. (NAVMED P-5010-1, article 4-301.12 and T9640-AC-DSP-010/HAB)		
	c. Booster heater capable of supplying final rinse water at least 171°F. (NAVMED P-5010-1, article 4-301.16, NAVMED P-5010-1, article 4-501.111, and T9640-AC-DSP-010/HAB)		
	d. Temperature gage installed or thermometer used to monitor wash and rinse temperatures. (NAVMED P-5010-1, article 4-204.115)		
	e. The temperature of the wash solution in manual ware washing equipment shall be maintained at not less than either 110°F (43°C) or the temperature specified on the cleaning agent manufacturer's label instructions. (NAVMED P-5010-1, article 4-501.19)		

	f. If immersion in hot water is used for SANITIZING in a manual operation, the temperature of the water shall be maintained at 171 °F (77°C) or above. NAVMED P-5010-1, article 4-501.111		
	g. Long-handled dip baskets available. (T9640-AC-DSP-010/HAB)		
	10. Dishwashing Machine		
	a. Center and end curtains installed. (S9AA0-AB-GOS-010/GSO, section 651)		
	b. Temperature gages accurate to ±3°F. (NAVMED P-5010-1, article 4-501.112)		
	c. Multiple tank conveyor dishwashing machine meets the following requirements (NAVMED P-5010, Article 1-9):		
	(1) Wash temperature 150-165°F for 7 seconds. (NAVMED P-5010-1, article 4-501.110)		
	(2) Rinse temperature 165-194°F for 7 seconds. (NAVMED P-5010-1, article 4-501.112)		
	(3) Final rinse temperature 180-194°F with a conveyor speed of 15 feet per minute at 15-25 psi or as specified in the machine technical manual. (NAVMED P-5010-1, article 4-501.112 (temperature) and NAVMED P-5010-1, article 4-501.113 (pressure))		
	d. Operating instructions posted on, or conspicuously near, the machine. (OPNAVINST 5100.19, Section V. 16)		

FOOD SERVICE

Inspector: _____Date: _____

C.	LIVING SPACES	YES	NO
	1. Bunks and lockers neat and in usable condition and bunk curtains installed. (S9AA0-AB-GOS-010/GSO, sections 640, 641, 642, and 643)		
	a. Floor space appropriate to rank of individual(s) occupying room and a minimum of 72 square feet of floor space per person, including a minimum of 3 feet between sleeping arrangements (racks, bunks, beds). (T9640-AC-DSP-010/HAB and NAVMED P-5010-2)		

	b. Each rack has an Emergency Escape Breathing Device installed within 3 feet from the head of the berth. (S9000-AD-SPN-010/NCDS, section 664 and T9640-AC-DSP-010/HAB)		
	c. Head-to-foot sleeping arrangements for occupants of adjacent beds or Privacy curtains installed at each bed. (NAVMED P-5010-2)		
	d. Hot bunking is prohibited. (T9640-AC-DSP-010/HAB, NAVMED P-5010-2)		
	e. Floor space is appropriate to rank of individual(s) occupying room and a minimum of 72 square feet of floor space per person, including a minimum of 3 feet between sleeping arrangements (racks, bunks, beds). (T9640-AC-DSP-010/HAB, NAVMED P-5010-2)		
	2. Sanitary Spaces - Facility		
	a. Plumbing fixtures installed in washrooms, showers and water closets, including showerheads and soap dishes and other necessary items. (S9AA0-AB-GOS-010/GSO, section 644)		
	b. Sinks, urinals, and commodes are clean, odor free, and operable. (NAVMED P-5010-2)		
	c. There are separate sanitary spaces for males and females. (T9640-AC-DSP-010/HAB)		
	d. During sewage backflow and overflowing toilet units, spaces are immediately secured until fixed then cleaned and sanitized. (NAVMED P-5010-2)		
	e. Adequate number of fixtures are provided per accommodation. (NAVMED P-5010-2T9640-AC-DSP-010/HAB)		
	3. Prescribed deck covering installed. (S9AA0-AB-GOS-010/GSO, section 634, NAVSEA Standard Item 009-26)		
	4. Adequate furniture and equipment installed to provide reasonable comfort, relaxation and entertainment in lounge areas.		
	5. Berthing spaces are clean, adequately ventilated and well illuminated. (OPNAVINST 9640.1, NAVMED P-5010, Chapter 2)		
	6. Drinking fountains are of the jet-angle type with clean bowls, orifices and orifice guards. (NAVMED P-5010-6)		
	7. No Category I flammables, combustibles or aerosol containers stored in berthing spaces. (NSTM Chapter 670, S9AA0-AB-GOS-010/GSO, section 671, S9AA0-AB-GOS-010/GSO, section 672)		

	8. Sinks, urinals and commodes are clean, odor free and operable. (NAVMED P-5010, Chapter 2)		
	9. The temperature of the hot water supplied for personal use of the crew does not exceed 130°F. (S9086-SE-STM-010/533)		
	10. Temperatures in berthing and messing spaces do not exceed 78°F. (T9640-AC-DSP-010/HAB)		
	11. Temperatures in living, sanitary, messing, medical, control spaces, and normal working stations are not lower than 65°F. (T9640-AC-DSP-010/HAB)		
	12. There are separate sleeping quarters for males and females. (OPNAVINST 1300.17, T9640-AC-DSP-010/HAB)		

LIVING SPACES

Inspector: _____Date: _____

D.	FRESHWATER	YES	NO
	1. Surveillance		
	a. Halogen residual present. (NAVMED P-5010-6, article 6-8.2.d and article 6-7.5)		
	b. Bacterial analysis obtained from points representative of the entire distribution system. (NAVMED P-5010-6, article 6-7.4)		
	c. Ice machines tested for bacterial contamination. (NAVMED P-5010-6, article 6-45)		
	d. Potable water processed or obtained from an approved source. (S9AA0-AB-GOS-010/GSO, section 532 NAVMED)		
	2. Bromination System and Equipment (when applicable).		
	a. Brominators are properly installed and functional. (NAVMED P-5010, Chapter 6, Article 21)		
	b. Warning plate installed next to unit. (S9AA0-AB-GOS-010/GSO, sections 532 and 507)		
	c. A four-foot hose with quick opening valve and vacuum breaker installed nearby. (S9AA0-AB-GOS-010/GSO, sections 532)		
	d. Bromine cartridges stored in dry, clean, well-ventilated storeroom. (S9AA0-AB-GOS-010/GSO, sections 532)		

	e. Locker or bin has label plate inscribed “Bromine Cartridges”. (S9AA0-AB-GOS-010/GSO, sections 532)		
	f. Storage locker has warning plate. (S9AA0-AB-GOS-010/GSO, sections 532)		
	3. Chlorination System and Equipment.		
	a. HTH stored in a metal box with three 1/4” holes, painted gray and labeled with red letters on white or black background “HAZARDOUS MATERIAL, CALCIUM HYPOCHLORITE”. (OPNAVINST 5100.19, Chapter 23)		
	b. HTH lockers not installed in machinery space, flammable liquids storeroom, berthing space or oil and water test lab area). (OPNAVINST 5100.19, Chapter 23)		
	4. Sounding Tubes		
	a. Equipped with screw caps. (NAVMED P-5010-6, Article 6-18.3)		
	b. Screw caps have keeper chains attaching them to sounding tubes. (NAVMED P-5010-6, Article 6-18.3)		
	c. Padlocks secure caps. (NSTM, Chapter 533, Section 2.3.6)		
	d. Label plates present. (NAVMED P-5010-6, Article 6-17)		
	e. Caps are color-coded dark blue. (NAVMED P-5010-6, Article 6-17)		
	5. Potable Water Hoses		
	a. New hoses are disinfected with a solution not less than 100 ppm FAC for at least 2 minutes. (NSTM, Chapter 533, Section 3.3.3)		
	b. Labeled “Potable Water Only” at 10-foot intervals. (NAVMED P-5010-6 article 6-30 and S9086-SE-STM-010/533, section 533-2.1.3)		
	c. End couplings color coded dark blue. (NAVMED P-5010, Article 6-19)		
	d. Stored with ends capped or coupled together. (NSTM, Chapter 533, Section 2.1.3)		
	e. Hoses not used for any other purpose. (NAVMED P-5010, article 6-8 and NSTM Chapter 533, Section 2.1.3).		
	6. Potable Water Hose Lockers		

	a. Located at least 18 inches off deck and hose disinfecting instructions posted in a conspicuous location in the hose storage areas. (NAVMED P-5010-6, article 6-19 and S9086-SE-STM-010/533, section 533-2.1.3)		
	b. Padlocked, vermin proof and labeled “Potable Water Hose”. (NAVMED P-5010-6, article 6-19 and S9086-SE-STM-010/533, section 533-2.1.3)		
	7. Potable Water Receiving Connections		
	a. Located at least 18 inches off deck, are not cross connected with any non-potable waterline or system and are turned down to protect against contamination. (NAVMED P-5010, article 6-8 and NSTM 533, Section 2.1.2)		
	b. Conspicuously designated by warning plate “POTABLE WATER ONLY”, closed with screw cap when not in use, and cap has keeper chain attached to riser. (NAVMED P-5010, Article 6-8 and NSTM 533, Section 2.1.2)		
	c. Valve handwheel color-coded dark blue. (NSTM 505)		
	8. Cross Connections		
	a. Potable water connections to the following equipment provided with either an air gap of at least two supply pipe diameters, or a vacuum breaker backflow preventer installed at least six inches above the maximum potable fill level: (NSTM, Chapter 533, Sections 2.3.3.1 and 2.3.5.2)		
	(1) X-ray and photo developing equipment and associated chemical mixing tanks.		
	(2) Laundry washing machines.		
	(3) Diesel engine cooling jackets.		
	(4) Garbage disposals.		
	(5) Gaylord hood automatic wash down system (vacuum breaker installed upstream from detergent injector) (GEN SPECS, Section 532b3), if applicable.		
	(6) Steam tables, steam kettles, potato peelers, sinks and other food service equipment.		
	(7) Bridge or helicopter control tower window washer tanks.		
	(8) Other equipment containing non-potable liquids.		

	b. Continuous pressure backflow preventer with intermediate vent provided wherever a permanent or hose connection is made below the overflow level of equipment containing non-potable liquids and a manual or automatic cutout valve is installed downstream of the vacuum breaker (GEN SPECS, Section 532bl), if applicable.		
	c. Reduced pressure backflow preventer provided wherever a permanent or hose connection is made to equipment or a system that could subject the potable water system to a positive pressure such as the chill water expansion tank (GEN SPECS, Section 532bl), if applicable.		
	d. Sink and space faucets with standard 3/4-inch hose threads equipped with a hose connection vacuum breaker. (NSTM 533, Section 2.3.5.1)		
	e. Laboratory and shop (photo and battery shop) sinks with non-standard hose connections equipped with either an integral vacuum breaker or hose vacuum breaker. (NSTM 533, Section 2.3.5.2)		
	f. Hose connections to the potable water system disconnected when not in use. (NSTM 533, Section 2.3.4)		
	g. Label plate having the following wording in one-inch-high red letters installed in a conspicuous location near each hose connection to the potable water system: "CAUTION DISCONNECT HOSE WHEN NOT IN USE". (NSTM 533, Section 2.3.4)		
	h. Two check valves installed in the potable water supply to carbonated beverage dispensers with no copper, brass or bronze pipe, valves or fittings downstream of check valves, if applicable. (GEN SPECS 532, Section 532bl)		

FRESHWATER

Inspector: _____Date: _____

E.	**CHT SYSTEM**	**YES**	**NO**
	1. Personal Hygiene		
	a. Handwashing facilities located in or near pump rooms or comminutor spaces. (S9086-T8-STM-010/593, section 593-8.3.7.4.2.g)		

	b. Signs posted in CHT spaces near each sewage pump controller requiring hand washing with soap and water prior to leaving area, and prohibiting eating, drinking and smoking while work is in progress. (NAVMED P-5010, Chapter 7, Article 19(6) and NSTM 593)		
	2. Pump Room Safety		
	a. Slightly negative pressure exhaust ventilation with duct installed 9 inches from the deck in CHT pump rooms. (NAVMED P-5010, Chapter 7, Article 22 and NSTM 512)		
	b. Is there a locker stocked with personal protective equipment located at the entrance to the sewage pump room or comminutor space? (S9086-T8-STM-010/593, section 593-8.3.7.4.2)		
	c. Are there leaks present in sanitary fixtures or sanitary fixture piping in use? (S9086-T8-STM-010/593, section 593-8.3.7.4.3.f)		
	d. Are the intended sanitary spaces to support crew, readily accessible and clear of equipment and debris?		
	e. Indicator light installed outside compartment indicating ventilation system is operating. (NAVMED P-5010, Chapter 7, Article 22)		
	f. Two emergency escape breathing devices (EEBD) placed in each CHT pump room. (S9086-T8-STM-010/593, section 593-8.3.7.1.1.d)		
	g. Placard installed at the access of each CHT pump room outlining safety precautions to be followed if a sewage spill occurs. (NAVMED P-5010, Chapter 7, Article 22d)		
	h. Warning sign posted near each sewage pump controller: "CAUTION, WHEN HIGH LEVEL ALARM SOUNDS DIVERT UPPER DECK DRAINS OVERBOARD AND CLOSE ISOLATION VALVES ON DRAINS BELOW OVERBOARD DSCHARGE" , if applicable. (GEN SPECS 593a)		
	i. Audible and visual alarms for high and low sewage tank levels wired to signal in a continuously manned station and in the CHT pump room. (NSTM 593, Section 4.2.5 and GEN SPECS 593a)		
	3. Ship-Shore Transfer		
	a. Sewage fuser properly labeled. (GEN SPECS 593a)		

	b. Label plates at each deck discharge connection with warning against disconnecting sewage hose while it is pressurized, hose hook-up and disconnect procedures and sanitary and health precautions, if applicable. (GEN SPECS 593a)		
	4. Surveillance		
	a. Removable drip pans installed beneath comminutors mounted off deck, or a two-to-four-inch coaming around deck-mounted comminutors to aid in detection of possible leakage. (NSTM 593, Section 4.2.14)		
	b. Removable drip pans provided in health sensitive areas under valves and takedown joints to detect possible leakage. (NSTM 593, Section 4.2.14)		
	5. General Requirements		
	a. CHT space capable of containing sewage spills. (NSTM 593, Section 4.2.14 and GEN SPECS 593a)		
	b. Proper color-coding of handwheels, valves, fusers and caps. (NSTM 505, Table 505-16)		
	c. Functional eductor or sump pump installed in CHT spaces. (NSTM 593, Section 4.2.14)

APPENDIX J

MINIMUM DOCK TRIALS REQUIREMENTS

1. Check all Telephone, Announcing and Interior Communications circuits between all stations.
2. Test all alarms, i.e., General Quarters, Collision, etc.
3. Check all operational status readout interior communications circuits.
4. Test whistle.
5. Check adequacy of interior lighting and emergency lighting.
6. Operate all hydraulic systems using each installed pump.
7. Test operation of all radio transmitters and receivers using all antennas.
8. Operate all radar equipment.
9. Take and plot fixes using all navigation equipment and each antenna.
10. Test operation of trim, ballast control and list control system and pump (from all operating locations) per local instructions.
11. Test operation of portable submersible pump from each installed outlet.
12. Test engine order telegraphs.
13. Test magazine and pyro flooding systems.
14. Operate each lube oil system, including pumps, controllers, purifiers and indicators.
15. Energize the Navigation System and gyrocompass; determine that they settle out; take azimuth; check all repeaters.
16. Check potable water system, have water samples analyzed.
17. Test capstans and winches.
18. Operate steering system in all modes. Test normal and emergency rudder angle indicators.
19. Test Automatic Bus Transfer devices.
20. Operate each watertight door and hatch.
21. Check operation of escape hatches and scuttle fittings.
22. Check navigation and running lights for brightness and proper lenses (to be done at night). Includes Flight Deck lighting. (if applicable)
23. Check air conditioning, chill water, ventilation, and heating systems.

24. Test underwater log and dummy log if water depth permits.
25. Check operation of all 400-cycle generating equipment.
26. Check all galley, messing, and ship's service equipment.
27. Check fathometer.
28. Check that mooring lines are doubled and taut and that camels are secured to the pier not the ship.
29. Check bilge flooding alarm.
30. Check all High Pressure and Low Pressure air systems and components.
31. Operate distilling units.
32. Check anchor windlass and brake operation.
33. Check atmosphere monitoring equipment, both installed and portable.
34. Operate the emergency diesel generator(s).
35. Test Main Engines; Nuclear Powered ships jack main engines.
36. Check all TV monitoring systems.
37. Check small arms lockers and security devices.
38. Operate all Identification Friend or Foe (IFF) Equipment.
39. Check degaussing equipment.
40. Check hangar bay doors.
41. Inventory and check all damage control equipment.
42. Inspect and operate oxygen and nitrogen systems.
43. Check out all Tank Level Indicating systems.
44. Check out Flight Deck communications (if applicable).
45. Check meteorological equipment.
46. Check graphics preparation and display equipment.
47. Check weapon systems. Check to include loading of dummy missile at each launch station, transmission of fire control signals and operation of launchers in all modes.
48. Operate all electrical and mechanical medical equipment.
49. Inspect all compartments for proper stowage and cleanliness and operability of equipment.

50. Test operation of all data processing equipment.
51. Test and inspect jet blast deflectors.
52. Test and inspect JP-5 fuel systems.
53. Test and inspect all aircraft starting, handling and launching equipment including catapults.
54. Test and inspect aircraft landing equipment including land signal officer equipment, arresting gear, barricades, as applicable.
55. Operate all Refueling at Sea equipment.
56. Check bridge window wiper system.
57. Operate all accommodation ladders.
58. Operate all conveyors.
59. Operate all Boats.
60. Test and inspect Lifeboat and Life Raft stowage and launch equipment.
61. Test and inspect all elevators in all modes of operation.
62. Test and inspect all firefighting systems.
63. Test and inspect refrigeration system.
64. Test and inspect all sea water cooling systems.
65. Operate all ship’s service generators.
66. Check all photographic processing and recording equipment.

NOTE: ENSURE MESSAGES ARE PER CURRENT MESSAGE FORMAT AND CURRENT PLAD IS U

APPENDIX L

MINIMUM FAST CRUISE REQUIREMENTS

1. Make all preparations for getting underway.
2. Station the maneuvering watch and sea and anchor detail.
3. Station the normal underway watch (section watches).
4. Simulate getting underway and return to port. (Day and Night)
5. Walk through all major Sea Trial evolutions.
6. Exercise the reduced visibility detail.
7. Spot check storage and availability of spare parts and tools. Verify adequacy of stores and provisions.
8. Conduct the following emergency drills:
a. Fire.
b. Flooding.
c. Abandon Ship.
d. Man Overboard.
e. Loss of AC Power.
f. Loss of Air Conditioning and ACW.
g. Loss of Lighting.
h. Loss of Interior Communications.
i. Steering Casualty.
j. Engine Casualty Control.
9. Set General Quarters. Exercise the crew at battle stations.
10. Conduct communication and Electronic Counter Measures (ECM) drills.
11. Anchor (walk-through).
12. Exercise damage control party with emergency and damage control equipment during conduct of item 12.
13. Perform the minimum Fast Cruise requirements for nuclear propulsion plants contained in reference (c).
14. Operate air conditioning plants to demonstrate the ability to carry the maximum existing ships air conditioning load or 100% capacity.

15. Operate fresh water and seawater heat exchangers at sufficient load to demonstrate proper operation.
16. Simulate underway conditions, performing all evolutions and operating equipment normally.
17. Simulate boat transfer at sea.
18. Conduct competitive and non-competitive drills and exercises such as aircraft tracking, and aircraft control.
19. Man Towing, Salvage and Fueling Stations.
20. Set Flight Quarters as applicable.
21. Check all interior communications circuits.

APPENDIX N

MINIMUM TESTS TO BE PERFORMED DURING SEA TRIALS

I. RESPONSIBILITIES (reference (u), Chapter 094).

The Ship's Force or Ship Trial Coordinator is responsible for:

1. The scheduling of the various trials and for conducting tests during trials while underway. A schedule of equipment tests should be available so all personnel are prepared for the evolutions.
2. Equipment operation during testing and for conducting the trials per reference (v) and TYCOM directives.
3. Verifying necessary trial documentation and technical data is on board.
4. Review of Personnel Qualification Standard (PQS) programs to identify new equipment and systems requiring PQS coverage, to implement PQS standards for new personnel, and to determine required watch station qualification in preparation for propulsion plant light-off and Sea Trials.
5. Providing a Sea Trial watch organization to accomplish the trial agenda.
6. Preparing and providing fire and abandon ship bills and holding emergency underway drills (can be completed and certified as part of Dock Trials or Fast Cruise).

II. PREPARATION FOR SEA TRIALS (reference (u), Chapter 094c).

Prior to Sea Trials, every reasonable effort must be made to complete all prerequisites:

1. Dockside tests must be satisfactorily completed and all safety requirements met. Incomplete non-safety items must be documented, including plans for timely resolution and completion. Should it be impractical to conduct any of these prerequisite tests dockside, the Naval Supervisory Authority (NSA) may permit the test to be conducted while underway.
2. All equipment, furniture and systems necessary to the conduct of the trials must be installed and in operating condition. All labeling, painting, sheathing, insulation and deck covering must be completed.
3. An inclining experiment, if required, must be performed and the results certified in writing to the NSA that the ship meets stability requirements and is safe for sea.
4. All temporary rigging and equipment, except that necessary for collection of Sea Trial test data, and all debris must be removed from the ship.
5. Painting that will not be dry at time of trials must be avoided.
6. Messing, sanitary and berthing facilities must be operational and available for use during Sea Trials.
7. The ship must be prepared for possible emergencies at sea. The NSA must certify in writing that equipment or systems listed that have been installed, overhauled or

disturbed during the overhaul have been restored to their normal operating status. The minimum readiness includes:

a. Power boats to be utilized in an emergency must be fully operational, fitted-out and provisioned as prescribed by reference (w).

b. All davits must be operational.

c. Air inflatable lifeboats must be onboard and properly installed and within PMS certification requirements.

d. Emergency radios must be onboard and operable.

e. Life rings and float lights must be rigged in stowage brackets.

f. Life jackets for all personnel embarked plus 5 percent spares must be onboard and distributed in readily accessible areas.

g. Adequate first aid kits and emergency medical equipment must be onboard.

h. Firefighting and damage control equipment must be returned to the ship (if removed), verified to be fully operational and ready for use and properly stowed.

i. All navigation devices and equipment must be tested to ensure proper operation.

j. Work on all compartments whose watertight integrity is essential to the safety of the ship must be completed and, where authorized, satisfactorily tested.

III. PRIOR TO GETTING UNDERWAY.

1. Prior to Sea Trials following extended in-port or lay-up time, the following preliminary inspections should be conducted (reference (v), section 1.3.2):

a. Inspect the underwater sea chests.

b. Clean the sea chests of marine growth and debris if required.

c. Inspect underwater hull for foreign material or objects.

d. Inspect and clean as necessary condenser sea water sides.

NOTE: CVNS IN JAPAN HAVE THEIR HULLS INSPECTED PER QUARTERLY REQUIREMENTS SET BY NAVSEA.

e. Ensure correct hoses for blowing sea chests are available on board and can be made up to hose connections provided for this purpose.

f. Establish operability of each item of machinery to be used during the trial.

(1) Test equipment to validate minimal equipment available to conduct operations per technical specifications.

(2) Specific emphasis should be placed on fire pumps, anchor equipment and steering systems.

2. Ensure instrumentation to be used for obtaining trial data is properly installed, calibrated and certified.

   a. The NSA must determine, in conjunction with the Commanding Officer, any special instrumentation required such as flow meters, torsion meters and calorimeters. Government Loaned Equipment may be made available with NAVSEA approval. The NSA will ensure the installation of any other temporary test instrumentation and equipment necessary for the trials except as otherwise stated herein or as indicated on the list of Government Furnished Equipment.

   b. Unless otherwise specified, the NSA must ensure the installation of all temporary instrumentation and equipment regardless of who furnished it. All temporary instrumentation and equipment must be removed from the ship by the NSA upon conclusion of the trial. It must be the NSA's responsibility to maintain Government Loaned Equipment in proper working order. The NSA must calibrate, test and otherwise ensure both temporary and permanent instrumentation utilized to collect data for trials is reliable. Government furnished flow meters on loan from NSWCPD will be calibrated by NSWCPD.

   c. Verify proper installation, adjustment and operability of torsion meter, if installed (reference (v), section 1.4.1.f).

   d. Care must be taken that proper draft and trim of the ship are maintained throughout the duration of the trial (reference (v), section 1.4.1.g).

      (1) Firefighting systems must be completely installed, tested and placed in operating condition before the ship is fueled.

      (2) Fuel ship and adjust draft and trim to attain trial requirements.

   e. Prior to departure, check all communications equipment, including radio, interior communications circuits, telephones and special signal circuits that may be used during the trial.

   f. Zero set EM log.

   g. Settle Navigation System and gyrocompass.

   h. Test arresting gear systems, including barricade (as applicable).

   i. Test Visual Landing Aid systems (as applicable).

   j. Conduct static JP-5 System Certification. Test Control Console functions and conduct system stripping, transferring and purifying operations, as necessary, in preparation for underway systems dynamic operations.

IV. UNDERWAY ENGINEERING AND OTHER MAJOR TESTS.

1. The following systems must be tested to the extent authorized in the NSA's Work Package and test procedures identified in the trial agenda and be in an operating condition at the time of Sea Trial (reference (g), Chapter 094c). Table 1 of this

appendix summarizes general items. Procedural precedence is current PMS, equipment technical manuals and NAVSEA technical manuals procedures:

a. Newly installed, modified or overhauled ventilating, heating and air conditioning systems.

b. Newly installed, modified or overhauled firefighting systems and damage control equipment.

c. Newly installed, modified or overhauled alarms and safety devices.

(1) All alarm systems must be operative.

(2) Gages and safety devices must be checked and all final adjustments completed per technical specifications.

(3) SSTG Resistance Temperature Element settings may be made according to reference (x), Table 231-3-2 during dockside testing at 0 to 100 percent load or during Sea Trials, whichever gives the highest temperature reading (reference (y), section 3.10.3.4.1-.3).

d. Newly installed, modified or overhauled interior communication systems.

e. Newly installed, modified or overhauled radio and navigation systems.

2. Propulsion systems.

a. Particular attention must be paid to boiler water treatment levels during Dock and Sea Trials. Additional tests of water chemistry and increased bottom blowdown frequency must be planned (reference (z), section 2.4.12).

b. A full power run must be scheduled following each regular maintenance availability to ascertain the propulsion plant is capable of full power operation. The following general rules must be observed during all full power trials and during other machinery trials to which they may be applicable, consistent with conditions imposed (reference (v), section 1.4.1.e):

(1) Fuel used for the trials should be comparable to that used during shop tests.

(2) Average power developed by diesel-electric plants may be computed from kilowatt output from each propulsion generator set. Such observations must be taken at intervals of not greater than 15 minutes for the duration of the run.

(3) In ships required to be fitted with torsion meters, readings of torque and rpm should be taken at sufficiently frequent intervals to produce an essentially continuous record. The record should be averaged at 15-minute intervals, for the duration of the run.

3. Main lube oil systems: Post-availability Sea Trial operations will normally jar and vibrate the lube oil system enough to break loose foreign material hidden in

the system, even after flushing. To contain this foreign material, muslin or nylon bags must be kept in the lube oil strainers from initial operation through final Sea Trials (reference (x), section 3.10.3.4.3). Filter bags and disposable filters must remain in propulsion machinery lubricating oil systems until Sea Trials are completed, except where 25 or 40-micron filter elements are required for the propulsion lubricating oil system, remove the disposable filter elements and install the applicable cleanable filter elements upon completion of Sea Trials (reference (aa), section 3.7.3.5.2).

4. Reduction gear systems for new and overhauled gears: At the first Sea Trial, determine proper tooth contact of main pinions and gears and conduct operational tests. After trials, in addition to inspections that may be directed by the proper authority, remove the inspection plates and examine the tooth contact and the condition of the teeth to note changes that occurred during the trial (reference (ab), section 5.3.9).

5. Turbine casing joints: Experience has shown when new bolting is installed, particularly steam chest bolting exposed to temperatures above 900°F, the bolting must be rechecked and retightened after initial dockside steaming and again after Sea Trials following the overhaul (reference (x), section 8.7.6).

6. Turbine bearing Resistance Temperature Element Settings: Make the initial settings before initially operating the bearing. Make the final settings before the Inspection Survey (INSURV) Trial or final Post Overhaul Trial if an INSURV Trial is not run. Base these settings on the highest values observed from the ship Sea Trials or shipbuilder test form data taken during all previous trials (reference (x), section 3.10.3.4.2).

7. Propulsion demonstrations (reference (u), Chapter 200f).

   a. Runs ahead at various power levels, using all main propulsion unit combinations, including cruising speed and maximum full-power ahead.

   b. Runs astern, using all main propulsion unit combinations, including maximum full-power astern.

   c. For Builder's Sea Trials only: Emergency reversals and crash stops, including maximum design full-power ahead to maximum design full power astern and vice versa.

   d. Maximum speed steering gear tests ahead, limited speed steering tests astern and such other ship maneuvering tests as the specifications may require.

   e. Twenty percent boiler overload test on one boiler (as applicable).

   f. Boiler flexibility tests (as applicable).

   g. Locked-shaft tests (as applicable).

8. Anchor gear demonstration (including towing winch demonstration, if installed) (reference (ac), section 3.8.1).

a. Complete all inspections, repairs and adjustments prior to conducting drop tests.

b. Conduct drop tests by or under the direction of experienced personnel from the repair activity.

c. Conduct drop test following the test agenda based on type of repairs conducted. Do not allow more than 15 fathoms (90 ft) of chain to run free without stopping. Observe the 65 fathom (390 ft) maximum depth for the drop test.

NOTE: 65 FATHOM DROP TEST IS ONLY REQUIRED FOR NEW INSTALLATIONS AND TYPICALLY CONDUCTED AT ORIGINAL SHIP DELIVERY BUILDERS'S SEA TRIALS.

d. Conduct anchor retrieval rate test to determine adequacy of power units.

9. Distilling plant test: Conduct twenty-four-hour production capacity check. A shorter test period is permissible with concurrence of the NSA and so indicated in the trials agenda (reference (ad), section 7.7.6.3.5).

10. Steering gears: Ensure limits are determined (or have been determined) during current or previous Sea Trials and are posted on the ship control console and in the steering gear room (reference (ad), section 2.2.3).

a. Reference (x), Table 562-2-1 lists the astern limits for several (but not all) ship classes and may be used as a reference. Any limits posted on the ship control console or in the steering gear room must be strictly followed.

b. Conduct an analysis of the hydraulic fluid contamination by a naval test facility as required per PMS or whenever one of the following conditions exists:

(1) Immediately before the first Sea Trials following a maintenance availability.

(2) Immediately after Sea Trials following a maintenance availability.

11. Electrical ship service generating and distribution system: Conduct testing following the trial agenda based on scope of repairs conducted per the NSA's contract specifications (reference (ae), section 1.4).

12. Conduct an analysis of the hydraulic fluid contamination by a naval test facility as required per PMS or whenever one of the following conditions exists:

(a) Immediately before the first Sea Trials following a maintenance availability.

(b) Immediately after Sea Trials following a maintenance availability.

13. Washdown countermeasures and miscellaneous topside demonstrations. Conduct testing following the trial agenda based on scope of repairs conducted per the NSA's contract specifications (reference (v), section 1.4).

14. Ballast or deballast ship (when applicable): Conduct testing following the trial agenda based on scope of repairs conducted per the NSA's contract specifications (reference (v), section 1.4).

15. Radar and navigation system demonstrations. Conduct testing following the trial agenda based on scope of repairs conducted per the NSA's contract specifications.

16. Underway replenishment demonstrations: Conduct testing (including special winch tests, as applicable) following the trial agenda based on scope of repairs conducted per the NSA's contract specifications.

17. Other demonstrations and tests: Conduct testing following the trial agenda based on scope of repairs conducted per the NSA's contract specifications. Consideration should also be given to the equipment repaired or overhauled by Ship's Force and subsequent testing is required to validate operability. These items may be tested or demonstrated during Sea Trials providing:

    a. Such tests do not significantly extend the duration of Sea Trials.

    b. Such tests are within the capability of Ship's Force.

    c. Such tests have a prescribed PMS MRC procedure or an equivalent procedure provided by Ship's Force or in service engineering agent which has technical authority concurrence.

V. AIRCRAFT OPERATIONS.

1. Certify Aircraft Launch and Recovery Equipment (as required).

2. Conduct flight deck certification (as applicable) per applicable TYCOM instructions (reference (af).

TABLE 1 - MINIMUM UNDERWAY TESTS TO BE PERFORMED DURING SEA TRIALS (Cont'd)	
	Light off distilling plants and conduct 24-hour capacity test
	Test fathometer
	Test Countermeasure Washdown system
	Test navigation radar comparing fixes with visual fixes
	Test Electronic Warfare Support Measures and Identification Friend or Foe
	Conduct infrared communications device checks (Nancy lights)
	Test firefighting systems, to include Flight Deck and Hangar Bay for aviation capable units
	Test aircraft support systems
	Test steering systems in all modes ahead and astern at optimum design speed for the steering systems per ship steering technical manuals or ship information book
	Operationally test JP-5 system and components as required for JP-5 System Certification
	Warm up catapults and shoot no loads
	Operate emergency diesel generators carrying ship's load
	Run in shaft seals shifting to forward and after seals
	Test all Aircraft Control and Tracking functions
	Test air conditioning, ventilation and refrigeration systems
	Demonstrate Darken Ship
	Operate both forward and after Oxygen-Nitrogen plants
	Test Jet Blast Deflector cooling water systems

NOTE: IF THESE TESTS WERE PERFORMED AND CERTIFIED BY THE INDUSTRIAL ACTIVITY WITHIN TWO MONTHS OF SEA TRIALS AND THE TEST RESULTS WERE SATISFACTORY, THE ITEM MAY BE REDUCED IN SCOPE OR OMITTED.

LISTING OF APPENDICES.

A Business Case Analysis Tool
B Suggested Format for a Message Work Candidate
C Availability Key Event List
D Ammunition Requirement Message

3.1 PURPOSE. Provide guidance for the implementation of policies set forth in references (a) through (n) for Fleet Maintenance Availability planning, scheduling, and execution. Policy, procedures and guidance regarding utilization of Fleet Technical Assistance program resources are contained in volume VI, chapter 2 of this manual.

3.2 DEFINITIONS.

3.2.1 Fleet Maintenance Activity. All government waterfront ship maintenance and modernization, activities, e.g., Regional Maintenance Centers (RMC), Naval Ship Repair Facilities, Naval Intermediate Maintenance Facilities, Weapons Repair Facilities, Naval

Shipyards, tenders and other activities of that type responsible for the processing, screening and brokering, and execution of work candidates.

3.2.2 Lead Maintenance Activity. The single activity responsible for integrating all maintenance and modernization on US Naval ships during any type availability. The Lead Maintenance Activity (LMA) is the activity responsible for planning and coordinating the work of the Executing Activities in Continuous Maintenance (CM). The LMA may also be an Executing Activity.

3.2.3 Executing Activity. The public or private enterprise that is assigned or awarded the responsibility for accomplishing the actual production work to effect repairs or modernization to ships.

3.2.4 Business Case Analysis. A critical evaluation of late identified work, new work or growth work, based on the benefit of completing the work, the cost of the work to be performed including premiums, available work capacity and material resources, the risk to other work and schedule impact. The Business Case Analysis Tool is located in Appendix A.

3.2.5 Planning Board for Maintenance. The Planning Board for Maintenance (PB4M) regularly scheduled meeting of the ship's Maintenance Team, as required by chapter 4, of this part and volume and defined in volume VI, chapter 41 of this manual, to discuss ship wide maintenance issues. Chaired by the ship's Commanding Officer using an agenda prepared by the Type Commander (TYCOM) Maintenance Program Manager, this forum provides a review of current planned off-ship and organizational maintenance, Current Ship's Maintenance Project (CSMP) quality and accuracy, future maintenance and modernization planning, and fiscal concerns. The objective is to ensure clarity of intent for both the ship's efforts and the shore infrastructure with respect to total ship maintenance, operational schedules, and other concerns affecting ship material readiness.

3.2.6 Maintenance and Modernization Business Plan. The Maintenance and Modernization Business Plan (MMBP), located in volume VI, chapter 33 of this manual, prepared six to eight months in advance of the fiscal year, is the ship's plan for maintenance and modernization effort for a fiscal year. The ship's maintenance team prepares the plan. The Maintenance Team applies its knowledge of the ship's material condition and TYCOM scheduled modernization and Chief of Naval Operations (CNO) availabilities in the prospective operating cycle to develop the budget recommendation for funding maintenance requirements. The plan is based on an assessment of the ship's anticipated material condition, the validated CSMP including Class Maintenance Plan applicable tasks, planned fleet alterations, outstanding Departures from Specifications (DFS), Casualty Reports (CASREP) and Board of Inspection and Survey material discrepancies. The MMBP must address funding required for CNO availabilities advanced planning and CM opportunities.

3.2.7 Immediate Superior In Command. In the context of this chapter the TYCOM may act in support of or in the place of the Immediate Superior In Command (ISIC) for maintenance.

3.3 FLEET MAINTENANCE AVAILABILITIES. Fleet maintenance availabilities consist of the following:

3.3.1 Ship's Force Upkeep. A Ship's Force Upkeep is a scheduled period in which the ship is principally engaged in self-maintenance.

3.3.2 Scheduled Continuous Maintenance Availability. A Continuous Maintenance Availability (CMAV) is a scheduled availability, as needed, normally two to six weeks in duration and normally scheduled once per non-deployed quarter during a period when the ship will be in port.

3.3.3 Unscheduled Continuous Maintenance Availability. The Unscheduled CM Availability is a single yearlong availability, for the period 01 October through 30 September, scheduled for each ship every fiscal year. The Year Long Unscheduled CM Availability is for the scheduling and completion of non-emergent work items that are not accomplished during any other schedule availability.

3.3.4 Emergent Availability. Emergent Availability (EM) is designed for work of such an urgent nature that the heightened risk of disruption and paying of premiums is accepted and planning horizons are shortened.

3.4 COMMON ELEMENTS.

3.4.1 Responsibilities. Responsibilities regarding maintenance policies and procedures for Fleet maintenance availabilities are:

3.4.1.1 Immediate Superior In Command.

a. Coordinate scheduling of availabilities at LMAs with TYCOMs.

(1) Monitor corrective maintenance action taken by LMA and Executing Activities.

(2) Schedule and conduct inspections of Forces Afloat.

(3) Monitor progress of availabilities.

b. Initiate the required budgetary actions for funding availabilities.

c. Ensure all authorized alterations are identified by priority based on material availability.

d. Identify the routine package to be accomplished based on Master Specification Catalog or Master Job Catalog (MJC) review as appropriate.

e. Review results of scheduled monitoring inspections and testing that could result in significant new work or could impact scheduled work.

f. Identify required special evolutions associated with availabilities in support of Pre-Overseas Movement preparations and pre-availability test and inspection requirements.

g. Issue availability planning message.

h. Ensure reference (a) requirements are implemented in all CMAVs based on complexity, scope of work and duration of the CMAV. The ISIC will ensure all requirements of reference (a) are implemented to the maximum extent practical based these considerations. If portions are not implemented in a CMAV due to scope of work, complexity, or time restrictions the ISIC will inform TYCOM after the Work Package Execution Review (WPER).

3.4.1.2 Regional Maintenance Center or Lead Maintenance Activity. (As appropriate)

a. Develop recommended Key Event schedule and present to the ISIC and Ship's Force.

b. Conduct ship checks, plan work candidates and order required material.

c. Recommend returned work candidates to the RMC ISIC, as applicable.

d. Develop strategy using the guidance found in volume VI, chapter 9 of this manual to accomplish calibration of systems, gages, instruments and tools in support of Ship's Force requested work and the availability milestones.

e. Identify and order Long Lead Time Material.

f. Review the Availability Work Package, write Formal Work Package or Technical Work Documents , identify critical jobs and develop an Integrated Work Schedule (IWS) to aid in tracking and coordination of all work.

g. Conduct the WPER.

h. Conduct arrival conference.

i. Conduct daily and weekly meetings.

j. Issue Departure and Assessment report per paragraph 3.6.3 of this chapter.

h. Review the requirements of reference (a) and make recommendations for implementation and exceptions to ISIC during the WPER. The LMA will ensure all requirements of reference (a) are implemented to the maximum extent practical based on scope of work, complexity and duration of the CMAV.

3.4.1.3 Ship's Maintenance Team. Commanding Officer (CO).

a. Validate, broker, schedule, and track through execution all maintenance candidates.

b. Manage Ship's MMBP.

c. Maintain a current and valid CSMP that serves as the single authoritative source for all maintenance requirements.

d. Develop, plan and coordinate Ship's Force Upkeeps, CMAVs, CMs, and EMs and repairs within the resources provided.

e. Prioritize all deferred maintenance actions intended for accomplishment during an availability.

f. Develop a strategy for calibration of gages, instruments and tools.

g. Publish a policy concerning number of duty sections, liberty, ship cleanliness, tagout procedures, tank closeout and installation of blank flanges of otherwise exposed fluid systems, waveguide and air systems before the availability starts.

h. Assign an Officer or Chief Petty Officer to serve as the Availability Coordinator, responsible for coordinating the completion of all pre-availability and availability milestones.

i. Make reference (a) implementation recommendations to ISIC.

j. Implement and execute requirements of reference (a) as directed by ISIC.

3.4.1.4 Assigning Lead Maintenance Activity and Ship's Force Maintenance Responsibility. The RMC or ISIC assigns work responsibility for each maintenance item in an availability work package. The assignment of work responsibility will be such that split responsibility between two organizations does not occur for the same unit task on a maintenance action. The following guidelines apply:

a. The Fleet Maintenance Activity (FMA) will remove all controlled system interference as defined in volume V, part I, chapter 2 of this manual and Ship's Force will remove all other interference.

b. The following are examples of maintenance actions requiring Intermediate Level shop work that will be assigned as "ship-to-shop":

(1) Calibration and repair of portable equipment, removable gages, and rack-out electronic equipment and meters.

(2) Manufacture of components which do not require fit-up in a larger assembly, or that are fabricated with a sample provided by Ship's Force.

(3) Small flanged or bolted valves and operators sized 2.5 Iron Pipe Size and below.

(4) Small components such as pumps, motors, controllers, deck plates, access covers and lockers.

3.4.1.5 Fleet Maintenance Activity and Nuclear Regional Maintenance Department Radiological Controls Support. In order to fully use the FMA radiological controls resources, Ship's Force must request FMA or Nuclear Regional Maintenance Department (NRMD) radiological support for their jobs that involve significant radiological controls. The following guidelines apply:

a. FMA or NRMD will provide full radiological control support including material, surveys, supervision and instructions for radiological aspects of the job.

b. FMA or NRMD will provide mock-up training, when necessary, for Ship's Force personnel performing the actual work.

c. Ship's Force jobs which fall into this category include, but are not limited to, retention tank (or equivalent) inspection, nuclear instrument detector replacement, and primary plant venting or draining evolutions.

d. As an example, during a retention tank inspection, an FMA or NRMD would:

(1) Construct and certify the containment tent.

(2) Conduct the necessary pre-job, in process and post-job surveys.

(3) Train Ship's Force personnel in the use of air fed hoods.

(4) Provide radiological monitoring.

(5) Review and comment on the Ship's Force work procedure.

e. The FMA or NRMD should develop standard radiological work procedures to be used in developing FWPs and TWDs in support of Ship's Force jobs. The service of the Fleet Maintenance Support Branch should be used by FMAs, when necessary, to formulate these work procedures.

3.4.2 Submission of Work Candidates.

a. Documenting Requests. Requests by Ship's Force for corrective maintenance assistance or support equipment from outside activities will be appropriately documented on a Ship's Maintenance Action Forms, OPNAV 4790/2K or Supplemental Form , OPNAV 4790/2L of reference (b) or message work candidate per Appendix B of this chapter, and prioritized per reference (b). The work candidate will be promptly forwarded for processing. The description of the deficiency or support requested and the action desired must be complete and clear. This description must be in sufficient detail to allow LMA personnel to plan, obtain parts and assemble the correct tools.

b. Message Work Candidates. Messages may be used to notify the FMA as early as possible when data systems up-lines are not available. This is particularly applicable to ships in transit between FMAs, and ships scheduled to return to port shortly before starting an availability. Accordingly, ships should submit message work candidate requests to the parent RMC or ISIC, with an information copy to the tending LMA and tending Squadron or RMC (if different), for items of this type. Where the change of LMA occurs coincident with a change in Operational Control, the (new) tending Squadron or RMC should be action addressee for the message, with both the parent RMC or ISIC and (new) LMA as information addresses. Appendix B provides the format for a message work candidate.

3.4.3 Critical Jobs. Critical Jobs (CJ) are those jobs or series of jobs that require special management attention and normally present the greatest risk to on-time completion of the key event or availability. The Executing Activity should be judicious in designating jobs as CJs to prevent diverting management attention from those jobs which are, in fact, critical to on time completion of the availability. Consideration must be given to, but not limited to, the following in determining the CJs:

a. Little or no room for delay exists.

b. Establishing plant conditions.

c. Long Lead Time Material.

d. Complexity of job or special skills or resources required.

e. Significant test requirements.

f. Not previously accomplished by the Executing Activity (alterations, etc.).

3.4.4 Integrated Work Schedule. The IWS is an integrated timeline that includes plant conditions, major work steps, tests and recertification used to progress all jobs as determined by the Naval Supervisory Authority (NSA) or LMA. The IWS should include:

a. Establishing plant conditions.

b. Major production steps.

c. Testing and Recertification.

d. Closing out work procedures.

3.4.5 Technical Assistance and Assessment. Technical assistance and assessments are to be assigned as work candidates within any of the following Fleet maintenance availabilities:

a. CMAV.

b. CM.

c. EM Availabilities.

3.4.6 Late Work and Scope Control.

a. The complete LMA Availability work package is defined and agreed upon at the WPER. A minimum of 30 days will be allotted for known work to be brokered to I-Level activities. This will allow a WPER to take place per the platform specific milestones. If these minimum thresholds cannot be complied with, the Maintenance Team will complete a Business Case Analysis per paragraph 3.4.6 of this chapter.

b. The Maintenance Team will perform a Business Case Analysis as a method of identifying risks associated with adding late work after the submission cut-off date. The Business Case Analysis is described in Appendix A. Late work identified after the submission cut-off date should not extend the availability completion date. The RMC or ISIC will take appropriate actions to make job tradeoffs, defer jobs to a subsequent availability or seek outside assistance to conduct the work.

c. Non-mission essential late work may be accepted on a case-by-case basis. The ISIC will provide approval authority for all late work after establishing that the LMA can support the additional workload and the scope of work does not impact the ship's operational schedule or schedule of other operational units.

3.4.7 Memorandum of Agreement. For all availabilities not assigned to an FMA, a Memorandum of Agreement (MOA) will be issued. The purpose of the MOA is to define areas of responsibility for all activities involved with the availability. A NSA representative must sign MOA(s) as assurance that any civilian contractor requirements detailed in MOA(s) are contained within applicable contracts.

3.4.8 Radiological Controls. Nuclear powered vessels are responsible to implement and ensure adherence to radiological controls per reference (c). Industrial activities authorized to perform nuclear maintenance are responsible to engineer appropriate radiological controls into assigned work.

3.4.9 Ship to Shop Material Control. Positive identification and control of ship to shop transfer of equipment and components is maintained through the use of a Ship to Shop tag. The Ship to Shop tag may also be used in conjunction with other methods specified by the Executing Activity or the LMA. Each Executing Activity must make sure that positive control exists for those subcomponents of equipment and components received with a Ship to Shop tag attached. The procedure for using the Ship to Shop tag is provided in volume V, part I, chapter 11 of this manual.

3.4.10 Ship-checks. The LMA or Executing Activity must conduct ship checks, when the tended ship is available in order to support process milestones, to verify the scope of work, identify interference, obtain equipment technical data, identify shipping (rigging) paths, verify

system and equipment configuration and obtain additional problem identification data from Ship's Force. Shipchecks must be conducted as early in the planning phase as possible.

3.4.11 Lead Maintenance Activity Daily Production Meeting. This meeting is for the coordination of ongoing work for all availabilities. The LMA Repair Officer or Production Officer, or their designated representatives, will conduct a Daily Production Meeting for all ships in availabilities.

a. Purpose. The primary purpose of the LMA Daily Production Meeting is to establish a joint Executing Activity and Ship's Force production plan and eliminate schedule conflicts that impact work for at least the next seven shifts (56 hours). It further tracks the current status of CJs. The results of this meeting are used to assess overall progress of the work, develop recovery plans when necessary and to ensure all the activities understand the production plan and support requirements during a minimum of the next seven shifts (56 hours).

b. Execution. The Daily Production Meeting will be held as early in the day as practicable.

c. Attendees. Representatives of the LMA Waterfront Operations, the Executing Activities, the tended ship, and LMA Supply or Fleet Logistics Center, as appropriate, will attend this daily production meeting and participate in its agenda. Others may attend as requested by the LMA.

d. Agenda. The following agenda will be used for the LMA Daily Production Meeting. Additional items may be added at the discretion of the Waterfront Operations Officer, Repair Officer or Production Officer.

(1) Discuss specific work scheduled to be accomplished and support required over the next seven shifts.

(2) Discuss projected site evolutions (ship moves, weapon moves, pier maintenance, or changes of command, etc.) which could impact production work.

(3) Discuss respective ship evolutions such as stores load or Fast Cruise that could impact production work.

(4) The Executing Activity brief on the current status of CJs on each ship.

~~(5) Review Safety of Ship Maintenance Item List as discussed in volume IV, chapter 10 of this manual, any necessary safety precautions and their status.~~

(6) Discuss requirements and execution of reference (a) as agreed upon at the WPER. Any changes since WPER will be approved by ISIC prior to exceptions being implemented.

3.4.12 Lead Maintenance Activity Progress Review. This review (Management Meeting) is normally conducted as part of the daily production meeting.

a. Purpose. The primary purpose of the LMA progress review is to ascertain that CJs and Key Events are progressing satisfactorily for on time completion of the availability and to ensure ISIC and Senior Repair Activity Management has a clear

picture of the ongoing status of the availability and any obstacles to on time completion. The meeting must also identify and resolve any issues, conflicts or differences since availability start or last review. These meetings may be conducted in conjunction with a ship's PB4M.

b. Execution. This review must be conducted by the Waterfront Operations, Repair Officer, Production Officer, or their representatives and be scheduled so as not to conflict with daily production meetings.

c. Attendees. As a minimum, the following must attend this review.

(1) Waterfront Operations Officer, Repair Officer, or Production Officer.

(2) Project Manager, Combat Systems Maintenance Officer, Reactor Maintenance Officer, and Ship's Maintenance Manager.

(3) Tended ship Chief Engineer.

(4) Availability Coordinator and designated Ship representatives.

(5) ISIC or RMC designated representatives (Commodore, Senior Deputy or Maintenance Deputy).

(6) Maintenance Support Team (MST) Officer In Charge (OIC) (if applicable).

(7) LMA Commanding Officer, Deputy Shipyard Commander or designated representative (as applicable).

d. Agenda. As a minimum, the following agenda must be used for LMA progress review. Additional items may be added at the discretion of the Waterfront Operations Officer, Repair Officer, Production Officer, ship CO, or ISIC. Attendees must be prepared to discuss their respective portions of the agenda.

(1) Specific work scheduled for accomplishment during the availability.

(2) Projected Executing Activity and ship evolutions which could impact production work on ship(s).

(3) Discuss current status of CJs and Key Events listed in Appendix C.

(4) Heavily loaded Executing Activity work centers and impact on the availability.

(5) Status of funds, supplies and equipage funding.

(6) Status of outstanding DFS scheduled for correction during the availability.

(7) Outstanding high priority repair material status.

(8) Provide Automated Work Requests or a list of completed work with applicable 3-M final action taken codes per reference (b).

(9) For ships with work in the Year Long CM or EM Availability no separate formal meeting is required. Rather, issues with these availabilities should be a part of the routine PB4M held by the ship's maintenance team or special meetings as needed to properly monitor and manage the ongoing maintenance.

(10) Discuss requirements and execution of reference (a) as agreed upon at the WPER. Any changes since WPER will be approved by ISIC and Repair Activity senior management prior to exceptions being implemented. Include the issues that have occurred and the resolution of those issues occurring during the previous week.

3.5 SHIP'S FORCE UPKEEP. Ship's Force Upkeep availability is a scheduled period in which the ship is conducting self-maintenance per reference (b), training, supporting inspections by outside activities, and performing routine shipboard evolutions. Ship's Force Upkeep availability can be accomplished at sea when the ability of the ship to perform its assigned missions and tasks is not affected and the work is accomplished onboard the ship. Scheduled Ship's Force Upkeep periods must not be interrupted for other than emergency reasons.

3.5.1 Upkeep Work Planning.

3.5.1.1 Planning Sources. The upkeep work package must be developed using three sources:

a. Planned Maintenance System (PMS) must be scheduled per reference (b).

b. Reactor Plant PMS must be scheduled per reference (d).

c. CSMP will be reviewed to ensure scheduling and accomplishment of all work which is within Ship's Force capability.

3.5.1.2 Ship's Force Planning Actions.

a. Preparation for Ship's Force Upkeep should be the normal activity of the maintenance team and be discussed at PB4M meetings.

b. Review all Ship's Force screened CSMP work candidates and identify those items to be accomplished within the scheduled Ship's Force Upkeep period.

c. Identify CJs.

d. Develop an IWS per paragraph 3.4.4 to aid in tracking and sequencing CJs.

e. Establish strategy for Ship's Force calibration of gages, instruments, and tools based on the onboard Calibration Recall List.

f. Develop FWPs, Controlled Work Packages, and TWDs, as required, per volume V, part I, chapter 2 of this manual.

3.5.2 Ship's Force Upkeep Work Execution. Duty section, division meetings, and shift briefings will be conducted as necessary to discuss the current status of work and projected work progress expected for the period covered. The status and projections will be based on CJs and the IWS and should be reviewed at the regular ship's PB4M Maintenance Team meetings.

3.5.3 Ship's Force Upkeep Work Completion.

3.5.3.1 Management Closeout Procedures. Upon completion of repairs, FWPs, Controlled Work Packages , and TWDs will be closed out per volume V, part I, chapter 2 of this manual. Update the CSMP. Ensure non-conformances (Waivers, Deviations or Departures from Specification) submitted during the availability by any activity are approved prior to trials at sea (if held) and not later than the completion of the availability.

3.5.3.2 Dock Trials, Fast Cruise and Sea Trials. Dock Trials, Fast Cruise and Sea Trials must be conducted as required. Sample agendas in part I, chapter 3 of this volume may be modified, as necessary, to ensure the equipment which was worked during the upkeep is exercised prior to at sea operation.

3.6 SCHEDULED CONTINUOUS MAINTENANCE AVAILABILITY.

3.6.1 Scheduled Continuous Maintenance Availability Planning. Thorough, detailed planning is an absolute prerequisite to effective CMAV execution. Effective CMAV management begins well before the ship arrives with material procurement and job planning.

3.6.1.1 Scheduled Continuous Maintenance Availabilities Planning Sources. A significant portion of the CMAV Work Package can be identified in advance from five basic sources.

a. Ship's CSMP. This document contains work items deferred during previous maintenance availabilities as the result of inadequate material support, outstanding DFS, drydock requirements, etc. To ensure the CSMP accurately reflects the required ship's maintenance, the Maintenance Team and ISIC will review each ship's CSMP in detail with Ship's Force during routine PB4Ms and prior to every maintenance availability.

b. Ship's Force Planned Maintenance. Ship's Force must conduct a review of PMS and Reactor Plant PMS requirements (where applicable) and ensure all maintenance actions are identified.

d. Alterations (Fleet Alterations, Program Alterations, Ship Changes and Strategic Systems Program Alterations, etc.). The RMC or ISIC will enter alterations on the ship's CSMP that the TYCOM has authorized for accomplishment. The Ship Maintenance Team, RMC or ISIC calls out alterations for a specific CMAV based on material availability and Executing Activity capacity as identified by the Executing Activity. Within funding constraints and TYCOM guidance, all alterations authorized on Navy Modernization Process (NMP) are candidates for accomplishment during each CMAV.

e. Work Routines. A set of standard routines from the MJC should be planned for every CMAV. The ISIC or RMC tailors each CMAV routine package to the needs of the ship by calling out additional routines to document periodic, interim dry docking, and calibration recall requirements, as appropriate.

3.6.1.2 Scheduled Continuous Maintenance Availability Planning Functions. The Maintenance Team, RMC and ISIC will take the following actions in planning a CMAV.

a. Work Package Submission. Message work candidates may be sent if the ship is not in port. This singular action has significant impact on the ability of both the RMC or ISIC, and Executing Activity to properly plan for the CMAV, and determine potential impacts on other planned work.

c. NMP Review. Review NMP and ensure all authorized alterations intended for accomplishment during the CMAV are identified by priority based on material availability as identified by the Executing Activity. Ensure they are properly entered into the CSMP.

d. MJC Review. Review the MJC and identify the routine package to be accomplished during the CMAV. Ensure it is properly entered into the CSMP.

e. Review work candidates for applicability of Master Specification Catalog task lists.

f. Draft Key Event Schedule.

g. Work Package Screening. Screen and forward the assigned prioritized work package to the Executing Activity. Maintenance Team, RMC and ISIC responsibilities for work package screening are established in reference (b). Additional specific requirements are:

(1) Ensure work candidates meet the criteria for the level of work and are correctly prioritized per reference (b).

(2) If the assistance requested is for use of the Executing Activity facilities or technical guidance in order for Ship's Force to accomplish planned or corrective maintenance, the submitting ship and TYCOM should be advised to use MJC Routine N0000EXCNA740, (Facilities for Ship's Force Work).

(3) If a work candidate is received in message format, the RMC or ISIC must input the message work candidate into the Maintenance Data System (MDS). For a ship in transit, the parent RMC or ISIC must advise the RMC or ISIC to which the ship is reporting of the desired disposition of the message work candidate.

(4) Designate controlled work as defined in volume V, part I, chapter 5 of this manual. Indicate the appropriate governing Key Event.

h. From the Key Event schedule, develop an IWS per paragraph 3.4.4 to aid in tracking and sequencing CJs.

i. CMAV Funding. CMAV funding targets are developed as a part of each ship's MMBP. RMC or ISIC will establish CMAV funding targets in order to properly and responsibly administer funds, and gain optimum readiness return on each dollar invested.

j. Material Condition Assessment Review. Review Material Condition Assessment (MCA) inspections, monitoring and testing data that may result in significant new work for the Executing Activity or Ship's Force; or that may impact scheduled Ship's Force or Executing Activity work.

k. Outside Activity Support. Identify outside activities (e.g., Warfare Center, Alteration Installation Team, Naval Undersea Warfare Center, Supervising Authority, RMC, Industrial Activity Tiger Team, etc.) participating in the CMAV and their associated support requirements.

l. Special Evolutions. Identify required special evolutions associated with pre-availability tests and inspections.

m. WPER. The WPER is conducted with the Executing Activity, ISIC, TYCOM, (and Ship's Force if available) as scheduled. The purpose is to finalize the CMAV work package and required evolutions. This is accomplished as noted in the below sub-paragraphs. This meeting may be conducted in conjunction with the ship's PB4M.

(1) Attendees will include the Maintenance Team, ISIC Material Officer, TYCOM Ship's Coordinator, Maintenance Planning Manager, RMC, Ashore Ships Maintenance Manager, Production Officer representative, Executing Activity, Ship's Engineer Officer, MST OIC, Availability Coordinator and the Ship Superintendent (as applicable).

(2) Assemble the proposed CMAV work package from the CSMP, PMRs, NMP and MJC, as applicable.

(3) Screen the proposed work package to designate the work to be accomplished during the CMAV.

(4) Validate the proposed work package will not require ammunition off-load.

(5) Prioritize the proposed work package.

(6) Designate the CJs.

(7) Integrate Executing Activity recommended CMAV Key Event schedule with other ISIC and Ship planned events for the ship, such as weapons moves, fueling, and training events.

(8) Review scheduled PMT and MCA testing that may result in significant new work after the CMAV starts.

(9) Establish the CMAV berth for pre-staging material and support equipment.

(10) Review adequacy of available testing and support equipment needed for the CMAV.

(11) Identify other outside activities participating in the CMAV and associated support requirements.

(12) Identify required special evolutions associated with pre-availability tests and inspections. The result of the CMAV WPER should be an executable work package within the CMAV time frame, budget, and Executing Activity capacity.

(13) Ensure reference (a) requirements are implemented in all CMAVs based on complexity, scope of work and duration of the CMAV. The ISIC will ensure all requirements of reference (a) are implemented to the maximum extent practical based on these considerations. If portions are not implemented in a CMAV due to scope of work, complexity, or time restrictions, the ISIC will inform TYCOM after the WPER.

n. Re-screen Work Candidates. Re-screen and assign returned work candidates (per part I, chapter 5 of this volume). Notify ship of final disposition of each item.

o. Issue the Ammunition Off-Load Requirement Message. Subsequent to package lock, but no later than two weeks prior to the start of the availability, Ship's Force will send the Ammunition Off-Load Requirement Message prepared in accordance with Appendix D and reviewed during the availability WPER to TYCOM. It will certify that the Availability Work Package has been reviewed by the Maintenance Team for exclusion of work that requires ammunition off-load, as required by reference (e).

3.6.1.3 Arrival Conference. This conference is conducted by the LMA. The Arrival Conference purpose is to provide an executive level brief to the RMC or ISIC, Executing Activity, MST OIC (if applicable) and ship's CO on the total scope of the CMAV effort and must be conducted as discussed in sub-paragraphs "a" through "d". Note that the Arrival Conference may be conducted in conjunction with the PB4M.

a. Attendees. The Arrival Conference is hosted by the responsible FMA and attended by the following personnel:

(1) RMC or ISIC Senior Management (Commodore or Senior Deputy) and Material representative(s).

(2) Executing Activity representative(s).

(3) Tended ship, (recommended, as applicable, are the CO, Department Heads, and Availability Coordinator).

(4) Site PMT or MCA Officer.

(5) MST OIC (if applicable).

(6) LMA Commanding Officer, Deputy Shipyard Commander or designated representative (as applicable).

b. Agenda. The following items comprise the agenda to be covered during the Arrival Conference:

(1) Introduction of key FMA, Executing Activity and ship personnel.

(2) CMAV material and funding status.

(3) Review the CMAV Key Event schedule for potential conflicts.

(4) Special evolutions scheduled during the availability.

(5) Validate that critical jobs to be accomplished by the Executing Activities and Ship's Force are properly sequenced in the IWS.

(6) Introduce the LMA representative as the single point of contact for all elements of the CMAV, including responsibility for coordination of all Executing Activities and Ship's Force. This point of contact may be the TYCOM Maintenance Program Manager, Project Manager, or Ship Superintendent, as applicable.

(7) Alterations to be accomplished.

(8) Significant material issues.

(9) Review status of outstanding DFS, as applicable.

(10) Results of arrival inspections and PMT or MCA testing.

(11) Issue meeting schedule for the CMAV.

(12) Discuss requirements and execution of reference (a) as agreed upon at the WPER. Any changes since WPER will be approved by the ISIC prior to exceptions being implemented.

c. Tended Ship Actions. The ship takes the following actions at this conference:

(1) Submit a list of key Ship's Force personnel, including officers, Leading Petty Officers or Work Center Supervisors, Quality Assurance Inspectors, Calibration Coordinator and Availability Coordinator.

(2) Verify that all known work candidates requiring outside assistance have been identified and work candidates submitted to the LMA or TYCOM (or submit known late work candidates for immediate screening).

(3) Discuss potential Executing Activity and Ship's Force work interface concerns.

(4) Identify Ship's Force and MST (if assigned) planned evolutions that could impact scheduled work and verify that they are properly sequenced in the IWS.

d. RMC or ISIC Actions. During this conference, the RMC or ISIC staff will take the following actions (if not already done):

(1) Review any late work candidates submitted by the ship per paragraph 3.4.6. Should the late work presented require that other work be deferred, that work to be deferred must be clearly understood. A Business Case Analysis described in Appendix A should be conducted.

(2) Brief the Key Events schedule for the availability. The ship's Key Events should normally be scheduled in the Pre-CMAV or Availability Planning Message, concurred with by the ship's CO on arrival and input to the MDS by the RMC or ISIC prior to the Arrival Conference. CJs controlling the CMAV completion must be identified for special management attention by the ISIC, LMA, Executing Activity and Ship's Force.

3.6.2 Continuous Maintenance Availability Execution. CMAVs are complex evolutions characterized by detailed management, closely coordinated RMC or ISIC, Executing Activity and Ship's Force work, systems testing, and other sequenced evolutions such as weapons movements, diver operations and training. Successful CMAV execution requires the closest possible communication and coordinated efforts by the RMC or ISIC, Executing Activity and Ship's Force.

3.6.3 Continuous Maintenance Availability Completion Procedures. The following procedures will be utilized for completing a CMAV. Exceptions are provided for those CMAVs of less than three weeks, or are of a minor scope where the Departure and Assessment Conference may be an appropriate forum.

3.6.3.1 Management Reports Closeout Procedures. Upon completion of a scheduled availability, the MDS files must be updated to reflect the current status of work. To accomplish this goal and to ensure that all activities understand the status of all work, the following procedures will be followed:

a. Upon completion of the assigned work, the LMA or Executing Activity will present a copy of the work candidate or a list of completed JCNs with the applicable final action codes to the ship to obtain concurrence that the described work was completed. Ship's Force will complete all AWRs per reference (b). Within 2 weeks of completion, the

Executing Activities who have performed any configuration change must submit the form OPNAV 4790 CK of reference (b) to Ship's Force for submission to Configuration Data Managers Database - Open Architecture.

b. Within two working days after the completion of an availability, all work centers will ensure that final man-hours have been entered. The ship's superintendent may sign off all Executing Activity routines for the ship. Completed work candidates and AWRs will be a product of the CMAV Departure and Assessment Conference of paragraph 3.6.3 of this chapter.

c. On the third working day after the completion of an availability, the Maintenance Team will ensure that the CSMP ship and shore files reflect the current status of the ship's JCNs and request a Departure and Assessment Report by priority for the ship.

d. On the fourth working day after the completion of an availability, the ship's superintendent will annotate each incomplete JCN on the final Departure and Assessment Report by JCN as to its present status and actions required in order to complete the item. Lead work centers must update this status into the MDS.

e. Within seven working days after the completion of an availability, the Executing Activity will forward copies of the annotated Departure and Assessment Report to the ship and ISIC.

f. Review status of outstanding DFSs.

3.6.3.2 End of Scheduled Continuous Maintenance Availability Departure and Assessment Conference. This comprehensive review and critique of the availability is another cornerstone of the continuous improvement policy regarding Fleet maintenance.

a. Purpose. The CMAV Departure and Assessment Conference is held to:

(1) Review the conduct of the availability and identify those improvements necessary to increase the effectiveness of Fleet maintenance.

(2) Identify the work that was completed during this CMAV and complete the appropriate documents (e.g., work candidates, AWRs, etc.) or produce the list necessary to update the ship's CSMP to reflect the completed work.

(3) Identify and reschedule to a future CMAV, the work deferred during this CMAV.

(4) Identify any incomplete work candidates and plan of action to complete items.

(5) Establish the basic requirements (i.e., initial work package, sequence number and tentative dates) for the next CMAV.

(6) Review status of outstanding DFSs.

b. Execution. The Departure and Assessment Conference will be held during the last week of the CMAV at a time agreed upon by the Executing Activity Repair Officer or Production Officer and the ship. This meeting may be held in conjunction with the final weekly Management Conference or Progress Review.

c. Attendees. The Departure and Assessment Conference is arranged, coordinated and chaired by the LMA Repair or Production Officer. Where the LMA is a contractor,

the LMA Project Manager may co-chair these meetings with the NSA Project Manager. However, lack of participation by the contractor does not alleviate the NSA Project Manager of this responsibility. The following personnel must attend this meeting and participate in its agenda:

(1) ISIC Supply Materials, Weapons, Combat Systems, and Electronics Material Officer Staff personnel (as applicable).

(2) LMA Repair Officer, Production Officer, and Ship Superintendent, or their designated representatives.

(3) Tended ship CO, MST OIC (if applicable), Engineer and Availability Coordinator.

(4) Others as directed by the TYCOM, ISIC or Executing Activity CO.

(5) Executing Activity representatives.

d. Agenda. The following agenda must be used for reviewing and assessing the CMAV. Additional items may be added at the discretion of the TYCOM, ISIC, Executing Activity or ship. Attendees will be prepared to address their respective portions of the agenda.

(1) Review of the CMAV work package to establish status of each item and, for items completed satisfactorily, complete the work candidate or Automated Work Requests.

(2) Review incomplete work candidates that will remain open from this CMAV and identify plan of action to complete these items.

(3) Identify and reschedule to a future CMAV the work deferred during this CMAV.

(4) Assess the scheduling, execution and quality of work accomplished by each activity during the CMAV.

(5) Assess the quality of general services provided by the Executing Activity site.

(6) Review recommendations for process improvements and possible LEAN initiatives.

(7) Assess lost time that prevented or delayed execution of scheduled work. (Lost time internal to the Executing Activity, e.g., waiting for transportation, assist work center, etc. and lost time caused by the ship such as waiting access, tagout, other Ship's Force support).

(8) Reference (a) lessons learned and corrective actions for future CMAVs.

e. Results. The LMA must consolidate the minutes of this meeting into the Departure and Assessment Report to the ISIC and provide a copy to the TYCOM and appropriate planning activity. The report must include:

(1) List of completed work or completed work candidates or AWRs for direct input into MDS to update the ship's CSMP and Configuration Data Managers Database - Open Architecture.

(2) Preliminary establishment of the next CMAV.

(3) List of policies and processes identified as requiring review for improvement. Proposed process improvements and corrective actions suggested to improve the effectiveness of future CMAVs.

(4) Lessons learned from the availability.

3.6.3.3 Fast Cruise or Sea Trials. The ISIC may schedule a one-to-two-day Fast Cruise as part of the CMAV Key Event schedule. This is normally the last major Key Event prior to CMAV completion. As a minimum, the Fast Cruise agenda will include specified drills and evolutions necessary to re-establish proficiency in basic ship operations. It will also include sufficient formal testing to certify that the equipment and systems are fully ready to operate at sea in an operational environment. For CMAVs less than four weeks, the requirement for a Fast Cruise must be at the ISIC discretion. The necessity of Sea Trials is a function of work performed during a CMAV and may not be required. If the duration or complexity of the CMAV is determined to be sufficient to warrant Sea Trials, the Ship, ISIC or TYCOM (as required by specific Force policy) must determine if a formal Sea Trial Agenda is necessary, and if required, task the RMC or ship to prepare a formal Sea Trial Agenda for ISIC or TYCOM approval.

3.6.4 Lessons Learned. For long duration or complex CMAVs, or in cases where there are significant lessons to be learned, Lessons Learned will be conducted. The Lessons Learned Conference should be within 30 days of completion of the availability. The Lessons Learned process is described in volume VI chapter 39 of this Manual. All key NSA, RMC, LMA, TYCOM or their representatives, Executing Activity, and Maintenance Team personnel must attend it. The agenda and details of the meeting must be determined by the RMC and Maintenance Team and must be of appropriate length to evaluate the overall scope of the work accomplished. The Lessons Learned process provides the maintenance and modernization community with a process to identify, resolve, and provide feedback communication on barriers causing inefficiencies or waste within business processes. While there are several milestone meetings within the availability planning and execution process, the feedback process exists to continually collect information to improve processes.

3.7 YEAR LONG CONTINUOUS MAINTENANCE. The CM is a single yearlong availability, for the period 01 October through 30 September, scheduled for each ship every fiscal year. The Year Long Continuous Maintenance (YLCM) availability is for the scheduling and completion of non-emergent work items that are not accomplished during any other scheduled availability.

3.7.1 Year Long Continuous Maintenance Planning. Planning sources and actions are similar to those for the CMAV. Since the continuous availability is a year long, it has no specific arrival date as a reference for the planning milestones. As a result, the milestone dates for the yearlong availability are consistent with those for the scheduled availability but are referenced to the planned execution date(s) of the work item(s). This approach for non-emergent work is intended to reduce premiums and waste for most work candidates by allowing the work to be planned, resourced with manpower and materials in a routine way. The definition of Executing Activity scope that takes place in the WPER of a CMAV does not occur in the YLCM availability as a discrete signal point. Rather LMAs should continuously define scope and schedule across the LMA and assigned Executing Activities.

3.7.2 Year Long Continuous Maintenance Work Execution. During the execution period of work items in the YLCM availability, measures should be taken to ensure that Ship's Force, LMA and Executing Activities remain appraised of:

a. Status of work to be accomplished.

b. Identities of designated contact personnel.

c. Status of material and other resources.

d. Current schedule status.

e. Special Evolutions that may impact completion of the work items.

3.7.3 Continuous Maintenance Completion. At the end of the fiscal year, the availability should be entered as complete and a new availability established for the new fiscal year.

3.8 EMERGENT AVAILABILITY. The EM Availability is designed for work of such an urgent nature that the heightened risk of paying premiums is accepted and planning horizons are shortened. This type of availability is for C3 or C4 CASREPs, or a C2 CASREP with reasonable potential to become a C3 or C4 CASREP. These CASREPs are identified as emergent maintenance and ordinarily funded from emergent funds. The RMC Commander may, with the respective TYCOM's approval, convert Emergent Maintenance funds to execute CNO availability or CM in this regard. Emergent work will be scheduled to minimize premiums in as much as the operational schedule will permit. Generally, C2 CASREPs will be corrected using the CM Process where work is scheduled in the unscheduled Continuous Maintenance availability, a Window of Opportunity or a CMAV, which supports the ship schedule, need and policy objectives minimizing premiums paid and operational schedule impacts.

3.8.1 Emergent Availability Planning. Planning sources and actions are similar to those for the CMAV. In the case of the EM Availability, the milestone dates for the availability are not consistent with those for the scheduled availability and produce added risk of disruptions and payment of premiums. This risk is acceptable only because of the effect of the work on the mission capability of the tended ship. The definition of scope and schedule for emergent work occurs after the definition for both scheduled CMAV and unscheduled CM availabilities when Executing Activities may already be fully loaded and material may need extra effort to be expedited. Additionally, it may result in already scheduled work being deferred.

3.8.2 Work Execution. During the execution period of work items in the EM Availability measures should be taken to ensure that Ship's Force, LMA and Executing Activities remain appraised of:

a. Status of work to be accomplished.

b. Identities of designated contact personnel.

c. Status of material and other resources.

d. Current schedule status.

e. Special evolutions that may impact completion of the work items.

3.8.3 Availability Completion. Once the Ships Commanding Officer and ISIC determine that the Ship's mission capability has been restored, the LMA can certify the work, and the ISIC can close the availability.

APPENDIX A

BUSINESS CASE ANALYSIS TOOL

To use this tool, first analyze the safety and mission impact of the damage to be repaired using Table 1. Determine the Hazard-Mission Index. Then consider the impact on schedule and cost using Table 2 and obtain the Cost - Schedule Index. On the next sheet, select the appropriate CO Modifier and sum the indices to obtain the Risk Index. Determine indicated action from the Business Case Analysis Table.

Table 1 - Hazard Severity and Impact to Mission

	Hazard Severity			
Impact to Mission	Catastrophic	Critical	Major	Minor
Frequent	1	1	3	6
Probable	1	2	4	7
Occasional	2	3	5	8
Remote	3	4	6	9
Improbable	5	5	7	10

Table 2 - Cost Severity and Impact to Schedule

	Cost Severity			
Impact to Schedule	Extreme	Significant	Major	Minor
Frequent			7	4
Probable			6	3
Occasional		8	5	1
Remote	7	6	4	1
Improbable	5	3	2	1

Impact to Mission Likelihood		Impact to Schedule Likelihood	
Description	Explanation	Description	Explanation
Frequent	Likely to adversely impact mission, operation of ship, ship's future schedule or critical systems regularly. Work to rectify this deficiency must be undertaken at the first opportunity.	Frequent	The undertaking of the work or combination of availability of Long Lead Time Material and Work Completion WILL delay the schedule greater than five working days.
Probable	Could adversely impact mission, operation of ship, ship's future schedule or critical system several times. Work to rectify this deficiency should be programmed in the current availability.	Probable	The undertaking of the work or combination of availability of Long Lead Time Material and Work Completion COULD delay the schedule greater than two working days.
Occasional	Unlikely, but could be reasonably expected to adversely impact mission, operation ship, ship's future schedule or critical system occasionally. Work to rectify this deficiency should be considered during the current availability depending upon schedule and cost.	Occasional	The undertaking of the work or combination of availability of Long Lead Time Material and Work Completion COULD BE REASONABLY expected to delay the schedule not greater than two working days.
Remote	Unlikely, but could possibly impact mission, operation of ship, ship's future schedule or critical system at some time. Work to rectify this deficiency should be considered and programmed to meet the ship's operational schedule.	Remote	The undertaking of the work or combination of availability of Long Lead Time Material and Work Completion is UNLIKELY BUT POSSIBLE to delay the schedule.
Improbable	So unlikely that there should be no adverse impact to mission, operation of ship, ship's future schedule or critical system. Work to rectify this deficiency should be programmed in due course.	Improbable	The undertaking of the work or combination of availability of Long Lead Time Material and Work Completion is SO UNLIKELY to delay the schedule it can be assumed it will not affect schedule.

Hazard Severity if Work Not Undertaken		Cost Severity Impact	
Description	Explanation	Description	Explanation
Catastrophic	Failure of System could result in total loss of ship or critical system. Resultant damage would be beyond economical repair.	Catastrophic	The increase in cost due to Growth & New Work, delay to start of work, cost or availability of material is so great that it either represents funding that would need to be sourced from another activity, or it constitutes a G&NW premium of 60% or higher.
Critical	Failure of System could result in significant damage to the ship or critical system. Resultant damage would require intervention of support agency. Usually damage to Primary structure or Watertight Integrity.	Critical	The increase in cost due to Growth & New Work, delay to start of work, cost or availability of material, represents a very large increase that it either can be covered in the existing budget plan but would adversely impact the remaining financial plan or it constitutes a G&NW premium of 40% to 60%.
Major	Failure could result in the temporary loss or deterioration of the system requiring repair action.	Major	The increase in cost, while large, is either able to be covered inside the existing budget plan with little impact to the remaining financial plan or it constitutes a Growth & New Work premium of 20% to 40%.
Minor	Failure could result in the need for minor defect repair action, continued operation without significant loss of output is possible.	Minor	The increase in cost is very small and is either able to be covered inside the existing budget plan with no impact to the remaining financial plan or it constitutes a Growth & New Work premium of 0% to 20%.

Commanding Officer's Concern	CO's Top 5	Subtract 2
Commanding Officer's Concern	Concerned	Subtract 1
Commanding Officer's Concern	Not Concerned	Subtract 0

Business Case Analysis (Table 1 + Table 2 + CO's Concerns) = Risk Index			
Risk Index	Relative Level of Risk	Decision	Amplifying Comments
Less than 10	Low	MT continue	Represents work that is either a safety concern or mission critical, or is relatively low cost and no impact to schedule.
10 - 14	Med	MT reschedule or conduct more rigorous BCA	Represents work that is either of reasonably high cost or a high risk to schedule impact, or of little to no safety or mission critical concern. This work should either be rescheduled, cancelled, or subject to a more comprehensive BCA.
Greater than 14	High	MT reschedule or cancel	Represents work that is either of high cost or extreme schedule impact, or of little to no safety or mission critical concern.

CHAPTER 4

SHIP MAINTENANCE VALIDATION, SCREENING AND BROKERING (AIRCRAFT CARRIERS)

REFERENCES.

(a) OPNAVINST 4700.7 - Maintenance Policy for U.S. Naval Ships

LISTING OF APPENDICES.

A Availability Creation and Numbering
B NESD Customer Service

4.1 PURPOSE. This chapter provides procedures and guidance regarding ship maintenance work candidate validation, screening and brokering processes. These processes affect all Type Commanders (TYCOM), Regional Maintenance Center (RMC) Commanding Officers and ship Maintenance Teams.

4.2 MAINTENANCE MANAGEMENT AUTOMATED INFORMATION SYSTEM MANAGEMENT. As Navy Maintenance Management Automated Information System (MMAIS) applications (such as the Maintenance Data System (MDS), Automated Work Notification (AWN), Electronic Tag Out (eTagOut), and Electronic Shift Operations Management Solution (ESOMS) programs) evolve into a connected group of systems, criteria for the management of unit, shipboard, ashore databases, and a process for submitting account requests for these MMAIS systems is hereby established.

4.2.1 Unit and Shipboard Databases Afloat and Ashore. The following applies to shipboard and unit based MMAIS systems such as MDS, AWN, Organizational Maintenance Management System - Next Generation (OMMS-NG), R-Admin, R-Supply, eTagOut and ESOMS:

a. Will be managed locally by an assigned and designated administrator.

b. Account structures and role and privileges will utilize the TYCOM approved Privilege Matrix which is maintained by the TYCOM.

c. Systems settings will be set to local time not “Zulu” time for all processing.

d. No outside activity will be allowed direct access to the databases. Database copies require prior written TYCOM N43 approval.

e. All work candidate, job, Job Sequence Number (JSN), Ship’s Maintenance Action Forms, OPNAV 4790/2K (2-Kilo), pre-2-Kilo to 2-Kilo review and approvals along with sending of parts requests to supply will be conducted by Ships Force. No outside activities will approve work candidate, job, JSN, pre-2-Kilo to 2-Kilo or the acquisition of shipboard parts. No outside activity will write work candidates directly into a Ships Force MDS system. All outside activities reporting or finding discrepancies will produce the required “bulkload” as per volume VI, chapter 42 of this manual.

4.2.2 Shore Databases. The following applies to shore-based MMAIS systems such as MDS, AWN, Afloat Toolbox for Maintenance (ATM), Validation Screening and Brokering (VSB), OMMS-NG, R-Admin, R-Supply, eTagOut, ESOMS and Electronic Work Acceptance Forms (EWAF).

a. Account requests

(1) For RMC and Commander Navy Regional Maintenance Center (CNRMC) users including all Navy Maintenance Database (NMD) accounts will be managed by the RMCs or CNRMC. VSB account requests from the RMCs or CNRMC users will be directed to the appropriate RMC or handled directly by CNRMC as per agreement with the appropriate TYCOM.

(2) Users requesting access to Unit, shipboard or command level, including remote hosted databases, will go to the local functional area supervisors, Local Area Network administrators or Information Technology (IT) support teams for access to the command level systems, see paragraph 4.2.1. The access level for the local users will be determined by the approved TYCOM matrix. No outside activity (personal not assigned to that unit) will be granted direct or remote access to any shipboard, command, unit or detachment database, for anything other than IT level troubleshooting and repairs, view only, writing of the alphanumeric JSN for bulkload by the TYCOM.

(3) User access to MDS, supply or personnel administrative systems who are not CNRMC or command level (including where the command level database is ashore) will submit a Navy Enterprise Service Desk (NESD) trouble ticket, refer to Appendix B.

b. All users requesting access through NESD will be approved by the TYCOM for that unit. NESD to establish the account. If upgraded roles or privileges are needed those roles or privileges will be implemented by the TYCOM. No outside activity will be granted direct or remote access to any shipboard, command, unit or detachment database, for anything other than IT level troubleshooting and repairs, view only, writing of the alphanumeric JSN for bulkload by the TYCOM.

c. Outside Activities (users not assigned to that unit) will not be granted access to the unit database (AWN, OMMS-NG, ETAG, EWAF, ESOMS, R-supply, and mission readiness assessment system) for writing of jobs directly into the shipboard or ashore databases nor will they be granted work candidate brokering or approval, including the approval and or sending of parts to supply.

d. All user access levels and accounts will be tracked by the activity creating the account.

e. Every TYCOM will have at a minimum a primary and secondary account manager. Account manager names will be provided to the NESD.

f. Users with accounts missing the required forms will be deactivated until the required documentation is presented to the NESD, and the account is approved by the TYCOM.

4.2.3 Process for Account Requests NESD. The following guidance will be followed for obtaining access to MMAIS systems such as MDS, AWN, ATM, VSB, OMMS-NG, R-Admin,

R-Supply, eTagOut, ESOMS and EWAF. No accounts will be created, password reset or updated without using NESD and or the TYCOM, refer to Appendix B.

a. User submits NESD ticket for VSB, ATM, eTagOut, EWAF account creation:

b. User submits account request through the VSB ATM and LCS ATM sites.

c. NESD will provide the required documents to the user, and the user will complete the following as per TYCOM guidance:

(1) System Authorization Access Request Navy (SAAR-N) Form.

(2) Maintenance Figure of Merit (MFOM) Authorization Access Request (MAAR) NNPI user security form.

(3) MFOM Non-Disclosure Agreement or Contractor user justification (for contractors only).

d. User will provide proof of training and training completion certificates.

(1) EWAFS course number (SPAWAR-EWAFS-0001) available through the CAC-enabled site MyNavy Portal (https://my.navy.mil) under Navy eLearning > Online Courses, Course Catalog.

(2) AWN - Navy eLearning courses SPAWAR-ATMAWN-0002 or SPAWAR-EWAFS-0001.

(3) eTagOut - Completion certificate from Navy eLearning courses SPAWAR-ETAGOUT-USER-3.0.

(4) VSB - Completion certificate from Navy eLearning courses VSB SPAWAR-VSB-0002.

NOTE: DUE TO LOSS OF ADOBE FLASH, INFORM NESD IF THERE ARE ISSUES TO RECEIVE THE POWER POINT OF THE TRAINING. NO COMPLETION CERTIFICATE IS GRANTED, USER ACKNOWLEDGMENT THE MATERIAL WAS VIEWED.

e. NESD must review account request.

(1) Provide the applicable TYCOM completed training documents, SAAR-N and MAAR forms and Non-Disclosure Agreement (NDA), if applicable. TYCOM will authorize the NESD to create the user account.

(2) ATM or AWN accounts roles and privileges will be per the TYCOM AWN, ATM, VSB, eTagOut, EWAF Privilege Matrix.

(3) If certain roles and privileges are not listed under the Privilege Matrix, then the TYCOM will create additional roles and privileges for accounts as required.

(4) VSB account access will be “View Only”. TYCOM will create additional access roles or privileges for accounts as required.

(5) “ADMIN” and or “SUPER ADMIN” accounts will not be created. TYCOM will be the only entity to create that level of account.

(6) NESD will create and maintain an all user listing that contains access levels for the MFOM systems. The User listing, SAAR, MAAR, NDA (if applicable) and TYCOM approval forms will be retained for a minimum of three years.

f. Completion of the process.

(1) NESD will notify users via email noting which VSB, ATM, ATM LCS, eTagOut or EWAF account has been approved.

(2) Users can then go to the login screen, enter their user "LOGIN_NAME", the "TEMPORARY PASSWORD" and login. The user will then create and confirm a new 15-character password.

NOTE: IF YOU DO NOT LOG INTO ATM WITH THE TEMPORARY PASSWORD WITHIN 24 HOURS, YOUR ACCOUNT WILL BE DISABLED.

g. User in a reply email verifies ability to log in.

h. NESD will update and close out the ticket in "Remedy".

4.3 MAINTENANCE.

4.3.1 Regional Maintenance Centers. The command with overall responsibility for efficient planning and execution of all ship maintenance and modernization for assigned ships is the local RMC. The RMC is a subordinate command to Naval Sea Systems Command (NAVSEA). The RMC must report Additional Duty to the appropriate TYCOMs. This reporting relationship ensures that the TYCOMs continue to effectively carry out their responsibilities relating to material readiness of their ships. Contact information for the RMCs can be found in volume VI, chapter 2, Appendix A of this manual.

4.3.2 Maintenance Team. Each ship must have a formally structured Maintenance Team as identified in volume VI, chapter 41 of this manual.

4.3.3 Class Maintenance Plan. The Class Maintenance Plan (CMP) database is an engineered set of organizational, Intermediate and Depot-level maintenance tasks, including the following: material condition assessment tasks (I-tasks), qualified repair and life renewal tasks (Q-tasks), availability routine tasks (R-tasks) and authorized Fleet and Program ship change tasks. Tasks are either scheduled or unscheduled.

a. Scheduled tasks are those Intermediate Level and Depot Level tasks the cognizant technical authority (usually the designated In-Service Engineer) requires to be accomplished on a periodic basis. These tasks have been identified, using Reliability Centered Maintenance, to be both applicable and effective. The CMP system automatically pushes scheduled tasks for Maintenance Team screening and brokering based on last accomplished date and task periodicity.

b. Scheduled tasks are pushed to the shore Current Ship's Maintenance Project (CSMP) six quarters before the deadline date, unless the periodicity is such that the task is due in less than 18 months. These tasks are mandatory and must be completed by the due date or approved for deferral or cancellation by the Ship Design Manager (SDM) (see paragraph 4.5.5).

c. Unscheduled tasks are pulled by the Maintenance Team based on evidence of need. This includes unscheduled assessment tasks, qualified repair tasks, approved ship changes with their associated support and service tasks and availability routine tasks. Additionally, if the need arises for a scheduled task to be accomplished before it has been pushed into the CSMP, the Maintenance Team has the ability to pull that scheduled task, and the last accomplished date will be appropriately updated.

4.4 WORK CANDIDATES.

4.4.1 Current Ship's Maintenance Project Composition. An accurate, up-to-date CSMP is essential for a well-maintained ship. The importance of documenting all discrepancies cannot be overemphasized because the CSMP is the basis for all funding. Only work that is documented in the CSMP will be authorized for accomplishment. The CSMP is maintained in two files, the organizational unit file and the shore file.

a. Shipboard File. This file contains information regarding all known material discrepancies that require corrective maintenance. These discrepancies are normally discovered either by Ship's Force personnel during routine operations and planned maintenance or by non-Ship's Force personnel during material assessment, training and assist visits, documented per volume VI, chapter 42, of this manual. The criticality of the discrepancy determines the maximum length of time allowed to upload the information regarding the discrepancy to the RMC responsible for managing the shore file. Exceptions to this policy are made within the considerations of bandwidth availability and Operational Security conditions.

(1) 2-Kilos associated with correction of C2 Casualty Reports must be uploaded within 24 hours.

(2) 2-Kilos associated with correction of C3 or C4 Casualty Reports must be uploaded within four hours.

b. Shore File. This file contains the material discrepancies uploaded from the shipboard file, other work identified by shore-based managers and tasks from the CMP. Tasks from the CMP include pushed scheduled tasks, pulled tasks, authorized program and Fleet modernization work and availability support routines. The Type Desk Officer and Ashore Ships Maintenance Manager are responsible for pulling CMP tasks as required based on evidence of need, availability of support routines and Fleet and Program alterations to be screened to be accomplished as efficiently and expeditiously as possible using Continuous Maintenance Availabilities (CMAV), Window of Opportunities (WOO) or other in-port and underway periods consistent with Maintenance Continuum strategy. Keeping unnecessary CMP work out of the Chief of Naval Operations (CNO) availability will depressurize and therefore derisk the CNO availability to the greatest extent possible. Although only on the Current Ship's Maintenance Project (CSMP) shore file, this work is visible to Ship's Force via reports sent to the ship.

4.4.2 Requirements. All work requiring an expenditure of man-hours, material or a combination of both requires a work candidate, 2-Kilo, to document the identified requirement. Pushed and pulled CMP tasks are already formatted as 2-Kilo when transferred to the CSMP shore file. The 2-Kilo requires certain information to be included by the identifying activity to support the

maintenance request and may be authored by activities other than the affected ship. There are three levels of the validation process:

a. The ship (Ship Material Maintenance Officer or 3MC) must do an initial validation of the work statement to determine if there is enough information for the designated representative (e.g., Ashore Ship's Maintenance Manager, Fleet Maintenance Activity Ship Superintendent, Project Manager, etc.) to understand the requirement.

b. The Ashore Ship's Maintenance Manager working with members of the Maintenance Team is responsible for requirement validation, and will determine whether there is real need (objective evidence) and, if so, will also verify the requirement's urgency.

c. Final validation is the responsibility of the Ashore Ship's Maintenance Manager. The Ashore Ship's Maintenance Manager ensures that the scope of the work is adequately defined and technically accurate before authorizing the work. This is the final product screened and brokered to a planning or execution activity.

4.4.3 Elements. A valid work candidate will provide the following key data elements at a minimum. The blocked numbers to the right of each item reference an OPNAV 4790/2K data block.

a. Configuration information automatically entered from the master configuration database (Configuration Data Manager's Database or Ship's Configuration and Logistics Support Information System) by the shipboard system:

(1)	Ship Unit Identification Code	[1]
(2)	Work Center Job Control Number	[2]
(3)	Allowance Parts List or Allowance Equipage List	[4]
(4)	Ship Name	[A]
(5)	Ship Hull Number	[B]
(6)	Equipment Noun Name	[5]
(7)	Equipment Identification Code	[14]
(8)	Location	[16]
(9)	Ship Work List Item Number	[56]
(10)	References	

b.	Job Sequence Number	[3]
c.	Equipment Status Code	[7]
d.	When Discovered Date	[17]
e.	Deferred Date	[26]
f.	Symptoms and Supporting Information	[35]
g.	First Contact Name	[38]
h.	Priority	[41]

i.	Type Availability - (Recommended Accomplishment Level)	[42]
j.	Required Delivery Date	[28]
k.	Recommended resolution	[35]
	(1) Master Job Catalog, if applicable	
	(2) TYCOM Maintenance Program Manager's Notes	
	(3) Additional references	
l.	Maintenance Action Requested	[35]
	(1) Assessment	
	(2) Repair	
	(3) Modernization	
m.	Maintenance Figure of Merit	In CSMP Shore File
n.	Initial Estimate (man days & material)	In CSMP Shore file
o.	TYCOM Screening Code	[45]
p.	TYCOM Screening Remarks	In CSMP Shore File

4.4.4 Guidelines. After a work candidate is created and uploaded by an assessment activity or provided and entered into the CSMP shore file by the CMP or other means, it will be reviewed by the Ashore Ship's Maintenance Manager with the Maintenance Team. The Ashore Ship's Maintenance Manager will use these guidelines to validate each work statement:

a. Initial validation will be conducted on each new work candidate to ensure there is sufficient information to understand the requested maintenance action. The originator must populate configuration data elements from the master database by selecting the correct configuration item in a configuration-based system and complete data elements listed in paragraph 4.4.3. If the ship is the originator, then data element (8) must also be present. All work candidates created in an ad-hoc mode or with an incorrect configuration item (and therefore incorrect configuration data) will be returned to the originating activity for cancellation and recreation.

b. If configuration data in the master database is incorrect (e.g., Allowance Parts List or Allowance Equipage List, Hierarchical Structure Code (Ship Work List Item Number) references, location, etc.), the Ashore Ship's Maintenance Manager must act to correct the data at its source. The Ashore Ship's Maintenance Manager may request additional logistic assistance from the Configuration Data Manager to determine and document the correct data.

c. When an initially validated work candidate is accepted as complete, the Ashore Ship's Maintenance Manager will then determine if there is enough objective evidence of need to validate the requirement. If not valid, the work candidate will be returned to the originator and cancelled.

d. CMP material assessments should be accomplished outside of depot maintenance periods as much as practicable to allow for the resulting work to be planned and accomplished as efficiently and expeditiously as possible using CMAVs, WOOs or other in-port or underway periods consistent with Maintenance Continuum strategy. Keeping the CMP material assessment and resulting work out of the CNO availability will depressurize and therefore de-risk the CNO availability to the greatest extent possible.

e. If during validation, the Maintenance Team finds inaccurate configuration data or has questions concerning the necessity of a "Pushed" CMP work candidate, they will contact the appropriate maintenance planning activity prior to returning or cancelling the work candidate.

4.4.5 Validation.

a. Validation is the process of reviewing an off-ship work statement to ensure that the correct configuration item (lowest repairable unit, equipment, system, etc.) is properly identified and that there is enough information to determine if the work candidate is required (objective evidence) and, if valid, contains enough information to:

(1) Properly determine the correct resolution inclusive of the root cause.

(2) Screen the work candidate in accordance with the Maintenance Continuum strategy, selecting the earliest feasible repair opportunity, making every effort to keep the work out of the CNO availability unless there is a specific need for duration or equipment only available in a CNO availability.

(3) Broker to the right activity to perform the work at the most practicable level.

(4) Pass to history.

b. The goal of the validation process is to provide a work candidate that is sufficiently defined, contains correct and complete information, provides an accurate diagnosis, and provides an applicable, effective, and feasible recommended resolution. A properly validated work candidate should provide the planning and executing activities with the ability to understand the requirement without expending additional manpower or time obtaining required information. The Ashore Ship's Maintenance Manager along with the Maintenance Team validates all off-ship (Type Availability 1, 2 and 3) work candidates before screening them to the planning activity by review of OPNAV 4790/2K documentation, personal shipboard observation of conditions, and knowledge of the quality of work candidates written by selected work centers or through additional technical assistance. All validated work candidates must be ship-checked by the Ashore Ship's Maintenance Manager or designated representative when practicable. The purpose of this check is to determine the best maintenance action and add to Block 35 (data elements k. and l. in paragraph 4.4.3).

4.4.6 Verification. The Ashore Ship's Maintenance Manager request additional assistance to determine and document the best corrective action. The recommended action will include all pertinent interferences, integration issues, verification of urgency and an initial estimate (data element n. in paragraph 4.4.3 of this chapter). The initial estimate for each job includes man-days, man-day rate and material costs. When validated, the Ashore Ship's Maintenance Manager

will assign a TYCOM Screening Code (data element o. in paragraph 4.4.3 of this chapter) to the work candidate. This shows the job as valid and ready for screening and brokering.

4.5 SCREENING AND BROKERING.

4.5.1 Screening and Brokering Work Candidates. The Ashore Ship's Maintenance Manager validates and screens work candidates continuously as they are documented. Work integration may entail screening multiple work candidates together when possible. Work screening also entails selecting the appropriate level of repair and the best opportunity in which to accomplish the work. The Ashore Ship's Maintenance Manager makes recommendations on the lowest level of executing activity with the capability and the capacity to accomplish the work during the required time frame, following the guidance of the TYCOM business rules. The screening and brokering process must be considered during the entire Maintenance Continuum (e.g., CNO availabilities, CMAVs, WOOs) and leverage opportunities to reduce depot-level work package size in CNO availabilities.

a. Management of ship maintenance is best performed by individuals most familiar with the condition of the ship, budgetary considerations and available workforce. (This requires a cooperative effort from the Ashore Ships Maintenance Manager and the Naval Supervisory Authority (NSA)). They have the responsibility to accomplish maintenance, repair and modernization work within available financial resources while balancing operational and technical risk.

b. The Ashore Ship's Maintenance Manager shall consider all maintenance availability opportunities when screening work, and where possible, pull maintenance to the left (i.e., into CMAVs or WOOs) such that the depot-level work package in CNO availabilities may be reduced. The effective utilization of the entire Maintenance Continuum is critical to accomplishing work in a timely manner and limiting the duration of CNO availability periods. Determination includes balancing operational schedule, material readiness requirements, on-time availability completion, and cost concerns to maximize maintenance productivity (material readiness vs. related maintenance cost).

c. All work screened by the Ashore Ship's Maintenance Manager to be accomplished aboard ship will be electronically visible to the NSA. Work assigned to the NSA will be tasked following Ashore Ship's Maintenance Manager brokering determination. TYCOM approval is required if the initial brokering determination needs to be changed.

4.5.2 Screening and Brokering. Although they may appear to be accomplished simultaneously, screening and brokering are actually two distinct processes.

a. Screening. Determines and assigns the work candidate to the right time period and maintenance availability. Determination includes balancing operational schedule, material readiness requirements and cost concerns to maximize maintenance productivity (material readiness vs. related maintenance cost).

b. Brokering. Determines and tasks the right activity to perform the work based on business case analysis, material availability, experience, tool requirements, personnel requirements, special considerations (Environmental, Health and Safety) and capacity.

4.5.3 Key Data.

a. The validated work candidate contains the following key data elements to aid in the screening and brokering process:

(1) Configuration Item (maintenance object) identification.

(2) Symptom (2-Kilo - Block 35).

(3) Expected scope of preventive, corrective and alterative maintenance (2-Kilo - Block 35).

(4) Required Completion Date.

(5) Level of Maintenance (TYCOM Code 1, 2, 3).

(6) Identification of a Master Spec Catalog item (pre-planning data).

(7) Priority (Figure of Merit).

b. All 2-Kilos in the Master File should be screened and brokered to a maintenance availability within eight days after being uploaded from the Shipboard File.

c. Work candidates will be brokered to the appropriate maintenance activity with the capability and capacity to accomplish the work during the required timeframe. When practicable, Fleet Maintenance Activity capacity will be utilized first.

d. Available capacity will be judged after applying MFOM and Deadline Date.

e. The cause-and-effect relationship between screening and brokering must be exercised to maximize maintenance productivity. This may require negotiation with the ship, maintenance activity, or both, to adjust the Deadline Date.

f. Other considerations for screening and brokering:

(1) Synergistic relationship between work candidates exist.

(2) Splitting responsibility.

(3) Third party access.

(4) Port loading.

(5) RMC Production Department training requirements.

4.5.4 Guidelines.

a. Validating, screening and brokering will be accomplished continuously using the Maintenance Continuum strategy to depressurize and de-risk our CNO avails and maximize Fleet Readiness. Once work has been rescheduled to an appropriate maintenance period, it should be completed in that maintenance availability to the maximum extent. The deferral of work from this scheduled maintenance period requires TYCOM concurrence to de-risk the CNO availability work package.

b. All work will be screened to an availability created and numbered per the business rules in Appendix A.

c. Work candidates will be screened to the following type of availabilities: CNO, Continuous Maintenance (CM), emergent or unfunded. No other type of availability will be used.

(1) CNO Availability. The work candidate is best performed during the scheduled CNO availability. These work candidates include major Ship Alterations and repairs that require support services and coordination.

(2) CMAV. Based on ship availability, priority of the job, business case analysis, periodicity or other consideration, the maintenance should be performed during a scheduled CMAV or during a window of opportunity permitted by ship's schedule.

(3) Emergent Availability. Emergent work is performed at greater cost than work planned and completed in other availabilities. The criteria to be used to qualify work as emergent is provided in TYCOM business rules.

(4) Unfunded Availability. This availability is reserved for work candidates, which should be shown as backlog or are of such low priority they are unlikely ever to be accomplished.

d. Brokering must follow these requirements:

(1) Work candidates for technical assistance, assessment or inspection will be brokered to the RMC Fleet Maintenance Activity or another technical activity.

(2) Work candidates will be brokered to the lowest level of maintenance activity, filling Fleet Maintenance Activity capacity first, based on the following criteria:

(a) Material availability.

(b) Capability:

1 Experience.

2 Available Production Resource Tools.

3 Available qualified and certified personnel.

4 Ability to comply with Environmental, Health and Safety regulations.

(c) Work center capacity.

(d) Funding.

4.5.5 Additional Requirements for Scheduled Mandatory Tasks Pushed by CMP. Since mandatory tasks pushed to the CSMP by the CMP are directed by proper Technical Authority, further screening and brokering restrictions apply.

a. Certain fields on mandatory tasks cannot be changed, including job summary, problem description, recommended solution, deadline date and maintenance level.

b. Mandatory tasks must be accomplished by an off-ship maintenance activity, not by Ship's Force. Organizational Level requirements are scheduled by Planned Maintenance System (PMS), not by CMP.

c. Mandatory tasks cannot be cancelled or passed to history by the Maintenance Team, or customer completed without being screened to an availability. If cancellation is requested, the CMP item must be adjudicated by proper Technical Authority and approved for cancellation as dictated in paragraph 4.3.3.

d. Mandatory tasks must be screened to a defined maintenance period instead of to the yearlong CM availability. When equipment condition requirement or other scheduling problems make it impractical to accomplish the mandatory task, the yearlong CM availability may be used for non-depot mandatory tasks. However, mandatory tasks screened to a CM availability will be considered to be improperly deferred after the mandatory tasks deadline date without consideration of the availability end date (see paragraph 4.5.5).

e. Although mandatory tasks may not be screened directly to an emergent maintenance period due to proper funding accountability, opening and charging mandatory tasks and other repairs to a concurrent availability to take advantage of the timeframe in accordance with the Maintenance Continuum strategy is permissible and encouraged.

f. If the mandatory task is screened to the unfunded availability or to an availability that begins more than 90 days after the mandatory task's deadline date, a "notification" is triggered by the Cancellation Deferral Notification System (CDNS) to notify the appropriate Technical Authority and a Departure From Specification (DFS) may be required. The Ashore Ship's Maintenance Manager comments will be reviewed, and the Technical Authority will either recommend approval or disapproval of the DFS. The Ashore Ship's Maintenance Manager must then rescreen the mandatory tasks to an appropriate availability following the guidance provided in the DFS. This functionality is referred to as the "CDNS Process".

(1) The Ashore Ship's Maintenance Manager may challenge whether the mandatory tasks should be accomplished (as opposed to not accomplished until after the deadline date). The task should be screened to the unfunded availability and comments entered. Depending on whether the CDNS notification is administrative or technical, the mandatory tasks will be adjudicated in the following manner:

NOTE: THE SUBSTITUTED WORK CANDIDATE WILL BE SUBJECT TO THE SAME PUSHED TASK RESTRICTIONS DESCRIBED IN THIS SECTION.

(a) Administrative: If the intent of the task was completed since the Last Accomplished Date by a non-CMP work candidate, provide that Job Control Number in the comment field. If the Planning Activity Engineer agrees that the intent of the task was met by the non-CMP work candidate, the Planning Activity Engineer will cancel the pushed mandatory tasks from the CSMP. If the intent of the task is covered by a non-CMP work candidate that is currently open and in planning or execution, the Planning Activity Engineer will substitute the pushed

mandatory tasks with the non-CMP work candidate and cancel the pushed mandatory tasks from the CSMP. If the mandatory tasks cannot be accomplished because the component or system no longer exists on the ship, the Planning Activity Engineer will cancel the pushed mandatory tasks from the CSMP and update the configuration records. For all administrative notifications, if the Planning Activity Engineer does not agree with the TYCOM Maintenance Program Manager's comments, the CDNS notification will be forwarded to the SDM for resolution.

(b) Technical: The Ashore Ship's Maintenance Manager can technically challenge pushed mandatory tasks using CDNS. Reasons for technically challenging mandatory tasks include non-modernization configuration change, permanent or temporary DFS exists, or authorized modernization upgrade to equipment. If the Planning Activity or SDM disapproves the CDNS notification, an e-mail will be sent to the Ashore Ship's Maintenance Manager providing justification. All technical challenges will be reviewed by the Planning Activity or SDM for resolution.

(2) If the Ashore Ship's Maintenance Manager determines that the mandatory tasks should be accomplished beyond the due date, the task should be screened to the recommended availability and comments entered. Reasons for deferring a mandatory task past its due date include: a temporary DFS exists making the task unnecessary before the due date, lack of an appropriate maintenance availability by the due date, unable to set required assessment conditions because of a related casualty or other issue, lack of capability or capacity to accomplish the mandatory tasks by due date, etc. Deadline challenges must be documented using the CDNS Process and must be reviewed and approved by the Planning Activity and a DFS may be required.

g. CMP push tasks must be accomplished within required periodicity or approval for deferral in the CDNS Process by NAVSEA Technical Authority. Ashore Ship's Maintenance Managers, RMCs and TYCOMs should resolve these mandatory task deferrals promptly. CMP push tasks can be addressed using a DFS or the CDNS Process. Deferred CMP push task delays are categorized as:

(1) Open and overdue. Often, CMP push tasks are screened to an appropriate availability but are not executed by their deadline dates. Sometimes, task deferrals are approved through the CDNS Process but then are subsequently moved to a later availability without further Planning Activity or SDM approval. Open and overdue jobs are particularly troublesome because they are now past the deadline date and do not have deferral approval from Technical Authority via a DFS or the CDNS Process. Specific types of open and overdue CMP push tasks jobs include:

(a) Job is open, screened to a yearlong CM availability and past its deadline date.

(b) Job is open, screened to an acceptable numbered availability (one that starts no later than 90 days after the deadline date or one approved in the CDNS Process by the Planning Activity or SDM).

(c) Job is open, unscreened and past its deadline date.

(2) Overturned and not rescreened. When a mandatory task is challenged by the Ashore Ship's Maintenance Manager via DFS or the CDNS Process, but that challenge is overturned by Technical Authority, the Ashore Ship's Maintenance Manager receives an e-mail stating that the job must be rescreened to an appropriate availability for accomplishment. Jobs should be rescreened to an appropriate availability within 30 days after the Ashore Ship's Maintenance Manager is made aware of the ruling.

h. Deferral notifications approved by the Planning Activity or SDM are approved for the availability to which the mandatory task was screened when the mandatory task triggered a notification. If a mandatory task is subsequently rescreened to a later availability, the approval is removed and the screening action must be acted on by the Planning Activity or SDM again.

i. Non-CMP push task A branded Mandatory Technical Requirements will be managed in VSB system by the Ashore Ships Maintenance Manager for screening and brokering in the same manner as CMP push tasks, as described in other sections of paragraph 4.5.5 in order to report close out data from NMD to VSB.

4.6 ASSESSMENTS.

4.6.1 Maintenance Team.

a. All material condition assessments, including tasks for Combat Systems Command, Control, Communications and Computer Readiness Assessments or Total Ship's Readiness Assessment, must be derived from the CMP. Scheduled condition assessments have been validated by an approved Reliability Centered Maintenance analysis to be applicable and effective, and are pushed by the CMP system to the CSMP shore file for the Ashore Ship's Maintenance Manager action, based on the ship's last accomplished date and task periodicity. Unscheduled material condition assessments are not, without further evidence of need, considered effective and are thereby not pushed into the CSMP shore file, but can be pulled from the CMP by the Ashore Ship's Maintenance Manager or their representative if there is evidence of need (such as degraded performance, errors, or other indication of problems). Scheduled tasks can also be pulled if circumstances warrant, and the Last Accomplished Date will be properly updated. The Ashore Ship's Maintenance Manager with help from the Maintenance Team must review all 2-Kilos pushed from the CMP system just as for any other off-ship 2-Kilo, and broker to the appropriate assessing activity.

b. Only assessment tasks in the CMP or assessment procedures in the PMS database may be used for assessments. Information addressing assessment requirements found not to be included within the CMP or PMS databases, such as local practices, In-Service Engineering Activity unique items, RMC practices, etc., must be forwarded using the Technical Feedback Report for review and approval as an acceptable addition to the

CMP and PMS databases. If not approved, these practices must not be used by any activity.

c. The Ashore Ship's Maintenance Manager will make the preliminary determination of the most appropriate source for all off-ship activity work for their assigned ships. Decisions made by the Ashore Ship's Maintenance Manager, with concurrence from the Maintenance Team, must be in compliance with policies in this instruction, reference (a), and guidance provided by the cognizant RMC.

4.6.2 Type Commander. The TYCOM must develop and execute a Memorandum of Agreement per volume II, part I, chapter 3 of this manual with each supporting RMC to define reporting and administrative relationships between the TYCOM and the RMCs.

APPENDIX A

AVAILABILITY CREATION AND NUMBERING

1. Specifying Availabilities. A uniform method of specifying availabilities is an essential part of availability management and data collection. No deviation from these protocols is permitted. An availability is defined as a specified period of time during which maintenance is conducted. Only Type Desk Officers, Type Desk Program Managers, and Ashore Ship's Maintenance Managers are authorized to create availabilities. Availabilities must include all work completed during a specific time period regardless of executing activity. With exception of the emergent availability, availabilities must not overlap and work by every activity (depot, Intermediate Maintenance Activity (IMA), Alteration Installation Team, tech assist and Ship's Force) must be entered into the same availability. Availability numbers are not to be used as a method of segregating the executing activity or the level of work performed.

2. Availability Numbering. The availability number consists of the first four digits -- the availability category code and the availability serial number. The Funding Activity Code (FAC) is used to identify the source of funding for any job and is entered at the time of job screening and authorization. The availability numbering system must consist of:

   a. A one-digit availability category code.

   b. A three-digit availability serial number.

   c. A two-digit funding activity code.

3. Availability Category Code. This code is the first character of the four-digit availability number. These codes are used by all TYCOMs and, therefore, not all codes are applicable to all ships.

CODE	TITLE
B	DOCKING SELECTED RESTRICTED AVAILABILITY
C	SELECTED RESTRICTED AVAILABILITY
D	COMPLEX OVERHAUL
E	EXTENDED INCREMENTAL SELECTED RESTRICTED AVAILABILITY
G	EXTENDED SELECTED RESTRICTED AVAILABILITY
H	DOCKING INCREMENTAL SELECTED RESTRICTED AVAILABILITY
J	INCREMENTAL SELECTED RESTRICTED AVAILABILITY
K	INTERIM OR EMERGENT DRY DOCK
L	DOCKING PHASED MAINTENANCE AVAILABILITY
N	INACTIVATION AVAILABILITY
O	POST DELIVERY AVAILABILITY
P	CMAV (YEAR LONG CM)
Q	POST SHAKEDOWN AVAILABILITY
R	REGULAR OVERHAUL
V	PLANNED INCREMENTAL AVAILABILITY

X	TECHNICAL AVAILABILITY AND ASSESSMENT
Z	VOYAGE REPAIRS (PER TITLE X) OR STRIKE FORCE INTERMEDIATE MAINTENANCE ACTIVITY
1	DOCKING PLANNED INCREMENTAL AVAILABILITY (DPIA1)
2	DOCKING PLANNED INCREMENTAL AVAILABILITY (DPIA2)
3	DOCKING PLANNED INCREMENTAL AVAILABILITY (DPIA3)
4	PLANNED INCREMENTAL AVAILABILITY (PIA1)
5	PLANNED INCREMENTAL AVAILABILITY (PIA2)
6	PLANNED INCREMENTAL AVAILABILITY (PIA3)
7	REFUELING COMPLEX OVERHAUL

4. Availability Serial Number. The availability serial number is the same three-character serial field currently used in Regional Maintenance Automated Information System (RMAIS). This entry is made in the "serial" field of the maintenance data system availability editor window. There are five authorized serial codes used to designate availabilities.

   a. Alongside Availability (XAZ). The XAZ availability is intended to be a planned CM availability, such as a CMAV, over a specified period of time determined by the ship's operational schedule. The TYCOM will schedule the availability during the normal fleet scheduling process. A nominal time frame for availability length is no less than two weeks and no more than six weeks. A ship is not to get underway during any period of the availability. There is no limit to the number of XAZ availabilities that may be scheduled during a year. The first character indicates Fiscal Year (FY) at availability start. The last character indicates a specific XAZ availability during that FY. If the number of availabilities in a single FY results in the Z character being greater than nine, alphabetical characters will then be used beginning with "A". Sequential serial number assignment is desired, but the occasion may arise when a significant schedule change allows for a new availability to be scheduled prior to an existing availability. In this unique case, an availability may be created using an out of sequence serial number. This eliminates the need to move jobs that are already screened in RMAIS and NMD and additional maintenance data systems. Availabilities may be scheduled in RMAIS for future years using notional time frames and the exact dates can be adjusted later once a more precise schedule is issued. All executing activities may be scheduled to work during this availability. If a job scheduled for completion is not started, then it must be moved into another availability and the availability closed on the scheduled completion date. The fact that the job was not completed will be reported in the availability completion report.

   b. CNO Scheduled Availability (XCZ). The XCZ availability is the scheduled CNO availability published in the OPNAV 4700 Notice. These availabilities are normally conducted in a shipyard under the direct supervision of the NSA. All major modernization programs will be scheduled for CNO availabilities. Other executing activities may conduct work during these availabilities pursuant to the contractual limits imposed by the shipyard and the Naval Supervisory Authority. Notional CNO availabilities may be established for years beyond the scope of the Office of the Chief of Naval Operations (OPNAV) Notice to support long-term work item placement.

The first character indicates FY at availability start. The last character indicates a specific XCZ availability during that FY. Software programs require that only one contract solicitation may be recorded against a given availability, therefore the situation may arise when two availabilities must be simultaneously executed. In this case, the same type of availability will be used and the next sequential number assigned.

c. Yearlong CMAV (XCM). The XCM availability is a yearlong availability for the scheduling and completion of work items that are not accomplished during any other scheduled availability. A job is not to be kept in the XCM availability if it is accomplished in an XCZ or XAZ availability. The first character indicates the FY.

d. Yearlong Emergent Work Availability (XEM). The XEM availability is for the completion of emergent work items as defined in Volume VI, Chapter 31 of this manual. Jobs screened to an XEM availability are paid for using emergent work funding. Items assigned to this availability will not be moved into any other availability and will remain in the XEM availability. Emergent work will not be conducted in a XCZ availability. Emergent work that is discovered during a CNO availability will be added to the availability and paid for using CM funding, for example, work required to support light off or sea trials. The first character indicates the FY.

e. Multi-year Unfunded (UNF) availability. The UNF availability is for those items for which there is no realistic expectation that they will be funded even in the out-years but must be maintained for material history purposes. It is also for those jobs with a Maintenance Figure of Merit such that there is a low probability of accomplishment, but the job remains valid. These jobs will be screened to the UNF availability but will not be authorized in RMAIS.

5. Availability Category Code. The codes in this section are authorized for use on all Aircraft Carrier availabilities.

CODE	AVAILABILITY ID	EXAMPLE
P	NXX	N09 - ORIGINATING WORK CENTER FOR 2009 CHANGES YEARLY CALENDAR.
P	990	990 - JCN REQUIRES SCD TO BE SUBMITTED. STATIC AVAILABILITY CODE.
P	991	991 - SCD WRITTEN AND SUBMITTED AWAITING APPROVAL. STATIC AVAILABILITY CODE.
P	992	992 - TYCOM HOLD FOR REVIEW OR INVESTIGATION. STATIC AVAILABILITY CODE.
P	REJ	REJ - REJECTED BACK TO SHIP FOR SF ACTION. ACCOMPANIED WITH TYCOM REMARKS. STATIC AVAILABILITY CODE.

CODE	AVAILABILITY ID	EXAMPLE
P	N43	N43 - SHIP ASSIGNED (SMM OFFICE) TA1, 2, 3. TA4 REQUESTING ACCOMPLISHMENT DURING CNO AVAILABILITY. STATIC AVAILABILITY CODE.
P	BDF	BDF - DEFERRED BASELINE JCN FOR REASSIGNMENT AT A LATER DATE. STATIC AVAILABILITY CODE.
P	CIS	COMMERCIAL INDUSTRIAL SERVICES APPROVED BY TYCOM CNAP SPECIFIC
P	DEF	NON-BWAP JCN DEFERRED BY TYCOM FROM CNO AVAILABILITY WORK PACKAGE
P	DIQ	COMMERCIAL PRESERVATION WORK APPROVED BY TYCOM - INDEFINITE DELIVERY, INDEFINITE QUANTITY CNAP SPECIFIC
P	MAC	COMMERCIAL DECK WORK APPROVED BY TYCOM - MULTIPLY AWARD CONTRACT CNAP SPECIFIC
S	SXX	S09 - SHIP SELF AVAILABILITY 2009 CHANGES YEARLY CALENDAR.
U	UNF	UNF - UNFUNDED. STATIC AVAILABILITY CODE.
X	XX	Z – SEQUENTIAL NUMBER YEAR

6. Funding Activity Code. The funding activity code (FAC) is a two-digit exportable field in RMAIS. A FAC must be entered for every non-TYCOM funded 2-Kilo prior to being screened and brokered. Any member of the maintenance team authorized to screen work may enter a FAC. The FAC table is NAVSEA controlled. The approved FACs are:

CODE	TITLE
AA	TYCOM CM NON-NUCLEAR
AB	TYCOM EM NON-NUCLEAR
AC	TYCOM DIVING SERVICES
AD	TYCOM FLEET ALTERATION (NON-NUCLEAR)
AE	TYCOM FUNDED SEMAT (ETC) SHIP'S FORCE ASSISTANCE
AF	TYCOM NUCLEAR MAINTENANCE OR REPAIRS
AG	TYCOM NUCLEAR ALTERATION
AH	TYCOM FUNDED CNO SCHEDULED AVAILABILITY MAINTENANCE
BA	NAVSEA NUCLEAR ALTERATION
BB	NAVSEA ORDNANCE ALTERATION (ORDALTS)
BC	NAVSEA NON-NUCLEAR PROGRAM ALTERATION
BD	NAVSEA - UNIQUE - NON-NUCLEAR (INCLUDES ALTERATION DEVELOPMENT, TECHNICAL SUPPORT)

BE	NAVSEA - UNIQUE - NUCLEAR OR REFUELING
BF	NAVAL SHIPYARD MISSION FUNDED
BG	SRF MISSION FUNDED
CA	IMA FUNDED MAINTENANCE
CB	IMA FUNDED FLEET ALTERATION
DA	ADMINISTRATIVE SUPPORT NON-NUCLEAR (PRORATABLE) INCLUDING DSA FUNDED
DB	ADMINISTRATIVE SUPPORT SERVICES NUCLEAR (PRORATABLE)
EA	SHIP'S FORCE MAINTENANCE OR REPAIRS
EB	SHIP'S FORCE - SELF HELP HABITABILITY
FA	TECHNICAL SUPPORT: NAVWAR SSC, RMC (MISSION FUNDED)
FB	TECHNICAL SUPPORT: NAVWAR (SEPARATE FUNDING ONLY)
GA	VRT-N, VRT-M, ALRE
HA	NAVAIR (CAFSU, NAWC, FAA, ASIR)
HB	NAEC LAKEHURST NJ
HC	NAWC CHINA LAKE
HD	NAWC PT MUGU
HE	NAWC PAX RIVER
HF	NAWCAD ST INIGOES MD
IA	NSWCCD
IB	NSWCPD
IC	NSWCPHD
ID	NSWC CRANE
IE	NSWC PANAMA CITY
IF	NSWC NEWPORT
IG	NSWC KEYPORT
IH	NAVSURFWARCENIHEODTECHDIV DET PICATINNY
JA	NAVWAR (ALTERATION INSTALLATION TEAM)
KA	ESU
OO	OTHER - EXPLAIN IN REMARKS
VV	VISITING SHIP SUPPORT (FOREIGN NAVY)

7. Example Cases. The FAC is designed to be applied from a user perspective. For example, if Naval Surface Warfare Center, Philadelphia Division (NSWCPD) plans to use an Alteration Installation Team to install an alteration and they are funded for the installation, then the maintenance team would select the FAC for NSWCPD. The maintenance team is not expected to know if it was OPNAV or the TYCOM that funded NSWCPD, this is beyond their level of knowledge, and those agencies are expected to track their own funds. In this case, a FAC of "IB" would be applied. The following table provides examples of how the various codes can be applied to common availabilities:

Availability Category	Availability Serial	Fund Activity Code
K, T, X, Z	XAZ	AA, AC, AD, AE, BB, BC, FA, FB, VV, OO
B, C, H, J, K, N, O, Q, R	XCZ	AA, AC, AD, AE, AH, BB, BC, BF, DA, FA, FB, OO (Note 1)
P	XCM	AA, AC, AD, FA, FB, OO (Note 2)
P	XEM	AB, BF, BG, VV, OO (Note 3)

NOTES

NOTE 1: The primary fund activity code is AH and a common additional code is BC. In Atlantic Fleet, any IMA work would use the AA code, Pacific Fleet ships would use CA for IMA work performed during this availability.

NOTE 2: Primary FAC is AA for TYCOM funded maintenance.

NOTE 3: Primary FAC is AB indicating ERATA expenditure. In some cases, BF or BG may be used as dictated by each region.

Examples:

a. A ship entering a scheduled CNO docking availability in FY07 will have an availability number consisting of a "B" for the Availability Category Code and the serial will use the XCZ format. The full availability number will be B7C1 as this will be the first CNO availability for this ship in FY07. The "B" is entered in its own field in RMAIS using the availability drop down menu. The three-digit serial is manually entered in the "serial" data field of the RMAIS window.

b. A ship entering an alongside three-week CM availability will use "A" as the Availability Category and the XAZ format for the serial. So the third alongside CM availability for FY06 will be an A6A3 availability. Again, the first digit and the last three digits are entered in separate RMAIS entry fields. The FAC is applied on a job-by-job basis and is not tied to the availability number. In a single availability, there can be several executing activities and multiple FACs across all the jobs screened to the availability. For example, Job EA04-1111 might be a pump repair screened to Supervisor of Shipbuilding and paid out of TYCOM CM funds so that job will have "AA" FAC assigned when it is screened to the A6A3 availability.

APPENDIX B

NESD CUSTOMER SERVICE

NESD is the Navy point of entry for technical support and should be the first source of support utilized for technical assistance. NESD provides Fleet users with a centralized source for receiving and routing support requests and is available 24/7/365. NESD issues a tracking number to the requester, coordinates assistance with the appropriate Subject Matter Experts, and monitors the issue until it is successfully resolved.

The NESD Digital Workplace (DWP) is the end user-facing Self-Service (Tier 0) solution to guide users to resolve issues on their own by utilizing Knowledge Articles and is the preferred method of trouble ticket entry. This platform enables user self-sufficiency, multiple communication channels – email, chat, and web form, and is simple to use. Follow the steps below to submit a trouble ticket:

Contact: Navy Enterprise Service Desk

DWP: https://nesd-dwp.onbmc.mil (Search Knowledge Article/Ask for help)

Chat: https://nesd-dwp.onbmc.mil *(Select Chat with agent)*

Email: nesd@nesd-mail.onbmc.mil

Phone: 1-833-NESDNOW (637-3669)

DSN: NESD main menu is: 647-6373

SIPR Email Support: nesd.fct@navy.smil.mil

****Note: Do not submit classified or sensitive information on Unclassified submission****

E_2 Process Flowchart Firm Fixed Price CMAV or Emergency Availability
E_3 Process Flowchart Firm Fixed Price PSIA CNO Availability
E_4 Process Flowchart Firm Fixed Price PSIA CMAV Availability

5.1 PURPOSE. To establish ship maintenance work items and specification package preparation procedures, milestones and business rules. These rules apply to Regional Maintenance Centers (RMC), Commander, Naval Air Forces Atlantic; Commander, Naval Air Forces Pacific; Systems Commanders (sponsoring Program Alterations) and other Alteration Installation Team (AIT) Sponsors. Responsibilities in Work Package Prepartions:

a. The Ship Program Manager (SPM) is responsible for the planning, budgeting and execution of the approved Program Ship Modernization.

b. The TYCOM is responsible for the planning, budgeting and execution of the approved Fleet Ship Modernization, ship repair and ship maintenance.

c. The Ashore Ship's Maintenance Manager is responsible for the execution of each ship's Maintenance and Modernization Business Plan (MMBP) and the division of the prorate percentages between Fleet and Program based on the business rules herein.

5.2 SCOPE. The goal of the effort is to deliver effective maintenance and modernization while capturing efficiencies. The cost avoidance can then be put to use in accomplishing additional maintenance. This chapter introduces work package preparation improvements that leverage existing planning information and process capabilities to make final work package content decisions closer to the time work is actually scheduled to begin. This will significantly reduce the churn in the work package content and support timely delivery of all work desired for the Chief of Naval Operations (CNO) availability. This includes the Depot Level (D-Level) repair and modernization package, Ship's Force, Intermediate Maintenance Activity and AIT modernization work. Effective financial management of ship maintenance and modernization depends upon use of return cost data in planning for future installations. Upon completion of

each availability, the participants must use the availability completion report return cost data to update Navy Data Environment modernization cost estimates and the next fiscal year business plan. Return costs for repair work will also be used to populate and validate costs estimates that are resident in the Master Specification catalog. A disciplined prorate distribution process, coupled with updates to the Navy Data Environment database and the business plan will help modernization financial planning and reduce cost surprises both before and during availability execution.

5.3 EXECUTING ACTIVITY PLANNING. Work Package Preparation process improvements include long-term contractual relationships and Private Sector Industrial Activity (PSIA) contracts, with public executing activities and private ship repair yards. The Executing Activity (EA) is the public or private enterprise that is assigned or awarded the responsibility for accomplishing the actual production work to effect modernization and repairs. For the most part, the EAs will perform the planning for accomplishment of the work that they will execute. All work, whether CNO availability, continuous maintenance or emergent work will have a Ship Specification Package (SSP) prepared in the appropriate maintenance database work planning and execution tool. The exception to EA planning is first of ship class ship alteration advance planning (drawing preparation and material ordering). This will be performed by the assigned planning yard. The EA will plan subsequent ship alteration installations provided they are not of such a complex nature that it is determined that these should be assigned to the planning yard. In most cases, as part of the planning effort, the EA will prepare the actual work specification (accomplished today in the Navy Maintenance Database (NMD) for D-Level or in another maintenance Automated Information System for Intermediate Level (I-Level)). The exceptions to the EA work item preparation are that the government may elect to accomplish work item development to provide an avenue to train government personnel in the critical skill sets used during the work item development process or to provide surge capabilities for the EA during peak work loading.

5.4 MASTER SPECIFICATION CATALOG.

5.4.1 Work Package Preparation. The Work Package Preparation process will leverage the large library of planning documents that exist today and are currently stored in Master Specification Catalogs (MSC). The MSCs provide a ready resource of technically correct and current work items that are universally accessible for use. The vast majority of these documents can be reused for planning future repair actions. The primary purpose of the MSC is to reduce maintenance costs by:

a. Reducing planning efforts.

b. Identifying and promoting best practices.

c. Effectively managing lessons learned.

d. Minimizing delays associated with maintenance planning.

e. Providing a cost estimate for the work item.

5.4.2 Use of the Master Specification Catalog. Use of the MSC by Maintenance Teams and Planners at maintenance activities is mandatory. Processes are established to allow all users to recommend content and provide feedback regarding the quality of specifications and templates. The D-Level MSC can be accessed through the NMD application. The D-Level catalog consists

of master specifications, specifications used directly without any modification, and templates that can be used with minor modifications. NMD has been modified to capture the contractors' planning estimates and actual return costs. This allows standard costs to be developed for the specifications residing in MSC. The D-Level MSC is maintained by the Master Specification Catalog Maintenance Office (MSCMO) at Carrier Planning Activity (CPA) , who is assigned to standardize all templates to the maximum extent possible to ensure the specifications that reside there are technically correct and reflect the most current guidance. Appendix A provides the general guidelines for template preparation, processing and maintenance. The MSCMO will incorporate the directives of Naval Sea Systems Command (NAVSEA) Standard Specification for Ship Repair and Alteration Committee (SSRAC) accessed from the NAVSEA SSRAC Web site: https://www.navsea.navy.mil/Home/RMC/CNRMC/Our-Programs/SSRAC/. The intent is to standardize templates for all ship classes at each geographic location. The MSCMO relies on the expertise of the author for technical content of templates, although when processing a template, the MSCMO will question areas of omission and scrutinize non-conformance to NAVSEA SSRAC. CPA also acts as the clearinghouse for the nomination or acceptance of additional specifications to the MSC.

5.4.3 Central Planning Activities. Central management is used to ensure quality and consistency of the catalog content and a Central Planning Activity is assigned for each branch to carry out central management responsibilities. For the NMD branch, the Central Planning Activity is the MSC Maintenance Office and is functionally part of CPA. For the I-Level Planning, the Central Planning Activity is the Southwest Regional Maintenance Center. The Central Planning Activity responsibilities include:

a. Ensuring MSC content adheres to a standard format.

b. Enforcing technical authority compliance for MSC content.

c. Ensuring reference lists cited by MSC content are current.

d. Ensuring that documents stored in the MSC are current and technically correct.

e. Managing the review process for proposed MSC documents.

f. Managing the MSC document change process.

g. Addition of new content to the MSC.

h. Deletion of content from the MSC.

i. Analysis of feedback and metrics; monitor and maintain MSC content quality.

j. Monitoring MSC business rule compliance.

k. Providing decision quality data to oversight commands and committees.

l. Provide first level support for questions related to MSC use or content.

m. Screening requests for access to the MSC prior to submittal to the catalog user and Information Technology management offices.

Each Central Planning Activity has established detailed processes to accomplish the responsibilities. These processes are contained in Central Planning Activity process or instruction manuals.

5.4.4 General Process. The general process for using the MSC is discussed in this paragraph. While details and terminology will vary from system to system, the basic workflow and responsibilities are common to both systems.

a. The ship identifies a problem and requests a maintenance action via the Ship's Maintenance Action Form OPNAV 4790/2K, using the ship's Maintenance Data System.

b. The request is transferred to the fleet brokering system - Validation, Screening and Brokering (VSB).

c. The Maintenance Team screens the request, determines maintenance level, and enters the appropriate branch of the MSC to determine if there is a work item that accomplishes the scope of work required by the work request.

d. If there is a work item, the OPNAV 4790/2K is annotated with the work item identification information prior to brokering the OPNAV 4790/2K.

e. The OPNAV 4790/2K is brokered to a maintenance activity.

f. The maintenance activity receives the work request and checks for MSC information. If there is MSC information that identifies a master specification, or if the maintenance activity identifies an appropriate master specification, the maintenance activity uses the specified pre-planned MSC specification and adds the new specification to the work package without additional planning review.

g. If there is MSC information that identifies a template, or if the maintenance activity identifies an appropriate template, the maintenance activity uses the specified pre-planned MSC template, makes the required changes, performs the normal planning reviews, and then adds the resulting work item to the work package.

h. If there is no catalog identification information, the maintenance activity verifies that there is no appropriate master or template. After verification, the activity plans the work using the established planning and planning review processes. The maintenance activity also forwards the new work item to the MSC Maintenance Office and local standards personnel as a proposed template.

i. The work in the work package is released at the appropriate time and sent through established work integration or contracting processes.

5.4.5 Common Business Rules. There are seven business rules that are common to both branches of the MSC. These business rules form the fundamental base for the catalog. Consequently, Central Planning Activity processes, as well as programming of the MSC software systems, are designed to support these business rules. Additionally, enforcement of the rules is required to attain MSC goals. Metrics and review processes have been established to support compliance monitoring and reporting. The following business rules apply to both branches of the MSC.

NOTE: NAVSEA "STANDARD ITEMS" ARE NON-DEVIATIONAL.

NOTE: CONTRACTS DICTATE THAT "TEMPLATES" MAY BE CHANGED OR MODIFIED. CHANGES MUST BE FED BACK TO THE MSCMO AS APPROPRIATE.

a. NAVSEA Standard Items must be used whenever they fulfill the requirements of a specific maintenance task.

b. Standard Items and templates must be the preferred method of planning for both public and private Lead Maintenance Activities (LMA).

c. NAVSEA Standard Items will be used without change.

d. NAVSEA Standard Items and templates must be centrally filed and maintained by a Central Planning Activity. Only the Central Planning Activity will be allowed to store, delete or change the status of a NAVSEA Standard Item or template stored in the central library.

e. MSC task lists will adhere to a specific format. The format is defined in:

(1) NAVSEA SSRAC web site.

(2) Enclosure (1) of the I-Level MSC process manual for I-Level specifications and templates.

f. NAVSEA Standard Items are reviewed prior to approval for use. No additional planning review is required prior to use of a Standard Item to accomplish a maintenance task.

g. Although NAVSEA Standard Items do not require planning review, they are subject to established release, scheduling and integration planning processes.

5.5 MILESTONES.

5.5.1 Package Preparation Milestones. These milestones have been developed that support the continuous maintenance philosophy. These milestones are designed to allow a more continuous flow of work to create a work package. The milestones now require that only 50% of the work, measured by 50% of the budgeted funds for repair work during the availability being committed, be "locked" at the 50% lock per the appropriate milestones in Appendix B. It is expected that this work will be repair work and major industrial work that is generally known well before the 50% lock. Every effort should be made to include unscheduled and unaccomplished mandatory Class Maintenance Plan work items in the ship's Baseline Availability Work Package (BAWP) in the work package. Once work is placed in the package, and funding for that work is committed, the EA is authorized to plan that work, order material and expend other funds as necessary to execute the work. It should be the rare exception that work is ever removed from a work package. TYCOM will obtain technical adjudication for any BAWP items prior to the removal of any BAWP item from the work package. It is extremely important that the right work at the right time is placed in the work package. Operational commitments, port loading or other reasons may require modification to availability schedules and milestones may need to be adjusted accordingly.

a. Milestones that are agreed upon by TYCOM and Program Office at the Advance Planning to Planning Event will be included in the NSA's Naval Message of the Joint Fleet Maintenance Manual (JFMM) tailored milestones released within five working days of the event.

b. Availabilities that are within the A-360 window may miss milestones due to the compressed timeline, however, every effort should be made to accommodate those

milestones lost to compression. There should be no attempt to compress milestones of an availability that is already inside of the A-90 date. The TYCOM, NSA, affected Program Office and LMA will agree on the compressed milestone timeline and enter a Memorandum of Agreement for the record dictating the agreement. Additionally, there may be instances where other factors create a need to make milestone changes after A-360 that are not related to compression issues. In these cases, the process to approve milestone changes remains the same as the compressed timelines. The following steps must be adhered to for all milestone changes after A-360:

(1) The Contracting officer and the Project Team should be notified immediately. Additionally, should the Primary Contracting Officer or Administrative Contracting Officer make any changes, C300 (including the Program Manager) should be notified immediately.

(2) Adjustment of milestones will be addressed and adjudicated by TYCOM, NSA, affected Program Office and LMA.

(3) Where availability compression or a milestone change after A-360 is deemed necessary, all efforts will be made to preserve the 100% lock date to meet planning and estimating requirements to support the on-time release of the proposal and contract award or the Final Technical Analysis Report (TAR) and contract definitization. If it is determined the 100% lock date must move, TYCOM and affected Program Office concurrence is required and the NSA must develop a mitigation plan to ensure on time contract award or definitization. If milestone changes cause a loss of either the 50% or 80% lock milestone, the 100% lock date must be adjusted to 15 days earlier in order to accommodate an excess of scope, plan and estimate requirements. This will aid in completion of Final TAR and contract definitization on their regularly scheduled dates.

(4) TYCOM, NSA, LMA, Program Office sign Memorandum of Agreement identifying the adjusted milestones.

(5) Where applicable, the appropriate package lock date should be met as soon as practical (if lost in the compression) following the change of availability dates. The Class Maintenance Plan BAWP should be used to accommodate this event. Repair items on the Current Ship's Maintenance Project will also be locked based on the highest readiness return on investment (Use Maintenance Figure of Merit screening values where appropriate). For example, if the availability is compressed and the 50% or 80% lock milestones were lost in the compression, they should in turn be met as soon as practical.

(6) All work items should be scoped, estimated and TAR submitted.

(7) In all cases, the Final TAR and definitization milestones must be met.

(8) An Integrated Project Team Development, Integrated Planning Conference and Work Package Execution Review (WPER) must be convened to discuss the integration and execution plans regarding the adjusted work package and accommodate Project Team communications regarding changes. For Carrier

Incremental Availabilities, Integrated Project Team Development and WPER requirements will be per the LMA Executive Agreement Letter.

5.5.2 Committed Work at 80% Lock. The milestones require that 80% of the D-Level work package be committed at 80%, and 100% of the Ship's Force and I-Level work that is planned to be executed during the availability concurrently with the D-Level work be identified. This provides a period of time during which this work can be evaluated and placed in the D-Level package if necessary. Additionally, all AIT support requirements must be identified no later than the 80% lock date.

5.5.3 Committed Work at 100% Lock. One hundred percent of the depot level package must be identified, with the activity accomplishing the planning to complete planning and estimating per the appropriate milestones in Appendix B. The EA will then have 30 days to produce an integrated work schedule that will be reviewed at a WPER. By delaying the final commitment of the last 20% of the D-Level work package until the 100% lock date, there should no longer be any reason to front load "insurance" work. The new entitled work package preparation process will better reflect the most current priority of maintenance that needs to be performed on the ship. These milestones are designed for use by those ships supported with PSIA contracts. Where PSIA contracts are not in effect and no existing Indefinite Delivery, Indefinite Quantity (IDIQ) contracts cover the work contemplated, work packages for Continuous Maintenance Availabilities (CMAV) must be submitted to meet local contracting milestones.

5.5.4 Automated Work Request Screening. By no later than the 100% lock date, the entire D-Level package must have been screened to the appropriate IT System availability by the Ashore Maintenance Manager. The Ashore Maintenance Manager must screen the Automated Work Requests (AWR) based upon the established TYCOM controls and planning budget. The Project Manager will broker the screened work to the planning activity for development of work specifications. No additional AWRs must be brokered for inclusion into the basic proposal after lock date.

a. The 100% package lock is the official milestone to mark identification of 100% of the work requirements for an availability based on the MMBP budget. All work added to or deleted from the package after the 100% lock will be via errata, addendum or inducted as new work via the Request for Contract Change Process.

b. For certain availabilities, the 100% lock date will need to be adjusted to a date which will support timely definitization. This will usually be based upon the total projected budget (all funding sponsors) of the project to be contracted. The RMC and TYCOM must agree upon the change in planning preparation dates. It is anticipated that any change will be made no later than A-360.

c. TYCOM Maintenance Program Manager must screen work using AWR estimates against their Available Controls and budget. Available planning budget is defined as the remaining budget after Long Lead Time Material (LLTM), contractor fees, other work and growth pools are subtracted from controls.

d. The contractor Class C and Independent Government Estimate submission at the 50 and 80 percent milestones are required to ensure that calculations of package build are based on an accurate estimated value.

e. The Project Manager will verify that the planning budget supports the estimated value of the 100% locked work package. If the work package exceeds the planning budget, the Project Manager will notify the funding sponsor(s) of the delta and request additional funds or removal of work from the authorized priority list to get to the budget allocated.

f. On the lock date, the Project Manager will provide the RMC Administrative Contracting Officer with a complete and consolidated list of all AWRs that make up the 100% D-Level work package. The Administrative Contracting Officer will issue the list of AWRs to the PSIA contractor annotating that all AWRs listed constitute the basic work package. The contractor must ensure that all AWRs listed are incorporated in work items, published and included in the proposal through to award. Currently availabilities are not being definitized on time due to the time it takes from package lock. Furthermore, churn in package content after the 100% lock date causes turmoil in the contractor's ability to develop a work package proposal.

5.5.5 Flow Metric. In order to track the progress of creation of the work package, a work package flow metric has been created. This metric will provide the maintenance team a tool to manage their work package preparation progress. It also provides the RMC Commander and the maintenance teams a leading indicator of the manner in which the ship's Maintenance and Modernization Business Plan is being executed.

5.6 CONTINUOUS MAINTENANCE AVAILABILITIES. CMAVs are intended to provide the maintenance team with the flexibility required to do the right maintenance at the right time for the right price. An additional intent of CMAVs is to provide the agility required to support the fleet response plan.

5.6.1 Continuous Maintenance Availability Types. There are two basic types of CMAVs, scheduled (XAZ) and unscheduled (XCM). CMAV schedules will be reviewed at each Planning Board for Maintenance and will be adjusted as ship's operational schedules dictate. Schedule adjustment should be requested by the ship via naval message to the TYCOM, information to the applicable RMC.

5.6.2 Continuous Maintenance Availability Business Rules. The following CMAV business rules have been established to provide guidance for developing work items associated with scheduled and unscheduled repair and modernization availabilities, managing assigned work brokered to both CNO and CMAV availabilities for Firm Fixed Price (FFP) and PSIA contracts, and establishing priorities for the executing activity to accomplish planning and execution of Work Candidates into work items. This enables the Vision of Entitlement to be realized. The Vision of Entitlement requires a somewhat continuous flow of the planned work items to allow for a continual estimating, work item review and cost definitization process.

5.6.2.1 Applicability. This process is applicable to all personnel involved with writing work items for repair and modernization contracts using work items developed and maintained in NMD per this manual, Maintenance and Modernization contracts and NAVSEA Standard Items. The start and stop points of the process are when a Work Candidate is brokered from an appropriate IT system into an availability and the production period of the maintenance availability is completed.

5.6.2.2 Ship Specification Package. The Project Manager, or if required by contract, the contractor's Planning Manager on behalf of the Maintenance Team must:

a. Establish a SSP within NMD Planning for scheduled and unscheduled CMAVs ((XAZ), (XCM) and (XEM)) and set up the availability in NMD to receive AWRs from VSB electronically per this manual.

b. For each Work Candidate that is brokered to the availability in NMD, ensure that the planning date, the "Deadline Date" and the "Availability Number" (in which an availability period can be entered) listed on the Work Candidate is correct, and also include a preliminary man-hour and material cost estimate. Work must be planned and estimated (man hours and material cost) with LLTM identified prior to being routed into any NMD execution availability. This planning estimate is necessary to more accurately predict, for a CNO availability, what percent of the package (in dollars), has been authorized at the 50%, 80% and 100% milestones, and for a CMAV (XAZ) and (XCM) availability, will allow the Navy to know if they have adequate funding available in the budget. A minimum of **fourteen (14) calendar days** should be allowed for planning unscheduled (XCM) availabilities before routing a job to an NMD execution availability.

5.6.2.3 Planning. With the creation of an SSP in NMD, the actual Planning start and stop dates for the execution of the work within that SSP will be established. The one exception to this will be the yearlong CMAV, Scheduled or Unscheduled CMAV (XAZ) and (XCM) (XEM) availabilities.

a. All valid maintenance items will have a specification prepared in the NMD Planning module per this manual. All new work will also be written in the planning module of NMD.

b. When a valid maintenance item is ready for brokering, review of the currently scheduled SSP availabilities in NMD Planning will then determine to which SSP the item should be added. All SSPs existing within NMD Planning will have a date established when that package should be "locked" per the advance planning milestones contained in Appendix B. No valid work items can be added to an existing SSP if the current date is past the "lock" milestone date without providing a written detailed description of the rationale used to add it in the "Work Item" comments field.

c. The priorities for the Planning Activity are then established by the next scheduled availability milestone that is coming due per Appendices C and D. This could be a CNO, the next scheduled CMAV (XAZ) or yearlong XCM availability. Process flowcharts appear in Appendices E_1 through E_4. The yearlong XCM SSP availability will be a workload leveling mechanism for the planning activity and the goal would be to have these items brokered, planned, material ordered, funded, scheduled and ready to start work within 14 calendar days prior to start. The valid maintenance items in the XCM SSP availability will become candidates for scheduled CMAVs and unscheduled XCM execution availabilities (windows of opportunity) that are identified on short notice. These planned work items for PSIA contracts will be routed to NMD execution availabilities that branch off of this yearlong NMD XCM planning availability. Re-broker those remaining AWRs at the end of the fiscal year, into the next fiscal year long XCM and scheduled CMAV (XAZ) SSP availability. Refer to

Appendices E_1 through E_4. Refer to Appendix C to assist in determining priority of planning work.

d. If the urgency to accomplish any emergency maintenance repairs does not allow for development of a work item prior to the start of work and a work item does not exist in the MSC, then a work item will be prepared after completion of work to document it within NMD. Route these emergent Work Candidates to the applicable SSP planning availability, which can then be forwarded to the NMD execution availabilities where the emergency maintenance work was executed.

e. The Project Manager will check NMD daily for AWRs received in NMD SSP planning availability, review and validate each AWR to determine scope of work. If the information contained in the AWR is insufficient to write a work item, the Project Manager must coordinate and manage any required ship checks.

f. The RMC will determine who should plan a given availability (other than CNO) based on manpower available either at the PSIA contractor or the Government. (Check Contract Line Item Number verbiage for actual contract requirements.)

5.6.2.4 Planners and Estimators.

5.6.2.4.1 Key Terms. Key Terms as found in the NAVSEA SSRAC.

a. Standard Items: Mandatory and non-deviational. There are two types of Standard Items:

(1) Standard Items.

(2) Local Standard Items.

b. Templates: Work Items that can be modified and used for single or multiple ship classes. There are five types of Templates:

(1) Standard Work Templates.

(2) Class Standard Work Templates.

(3) Local Work Templates.

(4) Basic Work Shell Template.

(5) Master Specification Work Template.

5.6.2.4.2 Planning and Estimating Process.

a. Determine if the information contained in the AWR is adequate enough to write a work item. If yes, continue development. If no, check the inadequate box and note reasons for inadequacy, then continue.

b. Review for MSC Templates:

(1) Identify appropriate Ship Work List Item Number that applies for AWR to be planned under.

(2) Check or search for an appropriate Master Specification Template such as a Class Standard Work Template, Standard Work Template or Local Work Template that addresses the scope of work identified in AWR.

(a) If no applicable template is found, check or search for a previously written work item that is applicable and addresses the scope of work identified in AWR.

(b) If no previously written work item is found that is applicable, check or search for a "basic" work item template or format.

c. Select appropriate Master Specification Template, previously written work item or "basic" work item template or format and initiate planning the work item.

d. Identify and validate all references, including Liaison Action Requests or Reverse Liaison Action Requests required to complete the work item.

e. Identify test requirements needed to complete work item. If test procedures are required, obtain from execution site design group, planning yard contractor or In-Service Engineering Activity.

f. Identify security and certification requirements. Develop technical requirements and Planning Estimate.

g. Identify repair material required to include long lead-time items and submit to material specialist for procurement.

h. Determine if there is Hazardous Material involved with the work item.

i. Review the completed work item for candidacy as a new or revised template for inclusion into the MSC. If a candidate, submit the new or revised template to the local NSA Standards Person for review and subsequent routing to the MSCMO for processing and inclusion into the catalog.

j. Route completed work item in its preliminary state to the Program Manager queue in NMD to be included in a final review work package compiled in NMD.

5.6.2.5 Maintenance Team Program Manager.

a. Route review work package of work items to Prelim Spec review web site. Web site address: https://www.spear.navy.mil/onlineSpecReview.aspx.

b. Review and respond to comments on prelim work item review web site.

c. Route and approve work items to "APPROVED" work item review web site.

d. Process entire work package and issue.

5.6.2.6 Advanced Planning Manager. The PSIA Contractor will publish the CNO PSIA Package in NMD at A-60 and the CMAV PSIA at A-25. This is an important milestone and metric captured within NMD.

5.6.2.7 Scheduled Availabilities.

a. Scheduled XAZ availabilities are normally 3 to 6 weeks in duration and are nominally scheduled once per non-deployed quarter during a period when the ship will be in port at least three continuous weeks. The ship, via the TYCOM, will schedule XAZ availabilities. RMC requirements will be addressed to the ship via the maintenance team. Adjustments to XAZ availability start dates are inevitable; however, the start dates may not move "forward" if package preparation and work package "lock"

milestone dates would be violated by the new start date. In this case, the applicable XAZ CMAV availability must be rescheduled to support the entitled process milestone dates. In general, CMAVs will be scheduled to start on the first weekday after arriving in port and will be scheduled to complete one week prior to the scheduled underway day. The minimum length of a ship's uninterrupted period will be three weeks if an XAZ availability is to be scheduled, with the XAZ availability preferably being a minimum length of three weeks. Any XAZ availability that is scheduled without adhering to these minimums should be avoided and work required during that timeframe will be conducted as XCM. Ships and TYCOMs must ensure that other in port requirements (training, inspections, etc.) are not scheduled concurrent with an XAZ availability if these requirements impede scheduled production.

b. CMAVs will not normally start on weekends or holidays when support for tag-outs and availability start-up is limited, and will not be the same day the ship arrives in port. As a result of requiring the XAZ availability to complete one week prior to getting underway, a reduction in premiums is expected by eliminating the last-minute rush to complete work to support the scheduled underway. Maintenance teams must ensure that work scheduled for an XAZ availability can realistically be accomplished in the production window. When operational schedule changes occur early enough to allow the scheduling of an additional XAZ availability without violating the milestones discussed in paragraph 5.5 of this chapter, a new XAZ availability should be scheduled when possible, rather than executing maintenance in the unscheduled XCM availability. Additionally, the length of an existing XAZ availability may be increased to accommodate changes in operational schedules provided none of the scheduling rules are violated.

NOTE: XCM AVAILABILITIES ARE NOT TO BE USED AS HOLDING QUEUES FOR MAINTENANCE ITEMS.

5.6.2.8 Unscheduled Availabilities.

a. The unscheduled XCM availability is a single yearlong availability, for the period of 01 October through 30 September, scheduled for each ship every fiscal year. This yearlong availability is used to accomplish maintenance when a ship is not in a scheduled XCM availability or CNO availability. Since the XCM CMAV Windows Of Opportunity (WOO) are potentially short notice, a reduced set of D-Level milestones is established. Read in three columns:

TASK	RESPONSIBLE ACTIVITY	MILESTONE
WORK SPECS DEVELOPED	RMC OR MSR	WOO-14
WORK PACKAGE DEFINITIZED	RMC OR MSR	WOO-7

b. No length requirement exists for an XCM availability. These are accomplished as WOOs become available. If a work item is determined to require more than one WOO to accomplish in its entirety, then it may be executed during multiple WOOs provided that it can be broken into several shorter period requirements.

5.6.3 Continuous Maintenance Availability. The CMAV business rules apply to all XAZ availabilities and XCM. Since the potential exists for CMAVs to become increasingly more

complex, an NSA will be assigned for every CMAV. The NSA will typically be the applicable RMC, or naval shipyard (if applicable).

5.6.4 Work Included in Continuous Maintenance Availabilities. All levels of work (organizational, intermediate and depot) must be included in a single CMAV for a specific availability period regardless of the executor (Ship's Force, RMC production personnel or contractor). The intent is to integrate all types of work into a single production schedule for a specific CMAV. Separate intermediate and depot availabilities will not be established for the same period of time. Dependent upon complexity of the scheduled maintenance or modernization and the number of maintenance activities involved, the Ashore Ship's Maintenance Manager may include a work item for production scheduling and integration in the work package or bid specifications. If this work item is not used, then the Ashore Ship's Maintenance Manager will perform this function.

5.6.5 Concurrent Continuous Maintenance Availabilities. It is incumbent upon the Ashore Ship's Maintenance Manager to ensure that two non-emergent availabilities are not in progress at the same time. Additionally, CMAVs are not to be scheduled concurrently with CNO availabilities. As required, XCM work items meeting the requirements of paragraph 5.6.2 of this chapter that are being accomplished in WOOs may overlap with XAZ and CNO availabilities. Ashore Ship's Maintenance Managers shall consider the establishment of a concurrent (non-emergent) availability during times when an emergent availability is in progress. The establishment of a concurrent (non-emergent) availability would be necessary to maximize opportunity to complete non-emergent work during the same time that emergent work is taking place.

5.6.6 Ship Movement During Continuous Maintenance Availabilities. In order to maintain focus on the maintenance work package and minimize premium costs, no ship must get underway during a CMAV other than to support the maintenance availability or to complete sea trials. Maintenance that prevents a ship from being ready for sea within 96 hours will normally only be screened to XAZ availabilities. Ships will notify their TYCOM of any production item that will prevent the ship from getting underway within 96 hours. If this work is being conducted within a scheduled XAZ availability, a waiver is not required. It is imperative that the TYCOM take a proactive role in ensuring that the integrity of the scheduling process be maintained as it relates to CMAVs. CMAVs must be incorporated into the ship's operational schedule and must remain as a priority for completion.

5.6.7 Continuous Maintenance Availability Metrics. In order for accurate metrics to be obtained, it is imperative that all CMAVs be planned and executed utilizing the appropriate IT systems. The following placement and oversight metrics will be collected to measure the effectiveness of the CMAV process. This is not a complete listing of all CMAV metrics. Volume VI, chapter 36 of this manual provide additional guidance and discussion on metrics.

a. Award on-time delivery (XAZ only). Scheduled CMAV "on-time award" is defined as the percentage of time contract award is made on time or early.

b. Completion on-time delivery (XAZ only). The CMAV completion on-time delivery metric calculates the percentage of occasions when a CMAV availability is completed on or before the CMAV end date as recorded in the appropriate maintenance database.

c. Availability churn (XAZ only). The CMAV availability churn percentage is a monthly capture of the dollar value of work items changed, deleted or added in a CMAV work package from contract award until availability completion versus the dollar value of the work package at award for all CMAV availabilities that ended in the current measurement month and the previous two months. This metric is collected by availability and reported in the month the availability completes.

d. Growth and New Work Premiums. The Growth and New Work Premiums metric is a measure of late work premiums paid as a percentage of growth and new work monthly. It does not include authorized work included at the start of the availability as growth reserves for specific work items or execution of pre-priced option items if executed within the scope and schedule as pre-priced. This metric is collected weekly with each change to the original contract award FFP or definitization PSIA work package transaction being reported one time in the data call for the week in which it was settled for scheduled CMAVs.

5.6.8 Continuous Maintenance Availability Late Work Premium (XAZ only). The CMAV late work premium metric is a measure of the total dollar value of late work premiums paid for CMAV completed in the current month divided by the sum of the execution contract award FFP or definitization PSIA and the settled cost of all Request for Contract Changes for that availability.

5.6.9 Continuous Maintenance Planning. Continuous maintenance is the process of scheduling and accomplishing work outside of CNO availabilities. PSIA contracts create a long-term relationship with the EA that accomplishes the continuous maintenance to maintain the ship at an acceptable readiness level. The Ashore Ship's Maintenance Manager will use every scheduled in-port period as an opportunity to accomplish continuous maintenance. Funding for continuous maintenance is included in the ship's MMBP. To prevent premiums from being accrued, a minimum of 30 days will be allotted between the time D-Level work is brokered to the EA and the time work is scheduled to start. A minimum of 40 days will be allotted for work brokered to I-Level activities. This will provide for adequate time to plan the work and acquire the necessary material in an efficient manner. This will allow a WPER to take place and for all work to be definitized per the milestones listed in Appendix B. If these minimum thresholds cannot be complied with, the work should be postponed until the next continuous maintenance opportunity. The Ashore Ship's Maintenance Manager may run a business case analysis if there are other factors that might justify the addition of work inside these preferred windows.

5.7 ADVANCE PLANNING STATUS MESSAGES. The Advance Planning Status Messages required by reference (a) should continue to be issued by the activity responsible for planning the ship's CNO availability. Messages should commence at the completion of the Integrated Planning Conference. These messages play a vital role in keeping all concerned parties informed of the status of the planning effort. The messages document the successful accomplishment or failure to achieve milestones and produce deliverables.

5.8 WORK PACKAGE EXECUTION REVIEW. The WPER meeting, held to review the integrated work production schedule that has been prepared by the EA, is the final opportunity to resolve any work interface or production support issues between the different activities before actual production work begins.

APPENDIX A

MASTER SPECIFICATION CATALOG MAINTENANCE OFFICE GUIDELINES

1. Scope. This procedure is applicable to all personnel involved in processing and submitting new proposed templates, including updated proposals of existing templates, in the NMD for processing by the MSCMO.

2. Procedure.

2.1 Template.

a. Select template candidate.

b. Check for an existing template or a previously successful Work Item in the following order:

(1) Master Specification Work Template.

(2) Class Standard Work Template.

(3) Standard Work Template.

(4) Local Work Template.

(5) Basic Work Shell Template.

(6) Past Availability.

c. Initiator of the proposed new template candidate must first review existing templates within the MSC to ensure a duplicate is not being created. If there is no duplicate, initiator can proceed with proposal.

d. Ensure item number conforms to NAVSEA SSRAC (e.g., correct Expanded Ship Work Breakdown Structure and contains 8 digits). If non-conforming, correct proposed template.

e. Template Paragraph 1 “Scope”, ensure the following:

(1) Paragraph 1.1 Title: Conforms to NAVSEA SSRAC B.2.a.

(2) Paragraph 1.2 Location of Work: Conforms to NAVSEA SSRAC B.2.b.

(3) Paragraph 1.3 Identification: Conforms to NAVSEA SSRAC B.2.c.

(4) Paragraph 1.4 Security Classification of Equipment, Components, Spaces and Documents: When required to identify classified spaces, equipment or documents, conforms to NAVSEA SSRAC B.2.d.

All Titles that currently contain ANY PHRASE in parentheses that is not a Navy Standard acronym, abbreviation or part of a Planning Yard drawing title must be removed. Example: (OPTION ITEM, DRYDOCK).

f. Ensure the following:

(1) Template Paragraph 2 “References” conforms to NAVSEA SSRAC B.3.

Reference is appropriate and correct for work being done. References must be in one of the following formats:

602-6663754PL Rev *, (Title).
602-6663754 Rev *, (Title).
525146-1 Rev B, (Title) (No Group listed-Manufacturer's Drawing).

(2) Reference type is correctly identified and per Instructions for Entering Reference Types table located in the help section of NMD.

(3) Any liens (Liaison Action Requests or Reverse Liaison Action Requests) against a drawing must be deleted from the proposed template.

(4) The order in which the references are listed is in the same order as they appear in the body of the proposed template.

g. Ensure Template Paragraph 3 "Requirements" conforms to NAVSEA SSRAC B.4. Verify the following:

(1) NAVSEA Standard Items are called out as required.

(2) Category I NAVSEA Standard Item requirements are not invoked.

(3) Current NAVSEA SSRAC Standard Phraseology is used.

(4) Required reports are called out and flagged in NMD. Required flag identifies the purpose of the report such as Inspection Results. The first letter of each word must be upper case.

(5) Inspections, Tests, and Government Notifications conform to NAVSEA SSRAC B.4.j.

(6) Planner's Notes are used to call out information that needs to be inserted or addressed.

(7) Verify that parts listed as repair parts have the correct information.

(8) Bilge cleaning and pumping requirements of Standard Work Template 992-XXX and tank void cleaning and pumping requirements of Class Standard Work Templates 123-XXX are not invoked.

(9) Fluid capacities for tanks with designated tank numbers are not listed in the proposed template.

(10) Lead paragraph construction:

(a) A lead paragraph must include phraseology that begins with a verb, and refers to paragraphs 1.2 and 1.3 within the sentence structure where applicable (e.g., 3.1 Remove existing and install new the equipment listed in 1.3 and located in 1.2).

(b) Or refer to a previous lead paragraph that referred to paragraphs 1.2 and 1.3 within the template (e.g., 3.2 Remove each watertight closure listed in 1.3 and located in 1.2., 3.4. Install each watertight closure removed in 3.2).

(11) The following format must be used when entering Contractor Furnished Material:

(a) Each entry must be inserted to line up to header standard phrase B-30 to justify left.

(b) No space between material line entries:

TOTAL QUANTITY REQUIRED	NAME OF PART	PIECE NO.	REF NO.	FIGURE DRAWING NO.	PART NO.
One each	Seal	2	2.2	7-6	12345
Two each	Worm Gear	4	2.2	7-6	6789

(12) Where Table, Line(s), and Column(s) of 009-32 are specified within a template, the template must be updated and filled in using the appropriate Table, Line(s), and Column(s). If non-conforming or incorrect, correct proposed template.

h. Ensure Template Paragraph 4 "Notes" conforms to NAVSEA SSRAC B.5. If non-conforming, correct proposed template.

i. Ensure Template Paragraph 5 "Government Furnished Material (GFM)" conforms to NAVSEA SSRAC B.6. If Government Furnished Material is listed in paragraphs 5.1 - 5.3 ensure Government Furnished Material information is correct.

j. Ensure Attachments are correct and open properly in NMD. If errors are found, correct errors.

k. Review template for conformance to NAVSEA SSRAC. If non-conforming, correct proposed template.

l. Ensure proposed template estimate is completely filled out, estimated as a minimum to the lead paragraph level, and accurate. Templates that are silent in paragraph 1.3 (where the equipment has no identification or specific quantity listed) do not have a true and accurate estimate on file reflecting the actual work within the template. Insert a Planner's Note in the template to reflect a unit of (One each) for estimating purposes.

m. Is the proposed template complete and in conformance with NAVSEA SSRAC and the MSCMO Guidelines? If yes, submit proposed template.

2.2 Submission of Change.

a. Recommended changes to the MSCMO Guidelines must be submitted to the MSCMO for consideration. Approved changes to the Guidelines will be forwarded by the MSCMO to the JFMM Program Manager for inclusion in the next scheduled JFMM release, utilizing the JFMM Change Request Form.

b. Recommended changes, NAVSEA SSRAC must be submitted to the SSRAC, for consideration of adding to reference (b), through the SSRAC proposed change process. See the SSRAC web site and e-mail addresses and phone number.

c. Recommended Enhancements to the NMD program must be submitted to the Automated Information Service Center through the Configuration Control Board process.

2.3. Internal Review (Planner to Supervisor). Initiating activity must perform an internal review of proposal to ensure template candidate is appropriate and conforms to NAVSEA SSRAC and meets the MSCMO Guidelines. Upon completion of review, template candidate is routed to the Regional RMC or NSA Standards Coordinator.

NOTE: CONTRACTOR GENERATED PROPOSALS MUST BE ROUTED FROM THE CONTRACTOR'S LOCAL STANDARDS COORDINATOR TO THE REGIONAL RMC or NSA STANDARDS COORDINATOR IN THEIR GEOGRAPHIC AREA.

2.4 Command Review. The Regional RMC or NSA must review proposal to ensure proposed template candidate is appropriate and conforms to NAVSEA SSRAC and the MSCMO Guidelines. Upon completion of review, proposed template candidate is:

a. Routed to the MSCMO for review; or

b. Prior to routing to the MSCMO for review, the RMC or NSA for that class of ship must review proposed Class Standard Work Template candidate. This must be initiated by an e-mail notification from the submitting Regional RMC or NSA MSC Standards Coordinator to the cognizant class RMC or NSA MSC Standards Coordinator. The e-mail notification must include the file number of the new proposal. The cognizant class RMC or NSA MSC Standards Coordinator receiving the notification must review proposed template for technical accuracy, current applicable phraseology, conformance to NAVSEA SSRAC and the MSCMO Guidelines, estimate information, and submit a response to the submitting Regional RMC or NSA Standards Coordinator via e-mail within 10 days of receipt of notification. Responses must be provided for all templates submitted for review.

2.5 Master Specification Catalog Maintenance Office.

a. The MSCMO must review proposal to ensure template conforms to NAVSEA SSRAC and the MSCMO Guidelines. If there are no issues, MSCMO activates new template. If there are significant issues with proposal, MSCMO initiates dialog with local standards person or originator of proposal to resolve issues. Once issues are resolved, MSCMO activates new template.

b. The MSCMO will return a template if there is no estimate or if the proposed template is a duplicate of an existing template.

c. Processing Changes to Existing Template. The MSCMO is responsible for maintaining templates (Class Standard Work Templates and Standard Work Templates) up to date. When a user finds an active MSC template that needs to be updated (as a result of changes through Lessons Learned, error, outdated requirements, etc.), a proposed change must be initiated following these Guidelines and processed or review per paragraph 2.4 of this appendix.

3. Naval Supervisory Authorities and Class Assignment Responsibilities.

a. Mid-Atlantic Regional Maintenance Center.

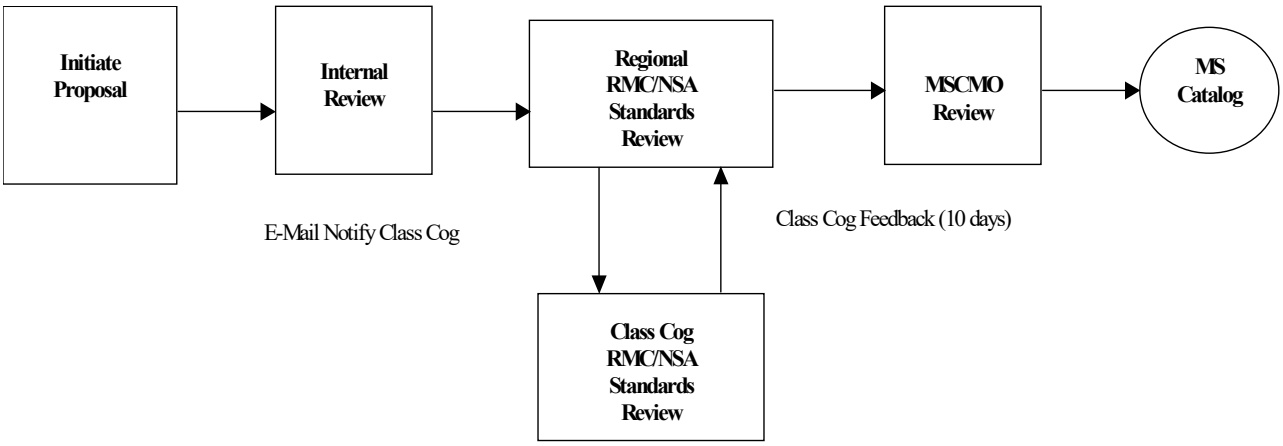
b. Norfolk Naval Shipyard.

c. Southwest Regional Maintenance Center.

d. Southeast Regional Maintenance Center.

e. SUPSHIP Gulf Coast.

Processing Templates in Navy Maintenance Database
(Proposed New Template or Proposed Change to Existing Template)



APPENDIX B

NAVY MODERNIZATION PROCESS MILESTONES

(Milestones are in days)

Item #	Task or Milestone	Responsible Activity	Critical	PIA or DPIA	CIA or WOO	FDNF SRA	RCOH	PSA or SRA
1	Issue Advance Planning Letter (APL)	SPM		Approx A-720	N/A	Approx A-720	N/A	Approx A-720

APPENDIX C

PLANNING PRIORITY MATRIX

The priority for work item planning completion is set by the required due date for the work accomplishment. This date is established by the Maintenance Team, based on the availability start date minus the required contracting time. This table provides guidelines for FFP and PSIA contract vehicles.

DEPOT PLANNING PRIORITY SCHEDULE (FFP)

PRI	TYPE WORK	SPEC EST DUE DATE	PRIORITY SET BY	PLNG SYS	AWARD INTERVAL	COMMENTS/REMARKS
1	EM	"ASAP"	MT-BASED ON EM SKED	NMD	N/A	CAN USE IDIQ IF AVAIL INCLUDES EM DOCKING (SUSTAIN IDIQ) OT USE AS NEEDED

CHAPTER 6

MAINTENANCE WORK CLOSEOUT (AIRCRAFT CARRIERS)

REFERENCES.

(a) NAVSEA SI 009-99 - Ship Departure Report; Provide
(b) NAVSEAINST 4790.14 - Ship Departure and Alteration Completion Reports
(c) NAVSEAINST 4790.8 - Ship's Maintenance and Material Management (3-M) Manual

6.1 PURPOSE. This chapter provides procedures and guidance regarding aircraft carrier maintenance and modernization work candidate closeout. These rules apply to Maintenance Activities (MA), Maintenance Teams (MT), Regional Maintenance Centers (RMC), Fleet Maintenance Activities (FMA), Naval Shipyards, Systems Commanders sponsoring Program Alterations and other Alteration Installation Team sponsors.

6.2 SCOPE. This chapter covers the process and responsibilities for closing all Ship's Maintenance Action Forms, OPNAV 4790/2K (2-Kilo), that were screened and brokered to an activity other than Ship's Force.

6.3 BACKGROUND. Prior to changes in the work closeout process, 2-Kilos executed in shipyards (public and private), by intermediate-level activities, and technical assistance organizations often did not get closed until long after the work was completed, and then often by someone unfamiliar with the actual work accomplished. Additionally, even though shipyards provide completion data in the form of departure reports following an availability, that information was either not captured in Ship's Maintenance and Material Management (3-M) History or captured manually. This means that useful data was not seamlessly making its way into the Navy's maintenance data warehouse. Since this data is used to determine troubled systems, identify trends in system health, identify causes and solutions to expensive growth work, update cost estimates in the Master Specification Catalogs, update return costs in the Open Architecture Retrieval System database, program for future maintenance budgets, identify the most cost-efficient periodicity for scheduled assessments, and identify candidates for alterations or assessments, it is critical that it be captured and made readily available to all users. This chapter provides the required means to close and report accurate completion data for all 2-Kilos executed by other than Ship's Force personnel.

6.4 WORK CLOSEOUT PROCEDURES.

6.4.1 Depot Maintenance Activity Responsibilities.

6.4.1.1 Private Shipyards Using the Navy Maintenance Database. Comply with reference (a) for submission of cost and completion information directly in Navy Maintenance Database (NMD) for each work specification and Request for Contract Change (RCC). No other ship departure reports should be created or distributed because stakeholders can print standardized departure reports that contain the required data directly from NMD. Submission of cost and completion information is required within 60 days after the completion of an availability (including

Continuous Maintenance Availability), or within 60 days after completion of the work for emergent maintenance or unscheduled continuous maintenance. This data can be entered either directly in NMD Planning or through a computer-to-computer connection to NMD. The MA must notify the MT when cost and completion information has been entered.

a. For Firm-Fixed-Price contracts, the completion costs are, by definition, the award costs for original work and the RMC approved RCC costs for growth and new work. As such, for Firm-Fixed-Price availabilities, cost information for original work items must be entered by the Project Manager directly in NMD Execution on the Work Item Management screen cost tab after award, and cost information for RCCs must be entered by the Negotiator directly in NMD Execution on the RCC Management screen during RCC settlement. These cost values will populate to the Actual Return Cost screen in NMD Planning and are not editable by the MA. However, completion information (Final Action and Completion Date) must still be entered in NMD just as it is for Cost contracts.

b. Once the MA enters the required information and the MT closes the availability, NMD automatically prorates completion costs from the work specification to the 2-Kilos that make up the specification based on the proportion of the most recent estimates. NMD also submits a "growth 2-Kilo" for each completed growth or growth on new work RCC. A growth 2-Kilo is used strictly for documentation purposes, getting its information from the "parent" 2-Kilo and cost and completion data from the RCC. It requires no additional actions by, and should be transparent to, the MA or MT.

6.4.1.2 Naval Shipyards and Facilities Using Advanced Industrial Management (AIM) or AIM Express (AIMXP). Comply with reference (b) for submitting Ship Departure Reports. AIM (via AIMXP) transmits 2-Kilo cost and completion information to the brokering Information Technology (IT) system automatically based on labor entries and material transactions made during availability execution. Users should follow local instructions for AIM operations.

6.4.1.3 Depot Maintenance Activities Not Using Navy Maintenance Database or Advanced Industrial Management. The MA is responsible for providing to the TYCOM Maintenance Program Manager (MPM), within 60 days after completion of the work, the man-days, labor costs, material cost, total cost, date completed, and the Final Action code (see reference (c), Appendix C for code definitions) for each 2-Kilo. At the time of submission, return costs must be the best prediction of the final costs for that 2-Kilo. If the costs are not finalized when the MA reports return cost data (i.e., there are outstanding invoices), report costs from the Final Cost Report or equivalent financial report. Additionally, if the 2-Kilo was a scheduled task generated by the CMP, the MA must report the "As Found Condition" (the second character in the Final Action code).

6.4.2 Fleet Maintenance Activity Responsibilities.

6.4.2.1 Fleet Maintenance Activities Managing 2-Kilos Using AIM, AIMXP, Advanced Industrial Management for Regional Maintenance Centers (AIM4RMC) or Fleet Technical Support. AIMXP, AIM (via AIMXP), AIM4RMC and Fleet Technical Support (FTS) transmit 2-Kilo cost and completion information to the brokering IT system automatically based on labor entries and material transactions made during 2-Kilo execution. FMAs working 2-Kilos

assigned to these IT systems should follow local instructions for AIMXP, AIM, AIM4RMC or FTS operations.

6.4.2.2 Fleet Maintenance Activities Managing 2-Kilos Using Logistics Data System. Logistics Data System (LDS) transmits a portion of the required cost and completion information to the brokering IT system. The information that is transmitted can be used to calculate the missing information with a reasonable level of accuracy. Naval Sea Logistics Center has implemented a procedure in Ship's 3-M History to calculate and fill in the missing information. FMAs should follow local instructions for LDS operations.

6.4.2.3 Fleet Maintenance Activities Managing 2-Kilos in a System Other than AIM, AIMXP, AIM4RMC, FTS or LDS. The FMA is responsible for coordinating with the applicable TYCOM MPM, within 60 days after completion of the work, to enter in the brokering IT system the man-days, labor costs, material cost, total cost, date completed, and the Final Action code for each 2-Kilo per reference (c), Appendix C. Additionally, if the 2-Kilo was a scheduled task generated by the CMP, the FMA must report the "As Found Condition" (the second character in the Final Action code).

6.4.3 Maintenance Team Responsibilities.

a. The MT, led by the TYCOM MPM, is administratively responsible for all work screened and brokered to an activity other than Ship's Force.

b. Depending on the settings of the brokering IT system, 2-Kilos may require both a "Maintenance Activity Completion" and a "Customer Completion" to fully close the 2-Kilo. The Type Commander Representative, or Ship's Force must "Customer Complete" all remaining open 2-Kilos executed in the availability no later than 90 days after the completion of an availability (including Continuous Maintenance Availability), or no later than 90 days after completion of the work for emergent maintenance or unscheduled continuous maintenance.

c. If a 2-Kilo was created in the brokering IT system, it may not appear on the ship's Current Ship's Maintenance Project. These 2-Kilos may need to be "Customer Completed" by the MT on behalf of the ship.

6.4.3.1 Work Executed by Private Shipyards Using the Navy Maintenance Database. The following steps must be followed by the MT to properly close out the work.

a. After notification that the MA entered cost and completion information data in NMD, but not later than 90 days after the completion of an availability (including Continuous Maintenance Availability), or no later than 90 days after completion of the work for emergent maintenance or unscheduled continuous maintenance, enter Government Furnished Material costs for each specification and RCC in NMD Planning and set the Actual Cost Tab to "Complete".

b. Change the Avail Status to "Closed" and enter the Closed Date in NMD Execution. This transmits the cost and completion information to the brokering IT system and creates a "Maintenance Activity Completion" for the executed 2-Kilos.

c. Obtain validation that the work was accepted by Ship's Force.

d. Close any 2-Kilos not closed by the ship or auto-closed by the brokering IT system by completing a "Customer Completion". They can be closed individually, or group selected and closed.

e. When an availability is closed in NMD, all 2-Kilos that were in the work package will be closed. It is not possible to keep 2-Kilos that were not accepted or not worked from getting a "Maintenance Activity Completion". For that reason, if the work is not acceptable by the end of the availability, a new 2-Kilo, referencing the original 2-Kilo in the narrative text, should be created to document the remaining deficiencies. This new 2-Kilo will then be screened and brokered to the appropriate MA for future availability.

6.4.3.2 Work Executed by Maintenance Activities Using AIM, AIMXP, AIM4RMC, LDS or FTS. These IT systems automatically report cost information and create a "Maintenance Activity Completion" for 2-Kilos executed using those systems. The following steps must be followed by the MT to properly close out the work:

a. Obtain validation that the work was accepted by Ship's Force.

b. Close any 2-Kilos not closed by the ship or auto-closed by the brokering IT system by completing a "Customer Completion". They can be closed individually, or group selected and closed.

6.4.3.3 Work Executed by Maintenance Activities Not Using NMD, AIM, AIMXP, AIM4RMC, LDS or FTS. 2-Kilos executed outside of these IT systems will not automatically have their costs transmitted to the brokering system, nor will a "Maintenance Activity Completion" be recorded. Instead, the required cost and completion information must be entered directly in the brokering IT system. The following steps must be followed by the MT to properly close out the work:

a. Upon receipt of cost and completion information from the MA, enter this information in the brokering IT system and complete a "Maintenance Activity Completion".

b. Obtain validation that the work was accepted by Ship's Force.

c. Close any 2-Kilos not closed by the ship or auto-closed by the brokering IT system by completing a "Customer Completion". They can be closed individually, or group selected and closed.

LISTING OF APPENDICES.

A First 100 Hours for Scheduled Availability
B Final 100 Hours for Scheduled Availability

1.1 PURPOSE. The purpose of this chapter is to provide Fleet Commanders' guidance for the maintenance of ships throughout their operating cycle per references (a) through (h). This includes maintenance levels, strategies, programs and modernization which define and support all maintenance accomplished per technical specifications and standards during a ship's operating cycle.

1.1.1 Naval Supervisory Authority.

a. Naval Supervisory Authority Definition. The Naval Supervisory Authority (NSA) is the single Naval activity, as indicated in Table 1-1, responsible for the integration, oversight and verification of all work accomplished by all activities (i.e., Naval Shipyards (NSY), Regional Maintenance Centers (RMC), Supervisors of Shipbuilding (SUPSHIP) contractors, Type Commander (TYCOM) sponsored contractors, Intermediate Maintenance Activities (IMA), Alteration Installation Teams (AIT) and Ship's Force (SF)) working within the assigned availability. The NSA will provide the oversight required to ensure that all work in the assigned availability (e.g., Chief of Naval Operations (CNO) availabilities, Continuous Maintenance Availability, Emergent Availability, or Window of Opportunity) is authorized and completed in compliance with applicable technical requirements and maintenance and modernization policy, and all work meets schedule, quality, environmental, and safety requirements. The NSA must possess a Naval Sea Systems Command (NAVSEA) technical warrant per reference (a).

b. NSA Assignment. In most cases, the NSA is assigned by the Fleet Maintenance Officer and TYCOM per Table 1-1. An NSA must be assigned to all CNO availabilities and to all contracted work where the majority of the work is performed onboard the ship. Local Technical Authority for the Lead Maintenance Activity (LMA) is delegated by their assigned Chief Engineer per reference (b) as defined in a Memorandum of Agreement (MOA) between the responsible organizations. When such an MOA exists, the LMA executes the specific NSA responsibilities when no NSA is assigned.

(1) Alterations installed by AITs per reference (c) can only be executed in availabilities having a designated NSA.

(2) An NSA is not required if the work is being performed by a U.S. Navy LMA outside a CNO availability.

(3) The NSA will normally be the activity assigned based on the geographic area covered by the assigned RMC or SUPSHIP, as indicated in volume VI, chapter 2, Table 2-1 of this manual. If this is not practical, the NSA assignment will be made based on the area of responsibility of the cognizant Chief Engineer as delineated in reference (b).

(4) The NSA designation does not apply to alterations to modernization exemptions specified in reference (c).

c. NSA Qualification. To be qualified to perform the functions of an NSA, the organization must have a Chief Engineer holding a NAVSEA Technical Warrant. For this reason, the only organizations qualified to perform the functions of NSA are the RMCs and the SUPSHIPs.

NOTE: DELEGATION OF NSA RESPONSIBILITIES CAN BE ACCOMPLISHED THROUGH A MOA THAT IDENTIFIES DUTIES, RESPONSIBILITIES AND OVERSIGHT FUNCTIONS. THE NSA IS RESPONSIBLE FOR ALL WORK ACCOMPLISHED BY ALL ACTIVITIES AND ACTS AS THE SINGLE POINT OF CONTACT.

d. NSA Responsibilities. These responsibilities include but are not limited to:

(1) Coordination with other Maintenance Activities (e.g., RMC, Regional Maintenance & Modernization Coordination Office, SUPSHIP, AIT, Ordnance Alteration or Temporary Alteration Installation Teams) through an authorized MOA. NSA representative must sign MOA(s) as assurance that any civilian contractor requirements detailed in the MOA are contained within applicable contracts.

(2) Single point of contact for the LMA and shipboard personnel.

(3) Verify completion of work for milestones, key events, end of availability, availability departure report based on documentation provided by all maintenance activities.

(4) Based on the amount of work accomplished, the NSA may also assume the role of the LMA per paragraph 1.1.2.

(5) For CNO availabilities, the NSA must:

(a) Participate in all work definition, planning and completion conferences.

(b) Facilitate planning efforts. Ensure detailed planning and integration of the work package is accomplished to provide a schedule incorporating the work and testing of all organizations involved in the availability. The schedule must address work definition, key events, ship-checks, job summary, material preparations and strategy preparations. Identify milestones with sufficient detail to measure intermediate progress toward each key event. Ensure orientation briefings and training are conducted as necessary so that personnel understand applicable project processes and requirements. Identify their appropriate points of contact.

(c) Prior to Fast Cruise, Sea Trials and availability completion, verify all authorized work has been completed unless waived. For work performed by contractors, ensure all provisions of the contract have been fully executed.

(d) During work execution, review all changes to specifications and work items impacting propulsion plant to ensure requirements are met.

(e) Participate in critiques and problem investigations (e.g., Trouble Reports) as necessary.

(f) Participate in Quality of Service Council per chapter 2, of this part and volume.

(6) For alterations installed by AITs, the NSA, as provided in Table 1-1, as required by reference (c) must:

(a) Initiate the AIT MOA with the AIT Manager and engage all assigned activities to support development of the MOA as detailed in reference (c). The MOA will state that the on-site QA Workbook, surveillances conducted by the On-site Installation Coordinator and any Corrective Action Requests issued will be provided to the NSA upon request. Additionally, the MOA must specify that the NSA be notified of and allowed to attend all critiques associated with the alteration as well as be notified of all stop work orders issued to the AIT.

(b) Monitor the effectiveness and the quality of AIT managers' execution of Quality Assurance oversight responsibilities by assessing their execution of Quality Assurance oversight responsibilities and by Quality Sampling. Request Qualification Records as needed in support of spot checks.

(c) Perform surveillances of AIT installations, on a sampling basis, and use the sampling evidence to indicate conformance or nonconformance with NAVSEA requirements. Document nonconformances per reference (c).

(d) Participate in SF AIT In-Briefs and SF and NSA Out-Briefs.

NOTE: THE SF OR NSA OUT-BRIEF SHOULD BE CONDUCTED INDEPENDENT OF COMPLETION STATUS AT THE END OF AVAILABILITY.

(e) Coordinate with the AIT Manager, OSIC and SF to ensure satisfactory completion of alterations.

(f) Verify delivery of Integrated Logistics Support deliverables from the AIT.

(g) Ensure completion reports are issued and for any work not accomplished, assure a Current Ship's Maintenance Project (CSMP) Job Control Number is issued.

Maintenance Availability	NSA	LMA
CNO Private (1)	RMC or SUPSHIP (2)	Contractor
Non-CNO Public (3)	RMC	RMC or Fleet Maintenance Activity (FMA)
Non-CNO Private (3)	RMC or SUPSHIP (2)	Contractor
Emergent or Voyage repair	RMC or SUPSHIP	FMA, RMC, or Contractor
Maintenance Availability	NSA	LMA
New Construction	SUPSHIP	Contractor
AIT availabilities	RMC or SUPSHIP	FMA, RMC, AIT or Contractor

NOTES:
1. Per reference (d).
2. Pearl Harbor NSY and Intermediate Maintenance Facility and Puget Sound NSY and Intermediate Maintenance Facility are also considered RMCs.
3. Examples of Non-CNO availabilities are located in part II, chapter 4 of this volume.

Table 1-1 RMC Area of Responsibility Assignment

NOTE: THE LMA IS RESPONSIBLE TO THE NSA WHEN AN NSA IS ASSIGNED OR THE IMMEDIATE SUPERIOR IN COMMAND (ISIC) IF NO NSA IS ASSIGNED.

1.1.2 Lead Maintenance Activity. The single activity responsible for work being accomplished on U.S. Naval ships during any type of industrial availability. For work conducted during periods in which the NSYs or RMCs do not have oversight, an LMA will be designated. LMAs are responsible for:

a. Conduct or attend routine progress review meetings with all assigned repair activities. Identify and resolve coordination problems and work conflicts. Advise the appropriate maintenance activities (e.g., NSA, NAVSEA, TYCOM, AIT Manager,

Ship's Program Manager, etc.) of significant quality, cost and schedule impacts and problems.

b. Integrate the work of all repair activities. This includes an integrated schedule. The schedule must ensure adequate time is provided for crew training.

c. Report work status to Maintenance Brokers.

d. Request assistance via Maintenance Broker as needed for outside activity performance.

e. Track progress of all maintenance activities.

f. Maintain a list of activities authorized to work on the ship the LMA is responsible for and ensure the list is updated weekly or on an as-needed basis. Ensure activities working on ship have the proper credentials, work schedule and pedigree (authorized maintenance activity) prior to being added on the work authorization list.

g. Ensure maintenance activities performing maintenance on assigned ships have proper MOA, Standard Work Practices, NAVSEA standard items in place and that the MOA, Standard Work Practices, NAVSEA standard items authorization address required support for work authorizations and work control. NSA representative must sign MOA(s) as assurance that any civilian contractor requirements detailed in the MOA are contained within applicable contracts.

h. Direct maintenance providers to their proper points of contact.

i. Attend all production and maintenance management meetings to communicate and resolve priorities, problems, job interferences and issues.

j. Define, identify and provide resolution to coordination problems and work conflicts between the Maintenance Managers, Maintenance Activities, Maintenance Brokers and the ship.

k. Provide a copy of all Departures From Specifications to SF Quality Assurance Officer and TYCOM N43.

l. Participate in critiques and problem investigations (e.g., Trouble Reports) as necessary.

m. Conduct SF and contractor orientation briefings and training per reference (c), as applicable prior to commencement of shipboard work.

n. For CNO Availabilities, the LMAs are additionally responsible for:

(1) Appoint a Ship Safety Officer to chair the Ship Safety Council and coordinate work and testing that affects ship's conditions (i.e., buoyancy, list, trim, stability and watertight integrity) and prevention and protection from fire and flooding.

(2) Respond to findings of the Quality of Service Council per chapter 2 of this part and volume, as requested.

(3) Provide sea trials agenda, with all repair activity input, for ship Commanding Officer's concurrence and Type Commander approval.

(4) Coordinate crane operations, pier laydown areas, dry dock work areas and resolve other real estate conflicts which may impede efficient execution of the availability.

(5) Coordinate preparations by assigned repair activities for all key events (e.g., docking, undocking, hot ops, dock trials, fast cruise, sea trials, etc.) to include verification signature checklists of readiness to start.

(6) Coordinate work and testing controls to include Work Authorization Forms, tagouts and test sequencing per volume IV, chapter 10, of this manual.

1.1.3 Ship's Responsibility. The ship is responsible to:

a. Monitor all maintenance activities to ensure they are on the master authorization list.

b. Ensure a current master authorization list is maintained by the Ship's Duty Officer.

c. Provide the LMA with information on ship-brokered work, so all activities are placed on the master authorization list.

1.2 MAINTENANCE ACCOMPLISHMENT LEVELS.

1.2.1 Fleet Maintenance. Fleet maintenance encompasses Organizational and Intermediate level maintenance as defined in reference (d). It includes, but is not limited to:

a. SF maintenance that is planned and corrective maintenance which is within the capability and the responsibility of the ship's crew or Maintenance Support Team (if assigned). The work is a blend of equipment operation, condition monitoring, planned maintenance and repairs ranging from simple equipment lubrication to component change-out and in some cases complete disassembly and repair in-place. The thrust of SF maintenance is to take advantage of operator experience and onboard rating skills and to ensure the ship is as maintenance self-sufficient as possible.

b. FMA maintenance is that requiring specialized ratings, skill training in special maintenance processes and technical proficiency or equipment or instrumentation not available to SF. FMA maintenance normally consists of calibration, repair, refurbishment or replacement of damaged or unserviceable parts, components or assemblies, the emergency manufacture of unavailable parts within the FMA capability and providing technical assistance.

(1) FMAs will accomplish refurbishment level maintenance beyond SF capability to the maximum extent possible within the policies of this chapter and other directives consistent with the availability of funds, material and skilled manpower.

(2) FMAs include Regional Repair Centers and Regional Maintenance Teams which are capable of conducting in-depth maintenance on their assigned components using the latest available technology.

c. Strike Force Intermediate Maintenance Activity is composed of the collective Strike Force elements capable of performing maintenance beyond the organizational level. A Strike Force Intermediate Maintenance Activity maximizes the Strike Force's

ability to operate and sustain itself at sea during extended periods in forward areas through improved repair capabilities and material self-sufficiency.

d. The Commercial Industrial Services program accomplishes Fleet maintenance for essential Fleet repairs that the FMAs have the capability to accomplish but not the shop capacity. The Commercial Industrial Services concept provides a means of using commercial industrial activities to provide maintenance services on a rapid response basis while observing approved commercial contracting procedures. Reference (e) fully describes policies and procedures for Commercial Industrial Services.

e. (Littoral Combat Ship (LCS) only) Maintenance Execution Teams are unique to LCS and include a team of sailors assigned to LCSRON or DIVISION COMMANDER that assist SF in completing Planned Maintenance System checks.

1.2.2 Industrial Maintenance. Industrial maintenance is restoration level maintenance which encompasses Depot level maintenance as defined in reference (d). It includes but is not limited to:

a. Industrial maintenance is restoration level work requiring complex industrial processes, journeyman level technician skills, facilities, capabilities or manpower capacity not available at FMAs or to SF. This capability is provided within the Navy by naval industrial activities, ship repair facilities, and commercial industrial activities and repair facilities under contract.

b. Ship maintenance work scheduled for accomplishment by industrial facilities that in the judgment of the TYCOM, Commander NAVSEA or Commander, Naval Information Warfare Systems Command in their specific areas of responsibility, is not feasible to be accomplished by FMAs or SF, due to:

(1) Having insufficient time or manpower.

(2) Being beyond the capabilities of the FMAs.

(3) Being of such a nature that split responsibility between Fleet and industrial maintenance activities may occur.

1.3 RELIABILITY CENTERED MAINTENANCE.

a. Reliability Centered Maintenance (RCM) is a method for determining maintenance requirements based on the analysis of the likely functional failures of components, equipment, subsystems, or systems having a significant impact on safety, operations, and life cycle cost. RCM supports the failure-management strategy for any component, equipment, subsystem, or system based on its inherent reliability and operating context. RCM is the engineering discipline that allows for the evaluation of evidence for the purpose of scheduling and executing maintenance. Criterion for objective evidence will be determined using RCM analysis per reference (f).

b. The objective is to design a planned maintenance program to address possible failure consequences. The emphasis here is on the establishment of planned maintenance requirements (versus corrective maintenance requirements).

c. Maintenance plans for in-service ships, systems and equipment should be reviewed and modified to incorporate RCM principles in areas where it can be determined that the expected results will be commensurate with associated costs.

1.4 CONDITION BASED MAINTENANCE. Condition Based Maintenance (CBM) is maintenance based on objective evidence of actual or predictable failure of ship's installed systems or components. This includes condition-directed maintenance and periodicity adjustments to time-directed planned maintenance. Further information on CBM is provided in reference (g).

a. Thorough knowledge and assessment of actual equipment condition in relation to its designed condition is the basis for most maintenance decisions. Equipment condition is a broad term which includes static parameters, such as size and shape, and dynamic parameters, such as speed, temperature, pressure, voltage, etc. While SF is in the best position to know the condition of their ship and equipment, the complexities of modern design and engineering dictate specialized assistance be utilized to determine the condition of much of the equipment. Diagnostics, inspections, non-intrusive monitoring for trending, analyses and tests must be utilized to the maximum extent possible to determine performance and material condition of, and to predict and schedule required corrective maintenance action on, ships systems and equipment.

b. Programs and organizations available to assess equipment conditions are described under Machinery Condition Analysis. Deficiencies identified by these and other programs and organizations must be documented in the CSMP.

c. Further information on CBM is provided by reference (d).

1.4.1 Machinery Condition Analysis.

1.4.1.1 General. The TYCOM Machinery Condition Analysis (MCA) and SF Machinery Vibration Analysis programs provide an objective assessment of the mechanical condition of propulsion plant and auxiliary rotating machinery. MCA surveys and SF Machinery Vibration Analysis and testing directly support the CBM strategy by determining specific maintenance requirements and priorities.

1.4.1.2 Automated Machinery Condition Analysis. The advent of real-time machinery digital sensors, analysis tools, data recording and data transfer has brought Automated Machinery Condition Analysis (AMCA) to the forefront of CBM. AMCA systems are being employed and installed on new ships-of-the-line and back-fitted where practicable on existing ships. The AMCA tools and systems support the MCA programs and MCA surveys. The systems are implementing prognostic, diagnostic and maintenance capabilities for both shipboard and off-ship personnel to utilize to enhance understanding of the mechanical condition of propulsion plant and auxiliary rotating machinery.

1.4.1.3 Machinery Condition Analysis Surveys. MCA surveys combine vibration analysis, visual inspections and a review of operating and maintenance records to objectively determine each machine's condition.

a. Surveys are conducted before and after each scheduled CNO maintenance availability period. The survey preceding the availability provides a comprehensive list of machines which require repair. The MCA survey after the availability allows time for

corrective maintenance actions prior to the ship's deployment and, if applicable, repairs while machinery is still under the availability warranty period. The post-availability survey also establishes a baseline to which future surveys can be compared.

b. The key to the MCA program is onboard analysis of vibration data. MCA surveys identify machinery problems. A written report details prioritized repair recommendations with appropriate diagnostic and visual inspection data for all machines tested. The report also summarizes machinery repair history.

c. Reports of failure trends and recurring or continuing mechanical problems are available along with MCA history reports. These reports can be generated based on machine type, ship, ship class and Fleet.

1.4.1.4 Ship's Force Machinery Vibration Analysis Program. The SF Machinery Vibration Analysis program uses a fully capable automated diagnostics system to provide many ships with the ability to perform vibration testing. A set of computer programs in the diagnostics system provides the equivalent of a full-time vibration engineer so SF can test and analyze machinery at any time. Periodic training is provided to SF.

1.4.2 Ship Assessment, Groom and Evaluation. Ship Assessment, Groom and Evaluation is an existing TYCOM program which provides assessment of the material condition of selected shipboard systems and equipment. Ship Assessment, Groom and Evaluation includes identification of discrepancies to support development of a comprehensive conditioned based industrial availability work package. This program is fully described in volume VI, chapter 42 of this manual.

1.5 MODERNIZATION. The Navy Modernization Process is a CNO managed program to develop, plan, fund and accomplish Ship Changes and alterations following policies mandated in reference (h). It is executed per volume VI, chapter 36 of this manual.

1.6 INTEGRATED FLEET MAINTENANCE MANAGEMENT.

1.6.1 Integrated Fleet Maintenance Management. Integrated Fleet Maintenance Management is the business management model allowing for continuous maintenance by providing a seamless interface between all associated processes. It provides for processing work candidates including storage and retrieval of historical data and feedback to improve the process. The intent is to have a standard management model applicable to all platforms at all maintenance levels encompassing the following:

a. Discover and document work.

b. Validate and diagnose work.

c. Integrate and screen work.

d. Estimate and task work.

e. Plan work.

f. Execute work.

g. Collect feedback and analyze data.

1.6.2 Maintenance Continuum. The Maintenance Continuum defines Fleet strategy for maximizing Fleet Readiness by optimizing the continuous screening, planning, and execution of maintenance per reference (c). It builds upon continuous maintenance principles of which all scheduling opportunities are aggressively utilized resulting in the ships work candidates being expeditiously resolved at every maintenance opportunity (e.g, CMAVs, Windows of Opportunities (WOOs)) outside of the ship's CNO Availability. The core tenet is moving all feasible jobs out of CNO availabilities, reserving these events solely for work requiring shipyard-level equipment, facilities, or the extended duration afforded by that environment. Adherence to the Maintenance Continuum is essential for achieving shorter, more frequent availabilities and preventing delays to ship's deployments and operational schedules.

1.6.2.1 Implementing the Maintenance Continuum. Ashore Ships Maintenance Managers, Intermediate Level Ship Superintendents, and Project Managers are expected to aggressively advance continuous screening and planning processes to ensure jobs are ready for execution as quickly as possible after discovery and entry into the ship's CSMP. Ashore Ships Maintenance Manager, Intermediate Level Ship Superintendents, and Projecsat surf t Managers are also expected to identify and implement innovative approaches to utilizing in-port and even underway time to accomplish these jobs. The goal is to fully operationalize maintenance, modernization and repairs, making them continuous, everyday activities throughout the ship's lifecycle. The average time a job spends on the CSMP, from initial entry to completion, is a key metric that ship and shore maintenance managers must continuously work to minimize.

1.6.2.2 Continuous Planning Process. Continuous Planning is a process in which work is planned when tasked. Continuous Planning:

a. Begins with tasking of a work candidate to a planning activity for preparation of a work specification and cost estimate.

b. Ends when the specification is approved for execution. There is overlap between Continuous Screening and Continuous Planning.

1.6.2.3 Continuous Execution Process. Continuous Execution is a process in which selected emergent and non-emergent work candidates are executed outside of scheduled availabilities. Continuous Execution will not replace the current availability system. Availabilities will still be necessary to accomplish major repairs and extensive configuration changes, as well as provide the ship with a specific period of time to concentrate on maintenance and training. Continuous Execution will assist planning activities and repair activities in leveling their workload while providing the ships with a means of accomplishing repairs when needed with a minimum level of interruption to the ships' in port routine that is acceptable to the ship. The process is used when:

a. The work candidate is ready for execution.

b. Capacity exists in the selected repair activity.

c. Ship's in-port schedule supports the required level of repair effort.

1.7 TECHNICAL ASSISTANCE.

1.7.1 Regional Maintenance Center.

a. The RMCs provide direct support to Fleet and TYCOMs in matters of waterfront technical assistance, maintenance training and logistics services associated with the

installation, operation, maintenance, and readiness of shipboard equipment and systems. The RMCs promote Fleet readiness and maintenance self-sufficiency in shipboard systems and equipment through direct technical help in troubleshooting, maintenance and repair, on-the-job maintenance training, logistics reviews, and technical documentation support. These services help correct operational and maintenance problems which are beyond the technical capability or capacity of fleet units or FMAs.

b. Volume VI, chapter 2 of this manual fully describes policies and procedures for the RMCs.

1.7.2 Elevator Support Unit.

a. Elevator Support Unit is an element of NAVSEA's Weapons and Cargo Elevator Improvement Program funded and scheduled by the TYCOM to provide technical assistance for the maintenance, modernization and repair of weapons and cargo handling elevators.

b. Volume IV, chapter 8 of this manual provides further explanation of this program.

1.7.3 Waterfront Corrective Action Program.

a. Waterfront Corrective Action Program is a subprogram of the Shipboard Electromagnetic Compatibility Improvement Program, and is part of the RMCs, designed to provide training and technical assistance to SF in Electromagnetic Interference recognition and reduction.

b. Volume VI, chapter 4 of this manual provides further explanation of this program.

1.8 100 HOUR TRANSITION PERIODS.

1.8.1 Critical Time Period. The 100 hours at the beginning and at the end of an availability are critical times for availability execution. The ISIC, TYCOM, NSA, LMA and ship are responsible for coordinating the 100-hour plan. Any job or event that is viewed as hindering the start of the availability must be included in the 100-hour plan. Communication is vital to ensuring a full understanding of all work and associated requirements. Details for the first and final 100 hours will be:

a. First 100 Hour Plan should be discussed at:

(1) Work Package Execution Review (WPER).

(2) Planning Board for Maintenance meetings within six months of a scheduled availability.

(3) Arrival Conference.

b. Final 100 Hour Plan should be discussed at:

(1) 50% and 75% Completion Conferences.

(2) Planning Board for Maintenance meetings conducted during Availabilities.

1.8.2 First 100 Hour Plan. The First 100 Hour Plan will notionally start the first full work day of the availability. The items listed here are the focus of the first 100 hours, as indicated in Appendix A.

a. Conduct Tag-out audit.

b. Establishing plant conditions.

c. Establishing working hours and implement work controls (i.e., Tag-outs and Work Authorization Forms (WAF) throughout the availability).

d. NSA, LMA and SF will have a plan ready to execute at the start of the availability to place required equipment and systems into Inactive Equipment Maintenance status.

e. Jobs still requiring ship checks will be listed in the Availability Planning Message.

f. Test forms required for SF retest of FMA work will be delivered to the ship within the first 100 hours for SF to review, plan and write procedures as necessary.

g. Brief all critical path jobs (i.e., work requiring most of the availability to complete) starting during the first 100 hours.

h. Establish who from SF is authorized to sign off equipment testing (i.e., E-7 and above).

i. Confirm weekly progress meetings and times with SF and contractor management.

j. Submit Availability Start Message to cognizant Fleet Commander.

k. Provide SF with an Executive Level Integrated Maintenance Availability schedule (i.e., critical path jobs, long lead-time jobs, Maintenance Control Team jobs, high visibility jobs).

l. Conduct maintenance availability training and stand down for SF on critical safety systems (i.e., Tag-out, electrical safety, hearing conservation, sight protection, respiratory safety, etc.).

1.8.3 Final 100 Hour Plan. The Final 100 Hour Plan will notionally begin four days prior to the beginning of sea trials; or if no sea trials, last day of the ships' scheduled availability. Items listed here must be completed per Appendix B, which provides an outline of the final 100 hours.

a. Production work complete. It is vital all production work is completed by the 100-hour point to allow for the remaining events to occur without delay.

b. Production related temporary services removed.

c. Conduct departure conference.

d. Commence dock trials; complete dock trials.

e. Conduct Tag-out audit.

f. WAFs require close out no later than 72 hours prior to the beginning of sea trials; or if no sea trials, end of the availability. Conduct final WAF audit after closeout.

g. Testing associated with production work is completed and reviewed. (Testing should be ongoing as production work is completed throughout the ship's availability).

h. Operationally test systems and equipment repaired or modernized during the availability.

i. Conduct Pre-Underway checks and Master Light-Off Checklists.

j. Crew watchbills and berthing bills are complete.

k. Conduct Fast Cruise.

l. Complete Fast Cruise.

m. Crew rest and final administration.

APPENDIX A

FIRST 100 HOURS FOR SCHEDULED AVAILABILITY

Prior to 100 hours	Transition day	24 hours	48 hours	72 hours	100 hours
Pre-Availability	A	A+1	A+2	A+3	A+4

2.1 PURPOSE. This chapter provides guidance in support of advanced planning, preplanning, execution and close out of Chief of Naval Operations (CNO) Scheduled Maintenance Availabilities. The implementation of policies as set forth in references (a) through (ac) provide additional guidance as required. Requirements listed here apply unless otherwise approved by

Naval Sea Systems Command (NAVSEA). Where differences may exist, NAVSEA requirements take precedence.

2.2 CHIEF OF NAVAL OPERATIONS SCHEDULED MAINTENANCE AVAILABILITIES. A CNO availability is scheduled primarily for industrial maintenance and installation of major, high priority alterations. Types of these availabilities include:

a. Extended Docking Selected Restricted Availability.

b. Extended Selected Restricted Availability.

c. Engineered Overhaul.

d. Depot Modernization Period.

e. Selected Restricted Availability (SRA).

f. Docking SRA (DSRA).

g. Phased Maintenance Availability (PMA).

h. Docking Phased Maintenance Availability.

i. Docking Service Craft Overhaul.

j. Post-Shakedown Availability.

k. Surface Incremental Availability is a CNO scheduled availability non-docking maintenance period for Forward Deployed Naval Forces (FDNF) surface ships. SIAs are to be scheduled like a CNO availability and executed like a Continuous Maintenance Availability (CMAV) (see chapter 3 of this part and volume and volume III, chapter 4 of this manual for guidance on executing CMAVs.)

2.2.1 Early Start. An "early start" is defined as that time when ships are made available by Type Commanders (TYCOM) for the execution of maintenance or modernization, including dry-docking, prior to a scheduled CNO availability start date.

2.2.2 Early Start Concurrence. The Naval Supervisory Authority (NSA) (e.g., Naval Shipyard, Ship Repair Facility, Regional Maintenance Center (RMC), Supervisor of Shipbuilding) must request an "early start" period via Naval Message no later than A-75 days from scheduled availability start. TYCOMs must provide concurrence to execute an "early start" period. The cognizant maintenance activity will formally document each "early start" period using applicable availability management control tools (e.g., Navy Data Environment, Final Review Estimate provided to the TYCOM, etc.), and include NSA acknowledgement that the availability cost to the TYCOM will be the same, as if no "early start" period was utilized, within that documentation.

2.2.3 Readiness to Start Availability. The Project will conduct a Readiness to Start brief per the appropriate milestones listed chapter 3, Appendix A of this part and volume. The purpose of this briefing is for the Project Team to demonstrate its readiness to execute, test and certify the maintenance availability. The Project Team must review the Availability Work Package (AWP) for risks that would threaten the Project Team's ability to accomplish the work to the expected level of quality within the scheduled time and budget. The Project Team must develop risk mitigation strategies that eliminate or minimize risks. These risk mitigation strategies must be outlined in a letter provided to the TYCOM and the NSA's Immediate Superior In Command

(ISIC), or Commander, Navy Regional Maintenance Center (CNRMC). Readiness to Start Brief include:

a. All required Technical Work Documents are complete, reviewed and approved by the NSA Engineering Department. Any unfinished TWDs will be discussed.

b. The Quality Management Plan (QMP) is complete and signed.

c. The initial conditions can be established to support the work (e.g., drained, depressurized, de-energized, tag out and Work Authorization Form (WAF)).

d. The required repair parts, materials (including pre-fabrication) and test equipment are available or will be available to support the work.

e. Assigned project team personnel are knowledgeable, trained and qualified. The Executing Activity must provide appropriate written documentation to support the qualifications or certifications prior to personnel performing any work.

f. The milestones and key events schedule, critical path jobs and budget (including the overtime plan).

g. All required MOAs are signed and a communications plan has been established between the key participants of the availability.

h. A risk management plan is developed to mitigate or reduce risk. These mitigation or risk reduction options will be continuously evaluated throughout the availability.

i. A Fast Start strategy must be developed and monitored. A 100-hour beginning of the availability strategy will be part of this plan.

j. Ship's Force (SF) availability related training plan.

k. Readiness to receive SF. Items to be discussed must include adequacy of workspace, computer and telephone connectivity, completion of training and SF watchbill qualifications.

2.3 MAINTENANCE POLICIES AND PROCEDURES.

2.3.1 Critical Path Jobs. Critical Path Jobs (CPJs) are those jobs or series of jobs requiring special management attention and normally present the greatest risk to on time completion of the Key Event or availability. Industrial activities should be judicious in designating jobs as CPJs to prevent diverting management attention from those jobs which are, in fact, critical to on time completion of the availability. Consideration must be given to, but not limited to, the following in determining the CPJs:

a. Little or no room for delay exists.

b. Establishing plant conditions.

c. Long Lead Time Material (greater than 30 days to receive items).

d. Complexity of job or special skills or resources required.

e. Significant test requirements.

f. Not previously accomplished by a Fleet Maintenance Activity (FMA) (alterations, etc.).

2.3.2 Work Sequence Schedule. The Work Sequence Schedule is an integrated timeline (Pert Chart, Gantt Chart, etc.) that includes plant conditions, major work steps, tests and recertifications used to identify and progress CPJs. The Work Sequence Schedule should include:

a. Staging.

b. Establishing plant conditions.

c. Issuing work procedures.

d. Cycle time for Process Control Procedure and Required Reports approval.

e. Identifying major production steps.

f. Testing or Recertifying.

g. Closing out work procedures.

2.3.3 Milestones. Appendix A contains Organizational Level CNO Maintenance Availability milestones. Deployed and FDNF homeported maintenance availability milestones can be found in volume III of this manual. It is a guide to aid the Commanding Officer (CO) in planning and executing the availability. Specific advance planning milestones are developed jointly by the ship, the TYCOM, and the planning and executing activities (if possible). A particular availability may require development of a complete off-load, storage, security plan or a tailored list of Inactive Equipment Maintenance (IEM) items, or may require office, training or flammable storage space, etc. These items should be added to the milestones through coordination with the responsible planning and engineering activity.

2.3.4 Production Completion Date. Production Completion Date (PCD) for the Engineering Plant is an availability key event providing sufficient time for the necessary steps to be taken by SF to shift from a maintenance environment back to operations. It is intended all work and testing in engineering and auxiliary spaces will be complete and certified up through Stage 2 testing per reference (a) by the scheduled PCD. PCD includes all work planned for accomplishment during the maintenance availability by all maintenance and modernization providers including, but not limited to, the LMA, Alteration Installation Team (AIT), Commercial Industrial Services and FMA. The time reserved between PCD and propulsion plant light off is set aside to allow SF to complete pre-event certifications, clearance of tagouts, complete any remaining discrepancy corrections, continued deep cleaning, small valve maintenance, SF startup maintenance, valve lineups, temporary service removal, and, if required, any groom teams in areas requiring special emphasis. This time is necessary to allow SF to transition to an operational environment and focus necessary training and complete final preparations for the Light Off Assessment (LOA) and propulsion plant light off. For availabilities in excess of 120 days, PCD will be scheduled for a minimum of 14 days prior to the LOA. For availabilities 120 days or less, PCD will be scheduled between 3-14 days prior to LOA. The ship's CO, Chief Engineer, TYCOM and the NSA will determine the number of days needed between PCD and LOA for availabilities 120 days or less based on the scope of work, length of availability and other pertinent factors. PCD will not be less than 3 days prior to propulsion plant light off regardless of whether a LOA is scheduled. Generally, LOAs will be scheduled for availabilities greater than 120 days. For availabilities 120 days or less, the requirement for a LOA will be determined by the TYCOM. The following list contains

examples of items to be considered and key event exceptions not granted for when deciding whether or not the ship is ready to call PCD and begin the shift from a maintenance environment back to operations:

a. Temporary services removed, except for those required by SF or late emergency industrial activity work required for LOA.

b. Access openings and ladders installed and clear for passage.

c. All damage control or firefighting systems operational.

d. Lagging repairs completed. As required for operational testing, minimal minor lagging repairs may be deferred until completion of hot plant testing.

e. All machinery in-place, and assembled, and certified complete through Stage 2 testing per current instructions.

f. All deck plates and supports installed.

g. Boiler work completed including hydrostatic testing, with boiler under appropriate lay-up.

h. Industrial tools, material and debris removed.

i. All main propulsion and auxiliary piping, valves, and systems intact, hydrostatic tightness tests completed satisfactorily and remote valve operator and associated or indicator tests completed satisfactorily.

j. Engineering and auxiliary space turnover complete.

k. Ship distributed systems impact engineering or auxiliary spaces are intact and operational.

2.3.5 Delayed Production Completion Date. If the decision is made to delay the scheduled PCD, careful consideration should be given to ensure the times allotted for SF between PCD and the LOA are preserved, even if the availability end date would be adversely affected. The ship's CO, TYCOM, and the NSA should carefully evaluate any and all work remaining within the engineering spaces that could impact SF ability to be successful in preparing for the LOA. An exceptions list will be generated and agreed to by the ship's CO, TYCOM, and NSA listing all outstanding engineering or auxiliary space and other plant affecting work, which will continue after PCD while the ship is preparing for the LOA.

2.3.6 Command, Control, Communications, Computer, Combat Systems, Intelligence Light Off (Aegis Light Off for Aegis ships). Command, Control, Communications, Computer, Combat Systems (C5I), Intelligence Light Off (C5ILO) is a Key Event to document all SF work, including legacy equipment restoration, and production work that supports uninterrupted C5I testing is complete and certified. C5ILO is defined as met when SF and production work including LMA, Commercial Industrial Services and AIT in designated compartments and support systems is complete to the degree required to support uninterrupted testing. For compartments, the degree required includes compartment release of all spaces required prior to C5ILO per the Compartment Release Schedule of NAVSEA Standard Item 009-117. For support systems, which are ship-wide distributed in nature, the degree required includes complete installation of the branches supporting the C5I equipment and completion of support

systems test procedures or applicable portions of the support system test procedures such that the support equipment is verified to be operating within design parameters.

a. The NSA must certify all related industrial production work and Stage 1 and Stage 2 testing is completed for C5ILO, with any exceptions noted and approved by the appropriate technical authority and agreed to in writing by the Ship's CO, NSA Project Manager, TYCOM and the NSA.

b. Access routes need not be released but must be passable or alternate routes made to the Combat Systems Suite available at all times. Services, either ship or shore based, must be available on a reliable basis. These services may include (based on ship class) but not limited to: 60 HZ or 400 HZ, Air Conditioning, Chilled Water, condensate drains, Vacuum, Collection, Holding and Transfer, Firemain or Aegis Salt Water Cooling pumps, Ventilation, Electronic Cooling Water (demineralized water), Dry Air, High Pressure Air, Low Pressure Air, Fwd and Aft AN/SPY skids, Sonar skid, AN/SPS 49 skid, Command and Decision skid, AN/SLQ 32 Cooling unit and Close-In Weapons System heat exchanger. In addition, the Electric Plant Control Equipment console or equivalent remote 400 HZ control unit must be available. Cabling from 60 HZ Power panels, Chilled Water hoses and routes must be intact to 400 HZ power sources or converters. Electronic Cooling Water modifications must be completed and all contractor flushes accomplished. If in dock, AC plants, cooling skids and Firemain must be placed in operation to support C5ILO with an acceptable means of discharge or operation (e.g., overboard discharge).

c. C5I testing must not begin in a compartment which has not been formally released per NAVSEA Standard Item 009-117 and accepted by the PEO Integrated Warfare System Combat Systems Project Engineer (is assigned) or SEA 21 Program Manager Representative, Ship's CO and the NSA.

d. Combat systems equipment restoration by the NSA and SF must be scheduled to commence a minimum of four weeks prior to key event C5ILO. SF inactive equipment maintenance work list (restoration plan, including start up maintenance) must be included in the Integrated Production Schedule by the LMA. The crew, with assistance from the Combat Systems Port Engineer, and under advisement by the Combat Systems Project Engineer and Command, Control, Communications, Computers and Intelligence representative (if assigned), must develop a C5ILO restoration plan, to be completed prior to key event C5ILO, to support C5I System Operational Verification Testing (SOVT) execution. The Combat Systems Port Engineer will assist the crew to validate equipment operation to include correction of Pre-Installation Check Out discrepancies and Post Deployment Total Ship Readiness Assessment (TSRA) discrepancies, cannibalized equipment restoration, and any new casualties identified during Light Off impacting SOVT testing. System restoration includes all C5I equipment, interfacing systems and a fully operational Network with off-hull connectivity. The C5ILO restoration plan must include Keying Material load requirements for all Cryptographic Equipment, submission of required Satellite Access Authorization, and required radiation requests to support Over-The-Air end to end SOVT completion. Delays and disruptions shall be documented and reported to ensure all stakeholders are aware of possible impacts to schedule. It is imperative

during the SOVT phase, the crew shall work closely alongside the In-Service Engineering Agents to receive training and proficiency on the modernized systems, ensuring the highest level of operational preparedness.

2.3.7 Habitability. Key Event of Habitability (HB00) at which the ship meets habitability standards by completion of Habitability Inspection per Quality of Service Council (QoSC) Execution Guidance and its subsequent paragraphs to determine that the ship is materially ready. Exceptions must be approved by the NSA Commanding Officer based on the Chief Engineers' Risk Assessment.

2.3.8 Memorandum of Agreement. The Memorandum of Agreement (MOA) must be executed and jointly signed by the ship's CO, the NSA, the AIT Manager, the ISIC representative (if applicable) and the FMA representative (if applicable) prior to commencing authorized intrusive work. It is an agreement between the industrial activity and SF concerning the responsibilities of each party during the availability. It deals with a number of areas in which SF generally provides support to the industrial activity and vice versa. As a minimum, the MOA must include:

a. Purpose. Include:

(1) Availability Type

(2) Period of Performance

(3) Geographic Location of Maintenance (e.g. CMAV, 2-30 Jun 2019, Norfolk, VA)

b. Applicability. List all parties involved in the MOA and include:

(1) Point of Contact Department or Code for each activity involved.

(2) The NSA and LMA.

(3) The AIT (if applicable) to include the Sponsor, Manager, Contractor(s) and Subcontractor(s) for alteration work.

c. Responsibilities for control of plant conditions and work area isolation.

d. Responsibilities for accomplishment of work.

e. Responsibilities for Quality Assurance (QA).

f. Responsibilities for support services or equipment.

g. Responsibilities for testing requirements.

h. Responsibilities for waivers, deviations, or Departure from Specifications.

i. Responsibilities for training.

j. Miscellaneous responsibilities (as required) (i.e., Hazardous Material, etc.).

k. Signatures of all activities signifying agreement with the terms and responsibilities of the MOA.

l. Responsibilities for reports or notification requirements of reference (b) Sections 302, 304, 311, 312, and 313.

m. Responsibilities for work control, execution and testing associated with Process Control Procedures.

n. For Alterations installed by AITs, the NSA will initiate the MOA and engage all assigned activities to support development of the MOA as detailed in reference (c) and part II, chapter 1, paragraph 1.1.1.d of this volume.

2.3.9 Responsibilities. Responsibilities for the Maintenance Policies and Procedures for CNO scheduled availabilities are:

2.3.9.1 Fleet Commander.

a. Maintain the Availability Intervals and Cycles issued in reference (d) to the maximum extent practical within operational requirements.

b. Inform the Chief of Naval Personnel of any significant changes which would affect ship manning requirements during an extended CNO Maintenance Availability.

c. Coordinate with the Program Executive Offices, Direct Reporting Program Manager or Ship Program Manager, as applicable, in the accomplishment of CNO Maintenance Availability planning.

d. Implement Docking Officer Qualification and Certification requirements as issued in NAVSEA instructions.

e. Plan for and monitor availability execution to achieve a balance of cost and schedule for the scope of work authorized. Ensure any growth in the scope of work authorized is necessary to reasonably assure safe, reliable operation of the ship during the subsequent operating cycle.

f. Plan for and provide berthing, messing, offices, classrooms, equipment stowage space, and SF repair shop per reference (e) when shipboard facilities are expected to become unusable or uninhabitable.

2.3.9.2 Type Commander.

a. Coordinate the scheduling of availabilities at industrial activities with Fleet Commander, NAVSEA and CNO.

b. Initiate the required budgetary actions for funding availabilities.

c. Coordinate the work assignments between the FMA and the industrial activity.

d. Seek resolution of all class and major technical problems and coordinate industrial requirements for modernization and repair.

e. Authorize AWPs prepared by Surface Maintenance Engineering Planning Program (SURFMEPP) Activity with recommendations from the ship's CO, Maintenance Manager and ISIC (if applicable). Exercise all work candidate screening and follow up actions relating to the availability directly with the ship concerned. Assume the lead role in managing the AWP from the Baseline Availability Work Package (BAWP) developed by SURFMEPP.

f. Designate a TYCOM representative for the Work Definition Conference (WDC), Project Review Conference (PRC), Quality of Service Council (QoSC) meeting, and Pre-Arrival Conference (PAC) when such conferences or meetings are scheduled.

g. Recommend to CNO any high priority fleet modernization desired to be accomplished.

h. Conduct a QA audit of SF and FMA Controlled Work Packages per volume V, part I, chapter 9 of this manual.

i. TYCOM Force Damage Control will provide fire safety oversight for all ships while in a maintenance availability per reference (f) or reference (g), as applicable.

g. Provide final endorsement via Fleet Maintenance Officer of any exceptions to end of availability key event.

2.3.9.3 Type Commander or Immediate Superior In Command (Group or Squadron).

a. Assist SURFMEPP in the preparation of the AWP.

b. Monitor corrective maintenance action taken by industrial activities and Regional Support Groups (RSG) or RMC.

c. Schedule and conduct inspections of Forces Afloat.

d. Monitor progress of CNO Maintenance Availabilities.

e. Ensure that a MOA is executed prior to availability start per paragraph 2.3.6 of this chapter.

f. Designate an ISIC representative to participate in QoSC.

g. In coordination with the RMC Chief Engineer (CHENG), submit Change Deferral Requests and Change Notifications to SURFMEPP per Appendices B and C. These documents will provide adequate information to support a technical analysis, including the date the maintenance was last accomplished, the proposed timeframe for accomplishment, reason for non-accomplishment using the deferral codes provided and a mitigation strategy with impact statement for non-accomplishment. In addition, TYCOM will maintain mandatory BAWP requirements proposed for non-accomplishment in an active planning status until adjudicated.

h. Coordinate with SURFMEPP to update the AWP when Class Maintenance Plan (CMP) changes drive a change to the BAWP after 100% D-Level Package Lock.

i. Coordinate meetings as required at key milestones and as required to support resolution of major issues, such as those associated with large budget reductions or shipyard resource shortfalls due to scheduling conflicts.

j. Provide fire safety oversight for all surface ships while in a maintenance availability per reference (g).

2.3.9.4 Surface Maintenance Engineering Planning Program.

a. Act as the CMP development and management activity.

b. Build Technical Foundation Papers for each ship class and Ship Sheets by hull.

c. Identify, track and process all mandatory CMP requirements.

d. Develop, track and process the BAWP to reflect changes in the CMP.

e. Capture all mandatory maintenance closeout or return costs at the Job Control Number (JCN) and Ship's Work List Item Number levels.

f. Review Change Deferral Letters and Cancellation Deferral Notification System (CDNS) requests for sufficient supporting documentation, mitigating actions and to determine the impact of reprogramming work or reducing scope following the change deferral process located in Appendix B.

g. Develop a response in conjunction with applicable Technical and Engineering Authorities and Engineering Authorities such as Naval Air Systems Command, Naval Information Warfare Systems Command, Naval Surface Warfare Centers and other stakeholders. If required, coordinate the mitigation strategy revision with Commander, Naval Surface Atlantic (COMNAVSURFLANT) or Commander, Naval Surface Pacific (COMNAVSURFPAC) N43.

h. Review and approve or disapprove recommended action for CDNS requests. Forward CDNS approval or disapproval decision to SURFMEPP with justification and recommendation for approval or disapproval within 14 calendar days of receipt.

i. SURFMEPP will provide recommendations to Deferral Letters and forward to NAVSEA 05 for Surface Ship Engineering Operation Cycle (SSEOC) designators and provide final determination for all other tasks to the TYCOM with information copy to SEA 05.

j. Ensure the CMP configuration data, Last Maintenance Accomplished dates as designated in the Maintenance and Ship Work Planning program, next Due Dates and associated periodicities remain current using historical technical data to correct deficiencies when necessary.

k. Review NAVSEA 05D responses to Change Deferral Requests and send the Final Disposition Letter to TYCOM within ten calendar days of receipt.

l. Coordinate the Life Cycle Planning Conference (LCPC), CSMP, Departures From Specifications (DFS), BAWP Mid-Cycle Review and the BAWP Close-Out Verification and Assessment Meeting and summarize all Deferral Letters, Change Notifications and resulting actions for the current Fleet Readiness Plan (FRP) Maintenance Cycle.

m. Brand tasks residing in the CMP and CSMP, as applicable.

n. Issue the CNO Availability Advance planning schedule.

o. Integrate Modernization tasks into the BAWP prior to 100% D-Level Package Lock per an issued Advance Planning Letter. After BAWP or AWP turnover, enter authorized Modernization tasks into the CSMP following the Navy Modernization Process and brand per Appendix D.

p. Attend TYCOM, RMC, and Private Sector Industrial Activity (PSIA) planning conferences for each ship.

2.3.9.5 Ship's Commanding Officer. The CO is the TYCOM representative for monitoring the progress and quality of industrial work. As such, the CO should review availability progress during weekly conferences with Department Heads and others as necessary. The Supervising Authority meets weekly with the CO and other industrial activity officials as described in paragraph 2.6.3. The CO should be prepared to discuss and assist in the resolution of scheduling, design, material, and production problems. The CO's responsibilities are defined in reference (d). Additionally, COs must:

a. Review AWPs and provide comments to the TYCOM and ISIC during the WDC or PRC.

b. Assign a Ship Selected Records (SSR) Coordinator to perform the functions of paragraph 2.6.6.

c. Publish policy concerning the number of duty sections, liberty, ship cleanliness, tagout procedures, tank closeout and blanking of otherwise exposed fluid systems, waveguides and air systems before availability start.

d. Ensure non-conformances (Waivers, Deviations or Departures from Specification) submitted during the availability by any activity are approved prior to trials at sea (if held) and not later than the completion of the availability.

e. Designate a SF QoSC representative to participate in QoSC meetings.

f. In accordance with Appendix E, provide the Force Afloat Work Package (FAWP) to the NSA Project Team for review and integration.

g. In accordance with Appendix E, FAWP should include all major maintenance actions such as IEM Planned Maintenance System (PMS), Ships Force planned repairs, major preservation and testing.

h. Identify what items on the FAWP could affect major milestones (Undocking, LOA, PCD, Aegis Light Off, etc.).

i. Review the command lay-up plan down to the work center level. Confirm all materials required for lay-up and IEM have been ordered and received.

2.3.9.6 Maintenance Team.

a. BAWP requirements uploaded to the CSMP with a due date prior to the ship's Mid Cycle Review must be screened and brokered within ten calendar days after receipt of task.

b. Screen and broker 100% of the BAWP's mandatory requirement JCNs per the planning milestones listed in volume II, part II, chapter 3, Appendix A (Continental United States and Hawaii) or volume III, chapter 4, Appendices B and G (FDNF).

c. Meet with TYCOM Representatives and SURFMEPP by Mid Cycle Review to review the ship's BAWP, CSMP, Availability Duration Estimate, active DFSs, Class Advisories, routines and services. The CSMP will be reviewed and evaluated for branding per Appendix D. The ship will assign a JCN to active temporary DFSs with no open JCN in the CSMP (the ship must update the DFS to reflect the new JCN as appropriate and the Port Engineer will ensure the "Job Closure Method" is set to "Both" as referred in Part II, Chapter 3 of this volume).

d. Screen and broker any mandatory CMP requirement uploaded to the CSMP by Mid Cycle Review within ten (10) days of receipt into the Information Technology (IT) screening and brokering system.

NOTE: MAINTENANCE TEAM (MT) WILL SCREEN ALL REQUIREMENTS TO A SCHEDULED OR FUTURE MAINTENANCE PERIOD TSRA EVENT WITHIN THE CURRENT FRP MAINTENANCE CYCLE.

e. Provide timely closeout information for completed requirements.

f. When required, provide CMP configuration data corrections to SURFMEPP.

2.3.9.7 Technical Warrant Holders and In-Service Engineering Agents.

a. Evaluate Deferral Letters requested by NAVSEA 05D (Ship Design Manager).

b. Evaluate CDNS deferral requests as requested by NAVSEA 05D.

c. Provide approval or disapproval recommendations to NAVSEA 05D in support of Deferral Letters and CDNS Deferral Requests.

2.3.9.8 NAVSEA 05D.

a. Review, adjudicate and provide a response for all Change Deferral Requests to SURFMEPP within ten calendar days of receipt. NAVSEA 05D (Ship Design Manager) must provide a representative to all BAWP Process Milestone Meetings when practical.

b. For Deferral Letters requiring other agency approvals (e.g., Naval Air Systems Command, Naval Ship Systems Engineering Station, etc.), NAVSEA 05D will coordinate with the appropriate Technical Authority for adjudication.

c. Review, adjudicate and provide a response for all CDNS requests within ten calendar days of receipt.

2.4 AVAILABILITY WORK PACKAGE PLANNING.

2.4.1 Forces Afloat Planning Sources. The majority of the Forces Afloat Work Package can be identified in advance from the following sources:

a. Ship's CSMP Integrated with the Life Cycle Maintenance Plan. This document contains work items deferred during the previous maintenance availabilities, outstanding Departures from Specifications, dry dock requirements, etc. To ensure the CSMP accurately reflects the required ships maintenance, the ISIC Material Officer or TYCOM will review each ship's CSMP in detail with the ship prior to the WDC or PRC for CNO Maintenance Availabilities. The ISIC or TYCOM 3-M Coordinator and Maintenance Document Control Office should provide the necessary technical assistance and training to facilitate CSMP updates.

(1) Alterations. SURFMEPP enters alterations on the ship's CSMP.

(2) Condition Based Maintenance. (Machinery Condition Analysis or Technical Assessment, Repair, Groom and Evaluation Team, Combat System Readiness Review, etc.). The ISIC or TYCOM Material Officer and SF must ensure all material deficiencies identified by Condition Based Maintenance programs as

identified in part II, chapter 1 of this volume are loaded into the CSMP for a specific availability.

(3) Life Cycle Planning Conference . Representatives from SURFMEPP, TYCOM and the ship's Port Engineer (PE) or Ashore Maintenance Manager will convene for a LCPC. SURFMEPP will be responsible for planning and conducting the conference. TYCOM, RMC Assessment Directors, Program Manager Representatives, representatives from NAVSEA 05, NAVSEA 21 Modernization, Planning Activity and the ship's MT should attend the LCPC.

b. Work Routines. A set of Master Job Catalog standard work routines should be developed for every availability. The Maintenance Document Control Office or TYCOM tailors each work routine package to the needs of the ship by calling out additional work routines to document periodic, interim dry-docking, and calibration recall requirements, as applicable.

c. Pre-Availability Tests and Inspections. SF and industrial activity inspectors perform and submit the results of these pre-availability tests and inspections to the industrial activity, or applicable TYCOM for evaluation and inclusion in the AWP, as applicable. NAVSEA 07T provides results and recommendations for pre-availability tests performed by SF.

2.4.2 Forces Afloat Planning Actions. SF must take the following maintenance availability planning actions, as applicable:

a. Develop a SF concurrent Work Package that includes all major maintenance actions such as PMS, repairs, alterations and testing to be conducted by SF during the availability, as applicable.

b. Identify CPJs per paragraph 2.3.1 of this chapter and submit to the planning or industrial activity for integration into the availability schedule.

c. Establish a strategy for calibration of gages, instruments, and tools based on the Calibration Recall List and Calibration Support Plan.

d. Identify all industrial activity provided production and testing support equipment needed to accomplish SF work, or to recertify systems following SF work. Identify this equipment to the industrial activity prior to the start of the availability. This support equipment includes the following, as applicable:

(1) System hydrostatic test equipment.

(2) Calibration equipment.

(3) Special tools.

e. SF should use Appendix A to prepare for availabilities. This appendix provides CNO Maintenance Availability Planning Milestones for deployed and FDNF homeported maintenance availability milestones can be found in volume III of this manual.

2.4.3 Availability Work Packages.

2.4.3.1 Availability Work Package Content. The AWP includes all authorized industrial work and associated Forces Afloat work for modernization, maintenance and repair during the

availability. The work described is developed from NAVSEA and TYCOM instructions. Forces Afloat actions in the AWP scheduled to complete prior to availability start are critical in defining additional work candidates per Appendix E.

2.4.3.2 Availability Work Package Sources:

a. CMP.

b. NAVSEA authorized alterations.

c. TYCOM authorized alterations, repairs, Engineering for Reduced Maintenance Costs items and baseline AWPs.

d. Results of pre-availability tests and inspections.

e. CSMP.

f. Fleet Technical Support records.

2.4.3.3 Availability Work Package Development. The five stages of AWP development include Baseline, Preliminary, Proposed, Approved and Completed.

a. SURFMEPP is responsible for BAWP development. The BAWP contains all NAVSEA requirements due during a ships' current FRP Maintenance Cycle and is comprised of:

1. Mandatory assessment and corrective maintenance requirements from the CMP

2. SSEOC -applicable repairs from the CSMP

3. Other programmatic mandatory requirements (e.g., Mandatory Safety Alterations)

4. Services and routines in support of Mandatory Technical Requirements or availability execution

b. Mandatory SSEOC work, identified by having an "A" brand in the Category of Work field regardless of its origin, will be tracked and adjudicated using processes described in this section. See Appendix D for detailed branding code information.

c. Systems Command (SYSCOM), TYCOM, and the ship's CO should review the Preliminary AWP to ensure it includes known work candidates and authorized alterations that will not be accomplished prior to availability start and for proposed work candidates, which in their opinion, are unnecessary. Appendix E provides suggested guidelines for review of the AWP. Following the initial review of the Preliminary AWP, SF will host a meeting with the TYCOM as applicable to consolidate comments and recommendations for the WDC or PRC. This meeting is normally held early in the same week as the WDC or PRC.

d. TYCOM will host a WDC or PRC attended by NAVSEA, the Supervising Authority, FMA (if applicable), TYCOM, ISIC, and SF when practical. During this meeting, the Preliminary AWP is carefully reviewed and the SYSCOM and the TYCOM authorize the work. When actions are required before a decision is made, those actions are identified and subsequently monitored. The goal is to issue the Proposed AWP (one

which represents all SYSCOM or TYCOM authorized work integrated and specifically tailored to the ship involved) within two months following this meeting. At this meeting, the SYSCOM or TYCOM authorizes the industrial activity to continue with planning on the basis of the work identified in the AWP. During this meeting, any activity may submit new work candidates for consideration by the SYSCOM or TYCOM. The SYSCOM or TYCOM will authorize or reject each new work candidate submitted. A reason for rejecting a work candidate will be provided. The NSA Chief Engineer will review requested growth and new work items for technical compliance.

e. SURFMEPP will host three scheduled meetings over the course of the ship's FRP Maintenance Cycle: the LCPC, Mid-Cycle Review, and the BAWP Close-Out Verification and Assessment Meeting. When possible, SURFMEPP conferences will be held in conjunction with other MT scheduled meetings, such as monthly Availability Advanced Planning Meetings and Planning Board for Maintenance.

f. SYSCOM or TYCOM and the ship's CO should review the Proposed AWP to ensure that it contains all agreements made at the WDC or PRC. Appendix E also provides suggested guidelines for review of this AWP.

g. The Supervising Authority will host a PAC attended by NAVSEA, FMA (if applicable), TYCOM, ISIC, and SF when practical. During this meeting, the Proposed AWP, with results of the pre-availability tests and inspections incorporated where possible, will be carefully reviewed and the SYSCOM or TYCOM will approve the work. The goal is to issue the Approved AWP at the conclusion of this meeting. During this meeting, any activity may submit new work candidates for consideration by the SYSCOM or TYCOM and NSA Chief Engineer. The SYSCOM or TYCOM will authorize or reject each new work candidate submitted. A reason for rejecting a work candidate will be provided. The NSA Chief Engineer will review requested growth and new work items for technical compliance.

h. Within six months after the completion of the availability, the applicable TYCOM will issue the Completed AWP. RMC Code 300 will verify Departure Report completion and availability closeout in the appropriate IT system within 90-days after CNO availability completion.

2.5 AVAILABILITY PLANNING.

2.5.1 Ship's Force Pre-Planning.

a. To effectively complete the SF and Maintenance Support Team (MST) (if assigned) responsibilities during the months preceding the start of the availability, it is necessary to assign an Officer or Chief Petty Officer as the Availability Coordinator, responsible for coordinating the completion of the milestones. The quality of the availability will be reflected in the preparations done by SF and MST (if assigned).

b. Prior to commencement of the availability, the industrial activity will request the ship to provide personnel Temporary Assigned Duty to the activity (approximately one month prior to the start date). The industrial activity will identify the personnel requirements of this pre-arrival team based on the type of availability and ship class.

2.5.1.1 Industrial Activity Visit. The ship's CO, Executive Officer, MST Officer In Charge (OIC) (if applicable) and department heads will visit the industrial activity as soon as practical prior to the start of the availability. The CO will meet key industrial activity managers involved in the availability, other COs of ships in availabilities at the same industrial activity. The Executive Officer, MST OIC (if applicable) and department heads will meet their counterparts within the industrial activity Project Team and counterparts assigned to other ships in an availability at the same industrial activity. The Executive Officer will also check available crew quarters and barge accommodations, if applicable. SF will:

a. Coordinate with the industrial activity to conduct pre-availability training and indoctrination. The following are suggested topics for training:

(1) Industrial activity organization and SF or MST (if assigned) interface.

(2) Industrial activity procedures and practices, including:

(a) Operational Control Transfer.

(b) Tagout, Rip-Out and Work Authorization Form. This training must address the WAF and tagout process described in volume IV, chapter 10, of this manual.

(c) Deficiency Reporting and Correcting.

(d) General Testing Requirements.

(e) Defueling or Fueling Requirements (Fossil Fuel).

(f) Industrial Activity Procedures for Accomplishing PMS of Equipment Under Their Cognizance.

(g) Maintenance of Ship's Cleanliness.

(h) QA Interface with the Industrial Activity.

(3) General schedule of Key Events and phases of work and testing.

(4) Safety requirements including SF or MST (if assigned) industrial activity responsibilities for:

(a) Dry Dock Safety.

(b) Fire Watches.

(c) Watertight Integrity.

(d) Personal Protective Equipment.

(5) Relationship with industrial activity management including responsibility regarding weekly management meetings.

(6) Functions and responsibilities of the joint test groups (Hull, Mechanical, Electrical and Combat Systems) and the Ship's Safety Council including the designation of SF group and council members.

(7) Control mechanism for work and tests affecting ship's conditions.

(8) Special evolutions and procedures to be conducted early in the availability such as dry-docking and establishing plant conditions.

(9) QA.

(10) IEM.

(11) Hazardous Material Requirements.

(12) Special Environmental Requirements.

(13) Support of Trials and Inspections.

(14) System Experts.

(15) Space Turnover.

b. Develop training plan and watch station requalification program per TYCOM directives.

c. Develop Plan of Action and Milestones for SF or MST (if assigned) responsibilities during the availability.

d. Review and prepare SSRs for turnover to the planning yard or industrial activity at the start of the availability.

e. Support the industrial activity's pre-availability ship checks, tests and inspections.

2.5.1.2 BAWP Milestones. Specific milestone timeline is located in chapter 3, Appendix A of this part and volume.

2.5.1.2.1 Life Cycle Planning Conference. SURFMEPP will conduct an LCPC and issue a BAWP for ships at the beginning of each ship's FRP maintenance cycle. The purpose of the LCPC is to review contents of the preliminary BAWP and planning timeline schedules with TYCOM, RMC Assessment Directors, Program Manager Representatives, representatives from NAVSEA 05, NAVSEA 21 Modernization, Planning Activity and the MT. Feedback from the meeting will be folded into the issued BAWP as applicable.

2.5.1.2.2 Baseline Availability Work Package. SURFMEPP will send a list of the FRP Maintenance Cycle CMP requirements and a list of availability services and routines to the ship's PE for review. This list is a preview of the initial BAWP and will be discussed in detail at the LCPC. SURFMEPP will provide a list of CMP-required assessments to TYCOM, Commander, Navy Regional Maintenance Center (CNRMC) and RMC as requested in support of the TSRA process.

a. SURFMEPP will upload a data file (MM0001 file) with all mandatory requirements and expected CNO Availability services into the ship's CSMP in support of ship-specific MT screening and brokering requirements.

b. SURFMEPP will issue formal correspondence detailing the BAWP planning schedule and outstanding action items from the LCPC.

c. Requirements uploaded to the IT screening and brokering system with a due date prior to the ship's Mid-Cycle Review milestone must be screened within ten (10) calendar days after receipt of task.

d. The PE must screen 100% of the BAWP requirements in IT screening and brokering system no later than Mid-Cycle Review and will only utilize the IT screening and brokering system or the Maintenance Support Tool to accomplish this task. These requirements must be screened by the PE to a scheduled or future maintenance period or availability (other than Unfunded) within the current FRP Maintenance Cycle.

2.5.1.2.3 Fleet Readiness Plan Mid-Cycle Review. SURFMEPP will conduct a mid-cycle review of the ship's BAWP and CSMP to ensure inclusion of all mandatory requirements, services or routines and lifecycle impacting Class Advisories, active DFSs and Avail Duration. Navy Data Environment (NDE) modernization forecasts are addressed as applicable. TYCOM, RMC Assessment Directors, Program Manager Representatives, representatives from NAVSEA 05, NAVSEA 21 Modernization, Planning Activity and the MT should attend this meeting.

a. 100% of the BAWP requirements in the IT screening and brokering system are required to be screened by the ship's PE. These requirements must be screened by the PE to a scheduled or future maintenance period or availability (other than Unfunded) within the current FRP Maintenance Cycle.

b. Any mandatory CMP requirement pushed after LCPC (initial BAWP push) is required to be screened within ten (10) calendar days of receipt into the appropriate IT system.

c. A full CSMP Scrub led by the TYCOM PE with each Ship Work Center is required to be completed as a pre-requisite for this review.

2.5.1.2.4 Mid-Cycle Review.

a. Following the Mid-Cycle Review, SURFMEPP will update the BAWP with lifecycle critical tasks.

b. Further TYCOM deferrals or deletions to the BAWP must be submitted using a Deferral Letter or the CMP CDNS.

c. CMP work completion, configuration updates and new CMP additions will require SURFMEPP to upload more CMP requirements into a ship's CSMP following the Mid-Cycle Review. These updates will be coordinated with the ship's PE prior to initiation. If the ship is beyond 100% D-Level Package Lock, updates must be coordinated with the respective TYCOM AWP Manager in addition to the ship's PE.

d. Mandatory CMP requirements pushed after LCPC (initial BAWP push) are required to be screened within ten (10) calendar days of receipt into the IT screening and brokering system.

2.5.1.2.5 Review of BAWP and CSMP.

a. SURFMEPP, TYCOM representatives, RMC and the ship's MT will meet to review the ship's BAWP and CSMP to ensure inclusion of all required services **or** routines and lifecycle impacting Class Advisories and active DFSs. NDE modernization forecasts are addressed as applicable. RMC Assessment Directors, RMC and TYCOM TSRA Planners, NRMC, Program Manager Representatives and representatives from NAVSEA 05D, NAVSEA 21 Modernization, COMNAVSURFLANT or COMNAVSURFPAC N43, PSIA Contractor (or Planning Activity), ISIC and the ship's MT **must** attend this meeting.

b. 100% of the BAWP requirements in the maintenance screening and brokering system are required to be screened by the ship's PE. These requirements **must** be screened by the PE to a scheduled or future maintenance period **or** availability (other than Unfunded) within the current FRP Maintenance Cycle.

c. Any mandatory CMP requirement pushed after LCPC is required to be screened within ten calendar days of receipt into the IT screening and brokering system.

2.5.1.2.6 Updating the BAWP.

a. SURFMEPP will update the BAWP with lifecycle critical repair tasks resulting from assessment requirements in addition to the results (i.e., deferral or technical challenges) from the CSMP, DFS **or** BAWP Mid-Cycle review.

b. Further changes to the BAWP must be submitted using a Change Request Deferral Letter or the maintenance screening and brokering system.

c. CMP work completion, configuration updates and new CMP additions may require SURFMEPP to upload more CMP requirements into the BAWP whose next due date falls within the current FRP Maintenance Cycle through the next maintenance cycles' LCPC. These updates will be coordinated with the ship's PE prior to call down. If the ship is beyond 100% D-Level Package Lock, updates must be coordinated with the respective TYCOM AWP Manager in addition to the ship's PE.

d. Mandatory CMP requirements pushed after LCPC are required to be also screened within ten calendar days of receipt into the IT screening and brokering system.

e. Ship Design Manager authorization via SURFMEPP Platform Engineering will be obtained if stakeholders desire to withhold or delay CMP requirements generated by configuration updates and new CMP additions if these requirements will be due prior to the end of the current FRP Maintenance Cycle.

f. Updates will cease after 100% D-level Package Lock unless required by the technical periodicity of a CMP task or upon TYCOM request.

NOTE: IF BAWP TURNOVER TO TYCOM OCCURS WITHIN 30 CALENDAR DAYS OF LCPC, THE PE MAY FORGO THE 50 PERCENT SCREENING MILESTONE AND INSTEAD HAVE 100% OF THE BAWP REQUIREMENTS SCREENED BY MID-CYCLE REVIEW.

2.5.1.2.7 BAWP Turnover to TYCOM. The TYCOM's AWP Manager will review the BAWP and assume responsibility for planning and developing the AWP as described in paragraph 2.5.4 of this chapter.

2.5.1.2.8 Mandatory Material List. SURFMEPP will develop a Mandatory Material List and distribute it via a Code 200 letter to the cognizant RMC's for the purpose of ordering materials needed for the availability prior to 100% package lock.

2.5.2 Docking Conference. For availabilities involving a ship's dry-docking, the industrial activity will conduct a Docking Conference prior to the ship entering the activity if scheduled to go directly into dry dock.

2.5.3 Ship's Force Administrative Preparations. SF administrative preparations for availabilities will include:

a. Necessary revisions to ship and department organization manuals to ensure compliance with established requirements.

b. Preparation of necessary ship and department directives to ensure that administration is formally supported per current requirements.

c. Formulation of procedures for qualification of underway or steaming watchstanders and maintenance of proficiency of in-port watchstanders, including:

(1) Implementation of formal provisional qualification procedures.

(2) Establishment of qualification goals for Key Events, such as undocking, operational testing of ship and propulsion plant systems, steam testing, initial criticality, space turnover, etc.

(3) Incorporation of qualification requirements necessitated by alterations to ship or propulsion plant systems.

d. Procedures for maintenance and security of SF or MST (if assigned) barge or office spaces.

e. General overhaul plan for SF or MST (if assigned) responsible actions including provisions for:

(1) Ship off-load.

(2) Establishment of barge, berthing and messing facilities.

(3) Establishment of routine ship and barge watch bills.

(4) Scheduling of required shore based schools and leave for personnel.

(5) Provision for accomplishment of known SF or MST (if assigned) corrective maintenance.

(6) Establishment of SF PMS routines.

(7) Establishment of Integrated Logistics Overhaul (ILO) procedures.

(8) Provisions for shift work during known periods of intensive testing (e.g., Engine Room Steaming Operations, Hot Operations).

(9) Ship load-out.

(10) Target dates for completion of key ship and department directives and procedures.

f. Assignment of ship system experts, or QA Inspectors, capable of monitoring industrial activity work on assigned systems.

2.5.4 TYCOM AWP Schedule and Documentation Requirements.

a. Assume lead responsibility for AWP management at 100% D-Level Package Lock.

b. TYCOM will conduct Availability Planning Conferences periodically throughout the availability planning timeline per the milestones listed chapter 3, Appendix A of this part and volume. Further details concerning Availability Planning Conferences can be found in Appendix F.

c. Deployed and FDNF homeported maintenance availability milestones can be found in volume III of this manual.

2.5.4.1 Resource Allocation.

a. Identify and evaluate the links between the technically mandated life cycle or service life requirements contained in the CMP, the known repair tasks mandated in the BAWP and the current readiness or corrective maintenance requirements identified in the ship's CSMP.

b. Across this mutually supportive prioritization and resource allocation process, TYCOM will function as the representative for making resource allocation recommendations in direct support of the AWP.

c. Submit Change Deferral Requests at any time to expedite reallocation of resources.

2.5.4.2 Technical Resolution. To resolve technical issues in a timely manner, there is one major milestone for processing Deferral Letters and Change Notifications by the TYCOM.

a. TYCOM will submit a Deferral Letter to SURFMEPP per the milestone chart located in chapter 3, Appendix A of this part and volume, which will include a list of mandatory tasks in the current FRP Maintenance Cycle being requested for deferral. The information provided in the Deferral Letter should have a sufficient level of detail to enable a complete evaluation by the Technical Warrant Holder and the Ship Design Manager. SURFMEPP will review the requested deferrals and forward the recommendation to NAVSEA 05D for technical resolution.

b. Subsequent Deferral Letter submissions occurring after TYCOM delivery of the Deferral Letter must be individually submitted. It is incumbent upon MTs and TYCOMs to discuss Deferral Letters as early as possible to enable a technical evaluation and an approval or disapproval granted prior to Definitization or Award.

2.5.4.3 Change Notifications. Subsequent submissions occurring after delivery of the Deferral Letter will be provided to SURFMEPP by TYCOM at the BAWP Close-Out Verification and Assessment Meeting using Appendix C format and will include the same information provided in any Deferral Letter submitted during the current cycle.

NOTE: THIS SECTION DOES NOT GOVERN NOR MODIFY THE POST-AVAILABILITY TESTING AND CERTIFICATION OR CLOSEOUT PROCESS.

2.5.4.4 Technical Deferral and Adjudication Process for Post-AWP Definitization (for Cost Contracts and Award (Firm Fixed Price Contracts) through the End of the Execution Period).

a. The TYCOM N43 Assistant Chief of Staff (ACOS) shall be made aware of the intent to defer within 14 days of discovery and before settlement of RCC, allowing for adjudication of final approval. ACOS issues written deferral approval to the MT and Chief Engineer for technical evaluation. The local RMC or SRF SEA 05 Chief Engineer is empowered as prescribed in reference (d) to provide final technical deferral authority of mandatory ("A" branded) tasks from Definitization or Award through the end of availability execution period.

b. The local RMC or SRF SEA 05 Chief Engineer is empowered as prescribed in reference (h) to provide technical deferral recommendations of work items as delineated in the TYCOM 100% lock letter from Definitization or Award through the end of availability execution period. The TYCOM N43 Assistant Chief of Staff (ACOS) has final approval authority for deferred work and shall be made aware of the intent to defer within 14 days of discovery and before settlement of RCC, allowing for adjudication of final approval.

c. In the event the RMC or SRF Chief Engineer receives approval to defer a work item, a signed letter with the following information must be provided to both TYCOM and SURFMEPP no later than the Availability closeout meeting.

(1) JCN, Job Summary.

(2) Reason for Non-Accomplishment.

(3) DFS number if required.

(4) Any further information that may help future completion or scheduling integration.

d. The TYCOM will provide a letter documenting all technically adjudicated and deferred work. This letter will be forwarded to SEA 21 and SEA 05, via SURFMEPP, prior to either Hull, Mechanical and Electrical or Combat Systems Production Completion date, whichever is later.

2.5.5 BAWP or AWP Change Management Process.

2.5.5.1 Branding. To support work prioritization and authorization decisions, BAWP work items must be branded using the branding category codes in Appendix D. Change Requests to "A" branded items require adjudication through the BAWP Change Management process per Appendix B. Deferral Letters and CDNS Requests are adjudicated by SURFMEPP. Work Item Branding Categories will be entered in the "Category of Work" block of the Automated Work Request (AWR) by SURFMEPP.

2.5.5.2 CMP Cancellation Deferral Notification System. The CDNS is embedded in the maintenance screening and brokering system and is used to track the status of all CMP mandatory maintenance in a ship's shore file CSMP. If a particular maintenance requirement is screened to a maintenance period starting greater than 90 days before or after the requirement's due date, if the requirement is screened by the ship's PE to an "unfunded availability", a series of e-mails are automatically sent from CDNS to key maintenance plan stakeholders. The stakeholders then communicate with the MT to provide technically sound adjudication for the situation surrounding that specific requirement. Deferrals using this system will be routed through SURFMEPP. This system provides an automated, auditable process for monitoring each ship's accomplishment of CMP requirements. MTs will use this system to request deferral or cancellation of mandatory CMP requirements as follows:

a. CDNS will only be used to request deferral of CMP tasks within the FRP. Requests for deferrals outside the FRP must be submitted using the Deferral Letter process.

b. Once SURFMEPP has entered the ship's CMP requirements into IT screening and brokering system, the MT will screen each requirement to an appropriate maintenance

period or TSRA event. CMP requirements may be identified by the MT as requiring deferral or correction based on errant configuration data, substitution JCNs or an inability to accomplish the requirement by the due date.

c. When the MT identifies such a condition, it must contact the local SURFMEPP Detachment to review the situation.

d. If both parties agree this item should be addressed by higher technical authority, the MT will screen the item to an "Unfunded" availability to initiate the CDNS process.

e. The CDNS adjudication process will be followed to resolve the request.

f. The PE will provide all approved deferrals to the TYCOM AWP Manager, who will list them on the BAWP Deferral letter.

g. This process is authorized for use from LCPC to Definitization.

2.5.5.3 BAWP Work Item Branding Categories.

a. Branding Category A (Mandatory - Technical). An approved Deferral Letter or positive CDNS adjudication is required to defer the maintenance requirement (see Appendix B). Only SURFMEPP or an authorized Technical Warrant Holder is authorized to brand items in this category. BAWP requirements in this branding category include maintenance actions which have high-level technical requirements and have been subdivided into branding categories as detailed in Appendix D. Any "A" branded item whose deferral violates a technical requirement (e.g., CMP mandatory requirement) requires SURFMEPP adjudication via the CDNS or a Deferral Letter. Late, cancelled or deferred execution of a technical requirement may require a QA form 12 DFS through the e-DFS system. See Volume V of this manual for guidance regarding DFS requirements.

b. Branding Category B (Required - Non-Technical). Items in this branding category include tasks significant to TYCOM; however, non-accomplishment does not require adjudication via the technical chain of command. Work items in this branding category have been subdivided into branding categories as detailed in Appendix D.

2.5.5.4 Branding Responsibility.

a. SURFMEPP brands all technically required, mandatory maintenance requirements residing in the CMP and any other tasks meeting branding Category "A" criteria. In addition, SURFMEPP will brand all Category "B" CMP issued tasks per Appendix D.

b. The Assessment Director is responsible for ensuring CSMP-ready repair AWRs are provided following assessment completion. In all cases, these AWRs will start the Block 35 narrative AWR with the words "Per (JCN)", where '(JCN)' is the Assessment JCN that generated the repair 2-Kilo followed by the characters "XXX" (e.g., "Per YYYYYEM01ZA56 "XXX", where "YYYYY") is the ship's unit identification code.

c. Identification Code and "XXX" signifies a break between the JCN and the beginning of the 2-Kilo's text description). This methodology allows maintenance personnel to connect each repair job to its initiating assessment.

2.5.5.5 Change Request Types. Change Requests and Change Notifications will be identified in one of the following three ways:

a. Reprogram. Requirements due during the current FRP Maintenance Cycle, but will be moved to a future FRP Maintenance Cycle. These requests must be requested through the Deferral Letter Process.

b. Cancel. Requirements are neither applicable nor due during the current FRP Maintenance Cycle and therefore should not be included in the BAWP, including items for which the configuration or requirement has changed and requirements with periodicities extending to a future FRP Maintenance Cycle beyond the next cycle's project LCPC.

c. De-scope. Requirements experiencing a reduction in the original scope of work, where the portion of work not accomplished is reprogrammed.

2.5.5.6 Deferral Process for an "A" Branded Mandatory Requirement .

a. Deferral of an "A" branded mandatory task within the current FRP must be requested from SURFMEPP by the Maintenance Team using the CDNS if it cannot be accomplished within 90 days of its due date.

b. Deferral of an "A" branded mandatory task outside the current FRP must be requested from the Ship's Design Manager and NAVSEA 05 by the Maintenance Team using the deferral letter process if it cannot be accomplished within the current FRP.

c. On approval of deferral of the task by NAVSEA 05 within the current maintenance cycle SURFMEPP will change the branding of the task from "A1" or "AR" to "AH". SEA 05 will send the deferral recommendation to the TYCOM via SEA 21.

d. On approval of the deferral and at the end of the current cycle, SURFMEPP will change the brand from "AH" to "A6".

e. If the task cannot be accomplished in the second FRP, the ship should initiate a request for a Major DFS per volume V, part I, chapter 8 of this manual and request a technical review by SEA 05 and a programmatic review by SEA 21. If the review results in a recommendation to not defer, then a two Flag Panel review will be conducted between the TYCOM and either SEA 05 or SEA 21. The two Flag Panel will make the final adjudication. If disapproved by the two Flag Panel, then the task will be completed in the current FRP.

f. On approval of deferral of the task to the third FRP, SURFMEPP must change the branding from "A6" to "AD".

g. If the task cannot be accomplished in the third FRP and is requested for deferral to the fourth FRP (which is deferral over an entire docking cycle), then a three Flag Panel review (TYCOM, SEA 05, SEA 21) is required. Flag level approval is required to defer the task to the fourth FRP. If disapproved by the three Flag Panel, then the task will be completed in the current FRP. The AD brand will remain until the task is executed or superseded.

2.5.6 Modernization. NAVSEA and TYCOM Letters of Authorization (LOA) are issued identifying all modernizations scheduled for the CNO Availability.

2.5.6.1 Modernization List. Forecasted ship changes may be viewed through the NDE database at LCPC and continuing throughout the BAWP to AWP development process. This list will be reviewed at each BAWP Milestone Meeting. Items from this list will not be entered into the ship's CSMP until they have been reconciled with an issued Advance Planning Letter or LOA. After this reconciliation, SURFMEPP is responsible for entering the modernization work into the ship's CSMP. Category A and Category B BAWP-branded assessment tasks that may be affected by forecasted Ship Change Documents must be planned and executed, despite discussion of removal or upgrade of equipment due to pending ship changes. Since the majority of "approved and authorized" modernization alterations are completed during the CNO availability, executing the assessments throughout the cycle as scheduled in the BAWP is required to ensure operational readiness throughout the FRP Maintenance Cycle. For example, NDE indicates CG-XX is scheduled for the electric modification SHIPALT 588K, which, among other changes, removes the waste heat boilers. The 18-month and five year mandatory boiler inspections were entered in the BAWP at LCPC for completion during the SRA. The MT, in this case, cannot cancel the scheduled assessment without following the established deferral or adjudication process.

2.5.6.2 BAWP or AWP Update. The BAWP or AWP will be updated as subsequent LOAs are issued by NAVSEA and TYCOM as ship changes mature. This process will continue through the advanced planning and execution phases of the availability to capture late and newly authorized alterations.

2.5.7 Quality of Service Council. The QoSC is tasked with ensuring issues affecting habitability, livability, and QoS, as defined within this volume and references (i), (j) and (k), are properly communicated between the ship, maintenance team, and TYCOM. The QoSC should also discuss the implications of out of homeport availabilities, Coast Wide Bid availabilities, and impending homeport shift issues, as applicable. Refer to paragraph 2.6.3 of this chapter for additional QoSC Execution Guidance.

a. Ship's CO must request a berthing barge per reference (l) or (m), as applicable, via Naval message to the TYCOM. Appendix G is a sample berthing barge request Naval message and should sufficiently outline impacts to space and requirements.

b. Ships in depot maintenance availabilities must establish a QoSC consisting, at a minimum, of representatives from the TYCOM, NSA, ISIC, and ship. The council shall meet no later than A-90 prior to availability start, quarterly following the initial meeting, in the event of a substantial delay or extension to the availability, and as requested by the command to address habitability concerns.

c. The QoSC must establish a chairperson, normally the SF representative, and consider all aspects of crew's QoS during the CNO availability in accordance with references (i) and (j).

d. QoSC must establish a process no later than A-30 by which SF can report impacts to berthing habitability (i.e. hotline, email account, quarter deck log). Ship's representative is responsible for communicating the process to the crew and CO and be flexible to account for multiple berthing situations (shipboard, barge, and alternative quarters). QoS Reporting system should be monitored daily to ensure QoS standards are maintained and restored in a timely manner.

e. QoSC must agree upon regularly occurring meetings after availability start to assess reported berthing impacts; once per month at a minimum and weekly after Habitability Key Event HB00.

f. Prior to availability start, the QoSC must designate a representative from the council to attend Weekly Management Meeting following the QoSC Execution Guidance. This will normally be the chairperson.

g. QoSC must review Habitability Work Items and document all compartments having the potential to affect quality of life or habitability during the availability.

2.6 AVAILABILITY EXECUTION.

2.6.1 Responsibilities. Responsibilities for CNO scheduled Maintenance Availabilities are:

2.6.1.1 Fleet Commander.

a. Monitor availability execution to achieve a balance of cost and schedule for the scope of work authorized. Ensure any growth in the scope of work authorized is necessary to ensure safe, reliable operation of the ship during the subsequent operating cycle.

b. Ensure testing of all systems and equipment installed or repaired during the availability, which require at sea testing, is conducted prior to availability completion.

c. Provide berthing, messing, offices, classrooms, equipment stowage space, and SF repair shops per reference (e), when shipboard facilities are unusable or uninhabitable.

2.6.1.2 Type Commander or Immediate Superior In Command (Group or Squadron).

a. Authorize new and growth industrial work items.

b. Monitor and approve all changes in established milestones, not internal to industrial activity, including LOA and completion dates.

c. Issue direction when the quality or completeness of industrial activity work is in question.

d. Monitor off-ship crew messing and berthing arrangements when required.

e. Notify the TYCOM when essential SF work cannot be completed on the scheduled contract or Key Event completion date. Make recommendations for assistance where appropriate.

f. Periodically assess and monitor shipboard conditions using Appendix H for guidance.

g. Monitor SF or MST (if assigned) preparation for LOA (if applicable).

h. Conduct formal Phase I crew certification inspection(s) of the SF per the TYCOM Training Manual (when required). The purpose of this inspection must be to audit the readiness and training of the SF, particularly in the areas of watch stander qualifications, damage control readiness, status of operational and emergency bills, presence on board of essential technical manuals and general operational knowledge. This inspection must be scheduled about one month prior to Fast Cruise and should include written examinations and personal interviews with officers and key enlisted personnel to determine their readiness and status of training as outlined for Phase I. A comparison of personnel allowance (including Navy Enlisted Classification

requirements) versus onboard count must be made to ensure that the ship is adequately manned.

i. Conduct Phase II crew certification. Witness and certify to the TYCOM the state of crew training is satisfactory for at sea operations per the TYCOM Training Manual. This will be done during a two-day period subsequent to Dock Trials and Phase I crew certification and prior to Fast Cruise. This two-day period will be scheduled so there is normally a 48-hour period between the end of this event and the beginning of Fast Cruise. This two-day Phase II crew certification period is divided into a 40-hour crew work-up and rest period and an eight-hour modified dockside Operational Readiness Inspection. The entire period should be scheduled to minimize interference with industrial activity work. However, since the certification must be conducted carefully to be meaningful, the officer scheduling the certification should coordinate industrial activity interference during the eight hour modified Operational Readiness Inspection. This certification should be thorough and meticulous. Pressure from the industrial activity or any other source to compromise ship safety must not be permitted to influence the judgment of the certifying officers. The desired overall sequence of these events is shown in volume I, chapter 2 of this manual.

j. Conduct a material inspection of the ship.

k. Satisfactory completion of crew certification (Phase I and Phase II) should be reported to the TYCOM in one “PRIORITY” crew certification message paralleled by a telephone call to the TYCOM Watch Officer reporting the date-time group of the message. If significant deficiencies exist or it appears an extension of time is required to correct training or material deficiencies, the TYCOM must be immediately advised by telephone and by message. The Supervising Authority will be included as an information addressee.

l. Receive from the ship’s CO or Supervising Authority the scope, schedule and agenda of tests for Sea Trials for review and approval. When approved, forward copies of the agenda to the TYCOM.

m. Monitor the progress of the availability.

2.6.1.3 Fleet Maintenance Activity. A scheduled CNO Maintenance availability may involve concurrent FMA repairs. During such availabilities, it is imperative the industrial activity and the FMA involved maintain a close working relationship, both between themselves and SF, to ensure a successful, on-time availability completion. As a minimum, the FMA must:

a. Carry out all FMA work consistent with the procedures described in chapter 3 of this part and volume.

b. Participate in all daily and Weekly Management Meetings.

c. Provide information on FMA Job Status for ship’s SITREP. (See Appendix I.)

d. Closely coordinate all jobs affecting Key Event or Milestone completion dates with the industrial activity and SF.

e. Assist the industrial activity and SF by maintaining good housekeeping on all job sites.

2.6.1.4 SF and MST (if assigned).

a. Support work authorization, tagout and REC programs.

b. Monitor the quality of the industrial activity's performance.

c. Support industrial activity test programs and witness equipment testing.

d. Perform IEM.

e. Ensure SF work is integrated into the industrial activities schedule.

NOTE: FLEET POLICY DOES NOT PROHIBIT SF FROM ACCOMPLISHING WORK ON EQUIPMENT, COMPONENTS OR SYSTEMS NOT OTHERWISE ASSIGNED TO THE INDUSTRIAL ACTIVITY AS LONG AS SUCH WORK DOES NOT IMPEDE THE INDUSTRIAL ACTIVITY SCHEDULE OR IMPACT PRIMARY SF RESPONSIBILITIES. THE MAJORITY OF PERSONNEL LEAVE, PARTICULARLY FOR THE WEAPONS AND ENGINEERING DEPARTMENTS, SHOULD BE PROGRAMMED EARLY IN THE AVAILABILITY SO NECESSARY PERSONNEL WILL BE AVAILABLE FOR SUCH THINGS AS COMBAT SYSTEM TESTING, HOT OPERATIONS, ENGINE ROOM STEAMING AND FAST CRUISE.

f. Train and qualify personnel to support the Key Event schedule.

g. Perform site visits where contractor services are being used for equipment refurbishment.

h. Ensure LOA preparations are progressing on schedule.

i. Attend weekly progress meetings.

j. Ensure that equipment returned to the ship has passed required shop tests.

k. For dry docking availabilities:

(1) Make sure bilges are properly preserved. To avoid moisture from condensation, plan to complete bilge painting before the ship undocks.

(2) Make sure air testing scheduled for tanks below the water line is completed before the ship undocks.

(3) Make sure all hull valves are reinstalled and tested before the ship undocks.

(4) Make sure underwater preservation is completed, water line boot is painted evenly and draft marks restored before the ship undocks.

l. Arrange for a post repair boiler inspection by Naval Surface Warfare Center Philadelphia Division (NSWCPD), and ISIC representatives. Detailed information concerning this inspection can be found in volume IV, chapter 3 of this manual.

m. Schedule Combat Systems Mobile Training Team visit with the ISIC.

n. Develop a Plan of Action and Milestones for LOA.

2.6.2 Arrival Conference. The arrival conference is scheduled shortly after the start of an availability and conducted by the industrial activity and attended by the CO, Executive Officer, MST OIC (if applicable), heads of department and their principal assistants, key shipboard

personnel and a TYCOM representative. This meeting also provides an excellent opportunity for SF to meet key industrial activity personnel.

a. The conference agenda should include, as a minimum, the following topics:

(1) Resolve problems not completed at the WDC, PRC or PAC.

(2) A discussion of work scheduling and production planning requiring close cooperation between SF and industrial activity personnel. Changes to dates for Key Events such as dry docking, Dock Trials, Fast Cruise, and Sea Trials must be made known and agreed upon at this time.

(3) Dissemination of planning information, such as job orders resulting from the deferral actions approved for industrial activity accomplishment.

(4) Resolution of any problems regarding work to be undertaken or material or scheduling problems.

(5) Reporting of plans and material status on Key Events or CPJs.

(6) Discussion of industrial activity regulations and other pertinent requirements affecting the ship, such as welding, emissions, etc., unique to the LMA's location.

(7) Dissemination of general administrative information of interest to SF, such as industrial activity and local facilities for training, recreation, housing accommodation, parking, etc.

(8) Industrial Activity Shipyard Access Requirements for FMAs.

b. Activities may submit new work items for consideration.

c. Industrial activity schedule daily or weekly meetings.

d. Submit an Availability Start Message to cognizant Fleet Commander at the start of an industrial availability.

2.6.3 Routine Meetings and Conferences.

2.6.3.1 Weekly Management Meetings. Senior industrial activity management officials should meet weekly with the CO of the ship during the availability.

a. Purpose. These meetings provide a formal means by which attendees can address important specific issues with the senior industrial activity official to obtain appropriate resolution. Questions not answered relative to the conduct of this meeting should be addressed by the CO through the ISIC (if applicable) to the TYCOM.

b. Execution.

(1) The industrial activity Senior Officer or Manager will designate the time and day of the week for the meeting.

(2) Attendees will submit agenda items normally within 24 hours before the meeting. The industrial activity will collect, collate, and prepare all agenda items in writing and distribute them to attendees at the meeting.

(3) Attendees will discuss agenda items at the meeting.

c. Attendees. The industrial activity chairs the meeting. The following personnel must attend and participate:

(1) The CO of the ship being repaired. The Executive Officer should attend if the CO cannot be personally present for any meeting.

(2) At some industrial activities, the TYCOM may designate a representative to attend. If so, CO may submit agenda items in addition to those submitted by CO's that may be broadly applicable to all ships in specific availabilities. In the record, there shouldn't be any "TYCOM Position" on any items. The CO has the responsibility to deal with the senior industrial activity official on problems relating to their ship.

(3) The industrial activity Project Manager or equivalent.

(4) Industrial Activity Senior Management (e.g., Engineering Department Head, QA Head, Production Officer).

(5) Any industrial activity personnel as required to support specific agenda items.

(6) MST OIC (if applicable).

(7) SEA 21 Program Management Representative.

(8) AIT OSIC.

d. General Guidelines.

(1) Before submitting an agenda item, the ship CO should have made an attempt to resolve the problem at an appropriate level within the industrial activities organization.

(2) When agenda items are general subjects such as overall schedule adherence, overall industrial activity manning of ships, overall ship cleanliness, performance of workers and overall ship safety, sufficient factual data should be included to substantiate them.

(3) Ship COs must be extremely careful in wording their agenda items, in the discussions at the meeting and in agreeing to words in the minutes to ensure they do not introduce or give tacit agreement to contractual matters.

(4) Ship COs should not submit items for the management meeting as a means to merely determine the status of a job.

(5) If required by the TYCOM, ship COs will provide a copy of the minutes of each meeting to their ISIC or TYCOM.

e. The Weekly Management Meeting is used as a forum to produce a Progress Report, which is intended to form a brief word picture of the availability progress and identify problems requiring action or resolution. (Paragraphs 1 and 2 in Appendix I should not exceed one typewritten page).

(1) If required by the TYCOM, COs will submit weekly Progress Reports by message of the overall status of work. As a minimum, quality of work, progress, significant problem areas, and action taken towards their resolution

must be addressed. COs shall include status of SF compliance with reference (g). In addition, if the availability completion or readiness-for-sea dates appear to be in jeopardy, the estimated period and reasons for delay will be reported and identified. The Progress Reports will be routed via the industrial activity and FMA (if applicable) for comments and transmitted in time to reach the TYCOM by the first workday of each week. Appendix I is the desired format for the report.

(2) If, as a result of their inspections, the CO considers the progress or the quality of work is unsatisfactory, they will promptly bring the matter to the attention of the industrial activity. If satisfactory corrective measures are not taken, they will report by letter, or if time is critical, by message, to the TYCOM with a copy to the industrial activity stating specifically in what respects the work is unsatisfactory. If the condition reported is not corrected to the CO's satisfaction, a report will be made to CNO via the TYCOM per reference (n). Copies of this report will be sent to the industrial activity and appropriate Fleet Commander.

(3) During the course of the availability, periodic progress reviews are conducted at the 25, 50 and 75 percent points of elapsed time of the availability. As a minimum, discussion should include the actions towards resolution of previously reported significant problem areas not yet resolved, upcoming Key Events that may be in jeopardy, any significant changes that may be required to meet availability milestones, status of new work and any other issues deemed necessary. The report of the periodic review will be annotated in the weekly SITREP.

f. Cost Performance Index or Schedule Performance Index per volume VII, chapter 7 of this manual, the RMC must report Cost Performance Index and Schedule Performance Index.

2.6.3.2 QoSC Execution Guidance. Unless specified, the requirements below apply to all berthing situations during CNO availabilities. Example: If berthing barge is in use, all berthing barge requirements below apply until crew has moved aboard, at which point all shipboard requirements apply for the remainder of the availability.

a. QoSC will review the QoS Reporting system log daily. SF reported habitability discrepancies that cannot be corrected within three days must be reported by the QoSC to the TYCOM and captured in the Weekly CNO Availability SITREP or by equivalent weekly reporting process.

(1) For berthing barge discrepancies contact the regional program berthing barge manager for correction per reference (i) or reference (l).

(2) Shipboard discrepancies should be documented via 2-Kilo and follow continuous screening and work authorization processes.

(3) For discrepancies with alternate berthing (e.g., hotel, BEQ, BOQ, NGIS, Navy Lodge), the QoSC and ship's CO will coordinate with contracting agent for berthing as required.

b. The SF QoSC representative must attend the Weekly Management Meeting to ensure QoS updates are included in the SITREP.

(1) The SF QoSC representative will communicate any changes to the documented compartments to the ship's CO.

(2) Any new work or growth work affecting habitability must be discussed to ensure ships force understands the timeline and impacts.

c. Inspect messing and berthing barges per reference (i) monthly when occupied per reference (i) and reference (j). Prioritized corrective action plan for deficiencies found must be executed following reference (k) or (l), as applicable. Inspections must be documented electronically and made available by request of Fleet Berthing Barge Program Managers. Completion of the monthly inspection will be noted in the QoSC section of the Weekly CNO Availability SITREP or by equivalent weekly reporting process following the QoSC Execution Guidance.

NOTE: TYCOMS MUST DEVELOP AND MAINTAIN ENTERPRISE SPECIFIC INSTRUCTIONS TO SUPPORT COMPLETION OF INSPECTIONS, ADHERENCE TO REFERENCES (AF) AND (AI), AS WELL AS ADDITIONAL DIRECTIONS NEEDED TO CERTIFY KEY EVENTS SUPPORTING QOS. ADDITIONAL KEY EVENTS, SUCH AS LIVABILITY, MAY BE ESTABLISHED BY THE TYCOM.

d. Maximum of three weeks and minimum of one week prior to the Habitability Key Event HB00, the SF QoSC representative, with assistance from the NSA, must conduct a Habitability Inspection of the ship using reference (k) or (l), as applicable. Appendix J provides a sample inspection list.

(1) Ship's CO must report completion and results of the Habitability Inspection to the TYCOM via Naval Message, with copy to the LMA. If shipboard discrepancies are discovered that cannot be corrected within 3 days or prior to HB00; the CO, with NSA, QoSC, LMA, and TYCOM will develop a corrective action plan included in the Naval Message with mitigating actions and identifying temporary services available.

(2) The corrective action plan (as applicable) will note any exceptions and be approved by the Maintenance Team and agreed to in writing by the Ship's CO and TYCOM.

(3) Appendix K provides sample SF message reporting completion of habitability inspection.

(4) Appendix L provides sample TYCOM message certifying habitability aboard.

e. QoSC and the established QoS Reporting system log will remain in place and active until availability completion.

f. Berthing and Messing barges will be transferred back to the Fleet Berthing and Messing Program 14 days following Habitability Key Event HB00, if in use.

g. Habitability Key Event HB00 is intended to support readiness for duty section move aboard.

2.6.3.3 Docking or Undocking Conferences. For availabilities involving a ship's dry docking, the industrial activity will conduct both a Docking and Undocking Conference, normally within one week prior to the expected evolution. These conferences will be conducted by the assigned industrial activity Docking Officer. Requirements for the conference agenda, attendees, and SF support are found in reference (o).

2.6.3.4 Interim Completion Conferences. The NSA and the LMA must conduct 25, 50 and 75 percent completion conferences. These conferences will review all completed work, testing and certification. All open and remaining work or reports must be discussed to include schedule, upcoming key events, milestones, planned production manning versus actual production manning, integrated test plan, certification and DFS. All open and inspect work must be completed in the first 20 percent of the maintenance availability. Two days prior to the 25 percent review conference, the LMA must provide the status of all open and inspect results so final adjudication on any growth or new work items may be completed.

2.6.4 Integrated Logistics Overhaul.

a. The ILO concept was developed to provide improved maintenance support to the Fleet in response to the need for complete on board logistics support. An ILO focuses on both maintenance and supply requirements by ensuring technical documentation and repair parts support the equipment which is actually on board. During an ILO, both maintenance and supply personnel are trained in the use and maintenance of shipboard logistics support documentation and systems to enable them to sustain the effects of the ILO during the operating cycle. The objective of an ILO is to improve readiness by providing a ship completing a specified availability with logistics support accurately reflecting the ship's configuration. A secondary objective is to train SF in the use of on-board support documents and in recognizing and correcting support deficiencies.

b. An ILO is a process which improves ship's readiness and equipment availability through verification of configuration status accounting data, ordering of proper logistics support, and training of SF in the use and maintenance of its logistics support documentation. An ILO is comprised of five functional elements:

(1) Configuration Analysis and Coordinated Shipboard Allowance List (COSAL) QA consists of verification of start of availability configuration data (including planned changes) with Weapons System File data and other documentation to ensure the Start of Overhaul COSAL fully supports the projected end of availability equipment configuration. In addition, changes in configuration reported by the accomplishing activity are verified to ensure final COSAL documents include required support.

(2) PMS Analysis. Includes verification of applicable Maintenance Index Pages (MIP) with ship's existing configuration and all changes to this configuration reported by the accomplishing activity. Resolution of discrepancies with PMS managers is accomplished as required. Analysis of individual MRCs is performed to ensure required PMS repair parts and special tools are identified, included in the applicable documents, and ordered.

(3) Technical Manual Analysis. Ensures the technical manuals required to support the end of availability configuration are identified and requisitioned. Technical manuals, both those off-loaded and those received during the availability, are inventoried and reviewed for applicability, correct change level, and status of changes. Technical manuals applicable to final configuration are retained. All discrepancies are reported as individual Technical Manual Feedbacks in MBPS, the Technical Manual Manager will be responsible for update. Technical manuals missing from the required inventory are requisitioned as are any changes needed to upgrade manuals already held. The ship's Technical Manual Applicability Report is updated to reflect the final configuration, this report is available from MBPS. Also provided are the Technical Manual requisitions still outstanding. Finally, to ensure minimum deterioration of stock after the availability, selected ship personnel are trained in technical manual maintenance procedures.

(4) Repair Parts Analysis. Ensures the accuracy of the repair parts inventory to be backloaded to the ship at the conclusion of the availability. This analysis includes a complete inventory of all parts aboard and identification of any parts for which there is incomplete data. It also includes recomputation of allowances based on usage or new equipment installation, turn-in of parts no longer allowed and numerous location or quality checks prior to back-loading.

(5) Training. Focuses on proper accomplishment of the first four functional elements of the ILO to ensure correct logistics support is identified and delivered for shipboard equipment. Efforts are made to ensure shipboard personnel are fully able to utilize and maintain the ship's logistics support and configuration documentation, both for ILO purposes and for ongoing operating cycle requirements. COSAL use and maintenance training provides shipboard personnel with a working knowledge of the COSAL, its relationship to other maintenance documents and the procedures to ensure logistics support remains current, (e.g., use of OPNAV 4790/CK Forms).

c. The SF team will develop an off-load schedule of all ship's spare parts. The ship's spare part stowage plan will be updated to reflect changes in the desired location of individual spare parts. Additionally, provisions must be made for the Aviation Consolidated Allowance List to support the embarking air wing.

d. A ship load-out schedule, including stores, repair parts, yellow gear, and removal of industrial activity equipment, will be prepared by the ship with the assistance of the industrial activity.

e. During a CNO maintenance availability, the ship will ensure new or removed equipment is reflected in the COSAL and the required spare parts are added or subtracted as applicable. Allowance changes are to be requested per reference (p).

f. Spare parts, test equipment, and special tools are the hardware portion of new and old equipment. The other portions are software: drawings, technical manuals, allowance lists, operating instructions, and any other technical documentation. Prior to commencement of an availability, NAVSEA will task the industrial activity with providing a listing and schedule, for installation on board the ship, of all technical

documentation for new equipment, including changes to SSR drawings and data. The ship is responsible for the installation and maintenance of technical documentation for all existing equipment.

g. The status of the installation of technical documentation will be reported in the Material Condition or Crew Readiness Status Report.

2.6.5 Ship's Selected Records.

a. The SSRs include various tables, charts, drawings, damage control books and plates, technical manuals and other data selected for their reference value and kept current throughout the life of the ship. Accurate SSRs are necessary for configuration control, maintenance support and troubleshooting. SSR items are:

(1) Ship's Information Books.

(2) Technical Manuals.

(3) Damage Control Books and Plates.

(4) Propulsion Operating Guides or Engineering Operational Sequencing System.

(5) Ship's Drawing Index.

(6) Index of Technical Publications.

(7) Docking Drawings (plan showing each of the docking positions).

(8) Booklet of General Drawings.

(9) Tank Capacity and Vehicle Center of Gravity Curves.

(10) Tank Sounding Tables.

(11) Other tables, charts, allowance lists, etc.

(12) Docking Reports (most recent two industrial availability dockings, and any interim reports).

b. The ship should appoint a SSR Coordinator for the availability. The coordinator should review the SSRs in paragraph 2.6.6 of this chapter, determine which items will be affected by work candidates listed in the approved work package, and send copies of these SSRs to the industrial activity responsible for executing the availability. The copies sent must include markups showing any changes accomplished during previous availabilities since last update. The ship must retain a master copy of each SSR item and keep it current. If SSR is on microfilm or electronic media, mark-up hard copy prints.

c. The SSR Coordinator will serve as the ship point of contact for dispatch, receipt and monitoring status of SSR items during the availability.

2.6.6 New Work.

a. New work is any maintenance requiring industrial level assistance which is not authorized until after contract award or definitization.

b. New work must be requested by message or letter to the appropriate TYCOM (information copy to the Supervising Authority or ISIC, as applicable). Sample letter

or message formats are provided in Appendices M and N for requesting new work authorization. Work not currently in ship's CSMP must be added to CSMP prior to requesting new work approval.

c. All new work candidates must be reviewed by and agreed to by the assigned Ashore Ships Maintenance Manager, Project Manager or Program Manager. Ashore Ships Maintenance Manager and Program Manager recommendations regarding requirement to perform repairs, risk assessment, and schedule impact are mandatory. The TYCOM, or the formally designated TYCOM representative, must be the final approving authority for all new work. The NSA Chief Engineer will review requested new work items and determine whether or not they are technically required or required to achieve minimum material readiness requirements. The TYCOM will certify, per Federal Acquisition Regulations, the accomplishment of the new work is of such unusual and compelling urgency so as to require waiving of Competition In Contracting Act public law regulations.

2.6.7 Trials, Inspections and Crew Certification.

a. Crew Certification. Crews in ships undergoing major CNO Maintenance Availabilities must be effectively trained in standard operating procedures, emergency bills, casualty drills, etc., and be thoroughly cognizant of equipment either newly installed or relocated during the availability. Based on the length and type of availability, Crew Certifications will be conducted per reference (q).

b. LOA. LOA will be conducted, if the availability exceeds 120 days or as deemed necessary by the TYCOM. The ISIC, assisted by an assessment team provided by Fleet Commander N7, will conduct the LOA. LOAs will be scheduled by means of the ISICs input into the normal scheduling process.

c. Steam Testing. All steam systems or equipment worked by the industrial activity must be tested per the Testing Plan developed by the industrial activity. SF must work closely with the industrial activity, providing necessary assistance and support, to carry out the Test Plan.

d. Dock Trials. During an industrial activity availability and prior to conducting post-repair trials, the engineering plant must be tested to ensure its readiness for sea. All special sea details and required general quarters will be manned throughout the trials. Ordinarily, dock trials can be completed in one day or less. The minimum requirements for Dock Trials are listed in Appendix O.

e. Fast Cruise.

(1) All ships completing a CNO Maintenance Availability must conduct a Fast Cruise where the ship assumes, insofar as practical, an "at sea" posture while in port with all equipment or systems used to the maximum extent possible. The primary purpose of the Fast Cruise is to determine and certify the state of training of ship's company as adequate to conduct at-sea operations. The progress toward this goal is a critical evolution ongoing throughout the availability requiring the TYCOM and ship's CO attention. The training program must be designed to have completed all training necessary to safely operate the ship at sea prior to Fast Cruise. The Fast Cruise provides the

opportunity to measure ship's preparedness; it is not a basic training period. Commencement of Fast Cruise requires TYCOM permission. Appendix P provides a sample message format for Ship's Request for Permission to Commence Fast Cruise.

(2) The following procedures pertain to the conduct of Fast Cruise:

(a) Fast Cruise will be included as a major event and scheduled for at least two days duration by the industrial activity in the case of ships undergoing a CNO maintenance availability greater than six months in duration or at least one day for ships undergoing a CNO maintenance availability less than six months in duration. The Fast Cruise must follow Dock Trials and precede to Sea Trials.

(b) A schedule of proposed events must be published by the ship to all activities concerned and must be concurred with by the industrial activity.

(c) Limited numbers of industrial activity personnel may be permitted to be aboard as necessary to continue testing and production work on systems as required. Shop and technical personnel must be permitted on board as instructors, troubleshooters and QA representatives of the industrial activity. Equipment that is not complete must not be included in the Fast Cruise. Settlement of the foregoing provisions must be reached by mutual agreement between the CO and the industrial activity, as warranted.

(d) As a minimum standard, system operation tests and drills described in Appendix Q must be conducted in all Fast Cruises. Intent is the necessary prerequisite training must have already been accomplished.

(3) The Ship's CO will report completion of Fast Cruise to the TYCOM. Appendix R provides a sample message format.

f. Rest and Repair Period. All ships completing a CNO Maintenance Availability should normally conduct a 48 Hour Rest and Repair Period to ensure SF is mentally and physically prepared after completing Fast Cruise and before the start of Sea Trials. The primary purposes of the Rest and Repair Period are to evaluate the results of Fast Cruise; to consider ship condition; to conduct necessary repairs on ship's equipment and systems; and to evaluate and conduct additional training for Ship's Company to ensure the ship is prepared to the highest possible standard.

g. Sea Trials.

(1) Sea Trials (or Post Repair Trials) constitute the final determination of a ship's material readiness and ability to rejoin the Fleet as a fully operational unit. Each Sea Trial will be conducted per an agenda prepared by the industrial activity, concurred with by the ship's CO, and approved by the TYCOM. The Sea Trial Agenda will be prepared in four phases and will contain the minimum requirements of Appendix S, a time-oriented sequence of events in Gantt chart form, and a matrix of fleet services required to support the trial.

The requesting ship or industrial activity will arrange for these Fleet services per Fleet Commander Instructions. Since the purpose of the trial is to determine the material readiness of the ship, all systems or equipment overhauled by the industrial activity will be tested per an industrial activity prepared test procedure which will document the results of the test and require operation of the system or equipment in all modes. A SF Trial Officer will be appointed to coordinate with the industrial activity Trial Coordinator throughout the Sea Trial. The Trial Officer will accept the results of all tests for the ship. SF personnel will operate all equipment during the Sea Trial per standard operating instructions or Sea Trial test procedures, as appropriate. Commencement of Sea Trials requires TYCOM permission. Appendix S provides a sample message format for the Supervising Activity to report all work necessary for Sea Trials has been satisfactorily completed.

(2) During Sea Trials the ship's CO will advise the TYCOM of major events accomplished and or significant problems encountered or outstanding on a daily basis. Appendix I provides the desired format for this report.

2.6.7.1 Availability Work Certification and Completion Requirements . Timely and technically correct planning and execution of availabilities demands a rigorous approach to certifying major Key Events leading to availability completion. A NSA certification plan verifies work is completed and technically correct and must include Executing Activity qualifications, NSA approval of mandatory technical requirements, an integrated test plan and adequate NSA oversight of all availability work. These elements provide the NSA with maximum reasonable assurance availability work is complete and technically correct. Executing Activity work completion starts with assurance that each Executing Activity has an approved and current Quality Management System. Each Executing Activity must provide certification of technically correct work completion and Objective Quality Evidence (OQE) as required in NAVSEA Standard Items or other technical requirements. NSA work oversight must provide assurance that all mandatory technical requirements have been met and sufficient review has been provided for all work specifications, integrated test plan, technical work documents, audit of work items, in-process surveillance (Procedure Review (PR), Procedures Evaluation, Product Verification Inspection (PVI)) and review of associated OQE. The NSA must utilize a risk-based availability QMP as discussed in Appendix T and volume VII, chapter 11 of this manual. NSA certification includes assurance that technical review or approval has been conducted on all OQE for work items requiring mandatory technical review and includes technical review and approval of all waivers and deviations by the NSA CHENG. This includes assurance that any exceptions to completion have been approved as to not adversely impact Key Event completion.

2.6.7.2 Key Event Readiness. Minimum Key Events requiring certification and prerequisite lists are to assure proper completion. These Key Events constitute the critical availability completion events for the crew to transition from the maintenance phase to an operational phase. The NSA Commanding Officer, based on the NSA Chief Engineers' technical assessment of the risk associated with any work still in progress, may combine Work Complete, Dock Trials and Fast Cruise certifications into a single certification. The NSA will normally designate the LMA to develop and track an Event Readiness List utilizing NAVSEA Standard Items 009-60 and 009-67. The Event Readiness List will consist of all prerequisites including work items and actions to be completed by the NSA and all executing activities associated with the Key Event per

reference (a). These associations must include technical connections (technically required to support follow-on training or testing) and strategic ties (work deemed relevant by the maintenance team as required to meet the Key Event). Appendix U will be tailored to the Key Event and utilized by the NSA certifying each Key Event by all maintenance activities. In lieu of Naval Message, a signed letter or memorandum or centrally managed exception list may be utilized to document completion of all prerequisites for the Key Event. If there are exceptions to completion, exceptions will be clearly identified and the local Technical Authority will provide a risk assessment for each. The NSA Project Manager, Ship's CO, TYCOM and the NSA Commanding Officer will sign the letter, memorandum or centrally managed list for the record noting agreement with Key Event or Milestone completion, including listed exceptions.

a. Undocking. Key Event to document that the ship is ready in all aspects for Undocking. The NSA Commanding Officer must certify all related work and testing is completed prior to commencing the ship's Undocking, with any exceptions noted and approved by the appropriate technical authority and agreed to in writing by the Ship's CO, TYCOM and the NSA.

b. Production Completion Date. Key Event scheduled prior to Propulsion Plant Hot Operations to document that all production work in engineering and auxiliary spaces to include work affecting equipment requirements for LOA is completed and certified up through Stage 2 testing per reference (a). Stage 2 inspections and static tests prove the integrity, strength and continuity and are applied to foundations, cabling, piping, ventilation, air conditioning, switchboards, etc. PCD includes all work planned for accomplishment during the maintenance availability by all maintenance and modernization providers including, but not limited to: LMA, AIT, Commercial Industrial Services and FMA. All work does not include touch up painting, minimal lagging, installation of spray shields or other items that cannot be accomplished until after hot plant testing is complete. The term "complete" is defined to mean the accomplishment of all work, testing, certification and removal of support equipment that is possible without completing LOA and hot plant testing. Steam must not be introduced into propulsion systems from any source until after a successful LOA. For gas turbine and diesel propulsion plant ships, the TYCOM or ISIC will issue a Safe-to-Start authorization to allow Propulsion Plant Hot Operations testing, if testing is scheduled in advance of LOA. This testing period starts after PCD and ends before commencing the 3 to 14 day training period prior to LOA. This period allows for testing diesel and gas turbine engines after significant repairs or after significant periods of layup when restoration of those engines may entail schedule risk. The testing period duration is dependent on the testing requirements and will be included in the availability schedule. PCD includes all required reports and OQE has been submitted to and risk assessed by the NSA Chief Engineer. The NSA and LMA are responsible for thorough and rigorous management of this Key Event and minimizing exceptions. In the event of incomplete work, an evaluation by the Ship's CO, NSA Chief Engineer and TYCOM must be performed to determine if the incomplete work will impede uninterrupted preparations and accomplishment of LOA. Exceptions must be approved by the NSA Commanding Officer based on the Chief Engineer risk assessment. PCD is scheduled to provide the crew sufficient time to prepare and train

for LOA, and to shift from a maintenance to an operations environment. If a PCD adjustment is required, the NSA will coordinate with TYCOM to obtain approval.

c. Command, Control, Communications, Computer, Combat Systems Intelligence Light Off. C5ILO is set to provide sufficient time to support uninterrupted testing and allow the crew to shift from a maintenance environment back to operations and to train in preparation for required Readiness Assessments and Certifications. This Key Event validates and documents the completion of all production work required to support returning C5I equipment and spaces to the government testing activities and SF for operational Verification testing, training and operations. All required reports and OQE have been submitted to and risk assessed by the NSA Chief Engineer following paragraph 2.3.6. Exceptions must be approved by the NSA Commanding Officer based on Chief Engineers' risk assessment. NSA is responsible for thorough and rigorous management of this Key Event and keeping any exceptions to a minimum.

d. Habitability Key Event HB00 at which the ship meets livability standards by completion of Habitability Inspections (see Appendix J) following QoSC Execution Guidance and subsequent paragraphs to determine the ship is materially ready. Exceptions must be approved by the NSA Commanding Officer based on the Chief Engineers' Risk Assessment.

e. Work Complete. Work Complete (WC) is a Key Event scheduled prior to Dock Trials (DT) to ensure all work affecting DT, Fast Cruise (FC) and Sea Trials (ST) is complete and certified up to and including Stage 5 testing to allow for unrestricted training and testing throughout the ship. This includes work by all maintenance and modernization providers and completion of all exceptions agreed to at previous key events. WC includes all required reports and objective quality evidence have been submitted to and risk assessed by the NSA Chief Engineer. The NSA and LMA are responsible for thorough and rigorous management of this key event and minimizing exceptions. In the event of incomplete work, an evaluation by the Ship's CO, NSA and TYCOM must be performed to determine if the incomplete work will impede the remaining availability scheduled events, including SOVTs. Exceptions must be approved by the NSA Commanding Officer based on the Chief Engineers' risk assessment.

f. Dock Trials. Key Event conducted during an industrial activity availability prior to Fast Cruise to determine the ability of a ship's readiness for sea and capability to safely conduct Sea Trials. The NSA and LMA are responsible for conducting integrated dockside system testing, with special sea and anchor detail and general quarters manning to ensure system readiness for sea. The NSA Commanding Officer must certify all required work and testing is completed prior to commencing Dock Trials, with any exceptions noted and approved by the appropriate technical authority and agreed to in writing by the Ship's CO, Project Manager, TYCOM and the NSA. The minimum requirements for Dock Trials are listed in Appendix O.

g. Fast Cruise. Key Event conducted after Dock Trials and prior to Sea Trials during which SF operates the ship and all equipment and systems as if underway for in port training. The primary purpose of the Fast Cruise is to ensure SF operational proficiency is adequate prior to conducting at-sea operations. The Ship's CO is

responsible for conducting Fast Cruise prior to Sea Trials where the ship assumes an "at-sea" posture to exercise all equipment and systems to the maximum extent possible. The NSA Commanding Officer must ensure all work is completed and certified prior to commencing Fast Cruise, with any exceptions noted and approved by the appropriate technical authority and agreed to in writing by the Ship's CO, TYCOM and the NSA. The minimum requirements for Fast Cruise are listed in Appendix Q. Commencement of Fast Cruise requires TYCOM permission. Appendix P provides a sample message format for ship's request for permission to commence Fast Cruise. Appendix R provides a sample message format for ships to report Fast Cruise completion.

h. Sea Trials. Key Event following Fast Cruise that constitutes the final determination of a ship's material readiness and ability to rejoin the Fleet as a fully operational unit. The Ship's CO is responsible for conducting Sea Trials following an agenda incorporating the required testing provided by the NSA, concurred on by the Ship's CO and approved by the ISIC. The NSA Commanding Officer must certify all required work and testing is completed prior to commencing Sea Trials, with any exceptions noted (unless required to be completed at sea) and approved by the appropriate technical authority and agreed to in writing by the Ship's CO, TYCOM and the NSA. The minimum requirements for Sea Trials are listed in Appendix S. Commencement of Sea Trials requires TYCOM permission. The NSA Commanding Officer must certify to the TYCOM all work and testing is complete and readiness to start Sea Trials (with exceptions noted) via the Readiness for Sea Trials message. Appendix T provides a sample message format for the Supervising Activity to report all work necessary for Sea Trials has been satisfactorily completed. Completion of Sea Trials requires a formal report from the Ship's CO to the TYCOM via the ISIC.

i. Availability Completion. Key Event to document all work, testing and inspections planned for and executed during the availability are complete and all required reports and OQE have been submitted to and risk assessed by the NSA Chief Engineer. Exceptions must be approved by the NSA Commanding Officer based on the Chief Engineers' risk assessment. Availability Completion signifies the availability is complete and the ship has successfully determined all maintenance and modernization work performed by the NSA is fully operational. The NSA Commanding Officer must certify all work tied to the Key Event is completed per the Availability Work Certification process or technically adjudicated in writing prior to reporting Availability Completion.

2.6.7.3 Availability or Key Event Certification Procedures.

a. The procedures outlined in the following sections provide the minimum requirements to (RMCs or NSA) to utilize during execution of CNO Availabilities and major Continuous Maintenance Availabilities (as directed by the Fleet or TYCOM) for Availability Certification and Key Event Management. This process is developed to provide the RMC Commander, via the RMC Project Manager and RMC CHENG, the maximum reasonable assurance all availability work has been properly completed, and the ship is materially ready for the next Key Event or Sea Trial. This process provides assurance that all technical waivers or deviations have been reviewed and approved,

any work exceptions (incomplete work) have been approved to not impact the Key Event or Sea Trials and work was planned, executed and tested technically correct.

b. The following process defines the steps to be taken by the NSA and all Executing Activities when certifying work to support readiness for Key Event. When Key Events or Milestones are accomplished sequentially and in conjunction with a tailored availability QMP, (Appendix U), this process will support incremental certification of Readiness for Fast Cruise or Sea Trials and Availability Completion and avoid late gathering of data and certifications to ensure readiness for Fast Cruise or Sea Trials. Certification may be tracked via a centralized signature sheet and central exceptions list or through each Executing Activity providing memoranda documenting work certification and exceptions. When memoranda are used, the Appendix V signature sheet and Appendices W through AC certification letters or memorandums will be collected in an Availability Certification Book maintained by the Project Support Engineer on the Project Team. Normally, the Project Support Engineer works closely with the Integrated Test Engineer to manage the availability certification process for the Project Manager. The following paragraphs describe minimum requirements associated with each action leading to certification.

2.6.7.4 Availability Certification Requirements and Procedures.

a. Work Authorization. This step is required for Fast Cruise or Sea Trial Certification and Availability Completion Certification, but is not normally required for Key Event or Milestone Certification. TYCOM work authorization is screened and brokered by availability vice by availability Key Event. TYCOM certification of work authorization may be completed prior to Fast Cruise or Sea Trial and does not need to be repeated prior to availability completion unless new or growth work is identified during Sea Trials which is required to be added to the AWP as a condition of availability completion.

(1) The TYCOM's agent (Port Engineer) or Business Agent Ship Repair Facility (SRF)-Japan Regional Maintenance Center (JRMC) will certify all authorized CNO Availability or CMAV work identified in the AWP has been tasked to the Prime Contractor, Naval Shipyard (NSY), FMA, AIT or SF.

(2) The TYCOM's agent (Port Engineer) or Business Agent (SRF-JRMC) will certify all work identified after work package definition (new or growth work) has been branded and authorized for accomplishment or deferred. If work branded as "A" or technically mandated as required to be deferred, it must be concurred on by the waterfront Technical Warrant Holder (NSA CHENG).

(3) The TYCOM's agent (Port Engineer) or Business Agent (SRF-JRMC) will certify a review has been accomplished on all existing deviations, waivers, and records of out-of-commission equipment. This review must include all conditions resulting in Temporary Standing Orders (TSO), DFSs and Casualty Reports (CASREP). Deviations have either been included in the AWP or an extension of the technical deviation has been submitted to the NSA CHENG for approval and concurred on by the TYCOM. If the condition resulting in a TSO or CASREP does not require technical concurrence for extension, the

TYCOM must concur with not correcting the condition that resulted in the TSO or CASREP.

(4) Prior to Fast Cruise or Sea Trial, the TYCOM will certify to the NSA via signature on central signature sheet or serialized letter or memorandum that the conditions have been met. Exceptions will be noted and provided for approval by the NSA.

(5) The NSA or RMC certification signature will be provided by the Project Manager, with the TYCOM signature or letter or memorandum and serial number noted, verifying receipt of TYCOM certification or proper work authorization accomplished.

b. Work Documents Issued or Prime Contractor. (This step must be completed by Key Event or Milestone for work tied to each Key Event.)

(1) Code 200 & 130 Review of Work Specifications and Test Procedures. The RMC or NSA Code 200 Project Support Engineer or Test Engineering (SRF-JRMC) and RMC or NSA Code 130 Quality Assurance Supervisor (QAS) will validate that Work Specifications and Test Procedures have received a technical review per RMC attributes checklist. At a minimum, work specifications will receive technical review per approved Availability QMP requirements, reference (r) and as outlined in volume VII, chapter 11, of this manual.

(2) Code 300 Review of Work Specifications and Test Procedures. The RMC or NSA Project Manager must validate all work specifications and test procedures issued by the prime contractor have received a government review for compliance with contractual requirements per volume VII, chapter 4, Appendix C of this manual and approved in the appropriate maintenance database.

(3) Contractor Furnished Reports (CFR). The RMC or NSA Project Manager will verify all required CFRs have been received as required by NAVSEA Standard Item 009-01, paragraph 3.2.

(4) The RMC or NSA Project Support Engineer will verify all CFRs screened for technical review in the Navy Maintenance Database (NMD) have been reviewed, technically adjudicated, and answered in NMD.

c. Key Event or Availability Completion for the Prime Contractor. (This step must be completed by Key Event for work tied to each Key Event.) The prime contractor will provide to the NSA a signed letter or memorandum (Appendix W) or sign a centrally managed list certifying all authorized work is completed satisfactorily, with any exceptions noted. Exceptions must be itemized and technically approved by the RMC or NSA Commanding Officer as to not impact Key Event or Milestone completion or Readiness for Sea Trials. Exceptions must include a plan for accomplishment. Signature of the centrally managed signature sheet or a letter or memorandum will be received prior to Key Event or Sea Trials. The RMC or NSA Project Manager will sign the signature sheet acknowledging receipt of letter or memorandum and noting serial number or signed list as noted.

d. Key Event or Availability Completion for a FMA (I-Level). (This step must be completed by Key Event for work tied to each Key Event.) The FMA or RMC Code 900 will provide to the NSA assigned letter or memorandum (Appendix W of this manual) or sign a centrally managed list certifying that all Formal Work Packages or Controlled Work Packages (FWP or CWP) and test procedures planned and accomplished by the FMA are technically correct and completed. Exceptions will be noted and technically approved by the RMC or NSA Commanding Officer as to not impact Key Event completion or Readiness for Sea Trials. Exceptions must include a plan for accomplishment. The RMC or NSA Project Manager will sign the signature sheet acknowledging receipt of letter or memorandum and noting serial number or signed list as noted.

e. Key Event or Availability Completion for a NSY. (This step must be completed by Key Event for work tied to each Key Event.) The NSY Project Superintendent will provide to the NSA a signed letter or memorandum (Appendix Y) or sign a centrally managed list certifying that all TWDs and test procedures planned and accomplished by the NSY are technically correct and completed. Exceptions will be noted and technically approved by the RMC or NSA Commanding Officer as to not impact Key Event completion or Readiness for Sea Trials. Exceptions must include a plan for accomplishment. The RMC or NSA Project Manager will sign the signature sheet acknowledging receipt of letter or memorandum and noting serial number or signed list as noted.

f. Key Event or Availability Completion for an AIT. (This step must be completed by Key Event for work tied to each Key Event.) Each AIT On-Site Installation Coordinator will provide to the NSA a signed letter or memorandum (Appendix Z) or sign a centrally managed list certifying respective AIT work and test procedures are technically correct and complete and AIT or Liaison Action Request (LAR) or Reverse Liaison Action Requests (RLAR) have been incorporated, with exceptions noted. Exceptions must be itemized and technically approved by the RMC or NSA Commanding Officer as to not impact Key Event completion or Readiness for Sea Trials. Exceptions must include a plan for accomplishment. Signature of the centrally managed signature sheet or a letter or memorandum will be received prior to Key Event or Milestone. The Project Manager or AIT Manager (if assigned) will sign the signature sheet acknowledging receipt of letter or memorandum and noting serial number or signed list as noted.

g. Key Event or Availability Completion for SF. (This step must be completed by Key Event for work tied to each Key Event.) SF CO will submit to the NSA a signed letter or memorandum (Appendix AA) or sign a centrally managed list certifying all SF FWPs and CWPs are technically correct and complete to support Key Event completion or readiness for Fast Cruise or Sea Trials. At a minimum, this certification must include a review of:

(1) SF Work Package derived from the CSMP.

(2) Inactive Equipment Maintenance is properly performed.

(3) TSO review.

(4) PMS review, including all checks to remove equipment or systems from IEM.

(5) Pre-underway or Pre-Event check-off list checks are complete.

(6) The RMC or NSA Project Manager will sign the signature sheet acknowledging receipt of SF CO letter or memorandum and noting serial number or signed list as noted.

h. Key Event or Availability Completion for RMC Engineering. (This step must be completed by Key Event for work tied to each Key Event or Milestone.)

(1) RMC or NSA CHENG will certify all work assigned has been tasked and properly executed prior to Fast Cruise or Sea Trials and at the end of an availability where RMC is the NSA. This process also ensures there are no outstanding technical waivers or deviations or QA deficiencies that have not been properly adjudicated and identifies any exceptions to completion, including work or testing occuring after Sea Trials completes and assures these work items have been technically adjudicated to prevent adverse impact on availability completion.

(2) RMC or NSA CHENG must certify all assigned assessments (TSRA) or Fleet Technical Assists (FTA) tied to Key Event or Fast Cruise or Sea Trial are completed. If TSRA assessments or FTA are ongoing, the RMC or NSA CHENG will certify they do not impact the Key Event or Fast Cruise or Sea Trial.

(3) All "A" branded requirements in the current FRP maintenance cycle must be reviewed for their completion status during the work certification and close out process. If an "A" branded requirement was screened for completion and was not fully accomplished as delineated in the task's Block 35 or work item by the executing activity, its status must be reported during the departure conference to the RMC or Ship Repair Facility Commanding Officer or designated representative and in the follow-on departure report by JCN and work item as applicable. If the executing activity is an In-Service Engineering Agent, the Project Manager or their designated representative must make this report.

i. Testing. (This step must be completed by Key Event, utilizing the approved Test and Inspection Plan required under NAVSEA Standard Item 009-67 for the Integrated Test Plan).

(1) The LMA must certify all Hull, Mechanical and Electrical and C5I test procedures identified in NAVSEA Standard Item 009-67 Integrated Test Plan were completed with OQE documentation or added to the exceptions list and all tests required to be completed at sea have been identified for inclusion on the Sea Trial agenda. The LMA will provide to the NSA this certification via signature of a centrally managed signature sheet or letter or memorandum. The RMC or NSA Integrated Test Engineer (or Project Support Engineer) will verify compliance and sign the signature sheet, noting the LMA memorandum or serial number or signed list as noted.

(2) The LMA and Ship's CO will verify all WAFs and Tag Outs required for Key Event have been closed and cleared per NAVSEA Standard Item 009-106. Signature of a centrally managed signature sheet or a supporting memorandum documenting WAF and Tag Out clearance will be provided to the RMC or NSA Integrated Test Engineer. The RMC or NSA Integrated Test Engineer will verify and sign the signature sheet acknowledging WAF or Tag Out completion to support Key Event of Sea Trials.

j. Waivers and Deviations. (This step must be completed for work tied to each Key Event.) The RMC or NSA CHENG will certify all technical non-conformances have been satisfactorily resolved to support Key Event to include availability completion. This includes certifying all:

(1) DFSs have been properly adjudicated and DFSs expiring during the availability have been corrected or extended.

(2) RMC Design Service Requests, LARs or RLARs have been answered and incorporated.

k. Quality Assurance. (This step must be completed by Key Event for work tied to each Key Event.)

(1) The RMC or NSA Code 130 QA Manager will submit to the Project Manager a signed letter or memorandum (Appendix AB) or sign a centrally managed list certifying all QA Office actions regarding resolution of QA Audits and Surveillances necessary to support Key Events or Milestones are completed.

(2) All RMC issued Corrective Action Requests (CAR – Method B-D) issued are either closed or at an acceptable level of completion to support work certification. Include a letter or memorandum (Appendix AC) describing outstanding items, remaining actions, and Estimated Completion Dates, if applicable.

l. Final Key Event or Readiness for Sea Trials Completion Certificate.

NOTE: SUB-PARAGRAPHS (1), (2), AND (3) OF THIS PARAGRAPH MUST BE COMPLETED FOR WORK TIED TO EACH KEY EVENT AND BEFORE FAST CRUISE OR SEA TRIAL.

(1) The NSA Project Manager shall verify availability work required to commence Key Event or Readiness for Sea Trials is complete. NSA oversight (PR, Procedures Evaluation, PVI) and G points have been completed per the Availability QMP (Appendix U). Non-conformances identified have been corrected or provided to NSA Technical Authority for adjudication. Any exceptions to completion have been reviewed and do not impact Key Event or Sea Trials completion.

(2) The NSA CHENG will verify availability work required to support Sea Trials has been completed in a technically correct manner and all exceptions listed have been reviewed and authorized. NSA technical review of work items has been conducted per the Availability QMP (Appendix U).

(3) The RMC or NSA Project Manager and RMC or NSA CHENG will sign a letter or memorandum (Appendix AC) or centrally managed list for the record acknowledging completion of all actions required for Key Event. Any exceptions will be listed and concurred with by the RMC, TYCOM and Ship's CO.

NOTE: SUB-PARAGRAPH (4) OF THIS PARAGRAPH IS REQUIRED PRIOR TO FAST CRUISE OR SEA TRIALS ONLY.

(4) When the signature sheet, Appendix V, is complete and any exceptions have been concurred on by Technical Authority, the NSA will release a message utilizing the format provided in Appendix T. Sea Trials will commence after Ship's satisfactory report of Fast Cruise is completed by Ship's CO to the TYCOM per Appendix R, mandatory 48-hour rest period and NSA report of readiness for Sea Trials to the TYCOM. TYCOM authorization of Sea Trials commencement will reference Ship's Fast Cruise completion message and NSA Readiness for Sea Trials message.

m. Final Availability Certification. Upon completion of Sea Trials, a final certification will be accomplished utilizing test results from Sea Trials. If Sea Trials testing resulted in new or growth work that does not support completion of the availability (after consultation with TYCOM), this new or growth work and re-testing must be completed or have an agreed upon plan for accomplishment prior to final availability certification. If all availability testing has been completed satisfactorily, or identified new or growth work does not impact availability completion, the RMC or NSA Commanding Officer will certify availability completion.

(1) RMC or NSA Project Manager. Verify all testing required for availability completion has been completed on Sea Trials. Exceptions to completion (including any new or growth identified on Sea Trials) have been adjudicated via Technical Authority and agreed by TYCOM as to not impact availability completion. These exceptions will be tracked to completion by the Project Manager via the Availability Closeout process.

(2) RMC or NSA CHENG. Verify all testing required for availability completion has been completed on Sea Trials. Any exceptions to completion (including new or growth work identified on Sea Trials) have been reviewed and do not impact availability completion.

(3) Availability Completion. The NSA will utilize Appendix V to track signatures required to document Sea Trial testing completion and adjudication of any availability completion exception items. After gaining concurrence from TYCOM and the Ship's CO, the NSA will report availability completion to TYCOM utilizing Appendix I via CNRMC.

n. End of Maintenance Phase. This documents the end of the Maintenance Phase and entrance into the Basic Training Phase for the ship. The Maintenance Phase exit criteria for equipment must include, but not be limited to, successful passing of Readiness Assessments and Certifications for non-Engineering systems (i.e. C5ILO, Aviation Certification, TSRA, etc.), and a Light-Off Assessment for Engineering

systems, and successful completion of comprehensive post-Availability Sea Trials that tests all systems. Minimum Equipment (Redlines) must be met and maintained for all Mission Areas.

(1) ISIC. Coordinate with SF to verify those systems and equipment not worked during the maintenance availability and operationally tested to ensure the ship is ready to transition from the maintenance phase to the training phase. Adjudicate all found deficiencies.

(2) Ship's Force. Operate all equipment and systems not worked during the maintenance availability. Identify and document any deficiencies. Coordinate with the RMC or NSA Project Manager to adjudicate all deficiencies found.

2.6.7.5 Planning Key Event Readiness. Minimum Planning Key Events require certification to assure proper completion. These Key Events constitute the critical availability planning events for the project to transition from the planning phase to the maintenance phase. The NSA Commanding Officer, based on the NSA Contracting assessment of the risk associated with any incomplete requirements, may certify Planning Key Events with exceptions.

2.7 COMPLETION OF AVAILABILITY. To standardize reporting practices, the official end of a CNO Availability will be upon Certification of work per "Availability Work Certification" dictated and completion of the TYCOM approved Sea Trials Agenda. Ships must report Sea Trial Agenda Completion in the form of Appendix I. Availability Certification Completion can occur with agreed to exceptions as discussed in volume VII, chapters 7 and 8 of this manual. The TYCOM, Contractor, FMA and NSA should consider Work Certification Requirements and the definition of "Availability Completion" when adjudicating New or Growth work in any availability. If scope, time and cost are impacted by New or Growth work, the impact should be addressed and documented in writing (by the RMC Project Manager) to the TYCOM or ISIC.

2.8 DAYS OF MAINTENANCE DELAY.

a. Days of Maintenance Delay (DoMD) is a metric used to track extensions to CNO availabilities caused by maintenance or modernization decisions or performance. Extensions beyond the planned availability length take away from training in the Optimized Fleet Response Plan. DoMD is defined as the number of days an availability extends beyond the originally established end of the availability or completion date at the start of the availability. The original availability completion date is documented in the NDE at the official start of the availability. Additionally, the A-35 (days) Readiness to Start (RTS) message for private shipyard availabilities and the Final Review Estimate (FRE) for public shipyard availabilities document CNO availability start and end dates prior to availability start. Should the actual availability start date differ from the RTS message or FRE, all stakeholders will need to agree on the date to be used for the original start and completion dates. For a public shipyard availability, the final completion date will match the end of availability completion message. For a private shipyard availability, the end of availability date will match the end of availability completion message.

b. Total DoMD is the sum of Unrealized DoMD and Realized DoMD, and accumulates in the fiscal year of when the day of delay is realized.

c. Unrealized DoMD are defined as the number of days an availability is projected to

extend beyond the originally scheduled availability completion date but have yet to occur as they are in the future from time now (today's date). If today's date is equal to or earlier than the originally scheduled availability completion date, the Unrealized DoMD is the delta between the projected end date and the originally scheduled availability completion date. If today's date is later than the originally scheduled availability completion date, the Unrealized DoMD is the delta between the projected end date and today's date.

d. Realized DoMD are defined as the actual number of days an availability has extended beyond the originally scheduled availability completion date that has already occurred. At the end of the availability, all days of maintenance delay are realized, though they may accumulate in different fiscal years.

(Example: If an availability was scheduled to complete on 10 August 2021 at availability start and was extended to 28 August, the Total DoMD is 18 Days. On 24 August 2021, the availability had 14 Realized DoMD and 4 Unrealized DoMD. For comparison, on 15 July 2021 (i.e., today's date at or earlier than originally scheduled availability completion data), the availability had 0 Realized DoMD and 18 Unrealized DoMD).

2.8.1 Schedule Change Request.

a. Activities executing CNO-scheduled depot availabilities that will extend beyond the currently approved completion date (as documented in NDE) must formally propose a new completion date in sufficient time to obtain approval of the request prior to the expiration of the currently approved completion date per reference (e). Activities will use the template located in Appendix AD. The message will include at a minimum, reasons for delay, expected timeline to bound and scope the issue, any immediate assistance required, initial mitigation actions taken, and projected timeline.

b. Projected timeline includes current CNO availability start and completion date (as documented in NDE), number of Days of Maintenance Delay requested, requested new availability start and completion date.

c. Reasons for delay will include the most applicable causal factor from the list below. Include the specific system(s), alteration(s) or action(s) added to the schedule causing the delay as well as any other pertinent details (i.e. event, RCC or CFR) defining the issue:

PM	Program Management
SF	Ship's Force
NW	New Work or Growth Work
RW	Rework
E	Efficiency or Resources
S	Supply or Material
CM	Contract Methodology
O	Other

2.8.2 Schedule Change Approval.

a. Approval of changes to the CNO depot maintenance schedule and requests for changes will normally be accomplished by naval message per reference (e).

b. The executing activity will make the requisite changes to the schedule in all other databases within 3 days of the release of the CNO schedule approval message.

2.9 AVAILABILITY COMPLETION DEPARTURE CONFERENCE. At the end of the availability, the Supervising Authority, FMA (if applicable), and SF will conduct a Departure Conference to finalize the status of all work performed during the availability. The conduct of this conference is similar to the Progress Reviews conducted per paragraph 2.6.3, and should be used to gather all necessary information to draft and send the Availability Completion Message. Further policy on availability completion can be found in volume VII, chapter 7 and chapter 8, of this manual. As a minimum, the Availability Completion Message should address all areas addressed in the Weekly Progress Message, Appendix I, as well as the following:

a. Unresolved maintenance issues and guarantee work items.

b. Report of configuration changes resulting from alterations installed during the availability.

c. Summarize the NAVSEA waivers issued during the availability.

d. Identify those work candidates that will be deferred until the next industrial availability.

2.10 POST AVAILABILITY.

a. Completed Availability Work Package. Within six months after the completion of the availability, SURFMEPP will issue the Completed Work Package.

b. End-of-Cycle Analysis. Provide inputs to support the SURFMEPP End-of-Cycle Analysis. These inputs will include DFSs approved during the availability and work accomplished, but not in the approved AWP.

c. Post-Availability Analysis. TYCOM will participate in the post-availability analysis process and attend CNO Availability completion Maintenance and Modernization Performance Reviews per volume VI, chapter 39 of this manual.

2.11 BASELINE AVAILABILITY WORK PACKAGE CLOSEOUT.

a. Fleet Readiness Plan Maintenance Cycle BAWP Closeout. The following procedures will be utilized to close-out and complete the FRP Maintenance Cycle and associated BAWP.

b. BAWP Closeout Verification and Assessment Meeting. No later than 70 days after CNO Availability completion, SURFMEPP will conduct a BAWP Close-Out Verification and Assessment Meeting. This meeting will determine the status of all "A" branded BAWP items. A list of all BAWP work items not accomplished and the reason(s) for non-accomplishment will be compiled for inclusion in the BAWP Close-Out Report.

c. Attendees. The BAWP Close-Out Verification and Assessment Meeting will be chaired by a SURFMEPP representative. The following personnel are encouraged to attend this meeting:

(1) Ship's CO (or designated representative).

(2) Engineer Officer and Availability Coordinator.

(3) Project Engineer and Combat Systems Project Engineer.

(4) Project Manager or Class Team Lead.

(5) PSIA, LMA or Planning Activity Representative.

(6) TYCOM Representative.

(7) ISIC Representative.

(8) Planning Yard Representative.

(9) Program Manager's Representative.

(10) Regional Maintenance Center Representative.

(11) RMC Assessment Director.

(12) NAVSEA 05D Representative.

d. BAWP Closeout Letter. This letter is a deliverable due at the BAWP Close-Out Verification Meeting per the planning milestones listed in volume II, part II, chapter 3, Appendix A (continental United States and Hawaii) or volume III, chapter 4, Appendices B and G (Forward Deployed Navay Forces). This meeting is used to ascertain the final disposition of each BAWP mandatory requirement ("A" branded JCN in the FRP maintenance cycle) and a BAWP Close-Out Report to summarize all changes for SURFMEPP, Technical Warrant Holders, Ship Design Managers, engineering authorities and other stakeholders as applicable. Maintenance requirement status will be reviewed at the meeting for deferred, accomplished or non-accomplished-no deferral authorized status. At the conclusion of the meeting, all non-accomplished-not authorized for deferral JCNs will require adjudication via the deferral letter process. The NSA, RMC and TYCOM will coordinate this effort as described in paragraph 2.5.4, which discusses the technical deferral and adjudication process for post-AWP definitization or award.

APPENDIX A

TYPICAL CNO AVAILABILITY PLANNING MILESTONES

* 1 - Both Naval and Private Industrial Activities
2 - Naval Activities

MILESTONES	CODE	RESPONSIBLE ACTIVITY	TIMELINE (Days)
1. Review CSMP and make sure all ship deferred maintenance actions desired for accomplishment are documented.	1	Maintenance Team (MT)	Continuous
2. Update BAWP with new requirements.	2	SURFMEPP	A-410
3. Pre-Availability Test and Inspection or Work Package Definition Conference, including combat systems and inspection of boilers (if possible).	1	TYCOM, Industrial Activity and MT	A-360 to A-304
4. Issue Pre-Availability Test and Inspections or Work Package Definition Conference Meeting report (within 10 days after conference).	1	TYCOM and Industrial Activity	A-334 to A-274
5. Order material for Ship's Force work.	1	Ship	A-90 to A-45
6. Cancel all outstanding Casualty Reports (CASREP) which are scheduled to be corrected during the industrial availability per CNSP/CNSL INST. 3040.2.	1	Ship	A to A+3
7. Arrival Conference.	1	Industrial Activity, ISIC and Ship	A to A-0

NOTE: "A" IN THE "TIMELINE" COLUMN REPRESENTS THE START DATES. THE DATE SHOWN IS FOR ILLUSTRATION ONLY, SINCE ACTUAL MILESTONES VARY DEPENDING ON SHIP OPERATING SCHEDULES, START DATE CHANGES AND OTHER CONSIDERATIONS.

APPENDIX B

APPENDIX D

BAWP WORK ITEM BRANDING CATEGORIES

Mandatory (Technical): Requires an approved Change Request prior to non-accomplishment. Only SURFMEPP is authorized to brand items in this category. BAWP work items in this branding category include maintenance actions, which have high-level technical requirements or are NAVSEA-mandated. Resolution is managed by the applicable Technical Warrant Holder.		
Type Sequence Number	Brand Code	
811	A1	Mandatory maintenance by direction of higher authority.
814	A4	Service required by higher-level technical requirement.
816	A6	Reprogrammed BAWP items from previous maintenance cycles.
820	AF	Mandatory maintenance that has been deferred to a future availability in advance of the Deferral Letter.
831	AD	Mandatory items deferred at least two FRP cycles.
833	AH	Mandatory maintenance approved for deferral in the current maintenance cycle.
832	AR	Repair task that must be accomplished within the current FRP Maintenance Cycle.
834	AS	Mandatory Safety-Related Modernization.
Required (Non-Technical): Requires TYCOM approval and subsequent notification to SURFMEPP prior to non-accomplishment.		
842	B2	MTA, MILR and legacy as failed alterations.
843	B3	All other modernization not included as categories B1 or B2. (Note: "B1" N/A to Surface Ships)
846	B6	Availability Services. (Temp or Routine)
847	B7	Repair work related to an active CASREP or DFS.
849	B9	Non-Mandatory Technical Requirement, Non-Service and Routine CMP task.

APPENDIX E

SUGGESTED GUIDELINES FOR FORCES AFLOAT REVIEW OF AVAILABILITY WORK PACKAGES

a. The preliminary AWP includes information which applicable TYCOM and Ashore Ships Maintenance Manager extracts from the CSMP prior to the availability. TYCOM and Ashore Ships Maintenance Manager only reviews items in the CSMP which are coded 1 under the type availability column. TYCOM and Ashore Ships Maintenance Manager continues to monitor the CSMP until submission of the first Supplementary Work List. It is essential the CSMP be up-to-date and reflect what work the ship requires the industrial activity to accomplish. The CSMP is the primary means of communicating unique work items not already covered by the AWP until submission of the first Supplementary Work List.
b. Ship's Force should review each maintenance item on the CSMP deferred for accomplishment to ensure that the deficiency reported and the work involved to correct it are complete and accurate.
c. To the maximum extent possible, work items that are within the capability of an FMA to accomplish should be accomplished as T/A-2 work prior to the CNO Maintenance Availability.
d. Ship's Force will identify CSMP repair items previously deferred for other than industrial activity action which Forces Afloat will not likely accomplish prior to the availability and change the type availability code to T/A-1, with ISIC concurrence, on these items.
e. Ship's Force will review each outstanding alteration for applicability and ensure the record of completed alterations is correct. Alterations erroneously reported complete result in plans and tests which do not fit the ship. Completed alterations not reported as complete will cause unnecessary expenditure of shipcheck funds, duplication or both, of effort during the availability.
f. During AWP review meetings, Ship's Force should markup both the index and applicable Ship's Work List Item Number as an aid in recalling information.
g. Ship's Force will review the AWP to see if any component or equipment requiring attention of any kind has been omitted.
h. On receipt of the Proposed AWP, Ship's Force should review each Ship System Work Description. Ship's Force should prepare comments as to whether the extent of planned restoration, maintenance or repairs is sufficient or excessive. Additional comments regarding abnormal operation or configuration will be of interest to the industrial activity even if the AWP covers the particular component for repair because the scope of the job can be exactly defined early, avoiding "growth within scope" and schedule slippage later in the availability.

i. Ship's Force should review the General Information Section, "zero" series SWLINs and the glossary for a definition of terms used in the AWP to obtain a general understanding of availability procedures, philosophy and the pre-availability planning requirements.
j. Ship's Force should review all outstanding Departures from Specification to ensure they identify, for correction during the availability, all known non-standard repairs or installations not per class plans.
k. Ship's Force should identify any recently completed repair actions on components assigned to industrial activities and alterations that may negate the need for, or reduce the extent of, industrial activity refurbishment.
l. Ship's Force should identify any equipment not presently addressed in the AWP. TYCOM and Ashore Ships Maintenance Manager are interested in identifying special or temporary equipment installations which may need maintenance during the availability.
m. Ship's Force should identify any equipment listed for refurbishment, that is in exceptionally good material condition.
n. Ship's Force should review, "Forces Afloat Actions to be Accomplished Prior To or At Arrival" index in the AWP to ensure these actions are understood.

APPENDIX F

AVAILABILITY PLANNING CONFERENCE AGENDA SAMPLE

1. Introduction of Attendees. (Chair)
   a. TYCOM Type Desk. (TDO or Availability Work Package Manager (AWPM) or PE) (Chair)
   b. Ship's Force.
   c. Maintenance Team.
   d. SURFMEPP.
   e. TSRA.
   f. Program Office Management Representative.
   g. Planning Yard Representative.
   h. Naval Information Warfare Systems Command (NAVWARSYSCOM) Representative.
   i. Government Planners.
   j. PSIA Contractor Representatives.
2. Meeting Overview - Agenda Topics. (Chair)
3. Availability Overview. (Chair)
   a. Type.
   b. Location.
   c. Start Date, End Date and Duration.
   d. Notional Mandays, Dollars and AP Dollars.
   e. Expected Control Mandays, Dollars and AP Dollars.
4. Availability Budget. (TYCOM Type Desk)
   a. Expected Control Breakdown.
      (1) Fees.
      (2) Reservations.
      (3) Farm-Out.
   b. Cost of work screened to date.
   c. Budget Assessment.
5. Review ship's schedule. (Chair)
   a. Home port.
   b. Deployments and Underway periods.

c. Scheduled Availabilities. (CMAV and TSRA)

d. Inspections and Assessment Visits.

e. Alteration Installation Teams.

f. Special evolutions that affect ship access.

6. Review remaining advance planning milestones highlighting key dates and deadlines. (TYCOM (AWPM or PE))

7. Brief BAWP contents including status of all mandatory repair and assessment tasks due during the cycle, showing those completed, scheduled and overdue. (SURFMEPP)

8. SURFMEPP Turnover BAWP to TYCOM. (SURFMEPP)

9. Brief CSMP showing the screening of all off-ship jobs. Highlight potential technical issues, including Departures from Specifications (DFS) and other jobs that may later be deemed mandatory. Discuss any other concerns. (TYCOM (PE))

10. Brief status of all mandatory repair and assessment tasks due during the cycle, showing remaining tasks scheduled and overdue and discuss concerns. (SURFMEPP)

11. Brief status of all mandatory CMP task Change Deferral Requests, showing those approved, approval pending and disapproved. (SURFMEPP)

12. Assess impact of disapproved CMP task Change Deferral Requests. (TYCOM (PE))

13. Brief schedule of remaining TSRA availabilities and mitigation strategy to accomplish those mandatory CMP assessments that were not executed as scheduled. (TSRA)

14. Assess impact of remaining inspections and assessments. (TYCOM (PE))

15. Brief Program and Fleet Alteration changes since last briefed. (TYCOM (AWPM) (SEA21 briefs Program Alterations changes, if present, else AWPM briefs both))

16. Assess impact of modernization changes on other work. (TYCOM (AWPM) or TYCOM (PE) or Planner)

17. Assess impact of AWP on habitability. (TYCOM (PE))

18. Review and assess Ship's Force planned work that may impact other work. (TYCOM (PE))

19. Review and assess Ship's Force deferred work that may need to be included in the AWP. (TYCOM (PE))

20. New Issues.

21. Ship Commanding Officer Concerns.

22. Action Required after the Meeting:

a. TYCOM (AWPM) distributes meeting minutes with action items.

b. TYCOM Type Desk briefs chain of command of the Commanding Officer Concerns.

c. SURFMEPP negotiates the uploading of all new CMP tasks identified after this point with the TYCOM. (AWPM or PE)

GENTEXT/1. IAW REF A, REQUEST TYCOM APPROVE <SHIP NAME/HULL NO.>
REQUEST FOR A BERTHING BARGE DURING <SHIP NAME/HULL NO.> (AVAIL
TYPE) MAINTENANCE PERIOD FROM DY MON YEAR UNTIL DY MON YEAR.
2. BARGE MUST BE LOCATED LESS THAN XXX YARDS FROM <SHIP NAME/HULL
NO.> IN ORDER FOR <SHIP NAME/HULL NO.> TO SUPPORT IMMEDIATE CASUALTY
RESPONSE ON THE BARGE.
3. BERTHING REQUIREMENTS ARE AS FOLLOWS:
MALE OFFICERS - ( )
FEMALE OFFICERS – ( )
MALE CPO - ( )
FEMALE CPO - ( )
MALE E-6 AND BELOW - ( )
FEMALE E-6 AND BELOW - ( )
TOTAL PERSONNEL - ( )
4. REQUEST THE FOLLOWING FOR USE DURING BARGE OCCUPANCY (AS
APPLICABLE, NOT LIMITED TO):
A. SECURE OFFICE SPACE FOR COMMANDER WITH SVTC AND VOSIP
CAPABILITIES

B. SECURE OFFICE SPACE FOR CHIEF OF STAFF WITH SVTC AND VOSIP CAPABILITIES
C. SECURE OFFICE SPACE FOR COMMAND MASTER CHIEF
D. SECURE OFFICE SPACE FOR MARITIME OPERATIONS CENTER DIRECTOR
E. SECURE OFFICE FOR INFORMATION WARFARE COMMANDER
F. SECURE CONFERENCE ROOM WITH SVTC AND VOSIP CAPABILITIES
G. VAULTED SERVER ROOM WITH CRYPTOGRAPHIC DEVICE AND SWITCHES
H. ETHERNET NETWORK INFRASTRUCTURE
I. SECURE OFFICES TO ACCOMODATE (ORG NAME) STAFF
J. ( ) SIPR DROPS
K. ( ) NIPR DROPS
L. ( ) DSN LINES
5. DURING <SHIP NAME/HULL NO.> (AVAIL TYPE), HOTEL SERVICES (POWER, WATER, ELECTRICITY) WILL BE SECURED FOR EXTENDED PERIODS OF TIME RESULTING IN THE DEGRADATION OF (COMMAND NAME) COMMAND AND CONTROL CAPABILITY. THE FOLLOWING SHIPBOARD WORK WILL NEGATIVELY IMPACT OPERATIONS:
A. LOAD CENTER CLEAN AND INSPECT: MONTH YEAR TO MONTH YEAR
B. COLLECTION, HOLDING, AND TRANSFER FORWARD ACID FLUSH: MONTH YEAR TO MONTH YEAR
C. FLIGHT DECK WORK DIRECTLY ABOVE (COMMAND) SPACES: MONTH YEAR TO MONTH YEAR
D. BERTHING OVERHAUL: MONTH YEAR TO MONTH YEAR
E. PRC AND DECK WORK: MONTH YEAR TO MONTH YEAR
6. A BARGE IS REQUIRED TO SUPPORT (COMMAND) MISSIONS, OPERATIONS, AND EXERCISES AS OUTLINED IN THE CAMPAIGN ORDER, ENSURING ALL OPERATIONS, ACTIVITIES, AND INVESTMENTS INTENDED FOR EXECUTION DURING OPERATIONAL EMPLOYMENT PERIODS ARE FULLY STAFFED. IT IS IMPERATIVE THAT (COMMAND) IS ABLE TO CONTINUOUSLY OPERATE DAILY FUNCTIONS IN SUPPORT OF THE SEVENTH FLEET COMMANDER, REGARDLESS OF LOCATION UPON DISEMBARKATION FROM THE <SHIP NAME/HULL NO.>.//

BT

NOTE: ENSURE MESSAGES ARE PER CURRENT MESSAGE FORMAT AND CURRENT PLAD IS UTILIZED.

APPENDIX H

MONITORING PROCEDURES

1.1 Periodic Monitoring.

a. Purpose. To provide to ships in availability such administrative and training assistance as is necessary to improve the Ship's Force conduct of the overhaul, maintenance and training tasks. Visits of this nature are termed Tech Assists.

b. To evaluate the effectiveness of administration and training. Visits of this nature are termed Work-Ups.

c. To conduct spot checks to monitor progress in specific material, administrative and training areas. Visits of this nature are termed Monitor Visits.

d. The extent, type and frequency of periodic monitoring and visits should be determined on a case basis by the responsible ISIC or TYCOM Representative. The initial inspection should be broad in scope in order to apprise the responsible ISIC of the adequacy of the ship's performance and progress. Normally, the initial visit will indicate the necessary frequency and scope of subsequent Tech Assists and Monitor Visits. In general, any required Work-Ups should be scheduled in advance of key events during the availability.

e. Examine the effectiveness of Ship's Force preparations for overhaul during initial inspections. Subsequent visits should review the following areas as appropriate for the purpose of the specific inspection.

(1) Review procedures and administrative steps for provisional watch station qualifications.

(2) Review department organization manuals.

(3) Review department instructions and administrative procedures.

(4) Review ship's instructions and administrative procedures.

(5) Review department logs, operating instructions and casualty procedures.

(6) Review ship's standard operating procedures and the ship's organization and regulations manual.

(7) Review training conducted and planned to support the goal of requalifying or reestablishing proficiency of watchstanders.

(8) Monitor performance of watch standing.

(9) Conduct spot check of ship's records and logs in use.

(10) Review Ship's Force controlled work (Level I) and procedures to ensure proper controls and documentation are per volume V, part I, chapter 2 of this manual.

(11) Review status of Ship's Force responsible PMS and IEM.

(12) Inspect installed equipment for cleanliness and adequate protection from damage.

(13) Review Tagout and Work Authorization Logs. Spot check for compliance per current directives.

(14) Inspect ship for hazards.

(15) Inspect provisions for casualty control including watertight integrity.

(16) Verify all COSAL material including operating space items, have been off-loaded to processing areas which provide appropriate security.

(17) Inspect the processing area to verify provisions and procedures for careful ILO inventory.

(18) Review response of supply system to requisitions in support of Ship's Force work.

(19) Verify items are withdrawn from the ship's COSAL stock undergoing inventory and ILO only on an emergency basis and such issues are well documented with appropriate adjustments to the inventory records.

(20) Evaluate general safety practices.

f. Scheduling of Periodic Monitoring Visits. Periodic Monitoring Visits should be scheduled by the responsible ISIC or TYCOM as appropriate. Some monitoring visits should be conducted on an unannounced basis. These visits should be given to minimize interference with industrial activity and Ship's Force work.

g. Reports of Visits. Formal reports of the results of periodic monitoring visits are not required by the TYCOM. However, the responsible ISIC should advise the TYCOM in situations when the attainment of required progress toward completion of Key Events is in jeopardy.

APPENDIX J

HABITABILITY INSPECTION CHECKLIST FOR SHIPS IN CNO AVAILABILITIES

1. This checklist is a sample for QoSC ship's force representative, with assistance from the NSA to qualitatively determine the minimum required standards to the ability of the crew to live on board safely and comfortably during CNO availability. This assessment does not fulfill shipboard system certification requirements or other inspection requirements related to food service sanitation, laundry and dry cleaning, potable water and marine sanitation devices.
2. The purpose of the inspection is to verify living and messing spaces are clean, safe and ready to receive the crew and meet habitability requirements per references (i) through (i), as applicable. Upon completion of the inspection, Ship's CO must report completion and results of the Habitability Inspection to the TYCOM via Naval Message (see Appendix K), with copy to the LMA.
3. Areas to be inspected include general safety and sanitation, galley, scullery, messing, dry food storage spaces, refrigerated food storage spaces, berthing spaces, washrooms, showers, heads, lounges and potable water.
4. It is understood not all equipment, spaces and systems aboard the ship will be completed and transferred to SF at the time of the assessment. If a space or system to be inspected has not been transferred to the crew, the LMA will present the space or system to the inspector. If a space or system has been accepted by the crew, the crew will present the space. As remaining habitability related spaces or systems are completed after crew move aboard, the QoSC is responsible for inspecting spaces or systems per the agreed upon turnover plan.
5. The inspection team will evaluate the following areas utilizing their TYCOM approved checklist which must include, but not limited to, the following areas or services as they were affected during the CNO availability:
   A. General.
   B. Food Service.
   C. Living Spaces.
   D. Freshwater.
   E. Collection, Holding and Transfer (CHT) System.
   F. Laundry and Dry Cleaning.

HABITABILITY INSPECTION CHECKLIST FOR SHIPS IN CNO AVAILABILITIES (Cont'd)

Compartment Number: _____ Division: _____

A.	GENERAL	YES	NO
	1. All trash and rubbish removed.		
	2. Spaces are neat, clean and in a usable condition.		
	3. Wireways and other exposed areas that could serve as a path for rats are free of foreign matter.		
	4. Electrical wires or plugs are not located to be easily tripped over.		
	5. Drains open with covers attached.		
	6. Ventilation (heating and cooling) and lighting adequate to maintain healthful and comfortable conditions.		
	7. Electrical outlets required for habitability are installed and operable.		
	8. Spaces are free of major safety discrepancies.		
	9. Damage Control equipment installed per ship plan and labeled.		

GENERAL

Inspector: _____Date: _____

B.	FOOD SERVICE	YES	NO
	1. Facility		
	a. Decks sloped properly to allow drainage into deck drains. (S9AA0-AB-GOS-010/GSO Section 528. NAVMED P-5010-1 Article 5-204.11).		
	b. Adequate and convenient hand washing facilities with hot and cold running water, dispensed soap and single service disposable towels and waste receptacle for used paper towels are provided in or adjacent to the food service facility. (OPNAVINST 5100.19, Section D CH4, T9640-AC-DSP-HAB; and NAVMED P-5010-1, article 6-301.20).		

	c. Drain lines from refrigerators, ventilator hoods and other food service equipment drain through an air gap into a deck drain or funnel with removable grating (if cited in the contract). (S9AA0-AB-GOS-010/GSO Section 528. NAVMED P-5010-1 Article 5-202.13).		
	d. Signs posted reminding personnel to wash hands and not smoke. (NAVMED P-5010, Article 6-301.14).		
	e. Equipment operating and safety instructions are prominently posted on or conspicuously near the equipment to which it relates. (OPNAVINST 5100.19, Section D, chapter 8; S9AA0-AB-GOS-010/GSO section 602).		
	f. Steam and hot water lines properly lagged and sheathed. (S9086-RK-STM-010/505 and S9AA0-AB-GOS-010/GSO section 508).		
	g. Furniture is installed in prescribed arrangement and neat, clean and in usable condition. (S9AA0-AB-GOS-010/GSO section 651).		
	h. Racks and bins are installed in storerooms. (S9AA0-AB-GOS-010/GSO section 670).		
	2. Equipment		
	a. Deck mounted equipment sealed to the deck or elevated on legs that provide at least 8 inches of clearance between the deck and equipment. (NAVMED P-5010, chapter 4; and T9640-AC-DSP-010/HAB).		
	b. Decks in food service areas maintained in good repair. (NAVMED P-5010-a article 6-201).		
	c. All equipment accessible.		
	d. Food contact surfaces made of smooth, corrosion resistant, non-toxic (FDA Food, Drug and Cosmetic Act guidelines), stable non-absorbent materials that will not impart odors, color or taste, nor contribute to adulteration of food. (NAVMED P-5010 -1 article 6-101).		
	e. Vegetable peelers, vegetable slicers, can openers, meat slicers, ranges, ovens, grills, deep fat fryers, microwave ovens, toasters, mixing machines, pressure cookers, steam jacketed kettles, steam tables, steam table and salad bar inserts, soft ice cream machines, baking and roasting pans, cooking and serving utensils, food carts, storage racks and shelving properly installed, sanitized and operationally tested. (NAVMED P-5010 -2 chapter 4).		

	f. On and off toggle switches on food service equipment have toggle switch guards installed to prevent inadvertent operation. (NAVMED P-5010-2 chapter 4).		
	g. Safety interlocks on food preparation equipment maintained in proper operating condition.		
	h. Steam Jacketed Kettles.		
	(1) Equipped with functional steam safety release valve, if applicable. (S9AA0-AB-GOS-010/GSOs. 65).		
	(2) Chains at least 18 inches long attached to steam safety release valves to allow for operation from a safe location for direct steam heated kettles (GEN SPECS, Section 528, Article C1905 g(4)), if applicable.		
	(3) Steam discharge piped down to kettle coamings and directed away from operator's feet (GEN SPECS, Section 651 b), if applicable.		
	i. Equipment free from salt-water connections except NAVMEDCOM approved garbage grinders or refrigeration units. (NAVMED P-5010-6, article 6-6.8).		
	j. Food service spaces and equipment are free from cross connections with non-potable liquids or submerged freshwater inlets. (NAVMED P-5010-6, article 6-6.8.		
	3. Ventilation		
	a. Hoods serving deep fat fryers are fitted with a fire extinguishing system. (S9AA0-AB-GOS-010/GSO, section 512 and S9AA0-AB-GOS-010/GSO, section 555).		
	b. Grease filters and hoods are installed over convection ovens, combination ovens, range, griddles, deep fat fryers, steamers, skittles, and kettles are free from grease buildup and can be washed at least weekly. (S9AA0-AB-GOS-010/GSO, section 512 and 0938-LP-018-0010).		
	c. Hoods and filters are free from grease buildup and can be washed daily or weekly, as required. (S9AA0-AB-GOS-010/GSO, section 512).		
	d. Spaces adequately ventilated to keep them free of excessive heat, steam, condensation, vapors, smoke or gases. (S9AA0-AB-GOS-010/GSO, section 512 and 0938-LP-018-0010).		
	e. Vent ducts free of excessive grease and debris which could be a fire hazard. (S9AA0-AB-GOS-010/GSO, section 512 and 0938-LP-018-0010).		

	4. Lighting		
	a. Illumination levels adequate. (MIL-STD-1472, DOD-HDBK-289, and T9640-AC-DSP-010/HAB).		
	b. Lighting fixtures in food service areas shielded.		
	5. Refrigeration		
	a. Frost build-up no more than 1/4 of an inch (NAVMED P-5010, article 1-34).		
	b. Refrigeration spaces clean. (NAVMED P-5010-1, article 4-602.11).		
	c. One portable or built-in air measurement thermometer provided in all refrigerated storage spaces which is accurate to ±3°F. (NAVMED P-5010-1, articles 4-204.112 and 4-203.12).		
	d. Refrigerated spaces maintained at:		
	(1) Freezers 0°F or lower.		
	(2) Chilled Bulk Storage 33-36°F.		
	(3) Thaw Boxes 36-38°F.		
	(4) Dairy Products Box 32-34°F.		
	(5) Milk Dispenser Cabinet 32-40°F.		
	(6) Reach-in Refrigerator 34-40°F.		
	e. Interior safety release latches installed and operable in all bulk refrigeration and freezer units.		
	6. Serving Lines and Salad Bars		
	a. Serving line areas clean. (NAVMED P-5010-1, articles 4-204.112 and 4-203.12).		
	b. Equipment food-contact surfaces and utensils shall be clean to sight and touch. (NAVMED P-5010-1, article 4-601.11).		
	c. Functional sneeze shields installed on serving lines and salad bars. (NAVMED P-5010, Article 1-40).		
	d. Hot TCS foods shall be held at 135 °F (57 °C) or above throughout the meal period. (NAVMED P-5010-1, article 9-502.12).		
	e. Salad bars capable of being maintained at 40°F or below. (NAVMED P-5010-1, article 3-501.16).		
	7. Milk Dispensers and Holding Cabinets		

	a. Bulk milk dispenser is capable of maintain storage compartment at 41°F (5°C) or below during storage, display, and service. (NAVMED P-5010-1, article 9-502.16).		
	b. Dispenser and holding cabinets have accurate temperature gages or thermometers. (NAVMED P-5010-1, article 4-204.112).		
	c. Dairy box capable of being maintained at 33°-34°F. (NAVMED P-5010, article 1-34).		
	8. Ice Machines		
	a. Ice scoop made of smooth, corrosion resistant, non-toxic (FDA Food, Drug and Cosmetic Act guidelines), stable, non-absorbent materials. (NAVMED P-5010-1, article 4-101.11).		
	b. Ice compartment drains are aligned to the deck drains with an air gap. Air gap is at least twice the diameter of the drain served, but not less than 2 inches. (NAVMED P-5010-1, article 5-203.14, NAVMED P-5010-1, article 5-202.13, NAVMED P-5010-1, article 5-203.14 and NAVMED P-5010-1, article 5-202.13).		
	c. Ice scoop, stored handle up, in a covered and freely draining bracket outside ice storage compartment or inside the ice machine on a bracket above the highest level of the ice. (NAVMED P-5010-1, article 3-304.12).		
	9. Manual Dishwashing		
	a. Utensils move from dirty to clean side of wash area without risk of cross contamination by handling or splashing. (NAVMED P-5010-1, article 4-904).		
	b. A three-compartment sink is installed for washing pots, pans and utensils. (NAVMED P-5010-1, article 4-301.12 and T9640-AC-DSP-010/HAB).		
	c. Booster heater capable of supplying final rinse water at least 171°F. (NAVMED P-5010-1, article 4-301.16, NAVMED P-5010-1, article 4-501.111, and T9640-AC-DSP-010/HAB).		
	d. Temperature gage installed or thermometer used to monitor wash and rinse temperatures. (NAVMED P-5010-1, article 4-204.115).		
	e. The temperature of the wash solution in manual warewashing equipment shall be maintained at not less than either 110°F (43°C) or the temperature specified on the cleaning agent manufacturer's label instructions. (NAVMED P-5010-1, article 4-501.19).		

	f. If immersion in hot water is used for SANITIZING in a manual operation, the temperature of the water shall be maintained at 171 °F (77°C) or above. (NAVMED P-5010-1, article 4-501.111),		
	g. Long-handled dip baskets available. (T9640-AC-DSP-010/HAB).		
	10. Dishwashing Machine		
	a. Center and end curtains installed. (S9AA0-AB-GOS-010/GSO, section 651).		
	b. Temperature gages accurate to ±3°F. (NAVMED P-5010-1, article 4-501.112).		
	c. Multiple tank conveyor dishwashing machine meets the following requirements. (NAVMED P-5010, Article 1-9):		
	(1) Wash temperature 150-165°F for 7 seconds. (NAVMED P-5010-1, article 4-501.110).		
	(2) Rinse temperature 165-194°F for 7 seconds. (NAVMED P-5010-1, article 4-501.112).		
	(3) Final rinse temperature 180-194°F with a conveyor speed of 15 feet per minute at 15-25 psi or as specified in the machine technical manual. (NAVMED P-5010-1, article 4-501.112 (temperature) and NAVMED P-5010-1, article 4-501.113 (pressure)).		
	d. Operating instructions posted on, or conspicuously near, the machine. (OPNAVINST 5100.19, Section V. 16).		

FOOD SERVICE

Inspector: _____ Date: _____

C.	LIVING SPACES	YES	NO
	1. Bunks and lockers neat and in usable condition and bunk curtains installed. (S9AA0-AB-GOS-010/GSO, sections 640, 641, 642, and 643).		
	a. Floor space appropriate to rank of individual(s) occupying room and a minimum of 72 square feet of floor space per person, including a minimum of 3 feet between sleeping arrangements (racks, bunks, beds). (T9640-AC-DSP-010/HAB and NAVMED P-5010-2).		

	b. Each rack has an Emergency Escape Breathing Device installed within 3 feet from the head of the berth. (S9000-AD-SPN-010/NCDS, section 664 and T9640-AC-DSP-010/HAB).		
	c. Head-to-foot sleeping arrangements for occupants of adjacent beds or Privacy curtains installed at each bed. (NAVMED P-5010-2).		
	d. Hot bunking is prohibited. (T9640-AC-DSP-010/HAB, NAVMED P-5010-2).		
	e. Floor space is appropriate to rank of individual(s) occupying room and a minimum of 72 square feet of floor space per person, including a minimum of 3 feet between sleeping arrangements (racks, bunks, beds). (T9640-AC-DSP-010/HAB, NAVMED P-5010-2).		
	2. Sanitary Spaces - Facility		
	a. Plumbing fixtures installed in washrooms, showers and water closets, including showerheads and soap dishes and other necessary items. (S9AA0-AB-GOS-010/GSO, section 644).		
	b. Sinks, urinals, and commodes are clean, odor free, and operable. (NAVMED P-5010-2).		
	c. There are separate sanitary spaces for males and females. (T9640-AC-DSP-010/HAB).		
	d. During sewage backflow and overflowing toilet units, spaces are immediately secured until fixed then cleaned and sanitized. (NAVMED P-5010-2).		
	e. Adequate number of fixtures are provided per accommodation. (NAVMED P-5010-2T9640-AC-DSP-010/HAB).		
	3. Prescribed deck covering installed. (S9AA0-AB-GOS-010/GSO, section 634, NAVSEA Standard Item 009-26).		
	4. Adequate furniture and equipment installed to provide reasonable comfort, relaxation and entertainment in lounge areas.		
	5. Berthing spaces are clean, adequately ventilated and well illuminated. (OPNAVINST 9640.1, NAVMED P-5010, Chapter 2).		
	6. Drinking fountains are of the jet-angle type with clean bowls, orifices and orifice guards. (NAVMED P-5010-6).		
	7. No Category I flammables, combustibles or aerosol containers stored in berthing spaces. (NSTM Chapter 670, S9AA0-AB-GOS-010/GSO, section 671, S9AA0-AB-GOS-010/GSO, section 672).		

	8. Sinks, urinals and commodes are clean, odor free and operable. (NAVMED P-5010, Chapter 2)		
	9. The temperature of the hot water supplied for personal use of the crew does not exceed 130°F. (S9086-SE-STM-010/533).		
	10. Temperatures in berthing and messing spaces do not exceed 78°F. (T9640-AC-DSP-010/HAB).		
	11. Temperatures in living, sanitary, messing, medical, control spaces, and normal working stations are not lower than 65°F. (T9640-AC-DSP-010/HAB).		
	12. There are separate sleeping quarters for males and females. (OPNAVINST 1300.17, T9640-AC-DSP-010/HAB).		

LIVING SPACES

Inspector: _____ Date: _____

D.	FRESHWATER	YES	NO
	1. Surveillance		
	a. Halogen residual present. (NAVMED P-5010-6, article 6-8.2.d and article 6-7.5).		
	b. Bacterial analysis obtained from points representative of the entire distribution system. (NAVMED P-5010-6, article 6-7.4).		
	c. Ice machines tested for bacterial contamination. (NAVMED P-5010-6, article 6-45).		
	d. Potable water processed or obtained from an approved source. (S9AA0-AB-GOS-010/GSO, section 532 NAVMED).		
	2. Bromination System and Equipment (when applicable).		
	a. Brominators are properly installed and functional. (NAVMED P-5010, Chapter 6, Article 21).		
	b. Warning plate installed next to unit. (S9AA0-AB-GOS-010/GSO, sections 532 and 507).		
	c. A four-foot hose with quick opening valve and vacuum breaker installed nearby. (S9AA0-AB-GOS-010/GSO, sections 532).		
	d. Bromine cartridges stored in dry, clean, well-ventilated storeroom. (S9AA0-AB-GOS-010/GSO, sections 532).		

	e. Locker or bin has label plate inscribed “Bromine Cartridges”. (S9AA0-AB-GOS-010/GSO, sections 532).		
	f. Storage locker has warning plate. (S9AA0-AB-GOS-010/GSO, sections 532).		
	3. Chlorination System and Equipment.		
	a. HTH stored in a metal box with three 1/4” holes, painted gray and labeled with red letters on white or black background “HAZARDOUS MATERIAL, CALCIUM HYPOCHLORITE”. (OPNAVINST 5100.19, Chapter 23).		
	b. HTH lockers not installed in machinery space, flammable liquids storeroom, berthing space or oil and water test lab area). (OPNAVINST 5100.19, Chapter 23).		
	4. Sounding Tubes		
	a. Equipped with screw caps. (NAVMED P-5010-6, Article 6-18.3).		
	b. Screw caps have keeper chains attaching them to sounding tubes. (NAVMED P-5010-6, Article 6-18.3).		
	c. Padlocks secure caps. (NSTM, Chapter 533, Section 2.3.6).		
	d. Label plates present. (NAVMED P-5010-6, Article 6-17).		
	e. Caps are color coded dark blue. (NAVMED P-5010-6, Article 6-17).		
	5. Potable Water Hoses		
	a. New hoses are disinfected with a solution not less than 100 ppm FAC for at least 2 minutes. (NSTM, Chapter 533, Section 3.3.3).		
	b. Labeled “Potable Water Only” at 10-foot intervals. (NAVMED P-5010-6 article 6-30 and S9086-SE-STM-010/533, section 533-2.1.3).		
	c. End couplings color coded dark blue. (NAVMED P-5010, Article 6-19).		
	d. Stored with ends capped or coupled together. (NSTM, Chapter 533, Section 2.1.3).		
	e. Hoses not used for any other purpose. (NAVMED P-5010, article 6-8 and NSTM Chapter 533, Section 2.1.3).		
	6. Potable Water Hose Lockers		

	a. Located at least 18 inches off deck and hose disinfecting instructions posted in a conspicuous location in the hose storage areas. (NAVMED P-5010-6, article 6-19 and S9086-SE-STM-010/533, section 533-2.1.3).		
	b. Padlocked, vermin proof and labeled "Potable Water Hose". (NAVMED P-5010-6, article 6-19 and S9086-SE-STM-010/533, section 533-2.1.3).		
	7. Potable Water Receiving Connections		
	a. Located at least 18 inches off deck, are not cross connected with any non-potable waterline or system and are turned down to protect against contamination. (NAVMED P-5010, article 6-8 and NSTM 533, Section 2.1.2).		
	b. Conspicuously designated by warning plate "POTABLE WATER ONLY", closed with screw cap when not in use, and cap has keeper chain attached to riser. (NAVMED P-5010, Article 6-8 and NSTM 533, Section 2.1.2).		
	c. Valve handwheel color-coded dark blue. (NSTM 505).		
	8. Cross Connections		
	a. Potable water connections to the following equipment provided with either an air gap of at least two supply pipe diameters, or a vacuum breaker backflow preventer installed at least six inches above the maximum potable fill level: (NSTM, Chapter 533, Sections 2.3.3.1 and 2.3.5.2).		
	(1) X-ray and photo developing equipment and associated chemical mixing tanks.		
	(2) Laundry washing machines.		
	(3) Diesel engine cooling jackets.		
	(4) Garbage disposals.		
	(5) Gaylord hood automatic wash down system (vacuum breaker installed upstream from detergent injector) (GEN SPECS, Section 532b3), if applicable.		
	(6) Steam tables, steam kettles, potato peelers, sinks and other food service equipment.		
	(7) Bridge or helicopter control tower window washer tanks.		
	(8) Other equipment containing non-potable liquids.		

	b. Continuous pressure backflow preventer with intermediate vent provided wherever a permanent or hose connection is made below the overflow level of equipment containing non-potable liquids and a manual or automatic cutout valve is installed downstream of the vacuum breaker. (GEN SPECS, Section 532bl), if applicable.		
	c. Reduced pressure backflow preventer provided wherever a permanent or hose connection is made to equipment or a system that could subject the potable water system to a positive pressure such as the chill water expansion tank. (GEN SPECS, Section 532bl), if applicable.		
	d. Sink and space faucets with standard 3/4-inch hose threads equipped with a hose connection vacuum breaker. (NSTM 533, Section 2.3.5.1).		
	e. Laboratory and shop (photo and battery shop) sinks with non-standard hose connections equipped with either an integral vacuum breaker or hose vacuum breaker. (NSTM 533, Section 2.3.5.2).		
	f. Hose connections to the potable water system disconnected when not in use. (NSTM 533, Section 2.3.4).		
	g. Label plate having the following wording in one-inch-high red letters installed in a conspicuous location near each hose connection to the potable water system: "CAUTION DISCONNECT HOSE WHEN NOT IN USE". (NSTM 533, Section 2.3.4).		
	h. Two check valves installed in the potable water supply to carbonated beverage dispensers with no copper, brass or bronze pipe, valves or fittings downstream of check valves, if applicable. (GEN SPECS 532, Section 532bl).		

FRESHWATER

Inspector: _____Date: _____

E.	**CHT SYSTEM**	**YES**	**NO**
	1. Personal Hygiene		
	a. Handwashing facilities located in or near pump rooms or comminutor spaces. (S9086-T8-STM-010/593, section 593-8.3.7.4.2.g).		

	b. Signs posted in CHT spaces near each sewage pump controller requiring hand washing with soap and water prior to leaving area, and prohibiting eating, drinking and smoking while work is in progress. (NAVMED P-5010, Chapter 7, Article 19(6) and NSTM 593).		
	2. Pump Room Safety		
	a. Slightly negative pressure exhaust ventilation with duct installed 9 inches from the deck in CHT pump rooms. (NAVMED P-5010, Chapter 7, Article 22 and NSTM 512).		
	b. Is there a locker stocked with personal protective equipment located at the entrance to the sewage pump room or comminutor space? (S9086-T8-STM-010/593, section 593-8.3.7.4.2).		
	c. Are there leaks present in sanitary fixtures or sanitary fixture piping in use? (S9086-T8-STM-010/593, section 593-8.3.7.4.3.f).		
	d. Are the intended sanitary spaces to support crew, readily accessible and clear of equipment and debris?		
	e. Indicator light installed outside compartment indicating ventilation system is operating. (NAVMED P-5010, Chapter 7, Article 22).		
	f. Two emergency escape breathing devices (EEBD) placed in each CHT pump room. (S9086-T8-STM-010/593, section 593-8.3.7.1.1.d).		
	g. Placard installed at the access of each CHT pump room outlining safety precautions to be followed if a sewage spill occurs. (NAVMED P-5010, Chapter 7, Article 22d).		
	h. Warning sign posted near each sewage pump controller: "CAUTION, WHEN HIGH LEVEL ALARM SOUNDS DIVERT UPPER DECK DRAINS OVERBOARD AND CLOSE ISOLATION VALVES ON DRAINS BELOW OVERBOARD DSCHARGE" , if applicable. (GEN SPECS 593a).		
	i. Audible and visual alarms for high and low sewage tank levels wired to signal in a continuously manned station and in the CHT pump room. (NSTM 593, Section 4.2.5 and GEN SPECS 593a).		
	3. Ship-Shore Transfer		
	a. Sewage fuser properly labeled. (GEN SPECS 593a).		

	b. Label plates at each deck discharge connection with warning against disconnecting sewage hose while it is pressurized, hose hook-up and disconnect procedures and sanitary and health precautions, if applicable. (GEN SPECS 593a).		
	4. Surveillance		
	a. Removable drip pans installed beneath comminutors mounted off deck, or a two-to-four-inch coaming around deck-mounted comminutors to aid in detection of possible leakage. (NSTM 593, Section 4.2.14).		
	b. Removable drip pans provided in health sensitive areas under valves and takedown joints to detect possible leakage. (NSTM 593, Section 4.2.14).		
	5. General Requirements		
	a. CHT space capable of containing sewage spills. (NSTM 593, Section 4.2.14 and GEN SPECS 593a).		
	b. Proper color-coding of handwheels, valves, fusers and caps. (NSTM 505, Table 505-16).		
	c. Functional eductor or sump pump installed in CHT spaces. (NSTM 593, Section 4.2.14).

Inspector: _____ Date: _____

F.	LAUNDRY AND DRY CLEANING	YES	NO
	1. Laundry and dry-cleaning facilities are operational. (OPNAVINST 9640.1 and S9AA0-AB-GOS-010/GSO, section 655).		
	2. Adequate ventilation available. (NAVMED P-5010-2, Article 2-46).		
	3. Fixtures and appliances connected to prevent backflow or cross-connection with the potable water supply. (NAVMED P-5010, Article 2-37.3).		
	4. Adequate drinking water furnished by drinking fountain. (T9640-AC-DSP-010/HAB).		
	5. Rooms or spaces designed, and machines and equipment arranged, so that a separate flow of clean and soiled garments will be maintained through the laundry or cleaning process. (NAVMED P-5010, Article 2-37.8).		

	6. All steam and hot water pipes are insulated with approved (non-asbestos) lagging (T9640-AC-DSP-010/HAB).		
	7. Adequate lighting levels are provided. (NAVMED P-5010, Article 2-40.3).		
	8. Automatic safety devices on all equipment clearly identified and operational. (NAVMED P-5010, Article 2-40.7).		
	9. Ensure NAVSEA 1995/93 preventing laundry dryer fires are posted (stock number 0118-LF-981-6600).		
	10. Guard rails are installed for ironers, compressors, and other dangerous pieces of equipment. Drive shafts, exposed belts, and gears should be enclosed. (T9640-AC-DSP-010/HAB).

APPENDIX O

MINIMUM DOCK TRIALS REQUIREMENTS

REQUIREMENT
1. Check all Telephone, Announcing and Interior Communications circuits between all stations.
2. Test all alarms, i.e., General Quarters, Collision, etc.
3. Check all operational status readout interior communications circuits.
4. Test whistle.
5. Check adequacy of interior lighting and emergency lighting.
6. Operate all hydraulic systems using each installed pump.
7. Test operation of all radio transmitters and receivers using all antennas.
8. Operate all radar equipment.
9. Operate all sonar equipment.
10. Take and plot fixes using all navigation equipment and each antenna.
11. Test operation of trim, ballast control and list control system and pump (from all operating locations) per local instructions.
12. Test operation of portable submersible pump from each installed outlet.
13. Test engine order telegraphs.
14. Test magazine and pyro flooding systems.
15. Operate each lube oil system, including pumps, controllers, purifiers and indicators.
16. Energize the Navigation System and gyrocompass; determine that they settle out; take azimuth; check all repeaters.
17. Check potable water system, have water samples analyzed.
18. Test capstans and winches.
19. Operate steering system in all modes. Test normal and emergency rudder angle indicators.
20. Test Automatic Bus Transfer devices.
21. Operate each watertight door and hatch.
22. Check operation of escape hatches and scuttle fittings.
23. Check navigation and running lights for brightness and proper lenses (to be done at night). Includes Flight Deck lighting. (if applicable)
24. Check air conditioning, chill water, ventilation, and heating systems.
25. Test underwater log and dummy log if water depth permits.

REQUIREMENT
26. Check operation of all 400-cycle generating equipment.
27. Check all galley, messing, and ship's service equipment.
28. Check fathometer.
29. Check that mooring lines are doubled and taut and that camels are secured to the pier not the ship.
30. Check bilge flooding alarm.
31. Check all High Pressure and Low Pressure air systems and components.
32. Operate distilling units.
33. Check anchor windlass and brake operation.
34. If possible, operate Secondary Propulsion Motor(s) (SPM), auxiliary propulsion units and thrusters.
35. Operate the emergency diesel generator(s).
36. Engage and disengage propulsion shaft clutch(es).
37. Test Main Engines.
38. Check all TV monitoring systems.
39. Check small arms lockers and security devices.
40. Operate all Identification Friend or Foe (IFF) Equipment.
41. Check degaussing equipment.
42. Check hangar bay doors.
43. Inventory and check all damage control equipment.
44. Check out all Tank Level Indicating systems.
45. Check out Flight Deck communications. (if applicable)
46. Check meteorological equipment.
47. Check graphics preparation and display equipment.
48. Check weapon systems. Check to include loading of dummy missile at each launch station, transmission of fire control signals and operation of launchers in all modes.
49. Operate all electrical and mechanical medical equipment.
50. Inspect all compartments for proper stowage and cleanliness and operability of equipment.
51. Test operation of all data processing equipment.
52. Test and inspect jet blast deflectors.
53. Test and inspect JP-5 fuel systems.

REQUIREMENT
54. Test and inspect all aircraft starting, handling and launching equipment.
55. Test and inspect aircraft landing equipment including land signal officer equipment, as applicable.
56. Operate all Refueling at Sea equipment.
57. Check bridge window wiper system.
58. Operate all accommodation ladders.
59. Operate all conveyors.
60. Launch and raise motor whaleboat.
61. Operate all Boats.
62. Test and inspect Lifeboat and Life Raft stowage and launch equipment.
63. Test and inspect all elevators in all modes of operation.
64. Test and inspect all firefighting systems.
65. Test and inspect refrigeration system.
66. Test and inspect all sea water cooling systems.
67. Operate stern gate doors.
68. Operate cranes.
69. Operate all ship’s service generators.
70. Check all photographic processing and recording equipment.

NOTE: ENSURE MESSAGES ARE PER CURRENT MESSAGE FORMAT AND CURRENT PLAD IS UTILIZED.

APPENDIX Q

MINIMUM FAST CRUISE REQUIREMENTS

REQUIREMENT
1. Make all preparations for getting underway.
2. Station the maneuvering watch and sea and anchor detail.
3. Station the normal underway watch (section watches).
4. Simulate getting underway and return to port. (Day and Night)
5. Walk through all major Sea Trial evolutions.
6. Exercise the reduced visibility detail.
7. Spot check storage and availability of spare parts and tools. Verify adequacy of stores and provisions.
8. Conduct the following emergency drills:
a. Fire
b. Flooding
c. Abandon Ship
d. Man Overboard
e. Loss of AC Power
f. Loss of Air Conditioning and ACW
g. Loss of Lighting
h. Loss of Interior Communications
i. Steering Casualty
j. Engine Casualty Control
9. Set General Quarters. Exercise the crew at battle stations.
10. Conduct communication and Electronic Counter Measures (ECM) drills.
11. Anchor (walk-through).
12. Exercise damage control party with emergency and damage control equipment during conduct of item 12.
14. Operate air conditioning plants to demonstrate ability to carry the maximum existing ships air conditioning load or 100% capacity.
15. Operate fresh water and seawater heat exchangers at sufficient load to demonstrate proper operation.

REQUIREMENT
16. Simulate underway conditions, performing all evolutions and operating equipment normally.
17. Simulate boat transfer at sea.
18. Conduct competitive and non-competitive drills and exercises such as aircraft tracking, and aircraft control.
19. Man Towing, Salvage and Fueling Stations.
20. Set Flight Quarters as applicable.
21. Check all interior communications circuits.

APPENDIX S

MINIMUM TESTS TO BE PERFORMED DURING SEA TRIALS

I. RESPONSIBILITIES (reference (s), Chapter 094).

The Ship's Force or Ship Trial Coordinator is responsible for:

1. The scheduling of the various trials and for conducting tests during trials while underway. A schedule of equipment tests should be available so all personnel are prepared for the evolutions.
2. Equipment operation during testing and for conducting the trials per reference (t) and TYCOM directives.
3. Verifying necessary trial documentation and technical data is on board.
4. Review of Personnel Qualification Standard (PQS) programs to identify new equipment and systems requiring PQS coverage, to implement PQS standards for new personnel, and to determine required watch station qualification in preparation for propulsion plant light-off and Sea Trials.
5. Providing a Sea Trial watch organization to accomplish the trial agenda.
6. Preparing and providing fire and abandon ship bills and holding emergency underway drills (can be completed and certified as part of Dock Trials or Fast Cruise).

II. PREPARATION FOR SEA TRIALS (reference (s), Chapter 094c).

Prior to Sea Trials, every reasonable effort must be made to complete all prerequisites:

1. Dockside tests must be satisfactorily completed and all safety requirements met. Incomplete non-safety items must be documented, including plans for timely resolution and completion. Should it be impractical to conduct any of these prerequisite tests dockside, the Naval Supervisory Authority (NSA) may permit the test to be conducted while underway.
2. All equipment, furniture and systems necessary to the conduct of the trials must be installed and in operating condition. All labeling, painting, sheathing, insulation and deck covering must be completed.
3. An inclining experiment, if required, must be performed and the results certified in writing to the NSA that the ship meets stability requirements and is safe for sea.
4. All temporary rigging and equipment, except necessary for collection of Sea Trial test data, and all debris must be removed from the ship.
5. Painting that will not be dry at time of trials must be avoided.
6. Messing, sanitary and berthing facilities must be operational and available for use during Sea Trials.
7. The ship must be prepared for possible emergencies at sea. The NSA must certify in writing that equipment or systems listed that have been installed, overhauled or

disturbed during the overhaul have been restored to their normal operating status. The minimum readiness includes:

a. Power boats to be utilized in an emergency must be fully operational, fitted-out and provisioned as prescribed by reference (s).

b. All davits must be operational.

c. Air inflatable lifeboats must be onboard and properly installed and within PMS certification requirements.

d. Emergency radios must be onboard and operable.

e. Life rings and float lights must be rigged in stowage brackets.

f. Life jackets for all personnel embarked plus 5 percent spares must be onboard and distributed in readily accessible areas.

g. Adequate first aid kits and emergency medical equipment must be onboard.

h. Firefighting and damage control equipment must be returned to the ship (if removed), verified to be fully operational and ready for use and properly stowed.

i. All navigation devices and equipment must be tested to ensure proper operation.

j. Work on all compartments whose watertight integrity is essential to the safety of the ship must be completed and, where authorized, satisfactorily tested.

III. PRIOR TO GETTING UNDERWAY.

1. Prior to Sea Trials following extended in-port or lay-up time, the following preliminary inspections should be conducted (reference (t), section 1.3.2):

a. Inspect the underwater sea chests.

b. Clean the sea chests of marine growth and debris if required.

c. Inspect underwater hull for foreign material or objects.

d. Inspect and clean as necessary condenser sea water sides.

e. Ensure correct hoses for blowing sea chests are available on board and can be made up to hose connections provided for this purpose.

f. Establish operability of each item of machinery to be used during the trial.

(1) Test equipment to validate minimal equipment available to conduct operations per technical specifications.

(2) Specific emphasis should be placed on fire pumps, anchor equipment and steering systems.

2. Ensure instrumentation to be used for obtaining trial data is properly installed, calibrated and certified.

a. The NSA must determine, in conjunction with the Commanding Officer, any special instrumentation required such as flow meters, torsion meters and calorimeters. Government Loaned Equipment may be made available with NAVSEA approval. The NSA will ensure the installation of any other temporary test instrumentation and equipment necessary for the trials except as otherwise stated herein or as indicated on the list of Government Furnished Equipment.

b. Unless otherwise specified, the NSA must ensure the installation of all temporary instrumentation and equipment regardless of who furnished it. All temporary instrumentation and equipment must be removed from the ship by the NSA upon conclusion of the trial. It must be the NSA's responsibility to maintain Government Loaned Equipment in proper working order. The NSA must calibrate, test and otherwise ensure both temporary and permanent instrumentation utilized to collect data for trials is reliable. Government furnished flow meters on loan from NSWCPD will be calibrated by NSWCPD.

c. Verify proper installation, adjustment and operability of torsion meter, if installed (reference (t), section 1.4.1.f).

d. Care must be taken that proper draft and trim of the ship are maintained throughout the duration of the trial (reference (t), section 1.4.1.g).

(1) Firefighting systems must be completely installed, tested and placed in operating condition before the ship is fueled.

(2) Fuel ship and adjust draft and trim to attain trial requirements.

e. Prior to departure, check all communications equipment, including radio, interior communications circuits, telephones and special signal circuits that may be used during the trial.

f. Zero set EM log.

g. Settle Navigation System and gyrocompass.

h. Test Visual Landing Aid systems (as applicable).

i. Conduct static JP-5 System Certification. Test Control Console functions and conduct system stripping, transferring and purifying operations, as necessary, in preparation for underway systems dynamic operations.

IV. UNDERWAY ENGINEERING AND OTHER MAJOR TESTS.

1. The following systems must be tested to the extent authorized in the NSA's Work Package and test procedures identified in the trial agenda and be in an operating condition at the time of Sea Trial (reference (s), Chapter 094c). Table 1 summarizes general items. Procedural precedence is current PMS, equipment technical manuals and NAVSEA technical manuals procedures:

a. Newly installed, modified or overhauled ventilating, heating and air conditioning systems.

b. Newly installed, modified or overhauled firefighting systems and damage control equipment.

c. Newly installed, modified or overhauled alarms and safety devices.

(1) All alarm systems must be operative.

(2) Gages and safety devices must be checked and all final adjustments completed per technical specifications.

(3) SSTG Resistance Temperature Element settings may be made according to reference (u), Table 231-3-2 during dockside testing at 0 to 100% load or during Sea Trials, whichever gives the highest temperature reading (reference (u), section 3.10.3.4.1-.3).

d. Newly installed, modified or overhauled interior communication systems.

e. Newly installed, modified or overhauled radio and navigation systems.

2. Propulsion systems.

a. Particular attention must be paid to boiler water treatment levels during Dock and Sea Trials. Additional tests of water chemistry and increased bottom blowdown frequency must be planned (reference (u), section 2.4.12).

b. A full power run must be scheduled following each regular maintenance availability to ascertain the propulsion plant is capable of full power operation. The following general rules must be observed during all full power trials and during other machinery trials to which they may be applicable, consistent with conditions imposed (reference (t), section 1.4.1.e):

(1) In diesel powered ships not required to be fitted with torsion meters, brake horsepower developed by the main propulsion engines may be closely approximated by careful observations of fuel injection rack positions and compared with data taken during shop tests, where output has been previously measured directly on a dynamometer, or equivalent.

(2) Fuel used for the trials should be comparable to that used during shop tests.

(3) Average power developed by diesel-electric plants may be computed from kilowatt output from each propulsion generator set. Such observations must be taken at intervals of not greater than 15 minutes for the duration of the run.

(4) In ships required to be fitted with torsion meters, readings of torque and rpm should be taken at sufficiently frequent intervals to produce an essentially continuous record. The record should be averaged at 15-minute intervals, for the duration of the run.

3. Main lube oil systems: Post-availability Sea Trial operations will normally jar and vibrate the lube oil system enough to break loose foreign material hidden in the system, even after flushing. To contain this foreign material, muslin or nylon bags must be kept in the lube oil strainers from initial operation through final Sea Trials (reference (v), section 3.10.3.4.3). Filter bags and disposable filters must remain in propulsion machinery lubricating oil systems until Sea Trials are completed, except where 25 or 40-micron filter elements are required for the propulsion lubricating oil system, remove the disposable filter elements and install the applicable cleanable filter elements upon completion of Sea Trials (reference (w), section 3.7.3.5.2).

4. Reduction gear systems for new and overhauled gears: At the first Sea Trial, determine proper tooth contact of main pinions and gears and conduct operational tests. After trials, in addition to inspections that may be directed by the proper authority, remove the inspection plates and examine the tooth contact and the condition of the teeth to note changes that occurred during the trial (reference (x), section 5.3.9).

5. Turbine casing joints: Experience has shown when new bolting is installed, particularly steam chest bolting exposed to temperatures above 900°F, the bolting must be rechecked and retightened after initial dockside steaming and again after Sea Trials following the overhaul (reference (v), section 8.7.6).

6. Turbine bearing Resistance Temperature Element Settings: Make the initial settings before initially operating the bearing. Make the final settings before the Inspection Survey (INSURV) Trial or final Post Overhaul Trial if an INSURV Trial is not run. Base these settings on the highest values observed from the ship Sea Trials or shipbuilder test form data taken during all previous trials (reference (v), section 3.10.3.4.2).

7. Propulsion demonstrations (reference (s), Chapter 200f).

    a. Runs ahead at various power levels, using all main propulsion unit combinations, including cruising speed and maximum full-power ahead.

    b. Runs astern, using all main propulsion unit combinations, including maximum full-power astern.

    c. For Builder's Sea Trials only: Emergency reversals and crash stops, including maximum design full-power ahead to maximum design full power astern and vice versa.

    d. Maximum speed steering gear tests ahead, limited speed steering tests astern and such other ship maneuvering tests as the specifications may require.

    e. Twenty percent boiler overload test on one boiler (as applicable).

    f. Boiler flexibility tests (as applicable).

    g. Locked-shaft tests (as applicable).

8. Anchor gear demonstration (including towing winch demonstration, if installed) (reference (y), section 3.8.1).

   a. Complete all inspections, repairs and adjustments prior to conducting drop tests.

   b. Conduct drop tests by or under the direction of experienced personnel from the repair activity.

   c. Conduct drop test following the test agenda based on type of repairs conducted. Do not allow more than 15 fathoms (90 ft) of chain to run free without stopping. Observe the 65 fathom (390 ft) maximum depth for the drop test.

   NOTE: 65 FATHOM DROP TEST IS ONLY REQUIRED FOR NEW INSTALLATIONS AND TYPICALLY CONDUCTED AT ORIGINAL SHIP DELIVERY BUILDERS'S SEA TRIALS.

   d. Conduct anchor retrieval rate test to determine adequacy of power units.

9. Distilling plant test: Conduct twenty-four-hour production capacity check. A shorter test period is permissible with concurrence of the NSA and so indicated in the trials agenda (reference (z), section 7.7.6.3.5).

10. Steering gears: Ensure limits are determined (or have been determined) during current or previous Sea Trials and are posted on the ship control console and in the steering gear room (reference (aa), section 2.2.3).

    a. Reference (ab), Table 562-2-1 lists the astern limits for several (but not all) ship classes and may be used as a reference. Any limits posted on the ship control console or in the steering gear room must be strictly followed.

    b. Conduct an analysis of the hydraulic fluid contamination by a naval test facility as required per PMS or whenever one of the following conditions exists:

       (1) Immediately before the first Sea Trials following a maintenance availability.

       (2) Immediately after Sea Trials following a maintenance availability.

11. Auxiliary propulsion units or Thruster engines: Conduct testing following the trial agenda based on scope of repairs conducted per the NSA's contract specifications (reference (t), section 1.4).

12. Electrical ship service generating and distribution system: Conduct testing following the trial agenda based on scope of repairs conducted per the NSA's contract specifications (reference (t), section 1.4).

13. Surface ship stabilizing devices: Conduct testing following the trial agenda based on scope of repairs conducted per the NSA's contract specifications (reference (ab), section 7.9.4.4).

a. Conduct an analysis of the hydraulic fluid contamination by a naval test facility as required per PMS or whenever one of the following conditions exists:

(1) Immediately before the first Sea Trials following a maintenance availability.

(2) Immediately after Sea Trials following a maintenance availability.

14. Washdown countermeasures and miscellaneous topside demonstrations: Conduct testing following the trial agenda based on scope of repairs conducted per the NSA's contract specifications (reference (t), section 1.4).

15. Ballast or deballast ship (when applicable): Conduct testing following the trial agenda based on scope of repairs conducted per the NSA's contract specifications (reference (t), section 1.4).

16. Sonar, radar and navigation system demonstrations. Conduct testing following the trial agenda based on scope of repairs conducted per the NSA's contract specifications.

17. Underway replenishment demonstrations: Conduct testing (including special winch tests, as applicable) following the trial agenda based on scope of repairs conducted per the NSA's contract specifications.

18. Other demonstrations and tests: Conduct testing following the trial agenda based on scope of repairs conducted per the NSA's contract specifications. Consideration should also be given to the equipment repaired or overhauled by Ship's Force and subsequent testing is required to validate operability. These items may be tested or demonstrated during Sea Trials providing:

a. Such tests do not significantly extend the duration of Sea Trials.

b. Such tests are within the capability of Ship's Force.

c. Such tests have a prescribed PMS MRC procedure or an equivalent procedure provided by Ship's Force or in service engineering agent which has technical authority concurrence.

V. AIRCRAFT OPERATIONS (If Applicable).

1. Certify Aircraft Launch and Recovery Equipment (as required).

2. Conduct flight deck certification (as applicable) per applicable TYCOM instructions (reference (ac).

TABLE 1 - MINIMUM UNDERWAY TESTS TO BE PERFORMED DURING SEA TRIALS (cont'd)	
	Light off distilling plants and conduct 24-hour capacity test.
	Test fathometer.
	Test Countermeasure Washdown system.
	Test navigation radar comparing fixes with visual fixes.
	Test Electronic Warfare Support Measures and Identification Friend or Foe.
	Conduct infrared communications device checks (Nancy lights).
	Test firefighting systems, to include Flight Deck and Hangar Bay for aviation capable units.
	Test aircraft support systems.
	Test steering systems in all modes ahead and astern at optimum design speed for the steering systems per ship steering technical manuals or ship information book.
	Operationally test JP-5 system and components as required for JP-5 System Certification.
	Operate emergency diesel generators carrying ship's load.
	Run in shaft seals shifting to forward and after seals.
	Test all Aircraft Control and Tracking functions.
	Test air conditioning, ventilation and refrigeration systems.
	Demonstrate Prairie and Masker Air operation.
	Demonstrate Darken Ship.
	Operate both forward and after Oxygen-Nitrogen plants.

NOTE: IF THESE TESTS WERE PERFORMED AND CERTIFIED BY THE INDUSTRIAL ACTIVITY WITHIN TWO MONTHS OF SEA TRIALS AND THE TEST RESULTS WERE SATISFACTORY, THE ITEM MAY BE REDUCED IN SCOPE OR OMITTED.

APPENDIX U

AVAILABILITY QUALITY MANAGEMENT PLAN (QMP)

1. NSA Certification Requirements. Naval Supervisory Authority (NSA) certification of readiness for major Key Events, Fast Cruise or Sea Trials and availability completion is required. NSA certification of readiness for events must include a basis for certification. This basis includes:

a. Approved Quality Management System (QMS). The Executing Activity performing the work has a NAVSEA approved QMS. The QMS is audited periodically and includes ongoing in-process surveillance and follow-up to ensure recurring, systemic problem areas are identified and corrective action is taken. The QMS is further defined in NAVSEA Standard Item 009-04, Quality Management System.

b. Mandatory Oversight. The NSA or Government activity performing the oversight of contract execution provides mandatory oversight to include "G" point observation and mandatory review of test data when required by the contract for critical work as required by volume VII, chapter 11, Section 11.5 of this manual and other higher level documentation.

c. Non-Mandatory Oversight. The NSA or Government activity performing oversight of contract execution must also perform adequate oversight of contract work not identified as mandatory. Although not specified, frequency or degree of oversight is often described as "random." There should be a systematic approach taken to defining where government oversight should be applied to provide the NSA with the maximum reasonable level of assurance that work is planned, executed and tested correctly.

2. QMP Requirement. The Availability Quality Management Plan (QMP) provides a risk-based methodology for the NSA to utilize and provide this maximum reasonable level of assurance in work planning, execution and testing without requiring 100% oversight or review of contractor work products. An Availability QMP is required by Volume VII, Chapter 11 of this manual (Contract Administration Quality Assurance Program).

3. QMP Methodology. The Availability QMP then is a product of review(s) conducted on the Availability Work Package (AWP) evaluating each work item based on probability of failure and criticality of failure. The evaluation of the work items for these two attributes should result in a plan which dictates which work items will have increased levels of Procedure Evaluations (PE), Process Quality Audits (PQA) and Product Verification Inspections (PVI) by Engineering, QA and Waterfront Operations Departments. In addition, the Availability QMP should determine which work items will receive Quality Audits by QA Department.

a. Probability of Failure. Contractor's past performance history in different work areas, as captured in Code 130 Quality Data Evaluation, is utilized to evaluate work items requiring additional oversight based on contractor's past performance. If a contractor does not have any previous experience in a work area, probability of failure should be evaluated as high, unless there is work experience in a related area sufficient to build confidence in expectation of good contractor performance.

b. Criticality of Failure. A consistent approach needs to be utilized by the NSA when developing Availability QMPs to identify work items which have higher criticality of

failure. Simply put, equipment or systems that, by their failure alone, will result in the inability of the ship to get underway or meet primary mission requirements, (C4 CASREP) would equate to highest criticality of failure impact. Those systems or equipment, by their failure alone, would result in a major degradation to ship's ability to meet mission requirements, (C3 CASREP) would have next highest criticality of failure consideration. Systems or equipment, by their failure alone, would result in minor degradation to ship's ability to meet mission requirements, (C2 CASREP) would have the lowest criticality of failure consideration. There is no single source of input to determine criticality of failure. CNSP/CNSLINST 3504.1 identified "Redlines" requirements for surface force ships and should be utilized when identifying criticality of failure of systems or equipment being worked in the availability. Additional discussion on these requirements:

(1) Redlines Systems. CNSP/CNSLINST 3504.1 includes matrices which identify minimum equipment lists by ship class. The NSA should utilize the redlines instruction as a guideline for determining "criticality of failure" when evaluating work items that may require additional oversight. Consideration should be given to redundancy, for example: On a DDG, relative level of oversight on a boat davit (1 of 1 required) would likely dictate more oversight than work on an air conditioning plant (2 of 5 required). For all redlines systems or equipment, contractor past performance discussed in paragraph 3.a. should be considered.

(2) Non-Redlines Systems. Systems or equipment not addressed by CNSP/CNSLINST 3504.1 normally require less oversight. An exception would be if there is a record of poor past performance such as poor performance on critical coating systems application in tanks and voids. While Volume VII, Chapter 11 of this manual requires increased RMC inspection requirements for these systems, additional PE, PR, PVI or QA audit may also be required by the RMC due to a contractor's past performance.

(3) QMP Applicability to FMA (I-Level), Ship's Force (SF), Naval Shipyards (NSY) and Alteration Installation Teams (AIT). While the QA Plan described herein generally refers to work contracted through the RMC, the NSA availability certification includes all work accomplished in the availability to include I-Level (FMA), SF, NSY and AIT. Each of these executing activities is also required to maintain an approved QMS. The NSA may not have direct oversight responsibility for these executing activities or provide auditing of their QMS. Oversight for NSY, FMA and SF work is provided organic to those organizations and does not normally require additional oversight by the NSA. The AWP review conducted concurrent with development of the QMP should, however, include a determination of high risk jobs being conducted requiring additional NSA oversight. This oversight, if required, should be part of the Availability QMP. For AIT work, NAVSEA Technical Specification 9090-310 requires AIT contractors maintain a QMS approved by NAVSEA 04Q and audited by respective government sponsor. NAVSEA Technical Specification 9090-310 also requires respective AIT government sponsors provide on-site oversight of AIT contractors, including specification review

and approval, G point checks, and in-process surveillance of work. The NSA should include AIT work in the QMP development and make a determination on what additional oversight may be required to include in the QMP for AIT work.

APPENDIX V

APPLICABLE RMC AVAILABILITY COMPLETION CERTIFICATION SHEET

CATEGORY or ITEM	REQUIREMENT	MILESTONE	SIGNATURE/DATE
PRIOR TO KEY EVENT OR SEA TRIALS			
I. Work Authorization	TYCOM will certify via letter or memo: a. All authorized CNO availability or CMAV work identified in the Availability Work Package (AWP) has been tasked to the Master Ship Repair Contractor, Naval Shipyard (NSY), Fleet Maintenance Activity (FMA), Alteration Installation Team (AIT), or Ship's Force for accomplishment. b. All deferred new and growth branded "A" (mandatory) has been concurred on by Technical Authority. c. All Temporary Standing Orders (TSO), Departures from Specifications (DFS) and CASREPs have been included in AWP or have Technical Authority approval, if deferred.	Prior to Sea Trials	Business Agent/ Project Manager/date _____/_____ TYCOM memorandum/Ser #/date _____/___/_____
II. Work Documents Issued-Prime Contractor	a. The Project Support Engineer and QAS must validate Work Specifications and Test Procedures issued by the prime contractor have received a government technical review per Availability Quality Management Plan (QMP) and Local Attribute Checklist.	a. Prior to Key Event or Sea Trials	a. Project Support Engineer/date _____/_____ Code 130 QAS/date _____/_____

CATEGORY or ITEM	REQUIREMENT	MILESTONE	SIGNATURE/DATE
PRIOR TO KEY EVENT OR SEA TRIALS			
II. Work Documents Issued-Prime Contractor (Cont'd)	b. Project Manager must validate all work specifications and test procedures issued by the prime contractor have received a government review per Volume VII, Chapter 4, Appendix E of this manual. c. Project Manager will verify all required CFRs have been received as required by NAVSEA Standard Item 009-01 paragraph 3.2. d. Project Support Engineer will verify all C200 CFRs have been reviewed and answered. Deferred maintenance action and test result CFRs have been technically adjudicated. All CFRs screened to C 200 for action must be documented via Engineering Service Request (ESR).	b. Prior to Key Event or Sea Trials c. Prior to Key Event or Sea Trials d. Prior to Key Event or Sea Trials	b. Project Manager/date _____/_____ c. Project Manager/ date _____/_____ d. Project Support Engineer/ date _____/_____
III. Work Completion/Prime Contractor	Verify all prime contractor work (including sub-contractors) has been certified as complete by prime contractor (include letter/memo Ser/date). All Sea Trials testing is included on Sea Trials Agenda. Verify any incomplete work (exception items) have been provided to RMC/NSA CHENG for technical concurrence to not impact key Event/Sea Trials. RMC or NSA CHENG will provide a Risk Assessment to the RMC or NSA CO for certification.	Prior to Key Event or Sea Trials	Project Manager/date _____/_____ Prime Contractor Memorandum/Ser _____/_____

CATEGORY or ITEM	REQUIREMENT	MILESTONE	SIGNATURE/DATE
PRIOR TO KEY EVENT OR SEA TRIALS			
IV. Work Completion/FMA	Verify all FMA FWP and CWPs have been certified as complete and technically correct by FMA (include letter/memo Ser/date). All Sea Trials testing is included on Sea Trials Agenda. Verify any incomplete work (exception items) have been provided to RMC/NSA CHENG for technical concurrence to not impact Key Event or Sea Trials. RMC or NSA CHENG will provide a Risk Assessment to the RMC or NSA CO for certification.	Prior to Key Event or Sea Trials	Project Manager/date _____/_____ FMA Memorandum/Ser _____/_____
V. Work Completion/NSY	Verify that all NSY work has been certified as complete and correct by NSY (include letter or memo Ser/date). All Sea Trials testing is included on Sea Trials Agenda. Verify any incomplete work (exception items) have been provided to RMC/NSA CHENG for technical concurrence to not impact Key Event/Sea Trials. RMC or NSA CHENG will provide a Risk Assessment to the RMC or NSA CO for certification.	Prior to Key Event or Sea Trials	Project Manager/date _____/_____ NSY Memorandum/Ser _____/_____
VI. Work Completion/AIT	Verify all AIT work and test procedures have been certified as technically correct and complete by each AIT On-Site Installation Coordinator (include each letter or memo Ser/date). All Sea Trials testing is included on Sea Trials Agenda. Verify any incomplete work (exception items) have been provided to RMC/NSA CHENG for technical concurrence to not impact Key Event or Sea Trials. RMC or NSA CHENG will provide a Risk Assessment to the RMC or NSA CO for certification.	Prior to Key Event or Sea Trials	Project Manager or AIT Coordinator/date _____/_____ AIT On-Site Installation Coordinator Memorandum/Ser. _____/_____

CATEGORY or ITEM	REQUIREMENT	MILESTONE	SIGNATURE/DATE
PRIOR TO KEY EVENT OR SEA TRIALS			
VII. Work Completion/SF	Verify all SF FWP and CWPs have been certified as technically correct and complete by Ship's CO (include letter or memo Ser/date). All Sea Trials testing is included on Sea Trials Agenda. Verify any incomplete work (exception items) have been provided to RMC or NSA CHENG for technical concurrence to not impact Key Event or Sea Trials. RMC or NSA CHENG will provide a Risk Assessment to the RMC or NSA CO for certification.	Prior to Key Event or Sea Trials	Project Manager/date _____/_____ SF Memorandum/Ser _____/_____
VIII. Work Completion/RMC Engineering	Certify all assigned assessments (TSRA) or Fleet Tech Assists (FTA) tied to Key Event or Fast Cruise or Sea Trial are completed. For ongoing TSRA assessments or FTA, the RMC or NSA CHENG will certify these assessments or FTA do not impact the Key Event, Fast Cruise or Sea Trial. RMC or NSA CHENG will provide a Risk Assessment to the RMC or NSA CO for certification.	Prior to Key Event or Sea Trials	RMC/NSA CHENG/date _____/_____

CATEGORY or ITEM	REQUIREMENT	MILESTONE	SIGNATURE/DATE
PRIOR TO KEY EVENT OR SEA TRIALS			
IX. Testing	The RMC or NSA Integrated Test Coordinator will verify: a. LMA Test Coordinator has certified all Hull, Mechanical and Electrical and C5I testing identified per NAVSEA Standard Item 009-67 are complete with requisite OQE. Testing not complete is included on Sea Trials Agenda or added to exceptions list and provided to RMC or NSA CHENG for technical concurrence not to impact Key Event/Sea Trials. b. LMA WAFCO and Ship's CO have certified all WAFs and Tag-outs required to Support Key Event/Sea Trials have been closed and cleared. RMC or NSA CHENG will provide a Risk Assessment to the RMC or NSA CO for certification.	a. Prior to Key Event or Sea Trials b. Prior to Key Event or Sea Trials	a. Integrated Test Coordinator/date _____/_____ LMA memorandum/ser _____/_____ b. Integrated Test Coordinator/date _____/_____ LMA memorandum/ser _____/_____ SF memorandum/ser _____/_____
X. Waivers and Deviations	a. The RMC or NSA CHENG will certify all technical non-conformances have been satisfactorily resolved in order to support Sea Trials and availability completion. This includes certifying all DFS have been properly adjudicated, all AIT LAR/RLARs have been incorporated and all RMC ESRs/Design b. Service Requests, LARs and RLARs have been answered and incorporated. The NSA CHENG will also certify all conditionally approved technical non-conformances that expire during the availability have been resolved.	Prior to Key Event or Sea Trials	RMC/NSA CHENG/date _____/_____

CATEGORY or ITEM	REQUIREMENT	MILESTONE	SIGNATURE/DATE
PRIOR TO KEY EVENT OR SEA TRIALS			
XI. Quality Assurance	Certify all QA Office actions are satisfactory regarding resolution of QA Audits and Surveillances necessary to support Key Event or Sea Trials. All contractor Corrective Action Requests (CAR - Method B-D) issued during the availability are either closed or at an acceptable level of completion to support work certification. Include a memo describing outstanding items, remaining actions and Estimated Completion Dates, if applicable.	Prior to Key Event or Sea Trials	Quality Assurance Manager/date _____/_____ C130 Memorandum/Ser _____/_____
XII. Key Event Certification	RMC or NSA CO certifies readiness to proceed with Key Event or Sea Trials based on Risk Assessment from RMC or NSA CHENG	Prior to Key Event or Sea Trials	RMC/NSA CO/Date _____/_____
XIII. Availability Completion	a. RMC or NSA Project Manager verifies all Sea Trials testing required for availability completion has been completed on Sea Trials. Exceptions to completion (including any new or growth work identified on Sea Trials have been approved by Technical Authority as to not impact availability completion and agreed upon by TYCOM. Exceptions will be tracked via Availability Closeout process. b. RMC or NSA CHENG verifies all Sea Trials testing required for availability completion has been completed on Sea Trials. Any exceptions to completion (including new or growth work identified on Sea Trials) have been reviewed and approved as not to impact availability completion. c. The RMC or NSA CO releases message certifying availability completion based on the risk assessment provided by the RMC or NSA CHENG.	a. Prior to Availability Completion b. Prior to Availability Completion c. Prior to Availability Completion	a. Project Manager/date _____/_____ b. NSA CHENG/date _____/_____ c. RMC Commander/date _____/_____ Message Date Time Group (DTG) _____

Ref: (a) COMUSFLTFORCOMINST 4790.3 Joint Fleet Maintenance Manual (JFMM)

Encl: (1) Prime Contractor Undocking Exception List, USS Pilot Ship (XXX XX) DSRA

1. Per reference (a), this memorandum is to certify all Prime Contractor contracted work for subject DSRA is complete in support of Undocking and unless listed as an exception, none of the remaining Prime Contractor contracted work meets the following definition of "Dry Dock Critical":

Dry Dock Critical Items:

a. All work or work items requiring the ship to be in dry dock in order to perform the work.

b. Work could be performed after undocking but would require additional costs, create an impact to schedule, or require the need for additional equipment and specialized personnel to perform the task that is not already covered by the original basic work package.

c. This includes associated checkpoints, required OQE, and equipment testing required by the work or work item.

2. Exceptions listed in the attached enclosure were not completely accomplished and have been technically adjudicated in support of Undocking.

D Availability Key Event List
E Ammunition Requirement Message (Sample)

3.1 PURPOSE. Provide guidance for the implementation of policies set forth in references (a) through (d) for Fleet Maintenance Availability planning, scheduling, and execution. Policy, procedures and guidance regarding utilization of Fleet Technical Assistance program resources are contained in volume VI, chapter 2 of this manual.

3.2 DEFINITIONS.

3.2.1 Fleet Maintenance Activity. All government waterfront ship maintenance and modernization, activities, e.g., Regional Maintenance Centers (RMC), Naval Ship Repair Facilities, Naval Intermediate Maintenance Facilities, Weapons Repair Facilities, Naval Shipyards, tenders and other activities of that type responsible for the processing, screening and brokering, and execution of work candidates.

3.2.2 Lead Maintenance Activity. The single activity responsible for integrating all maintenance and modernization on US Naval ships during any type of availability. The Lead Maintenance Activity (LMA) is the activity responsible for planning and coordinating the work of the Executing Activities in Continuous Maintenance (CM). The LMA may also be an Executing Activity.

3.2.3 Executing Activity. The public or private enterprise is assigned or awarded the responsibility for accomplishing the actual production work to effect repairs or modernization to ships.

3.2.4 Business Case Analysis. A critical evaluation of late identified work, new work or growth work, based on the benefit of completing the work, the cost of the work to be performed including premiums, available work capacity and material resources, the risk to other work and schedule impact.

3.2.5 Planning Board for Maintenance. The regularly scheduled meeting of the ship's Maintenance Team, as required by chapter 4 of this part and volume, and as defined in volume VI, chapter 41 of this manual, to discuss ship wide maintenance issues. Chaired by the ship's Commanding Officer using an agenda prepared by the Ashore Ship's Maintenance Manager, this forum provides a review of current planned off-ship and organizational maintenance, Current Ship's Maintenance Project (CSMP) quality and accuracy, future maintenance and modernization planning, and fiscal concerns. The objective is to ensure clarity of intent for both the ship's efforts and the shore infrastructure with respect to total ship maintenance, operational schedules, and other concerns affecting ship material readiness.

3.2.6 Maintenance and Modernization Business Plan. The Maintenance and Modernization Business Plan (MMBP), located in volume VI, chapter 33 of this manual, prepared six to eight months in advance of the fiscal year, is the ship's plan for maintenance and modernization effort for a fiscal year. The ship's maintenance team prepares the plan. The Maintenance Team applies its knowledge of the ship's material condition and Type Commander (TYCOM) scheduled modernization and Chief of Naval Operations (CNO) availabilities in the prospective operating cycle to develop the budget recommendation for funding maintenance requirements. The plan is based on an assessment of the ship's anticipated material condition, the validated CSMP including Class Maintenance Plan (CMP) applicable tasks, planned fleet alterations, outstanding Departures from Specifications (DFS), Casualty Reports (CASREP) and Board of Inspection and Survey material discrepancies. The MMBP must address funding required for CNO availabilities advanced planning and CM opportunities.

3.2.7 Immediate Superior In Command. In the context of this chapter the TYCOM may act in support of or in the place of the Immediate Superior In Command (ISIC) for maintenance.

3.3 FLEET MAINTENANCE AVAILABILITIES. Fleet maintenance availabilities consist of the following:

3.3.1 Ship's Force Upkeep. A Ship's Force Upkeep is a scheduled period in which the ship is principally engaged in self-maintenance.

3.3.2 Scheduled Continuous Maintenance Availability. A Continuous Maintenance Availability (CMAV) is a scheduled availability normally 2 to 6 weeks in duration and normally scheduled once per non-deployed quarter during a period when the ship will be in port. Surface Force Ship CMAV milestones are outlined in Appendix A.

a. Surface Ships (Littoral Combat Ships excluded) - At a minimum, one 3-week CMAV per non-deployed quarter.

b. Littoral Combat Ship (LCS). The limited capacity of the crew to conduct maintenance requires a fundamentally different approach to material readiness. Preventive

Maintenance execution is unique in that the crew is not responsible for oversight and execution for the entirety of the Planned Maintenance System (PMS) effort. Additionally, due to the limited capacity of the crew, periodic basic facility maintenance support for housekeeping, corrosion control, and industrial cleaning is required.

(1) A CMAV is notionally a two-week availability, every four months. CMAVs are Continental United States (CONUS) and Guam availabilities. For deployed or Forward Deployed Naval Forces homeported LCS ships, see volume III, chapter 4 of this manual. To minimize maintenance requirements competing with deployed operations, CONUS availabilities will be planned to ensure all possible maintenance actions that can be completed in CONUS are scheduled accordingly.

(2) Preventative Maintenance Availability. A scheduled availability dedicated for off-hull based personnel to perform PMS, normally five days, scheduled notionally once per month during a period when the ship will be in port.

(3) Facilities maintenance. Facilities maintenance consists of the following elements:

(a) Housekeeping. The effort required to provide housekeeping services throughout the ship.

(b) Corrosion control. The effort required to perform coating maintenance and repair to exterior and interior surfaces due to normal environmental conditions.

(c) Industrial cleaning. The effort required to clean mechanical spaces, mission zones, and topside spaces.

(d) Crews perform basic cleaning to include sweeping, vacuuming, swabbing, and dusting of exterior surfaces, and hand-wiping and rinsing surfaces free of soil and smudges. In general, facilities maintenance actions beyond the crew's capability are deferred to shore-based maintenance providers.

3.3.3 Unscheduled Continuous Maintenance Availability. The Unscheduled CM Availability is a single yearlong availability, for the period 01 October through 30 September, scheduled for each ship every fiscal year. The Year Long Unscheduled CM Availability is for the scheduling and completion of non-emergent work items that are not accomplished during any other schedule availability.

3.3.4 Emergent Availability. The Emergent (EM) Availability is designed for work of such an urgent nature that the heightened risk of disruption and paying of premiums is accepted and planning horizons are shortened.

3.3.5 Inactivation Continuous Maintenance Availability. Inactivation Continuous Maintenance Availabilities will be scheduled with the following durations:

1. Baseline duration 90 days.
2. Tow Rigging +14 days.

3. Logistic Support Asset or Dismantle Harvesting +30 days.

3.4 COMMON ELEMENTS.

3.4.1 Responsibilities. Responsibilities regarding maintenance policies and procedures for Fleet maintenance availabilities are:

3.4.1.1 Immediate Superior In Command.

a. Coordinate scheduling of availabilities at LMAs with TYCOMs.

(1) Monitor corrective maintenance action taken by LMA and Executing Activities.

(2) Schedule and conduct inspections of Forces Afloat.

(3) Monitor progress of availabilities.

b. Initiate the required budgetary actions for funding availabilities.

c. Ensure all authorized alterations are identified by priority based on material availability.

d. Identify the routine package to be accomplished based on Master Specification Catalog or Master Job Catalog (MJC) review (as appropriate).

e. Review results of scheduled monitoring inspections and testing that could result in significant new work or could impact scheduled work.

f. Identify required special evolutions associated with availabilities in support of Pre-Overseas Movement preparations and pre-availability test and inspection requirements.

g. Issue availability planning message.

h. Ensure reference (a) requirements are implemented in all CMAVs based on complexity, scope of work and duration of the CMAV. The ISIC will ensure all requirements of reference (a) are implemented to the maximum extent practical based these considerations. If portions are not implemented in a CMAV due to scope of work, complexity, or time restrictions the ISIC will inform TYCOM after the Work Package Execution Review (WPER).

i. (LCS only) Validate and broker PMS checks to upcoming PMAVs.

3.4.1.2 Regional Maintenance Center or Lead Maintenance Activity. (As appropriate).

a. Develop recommended Key Event schedule and present to the ISIC and Ship's Force.

b. Conduct ship checks, plan work candidates and order required material.

c. Recommend returned work candidates to the RMC ISIC, as applicable.

d. Develop strategy using the guidance found in volume VI, chapter 9 of this manual to accomplish calibration of systems, gages, instruments and tools in support of Ship's Force requested work and the availability milestones.

e. Identify and order Long Lead Time Material (LLTM).

f. Review the Availability Work Package, write Formal Work Packages (FWP) or Technical Work Documents (TWD), identify critical jobs and develop an Integrated Production Schedule (IPS) to aid in tracking and coordination of all work.

g. Conduct the WPER.

h. Conduct arrival conference.

i. Conduct daily and weekly meetings.

j. Issue Departure and Assessment report per paragraph 3.6.3.2.

k. Review the requirements of reference (a) and make recommendations for implementation and exceptions to ISIC during the WPER. The LMA will ensure all requirements of reference (a) are implemented to the maximum extent practical based on scope of work, complexity and duration of the CMAV.

3.4.1.3 Ship's Maintenance Team. Commanding Officer (CO).

a. Validate, broker, schedule, and track through execution all maintenance candidates.

b. Manage Ship's MMBP.

c. Maintain a current and valid CSMP that serves as the single authoritative source for all maintenance requirements.

d. Develop, plan and coordinate Ship's Force Upkeeps, CMAVs, CMs, and EMs and repairs within the resources provided.

e. Prioritize all deferred maintenance actions intended for accomplishment during an availability.

f. Develop a strategy for calibration of gages, instruments and tools.

g. Publish a policy concerning number of duty sections, liberty, ship cleanliness, tagout procedures, tank closeout and installation of blank flanges of otherwise exposed fluid systems, waveguide and air systems before the availability starts.

h. Assign an Officer or Chief Petty Officer to serve as the Availability Coordinator, responsible for coordinating the completion of all pre-availability and availability milestones.

i. Make reference (a) implementation recommendations to ISIC.

j. Implement and execute requirements of reference (a) as directed by ISIC.

3.4.1.4 Assigning Lead Maintenance Activity and Ship's Force Maintenance Responsibility. The RMC or ISIC assigns work responsibility for each maintenance and modernization item in an availability work package. The assignment of work responsibility will be such that split responsibility between two organizations does not occur for the same unit task on a maintenance action. The following guidelines apply:

a. The Fleet Maintenance Activity (FMA) will remove all controlled system interference as defined in volume V, part I, chapter 2 of this manual and Ship's Force will remove all other interference.

b. The following are examples of maintenance actions requiring Intermediate Level shop work assigned as "ship-to-shop":

(1) Calibration and repair of portable equipment, removable gages, and rack-out electronic equipment and meters.

(2) Manufacture of components which do not require fit-up in a larger assembly, or are fabricated with a sample provided by Ship's Force.

(3) Small flanged or bolted valves and operators sized 2.5 inch Iron Pipe Size and below.

(4) Small components such as pumps, motors, controllers, deck plates, access covers and lockers.

3.4.2 Submission of Work Candidates.

3.4.2.1 Documenting Requests. Requests by Ship's Force for corrective maintenance assistance or support equipment from outside activities will be appropriately documented on a Ship's Maintenance Action Form, OPNAV 4790/2K (2-Kilo) or Supplement Form OPNAV 4790/2L (2-Lima) of reference (b), or Message Work Candidate, and prioritized per reference (b). The work candidate will be promptly forwarded for processing. The description of the deficiency or support requested and the action desired must be complete and clear. This description must be in sufficient detail to allow LMA personnel to plan, obtain parts and assemble the correct tools.

3.4.2.2 Message Work Candidates. Messages may be used to notify the FMA as early as possible when data systems up-lines are not available. This is particularly applicable to ships in transit between FMAs, and ships scheduled to return to port shortly before starting an availability. Accordingly, ships should submit message work candidate requests to the parent RMC or ISIC, with an information copy to the tending LMA and tending Squadron or RMC (if different), for items of this type. Where the change of LMA occurs coincident with a change in Operational Control, the (new) tending Squadron or RMC should be action addressee for the message, with both the parent RMC or ISIC and (new) LMA as information addresses. Appendix B provides the format for a message work candidate.

3.4.3 Critical Jobs. Critical Jobs (CJ) are those jobs or series of jobs requiring special management attention and normally present the greatest risk to on-time completion of the key event or availability. The Executing Activity should be judicious in designating jobs as CJs to prevent diverting management attention from those jobs which are, in fact, critical to on time completion of the availability. Consideration must be given to, but not limited to, the following in determining the CJs:

a. Little or no room for delay exists.

b. Establishing plant conditions.

c. LLTM.

d. Complexity of job or special skills or resources required.

e. Significant test requirements.

f. Not previously accomplished by the Executing Activity (alterations, etc.).

3.4.4 Integrated Production Schedule. The IPS is an integrated timeline including plant conditions, major work steps, tests and recertification used to progress all jobs as determined by the Naval Supervisory Authority (NSA) or LMA. The IPS should include:

a. Establishing plant conditions.

b. Major production steps.

c. Testing and Recertification.

d. Closing out work procedures.

3.4.5 Technical Assistance and Assessment. Technical assistance and assessments are to be assigned as work candidates within any of the following Fleet maintenance availabilities:

a. CMAV.

b. CM.

c. EM Availabilities.

3.4.6 Late Work and Scope Control.

a. The complete LMA Availability work package is defined and agreed upon at the WPER. To provide for adequate time to plan the work and acquire the necessary materials in an efficient manner, the work submission cut-off date should not exceed the milestones listed in Appendix A. A minimum of 30 days will be allotted for known work to be brokered to I-Level activities. This will allow a WPER to take place per the platform specific milestones. If these minimum thresholds cannot be complied with, the Maintenance Team will complete a Business Case Analysis.

b. The Maintenance Team will perform a Business Case Analysis as a method of identifying risks associated with adding late work after the submission cut-off date identified in Appendix A. The Business Case Analysis is described in Appendix C. Late work identified after the submission cut-off date should not extend the availability completion date. The RMC or ISIC will take appropriate actions to make job tradeoffs, defer jobs to a subsequent availability or seek outside assistance to conduct the work.

c. Non-mission essential late work may be accepted on a case-by-case basis. The ISIC will provide approval authority for all late work after establishing the LMA can support the additional workload and the scope of work does not impact the ship's operational schedule or schedule of other operational units.

3.4.7 Memorandum of Agreement. For all Surface Force Ship availabilities not assigned to an FMA, a Memorandum of Agreement (MOA) will be issued. The purpose of the MOA is to define areas of responsibility for all activities involved with the availability. A NSA representative must sign the MOA(s) as assurance that any civilian contractor requirements detailed in the MOA(s) are contained within applicable contracts.

3.4.8 Ship to Shop Material Control. Positive identification and control of ship to shop transfer of equipment and components is maintained through the use of a Ship to Shop tag. The Ship to Shop tag may also be used in conjunction with other methods specified by the Executing Activity or the LMA. Each Executing Activity must make sure positive control exists for those

subcomponents of equipment and components received with a Ship to Shop tag attached. The procedure for using the Ship to Shop tag is provided in volume V, part I, chapter 11 of this manual.

3.4.9 Ship-checks. The LMA or Executing Activity must conduct ship checks, when the tended ship is available to support process milestones, to verify the scope of work, identify interference, obtain equipment technical data, identify shipping (rigging) paths, verify system and equipment configuration and obtain additional problem identification data from Ship's Force. Ship-checks must be conducted as early in the planning phase as possible.

3.4.10 Lead Maintenance Activity Daily Production Meeting. This meeting is for the coordination of ongoing work for all availabilities. The LMA Repair Officer or Production Officer, or their designated representatives, will conduct a Daily Production Meeting for all ships in availabilities.

a. Purpose. The primary purpose of the LMA Daily Production Meeting is to establish a joint Executing Activity and Ship's Force production plan and eliminate schedule conflicts impacting work for at least the next seven shifts (56 hours). It further tracks the current status of CJs. The results of this meeting are used to assess overall progress of the work, develop recovery plans when necessary and to ensure all the activities understand the production plan and support requirements during a minimum of the next seven shifts (56 hours).

b. Execution. The Daily Production Meeting will be held as early in the day as practicable.

c. Attendees. Representatives of the LMA Waterfront Operations, the Executing Activities, the tended ship, and LMA Supply or Fleet Logistics Center, as appropriate, will attend this daily production meeting and participate in its agenda. Others may attend as requested by the LMA.

d. Agenda. The following agenda will be used for the LMA Daily Production Meeting. Additional items may be added at the discretion of the Waterfront Operations Officer, Repair Officer or Production Officer.

(1) Discuss specific work scheduled to be accomplished and support required over the next seven shifts.

(2) Discuss projected site evolutions (ship moves, weapon moves, pier maintenance, or changes of command, etc.) which could impact production work.

(3) Discuss respective ship evolutions such as stores load or Fast Cruise that could impact production work.

(4) The Executing Activity brief on the current status of CJs on each ship.

~~(5) Review Safety of Ship Maintenance Item List, necessary safety precautions and their status.~~

(6) Discuss requirements and execution of reference (a) as agreed upon at the WPER. Any changes since WPER will be approved by ISIC prior to exceptions being implemented.

3.4.11 Lead Maintenance Activity Progress Review. This review, also known as the Management Meeting, will be conducted weekly in CMAVs.

a. Purpose. The primary purpose of the LMA progress review is to ascertain if CJs and Key Events are progressing satisfactorily for on time completion of the availability and to ensure ISIC and Senior Repair Activity Management has a clear picture of the ongoing status of the availability and any obstacles to on time completion. The meeting must also identify and resolve any issues, conflicts or differences since availability start or last review. These meetings may be conducted in conjunction with a ship's Planning Board for Maintenance (PB4M).

b. Execution. This review must be conducted by the Waterfront Operations, Repair Officer, Production Officer, or their representatives and be scheduled so as not to conflict with daily production meetings.

c. Attendees. As a minimum, the following must attend this review.

(1) RMC Project Manager and designated Project Team representatives.

(2) Waterfront Operations Officer, Repair Officer, or Production Officer.

(3) Ship Superintendent and designated Executing Activity representatives.

(4) Tended ship CO.

(5) Availability Coordinator and designated Ship representatives.

(6) ISIC designated representatives (Commodore, Senior Deputy or Maintenance Deputy).

(7) Maintenance Support Team (MST) Officer In Charge (OIC) (if applicable).

(8) LMA designated representatives (as applicable).

d. Agenda. As a minimum, the following agenda must be used for LMA progress review. Additional items may be added at the discretion of the Waterfront Operations Officer, Repair Officer, Production Officer, ship CO, or ISIC. Attendees must be prepared to discuss their respective portions of the agenda.

(1) Specific work scheduled for accomplishment during the availability.

(2) Projected Executing Activity and ship evolutions which could impact production work on the ship.

(3) Discuss current status of CJs and Key Events listed in Appendix D.

(4) Heavily loaded Executing Activity work centers and impact on the availability.

(5) Status of funds, supplies and equipage funding.

(6) Status of outstanding DFS scheduled for correction during the availability.

(7) Outstanding high priority repair material status.

(8) Provide Automated Work Requests (AWR) or a list of completed work with applicable 3-M final action taken codes per reference (b).

(9) For ships with work in the Year Long CM or EM Availability no separate formal meeting is required. Rather, issues with these availabilities should be a part of the routine PB4M held by the ship's maintenance team or special meetings as needed to properly monitor and manage the ongoing maintenance.

(10) Discuss requirements and execution of reference (a) as agreed upon at the WPER. Any changes since WPER will be approved by ISIC and Repair Activity senior management prior to exceptions being implemented. Include issues occurred and resolution of the previous week.

3.5 SHIP'S FORCE UPKEEP. Ship's Force Upkeep availability is a scheduled period in which the ship is conducting self-maintenance per reference (b), training, supporting inspections by outside activities, and performing routine shipboard evolutions. Ship's Force Upkeep availability can be accomplished at sea when the ability of the ship to perform its assigned missions and tasks is not affected and the work is accomplished onboard the ship. Scheduled Ship's Force Upkeep periods must not be interrupted for other than emergency reasons.

3.5.1 Upkeep Work Planning.

3.5.1.1 Planning Sources. The upkeep work package must be developed using three sources:

a. PMS must be scheduled per reference (b).

b. CSMP will be reviewed to ensure scheduling and accomplishment of all work which is within Ship's Force capability.

3.5.1.2 Ship's Force Planning Actions.

a. Preparation for Ship's Force Upkeep should be the normal activity of the maintenance team and be discussed at PB4M meetings.

b. Review all Ship's Force screened CSMP work candidates and identify those items to be accomplished within the scheduled Ship's Force Upkeep period.

c. Identify CJs.

d. Develop an IPS to aid in tracking and sequencing CJs.

e. Establish strategy for Ship's Force calibration of gages, instruments, and tools based on the onboard Calibration Recall List.

f. Develop FWPs, CWPs, and TWDs, as required, per volume V, part I, chapter 2 of this manual.

3.5.2 Ship's Force Upkeep Work Execution. Duty section, division meetings, and shift briefings will be conducted as necessary to discuss the current status of work and projected work progress expected for the period covered. The status and projections will be based on CJs and the IPS and should be reviewed at the regular ship's PB4M Maintenance Team meetings.

3.5.3 Ship's Force Upkeep Work Completion.

3.5.3.1 Management Closeout Procedures. Upon completion of repairs, FWPs, CWPs, and TWDs will be closed out per volume V, part I, chapter 2 of this manual. Update the CSMP. Ensure non-conformances (Waivers, Deviations or Departures from Specification) submitted

during the availability by any activity are approved prior to trials at sea (if held) and not later than the completion of the availability.

3.5.3.2 Dock Trials, Fast Cruise and Sea Trials. Dock Trials, Fast Cruise and Sea Trials must be conducted as required. Sample agendas in part II, chapter 2 of this volume may be modified, as necessary, to ensure the equipment which was worked during the upkeep is exercised prior to at sea operation.

3.6 SCHEDULED CONTINUOUS MAINTENANCE AVAILABILITY.

3.6.1 Scheduled Continuous Maintenance Availability Planning. Thorough, detailed planning is an absolute prerequisite to effective CMAV execution. Effective CMAV management begins well before the ship arrives with material procurement and job planning. The Surface Force Maintenance and Modernization Milestones are located in Appendix A.

3.6.1.1 Scheduled CMAV Planning Sources. A significant portion of the CMAV Work Package can be identified in advance from five basic sources.

a. Ship's CSMP. This document contains work items deferred during previous maintenance availabilities as the result of inadequate material support, outstanding DFS, drydock requirements, etc. To ensure the CSMP accurately reflects the required ship's maintenance, the Maintenance Team and ISIC will review each ship's CSMP in detail with Ship's Force during routine PB4Ms and prior to every maintenance availability.

b. Ship's Force Planned Maintenance. Ship's Force must conduct a review of PMS requirements and ensure all maintenance actions are identified.

c. Alterations (Fleet Alterations, Program Alterations, Ship Changes, etc.). The RMC or ISIC will enter alterations on the ship's CSMP the TYCOM has authorized for accomplishment. The Ship Maintenance Team, RMC or ISIC calls out alterations for a specific CMAV based on material availability and Executing Activity capacity as identified by the Executing Activity. Within funding constraints and TYCOM guidance, all alterations authorized on the Navy Modernization Process (NMP) are candidates for accomplishment during each CMAV.

d. Work Routines. A set of standard routines from the MJC should be planned for every CMAV. The ISIC or RMC tailors each CMAV routine package to the needs of the ship by calling out additional routines to document periodic, interim dry docking, and calibration recall requirements, as appropriate.

3.6.1.2 Scheduled CMAV Planning Functions. The Maintenance Team, RMC and ISIC will take the following actions in planning a CMAV. See chapter 4 of this part and volume for maintenance validation, screening and brokering.

a. Work Package Submission. Ensure ships submit CMAV work packages as scheduled. Surface Force Maintenance and Modernization Milestones are located in part II, chapter 2, Appendix B. Message work packages may be sent if the ship is not in port. This singular action has significant impact on the ability of both the RMC or ISIC and Executing Activity to properly plan for the CMAV and determine potential impacts on other planned work.

b. NMP Review. Review NMP and ensure all authorized alterations intended for accomplishment during the CMAV are identified by priority based on material availability as identified by the Executing Activity. Ensure they are properly entered into the CSMP.

c. MJC Review. Review the MJC and identify the routine package to be accomplished during the CMAV. Ensure it is properly entered into the CSMP.

d. Review work candidates for applicability of Master Specification Catalog task lists.

e. Draft Key Event Schedule.

f. Work Package Screening. Screen and forward the assigned prioritized work package to the Executing Activity. Maintenance Team, RMC and ISIC responsibilities for work package screening are established in reference (b). Additional specific requirements are:

(1) Ensure work candidates meet the criteria for the level of work and are correctly prioritized per reference (b).

(2) If the assistance requested is for use of the Executing Activity facilities or technical guidance in order for Ship's Force to accomplish planned or corrective maintenance, the submitting ship and TYCOM should be advised to use MJC Routine N0000EXCNA740, (Facilities for Ship's Force Work).

(3) If a work candidate is received in message format, the RMC or ISIC must input the message work candidate into the Maintenance Data System (MDS). For a ship in transit, the parent RMC or ISIC must advise the RMC or ISIC to which the ship is reporting of the desired disposition of the message work candidate.

(4) Designate controlled work as defined in volume V, part I, chapter 5 of this manual. Indicate the appropriate governing Key Event.

g. From the Key Event schedule, develop an IPS to aid in tracking and sequencing CJs.

h. CMAV Funding. CMAV funding targets are developed as a part of each ship's MMBP. RMC or ISIC will establish CMAV funding targets to properly and responsibly administer funds, and gain optimum readiness return on each dollar invested.

i. Outside Activity Support. Identify outside activities (e.g., Warfare Center, Alteration Installation Team, Naval Undersea Warfare Center, Supervising Authority, RMC, Industrial Activity Tiger Team, etc.) participating in the CMAV and their associated support requirements.

j. Special Evolutions. Identify required special evolutions associated with pre-availability tests and inspections.

k. WPER. The WPER is conducted with the Executing Activity, ISIC, TYCOM, (and Ship's Force if available) as scheduled. The purpose is to finalize the CMAV work package and required evolutions. This is accomplished as noted in sub-paragraphs (1) through (13) of this paragraph. This meeting may be conducted in conjunction with the ship's PB4M.

(1) Attendees will include the Maintenance Team, ISIC Material Officer, TYCOM Ship's Coordinator, Maintenance Planning Manager, RMC, Ashore Ships Maintenance Manager, Production Officer representative, Executing Activity, Ship's Engineer Officer, MST OIC, Availability Coordinator and the Ship Superintendent (as applicable).

(2) Assemble the proposed CMAV work package from the CSMP, NMP and MJC, as applicable.

(3) Screen the proposed work package to designate the work to be accomplished during the CMAV.

(4) Validate the proposed work package will not require ammunition off-load.

(5) Prioritize the proposed work package.

(6) Designate the CJs.

(7) Integrate Executing Activity recommended CMAV Key Event schedule with other ISIC and Ship planned events for the ship, such as weapons moves, fueling, and training events.

(8) Establish the CMAV berth for pre-staging material and support equipment.

(9) Review adequacy of available testing and support equipment needed for the CMAV.

(10) Identify other outside activities participating in the CMAV and associated support requirements.

(11) Identify required special evolutions associated with pre-availability tests and inspections. The result of the CMAV WPER should be an executable work package within the CMAV time frame, budget, and Executing Activity capacity.

(12) Ensure reference (a) requirements are implemented in all CMAVs based on complexity, scope of work and duration of the CMAV. The ISIC will ensure all requirements of reference (a) are implemented to the maximum extent practical based on these considerations. If portions are not implemented in a CMAV due to scope of work, complexity, or time restrictions, the ISIC will inform TYCOM after the WPER.

l. Re-screen Work Candidates. Re-screen and assign returned work candidates (per chapter 4 of this part and volume). Notify ship of final disposition of each item.

m. Issue the Ammunition Off-Load Requirement Message. Subsequent to package lock, but no later than two weeks prior to the start of the availability, Ship's Force will send the Ammunition Off-Load Requirement Message prepared in accordance with Appendix E and reviewed during the availability WPER to TYCOM. It will certify the Availability Work Package has been reviewed by the Maintenance Team for exclusion of work requiring ammunition off-load, as required by reference (c).

3.6.1.3 Arrival Conference. This conference is conducted by the LMA. The Arrival Conference purpose is to provide an executive level brief to the RMC or ISIC, Executing Activity, MST OIC

(if applicable) and ship's CO on the total scope of the CMAV effort and must be conducted as discussed in sub-paragraphs "a" through "d". Note that the Arrival Conference may be conducted in conjunction with the PB4M.

a. Attendees. The Arrival Conference is hosted by the responsible FMA and attended by the following personnel:

(1) RMC Project Manager and designated Project Team representatives.

(2) RMC Senior Management (Commodore or Senior Deputy) and Material representative(s).

(3) Executing Activity representative(s).

(4) Tended ship, (recommended, as applicable, are the CO, Department Heads, and Availability Coordinator).

(5) Site PMT or MCA Officer.

(6) MST OIC (if applicable).

(7) LMA designated representatives (as applicable).

b. Agenda. The following items comprise the agenda to be covered during the Arrival Conference:

(1) Introduction of key FMA, Executing Activity and ship personnel.

(2) CMAV material and funding status.

(3) Review the CMAV Key Event schedule for potential conflicts.

(4) Special evolutions scheduled during the availability.

(5) Validate critical jobs to be accomplished by the Executing Activities and Ship's Force are properly sequenced in the IPS.

(6) Introduce the LMA representative as the single point of contact for all elements of the CMAV, including responsibility for coordination of all Executing Activities and Ship's Force. This point of contact may be the Port Engineer, Project Manager, or Ship Superintendent, as applicable.

(7) Alterations to be accomplished.

(8) Significant material issues.

(9) Review status of outstanding DFS, as applicable.

(10) Issue meeting schedule for the CMAV.

(11) Discuss requirements and execution of reference (a) as agreed upon at the WPER. Any changes since WPER will be approved by the ISIC prior to exceptions being implemented.

c. Tended Ship Actions. The ship takes the following actions at this conference:

(1) Submit a list of key Ship's Force personnel, including officers, Leading Petty Officers or Work Center Supervisors, Quality Assurance Inspectors, Calibration Coordinator and Availability Coordinator.

(2) Verify all known work candidates requiring outside assistance have been identified and work candidates submitted to the LMA or TYCOM (or submit known late work candidates for immediate screening).

(3) Discuss potential Executing Activity and Ship's Force work interface concerns.

(4) Identify Ship's Force and MST (if assigned) planned evolutions that could impact scheduled work and verify they are properly sequenced in the IPS.

d. RMC or ISIC Actions. During this conference, the ISIC staff will review (if not already done) any late work candidates submitted by the ship. Should the late work presented require other work be deferred, that work to be deferred must be clearly understood. A Business Case Analysis described in Appendix C should be conducted.

3.6.2 Continuous Maintenance Availability Execution. CMAVs are complex evolutions characterized by detailed management, closely coordinated RMC or ISIC, Executing Activity and Ship's Force work, systems testing, and other sequenced evolutions such as weapons movements, diver operations and training. Successful CMAV execution requires the closest possible communication and coordinated efforts by the RMC or ISIC, Executing Activity and Ship's Force.

3.6.3 Continuous Maintenance Availability Completion Procedures. The following procedures will be utilized for completing a CMAV. Exceptions are provided for those CMAVs of less than three weeks or are of a minor scope where the Departure and Assessment Conference may be an appropriate forum.

3.6.3.1 Management Reports Closeout Procedures. Upon completion of a scheduled availability, the MDS files must be updated to reflect the current status of work. To accomplish this goal and to ensure all activities understand the status of all work, the following procedures will be followed:

a. Upon completion of the assigned work, the LMA or Executing Activity will present a copy of the work candidate or a list of completed JCNs with the applicable final action codes to the ship to obtain concurrence that the described work was completed. Ship's Force will complete all AWRs per reference (b). Within 2 weeks of completion, the Executing Activities who have performed any configuration change must submit the MDS 4790/CK, of reference (b) to Ship's Force for submission to Configuration Data Managers Database - Open Architecture.

b. Within two working days after the completion of an availability, all work centers will ensure final man-hours have been entered. The ship's superintendent may sign off all Executing Activity routines for the ship. Completed work candidates and AWRs will be a product of the CMAV Departure and Assessment Conference.

c. On the third working day after the completion of an availability, the Maintenance Team will ensure the CSMP ship and shore files reflect the current status of the ship's JCNs and request a Departure and Assessment Report by priority for the ship.

d. On the fourth working day after the completion of an availability, the ship's superintendent will annotate each incomplete JCN on the final Departure and

Assessment Report by JCN as to its present status and actions required to complete the item. Lead work centers must update this status into the MDS.

e. Within seven working days after the completion of an availability, the Executing Activity will forward copies of the annotated Departure and Assessment Report to the ship and ISIC.

f. Review status of outstanding DFSs.

3.6.3.2 End of Scheduled CMAV Departure and Assessment Conference. This comprehensive review and critique of the availability is another cornerstone of the continuous improvement policy regarding Fleet maintenance.

a. Purpose. The CMAV Departure and Assessment Conference is held to:

(1) Review the conduct of the availability and identify those improvements necessary to increase the effectiveness of Fleet maintenance.

(2) Identify the work completed during this CMAV and complete the appropriate documents (e.g., work candidates, AWRs, etc.) or produce the list necessary to update the ship's CSMP to reflect the completed work.

(3) Identify and reschedule to a future CMAV, the work deferred during this CMAV.

(4) Identify any incomplete work candidates and plan of action to complete items.

(5) Establish the basic requirements (i.e., initial work package, sequence number and tentative dates) for the next CMAV.

(6) Review status of outstanding DFSs.

b. Execution. The Departure and Assessment Conference will be held during the last week of the CMAV at a time agreed upon by the Executing Activity Repair Officer or Production Officer and the ship. This meeting may be held in conjunction with the final weekly Management Conference or Progress Review.

c. Attendees. The Departure and Assessment Conference is arranged, coordinated and chaired by the LMA Repair or Production Officer. Where the LMA is a contractor, the LMA Project Manager may co-chair these meetings with the NSA Project Manager. However, lack of participation by the contractor does not alleviate the NSA Project Manager of this responsibility. The following personnel must attend this meeting and participate in its agenda:

(1) ISIC Supply Materials, Weapons, Combat Systems, Electronics Material Officer, and Staff personnel (as applicable).

(2) LMA Repair Officer, Production Officer, and Ship Superintendent, or their designated representatives.

(3) Tended ship CO, MST OIC (if applicable), Engineer and Availability Coordinator.

(4) Others as directed by the TYCOM, ISIC or Executing Activity CO.

(5) Executing Activity representatives.

d. Agenda. The following agenda must be used for reviewing and assessing the CMAV. Additional items may be added at the discretion of the TYCOM, ISIC, Executing Activity or ship. Attendees will be prepared to address their respective portions of the agenda.

(1) Review of the CMAV work package to establish status of each item and, for items completed satisfactorily, complete the work candidate or AWR.

(2) Review incomplete work candidates that will remain open from this CMAV and identify plan of action to complete these items.

(3) Identify and reschedule to a future CMAV the work deferred during this CMAV.

(4) Assess the scheduling, execution and quality of work accomplished by each activity during the CMAV.

(5) Assess the quality of general services provided by the Executing Activity site.

(6) Review recommendations for process improvements and possible LEAN initiatives.

(7) Assess lost time that prevented or delayed execution of scheduled work. (Lost time internal to the Executing Activity, e.g., waiting for transportation, assist work center, etc. and lost time caused by the ship such as waiting access, tagout, other Ship's Force support).

(8) Reference (a) lessons learned and corrective actions for future CMAVs.

e. Results. The LMA must consolidate the minutes of this meeting into the Departure and Assessment Report to the ISIC and provide a copy to the TYCOM and appropriate planning activity. The report must include:

(1) List of completed work or completed work candidates or AWRs for direct input into MDS to update the ship's CSMP and Configuration Data Managers Database - Open Architecture.

(2) Preliminary establishment of the next CMAV.

(3) List of policies and processes identified as requiring review for improvement. Proposed process improvements and corrective actions suggested to improve the effectiveness of future CMAVs.

(4) Lessons learned from the availability.

3.6.3.3 Fast Cruise or Sea Trials. The ISIC may schedule a one-to-two-day Fast Cruise as part of the CMAV Key Event schedule. This is normally the last major Key Event prior to CMAV completion. As a minimum, the Fast Cruise agenda will include specified drills and evolutions necessary to re-establish proficiency in basic ship operations. It will also include sufficient formal testing to certify the equipment and systems are fully ready to operate at sea in an operational environment. For CMAVs less than four weeks, the requirement for a Fast Cruise must be at the ISIC's discretion. The necessity of Sea Trials is a function of work performed during a CMAV and may not be required. If the duration or complexity of the CMAV is determined to be sufficient to warrant Sea Trials, the Ship, ISIC or TYCOM (as required by

specific Force policy) must determine if a formal Sea Trial Agenda is necessary, and if required, task the RMC or ship to prepare a formal Sea Trial Agenda for ISIC or TYCOM approval.

3.6.4 Lessons Learned. For long duration or complex CMAVs, or in cases where there are significant lessons to be learned, Lessons Learned will be conducted. The Lessons Learned Conference should be within 30 days of completion of the availability. The Lessons Learned process is described in volume VI chapter 39 of this Manual. All key NSA, RMC, LMA, TYCOM or their representative, Executing Activity and Maintenance Team personnel must attend it. The agenda and details of the meeting must be determined by the RMC and Maintenance Team and must be of appropriate length to evaluate the overall scope of the work accomplished. The Lessons Learned process provides the maintenance and modernization community with a process to identify, resolve, and provide feedback communication on barriers causing inefficiencies or waste within business processes. While there are several milestone meetings within the availability planning and execution process, the feedback process exists to continually collect information to improve processes.

3.7 YEAR LONG CONTINUOUS MAINTENANCE. The CM is a single yearlong availability, for the period 01 October through 30 September, scheduled for each ship every fiscal year. The Year Long Continuous Maintenance (YLCM) availability is for the scheduling and completion of non-emergent work items not accomplished during any other scheduled availability.

3.7.1 Year Long Continuous Maintenance Planning. Planning sources and actions are similar to those for the CMAV. Since the continuous availability is a year long, it has no specific arrival date as a reference for the planning milestones. As a result, the milestone dates for the yearlong availability are consistent with those for the scheduled availability but are referenced to the planned execution date(s) of the work item(s). This approach for non-emergent work is intended to reduce premiums and waste for most work candidates by allowing the work to be planned, resourced with manpower and materials in a routine way. The Surface Force Planning Milestones are included in Appendix A. The definition of Executing Activity scope that takes place in the WPER of a CMAV does not occur in the YLCM availability as a discrete signal point. Rather LMAs should continuously define scope and schedule across the LMA and assigned Executing Activities.

3.7.2 Year Long Continuous Maintenance Work Execution. During the execution period of work items in the YLCM availability, measures should be taken to ensure Ship's Force, LMA and Executing Activities remain appraised of:

a. Status of work to be accomplished.

b. Identities of designated contact personnel.

c. Status of material and other resources.

d. Current schedule status.

e. Special Evolutions that may impact completion of the work items.

3.7.3 Continuous Maintenance Completion. At the end of the fiscal year, the availability should be entered as complete and a new availability established for the new fiscal year.

3.8 EMERGENT AVAILABILITY. The EM Availability is designed for work of such an urgent nature that the heightened risk of paying premiums is accepted and planning horizons are

shortened. This type of availability is for C3 or C4 CASREPs, or a C2 CASREP with reasonable potential to become a C3 or C4 CASREP. These CASREPs are identified as emergent maintenance and ordinarily funded from emergent funds. The RMC Commander may, with the respective TYCOM's approval, convert Emergent Maintenance funds to execute CNO availability or CM in this regard. Emergent work will be scheduled to minimize premiums in as much as the operational schedule will permit. Generally, C2 CASREPs will be corrected using the CM Process where work is scheduled in the unscheduled Continuous Maintenance availability, a Window of Opportunity or a CMAV, which supports the ship schedule, need and policy objectives minimizing premiums paid and operational schedule impacts.

3.8.1 Emergent Availability Planning. Planning sources and actions are similar to those for the CMAV. In the case of the EM Availability, the milestone dates for the availability are not consistent with those for the scheduled availability and produce added risk of disruptions and payment of premiums. This risk is acceptable only because of the effect of the work on the mission capability of the tended ship. The definition of scope and schedule for emergent work occurs after the definition for both scheduled CMAV and unscheduled CM availabilities when Executing Activities may already be fully loaded and material may need extra effort to be expedited. Additionally, it may result in already scheduled work being deferred.

3.8.2 Work Execution. During the execution period of work items in the EM Availability measures should be taken to ensure Ship's Force, LMA and Executing Activities remain appraised of:

a. Status of work to be accomplished.

b. Identities of designated contact personnel.

c. Status of material and other resources.

d. Current schedule status.

e. Special evolutions that may impact completion of the work items.

3.8.3 Availability Completion. Once the Ships Commanding Officer and ISIC determine that the Ship's mission capability has been restored, the LMA can certify the work, and the ISIC can close the availability.

3.9 PROPULSION PLANT TESTS (If Required). For full power trials provisions of reference (d), Section 6 applies.

APPENDIX A_1

COST SURFACE SHIP AVAILABILITY MILESTONES

EVENT #	TASK OR MILESTONE	RESPONSIBLE ACTIVITY	CNO COST	DESCRIPTION
CNO ADVANCE PLANNING PROCESS (SEA 21 RESPONSIBILITY)				
1	Establish CNO or CM Availability Schedule	TYCOM	A-720	Schedule established per the Fleet Response Plan maintenance cycle. TYCOM will publish routine updates in NDE as they occur.
2	Fund Modernization Procurement & Installation - Decision Point 3 in the Ship Change Document Process	PARM or TYCOM	Varies	Decision Point 3 is to validate and update the Modernization Plan and to proceed with material procurement and scheduling installations with Resource Sponsor confirmation that funds exist in the budget to fully execute the SC.
3	Issue EHMP	SPM	Varies	In support of MMBP development, in March of each year, SPMs will deliver an EHMP listing all program SCs scheduled for each active ship under their cognizance to the RMCs. TYCOMs will deliver an EHMP listing all scheduled fleet SCs for each active ship under their cognizance to the RMCs. The EHMP will contain all SCs scheduled for the next fiscal year and the first quarter of the following fiscal year. It is a snapshot of the current maturity and authorization status and industrial man-day and material estimates for SCs scheduled for installation in the next fiscal year.
4	Issue 2-year rolling AHMP	SPM	Varies	An AHMP for all active ships must be provided by the cognizant SPM to each RMC in July each year in support of the A-810 to A-450 rolling HMP NMP milestone and development of SPM Advance Planning Letters. The AHMP will contain all Program and Fleet SCs planned for the year after the next fiscal year (Example: JUL 2006 release is for FY 2008). The RMC is advised of the planned SCs for installation to facilitate necessary long lead-time planning efforts for ships under their cognizance.
5	PY Submit Funding Request for work assigned	Planning Yard	A-480	PYs request funding from the alteration sponsors for what they know they are going to be tasked to perform.
6	Accomplish SURFMEPP Mid-Cycle Review	SURFMEPP	A-440	This is the SURFMEPP Mid Cycle Meeting to Review of the ship's BAWP, CSMP, active DFSs, Class Advisories, routines, services, and the latest Availability Duration. Surface Ship Engineered Operating Cycle-applicable WNs will be branded as Mandatory Technical Requirements per the Joint Fleet Maintenance Manual. The BAWP Status Letter is the output.

EVENT #	TASK OR MILESTONE	RESPONSIBLE ACTIVITY	CNO COST	DESCRIPTION
7	SC Design or Planning Funds provided	PARM, SPM, TYCOM	A-425	Funding is requested by the PY and the Alt sponsor is to provide the funding. The purpose is to accomplish site-specific advanced planning of the SC. The attention is redirected from overall SC applicability to design for installation on a specific hull or at a specific location. This includes finalized design (including ship check, site survey and drawings, technical installation instructions, etc.), initiation of procurement, pre-installation certification and testing, installation readiness reviews and risk assessments.
8	Send habitability project advance planning notice	TYCOM N43	A-420	This TYCOM generated notice identifies Projects proposed for accomplishment, and provides work scope details including, if applicable, Ship's Force manpower requirements. This notice also requests Commanding Officer's comments, concurrence and commitment of resources to the proposed projects.
9	ICD-IRD delivered to alteration developer or PY	PARM	A-420	ICD-IRDs are equipment specific drawings and should be used as general guidance to develop Ship Specific or Ship Class SID. SIDs are the authorized or approved drawings to be used by the IAs for shipboard implementation of SCs. ICD-IRDs should be used as supplemental information where SIDs are deficient in specific guidance, and should be accompanied by a Liaison Action Record prior to their use. Alteration Sponsors provide the ICD for SID development to the appropriate party (PY or Third Party).
10	Issue Request for the EP Proposal to the planning activity. Notify each funding sponsor of the requirement and amount of funding for Execution Planning. Provide no later than date for required funding.	RMC C300	A-410	Develop Execution Planning CLIN MSC Work Item. Develop IGE, and Issue RFP for Planning. Notify each funding sponsor of the requirement for Planning funding. Provide "no later than date" for required funding. Each funding Sponsor is required to fund the Planning Costs associated with their requirements. If an advanced LOA is not available, the SEA21 Monthly Advanced Planning Letter will be used to estimate the Modernization Sponsor's cost. Funding must be received NLT A-365 to ensure Work Item development and LLTM identification can start at A-360 in conjunction with issuance of the AWP and LOAs.
11	Provide Funding for Execution Planning	PARM, SPM, TYCOM	A-365	Funding must be received NLT A-365 to ensure Work Item development and LLTM identification can start at A-360 in conjunction with issuance of the AWP and LOAs.
12	Provide BAWP Turnover Letter	SURFMEPP	A-360	As stated.

EVENT #	TASK OR MILESTONE	RESPONSIBLE ACTIVITY	CNO COST	DESCRIPTION
13	Provide Availability Financial Target Control	SPM, TYCOM	A-360	A financial control is required to establish the Availability Planning Requirements.
14	Issue Initial Letter of Authorization (including AITs) or Hull Modernization Plan	SPM, TYCOM	A-360	NAVSEA and TYCOM LOA are issued showing all modernizations scheduled for the CNO Availability. The SPM LOA specifies to the NSA the SCs approved to be accomplished during a specific ship CNO availability. Forecasted ship changes may be viewed through the NDE database at C+130 and continuing throughout the BAWP to AWP development process. This list will be reviewed at each BAWP Milestone Meeting. Items from this list will not be entered into the ship's CSMP until they have been reconciled with an issued LOA.
15	Definitize Execution Planning	RMC C400	A-360	A negotiated price for the anticipated planning actions necessary to support the availability that has been funded via a supplemental agreement. This step contractually obligates both the government and contractor to the requirements defined in the EP work Item(s).
16	Establish Availability in the appropriate IT system	RMC C300	A-360	Availabilities will be established in the applicable planning database when known or work is ready to be screened.
17	Advance Planning to Planning Event	NRMC C300	A-355	IPTD overview or introduction of the IPTD Program to the Ship or MT. BAWP package review. AWP Package Review to include any planned habitability work scheduled for the avail and TYCOM funded alterations. Modernization Package review LOA, discussion of the PY drawing status including Ship checks (if they are funded), etc. Review schedule risk identified during BAWP process, start identification of overall availability risks. Select Planning Milestones to suit availability. Establish Communication plan or strategy and meeting or planning drumbeat.
CNO PLANNING PROCESS (RMC RESPONSIBILITY)				
18	Task or Fund SID Development	SPM, NSA, AIT, TYCOM	A-330	Alteration Sponsors task and fund appropriate party to develop SIDS (PY or Third Party). This is a Modernization milestone to ensure funding has been obligated in support of SID development or SID delivery milestones.

EVENT #	TASK OR MILESTONE	RESPONSIBLE ACTIVITY	CNO COST	DESCRIPTION
19	Modernization Ship Checks Completed	Planning Yard, Or Other as Assigned	A-300	Ship checks (Design, Verification, Production and Proofing) are accomplished in support of the development of SIDs. All ship checks will incorporate a validation or verification of actual Hull or Site configuration. This is a Modernization milestone to ensure all design ship checks are complete in support of the SID delivery milestone.
20	Provide incremental funds for ordering LLTM for both repair and alt or mod work to meet required dates	SYSCOM, SPM, TYCOM	A-270	Provide incremental funds for ordering LLTM for both repair and alt or mod work to meet required dates. This is an iterative process as LLTM is identified and funding is requested and authorized based on the lead time. It is incumbent on the Execution Planning Activity or MT to identify LLTM as soon as possible. LLTM is defined as any material with a delivery date in excess of 30 days.
21	50% of D-level maintenance work package development 2Ks have been screened based on target control	TYCOM	A-240	Intent is that 50% of the expected AWRs (work, not services) have been screened to the planning activity. The planning activity continually develops specs in the most cost effective manner and does not batch this work in front of the next package development milestone.
22	Submit A-220 Deferral Letter with Maintenance Team Assist	TYCOM	A-220	TYCOM submit a Change Deferral Request Letter to SURFMEPP, which will include a list of Change Deferral Requests for subject FRP Maintenance Cycle.
23	TSRA-1 Discrepancies Screened	Ashore Ships Maintenance Manager	A-240	TSRA-1 is a TYCOM-scheduled two-week ship-wide pre-deployment material condition assessment designed to identify work items for inclusion in the post-deployment maintenance availability. The goal of this phase is to reduce availability growth and new work, by providing the earliest possible identification of work, which is then notionally scheduled in an availability. This is a validation that the discrepancies identified as a result of TSRA-1 assessment has been screened by this date.
24	Issue or Deliver SIDs to NSA for contractors and AITs	Planning Yard	A-240	SID delivery is listed in the NMP MOM as a critical milestone. All SIDs must be issued to the NSA to ensure planning milestones can be met.

EVENT #	TASK OR MILESTONE	RESPONSIBLE ACTIVITY	CNO COST	DESCRIPTION
25	Planning Activity complete planning and estimating of work assigned as required by the 50% package development milestone.	Contractor	A-190	The requirement is that all work brokered by the 50% package development milestone must be planned (Work Item complete and LLTM identified) and estimated with minimum quality as described as a "Class C" estimate.
26	IGE Submitted in support of 50% package development.	RMC C300	A-190	The requirement is that all work Planned in support of the 50% package development milestone must be estimated by the government with minimum quality as described as a "Class C" estimate.
27	Estimate Comparison Complete in support of 50% package development	RMC C400 or C300	A-180	The requirement is a bottom line comparison of the contractor provided Class C estimate and IGE Class C will be compared. Any estimate in excess of 10% or $10K will be scoped for requirements. Estimates will be revised as required to ensure there is a consensus for the scope of work required. The government estimate will be documented to reflect the outcome of the scoping.
28	LOA Change 1 Issued	SPM	A-180	After LOA Change 1 is issued, any change to the Fielding Plan in NDE-NM requiring SIDs or impacts ship distributed systems requires sponsoring activity to submit a late add impact assessment.
29	All Modernization Risk Assessments (including waivers) submitted	PARM, SPM, TYCOM	A-175	Complete all required design, procurement of material, pre-installation testing, and obtain all required certifications or impact assessment(s) prior to final installation. Evaluate maturity of an installation and determine if the SC is ready for installation. Perform an impact assessment for SCs that have not achieved maturity per the Navy Modernization milestone charts to determine whether or not to proceed with installation planning.
30	Risk Letter Sent to CNRMC	RMC Code 100	A-170	Risk letter will be submitted to CNRMC (with copy to TYCOM) for review and endorsement no later than 10 days after the milestone. The A-180 Risk Letter (Include Modernization Risk) will address, at a minimum, the following: Budget, Schedule, Resources (Manpower and Fiscal), RMC or NSA Capability or Capacity, Contractor Capability or Capacity, Availability Duration, Planning, Modernization, Funding. (Include work items MT intends to broker to IDIQ contracts and other government agencies.)

EVENT #	TASK OR MILESTONE	RESPONSIBLE ACTIVITY	CNO COST	DESCRIPTION
31	All Modernization Risk Assessments (including waivers) approved	FLEET, TYCOM	A-150	Perform an impact assessment for SCs that have not achieved maturity IAW the Navy Modernization milestone charts to determine whether or not to proceed with installation planning.
32	Maintenance Ship Check	RMC or WFO	<$5M: A-120 >$5M<$20M: A-134 >$20M<$100M: A-155 >$100M: A-155 (See Note 1)	Intent is that all maintenance related ship checks will be completed as early as possible within the planning process however, no later than this milestone.
33	Award AIT contracts for work not being done by prime contractor. Identify all outside activities participating in the availability and associated support requirements	AIT Sponsor, TYCOM N43, SEA 21	A-150	The AIT Manager must have the AIT contract in place NLT this milestone. Contract tasking can also include testing support, incidental and consumable material, ship check and post-install support. The selected contractor must have a NAVSEA 04Q accepted QMS in order to accomplish shipboard industrial work. The AIT Manager must ensure that the contract identifies all contractor deliverables necessary to complete schedule, return costs and design change feedback. Date supports requirement for POA&M at A-135. All non-AIT contractor outside activities will be contacted to obtain service requirements.
34	Identification of AIT support requirements and POA&M provided	AIT Manager	A-135	If the AIT will require industrial support, (e.g., crane and rigging services, welding or burning, compressed air), during accomplishment of the alteration or SC, additional information (2-Kilo) requesting these services will be provided for loading into the CSMP shore file. The AIT Manager, or their designated representative, will prepare information for the creation of a 2-Kilo JCN. In addition, if required by the NSA, any required support services must be specified using 2-Kilo. The planning activity can then prepare a 4E specification work item per volume VII, chapter 4, Appendix A of this manual for inclusion in the CNO availability work package for private sector industrial availabilities, or a job summary and Task Group Instruction for Naval shipyard availabilities.

EVENT #	TASK OR MILESTONE	RESPONSIBLE ACTIVITY	CNO COST	DESCRIPTION
35	80% of D-level maintenance work package development 2Ks have been screened based on target control	TYCOM	<$5M: A-120 >$5M <$20M: A-134 >$20M <$100M: A-155 >$100M: A-155 (See Note 1)	Intent is that 80% of the expected AWRs (work not services) have been screened or brokered to the planning activity. The planning activity continually develops specs in the most cost effective manner and does not batch this work in front of the next package development milestone.
36	Conduct WPIC	RMC C300	A-120	Provides a forum for early identification of work requirements requiring integration to avoid conflicts with other work during execution.
37	LOA CH 2, 100% Modernization Lock	SPM	A-120	The SPM must prepare and issue the LOA. The LOA will identify any planned SCs identified in the A-360 letter that have reached maturity. All SCs that have not reached maturity or do not have an approved impact assessment will be deferred from the availability with the exception of Sustainment Type SCs which must meet this criteria by A-75.
38	Submit Execution Risk Letter	RMC Code 100	A-110	A-120 Risk letter will be submitted to CNRMC for review and endorsement (to be sent to TYCOM) NLT 10 days after the A-120 milestone. The A-120 Risk Letter is the first Risk Letter to specifically address Execution Risk along with Planning Risk.
39	Planning Activity complete planning and estimating of work assigned as required by the above 80% package development milestone.	Planning Activity	<$5M: A-95 >$5M <$20M: A-109 >$20M <$100M: A-120 >$100M: A-120 (See Note 1)	The requirement is all work brokered by the 80% lock milestone must be planned (Work Item complete and LLTM identified) and estimated with the minimum quality described as a "Class C" estimate.
40	IGE Submitted in support of 80% package development	RMC C300	<$5M: A-95 >$5M <$20M: A-109 >$20M <$100M: A-120 >$100M: A-120 (See Note 1)	The requirement is all work Planned in support of the 80% package development milestone must be estimated by the government with the minimum quality described as a "Class C" estimate.

EVENT #	TASK OR MILESTONE	RESPONSIBLE ACTIVITY	CNO COST	DESCRIPTION
41	TSRA-2 Discrepancies Screened	Ashore Ship Maintenance Manager	<$5M: A-90 >$5M <$20M: A-114 >$20M <$100M: A-128 >$100M: A-128 (See Note 1)	TSRA-2 focuses on the evaluation of equipment after deployment to minimize growth and new work within the ship's CNO availability. It includes a post-deployment, underway material assessment of selected HM&E and C5I systems and is designed to add work items needed to fully define the AWP.
42	I-level work package fully brokered	Ashore Ship Maintenance Manager	A-90	Intent is to fully broker all known Intermediate Level work to I-level by this date.
43	Estimate Comparison Complete in support of 80% package development	RMC C400 or C300	<$5M: A-85 >$5M <$20M: A-99 >$20M <$100M: A-110 >$100M: A-110 (See Note 1)	The requirement is a bottom comparison of the contractor provided Class C estimate and IGE Class C will be compared. Any estimate in excess of 10% or $10K will be scoped for requirements. Estimates will be revised as required to ensure that there is a consensus for the scope of work required. The government estimate will be documented to reflect the outcome of the scoping.
44	I-level work package fully accepted	RMC C900	A-75	Intent is for I-level to accept or reject all work brokered to it up to this point in time. Any work entering later in the process will be subject to the Business Case Analysis process and will likely need to be inducted into the work package as new work.
45	100% of O-level maintenance work package locked	Ship's Force	A-75	Develop a Ship's Force concurrent Work Package including all major maintenance actions such as PMS, repairs, alterations and testing to be conducted by Ship's Force during the availability, as applicable. Review PMS, CSMP and Testing requirements and ensure all Ship's Force maintenance actions scheduled for accomplishment during availability are identified.
46	100% of D-level maintenance work package 2K's locked based on target control	Ashore Ship Maintenance Manager	<$5M: A-75 >$5M <$20M: A-90 >$20M <$100M: A-120 >$100M: A-140 (See Note 1)	Intent is 100% of the expected AWRs have been brokered to the planning activity. The planning activity continually develops specs in the most cost effective manner and does not batch this work in front of the next package development milestone.

EVENT #	TASK OR MILESTONE	RESPONSIBLE ACTIVITY	CNO COST	DESCRIPTION
47	Final Work Item Review and Approval	RMC C300	<$5M: A-65 >$5M <$20M: A-92 >$20M <$100M: A-104 >$100M: A-104 (See Note 1)	Work Item reviews must be accomplished on a routine drumbeat established by the MT with the final work item review being completed in support of the established publishing date for the specification package. This will include the final quality and technical and contractual review of the work items. Contractual must include legal requirements (i.e., if sole source, is there sole source justification?).
48	Solicit Bids	RMC C400	N/A	Non-Multi-Option Contracting Vehicles. The Federal Acquisition Regulation designates SAM.gov as the mandatory "Government wide point of entry" for posting of Government business opportunities, including proposed contract actions, solicitations and associated information.
49	100% of D-level maintenance work package 2Ks planned, estimated.	Planning Activity	<$5M: A-65 >$5M <$20M: A-89 >$20M <$100M: A-106 >$100M: A-106 (See Note 1)	The requirement is all work brokered by the 100% lock milestone must be planned (Work Item complete and LLTM identified) and estimated with the minimum quality described as a "Class C" estimate.
50	Planning Activity "publish" package in the appropriate IT system	Planning Activity	<$5M: A-65 >$5M <$20M: A-92 >$20M <$100M: A-104 >$100M: A-104 (See Note 1)	This is the act of issuing a final specification package for the availability that will be used to formulate a proposal. All work after this date will be handled as supplemental or new work.
51	IGE Submitted in support of 100% lock	RMC C300	<$5M: A-65 >$5M <$20M: A-67 >$20M <$100M: A-78 >$100M: A-78 (See Note 1)	The requirement is all work Planned in support of the 100% lock milestone must be estimated by the government with the minimum quality described as a "Class C" estimate.

EVENT #	TASK OR MILESTONE	RESPONSIBLE ACTIVITY	CNO COST	DESCRIPTION
52	Submit I-level work package and schedule for integration	RMC C900	A-60	The LMA must develop an inclusive, detailed, integrated and resource-loaded schedule of all participating activities. All participants must meet and review the proposed plan and make necessary adjustments to render a balanced and optimized integrated schedule. This formal schedule review must occur after the WPIC, but no later than the Work Package Execution Review. The NSA or LMA must serve as the final arbiter of conflicts. By the Work Package Execution Review, all integrated schedule conflicts must be resolved by the NSA or LMA.
53	Contractor submits final package cost proposal	Contractor	<$5M: A-55 >$5M <$20M: A-67 >$20M <$100M: A-76 >$100M: A-76 (See Note 1)	This is the date the Prime contract holder must submit their valid and complete cost proposal. It must be in compliance with the DCAA's "CRITERIA FOR ADEQUATE CONTRACT PRICING PROPOSALS" associated with an option within the contract in support of a defined scope of work. The proposal must include an integrated schedule based upon the proposed work package.
54	Complete TAR	RMC C400	<$5M: A-50 >$5M <$20M: A-53 >$20M <$100M: A-55 >$100M: A-55 (See Note 1)	The TAR will be prepared by the technical analyst on claims or proposals that meet threshold criteria established by the FAR. At any value below that threshold, and at the discretion of the negotiator, a "desk" TAR may be performed by the negotiator. Usually the evaluation involves review of direct labor hours and costs associated with material, delay in delivery or disruption costs. It will also include review of the contractor's estimating standards. The TAR should reflect the technical evaluation and its results. The TAR serves several essential purposes, including essential file documentation, advice to the negotiator and ACO and advice to the auditor if an audit is to be conducted. The objective of the TAR is to establish the acceptability and reasonableness of the contractor's proposal or backup data and records.
55	Establish Prorate based on final cost proposal	RMC C400 RMC C300 SEA 21 Program Managers Rep TYCOM N43	<$5M: A-50 >$5M <$20M: A-53 >$20M <$100M: A-55 >$100M: A-55 (See Note 1)	At A-120, all mature SCs listed on the LOA will be considered for proration. The budgets associated with SCs and repair and maintenance will lock the proration distribution percentages. If modernization is added after this date, the sponsor will assume the full increase in cost associated with the prorated items. The percentages established at this time will be applied to the proratable items proposal amount by sponsor to establish the full funding required.

EVENT #	TASK OR MILESTONE	RESPONSIBLE ACTIVITY	CNO COST	DESCRIPTION
56	Submit Funding Requests to Funding Sponsors	RMC C300	<$5M: A-50 >$5M <$20M: A-53 >$20M <$100M: A-55 >$100M: A-55 (See Note 1)	Sponsors must be kept aware of anticipated funding needs including prorated amounts. This typically happens as estimates come in but MUST be communicated when the proposal is received and finalized as the TAR completes. COMMENTS OR REMEDIAL ACTION: Program Office wants 14 days from receipt of request to receipt of funds.
57	Pre-Business Clearance Approved Within C400	RMC C400	<$5M: A-46 >$5M <$20M: A-46 >$20M <$100M: A-45 >$100M: A-45 (See Note 1)	The pre-negotiation plan is an official document of the contracting officer's negotiation objectives relating to pricing, technical, business and contractual issues. It assists in the contracting officer's determination of a fair and reasonable price. It must document the pertinent issues to be negotiated and the cost objectives and a profit or fee objective. Because it serves as the basis of the negotiation, the pre-negotiation plan should fully explain the contractor and Government positions.
58	Provide Availability Funding for Repair and Modernization to the RMC	SYSCOMS, SPM, TYCOM	A-45	Availability funding is required prior to definitization. To ensure the correct amount and type of funding is available; it should be received at the RMC NLT 10 days prior to the scheduled definitization date. Receipt of funding later than that may cause the work to be deleted from the work package or may delay definitization.
59	Pre BCM Routed and Approved Through SEA 02	RMC C400 or SEA 02	<$5M: N/A >$5M <$20M: A-40 >$20M <$100M: A-40 >$100M: A-40 (See Note 1)	SEA 02 must approve the Pre-BCM for all contracting actions expected to exceed the Contracting Officers threshold for award.
60	Final Negotiations	RMC C400 or SEA 02	<$5M: A-43 >$5M <$20M: A-43 >$20M <$100M: A-38 >$100M: A-38 (See Note 1)	Negotiation is a procedure that includes the receipt of proposals from offerors, permits bargaining, and usually affords offerors an opportunity to revise their offers before award of a contract. Bargaining, in the sense of discussion, persuasion, alteration of initial assumptions and positions, and give-and-take, may apply to price, schedule, technical requirements, type of contract or other terms of a proposed contract.

EVENT #	TASK OR MILESTONE	RESPONSIBLE ACTIVITY	CNO COST	DESCRIPTION
61	Post BCM Drafted within C400	RMC C400	<$5M: N/A >$5M <$20M: N/A >$20M <$100M: A-35 >$100M: A-35 (See Note 1)	Upon completing negotiations, a price negotiation memorandum must be developed. It should document the purpose and results of the negotiation, the extent to which negotiation objectives were met and the basis for accepting a position that departs from the established objective. To the extent that specific negotiation objectives were met, a statement to this effect is sufficient. A restatement or summary of information and analysis provided in the pre-negotiation is not required. However, where there are differences between the negotiation objectives and the actual negotiated outcome or issues not identified in the pre-negotiation plan, the price negotiation memorandum should provide a full explanation of the agreement reached.
62	CHINFO Release	RMC C400	<$5M: N/A >$5M <$20M: A-40 >$20M <$100M: A-32 >$100M: A-32 (See Note 1)	A news release is required per DFARs to provide information on all contractual actions or modifications that have a face value greater than amount in reference (e), subsection 303(a), excluding unexercised options. This information will be used in a public news release announcing the award. Congressional members whose states or districts are affected by the contract (either the contractor lives in the state or district or the work will be performed there) will be provided similar information concurrent with the public announcement. Contract award information will be provided to the appropriate PAO in the form of a news release.
63	Post BCM Routed and Approved Through SEA 02	RMC C400 or SEA 02	<$5M: N/A >$5M <$20M: N/A >$20M <$100M: A-30 >$100M: A-30 (See Note 1)	SEA 02 must approve the Post-BCM for all contracting actions exceeding the Contracting Officers threshold for award.
64	Definitize Work Package	RMC C400	<$5M: A-35 >$5M <$20M: A-35 >$20M <$100M: A-30 >$100M: A-30 (See Note 1)	The culmination of the contractual planning efforts resulting in a negotiated price for the availability that has been funded via a supplemental agreement. This step contractually obligates both the government and contractor to the requirements of the Work Package.
Note 1: For Availabilities in excess of $100M, milestones may need to be established earlier in the planning process to account for the DCAA Audit, Peer Review Process and other issues unique to the magnitude of the work package.				

EVENT #	TASK OR MILESTONE	RESPONSIBLE ACTIVITY	CNO COST	DESCRIPTION
65	Deliver Material (LLTM and Kitted Materials) to Executing Activity	Planning Yards, PARM	A-30	LLTM is any material that will take in excess of 30 days to procure. The government may elect to provide LLTM or prefabricated assemblies generally kitted via a planning yard. This material procured through sources other than the executing activity should be delivered 30 days prior to start of the availability to ensure there is no disruption to production.
66	Conduct WPER	RMC C300	A-30	Review of the integrated work production schedule has been prepared by the Executing Activity. The complete LMA Availability work package is defined and agreed upon at the WPER.
67	PICO's Complete	PARM RMC	A-30	As stated.
68	Start of Availability	Ship's Force, MT, Industrial Activity	A-0	The first day of the production period for the executing activity.
CMAV (RMC RESPONSIBILITY)				
These are notional milestones for CM or CMAV packages within the TAR threshold. If availabilities are expected to exceed the TAR threshold, the MT must establish milestones that fit the particular availability. COMMENTS OR REMEDIAL ACTION: Anything over $750k must TAR.				
69	Establish CM Availability Schedule	TYCOM	Annually	CMAV Schedules are established annually at the fleet scheduling conferences. TYCOM will publish routine updates as they occur for the CMAV schedules.
70	Establish Availability in the appropriate IT system	RMC C300	As Required	Availabilities will be established in the applicable planning database when known or work is ready to be screened.
71	100% of D-level maintenance work package 2Ks locked based on target control.	Ashore Ships Maintenance Manager	A-60	Intent is 100% of the expected AWRs have been screened to the CMAV. The planning activity continually develops specs in the most cost effective manner and does not batch this work in front of the next package development milestone.
72	100% of D-level maintenance work package 2Ks planned, estimated	Planning Activity	A-50	The requirement is all work brokered by the 100% lock milestone must be planned to include Work Item complete and LLTM identified and estimated with minimum quality as described as a "Class C" estimate.

EVENT #	TASK OR MILESTONE	RESPONSIBLE ACTIVITY	CNO COST	DESCRIPTION
73	IGE Submitted in support of 100% lock	RMC C300	A-50	The requirement is all work Planned in support of the 100% lock milestone must be estimated by the government with minimum quality as described as a "Class C" estimate.
74	Planning Activity "publish" package in the appropriate IT system	Planning Activity	A-45	This is the act of issuing a final specification package for the availability that will be used to formulate a proposal. All work after this date will be handled as supplemental or new work.
75	Final Work Item Review and Approval	RMC C300	A-45	Work Item reviews must be accomplished on a routine drumbeat established by the MT with the final work item review being completed in support of the established publishing date for the specification package. This will include the final quality, technical and contractual review of the work items (contract must include legal requirements i.e.; if sole source: is there sole source justification?).
76	I-level work package fully brokered	Ashore Ship Maintenance Manager	A-40	Intent is to fully broker all known Intermediate Level work to I-level by this date.
77	Contractor submits final package cost proposal	Contractor	A-35	This is the date the Prime contract holder must submit their valid and complete cost proposal. It must be in compliance with the DCAA's "CRITERIA FOR ADEQUATE CONTRACT PRICING PROPOSALS" associated with an option within the contract in support of a defined scope of work.
78	I-level work package fully accepted	RMC C900	A-33	Intent is for I-level to accept or reject all work brokered to it up to this point in time, work entering later in the process will be subject to normal Business Case Analysis and will likely need to be inducted into the work package as new work.
79	Submit I-level work package and schedule to contractor for integration	RMC C900	A-30	The LMA must develop an inclusive, detailed, integrated and resource-loaded schedule of all participating activities. All participants must meet and review the proposed plan and make necessary adjustments to render a balanced and optimized integrated schedule. This formal schedule review must occur after the WPIC, but no later than the Work Package Execution Review. The NSA or LMA must serve as the final arbiter of conflicts. By the WPER, all integrated schedule conflicts must be resolved by the NSA or LMA.

EVENT #	TASK OR MILESTONE	RESPONSIBLE ACTIVITY	CNO COST	DESCRIPTION
80	BCM and Negotiations Complete	RMC C400	A-22	Negotiation is a procedure that includes the receipt of proposals from offerors, permits bargaining and usually affords offerors an opportunity to revise their offers before award of a contract. Bargaining, in the sense of discussion, persuasion, alteration of initial assumptions and positions, and give-and-take, may apply to price, schedule, technical requirements, type of contract or other terms of a proposed contract. Upon completing negotiations, a price negotiation memorandum must be developed. It should document the purpose and results of the negotiation, the extent to which negotiation objectives were met and the basis for accepting a position that departs from the established objective.
81	Definitize Work Package	RMC C400	A-18	The culmination of the contractual planning efforts resulting in a negotiated price for the availability has been funded via a supplemental agreement. This step contractually obligates both the government and contractor to the requirements of the Work Package.
AVAILABILITY CLOSE OUT - START OF NEXT CYCLE (RMC or SURFMEPP RESPONSIBILITY)				
82	Start of Availability	RMC C300	A-0	The first day of the production period for the executing activity.
83	Conduct Departure and Assessment Conference	RMC C300	C+0	To verify completion of all work assigned to the availability or to document exceptions. Exceptions must have a plan for completion with an estimated completion date and must be tracked through completion. This conference will establish the date and conditions under which the TYCOM and NAVSEA will accept redelivery of the ship.
84	Issue Completion Report	NSA	C+60	NAVSEAINST 4710.8 series details the requirements for availability completion reporting which must include financial as well as production and exception reporting.
85	Upload BAWP 1 of 2 Tasks to ship's CSMP	SURFMEPP	C+65	SURFMEPP will upload a data file with all mandatory maintenance actions and expected CNO Availability services into the ship's CSMP in support of ship-specific MT screening and brokering requirements. The data file will span approximately ten (10) calendar quarters and will include the requirements through the next cycle's LCPC.
86	Verify Completion of Departure Report and Close Out of Avail in the Appropriate IT System	RMC C300	C+90	Purpose is to verify that financial information, AWRs and work items, as applicable, have been uploaded and closed out in the appropriate IT system as required by NAVSEA Standard Item 009-99.

EVENT #	TASK OR MILESTONE	RESPONSIBLE ACTIVITY	CNO COST	DESCRIPTION
87	Submit Final BAWP Close-Out Report	SURFMEPP	C+100	Purpose is to document the results (including follow up action items) resulting from the Close Out Meeting.
88	LCPC Meeting	SURFMEPP	C+115	The LCPC agenda will include a review of the planning schedule, Corrosion Plan, required CMP assessments, NDE modernization forecasts, CNO Availability services and routines (as applicable), organizational responsibilities and DFSs.
89	Upload BAWP 2 of 2 Tasks to ship's CSMP	SURFMEPP	C+125	SURFMEPP will upload a data file with all mandatory Tank and Void maintenance tasks into the ship's CSMP in support of ship-specific MT screening and brokering requirements. The data file will span the entire OFRP and will include the requirements through C+120.
90	Issue Post-LCPC Planning Schedule Letter	SURFMEPP	C+125	Confirms completion of the LCPC, lists all attendees, provides action items and associated POCs. SURFMEPP tracks all action items to completion. COMMENTS OR REMEDIAL ACTION: After last CNO Availability Completion.
91	TSRA-5 Discrepancies Screened	Ashore Ships Maintenance Manager	C+360	This event is the final validation of equipment prior to the ship's deployment. COMMENTS OR REMEDIAL ACTION: Done after intermediate training phase and should be completed 90 days prior to deployment.

APPENDIX A_2

FIRM FIXED PRICE A-120 AWARD CONUS AND HAWAII SURFACE SHIP AVAILABILITY MILESTONES

EVENT #	TASK, KEY EVENT OR MILESTONE	RESPONSIBLE ACTIVITY	FFP A-120 AWARD	DESCRIPTION
1	Establish CNO and CMAV Schedule	OPNAV (CNO) TYCOM (CMAV)	A-880	Schedule established per the FRP maintenance cycle. TYCOM will publish routine updates in NDE-NM.NET as they occur.
2	Issue Advance Planning Letter	SPM	A-850	Issue SPM Advance Planning Letter announcing CNO availability dates, cognizant NSA, RMC, and additional modernization planning requirements.
3	Establish Work Split Strategy for Modernization	SPM	A-850	PARMS will update Availability Planning Sheet and provide to SPM.
4	All SCDs Approved at Any Phase and Scheduled in NDE-NM.NET	PARM	A-720	All ship changes planned for installation will be scheduled in NDE-NM.NET.
5	Issue A-700 LOA	SPM (Program Alts) TYCOM (Fleet Alts)	A-700	NAVSEA and TYCOM LOA are issued showing all modernizations scheduled for the CNO Availability. The SPM LOA specifies to the NSA the SCs approved to be accomplished during a specific ship CNO availability. Forecasted ship changes may be viewed through the NDE database and continuing throughout the BAWP to AWP development process. This list will be reviewed at each BAWP Milestone Meeting. Items from this list will not be entered into the ship's CSMP until they have been reconciled with an issued LOA. Authorized and PNA SCs must be planned for execution.
6	Request Funding for Work Item Development – Maintenance and Repair	SDAES COR	A-670	Request necessary funding (IY-2) from TYCOM to plan Availability.
7	Third-Party SID Development Request Submitted to SPM for Approval of Work Executed by MSR IND-SIA Method of Install	PARM	A-660	Pending PY workload assessment and GFI maturity, if PARM desires to utilize a Third-Party SID developer vice designated PY, PARM must request and obtain permission from SPM. Third-Party SIDs must be reviewed and approved by designated PY.

EVENT #	TASK, KEY EVENT OR MILESTONE	RESPONSIBLE ACTIVITY	FFP A-120 AWARD	DESCRIPTION
8	Fund and Task SID Development for Work Executed by LMA IND-SIA Method of Install	PARM (Program Alts) TYCOM (Fleet Alts)	A-660	SIDs will be tasked and funded. For first time install SC, PARMS are required to provide the PY with the planned execution strategy (work split between shipyard and AIT) to support development of SID or trade-level manpower estimates for advance planning, schedule integration, and subsequent work specification development. Technical Data Packages or GFI will be provided in support of ship checks and SID development. Drawings are to be developed per NAVSEA TS 9090-600.
9	ICD-IRD Delivered to Alteration Developer or PY for IND-SIA Installs	PARM	A-660	As indicated, ICD-IRDs for IND-SIA installs provided to the developer or PY.
10	Provide Availability Target Control	TYCOM	A-655	A financial control is required to establish the Availability Planning Requirements.
11	Contract Determination Point Memo Issued	SEA21A	A-650	The contract determination point is the documented decision establishing whether an availability will be a CWB competition or will be restricted to Homeport.
12	Establish SDAES TI	SDAES COR	A-650	A TI is to be drafted by the SDAES COR and issued by NAVSEA 024 SDAES PCO for activities using SDAES planning support contract. This function authorizes the SDAES to begin the Planning process.
13	Provide Incremental Funding for Ordering LLTM	PARM (Program Alts) TYCOM (Maintenance and Fleet Alts)	A-649	Provide incremental funding for PY to order LLTM for both Maintenance (Repair) and Modernization (Ship Changes).
14	Establish Availability in the Applicable IT Maintenance System	RMC C300	A-649	Availabilities will be established in the applicable IT Maintenance System when known or work is ready to be screened.
15	BAWP Tasks Screened to Appropriate Avail	TYCOM PE	A-639	MT screens all BAWP WNs to the appropriate current or future maintenance availability within the respective Information Technology brokering system.
16	SDAES COR Requests Funding from PARMs for Modernization Work Item Development by SDAES	SDAES COR	A-620	SDAES TI is incrementally funded from A-650 for activities using SDAES planning support contract. This milestone is the final request for Maintenance, Repair, and Modernization Work Item Development funding.

EVENT #	TASK, KEY EVENT OR MILESTONE	RESPONSIBLE ACTIVITY	FFP A-120 AWARD	DESCRIPTION
17	Issue A-600 LOA	SPM (Program Alts) TYCOM (Fleet Alts)	A-600	The SPM must prepare and issue the LOA, identifying all Authorized and PNA modernization ship changes scheduled for installation. The SPM LOA specifies to the NSA the SCs to be accomplished during specific ship CNO availability. Authorized and PNA SCs must be planned for execution.
18	Finalize Method of Install for Modernization	PARM (Program Alts) TYCOM (Fleet Alts)	A-600	PARMs will provide final updates to work split strategy to SPM for inclusion in the A-600 LOA.
19	Revise SDAES TI to Incorporate Program Modernization Updates Based on LOA	SDAES COR	A-590	This action is initiated by the SDAES COR to add the Modernization planning work to the TI issued at A-650 for activities using SDAES planning support contract. Revision will be given to the SEA 024 SDAES PCO who will execute the revision to the TI. This action authorizes SDAES to begin Planning modernization work.
20	Issue Mandatory Material List Letter	SURFMEPP	A-550	Provides a list of required material necessary to accomplish Directed Maintenance Strategy tasks (information currently in Paragraph 5 of applicable Class Standard Work Templates). RMC request funding to order Directed Maintenance Strategy task material.
21	Submit Notification of Intent to Contract	SEA 21C (CWB) RMC C300 (Homeport)	A-540	Requirements generator sends contracting office notification of intent to contract an availability.
22	Modernization Ship Checks Completed for Ship-Specific SIDs for Work Executed by LMA (IND-SIA)	PY	A-540	Ship checks (Design, Verification, Production and Proofing) are accomplished in support of the development of SIDs. All ship checks will incorporate a validation and verification of actual Hull or Site configuration. This is a modernization milestone to ensure all design ship checks are complete in support of the SID delivery milestone.

EVENT #	TASK, KEY EVENT OR MILESTONE	RESPONSIBLE ACTIVITY	FFP A-120 AWARD	DESCRIPTION
23	Executive Level Executability Assessment I	CNRMC	A-540	One and Two-star review (also referred to as Stack Hands Brief) of the NSA's Executability Assessment by CNRMC, Fleet, and Type Commander. EA will include, but is not limited to; milestone adherence, overall availability risk assessment with a focus on specific barriers and concerns identified by the Project Team, description of any work or critical specific risks with mitigating actions and completion dates, issues with BAWP delivery and content, and preliminary issues with Long Lead Time Material, modernization, or any other area. The NSA shall provide a Workload and Resource Report or a Port Loading Layer Cake assessment on the industrial bases' ability to support the availability. This review is intended to determine the readiness of the planned availability, allow for requesting Flag-level assistance, and provide an opportunity for Flag-level direction as necessary. Surface Flag leadership, in concurrence with NAVSEA 00 and CNSF 00, will determine which availabilities require a follow-on 3-Star Stack Hands Brief. If a follow-on 3-Star Stack Hands Brief is not required, the Surface Flag shall provide NAVSEA 00 and CNSF 00 correspondence detailing the Executability Assessment I briefing to identify risks (mitigations and issues), Flag-level assistance requested, and their overall availability assessment.
24	Issue Consolidated Accountability Letter	SPM	A-526	Within 14 days of Executability Assessment I, the SPM will prepare a Consolidated Accountability Letter to the TYCOM and NAVSEA reporting on the overall planning milestone adherence and modernization maturity. This letter will call out the reason(s) items were removed from the work package, milestone risks for items retained and reason(s) items missed milestones or are incomplete. This letter will also outline the way ahead, mitigations to recover from missed milestones, and address the root cause for why the milestones were missed.
25	3-Star Stack Hands Event	NAVSEA, CNSF	A-510	Unless determined to be unnecessary based on the Surface Flag's decision during the Executive Level Executability Assessment I at A-540, the intent of this senior Flag review is to ensure alignment across the Surface enterprise of the readiness and health of the availability planning process and the region's industrial base. The focus of this review is the status of the A-540 risks identified during the 1-star and 2-star review which include, but is not limited to: the overall availability risk assessment, risk mitigation plans, new or unmitigated risks, and any issues to date concerning contracting, modernization, material assessment plans, ship checks, funding, material identification and ordering, work screening, or the ability of the region's industrial base to support the availability. (also referred to as Stack Hands Brief).

EVENT #	TASK, KEY EVENT OR MILESTONE	RESPONSIBLE ACTIVITY	FFP A-120 AWARD	DESCRIPTION
26	50% of D-level Maintenance Work Package 2-Kilos Locked Based on Target Control to Include All BAWP Items	TYCOM PE	A-500	Intent is 50% of the expected 2-Kilos (work, not services) have been screened and WNs brokered to the planning activity via tasking memo. The planning activity continually develops specs in the most cost-effective manner and does not batch this work in front of the next lock milestone.
27	Drawings for any SC Authorized to Use Third-Party SID Development Submitted to the Applicable PY for Review (for work executed by MSR)	PARM	A-500	If PARM obtained permission from SPM to utilize a Third-Party SIDs developer by A-600, PARM must submit Third-Party SIDs to designated PY for review. PY requires 60 days for initial review. SID tasking status to be documented in NDE-NM.
28	Task and Fund PY for SID Development of Work Executed by AIT	PARM	A-500	If approved by SPM to use Third-Party Developer, PARM must task and fund the PY to conduct SID review and approval when delivered to the PY. GFI (approved ICD-IRD or technical data package) is required at this milestone.
29	ICD-IRD Delivered to Alteration Developer or PY for AIT Installs	PARM	A-500	If PARM obtained permission from SPM to utilize a Third-Party SIDs developer by A-600, PARM must submit Third-Party SIDs to designated PY for review. PY requires 60 days for initial review.
30	Revise SDAES TI to Incorporate Program Modernization Updates Based on LOA	SDAES COR	A-490	This action is initiated by the SDAES COR to add the Modernization planning work to the TI that was issued at A-650 for activities using SDAES planning support contract. Revision will be given to the SEA 024 SDAES PCO who will execute the revision to the TI. This action authorizes the SDAES to begin planning Modernization work.
31	Third-Party SID Development Request Submitted to SPM for Approval of Work Executed by AIT	PARM	A-480	Pending PY workload assessment and GFI maturity, if PARM desires to utilize a Third-Party SID developer vice designated PY, PARM must request and obtain permission from the SPM. Third-Party SIDs must be reviewed and approved by designated PY.

EVENT #	TASK, KEY EVENT OR MILESTONE	RESPONSIBLE ACTIVITY	FFP A-120 AWARD	DESCRIPTION
32	Issue Sources Sought, RFI, Market Research	SEA 02 (CWB) RMC C400 (Homeport)	A-470	Sources Sought issued to determine if there are two or more capable businesses willing to perform the requirements of the CNO availability. The contracting officer issues the Sources Sought or RFI. Based on industry responses, SEA21C or RMC C300 develops the Market Research.
33	Complete P&E of Work Assigned by the 50% Work Package Lock Milestone to Include All BAWP Items and Program Modernization Updates Based on LOA	RMC	A-470	The requirement is all work brokered by the 50% lock milestone must be planned (Work Item complete and LLTM identified) and estimated with minimum quality as described as a "Class C" estimate.
34	Send Habitability Project Advance Planning Notice	TYCOM N43	A-450	This TYCOM-generated notice identifies Projects proposed for accomplishment, and provides work scope details including, if applicable, Ship's Force manpower requirements. This notice also requests Commanding Officer's comments, concurrence and commitment of resources to the proposed projects.
35	IGE Complete in support of 50% Package Lock	RMC C300	A-445	All work planned in support of the 50% lock milestone must be estimated by the government with minimum quality as described as a "Class C" estimate.
36	Long Lead Time Material Identified at 50% P&E Ordered	RMC	A-440	As stated, TYCOM to ensure funding is provided.
37	Accomplish Mid-Cycle Review	SURFMEPP	A-440	Meeting to review the ship's BAWP, CSMP, active DFS, Class Advisories, routines, services, and the latest Availability Duration. Surface Ship Engineered Operating Cycle applicable WNs will be branded as Mandatory Technical Requirements per the Joint Fleet Maintenance Manual. The BAWP Status Letter is the output.
38	PYs Issue or Deliver SIDs for Work Executed by LMA (IND-SIA)	PY	A-435	An SC without PY-approved SIDs must be considered not executable by the LMA and at risk of deferral from the SPM authorization letter.

EVENT #	TASK, KEY EVENT OR MILESTONE	RESPONSIBLE ACTIVITY	FFP A-120 AWARD	DESCRIPTION
39	80% of D-level Maintenance Work Package 2-Kilos Locked Based on Target Control to Include All BAWP Items and Program Modernization Updates Based on LOA	TYCOM PE	A-420	Intent is 80% of the expected 2-Kilos (work, not services) have been screened and WNs brokered to the planning activity via tasking memo. The planning activity continually develops specs in the most cost-effective manner and does not batch this work in front of the next lock milestone.
40	C5IMP Baseline Lock Event	SEA 05H	A-420	1. Provide C5IMP baseline assessment to FLT CDR for review and C5IMP baseline lock approval. 2. Review all Strike Force Interoperability Category 1 and 2 planned and scheduled SCs to establish the planned C5IMP baseline. 3. SCDs past the first Decision Point must be scheduled in NDE-NM.NET. SCDs planned but do not have a phase approval will be reviewed for inclusion in the C5IMP baseline. 4. SCs scheduled in NDE-NM.NET will be reviewed and presented to the FLT CDR for addition to the approved C5IMP baseline in an Authorized or Planned Not Authorized status. 5. Any C5IMP SC baseline change after this baseline lock will be submitted via C5IMP Electronic Change Control Board.
41	Maintenance Ship Checks Complete	RMC	A-420	Intent is all maintenance-related ship checks will be completed as early as possible within the planning process, however, no later than this milestone.
42	Provide AIT Support Service Requirements, Notional POA&M, and System Operation Verification Testing or TP, or Draft or Notional Platform System Operation Verification Testing or TP	PARM (Program Alts) TYCOM (Fleet Alts)	A-415	When an AIT requires industrial support, (e.g., crane and rigging services, welding or burning, compressed air), during accomplishment of the SC, coordinate with local RMC for Support. The AIT manager or designated representative must utilize Exhibit-1 Template "AIT Support Services Request Form" of the NAVSEA TS 9090-310 to provide requirements to the MT and the planning activity to generate a 4E-compliant support work item to be included in the AWP.

EVENT #	TASK, KEY EVENT OR MILESTONE	RESPONSIBLE ACTIVITY	FFP A-120 AWARD	DESCRIPTION
43	Submit Deferral Letter with MT Assist to SURFMEPP	TYCOM N43	A-415	TYCOM will submit a Change Deferral Request Letter to SURFMEPP, which will include a list of Change Deferral Requests for subject OFRP Maintenance Cycle.
44	Issue BAWP Status Letter	SURFMEPP	A-410	Confirms completion of the Mid-cycle Review milestone. It includes any End-to-End Process non-compliance concerns, "AS"-branded Mandatory Safety Alteration WNs due within the cycle, discusses the disposition of Class Advisories and DFS, TSRA and Dry-Docking concerns (if applicable).
45	Submit Deferral Recommendation Letter to SDM (SEA 05)	SURFMEPP	A-405	SURFMEPP receives TYCOM's Deferral Request Letter, adjudicates the Mandatory Technical Requirement requests (if any), and provides recommended actions for review by the SDM (SEA 05) via the Deferral Recommendation Letter.
46	Complete P&E of Work Assigned by the 80% Work Package Lock Milestone to Include All BAWP Items and Program Modernization Updates Based on LOA	RMC	A-400	All work brokered by the 80% lock milestone must be planned (Work Item complete and LLTM identified) and estimated with the minimum quality described as a "Class C" estimate.
47	GFI Provided to SDAES	RMC	A-400	Per SEA 21C/010 of 4 May22, any brokered Work Notifications missing GFI at 100% Lock will be removed from the availability package and will be subject to the Late Authorization process.

EVENT #	TASK, KEY EVENT OR MILESTONE	RESPONSIBLE ACTIVITY	FFP A-120 AWARD	DESCRIPTION
48	LMA (IND-SIA, AIT, SS) Modernization Package Lock with Like-Ship SIDS in support of Work Item Development (Must Be Class or Flight Specific). Issue A-400 LOA	SPM	A-400	1. All SCs without approved SIDs or "like ship" SIDs for LMA work (SCs with Method of Install of IND-SIA) by A-365 or FLT CDR or TYCOM SID risk acceptance (including a SPM-approved risk reduction plan addressing the late delivery of SIDs) will require Late Add Approval. Like Ship SIDs are Class or Flight specific. 2. The PARM must submit a Late Add Request to the Platform TYCOM for all SCs added after the A-400 LOA having a Method of Install of IND-SIA or AIT Installations requiring support services unless GFI for the solicitation is submitted by A-365. 3. Flag approval is required for all SCs with a Method of Install of IND-SIA or AIT Installations requiring support services unless submission of GFI for the solicitation is communicated to the SPM by A-415 and submitted by A-365. Note: SIDs are not required for AIT installations requiring support services until A-240; Support Service Requests are due no later than A-365. 4. Under FFP, any SC included in the solicitation is liable for financial responsibility for award. Removals or deferrals from the work package shall occur before A-365 to avoid any financial implications.
49	SDM Deferral Letter Response Submitted to TYCOM	SEA 05 SDM	A-395	SEA 05 issues final adjudication of TYCOM's Mandatory Technical Requirement deferral request.
50	IGE Complete in Support of 80% Lock	RMC C300	A-385	All work planned in support of the 80% lock milestone must be estimated by the government with the minimum quality described as a "Class C" estimate.
51	Acquisition Plan Approved	SEA 21C (CWB) RMC 300 (Homeport)	A-380	Acquisition Plan developed, reviewed, approved and signed, documenting the acquisition plan for a particular solicitation.
52	Long Lead Time Material Identified at 80% P&E Ordered	RMC	A-370	As stated. TYCOM to ensure funding is provided.

EVENT #	TASK, KEY EVENT OR MILESTONE	RESPONSIBLE ACTIVITY	FFP A-120 AWARD	DESCRIPTION
53	100% of D-level Maintenance and All Modernization LMA (IND-SIA or AIT with Support Services) Work Package 2-Kilos Locked Based on Target Control to Include All BAWP Items and Program Modernization Updates Based on LOA	PARM (Program Alts) TYCOM PE (Maintenance and Fleet Alts)	A-365 * A-379	1. Intent is 100% of the expected 2-Kilos have been screened and WNs brokered to the planning activity via tasking memo. The planning activity continually develops specs in the most cost-effective manner and does not batch this work in front of the next package development milestone. 2. 100% Package Lock is defined as all planned depot-level work brokered to the planning activity for development of work specifications. No additional work shall be brokered for inclusion into the basic proposal after the lock date. Any SC added after 100% Package Lock must follow the New Work process and accept all applicable financial implications of New Work. 3. GFI submission deadline for all work notifications. Missing GFI (SIDs, BOM/4720, SOW, SSR) results in WN being removed from work package. * Coast Wide Bid (CWB) Milestones Only. For work discovered post lock, work candidates should be reviewed for inclusion as part of the Post Award Supplemental process.
54	Issue TYCOM 100% Lock Letter	TYCOM	A-365	The Lock Letter is the complete list of all TYCOM work with the Job Sequence Numbers screened and brokered to the identified CNO availability. It includes a short CSMP summary and Class "F" cost estimate for each job sequence number. Lock letter include: Mandatory Class Maintenance Plan tasks, Fleet alterations, TYCOM repairs, option items, and services and routines.

EVENT #	TASK, KEY EVENT OR MILESTONE	RESPONSIBLE ACTIVITY	FFP A-120 AWARD	DESCRIPTION
55	Executive Level Executability Assessment II	CNRMC	A-365	This Flag review will serve as the original 100% Depot Level Maintenance Work Package 2-Kilo Lock based on Target Controls. The focus of this review would include, but not be limited to an updated overall risk assessment with focus on specific barriers, description of any work, critical chain that does not fit within the availability's duration, and concerns identified by the Project Team in their Executability Assessment. Prior to this assessment, the SPM, TYCOM, SURFMEPP, and NSA Project Team shall agree on the proposed original work package which will be presented. The specific items to be locked are Modernization, CMP work items, and currently screened CSMP work. From this point forward, the addition of any externally generated work requirements (e.g., late modernization, new life cycle maintenance requirements, etc.) will be extremely limited and addressed through the Flag-level Late Add Governance process. This responsibility will be shared jointly between TYCOM and SEA21 or RMC. For all platforms, the TYCOM will have cognizance over the assessment schedule and should ensure the vessel is available for the required assessment periods. The expected outcome of this brief is the full understanding of the agreed upon "locked" work package, timeline or key events to availability start, risks and challenges to the availability, required actions and mitigations for outstanding risks, and the combined strategy for successful execution.
56	Submit Third-Party SIDs to PY for Review and Approval	PARM	A-360	If PARM obtained permission from SPM to utilize a Third-Party SID developer by A-480, PARM must submit Third-Party SIDs to designated PY for review.
57	Final Funding Provided for LLTM	PARM (Program Alts) TYCOM (Maintenance and Fleet Alts)	A-360	Provide incremental funds to PY to order LLTM for both repair and alt or mod work to meet required dates. This is an iterative process as LLTM is identified and funding is requested and authorized based on the lead time. It is incumbent on the Execution Planning Activity or MT to identify LLTM as soon as possible. LLTM is defined as any material with a delivery date in excess of 30 days.
58	Validate Availability Target Control	TYCOM	A-360	Provide the latest funding requirements (target controls) for the CNO availability based on the budget cycle (PRESBUD, DON-FAST, OSD).

EVENT #	TASK, KEY EVENT OR MILESTONE	RESPONSIBLE ACTIVITY	FFP A-120 AWARD	DESCRIPTION
59	Issue Consolidated Accountability Letter	SPM	A-351	Within 14 days of Executability Assessment II, the SPM will prepare a Consolidated Accountability Letter to the TYCOM and NAVSEA reporting on the overall planning milestone adherence and modernization maturity. This letter will call out the reason(s) items were removed from the work package, milestone risks for items retained and reason(s) items missed milestones or are incomplete. This letter will also, outline the way ahead and mitigations to recover from missed milestones and address the root cause for why the milestones were missed.
60	Complete P&E of Work Assigned by the 100% Work Package Lock Milestone to Include All BAWP Items and Program Modernization Updates Based on LOA	RMC	A-350	The requirement is all work brokered by the 100% lock milestone must be planned (Work Item complete and LLTM identified) and estimated with the minimum quality described as a "Class C" estimate.
61	Source Selection Plan Approved	SEA 21C (CWB) RMC C400 (Homeport)	A-335	Source Selection Plan developed, reviewed, approved and signed, documenting source selection requirements for the particular solicitation.
62	IGE Complete in Support of 100% Lock	RMC C300	A-335 * A-349	All work planned in support of the 100% lock milestone must be estimated by the government with the minimum quality described as a "Class C" estimate. * CWB only.
63	Final Work Item Review and Approval	RMC C300	A-335 * A-349	Work Item reviews must be accomplished on a routine drumbeat established by the MT with the final work item review being completed in support of the established publishing date for the specification package. This will include the final quality, technical and contractual review of the work items. Contractual must include legal requirements, i.e., if sole source, is there sole source justification? * CWB only.
64	Work Package Published in NMD	RMC C300	A-333 * A-347	The work package is locked from any further changes to support accurate and complete requirement package turnover to SEA 21 or RMC C400. * CWB only.

EVENT #	TASK, KEY EVENT OR MILESTONE	RESPONSIBLE ACTIVITY	FFP A-120 AWARD	DESCRIPTION
65	Accurate and Complete Planning Package Verified and Ready for Solicitation. Turnover to SEA 21C or RMC C400	RMC C300	A-330 * A-344	Requirements Packages must include all necessary data as required in the Requirements Package Checklist (e.g., CD, References, Key Events, Work Items, CLIN Structure). RMC C300 is responsible for ensuring all required data is compiled and submitted to the cognizant PCO (SEA21C for CWB and RMC C400 for homeport). * CWB only.
66	PY Issues RFP to SUPSHIP in support of LLTM Procurement	PY	A-330	RFP delivered to SUPSHIP to support PY LLTM procurement for Modernization material.
67	Conduct WPIC	RMC C300	A-330	Provides a forum for early identification of work requirements requiring integration to avoid conflicts with other work during execution.
68	3-Star Stack Hands Event	NAVSEA, CNSF	A-330	The intent of this senior Flag review is to ensure alignment across the platform enterprise of the "locked" CNO availability original work package, the health of the availability planning process and the regional industrial base. The focus of this review would include, but not be limited to a summary of the A-365 original work package, an overall availability risk assessment, risk mitigation plans, new or unmitigated risks, and any issues to date with contracting, modernization, assessment plans, ship checks, funding, material identification and ordering, work screening, as well as any identified issues through the Milestone Adherence Board.
69	Accurate and Complete Requirements Package Verified and turned over to Contracting Officer	SEA 02 (CWB) RMC C400 (Homeport)	A-328	Requirements Packages must include all necessary data as required in the Requirements Package Checklist. RMC C300 is responsible for ensuring all required data is compiled and submitted to the cognizant PCO. **This is a required Key Event.**

EVENT #	TASK, KEY EVENT OR MILESTONE	RESPONSIBLE ACTIVITY	FFP A-120 AWARD	DESCRIPTION
70	Pre-Solicitation Peer Review Start – Ship Specification Package, Inter Port Differential Memo, Market Research, CLIN Structure, IGE, RFP, CDR provided for Peer Review	SEA 02 PCO (CWB) RMC C400 (Homeport)	A-325	Cognizant PCO must validate that all the required data has been provided and in the proper format. Upon completion of the verification, the requirements should be ready to be incorporated into a solicitation.
71	Long Lead Time Material Identified at 100% P&E Ordered	RMC	A-320	As stated. TYCOM to ensure funding is provided.
72	Pre-Solicitation Peer Review Complete	SEA 02 PCO (CWB) RMC C400 (Homeport)	A-315	The cognizant PCO in conjunction with the Peer Review Board, have confirmed the solicitation and all supporting attachments are complete and align with the planning documentation.
73	Solicitation for Proposals	SEA 02 CS (CWB) RMC C400 (Homeport)	A-315	Non-Multi-Option Contracting Vehicles. The Federal Acquisition Regulation designates SAM.gov as the mandatory "Government-wide point of entry" for posting Government business opportunities, including proposed contract actions, solicitations and associated information.
74	Funding for Procurement of LLTM Provided to SUPSHIP by PARMs or TYCOM	PARMs or TYCOM	A-315	All funding required for PY procurement of Modernization LLTM available for award by SUPSHIP.
75	Complete Offeror's Ship Checks	Offerors	A-285	In solicitations where the subject ship or a sister ship is made available to prospective offerors, this milestone marks the date where ship checks have been completed.
76	PY Issue Shortage Reports	PY	A-285	PY identify any LLTM in jeopardy of not meeting delivery dates and provide notification to the SPM and SC sponsor.

EVENT #	TASK, KEY EVENT OR MILESTONE	RESPONSIBLE ACTIVITY	FFP A-120 AWARD	DESCRIPTION
77	Cutoff for Offeror's Questions	SEA 02 CS (CWB) RMC C400 (Homeport)	A-270	The no later than date, issued by the PCO, is the date the government will no longer accept pre-bid inquiries for a particular solicitation. The time frame established allows the PCO time to respond to the inquiry while still maintaining adequate time for the contractor to produce a proposal or bid.
78	Solicitation Amendment for Offeror's Questions	SEA 02 CS (CWB) RMC C400 (Homeport)	A-255	The deadline by which the Government must respond to all outstanding pre-bid inquiries, in the form of an Amendment to the Solicitation, to ensure all necessary changes and updates are incorporated and provide adequate time for contractors to produce proposals.
79	Warfare System Installation Assessment	SEA 05H	A-240	Provide to the Warfare Systems Integration Manager with a validated baseline for scheduled SCs in NDE-NM.
80	PY Will Issue or Deliver SIDs Intended for Execution by AIT	PY	A-240	(AIT ONLY) PY will issue or deliver SIDs intended for execution by AIT.
81	Initial Proposals Received	Offerors	A-240	This is the date, provided by the PCO, when a FFP offeror must submit their bid to be considered responsive. Submissions after this date are typically rejected.
82	Evaluations Start (TERP, PAT)	SEA 02 (CWB) RMC C400 (Homeport)	A-240	Once the PAT performs an initial compliance check on received proposals, the PAT (led by the SEA 02 or RMC C400, for CWB or homeport) and TERP-SSEB (led by SEA21C or RMC C300, for CWB or homeport) begin their review and analysis of each offeror's price (PAT) and non-price proposals (TERP-SSEB). TYCOM is a participant but not the primary responsible activity.
83	Funding Request Based on Highest Proposed ("Worst Case") CLINs	SEA 21C (CWB) RMC C300 (Homeport)	A-230	To ensure adequate funding is available for the requirement, SEA02 provides SEA21 with the highest proposed price for each CLIN (irrespective of the offeror). SEA21 provides notification for awareness to respective funding stakeholders.

EVENT #	TASK, KEY EVENT OR MILESTONE	RESPONSIBLE ACTIVITY	FFP A-120 AWARD	DESCRIPTION
84	Establish Prorate Percentage	SEA 21C (CWB) RMC C300 (Homeport) TYCOM*	A-230	All mature SCs listed on the LOA will be considered in the formula for prorations. The budgets associated with SCs and repair and maintenance will lock the proration distribution percentages. *Applicable if TYCOM provides funding for alterations and planning efforts.
85	C5I PNA Review	SEA 05H	A-210	C5IMP meeting where status of all SCDs that are PNA are briefed by the SEA 05H Baseline Managers mainly to the TYCOMs but also for FLT CDR awareness. Attendees are the PARMs to be able to support the status as well as the rest of the C5IMP community, but also the SPMs are invited for their awareness.
86	ILS Submitted to SPM for Review and Certification	PARM	A-210	PARMs shall ensure ILS certification packages are submitted to ensure certification is met by the A-120 milestone. (PMS 321: Interim and Hull cert may be approved with immature ILS products. If all ILS products are mature, a final class ILS cert must be approved by the SPM.)
87	Evaluations Complete (i.e., Report Complete), PAT-TECH, transfer to Legal for Review	SSEB, PAT Chairs	A-210	The PAT and TERP-SSEB have completed their respective analyses of each offeror's proposal and prepared a summary report. These reports are sent to legal for review and concurrence before presenting to the SSAC.
88	Pre-BCM Route for Approval	SEA 02 CS (CWB) RMC C400 (Homeport)	A-200	Pursuant to DFARS 215.306(c)(1), for all contract actions valued at over $100 Million, PCOs should conduct discussions; however, discussions are highly encouraged by the FAR and DFARS irrespective of dollar value. When discussions are anticipated, the PCO prepares a Pre-Business Clearance Memorandum, which documents the findings of the PAT and TERP-SSEB, establishes the competitive range and requests approval to enter into discussions.
89	Pre-BCM Approved	SEA 02 CS (CWB) RMC C400 (Homeport)	A-195	The Pre-BCM has been approved through the proper chain of command.

EVENT #	TASK, KEY EVENT OR MILESTONE	RESPONSIBLE ACTIVITY	FFP A-120 AWARD	DESCRIPTION
90	Discussions Commence	SEA 02 CS (CWB) RMC C400 (Homeport)	A-195	The Government enters exchanges with each offeror in the competitive range to address deficiencies in offeror's proposal and obtain the best value for the Government. Pursuant to FAR 15.306(d)(3), at a minimum, the PCO must discuss any weaknesses, deficiencies or adverse past performance information for which an offeror has not yet had an opportunity to respond.
91	Authorize C5IMP Baseline in NDE-AMPS	Fleet	A-190	All SCs in baseline must be approved for SPM A-95 LOA Authorization.
92	All Modernization Risk Assessments Approved	PARM	A-180	Perform a risk assessment for SCs that have not achieved maturity following the Navy Modernization milestone charts to determine whether to proceed with installation planning. Excludes SPM approved LI-type alterations. Excludes LI (formerly designated as Sustainment Type I and II) SCs, AIT installations not requiring LMA support services or SIDs, and software only SCs. The Continue to Plan Message in support of this milestone is released by the PARM. TYCOM will endorse or provide recommendation and will approve BFI CAT 3&4 SCs; Continue to Plan message requires Fleet Approval for BFI CAT 1&2 SCs.
93	Discussions Closed	SEA 02 CS (CWB) RMC C400 (Homeport)	A-180	Should the Source Selection Decision Document and the Pre-BCM determine discussions with Offerors are in the best interest of the Government, this milestone means all discussions and correspondence have been completed and FPRs have been requested.
94	Supplemental Package Locked	TYCOM	A-180	Additional work added between package lock (A-365) and A-240 must be locked by A-180. Intent is 100% of the expected WNs have been screened and brokered to the planning activity via tasking memo. The planning activity continually develops specs in the most cost-effective manner and does not batch this work in front of the next package development milestone (Post-Award Supplemental Only).
95	Start Pre-Final Proposal Request Peer Review	SEA 02 CS (CWB) RMC C400 (Homeport)	A-180	The cognizant PCO in conjunction the Peer Review Board, performs a detailed review of the Pre-Negotiation BCM and proposed discussion letters to ensure all issues have been addressed.

EVENT #	TASK, KEY EVENT OR MILESTONE	RESPONSIBLE ACTIVITY	FFP A-120 AWARD	DESCRIPTION
96	ILS Certification Status, are to be, at minimum, under development	PARM	A-180	It is the responsibility of the associated activities to ensure timely submittal of ILS packages to ensure milestone compliance.
97	End Pre-Final Proposal Request Peer Review	SEA 02 CS (CWB) RMC C400 (Homeport)	A-170	The Peer Review Board has determined all issues have been addressed with each offeror in the competitive range. Authority is granted to request FPRs from offerors and close discussions.
98	Final Proposal Request	SEA 02 CS (CWB) RMC C400 (Homeport)	A-170	The Government requests FPRs to clarify and document issues addressed during discussions from all offerors in the competitive range.
99	Final Proposal Revision Received	Offerors	A-170	The date where FPRs from offerors within the competitive range may be submitted in response to the Discussion Questions.
100	100% Complete Supplemental P&E	SDAES	A-165	The requirement is that all work brokered by the 100% lock milestone must be planned (Work Item complete and LLTM identified) and estimated with the minimum quality described as a "Class C" estimate (Post-Award Supplemental Only).
101	Evaluations Start (TERP and PAT)	SEA 02 (CWB) RMC C400 (Homeport)	A-155	The PAT (led by the SEA 02 or RMC C400, for CWB or homeport) and TERP-SSEB (led by SEA21C or RMC C300, for CWB or homeport) begin review and analysis of each offeror's FPR to its price (PAT) and non-price proposals (TERP-SSEB). TYCOM is a participant but not the primary responsible activity
102	ENG & QA Review and Estimate, the IGE, Submitted in Support of Supplemental Lock	RMC C300	A-150	All work planned in support of the 100% lock milestone must be estimated by the government with minimum quality as described as a "Class C" estimate (Post-Award Supplemental Only).
103	Identify Availability Funding for Modernization Work	NSA	A-150	Identify modernization execution funding requirements to SPM. Provide a no later than date for required funding.

EVENT #	TASK, KEY EVENT OR MILESTONE	RESPONSIBLE ACTIVITY	FFP A-120 AWARD	DESCRIPTION
104	Supplemental Published in NMD	RMC C300	A-148	The work package is locked from any further changes to support accurate and complete requirement package turnover to SEA 21 or RMC C400 (Post-Award Supplemental Only).
105	Accurate and Complete Supplemental Package	RMC C300	A-147	Requirements Packages must include all necessary data as required in the Requirements Package Checklist. RMC C300 is responsible for ensuring all required data is compiled and submitted to the cognizant PCO (Post-Award Supplemental Only). **This is a required Key Event**.
106	Conduct WPIC	RMC C300	A-147	Provides a forum for early identification of work requirements requiring integration to avoid conflicts with other work during execution (Post-Award Supplemental Only).
107	Evaluations Complete (i.e., Report Complete), PAT or TECH, Transfer to Legal for Review	SSEB, PAT Chairs	A-140	The PAT and TERP-SSEB have completed their respective analysis of each offeror's FPRs and prepared revised summary reports. These reports are sent to legal for review and concurrence before presenting to the SSAC.
108	Legal Review Complete	NAVSEA (CWB) RMC Legal (Homeport)	A-138	Legal has reviewed and provided concurrence regarding the PAT and TERP-SSEB findings.
109	Reports Provided to SSAC for Review	SSAC Chair	A-138	Following legal review, PAT and TERP-SSEB summary reports provided to the SSAC for Award decision recommendation.
110	SSAC Convenes and Award Decision Recommendation	SSAC	A-136	SSAC makes Award decision recommendation to SSA.
111	SSAC Decision Recommendation and Reports Provided to SSA for Review	SEA 21C, PMS 421, PMS 321	A-133	SSAC Award recommendation and associated reports provided to the SSA.

EVENT #	TASK, KEY EVENT OR MILESTONE	RESPONSIBLE ACTIVITY	FFP A-120 AWARD	DESCRIPTION
112	All Funding Available for Award	TYCOM (Maintenance and Fleet Alts) PARM (Program Alts)	A-133	All availability funding available for execution; SEA 02 (CWB) and RMC C400 (Homeport) validate funding availability. TYCOM and PARM provide funding.
113	SSA De-briefed and Award Decision	SEA 21, RMC C400	A-132	SSAC Award decision recommendation reviewed, and final Award decision made by the SSA.
114	Initiate CHINFO Drafting	SEA 02 CS (CWB) RMC C400 (Homeport)	A-131	Public announcement is required for all contract awards (or modifications) with a value greater than amount in reference (e), subsection 303(a) (excluding options). The PCO prepares a press release for publication to the CHINFO after obtaining legal approval.
115	Start Pre-Award Peer Review	SEA 02 (CWB) RMC C400 (Homeport)	A-131	The cognizant PCO in conjunction with the Peer Review Board, performs a detailed review of the Post-Negotiation BCM to ensure all issues raised during discussions have been adjudicated and basis for award has been established.
116	Final BCM Approved	SEA 02 CS (CWB) RMC C400 (Homeport)	A-131	The Post-Negotiation BCM has received approval through the appropriate chain of command.
117	Complete Pre-Award Peer Review	SEA 02 CS (CWB) RMC C400 (Homeport)	A-125	The Peer Review Board has determined all issues have been addressed with the awardee. Authority is granted to award the contract.

EVENT #	TASK, KEY EVENT OR MILESTONE	RESPONSIBLE ACTIVITY	FFP A-120 AWARD	DESCRIPTION
118	CHINFO Released	SEA 02 CS (CWB) RMC C400 (Homeport)	A-122	Public announcement is required for all contract awards (or modifications) with a value greater than the amount in reference (e), subsection 303(a) (excluding options). This information will be used in a public news release announcing the award. Congressional members whose states or districts are affected by the contract (either the contractor lives in the state or district, or the work will be performed there) will be provided similar information concurrent with the public announcement. Contract award information will be provided to the appropriate PAO in the form of a news release.
119	100% of O-level Maintenance Work Package Locked	SURFGRU, ISIC, Ship's Force	A-120	Develop a Force Afloat Work Package (FAWP) including all major maintenance actions such as PMS, repairs, alterations and testing to be conducted by Ship's Force during the availability, as applicable. Review PMS, CSMP and Testing requirements and ensure all Ship's Force maintenance actions scheduled for accomplishment during the availability are identified. Ship's Force must submit their FAWP to the applicable SURFGRU or ISIC for concurrence prior to submission as final to the applicable RMC.
120	LMA Contract Award	SEA 02 PCO (CWB) RMC C400 (Homeport)	A-120	Notification by the Contracting Officer to a bidder that his offer, or a negotiated proposal, has been accepted. This award establishes a legal obligation between the parties.
121	Submit I-Level work package; I-Level Lock	RMC C900	A-120	Intent is 100% of the expected WNs have been screened and brokered to the I-Level planning activity.
122	AIT Contract Award	AIT Manager, PARM	A-120	The AIT Manager must award AIT contracts for work not to be accomplished by the prime contractor and identify all outside activities participating in the availability.

EVENT #	TASK, KEY EVENT OR MILESTONE	RESPONSIBLE ACTIVITY	FFP A-120 AWARD	DESCRIPTION
123	Final Modernization Work Package Risk Assessment	PARM	A-120	The intent of this assessment is to ensure modernization work "locked" into the work package at A-365 (or added through the Late Add Governance process) has matured to plan. Note the A-120 date was selected based on current planning product milestones (i.e. SID delivery, AIT contract award, execution POA&M delivery, etc.). The focus of this review would include, but not be limited to: review of modernization included in the work package that has fallen behind execution-related planning product milestones and any specific high risk modernization work items. The outcome of this review will be decisions on items that are behind or have risks associated with them to determine if they will remain part of the work package. The documented result of this review will be an updated LOA. Risk Assessment Message is performed and release by the PARM with input from SURFMEPP, SEA21, SPM, and RMC. TYCOM will endorse or provide recommendation; Risk Assessment Message requires Fleet Approval.
124	Issue Supplemental Package for Proposal	RMC C400	A-118	Provide the additional post award supplemental work package to the awarded offeror for proposal.
125	Conduct Post-Award Conference	RMC C400	A-115	One conference for Government only, followed by a conference with Government and Contractor.
126	Issue Consolidated Accountability Letter	SPM	A-102	Within 18 days after the Final Modernization Work Package Risk Assessment, the SPM will issue a Consolidated Accountability Letter on overall planning milestone adherence and modernization maturity. Report will call out the reason for items removed from the work package at A-120, maturity issues for retained items, outline the way ahead and mitigations for non-mature items and describe the root cause for why they are not mature. In addition, the letter shall also detail any observed trends and repeat poor performers at the program level.
127	Provide FAWP to the RMC	Ship's Force	A-100	Ship's Force responsible to provide a FAWP that consists of all major maintenance actions such as PMS, repairs, alterations and testing to be conducted by Ship's Force during the availability. Between A-100 and A-85, or sooner, the RMC Project Team under the supervision of the Project Manager will ensure the FAWP is properly formatted, with proper logic and is compatible with inclusion and integration with the LMA's Integrated Production Schedule (IPS).

EVENT #	TASK, KEY EVENT OR MILESTONE	RESPONSIBLE ACTIVITY	FFP A-120 AWARD	DESCRIPTION
128	Schedule I-level Work Integration	RMC C900	A-100	I-level work for a CNO availability is to be provided to the RMC Code 300 Project Team. Between A-100 and A-85, or sooner, the RMC Project Team under the supervision of the Project Manager will ensure the "I" level Work List is properly formatted, with proper logic and is compatible with inclusion and integration with the LMA's IPS.
129	ILS Certification Packages Complete, SPM Approved	SPM	A-95	All SCs planned for installation during a CNO availability must have completed ILS certification by A-95 or the SC is at risk of deferral.
130	Issue A-95 LOA Message	SPM	A-95	The SPM must prepare and issue the LOA. All modernization SCs must be fully mature or have an authorized risk assessment in place. All fully mature LI (formerly designated as Sustainment Type I and II) SCs, AIT installations not requiring LMA support services or SIDs, and software only SCs must be scheduled in NDE-NM no later than A-100 for inclusion in the A-95 LOA. These SCs do not have significant integration impact on a CNO availability and may be added to the package without an approved late add request up to A-95, pending full maturity after C5IMP Baseline push.
131	Provide AIT Production POA&M	AIT Manager	A-85	1. AIT Managers will submit AIT Production POA&Ms to the LMA (with info to the NSA) for all planned modernization to allow the LMA to properly integrate AIT work into the IPS. 2. The initial production POA&M submission must contain the data elements specified in NAVSEA Standard Item 009-60 using the Exhibit-2 template in NAVSEA TS 9090-310 to integrate schedule.
132	Provide FAWP and "I" Level Work List to the LMA	RMC C300	A-85	No later than A-85 the RMC Code 300 will deliver both the FAWP and the "I" Level Work List as GFI to the LMA in a format compatible with the data elements of the NAVSEA Standard Item 009-060.
133	Conduct WPER	RMC C300	A-60	Review of the integrated work production schedule that has been prepared by the Executing Activity. The complete LMA Availability work package is defined and agreed upon at the WPER.
134	Award Supplemental Package	SEA 02, PCO (CWB) RMC C400 (Homeport)	A-60	Supplemental package locked at A-180 awarded. Target Award is A-60 with an A-0 threshold.

EVENT #	TASK, KEY EVENT OR MILESTONE	RESPONSIBLE ACTIVITY	FFP A-120 AWARD	DESCRIPTION
135	Schedule Model Review	Executing Activity	A-59	All involved stakeholders performing work (e.g., D-Level, O-Level and I-Level and MOD work) will be de-conflicted and integrated into a package to meet availability schedule.
136	Deliver Material (LLTM and Kitted Materials) to Executing Activity	PY* PARM** RMC C500***	A-30	100% of LLTM kitted material will be delivered to awarded LMA in support of on-time availability start and execution. *PY responsible for non-GFE material delivery. **PARM responsible for funding and GFE delivery. ***RMC C500 is responsible for LLTM turnover.
137	PICO's Complete	PARM RMC	A-30	As stated.
138	Start of Availability	Executing Activity	A-0	The first day of the production period for the executing activity, including but not limited to, LMA, AITs, and In-Service Engineering Activities.
139	Conduct Departure and Assessment Conference	RMC C300	C+0	To verify the completion of all work assigned to the availability or to document exceptions. Exceptions must have a plan for completion with an estimated completion date and must be tracked through completion. This conference will establish the date and conditions under which the TYCOM and NAVSEA will accept re-delivery of the ship.
140	Issue Completion Report	NSA	C+60	NAVSEAINST 4710.8 details the requirements for availability completion which must include financial as well as production and exception reporting.
141	Upload BAWP Part 1 of 2 Tasks to Ship's CSMP	SURFMEPP	C+65	SURFMEPP will upload a data file with all mandatory maintenance actions and expected CNO Availability services, except for Tanks and Voids, into the ship's CSMP in support of ship-specific MT screening and brokering requirements. The data file will span the entire OFRP and will include the requirements through the next cycle's LCPC.
142	Conduct SURFMEPP BAWP Closeout Meeting	SURFMEPP	C+70	Identifies "A"-branded BAWP requirements completed, not completed, or deferred. Establishes requirements for the next OFRP Maintenance Cycle and reviews outstanding DFS.
143	Verify Completion of Departure Report and Closeout of Avail in the Appropriate IT System	RMC C300	C+90	Purpose is to verify financial information, AWRs and work items, as applicable, have been uploaded and closed out in the appropriate IT system as required by NAVSEA Standard Item 009-99.

EVENT #	TASK, KEY EVENT OR MILESTONE	RESPONSIBLE ACTIVITY	FFP A-120 AWARD	DESCRIPTION
144	Submit Final BAWP Closeout Report	SURFMEPP	C+100	Purpose is to document the results (including follow up action items) from the Closeout Meeting.
145	Conduct LCPC	SURFMEPP	C+115	The LCPC agenda will include a review of the planning schedule, Corrosion Plan, required class maintenance plan assessments, NDE modernization forecasts, CNO Availability services or routines (as applicable), organizational responsibilities, and DFSs.
146	Upload BAWP Part 2 of 2 Tasks to Ship's CSMP	SURFMEPP	C+125	SURFMEPP will upload a data file with all mandatory Tank and Void maintenance tasks into the ship's CSMP in support of ship-specific MT screening and brokering requirements. The data file will span the entire OFRP and will include the Tank and Void requirements through the next cycle's LCPC.
147	Issue Post-LCPC Letter	SURFMEPP	C+125	Confirms completion of the LCPC, lists all attendees, provides action items and associated POCs. SURFMEPP tracks all action items to completion.

APPENDIX A3

FIRM FIXED PRICE CMAV SURFACE SHIP AVAILABILITY MILESTONES

EVENT #	TASK, KEY EVENT OR MILESTONE	RESPONSIBLE ACTIVITY	FFP AWARD	DESCRIPTION
1	Establish CMAV in NMD	RMC Code 300	A-180	Availabilities will be established in the applicable database when known or work is ready to be screened.
2	Establish SDAES Tl	SDAES PCO and COR and RMC Code 300	A-180	A TI is to be drafted by the SDAES COR and issued by NAVSEA 024 SDAES PCO. This function authorizes the SDAES to begin the Planning process. SSP ESTABLISHED PM or GAPM creates availability in NMD, PE commences brokering WN's in a progressive manner to support Engineering and Critical Items; Ship Check Requirements; LLTM; Service and Administrative WN's SDAES commence planning, research and development of Work Specs as WN's are received.
3	50% of D-Level maintenance work package WNs locked based on target Man Day Density	TYCOM (PE) RMC Code 300 (PM)	A-135	Intent is that 50% of the expected WNs based on the Man Day Density (work not services) have been screened. Project team will have all WN's brokered via Tasking Memo within 1 working day of this milestone. Engineering items include critical items listed on CNRMCINST 4700.5; Ship Check items are those that require a ship check.
4	Complete P&E of work assigned by the 50% work package lock milestone	Planning Activity	A-125	Complete P&E of work assigned by the 50% work package lock milestone. The requirement is that all work brokered by the 50% lock milestone must be planned (Work Specs complete and LLTM identified) and estimated with a minimum quality as described as a "Class C" estimate.
5	80% of D-Level maintenance work package WN's locked based on target Man Day Density.	TYCOM (PE) RMC Code 300 (PM)	A-110	80% of D-Level maintenance work package WN's locked based on target Man Day Density. Intent is that 80% of the expected WN's based on the Man Day Density have been screened. Project team will have all WN's brokered via Tasking Memo within 1 working day of this milestone.
6	Review Screened I- Level Work	TYCOM (PE) Ashore Ship Maintenance Manager	A-105	Intent is to screen all known Intermediate Level Work to I-Level by this date.

EVENT #	TASK, KEY EVENT OR MILESTONE	RESPONSIBLE ACTIVITY	FFP AWARD	DESCRIPTION
7	100% of D-Level maintenance work package WN's locked based on Target Man Day Density.	TYCOM (PE) RMC Code 300 PM	A-100	Intent is that 100% of the expected WNs based on Man Day Density have been screened. Project team will have all WN's brokered via Tasking Memo within 1 working day of this milestone. 100% of WN's received. D-Level Planning GAPM or Planning Supervisor may not accept any WN's brokered after this milestone without a BCA. Any D-Level work injected into the work package after this point in time is considered New Work.
8	Complete P&E of work assigned by the 100% work package lock milestone.	Planning Activity	A-95	The requirement is that all work brokered by the 100% lock milestone shall be planned (i.e. Work specs complete and LLTM identified) and estimated with the minimum quality described as a "Class C" IGE.
9	Final Work Spec Review and Approval	RMC Code300 (PM)	A-90	Work spec reviews shall be accomplished on a routine drumbeat established by the MT with the final spec review being completed in support of the established publishing date for the specification package. This will include the final quality, technical and contractual review of the work spec. Contractual review shall include legal requirements, i.e., if sole source, confirm sole source justification. PM to Publish Package in NMD.
10	IGE Submitted	RMC Code 300	A-85	The requirement is that all work planned in support of the 100% lock milestone must be estimated by the government with minimum quality as described as a "Class C" estimate.
11	Accurate and complete requirements package turnover to contracts	RMC Code 300	A-85	Requirements Packages shall include all necessary data as required in the Requirements Package Checklist, RMC C300 is responsible for ensuring all required data is compiled and submitted to the cognizant PCO. Requirements package turnover must be in accordance with Code 400 Package Checklist. Planning Activity deliver turnover information to Code 400 (PCO).
12	Requirements package verified and ready for solicitation	RMC Code 400 (FLC)	A-83	Planning package verified and ready for solicitation. Cognizant PCO shall validate that all the required data has been provided and in the proper format. Upon completion of the verification, the requirements should be ready to be incorporated into a solicitation.
13	Solicitation	RMC Code 400 (FLC)	A-80	The Federal Acquisition Regulation designates SAM.GOV as the mandatory GPE for posting of Government business opportunities including proposed contract actions, solicitations and associated information.
14	Cutoff for offeror's Questions	Offerors	A-65	The NLT date, issued by the PCO, is the date that the government will no longer accept pre-bid inquiries for a particular solicitation. The time frame established allows the PCO time to respond to the inquiry while still maintaining adequate time for the contractor to produce a proposal or bid. Bidders Questions must be provided to Planning Activity andGovernment Planning Floor.

EVENT #	TASK, KEY EVENT OR MILESTONE	RESPONSIBLE ACTIVITY	FFP AWARD	DESCRIPTION
15	I-Level Work Package Fully Brokered	TYCOM (PE) Ashore Ships Maintenance Manager	A-50	Intent is to fully broker all known Intermediate Level work to I- Level by this date.
16	Contractor Proposal Received	RMC Code 400 (FLC)	A-50	This is the date provided by the PCO, when a FFP offeror must submit their bid to be considered responsive. Submissions after this date are typically rejected.
17	All Funding Available for Award	TYCOM	A-45	All funding available for award. Provide funding to Maintenance Activity, Intent is for all funding to be provided to NSA to support contract award.
18	I-Level Work Package Fully Accepted	RMC Code 900	A-40	Intent if for I-Level to accept or reject all work brokered up to the point in time, work entered later in the process will be subject to normal Business Case Analysis. I- level work inducted into the work package after this point in time is considered New Work.
19	SFWL Submitted	Ship	A-30	Submit SFWL for Integration. The LMA will develop an inclusive, detailed, and integrated schedule for all participating activities.
20	Submit I-Level Work Package and Schedule for Integration	RMC Code 300 RMC Code 900	A-30	Submit I-Level Work Package and Schedule for Integration: The LMA shall develop an inclusive, detailed, integrated and resource loaded schedule of all participating activities. All participants shall meet and review the proposed plan and make necessary adjustments to render a balanced and optimized integrated schedule. This formal schedule review shall occur no later than the WPER. The NSA and LMA shall serve as the final arbiter of conflicts prior to the conclusion of the WPER.
21	Award Contract	RMC Code 400 (FLC)	A-30	This is the notification by the Contracting Officer to a bidder that his offer, or a negotiated proposal, has been accepted. This award establishes a legal obligation between the parties.
22	Deliver Material GFM (LLTM, Push and Kitted Materials) to Executing Activity	RMC Code 500 or PARM	A-25	LLTM is any material that will take in excess of 30 days to procure. The government may elect to provide LLTM or prefabricated assemblies generally kitted in a planning yard. This material, procured through sources other than the executing activity, should be delivered 25 days prior to the start of availability to ensure that there is no disruption to production.
23	Conduct WPER	RMC Code 300 Executing Activity	A-20	Review of the integrated work production schedule that has been prepared by the Executing Activity. The complete LMA Availability work package is defined and agreed upon at the WPER
24	Start Availability	RMC Code 300 Executing Activity	A-0	The first day of the production period for the executing activity.

APPENDIX A4

LIST OF ACRONYMS FOR SURFACE SHIP AVAILABILITY MILESTONES

AIT	Alteration Installation Team
AHMP	Advance Planning Hull Modernization Plan
AWP	Availability Work Package
AWR	Automated Work Requests
BAWP	Baseline Availability Work Package
BCA	Business Case Analysis
BCM	Business Clearance Memorandum
CHINFO	Navy Chief of Information Office
CLIN	Contract Line-Item Number
CMAV	Continuous Maintenance Availability
CNO	Chief of Naval Operations
CNSF	Commander, Naval Surface Forces
COR	Contractor Officer's Representative
CSMP	Current Ship's Maintenance Project
CWB	Coast-Wide Bid
C5IMP	C5ISR Modernization Policy
C5ISR	Command, Control, Communications, Computer, Combat Systems, Intelligence, Surveillance and Reconnaissance
DCAA	Defense Contract Audit Agency
DFARS	Defense Federal Acquisition Regulation Supplement
DFS	Departures from Specification
DON-FAST	Department of the Navy - Fleet Availability Scheduling Team
EA	Executing Activity
EHMP	Execution Planning Hull Modernization Plan
FAWP	Forces Afloat Work Package
FAR	Federal Acquisition Regulation
FFP	Firm Fixed Price
FLC	Fleet Logistic Center
FLT CDR	Fleet Commander
FPR	Final Proposal Revisions
FRP	Fleet Readiness Plan
GAPM	Government Availability Planning Manager
GFI	Government Furnished Information
GFM	Government Furnished Material
GPE	Government-Wide Point of Entry
ICD-IRD	Installation Control Drawing-Installation Requirements Drawing
IGE	Independent Government Estimate
ILS	Integrated Logistics Support
IND-SIA	Industrial-Split Installation Alteration
IPS	Integrated Project Schedule
IPTD	Integrated Project Team Development
IT	Information Technology

LCPC	Life Cycle Planning Conference
LI	Low Impact
LLTM	Long Lead Time Material
LMA	Lead Maintenance Activity
LOA	Letters of Authorization
MSR	Master Ship Repair (Contractor)
MT	Maintenance Team
NDE	Navy Data Environment
NDE-AMPS	Navy Data Environment - Afloat Master Plan System
NDE-NM	Navy Data Environment - Navy Modernization.
NLT	No Later Than
NMD	Navy Maintenance Database
NSA	Naval Supervisory Authority
OFRP	Operational Fleet Response Plan
OSD	Office of the Secretary of Defense
PARM	Participating Acquisition Resource Managers
PAO	Public Affairs Office
PAT	Price Analysis Team
PE	Port Engineer
PICO	Pre-Installation Check Out
PCO	Procuring Contracting Officer
PMS	Planned Maintenance System
PNA	Planned, Not Authorized
POA&M	Plan of Action and Milestones
PRESBUD	President's Budget
PY	Planning Yard
P&E	Planning and Estimating
RFI	Ready for Issue
RFP	Request for Proposal
RMC	Regional Maintenance Center
SC	Ship Changes
SCD	Ship Change Document
SDAES	Specification Development and Availability Execution Support
SDM	Ship Design Manager
SID	Ship Installation Drawing
SFWL	Ships Force Work List
SPM	Ship's Program Manager
SSA	Source Selection Authority
SSAC	Source Selection Advisory Council
SUPSHIP	Supervisor of Shipbuilding, Conversion and Repair
SURFMEPP	Surface Force Maintenance, Equipment, Planning and Procurement
TAR	Technical Advisory Report
TERP-SSEB	Technical Evaluation Review Panel - Source Selection Evaluation Board
TI	Technical Instruction
TP	Test Procedure
TSRA	Total Ships Readiness Assessment

TYCOM	Type Commander
WFO	Waterfront Operations
WN	Work Notification
WPER	Work Package Execution Review
WPIC	Work Package Integration Conference

APPENDIX C

BUSINESS CASE ANALYSIS TOOL

To use this tool, first analyze the safety and mission impact of the damage to be repaired using Table 1. Determine the Hazard-Mission Index. Then consider the impact on schedule and cost using Table 2 and obtain the Cost - Schedule Index. On the next sheet, select the appropriate CO Modifier and sum the indices to obtain the Risk Index. Determine indicated action from the Business Case Analysis Table.

Table 1 - Hazard Severity and Impact to Mission

	Hazard Severity			
Impact to Mission	Catastrophic	Critical	Major	Minor
Frequent	1	1	3	6
Probable	1	2	4	7
Occasional	2	3	5	8
Remote	3	4	6	9
Improbable	5	5	7	10

Table 2 - Cost Severity and Impact to Schedule

	Cost Severity			
Impact to Schedule	Extreme	Significant	Major	Minor
Frequent			7	4
Probable			6	3
Occasional		8	5	1
Remote	7	6	4	1
Improbable	5	3	2	1

Impact to Mission Likelihood		Impact to Schedule Likelihood	
Description	**Explanation**	**Description**	**Explanation**
Frequent	Likely to adversely impact mission, operation of ship, ship's future schedule or critical systems regularly. Work to rectify this deficiency must be undertaken at the first opportunity.	Frequent	The undertaking of the work or combination of availability of Long Lead Time Material and Work Completion WILL delay the schedule greater than five working days.
Probable	Could adversely impact mission, operation of ship, ship's future schedule or critical system several times. Work to rectify this deficiency should be programmed in the current availability.	Probable	The undertaking of the work or combination of availability of Long Lead Time Material and Work Completion COULD delay the schedule greater than two working days.
Occasional	Unlikely, but could be reasonably expected to adversely impact mission, operation ship, ship's future schedule or critical system occasionally. Work to rectify this deficiency should be considered during the current availability depending upon schedule and cost.	Occasional	The undertaking of the work or combination of availability of Long Lead Time Material and Work Completion COULD BE REASONABLY expected to delay the schedule not greater than two working days.
Remote	Unlikely, but could possibly impact mission, operation of ship, ship's future schedule or critical system at some time. Work to rectify this deficiency should be considered and programmed to meet the ship's operational schedule.	Remote	The undertaking of the work or combination of availability of Long Lead Time Material and Work Completion is UNLIKELY BUT POSSIBLE to delay the schedule.
Improbable	So unlikely that there should be no adverse impact to mission, operation of ship, ship's future schedule or critical system. Work to rectify this deficiency should be programmed in due course.	Improbable	The undertaking of the work or combination of availability of Long Lead Time Material and Work Completion is SO UNLIKELY to delay the schedule it can be assumed it will not affect schedule.

Hazard Severity if Work Not Undertaken		Cost Severity Impact	
Description	**Explanation**	**Description**	**Explanation**
Catastrophic	Failure of System could result in total loss of ship or critical system. Resultant damage would be beyond economical repair.	Catastrophic	The increase in cost due to Growth & New Work, delay to start of work, cost or availability of material is so great that it either represents funding that would need to be sourced from another activity, or it constitutes a G&NW premium of 60% or higher.
Critical	Failure of System could result in significant damage to the ship or critical system. Resultant damage would require intervention of support agency. Usually, damage to Primary structure or Watertight Integrity.	Critical	The increase in cost due to Growth & New Work, delay to start of work, cost or availability of material, represents a very large increase that it either can be covered in the existing budget plan but would adversely impact the remaining financial plan or it constitutes a G&NW premium of 40% to 60%.
Major	Failure could result in the temporary loss or deterioration of the system requiring repair action.	Major	The increase in cost, while large, is either able to be covered inside the existing budget plan with little impact to the remaining financial plan or it constitutes a Growth & New Work premium of 20% to 40%.
Minor	Failure could result in the need for minor defect repair action, continued operation without significant loss of output is possible.	Minor	The increase in cost is very small and is either able to be covered inside the existing budget plan with no impact to the remaining financial plan or it constitutes a Growth & New Work premium of 0% to 20%.

Commanding Officer's Concern	CO's Top 5	Subtract 2
Commanding Officer's Concern	Concerned	Subtract 1
Commanding Officer's Concern	Not Concerned	Subtract 0

Business Case Analysis (Table 1 + Table 2 + CO's Concerns) = Risk Index			
Risk Index	Relative Level of Risk	Decision	Amplifying Comments
Less than 10	Low	MT continue	Represents work that is either a safety concern or mission critical or is relatively low cost and no impact to schedule.
10 - 14	Med	MT reschedule or conduct more rigorous BCA	Represents work that is either of reasonably high cost or a high risk to schedule impact, or of little to no safety or mission critical concern. This work should either be rescheduled, cancelled, or subject to a more comprehensive BCA.
Greater than 14	High	MT reschedule or cancel	Represents work that is either of high cost or extreme schedule impact, or of little to no safety or mission critical concern.

PART II

CHAPTER 4

SHIP MAINTENANCE VALIDATION, SCREENING AND BROKERING (SURFACE FORCE)

REFERENCES.

(a) OPNAVINST 4700.7 - Maintenance Policy for U.S. Naval Ships

LISTING OF APPENDICES.

A Availability Creation and Numbering
B NESD Customer Service

4.1 PURPOSE. This chapter provides procedures and guidance regarding ship maintenance work candidate validation, screening and brokering processes. These processes affect all Type Commanders (TYCOM), Regional Maintenance Centers (RMC) Commanding Officers and ship Maintenance Teams.

4.2 MAINTENANCE MANAGEMENT AUTOMATED INFORMATION SYSTEM MANAGEMENT. As Navy Maintenance Management Automated Information System (MMAIS) applications (such as the Maintenance Data System (MDS), Automated Work Notification (AWN), Electronic Tag Out (eTagOut) and Electronic Shift Operations Management Solution (ESOMS) programs) evolve into a connected group of systems, criteria for the management of unit, shipboard, ashore databases and a process for submitting account requests for these MMAIS systems is hereby established.

4.2.1 Unit and Shipboard Databases Afloat and Ashore. The following applies to shipboard and unit based MMAIS systems such as MDS, AWN, Organizational Maintenance Management System - Next Generation (OMMS-NG), R-Admin, R-Supply, eTagOut and ESOMS:

a. Will be managed locally by an assigned and designated administrator.

b. Account structures and role and privileges will utilize the TYCOM approved Privilege Matrix which is maintained by the TYCOM.

c. Systems settings will be set to local time not “Zulu” time for all processing.

d. No outside activity will be allowed direct access to the databases. Database copies require prior written TYCOM N43 approval.

e. All work candidate, job, Job Sequence Number (JSN), pre-Ship’s Maintenance Action Forms (OPNAV 4790/2K) (2-Kilo) to 2-Kilos review and approvals along with sending of parts requests to supply will be conducted by Ships Force. No outside activities will approve work candidate, job, JSN, pre-2-Kilos to 2-Kilos or the acquisition of shipboard parts. No outside activity will write work candidates directly into a Ships Force MDS system. All outside activities reporting or finding discrepancies will produce the required “bulkload” per volume VI, chapter 42 of this manual.

4.2.2 Shore Databases. The following applies to shore-based MMAIS systems such as MDS, AWN, Afloat Toolbox for Maintenance (ATM), Validation Screening and Brokering (VSB), OMMS-NG, R-Admin, R-Supply, eTagOut, ESOMS and Electronic Work Acceptance Forms (EWAF).

a. Account requests

(1) For RMC and Commander Navy Regional Maintenance Center (CNRMC) users including all Navy Maintenance Database (NMD) accounts will be managed by the RMCs or CNRMC. VSB account requests from the RMCs or CNRMC users will be directed to the appropriate RMC or handled directly by CNRMC per agreement with the appropriate TYCOM.

(2) Users requesting access to Unit, shipboard or command level, including remote hosted databases, will go to the local functional area supervisors, Local Area Network administrators or Information Technology (IT) support teams for access to the command level systems, see paragraph 4.2.1 of this chapter. The access level for the local users will be determined by the approved TYCOM matrix. No outside activity (personnel not assigned to that unit) will be granted direct or remote access to any shipboard, command, unit or detachment database, for anything other than IT level troubleshooting and repairs, view only, writing of the alphanumeric JSN for bulkload by the TYCOM.

(3) User access to MDS, supply or personnel administrative systems who are not CNRMC or command level (including where the command level database is ashore) will submit a Navy Enterprise Service Desk (NESD) trouble ticket, refer to Appendix B.

b. All users requesting access through NESD will be approved by the TYCOM for that unit. NESD to establish the account. If upgraded roles or privileges are needed those roles or privileges will be implemented by the TYCOM. No outside activity will be granted direct or remote access to any shipboard, command, unit or detachment database, for anything other than IT level troubleshooting and repairs, view only, writing of the alphanumeric JSN for bulkload by the TYCOM.

c. Outside Activities (users not assigned to that unit) will not be granted access to the unit database (AWN, OMMS-NG, ETAG, EWAF, ESOMS, R-supply, and Mission Readiness Assessment System) for writing of jobs directly into the shipboard or ashore databases nor will they be granted work candidate brokering or approval, including the approval and or sending of parts to supply.

d. All user access levels and accounts will be tracked by the activity creating the account.

e. Every TYCOM will have at a minimum a primary and secondary account manager. Account manager names will be provided to the NESD.

f. Users with accounts missing the required forms will be deactivated until the required documentation is presented to the NESD, and the account is approved by the TYCOM.

4.2.3 Process for Account Requests NESD. The following guidance will be followed for obtaining access to MMAIS systems such as MDS, AWN, ATM, VSB, OMMS-NG, R-Admin,

R-Supply, eTagOut, ESOMS and EWAF. No accounts will be created, password reset or updated without using NESD and or the TYCOM, refer to Appendix B.

a. User submits NESD ticket for VSB, ATM, ATM LCS, eTagOut, EWAF account creation.

b. User submits account request through the VSB ATM and LCS ATM sites.

c. NESD shall provide the required documents to the user, and the user shall complete the following per TYCOM guidance:

(1) System Authorization Access Request Navy Form.

(2) Maintenance Figure of Merit Non-Disclosure Agreement or Contractor user justification (for contractors only).

d. User will provide proof of training and training completion certificates.

(1) EWAFS course number (SPAWAR-EWAFS-0001) available through the CAC-enabled site MyNavy Portal (https://my.navy.mil) under Navy eLearning > Online Courses, Course Catalog.

(2) AWN - Navy eLearning courses SPAWAR-ATMAWN-0002 or SPAWAR-EWAFS-0001.

(3) eTagOut - Completion certificate from Navy eLearning courses SPAWAR-ETAGOUT-USER-3.0.

(4) VSB - Completion certificate from Navy eLearning courses VSB SPAWAR-VSB-0002.

NOTE: DUE TO LOSS OF ADOBE FLASH, INFORM NESD IF THERE ARE ISSUES TO RECEIVE THE POWER POINT OF THE TRAINING. NO COMPLETION CERTIFICATE IS GRANTED, USER ACKNOWLEDGMENT THE MATERIAL WAS VIEWED.

e. NESD shall review account requests.

(1) Provide the applicable TYCOM completed training documents, System Authorization Access Request Navy form and Non-Disclosure Agreement, if applicable. TYCOM will authorize the NESD to create the user account.

(2) ATM or AWN accounts roles and privileges will be per the TYCOM AWN, ATM, VSB, eTagOut, EWAF Privilege Matrix.

(3) If certain roles and privileges are not listed under the Privilege Matrix, then the TYCOM will create additional roles and privileges for accounts as required.

(4) VSB account access will be “View Only”. TYCOM will create additional access roles or privileges for accounts as required.

(5) “ADMIN” and or “SUPER ADMIN” accounts will not be created. TYCOM will be the only entity to create that level of account.

(6) NESD will create and maintain an all-user listing containing access levels for the Maintenance Figure of Merit systems. The User listing, SAAR, Non-

Disclosure Agreement (if applicable) and TYCOM approval forms will be retained for a minimum of three years.

f. Completion of the process.

(1) NESD will notify users via email noting which VSB, ATM, ATM LCS, eTagOut or EWAF account has been approved.

(2) Users can then go to the login screen, enter their user "LOGIN_NAME", the "TEMPORARY PASSWORD" and login. The user will then create and confirm a new 15-character password.

NOTE: IF YOU DO NOT LOG INTO ATM WITH THE TEMPORARY PASSWORD WITHIN 24 HOURS, YOUR ACCOUNT WILL BE DISABLED.

g. User in a reply email verifies ability to log in.

h. NESD will update and close out the ticket in "Remedy".

4.3 MAINTENANCE.

4.3.1 Regional Maintenance Centers. The command with overall responsibility for efficient planning and execution of all ship maintenance and modernization for assigned ships is the local RMC. The RMC is a subordinate command to Naval Sea Systems Command (NAVSEA). The RMC must report Additional Duty to the appropriate TYCOMs. This reporting relationship ensures the TYCOMs continue to effectively carry out their responsibilities relating to material readiness of their ships. Contact information for the RMCs can be found in volume VI, chapter 2, Appendix A of this manual.

4.3.2 Maintenance Team. Each ship must have a formally structured Maintenance Team as identified in volume VI, chapter 41 of this manual.

4.3.3 Class Maintenance Plan. The Class Maintenance Plan (CMP) database is an engineered set of organizational, Intermediate Level and Depot Level maintenance tasks, including the following: material condition assessment tasks (Intermediate Level), qualified repair and life renewal tasks, availability routine tasks and authorized Fleet and Program ship change tasks. Tasks are either scheduled or unscheduled.

a. Scheduled tasks are those Intermediate Level and Depot Level tasks the cognizant technical authority (usually the designated In-Service Engineer) requires to be accomplished on a periodic basis. These tasks have been identified, using Reliability Centered Maintenance, to be both applicable and effective. The CMP system automatically pushes scheduled tasks for Maintenance Team screening and brokering based on last accomplished date and task periodicity. Scheduled tasks are pushed to the shore CSMP and must be completed by the due date or approved for deferral or cancellation by the Ship Design Manager (SDM) (see paragraph 4.5.5.e of this chapter).

b. Unscheduled tasks are pulled by the Maintenance Team based on evidence of need. This includes unscheduled assessment tasks, qualified repair tasks, approved ship changes with their associated support and service tasks and availability routine tasks. Additionally, if the need arises for a scheduled task to be accomplished before it has

been pushed into the CSMP, the Maintenance Team has the ability to pull that scheduled task, and the last accomplished date will be appropriately updated.

4.4 WORK CANDIDATES.

4.4.1 Current Ship's Maintenance Project Composition. An accurate, up-to-date CSMP is essential for a well-maintained ship. The importance of documenting all discrepancies cannot be overemphasized because the CSMP is the basis for all funding. Only work documented in the CSMP will be authorized for accomplishment. The CSMP is maintained in two files, the organizational unit file and the shore file.

a. Shipboard File. This file contains information regarding all known material discrepancies requiring corrective maintenance. These discrepancies are normally discovered either by Ship's Force personnel during routine operations and planned maintenance or by non-Ship's Force personnel during material assessment, training and assist visits, documented per volume VI chapter 42 of this manual. The criticality of the discrepancy determines the maximum length of time allowed to upload the information regarding the discrepancy to the RMC responsible for managing the shore file. Exceptions to this policy are made within the considerations of bandwidth availability and Operational Security conditions.

(1) 2-Kilos associated with correction of C2 Casualty Reports must be uploaded within 24 hours.

(2) 2-Kilos associated with correction of C3 or C4 Casualty Reports must be uploaded within 4 hours.

b. Shore File. This file contains the material discrepancies uploaded from the shipboard file, other work identified by shore-based managers and tasks from the CMP. Tasks from the CMP include pushed scheduled tasks, pulled tasks, authorized program and Fleet modernization work and availability support routines. The Type Desk Officer and Ashore Ships Maintenance Manager are responsible for pulling CMP tasks as required based on evidence of need, availability of support routines and Fleet and Program alterations to be screened to be accomplished as efficiently and expeditiously as possible using Continuous Maintenance Availabilities (CMAV), Window of Opportunities (WOO) or other in-port and underway periods consistent with Maintenance Continuum strategy. Keeping unnecessary CMP work out of the Chief of Naval Operations (CNO) availability will depressurize and therefore derisk the CNO availability to the greatest extent possible. Although only on the Current Ship's Maintenance Project (CSMP) shore file, this work is visible to Ship's Force via reports sent to the ship.

4.4.2 Requirements. All work requiring an expenditure of man-hours, material or a combination of both requires a 2-Kilos to document the identified requirement. Pushed and pulled CMP tasks are already formatted as 2-Kilos when transferred to the CSMP shore file. The 2-Kilo requires certain information to be included by the identifying activity to support the maintenance request and may be authored by activities other than the affected ship. There are three levels of the validation process:

a. The ship (Ship Material Maintenance Officer or 3MC) must do an initial validation of the work statement to determine if there is enough information for the designated

representative (e.g., Ashore Ship's Maintenance Manager, Fleet Maintenance Activity Ship Superintendent, Project Manager, etc.) to understand the requirement.

b. The Ashore Ship's Maintenance Manager working with members of the Maintenance Team is responsible for requirement validation and will determine whether there is real need (objective evidence) and, if so, will also verify the requirement's urgency.

c. Final validation is the responsibility of the Ashore Ship's Maintenance Manager. The Ashore Ship's Maintenance Manager ensures that the scope of the work is adequately defined and technically accurate before authorizing the work. This is the final product screened and brokered to a planning or execution activity.

4.4.3 Elements. A valid work candidate will provide the following key data elements at a minimum. The blocked numbers to the right of each item reference an 2-Kilo data block.

a. Configuration information automatically entered from the master configuration database (Configuration Data Manager's Database or Ship's Configuration and Logistics Support Information System) by the shipboard system:

(1)	Ship Unit Identification Code	[1]
(2)	Work Center Job Control Number	[2]
(3)	Allowance Parts List or Allowance Equipage List	[4]
(4)	Ship Name	[A]
(5)	Ship Hull Number	[B]
(6)	Equipment Noun Name	[5]
(7)	Equipment Identification Code	[14]
(8)	Location	[16]
(9)	Ship Work List Item Number	[56]
(10)	References	

b.	Job Sequence Number	[3]
c.	Equipment Status Code	[7]
d.	When Discovered Date	[17]
e.	Deferred Date	[26]
f.	Symptoms and Supporting Information	[35]
g.	First Contact Name	[38]
h.	Priority	[41]
i.	Type Availability - (Recommended Accomplishment Level)	[42]
j.	Required Delivery Date	[28]
k.	Recommended resolution	[35]

(1) Master Job Catalog, if applicable

(2) Port Engineer's Notes

(3) Additional references

l. Maintenance Action Requested [35]

(2) Repair

(3) Modernization

m. Maintenance Figure of Merit In CSMP Shore File

n. Initial Estimate (man days & material) In CSMP Shore File

o. TYCOM Screening Code [45]

p. TYCOM Screening Remarks In CSMP Shore File

4.4.4 Guidelines. After a work candidate is created and uploaded by an assessment activity or provided and entered into the CSMP shore file by the CMP or other means, it will be reviewed by the Ashore Ship's Maintenance Manager with the Maintenance Team. The Ashore Ship's Maintenance Manager will use these guidelines to validate each work statement:

a. Initial validation will be conducted on each new work candidate to ensure there is sufficient information to understand the requested maintenance action. The originator must populate configuration data elements from the master database by selecting the correct configuration item in a configuration-based system and complete data elements (1) through (7) listed in paragraph 4.4.3.a of this chapter. If the ship is the originator, then data element (8) must also be present. All work candidates created in an ad-hoc mode or with an incorrect configuration item (and therefore incorrect configuration data) will be returned to the originating activity for cancellation and recreation.

b. If configuration data in the master database is incorrect (e.g., Allowance Parts List or Allowance Equipage List, Hierarchical Structure Code (Ship Work List Item Number) references, location, etc.), the Ashore Ship's Maintenance Manager must act to correct the data at its source. The Ashore Ship's Maintenance Manager may request additional logistic assistance from the Configuration Data Manager to determine and document the correct data.

c. When an initially validated work candidate is accepted as complete, the Ashore Ship's Maintenance Manager will then determine if there is enough objective evidence of need to validate the requirement. If not valid, the work candidate will be returned to the originator and cancelled.

d. CMP material assessments should be accomplished outside of depot maintenance periods as much as practicable to allow for the resulting work to be planned and accomplished as efficiently and expeditiously as possible using CMAVs, WOOs or other in-port or underway periods consistent with Maintenance Continuum strategy. Keeping the CMP material assessment and resulting work out of the CNO availability will depressurize and therefore de-risk the CNO availability to the greatest extent possible.

e. If during validation, the Maintenance Team finds inaccurate configuration data or has questions concerning the necessity of a "Pushed" CMP work candidate, they will contact the appropriate maintenance planning activity prior to returning or cancelling the work candidate.

4.4.5 Validation.

a. Validation is the process of reviewing an off-ship work statement to ensure the correct configuration item (lowest repairable unit, equipment, system, etc.) is properly identified and there is enough information to determine if the work candidate is required (objective evidence) and, if valid, contains enough information to:

(1) Properly determine the correct resolution inclusive of the root cause.

(2) Screen the work candidate in accordance with the Maintenance Continuum strategy, selecting the earliest feasible repair opportunity, making every effort to keep the work out of the CNO availability unless there is a specific need for duration or equipment only available in a CNO availability.

(3) Broker to the right activity to perform the work at the most practicable level.

(4) Pass to history.

b. The goal of the validation process is to provide a work candidate that is sufficiently defined, contains correct and complete information, provides an accurate diagnosis, and provides an applicable, effective and feasible recommended resolution. A properly validated work candidate should provide the planning and executing activities with the ability to understand the requirement without expending additional manpower or time obtaining required information. The Ashore Ship's Maintenance Manager along with the Maintenance Team validates all off-ship (Type Availability 1, 2 and 3) work candidates before screening them to the planning activity by review of 2-Kilo documentation, personal shipboard observation of conditions and knowledge of the quality of work candidates written by selected work centers, or through additional technical assistance. All validated work candidates must be ship-checked by the Ashore Ship's Maintenance Manager or designated representative when practicable. The purpose of this check is to determine the best maintenance action and add to Block 35 (data elements k. and l. in paragraph 4.4.3 of this chapter).

4.4.6 Verification. The Ashore Ship's Maintenance Manager request additional assistance to determine and document the best corrective action. The recommended action will include all pertinent interferences, integration issues, verification of urgency and an initial estimate (data element n. in paragraph 4.4.3 of this chapter). The initial estimate for each job includes man-days, man-day rate and material costs. When validated, the Ashore Ship's Maintenance Manager will assign a TYCOM Screening Code (data element o. in paragraph 4.4.3 of this chapter) to the work candidate. This shows the job as valid and ready for screening and brokering.

4.5 SCREENING AND BROKERING.

4.5.1 Screening and Brokering Work Candidates. The Ashore Ship's Maintenance Manager validates and screens work candidates continuously as they are documented. Work integration may entail screening multiple work candidates together when possible. Work screening also entails selecting the appropriate level of repair and the best opportunity in which to accomplish

the work. The Ashore Ship's Maintenance Manager makes recommendations on the lowest level of executing activity with the capability and the capacity to accomplish the work during the required time frame, following the guidance of the TYCOM business rules (e.g., volume VI, chapter 31 of this manual for Surface Force Ships). The screening and brokering process must be considered during the entire Maintenance Continuum (e.g., CNO availabilities, CMAVs, WOOs) and leverage opportunities to reduce depot-level work package size in CNO availabilities.

a. Management of ship maintenance is best performed by individuals most familiar with the condition of the ship, budgetary considerations and available workforce. (This requires a cooperative effort from the Ashore Ships Maintenance Manager and the Naval Supervisory Authority (NSA)). They have the responsibility to accomplish maintenance, repair and modernization work within available financial resources while balancing operational and technical risk.

b. The Ashore Ship's Maintenance Manager shall consider all maintenance availability opportunities when screening work, and where possible, pull maintenance to the left (i.e., into CMAVs or WOOs) such that the depot-level work package in CNO availabilities may be reduced. The effective utilization of the entire Maintenance Continuum is critical to accomplishing work in a timely manner and limiting the duration of CNO availability periods. Determination includes balancing operational schedule, material readiness requirements, on-time availability completion, and cost concerns to maximize maintenance productivity (material readiness vs. related maintenance cost).

c. All work screened by the Ashore Ship's Maintenance Manager to be accomplished aboard ship will be electronically visible to the NSA. Work assigned to the NSA will be tasked following Ashore Ship's Maintenance Manager brokering determination. TYCOM approval is required if the initial brokering determination needs to be changed.

4.5.2 Screening and Brokering. Although they may appear to be accomplished simultaneously, screening and brokering are actually two distinct processes.

a. Screening. Determines and assigns the work candidate to the right time period and maintenance availability. Determination includes balancing operational schedule, material readiness requirements and cost concerns to maximize maintenance productivity (material readiness vs. related maintenance cost).

b. Brokering. Determines and tasks the right activity to perform the work based on business case analysis, material availability, experience, tool requirements, personnel requirements, special considerations (Environmental, Health and Safety) and capacity.

4.5.3 Key Data.

a. The validated work candidate contains the following key data elements to aid in the screening and brokering process:

(1) Configuration Item (maintenance object) identification.

(2) Symptom (2-Kilo - Block 35).

(3) Expected scope of preventive, corrective and alterative maintenance (2-Kilo - Block 35).

(4) Required Completion Date.

(5) Level of Maintenance (TYCOM Code 1, 2, 3).

(6) Identification of a Master Spec Catalog item (pre-planning data).

(7) Priority (Figure of Merit).

b. All 2-Kilo in the Master File should be screened and brokered to a maintenance availability within eight days after being uploaded from the Shipboard File.

c. Work candidates will be brokered to the appropriate maintenance activity with the capability and capacity to accomplish the work during the required timeframe. When practicable, Fleet Maintenance Activity capacity will be utilized first.

d. Available capacity will be judged after applying Maintenance Figure of Merit and Deadline Date. This determination is made through a coordinated effort between the Project Manager, Ashore Ship's Maintenance Manager, RMC Ship superintendent and the Maintenance Team Private Sector Industrial Activity representative (If under a Private Sector Industrial Activity contract).

e. The cause-and-effect relationship between screening and brokering must be exercised to maximize maintenance productivity. This may require negotiation with the ship, maintenance activity, or both, to adjust the Deadline Date.

f. Other considerations for screening and brokering:

(1) Synergistic relationship between work candidates exist.

(2) Splitting responsibility.

(3) Third party access.

(4) Port loading.

(5) RMC Production Department training requirements.

4.5.4 Guidelines.

a. Validating, screening and brokering will be accomplished continuously using the Maintenance Continuum strategy to depressurize and de-risk our CNO avails and maximize Fleet Readiness. Once work has been rescheduled to an appropriate maintenance period, it should be completed in that maintenance availability to the maximum extent. The deferral of work from this scheduled maintenance period requires TYCOM concurrence to de-risk the CNO availability work package.

b. All work will be screened to an availability created and numbered per the business rules in Appendix A.

c. Work candidates will be screened to the following type of availabilities: CNO, Continuous Maintenance (CM), emergent or unfunded. No other type of availability will be used.

(1) CNO Availability. The work candidate is best performed during the scheduled CNO availability. These work candidates include major Ship Alterations and repairs requiring support services and coordination.

(2) Continuous Maintenance Availability. Based on ship availability, priority of the job, business case analysis, periodicity or other consideration, the maintenance should be performed during a scheduled Continuous Maintenance Availability or during a window of opportunity permitted by ship's schedule.

(3) Emergent Availability. Emergent work is performed at greater cost than work planned and completed in other availabilities. The criteria to be used to qualify work as emergent is provided in TYCOM business rules (e.g., volume VI, chapter 31, of this manual).

(4) Unfunded Availability. This availability is reserved for work candidates, which should be shown as backlog or are of such low priority they are unlikely ever to be accomplished.

d. Brokering must follow these requirements:

(1) Work candidates for technical assistance, assessment or inspection will be brokered to the RMC Fleet Maintenance Activity or another technical activity.

(2) Work candidates will be brokered to the lowest level of maintenance activity, filling Fleet Maintenance Activity capacity first, based on the following criteria:

(a) Material availability.

(b) Capability:

1 Experience.

2 Available Production Resource Tools.

3 Available qualified and certified personnel.

4 Ability to comply with Environmental, Health and Safety regulations.

(c) Work center capacity.

(d) Funding.

4.5.5 Additional Requirements for Scheduled Mandatory Tasks Pushed by CMP. Since mandatory tasks pushed to the CSMP by the CMP are directed by proper Technical Authority, further screening and brokering restrictions apply. SURFMEPP is the technical authority for approving and disapproving cancellation deferral notification. Technical challenges will be reviewed by SURFMEPP for resolution. Direct all Cancellation Deferral Notification System (CDNS) requests to SURFMEPP for adjudication.

a. Certain fields on mandatory tasks cannot be changed, including job summary, problem description, recommended solution, deadline date and maintenance level.

b. Mandatory tasks must be accomplished by an off-ship maintenance activity, not by Ship's Force. Organizational Level requirements are scheduled by Planned Maintenance System (PMS), not by CMP.

c. Mandatory tasks cannot be cancelled or passed to history by the Maintenance Team, or customer completed without being screened to an availability. If cancellation is requested, the CMP item must be adjudicated by proper Technical Authority and approved for cancellation as dictated in paragraph 4.3.3.

d. Mandatory tasks must be screened to a defined maintenance period instead of to the yearlong CM availability. When equipment condition requirement or other scheduling problems make it impractical to accomplish the mandatory task, the yearlong CM availability may be used for non-depot mandatory tasks. However, mandatory tasks screened to a CM availability will be considered to be improperly deferred after the mandatory tasks deadline date without consideration of the availability end date (see paragraph 4.5.5).

e. Although mandatory tasks may not be screened directly to an emergent maintenance period due to proper funding accountability, opening and charging mandatory tasks and other repairs to a concurrent availability to take advantage of the timeframe in accordance with the Maintenance Continuum strategy is permissible and encouraged.

f. If the mandatory task is screened to the unfunded availability or to an availability beginning more than 90 days after the mandatory task's deadline date, a "notification" is triggered by the CDNS to notify the appropriate Technical Authority and a Departure From Specification (DFS) may be required. The Ashore Ship's Maintenance Manager comments will be reviewed and the Technical Authority will either recommend approval or disapproval of the DFS. The Ashore Ship's Maintenance Manager must then rescreen the mandatory tasks to an appropriate availability following the guidance provided in the DFS. This functionality is referred to as the "CDNS Process".

(1) The Ashore Ship's Maintenance Manager may challenge whether the mandatory tasks should be accomplished (as opposed to not accomplished until after the deadline date). The task should be screened to the unfunded availability and comments entered. Depending on whether the CDNS notification is administrative or technical, the mandatory tasks will be adjudicated in the following manner:

NOTE: THE SUBSTITUTED WORK CANDIDATE WILL BE SUBJECT TO THE SAME PUSHED TASK RESTRICTIONS DESCRIBED IN THIS SECTION.

(a) Administrative: If the intent of the task was completed since the Last Accomplished Date by a non-CMP work candidate, provide that Job Control Number in the comment field. If the Planning Activity Engineer agrees the intent of the task was met by the non-CMP work candidate, the Planning Activity Engineer will cancel the pushed mandatory tasks from the CSMP. If the intent of the task is covered by a non-CMP work candidate currently open and in planning or execution, the Planning Activity Engineer will substitute the pushed

mandatory tasks with the non-CMP work candidate and cancel the pushed mandatory tasks from the CSMP. If the mandatory tasks cannot be accomplished because the component or system no longer exists on the ship, the Planning Activity Engineer will cancel the pushed mandatory tasks from the CSMP and update the configuration records. For all administrative notifications, if the Planning Activity Engineer does not agree with the Port Engineer's comments, the CDNS notification will be forwarded to the SDM for resolution.

(b) Technical: The Ashore Ship's Maintenance Manager can technically challenge pushed mandatory tasks using CDNS. Reasons for technically challenging mandatory tasks include non-modernization configuration change, permanent or temporary DFS exists, or authorized modernization upgrade to equipment. If the Planning Activity or SDM disapproves the CDNS notification, an e-mail will be sent to the Ashore Ship's Maintenance Manager providing justification. All technical challenges will be reviewed by the Planning Activity or SDM for resolution.

(2) If the Ashore Ship's Maintenance Manager determines the mandatory tasks should be accomplished beyond the due date, the task should be screened to the recommended availability and comments entered. Reasons for deferring a mandatory task past its due date include: a temporary DFS exists making the task unnecessary before the due date, lack of an appropriate maintenance availability by the due date, unable to set required assessment conditions because of a related casualty or other issue, lack of capability or capacity to accomplish the mandatory tasks by due date, etc. Deadline challenges must be documented using the CDNS Process and must be reviewed and approved by the Planning Activity and a DFS may be required.

g. CMP push tasks must be accomplished within required periodicity or approval for deferral in the CDNS Process by NAVSEA Technical Authority. Ashore Ship's Maintenance Managers, RMCs and TYCOMs should resolve these mandatory task deferrals promptly. CMP push tasks can be addressed using a DFS or the CDNS Process. Deferred CMP push task delays are categorized as:

(1) Open and overdue. Often, CMP push tasks are screened to an appropriate availability but are not executed by their deadline dates. Sometimes, task deferrals are approved through the CDNS Process but then are subsequently moved to a later availability without further Planning Activity or SDM approval. Open and overdue jobs are particularly troublesome because they are now past the deadline date and do not have deferral approval from Technical Authority via a DFS or the CDNS Process. Specific types of open and overdue CMP push tasks jobs include:

(a) Job is open, screened to a yearlong CM availability and past its deadline date.

(b) Job is open, screened to an acceptable numbered availability (one starts

no later than 90 days after the deadline date or one approved in the CDNS Process by the Planning Activity or SDM).

(c) Job is open, unscreened and past its deadline date.

(2) Overturned and not rescreened. When a mandatory task is challenged by the Ashore Ship's Maintenance Manager via DFS or the CDNS Process but that challenge is overturned by Technical Authority, the Ashore Ship's Maintenance Manager receives an e-mail stating the job must be rescreened to an appropriate availability for accomplishment. Jobs should be rescreened to an appropriate availability within 30 days after the Ashore Ship's Maintenance Manager is made aware of the ruling.

h. Deferral notifications approved by the Planning Activity or SDM are approved for the availability to which the mandatory task was screened when the mandatory task triggered a notification. If a mandatory task is subsequently rescreened to a later availability, the approval is removed and the screening action must be acted on by the Planning Activity or SDM again.

i. SURFMEPP defines A branded Mandatory Technical Requirements screened to a valid availability as "not in a screening required, unfunded, hold, rejected, or returned status, screened to a closed or CM avail, and screened within 90 days of the next due date." Some Work Notification (WN) status issues labelled as screening can be a result of brokering actions as described in paragraph 4.5.2.b. In addition to SURFMEPP validity factors, a WN may not be placed in an "Assigned" status with the intent of having the work completed by the LMA via a front load on an existing specification that does not have the WN listed to support the work specification. Without the WN being authorized in NMD and put on contract, the LMA will not report correct completion data for WN close out per part II, chapter 3 of this volume.

j. Non-CMP push task A branded Mandatory Technical Requirements shall be managed in VSB system by the Ashore Ships Maintenance Manager for screening and brokering in the same manner as CMP push tasks, as described in other sections of paragraph 4.5.5 in order to report close out data from NMD to VSB.

4.6 ASSESSMENTS.

4.6.1 Maintenance Team.

a. All material condition assessments, including tasks for Combat Systems Command, Control, Communications and Computer Readiness Assessments or Total Ship's Readiness Assessment, must be derived from the CMP. Scheduled condition assessments have been validated by an approved Reliability Centered Maintenance analysis to be applicable and effective, and are pushed by the CMP system to the CSMP shore file for the Ashore Ship's Maintenance Manager action, based on the ship's last accomplished date and task periodicity. Unscheduled material condition assessments are not, without further evidence of need, considered effective and are thereby not pushed into the CSMP shore file, but can be pulled from the CMP by the Ashore Ship's Maintenance Manager or their representative if there is evidence of need (such as degraded performance, errors, or other indication of problems). Scheduled tasks can also be pulled if circumstances warrant, and the Last

Accomplished Date will be properly updated. The Ashore Ship's Maintenance Manager with help from the Maintenance Team must review all 2-Kilos pushed from the CMP system just as for any other off-ship 2-Kilo, and broker to the appropriate assessing activity.

b. Only assessment tasks in the CMP or assessment procedures in the PMS database may be used for assessments. Information addressing assessment requirements found not to be included within the CMP or PMS databases, such as local practices, In-Service Engineering Activity unique items, RMC practices, etc., must be forwarded using the Technical Feedback Report for review and approval as an acceptable addition to the CMP and PMS databases. If not approved, these practices must not be used by any activity.

c. The Ashore Ship's Maintenance Manager will make the preliminary determination of the most appropriate source for all off-ship activity work for their assigned ships. Decisions made by the Ashore Ship's Maintenance Manager, with concurrence from the Maintenance Team, must be in compliance with policies in this instruction, reference (a), and guidance provided by the cognizant RMC.

4.6.2 Type Commander. The TYCOM must develop and execute a Memorandum of Agreement per volume II, part II, chapter 2 of this manual with each supporting RMC to define reporting and administrative relationships between the TYCOM and the RMCs.

APPENDIX A

AVAILABILITY CREATION AND NUMBERING

1. Specifying Availabilities. A uniform method of specifying availabilities is an essential part of availability management and data collection. No deviation from these protocols is permitted. An availability is defined as a specified period of time during which maintenance is conducted. Only Type Desk Officers, Type Desk Program Managers, and Ashore Ship's Maintenance Managers are authorized to create availabilities. Availabilities must include all work completed during a specific time period regardless of executing activity. With exception of the emergent availability, availabilities must not overlap and work by every activity (depot, Intermediate Maintenance Activity (IMA), Alteration Installation Team, tech assist and Ship's Force) must be entered into the same availability. Availability numbers are not to be used as a method of segregating the executing activity or the level of work performed.

2. Availability Numbering. The availability number consists of the first four digits -- the availability category code and the availability serial number. The Funding Activity Code (FAC) is used to identify the source of funding for any job and is entered at the time of job screening and authorization. The availability numbering system must consist of:

   a. A one-digit availability category code.

   b. A three-digit availability serial number.

   c. A two-digit funding activity code.

3. Availability Category Code: This code is the first character of the four-digit availability number. These codes are used by all TYCOMs and, therefore, not all codes are applicable to all ships.

CODE	TITLE
A	ALONGSIDE SCHEDULED CONTINUOUS MAINTENANCE
B	DOCKING SELECTED RESTRICTED AVAILABILITY
C	SELECTED RESTRICTED AVAILABILITY
D	COMPLEX OVERHAUL
E	EXTENDED INCREMENTAL SELECTED RESTRICTED AVAILABILITY
F	EXTENDED DOCKING SELECTED RESTRICTED AVAILABILITY
G	EXTENDED SELECTED RESTRICTED AVAILABILITY

Z	VOYAGE REPAIRS (PER TITLE X) OR STRIKE FORCE INTERMEDIATE MAINTENANCE ACTIVITY
8	FITTING OUT AVAILABILITY

4. Availability Serial Number. The availability serial number is the same three-character serial field currently used in Regional Maintenance Automated Information System (RMAIS). This entry is made in the "serial" field of the maintenance data system availability editor window. There are five authorized serial codes used to designate availabilities.

   a. Alongside Availability (XAZ). The XAZ availability is intended to be a planned CM availability, such as a Continuous Maintenance Availability, over a specified period of time determined by the ship's operational schedule. The TYCOM will schedule the availability during the normal fleet scheduling process. A nominal time frame for availability length is no less than two weeks and no more than six weeks. A ship is not to get underway during any period of the availability. There is no limit to the number of XAZ availabilities that may be scheduled during a year. The first character indicates FY at availability start. The last character indicates a specific XAZ availability during that FY. If the number of availabilities in a single FY results in the Z character being greater than 9, alphabetical characters will then be used beginning with "A". Sequential serial number assignment is desired, but the occasion may arise when a significant schedule change allows for a new availability to be scheduled prior to an existing availability. In this unique case, an availability may be created using an out of sequence serial number. This eliminates the need to move jobs that are already screened in RMAIS and NMD and additional maintenance data systems. Availabilities may be scheduled in RMAIS for future years using notional time frames and the exact dates can be adjusted later once a more precise schedule is issued. All executing activities may be scheduled to work during this availability. If a job scheduled for completion is not started, then it must be moved into another availability and the availability closed on the scheduled completion date. The fact that the job was not completed will be reported in the availability completion report. During a Total Ship Readiness Assessment (TSRA) event, Port Engineer will create a TSRA Avail using the Aval Category (cat) + XAZ Avail Serial format, where; "X" = last digit of the Fiscal Year (FY), "A" = the Avail Type and "Z"=the n^{th} occurrence. For a given UIC, select "X" from the * Avial cat dropdown, select the appropriate FY from the *FY dropdown, enter the "X" value + "X" + "Z" value (example X6X2.)

b. CNO Scheduled Availability (XCZ). The XCZ availability is the scheduled CNO availability published in the OPNAV 4700 Notice. These availabilities are normally conducted in a shipyard under the direct supervision of the Naval Supervisory Authority. All major modernization programs will be scheduled for CNO availabilities. Other executing activities may conduct work during these availabilities pursuant to the contractual limits imposed by the shipyard and the Naval Supervisory Authority. Notional CNO availabilities may be established for years beyond the scope of the OPNAV Notice to support long-term work item placement. The first character indicates FY at availability start. The last character indicates a specific XCZ availability during that FY. Software programs require that only one contract solicitation may be recorded against a given availability, therefore the situation may arise when two availabilities must be simultaneously executed. In this case, the same type of availability will be used and the next sequential number assigned.

c. Yearlong Continuous Maintenance Availability (XCM). The XCM availability is a yearlong availability for the scheduling and completion of work items that are not accomplished during any other scheduled availability. A job is not to be kept in the XCM availability if it is accomplished in an XCZ or XAZ availability. The first character indicates the FY.

d. Yearlong Emergent Work Availability (XEM). The XEM availability is for the completion of emergent work items as defined in Volume VI, Chapter 31 of this manual. Jobs screened to an XEM availability are paid for using emergent work funding. Items assigned to this availability will not be moved into any other availability and will remain in the XEM availability. Emergent work will not be conducted in a XCZ availability. Emergent work that is discovered during a CNO availability will be added to the availability and paid for using CM funding, for example, work required to support light off or sea trials. The first character indicates the FY.

e. Multi-year Unfunded (UNF) availability. The UNF availability is for those items for which there is no realistic expectation that they will be funded even in the out-years but must be maintained for material history purposes. It is also for those jobs with a Maintenance Figure of Merit such that there is a low probability of accomplishment, but the job remains valid. These jobs will be screened to the UNF availability but will not be authorized in RMAIS.

5. Funding Activity Code. The FAC is a two-digit exportable field in RMAIS. A FAC must be entered for every non-TYCOM funded 2-Kilo prior to being screened and brokered. Any member of the maintenance team authorized to screen work may enter a FAC. The FAC table is NAVSEA controlled. The approved FACs are:

CODE	TITLE
AA	TYCOM CM NON-NUCLEAR
AB	TYCOM EM NON-NUCLEAR
AC	TYCOM DIVING SERVICES
AD	TYCOM FLEET ALTERATION (NON NUCLEAR)
AE	TYCOM FUNDED SEMAT (ETC) SHIP'S FORCE ASSISTANCE

AH	TYCOM FUNDED CNO SCHEDULED AVAILABILITY MAINTENANCE
BB	NAVSEA ORDNANCE ALTERATION (ORDALTS)
BC	NAVSEA NON-NUCLEAR PROGRAM ALTERATION
BD	NAVSEA - UNIQUE - NON-NUCLEAR (INCLUDES ALTERATION DEVELOPMENT, TECHNICAL SUPPORT)
BF	NAVAL SHIPYARD MISSION FUNDED
BG	SRF MISSION FUNDED
CA	IMA FUNDED MAINTENANCE
CB	IMA FUNDED FLEET ALTERATION
DA	ADMINISTRATIVE SUPPORT NON-NUCLEAR (PRORATABLE) INCLUDING DSA FUNDED
EA	SHIP'S FORCE MAINTENANCE OR REPAIRS
EB	SHIP'S FORCE - SELF HELP HABITABILITY
FA	TECHNICAL SUPPORT: NAVWAR SSC, RMC (MISSION FUNDED)
FB	TECHNICAL SUPPORT: NAVWAR (SEPARATE FUNDING ONLY)
GA	VRT-N, VRT-M, ALRE
HA	NAVAIR (CAFSU, NAWC, FAA, ASIR)
HB	NAEC LAKEHURST NJ
HC	NAWC CHINA LAKE
HD	NAWC PT MUGU
HE	NAWC PAX RIVER
HF	NAWCAD ST INIGOES MD
IA	NSWCCD
IB	NSWCPD
IC	NSWCPHD
ID	NSWC CRANE
IE	NSWC PANAMA CITY
IF	NSWC NEWPORT
IG	NSWC KEYPORT
IH	NAVSURFWARCENIHEODTECHDIV DET PICATINNY
JA	NAVWAR (ALTERATION INSTALLATION TEAM)
KA	ESU
OO	OTHER - EXPLAIN IN REMARKS
VV	VISITING SHIP SUPPORT (FOREIGN NAVY)

6. Example Cases: The FAC is designed to be applied from a user perspective. For example, if Naval Surface Warfare Center, Philadelphia Division (NSWCPD) plans to use an Alteration Installation Team to install an alteration and they are funded for the installation, then the maintenance team would select the FAC for NSWCPD. The maintenance team is not expected to know if it was OPNAV or the TYCOM that funded NSWCPD, this is beyond

their level of knowledge and those agencies are expected to track their own funds. In this case, a FAC of "IB" would be applied. The following table provides examples of how the various codes can be applied to common availabilities:

Availability Category	Availability Serial	Fund Activity Code
A, K, T, X, Z	XAZ	AA, AC, AD, AE, BB, BC, FA, FB, VV, OO (Note: 1)
B, C, H, J, K, L, M, N, O, Q, R, W, 8	XCZ	AA, AC, AD, AE, AH, BB, BC, BF, DA, FA, FB, OO (Note: 2)
P	XCM	AA, AC, AD, FA, FB, OO (Note: 3)
P	XEM	AB, BF, BG, VV, OO (Note: 4)
U	UNF	NONE

NOTES

NOTE 1: The primary fund activity code is AA for the alongside availability as most work is TYCOM funded maintenance. Commander, Naval Surface Force Atlantic ships should not use codes CA or CB unless the IMA becomes a fleet funded activity as it is in the Pacific region. Pacific Fleet ships would use CA for IMA work performed during this availability. The voyage repair Availability Category should be used for scheduled voyage repairs using either the AA or AB activity code as appropriate, the XEM availability should not be used for voyage repairs.

NOTE 2: The primary fund activity code is AH and a common additional code is BC. In Atlantic Fleet, any IMA work would use the AA code, Pacific Fleet ships would use CA for IMA work performed during this availability.

NOTE 3: Primary FAC is AA for TYCOM funded maintenance.

NOTE 4: Primary FAC is AB indicating ERATA expenditure. In some cases, BF or BG may be used as dictated by each region.

Examples:

a. A ship entering a scheduled CNO docking availability in FY07 will have an availability number consisting of a "B" for the Availability Category Code and the serial will use the XCZ format. The full availability number will be B7C1 as this will be the first CNO availability for this ship in FY07. The "B" is entered in its own field in RMAIS using the availability drop down menu. The three-digit serial is manually entered in the "serial" data field of the RMAIS window.

b. A ship entering an alongside three-week CM availability will use "A" as the Availability Category and the XAZ format for the serial. So the third alongside CM availability for FY06 will be an A6A3 availability. Again, the first digit and the last three digits are entered in separate RMAIS entry fields. The FAC is applied on a job-by-job basis and is not tied to the availability number. In a single availability, there can be several executing activities and multiple FACs across all the jobs screened to the availability. For example, Job EA04-1111 might be a pump repair screened to

Supervisor of Shipbuilding and paid out of TYCOM CM funds so that job will have "AA" FAC assigned when it is screened to the A6A3 availability.

APPENDIX B

NESD CUSTOMER SERVICE

NESD is the Navy point of entry for technical support and should be the first source of support utilized for technical assistance. NESD provides Fleet users with a centralized source for receiving and routing support requests and is available 24/7/365. NESD issues a tracking number to the requester, coordinates assistance with the appropriate Subject Matter Experts, and monitors the issue until it is successfully resolved.

The NESD Digital Workplace (DWP) is the end user-facing Self-Service (Tier 0) solution to guide users to resolve issues on their own by utilizing Knowledge Articles and is the preferred method of trouble ticket entry. This platform enables user self-sufficiency, multiple communication channels – email, chat, and web form, and is simple to use. Follow the steps below to submit a trouble ticket:

Contact: Navy Enterprise Service Desk (NESD)

DWP: https://nesd-dwp.onbmc.mil (Search Knowledge Article and ask for help)

Chat: https://nesd-dwp.onbmc.mil *(Select Chat with agent)*

Email: nesd@nesd-mail.onbmc.mil

Phone: 1-833-NESDNOW (637-3669)

DSN: NESD main menu is: 647-6373

SIPR Email Support: nesd.fct@navy.smil.mil

****Note: Do not submit classified or sensitive information on Unclassified submission****

CHAPTER 5

WORK PACKAGE PREPARATION (SURFACE FORCE)

REFERENCES.

(a) CNRMCINST 4790.15 - Requirements for Monthly Execution Planning Status Reporting of Surface Ship Maintenance and Modernization Availabilities

LISTING OF APPENDICES.

A Prorate Items with Explanations
B Master Specification Catalog Maintenance Office Guidelines
C Surface Ship Prorate Process
D Depot Planning Priority Schedule (FFP)
E Depot Planning Priority Schedule (PSIA)
F_1 Process Flowchart Firm Fixed Price CNO Availability
F_2 Process Flowchart Firm Fixed Price CMAV or Emergency Availability
F_3 Process Flowchart Firm Fixed Price PSIA CNO Availability
F_4 Process Flowchart Firm Fixed Price PSIA CMAV Availability

5.1 PURPOSE. To establish ship maintenance work items and specification package preparation procedures, milestones and business rules. These rules apply to Regional Maintenance Centers (RMC), Commander, Naval Surface Force Pacific; Commander, Naval Surface Force Atlantic; Systems Commanders (sponsoring Program Alterations) and other Alteration Installation Team (AIT) Sponsors.

5.1.1 Prorated Business Rules. This chapter also provides prorate business rules including:

a. Defining common prorates, those prorates to be assigned to specific alterations, and those Type Commander (TYCOM) operational prorates (Appendix A).

b. Providing a simple consistent method to divide those prorates between Program Alterations, Fleet Alterations, maintenance and repair items.

c. Providing a coast specific “Prorate Factor” used in planning as part of the Cost Benefit Analysis of the Ship Change (SC) Document to estimate installation cost of the alteration. Paragraph 5.4.6 lists the Prorate Factors.

5.1.2 Responsibilities.

a. The Life Cycle Manager or Ship Program Manager is responsible for the planning, budgeting and execution of the approved Program Ship Modernization.

b. The TYCOM is responsible for the planning, budgeting and execution of the approved Fleet Ship Modernization, ship repair and ship maintenance.

c. The Ashore Ship's Maintenance Manager is responsible for the execution of each ship's Maintenance and Modernization Business Plan (MMBP) and the division of the prorate percentages between Fleet and Program based on the business rules herein.

5.2 SCOPE. The goal of the effort is to deliver effective maintenance and modernization while capturing efficiencies. The cost avoidance can then be put to use in accomplishing additional maintenance. This chapter introduces work package preparation improvements that leverage existing planning information and process capabilities to make final work package content decisions closer to the time work is actually scheduled to begin. This will significantly reduce the churn in the work package content and support timely delivery of all work desired for the Chief of Naval Operations (CNO) availability. This includes the depot level repair and modernization package, Ship's Force, Intermediate Maintenance Activity and AIT modernization work. Effective financial management of ship maintenance and modernization depends upon use of return cost data in planning for future installations. Upon completion of each availability, the participants must use the availability completion report return cost data to update Navy Data Environment modernization cost estimates and the next fiscal year business plan. Return costs for repair work will also be used to populate and validate costs estimates resident in the Master Specification catalog. A disciplined prorate distribution process, coupled with updates to the Navy Data Environment database and the business plan will help modernization financial planning and reduce cost surprises both before and during availability execution.

5.3 EXECUTING ACTIVITY PLANNING. Work Package Preparation process improvements include long-term contractual relationships and Private Sector Industrial Activity (PSIA) contracts, with public executing activities and private ship repair yards. The Executing Activity (EA) is the public or private enterprise assigned or awarded the responsibility for accomplishing the actual production work to effect modernization and repairs. For the most part, the EAs will perform the planning for accomplishment of the work they will execute. All work, whether CNO availability, continuous maintenance or emergent work will have a Ship Specification Package (SSP) prepared in the appropriate maintenance database work planning and execution tool. The exception to EA planning is first of ship class ship alteration advance planning (drawing preparation and material ordering). This will be performed by the assigned planning yard. The EA will plan subsequent ship alteration installations provided they are not of such a complex nature that it is determined they should be assigned to the planning yard. In most cases, as part of the planning effort, the EA will prepare the actual work specification (accomplished today in the Navy Maintenance Database (NMD) for depot level or in another maintenance Automated Information System for Intermediate Level (I-Level)). The exceptions to the EA work item preparation is that the government may elect to accomplish work item development to provide an avenue to train government personnel in the critical skill sets used during the work item development process or to provide surge capabilities for the EA during peak work loading.

5.4 MASTER SPECIFICATION CATALOG.

5.4.1 Work Package Preparation. The Work Package Preparation process will leverage the large library of planning documents that exist today and are currently stored in Master Specification Catalogs (MSC). The MSCs provide a ready resource of technically correct and current work items universally accessible for use. The vast majority of these documents can be reused for

planning future repair actions. The primary purpose of the MSC is to reduce maintenance costs by:

a. Reducing planning efforts.

b. Identifying and promoting best practices.

c. Effectively managing lessons learned.

d. Minimizing delays associated with maintenance planning.

e. Providing a cost estimate for the work item.

5.4.2 Use of the Master Specification Catalog. Use of the MSC by Maintenance Teams and Planners at maintenance activities is mandatory. Processes are established to allow all users to recommend content and provide feedback regarding the quality of specifications and templates. The Depot Level (D-Level) MSC can be accessed through the NMD application. The Depot level catalog consists of master specifications, specifications used directly without any modification, and templates that can be used with minor modifications. NMD has been modified to capture the contractors' planning estimates and actual return costs. This allows standard costs to be developed for the specifications residing in MSC. The D-Level MSC is maintained by the Master Specification Catalog Maintenance Office (MSCMO) at Surface Maintenance Engineering Planning Program (SURFMEPP), who is assigned to standardize all templates to the maximum extent possible to ensure the specifications residing there are technically correct and reflect the most current guidance. Appendix B provides the general guidelines for template preparation, processing and maintenance. The MSCMO will incorporate the directives of Naval Sea Systems Command (NAVSEA) Standard Specification for Ship Repair and Alteration Committee (SSRAC) accessed from the NAVSEA SSRAC Web site: https://www.navsea.navy.mil/Home/RMC/CNRMC/Our-Programs/SSRAC/. Under certain circumstances, these guidelines may expand upon or differ from NAVSEA SSRAC. The intent is to standardize templates for all ship classes at each geographic location. The MSCMO relies on the expertise of the author for technical content of templates, although when processing a template, the MSCMO will question areas of omission and scrutinize non-conformance to NAVSEA SSRAC. SURFMEPP also acts as the clearinghouse for the nomination or acceptance of additional specifications to the MSC.

5.4.3 Central Planning Activities. Central management is used to ensure quality and consistency of the catalog content and a Central Planning Activity is assigned for each branch to carry out central management responsibilities. For the NMD branch, the Central Planning Activity is the MSC Maintenance Office and is functionally part of SURFMEPP. For I-Level Planning, the Central Planning Activity is Southwest Regional Maintenance Center. The Central Planning Activity responsibilities include:

a. Ensuring MSC content adheres to a standard format.

b. Enforcing technical authority compliance for MSC content.

c. Ensuring reference lists cited by MSC content are current.

d. Ensuring documents stored in the MSC are current and technically correct.

e. Managing the review process for proposed MSC documents.

f. Managing the MSC document change process.

g. Addition of new content to the MSC.

h. Deletion of content from the MSC.

i. Analysis of feedback and metrics; monitor and maintain MSC content quality.

j. Monitoring MSC business rule compliance.

k. Providing decision quality data to oversight commands and committees.

l. Provide first level support for questions related to MSC use or content.

m. Screening requests for access to the MSC prior to submittal to the catalog user and Information Technology management offices.

Each Central Planning Activity has established detailed processes to accomplish the responsibilities. These processes are contained in Central Planning Activity process or instruction manuals.

5.4.4 General Process. The general process for using the MSC is discussed in this paragraph. While details and terminology will vary from system to system, the basic workflow and responsibilities are common to both systems.

a. The ship identifies a problem and requests a maintenance action via the Office of the Chief of Naval Operations Maintenance and Material Management Maintenance Action Form (OPNAV 4790/2K) using the ship's Maintenance Data System.

b. The request is transferred to the fleet brokering system - Validation, Screening and Brokering (VSB).

c. The Maintenance Team screens the request, determines maintenance level, and enters the appropriate branch of the MSC to determine if there is a work item that accomplishes the scope of work required by the work request.

d. If there is a work item, the OPNAV 4790/2K is annotated with the work item identification information prior to brokering the OPNAV 4790/2K.

e. The OPNAV 4790/2K is brokered to a maintenance activity.

f. The maintenance activity receives the work request and checks for MSC information. If there is MSC information that identifies a master specification, or if the maintenance activity identifies an appropriate master specification, the maintenance activity uses the specified pre-planned MSC specification and adds the new specification to the work package without additional planning review.

g. If there is MSC information that identifies a template, or if the maintenance activity identifies an appropriate template, the maintenance activity uses the specified pre-planned MSC template, makes the required changes, performs the normal planning reviews, and then adds the resulting work item to the work package.

h. If there is no catalog identification information, the maintenance activity verifies there is no appropriate master or template. After verification, the activity plans the work using the established planning and planning review processes. The maintenance

activity also forwards the new work item to the MSC Maintenance Office and local standards personnel as a proposed template.

i. The work in the work package is released at the appropriate time and sent through established work integration or contracting processes.

5.4.5 Common Business Rules. There are seven business rules common to both branches of the MSC. These business rules form the fundamental base for the catalog. Consequently, Central Planning Activity processes, as well as programming of the MSC software systems, are designed to support these business rules. Additionally, enforcement of the rules is required to attain MSC goals. Metrics and review processes have been established to support compliance monitoring and reporting. The following business rules apply to both branches of the MSC.

NOTE: NAVSEA "STANDARD ITEMS" ARE NON-DEVIATIONAL.

NOTE: CONTRACTS DICTATE "TEMPLATES" MAY BE CHANGED OR MODIFIED. CHANGES MUST BE FED BACK TO THE MSCMO AS APPROPRIATE.

a. NAVSEA Standard Items must be used whenever they fulfill the requirements of a specific maintenance task.

b. Standard Items and templates must be the preferred method of planning for both public and private Lead Maintenance Activities (LMA).

c. NAVSEA Standard Items will be used without change.

d. NAVSEA Standard Items and templates must be centrally filed and maintained by a Central Planning Activity. Only the Central Planning Activity will be allowed to store, delete or change the status of a NAVSEA Standard Item or template stored in the central library.

e. MSC task lists will adhere to a specific format. The format is defined in:

(1) SSRAC web site.

(2) Enclosure (1) of the I-Level MSC process manual for I-Level specifications and templates.

f. NAVSEA Standard Items are reviewed prior to approval for use. No additional planning review is required prior to use of a Standard Item to accomplish a maintenance task.

g. Although NAVSEA Standard Items do not require planning review, they are subject to established release, scheduling and integration planning processes.

5.4.6 Prorate Information.

5.4.6.1 Prorate Distribution Process. The prorate distribution process map (Appendix C) summarizes the steps in arriving at an equitable distribution of prorate costs. The prorate distribution process follows these milestones:

a. April prior to execution fiscal year:

(1) RMC, TYCOM or Program Executive Officer SHIPS issues the Maintenance and Modernization Business Plan Guidance. This is the baseline for prorate distribution.

(2) The TYCOM input to the MMBP will provide total dollars budgeted for the Fleet Modernization, Maintenance and Repair scheduled for each availability.

(3) The Program Modernization input to the MMBP is the Extended Planning Hull Maintenance Plan which provides man-days and material costs for each scheduled SC. The RMC multiplies the current port man-day rate by the total number of program man-days, by appropriation, and adds locally procured material costs to provide total "installation dollars" for Program Modernization.

NOTE: THE TOTAL DOLLARS USED TO DETERMINE THE PRORATE PERCENTAGES DO NOT INCLUDE SERVICES, GROWTH OR AWARD FEES.

(4) The proportion of TYCOM dollars and Program dollars relative to the total dollars will provide the percentage of prorate costs assigned to TYCOM and Program respectively.

b. Following Maintenance and Modernization Process milestones as shown in chapter 3, Appendix A_1 or A_2, of this part and volume:

(1) TYCOM or Program Executive Officer SHIPS issues the Letters of Authorization for all modernization.

(2) The work package that began definition at the Integrated Planning Conference is further refined with a 50% lock on repair items. The Project Manager provides a list of expected prorated items, with work item numbers assigned, using Appendix A for guidance, for all Program and Fleet Letter of Authorization authorized modernization and TYCOM repair items.

(3) All SCs listed in the Letter of Authorization, except ST1 and ST2 SCs, are mature, impact approved or are removed from the Letter of Authorization. ST1 and ST2 SCs and Programmed but not Authorized SCs will be removed at this time. This locks the prorate distribution percentages. This milestone obligates the cost of prorates based on the locked Letters of Authorization and MMBP budget of the repair and maintenance package.

(4) If one of the participants elects to remove maintenance, repair or modernization work from the availability work package after 80% lock, that participant is still responsible for payment of the actual prorate costs incurred, as of the date of the withdrawal, on execution planning for the removed work.

In the event a Program SC owner declines to comply with paying the prorate charges, payment of the delinquent charges will be a prerequisite for adding the SC to the Letter of Authorization for the next availability for which the SC is programmed.

(5) If new modernization work is added after 80% lock, the activity requesting the SC will incur all additional prorate costs generated as a result of the additional work.

(6) A 100% lock is placed on all repair items. Funding is requested from the participating activities. The Naval Supervisory Authority (NSA) must receive funding to support definitization.

(7) The modernization, maintenance and repair package is definitized.

c. If the availability is extended, the additional prorate requirements are paid for by the party or parties causing the extension.

d. Once the originally planned growth pool is expended, large increases due to growth (exceeding 2% of the total work package costs) will result in reallocation of prorates.

5.4.6.2 Prorate Factors. The prorate factor is used in the budget process for modernization, repair and maintenance, in order to ensure adequate funding for planned work. The following prorate factors are to be applied to total estimated ship repair cost to forecast the portion of total cost for "Prorate" effort. These factors are based on data from selected Departure Reports for ship repairs completed in 2003 through 2005 and are subject to periodic updates.

	Prorate Factor		
	East coast	West coast	Navy-Wide Average
All Prorate work	33%	33%	33%

5.5 KEY EVENTS AND MILESTONES. Package preparation milestones have been developed to support the continuous maintenance philosophy. These milestones are designed to allow a more continuous flow of work to create a work package. The milestones now require only 50% of the work, measured by 50% of the budgeted funds for repair work during the availability being committed, be "locked" at the 50% lock per the appropriate milestones in chapter 3, Appendix A_1 or A_2, of this part and volume. It is expected this work will be repair and major industrial work generally known well before the 50% lock. Every effort should be made to include unscheduled and unaccomplished mandatory Class Maintenance Plan work items in the ship's Baseline Availability Work Package (BAWP) in the work package. Once work is placed in the package, and funding for that work is committed, the EA is authorized to plan that work, order material and expend other funds as necessary to execute the work. It should be the rare exception that work is ever removed from a work package. TYCOM will obtain technical adjudication for any BAWP items prior to the removal of any BAWP item from the work package. It is extremely important the right work at the right time is placed in the work package. Operational commitments, port loading or other reasons may require modification to availability schedules and milestones may need to be adjusted accordingly.

a. Availabilities in the advance planning window when rescheduled should not impact the Maintenance and Project Teams ability to meet milestones beginning inside of the 100% D-Level Package Lock date.

b. Milestones agreed upon by TYCOM and Program Office at the Advance Planning to Planning Event will be included in the NSA's Naval Message of the tailored milestones of this manual released within five working days of the event.

c. Availabilities that are past 100% D-Level Package Lock may miss milestones due to the compressed timeline, however, every effort should be made to accommodate those milestones lost to compression. There should be no attempt to compress milestones of an availability that is within 30 days of contract award. The TYCOM, NSA, affected Program Office and LMA will agree on the compressed milestone timeline and enter a Memorandum of Agreement for the record dictating the agreement. Additionally, there may be instances where other factors create a need to make milestone changes after 100% D-Level Package Lock that are not related to compression issues. In these cases, the process to approve milestone changes remains the same as the compressed timelines. The following steps must be adhered to for all milestone changes after 100% D-Level Package Lock:

(1) The Contracting Officer and the Project Team should be notified immediately. Additionally, should the Primary Contracting Officer or Administrative Contracting Officer make any changes, C300 including the Project Manager should be notified immediately.

(2) Adjustment of milestones will be addressed and adjudicated by TYCOM, NSA, affected Program Office and LMA.

(3) Where availability compression or a milestone change after A-360 is deemed necessary, all efforts will be made to preserve the 100% lock date to meet planning and estimating requirements to support the on time release of the proposal and contract award or the Final Technical Analysis Report (TAR) and contract definitization. If it is determined the 100% lock date must move, TYCOM and affected Program Office concurrence is required and the NSA must develop a mitigation plan to ensure on time contract award or definitization. If milestone changes cause a loss of either the 50% or 80% lock milestone, the 100% lock date must be adjusted to 15 days earlier in order to accommodate an excess of scope, plan and estimate requirements. This will aide in completion of Final TAR and contract definitization on their regularly scheduled dates.

(4) TYCOM, NSA, LMA, Program Office sign Memorandum of Agreements identifying the adjusted milestones.

(5) Where applicable, the appropriate package lock date should be met as soon as practical (if lost in the compression) following the change of availability dates. The Class Maintenance Plan BAWP should be used to accommodate this event. Repair items on the Current Ship's Maintenance Project will also be locked based on the highest readiness return on investment. Use Maintenance Figure of Merit screening values where appropriate. For example, if the availability is compressed and the 50% or 80% lock milestones were lost in the compression, they should in turn be met as soon as practical.

(6) All work items should be scoped, estimated and TAR submitted.

(7) In all cases, the Final TAR and definitization milestones must be met.

(8) An Integrated Project Team Development Integrated Planning Conference and Work Package Execution Review must be convened to discuss the integration and execution plans regarding the adjusted work package and accommodate Project Team communications regarding changes.

d. Planning Key Events are certified by the NSA Contracting Officer, in conjunction with supporting organizations. Key Events must be documented to be accomplished and any exceptions must be approved by the NSA Commanding Officer.

5.5.1 Key Events and Milestone Compliance. All Availabilities (e.g., CNO, Continuous Maintenance Availability (CMAV), CM, EM) in NMD must meet the requirements of the Maintenance and Modernization Milestones per the milestone chart located in chapter 3, Appendix A_1 and A_2, of this part and volume. The Maintenance Team Project Manager is responsible for ensuring all milestones for the specific contract type are entered in NMD.

a. The Planning Milestone List in NMD will only be revised if the Ship Availability Start Date is changed. When the Availability Start Date is changed in NMD, this revised date will auto populate all other revised milestones on the Planning Milestone List.

b. When an Original Milestone date, or a revised date, cannot be met on time, a "Projected-Proposed" date must be entered for that milestone. The Projected-Proposed date will be the date the Project Manager believes the milestone can be met. This does not revise the date or due date for the milestone. The milestone will be late and a comment shall be entered to explain why it was late or missed and a mitigation as to how the milestone will be completed.

c. If the Availability Start Date has not been changed, there should be no revised dates entered. If an original date cannot be met on time, a Projected-Proposed date must be entered as to when it is believed the milestone will be met, and a comment shall be entered to explain why it was late or missed and a mitigation as to how the milestone will be completed. The Projected-Proposed date does not replace the original date that the milestone was due.

d. These requirements apply to all availability types within NMD, (i.e. CNO, CMAV, CM and EM availabilities).

5.5.2 Committed Work at 80% Lock. The milestones require 80% of the depot level work package be committed at 80%, and 100% of the Ship's Force and I-Level work planned to be executed during the availability concurrently with the depot level work be identified. This provides a period of time during which this work can be evaluated and placed in the depot level package if necessary. Additionally, all AIT support requirements must be identified no later than the 80% lock date.

5.5.3 Committed Work at 100% D-Level Package Lock. One hundred percent of the depot level package must be identified, with the activity accomplishing the planning to complete planning and estimating per the appropriate milestones in volume III, chapter 4, Appendix B and G (Surface Force Forward Deployed Naval Forces Ships) and chapter 3, Appendix A_1 and A_2, of this part and volume (Surface Force Continental United States or Hawaii ships). The EA will then have 30 days to produce an integrated work schedule for review at a Work Package

Execution Review. By delaying the final commitment of the last 20% of the depot level work package until the 100% lock date, there should no longer be any reason to front load "insurance" work. The new entitled work package preparation process will better reflect the most current priority of maintenance to be performed on the ship. These milestones are designed for use by those ships supported with PSIA contracts. Chapter 3, Appendix A_1 of this part and volume describes milestones to be used for cost contracts and chapter 3, Appendix A_2 of this part and volume (Continental United States or Hawaii based Surface Ships) and volume III, chapter 4, Appendix B and G (Forward Deployed Naval Forces based Surface Ships) of this manual describes milestones to be used with Firm Fixed Price (FFP) contracts. Where PSIA contracts are not in effect and no existing Indefinite Delivery, Indefinite Quantity (IDIQ) contracts cover the work contemplated, work packages for CMAVs must be submitted to meet local contracting milestones.

5.5.4 Automated Work Request Screening. By no later than the 100% lock date, the entire depot level package must have been screened to the appropriate IT System availability by the Ashore Maintenance Manager. The Ashore Maintenance Manager must screen the Automated Work Requests (AWR) based upon the established TYCOM controls and planning budget. The Project Manager will broker the screened work to the planning activity for development of work specifications. No additional AWRs must be brokered for inclusion into the basic proposal after lock date.

a. The 100% package lock is the official milestone to mark identification of 100% of the work requirements for an availability based on the MMBP budget. All work added to or deleted from the package after the 100% lock will be via errata, addendum or inducted as new work via the Request for Contract Change Process.

b. For certain availabilities, the 100% D-Level Lock date will need to be adjusted to a date which will support timely definitization or Award. Chapter 3, Appendix A, of this part and volume (Continental United States or Hawaii) or volume III, chapter 4, Appendix B or G (Forward Deployed Naval Forces) contain the planning milestones used to execute ship availabilities. The RMC and TYCOM must agree upon the change in planning preparation dates. It is anticipated that any change will be made no later than 100% D-Level Lock date.

c. TYCOM Port Engineers must screen work using AWR estimates against their Available Controls and budget. Available planning budget is defined as the remaining budget after Long Lead Time Material, contractor fees, other work and growth pools are subtracted from controls.

d. The contractor Class C and Independent Government Estimate submission at the 50 and 80 percent milestones are required to ensure calculations of package build are based on an accurate estimated value.

e. The Project Manager will verify the planning budget supports the estimated value of the 100% locked work package. If the work package exceeds the planning budget, the Project Manager will notify the funding sponsor(s) of the delta and request additional funds or removal of work from the authorized priority list to get to the budget allocated.

f. On the lock date, the Project Manager will provide the RMC Administrative Contracting Officer with a complete and consolidated list of all AWRs that make up the 100% D Level work package. The Administrative Contracting Officer will issue the list of AWRs to the PSIA contractor annotating all AWRs listed constitute the basic work package. The contractor must ensure all AWRs listed are incorporated in work items, published and included in the proposal through to award. Currently availabilities are not being definitized on time due to the time it takes from package lock. Furthermore, churn in package content after the 100% lock date causes turmoil in the contractor's ability to develop a work package proposal.

5.5.5 Flow Metric. In order to track the progress of creation of the work package, a work package flow metric has been created. This metric will provide the maintenance team a tool to manage their work package preparation progress. It also provides the RMC Commander and the maintenance teams a leading indicator of the manner in which the ship's Maintenance and Modernization Business Plan is being executed.

5.6 CONTINUOUS MAINTENANCE AVAILABILITIES. CMAVs are intended to provide the maintenance team with the flexibility required to do the right maintenance at the right time for the right price. An additional intent of CMAVs is to provide the agility required to support the fleet response plan.

5.6.1 Continuous Maintenance Availability Types. CMAVs are availabilities accomplished on Surface Force ships outside of CNO availabilities for non-emergent maintenance per chapter 3, of this part and volume. There are two basic types of CMAVs, scheduled (XAZ) and unscheduled (XCM). CMAV schedules will be reviewed at each Planning Board for Maintenance and will be adjusted as ship's operational schedules dictate. Schedule adjustment should be requested by the ship via naval message to the Immediate Superior In Command (ISIC), information to the applicable RMC.

5.6.2 Continuous Maintenance Availability Business Rules. The following CMAV business rules have been established to provide guidance for developing work items associated with scheduled and unscheduled repair and modernization availabilities, managing assigned work brokered to both CNO and CMAV availabilities for FFP and PSIA contracts, and establishing priorities for the executing activity to accomplish planning and execution of Work Candidates into work items. This enables the Vision of Entitlement to be realized. The Vision of Entitlement requires a somewhat continuous flow of the planned work items to allow for a continual estimating, work item review and cost definitization process.

5.6.2.1 Applicability. This process is applicable to all personnel involved with writing work items for repair and modernization contracts using work items developed and maintained in NMD per this manual, Maintenance and Modernization contracts and NAVSEA Standard Items. The start and stop points of the process are when a Work Candidate is brokered from an appropriate IT system into an availability and the production period of the maintenance availability is completed.

5.6.2.2 Ship Specification Package. The Project Manager, or if required by contract, the contractor's Planning Manager on behalf of the Maintenance Team must:

a. Establish a SSP within NMD Planning for scheduled and unscheduled CMAVs ((XAZ), (XCM) and (XEM)) and set up the availability in NMD to receive AWRs from Regional Maintenance Automated Information System electronically per this manual.

b. For each Work Candidate brokered to the availability in NMD, ensure the planning date, the "Deadline Date" and the "Availability Number" (in which an availability period can be entered) listed on the Work Candidate is correct, and also include a preliminary man-hour and material cost estimate. Work must be planned and estimated (man hours and material cost) with Long Lead Time Material identified prior to being routed into any NMD execution availability. This planning estimate is necessary to more accurately predict, for a CNO availability, what percent of the package (in dollars), has been authorized at the 50%, 80% and 100% milestones, and for a CMAV (XAZ) and (XCM) availability, will allow the Navy to know if they have adequate funding available in the budget. A minimum of **14 calendar days** should be allowed for planning unscheduled (XCM) availabilities before routing a job to an NMD execution availability.

5.6.2.3 Planning. With the creation of an SSP in NMD, the actual Planning start and stop dates for the execution of the work within that SSP will be established. The one exception to this will be the yearlong CMAV, Scheduled or Unscheduled CMAV (XAZ) and (XCM) (XEM) availabilities.

a. All valid maintenance items will have a specification prepared in the NMD Planning module per this manual. All new work will also be written in the planning module of NMD.

b. When a valid maintenance item is ready for brokering, review of the currently scheduled SSP availabilities in NMD Planning will then determine to which SSP the item should be added. All SSPs existing within NMD Planning will have a date established when the package should be "locked" per the advance planning milestones contained in chapter 3, Appendix A_1 and A_2, of this part and volume. No valid work items can be added to an existing SSP if the current date is past the "lock" milestone date without providing a written detailed description of the rationale used to add it in the "Work Item" comments field.

c. The priorities for the Planning Activity are then established by the next scheduled availability milestone due per Appendix D or Appendix E. This could be a CNO, the next scheduled CMAV (XAZ) or yearlong XCM availability. Process flowcharts appear in Appendices F_1 through F_4. The yearlong XCM SSP availability will be a workload leveling mechanism for the planning activity and the goal would be to have these items brokered, planned, material ordered, funded, scheduled and ready to start work within 14 calendar days prior to start. The valid maintenance items in the XCM SSP availability will become candidates for scheduled CMAVs and unscheduled XCM execution availabilities (windows of opportunity) identified on short notice. These planned work items for PSIA contracts will be routed to NMD execution availabilities that branch off of this yearlong NMD XCM planning availability. Re-broker those remaining AWRs at the end of the fiscal year, into the next fiscal year

long XCM and scheduled CMAV (XAZ) SSP availability. Refer to Appendices F_1 through F_4. Refer to Appendix A to assist in determining priority of planning work.

d. If the urgency to accomplish any emergency maintenance repairs does not allow for development of a work item prior to the start of work and a work item does not exist in the MSC, then a work item will be prepared after completion of work to document it within NMD. Route these emergent Work Candidates to the applicable SSP planning availability, which can then be forwarded to the NMD execution availabilities where the emergency maintenance work was executed.

e. The Project Manager will check NMD daily for AWRs received in NMD SSP planning availability, review and validate each AWR to determine scope of work. If the information contained in the AWR is insufficient to write a work item, the Project Manager must coordinate and manage any required ship checks.

f. The RMC will determine who should plan a given availability, other than CNO. based on manpower available either at the PSIA contractor or the Government. Check Contract Line Item Number verbiage for actual contract requirements.

5.6.2.4 Planners and Estimators.

5.6.2.4.1 Key Terms. Key Terms as found at NAVSEA SSRAC Web site.

a. Standard Items: Mandatory and non-deviational. There are two types of Standard Items:

(1) Standard Items.

(2) Local Standard Items.

b. Templates: Work Items that can be modified and used for single or multiple ship classes. There are five types of Templates:

(1) Standard Work Templates.

(2) Class Standard Work Templates (CSWT).

(3) Local Work Templates.

(4) Basic Work Shell Template.

(5) Master Specification Work Template.

5.6.2.4.2 Planning and Estimating Process.

a. Determine if the information contained in the AWR is adequate enough to write a work item. If yes, continue development. If no, check the inadequate box and note reasons for inadequacy, then continue.

b. Review for MSC Templates:

(1) Identify appropriate Ship Work List Item Number that applies for AWR to be planned under.

(2) Check or search for an appropriate Template such as a Class Standard Work Template, Standard Work Template, Master Specification Work Template, or Local Work Template addressing the scope of work identified in AWR.

(a) If no applicable template is found, check or search for a previously written work item that is applicable and addresses the scope of work identified in AWR.

(b) If no previously written work item is found that is applicable, check or search for a "basic" work item template or format.

c. Select appropriate Template, previously written work item or "basic" work item template or format and initiate planning the work item.

d. Identify and validate all references, including Liaison Action Requests or Reverse Liaison Action Requests required to complete the work item.

e. Identify test requirements needed to complete work item. If test procedures are required, obtain from execution site design group, planning yard contractor or In-Service Engineering Activity.

f. Identify security and certification requirements. Develop technical requirements and Planning Estimate.

g. Identify repair material required to include long lead-time items and submit to material specialist for procurement.

h. Determine if there is Hazardous Material involved with the work item.

i. Review the completed work item for candidacy as a new or revised template for inclusion into the MSC. If a candidate, submit the new or revised template to the local NSA Standards Person for review and subsequent routing to the MSCMO for processing and inclusion into the catalog.

j. Route completed work item in its preliminary state to the Program Manager queue in NMD to be included in a final review work package compiled in NMD.

5.6.2.5 Maintenance Team Program Manager.

a. Route review work package of work items to Prelim Spec review web site. Web site address: https://www.spear.navy.mil/onlineSpecReview.aspx.

b. Review and respond to comments on prelim work item review web site.

c. Route and approve work items to "APPROVED" work item review web site.

d. Process entire work package and issue.

5.6.2.6 Advanced Planning Manager. The PSIA Contractor will publish the CNO PSIA Package in NMD at A-60 and the CMAV PSIA at A-25. This is an important milestone and metric captured within NMD.

5.6.2.7 Scheduled Availabilities.

a. Scheduled XAZ availabilities are normally three to six weeks in duration and are nominally scheduled once per non-deployed quarter during a period when the ship will be in port at least three continuous weeks. The ship, via the ISIC, will schedule XAZ availabilities. RMC requirements will be addressed to the ship via the maintenance team. Adjustments to XAZ availability start dates are inevitable; however, the start dates may not move "forward" if package preparation and work package "lock" milestone dates would be violated by the new start date. In this case, the applicable XAZ CMAV availability must be rescheduled to support the entitled process milestone dates. In general, CMAVs will be scheduled to start on the first weekday after arriving in port and will be scheduled to complete one week prior to the scheduled underway day. The minimum length of a ship's uninterrupted period will be three weeks if an XAZ availability is to be scheduled, with the XAZ availability preferably being a minimum length of three weeks. Any XAZ availability scheduled without adhering to these minimums should be avoided and work required during that timeframe will be conducted as XCM. Ships and ISICs must ensure other in port requirements (training, inspections, etc.) are not scheduled concurrent with an XAZ availability if these requirements will impede scheduled production.

b. CMAVs will not normally start on weekends or holidays when support for tag-outs and availability start-up is limited, and will not be the same day the ship arrives in port. As a result of requiring the XAZ availability to complete one week prior to getting underway, a reduction in premiums is expected by eliminating the last minute rush to complete work to support the scheduled underway. Maintenance teams must ensure work scheduled for an XAZ availability can realistically be accomplished in the production window. When operational schedule changes occur early enough to allow the scheduling of an additional XAZ availability without violating the milestones discussed in paragraph 5.5, a new XAZ availability should be scheduled when possible, rather than executing maintenance in the unscheduled XCM availability. Additionally, the length of an existing XAZ availability may be increased to accommodate changes in operational schedules provided none of the scheduling rules are violated.

NOTE: XCM AVAILABILITIES ARE NOT TO BE USED AS HOLDING QUEUES FOR MAINTENANCE ITEMS.

5.6.2.8 Unscheduled Availabilities.

a. The unscheduled XCM availability is a single yearlong availability, for the period of 01 October through 30 September, scheduled for each ship every fiscal year. This yearlong availability is used to accomplish maintenance when a ship is not in a scheduled XCM availability or CNO availability. Since the XCM CMAV Windows Of Opportunity (WOO) are potentially short notice, a reduced set of D level milestones is established. Read in three columns:

TASK	RESPONSIBLE ACTIVITY	MILESTONE
WORK SPECS DEVELOPED	RMC OR MSR	WOO-14
WORK PACKAGE DEFINITIZED	RMC OR MSR	WOO-7

b. No length requirement exists for an XCM availability. These are accomplished as WOOs become available. If a work item is determined to require more than one WOO to accomplish in its entirety, then it may be executed during multiple WOOs provided it can be broken into several shorter period requirements.

5.6.3 Continuous Maintenance Availability Applicability. The CMAV business rules apply to all XAZ availabilities and XCM. Since the potential exists for CMAVs to become increasingly more complex, an NSA will be assigned for every CMAV. The NSA will typically be the applicable RMC, or naval shipyard (if applicable).

5.6.4 Work Included in Continuous Maintenance Availabilities. All levels of work (organizational, intermediate and depot) must be included in a single CMAV for a specific availability period regardless of the executor (Ship's Force, RMC production personnel or contractor). The intent is to integrate all types of work into a single production schedule for a specific CMAV. Separate intermediate and depot availabilities will not be established for the same period of time. Dependent upon complexity of the scheduled maintenance or modernization and the number of maintenance activities involved, the Ashore Ship's Maintenance Manager may include a work item for production scheduling and integration in the work package or bid specifications. If this work item is not used, then the Ashore Ship's Maintenance Manager will perform this function.

5.6.5 Concurrent Continuous Maintenance Availabilities. It is incumbent upon the Ashore Ship's Maintenance Manager to ensure that two non-emergent availabilities are not in progress at the same time. Additionally, CMAVs are not to be scheduled concurrently with CNO availabilities. As required, XCM work items meeting the requirements of paragraph 5.6.2.8 of this chapter that are being accomplished in WOOs may overlap with XAZ and CNO availabilities. Ashore Ship's Maintenance Managers shall consider the establishment of a concurrent (non-emergent) availability during times when an Emergent Availability is in progress. The establishment of a concurrent (non-emergent) availability would be necessary to maximize opportunity to complete non-emergent work during the same time that emergent work is taking place.

5.6.6 Ship Movement During a Continuous Maintenance Availability. To maintain focus on the maintenance work package and minimize premium costs, no ship must get underway during a CMAV other than to support the maintenance availability or to complete sea trials. Maintenance preventing a ship from being ready for sea within 96 hours will normally only be screened to XAZ availabilities. Ships will notify their ISIC of any production item that will prevent the ship from getting underway within 96 hours. If this work is being conducted within a scheduled XAZ availability, a waiver is not required. It is imperative the ISIC take a proactive role in ensuring the integrity of the scheduling process be maintained as it relates to CMAVs. CMAVs must be incorporated into the ship's operational schedule and must remain as a priority for completion.

5.6.7 Continuous Maintenance Availability Metrics. In order for accurate metrics to be obtained, it is imperative that all CMAVs be planned and executed utilizing the appropriate IT systems. The following placement and oversight metrics will be collected to measure the effectiveness of the CMAV process. This is not a complete listing of all CMAV metrics. Volume VI, Chapter 36 of this manual provides additional guidance and discussion on the metrics topic.

a. Award on-time delivery (XAZ only). Scheduled CMAV "on time award" is defined as the percentage of time contract award is made on time or early.

b. Completion on-time delivery (XAZ only). The CMAV completion on time delivery metric calculates the percentage of occasions when a CMAV availability is completed on or before the CMAV end date as recorded in the appropriate maintenance database.

c. Availability churn (XAZ only). The CMAV availability churn percentage is a monthly capture of the dollar value of work items changed, deleted or added in a CMAV work package from contract award until availability completion versus the dollar value of the work package at award for all CMAV availabilities that ended in the current measurement month and the previous two months. This metric is collected by availability and reported in the month the availability completes.

d. Growth and New Work Premiums. The Growth and New Work Premiums metric is a measure of late work premiums paid as a percent of growth and new work monthly. It does not include authorized work included at the start of the availability as growth reserves for specific work items or execution of pre-priced option items if executed within the scope and schedule as pre-priced. This metric is collected weekly with each change to the original contract award (FFP) or definitization (PSIA) work package transaction being reported one time in the data call for the week in which it was settled for scheduled CMAVs.

5.6.8 Continuous Maintenance Availability Late Work Premium (XAZ only). The CMAV late work premium metric is a measure of the total dollar value of late work premiums paid for CMAV availabilities completed in the current month divided by the sum of the execution contract award (FFP) or definitization (PSIA) and the settled cost of all Request for Contract Changes for that availability.

5.6.9 Continuous Maintenance Planning. Continuous maintenance is the process of scheduling and accomplishing work outside of CNO availabilities. PSIA contracts create a long-term relationship with the EA accomplishing the continuous maintenance to maintain the ship at an acceptable readiness level. The Ashore Ship's Maintenance Manager will use every scheduled in-port period as an opportunity to accomplish continuous maintenance. Funding for continuous maintenance is included in the ship's Maintenance and Modernization Business Plan. To prevent premiums from being accrued, a minimum of 30 days will be allotted between the time depot level work is brokered to the EA and the time work is scheduled to start. A minimum of 40 days will be allotted for work brokered to I-Level activities. This will provide for adequate time to plan the work and acquire the necessary material in an efficient manner. This will allow a Work Package Execution Review to take place and for all work to be definitized per the milestones listed in chapter 3, Appendix A_1 and A_2, of this part and volume. If these minimum thresholds cannot be complied with, the work should be postponed until the next continuous maintenance opportunity. The Ashore Ship's Maintenance Manager may run a business case analysis if there are other factors that might justify the addition of work inside these preferred windows.

5.7 ADVANCE PLANNING STATUS MESSAGES. The Advance Planning Status Messages required by reference (a) should continue to be issued by the activity responsible for planning the ship's CNO availability. Messages should commence at the completion of the Integrated Planning Conference. These messages play a vital role in keeping all concerned parties informed

of the status of the planning effort. The messages document the successful accomplishment or failure to achieve milestones and produce deliverables.

5.7.1 Work Package Execution Review. The Work Package Execution Review meeting, held to review the integrated work production schedule prepared by the EA, is an opportunity to resolve any work interface or production support issues between the different activities before actual production work begins.

5.7.2 Monthly Execution Planning Status Reporting. The Execution Planning Status reports required by reference (a) must be issued by the Naval Supervising Authority (NSA). Reporting must commence on the last working day of the month in which the availability was established in NMD. The monthly report must conclude with the submission of the A-30 Readiness To Start message.

5.8 MAINTENANCE TEAMS EXECUTING MAINTENANCE WITH FIRM FIXED PRICE CONTRACTS. PSIA contracts are not in place for all surface force ships in the Navy's inventory. Some classes of ships will not receive PSIA contracts as they will be decommissioning soon, others have such a small number in their class that it is not worthwhile to do this. A modified planning milestone table for FFP contracts is included in chapter 3, Appendix A_2, of this part and volume(Continental United States or Hawaii based Surface Ships) and volume III, chapter 4, Appendix B or G (Forward Deployed Naval Forces based Surface Ships).

APPENDIX A

PRORATE ITEMS WITH EXPLANATIONS

A. The following items may be shared by all parties participating in the availability. The share will be based upon installation man-hours. The man-hours will be the sum of Prime (PSIA), Prime Subcontractor and AIT man-hours for each maintenance or modernization work item. These are then subtotaled to arrive at the equitable distribution weight for each participating organization. If the total man-hours for an AIT work item is less than 2% of the total work package, then the AIT will not be assigned a share of the prorates. Each of these prorated items is followed by a brief description.

1. Production Planning (813-10-XXX): The PSIA contractors are required to develop and maintain an integrated production plan for the availability. The plan integrates all repair and modernization work, including AIT work items. All parties gain benefit from the plan which assists in man-hour and material planning for the PSIA contractor as well as the repair and Participating Acquisition Resource Managers (PARM). AITs will not be included in the share of prorates for this item.
2. Temporary Services (863-50-XXX): These include ventilation air, compressed air, fire main, cooling water, potable water, shore power, sewer connections and welding leads as examples. These items benefit all and are appropriate for equitable sharing.
3. Housekeeping (864-90-XXX): Housekeeping includes trash disposal, deck coverings, post workday tidying and final cleaning during the compartment closeout process. Every participant benefits from this service.
4. Integrated Test Plan (894-90-XXX): The Integrated Test Plan is closely associated with the Production Plan. The Integrated Test Plan benefits every participating repair and modernization manager by showing when they can expect various equipment and services to be ready for use and when their own equipment must be ready for testing. Examples include ship's power which must be available to complete combat systems testing.
5. Program Management (897-00-XXX): Every PSIA contractor has a small staff which manages the overall availability. These include the availability manager and principle assistants. Every participant benefits from this team.

B. The costs of the following will be charged to the individual work items.

1. Provisioning Technical Documentation (PTD) (830-21-XXX): PTD is the source document notifying the Supply System that new equipment is being installed on the ship. PTD typically arises from a modernization installation or in repair cases where original equipment is beyond repair, or repair parts are not available, and a substitute must be installed. In all cases, the PTD is generated for an individual work item and will be charged accordingly.
2. Waterfront Liaison Engineering Services (838-10-XXX): Waterfront Liaison Engineering Services are typically required when the Ship Installation Drawings (SID) for a modernization installation have an error or there are interferences not accounted for in the SIDs. It is also possible to need Waterfront Liaison Engineering Services if there

are deteriorated structural members or sections which must be analyzed to see if replacement is mandatory or advisable. In all cases, the work is tied to an individual work item.

3. Test Memorandum Development (841-10-XXX): This item is for individual work item testing as compared to the total ship Integrated Test Plan which is shared by all. The individual Test Memoranda are charged to the respective work items.

4. Technical Support (861-00-XXX): This is technical support such as Original Equipment Manufacturer on-site assistance provided for individual work items. In all cases, the support is charged to the individual work item.

5. Condition Report Estimating (862-30-XXX): Condition reports are typically required for "open and inspect" repair items and for emergent requirements during a modernization installation. In all cases, the cost will be assigned to the individual work item.

6. Dry docking (863-40-XXX): Dry-docking may be required for maintenance of the hull or underwater appendages or there may be needs for access cuts low on the hull to install modernization items. Unlike most of the items in this section, the costs will typically not be charged to a single work item. It is much more likely the costs will be distributed between parties requiring use of the dock. The equitable distribution weight factor will be man-hours.

7. Hazardous Waste Disposal (863-50-XXX): This item is tied to specific work items. Examples include asbestos from propulsion space piping replacements. Lead abatement when sand or water blasting or doing preparations for welding. In all these cases, charging the cost to an individual work item is appropriate.

8. Temporary Access Cuts (863-60-XXX): In many cases, the cuts are for general access to reduce time to get both people and equipment in and out of high intensity work areas such as main machinery spaces. These cases will probably be charged to the TYCOM. In other cases, cuts must be made for a specific repair or modernization work item and they will be charged accordingly.

9. Gas Free and Maintenance of Gas Free (864-42-XXX): The requirement to gain access to a tank or void is usually job specific and will be charged to the individual work item. Exceptions will be evaluated on a case-by-case basis.

10. Crane Services (865-20-XXX): The crane services requirement will be estimated and assigned to individual work items that require the service.

11. Rigging Services (865-30-XXX): This is for rigging for the cranes and is assigned to individual work items.

12. Material Handling (865-20-XXX): This charge is for the "yellow gear" forklifts that support material handling on the pier, dock or main deck of the ship. The cost is assigned to individual work items that require the service.

13. Fire Watch Services (865-70-XXX): The fire watch personnel are estimated and assigned to individual work items.

14. Quality Assurance Support (866-20-XXX): In keeping with ISO 9000, each PSIA contractor maintains its own Quality Assurance. The cost of Quality Assurance will be assigned to individual work items.

15. Production Supervision (897-00-XXX): Every PSIA contractor has a small staff which manages the accomplishment of repairs and the installation of the alterations. The costs will be assigned to the appropriate work items.

C. The TYCOM will pay for the following items:

1. Armed Security Guards and Waterway Security Barrier (042-27-XXX): The security guards and the water barrier are designed to stop terrorist attacks similar to the events at the Marine Barracks in Beirut and the small craft attack upon USS *Cole*. The security guards are supported by land obstacles which are designed to stop unauthorized boats from approaching the ship.

2. Compartment Closeout Schedule (813-00-XXX): The Compartment Closeout Schedule is developed in conjunction with the Production Plan. The Compartment Closeout Schedule shows when each of the ship compartments will be completed in every respect. This includes all work as well as painting, labeling and final cleaning. The closeouts are usually done by a team of PSIA and Navy (civilian or military) personnel who sign the closeout form.

3. Weight and Moment Change Data (843-10-XXX): Every significant availability requires compilation of weight and moment changes to ensure long-term damaged stability of the ship is maintained. Though many repair items, and some modernization alterations, have negligible impact upon weight and moment, it is impractical to try to fractionalize the weight and moment costs to individual jobs.

4. Ship's Force Parking (863-70-XXX): This is a TYCOM item.

5. RMC Office Space (863-70-XXX): When the TYCOMs assumed responsibility for the repair RMCs, the cost of personnel and spaces became a TYCOM responsibility.

6. Cleaning and Pumping Bilges and Maintenance of the Oil Boom (864-42-XXX): This is a ship housekeeping item that is properly charged to the ship or TYCOM.

7. Light Off Assessment (868-30-XXX): This is a TYCOM item.

8. Dock Trial or Fast Cruise (868-40-XXX) and Sea Trials (868-50-XXX): This is a TYCOM item.

9. Work Authorization Forms (897-00-XXX): The Work Authorization Form formally documents the work scope to be performed, establishes a schedule, provides a cost estimate, identifies a responsible person for accomplishing the work, and provides time phased cost and manpower profiles.

10. Temporary Staging for Ship's Force Use (991-12-XXX): This is a TYCOM item.

APPENDIX B

MASTER SPECIFICATION CATALOG MAINTENANCE OFFICE GUIDELINES

1. Scope. This procedure is applicable to all personnel involved in processing and submitting new proposed templates, including updated proposals of existing templates, in the Navy Maintenance Database (NMD) for processing by the MSCMO.

2. Procedure.

2.1 Template.

a. Select template candidate.

b. Check for an existing template or a previously successful Work Item in the following order:

(1) Master Specification Work Template.

(2) Class Standard Work Template.

(3) Standard Work Template.

(4) Local Work Template.

(5) Basic Work Shell Template.

(6) Past Availability.

c. Initiator of the proposed new template candidate must first review existing templates within the MSC to ensure a duplicate is not being created. If there is no duplicate, initiator can proceed with proposal.

d. Ensure item number conforms to NAVSEA SSRAC (e.g., correct Expanded Ship Work Breakdown Structure and contains 8 digits). If non-conforming, correct proposed template.

e. Template Paragraph 1 “Scope”, ensure the following (refer NAVSEA SSRAC):

(1) Paragraph 1.1 Title.

(2) Paragraph 1.2 Location of Work.

(3) Paragraph 1.3 Identification.

(4) Paragraph 1.4 Security Classification of Equipment, Components, Spaces and Documents. (When required to identify classified spaces, equipment or documents).

All Titles containing ANY PHRASE in parentheses that are not a Navy Standard acronym, abbreviation or part of a Planning Yard drawing title must be removed. Example: (OPTION ITEM, DRYDOCK).

f. Ensure the following:

(1) Template Paragraph 2 “References” conforms to NAVSEA SSRAC.

Reference is appropriate and correct for work being done. References must be in one of the following formats:

602-6663754PL Rev *, (Title)

602-6663754 Rev *, (Title)

525146-1 Rev B, (Title) (No Group listed-Manufacturer's Drawing)

(2) For FFG-62 Class, any of the formats in sub-paragraph (1) or as indicated here:

528-****501 Rev *, (Title)

528-****501PL Rev *, (Title)

(3) Reference type is correctly identified and per Instructions for Entering Reference Types table located in the help section of NMD.

(4) Any liens (Liaison Action Requests or Reverse Liaison Action Requests) against a drawing must be deleted from the proposed template.

(5) The order in which the references are listed is in the same order as they appear in the body of the proposed template.

g. Ensure Template Paragraph 3 "Requirements" conforms to NAVSEA SSRAC. Verify the following:

(1) NAVSEA Standard Items are called out as required.

(2) Category I NAVSEA Standard Item requirements are not invoked.

(3) Current NAVSEA SSRAC Standard Phraseology is used.

(4) Required reports are called out and flagged in NMD. Required flag identifies the purpose of the report such as Inspection Results. The first letter of each word must be upper case.

(5) Inspections, Tests, and Government Notifications conform to NAVSEA SSRAC.

(6) Planner's notes are used to call out information to be inserted or addressed.

(7) Verify parts listed as repair parts have the correct information.

(8) Bilge cleaning and pumping requirements of Standard Work Template 992-XXX and tank void cleaning and pumping requirements of CSWT 123-XXX are not invoked.

(a) DDG

Tanks and Voids CSWT 123-XXX

Bilges CSWT 992-XXX

(b) LPD

Tanks and Voids CSWT 123-XXX

Bilges CSWT 992-XXX

(c) LSD

Tanks and Voids CSWT 123-XXX

Bilges CSWT 992-XXX

(d) LHD

Tanks and Voids CSWT 123-XXX

Bilges CSWT 992-XXX

(e) CG

Tanks and Voids CSWT 123-XXX

Bilges CSWT 992-XXX

(f) LCS

Tanks and Voids CSWT 123-XXX

Bilges CSWT 992-XXX

(g) MCM

Tanks and Voids CSWT 123-XXX

Bilges CSWT 992-XXX

(h) LHA

Tanks and Voids CSWT 123-XXX

Bilges CSWT 992-XXX

(9) Fluid capacities for tanks with designated tank numbers are not listed in the proposed template.

(10) Lead paragraph construction:

(a) A lead paragraph must include phraseology beginning with a verb, and refer to paragraphs 1.2 and 1.3 within the sentence structure where applicable (e.g., 3.1 Remove existing and install new the equipment listed in 1.3 and located in 1.2).

(b) Or refer to a previous lead paragraph referred to paragraphs 1.2 and 1.3 within the template (e.g., 3.2 Remove each watertight closure listed in 1.3 and located in 1.2, 3.4. Install each watertight closure removed in 3.2).

(11) The following format must be used when entering Contractor Furnished Material:

(a) Each entry must be inserted to line up to header standard phrase B-30 to justify left.

(b) No space between material line entries:

TOTAL QUANTITY REQUIRED	NAME OF PART	PIECE NO.	REF. NO.	FIGURE DRAWING NO.	PART NO.
One each	Seal	2	2.2	7-6	12345
Two each	Worm Gear	4	2.2	7-6	6789

(12) Where Table, Line(s), and Column(s) of 009-32 are specified within a template, the template must be updated and filled in using the appropriate Table, Line(s), and Column(s). If non-conforming or incorrect, correct proposed template.

h. Ensure Template Paragraph 4 "Notes" conforms to NAVSEA SSRAC. If non-conforming, correct proposed template.

i. Ensure Template Paragraph 5 "Government Furnished Material (GFM)" conforms to NAVSEA SSRAC. If Government Furnished Material is listed in paragraphs 5.1 - 5.3 ensure Government Furnished Material information is correct.

j. Ensure Attachments are correct and open properly in NMD. If errors are found, correct errors.

k. Review template for conformance to NAVSEA SSRAC. If non-conforming, correct proposed template.

l. Ensure proposed template estimate is completely filled out, estimated as a minimum to the lead paragraph level, and accurate. Templates that are silent in paragraph 1.3 (where the equipment has no identification or specific quantity listed) do not have a true and accurate estimate on file reflecting the actual work within the template. Insert a Planner's Note in the template to reflect a unit of (One each) for estimating purposes.

m. Is the proposed template complete and in conformance with NAVSEA SSRAC and the MSCMO Guidelines? If yes, submit proposed template.

2.2 Submission of Change.

a. Recommended changes to the MSCMO Guidelines must be submitted to the MSCMO for consideration. Approved changes to the Guidelines will be forwarded by the MSCMO to the Joint Fleet Maintenance Manual Program Manager for inclusion in the next scheduled Joint Fleet Maintenance Manual release, utilizing the Joint Fleet Maintenance Manual Change Request Form.

b. Recommended changes, to NAVSEA SSRAC must be submitted to the SSRAC through the SSRAC proposed change process. See the NAVSEA SSRAC web site and e-mail addresses and phone number.

c. Recommended Enhancements to the NMD program must be submitted to the Automated Information Service Center through the Configuration Control Board process.

2.3. Internal Review (Planner to Supervisor). The initiating activity must perform an internal review of proposal to ensure template candidate is appropriate and conforms to NAVSEA SSRAC and meets the MSCMO Guidelines. Upon completion of review, template candidate is routed to the RMC or NSA Standards Coordinator.

NOTE: CONTRACTOR GENERATED PROPOSALS MUST BE ROUTED FROM THE CONTRACTOR'S LOCAL STANDARDS COORDINATOR TO THE RMC or NSA STANDARDS COORDINATOR IN THEIR GEOGRAPHIC AREA.

2.4 Command Review. The Regional RMC or NSA must review proposal to ensure proposed template candidate is appropriate and conforms to NAVSEA SSRAC and the MSCMO Guidelines. Upon completion of review, proposed template candidate is:

a. Routed to the MSCMO for review, or

b. Prior to routing to the MSCMO for review, the RMC or NSA for that class of ship must review proposed Class Standard Work Template candidate. This must be initiated by an e-mail notification from the submitting RMC or NSA MSC Standards Coordinator to the cognizant class RMC or NSA MSC Standards Coordinator. The e-mail notification must include the file number of the new proposal. The cognizant class RMC or NSA MSC Standards Coordinator receiving the notification must review proposed template for technical accuracy, current applicable phraseology, conformance to NAVSEA SSRAC and the MSCMO Guidelines, estimate information, and submit a response to the submitting RMC or NSA Standards Coordinator via e-mail within 10 days of receipt of notification. Responses must be provided for all templates submitted for review.

2.5 Master Specification Catalog Maintenance Office.

a. The MSCMO must review proposal to ensure template conforms to NAVSEA SSRAC and the MSCMO Guidelines. If there are no issues, MSCMO activates new template. If there are significant issues with proposal, MSCMO initiates dialog with local standards person or originator of proposal to resolve issues. Once issues are resolved, MSCMO activates new template.

b. The MSCMO will return a template if there is no estimate or if the proposed template is a duplicate of an existing template.

c. Processing Changes to Existing Template. The MSCMO is responsible for maintaining templates (Class Standard Work Templates and Standard Work Templates) up to date. When a user finds an active MSC template that needs to be updated (as a result of changes through Lessons Learned, error, outdated requirements, etc.), a proposed change must be initiated following these Guidelines and processed for review per paragraph 2.4 of this appendix.

3. Naval Supervisory Authorities and Class Assignment Responsibilities.

a. Mid-Atlantic Regional Maintenance Center (MARMC):

AGF-3, AOE, ARS-50, LCC-19 & LPD-17

b. Norfolk Naval Shipyard (NNSY):

LHA & LHD

c. Southwest Regional Maintenance Center:

LSD-41, LSD-49, & MCM

d. Southeast Regional Maintenance Center (SERMC):

LCS-1 & LCS-2

e. SUPSHIP Gulf Coast (SSGC):

CG-47

f. SUPSHIP Bath (SBAT):

DDG-51

CHAPTER 6

MAINTENANCE WORK CLOSEOUT (SURFACE FORCE)

REFERENCES.

(a) NAVSEA SI 009-99 - Ship Departure Report; Provide
(b) NAVSEAINST 4790.8 - Ship's Maintenance and Material Management (3-M) Manual
(c) NAVSEAINST 4790.14 - Ship Departure and Alteration Completion Reports

6.1 PURPOSE. This chapter provides procedures and guidance regarding ship maintenance and modernization work candidate closeout. These rules apply to Maintenance Activities (MA), Maintenance Teams (MT), Regional Maintenance Centers (RMC), Fleet Maintenance Activities (FMA), Naval Shipyards, Systems Commanders sponsoring Program Alterations and other Alteration Installation Team sponsors.

6.2 SCOPE. This chapter covers the process and responsibilities for closing all Ship's Maintenance Action Form, OPNAV 4790/2K (2-Kilo), work candidates screened and brokered to an activity other than Ship's Force.

6.3 BACKGROUND. Prior to changes in the work closeout process, 2-Kilos executed in shipyards (public and private), by intermediate-level activities, and technical assistance organizations often did not get closed until long after the work was completed, and then often by someone unfamiliar with the actual work accomplished. Additionally, even though shipyards provide completion data in the form of departure reports following an availability, that information was either not captured in Ship's Maintenance and Material Management (3-M) History or captured manually. This means useful data was not seamlessly making its way into the Navy's maintenance data warehouse. Since this data is used to determine troubled systems, identify trends in system health, identify causes and solutions to expensive growth work, update cost estimates in the Master Specification Catalogs, update return costs in the Open Architecture Retrieval System database, program for future maintenance budgets, identify the most cost-efficient periodicity for scheduled assessments, and identify candidates for alterations or assessments, it is critical that it be captured and made readily available to all users. This chapter provides the required means to close and report accurate completion data for all 2-Kilos executed by other than Ship's Force personnel.

6.4 WORK CLOSEOUT PROCEDURES.

6.4.1 Depot Maintenance Activity Responsibilities.

6.4.1.1 Private Shipyards Using the Navy Maintenance Database. Comply with reference (a) for submission of cost and completion information directly in Navy Maintenance Database (NMD) for each work specification and Request for Contract Change (RCC). No other ship departure reports should be created or distributed because stakeholders can print standardized departure reports containing the required data directly from NMD. Submission of cost and completion information is required within 60 days after the completion of an availability, including

Continuous Maintenance Availabilities, or within 60 days after completion of the work for emergent maintenance or unscheduled continuous maintenance. This data can be entered either directly in NMD Planning or through a computer-to-computer connection to NMD. The MA must notify the MT when cost and completion information has been entered.

a. If the work item is a Class Maintenance Plan (CMP) scheduled maintenance task or assessment, include the as Found Condition as part of the Final Action code. Refer to reference (b) Appendix C for code definitions.

b. For Firm-Fixed-Price contracts, the completion costs are, by definition, the award costs for original work and the Regional Maintenance Center-approved RCC costs for growth and new work. As such, for Firm-Fixed-Price availabilities, cost information for original work items must be entered by the Project Manager directly in NMD Execution on the Work Item Management screen cost tab after award, and cost information for RCCs must be entered by the Negotiator directly in NMD Execution on the RCC Management screen during RCC settlement. These cost values will populate to the Actual Return Cost screen in NMD Planning and are not editable by the MA. However, completion information, including Final Action and Completion Date, must still be entered in NMD just as it is for Cost contracts.

c. Once the MA enters the required information and the MT closes the availability, NMD automatically prorates completion costs from the work specification to the 2-Kilos that make up the specification based on the proportion of the most recent estimates. NMD also submits a "growth 2-Kilo" for each completed growth or growth on new work RCC. A growth 2-Kilo is used strictly for documentation purposes, getting its information from the "parent" 2-Kilo and cost and completion data from the RCC. It requires no additional actions by, and should be transparent to, the MA or MT.

6.4.1.2 Naval Shipyards and Facilities Using Advanced Industrial Management (AIM) or AIM Express (AIMXP). Comply with reference (c) for submitting Ship Departure Reports. AIM (via AIMXP) transmits 2-Kilo cost and completion information to the brokering Information Technology (IT) system automatically based on labor entries and material transactions made during availability execution. Users should follow local instructions for AIM operations.

6.4.1.3 Depot Maintenance Activities Not Using Navy Maintenance Database or Advanced Industrial Management. The MA is responsible for providing to the Ashore Ship's Maintenance Manager, within 60 days after completion of the work, the man-days, labor costs, material cost, total cost, date completed, and the Final Action code (see paragraph B-2.5.2 of Appendix B to reference (b) for code definitions) for each 2-Kilo. At the time of submission, return costs must be the best prediction of the final costs for that 2-Kilo. If the costs are not finalized when the MA reports return cost data (i.e., there are outstanding invoices), report costs from the Final Cost Report or equivalent financial report. Additionally, if the 2-Kilo was a scheduled task generated by the CMP, the MA must report the As Found Condition (the second character in the Final Action code).

6.4.2 Fleet Maintenance Activity Responsibilities.

6.4.2.1 Fleet Maintenance Activities Managing 2-Kilos Using AIM, AIMXP, Advanced Industrial Management for Regional Maintenance Centers (AIM4RMC) or Fleet Technical Support (FTS). AIMXP, AIM (via AIMXP), AIM4RMC and FTS transmit 2-Kilo cost and

completion information to the brokering IT system automatically based on labor entries and material transactions made during 2-Kilo execution. FMAs working 2-Kilos assigned to these IT systems should follow local instructions for AIMXP, AIM, AIM4RMC or FTS operations.

6.4.2.2 Fleet Maintenance Activities Managing 2-Kilos Using Logistics Data System. Logistics Data System (LDS) transmits a portion of the required cost and completion information to the brokering IT system. The information that is transmitted can be used to calculate the missing information with a reasonable level of accuracy. Naval Sea Logistics Center has implemented a procedure in Ship's 3-M History to calculate and fill in the missing information. FMAs should follow local instructions for LDS operations.

6.4.2.3 Fleet Maintenance Activities Managing 2-Kilos in a System Other Than AIM, AIMXP, AIM4RMC, FTS or LDS. The FMA is responsible for coordinating with the applicable Ashore Ship's Maintenance Manager, within 60 days after completion of the work, to enter in the brokering IT system the man-days, labor costs, material cost, total cost, date completed, and the Final Action code for each 2-Kilo per reference (b) Appendix C. Additionally, if the 2-Kilo was a scheduled task generated by the CMP, the FMA must report the "As Found Condition" (the second character in the Final Action code).

6.4.3 Maintenance Team Responsibilities.

a. The MT, led by the Ashore Ship's Maintenance Manager, is administratively responsible for all work screened and brokered to an activity other than Ship's Force.

b. Depending on the settings of the brokering IT system, 2-Kilos may require both a "Maintenance Activity Completion" and a "Customer Completion" to fully close the 2-Kilo. CMP, non-modernization "Z" 2-Kilos originating from the Surface Maintenance Engineering Planning Program will be assigned a "Maintenance Activity complete" closure method, which will allow the task to be closed by the Maintenance Activity upon completion of work and the task Lead Maintenance Activity be updated in the CMP. The Type Commander Representative, or Ship's Force must "Customer Complete" all remaining open 2-Kilos executed in the availability no later than 90 days after the completion of an availability, including Continuous Maintenance Availabilities, or no later than 90 days after completion of the work for emergent maintenance or unscheduled continuous maintenance.

c. If a 2-Kilo was created in the brokering IT system, it may not appear on the ship's Current Ship's Maintenance Project. These 2-kilos may need to be "Customer Completed" by the MT on behalf of the ship.

6.4.3.1 Work Executed by Private Shipyards Using the Navy Maintenance Database. The following steps must be followed by the MT to properly close out the work.

a. After notification that the MA entered cost and completion information data in NMD, but not later than 90 days after the completion of an availability, including Continuous Maintenance Availabilities, or no later than 90 days after completion of the work for emergent maintenance or unscheduled continuous maintenance, enter Government Furnished Material costs for each specification and RCC in NMD Planning and set the Actual Cost Tab to "Complete".

b. Change the Avail Status to "Closed" and enter the Closed Date in NMD Execution. This transmits the cost and completion information to the brokering IT system and creates a "Maintenance Activity Completion" for the executed 2-Kilos.

c. Validate work was accepted by Ship's Force.

d. Close any 2-Kilos not closed by the ship or auto-closed by the brokering IT system by completing a "Customer Completion". They can be closed individually, or group selected and closed.

e. When an availability is closed in NMD, all 2-Kilos in the work package will be closed. It is not possible to keep 2-Kilos that were not accepted or not worked from getting a "Maintenance Activity Completion". For that reason, if the work is not acceptable by the end of the availability, a new 2-Kilo, referencing the original 2-Kilo in the narrative text, should be created to document the remaining deficiencies. This new 2-Kilo will then be screened and brokered to the appropriate MA for a future availability.

6.4.3.2 Work Executed by Maintenance Activities Using AIM, AIMXP, AIM4RMC, LDS or FTS. These IT systems automatically report cost information and create a "Maintenance Activity Completion" for 2-Kilos executed using those systems. The following steps must be followed by the MT to properly close out the work:

a. Validate work was accepted by Ship's Force.

b. Close any 2-Kilos not closed by the ship or auto-closed by the brokering IT system by completing a "Customer Completion". They can be closed individually, or group selected and closed.

6.4.3.3 Work Executed by Maintenance Activities Not Using NMD, AIM, AIMXP, AIM4RMC, LDS or FTS. 2-Kilos executed outside of these IT systems will not automatically have their costs transmitted to the brokering system, nor will a "Maintenance Activity Completion" be recorded. Instead, the required cost and completion information must be entered directly in the brokering IT system. The following steps must be followed by the MT to properly close out the work:

a. Upon receipt of cost and completion information from the MA, enter this information in the brokering IT system and complete a "Maintenance Activity Completion".

b. Validate work was accepted by Ship's Force.

c. Close any 2-Kilos not closed by the ship or auto-closed by the brokering IT system by completing a "Customer Completion". They can be closed individually, or group selected and closed.

(h) NAVSEA SL720-AA-MAN-030 - Navy Modernization Process Management and Operations Manual (NMP-MOM)

1.1 PURPOSE. The purpose of this chapter is to provide Fleet Commanders' guidance for the maintenance of ships throughout their operating cycle per references (a) through (h). This includes maintenance levels, strategies, programs and modernization which define and support all maintenance accomplished per technical specifications and standards during a ship's operating cycle.

1.1.1 Naval Supervisory Authority.

a. Naval Supervisory Authority Definition. The Naval Supervisory Authority (NSA) is the single Naval activity, as indicated in Table 1-1, responsible for the integration, oversight and verification of all work accomplished by all activities (i.e., Naval Shipyards (NSY), Regional Maintenance Centers (RMC), Supervisors of Shipbuilding (SUPSHIP) contractors, Type Commander (TYCOM) sponsored contractors, Intermediate Maintenance Activities, Alteration Installation Teams (AIT) and Ship's Force (SF) working within the assigned availability, and acts as the single point of contact for this work. The NSA will provide the oversight required to ensure that all work in the assigned availability (e.g., Chief of Naval Operations (CNO) availabilities, Continuous Maintenance Availability, Emergent Availability) is authorized and completed in compliance with applicable technical requirements and maintenance and modernization policy, and that all work meets schedule, quality, environmental, and safety requirements. The NSA must possess a Naval Sea Systems Command (NAVSEA) technical warrant.

b. NSA Assignment. In most cases, the NSA is assigned by the Fleet Maintenance Officer and TYCOM per Table 1-1. An NSA must be assigned to all CNO availabilities and to all contracted work where the majority of the work is performed onboard the ship. However, for repair, maintenance and modernization work packages where TRIDENT Refit Facility Kings Bay (TRFKB), Naval Submarine

Support Facility New London (NSSFNL) or the Tender is assigned as the Lead Maintenance Activity (LMA), no NSA Assignment is required (whether or not the work package includes contracted work). Local Technical Authority for the LMA is delegated by their assigned Chief Engineer per reference (a) as defined in a Memorandum of Agreement (MOA) between the responsible organizations. When such an MOA exists, the LMA (TRFKB, NSSFNL, Tenders) executes the specific NSA responsibilities of paragraphs 1.1.1.d.(1) through 1.1.1.d.(4) when no NSA is assigned.

(1) Alterations installed by AITs per reference (b) can only be executed in availabilities that have a designated NSA, with the exception of availabilities where TRFKB, NSSFNL or Tenders are the assigned LMA.

(2) An NSA is not required if the work is being performed by a U.S. Navy LMA outside a CNO availability.

(3) The NSA will normally be the activity assigned based on the geographic area covered by the assigned RMC, NSY or SUPSHIP, as indicated in volume VI, chapter 2, Table 2-1 of this manual. If this is not practical, the NSA assignment will be made based on the area of responsibility of the cognizant Chief Engineer as delineated in reference (a).

(4) The NSA designation does not apply to modernization exemptions specified in reference (b).

c. NSA Qualification. In order to be qualified to perform the functions of an NSA, the organization must have a Chief Engineer holding a NAVSEA Technical Warrant. For this reason, the only organizations qualified to perform the functions of NSA are the NSYs, the RMCs and the SUPSHIPs. Facilities such as the Tenders, NSSFNL, TRFKB and SF cannot be considered NSAs.

NOTE: DELEGATION OF NSA RESPONSIBILITIES CAN BE ACCOMPLISHED THROUGH A MOA THAT IDENTIFIES DUTIES, RESPONSIBILITIES AND OVERSIGHT FUNCTIONS. THE NSA IS RESPONSIBLE FOR ALL WORK ACCOMPLISHED BY ALL ACTIVITIES AND ACTS AS THE SINGLE POINT OF CONTACT.

d. NSA Responsibilities. These responsibilities include but are not limited to:

(1) Coordination with other Maintenance Activities (e.g., NSY, RMC, SUPSHIP, AIT, Ordnance Alteration or Temporary Alteration Installation Teams) through an authorized MOA. NSA representative must sign MOA(s) as assurance that any civilian contractor requirements detailed in the MOA are contained within applicable contracts.

(2) Single point of contact for the LMA and shipboard personnel.

(3) Verify completion of work for milestones, key events, end of availability, availability departure report based on documentation provided by all maintenance activities.

(4) Based on the amount of work accomplished, the NSA may also assume the role of the LMA per paragraph 1.1.2.

(5) For CNO availabilities, the NSA must:

(a) (For NSY only) Also serve as the LMA.

(b) Participate in all work definition, planning and completion conferences.

(c) Facilitate planning efforts. Ensure detailed planning and integration of the work package is accomplished to provide a schedule that incorporates the work and testing of all organizations involved in the availability. The schedule must address work definition, key events, ship-checks, job summary, material preparations and strategy preparations. Identify milestones with sufficient detail to measure intermediate progress toward each key event. Ensure orientation briefings and training are conducted as necessary so that personnel understand applicable project processes and requirements. Identify their appropriate points of contact.

(d) Prior to Fast Cruise, Sea Trials and availability completion, verify all authorized work has been completed unless waived. For work performed by contractors, ensure all provisions of the contract have been fully executed.

(e) During work execution, review all changes to specifications and work items impacting propulsion plant or designated areas of nuclear powered ships to ensure requirements are met.

(f) Participate in critiques and problem investigations (e.g., Trouble Reports) as necessary.

(g) Participate in Quality of Service Council per chapter 2 of this part and volume.

(6) For alterations installed by AITs, the NSA, as provided in Table 1-1, as required by reference (b) must:

(a) Initiate the AIT MOA with the AIT Manager and engage all assigned activities to support development of the MOA as detailed in 3.6.1 of reference (b). The MOA will state that the on-site QA Workbook, surveillances conducted by the On-site Installation Coordinator and any Corrective Action Requests issued will be provided to the NSA upon request. Additionally, the MOA must specify that the NSA be notified of and allowed to attend all critiques associated with the alteration as well as be notified of all stop work orders issued to the AIT.

(b) Monitor the effectiveness and the quality of AIT managers' execution of Quality Assurance oversight responsibilities by assessing their execution of Quality Assurance oversight responsibilities and by Quality Sampling. Request Qualification Records as needed in support of spot checks.

(c) Perform inspections of surveillances, on a sampling basis, and use the sampling evidence to indicate conformance or nonconformance with

NAVSEA requirements. Document nonconformances per reference (b).

NOTE: THE SF AND NSA OUT-BRIEF SHOULD BE CONDUCTED INDEPENDENT OF COMPLETION STATUS AT THE END OF AVAILABILITY.

(d) Participate in SF AIT In-Briefs, and Ships Force and NSA Out-Briefs.

(e) Coordinate with the AIT Manager, OSIC and SF to ensure satisfactory completion of alterations.

(f) Verify delivery of Integrated Logistics support deliverables from the AIT.

(g) Ensure completion reports are issued and for any work not accomplished, assure a Current Ship's Maintenance Project (CSMP) Job Control Number is issued.

Maintenance Availability	NSA	LMA
CNO Public (1)	NSY	NSY
CNO Private (1)	RMC or SUPSHIP (2)	Contractor
Non-CNO Public (3) (4)	RMC or NSY	RMC, NSY or Fleet Maintenance Activity (FMA)
Non-CNO Private (3)	RMC or SUPSHIP (2)	Contractor
Emergent or Voyage Repair (4)	RMC, SUPSHIP or NSY	FMA, RMC, NSY or Contractor
Maintenance Availability	NSA	LMA
New Construction	SUPSHIP	Contractor
AIT availabilities	RMC, SUPSHIP or NSY	FMA, RMC, NSY, AIT or Contractor
Other (4)	NA	FMA or SF

NOTES:

1. Per reference (c).
2. Pearl Harbor NSY and Intermediate Maintenance Facility and Puget Sound NSY and Intermediate Maintenance Facility are also considered RMCs.
3. Examples of Non-CNO availabilities are located in part III, chapter 4, of this volume.
4. The Tenders, NSSFNL, TRFKB and SF are not NSAs. If the FMA is executing work, the FMA will be the LMA. The Fleet Maintenance Officer may designate a NSA if necessary.

Table 1-1 RMC Area of Responsibility Assignment

NOTE: THE LMA IS RESPONSIBLE TO THE NSA WHEN AN NSA IS ASSIGNED OR THE IMMEDIATE SUPERIOR IN COMMAND IF NO NSA IS ASSIGNED.

1.1.2 Lead Maintenance Activity. The single activity responsible for work being accomplished on U.S. Naval ships during any type of industrial availability. For work conducted during periods in which the NSYs or RMCs do not have oversight, an LMA will be designated. LMAs are responsible for:

a. Conduct or attend routine progress review meetings with all assigned repair activities. Identify and resolve coordination problems and work conflicts. Advise the appropriate maintenance activities (e.g., NSA, NAVSEA, TYCOM, AIT Manager, Ship's Program Manager, etc.) of significant quality, cost and schedule impacts and problems.

b. Integrate the work of all repair activities. This includes an integrated schedule. The schedule must ensure adequate time is provided for crew training.

c. Report work status to Maintenance Brokers.

d. Request assistance via Maintenance Broker as needed for outside activity performance.

e. Track progress of all maintenance activities.

f. Provide management oversight of a ship safety council per reference (d).

g. Maintain a list of activities authorized to work on the ship the LMA is responsible for and ensure the list is updated weekly or on an as-needed basis. Ensure activities working on ship have the proper credentials, work schedule and pedigree (authorized maintenance activity) prior to being added on the work authorization list (e.g., Submarine Safety, Scope of Certification, Fly-By-Wire, Radiological).

h. Ensure maintenance activities performing maintenance on assigned ships have proper MOA, Standard Work Practices, NAVSEA standard items or Strategic Systems Programs Alteration authorization per reference (e) in place and that the MOA, Standard Work Practices, NAVSEA standard items or Strategic Systems Programs Alteration authorization address required support for work authorizations and work control. For SUBSAFE, Deep Submergence Systems, Scope of Certification and Fly-By-Wire work, ensure that the MOA identifies the certifying activity. NSA representative must sign MOA(s) as assurance that any civilian contractor requirements detailed in the MOA are contained within applicable contracts.

i. Direct maintenance providers to their proper points of contact.

j. Attend all production and maintenance management meetings to communicate and resolve priorities, problems, job interferences and issues.

k. Define, identify and provide resolution to coordination problems and work conflicts between the Maintenance Managers, Maintenance Activities, Maintenance Brokers and the ship.

l. Provide a copy of all Departures From Specifications to SF Quality Assurance Officer and the TYCOM N43.

m. Participate in critiques and problem investigations (e.g., Trouble Reports) as necessary.

n. Conduct SF and contractor orientation briefings and training per reference (f) or reference (b), as applicable prior to commencement of shipboard work.

o. For CNO Availabilities, the LMAs are additionally responsible for:

(1) Coordinate work and testing controls to include Work Authorization Forms, tagouts and test sequencing per volume IV, chapter 10, of this manual.

(2) Coordinate preparations by assigned repair activities for all key events (e.g., docking, undocking, hot ops, dock trials, fast cruise, sea trials, etc.) to include verification signature checklists of readiness to start.

(3) Coordinate sail safety and sail closeout efforts among the assigned repair activities conducting work.

(4) Coordinate crane operations, pier laydown areas, dry dock work areas and resolve other real estate conflicts which may impede efficient execution of the availability.

(5) Provide sea trials agenda, with all repair activity input, for ship Commanding Officer's concurrence and Type Commander approval.

(6) Appoint a Ship Safety Officer to chair the Ship Safety Council and coordinate work and testing that affects ship's conditions (i.e., buoyancy, list, trim, stability and watertight integrity) and prevention and protection from fire and flooding.

(7) Respond to findings of the Quality of Service Council per chapter 2 of this part and volume, as requested.

1.1.3 Ship's Responsibility. The ship is responsible to:

a. Monitor all maintenance activities to ensure they are on the master authorization list.

b. Ensure a current master authorization list is maintained by the Ship's Duty Officer.

c. Provide the LMA with information on ship-brokered work, so all activities are placed on the master authorization list.

1.2 MAINTENANCE ACCOMPLISHMENT LEVELS.

1.2.1 Fleet Maintenance. Fleet maintenance encompasses Organizational and Intermediate level maintenance as defined in reference (c). It includes, but is not limited to:

a. SF maintenance that is planned and corrective maintenance which is within the capability and the responsibility of the ship's crew or Maintenance Support Team (if assigned). The work is a blend of equipment operation, condition monitoring, planned maintenance and repairs ranging from simple equipment lubrication to component change-out and in some cases complete disassembly and repair in-place. The thrust of SF maintenance is to take advantage of operator experience and onboard rating skills and to ensure the ship is as maintenance self-sufficient as possible.

b. FMA maintenance is that requiring specialized ratings, skill training in special maintenance processes and technical proficiency or equipment or instrumentation not available to SF. FMA maintenance normally consists of calibration, repair, refurbishment or replacement of damaged or unserviceable parts, components or

assemblies, the emergency manufacture of unavailable parts within the FMA capability and providing technical assistance.

(1) FMAs will accomplish refurbishment level maintenance beyond SF capability to the maximum extent possible within the policies of this chapter and other directives consistent with the availability of funds, material and skilled manpower.

(2) TRIDENT Refit Facilities are additionally tasked and resourced to accomplish industrial restoration level maintenance to SSBN or SSGN 726 Class submarine components as part of the integrated overhaul maintenance strategy for these ships.

(3) FMAs include Regional Repair Centers and Regional Maintenance Teams which are capable of conducting in-depth maintenance on their assigned components using the latest available technology.

1.2.2 Industrial Maintenance. Industrial maintenance is that restoration level maintenance which encompasses Depot level maintenance as defined in reference (c). It includes but is not limited to:

a. Industrial maintenance that is restoration level work requiring complex industrial processes, journeyman level technician skills, facilities, capabilities or manpower capacity not available at FMAs or to SF. This capability is provided within the Navy by naval industrial activities, ship repair facilities and commercial industrial activities and repair facilities under contract.

b. Ship maintenance work scheduled for accomplishment by industrial facilities that in the judgment of the TYCOM, Commander NAVSEA or Commander, Naval Information Warfare Systems Command in their specific areas of responsibility, is not feasible to be accomplished by FMAs or SF, due to:

(1) Having insufficient time or manpower.

(2) Being beyond the capabilities of the FMAs.

(3) Being of such nature that split responsibility between Fleet and industrial maintenance activities may occur.

1.3 RELIABILITY CENTERED MAINTENANCE.

a. Reliability Centered Maintenance (RCM) is a systematic analysis approach where the system design is evaluated for possible failures, the consequences of these failures and the recommended maintenance procedures that should be implemented. The objective is to design a planned maintenance program to address possible failure consequences. The emphasis here is on the establishment of planned maintenance requirements (versus corrective maintenance requirements).

b. The objective is to design a planned maintenance program to address possible failure consequences. The emphasis here is on the establishment of planned maintenance requirements (versus corrective maintenance requirements).

c. Maintenance plans for in-service ships, systems and equipment should be reviewed and modified to incorporate RCM principles in areas where it can be determined that the expected results will be commensurate with associated costs.

1.4 CONDITION BASED MAINTENANCE. Condition Based Maintenance (CBM) is maintenance based on objective evidence of actual or predictable failure of ship's installed systems or components. This includes condition-directed maintenance and periodicity adjustments to time-directed planned maintenance.

a. A thorough knowledge and assessment of actual equipment condition in relation to its designed condition is the basis for most maintenance decisions. Equipment condition is a broad term which includes static parameters, such as size and shape, and dynamic parameters, such as speed, temperature, pressure, voltage, etc. While each SF is in the best position to know the condition of its ship and equipment, the complexities of modern design and engineering dictate that specialized assistance be utilized to determine the condition of much of the equipment. Diagnostics, inspections, non-intrusive monitoring for trending, analyses and tests must be utilized to the maximum extent possible to determine performance and material condition of, and to predict and schedule required corrective maintenance action on, ships systems and equipment.

b. Programs and organizations that are available to assess equipment conditions are described paragraph 1.4. Deficiencies identified by these and other programs and organizations must be documented in the CSMP.

c. Further information on CBM is provided by reference (c).

1.4.1 Unrestricted Operations. The Unrestricted Operation (URO) program is designed to ensure continued safe submerged operations to design test depth. URO requirements must be accomplished as scheduled and as described in volume V, part I, chapter 5, and volume VI, chapter 25, of this manual.

1.4.2. Hull Integrity Procedures. The Hull Integrity Procedures (HIP) program is designed to identify degradation of the material condition of the hull integrity boundary and of those systems affecting occupant safety. HIP requirements must be accomplished as scheduled and as described in volume V, part III, chapter 5 and volume VI, chapter 38, of this manual.

1.4.3 Periodic Maintenance Requirements Program. The Periodic Maintenance Requirement (PMR) program has been established to integrate test, inspection, and maintenance directives from various Systems Commands and to control their input into each ship's CSMP for the required accomplishment by means of the Master Job Catalog. The phrase, "Periodic Maintenance Requirement" encompasses the URO program and the Submarine Engineering Management, Monitoring and Fleet Support Program Office Performance Monitoring Program. All requirements due for accomplishment must be included in the CSMP at least six months prior to the due date to allow sufficient time for material procurement and maintenance planning. Specific requirements of the PMR program are described in volume VI, chapter 24, of this manual.

1.4.4 Material Condition Assessment Feedback Program.

a. The submarine Material Condition Assessment (MCA) program is coordinated by NAVSEA and Submarine Maintenance Engineering, Planning and Procurement Activity and is used to improve the maintenance efficiency of critical, non-nuclear

Hull, Mechanical and Electrical (components by optimizing component refurbishment periodicities. This assessment of a component's condition at refurbishment, along with other pertinent component data such as performance monitoring and corrective maintenance data, provides the foundation for extension or reduction of component refurbishment periodicity. Further, it allows for consideration of modification of component design configuration or the revision or elimination of component maintenance requirements with confidence that component reliability will not be diminished.

b. The MCA data collection program consists of MCA data sheets and pre-availability test and inspection information. Other feedback programs and sources of material condition data include, but are not limited to, UROs, Maintenance and Material Management System, Casualty Reports, Advanced Equipment Repair Program (AERP), Performance Monitoring Program, etc.

c. The Integrated Maintenance Analysis Profile database displays planned and corrective maintenance feedback, historical configuration, job completion and alteration installation data in support of the MCA program.

1.4.5 Total Ship Readiness Assessment. Total Ship Readiness Assessment is an existing TYCOM program which provides assessment of the material condition of selected shipboard systems and equipment. Total Ship Readiness Assessment includes identification of discrepancies to support development of a comprehensive conditioned based industrial availability work package. This program is fully described in volume VI, chapter 42 of this manual.

1.4.6 Performance Monitoring Team. The Performance Monitoring Team provides technical support to the Fleet by obtaining data using CBM methodology to monitor mission and safety critical systems and material conditions of selected Hull, Mechanical and Electrical systems. Performance Monitoring Team functions include, but are not limited to, the following:

a. Collecting and analyzing equipment data.

b. Establishing and maintaining a master database to track equipment performance.

c. Providing feedback and technical guidance using trend analysis.

d. Making equipment repair and deferral recommendations.

1.4.7 Electronic Systems Review. (SSBN and SSGN 726 Class Only) Fleet Training Support Center Detachments perform periodic Electronic Systems Reviews on SSBN and SSGN 726 Class submarines. The major emphasis of the Electronic Systems Review is on the job training of SF personnel in the performance of the Planned Maintenance System and maintenance of selected electronic equipment. Areas of review include monitoring for safety related issues, monitoring of the Planned Maintenance System and verifying equipment operability for the following systems: Radar, Electronic Warfare Support Measures, Periscopes, Fire Control, Central Atmosphere Monitoring System, Gyrocompass, Radio, Sonar, Launchers, Torpedo tubes and handling equipment. Additionally, the Electronic Systems Review team will assist division Maintenance and Material Management Coordinators in administrative reviews, perform National Policy on the Control of Compromising Emanations (TEMPEST) inspections or small arms inspections if requested.

1.5 SYSTEM OR COMPONENT MAINTENANCE.

1.5.1 Advanced Equipment Repair Program. (SSN 688, 21, and 774 Classes Only)

a. AERP is a system for providing new or refurbished non-nuclear components to support specific programmed industrial activity availability and Engineered Operating Cycle (EOC) maintenance requirements. A programmed requirement is one that is identified, budgeted and funded for ultimate end use on a specific submarine hull. Industrial activity availability and EOC requirements are defined as those assets necessary to support the accomplishment of a planned availability work package during scheduled CNO maintenance availabilities. Although similar in concept to the usual rotatable pool or repairable items, the AERP differs in that pool requirements are not determined by usage data. By its nature, the AERP is limited to items of significant value for which it would not be economical to stock based on 'normal' usage. Instead, requirements are specific and are determined by the overall schedule of submarine industrial activity availability and EOC requirements. Only so much material is provided as will meet the programmed needs of the specific ships involved. Range and depth of AERP assets will normally not exceed projected requirements for a two-year period.

b. Components are requisitioned from the stock system by maintenance activities performing industrial activity availabilities and maintenance of submarines. The AERP provides the flexibility and speed-of-response required to ensure timely logistic support and engineering direction of complex maintenance planning.

c. Components selected for management under the AERP are those complex, high value items required to affect the accomplishment of programmed submarine industrial activity availability or EOC requirements in the shortest possible time. However, other factors may also affect the decision to manage certain items under the AERP. Reference (g) provides specific guidance for selection of components.

d. Various activities may initiate action to include additional components into the AERP. Such action may stem from independent study or the recognition of some Fleet requirement. In identifying potential AERP components, close coordination must be maintained with the Fleet and with the activity assigned responsibility for producing the availability work package for each submarine's availability. The final decision regarding inclusion of an item in the AERP rests with Program Executive Officer SSN.

1.5.2 TRIDENT Planned Equipment Replacement Program. (SSBN and SSGN 726 Class Only) Shipboard equipment which requires significant maintenance during the planned operating cycle, industrial level maintenance, which is beyond the capability of SF, and which cannot be accomplished during the refit period (without unacceptable impact on other refit requirements), will be supported by *Trident* Planned Equipment Repair (TRIPER) program. TRIPER equipment will be removed from the ship for refurbishment ashore, replaced with pre-tested, Ready for Issue units and the affected system restored to full operational condition prior to completion of the refit period. Replacement will be accomplished on a planned basis at intervals designed to preclude the failure of the equipment or significant degradation of its associated system. A planned change to shelf stock TRIPER equipment will be accomplished only when sufficient change kits are available to affect the change in all units of a given model of the equipment held in shelf stock. Shelf stock TRIPER equipment is represented in configuration

status accounting databases maintained by Submarine Maintenance Engineering, Planning and Procurement.

1.6 MODERNIZATION. The Navy Modernization Process (is a CNO managed program to develop, plan, fund and accomplish Ship Changes and alterations following policies mandated in reference (h). It is executed per volume VI, chapter 3 of this manual.

1.7 INTEGRATED FLEET MAINTENANCE MANAGEMENT.

1.7.1 Integrated Fleet Maintenance Management. Integrated Fleet Maintenance Management is the business management model that allows for continuous maintenance by providing a seamless interface between all associated processes. It provides for processing work candidates including storage and retrieval of historical data and feedback to improve the process. The intent is to have a standard management model applicable to all platforms at all maintenance levels encompassing the following:

a. Discover and document work.

b. Validate and diagnose work.

c. Integrate and screen work.

d. Estimate and task work.

e. Plan work.

f. Execute work.

g. Collect feedback and analyze data.

1.7.2 Maintenance Continuum. The maintenance continuum defines Fleet strategy for maximizing fleet readiness by optimizing the continuous screening, planning, and execution of maintenance per reference (c). It builds upon continuous maintenance principles of which all scheduling opportunities are aggressively utilized, resulting in the ship's work candidates being expeditiously resolved at every maintenance opportunity (e.g, CMAVs, Windows of Opportunities (WOOs)) outside of the ship's CNO availability. The core tenet is moving all feasible jobs out of CNO availabilities, reserving these events solely for work requiring shipyard-level equipment, facilities, or the extended duration afforded by that environment. Adherence to the maintenance continuum is essential for achieving shorter, more frequent availabilities and preventing delays to ship's training, certification, and operational schedules.

1.7.2.1 Implementing the Maintenance Continuum. Ashore ships maintenance managers, intermediate level ship superintendents, and project managers are expected to aggressively advance continuous screening and planning processes to ensure jobs are ready for execution as quickly as possible after discovery and entry into the ship's CSMP. Ashore ships maintenance manager, intermediate level ship superintendents, and project managers are also expected to identify and implement innovative approaches to utilizing in-port and even underway time to accomplish these jobs. The goal is to fully operationalize maintenance, modernization and repairs, making them continuous, everyday activities throughout the ship's lifecycle. The average time a job spends on the CSMP, from initial entry to completion, is a key metric that ship and shore maintenance managers must continuously work to minimize.

1.7.2.2 Continuous Planning is a process in which work is planned when tasked. Continuous Planning:

a. Begins with tasking of a work candidate to a planning activity for preparation of a work specification and cost estimate.

b. Ends when the specification is approved for execution. There is overlap between Continuous Screening and Continuous Planning.

1.7.2.3 Continuous Execution is a process in which selected emergent and non-emergent work candidates are executed outside of scheduled availabilities. Continuous Execution will not replace the current availability system. Availabilities will still be necessary to accomplish major repairs and extensive configuration changes, as well as provide the ship with a specific period of time to concentrate on maintenance and training. Continuous Execution will assist planning activities and repair activities in leveling their workload while providing the ships with a means of accomplishing repairs when needed with a minimum level of interruption to the ships' in port routine that is acceptable to the ship. The process is used when:

a. The work candidate is ready for execution.

b. Capacity exists in the selected repair activity.

c. Ship's in-port schedule supports the required level of repair effort.

1.8 TECHNICAL ASSISTANCE.

1.8.1 Regional Maintenance Center.

a. The RMCs provide direct support to Fleet and TYCOMs in matters of waterfront technical assistance, maintenance training and logistics services associated with the installation, operation, maintenance, and readiness of shipboard equipment and systems. The RMCs promote Fleet readiness and maintenance self-sufficiency in shipboard systems and equipment through direct technical help in troubleshooting, maintenance and repair, on-the-job maintenance training, logistics reviews, and technical documentation support. These services help correct operational and maintenance problems which are beyond the technical capability or capacity of fleet units or FMAs.

b. Volume VI, chapter 2 of this manual fully describes policies and procedures for the RMCs.

1.8.2 Electromagnetic Interference Survey Program. EMI Survey Program is a subprogram of the Shipboard Electromagnetic Compatibility Improvement Program. Volume VI, chapter 4 of this manual provides further explanation of this program.

1.8.3 Fleet Maintenance Support Branch.

a. Fleet Maintenance Support Branches' charter is to improve the Fleets ability to perform nuclear maintenance. This is accomplished by the following:

(1) Training.

(2) Providing on-site technical support.

(3) Acting as corporate memory.

b. Fleet Maintenance Support Branch support should be coordinated through requesting ship's Immediate Superior In Command.

2.1 PURPOSE. This chapter provides guidance in support of advanced planning, preplanning, execution and close out of Chief of Naval Operations (CNO) submarine scheduled maintenance availabilities. References (a) through (ad) and the requirements listed in this chapter apply

unless otherwise approved by Naval Sea Systems Command (NAVSEA). Where differences may exist, NAVSEA requirements take precedence.

2.2 CHIEF OF NAVAL OPERATIONS SCHEDULED MAINTENANCE AVAILABILITIES.

a. CNO scheduled maintenance availabilities greater than six months in duration are:

(1) Overhaul. An availability scheduled for accomplishment of industrial maintenance and modernization. Types of availabilities include:

(a) Engineered Overhaul (EOH).

(b) Engineered Refueling Overhaul (ERO).

(2) Other availabilities. An availability scheduled primarily for industrial maintenance and installation of major, high priority alterations. Types of these availabilities include:

(a) Depot Modernization Period (DMP).

(b) Post Shakedown Availability (PSA).

(c) Extended Docking Selected Restricted Availability (EDSRA).

b. CNO scheduled maintenance availabilities less than six months in duration. Short, labor intensive availabilities scheduled for accomplishment of industrial maintenance and modernization. Types of these availabilities include:

(1) Selected Restricted Availability (SRA).

(2) Docking Selected Restricted Availability (DSRA).

(3) Phased Maintenance Availability (PMA).

(4) Docking Phased Maintenance Availability (DPMA).

(5) Extended Refit Period (ERP).

(6) Post Shakedown Availability (PSA).

(7) Pre-Inactivation Restricted Availability (PIRA).

(8) Major Maintenance Period (MMP).

(9) Interim Dry-Docking (IDD).

2.2.1 Early Start. An "early start" is defined as that time when ships or submarines are made available by Type Commanders (TYCOM) for the execution of maintenance or modernization, including dry-docking, prior to a scheduled CNO availability start date.

2.2.2 Early Start Concurrence. The Naval Supervisory Authority (NSA) (e.g., Naval Shipyard, Ship Repair Facility, Regional Maintenance Center, Supervisor of Shipbuilding must request an "early start" period via Naval Message no later than A-210 days from scheduled availability start. TYCOMs must provide concurrence to execute an "early start" period. The cognizant maintenance activity will formally document each "early start" period using applicable availability management control tools (e.g., Navy Data Environment, Final Review Estimate provided to the TYCOM, etc.), and include NSA acknowledgement that the availability cost to

the TYCOM will be the same, as if no "early start" period was utilized, within that documentation.

2.3 MAINTENANCE POLICIES AND PROCEDURES.

2.3.1 Critical Path Jobs. Critical Path Jobs (CPJ) are those jobs or series of jobs that require special management attention and normally present the greatest risk to on time completion of the Key Event or availability. Industrial activities will be judicious in designating jobs as CPJs to prevent diverting management attention from those jobs which are, in fact, critical to on time completion of the availability. Consideration must be given to, but not limited to, the following in determining the CPJs:

a. Little or no room for delay exists.

b. Establishing plant conditions.

c. Long Lead Time Material.

d. Complexity of job or special skills or resources required.

e. Significant test requirements.

f. Not previously accomplished by a Fleet Maintenance Activity (FMA) (alterations, etc.).

2.3.2 Work Sequence Schedule. The Work Sequence Schedule is an integrated timeline (Pert Chart, Gantt Chart, etc.) that includes plant conditions, major work steps, tests and recertifications used to identify and progress CPJs. The Work Sequence Schedule should include:

a. Staging.

b. Establishing plant conditions.

c. Issuing work procedures.

d. Identifying major production steps.

e. Testing or Recertifying.

f. Closing out work procedures.

2.3.3 Milestones. Appendix A is representative of Typical CNO Maintenance Availability milestones for submarines. NAVSEA will issue specific advance planning milestones for each CNO Maintenance Availability.

2.3.4 Habitability. Key Event (HB00) at which the ship meets habitability standards by completion of Habitability Inspection per Quality of Service Council (QoSC) Execution Guidance and its subsequent paragraphs to determine that the ship is materially ready. Exceptions must be approved by the NSA Commanding Officer based on the Chief Engineers' Risk Assessment.

2.3.5 Memorandum of Agreement. The Memorandum of Agreement (MOA) must be executed and jointly signed by the ship's CO, the NSA, the Alteration Installation Team (A)IT Manager, the Immediate Superior in Command (ISIC) representative (if applicable) and the Fleet Maintenance Activity (FMA) representative (if applicable) prior to commencing authorized

intrusive work. It is an agreement between the industrial activity and Ship's Force concerning the responsibilities of each party during the availability. It deals with a number of areas in which Ship's Force generally provides support to the industrial activity and vice versa. Reference (a) contains training requirements and additional guidance for MOAs involving submarines. As a minimum, the MOA must include:

a. Purpose. Include:

(1) Availability Type.

(2) Period of Performance.

(3) Geographic Location of Maintenance.

(e.g. CMAV, 2-30 Jun 2019, Norfolk, VA)

b. Applicability. List all parties involved in the MOA and include:

(1) Point of Contact Department or Code for each activity involved.

(2) The NSA and LMA.

(3) The AIT (if applicable) to include the Sponsor, Manager, Contractor(s) and Subcontractor(s) for alteration work.

c. Responsibilities for control of plant conditions and work area isolation.

d. Responsibilities for accomplishment of work.

e. Responsibilities for Quality Assurance (QA).

f. Responsibilities for support services or equipment.

g. Responsibilities for testing requirements.

h. Responsibilities for waivers, deviations, or Departure from Specifications.

i. Precise delineation of the Submarine Safety (SUBSAFE), Deep Submergence Systems Scope of Certification (DSS SOC) and Fly-By-Wire (FBW) work responsibility of each activity for all phases of SUBSAFE, DSS, SOC and FBW work prior to issuing Re-Entry Controls (REC)or Controlled Work.

(1) Identify the requirement that all activities assigned SUBSAFE work must be authorized by the current version of reference (b). If a new reference (b) is issued during any stage of the availability, the LMA must validate the new reference (b) does not impact the work or notify NAVSEA 07Q of the discrepancy.

(2) Identify the outsourcing of SUBSAFE work meets the requirements of reference (c).

j. Responsibilities for training.

k. Miscellaneous responsibilities (as required) (i.e., Radiological Control, Hazardous Material, etc.).

l. Signatures of all activities (signifying agreement with the terms and responsibilities of the MOA).

m. Responsibilities for reports or notifications for Emergency Planning and Community Right-to-Know Act requirements (Sections 302, 304, 311, 312, and 313).

n. For Alterations installed by AITs, the NSA will initiate the MOA and engage all assigned activities to support development of the MOA as detailed in reference (d) and part III, chapter 1, paragraph 1.1.1 of this volume.

2.3.6 Responsibilities. Responsibilities for the Maintenance Policies and Procedures for CNO scheduled availabilities are:

2.3.6.1 Fleet Commander.

a. Maintain the Availability Intervals and Cycles issued in reference (e) to the maximum extent practical within operational requirements.

b. Inform the Chief of Naval Personnel of any significant changes which would affect ship manning requirements during an extended CNO Maintenance Availability.

c. Coordinate with the Program Executive Office, Direct Reporting Program Manager or Ship Program Manager, as applicable, in the accomplishment of CNO Maintenance Availability planning.

d. Implement Docking Officer Qualification and Certification requirements as issued in NAVSEA instructions.

e. Plan for and monitor availability execution to achieve a balance of cost and schedule for the scope of work authorized. Ensure that any growth in the scope of work authorized is necessary to reasonably assure safe, reliable operation of the ship during the subsequent operating cycle.

f. Plan for and provide berthing, messing, offices, classrooms, equipment stowage space, and Ship's Force repair shop per reference (f) when shipboard facilities are expected to become unusable or uninhabitable.

2.3.6.2 Type Commander.

a. Coordinate the scheduling of availabilities at industrial activities with Fleet Commander, NAVSEA and CNO.

b. Initiate the required budgetary actions for funding availabilities.

c. Coordinate the work assignments between the FMA and the industrial activity.

d. Seek resolution of all class and major technical problems and coordinate industrial requirements for modernization and repair.

e. Authorize AWPs prepared by Submarine Maintenance Engineering, Planning and Procurement (SUBMEPP) Activity with recommendations from the ship's CO, Maintenance Manager and ISIC (if applicable). Exercise all work candidate screening and follow up actions relating to the availability directly with the ship concerned.

f. Coordinate the interface of the Maintenance and Material Management (3-M) system with the Periodic Maintenance Requirement (PMR) scheduling and feedback reporting system.

g. Designate a TYCOM representative for the Work Definition Conference (WDC), Project Review Conference (PRC), QoSC meeting, and Pre-Arrival Conference (PAC) when such conferences or meetings are scheduled.

h. Recommend to CNO any high priority fleet modernization desired to be accomplished.

i. Send a Sea Trials Support Services message, if required, to specify Submarine Rescue Diving Recompression System (SRDRS) "modified-alert" requirements (see Appendices BA or CA).

j. For minor CNO Maintenance Availabilities send a Waiver of Escort Requirements Message to NAVSEA when requested by the ISIC per paragraph 2.6.8.9.

k. Conduct a QA audit of Ship's Force and FMA Controlled Work Packages per volume V, part I, chapter 9 of this manual.

l. For major CNO Maintenance Availabilities issue the required messages for Fast Cruise, Sea Trials and Unrestricted Operations (URO) Certification per paragraph 2.6.9.1.

m. For CNO scheduled availabilities of less than six months in duration issue the required message for Sea Trials per paragraph 2.6.8.9.

n. Verify that all Submarine Flight Critical Component - certified On Board Repair Parts are loaded out by Fast Cruise following any major or minor CNO availability.

2.3.6.3 Immediate Superior In Command (Group or Squadron).

a. Assist the TYCOM and SUBMEPP in the preparation of the AWP.

b. Monitor corrective maintenance action taken by industrial activities and Regional Support Groups or Regional Maintenance Centers.

c. Schedule and conduct inspections of Forces Afloat.

d. Monitor progress of CNO Maintenance Availabilities.

e. Ensure that a MOA is executed prior to availability start per paragraph 2.3.5.

f. Designate an ISIC representative to participate in QoSC meetings.

g. Ensure timely accomplishment and reporting of PMR maintenance actions on assigned ships. This should include the use of the PMR scheduling system and the SUBMEPP scheduling tape for automatic interface between the Master Job Catalog, the Current Ship's Maintenance Project (CSMP), and the Automated Material Requisitioning system.

h. Ensure industrial activities and ships maintain current copies of Maintenance Standards, PMR schedules and PMR inventories.

i. Review Ship's Force submitted deferrals for industrial activity assistance to determine whether restoration per Maintenance Standard criteria is warranted in lieu of, or in addition to, requested industrial activity corrective maintenance.

j. Ensure industrial activities provide the 3-M and Maintenance Standards feedback necessary for analysis by SUBMEPP.

k. Request assistance from SUBMEPP as necessary in resolving problems with PMR scheduling and software.

l. Report to SUBMEPP the inability to perform PMRs due to software technical inadequacy, non-availability of overhauling spares, insufficient manpower or inadequate industrial activity facilities.

m. Designate an Availability Coordinator to coordinate industrial activity, FMA drydock and Ship's Force work to meet the availability completion date.

n. Provide updated Sea Trials status by telephone to Commander, Submarine Squadron (COMSUBRON) ELEVEN if SRDRS "modified-alert" support services are in use.

o. For minor CNO Maintenance Availabilities issue the required messages for Sea Trials escort requirements or waiver of escort requirements as applicable, Fast Cruise, Sea Trials and URO Certification per paragraph 2.6.8.9.

p. Report that all Submarine Flight Critical Component-certified On Board Repair Parts are loaded out by Fast Cruise following any major or minor CNO availability (Appendix BB or Appendix CB).

2.3.6.4 Submarine Maintenance Engineering, Planning and Procurement Activity.

a. Develop plans for accomplishing periodic maintenance or equipment replacement.

b. Maintain Baseline AWPs configured to each ship class and type availability and include the standard 3-M data elements controlled by the TYCOM.

c. Prepare and issue all phases of AWPs and AWP Supplements (if applicable).

d. Manage of shore based spares under the direction of NAVSEA and the TYCOM.

e. Prepare, issue and maintain PMR computerized inventories and scheduling reports and associated Master Job Catalog or PMR computer tapes.

f. Prepare, issue and maintain Maintenance Standards under the guidance of NAVSEA and the TYCOM.

2.3.6.5 Ship's Commanding Officer. The CO is the TYCOM representative for monitoring the progress and quality of industrial work. As such, the CO should review availability progress during weekly conferences with Department Heads and others as necessary. The Supervising Authority meets weekly with the CO and other industrial activity officials following the Weekly Management Meetings guidance. The CO will be prepared to discuss and assist in the resolution of scheduling, design, material, and production problems. The CO's responsibilities are defined in reference (d). Additionally, COs must:

a. Review AWPs and provide comments to the TYCOM, ISIC and SUBMEPP during the WDC or PRC.

b. Assign a Ship Selected Records (SSR) Coordinator to perform the functions of paragraph 2.6.6.

c. Publish policy concerning the number of duty sections, liberty, ship cleanliness, tagout procedures, tank closeout and blanking of otherwise exposed fluid systems, waveguides and air systems before availability start.

d. Ensure non-conformances (Waivers, Deviations or Departures from Specification) submitted during the availability by any activity are approved prior to trials at sea (if held) and not later than the completion of the availability.

e. Review PMR maintenance schedules and CSMP reports with parent ISIC prior to CNO Maintenance Availabilities assist in planning for accomplishment of required planned maintenance and corrective maintenance. Additional information and requirements concerning PMRs are discussed in detail in volume VI, chapter 24 of this manual.

f. Maintain a current SUBMEPP PMR inventory of maintenance requirements and Maintenance Standards applicable to the ship class.

g. Designate a ship's force QoSC representative to participate in QoSC meetings.

2.4 AVAILABILITY WORK PACKAGE PLANNING.

2.4.1 Forces Afloat Planning Sources. The majority of the Forces Afloat Work Package can be identified in advance from the following sources:

a. Ship's CSMP Integrated with the Life Cycle Maintenance Plan. This document contains work items deferred during the previous maintenance availabilities, outstanding Departures from Specifications, dry dock requirements, etc. To ensure the CSMP accurately reflects the required ships maintenance, the Immediate Superior in Command (ISIC) Material Officer or TYCOM will review each ship's CSMP in detail with the ship prior to the WDC or PRC for CNO Maintenance Availabilities. The ISIC or TYCOM 3-M Coordinator and Maintenance Document Control Office (MDCO) should provide the necessary technical assistance and training to facilitate CSMP updates.

(1) PMR or URO. The ISIC will load scheduled PMRs into each ship's CSMP for a specific availability.

(2) The ISIC MDCO or TYCOM will enter alterations on the ship's CSMP which the TYCOM has authorized for accomplishment. The ISIC or TYCOM calls out alterations for a specific availability based on material availability as identified by the industrial activity. Within funding constraints and TYCOM guidance, all alterations authorized on the TYCOM Alteration Management System or Navy Modernization Process are candidates for accomplishment during each availability.

(3) Condition Based Maintenance. (Machinery Condition Analysis or Technical Assessment, Repair, Groom and Evaluation Team or Performance Monitoring Team (PMT), Combat System Readiness Review, etc.). The ISIC or TYCOM Material Officer and Ship's Force must ensure that all material deficiencies identified by Condition Based Maintenance programs as identified in part III, chapter 1 of this volume are loaded into the CSMP for a specific availability.

b. Work Routines. A set of Master Job Catalog standard work routines will be developed for every availability. The MDCO or TYCOM tailors each work routine package to the needs of the ship by calling out additional work routines to document periodic, interim dry-docking, URO maintenance and calibration recall requirements, as applicable.

c. Pre-Availability Tests and Inspections. Ship's Force, PMTs and industrial activity inspectors perform and submit the results of these pre-availability tests and inspections to the industrial activity, SUBMEPP for evaluation and inclusion in the AWP, as applicable. NAVSEA 07T provides results and recommendations for pre-availability tests performed by PMTs and Ship's Force.

d. Additional requirements for nuclear powered ships are contained in reference (g).

2.4.2 Forces Afloat Planning Actions. Ship's Force must take the following maintenance availability planning actions:

a. Develop a Ship's Force concurrent Work Package that includes all major maintenance actions such as Planned Maintenance System (PMS), Reactor Plant PMS, repairs, PMRs, alterations and testing to be conducted by Ship's Force during the availability, as applicable.

b. Identify CPJs per paragraph 2.3.1 and submit to the planning or industrial activity for integration into the availability schedule.

c. Establish a strategy for calibration of gages, instruments, and tools based on the Calibration Recall List and Calibration Support Plan.

d. Identify all industrial activity provided production and testing support equipment needed to accomplish Ship's Force work, or to recertify systems following Ship's Force work. Identify this equipment to the industrial activity prior to the start of the availability. This support equipment includes the following, as applicable:

(1) Reactor Plant PMS support equipment.

(2) System hydrostatic test equipment.

(3) Calibration equipment.

(4) Special tools.

e. Ship's Force should use Appendix A as guidance to prepare for availabilities. This appendix provides Typical CNO Maintenance Availability Planning Milestones for submarines.

2.4.3 Availability Work Packages.

2.4.3.1 Availability Work Package Content. The AWP includes all nuclear and non-nuclear authorized industrial work and associated Forces Afloat work for modernization, maintenance and repair during the availability. The work described is developed from NAVSEA and TYCOM instructions. Forces Afloat actions in the AWP scheduled to complete prior to availability start are critical in defining additional work candidates per Appendix B.

2.4.3.2 Availability Work Package Sources.

a. CMP.

b. NAVSEA authorized alterations.

c. TYCOM authorized alterations, repairs, PMRs, Engineering for Reduced Maintenance Costs items and baseline AWPs.

d. Results of pre-availability tests and inspections.

e. CSMP.

f. Fleet Technical Support records.

2.4.3.3 Availability Work Package Development. The five stages of AWP development include Baseline, Preliminary, Proposed, Approved and Completed.

a. SUBMEPP develops and maintains Baseline AWPs for each ship class and type of availability.

b. SUBMEPP consolidates the Baseline AWP, NAVSEA authorized alterations and TYCOM authorized alterations, repairs, PMRs and Engineering for Reduced Maintenance Costs items to produce the Preliminary AWP. This Preliminary AWP is issued approximately 12 to 14 months prior to the start of the availability.

c. Systems Command (SYSCOM), TYCOM, and the ship's CO should review the Preliminary AWP to ensure that it includes known work candidates and authorized alterations that will not be accomplished prior to availability start and for proposed work candidates, which in their opinion, are unnecessary. Appendix B provides suggested guidelines for review of the AWP. Following the initial review of the Preliminary AWP, Ship's Force will host a meeting with the TYCOM and SUBMEPP to consolidate comments and recommendations for the WDC or PRC. This meeting is normally held early in the same week as the WDC or PRC.

d. SUBMEPP will host a WDC or PRC attended by NAVSEA, the Supervising Authority, FMA (if applicable), TYCOM, ISIC, PMT, Strategic Systems Project Officer (SSBN and SSGN 726 Class only) and Ship's Force when practical. During this meeting, the Preliminary AWP is carefully reviewed and the TYCOM authorizes the work. When actions are required before a decision is made, those actions are identified and subsequently monitored. The goal is to issue the Proposed AWP (one which represents all SYSCOM or TYCOM authorized work integrated and specifically tailored to the ship involved) within two months following this meeting. At this meeting, the SYSCOM or TYCOM authorizes the industrial activity to continue with planning on the basis of the work identified in the AWP. During this meeting, any activity may submit new work candidates for consideration by the SYSCOM or TYCOM. The SYSCOM or TYCOM will authorize or reject each new work candidate submitted. A reason for rejecting a work candidate will be provided.

e. TYCOM and the ship's CO should review the Proposed AWP to ensure that it contains all agreements made at the WDC or PRC. Appendix B also provides suggested guidelines for review of this AWP.

f. The Supervising Authority will host a PAC attended by NAVSEA, FMA (if applicable), TYCOM, ISIC, SUBMEPP, and Ship's Force when practical. During this

meeting, the Proposed AWP, with results of the pre-availability tests and inspections incorporated where possible, will be carefully reviewed and the TYCOM will approve the work. The goal is to issue the Approved AWP at the conclusion of this meeting. During this meeting, any activity may submit new work candidates for consideration by the TYCOM and NSA Chief Engineer. The TYCOM will authorize or reject each new work candidate submitted. A reason for rejecting a work candidate will be provided.

g. Within six months after the completion of the availability, SUBMEPP will issue the Completed AWP.

2.5 AVAILABILITY PLANNING.

2.5.1 Ship's Force Pre-Planning.

a. To effectively complete the Ship's Force and Maintenance Support Team (MST) (if assigned) responsibilities during the months preceding the start of the availability, it is necessary to assign an Officer or Chief Petty Officer as the Availability Coordinator, responsible for coordinating the completion of the milestones. The quality of the availability will be reflected in the preparations done by Ship's Force and MST (if assigned).

b. Prior to commencement of the availability, the industrial activity will request the ship to provide personnel Temporary Assigned Duty to the activity (approximately one month prior to the start date). The industrial activity will identify the personnel requirements of this pre-arrival team based on the type of availability and ship class.

2.5.1.1 Industrial Activity Visit. The ship's CO, Executive Officer, MST Officer In Charge (OIC) (if applicable) and department heads will visit the industrial activity as soon as practical prior to the start of the availability. The CO will meet key industrial activity managers involved in the availability, other COs of ships in availabilities at the same industrial activity and if applicable, the local Naval Reactors Representative. The Executive Officer, MST OIC (if applicable) and department heads will meet their counterparts within the industrial activity Project Team and counterparts assigned to other ships in an availability at the same industrial activity. The Executive Officer will also check available crew quarters and barge accommodations, if applicable. Ship's Force will:

a. Coordinate with the industrial activity to conduct pre-availability training and indoctrination. The following are suggested topics for training:

(1) Industrial activity organization and Ship's Force or MST (if assigned) interface.

(2) Industrial activity procedures and practices, including:

(a) Operational Control Transfer.

(b) Tagout, Rip-Out and Work Authorization Form. This training must address the WAF and tagout process described in volume IV, chapter 10 of this manual.

(c) SUBSAFE REC Procedures and, if applicable, SOC and FBW Procedures.

(d) Deficiency Reporting and Correcting.

(e) Radiological Controls Agreement.

(f) General Testing Requirements.

(g) Defueling or Fueling Requirements (Nuclear Reactor and Fossil Fuel).

(h) Industrial Activity Procedures for Accomplishing PMS of Equipment Under Their Cognizance.

(i) Nuclear Reactor or Radiological Accident Plan.

(j) Maintenance of Ship's Cleanliness.

(k) QA Interface with the Industrial Activity.

(3) General schedule of Key Events and phases of work and testing.

(4) Safety requirements including Ship's Force or MST (if assigned) industrial activity responsibilities for:

(a) Dry Dock Safety.

(b) Fire Watches.

(c) Watertight Integrity.

(d) Reactor Plant Safety.

(e) Personal Protective Equipment.

(5) Relationship with industrial activity management including responsibility regarding weekly management meetings.

(6) Functions and responsibilities of the joint test groups (Nuclear, Hull, Mechanical, Electrical and Combat Systems) and the Ship's Safety Council including the designation of Ship's Force group and council members.

(7) Control mechanism for work and tests affecting ship's conditions.

(8) Special evolutions and procedures to be conducted early in the availability such as dry-docking and establishing plant conditions.

(9) QA.

(10) IEM.

(11) Hazardous Material Requirements.

(12) Special Environmental Requirements.

(13) Support of Trials and Inspections.

(14) System Experts.

(15) Space Turnover.

b. Develop training plan and watch station requalification program per TYCOM directives.

c. Develop Plan of Action and Milestones for Ship's Force or MST (if assigned) responsibilities during the availability.

d. Review and prepare SSRs for turnover to the planning yard or industrial activity at the start of the availability (see paragraph 2.6.6).

e. Support the industrial activity's pre-availability ship checks, tests and inspections.

2.5.1.2 Availability Coordinator. A submarine served, nuclear trained Limited Duty Officer will be assigned to augment the normal ship's complement during Depot Modernization Periods, Engineered Refueling Overhauls, Major Maintenance Periods, SSBN Extended Refit Periods, Docking Selected Restricted Availabilities, or Engineered Overhauls and will act as the Availability Coordinator for the ship. Availability Coordinator responsibilities are specified in volume V, part I, chapter 1 of this manual.

2.5.2 Docking Conference. For availabilities involving a ship's dry-docking, the industrial activity will conduct a Docking Conference prior to the ship entering the activity if scheduled to go directly into dry dock.

2.5.3 Ship's Force Administrative Preparations. Ship's Force administrative preparations for availabilities will include:

a. Necessary revisions to ship and department organization manuals to ensure compliance with established requirements.

b. Preparation of necessary ship and department directives to ensure that administration is formally supported per current requirements.

c. Formulation of procedures for qualification of underway or steaming watchstanders and maintenance of proficiency of in-port watchstanders, including:

(1) Implementation of formal provisional qualification procedures.

(2) Establishment of qualification goals for Key Events, such as undocking, operational testing of ship and propulsion plant systems, steam testing, initial criticality, space turnover, etc.

(3) Incorporation of qualification requirements necessitated by alterations to ship or propulsion plant systems.

d. Procedures for maintenance and security of Ship's Force or MST (if assigned) barge or office spaces.

e. General overhaul plan for Ship's Force or MST (if assigned) responsible actions including provisions for:

(1) Ship off-load.

(2) Establishment of barge, berthing and messing facilities.

(3) Establishment of routine ship and barge watch bills.

(4) Scheduling of required shore based schools and leave for personnel.

(5) Provision for accomplishment of known Ship's Force or MST (if assigned) corrective maintenance.

(6) Establishment of Ship's Force PMS routines.

(7) Establishment of Integrated Logistics Overhaul (ILO) procedures.

(8) Provisions for shift work during known periods of intensive testing (e.g., Engine Room Steaming Operations, Hot Operations, Power Range Testing).

(9) Ship load-out.

(10) Target dates for completion of key ship and department directives and procedures.

f. Assignment of ship system experts, or QA Inspectors, capable of monitoring industrial activity work on assigned systems.

2.5.4 Quality of Service Council. The QoSC is tasked with ensuring issues affecting habitability, livability, and QoS, as defined within this volume and references (h) and (i), are properly communicated between the ship, maintenance team, and TYCOM. The QoSC should also discuss the implications of out of homeport availabilities, and impending homeport shift issues, as applicable. Refer to paragraph 2.6.3 for additional QoSC Execution Guidance.

a. Ship's CO must request a berthing barge per either reference (h) or (j), as applicable, via Naval message to the TYCOM. Appendix C is a sample berthing barge request Naval message and should sufficiently outline impacts to space and requirements.

b. Ships in depot maintenance availabilities must establish a QoSC consisting, at a minimum, of representatives from the TYCOM, NSA, ISIC, and ship. The council will meet no later than A-90 prior to availability start, quarterly following the initial meeting, in the event of a substantial delay or extension to the availability, and as requested by the command to address habitability concerns.

c. The QoSC must establish a chairperson, normally the Ship's Force (SF) representative, and consider all aspects of crew's QoS during the CNO availability in accordance with references (h) and (j).

d. QoSC must establish a process no later than A-30 by which SF can report impacts to berthing habitability (i.e. hotline, email account, quarter deck log). Ship's representative is responsible for communicating the process to the crew and CO and be flexible to account for multiple berthing situations (shipboard, barge, and alternative quarters). QoS Reporting system should be monitored daily to ensure QoS standards are maintained and restored in a timely manner.

e. QoSC must agree upon regularly occurring meetings after availability start to assess reported berthing impacts; once per month at a minimum and weekly after Habitability Key Event HB00.

f. Prior to availability start, the QoSC must designate a representative from the council to attend Weekly Management Meeting following the QoSC Execution Guidance. This will normally be the chairperson.

g. QoSC must review Habitability Work Items and document all compartments that have the potential to affect quality of life or habitability during the availability.

2.6 AVAILABILITY EXECUTION.

2.6.1 Responsibilities. Responsibilities for CNO scheduled Maintenance Availabilities are:

2.6.1.1 Fleet Commander.

a. Monitor availability execution to achieve a balance of cost and schedule for the scope of work authorized. Ensure that any growth in the scope of work authorized is necessary to ensure safe, reliable operation of the ship during the subsequent operating cycle.

b. Ensure that testing of all systems and equipment installed or repaired during the availability, which require at sea testing, is conducted prior to availability completion.

c. Provide berthing, messing, offices, classrooms, equipment stowage space, and Ship's Force repair shops per reference (g), when shipboard facilities are unusable or uninhabitable.

2.6.1.2 Type Commander or Immediate Superior In Command (Group or Squadron).

a. Authorize new items and growth industrial work items.

b. Monitor and approve all changes in established milestones, not internal to industrial activity, including LOA and completion dates.

c. Issue direction when the quality or completeness of industrial activity work is in question.

d. Monitor off-ship crew messing and berthing arrangements when required.

e. Notify the TYCOM when essential Ship's Force work cannot be completed on the scheduled contract or Key Event completion date. Make recommendations for assistance where appropriate.

f. Periodically assess and monitor shipboard conditions per paragraph 2.6.9.4.

g. Monitor Ship's Force or MST (if assigned) preparation.

h. Conduct a Pre-Critical Inspection of the Engineering Department to determine the ship's readiness for either the Reactor Safeguards Examination (RSE) or the Fleet Commander Post-Overhaul Reactor Safeguards Examination (PORSE) as applicable.

i. Schedule a Distressed Submarine and Salvage Inspection by Forces Afloat in time to have discrepancies corrected prior to the start of Fast Cruise. Normally, the Distressed Submarine and Salvage Inspection will be completed not less than one week prior to the scheduled start of the Fast Cruise.

j. Conduct formal Phase I crew certification inspection(s) of the Ship's Force per the TYCOM Training Manual (when required). The purpose of this inspection must be to audit the readiness and training of the Ship's Force, particularly in the areas of watch stander qualifications, damage control readiness, status of operational and emergency bills, presence on board of essential technical manuals and general operational knowledge. This inspection must be scheduled about one month prior to Fast Cruise and should include written examinations and personal interviews with officers and key enlisted personnel to determine their readiness and status of training as outlined for Phase I. A comparison of personnel allowance (including Navy Enlisted

Classification requirements) versus onboard count must be made to ensure that the ship is adequately manned.

k. Prior to Fast Cruise, the ISIC QA Officer must conduct a formal audit of the Ship's Force REC and Departure from Specification Records. The ISIC Material Officer must conduct a formal audit of the Ship's Force CSMP. Using the SUBMEPP PMR and URO Maintenance Requirement Card (MRC) scheduling reports and current industrial activity or Ship's Force updates to the latest report, ensure all required "D"-Level PMR and URO MRC accomplishment is current. The ISIC must forward the audit results to the TYCOM via the cognizant Commander, Submarine Group. The ISIC will then report to the TYCOM by message per message sample format of Appendix BC or CC the status of the crew or material certification. An update of this certification is needed prior to Sea Trial and following the rescinding of certification noted in paragraph 2.6.9.1.c.

l. Conduct Phase II crew certification. Witness and certify to the TYCOM that the state of crew training is satisfactory for at sea operations per the TYCOM Training Manual. This will be done during a two-day period subsequent to Dock Trials and Phase I crew certification and prior to Fast Cruise. This two-day period will be scheduled so that there is normally a 48-hour period between the end of this event and the beginning of Fast Cruise. This two-day Phase II crew certification period is divided into a 40-hour crew work-up and rest period and an eight-hour modified dockside Operational Readiness Inspection. The entire period should be scheduled to minimize interference with industrial activity work. However, since the certification must be conducted carefully to be meaningful, the officer scheduling the certification should coordinate industrial activity interference during the eight-hour modified Operational Readiness Inspection. This certification should be thorough and meticulous. Pressure from the industrial activity or any other source to compromise ship safety must not be permitted to influence the judgment of the certifying officers. The desired overall sequence of these events is shown in volume I, chapter 2 of this manual.

m. Conduct a material inspection of the ship.

n. Satisfactory completion of crew certification (Phase I and Phase II) and Fast Cruise should be reported to the TYCOM in one "PRIORITY" crew certification message per the sample message format of Appendix BC or CC paralleled by a telephone call to the TYCOM Watch Officer reporting the date-time group of the message. If significant deficiencies exist or it appears that an extension of time is required to correct training or material deficiencies, the TYCOM must be immediately advised by telephone and by message. The Supervising Authority will be included as an information addressee.

o. Receive from the ship's CO or Supervising Authority the scope, schedule and agenda of tests for Sea Trials for review and approval. When approved, forward copies of the agenda to the TYCOM. The concurrence of NAVSEA is required for the sequencing and scheduling of nuclear propulsion plant Sea Trials for CNO Maintenance Availabilities.

p. Prior to Sea Trials, report material certification of the ship by message per the message sample format of Appendix BC or CC, to the TYCOM.

q. Monitor the progress of the availability.

r. If required, initiate Operating Cycle Extension Assessment per references (l) and (m).

2.6.1.2.1 Extended Operating Cycles. An extended operating cycle is the period of time from the end of the current operating cycle to the anticipated start of the next major depot availability (Depot Modernization Period, Engineered Overhaul, Engineered Refueling Overhaul, Inactivation). The Interim Drydocking (IDD) or PIRA Availability Work Package (AWP) is comprised of minimum maintenance requirements that are required to support the specific operating cycle extension, as well as necessary repairs based on the submarine's material condition.

a. For extended operating cycles less than 24 months performed by naval shipyards, the TYCOM must certify completion of IDD or PIRA availabilities. For extended operating cycles less than 24 months performed by private shipyards, the Supervisor of Shipbuilding, with assistance from NAVSEA, will certify completion of IDD or PIRA availabilities.

b. For extended operating cycles of 24 months and greater, NAVSEA must certify completion of IDD or PIRA availabilities.

2.6.1.3 Fleet Maintenance Activity. A scheduled CNO Maintenance availability may involve concurrent FMA repairs. During such availabilities, it is imperative that the industrial activity and the FMA involved maintain a close working relationship, both between themselves and Ship's Force, to ensure a successful, on-time availability completion. As a minimum, the FMA must:

a. Carry out all FMA work consistent with the procedures described in chapter 3 of this part and volume.

b. Participate in all Weekly Management Meetings. (See paragraph 2.6.3.1.).

c. Provide information on FMA Job Status for ship's Situation Report (SITREP). (See Appendix BD or Appendix CD, as appliable).

d. Closely coordinate all jobs affecting Key Event or Milestone completion dates with the industrial activity and Ship's Force.

e. Assist the industrial activity and Ship's Force by maintaining good housekeeping on all job sites.

2.6.1.4 Ship's Force and MST (if assigned).

a. Support work authorization, tagout and REC programs.

b. Ensure no work is conducted within the certified SUBSAFE boundaries without proper authorization.

c. Monitor the quality of the industrial activity's performance.

d. Support industrial activity test programs and witness equipment testing.

e. Perform Inactive Equipment Maintenance (IEM).

f. Ensure Ship's Force work is integrated into the industrial activities schedule.

NOTE: FLEET POLICY DOES NOT PROHIBIT SHIP'S FORCE FROM ACCOMPLISHING WORK ON EQUIPMENT, COMPONENTS OR SYSTEMS NOT OTHERWISE ASSIGNED TO THE INDUSTRIAL ACTIVITY AS LONG AS SUCH WORK DOES NOT IMPEDE THE INDUSTRIAL ACTIVITY SCHEDULE OR IMPACT PRIMARY SHIP'S FORCE RESPONSIBILITIES. THE MAJORITY OF PERSONNEL LEAVE, PARTICULARLY FOR THE WEAPONS AND ENGINEERING DEPARTMENTS, SHOULD BE PROGRAMMED EARLY IN THE AVAILABILITY SO THAT NECESSARY PERSONNEL WILL BE AVAILABLE FOR SUCH THINGS AS COMBAT SYSTEM TESTING, HOT OPERATIONS, ENGINE ROOM STEAMING, POWER RANGE TESTING AND FAST CRUISE.

g. Train and qualify personnel to support the Key Event schedule.

h. Perform site visits where contractor services are being used for equipment refurbishment.

i. Attend weekly progress meetings.

j. Ensure that equipment returned to the ship has passed required shop tests.

2.6.2 Arrival Conference. Scheduling and Conducting. The arrival conference is scheduled shortly after the start of an availability and conducted by the industrial activity and attended by the CO, Executive Officer, MST OIC (if applicable), heads of department and their principal assistants, key shipboard personnel and a TYCOM representative. This meeting also provides an excellent opportunity for Ship's Force to meet key industrial activity personnel.

a. The conference agenda should include, as a minimum, the following topics:

(1) Resolve problems not completed at the WDC, PRC or PAC.

(2) A discussion of work scheduling and production planning requiring close cooperation between Ship's Force and industrial activity personnel. Changes to dates for Key Events such as dry docking, Dock Trials, Fast Cruise, and Sea Trials must be made known and agreed upon at this time.

(3) Dissemination of planning information, such as job orders that have resulted from the deferral actions approved for industrial activity accomplishment.

(4) Resolution of any problems regarding work to be undertaken or material or scheduling problems.

(5) Reporting of plans and material status on Key Events or CPJs.

(6) Discussion of industrial activity regulations and other pertinent requirements affecting the ship.

(7) Dissemination of general administrative information of interest to Ship's Force, such as industrial activity and local facilities for training, recreation, housing accommodation, parking, etc.

b. Activities may submit new work items for consideration.

c. Industrial activity schedule daily or weekly meetings.

d. Submit an Availability Start Message to cognizant Fleet Commander at the start of an industrial availability.

2.6.3 Routine Meetings and Conferences.

2.6.3.1 Weekly Management Meetings. Senior industrial activity management officials should meet weekly with the CO of the ship during the availability.

a. Purpose. These meetings provide a formal means by which attendees can address important specific issues with the senior industrial activity official to obtain appropriate resolution. Questions not answered relative to the conduct of this meeting should be addressed by the CO through the ISIC (if applicable) to the TYCOM.

b. Execution.

(1) The industrial activity Senior Officer or Manager will designate the time and day of the week for the meeting.

(2) Attendees will submit agenda items normally within 24 hours before the meeting. The industrial activity will collect, collate, and prepare all agenda items in writing and distribute them to attendees at the meeting.

(3) Attendees will discuss agenda items at the meeting.

c. Attendees. The industrial activity chairs the meeting. The following personnel must attend and participate:

(1) The CO of the ship being repaired. The Executive Officer should attend if the CO cannot be personally present for any meeting.

(2) At some industrial activities, the TYCOM may designate a representative to attend. If so, CO may submit agenda items in addition to those submitted by CO's that may be broadly applicable to all ships in specific availabilities. In the record, there shouldn't be any "TYCOM Position" on any items. The CO has the responsibility to deal with the senior industrial activity official on problems relating to his ship.

(3) The industrial activity Project Manager or equivalent.

(4) The Naval Reactor Representative at industrial activities authorized to conduct naval nuclear work.

(5) Industrial Activity Senior Management (e.g., Engineering Department Head, QA Head, Production Officer).

(6) Any industrial activity personnel as required to support specific agenda items.

(7) MST OIC (if applicable).

d. General Guidelines.

(1) Before submitting an agenda item, the ship CO should have made an attempt to resolve the problem at an appropriate level within the industrial activities organization.

(2) When agenda items are general subjects such as overall schedule adherence, overall industrial activity manning of ships, overall ship cleanliness, performance of workers and overall ship safety, sufficient factual data should be included to substantiate them.

(3) Ship COs should not routinely submit their agenda items to the Naval Reactors Representative Office (NRRO) for review prior to giving them to the industrial activity's Senior Manager. This does not mean that specific questions related to agenda items cannot be discussed with the NRRO. They should be. Ship COs should not expect the NRRO to be a screen for checking the appropriateness of the item.

(4) Ship COs in private activities must be extremely careful in wording their agenda items, in the discussions at the meeting and in agreeing to words in the minutes to assure that they do not introduce or give tacit agreement to contractual matters.

(5) Ship COs should not submit items for the management meeting as a means to merely determine the status of a job.

(6) If required by the TYCOM, ship COs will provide a copy of the minutes of each meeting to their ISIC or TYCOM.

e. The Weekly Management Meeting is used as a forum to produce a Progress Report, which is intended to form a brief word picture of the availability progress and identify problems that may require action or resolution (Paragraphs 1 and 2 in Appendices BD or CD, as applicable, should not exceed one typewritten page).

(1) If required by the TYCOM, COs will submit weekly Progress Reports by message of the overall status of work. As a minimum, quality of work, progress, significant problem areas, and action taken towards their resolution must be addressed. COs should include status of Ship's Force compliance with reference (n). In addition, if the availability completion or readiness-for-sea dates appear to be in jeopardy, the estimated period and reasons for delay will be reported and identified. The Progress Reports will be routed via the industrial activity and FMA (if applicable) for comments and transmitted in time to reach the TYCOM by the first workday of each week. Appendix BD or Appendix CD, as appliable is the desired format for the report.

(2) If, as a result of their inspections, the CO considers that the progress or the quality of work is unsatisfactory, they will promptly bring the matter to the attention of the industrial activity. If satisfactory corrective measures are not taken, they will report by letter, or if time is critical, by message, to the TYCOM with a copy to the industrial activity stating specifically in what respects the work is unsatisfactory. If the condition reported is not corrected to the CO's satisfaction, a report will be made to CNO via the TYCOM per reference (od). Copies of this report will be sent to the industrial activity and appropriate Fleet Commander.

(3) During the course of the availability, periodic progress reviews are conducted at the 25, 50 and 75 percent points of elapsed time of the availability. As a

minimum, discussion should include the actions towards resolution of previously reported significant problem areas not yet resolved, upcoming Key Events that may be in jeopardy, updates from the QoSC, any significant changes that may be required to meet availability milestones, status of new work and any other issues deemed necessary. The report of the periodic review will be annotated in the weekly SITREP.

2.6.3.2 QoSC Execution Guidance. Unless specified, the requirements below apply to all berthing situations during CNO availabilities. Example: If berthing barge is in use, all berthing barge requirements below apply until crew has moved aboard, at which point all shipboard requirements apply for the remainder of the availability.

a. QoSC will review the QoS Reporting system log daily. Ship's Force reported habitability discrepancies that cannot be corrected within three days must be reported by the QoSC to the TYCOM and captured in the Weekly CNO Availability SITREP or by equivalent weekly reporting process.

(1) For berthing barge discrepancies contact the regional program berthing barge manager for correction per reference (h) or reference (j).

(2) Shipboard discrepancies should be documented via 2-Kilo and follow continuous screening and work authorization processes.

(3) For discrepancies with alternate berthing (e.g., hotel, Bachelor Enlisted Quarters, Bachelor Officer Quarters, Navy Gateway Inns, Navy Lodge), the QoSC and ship's CO will coordinate with contracting agent for berthing as required.

b. The ship's force QoSC representative must attend the Weekly Management Meeting to ensure that QoS updates are included in the SITREP.

(1) The SF QoSC representative will communicate any changes to the documented compartments to the ship's CO.

(2) Any new work or growth work affecting habitability must be discussed to ensure ships force understands the timeline and impacts.

c. Inspect messing and berthing barges per reference (p) monthly when occupied per reference (h) and reference (j). Prioritized corrective action plan for deficiencies found must be executed following reference (h) or reference (j), as applicable. Inspections must be documented electronically and made available by request of Fleet Berthing Barge Program Managers. Completion of the monthly inspection will be noted in the QoSC section of the Weekly CNO Availability SITREP or by equivalent weekly reporting process following the QoSC Execution Guidance.

NOTE: TYCOMS MUST DEVELOP AND MAINTAIN ENTERPRISE SPECIFIC INSTRUCTIONS TO SUPPORT COMPLETION OF INSPECTIONS, ADHERENCE TO REFERENCES (AM) AND (AP), AS WELL AS ADDITIONAL DIRECTIONS NEEDED TO CERTIFY KEY EVENTS SUPPORTING QOS. ADDITIONAL KEY EVENTS, SUCH AS LIVABILITY, MAY BE ESTABLISHED BY THE TYCOM.

d. Maximum of three (3) weeks and minimum of one (1) week prior to the Habitability Key Event HB00, the ship's force QoSC representative, with assistance from the NSA, must conduct a Habitability Inspection of the ship using reference (k), as applicable. Appendix D provides a sample inspection list.

(1) Ship's CO must report completion and results of the Habitability Inspection to the TYCOM via Naval Message, with copy to the LMA. If shipboard discrepancies are discovered that cannot be corrected within 3 days or prior to HB00; the CO, with NSA, QoSC, LMA, and TYCOM will develop a corrective action plan included in the Naval Message with mitigating actions and identifying temporary services available.

(2) The corrective action plan (as applicable) will note any exceptions and be approved by the Maintenance Team and agreed to in writing by the Ship's CO and TYCOM.

(3) Appendix E provides sample SF message reporting completion of habitability inspection.

(4) Appendix F provides sample TYCOM message certifying habitability aboard.

e. QoSC and QoS Reporting system log will remain in place and active until availability completion.

f. Berthing and Messing barges must be transferred back to the Fleet Berthing and Messing Program per reference (h) or reference (j), if in use.

g. Habitability Key Event HB00 is intended to support readiness for duty section move aboard.

2.6.3.3 Docking or Undocking Conferences. For availabilities involving a ship's dry docking, the industrial activity will conduct both a Docking and Undocking Conference, normally within one week prior to the expected evolution. These conferences will be conducted by the assigned industrial activity Docking Officer. Requirements for the conference agenda, attendees, and Ship's Force support are found in reference (p).

2.6.4 Assist Ship's Force Funds. The TYCOM may set aside a portion of the maintenance funds for CNO availabilities as an Assist Ship's Force (ASF) fund. This fund is controlled by the CO and is used to obtain minor industrial activity assistance in the nature of services or labor, or both, to assist in completing assigned Ship's Force work. The following restrictions apply to the use of ASF funds:

a. No work in the nature of an alteration will be undertaken, unless authorized by the TYCOM.

b. No work using ASF funding will be undertaken in which Ship's Force is not the main participant.

c. Only incidental material will be purchased with ASF funds. "Incidental Material" cost, when measured against the cost of labor on each specific ASF work item, will not exceed ten percent of the total job cost without TYCOM permission.

d. A detailed account of ASF expenditures will be maintained. This account may be audited periodically by the TYCOM to ensure compliance with the restrictions in paragraphs 2.6.4.a. through 2.6.4.c.

2.6.5 Integrated Logistics Overhaul.

a. The ILO concept was developed to provide improved maintenance support to the Fleet in response to the need for complete on board logistics support. An ILO focuses on both maintenance and supply requirements by ensuring that technical documentation and repair parts support the equipment which is actually on board. During an ILO, both maintenance and supply personnel are trained in the use and maintenance of shipboard logistics support documentation and systems to enable them to sustain the effects of the ILO during the operating cycle. The objective of an ILO is to improve readiness by providing a ship completing a specified availability with logistics support that accurately reflects the ship's configuration. A secondary objective is to train Ship's Force in the use of on board support documents and in recognizing and correcting support deficiencies.

b. An ILO is a process which improves ship's readiness and equipment availability through verification of configuration status accounting data, ordering of proper logistics support, and training of Ship's Force in the use and maintenance of its logistics support documentation. An ILO is comprised of five functional elements:

(1) Configuration Analysis and Coordinated Shipboard Allowance List (COSAL) QA consists of verification of start of availability configuration data (including planned changes) with Weapons System File data and other documentation to ensure that the Start of Overhaul COSAL fully supports the projected end of availability equipment configuration. In addition, changes in configuration reported by the accomplishing activity are verified to ensure final COSAL documents include required support.

(2) PMS Analysis. Includes verification of applicable Maintenance Index Pages with ship's existing configuration and all changes to this configuration reported by the accomplishing activity. Resolution of discrepancies with PMS managers is accomplished as required. Analysis of individual MRCs is performed to ensure that required PMS repair parts and special tools are identified, included in the applicable documents, and ordered.

(3) Technical Manual Analysis. Ensures that the technical manuals required to support the end of availability configuration are identified and requisitioned. Technical manuals, both those off-loaded and those received during the availability, are inventoried and reviewed for applicability, correct change level, and status of changes. Technical manuals applicable to final configuration are retained. All discrepancies are reported as individual Technical Manual Feedbacks in Model Based Product Support , the Technical Manual Manager will be responsible for update. Technical manuals missing from the required inventory are requisitioned as are any changes needed to upgrade manuals already held. The ship's Technical Manual Applicability Report is updated to reflect the final configuration, this report is available from Model Based Product Support. Also provided are the Technical Manual

requisitions still outstanding. Finally, to ensure minimum deterioration of stock after the availability, selected ship personnel are trained in technical manual maintenance procedures.

(4) Repair Parts Analysis. Ensures the accuracy of the repair parts inventory to be backloaded to the ship at the conclusion of the availability. This analysis includes a complete inventory of all parts aboard and identification of any parts for which there is incomplete data. It also includes recomputation of allowances based on usage or new equipment installation, turn-in of parts no longer allowed and numerous location or quality checks prior to back-loading.

(5) Training. Focuses on proper accomplishment of the first four functional elements of the ILO to ensure that correct logistics support is identified and delivered for shipboard equipment. Efforts are made to ensure that shipboard personnel are fully able to utilize and maintain the ship's logistics support and configuration documentation, both for ILO purposes and for ongoing operating cycle requirements. COSAL use and maintenance training provides shipboard personnel with a working knowledge of the COSAL, its relationship to other maintenance documents and the procedures to ensure that logistics support remains current, (e.g., use of OPNAV 4790/CK Forms).

c. The Ship's Force team will develop an off-load schedule of all ship's spare parts. The ship's spare part stowage plan will be updated to reflect changes in the desired location of individual spare parts. Additionally, provisions must be made for the Aviation Consolidated Allowance List to support the embarking air wing.

d. A ship load-out schedule, including stores, repair parts, yellow gear, and removal of industrial activity equipment, will be prepared by the ship with the assistance of the industrial activity.

e. During a CNO maintenance availability, the ship will ensure that new or removed equipment is reflected in the COSAL and that the required spare parts are added or subtracted as applicable. Allowance changes are to be requested per reference (q).

f. Spare parts, test equipment, and special tools are the hardware portion of new and old equipment. The other portions are software: drawings, technical manuals, allowance lists, operating instructions, and any other technical documentation. Prior to commencement of an availability, NAVSEA will task the industrial activity with providing a listing and schedule, for installation on board the ship, of all technical documentation for new equipment, including changes to SSR drawings and data. The ship is responsible for the installation and maintenance of technical documentation for all existing equipment.

g. The status of the installation of technical documentation will be reported in the Material Condition or Crew Readiness Status Report.

2.6.6 Ship's Selected Records.

a. The SSRs include various tables, charts, drawings, damage control books and plates, technical manuals and other data selected for their reference value and kept current

throughout the life of the ship. Accurate SSRs are necessary for configuration control, maintenance support and troubleshooting. SSR items are:

(1) Ship's Information Books.

(2) Technical Manuals.

(3) Ship's Drawing Index.

(4) Index of Technical Publications.

(5) Docking Drawings (plan showing each of the docking positions).

(6) Booklet of General Drawings.

(7) Tank Capacity and Vehicle Center of Gravity Curves.

(8) Tank Sounding Tables.

(9) Other tables, charts, allowance lists, etc.

(10) Docking Reports (most recent two industrial availability dockings, and any interim reports).

b. The ship should appoint a SSR Coordinator for the availability. The coordinator should review the SSRs in paragraph 2.6.6, determine which items will be affected by work candidates listed in the approved work package, and send copies of these SSRs to the industrial activity responsible for executing the availability. The copies sent must include markups showing any changes accomplished during previous availabilities since last update. The ship must retain a master copy of each SSR item and keep it current. If SSR is on microfilm or electronic media, mark up hard copy prints.

c. The SSR Coordinator will serve as the ship point of contact for dispatch, receipt and monitoring status of SSR items during the availability.

2.6.7 New Work.

a. New work is any maintenance requiring industrial level assistance which is not authorized until after contract award or definitization.

b. New work must be requested by message or letter to the appropriate TYCOM (information copy to the Supervising Authority, ISIC, and SUBMEPP. Sample letter or message formats are provided in Appendices G and H for requesting new work authorization. Work not currently in ship's CSMP must be added to CSMP prior to requesting new work approval.

c. All new work candidates must be reviewed by and agreed to by the assigned Ashore Ships Maintenance Manager, Project Manager or Program Manager. Ashore Ships Maintenance Manager and Program Manager recommendations regarding requirement to perform repairs, risk assessment, and schedule impact are mandatory. The TYCOM, or the formally designated TYCOM representative, must be the final approving authority for all new work. In the case of private industrial activity availabilities, the TYCOM will certify that, per Federal Acquisition Regulations, the

accomplishment of the new work is of such unusual and compelling urgency so as to require waiving of Competition In Contracting Act public law regulations.

2.6.8 Trials, Inspections and Certification Minor Availabilities (Less Than Six Months).

a. Duties and Responsibilities for Sea Trials and Inspections. Reference (b) as applicable delineates the TYCOM's responsibility for operational control of assigned submarines during trials and for assuring that the crew and ship have attained satisfactory state of training, administrative, operational and material readiness for at-sea operations during the trials. Appendix BE provides a detailed summary of trial and inspection milestones required for minor submarine availabilities. Appendix BF provides a message sequence to support certification of work performed in the Minor CNO Availabilities.

b. General Instructions for Industrial Activity Availability Trials and Inspections.

(1) Fast Cruise may not commence until Dock Trials have been satisfactorily completed and a satisfactory state of crew training (if required) and material readiness (if required), as delineated by this manual, has been certified. The required inspections and tests and their associated time periods may be modified by the TYCOM upon request from the cognizant ISIC.

(2) Sea Trials involving escorts will not normally be scheduled to commence on a weekend. When circumstances are such that Sea Trials must be rescheduled or planned to commence on a weekend to avoid costly delays, TYCOM approval will be obtained by the ISIC.

(3) Critical operation of reactors while nuclear powered ships are in a naval or commercial industrial activity will be governed by reference (s). The CO may authorize critical operation of the reactor in support of tasks assigned the ship. However, as long as the ship remains in an industrial activity, the CO will notify the Supervising Authority well in advance of any critical operation of the ship's reactor. This notification must include the nature and duration of such operations.

(4) In conducting the inspections required herein, inspectors should be guided by the concept that at the start of Fast Cruise, the ship should be, in all respects, ready for Sea Trials with the exception of the additional training the crew will receive during the Fast Cruise.

(5) The requirement for TYCOM SUBSAFE certification of SUBSAFE boundaries not entered by the industrial activity and the material readiness upon completion of an industrial activity availability imposes additional responsibilities on the ISIC inspectors. Included in the material inspection will be a review of all outstanding Forces Afloat Departures from Specifications as defined in volume V, part I, chapter 8 of this manual. A review of the Ship's Force REC Records is necessary for SUBSAFE work accomplished by Forces Afloat per volume V, part I, chapter 5 of this manual, along with a review of the applicable URO MRC status. The ISIC certification message, per Appendix BC, will also provide a status report of any outstanding RECs, Forces Afloat Departures from Specifications and delinquent URO MRCs.

The scope and nature of this inspection will vary dependent upon the extent and length of the availability. In this regard:

(a) Material certification may be made subject to the correction of specific deficiencies. (Deficiencies are such that they can be readily identified and listed).

(b) Material certification should be postponed to a later date when deficiencies are so significant or so numerous as to preclude correction in the time remaining before the scheduled start of Fast Cruise.

(c) Deficiencies that could affect the safe operation of the ship during Sea Trials must be corrected, reinspected and reported to the TYCOM as having been corrected prior to the start of Fast Cruise.

(d) For ships with Fly-By-Wire Ship Control Systems (FBW SCS), if Upgrades or Alterations or Major Repair Work of the FBW SCS was performed, a 100% audit of the work performed by TYCOM managed activities, as defined in volume V, part I, chapter 9 of this manual, will be performed by the ISIC. The ISIC must report certification of work and recommend at-sea operations using the message format of Appendix BB.

(6) Inspectors must determine that all work or testing necessary to support Sea Trials has in fact been completed or identified for completion prior to the start of Fast Cruise including the following:

(a) All ship's systems which affect safe operation during Sea Trials must be operable.

(b) All work necessary for safe operation of the ship during Sea Trials which was undertaken by the industrial activity, Ship's Force, FMA, or other outside activities must have been satisfactorily completed and tested. Included must be a check for any "special configuration or installations" ensuring that they have been authorized by the proper authority, that their impact has been fully assessed and that the Sea Trial Agenda includes these impacts or limitations.

(c) If upgrades, alterations or major repair work of the FBW SCS was performed by TYCOM managed activities, a 100% audit of the work will be performed by the ISIC.

(7) Following the completion of the required training and material readiness certification, COs must keep the cognizant ISIC fully informed of any changes in personnel, training or material status which could affect the validity of certification. Prompt TYCOM notification is required to permit revision of Operational Orders and services required.

(8) Underway trials following an availability, particularly initial submerged and test depth trials, must be undertaken with the knowledge that the crew lacks recent experience operating as a unit and that the ship's structure and fittings have not been tested in an at-sea environment. All tests and procedures must

be conducted carefully and methodically. Systems and components designed to operate at test depth should not be demonstrated at that depth for the sole purpose of proving the design, but instead should be operated at the deepest depth at which they might be used. For example, the hovering system should not be demonstrated at test depth. Trials and tests which are inherently hazardous should not be conducted.

(9) A schedule is required for each underway, dockside or simulated trial. Prerequisites of the first underway period are satisfactory ship's material condition as shown by the successful completion of alongside tests, Distressed Submarine and Salvage Inspection, Ship's Force Dock Trial, and a satisfactory state of training as shown by the successful completion of crew certification inspection and Fast Cruise. Fast Cruise deficiencies affecting safe operations revealed in either material conditions or state of training must be corrected prior to getting underway for Sea Trials.

(10) Provide an operational order to be used incorporating the provisions of reference (b). Provide a copy to the TYCOM and, where appropriate, the local ISIC. Include within the operational orders pertaining to post-availability trials, instructions to send specific messages announcing the start and completion of initial deep dive with the TYCOM as an information addressee.

(11) The trial schedule must include a minimum of six hours of Individual Ship Exercises (ISE) for Ship's Force training. This ISE should be sequenced as soon as practical after the initial tightness dive and should include the necessary evolutions to allow each watch section ship control party to familiarize themselves with their assigned stations and duties. The ship should be operated at moderate speed to develop proficiency prior to the deep dive and full power run. Testing may be scheduled during the ISE period on a not-to-interfere basis with training. The time spent in the initial tightness dive, if at moderate speed, may be included as one section's training. The requirement to provide each watch section ship control party with about two hours experience submerged at moderate speed prior to the deep dive and full power run is mandatory for ship's safety.

(12) All trial periods must be organized such that each member of the command has an opportunity to get six uninterrupted hours of rest during each 24-hour period encompassed by the trials. Sea Trial events which can be accomplished by normal watch sections may be conducted concurrently with crew rest periods.

(13) Prior to getting underway for Sea Trials, Shipyard, Ship's Force and Type Commander must jointly agree that the required seven day supply of Oxygen (O2) and seven day supply of Carbon Dioxide (CO2) removal capacity will be available in each compartment, based upon the number of expected occupants of that compartment, independent of the supply and removal capacity in the other compartments.

(14) For industrial activity availabilities, a one-to-five-day deficiency correction period will normally be scheduled subsequent to the Sea Trials and prior to the completion date. The requirement to return to the availability site to correct deficiencies may be waived on a case basis with TYCOM authorization and agreement of the ship's CO and the Supervising Authority if the material condition of the ship so warrants.

(15) After the conclusion of Sea Trials, the submarine must not be operated at depths greater than 1/2 Test Depth plus 50 feet, unless specifically authorized by the TYCOM, and must not be released for unrestricted operations until all RECs are closed and the TYCOM issues the unrestricted operations authorization message.

(16) After the conclusion of Sea Trials and based upon a review of Sea Trial deficiencies and TYCOM authorization, the submarine may transit to a port other than the industrial activity.

c. If equipment malfunctions (except for casualties affecting recoverability, salvage, watertight integrity, or operation of ship's control surfaces), or seawater leakage in excess of the specification is found during the conduct of the initial tightness dive or the controlled dive to test depth, the ship should continue to the required depth and execute the sea trial agenda unless the Commanding Officer determines it appropriate to abort the dive. The Commanding Officer and Trials Director should be particularly circumspect in the case of leakage locations not isolable by flood control or other closures (e.g., electrical hull penetrators, periscope hoist rods, etc.).

d. Following completion of the initial tightness dive and the controlled dive to test depth, SUBSAFE deficiencies which result in seawater leakage exceeding the specification for acceptance must be reported to the TYCOM, NAVSEA and info to all concerned.

e. If leakage is from an unisolable joint, ship's depth will be limited to 1/2 test depth plus 50 feet until approval from the TYCOM is received to continue trials at depths greater than 1/2 test depth plus 50 feet.

2.6.8.1 Operating Depth Policy. The TYCOM's policy with respect to maximum allowable operating depths during trials, evolutions to be performed at the various depths, and the prescribed maximum water depth applicable in each case is stated in volume VI, chapter 26 of this manual. In every instance where the maximum authorized operating depth is exceeded, a report must be made per reference (r).

2.6.8.2 Propulsion Plant Tests (If Required). For full power trials provisions of reference (t), Section 6 apply. Submarine depth during the submerged full power trial should be consistent with the applicable Submerged Operating Envelope, based on the Emergency Main Ballast Tank (EMBT) blow from maximum authorized operating depth being previously accomplished. The full power submerged ahead test for commissioned nuclear powered submarines must be terminated by a back emergency bell. The duration of the back emergency must be limited to 45 seconds, to be followed immediately by an appropriate ahead bell. Caution must be exercised to avoid developing sternway.

2.6.8.3 Ocean Engineering Project Availability. Certain submarines have been assigned to provide dedicated support to NAVSEA Ocean Engineering Projects. Ships dedicated to these

projects have been assigned to a parent industrial activity which provides Logistic support, performs the maintenance actions required by the Submarine Extended Operating Cycle program and other functions normally provided by an industrial activity. Routine and Submarine Extended Operating Cycle maintenance is factored into the Availability Work Package prepared by the cognizant technical activity in support of the Ocean Engineering Project. Certification of the work during these availabilities is governed by reference (w), volume V of this manual, and the applicable requirements of paragraph 2.6.8 for availabilities less than six months duration or paragraph 2.6.9 for availabilities greater than six months duration. Specific actions and reporting requirements which are mandatory prior to completion of an availability are summarized in Appendix BE or Appendix CE, as applicable. The TYCOM will reiterate these requirements during the availability by a "Countdown Message" for availabilities greater than six months in duration. A sample format of this "Countdown Message" is shown in Appendix CF.

2.6.8.4 Distressed Submarine (DISSUB) and Salvage Inspection (As Required). Conduct a DISSUB and Salvage Inspection per volume IV, chapter 18 of this manual. The DISSUB and Salvage Inspection should be conducted early enough in the availability to allow time to complete any mandatory corrective maintenance prior to Fast Cruise.

2.6.8.5 Phase II Crew or Material Condition Inspection. A Phase II Crew Certification Inspection is normally not required, but should be determined on a case basis by the parent ISIC. If there will be less than 15% personnel turnover, crew certification may be waived. Should the CO determine that alterations accomplished or the transfer of experienced personnel warrant a crew certification, a formal request must be submitted to the ISIC. When required, crew certification will be performed per reference (v). The material certification consisting of an ISIC audit of all Ship's Force controlled work per volume V, part I, chapter 9 of this manual will need to be conducted for all industrial activity availabilities since the extent of the availability is such that an independent evaluation by an organization other than Ship's Force is required.

2.6.8.6 Pre-Critical Inspections. For availabilities where the reactor will be shut down for 16 weeks or more, it is considered prudent to use an inspection plan similar to that employed by NAVSEA. Normally, the crew's readiness can be assessed within two days using such a plan, which should encompass the following:

a. An administrative review.

b. Observation of basic drills and evolutions not requiring reactor operation.

c. Personnel interviews.

d. Material inspection.

2.6.8.6.1 Scheduling of Pre-Critical Inspections. The ISIC Pre-Critical Inspection should be scheduled by the responsible ISIC about four weeks prior to criticality. The TYCOM should be advised as soon as possible in advance of the tentative date for the ISIC Pre-Critical Inspection and confirmed dates should be established about one month in advance of the inspection.

2.6.8.6.2 Composition of the Inspection Team. The Pre-Critical Inspection Team should consist of:

a. A nuclear-trained member of the cognizant ISIC Staff, usually the Squadron Training Officer.

b. A qualified nuclear-trained officer with experience as an Engineer Officer.

2.6.8.6.3 Reports of Inspection.

a. The Senior Inspector should provide the inspected unit with an informal report of findings by the inspection team, copy to the cognizant ISIC and TYCOM.

b. The ship's CO must review the findings of the inspection team and make necessary adjustments to his training program to ensure his crew's readiness for criticality. CO must keep the cognizant ISIC advised of his training plan and his assessment of his crew's progress.

c. The cognizant ISIC must review the inspection findings, the CO's training plan and progress evaluations and direct follow-up reviews or inspections necessary to verify the ship's readiness for criticality.

2.6.8.7 Dock Trials. Dock Trials must, as a minimum, test those systems or equipment repaired or altered during the availability. The CO should use Appendix I as a guide in preparing the Dock Trial Agenda.

2.6.8.8 Fast Cruise. Fast Cruise may commence immediately upon completion of Dock Trials and must consist of the minimum requirements as set forth in Appendix J. The requirement for a Fast Cruise may be less than or greater than 24 hours in length depending upon the length of the availability and the time since the crew last operated the ship at sea. The CO, with ISIC concurrence, will determine length of the Fast Cruise. Prior to the ship commencing Fast Cruise, the Supervising Authority must report to the ship, by message, that all mandatory work approved for accomplishment during the availability is completed. When the ship is ready for sea with the exception of conducting Fast Cruise and after receipt of the SUBSAFE material certification report from the performing activity as required by references (u) and (v) and volume V of this manual, the ship will request permission from the ISIC by priority message to commence Fast Cruise. The ISIC will then, if satisfied with the state of crew training and material readiness, authorize the ship to commence Fast Cruise by message, information copy to CNO, Fleet Commander, NAVSEA, and the TYCOM.

a. A 24-hour rest and repair period will normally be scheduled following Fast Cruise and prior to the start of Sea Trials. This rest and repair period may be extended or reduced at the discretion of the ISIC.

b. COs should consider the work and alterations accomplished during the availability when determining the extent of the Fast Cruise. The minimum requirements are listed and identified with an asterisk in Appendix J.

2.6.8.9 Sea Trials. Upon receipt of the report of successful completion of Fast Cruise from the ship, the ISIC authorizes the ship to get underway for Sea Trials. Following completion of Fast Cruise the ISIC will notify the TYCOM of satisfactory completion of Fast Cruise and readiness for Sea Trials using the message format of Appendix BC. The submarine TYCOM will authorize the ISIC to allow the ship to get underway for Sea Trials using the message format of Appendices BG and BH if the ship had Upgrades or Alterations or Major Repair Work of the FBW SCS. The submarine CO will keep the TYCOM aware of the progress of the Sea Trial through periodic SITREPs using the message format of Appendix BD. SITREPs will be submitted following completion of the initial tightness dive, following completion of the deep

dive to test depth and daily at a minimum and as identified by the TYCOM or the Sea Trial Agenda. Sea Trials following availability are normally conducted with a significant number of "riders". These riders represent NAVSEA, TYCOM and Shipbuilder personnel onboard to observe various tests and trial evolutions. The ship's normal load out of Lithium Hydroxide canisters for DISSUB (granular or ExtendAir®, no mix), Lithium Hydroxide curtains (or ExtendAir® Deployment kits, if equipped), Emergency Air Breathing (EAB) masks, Submarine Escape and Surface Survival Personnel Equipment (SESSPE) and oxygen candles is not sufficient to support this increase in personnel. Therefore, an additional four Lithium Hydroxide canisters (or three ExtendAir®, if equipped), four Lithium Hydroxide curtains (or one ExtendAir® Deployment kit for every multiple of 60 ExtendAir® canisters in the compartment, if equipped), one EAB mask, one SESSPE and two Oxygen candles must be carried for each rider exceeding normal crew manning. Stowage of this additional equipment for DISSUB must be in the same escape compartment as the rider's designated General Emergency muster site assigned by the Commanding Officer. Lithium Hydroxide canisters, EABs, SESSPE and Lithium Hydroxide curtains are to be obtained from the industrial activity. Sea Trials are required only as necessary to test work completed during the availability but must include those mandatory requirements identified in Appendix K. The industrial activity must include at least four days in the availability for conduct of Sea Trials. The industrial activity must prepare a Sea Trial Agenda for Sea Trials conducted after an availability. The submarine involved must submit the Sea Trial Agenda to the ISIC for approval, with an information copy to the TYCOM. Extensions or reductions of the Sea Trial period may be granted where warranted by the scope of the work accomplished. Where extension of the Sea Trial period and a change in the availability schedule is required, requests for such extensions must be submitted by the industrial activity to the TYCOM as early as practical. All deficiencies resulting from Sea Trials will be satisfactorily resolved prior to the completion of the availability. If no Sea Trial deficiencies are found, the availability may be completed with TYCOM concurrence at the completion of Sea Trials.

a. EMBT Blow: An EMBT blow is required for each Sea Trial following an industrial activity availability, availability docking, or availability of less than six months duration. EMBT blow must be conducted per the applicable URO MRC and does **not** require an escort for EMBT blow at depths of 400 feet or less.

b. Assignment of Escort Ship.

(1) Per reference (w), a surface escort must be provided during deep dive submergence trials for ships completing an availability for repair of collision or grounding damage where deformation is observed to be in the hull integrity envelope or supporting structure.

(2) In accordance with reference (w), the requirement for providing an escort during deep dive submergence trials upon completion of all other availabilities will be evaluated by Commander, NAVSEA on a case basis. Commander, NAVSEA will advise the applicable Submarine Force Commander in writing whether or not an escort will be required based on the scope of work in the availability. In general, an industrial activity availability of less than six months duration should not require an escort, since the work typically performed in these availabilities is limited in scope, is carefully controlled and,

therefore, does not result in substantial risk of unidentified or incomplete work adversely affecting the SUBSAFE boundary.

(3) Escort requirements should be determined early so that an escort satisfying the requirements of Sea Trials can be scheduled if required. The TYCOM will in turn request services from the Fleet Commander as applicable. As a general rule, pressure hull work which could not affect hull circularity will not require an escort.

(4) Waiver of escort requirements may be requested by message when necessary. The ISIC will request the waiver as soon as possible. The TYCOM will pass the request to Commander, NAVSEA for approval. An escort waiver request message is to include all of the following specific statements, as applicable:

(a) A ( ) inch by ( ) inch hull cut between frames ( ) and ( ) including a ( ) inch section of frame ( ) was the only major hull integrity work accomplished during the availability. If no hull frame cut was made, a positive statement to that effect is required.

(b) The hull cut weld satisfactorily passed Radiographic Testing and seven day Magnetic Particle Testing non-destructive tests.

(c) Post repair frame circularity check readings are within specifications.

c. Assignment of SRDRS during Submarine Sea Trials.

NOTE: ASSIGNMENT OF AN SRDRS OR PLACING AN SRDRS IN MOD ALERT IS NOT REQUIRED WHEN THE SCOPE OF WORK IN THE AVAILABILITY DOES NOT REQUIRE AN ESCORT, PER REFERENCE (T), AND THE ONLY REASON FOR ASSIGNMENT OF AN ESCORT IS PERFORMING AN EMBT BLOW FROM DEPTHS GREATER THAN 400 FEET AS A REQUIREMENT OF THE SEA TRIAL AGENDA.

(1) A SRDRS will be placed in a modified alert status at the beginning of Sea Trials requiring an escort following an industrial availability or major maintenance availability for:

(a) Ships initial tightness and deep dive events.

(b) Subsequent Sea Trials until the completion of the initial dive to design test depth.

(c) If, in the TYCOM's judgment, a Sea Trial requires an escort due to major hull cuts.

(2) A modified alert message will be sent by the industrial activity with the required SRDRS support dates 6 weeks prior to the requested date. Any changes in this request date will require immediate notification to the Fleet commander, Commander Naval Sea Systems Command (COMNAVSEASYSCOM) and Commander, Submarine Squadron ELEVEN. Sample messages in Appendices BI and CG.

(3) The ship conducting Sea Trials will notify COMSUBRON ELEVEN and COMNAVSEASYSCOM when SRDRS services are no longer required due to completion of Sea Trials or due to delay in completing Sea Trials.

(4) The SRDRS is not required to be placed in a modified alert status for those Sea Trials requiring an escort solely for the accomplishment of an EMBT blow from depths greater than 400 feet.

2.6.8.10 Interrupted Sea Trials. In the event a Sea Trial is interrupted, or an additional Sea Trial becomes necessary, the following requirements are to be met. These requirements must be invoked if the ship returns to port for industrial activity repairs which affect SUBSAFE certification or which will require at-sea testing.

a. The industrial activity will draft a revised Sea Trials agenda to support resumption of the trials. This agenda must be provided to the ISIC for concurrence and TYCOM for information.

b. The Ship will report by message (format of Appendix BJ) that Ship's Force is ready for follow-on sea trials.

c. The ISIC must report by message (format of Appendix BK) to the TYCOM that the material condition of those SUBSAFE Certification boundaries that were installed, repaired or tested by Ship's Force is satisfactory for resuming Sea Trials.

d. Upon completion of all of the requirements in paragraphs 2.6.8.10.a. and b., the TYCOM will provide a message (Appendix BL) to the ISIC granting permission to proceed with the conduct of Sea Trials and authorize the ship to dive to the Sea Trial operating depth.

e. The industrial activity will identify by message to COMNAVSEASYSCOM and COMSUBRON ELEVEN any additional SRDRS requirements to support the interrupted trials. Sample message in Appendices BI and CG.

f. Submarine surface transits from industrial port in advance of completion of CNO availabilities (prior to certification for unrestricted operations) to a different or homeport can be executed without a sea trial, without an escort and without an SRDRS after obtaining NAVSEA concurrence and authorization from the TYCOM. The submarine will not be authorized to dive, and no testing is permitted during the transit. Operational need for transit and mitigating actions, if applicable, will be determined by the TYCOM.

2.6.8.11 Availability Completion Prerequisites. Upon completion of Sea Trials and correction or resolution of deficiencies, the following requirements must be met prior to completion of an industrial availability less than six months duration:

a. The Supervising Authority must report by message (format similar to reference (u), Appendix B.3.8) to the TYCOM, satisfactory completion of all Sea Trials, completion of controlled dives, correction of all mandatory and Sea Trial deficiencies. Report that the SUBSAFE material condition of the ship installed, repaired, or tested by the industrial activity is satisfactory for URO to test depth. Identify any deferred SUBSAFE work or conditionally approved deviations and waivers.

b. Following verification from the ship Commanding Officer and the Supervising Authority of satisfactory completion of all Sea Trials, completion of controlled dives, correction of all mandatory Sea Trial deficiencies, certification that the SUBSAFE material condition of those parts of the ship installed, repaired, or tested by the industrial activity is satisfactory, and upon confirmation of maintenance of SUBSAFE certification of portions of ship not affected by the industrial activity, the TYCOM must report by message (Appendix BM) to the ship, with copies to CNO and NAVSEA, reporting status of SUBSAFE certification and authorizing URO to test depth.

c. ISIC. Following verification from the ISEA or activity performing the work of satisfactory completion of all at-sea testing or trials, completion of controlled dives, correction of all mandatory sea trial deficiencies and resolution of all ISIC FBW SCS Certification Audit Deficiencies recommendations, certify to the TYCOM using Appendix BN, with information copies to CNO, the appropriate Fleet Commander and NAVSEA, the FBW SCS material condition of those parts of the ship installed, repaired or tested by the ISEA or activity performing the work is satisfactory, and recommend authorization for FBW SCS unrestricted use in support of submarine unrestricted operations, subject to ISIC verification that FBW SCS certification of areas outside ISEA or activity performing the work tasking has been sustained, or specifically identify any operating restrictions of the ship or system.

d. TYCOM. Following verification from the ISIC of satisfactory completion of all at-sea testing, correction of all mandatory deficiencies, receipt of certification that the FBW SCS material condition of those parts of the ship installed, repaired or tested by the ISEA or activity performing the work is satisfactory, and upon confirmation that FBW SCS certification was not affected for those portions of ship FBW SCS not affected by the ISEA or activity performing the work, issue a message to the ship using Appendix BO, with copies to CNO, ISIC and NAVSEA, certifying the FBW SCS and authorizing FBW SCS unrestricted use in support of submarine unrestricted operations or specifically identify any operating restrictions of the ship or system.

2.6.9 Trials, Inspections and Certification Major Availabilities (Greater Than Six Months). The following paragraphs summarize policies and responsibilities with respect to trials, tests and inspections incident to completion of major submarine availabilities. The TYCOM will maintain operational control of the submarine throughout the overhaul, conversion, refueling or post-conversion availability through the designated ISIC. For Atlantic or Pacific submarine units undergoing availabilities in West or East coast industrial activities, respectively, the TYCOM responsible for conducting all trials and inspections specified in this manual is the TYCOM with Operational Control of the unit. Appendix CH provides a message sequence to support Availability certification of work performed in a Major CNO Availability.

a. Policy. Major availabilities require a succession of inspections and tests which culminate in a series of underway trials. References (c) and (d) set forth the philosophy and sequencing of the various categories of these tests and trials, the results of which determine the readiness of the ship at the completion of overhaul or repair. Reference (b) delineates the Force Commander's responsibility for operational control of submarines assigned during trials and for assuring the crew and ship have

attained a satisfactory state of training, administrative, operational and material readiness for at-sea operations during the trials. ISICs and COs must comply with the provisions of this volume in the conduct of trials incident to the conversion, overhaul and refueling of submarines assigned.

b. General Information for Industrial Activity Availability Trials and Inspections.

(1) The normal sequence of events leading up to Sea Trials is described in paragraph 2.6.9. Fast Cruise may not commence until Dock Trials have been satisfactorily completed and a satisfactory state of crew training and material readiness, has been certified. The required inspections and tests, and their associated time periods, may be modified by the TYCOM upon request from the cognizant ISIC.

(2) The following inspections and tests are required:

(a) Periodic Monitoring Inspections.

1 Arrival Assist (on or about A+30) using the attributes of volume I, chapter 3, paragraph 3.3.1 of this manual.

2 Engineering Readiness Review(s).

3 Departmental Readiness Review(s).

(b) Pre-Critical Inspection (two days).

(c) Phase I Inspection (one day).

(d) Distressed Submarine and Salvage Inspection (one day).

(e) Dock Trials (one day).

(f) Phase II Crew or Material Certification (two days).

(g) Audit of Ship's Force REC and Departure from Specification records.

(h) Minimum of 48 hours for industrial activity work (following Phase II crew certification) (two days).

(i) Fast Cruise normally consists of two days of uninterrupted operation, one day to allow the industrial activity and Ship's Force personnel to correct deficiencies, followed by two more days of uninterrupted operation (five days).

(j) Rest and repair period (about one day).

(k) Underway for initial Sea Trials.

(l) Appendix CE provides a detailed summary of major trial and inspection milestones required for industrial activity availabilities of six months or greater in duration.

(3) When circumstances are such that Sea Trials must be rescheduled or planned for a weekend to avoid costly delays, Fleet Commander approval will be obtained by the Supervising Authority on a case basis.

(4) Critical operation of reactors while nuclear powered ships are in a naval or commercial industrial activity will be governed by reference (s). Until satisfactory completion of post repair propulsion plant trials (in the case of ships in industrial availabilities), permission to conduct critical reactor plant operations must be obtained from NAVSEA. Subsequent to completion of propulsion plant post repair trials, the CO may authorize critical operation of the reactor in support of tasks assigned the ship. However, so long as the ship remains in an industrial activity, the CO will notify the industrial activity, as appropriate, well in advance of any critical operations of the ship's reactor. This notification must include the nature and duration of such operations. Crew certification inspections will not involve or require critical operation of the reactor.

(5) In conducting the inspections required herein, inspectors should be guided by the concept that at the start of Fast Cruise the ship should be, in all respects, ready for Sea Trials with the exception of the additional training the crew will receive during Fast Cruise.

(6) NAVSEA SUBSAFE Certification Audit (SSCA). During major CNO Maintenance Availabilities NAVSEA will conduct a SSCA as required by reference (u). A copy of the SSCA will be provided to the Supervising Authority, the ship's CO, the TYCOM and Fleet Commander. Prior to conducting Fast Cruise, the Supervising Authority must report to NAVSEA and the TYCOM that those parts of the ship installed, repaired or tested by the industrial activity are certified satisfactory for post repair Sea Trials, including the resolution of NAVSEA SSCA Category I recommendations, status of all incomplete SSCA Category IA recommendations, and report that the ship is ready for commencement of Fast Cruise.

(7) The requirement for TYCOM certification of SUBSAFE boundaries not entered by the industrial activity and material readiness upon completion of an industrial activity imposes additional responsibilities on the ISIC inspectors. A formal audit of Ship's Force REC and Departure from Specification records must be conducted by the ISIC QA Officer prior to Fast Cruise. Included in the audit and material inspection will be a review of ship procedures to ensure no unauthorized work was conducted within certified boundaries, and all outstanding Forces Afloat Departures from Specification, as defined in Volume V, Part I, Chapter 8 of this manual, granted prior to the availability which required corrective action. There may or may not have been restrictions involved with these departures. A review of the Ship's Force REC Records and Procedures is necessary for SUBSAFE work accomplished by Forces Afloat per Volume V, Part I, Chapter 5 of this manual, along with a review of the applicable URO MRC status. The ISIC certification message will also provide a statement certifying that ship and industrial activity procedures ensured that no unauthorized work was conducted within the certified boundaries and, when required, will also provide a status report of any outstanding Re-Entries, Forces Afloat Departures from Specification and

delinquent URO MRCs. The scope and nature of this inspection will vary dependent upon the extent and length of the availability. In this regard:

(a) Material certification may be made subject to the correction of specific deficiencies. (Deficiencies are such that they can be readily identified and listed).

(b) Material certification should be postponed to a later date when deficiencies are so significant or so numerous as to preclude correction in the time remaining before scheduled commencement of Fast Cruise.

(c) Deficiencies that could affect the safe operation of the ship during Sea Trials must be corrected, reinspected and reported to the TYCOM as having been corrected prior to the start of Fast Cruise.

(8) Inspectors must determine that all work or testing necessary to support Sea Trials has in fact been completed or identified for completion prior to the commencement of Fast Cruise including the following.

(a) All ship systems which effect safe operation of the ship during Sea Trials must be operable.

(b) All work necessary for safe operation during Sea Trials which was undertaken by the industrial activity, Ship's Force, FMA, or other outside activities must have been satisfactorily completed and tested. Included must be a check for any "special configuration or installations" ensuring that they have been authorized by proper authority, that their impact has been fully assessed and that the Sea Trial Agenda considers these impacts or limitations.

(9) Following completion of the required training and material readiness certification, COs must keep the cognizant ISIC fully informed of any changes in personnel, training or material status which could affect the validity of certification. Prompt notification is required to permit revision of Operation Orders and services required.

(10) Underway trials following major availabilities, particularly initial submerged and test depth trials, must be undertaken with the knowledge that the crew lacks recent experience operating as a unit and that the ship's structure and fittings have not been tested in an at-sea environment. All tests and procedures must be conducted carefully and methodically. Systems or components designed to operate at test depth should not be exercised at test depth for the sole purpose of proving the design. They should be operated at the deepest depth at which they might be used. Trials and tests which are inherently hazardous should not be conducted. For example, the automated hovering system should not be demonstrated at test depth. Reference (e) provides pertinent information regarding the testing of seawater systems during underway trials.

(11) An approved agenda is required for each underway period. The prerequisites for the first underway period are set forth in paragraphs 2.6.9.4 through 2.6.9.7.

(12) The first underway tests will be of limited scope. The initial tightness dive will be a deliberate, planned, step-by-step evolution using conservative angles and moderate speed. The submarine must be accompanied by an escort ship properly equipped with sonar communication equipment as described in paragraph 2.6.9. The maximum water depth for this dive must be 400 feet, as prescribed by reference (ad).

(13) The initial trial schedule must include a minimum of six hours of submerged ISE for Ship's Force training. This ISE should be sequenced as soon as practical after the initial tightness dive and should include the necessary evolutions to allow each watch section ship control party to familiarize themselves with their assigned stations and duties. The ship should be operated at moderate speed to develop proficiency prior to the deep dive and full power run. Testing may be scheduled during the ISE period on a not-to-interfere basis with training. The time spent in the initial tightness dive, if at moderate speed, may be included as one section's training. The requirement to provide each watch section ship control party with about two hour's experience submerged at moderate speeds prior to the deep dive and full power run is mandatory for ship safety.

(14) All trial periods must be organized such that each member of the command has an opportunity to get six uninterrupted hours of rest during each 24-hour period encompassed by the trials. Sea Trial events which can be accomplished by normal watch sections may be conducted concurrently with crew rest periods.

(15) Prior to getting underway for Sea Trials, Shipyard, Ship's Force and Type Commander must jointly agree that the required seven day supply of Oxygen and seven day supply of Carbon Dioxide removal capacity will be available in each compartment, based upon the number of expected occupants of that compartment, independent of the supply and removal capacity in the other compartment(s).

(16) A deficiency correction period will be scheduled subsequent to the last Sea Trial and prior to the completion date. The scheduled length and location of this deficiency correction period will be determined by the type and magnitude of the deficiencies to be corrected.

(17) After the conclusion of Sea Trials, the submarine must not be operated at depths greater than 1/2 Test Depth plus 50 feet, unless specifically authorized by the TYCOM, and must not be released for unrestricted operations until all RECs are closed and the TYCOM issues the unrestricted operations authorization message.

(18) After the conclusion of Sea Trials, and based upon a review of Sea Trial deficiencies and TYCOM authorization, the submarine may transit to a port other than the industrial activity.

c. If equipment malfunctions (except for casualties affecting recoverability, salvage, watertight integrity, or operation of ship's control surfaces), or seawater leakage in

excess of the specification is found during the conduct of the initial tightness dive or the controlled dive to test depth, the ship should continue to the required depth and execute the sea trial agenda unless the Commanding Officer determines it appropriate to abort the dive. The Commanding Officer and Trials Director should be particularly circumspect in the case of leakage locations not isolable by flood control or other closures (e.g., electrical hull penetrators, periscope hoist rods, etc.).

d. Following completion of the initial tightness dive and the controlled dive to test depth, SUBSAFE deficiencies which result in seawater leakage exceeding the specification for acceptance must be reported to the TYCOM, NAVSEA and info to all concerned.

e. If leakage is from an unisolable joint, ship's depth will be limited to 1/2 test depth plus 50 feet until approval from the TYCOM is received to continue trials at depths greater than 1/2 test depth plus 50 feet.

2.6.9.1 Responsibilities. The responsibilities for trials and inspections are:

a. NAVSEA.

(1) Provide approved procedures for tests of the reactor plant required for nuclear refueling and for reactor plant repairs and alterations accomplished in the availability.

(2) Authorize critical operation of the reactor as outlined in paragraph 2.6.9.

(3) Approve the scheduling and the sequencing of nuclear propulsion plant tests and concur in the schedule and sequence for nuclear propulsion plant trials.

(4) Arrange for technical assistance from the U.S. Department of Energy as required.

(5) Conduct SSCAs and provide to the Supervising Authority, the ship's CO and the TYCOM and Fleet Commander a copy of the SSCA report.

(6) Review and concur with the Sea Trial Agenda submitted by the Supervising Authority.

(7) Certify (reference (u), Appendix B.3.2) to the TYCOM, information copies to CNO and Fleet Commander, that the material SUBSAFE condition of those parts of the ship installed, repaired or tested by the industrial activity are certified as satisfactory for Sea Trials and controlled dives to a specified depth (usually test depth).

(8) Following verification from the Supervising Authority of satisfactory completion of all Sea Trials, completion of controlled dives, correction of all mandatory Sea Trial deficiencies, and resolution of all NAVSEA SSCA Category IA recommendations, certify to the TYCOM, with information copies to CNO and the appropriate Fleet Commander, the SUBSAFE material condition of those parts of the ship installed, repaired, or tested by the industrial activity is satisfactory, and recommend authorization for URO to design test depth subject to TYCOM verification that SUBSAFE certification of areas outside the industrial activity AWP has been sustained.

b. Supervising Authority.

(1) Accept custody of and responsibility for special nuclear material upon delivery from the U.S. Department of Energy.

(2) Accept custody of and responsibility for spent nuclear fuel and other special nuclear material removed from the submarine incident to refueling until transferred to the U.S. Department of Energy.

(3) Transfer custody of and responsibility for nuclear fuel and other special nuclear material to the CO of the submarine undergoing refueling when it has been installed in the submarine.

(4) Provide sufficient time for crew training during the major availability period to permit the Ship's Force to attain a state of training adequate to ensure proper operation and safety of the ship and its personnel during Fast Cruise and Sea Trials.

NOTE: THE SCHEDULING AND SEQUENCING OF TRIALS INVOLVING TESTS OF A REACTOR PLANT PROPULSION PLANT MUST BE APPROVED BY THE FLEET COMMANDER AND CONCURRED TO BY NAVSEA.

(5) For FBW-SCS equipped ships, in order to maintain certification of the FBW-SCS Boundaries, the Supervising Authority must:

(a) Execute the Lifecycle Certification requirements of reference (z).

(b) Identify the pertinent information for inclusion in ship certification correspondence.

(c) Ensure that any required submarine FBW-SCS testing evolutions are included in the at-sea test or Sea Trial Agenda submitted to the ISIC for approval.

(6) Prior to Fast Cruise, submit the Sea Trial Agenda to NAVSEA for concurrence and to the TYCOM for approval. Resolve any differences between NAVSEA and the TYCOM. Submit the Deep Dive Test Form and EMBT Blow Test Procedures to NAVSEA for approval. The Sea Trial Agenda will provide the detailed sequence of events for conducting the Sea Trials required to be performed.

(7) Schedule the ship salvage inspection to ensure sufficient time for the TYCOM to conduct the inspection and for correction of deficiencies.

(8) Report the status of the material condition of those parts of the ship installed, repaired or tested by the industrial activity prior to each Sea Trial.

(a) Report by message (reference (u), Appendix B.3.1) to NAVSEA and TYCOM, in advance of the scheduled start of Fast Cruise, that those parts of the ship installed, repaired or tested by the industrial activity are certified satisfactory for post repair Sea Trials, including resolution of NAVSEA SSCA Category I recommendations and status of all incomplete NAVSEA SSCA Category IA recommendations, and report that the ship is ready for commencement of Fast Cruise. The message must also state that there are no conditional SUBSAFE Deviations or

Waivers which have not been satisfied or cite those that exist, and that, subject to satisfactory completion of Fast Cruise and resolution of mandatory deficiencies, the material condition of the ship is satisfactory for commencement of Sea Trials.

NOTE: SUBSEQUENT TO THE MESSAGE IN PARAGRAPH 2.6.9, ANY DEFICIENCY DISCOVERED AND THE CORRECTIVE ACTION TAKEN WHICH AFFECTS THE WATERTIGHT INTEGRITY, THE RECOVERABILITY OF THE SHIP, THE OPERATION OF THE SHIP'S CONTROL SURFACES, OR THE SHIP'S SALVAGE CAPABILITY MUST BE REPORTED TO NAVSEA AND THE APPROPRIATE FLEET COMMANDER AND TYCOM BY MESSAGE CITED IN PARAGRAPH 2.6.9. PREVIOUS CERTIFICATION OF MATERIAL CONDITION MUST BE SUSPENDED UNTIL NAVSEA AND TYCOM REVIEW THE REPORT AND NAVSEA CERTIFIES TO THE TYCOM BY MESSAGE THAT THE MATERIAL CONDITION OF THE PARTS OF THE SHIP COVERED BY THE INDUSTRIAL ACTIVITY AWP IS SATISFACTORY FOR SEA TRIALS TO A SPECIFIED DEPTH, AND THE TYCOM IN TURN CERTIFIES TO THE SHIP THAT THE SHIP'S SUBSAFE CERTIFICATION BOUNDARY IS SATISFACTORY FOR SEA TRIALS TO A SPECIFIED DEPTH.

(b) Report by message (reference (u), Appendix B.3.3) to NAVSEA and TYCOM, with the concurrence of the CO, the successful completion of Fast Cruise and SUBSAFE material condition readiness as a prerequisite to start of Sea Trials.

(c) Where a previous Sea Trial was aborted, or corrective actions for Sea Trial deficiencies require an additional deep dive, report by message (reference (u), Appendix B.3.5) to NAVSEA that the SUBSAFE material condition of those parts of the ship installed, repaired, or tested by the industrial activity is satisfactory for Follow-On Sea Trials to test depth.

(9) Report by message (reference (u), Appendix B.3.8) to NAVSEA, satisfactory completion of all Sea Trials, completion of controlled dives, correction of all mandatory Sea Trial deficiencies, and resolution of all NAVSEA SSCA Category IA recommendations. Report that the SUBSAFE material condition of those parts of the ship installed, repaired, or tested by the industrial activity is satisfactory for URO to test depth. Identify any deferred SUBSAFE work or conditionally approved deviations and waivers.

(10) Coordinate the schedule for Fast Cruise and post repair trials with the TYCOM or ISIC representative.

(11) Recommend to the President, Board of Inspection and Survey and the TYCOM, information to NAVSEA, Fleet Commander and TYCOM or ISIC representative, when post availability Material Inspection and Underway Trials by the Board of Inspection and Survey are required.

c. TYCOM.

(1) Schedule the Fleet Commander PORSE as recommended by the industrial activity in the Key Events Schedule and confirmed by the parent TYCOM or ISIC representative upon completion of the ISIC Pre-Critical Inspection.

(2) Provide Fast Cruise, Sea Trial and completion prerequisites message (Appendix CF) to the ship approximately 90 days prior to the start of Sea Trials.

(3) Assign material representatives to be embarked during trials as required by paragraph 2.6.9.

(4) Inform the CNO and Fleet Commander of the scope and schedule of the trials. This is normally done by copy of the TYCOM or ISIC representative Operation Order to the CNO and Fleet Commander.

(5) Provide escorts as required. Send a Sea Trials Support Services message (Appendix CA) to specify SRDRS "modified alert" requirements.

(6) Approve Sea Trial Agenda.

(7) Report, by message (Appendix CI), to NAVSEA crew readiness for Sea Trials and request NAVSEA Nuclear Propulsion Directorate (08) authorization for critical operations.

(8) Prior to each Sea Trial, following certification from the Supervising Authority and NAVSEA that the material condition of those parts of the ship installed, repaired or tested by the industrial activity is satisfactory for Sea Trials and TYCOM verification that the SUBSAFE certification of those parts of the ship not affected by the industrial activity AWP has been sustained, report by message (Appendix CJ) to the ship, with copies to CNO and NAVSEA, reporting that the status of the SUBSAFE Certification Boundary is satisfactory and authorizing the conduct of Sea Trials and dives to specified depth. If the ship had Upgrades, Alterations or Major Repair Work of the FBW SCS, and following a recommendation from NAVSEA, the ISIC, or both, authorize underway operation of the FBW SCS using Appendix CK.

(9) Following verification from NAVSEA of satisfactory completion of all Sea Trials, completion of controlled dives, correction of all mandatory Sea Trial deficiencies, certification that the SUBSAFE material condition of those parts of the ship installed, repaired or tested by the industrial activity is satisfactory, and upon confirmation of maintenance of SUBSAFE certification of portions of ship not affected by the industrial activity, report by message (Appendix CL) to the ship, with copies to CNO and NAVSEA, reporting status of SUBSAFE certification and authorizing URO to test depth. If the ship had Upgrades or Alterations or Major Repair Work of the FBW SCS, following verification from NAVSEA of satisfactory completion of all at-sea testing, correction of all mandatory deficiencies, receipt of certification that the FBW SCS material condition of those parts of the ship installed, repaired or tested by the ISEA or activity performing the work is satisfactory, and upon confirmation that FBW SCS certification was not affected for those portions of ship FBW SCS not affected by the ISEA or activity performing the work, issue

a message to the ship using Appendix CM, with copies to CNO, ISIC and NAVSEA, certifying the FBW SCS and authorizing FBW SCS unrestricted use in support of submarine unrestricted operations or specifically identify any operating restrictions of the ship or system.

NOTE: SUBSEQUENT TO THE MESSAGES, APPENDICES CB AND CE, AND REFERENCE (Q), APPENDICES B.3.1 AND B.3.2, ANY DEFICIENCY DISCOVERED AND THE CORRECTIVE ACTION TAKEN WHICH AFFECTS THE WATERTIGHT INTEGRITY, THE RECOVERABILITY OF THE SHIP, THE OPERATION OF THE SHIP'S CONTROL SURFACES OR THE SHIP'S SALVAGE CAPABILITY MUST BE REPORTED TO NAVSEA, TYCOM AND FLEET COMMANDER BY THE SUPERVISING AUTHORITY (INDUSTRIAL ACTIVITY DEFICIENCY) OR SHIP CO (FORCES AFLOAT DEFICIENCY) IN MESSAGE FORMAT. PREVIOUS CERTIFICATION MUST BE CONSIDERED RESCINDED. WHEN A REVIEW OF THE DEFICIENCY IS COMPLETED BY NAVSEA FOR INDUSTRIAL ACTIVITY ITEMS AND TYCOM FOR SHIP'S FORCE ITEMS, NAVSEA WILL CERTIFY TO THE TYCOM THAT THE MATERIAL CONDITION OF THE PARTS OF THE SHIP COVERED BY THE INDUSTRIAL ACTIVITY AWP IS SATISFACTORY FOR SEA TRIALS TO A SPECIFIED DEPTH. THE TYCOM IN TURN CERTIFIES THAT THE SHIP'S SUBSAFE CERTIFICATION BOUNDARY IS SATISFACTORY FOR SEA TRIALS TO A SPECIFIED DEPTH.

d. ISIC or TYCOM Representative.

(1) Conduct periodic monitoring of ships using paragraph 2.6.9 as a guide to include:

(a) Technical, administrative and training assistance visits directed toward improvements in management and conduct of maintenance during the availability and training tasks (Tech Assists).

(b) Evaluation visits to determine the state of administration and training (Work-Ups).

(c) Spot checks to monitor progress and effectiveness in specific material, training and administrative areas (Monitor Visits).

(d) Monitor Maintenance Reports that require post availability actions (Liaison Action Requests, Deficiency Management Tracking System items, Departure From Specifications, Deficiency Reports, etc.) for inclusion in the ship's CSMP, as required.

(2) Conduct a Pre-Critical Inspection of the Engineering Department per paragraph 2.6.9 to determine the ship's readiness for either the RSE or the Fleet Commander PORSE (as applicable).

(3) Schedule a salvage inspection by the operating forces in time to have discrepancies corrected prior to the start of Fast Cruise.

(4) Conduct a formal Phase I certification inspection of the ship's company per reference (v). The purpose of this inspection must be to audit the readiness and training of the Ship's Force, particularly in the areas of watch stander qualifications, damage control readiness, status of operational and emergency bills, present on board of essential technical manuals, and general operational knowledge. This inspection must be scheduled about one month prior to Fast Cruise and should include written examinations and personal interviews with officers and key enlisted men to determine their readiness and status of training as outlined for Phase I. A comparison of personnel allowance (including Navy Enlisted Classification requirements) versus onboard count must be made to ensure that the ship is adequately manned.

(5) Prior to Fast Cruise, the ISIC QA Officer must conduct a formal audit of Ship's Force REC and Departure from Specification Records and CSMP. Using the SUBMEPP PMR and URO MRC scheduling reports and current industrial activity or Ship's Force updates to the latest report, ensure all "D"-Level PMR and URO MRC accomplishment is current. The ISIC must forward the audit results to the TYCOM via the cognizant Commander, Submarine Group. The ISIC will then report to the TYCOM by message (Appendix CC) the status of the crew or material certification. An update of this certification is needed prior to Sea Trials and following the rescinding of certification noted in the NOTE following paragraph 2.6.9.1.c.(9). If Upgrades, Alterations or Major Repair Work of the FBW SCS was performed by TYCOM managed activities, a 100% audit of the work, as defined in volume V, part I, chapter 9 of this manual, will be performed by the ISIC. The ISIC must report certification of work and recommend at-sea operations using the message format of Appendix BB.

(6) Witness and certify to the TYCOM that the state of crew training is satisfactory for at-sea operations per reference (v). This will be done during a two-day period subsequent to Dock Trials and prior to Fast Cruise as outlined in paragraph 2.6.9. This two-day period will be scheduled so that there is normally a 48-hour period between the end of this event and the beginning of Fast Cruise. This two-day Phase II crew certification period is divided into a 40-hour crew work-up and rest period and an eight-hour modified dockside Operational Readiness Inspection. The entire period should be scheduled to minimize interference with industrial activity work. However, since the certification must be conducted most carefully to be meaningful, the officer scheduling the certification should coordinate industrial activity interference during the eight hour modified Operational Readiness Inspection. This certification should be thorough and meticulous. Pressure from the industrial activity or any other source to compromise the submarine's safety must not be permitted to influence the judgment of the certifying officers. The desired overall sequence of these events is shown in Appendix CE.

(7) Conduct a material inspection of the ship concurrent with the inspection of paragraph 2.6.9. This inspection should be conducted using the guidelines contained in paragraph 2.6.9.4.

(8) Satisfactory completion of the inspections of paragraphs 2.6.9 should be reported to the TYCOM in one "PRIORITY" crew certification message following the sample message format of Appendix CC paralleled by a telephone call to the TYCOM Watch Officer reporting the date-time group of the message. If significant deficiencies exist or it appears that extension of time is required to correct training or material deficiencies, the TYCOM must be immediately advised by telephone and by message. The Supervising Authority will be included as an information addressee.

(9) Receive from the CO or Supervising Authority the scope, schedule and agenda of tests for Sea Trials for review. The concurrence of NAVSEA is required for the sequencing and scheduling of propulsion plant Sea Trials for industrial activity availabilities.

(10) Prior to Sea Trials, report by message (Appendix CN) to the TYCOM the material certification of the ship.

(11) Advise the TYCOM by message of escort requirements and ensure that an escort is provided during the initial tightness dive, during the deep dive and during emergency blow tests as required by paragraph 2.6.9.

(12) Arrange for a SRDRS to be on "modified alert" during the Sea Trials via message (Appendix CA) to COMSUBRON ELEVEN.

(13) Provide updated sea trials status by telephone to COMSUBRON ELEVEN if SRDRS "mod-alert" support services are in use per paragraph 2.6.9.

(14) Provide an operation order to be used incorporating the provisions of reference (ad). Provide a copy to the TYCOM and, where appropriate, the local ISIC, information to CNO and Fleet Commander. Include within operation orders pertaining to post-availability trials, instructions to send specific messages announcing the start and completion of initial deep dive with the TYCOM as an information addressee.

(15) Arrange for the embarkation of technical personnel who may be assigned by NAVSEA to observe tests or trials.

(16) Arrange for the assignment of operating areas and communications frequencies.

(17) Assign a submarine qualified officer to act as TYCOM representative embarked during Sea Trials as required by paragraph 2.6.9. When necessary, provide a gold dolphin wearer to ride the escort vessel.

(18) When authorized by the TYCOM, grant permission for the ship's CO to commence Sea Trials per the approved Sea Trials Agenda.

(19) Upon completion of Sea Trials, report by message (Appendix CO) to the TYCOM the status of any work performed by Forces Afloat within the SUBSAFE boundary, status of Departures from Specification and status of URO MRCs. If Upgrades or Alterations or Major Repair Work of the FBW SCS was performed by TYCOM managed activities, following verification

from the ISEA or activity performing the work of satisfactory completion of all at-sea testing or trials, completion of controlled dives, correction of all mandatory sea trial deficiencies, and resolution of all ISIC FBW SCS Certification Audit Deficiencies recommendations, certify to the TYCOM using Appendix BN, with information copies to CNO, the appropriate Fleet Commander and NAVSEA, the FBW SCS material condition of those parts of the ship installed, repaired, or tested by the ISEA or activity performing the work is satisfactory, and recommend authorization for FBW SCS unrestricted use in support of submarine unrestricted operations, subject to ISIC verification that FBW SCS certification of areas outside ISEA or activity performing the work tasking has been sustained, or specifically identify any operating restrictions of the ship or system.

e. Ship CO.

(1) Carry out his command responsibilities per reference (o).

NOTE: SUBMARINES UNDERGOING INDUSTRIAL ACTIVITY AVAILABILITIES NORMALLY REMAIN IN COMMISSION WITH A CREW ASSIGNED. THE CO REMAINS FULLY RESPONSIBLE FOR THE NUCLEAR PROPULSION PLANT DURING ALL PHASES OF THE AVAILABILITY, INCLUDING ALL POST REPAIR TESTS AND TRIALS.

(2) Develop and execute training plans and documents in order to maintain the state of training of the crew adequate to support post repair tests, inspections and trials. The nature and scope of the training required will depend to a great extent on the length of the availability. Care must be taken to ensure that these plans and documents are in conformance with instructions and procedures approved by NAVSEA.

(3) Supervise operation of the nuclear propulsion plant. Critical operations will be conducted as set forth in paragraph 2.6.9.

(4) Prepare the ship's engineering personnel and propulsion plant and spaces for examination by the Director, Division of Naval Reactors, U.S. Department of Energy or the Fleet Commander Nuclear Propulsion Examining Board. For PORSE conducted by the Nuclear Propulsion Examining Board, direct liaison is authorized with the industrial activity to ensure estimated dates are included in the Key Events schedule.

(5) Maintain PMS per reference (aa), SUBSAFE REC per volume V, part I, chapter 5 of this manual to ensure no unauthorized Ship's Force work is conducted within the certified SUBSAFE boundaries, Reactor Plant PMS per reference (ab) and Planned Maintenance Management Program per reference (ac), for work performed by Forces Afloat. Ensure records are ready for ISIC audit conducted prior to Fast Cruise.

(6) Participate in at-sea periods prior to the first Sea Trials.

(a) If possible accompany the preceding ship in overhaul on the first Sea Trial to learn how the propulsion trial is run.

(b) For ships in availabilities 18 months or longer, the CO must participate in an underway period of sufficient duration about six months before Phase II Crew Certification. The purpose of this ride is to refresh the CO on what is important to ensure the safe conduct of his own Sea Trials and to ensure his crews training program is emphasizing those matters. This underway should be on a ship, preferably of the same class, which is concentrating on basic submarine operations, such as Selected Refresher Training or ISE, in order for the CO to see evolutions such as coming to periscope depth, snorkeling, ventilating, casualty training, etc. If the availability schedule has 10-12 weeks between Power Range Testing and Phase II Crew Certification, the CO should go to sea about two months before Power Range Testing. The intent is for the CO to go to sea after having been in the industrial activity for a fair amount of time (normally one year or more), but with sufficient time remaining to improve his own training program if necessary. During these underway periods, the CO should have time on the bridge and also observe piloting and navigation.

(7) Determine, in conjunction with the Supervising Authority, the nature and extent of the post-repair Sea Trials. Review the Sea Trial Agenda, including the sequence and duration of each test. The CO will concur with the trial agenda, then the Supervising Authority will submit it to NAVSEA for concurrence and the TYCOM for approval. Provide copies of the approved detailed schedule and agenda for underway trials to the local ISIC, if appropriate, the escort ship and embarked TYCOM representative, if assigned. This schedule and agenda must include:

(a) The minimum requirements in paragraph 2.6.9.

(b) A firm time scheduled for the conduct of all tests and trials showing their sequence and duration.

(c) General prerequisites for the conduct of each test. Detailed prerequisites should be itemized as part of individual test requirements.

(d) Responsibility for the conduct of each test (industrial activity or ship).

(e) Support required from the operating forces for the conduct of each test.

(f) Provision for adequate crew rest time during Sea Trials. Opportunity for six uninterrupted hours of rest in each twenty-four-hour period is a minimum for each member of the command.

(g) Provision for a minimum of six hours of uninterrupted independent ship exercises for crew training following the initial tightness dive and prior to the deep dive.

(h) Underway tests may be run during ISE and rest periods on a not-to-interfere basis. Specifically, tests which can be conducted underway under normal operating conditions without manning of special watch stations that require extra military personnel, may be scheduled during

rest periods. Tests which will not interfere with Ship's Force drills and training exercises may be conducted during ISE periods.

(8) Undergo a DISSUB and Salvage Inspection per volume IV, chapter 18 of this manual.

(9) Conduct one-day Ship's Force Dock Trials per paragraph 2.6.8.7.

(10) Demonstrate the state of training of the crew per reference (v).

(11) Ensure that all pertinent alongside tests, inspections, and trials are conducted.

(12) Certify to the designated ISIC or TYCOM representative that all DISSUB and Salvage Inspection discrepancies affecting safe conduct of Sea Trials have been corrected. Deliver a copy of the salvage plan to the escort ship, if required, and confer with the escort ship to coordinate communications and operational procedures, ensuring that the escort is fully informed as to the submarine's condition and intentions.

(13) Concur with Supervising Authority message (reference (u), Appendix B.3.1) concerning Fast Cruise or Sea Trial readiness.

(14) Report by message (Appendix CP) to the TYCOM that crew and ship are ready for Sea Trials. List exceptions such as completion of Fast Cruise, removal of shore power connections, etc.

(15) When authorized by the TYCOM and, when permission has been granted by NAVSEA 08 for critical reactor operations, conduct a Fast Cruise per paragraph 2.6.9.

(16) Concur with Supervising Authority message (reference (u), Appendix B.3.3) that Fast Cruise was successfully completed, all mandatory deficiencies for Sea Trials have been corrected and recommend commencement of Sea Trials.

(17) Report completion of Fast Cruise to the TYCOM by message (Appendix CQ) and request permission to commence Sea Trials.

(18) When all the requirements of this instruction are completed and permission has been received from the TYCOM, proceed to sea per operation order. At sea, carry out the approved Sea Trial Agenda and Schedule.

NOTE: SUBSEQUENT TO THE MESSAGES, APPENDICES CF AND CH, ANY DEFICIENCY DISCOVERED AND THE CORRECTIVE ACTION TAKEN WHICH AFFECTS THE WATERTIGHT INTEGRITY, THE RECOVERABILITY OF THE SHIP, THE OPERATIONS OF THE SHIP'S CONTROL SURFACES OR THE SHIP'S SALVAGE CAPABILITY MUST BE REPORTED TO NAVSEA, TYCOM AND FLEET COMMANDER BY THE SUPERVISING AUTHORITY, ISIC OR TYCOM REPRESENTATIVE BY MESSAGE. PREVIOUS CERTIFICATION MESSAGES MUST BE SUSPENDED. WHEN A REVIEW OF THE DEFICIENCY IS COMPLETED BY NAVSEA FOR INDUSTRIAL ACTIVITY ITEMS AND TYCOM FOR SHIP'S FORCE ITEMS, NAVSEA WILL CERTIFY TO THE TYCOM THAT THE MATERIAL CONDITION OF THE PARTS OF THE SHIP COVERED

BY THE INDUSTRIAL ACTIVITY AWP IS SATISFACTORY FOR SEA TRIALS TO A SPECIFIED DEPTH. THE TYCOM IN TURN CERTIFIES THAT THE SHIP'S SUBSAFE CERTIFICATION BOUNDARY IS SATISFACTORY FOR SEA TRIALS TO A SPECIFIED DEPTH.

2.6.9.2 Type Commander Embarked Representative. For the first Sea Trial after a major industrial activity availability of a nuclear powered submarine, an unrestricted line officer (a former CO senior to the CO) normally provided by the ISIC or TYCOM will be the TYCOM embarked representative. This officer has the authority to act for the TYCOM in making on the spot changes to the approved Sea Trial Agenda. A TYCOM material representative may also be assigned. When assigned, the TYCOM material representative will serve as a technical advisor to the TYCOM embarked representative on matters pertaining to Sea Trial Agenda changes, compliance with this manual and disposition of emergent material deficiencies.

a. During Sea Trials, assume the duties of Officer In Tactical Command unless otherwise designated by the ISIC. As Officer In Tactical Command, this officer must comply with direction found in Annex C of reference (ad).

b. When no officer senior to the CO is embarked for sea trials, the following officers must act for the TYCOM in approving on-the-spot changes to the Sea Trial Agenda in the order of precedence listed:

(1) TYCOM material representative if embarked.

(2) Designated ISIC representative if embarked.

(3) Ship's CO.

NOTE: SEA TRIAL AGENDAS ARE DEVELOPED AS A RESULT OF LESSONS LEARNED OVER A LONG PERIOD OF TIME. EVENTS AND SEQUENCES OF EVENTS ARE IMPORTANT AND SHOULD BE CHANGED ONLY AFTER THOROUGH DELIBERATION.

2.6.9.3 Availability Completion Prerequisites. The following requirements will be included in the TYCOM "Countdown Message" outlined in paragraph 2.6.9:

a. The Supervising Authority will report by message (reference (u), Appendix B.3.8) to NAVSEA, satisfactory completion of all Sea Trials, completion of controlled dives, correction of all mandatory Sea Trial deficiencies, and resolution of all NAVSEA SSCA Category IA recommendations. Report that the SUBSAFE material condition of those parts of the ship installed, repaired, or tested by the industrial activity is satisfactory for URO to test depth. Identify any deferred SUBSAFE work or conditionally approved deviations and waivers.

b. Following verification from the Supervising Authority of satisfactory completion of all Sea Trials, completion of controlled dives, correction of all mandatory Sea Trial deficiencies, and resolution of all NAVSEA SSCA Category IA recommendations, NAVSEA must certify by message (reference (u), Appendix B.3.9) to the TYCOM, with information copies to CNO and the appropriate Fleet Commander, the SUBSAFE material condition of those parts of the ship installed, repaired, or tested by the industrial activity is satisfactory, and recommend authorization for URO to design test depth subject to TYCOM verification that SUBSAFE certification of areas outside

industrial activity AWP has been sustained.

c. Following verification from NAVSEA of satisfactory completion of all Sea Trials, completion of controlled dives, correction of all mandatory Sea Trial deficiencies, certification that the SUBSAFE material condition of those parts of the ship installed, repaired or tested by the industrial activity is satisfactory, and upon confirmation of maintenance of SUBSAFE certification of portions of the ship not affected by the industrial activity, the TYCOM must report by message (Appendix CL) to ship, with copies to CNO and NAVSEA, reporting status of SUBSAFE certification and authorizing URO to test depth.

2.6.9.4 Inspection Procedures.

a. Periodic Monitoring, Inspections, and Visits.

(1) Purpose.

(a) To provide to ships in availability such administrative and training assistance as is necessary to improve the Ship's Force conduct of the availability, maintenance and training tasks. Visits of this nature are termed Tech Assists.

(b) To evaluate the effectiveness of administration and training. Inspections of this nature are termed Work-Ups.

(c) To conduct spot checks to monitor progress in specific material, administrative and training areas. Visits of this nature are termed Monitor Visits.

(2) Discussion. The extent, type and frequency of periodic monitoring, inspections, and visits should be determined on a case basis by the responsible ISIC or TYCOM representative. The initial inspection should be broad in scope in order to appraise the responsible ISIC of the adequacy of the ship's performance and progress. Normally, the initial visit will indicate the necessary frequency and scope of subsequent Tech Assists and Monitor Visits. In general, any required Work-Ups should be scheduled in advance of Key Events during the availability.

(3) Areas of Inspection Coverage. Initial inspections normally examine the effectiveness of Ship's Force preparations for an availability. Subsequent inspections and visits should review the following areas as appropriate for the purpose of the specific inspection.

(a) Review procedures and administrative steps for provisional watch station qualifications.

(b) Review department organization manuals.

(c) Review department instructions and administrative procedures.

(d) Review ship's instructions and administrative procedures.

(e) Review department logs, operating instructions and casualty procedures.

(f) Review ship's standard operating procedures and the ship's organization and regulations manual.

(g) Review training conducted and planned to support the goal of requalifying or reestablishing proficiency of watchstanders.

(h) Monitor performance of watch standing.

(i) Conduct spot check of ship's records and logs in use.

(j) Review Ship's Force controlled work (SUBSAFE, SOC, FBW, Level I and Nuclear) and procedures to ensure proper controls and documentation per this manual and no unauthorized work is conducted within the SUBSAFE, SOC and FBW boundaries.

(k) Review status of Ship's Force responsible PMS or IEM.

(l) Inspect installed equipment for cleanliness and adequate protection from damage.

(m) Review Tag-Out and Work Authorization Logs. Spot check for compliance per current directives.

(n) Inspect ship for hazards.

(o) Inspect provisions for casualty control including watertight integrity.

(p) Verify that all COSAL material, including operating space items, have been off-loaded to processing areas which provide appropriate security.

(q) Inspect the processing area to verify provisions and procedures for careful ILO inventory.

(r) Review response of supply system to requisitions in support of Ship's Force work.

(s) Verify that items are withdrawn from the ship's COSAL stock undergoing inventory or ILO only on an emergency basis and that such issues are well documented with appropriate adjustments to the inventory records.

(t) Evaluate general safety practices.

(4) Scheduling of Periodic Monitoring, Inspection and Visits. Periodic Monitoring, Inspections, and Visits should be scheduled by the responsible ISIC as appropriate for the purposes of the inspection concerned. Some monitoring visits should be conducted on an unannounced basis. These inspections should be given so as to minimize interference with industrial activity and Ship's Force work.

(5) Reports of Inspection. Formal reports of the results of periodic monitoring, inspection and visits are not required by the TYCOM. However, the responsible ISIC should advise the TYCOM in situations when the attainment of required progress toward completion of Key Events is in jeopardy.

b. Pre-Critical Inspection.

(1) Purpose. To evaluate the readiness of the engineering department to undergo a PORSE by the Fleet Commander Nuclear Propulsion Examining Board or a RSE by representatives from NAVSEA 08.

(2) Discussion. The conduct of the Pre-Critical Examination by the ISIC is not intended to duplicate the inspections for which readiness is being evaluated. It is considered prudent, however, to use an inspection plan similar to that employed by NAVSEA. Normally, the crew's readiness can be assessed within two days using such a plan, which should encompass the following:

(a) An administrative review.

(b) Observation of basic drills and evolutions not requiring reactor operation.

(c) Personnel interviews.

(d) Material inspection.

NOTE: FOR SSBN OR SSGN PRE-CRITICAL INSPECTIONS, THE CREW TO BE INSPECTED IS THE COMPOSITE CREW SELECTED FOR INITIAL CRITICALITY AND POWER RANGE TESTING.

(3) Scheduling of Pre-Critical Inspections. The ISIC must conduct a Pre-Critical Inspection within six weeks of intended criticality. The Pre-Critical Inspection must be scheduled such that the qualification program and material condition of the ship are sufficiently complete to allow for a thorough inspection, but early enough to allow time for the correction of identified deficiencies prior to criticality. The TYCOM should be advised as soon as possible in advance of the tentative date for the ISIC Pre-Critical Inspection and confirmed dates should be established about one month in advance of the inspection.

(4) Composition of the Inspection Team. The Pre-Critical Inspection Team should consist of:

(a) A nuclear-trained member of the cognizant ISIC Staff, usually the Squadron Training Officer.

(b) A nuclear-trained officer with experience as an Engineer Officer.

(c) When available, a nuclear-trained officer from the TYCOM's Staff will participate in ISIC Pre-Critical Inspections involving refueling. Arrangements for participation of the TYCOM Staff member should be initiated by the responsible ISIC at least one month in advance of the anticipated ISIC Pre-Critical Inspection.

(5) Reports of Inspection.

(a) The Senior Inspector should provide the inspected unit with an informal report of findings by the inspection team, copy to the cognizant ISIC and TYCOM.

(b) The ship's CO must review the findings of the inspection team and make necessary adjustments to the training program to ensure the

crew's readiness for the examination. The ship's CO must keep the cognizant ISIC advised of the training plan and the assessment of the crew's progress.

(c) The cognizant ISIC must review the inspection findings, the CO's training plan and progress evaluations, and direct follow-up reviews or inspections necessary to verify the ship's readiness for the examination.

c. Phase I Certification Inspection.

(1) Purpose. To determine the state of readiness and training of the Ship's Force, particularly in the areas of watch stander qualification, damage control readiness, status of operational and emergency bills, present onboard supply of essential technical manuals and general operational knowledge.

(2) Discussion. The guidelines for the Phase I inspection are provided in reference (v). The intent of the inspection is to provide a preliminary estimate of readiness and to identify areas requiring action prior to final certification (Phase II).

(3) Scheduling of Phase I Certification Inspection. Phase I Inspections should be scheduled by the responsible ISIC about 35 days before scheduled initial Sea Trials.

(a) Chief Inspector - ISIC representative of appropriate seniority.

(b) Assistant Chief Inspector - a submarine CO.

(c) Assistant inspectors for the following departments or areas - overall training, executive, operations, navigation, communications, weapons, first lieutenant, engineering and material.

(d) The inspector for the engineering areas of nuclear powered submarines will be a nuclear-trained officer qualified as an Engineer Officer.

(4) Reports of Inspection.

(a) The Chief Inspector must provide the inspected ship with an informal report of findings by the inspection team.

(b) In the event that inspection results indicate the readiness for final (Phase II) certification in the required time cannot be assured, the responsible ISIC should advise the TYCOM of the circumstances.

d. Material Inspection. Prior to certifying commissioned ships' readiness for at-sea operations, conduct a material inspection to determine that the ship is materially ready for at-sea operations per volume V of this manual. In addition, on all ships conduct a DISSUB and Salvage Inspection per volume IV, chapter 18 of this manual. Results of material inspections should be reported with Phase II crew certification reports.

e. Phase II Certification Inspection.

(1) Purpose. To certify that the state of training of the crew is satisfactory for at-sea operations.

(2) Discussion. The requirements for Phase II certification inspection are provided in reference (v).

(3) Scheduling of Phase II Certification Inspections. Phase II inspections should be scheduled by the responsible ISIC about nine days prior to Sea Trials.

(4) Composition of the Inspection Team. The requirements for Phase II Certification Team composition are the same as those for Phase I.

(5) Reports of Certification. The Phase II Certification and Material Certification Reports are combined and submitted per Appendix CC.

2.6.9.5 Dock Trials. Ship's Force Dock Trials provide the opportunity to test and check out systems, components and portable equipment prior to the Fast Cruise training period simulating underway conditions. Although normally a period of one day is assigned for integrated Ship's Force Dock Trials, tests and evolutions performed in the one to two weeks prior to the Dock Trial date may be accepted by the CO as fulfilling the requirements of this paragraph. The purpose of Dock Trials is to afford the ship an opportunity to demonstrate that major systems and equipment are in fact ready to support Sea Trials. It is expected that individual equipment will have been satisfactorily tested prior to commencement of the integrated operational tests afforded by Ship's Force Dock Trials. Appendix I lists the minimum requirements for Dock Trials and will be used by the ship's CO in preparing for and conducting Dock Trials.

2.6.9.6 Fast Cruise. The overall objective of the Fast Cruise is to train the crew and determine the crew's ability to take the ship to sea safely. In addition to the normal underway routine, the CO must have all equipment operated to check for proper operation and to determine the state of training of the crew. Fast Cruise must, as far as is practicable, simulate at sea operating conditions. It is to be conducted by the Ship's Force and is to be unhampered by repair work or by movement of industrial activity personnel through the ship. The Supervising Authority must **not** schedule any trials, tests or other work to be performed on the ship during this period. The Fast Cruise should be four days in duration for nuclear ships and two days for non-nuclear submarines. It should be completed within a five-day period. It should end not more than three days prior to underway trials. Normally, the ship will go to sea for an underway trial within a day after completion of Fast Cruise. Should the 72-hour period be exceeded, the TYCOM may direct an additional Fast Cruise. The parent ISIC will make formal recommendations to the TYCOM as to the desired period of Fast Cruise. Appendix J lists the minimum requirements for Fast Cruise and will be used by the ship's CO in preparing for and conducting Fast Cruise. Additional drills and operations are at the discretion of the ship's CO. The ship must be operated as if underway, simulating the various evolutions required for safe operation of the ship. Each underway section must be exercised in the evolutions which are normally performed on a section basis. During each evolution, check out all communication systems. Ensure that each is in proper working order and that, where duplicate systems exist, a priority system is designated.

2.6.9.7 Sea Trials. Appendix L delineates the minimum requirements incident to Sea Trials following industrial activity availabilities. For submarines, following completion of Fast Cruise the ISIC will notify the TYCOM of satisfactory completion of Fast Cruise and readiness for Sea Trials using the message format of Appendix CN. The submarine TYCOM will authorize the ISIC to allow the ship to get underway for Sea Trials using the message format of Appendix CJ. The submarine CO will keep the TYCOM aware of the progress of the Sea Trial through

periodic SITREPs using the message format of Appendix CD. SITREPs will be submitted following completion of the initial tightness dive, following completion of the deep dive to test depth and daily at a minimum and as identified by the TYCOM or the Sea Trial Agenda. Sea Trials following availability are normally conducted with a significant number of "riders". These riders represent NAVSEA, TYCOM and Shipbuilder personnel onboard to observe various tests and trial evolutions. The ship's normal load out of Lithium Hydroxide canisters for DISSUB (granular or ExtendAir®, no mix), Lithium Hydroxide curtains (or ExtendAir® Deployment kits, if equipped), EAB masks, SESSPE and oxygen candles are not sufficient to support this increase in personnel. Therefore, an additional four Lithium Hydroxide canisters (or three ExtendAir®, if equipped), four Lithium Hydroxide curtains (or one ExtendAir® Deployment kit for every multiple of 60 ExtendAir® canisters in the compartment, if equipped), one EAB mask, one SESSPE and two oxygen candles must be carried for each rider exceeding normal crew manning. Stowage of this additional equipment for DISSUB must be in the same escape compartment as the rider's designated General Emergency muster site assigned by the Commanding Officer. Lithium Hydroxide canisters, EABs, SESSPE and Lithium Hydroxide curtains are to be obtained from the industrial activity. The Supervising Authority and ship's CO will use Appendix L in preparing for and conducting Sea Trials.

a. Assignment of Escort Ship. An escort is required for:

(1) Initial tightness and deep dives after a major industrial activity availability, including EMBT blow at the completion of each of these dives.

(2) Any EMBT blow from greater than 400 feet. Rationale is to give the submarine added protection to prevent interference from any surface contact.

NOTE: IN ALL CASES, HULL STRENGTH OR TIGHTNESS AND VALVE OPERATIONS WILL HAVE BEEN TESTED TO A DEPTH EQUAL TO OR GREATER THAN EMBT BLOW DEPTH BEFORE TESTING EMBT.

(3) For second and subsequent underway periods if major hull or sea connected system work has been accomplished since last Sea Trials.

b. Escort Ship Capability Requirements. The surface escort ship must have the following capabilities with the necessary equipment in an operating condition:

(1) Radio Communication:

(a) Ability to transmit and receive on two Ultrahigh Frequency and on High Frequency circuits simultaneously including 243.0 MHz or equivalent system capabilities (Very High Frequency and INMARSAT-C).

(b) Equipped to tape record all non-secure radio transmissions between the submarine and the escort.

(c) Capability to communicate on the submarine High Frequency, Ultrahigh Frequency or equivalent system capabilities (Very High Frequency or INMARSAT-C) circuits.

(2) Sonar and Sonar Communications:

(a) Equipped with underwater telephone capable of communicating to the

submarine's test depth or equivalent system capabilities.

(b) Sufficient operators to man underwater telephone on a continuous basis, including CW capable operator on call if the requirement for CW communications develops.

(c) Equipped to tape record (installed or portable) all transmissions between the submarine and the escort by underwater telephone.

(d) Explosive charge signals or active sonar transmit capability as called for by AXP-1.

(3) Navigation:

(a) Equipped with an operable Global Positioning System or the latest accurate off-the-shelf navigational equipment.

(b) Equipped with an operable Dead Reckoning Tracers or equivalent system capability.

(c) Possess navigational capability to fix his position to two-mile average accuracy.

(d) Fathometer.

(e) Gyrocompass.

(f) Underwater log or equivalent system capability.

(4) Sea Keeping and Speed:

(a) Ability to remain at sea for one week in State 6 seas.

(b) Be capable of making 10 knots. Escorts will keep the submarine informed of any speed or sea state limitations. In addition, if the escort has an unfaired WQC hydrophone, it must notify the submarine of the maximum sea state and speed which will not restrict WQC communications. If the submarine requires a speed above this limit, the submarine should run a track about the escort within WQC range.

(5) When an escort ship is other than another submarine, the ISIC will designate a minimum of one officer qualified in submarines (Gold Dolphins) and ensure a sufficient number of officers qualified in submarines (Gold Dolphins) will be embarked during the escort duty. An escort is not required on Board of Inspection and Survey trials since the EMBT blow is done per applicable URO MRC vice from maximum authorized operating depth.

(6) Assignment of SRDRS During Submarine Sea Trials.

(a) A SRDRS will be placed in a modified-alert status at the beginning of Sea Trials requiring an escort following an industrial activity availability or major maintenance period for:

1 The ship's initial tightness and deep dive event.

2 Subsequent Sea Trials until the completion of the initial dive to design test depth.

3 If, in the TYCOM's judgment, a Sea Trial requires an escort due to major hull cuts, etc. The TYCOM must obtain NAVSEA concurrence when determining the need for escort or SRDRS services.

(b) The ship conducting Sea Trials will notify COMSUBRON ELEVEN and COMNAVSEASYSCOM when SRDRS services are no longer required due to completion of the events in paragraph 2.6.9.7 or due to delay in completing Sea Trials.

(c) The SRDRS is not required to be placed in a modified alert status for those Sea Trials requiring an escort solely for the accomplishment of an EMBT blow from depths greater than 400 feet.

(7) A modified alert message will be sent by the industrial activity with the required SRDRS support dates six weeks prior to the requested date. Any changes in this request date will require immediate notification to the Fleet Commander, COMNAVSEASYSCOM and COMSUBRON ELEVEN. Sample messages in Appendix BI and CG.

2.6.9.8 Interrupted or Additional Sea Trials. In the event a Sea Trial is interrupted, or an additional Sea Trial becomes necessary, the following requirements are to be met. These requirements must be invoked if the ship returns to port for industrial activity repairs which affect SUBSAFE certification or which will require at-sea testing. These requirements will be reiterated by the TYCOM via a special "Countdown Message" Appendix CR when the need arises:

a. The industrial activity will draft a revised Sea Trials Agenda to support resumption of the trials. This Agenda must be provided to NAVSEA for concurrence and TYCOM for approval.

b. The ISIC must report by message (format of Appendix CS) to the TYCOM that the material condition of those SUBSAFE Certification boundaries that were installed, repaired or tested by Ship's Force is satisfactory for resuming Sea Trials.

c. The Supervising Authority must provide a report, by message (reference (u), Appendix B.3.5), to NAVSEA (information copy to the TYCOM) that the material condition of the systems installed, repaired or tested by the industrial activity is satisfactory for resumption of Sea Trials. As a minimum, the report should state the status of all incomplete Category IA Audit Items resulting from the NAVSEA SSCA and that all SUBSAFE work has been performed per the requirements of reference (u).

d. The CO of the ship must provide a report by message (format of Appendix CT) to the TYCOM stating that the crew and ship are ready for Sea Trials. Any exceptions are to be listed in this message.

e. NAVSEA (PMS 392), upon receipt of the Supervising Authority report, must recertify the material condition of the ship for operation to a specific operating depth for Sea

Trials and report recertification by message (reference (u), Appendix B.3.6) to the TYCOM.

f. Upon completion of all of the requirements in paragraphs 2.6.9.8.a. through 2.6.9.8.e, the TYCOM will provide a message (Appendix CU) to the ship granting permission to proceed with the conduct of Sea Trials and authorize the ship to dive to the Sea Trial operating depth recommended by NAVSEA.

g. Submarine surface transits from industrial port in advance of completion of CNO availabilities (prior to certification for unrestricted operations) to a different or homeport can be executed without a sea trial, without an escort and without an SRDRS after obtaining NAVSEA concurrence and authorization from the TYCOM. The submarine must not be authorized to dive and no testing is permitted during the transit. Operational need for transit and mitigating actions, if applicable, must be determined by the TYCOM.

2.6.9.9 Availability Completion Prerequisites. Upon completion of Sea Trials and correction or resolution of deficiencies, the following requirements must be met prior to completion of an industrial availability greater than six months duration. These requirements will be reiterated in the TYCOM "Countdown Message" Appendix CF or CL:

a. The Supervising Authority must report by message (reference (u), Appendix B.3.8) to NAVSEA, satisfactory completion of all Sea Trials, completion of controlled dives, correction of all mandatory sea trial deficiencies, and resolution of all NAVSEA SSCA Category IA recommendations. Report that the SUBSAFE material condition of the ship installed, repaired, or tested by the industrial activity is satisfactory for URO to test depth. Identify any deferred SUBSAFE work or conditionally approved deviations and waivers.

b. Following verification from the Supervising Authority of satisfactory completion of all Sea Trials, completion of controlled dives, correction of all mandatory Sea Trial deficiencies, and resolution of all NAVSEA SSCA Category IA recommendations, NAVSEA must certify by message (reference (u) Appendix B.3.9) to the TYCOM, with information copies to CNO and the appropriate Fleet Commander, the SUBSAFE material condition of those parts of the ship installed, repaired, or tested by the industrial activity is satisfactory, and recommend authorization for URO to design test depth subject to TYCOM verification that SUBSAFE certification of areas outside the industrial activity AWP has been sustained.

c. Following verification from NAVSEA of satisfactory completion of all sea trials, completion of controlled dives, correction of all mandatory sea trial deficiencies, certification that the SUBSAFE material condition of those parts of the ship installed, repaired, or tested by the industrial activity is satisfactory, and upon confirmation of maintenance of SUBSAFE certification of portions of ship not affected by the industrial activity, the TYCOM must report by message (Appendix CL) to the ship, with copies to CNO and NAVSEA, reporting status of SUBSAFE certification and authorizing URO to test depth.

2.7 COMPLETION OF AVAILABILITY. CNO availabilities are complete when the TYCOM transmits one of the two following messages:

a. Appendix BM. TYCOM MESSAGE TO SHIP CONCERNING URO (for industrial activity availabilities less than six months in duration).

b. Appendix CL. TYCOM MESSAGE TO SHIP CONCERNING URO (for industrial activity availabilities greater than six months in duration).

2.8 DAYS OF MAINTENANCE DELAY.

a. Days of Maintenance Delay (DoMD) is a metric used to track extensions to CNO availabilities caused by maintenance or modernization decisions or performance. Extensions beyond the planned availability length take away from training in the Submarine Fleet Response Training Plan (FRTP) and the Optimized Fleet Response Plan. DoMD is defined as the number of days that an availability extends beyond the originally established end of the availability or completion date at the start of the availability. The original availability completion date is documented in the Navy Data Environment (NDE) at the official start of the availability. Additionally, the A-35 (days) Readiness to Start (RTS) message for private shipyard availabilities and the Final Review Estimate (FRE) for public shipyard availabilities document CNO availability start and end dates prior to availability start. Should the actual availability start date differ from the RTS message or FRE, all stakeholders will need to agree on the date to be used for the original start and completion dates. For a public shipyard availability, the final completion date will match the date on the Type Commander's URO certification message. For a private shipyard availability, the end of availability date will match the end of availability completion message.

b. Total DoMD is the sum of Unrealized DoMD and Realized DoMD that accumulates in the fiscal year in which the day of delay is realized.

c. Unrealized DoMD are defined as the number of days that an availability is projected to extend beyond the originally scheduled availability completion date but have yet to occur as they are in the future from time now (today's date). If today's date is equal to or earlier than the originally scheduled availability completion date, the Unrealized DoMD is the delta between the projected end date and the originally schedule availability completion date. If today's date is later than the originally scheduled availability completion date, the Unrealized DoMD is the delta between the projected end date and today's date.

d. Realized DoMD are defined as the actual number of days that an availability has extended beyond the originally scheduled availability completion date that has already occurred. At the end of the availability, all days of maintenance delay are realized, though they may accumulate in different fiscal years.

(Example: If an availability was scheduled to complete on 10 August 2021 at availability start and was extended to 28 August, the Total DoMD is 18 Days. On 24 August 2021, the availability had 14 Realized DoMD and 4 Unrealized DoMD. For comparison, on 15 July 2021 (i.e., today's date at or earlier than originally scheduled availability completion data), the availability had 0 Realized DoMD and 18 Unrealized DoMD).

2.9 AVAILABILITY COMPLETION DEPARTURE CONFERENCE. At the end of the availability, the Supervising Authority, FMA (if applicable), and Ship's Force will conduct a

Departure Conference to finalize the status of all work performed during the availability. The conduct of this conference is similar to that of the Progress Reviews conducted per paragraph 2.6.3 and should be used to gather all necessary information to draft and send the Availability Completion Message. Further policy on availability completion can be found in volume VII, chapter 7, paragraph 7.12 and chapter 8, paragraph 8.5 of this manual. As a minimum, the Availability Completion Message should address all areas addressed in the Weekly Progress Message, as well as the following:

a. Unresolved maintenance issues and guarantee work items.

b. Report of configuration changes resulting from alterations installed during the availability.

c. Summarize the NAVSEA waivers issued during the availability.

d. Identify those work candidates that will be deferred until the next industrial availability.

2.10 POST AVAILABILITY. Within six months after the completion of the availability, SUBMEPP will issue the Completed Work Package.

APPENDIX A

TYPICAL CNO AVAILABILITY PLANNING MILESTONES

MILESTONES	RESPONSIBLE ACTIVITY	TIMELINE (Months)
1. Identify Non-Nuclear Title "K" SHIPALTs, fund and authorize planning and procurement.	NAVSEA	A-24
2. Identify Non-Nuclear Title "D" and "F" SHIPALTs, fund and authorize SUBMEPP to accomplish planning.	TYCOM	A-24
3. Issue Advance Planning Letter for NAVSEA funded Alterations and Selected Restricted Availability Advance Planning Milestones.	NAVSEA	A-18
4. Update CSMP. Submit to SUBMEPP via ISIC	Ship	A-16
5. Issue Preliminary AWP.	SUBMEPP	A-15
6. Issue AWP Supplement (replaces inventory of PMRs and URO).	SUBMEPP	A-12 to -14
7. Issue SHIPALT drawings.	Design Agent	A-12
8. Issue Final Planning Letter for NAVSEA funded Non-Nuclear Title "K" SHIPALTs.	NAVSEA	A-12
9. Issue Initial LLTM Report for Centrally Procured LLTM.	LLTM Agent	A-12
10. Issue Preliminary Work Sequence Schedules, provide estimates for NAVSEA funded Non-Nuclear Alterations.	Industrial Activity	A-11
11. Conduct Ship's Force Meeting.	SUBMEPP	A-10
12. Conduct initial Shipcheck.	Industrial Activity	A-10
13. Conduct site Logistics and Facilities Check (for Selected Restricted Availability at FMA only).	Industrial Activity	A-10
14. Issue message providing centrally procured LLTM and FMPMIS material availability status and best estimated delivery dates for Non-Nuclear Title "K" SHIPALTs.	NAVSEA	A-10
15. Host WDC with customers and Industrial Activity.	SUBMEPP	A-10
16. Response to NAVSEA's Material Message issued.	Industrial Activity	A-9
17. Issue Interchangeability Data Sheets for Advance Equipment Repair Program components.	SUBMEPP	A-9
18. Provide Pre-Availability Test Procedures to users on the Standardized Test Procedures CD-ROM and on the SUBMEPP ePortal web site. For ePortal access, go to	SUBMEPP	A-9

MILESTONES	RESPONSIBLE ACTIVITY	TIMELINE (Months)
https://www.submepp.csd.disa.mil, select "Products/Services" then "Secure Web Site" and follow the instructions.		
19. Issue SHIPALT Authorization (240 day) letter for NAVSEA funded SHIPALTs.	NAVSEA	A-8
20. Issue Proposed AWP.	SUBMEPP	A-8
21. Confirm ability to accomplish all authorized Alterations during Availability.	Industrial Activity	A-7
22. Submit Pre-Availability Test results and Proposed changes to the AWP.	Industrial Activity and Ship	A-5
23. Submit Valve Lists and Sonar Testing, Assessment and Grooming Report for the AWP.	Ship and ISIC	A-5
24. Provide screening action on Pre-Availability Test results and proposed changes to AWP.	TYCOM	A-4
25. Confirm AWP man-day estimate vs. availability duration for compatibility.	Industrial Activity	A-3
26. Convene PAC.	Industrial Activity	A-3
27. Provide preliminary review estimates (90-day estimates) for NAVSEA funded Non-Nuclear Alterations.	Industrial Activity	A-3
28. Confirm receipt of centrally procured LLTM, Fleet Modernization Program Management Information System (FMPMIS) material and Advanced Equipment Repair Program (AERP) components.	Industrial Activity	A-2
29. Issue PAC Report.	Industrial Activity	A-2
30. Promulgate Availability schedule.	Industrial Activity	A-2
31. Deliver centrally procured LLTM.	LLTM Agent	A-2
32. Deliver AERP components.	SUBMEPP	A-2
33. Provide final review estimates (45-day estimates) for NAVSEA funded Non-Nuclear Alterations.	Industrial Activity	A-1.5
34. Issued Approved AWP.	SUBMEPP	A-1
35. Start Availability.	Industrial Activity	A-0
36. Conduct Arrival Conference	Industrial Activity	A-0
37. Issue monthly Availability Status messages.	Industrial Activity or	Monthly

MILESTONES	RESPONSIBLE ACTIVITY	TIMELINE (Months)
	Supervisor of Shipbuilding	
38. Submit Reactor Plant Configuration Change Reports (RPCCR) or OPNAV 4790/CK forms for completed Alterations to ship's CO.	Industrial Activity	Monthly
39. Update material history records, manual changes, onboard repair parts for complete alterations. Endorse and forward RPCCRs and OPNAV 4790/CK forms.	Ship	Monthly
40. Complete Availability.	Industrial Activity	C
41. Issue Availability Completion Message.	Industrial Activity	C+1

NOTE: "A" AND "C" IN THE "TIMELINE" COLUMN REPRESENT THE START AND COMPLETION DATES, RESPECTIVELY. THE DATES SHOWN ARE FOR ILLUSTRATION ONLY, SINCE ACTUAL MILESTONES VARY DEPENDING ON SHIP OPERATING SCHEDULES, START DATE CHANGES AND OTHER CONSIDERATIONS.

APPENDIX B

SUGGESTED GUIDELINES FOR FORCES AFLOAT REVIEW OF AVAILABILITY WORK PACKAGES

1. The preliminary AWP includes information which SUBMEPP extracts from the CSMP prior to the availability. SUBMEPP, TYCOM and Ashore Ships Maintenance Manager only review items in the CSMP which are coded 1 under the type availability column. SUBMEPP continues to monitor the CSMP until submission of the first Supplementary Work List. It is essential that the CSMP be up-to-date and reflect what work the ship requires the industrial activity to accomplish. The CSMP is the primary means of communicating unique work items not already covered by the AWP until submission of the first Supplementary Work List.

2. Ship's Force should review each maintenance item on the CSMP deferred for accomplishment to ensure that the deficiency reported and the work involved to correct it are complete and accurate.

3. To the maximum extent possible, work items that are within the capability of an FMA to accomplish should be accomplished as T/A-2 work prior to the CNO Maintenance Availability.

4. Ship's Force will identify CSMP repair items previously deferred for other than industrial activity action which Forces Afloat will not likely accomplish prior to the availability and change the type availability code to T/A-1, with ISIC concurrence, on these items.

5. Ship's Force will review each outstanding alteration for applicability and ensure that the record of completed alterations is correct. Alterations erroneously reported complete result in plans and tests which do not fit the ship. Completed alterations not reported as complete will cause unnecessary expenditure of shipcheck funds, duplication or both, of effort during the availability.

6. During AWP review meetings, Ship's Force will markup both the index and applicable SWLIN as an aid in recalling information.

7. Ship's Force will review the AWP to see if any component or equipment requiring attention of any kind has been omitted. Note that the Advanced Equipment Repair Program (688, 21 and 774 Classes) and *Trident* Planned Equipment Replacement (TRIPER) Program (SSBN and SSGN 726 Class). Repair work on components that will be replaced by AERP can be canceled or noted as covered by the replacement SWLIN.

8. On receipt of the Proposed AWP, Ship's Force will review each Ship System Work Description. Ship's Force will prepare comments as to whether the extent of planned restoration, maintenance or repairs is sufficient or excessive. Additional comments regarding abnormal operation or configuration will be of interest to the industrial activity even if the AWP covers the particular component for repair because the scope of the job can be exactly defined early, avoiding "growth within scope" and schedule slippage later in the availability.

9. Ship's Force should review the General Information Section, "zero" series SWLINs and the glossary for a definition of terms used in the AWP to obtain a general understanding of availability procedures, philosophy and the pre-availability planning requirements.

10. Ship's Force should review all outstanding Departures from Specification to ensure they identify, for correction during the availability, all known non-standard repairs or installations not per class plans.

11. Ship's Force will identify any recently completed repair actions on components assigned to industrial activities and alterations that may negate the need for, or reduce the extent of, industrial activity refurbishment.

12. Ship's Force will identify any equipment not presently addressed in the AWP. SUBMEPP, TYCOM, and Ashore Ships Maintenance Manager are interested in identifying special or temporary equipment installations which may need maintenance during the availability.

13. Ship's Force will identify any equipment listed for restoration, that is in exceptionally good material condition.

14. Ship's Force will review, "Forces Afloat Actions to be Accomplished Prior To or At Arrival" index in the AWP to ensure these actions are understood.

15. Ship's Force will review the AWP Part 4.14 NAVSEA 07T and PMT Actions (Non-Nuclear) to ensure SF and PMT actions are completed when required.

APPENDIX D

HABITABILITY INSPECTION CHECKLIST FOR SHIPS IN CNO AVAILABILITIES

REFERENCES:

(a) NAVSEAINST 9091.2 – Crew Livability Standards for Industrial Availabilities
(b) COMPACFLTINST 4720.2 - Fleet Berthing and Messing Program
(c) COMUSFLTFORINST 4720.1 - Fleet Berthing and Messing Program
(d) NAVSEA T05U3-085 – NAVSEA Design Practices and Criteria Manual for Submarine General Arrangements Design

1. This checklist is a sample for QoSC the ship's force representative, with assistance from the NSA, to qualitatively determine the minimum required standards to the ability of the crew to live on board safely and comfortably during CNO availability. This assessment does not fulfill shipboard system certification requirements or other inspection requirements related to food service sanitation, laundry and dry cleaning, potable water and marine sanitation devices.

2. The purpose of the inspection is to verify that living and messing spaces are clean, safe and ready to receive the crew, and meet habitability requirements per reference (a), references (b) or (c), and reference (d), as applicable. Upon completion of the inspection, Ship's CO must report completion and results of the Habitability Inspection to the TYCOM via Naval Message (Appendix E), with copy to the LMA.

3. Areas to be inspected include general safety and sanitation, galley, scullery, messing, dry food storage spaces, refrigerated food storage spaces, berthing spaces, washrooms, showers, heads, lounges and potable water.

4. It is understood that not all equipment, spaces and systems aboard the ship will be completed and transferred to SF at the time of the assessment. If a space or system to be inspected has not been transferred to the crew, the LMA will present the space or system to the inspector. If a space or system has been accepted by the crew, the crew will present the space. As remaining habitability related spaces or systems are completed after crew move aboard, the QoSC is responsible for inspecting spaces or systems per the agreed upon turnover plan.

5. The inspection team will evaluate the following areas utilizing their TYCOM approved checklist which must include, but not limited to, the following areas or services as they were affected during the CNO availability:

   A. General
   B. Food Service
   C. Living Spaces
   D. Freshwater
   E. Sanitary System
   F. Laundry

HABITABILITY INSPECTION CHECKLIST FOR SHIPS IN CNO AVAILABILITIES (Cont'd)

Compartment Number: _____ Division: _____

A.	GENERAL	YES	NO
	1. All trash and rubbish removed.		
	2. Spaces are neat, clean and in a usable condition.		
	3. Wireways and other exposed areas that could serve as a path for rats are free of foreign matter.		
	4. Electrical wires or plugs are not located to be easily tripped over.		
	5. Drains open with covers attached.		
	6. Ventilation (heating and cooling) and lighting adequate to maintain healthful and comfortable conditions.		
	7. Electrical outlets required for habitability are installed and operable.		
	8. Spaces are free of major safety discrepancies.		
	9. Damage Control equipment installed per ship plan and labeled.		

GENERAL

Inspector: _____Date: _____

B.	FOOD SERVICE	YES	NO
	1. Facility		
	a. Decks sloped properly to allow drainage into deck drains. (S9AA0-AB-GOS-010/GSO Section 528. NAVMED P-5010-1 Article 5-204.11)		
	b. Adequate and convenient hand washing facilities with hot and cold running water, dispensed soap and single service disposable towels and waste receptacle for used paper towels are provided in or adjacent to the food service facility. (OPNAVINST 5100.19, Section D CH4, T9640-AC-DSP-HAB; and NAVMED P-5010-1, article 6-301.20).		

	c. Drain lines from refrigerators, ventilator hoods and other food service equipment drain through an air gap into a deck drain or funnel with removable grating (if cited in the contract). (S9AA0-AB-GOS-010/GSO Section 528. NAVMED P-5010-1 Article 5-202.13)		
	d. Signs posted reminding personnel to wash hands and not smoke. (NAVMED P-5010, Article 6-301.14)		
	e. Equipment operating and safety instructions are prominently posted on or conspicuously near the equipment to which it relates. (OPNAVINST 5100.19, Section D, Chapter 8; S9AA0-AB-GOS-010/GSO section 602)		
	f. Steam and hot water lines properly lagged and sheathed. (S9086-RK-STM-010/505 and S9AA0-AB-GOS-010/GSO section 508)		
	g. Furniture is installed in prescribed arrangement and neat, clean and in usable condition. (S9AA0-AB-GOS-010/GSO section 651)		
	h. Racks and bins are installed in storerooms. (S9AA0-AB-GOS-010/GSO section 670)		
	2. Equipment		
	a. Deck mounted equipment sealed to the deck or elevated on legs that provide at least 8 inches of clearance between the deck and equipment. (NAVMED P-5010, chapter 4; and T9640-AC-DSP-010/HAB)		
	b. Decks in food service areas maintained in good repair. (NAVMED P-5010-a article 6-201)		
	c. All equipment accessible.		
	d. Food contact surfaces made of smooth, corrosion resistant, non-toxic (FDA Food, Drug and Cosmetic Act guidelines), stable non-absorbent materials that will not impart odors, color or taste, nor contribute to adulteration of food. (NAVMED P-5010 -1 article 6-101)		
	e. Vegetable peelers, vegetable slicers, can openers, meat slicers, ranges, ovens, grills, deep fat fryers, microwave ovens, toasters, mixing machines, pressure cookers, steam jacketed kettles, steam tables, steam table and salad bar inserts, soft ice cream machines, baking and roasting pans, cooking and serving utensils, food carts, storage racks and shelving properly installed, sanitized and operationally tested. (NAVMED P-5010 -2 Chapter 4)		

	f. On and off toggle switches on food service equipment have toggle switch guards installed to prevent inadvertent operation. (NAVMED P-5010-2 Chapter 4)		
	g. Safety interlocks on food preparation equipment maintained in proper operating condition.		
	h. Steam Jacketed Kettles.		
	(1) Equipped with functional steam safety release valve, if applicable. (S9AA0-AB-GOS-010/GSOs. 65)		
	(2) Chains at least 18 inches long attached to steam safety release valves to allow for operation from a safe location for direct steam heated kettles (GEN SPECS, Section 528, Article C1905 g(4)), if applicable.		
	(3) Steam discharge piped down to kettle coamings and directed away from operator's feet (GEN SPECS, Section 651 b), if applicable.		
	i. Equipment free from salt-water connections except NAVMEDCOM approved garbage grinders or refrigeration units. (NAVMED P-5010-6, article 6-6.8)		
	j. Food service spaces and equipment are free from cross connections with non-potable liquids or submerged freshwater inlets. (NAVMED P-5010-6, article 6-6.8		
	3. Ventilation		
	a. Hoods serving deep fat fryers are fitted with a fire extinguishing system. (S9AA0-AB-GOS-010/GSO, section 512 and S9AA0-AB-GOS-010/GSO, section 555)		
	b. Grease filters and hoods are installed over convection ovens, combination ovens, range, griddles, deep fat fryers, steamers, skittles, and kettles are free from grease buildup and can be washed at least weekly. (S9AA0-AB-GOS-010/GSO, section 512 and 0938-LP-018-0010)		
	c. Hoods and filters are free from grease buildup and can be washed daily or weekly, as required. (S9AA0-AB-GOS-010/GSO, section 512)		
	d. Spaces adequately ventilated to keep them free of excessive heat, steam, condensation, vapors, smoke or gases. (S9AA0-AB-GOS-010/GSO, section 512 and 0938-LP-018-0010)		
	e. Vent ducts free of excessive grease and debris which could be a fire hazard. (S9AA0-AB-GOS-010/GSO, section 512 and 0938-LP-018-0010)		

	4. Lighting		
	a. Illumination levels adequate. (MIL-STD-1472, DOD-HDBK-289, and T9640-AC-DSP-010/HAB)		
	b. Lighting fixtures in food service areas shielded.		
	5. Refrigeration		
	a. Frost build-up no more than 1/4 of an inch (NAVMED P-5010, article 1-34).		
	b. Refrigeration spaces clean. (NAVMED P-5010-1, article 4-602.11)		
	c. One portable or built-in air measurement thermometer provided in all refrigerated storage spaces which is accurate to ±3°F. (NAVMED P-5010-1, articles 4-204.112 and 4-203.12)		
	d. Refrigerated spaces maintained at:		
	(1) Freezers 0°F or lower.		
	(2) Chilled Bulk Storage 33-36°F.		
	(3) Thaw Boxes 36-38°F.		
	(4) Dairy Products Box 32-34°F.		
	(5) Milk Dispenser Cabinet 32-40°F.		
	(6) Reach-in Refrigerator 34-40°F.		
	e. Interior safety release latches installed and operable in all bulk refrigeration and freezer units.		
	6. Serving Lines and Salad Bars		
	a. Serving line areas clean. (NAVMED P-5010-1, articles 4-204.112 and 4-203.12)		
	b. Equipment food-contact surfaces and utensils shall be clean to sight and touch. (NAVMED P-5010-1, article 4-601.11)		
	c. Functional sneeze shields installed on serving lines and salad bars. (NAVMED P-5010, Article 1-40)		
	d. Hot TCS foods shall be held at 135 °F (57 °C) or above throughout the meal period. (NAVMED P-5010-1, article 9-502.12)		
	e. Salad bars capable of being maintained at 40°F or below. (NAVMED P-5010-1, article 3-501.16)		
	7. Milk Dispensers and Holding Cabinets		

	a. Bulk milk dispenser is capable of maintain storage compartment at 41°F (5°C) or below during storage, display, and service. (NAVMED P-5010-1, article 9-502.16)		
	b. Dispenser and holding cabinets have accurate temperature gages or thermometers. (NAVMED P-5010-1, article 4-204.112)		
	c. Dairy box capable of being maintained at 33°-34°F. (NAVMED P-5010, article 1-34)		
	8. Ice Machines		
	a. Ice scoop made of smooth, corrosion resistant, non-toxic (FDA Food, Drug and Cosmetic Act guidelines), stable, non-absorbent materials. (NAVMED P-5010-1, article 4-101.11).		
	b. Ice compartment drains are aligned to the deck drains with an air gap. Air gap is at least twice the diameter of the drain served, but not less than 2 inches. (NAVMED P-5010-1, article 5-203.14, NAVMED P-5010-1, article 5-202.13, NAVMED P-5010-1, article 5-203.14 and NAVMED P-5010-1, article 5-202.13)		
	9. Manual Dishwashing		
	a. Utensils move from dirty to clean side of wash area without risk of cross contamination by handling or splashing. (NAVMED P-5010-1, article 4-904)		
	b. Booster heater capable of supplying final rinse water at least 171°F. (NAVMED P-5010-1, article 4-301.16, NAVMED P-5010-1, article 4-501.111, and T9640-AC-DSP-010/HAB)		
	c. Temperature gage installed or thermometer used to monitor wash and rinse temperatures. (NAVMED P-5010-1, article 4-204.115)		
	d. The temperature of the wash solution in manual warewashing equipment shall be maintained at not less than either 110°F (43°C) or the temperature specified on the cleaning agent manufacturer's label instructions. (NAVMED P-5010-1, article 4-501.19)		
	e. If immersion in hot water is used for SANITIZING in a manual operation, the temperature of the water shall be maintained at 171 °F (77°C) or above. NAVMED P-5010-1, article 4-501.111		
	f. Long-handled dip baskets available. (T9640-AC-DSP-010/HAB)		

	10. Dishwashing Machine		
	a. Temperature gages accurate to ±3°F. (NAVMED P-5010-1, article 4-501.112)		
	b. Final rinse temperature 180-194°F with a conveyor speed of 15 feet per minute at 15-25 psi or as specified in the machine technical manual. (NAVMED P-5010-1, article 4-501.112 (temperature) and NAVMED P-5010-1, article 4-501.113 (pressure))		
	c. Operating instructions posted on, or conspicuously near, the machine. (OPNAVINST 5100.19, Section V. 16)		

FOOD SERVICE

Inspector: _____ Date: _____

C.	LIVING SPACES	YES	NO
	1. Bunks and lockers neat and in usable condition and bunk curtains installed. (S9AA0-AB-GOS-010/GSO, sections 640, 641, 642, and 643)		
	a. Floor space appropriate to rank of individual(s) occupying room and a minimum of 72 square feet of floor space per person, including a minimum of 3 feet between sleeping arrangements (racks, bunks, beds). (T9640-AC-DSP-010/HAB and NAVMED P-5010-2)		
	b. Each rack has an Emergency Escape Breathing Device installed within 3 feet from the head of the berth. (S9000-AD-SPN-010/NCDS, section 664 and T9640-AC-DSP-010/HAB)		
	c. Head-to-foot sleeping arrangements for occupants of adjacent beds or Privacy curtains installed at each bed. (NAVMED P-5010-2)		
	d. Hot bunking is prohibited. (T9640-AC-DSP-010/HAB, NAVMED P-5010-2)		
	e. Floor space is appropriate to rank of individual(s) occupying room and a minimum of 72 square feet of floor space per person, including a minimum of 3 feet between sleeping arrangements (racks, bunks, beds). (T9640-AC-DSP-010/HAB, NAVMED P-5010-2)		
	2. Sanitary Spaces - Facility		

	a. Plumbing fixtures installed in washrooms, showers and water closets, including showerheads and soap dishes and other necessary items. (S9AA0-AB-GOS-010/GSO, section 644)		
	b. Sinks, urinals, and commodes are clean, odor free, and operable. (NAVMED P-5010-2)		
	c. There are separate sanitary spaces for males and females. (T9640-AC-DSP-010/HAB)		
	d. During sewage backflow and overflowing toilet units, spaces are immediately secured until fixed then cleaned and sanitized. (NAVMED P-5010-2)		
	e. Adequate number of fixtures are provided per accommodation. (NAVMED P-5010-2T9640-AC-DSP-010/HAB)		
	3. Prescribed deck covering installed. (S9AA0-AB-GOS-010/GSO, section 634, NAVSEA Standard Item 009-26)		
	4. Adequate furniture and equipment installed to provide reasonable comfort, relaxation and entertainment in lounge areas.		
	5. Berthing spaces are clean, adequately ventilated and well illuminated. (OPNAVINST 9640.1, NAVMED P-5010, Chapter 2)		
	6. Drinking fountains are of the jet-angle type with clean bowls, orifices and orifice guards. (NAVMED P-5010-6)		
	7. No Category I flammables, combustibles or aerosol containers stored in berthing spaces. (NSTM Chapter 670, S9AA0-AB-GOS-010/GSO, section 671, S9AA0-AB-GOS-010/GSO, section 672)		
	8. Sinks, urinals and commodes are clean, odor free and operable. (NAVMED P-5010, Chapter 2)		
	9. The temperature of the hot water supplied for personal use of the crew does not exceed 130°F. (S9086-SE-STM-010/533)		
	10. Temperatures in berthing and messing spaces do not exceed 78°F. (T9640-AC-DSP-010/HAB)		
	11. Temperatures in living, sanitary, messing, medical, control spaces, and normal working stations are not lower than 65°F. (T9640-AC-DSP-010/HAB)		
	12. There are separate sleeping quarters for males and females. (OPNAVINST 1300.17, T9640-AC-DSP-010/HAB)		

LIVING SPACES

Inspector: _____ Date: _____

D.	FRESHWATER	YES	NO
	1. Surveillance		
	a. Halogen residual present. (NAVMED P-5010-6, article 6-8.2.d and article 6-7.5)		
	b. Bacterial analysis obtained from points representative of the entire distribution system. (NAVMED P-5010-6, article 6-7.4)		
	c. Ice machines tested for bacterial contamination. (NAVMED P-5010-6, article 6-45)		
	d. Potable water processed or obtained from an approved source. (S9AA0-AB-GOS-010/GSO, section 532 NAVMED)		
	2. Chlorination System and Equipment.		
	a. HTH must be stowed in sealed plastic bags in a plastic medical instrument box, NSN 6545-00-131-6992, vented with three 1/4 inch holes. The plastic box shall be kept in a secured aluminum cabinet with ventilation holes drilled into the bottom of the box, preferably located in the cognizant department office space and labeled with red letters on white or natural gray background “HAZARDOUS MATERIAL, CALCIUM HYPOCHLORITE”. (OPNAVINST 5100.19, Chapter 23)		
	b. HTH lockers not installed in machinery space or nuclear space, berthing space, storeroom, fanroom, or in the nucleonic laboratory areas. (OPNAVINST 5100.19, Chapter 23)		
	3. Potable Water Hoses		
	a. New hoses are disinfected with a solution not less than 100 ppm FAC for at least 2 minutes. (NSTM, Chapter 533, Section 3.3.3)		
	b. Labeled “Potable Water Only” at 10-foot intervals. (NAVMED P-5010-6 article 6-30 and S9086-SE-STM-010/533, section 533-2.1.3)		
	c. End couplings color coded dark blue. (NAVMED P-5010, Article 6-19)		
	d. Stored with ends capped or coupled together. (NSTM, Chapter 533, Section 2.1.3)		
	e. Hoses not used for any other purpose. (NAVMED P-5010, article 6-8 and NSTM Chapter 533, Section 2.1.3).		
	4. Potable Water Hose Lockers		

	a. Located at least 18 inches off deck and hose disinfecting instructions posted in a conspicuous location in the hose storage areas. (NAVMED P-5010-6, article 6-19 and S9086-SE-STM-010/533, section 533-2.1.3)		
	b. Padlocked, vermin proof and labeled “Potable Water Hose”. (NAVMED P-5010-6, article 6-19 and S9086-SE-STM-010/533, section 533-2.1.3)		
	5. Potable Water Receiving Connections		
	a. Located at least 18 inches off deck, are not cross connected with any non-potable waterline or system and are turned down to protect against contamination. (NAVMED P-5010, article 6-8 and NSTM 533, Section 2.1.2)		
	b. Conspicuously designated by warning plate “POTABLE WATER ONLY”, closed with screw cap when not in use, and cap has keeper chain attached to riser. (NAVMED P-5010, Article 6-8 and NSTM 533, Section 2.1.2)		
	c. Valve handwheel color-coded dark blue. (NSTM 505)		
	6. Cross Connections		
	a. Potable water connections to the following equipment provided with either an air gap of at least two supply pipe diameters, or a vacuum breaker backflow preventer installed at least six inches above the maximum potable fill level: (NSTM, Chapter 533, Sections 2.3.3.1 and 2.3.5.2)		
	(1) X-ray and photo developing equipment and associated chemical mixing tanks.		
	(2) Laundry washing machines.		
	(3) Diesel engine cooling jackets.		
	(4) Garbage disposals.		
	(5) Gaylord hood automatic wash down system (vacuum breaker installed upstream from detergent injector) (GEN SPECS, Section 532b3), if applicable.		
	(6) Steam tables, steam kettles, potato peelers, sinks and other food service equipment.		
	(7) Bridge or helicopter control tower window washer tanks.		
	(8) Other equipment containing non-potable liquids.		

	b. Continuous pressure backflow preventer with intermediate vent provided wherever a permanent or hose connection is made below the overflow level of equipment containing non-potable liquids and a manual or automatic cutout valve is installed downstream of the vacuum breaker (GEN SPECS, Section 532bl), if applicable.		
	c. Reduced pressure backflow preventer provided wherever a permanent or hose connection is made to equipment or a system that could subject the potable water system to a positive pressure such as the chill water expansion tank (GEN SPECS, Section 532bl), if applicable.		
	d. Sink and space faucets with standard 3/4-inch hose threads equipped with a hose connection vacuum breaker. (NSTM 533, Section 2.3.5.1)		
	e. Laboratory and shop (photo and battery shop) sinks with non-standard hose connections equipped with either an integral vacuum breaker or hose vacuum breaker. (NSTM 533, Section 2.3.5.2)		
	f. Hose connections to the potable water system disconnected when not in use. (NSTM 533, Section 2.3.4)		
	g. Label plate having the following wording in one-inch-high red letters installed in a conspicuous location near each hose connection to the potable water system: "CAUTION DISCONNECT HOSE WHEN NOT IN USE". (NSTM 533, Section 2.3.4)		
	h. Two check valves installed in the potable water supply to carbonated beverage dispensers with no copper, brass or bronze pipe, valves or fittings downstream of check valves, if applicable. (GEN SPECS 532, Section 532bl)		

FRESHWATER

E.	**SANITARY SYSTEM**	**YES**	**NO**
	1. Personal Hygiene		
	a. Handwashing facilities located in or near pump rooms or comminutor spaces. (S9086-T8-STM-010/593, section 593-8.3.7.4.2.g)		

	b. Signs posted in CHT spaces near each sewage pump controller requiring hand washing with soap and water prior to leaving area, and prohibiting eating, drinking and smoking while work is in progress. (NAVMED P-5010, Chapter 7, Article 19(6) and NSTM 593)		
	2. Pump Room Safety		
	a. Slightly negative pressure exhaust ventilation with duct installed 9 inches from the deck in CHT pump rooms. (NAVMED P-5010, Chapter 7, Article 22 and NSTM 512)		
	b. Is there a locker stocked with personal protective equipment located at the entrance to the sewage pump room or comminutor space? (S9086-T8-STM-010/593, section 593-8.3.7.4.2)		
	c. Are there leaks present in sanitary fixtures or sanitary fixture piping in use? (S9086-T8-STM-010/593, section 593-8.3.7.4.3.f)		
	d. Are the intended sanitary spaces to support crew, readily accessible and clear of equipment and debris?		
	e. Indicator light installed outside compartment indicating ventilation system is operating. (NAVMED P-5010, Chapter 7, Article 22)		
	f. Two emergency escape breathing devices (EEBD) placed in each CHT pump room. (S9086-T8-STM-010/593, section 593-8.3.7.1.1.d)		
	g. Placard installed at the access of each CHT pump room outlining safety precautions to be followed if a sewage spill occurs. (NAVMED P-5010, Chapter 7, Article 22d)		
	h. Warning sign posted near each sewage pump controller: "CAUTION, WHEN HIGH LEVEL ALARM SOUNDS DIVERT UPPER DECK DRAINS OVERBOARD AND CLOSE ISOLATION VALVES ON DRAINS BELOW OVERBOARD DSCHARGE", if applicable. (GEN SPECS 593a)		
	i. Audible and visual alarms for high and low sewage tank levels wired to signal in a continuously manned station and in the CHT pump room. (NSTM 593, Section 4.2.5 and GEN SPECS 593a)		
	3. Ship-Shore Transfer		
	a. Sewage fuser properly labeled. (GEN SPECS 593a)		

	b. Label plates at each deck discharge connection with warning against disconnecting sewage hose while it is pressurized, hose hook-up and disconnect procedures and sanitary and health precautions, if applicable. (GEN SPECS 593a)		
	4. Surveillance		
	a. Removable drip pans installed beneath comminutors mounted off deck, or a two-to-four-inch coaming around deck-mounted comminutors to aid in detection of possible leakage. (NSTM 593, Section 4.2.14)		
	b. Removable drip pans provided in health sensitive areas under valves and takedown joints to detect possible leakage. (NSTM 593, Section 4.2.14)		
	5. General Requirements		
	a. CHT space capable of containing sewage spills. (NSTM 593, Section 4.2.14 and GEN SPECS 593a)		
	b. Proper color-coding of handwheels, valves, fusers and caps. (NSTM 505, Table 505-16)		
	c. Functional eductor or sump pump installed in CHT spaces. (NSTM 593, Section 4.2.14)

APPENDIX I

MINIMUM DOCK TRIALS REQUIREMENTS

1. Dock Trials. Ship's Force Dock Trials provide the opportunity to test and check out systems, components and portable equipment prior to the Fast Cruise training period simulating underway conditions. Although normally a period of one day is assigned for integrated Ship's Force Dock Trials, tests and evolutions performed in the one to two weeks prior to the Dock Trial date may be accepted by the CO as fulfilling the requirements of this paragraph. The purpose of Dock Trials is to afford the ship an opportunity to demonstrate that major systems and equipment is in fact ready to support Sea Trials. It is expected that individual equipment will have been satisfactorily tested prior to commencement of the integrated operational tests afforded by Ship's Force Dock Trials.

1.1 Supervising Authority. The industrial activity may desire to conduct "machinery checkouts" or system checks prior to the Ship's Force Dock Trials in order to test the propulsion plant or other ship's systems. In order to support these evolutions, close liaison between the ship's CO and the industrial activity will be required. For these evolutions, completion of repairs or modifications to all ship's systems are not required except for those systems which directly support the proposed tests.

1.2 Scheduling of Tests. The scheduling of Ship's Force Dock Trials is flexible. Ship's Force Dock Trials may be scheduled by mutual agreement between the ship and the supervising authority but must take place prior to certification of crew and material readiness with adequate time allowed for collection of deficiencies discovered during the Ship's Force Dock Trials. Preparation of the agenda and schedule for the Dock Trials is the CO's responsibility.

1.3 Extent of Trials. Ship's Force Dock Trials are conducted by the Ship's Force and are normally unhampered by repair work. This applies to the entire ship not just the propulsion plant. The trials may be witnessed by the industrial activity.

1.3.1 Tests. The term "test" must include, where applicable:

a. The review and use of a procedure for correct line-up, starting, operation and securing of systems or equipment.

b. Rigging, connecting and using all hoses, fittings and devices required for the test evolution.

c. Operation of systems in all modes, such as emergency, hand, override, cross-connected, normal, local, etc.

d. Checking all electrical and mechanical, local and remote indicators for proper readings.

e. Testing communications between normal control station and other locations involved in operating the system or performing the evolution.

f. Calibration and adjustment of equipment, systems and devices where required.

g. Inventory consumables, fittings, devices and portable test equipment to ensure that sufficient amounts are on board for proper operation throughout the trials.

1.3.2 Specific Test Areas. There are specific tests which relate to both systems and ship safety which must be conducted in preparation for Sea Trials.

a. The following are specific alongside tests which must be conducted during Dock Trials:

(1) Check the sound powered phone system between all stations.

(2) Check the announcing system between all stations.

(3) Test collision alarm and diving alarm.

(4) Test general alarm.

(5) Test each light on Ballast Control Panel (BCP) (where applicable).

(6) Test whistle.

(7) Check emergency lights.

(8) Operate all hydraulic plants using each installed pump.

(9) Conduct a complete air charge using only ship's compressors.

(10) Conduct a normal battery charge using shore power.

(11) Conduct low pressure blow of all Main Ballast Tanks (MBT). Thereafter conduct the dockside portions of URO 022 (remote static blow and local static blow).

(12) Fill sanitary tanks, then blow or pump them.

(13) Operate each main vent in hand and power. Following operation, with valves shut, conduct a controlled removal of MBT vent covers, one at a time, to check MBT vents for leaks.

(14) Operate the outboard induction in hand and power.

(15) Operate the diesel engine exhaust valve in hand and power.

(16) Operate inboard induction valve.

(17) Raise, train and lower periscopes, snorkel, radar and antenna masts and fairings as applicable.

(18) Test operation of radio transmitters and receivers on all antennas.

(19) Operate all sonar and radar equipment at rated conditions.

(20) Take and plot Global Positioning System fixes using each antenna.

(21) Test operation of drain pump using each bilge suction.

(22) Test operation of trim system and pump by pumping to and from each tank and by pumping to and from sea (if applicable).

(23) Review and enter the diving trim calculation provided by the shipyard Naval Architects (or equivalent).

(24) Test operation of portable submersible pump from each installed outlet.

(25) Fire inboard slugs from torpedo room.

(26) Fire inboard slugs from weapons launch console.

(27) Test magazine flooding system.

(28) Operate each lube oil system including pumps, controllers, purifiers and indicators.

(29) Energize the Navigation System and gyrocompasses; determine that they settle out and take an azimuth; check all repeaters.

(30) Check freshwater system, have water samples analyzed.

(31) Test the capstan.

(32) Test bow plane rigging (where applicable).

(33) Test bow or sail and stern plane tilting in hand, normal power and emergency. Test normal and emergency plane angle indicators.

(34) Test rudder in hand, normal and emergency power. Test normal and emergency rudder angle indicators.

(35) Check alignment of periscopes, TBTs and all bearing and range repeaters.

(36) Test the engine order telegraphs.

(37) Test Automatic Bus Transfer Devices.

(38) Operate each watertight door and hatch, each bulkhead flapper and each intercompartment air salvage valve.

(39) Check operation of escape hatch fittings.

(40) Operate signal ejectors by impulse and hand using dummy signal. Fire water slugs from all launchers, both locally and remotely.

(41) Turn on and check running lights for brightness and proper lenses (to be done at night).

(42) Check Freon air conditioning system.

(43) Check underwater log.

(44) Check 400 Hz MG sets (where applicable).

(45) Check out galley equipment.

(46) Check fathometer.

(47) Check bilge flooding alarms.

(48) Check dummy log.

(49) Check ship service air system.

(50) Check anchor windlass and brake operation.

(51) Check out atmosphere monitoring equipment, both installed and portable.

(52) Operate oxygen generator(s), CO_2 scrubbers, CO burners and emergency air breathing system.

(53) If possible, lower, train, operate and raise the SPM.

(54) Ensure that all required PMS to ship depth detectors is complete.

(55) Verify that the PMS for this diesel engine high vacuum cutout is current.

(56) Check main propulsion. (Should be done during the propulsion plant test program).

(57) Ensure seven-day supply of oxygen onboard.

APPENDIX J

MINIMUM FAST CRUISE REQUIREMENTS

1. Fast Cruise Requirements. Asterisk (*) items are the minimum requirements for an industrial activity availability of less than six months duration. All listed items are the minimum requirements for an industrial activity availability of greater than six months duration.

a. All Ships (as applicable):

*(1) Station the maneuvering watch and check each system and piece of equipment for proper operation. (For availability less than six months duration, system and equipment checks are **not** required).

*(2) Station the normal underway watch (section watches).

(3) Simulate getting underway and return to port (day and night).

*(4) Walk through all major Sea Trial evolutions, including cycling of hull and back-up valves to be tested during the deep dive.

*(5) Exercise the reduced visibility detail.

*(6) Emergency ventilate a compartment.

(7) Spot check storage and availability of spare parts and tools. Verify adequacy of stores and provisions.

*(8) Rig for dive and rig for surface.

*(9) Simulate diving and surfacing.

*(10) Rig for deep submergence.

(11) Rig for various quiet conditions.

(12) Drill at loss of power to various circuits including lighting, communications, 400 Hz power, etc.

(13) Battery charge.

*(14) Conduct the following emergency drills:

*(a) Fire.

*(b) Collision.

*(c) Flooding.

*(d) Toxic Gas.

(e) Abandon Ship.

*(f) Man Overboard.

(g) Submarine Escape.

(h) Loss of AC Power.

(i) Emergency Ventilation.

(j) Loss of Air Conditioning.

(k) Loss of Lighting.

(l) Loss of Interior Communications.

(15) Exercise the crew at battle stations.

(16) Conduct communications and ESM drills.

*(17) Conduct an air charge to all air banks. (For availabilities less than six months duration "Conduct an air charge").

*(18) Bleed oxygen and ventilate ship. Ensure a seven-day supply of oxygen is onboard and oxygen generator(s) are fully operational. Ships without (A)EOG(s) will provide a seven-day supply of oxygen in O2 candle form.

(19) Simulate anchoring.

(20) Operate atmosphere control equipment and take air samples.

*(21) Check out all interior communications circuits, including battle telephones.

(22) Simulate submerged patrol, performing all evolutions and operating equipment normally used.

*(23) Operate freshwater and seawater heat exchangers at sufficient load to verify proper operation (not fouled with marine growth).

(24) Submarines must meet all requirements of reference (m), Appendix D, Part 3.

b. Additional requirements for SSBN and SSGNs. SSBN and SSGNs must conduct exercises in casualties to missile tube breather valves which would result in:

(1) Flooding.

(2) Introducing toxic gases into the missile compartment from gas generators.

APPENDIX K

MINIMUM SEA TRIALS REQUIREMENTS FOR CHIEF OF NAVAL OPERATIONS AVAILABILITIES LESS THAN SIX MONTHS DURATION

REFERENCES:

(a) COMSUBLANT/COMSUBPAC OPORD 2000
(b) NAVSEAINST C9094.2 - Submarine Valve Operation Requirements for Builders and Post Overhaul Sea Trial Test Dives

1 Sea Trial Agenda. This Appendix delineates the minimum requirements incident to Sea Trials following a Chief of Naval Operations availability of less than six months duration. Additional events listed in Appendix L, Minimum Sea Trials Requirements for Chief of Naval Operations Availabilities Greater Than Six Months Duration, may be included by the shipyard based on the scope of the work accomplished or as desired by the CO.

2 Sea Trial Policy. The following policies apply to conduct of trials and tests associated with industrial activity availabilities, NAVSEA or Naval Surface Warfare Center, Carderock Division sponsored Trials and Tests or any other situation where the ship is requested to conduct trials or tests:

a. No test or trial event must be conducted that requires crew intervention to avoid exceeding normal operating limits. Trial agendas will be based on the expectation that the ship will remain within normal operating limits of the SOE and at angles less than 30 degrees.

b. The trial director(s) must be prepared to project whether the next event might exceed normal operating limits based on the empirical results of the previous event. A run that is predicted to exceed normal operating limits will be deleted along with the more demanding runs of that sequence.

c. Any run which will result in exceeding normal operating limits of the SOE or 30-degree angles, but which is essential to provide adequate test data must be specifically approved by the TYCOM. The test and trial sponsor will obtain this permission.

d. A violation of the SOE limit or exceeding a 30-degree angle, not previously approved, will be reported by unit SITREP. The TYCOM will resolve the situation.

e. Specific written approval by the TYCOM is not required to operate outside the upper limits of the SOE (i.e., shouldow and fast) while conducting the following operations during Sea Trials or tests following an agenda approved by the ISIC, NAVSEA or higher authority:

   (1) Conducting full power runs or cavitation curves.

   (2) NAVSEA sponsored acoustic trials following Naval Surface Warfare Center, Carderock Division acoustic trial agenda.

f. In cases where troubleshooting is required, it must meet the following criteria or a formally approved change to the agenda is mandatory.

(1) The troubleshooting does not violate any policy listed in paragraphs 2.a. through 2.e. of this Appendix or any other requirement of the trials agenda.

(2) The troubleshooting will not result in the ship being in a certain condition before that condition is reached during the normal testing sequence. For example, troubleshooting requiring the ship to be deeper than 200 feet cannot be done until after the deep dive. Likewise, troubleshooting requiring large angles or turn rates cannot be done until after the completion of the steering and diving operational tests and the large angle tests.

g. Each person involved in Sea Trials will be allowed to obtain a minimum of six hours of continuous, uninterrupted sleep during any 24-hour period.

3. Test Phasing. The Sea Trials will be scheduled and phased to support actions enroute to the test dive area, in the test dive area, prior to the deep dive, etc., subject to the amplifying notes.

a. The following tests and evolutions must be carried out on the surface enroute to the test dive area and prior to the initial tightness dive:

(1) Underway. Rig for dive.

(2) Ship's Force instruct Sea Trials riders on the proper use of Emergency Air Breathing System.

(3) At slow speed, conduct operational test of rudder in all modes (local and remote) per applicable class operating procedures.

(4) Navigation system check. Take fixes by all means available and compare.

(5) Test underwater log(s) using the base course or reciprocal course method (i.e., inertial reference method) or other approved functional procedures to determine accuracy.

(6) Test accuracy of all bearing transmitters and indicators. Compare sonar, visual and radar bearings.

(7) Check operation of all radars. Demonstrate accuracy by conducting simultaneous radar and visual plot.

(8) Inspect stern tube packing gland, seals and circulating water flow for excessive heating, leakage and audible noise.

(9) Test fathometer(s) and compare with charted soundings.

(10) Run ahead at maximum allowable surface speed long enough for temperatures to reach a stable value. After readings have stabilized, at maximum allowable surface speed, operate the rudder through full throw in each direction, in all remote modes of operation.

(11) Ahead, at maximum allowable surface speed, to back emergency. For SSBN and SSGN 726 Class only - Answer ahead standard. Once ship speed has stabilized, perform back emergency for 5 minutes.

(12) Run astern up to a back full bell. Full power run astern to be within the main engine limits of the applicable Steam and Electric Plant Manual. For SSBN

and SSGN 726 Class only - Run astern up to a back full bell for 5 minutes, followed by 60 SRPM for 5 minutes. (See Note 1.)

(13) Check operation and accuracy of ship's gyro compass.

(14) Rendezvous with escort, if an escort is required. Conduct radio and sonar communications checks (See Note 2).

(15) Rig out bow planes, if applicable. Test bow, fairwater and stern planes in all modes.

(16) Flood variable tanks to computed compensation less a safety factor.

(17) Operate trim and drain pumps.

(18) Test variable ballast system for proper operation.

(19) Perform both a low-pressure blow and an EMBT blow for as long as necessary to verify system operability. A static blow must not be used to test the EMBT blow system. For SSN 23 only: Additionally, perform an MBT 6 normal blow from the BCP for a minimum duration of 2 seconds to verify that air flows into MBT 6 as indicated by a reduction in air bank pressure. For SSBN and SSGN 726 Class submarines only: Additionally, perform a high-pressure blow for as long as necessary to verify system operability.

(20) Check that initial EMBT Blow system actuating air pressure and air bank pressure is within +0 PSIG, -200 PSIG of nominal operating air pressure.

(21) Ensure all MBT blow systems are in a normal line up configuration.

(22) Additional requirements may be imposed at the discretion of the CO.

b. The following tests and evolutions must be carried out immediately prior to or during the initial tightness dive:

(1) Obtain navigational fix and take sounding. Maximum depth of water is 400 feet as specified in reference (a).

(2) Rig ship for deep submergence. Line up propulsion plant for maximum reliability. All systems must be in the maximum secure condition with unnecessary sea systems isolated (See Note 3).

(3) Station additional personnel throughout the ship to inspect for leaks.

(4) Transmit commencing initial tightness dive message. Submerge the ship per the Ship Systems Manual Operating Procedures. If desired to conduct periscope depth tests, the ship may be submerged to periscope depth.

(5) Check operation of ship control systems, including depth indication (See Note 4).

(6) When escort is required, communicate with escort on RAC or WQC at each depth increment or at 10-minute intervals, whichever is sooner. If communications are lost, return to depth at which communications can be established before continuing (See Note 2).

(7) All hands inspect for leaks and report them.

(8) Inspect the discharge of all automatic drains in each EMBT Blow quadrant for sea water leakage prior to the first dive when the ballast tanks are flooded (e.g., at periscope depth).

(9) At periscope depth, operate all masts checking optics and leakage. Observe speed and depth restrictions for masts without violation of the SOE (See Note 5). Event may be performed following initial dive, if sea state prevents operation at periscope depth.

(10) Test operation of trim and drain system discharging to sea.

(11) If not at 150 feet for SSN 688 Class submarines (155 feet for SSN 774 Class submarines), (160 feet for SSBN and SSGN 726 and SSN 21 Class submarines), proceed to 150 feet for SSN 688 Class submarines (155 feet for SSN 774 Class submarines), (160 feet for SSBN and SSGN 726 and SSN 21 Class submarines) and obtain SAT 1/3 trim per the Ship's Operating Manual. Take readings as required to make a check of ballasting.

(12) At 200 feet:

(a) Adjust trim (See Note 6).

(b) Inspect for leaks.

(c) Communicate with escort at each depth increment or at 10-minute intervals, whichever is sooner. If communications are lost, return to depth at which communications can be re-established before continuing (See Note 2).

(13) At 200 feet, per reference (b):

(a) Check accuracy of gauges and repeaters (See Note 4).

(b) Evaluate signal ejectors or launchers. Conduct operational test of each by hand and impulse methods, as applicable (See Note 7).

(c) Check shafting bearings and stern tubes for excessive heating, leakage and noise. Main shaft seals must be tested at each depth specified in reference (b) testing one seal for 20 minutes, and shifting to the other seal. Test the second seal for 20 minutes or until the boat is ready to go to the next depth, whichever comes first.

(d) Cycle rudder and planes through full throw at slow speed to check for binding.

(e) Operate all Main and Auxiliary Sea Water hull and back-up valves and those other seawater system valves worked during the availability (using remote closures, as applicable, from flooding control stations) that are required to maintain propulsion and other functions vital to the ship's operation.

NOTE: REQUIRED SYSTEMS ARE LISTED IN PARAGRAPH 4.B. OF REFERENCE

(B). OBSERVE RESTRICTIONS ON OPERATION OF SYSTEMS LISTED IN PARAGRAPH 4.D. OF REFERENCE (B).

(f) Test operation of trim and drain system discharging to sea.

(g) Cycle main ballast tank vents hydraulically to check for binding.

(14) Test the SPM (see Note 13 in Appendix L of this chapter).

(15) Additional requirements may be imposed at the discretion of the CO.

c. The following tests and evolutions must be carried out following the initial tightness dive and prior to the deep dive:

(1) Transmit initial tightness dive complete message (See Note 12).

(2) A minimum of six hours of Individual Ship Exercises submerged for crew training.

(3) Charge air banks and battery as necessary. The ship may be submerged while charging air banks provided the depth of the ship does not exceed other guidelines in this instruction, or those of the flooding bill or ship's operating procedure.

(4) If escort is required, detach escort after initial tightness dive. Escort will then proceed to station for deep dive. Ensure that deep dive rendezvous time and location are clearly established before escort is released. The escort may be retained for additional testing during the transit as described in Appendix M. Transit depths must not exceed depth as described in Appendix M.

(5) Additional requirements may be imposed at the discretion of the CO.

d. The following tests and evolutions must be carried out immediately prior to or during the deep dive:

(1) Check that initial EMBT Blow system actuating air pressure and air bank pressure is within +0 PSIG, -200 PSIG of nominal operating air pressure.

(2) Verify MBT systems lined up for normal operation.

(3) Take sounding. Accurately fix ship's position within the specified dive area per reference (a). Transmit the commencing deep dive message.

(4) Proceed to normal submergence depth and obtain 1/3 speed trim. Use conservative angles and speed on initial dive.

(5) Trim ship to maintain neutral buoyancy (See Note 6).

(6) Rig ship for deep submergence. Line up propulsion plant for maximum reliability. All systems must be in the maximum secure condition with unnecessary sea systems isolated (See Note 3).

(7) Station additional personnel throughout the ship to inspect for leaks.

(8) At 400 feet and then in increments of 100 feet descending to one-half the maximum operating depth and every 100 feet or other lesser specified increments thereafter down to the maximum authorized operating depth:

(a) Adjust trim (See Note 6).

(b) Inspect for leaks.

(c) Communicate with escort (if escort required) at each 100-foot depth increment or at 10-minute intervals, whichever is sooner. If communications are lost, return to a depth at which communications can be re-established before continuing. (See Note 2).

NOTE: REQUIRED SYSTEMS ARE LISTED IN PARAGRAPH 4.B. OF REFERENCE (B). OBSERVE RESTRICTIONS ON OPERATION OF SYSTEMS LISTED IN PARAGRAPH 4.D. OF REFERENCE (B).

(9) At depths listed for hull valve cycling in reference (b) including the maximum authorized operation depth:

(a) Check accuracy of gauges and repeaters (See Note 4).

(b) Evaluate signal ejectors or launchers. Conduct operational test of each by hand and impulse methods, as applicable (See Note 7).

(c) Check shafting bearings and stern tubes for excessive heating, leakage and noise. Main shaft seals must be tested at each depth specified in reference (b) testing one seal for 20 minutes, and shifting to the other seal. Test the second seal for 20 minutes or until the boat is ready to go to the next depth, whichever comes first.

(d) Cycle rudder and planes through full throw at slow speeds to check for binding. Cycling of rudder and planes through full throw must be limited to 90% of test depth. For SSN 21 Class follow the specific Sea Trial Agenda.

(e) Operate all Main and Auxiliary Sea Water hull and back-up valves and those other seawater system valves worked during the availability (using remote closures, as applicable, from flooding control stations) that are required to maintain propulsion and other functions vital to the ship's operation at increments of depth specified in reference (b).

NOTE: TRASH DISPOSAL UNITS (TDU) WITH BALL VALVES WILL NOT BE OPERATED BELOW 200 FEET. TDUs WITH FLAPPER VALVES WILL NOT BE OPERATED BELOW 150 FEET.

(f) Operate trim and drain pumps, discharging to sea.

(g) Cycle main ballast tank vents to check for binding. Main ballast tank vents will be cycled hydraulically except at test depth where they will be cycled manually.

(10) Surface fully with EMBT blow per applicable URO MRC. Check air bank pressures before and after blow. For SSN 23 only, **perform** an MBT 6 normal blow from the BCP until MBTs 6A and 6B are blown to residual water levels.

(11) Transmit completion of deep dive message (See Note 12).

(12) Additional requirements may be imposed at the discretion of the Commanding Officer.

e. The following tests and evolutions must be carried out submerged following the deep dive:

(1) Full power run (See Notes 8, 9 and 10).

(2) Emergency stop (See Notes 9 and 10).

(3) Steering and diving operation at full speed (See Notes 9 and 11).

(4) Steep angles - operate ship through several depth changes using large up and down angles. Check operation of ship machinery (See Note 9).

(5) Time raising each periscope and mast at maximum depth and speed for which they are designed. Check training feature where applicable.

(6) Run and observe air conditioning plants throughout trials noting deficiencies. Operate the Lithium Bromide air conditioning plant (if installed) to demonstrate ability to carry entire maximum existing ship's air conditioning load or 100 percent capacity.

(7) Shoot water slugs from all torpedo tubes (See Note 13).

(8) Additional requirements may be imposed at the discretion of the Commanding Officer.

4. Sea Trial Conclusion. At the conclusion of Sea Trials, and based on a review of Sea Trial deficiencies and TYCOM concurrence, the submarine may transit to a port other than the overhauling activity. During this transit the submarine must not operate at depths greater than one-half test depth plus fifty feet, unless specifically authorized by NAVSEA, and must not be released for unrestricted operations until final certification is received via message from the TYCOM (Appendix BO).

NOTES:

1. For SSBN and SSGN 726 Class submarines only - This surface evolution, full power run astern, **must** be conducted only if maintenance was accomplished on the reduction gears, the astern throttle(s) or the main shaft thrust bearing.
2. In the execution of any Sea Trial, whether escorted or not, submarine COs are reminded of their responsibility to communicate with escorts, shore authorities, or both, within the prescribed previously agreed upon time limits to avoid initiation of lost submarine procedures.
3. Reference (b) prescribes procedures for system operation during the deep dive.
4. Compare all depth and pressure gauges. Depth and pressure gauges will be checked as soon as each next specified depth is reached.

5. Any evolutions (e.g., mast testing, propeller cavitation data collection, etc.) required by the Sea Trials Agenda which violate the ship's SOE must be approved by the TYCOM prior to Sea Trials per paragraph 2 of this Appendix.

6. Deep dive will be conducted using moderate speed and constantly adjusting trim, at depths indicated in paragraphs 3.b.(12)(a) and 3.d.(8)(a) of this Appendix, to maintain neutral buoyancy. Moderate speed must be defined as that range of speed that allows the ship to recover from a loss of stern plane control or flooding casualty.
