</table>
1. **SCOPE:**

   1.1 Title: General Criteria; accomplish

2. **REFERENCES:**

   2.1 Standard Items

   2.2 DOD 5220.22-M, National Industrial Security Program Operating Manual

   2.3 40 CFR Part 61, National Emission Standards for Hazardous Air Pollutants

3. **REQUIREMENTS:**

   3.1 Report delays to the SUPERVISOR.

      3.1.1 In the event difficulty is encountered or anticipated in complying with the contract schedule dates, notify the SUPERVISOR immediately by verbal means, followed on the next work day by an original and 2 copies of a letter stating pertinent details. Receipt of this notification by the SUPERVISOR is not to be construed as a waiver of the requirements, delivery schedule by the Government, or waiver of rights or remedies provided by law or under this Job Order or any other requirements in the Job Order relating to jeopardy of contract schedule dates.

   3.2 Reports:

      3.2.1 When a Work Item does not require a report, and one is determined to be necessary in order to produce a reliable or complete repair, submit one legible copy, in approved transferrable media, of a report with supporting data as early as possible in the contract period. The goal is to have required work completed within the original contract period.

      3.2.2 For reports required by 2.1 or the Work Item, that could result in a change in work to be accomplished or additional material to be procured, complete the preliminary work and submit one legible copy, in approved transferrable media, of the report in a time frame to allow the SUPERVISOR to initiate early action, but no later than the first 20 percent of the availability. Any exceptions for submission of a report after the first 20 percent of the availability must be approved by the SUPERVISOR.
3.2.3 Reports are costly to generate and process. Identify suspected duplicative reporting requirements and cases where required reports could be combined in order to eliminate a report to the SUPERVISOR via e-mail. Receipt of this notification by the SUPERVISOR is not to be construed as a waiver of the reporting requirements unless the SUPERVISOR’s response eliminates the required report.

3.2.4 Submit one legible copy, in approved transferrable media, of the following unless waived by the SUPERVISOR one day prior to the weekly progress meeting:

3.2.4.1 A report listing Government Furnished Material not received, showing the associated Work Item number and title, material description, expected delivery date, required delivery date, effect on production dates, and action proposed to resolve problems resulting from late delivery. Material with expected delivery dates before the required delivery date need not be listed in this report.

3.2.4.2 A report listing late or deficient Government Furnished Information, showing the associated Work Item number, deficiency description, and proposed corrective action.

3.2.4.3 A report of overdue contractor condition reports by Work Item number and expected submission date. The report must also include those deficiency and condition reports for which Government response is outstanding.

3.2.5 Dry dock, or dry berth for Navy boats and craft, related inspection reports must be submitted no later than the first 20 percent of the scheduled docking or dry berth period. Any exceptions for submission of a report after the first 20 percent of the scheduled docking or dry berth period must be approved by the SUPERVISOR. Dry dock or dry berth related reports which contain readings (final, thickness, etc.), clearances, alignments, test results, or other such data for work that has to be completed prior to pre-flood, undocking, or floating for Navy boats and craft must be submitted to the SUPERVISOR within one day after recording the data but no later than 4 days prior to pre-flood, undocking, or floating for Navy boats and craft whichever occurs first.

3.2.6 Reports must contain the following information:

3.2.6.1 Name and hull number of ship or craft, the Job Order, Work Item, and paragraph numbers including Standard Item paragraph number if applicable.

3.2.6.2 A description of the conditions found with supporting data. Include annotated sketches, graphs, and photographs when necessary to make a report clearly understandable to the SUPERVISOR. Identify actual readings/dimensions taken.

3.2.6.3 Recommendations and/or a list of material required.
3.2.6.4 For those reports not submitted in NMD, submit the following additional information: data required by, signature, printed name, and title of the contractor's representative, and submission date.

3.2.7 Prepare and submit one legible copy, in approved transferrable media, of a listing of all reports and Process Control Procedures (PCP) required by the CNO/CMAV Job Order to the SUPERVISOR no later than 15 days prior to the start of the CNO/CMAV availability. The listing must be sequential by Work Item number, and include each applicable paragraph number, PCP/report due date, completion date, submission date, and a provision for adding report serial numbers from NMD. When the equivalent information is provided in the Test and Inspection Plan (TIP) the report is not required.

3.2.7.1 The report must be revised and provided weekly throughout the availability to include additions, deletions, modifications, progress, completions, and serial numbers from NMD (e.g., Contractor Furnished Reports (CFR)) after numbers are assigned to the reports.

3.2.8 Where one legible copy of a report in hard copy or approved transferrable media is required, or where sketches, graphs, or photographs are required, the electronic methods and file format must be as agreed to by the SUPERVISOR.

3.2.8.1 Use NMD, or an approved web interface with NMD, for contracts managed in NMD.

3.2.9 When a report is required to be submitted but no time requirement is specified in the Standard Item or Work Item, it must be submitted no later than 4 days after completion of the event.

3.3 Accomplish tests and checkouts.

3.3.1 Complete work that requires tests in time to allow correction of deficiencies prior to dock trials, sea trials, or other applicable milestones established in the Job Order.

3.3.2 Do not operate new, existing, or repaired equipment on the ship. Ship's Force will accomplish such operation when required for test, maintenance, and checkout purposes. Such requirements will be coordinated by the SUPERVISOR.

3.3.2.1 Exception will be on unmanned vessels when Ship’s Force is not present.

3.4 Provide labor, material, equipment, and services (such as air, power, water, etc.) which are required to complete the Work Item, including that which is indicated on drawings or test specifications as being provided by sources other than the contractor, unless specifically listed as Government Furnished Material (GFM) in paragraph 5 of the Work Items.
3.4.1 When a performance specification (such as MIL-PRF) is specified, the products approved to that specification are those listed on the Government Qualified Products Database (QPD) for that performance specification. If a Type, Class, Grade or other subcategory is listed, the products approved for use are limited to those that meet that subcategory on the performance specification’s QPD.

3.4.2 Manufacture parts that are not available from the vendor/manufacturer, utilizing NAVSEA approved drawings, technical manuals, templates, or sketches.

3.4.2.1 Verify latest revisions are correct via the SUPERVISOR prior to start of manufacture.

3.4.3 Submit one legible copy, in approved transferrable media, of a status report, listing Contractor Furnished Material (CFM) required to accomplish the work in Work Items that is not already on hand, to the SUPERVISOR not later than 30 days after the Job Order award, or 2 days after availability start date, whichever occurs first. Update the report and submit revisions to the SUPERVISOR every 14 days up to availability start date, within 10 days after availability start date, then monthly thereafter to End of Availability (EOA). The reports are to contain the following:

3.4.3.1 Contract number
3.4.3.2 Contractor’s purchase order number
3.4.3.3 Description of material
3.4.3.4 Quantity ordered
3.4.3.5 Date scheduled to be ordered
3.4.3.6 Date ordered
3.4.3.7 Date required to meet production schedule
3.4.3.8 Proposed receipt date
3.4.3.9 A summary listing any problem areas
3.4.3.10 Date submitted to the SUPERVISOR
3.4.3.11 Alteration number
3.4.3.12 Drawing and piece number
3.4.3.13 Manufacturer
3.4.3.14 Manufacturer’s part number
3.4.3.15 Date received
3.4.3.16 Work Item number
3.4.3.17 Late CFM that affects production dates

3.4.4 Purchase Orders

3.4.4.1 Maintain a file of purchase orders for CFM for review by the SUPERVISOR upon request.

3.4.4.2 Submit one legible copy, in approved transferrable media, of selected purchase orders to the SUPERVISOR upon request.

3.5 When a Work Item references Class and Hull specific configuration and Ship Alteration information, planning activity must validate that reference information (Ship Alteration drawings, LARS, "as built drawings", Test Procedures, etc.) used is correct via the assigned Class Planning Yard.

3.6 Procure Military Specifications and Standards and Commercial Specifications and Standards.

3.6.2 Classified Military Specifications are available at the office of the SUPERVISOR.

3.6.3 Work Items will normally reference the basic Government Specifications, Standards, or NAVSEA Standard Plans, without suffix letters or numbers which identify revisions or amendments. Unless otherwise specified, the effective issue of these basic referenced documents, including revisions or amendments, must be the most recent issue at the date of solicitation for a Job Order. Wherever specific dates for specifications, standards, and publications or amendments, revisions, or alterations thereto are specified in the Work Items, issues of those dates specifically must apply in lieu of any other issue. Where industry standards such as ASTM and ANSI are referenced, the issue or revision in effect on the date specified for Work Package Solicitations applies.

3.7 Work Items may reference specific revision levels of equipment technical manuals or drawings which are not NAVSEA Standard Plans. When these references are listed in a Work Item without suffix letters or numbers which identify revisions, change notices, or amendments, unless otherwise specified, the effective issue of technical manuals, including revisions, change notices, or amendments, must be the most recent issue at the date of solicitation for the Job Order.

3.8 Submit requests for deviations to the SUPERVISOR.
3.8.1 A deviation is defined as any action which is not in conformance with the Work Item requirements, including references thereto, no matter how minor.

3.8.2 Deviations from Work Items and references thereto will not be considered by the SUPERVISOR without a written request from the contractor.

3.8.3 Submit one legible copy, in approved transferrable media, of requests for deviations to the SUPERVISOR within one day of identifying the deviation.

3.8.4 For technical deviations from the references of any Work Item, include the following minimum information:

3.8.4.1 Ship name
3.8.4.2 Hull number
3.8.4.3 Contractor/Subcontractor
3.8.4.4 Name of deviation requestor
3.8.4.5 Identification as an existing condition or result of repair
3.8.4.6 Duration of repair with and without the deviation
3.8.4.7 System, component as indicated in the applicable selected record drawing
3.8.4.8 Location by compartment, frame and deck
3.8.4.9 Description of the deviation and degree of non-compliance
3.8.4.10 Document deviated from
3.8.4.11 Technical justification for the deviation
3.8.4.12 Alteration number if applicable
3.8.4.13 Proposed resolution
3.8.4.14 Date SUPERVISOR response is needed by

3.8.5 The Government does not have an obligation to approve any deviation; it may elect to do so if benefit to the Government can be shown. Accomplish deviation only when authorized in writing by the SUPERVISOR.
3.9 Submit documents (including procedures, required reports, plans, forms) requiring SUPERVISOR review, approval, acceptance or direction via an NMD CFR unless otherwise directed by the SUPERVISOR.

3.10 Comply with security requirements.

3.10.1 In the event that the work required by the Job Order requires access to spaces or equipment that are classified, or use of technical manuals, references, or drawings that are classified, the specific security clearance requirements will be identified in the individual Work Item in addition to the requirements provided in the Invitation for Bid/Request for Proposal (IFB/RFP) by the Contract Security Classification Specification (DD Form 254).

3.10.2 Verify that personnel, including subcontractor's personnel, are cleared for the required level of security classification for handling, repair, installation, and testing of classified equipment and for access to areas of the ship which require a specific security clearance.

3.10.2.1 After selection of a subcontractor, prepare in triplicate a DD Form 254 for the subcontract and request the official designated in Paragraph 14.b of the DD Form 254 for the prime contract to approve and sign the DD Form 254 for the subcontract and to make the required distribution. In preparing the DD Form 254 for subcontracts, extract pertinent data from the DD Form 254 pertaining to the prime contract.

3.10.2.2 Prior to starting work on a Work Item that requires a security clearance, submit a list in triplicate of the names, badge numbers or other identification numbers, and security clearances of contractor and subcontractor personnel who will require access to classified information or areas in order to accomplish the work.

3.10.3 Verify that classified equipment removed from ship and classified documents, such as drawings, technical manuals, and test specifications, are marked or tagged and safeguarded at all times in accordance with 2.2.

3.11 Comply with applicable federal, state, and local laws, codes, ordinances, and regulations in their entirety. Any reference to a specific portion of a federal, state, or local law, code, ordinance, or regulation in this or any other item must not be construed to mean that relief is provided from any other sections of the law, code, ordinance, or regulation.

3.11.1 Provide appropriate notification to regional United States Environmental Protection Agency (EPA) in accordance with the requirements of 2.3. Also, comply with notification requirements of state and local air pollution control laws.

3.11.2 Submit one legible copy, in approved transferrable media, of notification required in 3.11.1 that has been provided to any regulatory
authority for work on board the vessel to the SUPERVISOR within 2 days of providing such notice to the regulatory authority.

3.12 Maintain a current copy at the job site of the Safety Data Sheet (SDS) for each hazardous material that will be utilized aboard the ship and/or in a Navy facility during the performance of this Job Order. Submit one legible copy, in hard copy or approved transferrable media, to the SUPERVISOR upon request.

3.12.1 Each SDS requires a one-time submittal/acceptance unless the SDS changes or this NAVSEA Standard Item and/or references change.

3.13 Comply with applicable federal, state, local, and foreign contractor host country requirements when using Nuclear Regulatory Commission (NRC) licensed radioactive material, Agreement State licensed radioactive material, and/or machine sources of ionizing radiation on Government property.

3.13.1 Do not commence operations using radioactive material or machine sources of ionizing radiation on Government property until authorized in writing by the SUPERVISOR.

3.13.2 Contract personnel must not be used as operators under a Navy Radioactive Material Permit (NRMP) issued to a naval facility. Navy personnel must not be used as operators under a Nuclear Regulatory Commission (NRC) or Agreement State License issued to a contractor.

3.13.3 Submit one legible copy, in approved transferrable media, of a consolidated inventory of all ionizing radiation producing machines or material that will be utilized aboard the ship and/or naval facility during the performance of this Job Order to the SUPERVISOR, 5 days prior to the start of work.

3.13.4 Submit one legible copy, in approved transferrable media, of the applicable NRC or Agreement State License including procedures regarding system process and operation for use of licensed radioactive material, to the SUPERVISOR 5 days prior to the start of work. Agreement State licensees must provide evidence of NRC Form 241 (Report of Proposed Activities in a Non-Agreement State) with the copy of the license for Agreement State licensees.

3.13.5 Submit one legible copy, in approved transferrable media, of the applicable State license, authorization, or registration for machines that produce ionizing radiation, to the SUPERVISOR 5 days prior to the start of work.

3.13.6 Submit one legible copy, in approved transferrable media, of a formal Radiological Safety Plan which must include operating and emergency procedures pertinent to the items listed in 3.13.3, and actions to control jobsite-boundary radiation exposures below those allowed for members of the general public under NRC and OSHA standards, to the SUPERVISOR 5 days prior to the start of work.
3.13.7 Provide the SUPERVISOR with remedies to any radiation safety shortcomings identified by the SUPERVISOR, to be rectified prior to commencing operations.

3.14 Correct errors in record keeping by drawing a single line through the error, recording the correct entry, initialing, dating, and printing the name of the person making the correction.

3.14.1 Corrections to records must be made by the individual that made the original entry and signed for the accuracy and validity of the record, or by cognizant trade manager or project superintendent.

3.14.1.1 Submit corrected report to SUPERVISOR.

3.15 Record and Certification Signature Block or signature must be legible and in ink. Erasures, write-overs, white-outs, ditto marks, continuation arrows, signature stamps, etc., are not acceptable.

3.15.1 Copying records to "make them neat" is not allowed.

3.15.2 Electronic records must utilize electronic signature controls for certification of individual providing signature.

3.16 Do not commence operations that could compromise watertight integrity during waterborne availabilities until confirmation by the SUPERVISOR that the ship has at least one back-up power source immediately available for providing power of minimum load to support firefighting and dewatering equipment in the event of loss of shore power.

3.17 Protect the ship and its equipment from damage.

4. NOTES:

4.1 The term "day" means 24 hours prior to or after the scheduled event. “Business day” is used to indicate Monday through Friday, otherwise “day” means calendar day (Sunday through Saturday).

4.2 Known sources for unclassified military specifications and standards are:

https://mercury.tdmis.navy.mil
https://assist.dla.mil
http://quicksearch.dla.mil

4.3 The term “SUPERVISOR” is defined as the local Government activity responsible for the execution and contract administration of Navy maintenance and modernization work.

4.4 The term "Job Order" is synonymous with the term "Contract" and “Task Order”.
4.5 The term “approved transferrable media” is the form, system or program for submitting reports required as agreed to by the SUPERVISOR.

4.6 The term “subcontract” means any contract as defined in the FAR, Subpart 2.1, entered into by a subcontractor to furnish supplies or services for performance of a prime contract or a subcontract. It includes but is not limited to purchase orders, and changes and modifications to purchase orders.

4.7 Navy Boats and Craft are defined by S9086-TX-STM-010/CH 583 Volume 1, Boats and Small Craft.

4.8 Service Craft are defined by S9086-BA-STM-010/CH 034 Service Craft.

4.9 Worksite is defined as within the specific compartment or space where physical productive work is occurring. For work performed on Navy boats and craft or service craft, the “worksite” is defined as on or near the vessel.
NAVSEA
STANDARD ITEM

ITEM NO: 009-02
DATE: 30 APR 2018
CATEGORY: I

1. SCOPE:

1.1 Title: Environmental Compliance Report for Material Usage; accomplish

2. REFERENCES:

2.1 42 USC 7412(b), Clean Air Act, Section 112(b), List of Hazardous Air Pollutants

2.2 40 CFR Part 63, National Emission Standards for Hazardous Air Pollutants for Source Categories, Subpart II

3. REQUIREMENTS:

3.1 Contractor facility availabilities:

3.1.1 Designate a contractor primary and secondary point of contact to receive reports applicable under this item.

3.1.2 Submit one legible copy, in approved transferrable media, of the names of the primary and secondary point of contact to the SUPERVISOR prior to availability start date.

3.2 Naval facility availabilities:

3.2.1 Submit one legible copy, in approved transferrable media, of an Environmental Compliance Report for Material usage at Naval Facility as follows:

3.2.2 Submit applicable permits for portable, registered, or rental emission units to the SUPERVISOR prior to start of work.

3.2.3 Establish a record-keeping program to reflect the manner in which the material records will be maintained and submitted to the SUPERVISOR.

3.2.4 Maintain facility specific records to ensure accurate reporting for all preservation, welding repairs, and fuel consumption for
each individual portable internal combustion engine or portable emission unit. Provide the SUPERVISOR sufficient details to track usage of all paints, solvents, adhesives, welding rods, and fuel used for each individual portable internal combustion engine over 50-brake horsepower. Report any other materials used which contain chemicals listed in 2.1.

3.2.5 Maintain current usage records of materials listed in 2.1.

3.2.6 Negative reports are required.

3.2.7 Reports for paint, solvent, adhesive, and nonskid usage records shall contain the following items based upon category of the material.

3.2.7.1 Product manufacturer, identification or color

3.2.7.2 Net daily paint usage in gallons, paint application method (airless spray, HVLP, brush, or roller) per paint type, amount of paint disposed as hazardous waste; density of mixed paint; net daily onsite solvent usage in gallons used for equipment cleaning and surface preparation; net amount of adhesives in unit of measure (ounces, quart, gallons or pound)

3.2.7.3 Product Safety Data Sheet (SDS), technical data sheet, VOC certification for paint and nonskid product

3.2.7.4 Government site location, applicable local Air Pollution Control District (APCD) permit number, date, and ship's name

3.2.8 Abrasive blast grit materials used shall be submitted monthly and shall include:

3.2.8.1 Manufacturer of abrasive blast grit and SDS

3.2.8.2 Abrasive blast grit usage certification if required by the cognizant state or local authorities

3.2.8.3 Amount and hourly usage of the abrasive blast grit

3.2.8.4 Permit associated with the abrasive blasting equipment if required by the cognizant state or local authorities

3.2.9 Welding operation report shall be submitted monthly and shall include filler metal manufacturer, specific product used in welding application, SDS, usage in pounds, and type of welding application.

3.2.10 Portable internal combustion (IC) engine greater than 50 brake horse power operation report shall be submitted monthly and shall include:
3.2.10.1 Amount of fuel used in gallons and the hours of operation

3.2.10.2 IC engine permit number and site location if required by the cognizant state or local authorities

3.3 Submit one legible copy, in approved transferrable media, of each report required by 3.2 to the SUPERVISOR no later than 10 days after the end of the month throughout the availability.

3.4 Provide certification to the SUPERVISOR, using Attachment A for Volatile Organic Compounds (VOC) (for Option 1, 2, and 3 thinning requirement use only), or Attachment B for Volatile Organic Hazardous Air Pollutants (VOHAP) (for Option 4 thinning requirement), on the as-supplied coating by the manufacturer, or similar form as authorized by the SUPERVISOR.

3.4.1 For coatings to which thinners must not be added, the coating container must have a label stating "NO THINNING".

3.4.2 For coatings to which thinners are to be added, designate a single thinner to be used and determine the maximum allowable thinning ratio using Equation One of 2.2, apply a label to the coating container stating that "THINNER MAY BE ADDED" and also supply the maximum allowable thinning ratio.

3.4.3 No later than the 10th of each month, or at the end of each job, whichever is earlier; submit one legible copy, in approved transferrable media, of a report listing the following to the SUPERVISOR:

3.4.3.1 Volume and type of each coating used the previous month.

3.4.3.2 Volume and type of thinner used the previous month.

3.4.3.3 Calculations used to determine the maximum allowable thinning ratio for each coating that was thinned the previous month.

3.4.4 All handling, thinning, and transfer of coatings, solvents, and related waste shall be done in a manner that minimizes spills.

3.4.4.1 All containers of coatings, solvents, and related waste shall be free of cracks, holes, and defects such as damage, dents, or ill-fitting lids or covers that compromise the integrity of the container. The containers shall remain closed unless materials are being added or removed from the container.

3.4.4.2 All waste materials including rags, brushes, and rollers shall be kept in tightly closed containers that minimize evaporation.
4. **NOTES:**

4.1 Examples of paint and nonskid manufacturers may be Ameron, International, American Safety Technology, or others as applicable.

4.2 Examples of American Welding Society Classifications for welding rod may be E316-16, E7018-AL 308-16, or others. If there is no American Welding Society (AWS) classification assigned, use the product name and circle the product on the SDS.

4.3 Examples of welding applications may be Shielded Metal Arc Weld (SMAW), Gas Metal Arc Weld (GMAW), Flux Core Arc Weld (FCAW), and others.
1. **SCOPE:**

   1.1 Title: Toxic and Hazardous Substance; control

2. **REFERENCES:**

   2.1 29 CFR Part 1915, Occupational Safety and Health Standards for Shipyard Employment

3. **REQUIREMENTS:**

   3.1 Identify materials that may contain toxic or hazardous substances as listed in Subpart Z of 2.1 that are to be used, removed, or disturbed during work operations.

   3.1.1 Conduct and document an initial determination of potential personnel exposure to these materials prior to the start of work.

   3.1.1.1 Provide a copy of the documentation, signed by a competent person as defined in 29 CFR 1915.4, to the SUPERVISOR upon request.

   3.2 Ensure that work operations comply with the requirements of 2.1 for the use of toxic or hazardous substances and removal or disruption of existing toxic or hazardous substances.

   3.3 Ensure that processes or procedures for work operations that can expose personnel to toxic or hazardous substances comply with the requirements of 2.1. At a minimum, address the following: exposure monitoring, method of compliance, engineering and work practice controls, respiratory protection, protective clothing, housekeeping, hygiene facilities and practices, medical surveillance, employee information and training, signs, and recordkeeping.

   3.3.1 Submit one legible copy of process(es) or procedure(s), in approved transferrable media, when requested by the SUPERVISOR.

   3.4 Provide a notice to the SUPERVISOR and to the Commanding Officer's designated representative at least 4 hours, but not more than 24 hours prior to commencement of any work operation that requires establishment of a regulated area in accordance with the requirements of 2.1 (i.e. cleaning of
spaces that have contained flammable or combustible liquids, lead work, cadmium work, asbestos work, etc.)

3.4.1 Post the notice at the ship's Quarterdeck and at all entrances to spaces where work operations will be performed that require posting of warning signs, signs, or establishment of a regulated area.

3.4.2 The notice shall contain the following information:
   3.4.2.1 Ship's name and hull number
   3.4.2.2 Work Item number
   3.4.2.3 Compartment or frame number
   3.4.2.4 Identification of hazard
   3.4.2.5 Date and time of work process
   3.4.2.6 Identification of engineering and work practice controls

3.4.3 Deliver notification of work planned over a weekend or Monday following that weekend to the Commanding Officer's designated representative not later than 0900 on the Friday immediately preceding that weekend.

3.4.4 Deliver notification of work planned on a Federal holiday and on the day following the Federal holiday to the Commanding Officer's designated representative not later than 0900 on the last working day preceding the Federal holiday.

3.5 Provide for isolation and blanking of ship's ventilation systems in work areas to prevent toxic or hazardous substance contamination of ventilation systems or other compartments/spaces.

3.6 Establish regulated areas for monitoring and authorized personnel entry whenever concentrations of the toxic or hazardous substance are in excess of exposure limits as listed in 2.1.

3.7 Monitor the affected areas during work operations to ensure compliance with 2.1. Monitoring shall include adjacent spaces to ensure the work area containments and work practices are effective. Results of surveillance shall be documented and documentation shall be made available to the SUPERVISOR.

4. **NOTES:**

4.1 The term "hazardous substance" means a substance, which by reason of being explosive, flammable, poisonous, corrosive, oxidizing, irritant, or otherwise harmful is likely to cause injury.
4.2 Consider ventilation cleaning debris to contain toxic or hazardous substances.
1. **SCOPE:**

1.1 Title: Quality Management System; provide

2. **REFERENCES:**

2.1 Standard Items

2.2 ANSI/ISO/ASQ Q9001-2015, Quality Management Systems – Requirements

2.3 ANSI/NCSL Z540-3, Requirements for the Calibration of Measuring and Test Equipment

2.4 ISO/IEC 17025, General Requirements for the Competence of Testing and Calibration Laboratories

2.5 NAVSEA 04-4734, Navy and Marine Corps Calibration Laboratory Audit/Certification Manual

2.6 SSPC QP1 Application, Instructions, and Program Rules

2.7 NAVSEA OD 45845, Metrology Requirements List (METRL)

3. **REQUIREMENTS:**

3.1 Establish, document, implement, and maintain a Quality Management System (QMS) as a means of ensuring that product conforms to specified requirements.

3.2 A written QMS Manual addressing all elements of 2.2 and supporting documented procedures **must** be submitted to the SUPERVISOR for review and acceptance. **Required documented procedures may be contained in either the Manual or Level II QMS procedures.** The contractor **must** have an | accepted QMS, in accordance with this Standard Item, in place to receive an award of a Job Order. Include the following documented procedures **if not addressed in the contractor’s Quality Manual:**

3.2.1 Support: Address all areas of Paragraphs 7.1.5, 7.2 and 7.5 of 2.2.
3.2.1.1 Calibration laboratories must be accredited to either 2.3 or 2.4 by a Commercial Accreditation Activity, or certified by a Navy Certification Activity to 2.5, and the scope of accreditation must cover the appropriate measurement parameters and ranges of the calibrations performed.

3.2.1.2 Calibration intervals assigned to Measuring and Test Equipment used by the contractor for acceptance testing must meet those recommended in 2.7 unless alternate calibration intervals are established in accordance with 2.3.

3.2.2 Operation: Address all areas of Paragraphs 8.2, 8.4, 8.5, 8.6, 8.7 of 2.2

3.2.2.1 Verification of Purchased Product: Identify, in the purchasing documents, verification arrangements at the subcontractor or vendor location/premises. Purchasing documents must contain the following statement when the SUPERVISOR requests government inspection: "Government Inspection is required prior to shipment from your plant. Upon receipt of this order, promptly notify and furnish a copy to the Government representative who normally services your plant so that appropriate planning for government inspection can be accomplished. In the event the government representative or office cannot be located, our purchasing agent must be notified immediately.

3.2.2.2 Unless otherwise specified in a higher tier document, Receipt Inspection of contractor furnished materials must be based on supplier performance history and one or more of the following: certificate of compliance, vendor material test certification data, manufacturer's mill certificate, or testing using sampling techniques.

3.2.3 Performance evaluation: Address all areas of Paragraphs 9.2 and 9.3 of 2.2

3.2.4 Improvement: Address all areas of Paragraph 10.2 of 2.2.

3.2.5 The documented QMS must include a matrix listing the correlation between 2.2, 3.2 and the corresponding paragraph/sub-paragraph(s) of the submitted documented procedures.

3.3 Subsequent to SUPERVISOR acceptance, a contractors QMS certification is acceptable in all other geographic location in which the contractor maintains the same QMS, providing:

3.3.1 The contractor uses the same QMS Manual.

3.3.2 The contractor uses the same QMS Manager as the final decision authority for QMS policy.

3.3.3 Successful completion of Contractor's QMS Review Checklists (Attachment B, C, and D) in their entirety by the SUPERVISOR.
3.4 The QMS must be subject to audits by the SUPERVISOR throughout the contract. Retain documented information to demonstrate the processes are carried out as planned. Audits must be conducted on active contracts, but may be conducted on completed contracts when there are limited or no active contracts available.

3.5 Submit one legible copy, in hard copy or approved transferrable media, of any revisions to the accepted QMS identified in 3.2 to the SUPERVISOR within 7 days of contractor approval and include the planned implementation date.

3.6 Submittal of procedures invoked by NAVSEA Standard Items, MIL-STDs, drawings, technical publications, and specifications, although an integral part of the QMS, must be submitted to and approved by the SUPERVISOR independent of the QMS a minimum of 14 days prior to start of required process for planned availabilities, or as otherwise approved by SUPERVISOR.

3.7 The corrective action program must require that a copy of the written responses to contractor generated corrective actions will be provided to the SUPERVISOR when requested.

3.8 Respond in writing to each SUPERVISOR issued Method B/C/D Corrective Action (CA) within 3 business days unless otherwise specified by the SUPERVISOR. Initial response must include immediate corrective action taken and a plan of action for CA completion, including estimated completion dates. Final response must include preventive action for recurrence of identified nonconformance, root cause analysis and Objective Quality Evidence (OQE) for corrective action completed. All follow up responses must be as specified by the SUPERVISOR.

3.8.1 Inform the SUPERVISOR when corrective actions are complete for each SUPERVISOR issued Method A (CA). Response required within 3 business days unless otherwise specified by the SUPERVISOR. Response must state that the non-conformance has been corrected.

3.8.2 Use NMD, or approved Web interface, to perform all CAR functions for contracts managed in NMD.

3.9 Attend SUPERVISOR conducted fact-finding/investigative meetings when requested by the SUPERVISOR not to exceed 4 hours. (See 4.4)

3.10 Develop a Test and Inspection Plan (TIP) incorporating each Work Item in the job order, LOA Chits or Statements of Work (SOW). The initial TIP must include all inspections and tests required by zero-tier references and first tier references, as well as symbols (I)(V)(Q) test/inspections and (G) government notification identified in the Work Item, and any additional tests and inspections the contractor deems necessary to substantiate product conformance.

3.10.1 Submit one legible copy, in hard copy or approved
transferrable media, of initial copy of the TIP to the SUPERVISOR prior to start of productive work for non-CNO availabilities and no later than 3 days prior to the availability start date for CNO availabilities.

3.10.1.1 Submit one legible copy, in hard copy or approved transferrable media that can be sorted (e.g., Excel spreadsheet) of an updated TIP when requested by the SUPERVISOR not to exceed one per week.

3.10.2 A TIP must:

3.10.2.1 Be revised prior to the start of productive work and updated as work proceeds on each Work Item. Supporting data for tests and inspections requiring government notification (G), including accept/reject criteria, must be available at the location of each test and inspection. Include provisions for documenting the date, time, and identification of the SUPERVISOR’s representative notified and government representative attending each (G)-Point on the TIP. The TIP must annotate the relationship to a specific key event unless otherwise agreed upon by the SUPERVISOR. The following key events must be considered at a minimum (as applicable): Undocking, Production Completion Date (PCD), Command, Control, Communications, Computer, Combat Systems, and Intelligence (C5I) Light-Off (C5ILO), Dock Trials (DT), Fast Cruise (FC), Sea Trials (ST), and Availability Completion (AC).

3.10.2.2 Each test and inspection must be identified by its respective Work Item number and Work Item paragraph number, including Standard Item paragraph number, and must include inspection symbols (I)(Q) and (V), and the government notification (G) Point symbol where applicable.

3.10.2.3 Provide identification of the item to be inspected by name, number, and location (e.g., number 3 main feed pump, 5-180-0-E).

3.10.2.4 Provide identification of each characteristic of the items to be inspected and provide the criterion for acceptance for each characteristic (e.g., air test; 2 PSIG for 10 minutes; no drop).

3.11 Test and Inspection records must:

3.11.1 Include the ship’s name and hull number, Job Order and Work Item number, applicable PCP number, paragraph number, component identification, accept/reject criteria, date, time, and signature of the contractor’s authorized representative who witnessed or performed the test or inspection. The signature occurs after the checkpoint is determined to be satisfactory or unsatisfactory and any exceptions are documented.

3.11.2 Be maintained at a contractor location accessible to the site of the work required by the Job Order.

3.11.3 Be documented within one day of accomplishment or prior to the subsequent tests or inspections, whichever is less. The records must
indicate the results of the test and or inspection accomplished. Records must be incorporated into the TIP within 4 days after completion of each test or inspection.

3.11.3.1 For tests and inspections involving (G)-points, records must be documented upon acceptance or rejection and a hard copy (or electronic copy as authorized by the SUPERVISOR) provided to the SUPERVISOR at the conclusion of each (G)-Point. (See 4.5)

3.11.4 Required reports resulting from tests or inspections must include the appropriate design criterion for each attribute or measurement required by the Work Item.

3.12 The SUPERVISOR will consider the Work Item incomplete if the contractor's documentation and records are not complete.

3.13 Accomplish (I), (V) and (Q) tests/inspections that do not have associated (G)-points, with qualified and/or currently certified personnel where required by the technical documents (e.g., NBFI, NACE, nondestructive testing, electrical cableway inspection, Oxygen Cleanliness Inspector, etc.) as follows:

3.13.1 (I) inspections require verification and documentation by a separate individual, other than the person who has accomplished the work, who is qualified as an inspector.

3.13.2 (V) inspections require verification and documentation by the qualified tradesperson, trade supervisor, or inspector.

3.13.3 (Q) inspections require verification and documentation by a qualified Technical Representative in accordance with 009-90 of 2.1 and associated PCP requirements.

3.13.4 The authority to accomplish, document, accept and reject (I) and (V) inspections may be delegated to qualified subcontractor personnel, without regards to geographical location, subject to SUPERVISOR approval.

3.14 Accomplish (G)-Point (government notification) as follows:

3.14.1 (G) is a symbol inserted in a Work Item to establish a point in the sequence of accomplishment of work at which time the SUPERVISOR must be notified by the prime contractor in all cases to permit observation of a specific test or inspection (I)(V) by the government. When the symbol (G) precedes tests or inspections in a Work Item which are applicable to more than one action, the symbol (G) must identify the action required, e.g., (G) "HYDROSTATIC TEST". When more than one unit is involved, the (G) notification requirement applies to each unit.

3.14.2 Notify the SUPERVISOR's designated representative as directed by the SUPERVISOR via FAX, hard copy, or by electronic method.
3.14.2.1 Notify the SUPERVISOR during normal day shift working hours, at least 4 hours, but not more than one day, prior to commencing the specific requirements in the paragraph annotated with the symbol (G). Notify the SUPERVISOR to cancel a scheduled test or inspection no later than 30 minutes prior to the scheduled event or as negotiated with the SUPERVISOR.

3.14.2.2 Notify the SUPERVISOR not later than 4 hours before the end of the last preceding day shift when tests or inspections following a (G) Point are scheduled after normal day shift working hours, on a weekend, or on a federal holiday.

3.14.2.3 Notify the SUPERVISOR at least 48 hours, but not more than 72 hours, prior to commencing (G)-Points at contractor's/subcontractor's plants located in excess of 50 miles by the most direct roadway nearest to the place of performance of the contract. Document the date, time, and identification of the SUPERVISOR's representative notified.

3.14.2.4 For (G)-Points scheduled after normal day shift working hours, on a weekend, or a Federal holiday, notify the SUPERVISOR to cancel a scheduled test or inspection as soon as known, but no later than 2 hours prior to the scheduled event.

3.14.3 Proceed with the test or inspection if the SUPERVISOR is not present, provided the required advance notice has been furnished to the SUPERVISOR and the contractor has completed and documented the preceding tests and inspections.

3.14.4 A partial test or inspection requiring (G) notification may be accomplished in the event that all work cannot be completed and work progress would be delayed in waiting for total completion of work. Comply with the requirements of 3.14.2 when the incomplete work is completed and ready for the remainder of the test or inspection. Note partial inspections on the test or inspection form.

3.14.5 A qualified contractor representative must be present to accomplish, accept or reject and document tests or inspections associated with the symbol (G).

3.14.5.1 The authority to witness or perform, document and accept/reject (I)(G), (Q)(G), and (V)(G) tests and inspections is a prime contractor's responsibility but, subject to SUPERVISOR approval within a 50-mile radius of the contractor's plant nearest to the place of performance of the contract, may be delegated to subcontractors who are MSRA or ABR agreement holders, SSPC QP1 certified, NDT certified, or have a current QMS accepted by the SUPERVISOR.

3.14.5.2 The contractor may delegate responsibility to subcontractors to perform, document and accept/reject (I)(G) and (V)(G) tests and inspections performed at plants located outside a 50-mile radius of the
contractor's plant nearest to the place of performance of the contract subject to SUPERVISOR prior approval.

3.14.5.3 Associated (G)-Point notification requirements must not be delegated.

3.15 For work being performed outside a 50-mile radius of the place of contract performance, the prime contractor must submit one legible copy, in hard copy or approved transferrable media, of purchase orders to the SUPERVISOR within 2 days or otherwise as directed by the SUPERVISOR, prior to issue of purchase order and shipment of equipment. For contractors who do not utilize purchase orders as a vehicle for accomplishing work within their company, a report identifying the delineation of the specific Work Item requirements, in lieu of the purchase order must be submitted to the SUPERVISOR.

3.16 Maintain a current list for reference by the SUPERVISOR, designating the contractor's qualified and currently certified inspectors who witness or perform and sign for symbol (I) inspections, indicating the type of tests and inspections for which each inspector is qualified and currently certified. When subcontractors are delegated responsibility, the subcontractor's qualified and currently certified inspectors must be included on this list.

3.17 Certify to the SUPERVISOR that work is completed technically correct with all required OQE. All supporting documentation must be submitted in support of the following Key Events: Undocking (if applicable), PCD, C5ILO, DT, FC, ST, and CA. Key Event ties must also be annotated for each item in the TIP as required by 3.10.2.1.

3.17.1 Notify the SUPERVISOR of the condition and status of each individual Work Item in the availability within 3 days of Work Item completion or a minimum of 5 days prior to the scheduled Key Event to which that item is tied, whichever occurs first, by either of the following methods:

3.17.1.1 Completion and submission of one legible copy of Attachment A, in hard copy or approved transferrable media.

3.17.1.2 Completion and submission of one legible copy of Event Readiness List (ERL), in hard copy or approved transferrable media.
3.17.1.3 Completion and submission of centralized signature sheet in record book maintained by the SUPERVISOR.

3.17.2 If work is incomplete or complete with discrepancies, supporting rationale and impact statement with recovery plan must be provided to the SUPERVISOR via submission of one legible copy of Attachment A, in hard copy or approved transferrable media. Upon completion of work or correction of discrepancies, a revised Attachment A with the updated status must be submitted to the SUPERVISOR in hard copy or approved transferrable media.

4. NOTES:

4.1 ANSI/ISO/ASQ Q9001:2015 commercial third party registrar certification is not required.

4.2 The QMS submitted in 3.2 requires a one-time submittal/acceptance unless this NAVSEA Standard Item and/or references change or contractor's status changes.

4.3 A "zero-tier reference" is a specification, standard, drawing, test memo, planning/design memo that is cited in the contract (including its attachments). A "first-tier reference" is either: (1) a specification, standard, or drawing cited in a zero-tier reference, or (2) a specification cited in a first tier drawing. All zero-tier and first tier references are mandatory for use. All lower tier references must be used for guidance only.

4.4 Contractor-run critiques or fact findings are accomplished in accordance with 009-120 of 2.1.

4.5 A partial (G)-point may be accomplished for a fraction of the work specification components. When elected, the contractor is responsible to account for the inspection status of each component. A final (G)-point is required for the last remaining component(s).

4.6 ISO compliant Quality Management Systems typically follow a 4-tiered hierarchy comprised of:

a. The "first-tier" document related to the QMS is the Quality Manual, which is the high-level document that is authored and approved by upper management of the organization and is the guiding organizational document for which all subsequent tiers within the system should be aligned with.

b. The "second-tier" documents are the Quality Procedures making up the center of the documentation system. These procedures span all the required processes and practices within the organization and should include references both upward to the Quality Manual and downward to the Work Instructions associated with each process.
c. The “third-tier” documents are Work Instructions comprised of instructions that describe the specific actions required to achieve a quality product.

d. The “fourth-tier” documents are the Quality Records which capture all the data, information, records, forms and become the objective evidence which will prove the QMS is being executed per procedure.

4.7 NAVSEA 04RM3 Approved list of Accrediting Bodies (AB).

- ANSI-ASQ National Accreditation Board (ANAB), http://anab.org/
- Laboratory Accreditation Bureau (L-A-B), http://l-a-b.com/
- Perry Johnson Registrars (PJLA), http://www.pjr.com/
- The American Association for Laboratory Accreditation (A2LA), https://www.a2la.org/
- National Voluntary Laboratory Accreditation Program (NVLAP), https://www.nist.gov/nvlap
- International Accreditation Service (IAS), http://www.iasonline.org

Contact NAVSEA 04RM3 for information on commercial accreditation in accordance with 2.3 and 2.4 by NAVSEA approved commercial Accrediting Bodies (AB).
Attachment A

Work Completion Certification

SHIP'S NAME: ____________________________ HULL NO.: ____________________________
WORK ITEM NO: ____________________________ SSP NO.: ____________________________

KEY EVENT:

☐ Undocking (UD)
☐ Production Completion Date (PCD)
☐ Dock Trials (DT)
☐ Past Cruise (FC)
☐ Sea Trials (ST)
☐ Availability Completion (AC)
☐ Command, Control, Communications, Computer, Combat Systems, and Intelligence Light-Off (C5ILO)
☐ Other ____________________________

1) All contracted production work (original, new and growth) has been satisfactorily reviewed, accurate and complete. All non-conformances have been corrected and corrective action request (CAR) are at an acceptable level of completion.

RESULTS/STATUS:

☐ Complete
☐ Complete w/ Discrepancies
☐ Incomplete

Note: If work is incomplete or complete with discrepancies, supporting rational and impact statement with recovery plan in the Comments block below.

Comments: __________________________________________________________

1. **SCOPE:**

   1.1 Title: Temporary Access; accomplish

2. **REFERENCES:**

   2.1 Standard Items

   2.2 MIL-STD-1689, Fabrication, Welding, and Inspection of Ships Structure

   2.3 29 CFR 1915, Occupational Safety and Health Standards for Shipyard Employment

   **2.4 S9086-DA-STM-010, NAVAL SHIPS' TECHNICAL MANUAL CHAPTER 100 HULL STRUCTURES**

3. **REQUIREMENTS:**

   3.1 Submit one legible drawing or sketch of each proposed temporary access cut to the ship structure or engine enclosure and a list of each proposed bolted/riveted access removal to the SUPERVISOR 3 days prior to making the cuts or removing the bolted/riveted access. For a nuclear-powered vessel, submit drawing/sketch of each proposed temporary access cut to the SUPERVISOR 5 days prior to making cut or removing the bolted/riveted access. (See Note 4.4 and 4.5)

   3.1.1 Submittal of drawing or sketch is not required for those access cuts authorized on a NAVSEA-approved drawing.

   3.1.2 The drawing or sketch must include, as a minimum, the following information:

   3.1.2.1 A plan and elevation view specifying the location of the access by deck, frame, and distance from the center line or deck edge and showing location of adjacent penetrations, bulkheads, framing, welds, and riveted joints within 12 inches of the proposed cut.
3.1.2.2 Location and number of previous cuts visible in each plate and the cutback of existing welds as required by 2.2.

3.1.2.3 Temporary structural reinforcement required to prevent distortion of ship structure.

3.1.2.4 Thickness and type of material of plating and structural members to be cut. Include source or document/drawing number which identifies material requirements.

3.1.2.5 A description of the temporary access closure or enclosure.

3.1.2.6 Include a copy of the weld procedure or approved weld procedure number with the proposed access sketch.

3.1.3 List of bolted/riveted access covers must include location, designation, and classification as identified on ship's damage control book.

3.1.4 Provide all drawing titles and numbers (including applicable sub-tier), and technical documentation used to accomplish the requirements of 3.1.

3.1.5 Temporary accesses include access plates, small access plates, and closure plates as defined in Paragraph 3.33 of 2.2.

3.2 Ensure that access cut boundaries conform to the requirements of 2.2, 2.4 and the following:

3.2.1 Boundaries may extend across one or more frames as required for size of opening.

3.2.2 Are sized and located to accomplish the requirements of the Job Order.

3.2.2.1 Verify access requirements on NAVSEA drawings conform to these same requirements.

3.2.3 Weld riveted plates using a single V-weld with glass cloth conforming to MIL-C-24576, Type One, Class One, to prevent fusion between backing member and plate.

3.2.3.1 Remove existing rivets within 6 inches of a cut and install new rivets in accordance with 2.2.

3.2.3.2 Round patches 2 feet in diameter or less must be dished 1/16-inch to 1/8-inch.
3.2.4 Minimum width of small access plates must be at least 4 times the material thickness of the plate being cut or 3 inches, whichever is greater.

3.2.5 Corners of small access plates between 3 inches minimum to 6 inches maximum in width must have a radius of one-half the width. Exception to this corner radius criterion is where a boundary terminates on an existing hull longitudinal seam or transverse butt joint.

3.2.6 Corners of small access plates greater than 6 inches in width must have a radius of 2 times the material thickness of the plate being cut or 3 inches, whichever is greater. Exception to this corner radius criterion is where a boundary terminates on an existing hull longitudinal seam or transverse butt joint.

3.2.7 Corners of access plates must have a minimum radius of 6 inches. Exception to this corner radius criterion is where a boundary terminates on an existing hull longitudinal seam or transverse butt joint.

3.2.8 Utilize the same boundaries as used for prior cuts unless the requirements of this Standard Item have been violated.

3.2.8.1 Annotate violations on the drawing or sketch required by 3.1.

3.2.9 Location restrictions and limitations on number of temporary accesses allowed per tank must conform to the requirements of 100-2.9.1 of 2.4.

(V)(G) "INSPECT LAY OUT"

3.3 Lay out access on both sides of the structure to be cut, in accordance with the approved drawing or sketch.

3.4 Prior to cutting access in the ship/vessel's structure and after layout checkpoint, accomplish positive verification by drilling a pilot hole in the path of the cut to be accomplished.

3.5 Center punch access layout upon completion of verification in 3.4.

3.6 Accomplish the requirements of 2.3 for guarding of access openings.

3.6.1 Remove temporary guarding after installation of access plates. Chip and grind surfaces flush in way of removals.

3.7 Install a temporary coaming with a minimum height of 4 inches around access cuts through decks. Tack-weld the coaming to the deck and seal the deck joint with caulking compound.
3.7.1 Remove the temporary coaming after installation of access plate. Chip and grind surfaces flush in way of removals.

3.8 Cut access in accordance with the approved drawing or sketch.

3.9 Remove bolted/riveted access.

3.9.1 Clean and preserve gasket faying surfaces.

3.9.2 Chase and tap exposed threaded areas.

3.10 Protect ship from weather and contamination.

3.10.1 Fabricate temporary closures using fire retardant material, prior to removing plates or cutting access openings.

3.10.1.1 Closures must be constructed to protect the access from inclement weather and entry of contaminants.

3.10.1.2 Horizontal deck closures must support a minimum of 150 pounds per square foot.

3.10.1.3 Closures must be fitted with fasteners that permit rapid installation and removal.

3.10.2 Install closures whenever access is not in use.

3.11 Maintain watertight integrity of waterborne ship.

3.11.1 Fabricate and install watertight enclosures prior to removing plates or cutting access openings that do not provide a minimum of 4 feet of freeboard.

3.11.1.1 Maintain watertight integrity to a level 4 feet above the maximum calculated draft.

3.12 Maintain watertight integrity of ship in dry dock.

3.12.1 Provide temporary access closure plates and fasteners prior to removing plates or cutting access openings below 4 feet of waterborne freeboard.

3.12.1.1 Closure plates must be available on short notice for emergency sealing of the temporary access openings.

3.12.2 Seal access openings with closure plates when conditions warrant.

3.12.3 Secure openings at the end of each shift not immediately followed by another shift engaged in dry dock work.
3.13 Remove the temporary closures when no longer required.

3.14 Reinstall the temporary access removed in 3.8 in accordance with the approved drawing or sketch.

3.14.1 Accomplishment of welding, fabrication, and inspection requirements to support installation of a temporary access must be in accordance with NAVSEA Standard Items (See Note 4.2)

3.14.2 Install the bolted/riveted access.

3.14.2.1 Use new gasket material conforming to MIL-PRF-900.

3.14.2.2 Install new rivets for riveted access plates in accordance with 2.2.

(V) "CHALK TEST"

3.15 Accomplish a chalk test on structural closure in way of temporary access. Chalk imprint must be centered with 100-percent contact.

3.16 Accomplishment of structural boundary testing (e.g., cofferdam, vacuum box, air hose, water hose) of each watertight/airtight temporary access closure must be in accordance with NAVSEA standard items (See Note 4.3).

4. NOTES:

4.1 Maximum Calculated Draft (MCD) – The maximum draft, calculated during the period in which ship’s draft is affected due to evolutions which add, remove, or change weight. It represents the “worst case” cumulative effect at any one time on trim, list, or draft for the proposed weight changes throughout the period that hull penetrations are in a non-standard configuration. MCD must be known and utilized by the SUPERVISOR and Ship’s Force in scheduling work and testing during waterborne maintenance periods.

4.2 If welding, fabrication, or inspection for installation of a temporary access of 3.14.1 is required; the use of Category II Standard Item 009-12 “Welding, Fabrication, and Inspection Requirements; accomplish” of 2.1 will be specified in the Work Item.

4.3 If a structural boundary test (e.g., cofferdam, vacuum box, air hose, water hose) to support testing of a watertight/airtight temporary access closure is required; the use of Category II Standard Item 009-25 “Structural Boundary Test; accomplish” of 2.1 will be specified in the Work Item.

4.4 Drawings provide detailed representations of the proposed area of the access cut rendered to scale. They include exact dimensional data and
are normally produced using drawing instruments (i.e., from compasses to computers).

4.5 Sketches are simplified or basic drawings. They are normally locally produced but still fulfill all requirements from this NSI (3.1.2.1 through 3.1.2.6) for the proposed area of the access cut.
1. **SCOPE:**

   1.1 Title: Maintaining Protection and Cleanliness from Non-Radioactive Operations; accomplish

2. **REFERENCES:**

   2.1 MIL-STD-1623, Fire Performance Requirements and Approved Specifications for Interior Finish Materials and Furnishings (Naval Shipboard Use)

   2.2 NFPA Standard 701, Standard Methods of Fire Tests for Flame Propagation of Textiles and Films

3. **REQUIREMENTS:**

   3.1 Observe the following requirements, in addition to the specific requirements of the Job Order, for maintaining protection and cleanliness from non-radioactive operations on the ship, ship's equipment, components, and spaces for the duration of the availability.

   3.1.1 Accomplish an inspection of the work area prior to installation of protective covering to identify the current condition of equipment, systems, and components, including any exposed cables, penetrations, stuffing tubes, bolted cover plates, and antennas.

   3.1.1.1 Submit one legible copy, in hard copy or approved transferrable media, of a report listing results of the requirements of 3.1.1 to the SUPERVISOR.

   3.2 Prevent contamination and damage of the ship's equipment, components, and spaces during contamination-producing operations.

   3.2.1 Plug, blank, wrap, cover, seal, and mask equipment, components, cables, wireways, boots, and openings using fire retardant/water repellent material, and prevent entry of contaminants to components, systems and equipment.
3.2.1.1 Ensure plugging and blanking does not result in flooding or damage to ship's equipment.

3.2.1.2 Protect ship’s equipment by installing Herculite or canvas covering conforming to A-A-55308, and/or fire retardant plywood conforming to Category 2, Type II, of MIL-L-19140, or other NAVSEA-approved fire retardant industrial protective material within the proximity to hot work and non-fabric material that conforms with 2.1 and is tested in accordance with and meets the requirements of 2.2 when used onboard for containment or as protective coverings not within the proximity of hot work.

3.2.2 Install fire retardant industrial filter material meeting the minimum requirements of UL 900 Class 1, non-fire contributing material, on the intake of supply and exhaust end of ventilation systems that will be in use.

3.2.2.1 Remove existing and install new filter or clean the filter material when air flow is restricted.

(V) "VERIFY PROTECTIVE MEASURES"

3.2.3 All protective measures are to be in place prior to start of any contamination-producing operations and shall remain in place until the contamination-producing operations are complete.

3.2.4 Install double curtain baffles at the entrance of each access door where airborne contamination could occur during contamination-producing operations. Install a dirt collecting mat on the deck directly inside each door. The SUPERVISOR will select a maximum of 4 doors. Secure and mark doors not designated for access.

3.2.5 Temporary coverings shall not be removed during contamination-producing operations without permission of the SUPERVISOR.

3.3 Maintain the integrity of the protective covering at the beginning of each shift in which contamination-producing operations will be accomplished. Ensure that equipment and machinery have not been infiltrated by contaminants. Notify the SUPERVISOR immediately by verbal means, followed on the next day in writing, if contamination or surface damage has occurred. Reseal to prevent further entry of contaminants or surface damage.

3.4 Maintain cleanliness of the work site, including bilges, free from accumulation of industrial debris caused by contractor and/or subcontractor employees on a continuous basis throughout the availability. Work spaces include those areas immediately under and adjacent, and those areas where service lines are run, and bilge areas in vicinity of the work site.

3.4.1 Cleaning shall be accomplished no later than at the end of each shift at a minimum, on a daily basis.

3.4.2 Remove and dispose of industrial debris from the ship at the end of each shift at a minimum, on a daily basis.
3.4.3 Vacuum cleaners shall be emptied of all debris at the end of each shift at a minimum, on a daily basis.

3.4.3.1 Use metal canister vacuum cleaners aboard the ship, except those used for regulated and controlled radiological and hazardous waste or hazardous material.

3.4.3.2 Permanently and legibly mark each vacuum cleaner with a company name or unique identifier.

3.4.4 Plastic trash cans are prohibited for trash collection onboard in spaces where industrial work is being performed. Plastic trash bags may be used onboard as a liner for metal trash cans.

(V) (G) "FINAL CONTAMINATION/DAMAGE INSPECTION"

3.5 Remove protective covering installed in 3.2 upon completion of contamination-producing operations. Accomplish a final inspection of the work area to identify the presence of contamination and/or damage created by contamination-producing operations. Contamination/damage shall be documented on the inspection record.

3.5.1 Presence of contamination and/or damage created by contamination-producing operations is unacceptable and shall be corrected.

3.6 Remove from the ship and dispose of debris and foreign matter generated as a result of work being accomplished at the end of each shift at a minimum, on a daily basis. Comply with the requirements of federal, state, and local laws, codes, ordinances, and regulations or as specified elsewhere in the Job Order.

4. NOTES:

4.1 Definitions:

4.1.1 Cleanliness means the removal of all industrial debris (industrial trash, waste material, weld rods/tips, fasteners, rags, lagging waste, job scrap, wire, litter, rubbish, etc.) at the end of each shift, leaving the areas broom clean and electronic spaces vacuum clean. Adjacent/surrounding machinery, equipment, etc., shall be cleaned free of all resulting debris.

4.1.2 Daily means at least once per every calendar day.
4.1.3 Non-radioactive operations include but are not limited to:

4.1.3.1 Operations liable to produce particulates to become airborne during accomplishment of the work scope, i.e., abrasive blasting, mechanical cleaning, spray painting, hot work operations, and air blowdowns.

4.1.3.2 Operations liable to produce fluid contamination of equipment as a result of external leakage of piping systems during testing.

4.1.3.3 Operations liable to produce fluid contamination of equipment as a result of external leakage of piping systems during waterjetting.

4.1.3.4 Operations liable to produce industrial debris such as, but not limited to, industrial trash, waste material, weld rods/tips, fasteners, rags, lagging waste, job scrap, wire, litter, rubbish, etc.

4.2 The SUPERVISOR will coordinate operation of ventilation systems, as requested by the contractor, to maintain a positive pressure within the vessel's envelope and to create an outward flow of air through crevices or around penetrations.

4.3 The cleanliness goal is to turn over all areas of the ship in the same condition or better as at beginning of the availability.

4.4 Ship's Force responsibility:

4.4.1 Ship's Force is responsible for dust that collects as a matter of course throughout the availability and for any Ship's Force work site maintenance including monitoring work sites being worked by intermediate maintenance activities, Alteration Installation Teams (AIT), and any contractor services that the ship has arranged.

4.4.2 Ship's Force is responsible to maintain cleanliness of their areas of responsibility broom clean at the end of each shift, on a daily basis.

4.4.3 Ship's Force will report cleanliness concerns to the SUPERVISOR for contractor responsible areas.

4.4.4 Ship's Force will work continually throughout the availability to keep bilges and other general areas of the ship clean where the Contractor is not working.

4.5 Ship's Force and the Contractor will familiarize each other with their scope of work (any other work being performed on board the ship not pursuant to contractor authorized work under the Job Order is considered Ship's Force work). The affected locations and aspects of the work and/or ship conditions (i.e., blasting, grinding, preservation, hot work, insulation removals, deck replacement, hydroblasting, weight tests, electrical cable replacement, etc.) will be identified. Each responsible party will clean
site in locations where both parties will be working, on a daily basis. Communications must be continuous and active 2 ways.

4.6 Diligence in inspection will ensure that action is taken by the responsible party prior to any area becoming unsatisfactory.
1. **SCOPE:**

   1.1 Title: Confined Space Entry, Certification, Fire Prevention and Housekeeping; accomplish

2. **REFERENCES:**

   2.1 Standard Items

   2.2 29 CFR Part 1915, Occupational Safety and Health Standards for Shipyard Employment

   2.3 29 CFR Part 1910.134, Occupational Safety and Health Standards, Respiratory Protection

   2.4 NFPA Standard 51B, Standard for Fire Prevention During Welding, Cutting, and Other Hot Work

   2.5 NFPA Standard 312, Standard for Fire Protection of Vessels During Construction, Repair, and Lay-up

   2.6 American Conference of Government Industrial Hygienists (ACGIH) Threshold Limit Values for Chemical Substances and Physical Agents

   2.7 NAVSEA OP-4, Ammunition and Explosives Safety Afloat

   2.8 Underwriter Laboratories (UL) Standard 199, Automatic Sprinklers for Fire-Protection Service

3. **REQUIREMENTS:**

   3.1 Comply with the requirements of 2.2 through 2.5 and this item to determine whether or not an explosive or other dangerous atmosphere exists in tanks, spaces, and associated piping, including adjacent tanks, spaces, and piping aboard the ship and control hot work and entry to those spaces to preclude damage to the ship or injury to personnel during the accomplishment of this Job Order.
3.1.1 Submit one legible copy, in approved transferrable media, of a list of tanks or spaces to be opened or certified to the SUPERVISOR at least one day prior to opening the tank or void.

3.1.1.1 Comply with additional requirements of NAVSEA Standard Items when accomplishing work in Collection, Holding and Transfer (CHT) and Motor Gasoline (MOGAS) tanks, spaces, or associated piping. (See Note 4.6)

3.1.1.2 For fuel tanks or spaces that contain or have contained fuel, including F-76 and JP-5, in addition to the atmospheric testing required by 2.2, test for diesel fuel (CAS No. 68334-30-5; 68476-30-2; 68476-31-3; 68476-34-6, 77650-28-3) as total hydrocarbons in accordance with 2.6, and record total hydrocarbon test results on the Marine Chemist Certificate or competent person's test/inspection record.

3.1.2 Provide initial and annual update training for Competent Persons by utilizing a National Fire Protection Association (NFPA) Certified Marine Chemist or NFPA Instructor. The length of the initial training class must be at least 24 hours. Annual update training must be at least 8 hours.

3.1.2.1 Maintain a current roster of designated Competent Person(s) and copies of certificates of completion for the training required in 3.1.2 for reference by the SUPERVISOR. Submit one legible copy, in approved transferrable media, of the specific documents when requested by the SUPERVISOR.

3.1.3 Post a copy of the Marine Chemist Certificate, Certified Industrial Hygienist's test/inspection record, or Competent Person's test/inspection record at each access to the affected space while work in the space is in progress. When requested, a copy of the MCC or test/inspection record must also be delivered to a location designated by the SUPERVISOR. In the event that the space is identified to be NOT SAFE FOR WORKERS or NOT SAFE FOR HOT WORK, the space must be posted accordingly and other affected contractors, the SUPERVISOR and Ship’s Force must be notified immediately. The posted copy must be clearly visible and legible.

3.1.3.1 Initial certification of spaces that require a Certified MCC or Certified Industrial Hygienist's test/inspection record in support of work operations must be effective until conditions change which would void the certificate or test/inspection record. A Competent Person must conduct the same atmospheric testing as required on the MCC or Certified Industrial Hygienist's test/inspection record.

3.1.3.2 For those certified spaces which employees will enter, a Competent Person must visually inspect, test and record each space certified as ENTER WITH RESTRICTIONS or SAFE FOR WORKERS as often as necessary, and as a minimum, prior to entry by employees on a daily basis. If a space is not to be entered on any given day, it is not required to be
inspected and tested by a Competent Person. The initial MCC remains valid if conditions have not changed, unless noted on the MCC.

3.1.3.3 For those certified spaces affected by hot work, a Competent Person must visually inspect, test, and record each space certified as SAFE FOR HOT WORK as often as necessary and, as a minimum, daily prior to commencement of hot work to ensure that conditions established by the certificate are maintained. When hot work is continuous, the affected spaces must be visually inspected, tested, and recorded on a daily basis to maintain the SAFE FOR HOT WORK certification.

3.1.3.4 If a Competent Person finds that the conditions within a certified space fail to meet the applicable requirements for which it was certified, work in the space must be stopped and may not be resumed until the space has been recertified by a Marine Chemist.

3.1.3.5 For those spaces where only Competent Person tests and inspections are required in accordance with 2.2, a Competent Person must visually inspect and test each space as often as necessary and, as a minimum, daily prior to entry or commencement of hot work to ensure that conditions are safe.

3.1.3.6 After the Competent Person has determined initially that a space is safe for entry and finds subsequently that the conditions within the tested space fail to meet the requirements of 2.2, work must be stopped until the conditions in the tested space are corrected, the space is retested, reinspected, and a new record of tests/inspections is recorded and posted.

3.1.3.7 Allow Navy civilian and military personnel to enter under the certificate or test / inspection record for inspection purposes.

3.1.4 Tank cleaning personnel must be trained annually on safety practices to include a discussion of safety information identified in Subparts A, B, and Section 1915.152 of Subpart I of 2.2.

3.1.5 Maintain a current roster of the names of the Shipyard/Plant Rescue Team Members, along with contractor certification that training requirements of Subpart B of 2.2 have been accomplished and are current for each Rescue Team Member, or documentation of arrangements made for an outside rescue team to respond promptly to a request for rescue service in a contractor facility. Submit one legible copy, in approved transferrable media, of the specific documents when requested by the SUPERVISOR.

3.1.5.1 At a naval facility, the Navy will respond.

3.1.6 Spaces that are determined to contain Immediately Dangerous to Life or Health (IDLH) atmospheres must never be entered except for emergency rescue or for short duration for installation of ventilation equipment in accordance with 2.2 and 2.3. When entering IDLH spaces for the purpose of installing ventilation, notify the SUPERVISOR prior to entry.
Notifications of rescue must be made as soon as management becomes aware of such an event.

3.1.7 Confirm that all personnel have exited the space prior to closure of tanks, voids, and cofferdams. Designate one person to account for all personnel who may have entered the space.

3.2 Provide a written notice for each job or separate area of hot work aboard ship.

3.2.1 The notice must state a description of the work to be done, the specific location, to include compartment number, of the hot work, and compartments adjacent to decks, bulkheads, and similar structures upon which hot work is to be accomplished, the time hot work will commence, current gas-free status of the area (if required), the absence or existence of combustible material within 35 feet in any direction of the operation (or further, if affected by the operation), and if combustible material exists, what action must be taken to protect the material from fire, the provision and assignment of a fire watch, and the affirmation that conditions at the work site (ventilation, temporary lighting, accesses) permit the fire watch(es) to have a clear view of and immediate access to all areas included in the fire watch.

3.2.2 The notice must affirm that a suitable, fully-charged fire extinguisher must be available at the work site and provide for an inspection of the area 30 minutes after completion of the hot work or the cessation of hot work at the work site unless the contractor's Hot Work Supervisor surveys the affected work area and determines that there is no further fire hazard as the final action to complete the notice.

3.2.3 The notice must be signed by a supervisor specifically designated as responsible for coordination of the hot work and the fire watch requirement for each shift where hot work is being conducted.

3.2.4 One copy of each notice must be given to the SUPERVISOR when requested and one copy to the Commanding Officer's designated representative, and at a minimum, one copy of each notice must also be conspicuously posted at the location where the hot work is being accomplished.

3.2.4.1 The notice to the Commanding Officer's designated representative must precede the initiation of the actual hot work in order to permit the Commanding Officer to designate a member of the crew to observe the operation, if desired.

3.2.4.2 Deliver written notification of hot work planned Tuesday through Friday to the Commanding Officer's designated representative at least 30 minutes and not more than 24 hours preceding start of work.

3.2.4.3 Deliver written notification of hot work planned over a weekend or Monday following that weekend to the Commanding Officer's
designated representative no later than 0900 on the Friday immediately preceding that weekend.

3.2.4.4 Deliver written notification of hot work planned on a federal holiday and on the day following the federal holiday to the Commanding Officer's designated representative no later than 0900 of the last working day preceding the federal holiday.

3.2.4.5 The notice must be effective for 24 hours unless a shorter period is specified in the contract or the gas-free status of the work area or system requires stopping the work. A new notice is required if work is interrupted due to loss of gas-free status.

3.3 Provide trained fire watches, at all affected areas where hot work is being accomplished. Provide fire extinguishing equipment as described in 2.2, 2.4, and 2.5.

3.3.1 The program utilized to train fire watches must be in accordance with the requirements of 2.2 and 2.4, and include steps to be taken by the fire watch and hot work operator prior to accomplishment of hot work, proper selection and use of fire extinguishing equipment and other safety equipment, relationship between the fire watch and hot work operator, proper fire reporting procedures and other sounding of fire alarms, and reporting of fires to the ship's Quarterdeck. A means of communicating between all fire watches and their corresponding hot workers must be provided. This training must include theory and practical (hands-on) fire suppression techniques. This training must be provided to all newly assigned fire watches, with annual updates provided to personnel. Provide visible means of identifying trained fire watches, i.e., badge, sticker, vest, etc.

3.3.1.1 Submit one legible copy, in approved transferrable media, of the training program when requested by the SUPERVISOR.

3.3.2 Each fire watch attending worker(s) accomplishing hot work must be equipped with a fully-charged and operable fire extinguisher, have immediate access and an unobstructed view of the affected hot work area to which they are assigned and must remain at the job site for 30 minutes from the time the hot work is completed unless the contractor's Hot Work Supervisor surveys the affected work area and determines that there is no further fire hazard.

3.3.2.1 The fire watch must not accomplish other duties while hot work is in progress.

3.3.3 Where several workers are accomplishing hot work at one site, the fire watch must have a clear view of and immediate access to each worker accomplishing hot work.

3.3.3.1 No more than 4 workers must be attended by a single fire watch.
3.3.4 In cases in which hot material from hot work may involve more than one level, as in trunks, machinery spaces, and on scaffolding, a fire watch must be stationed at each level unless positive means are available to prevent the spread or fall of hot material.

3.3.5 In cases where hot work is to be accomplished on a bulkhead or deck, combustible material must be removed from the vicinity of the hot work on the opposite side of the bulkhead, overhead, or deck, and a fire watch must be posted at each location.

3.3.5.1 If multiple blind compartments are involved in any hot work job, fire watches must be posted simultaneously in each blind area.

3.3.6 Comply with the firefighting and fire prevention requirements of 2.7 prior to hot work operations in or adjacent to areas containing ammunition or explosives.

3.3.6.1 Hot work must not be conducted during any logistics or maintenance movement of ammunition or explosives.

3.3.7 No hot work must be performed without an operational general announcing system, i.e., Ship’s 1MC, or a documented communication strategy approved by the SUPERVISOR.

3.4 Locate oxygen, acetylene, fuel gas, toxic, oxygen depleting (OD) gas supply systems off the ship. Manifolds connected to pierside supply systems may be placed on board ships as long as they are located on a weather deck and equipped with a shutoff valve located on the pier. The pierside shutoff valve must be in addition to the shutoff valve at the inlet to each portable outlet header required by 2.2.

3.4.1 Oxygen, acetylene, fuel gas, toxic, and OD gas supply systems must be stored to prevent collisions by trucks, forklifts, falling objects, etc.

3.4.2 Liquid oxygen (LOX) tanks must be staged in designated locations on the quay wall/pier to be determined jointly by the contractor, Ship’s Force, and the SUPERVISOR.

3.4.3 When gas cylinders are in use on board ship, they must be located on the weather decks or in a location determined jointly by the contractor, Ship’s Force, and the SUPERVISOR and must be secured in cylinder racks, and in an upright position. The number of in-use cylinders must be limited to those which are required for work in progress and which have pressure regulators connected to the cylinder valves. On-board reserve gas cylinders must not exceed one-half the number of in-use cylinders and must be located in a remote area of the weather decks or in a location determined jointly by the contractor, Ship's Force, and the SUPERVISOR. Reserve acetylene cylinders must be secured in an upright position.
3.4.4 When not in use, gas cylinders and manifolds on board must have valves closed, lines disconnected, protective cover (cap) in place, and must be secured. Acetylene cylinders must be secured in cylinder racks and in an upright position.

3.5 Each inert gas/oxygen depleting (OD), fuel gas and oxygen hose run must be positively identified with durable unique markings that include maintenance activity name, service type, location, and shore side shut-off points. Tags must be located (at a minimum) at the source, point of entry aboard ship, at each connection point (including quick disconnects), and termination point.

3.5.1 Unattended hose lines or torches are prohibited in confined spaces.

3.5.2 Unattended, charged hose lines or torches are prohibited in enclosed spaces for more than 15 minutes.

3.5.3 All hose lines must be disconnected at the supply manifold at the end of each shift.

3.5.4 All disconnected hose lines must be rolled back to the supply manifold or to open air to disconnect the torch; or extended fuel gas and oxygen hose lines must not be reconnected at the supply manifold unless the lines were given a positive means of identification when they were first connected and the lines are tested using a drop test to ensure the integrity of fuel gas and oxygen burning system. Alternate procedures must be approved by the SUPERVISOR.

3.5.5 Upon completion of system hook-up, accomplish a pressure drop test to include the torch, hoses, and gauges.

3.5.5.1 Apply pressure to the system. Back off pressure by turning off the valve supplying gases to the system. If the pressure on the gauge drops, a leak in the system exists. If the pressure on the gauge does not drop, the system is tight.

3.5.5.2 After applying pressure, wait 2 minutes to ensure pressure does not drop.

3.5.6 The use of gas hose splitters is prohibited.
3.6 Use fireproof or fire-retardant covering in accordance with MIL-C-24576, such as fireproofed canvas, fire-resistant synthetic fabrics, non-combustible fabrics, metal covers in accordance with ASTM D6413, or other suitable materials, to protect ship’s equipment from falling sparks or other potential sources of fire. Coverings must be in place prior to commencing hot work and be maintained throughout the hot work evolution. Proper documentation of fire retardancy must be available for review upon request.

3.6.1 Non fire-retardant temporary wooden structures located on the pier, dry dock edge, or in the dry dock (not including dry dock blocks) must be a minimum of 35 feet from the ship to prevent spread of fire.

3.6.2 Lumber, plywood, and staging boards, except that used for pallets, must be fire retardant in accordance with Category Two, Type II, of MIL-L-19140.

3.6.3 Storage of material aboard ship must be limited to that which is required for work in progress. Materials, trailers, temporary lights, flammable liquids, fueling of vehicles, and the rigging of hoses/welding leads/temporary lights aboard the ship must comply with the following: Material, including that stowed in bins that are placed and held temporarily on hangar decks, well decks, or tank decks must not exceed 8 feet in height. A 20-foot-wide lane must be maintained the length of hangar decks to act as a fire break. Material must occupy a deck space not to exceed 25-feet by 25-feet with adjacent 6-foot-wide aisles on each side for ready hose line access.

3.6.4 Prior to bringing equipment or working material aboard ship, its crating and packing must be removed. If the equipment or material may be damaged during handling, the crating and packing must be removed immediately after the equipment or working material is brought aboard and taken ashore for disposal. A small quantity of pallets may be staged in a location determined jointly by the contractor, Ship’s Force, and the SUPERVISOR aboard ship for use in materials handling operations.

3.6.5 Install sprinkling systems (or other firefighting equipment approved by the supervisor) on temporary structures constructed or staged in an internal sprinkler ed area of the ship (e.g., hangar bay, helo hangar) onboard for the purpose of material stowage.

3.6.5.1 Identify sprinkler and open sprinkler pendent, upright or sidewall type. The type must be most suitable for the shape and configuration of the protected area. Pendent and upright sprinklers must have 180-degree full cone spray patterns. The sprinkling density must be 0.2 gpm/sqft and the sprinklers must be arranged to cover the entire level of the temporary structure and all contents. Follow the manufacturer’s instructions
for spacing of sprinklers, distance from the overhead of the protected area, and distance from stowed material or obstructions. Place placards on the interior of the protected area and note the height that material cannot be stacked above.

3.6.5.2 The system must be a dry deluge type, manually operated by a quarter-turn sprinkler valve located outside and near the access to the structure. The system must be continuously charged up to the sprinkler valve, from the ship’s permanent or temporary firemain, using temporary piping or a non-collapsible hose suitable for the pressure and flow. Piping downstream of the sprinkler valve must be metal. Aluminum must not be used for piping. Place a placard at the sprinkler valve identifying the protected area and providing instructions on operating the sprinkler valve. Provide freeze protection with the water supply.

3.6.5.3 Automatic sprinklers, with the heat responsive and activating elements removed, may be substituted for open (deluge) sprinklers.

3.6.5.4 CONEX boxes/MILVANs staged within the ship for material storage or other operational purposes will be of all steel exterior construction and be capable of being completely sealed closed. Each enclosure placed on board the ship will be supported at least 10 inches above the deck. Only Class A type combustibles and non-combustibles are permitted to be stored within such structures and they must remain completely sealed closed when not being physically manned. When such structures are used as manned office or operating spaces (including temporary Enclosed Operating Stations), they must be equipped with smoke detection in accordance with 2.8 and must have at a minimum, one fire extinguisher of appropriate size and class at each access. The use of kitchen appliances (microwaves, coffee makers, hot pots, etc.) and hot work within the unit is prohibited.

3.6.5.5 Smoke alarms, approved by Underwriter's Laboratory, must be installed in enclosures and must be audible outside the enclosures.

3.6.6 Install sprinkling system on each temporary structures constructed or staged onboard not for the purpose of material stowage. The sprinkling density must be 0.1 gpm/sqft and the sprinklers must be arranged to cover the entire level of the temporary structure and all contents. The system must be a wet automatic type. The system must be continuously charged up to the sprinkler, from the ship’s permanent or temporary firemain. Place a placard at the sprinkler valve identifying the protected area and providing instructions on operating the sprinkler valve. Provide freeze protection with the water supply. Operation of the sprinkler system must sound an audible alarm outside the structure. Install smoke detection system inside the structure. Provide audible alarms both inside and outside the structure. Provide portable AFFF and CO2 extinguishers interior to the structure near the access.
3.6.7 The quantity of flammable and combustible liquids brought onboard must be kept to a minimum, must not exceed that necessary for one shift’s use, and must not be left unattended.

3.6.8 Fueling of vehicles or transfer of fuel between containers must be accomplished at designated sites on weather decks or in a location determined jointly by the contractor, Ship’s Force, and the SUPERVISOR. Notify ship’s Officer of the Deck prior to the fueling or transfer operation. When fuel is transferred between containers, the containers must be bonded and grounded to prevent static discharge. Fueling operations must be conducted at designated sites on exposed weather decks. All fuel must be transferred aboard ship in approved safety containers. Direct fueling of vehicles aboard ship must be avoided but may be utilized during operations via an approved fuel storage tank on the weather deck (flight deck, Helo deck, or deck edge elevator) provided the following safety precautions are provided and maintained by the performing activity:

3.6.8.1 Fuel storage tanks must be either of double wall construction or have integral cofferdam sized to exceed tank capacity.

3.6.8.2 Locate fuel storage tanks in a location approved by the SUPERVISOR, open to atmosphere on an exposed weather deck and not in interior spaces where a build-up of fuel vapors would be of concern.

3.6.8.3 Fuel storage tanks must be inspected and verified by safety personnel to meet safety requirements.

3.6.8.4 Perform and document weekly inspections of the fuel storage tanks.

3.6.8.5 Provide 2 dry chemical fire extinguishers, each with an Underwriter’s Laboratory rating of at least 60 B:C, within 20 feet of each fuel storage tank.

3.6.8.6 Post signs at each storage tank designating ownership and contact numbers in the event of an emergency.

3.6.8.7 Stage an Oil and Hazardous Substance Spill Response Kit at each fuel storage station.

3.6.8.8 Install metal coamings 4 inches high, tack welded and caulked to the deck, around all through-deck access openings to control flammable liquid spills. Modifications from this requirement based on location of the access openings may be approved by the SUPERVISOR.

3.7 Utilize the ship’s permanent and emergency lighting and power as the preferred systems. Plan and execute work in such a manner that the ship’s permanently installed lighting and power systems will be out of service for the minimum amount of time.
3.7.1 Install temporary lighting for ship’s lighting systems that are non-operational or require additional illumination.

3.7.2 Provide 2 sources of lighting to all spaces that normally have 2 sources for ship’s lighting systems that are non-operational. The lighting may be the ship’s permanent and emergency lighting systems or a combination of temporary and ship’s permanent lighting, provided that separate power sources are utilized for each system. The removal of lighting from spaces or compartments that could impede damage control efforts, personnel egress, and/or casualty responder access must require approval by the SUPERVISOR prior to removal.

3.7.3 Permanent or temporary lighting must meet the illumination requirements of 2.2.

3.8 Accomplish temporary access requirements as follows:

3.8.1 Temporary access cuts may be made in fire zone boundaries provided they are equipped with fume-tight steel closures when installed. Boundary degradation by use of temporary access cuts or passage of service lines must be permitted only upon granting of a written waiver by the SUPERVISOR, in conjunction with the Commanding Officer's designated representative, for a limited time.

3.8.1.1 Submit one legible copy, in approved transferrable media, of a record of boundary openings and their locations to the SUPERVISOR and one additional copy to the Commanding Officer's designated representative. Resubmit boundary opening data when any changes, additions, or deletions of boundary openings occur.

3.8.2 Ensure at least one unobstructed access on ships designed with 3 or fewer accesses to each main and auxiliary machinery space and at least 2 unobstructed accesses on ships designed with 4 or more accesses to each main and auxiliary machinery space.

3.8.3 Stage fire retardant material adjacent to the ship to provide for temporary closure of access cuts, hatches, and other hull penetrations created by contractor work (e.g., access cuts and open hatches due to running of temporary services).

3.9 Accomplish a fire prevention and housekeeping inspection during each shift whenever work is in progress. Once each manned/regular workday, the inspection must be made jointly with the SUPERVISOR and the Commanding Officer's designated representative. Deviation from this requirement for availabilities less than 30 days in duration must be adjudicated by the SUPERVISOR.
3.9.1 Submit one legible copy, in approved transferrable media, of request for deviation to the SUPERVISOR.

3.9.2 Submit one legible copy, in an approved transferrable media, of a written report of the discrepancies and corrective actions, using Attachment A, to the SUPERVISOR and the Commanding Officer's designated representative within 4 hours after completion of the inspection.

3.9.3 Provide a safety representative to accomplish the fire prevention and housekeeping inspection who at a minimum has completed the training required in para 3.1.2 and the following OSHA Training Institute (OTI) courses or NAVSEA approved equivalents: 5410; Occupational Safety and Health Standards for Maritime Industry, 3095; Electrical Standards, 3115; Fall Protection, 521; OSHA Guide to Industrial Hygiene.

3.9.3.1 Submit one legible copy, in approved transferrable media, of the certificates of completion for the required courses upon request by the SUPERVISOR.

3.10 Determine fire zone boundaries as follows:

3.10.1 The SUPERVISOR, Ship's Force, and the contractor must establish fire zone boundaries prior to start of production work.

3.10.1.1 For ships having fire zones by design, the designated bulkheads must be used as fire zones. Ships under 600 feet in length that do not have fire zones by design must have a minimum of 2 fire zone boundaries. Ships 600 feet and over in length that do not have fire zones by design must have a minimum of 3 fire zone boundaries.

3.10.2 Fire zone boundaries must be continuous through the vertical extent of the ship, from the keel up to the highest weather deck, excluding the superstructure.

3.10.2.1 For ships that have established fire zone boundaries that run from keel up through the superstructure, the fire zone boundaries as depicted on the ship's damage control diagrams must be observed.

3.10.2.2 On aircraft carriers, provide for closing of hangar division doors in case of fire in the event division doors being repaired by the contractor are mechanically inoperative. As a minimum, rig chain falls to manually close doors in the event of fire. Exceptions must be permitted only upon execution of a written waiver approved by the SUPERVISOR.

3.10.3 Indicate each fire zone by installing a sign adjacent to each entrance. Mark each sign with international orange tape.

3.10.3.1 Service line(s) must not be run through fire zone boundaries unless quick disconnects are installed in temporary service lines within 6 feet of the opening, door, or closure. The quick disconnects must
be marked with international orange tape and be positively identified with durable unique markings that include the maintenance activity name, service type, location, and shore side shut-off points. All service line(s) must be able to be secured and pulled back within 3 minutes. Fuel gas/oxygen/compressed gas hoses, steam lines, hoses pressurized above 140 PSI, or hoses carrying hazardous/flammable materials (as defined in Subpart P of 2.2) must not be run through fire zone boundaries. Hose numbers or sizes must not restrict free and easy access or closure of fire zone boundary doors.

3.10.3.2 Request for deviation must be in writing to the SUPERVISOR and must include the following; rational for deviation, location(s) and duration of each deviation, description of services that will violate any fire zone boundary, hazards associated with services, and the hazard mitigation plan(s).

3.11 Ensure access to temporary and Ship’s Force firefighting equipment is not obstructed or restricted.

3.11.1 Ensure Ship’s Force firefighting equipment is not relocated without written authorization from the SUPERVISOR. Provide a secure, Ship’s Force accessible temporary storage facility for firefighting equipment that is moved from its original location.

3.12 Conduct a firefighting and fire prevention conference in conjunction with the arrival conference or no later than 5 days after start of the availability for availabilities in excess of 30 days. This conference must familiarize Ship’s Force with the contractor’s fire safety and fire response plan for fire prevention and firefighting and with the procedures that will be in use by the contractor and the region/installation or municipal fire and emergency services, as well as familiarize the contractor and the region/installation or municipal fire and emergency services with the ship arrangement, shipboard fire prevention, and firefighting systems, equipment, and organization, and familiarize all parties with the scope of work and aspects of the work or ship conditions that have significance in fire prevention and firefighting.

3.12.1 The conference must specifically address the following matters:

3.12.1.1 Fire alarm and response procedures

3.12.1.2 Contractor firefighting capability and procedures

3.12.1.3 Region/installation or municipal fire and emergency services firefighting capability and procedures

3.12.1.4 Firefighting jurisdictional cognizance and incident command procedures
3.12.1.5 Communication system for fire reporting and control or firefighting efforts

3.12.1.6 Shipboard arrangement including access routes, availability or firefighting systems (installed and temporary), fire zone boundaries, and communication systems

3.12.1.7 Each shipboard firefighting organization, system, drill, and equipment to include rehabilitation procedure.

3.12.1.8 Ship, space, and equipment security consideration

3.12.1.9 Compatibility of ship, contractor, and region/installation or municipal fire and emergency services firefighting equipment

3.12.1.10 Industrial work scope, including location of ship, and effect on firefighting systems, access, and communications

3.12.1.11 The roles, responsibilities, and membership of the Fire Safety Council (FSC). Include the requirement to obtain permission from the FSC to perform work that affects the fire safety posture (e.g., securing the firemain, securing the 1MC, undocking, transferring fuel/lube oil) of the ship.

3.12.1.12 Hotwork monitoring and confined space practices.

3.12.2 The firefighting and fire prevention conference must include a table top fire drill.

3.13 Conduct a tour of the ship for Naval installation fire and emergency services/or municipal fire department personnel, the SUPERVISOR, Ship’s Force, and contractor key personnel assigned specific responsibilities during fires to familiarize personnel concerned with the ship’s normal access and anticipated condition while industrial work is in progress.

3.14 Provide a portable 300 KW diesel generator with associated cables, lugs/plugs to supply emergency power during transits to and from dry dock when ship’s emergency power cannot be used or anytime during the availability that the ship’s power is not available as an emergency back-up to installed shore power.

3.15 For Navy boats and craft, all paragraphs of this standard item will apply except paragraph 3.15.

4. NOTES:

4.1 In addition to CHT and MOGAS tanks, Hydrogen sulfide (H2S) may be found in AFFF, seawater, and firemain systems.
4.2 Booklet of General Plans and Tank Sounding Tables are available for review at the office of the SUPERVISOR.

4.3 A "quick disconnect" is a coupling or connecting device/system designed to permit easy and immediate separation of lines without the use of tools and to ensure the contents do not escape.

4.4 Shipboard fixed extinguishing systems such as Halon and CO2 are to be secured or isolated only at the discretion of the ship’s Commanding Officer or designated representative. Employees should be trained as required by 2.2 before entering/working in spaces with active shipboard fixed extinguishing systems.

4.5 The term “annual” means once a year, not-to-exceed 12 months.

4.6 When accomplishing work in Collection, Holding and Transfer (CHT) and Motor Gasoline (MOGAS) tanks, spaces, or associated piping is required; the use of Standard Item 009-88 of 2.1 “Collection, Holding and Transfer (CHT) and Motor Gasoline (MOGAS) Tanks, Spaces, and Piping, including Sewage or MOGAS-Contaminated Tanks, Spaces, and Piping; certify” will be specified in the Work Item.

4.7 Submit requests for deviations/waivers to the SUPERVISOR.

ITEM NO: 009-07
FY-20
ESH DISCREPANCY AND CORRECTIVE ACTION LOG INSTRUCTIONS

1. **Fire Zone Boundaries**: List the designated Fire Zone Boundaries.
2. **Attendees**: List Company and or Command and names of personnel present for walk thru.
3. **Ship Name/Hull Number**: Indicate ship name and hull number of the location of the walk thru.
4. **Location**: Indicate location where ship is moored or docked, i.e. name of contractor facility or pier at Naval Base or Station.
5. **Prime Contractor**: Indicate prime contractor who has the contract with the SUPERVISOR.
6. **Date**: Indicate date of walk thru being accomplished.
7. **Time**: Indicate start time (24 hour clock) of walk thru being accomplished.
8. **No. (number)**: List sequentially, each discrepancy noted during the walk thru. Number will continue where the numbering left off the previous day, until the end of the availability.
9. **Point of Contact**: Indicate Company/Command identified with the discrepancy.
10. **Date Corrected**: Date condition was corrected. If condition is not corrected, condition will be carried over to the next walk thru until condition is corrected.
11. **Location**: Indicate location of the condition, i.e. space number or frame number.
12. **Discrepancy**: Indicate condition that needs corrective action, be specific as necessary.
13. **Corrective Action**: Indicate corrective action taken to correct the condition and who is responsible for the corrective action.
14. **Code**: Indicate code, located at the bottom of ATTACHMENT A that condition can be grouped with, i.e. lines on deck causing trip hazard would use code 14-Lines and Leads Hazards.

NAVSEA  
STANDARD ITEM  

FY-20  

ITEM NO: 009-08  
DATE: 31 AUG 2018  
CATEGORY: I  

1. SCOPE:  
1.1 Title: Shipboard Fire Protection and Fire Prevention; accomplish

2. REFERENCES:  
2.1 NFPA Standard 312, Standard for Fire Protection of Vessels During Construction, Conversion, Repair, and Lay-up  
2.2 NFPA Standard 1962, Standard for the Care, Use, and Service Testing of Fire Hose Including Couplings and Nozzles  
2.3 29 CFR Part 1915, Occupational Safety and Health Standards for Shipyard Employment  
2.4 NFPA Standard 14, Standard for Installation of Standpipe and Hose Systems  
2.5 NFPA Standard 1961, Standard on Fire Hose  
2.6 NFPA Standard 701, Standard Methods of Fire Tests for Flame Propagation of Textiles and Films

3. REQUIREMENTS:  
3.1 Plan and execute all work to minimize the use of temporary firefighting systems. When the scope of work allows, the ship's firemain system shall provide the ship's firefighting capability.  

3.1.1 Firemain system repairs or modifications that reduce the coverage or damage control capability of the ship's firemain shall be coordinated through the use of jumpers and/or temporary fire hose manifold stations in affected areas to restore firefighting capabilities.  

3.1.2 Use of temporary firefighting systems shall be approved by the SUPERVISOR.  

3.2 Provide fire protection in accordance with 2.1 through 2.4.
3.3 Establish, document, implement, and maintain a Shipboard Temporary Fire Protection Plan when temporary fire protection is needed. The plan shall include, at a minimum, the following elements:

3.3.1 Temporary firefighting and dewatering equipment inventory

3.3.2 Identification of which hoses/pipes are charged/not charged

3.3.3 Diagram of temporary firemain system, to include the following elements:
   3.3.3.1 Diameter, length, and connection path of each distribution hose/pipe (See Note 4.3)
   3.3.3.2 Location of each temporary fire hose manifold station.
   3.3.3.3 Connection locations to shore side water supply.
   3.3.3.4 Coverage for all spaces where ship’s firemain is inoperative.

3.4 Submit one legible copy, in hard copy or approved transferrable media, of the initial Shipboard Temporary Fire Protection Plan to the SUPERVISOR for approval and posting no later than 10 days prior to placing any section of the ship’s firemain out of service.

3.4.1 Submit one legible copy, in hard copy or approved transferrable media, of an updated Shipboard Temporary Fire Protection Plan prior to any modification to the plan after initial approval.

3.5 Provide information on the operation and use of the Temporary Firemain and the Shipboard Temporary Fire Protection Plan at least one day prior to securing ship’s firemain and no later than one day prior to entering dry dock, graving dock, or marine railway.

3.6 Provide temporary fire protection equipment as follows:

3.6.1 Each fire hose shall be:

   3.6.1.1 Manufactured with National Hose/National Pipe Straight Hose (NH/NPSH) fittings (NH for 2 and one-half inch and larger hoses, and NPSH for one and one-half inch couplings to ensure compatibility with shipboard equipment).

   3.6.1.2 Inspected and service-tested in accordance with 2.2 within 90 days prior to being placed in service for the first time and annually thereafter.

   3.6.1.3 Cotton or synthetic double jacketed manufactured to the requirements of 2.5 or in accordance with MIL-H-24606B.
3.6.2 Each fire hose nozzle shall be:

3.6.2.1 One and one half inch combination straight stream and spray pattern nozzles, conforming to MIL-N-24408, rated for 125 gallons per minute (GPM) at 100 pounds per square inch (PSI).

3.6.2.2 Pre-connected to the end of each handline hose and maintained operational. (See Note 4.4)

3.6.3 Each temporary fire hose manifold station shall:

3.6.3.1 Be provided in sufficient numbers such that all parts of the ship, including the interior of temporary structures, can be reached from at least 2 each, 100 foot lengths of one and three-quarters inch hand line hoses, with no allowance for stream reach.

3.6.3.2 Have, at a minimum, three handline outlets, each individually valved from each temporary fire hose manifold station. Each handline outlet shall be one and one half-inch NPSH thread.

3.6.3.3 Have distribution hoses of sufficient size to meet a minimum of 95 GPM and 60 PSI residual nozzle pressure at the end of each one and three-quarters inch handline hose.

3.6.3.4 Have 2 each, 100 foot lengths of one and three-quarters inch handline hose manufactured with one and one-half inch NPSH couplings pre-connected to temporary fire hose manifold station valve outlets and faked on racks nearby.

3.6.3.5 Have pressure gauges installed with a 0 – 250 (plus or minus 50) PSI range.

3.6.3.6 Have a 0 – 250 (plus or minus 50) PSI range calibrated gauge installed on the hydraulically most remote temporary fire hose manifold station. (See Note 4.2).

3.6.3.7 Have operating instructions posted on each temporary manifold station with sources of water identified. Instructions must endure the repair process, stay attached, and be legible the entire time the station is on board.

3.6.4 Each primary fire pump shall:

3.6.4.1 Have functioning auto start capability.

3.6.4.2 Provide GPM flow specified in Attachment A uninterrupted at a minimum of 150 PSI measured at the most remote shore side outlet providing firemain water to the ship.
3.6.4.3 Maintain constant pressure automatically without manually manipulating valves.

3.6.5 Each back-up fire pump shall:

3.6.5.1 Be equivalent to primary fire pump(s), powered from a source(s) different than that powering the primary fire pump(s), and be pre-installed in the temporary fire protection system.

3.6.6 Ensure when ship's firemain system cannot be used, portable fire pump(s) capable of providing a total of 500 GPM at 100 PSI shall be on board the ship during berthing shifts, transits to and from Naval facilities, dockings, undocking’s. The pump shall be connected to the ship’s firemain system or the temporary firemain system prior to ship movement.

3.6.7 Ensure all engine driven equipment providing emergency services (firefighting water, power, and lighting) are equipped with a functioning audible low fuel level alarm capable of producing a continuous 110dBA (plus 0 or minus 25 decibel) signal.

3.6.8 When connection of the shore supply to the ship’s Firemain Shore Connection fitting is not possible, ensure a tri-gate hose connection compatible with the ship’s portable fire pumps is used to connect to the ship’s fire plugs, to permit ship’s firemain to remain in service while also acting as shore firemain connection.

3.6.9 Provide and install distribution hoses connected to the ship’s permanent firemain or temporary firemain in sufficient number to deliver the fire protection capacity specified in Attachment A. This shall be determined by dividing the water supply capacity from Attachment A (plus cooling and flushing loads) by the hose line capacity for the chosen distribution hose/pipe diameter. (See Note 4.1 for example).

3.6.9.1 The number of hoses connected to the ship from the shore shall not be reduced when the ship’s firemain becomes operational unless the permanently installed pumping capacity of the ship can meet the entire fire protection water supply requirement of Attachment A plus cooling and flushing loads.

3.6.10 Unpressurized 2 and one-half inch drop lines, supplied from a temporary hose manifold station, with a 2 and one-half inch NH by one and one-half inch NPSH by one and one-half inch NPSH hose fittings may be utilized to provide coverage to the lowermost compartments (tanks and voids) that are inaccessible with a 100 feet of handline hose, approved by the SUPERVISOR.

3.6.11 Equip temporary firemain systems with a minimum of 2 isolation valves from shore side supply prior to entry to the temporary firemain system. Place additional isolation valves in the remainder of the
temporary firemain system so that the maximum distance between any 2 adjoining valves does not exceed 200 feet.

3.7 Provide emergency fire protection equipment as follows:

3.7.1 Install a temporary fire alarm system on the quarterdeck configured to send a signal directly to the cognizant fire department, shipyard/Naval facility fire department, or a continuously manned location within the shipyard/Naval facility where trained personnel can take immediate action to transmit an alarm.

3.7.1.1 Temporary fire alarm devices placed aboard ship shall be a fire alarm pull box, non-dial telephone, or as approved by the SUPERVISOR.

3.7.1.2 Provide a telephone on the quarterdeck, in addition to the temporary fire alarm system, as an alternate means of calling the cognizant fire department, shipyard/Naval facility fire department, or a continuously manned location within the shipyard/Naval facility where trained personnel can take immediate action to transmit an alarm.

3.7.1.3 Conspicuously post the emergency reporting procedures at the quarterdeck.

3.7.1.4 Test the temporary fire alarm system daily. Repair or replace defective or inoperative equipment immediately. Submit one legible copy, in hard copy or approved transferrable media, of the test report for the temporary fire alarm system, when requested by the SUPERVISOR.

3.7.2 Provide dewatering equipment to include a sufficient number of pumps capable of providing 100 GPM minimum each and a total dewatering capability equal to at least one-half of the supply GPM specified in Attachment A.

3.8 Develop and implement a written Fire Safety and Emergency Fire Response Plan in accordance with 2.3. In addition to the requirements of 2.3, the plan shall identify:

3.8.1 Each integrated fire protection system in effect during the performance of the maintenance availability.

3.8.2 Each fire prevention program used, along with the types and frequency of tests of equipment and devices.

3.8.3 Details of all communication links (telephones, drop boxes, alarms, horns) location, testing interval, and interface with shore side response systems.
3.8.4 Each normal and emergency source of electric power, firefighting water, lighting, testing interval, and interface with shore side response systems.

3.8.5 Each location of all normal and emergency backup support equipment to be used in support when combating a fire, and the equipment's testing cycle.

3.8.6 Each organization to be used, designation of responsibility for all shifts, training, anticipated response times, and interface with shore side response units.

3.8.7 Ensure general procedures for directing contractor employees on fire reporting, fire responses, firefighting actions, personnel accountability, and prolonged firefighting responsibilities.

3.8.8 Provision for portable communication devices for contractor use during firefighting operations between site, fire, and contractor's/shipyard’s operations center.

3.8.9 Submit one legible copy, in hard copy or approved transferrable media of the Fire Safety and Emergency Fire Response Plan to the SUPERVISOR no later than 10 days prior to commencement of work.

3.8.9.1 Submit one legible copy, in hard copy or approved transferrable media, of an updated Fire Safety and Emergency Fire Response Plan prior to any modification to the plan after initial approval.

3.9 Review the Fire Safety and Emergency Fire Response plan in accordance with 2.3 with contractor employees and subcontractors.

3.10 Ensure access to temporary and Ship’s Force firefighting equipment is not obstructed or restricted.

3.11 Provide fire reporting devices in Dry dock, graving dock, or marine railway as follows:

3.11.1 Fire reporting devices shall be clearly identified and located at each manifold station and each exit serving the dry dock, graving dock, or marine railway.

3.11.2 Fire reporting device separation shall not exceed 200 feet horizontally along the dry dock, graving dock wall, or marine railway or 100 feet from either end of the dry dock, graving dock, or marine railway.

3.11.3 Modifications to locations of fire reporting devices for ships docked side by side, must be approved by the SUPERVISOR.
3.12 Provide water for firefighting to the ship through sufficiently sized hoses or pipes to carry capacities specified by Attachment A. These requirements shall be in addition to water required for flushing and cooling.

3.12.1 Maintain a minimum of 100 PSI residual and static pressure uninterrupted for the entire availability and during testing, measured at each temporary fire hose manifold station.

3.13 Locate each temporary fire distribution hose and each fire hose manifold station to minimize exposure to areas of the ship where flooding due to a ruptured hose would cause damage.

3.14 Conduct an orientation brief to Ship’s Force no later than 5 days of the availability start to include the following:

3.14.1 Procedures to rapidly secure temporary systems (e.g., air, electrical power, and ventilation) under Ship’s Force control.

3.14.1.1 Train Ship’s Force personnel on the procedures to operate temporary firefighting systems, if installed. Provide written operating procedures/instructions to Ship’s Force on each type of firefighting system. Provide information and physical training aids for all versions of quick disconnect fittings used in conjunction with temporary services.

3.14.2 Procedures to operate temporary firefighting equipment.

(I)(G) “TEMPORARY FIREMAIN OPERATIONAL TEST”

3.15 Conduct an operational test of both shore side supply and shipboard distribution of firefighting water through the temporary firemain system prior to taking down ships firemain. 3.15.1 and 3.15.2 shall be tested concurrent with acceptance criteria met simultaneously.

3.15.1 Discharge firefighting water from 4 each one and three-quarters inch handline hoses from the two most hydraulically remote temporary fire hose manifold stations on the ship that share the same distribution hose (four nozzles total). Discharge firefighting water from each hose simultaneously for 60 seconds prior to measurement start in order to obtain steady state flow conditions. Once at steady state, test firefighting water flow for a minimum of 60 seconds. Measure and record flowrate and residual nozzle pressure at each nozzle by in-line flow meter and calibrated nozzle pressure gauge. The elevation of each nozzle tested shall be equal to or greater than the elevation of the temporary fire hose manifold station providing water to that nozzle. Accept/Reject Criteria: Temporary pumps shall automatically start. Maintain a minimum of 95 GPM and a minimum of 60 PSI residual pressure while flowing simultaneously at each nozzle for a minimum of 60 seconds. Pressure and flowrate shall be constant, maximum
nozzle pressure variation allowed during 60 seconds is plus 25 or minus 0 PSI.

3.15.1.1 When nozzle(s) cannot be tested at the same or higher elevation as the temporary fire hose manifold station(s), add 4.5 PSI to residual nozzle pressure acceptance criteria per 10 foot drop in elevation from the station(s).

3.15.2 Measure and record residual pressure at the shore side supply outlet(s) providing water to those temporary fire hose manifold stations tested in 3.15.1 while simultaneously discharging the 4 nozzles tested in 3.15.1. Accept/Reject Criteria: Maintain a minimum of 150 PSI residual pressure at the shore side supply outlet(s).

3.15.3 Accomplish a retest of 3.15.1 and 3.15.2 if the system is modified after initial test and the criteria of either 3.15.3.1 or 3.15.3.2 are met.

3.15.3.1 After any temporary firemain system modification, where the previously tested hydraulically most remote stations are no longer the hydraulically most remote.

3.15.3.2 After any temporary firemain system modification, where the available residual pressure at the most hydraulically remote stations is reduced.

(V) “TEMPORARY FIREMAIN OPERATIONAL TEST”

3.16 Conduct an operational test of temporary firemain discharge water every 60 days from the most hydraulically remote temporary fire hose manifold station to verify valves are not secured and/or obstructions in the piping system are not present. Verify that all control valves in the temporary firemain system are in the intended open/closed position. Accept/Reject Criteria: Maintain a minimum of 95 GPM and a minimum of 60 PSI residual pressure while flowing one nozzle for a minimum of 30 seconds.

(I)(G) “PERIODIC SHORE SIDE WATER SUPPLY VALIDATION”

3.17 Conduct validation of shore side water supply flow and pressure prior to availability start date, each time the vessel shifts berths, and annually thereafter should the contract extend beyond one year. Measure and record flow and residual pressure using a calibrated in-line flow meter and calibrated pressure gauge. Accept/Reject Criteria: Minimum water supply specified in Attachment A plus flushing and cooling loads is available at the shore side firemain supply outlet(s) and with a minimum of 150 PSI residual pressure.
3.18 Provide a recirculation capability where weather and flow conditions are such that freezing may occur. Freeze protection equipment shall be functional when temperatures drop below 40 degrees F.

3.19 Use of aluminum piping in a temporary saltwater firemain system is prohibited.

3.20 Provide a representative, whose purpose is to coordinate and be responsible for the management of all project temporary services, including services provided by other maintenance activities.

3.21 The following applies to routing of temporary services through installed ship hull openings, both exterior and interior, designed for personnel ingress and egress:

3.21.1 Doorways/Hatches: Temporary services shall be routed within the topmost area of the opening, such that the unobstructed opening of any doorway/hatch with services run shall be at least fifty (50) inches high and twenty-six (26) inches wide.

3.21.2 Vertical Ladders: Temporary services shall be routed to allow safe access. Route services so that personnel may transit the hatch. Services shall not be routed within four (4) inches on either side of the ladder. Services routed behind the ladder shall not interfere with safe access to the ladders and rungs.

3.22 In the event temporary services cannot be routed through interior and exterior installed shipboard personnel openings in accordance with the direction provided above, additional access cuts shall be utilized for routing of temporary services or personnel access and egress. Deviation from this requirement must be adjudicated by the SUPERVISOR.

3.22.1 Submit one legible copy, in hard copy or approved transferrable media, of each approved deviation to the SUPERVISOR.

3.23 Submit one legible copy, in hard copy or approved transferrable media, of a consolidated drawing in the format of a damage control diagram, depicting all services entering the ship to the SUPERVISOR within 2 days of availability start date.

3.23.1 The drawings shall be conspicuously posted at the quarterdeck and damage control central for use by emergency responders. The drawing shall include the issue date clearly legible on each page. The drawing shall be updated weekly, or immediately to reflect significant changes, and shall be suitable for use by emergency responders for isolation of services during an emergency.

3.23.2 At a minimum, the drawing shall include:

3.23.2.1 Type and description of service.

3.23.2.2 Shore side shut-off points.
3.23.2.3 Route of service through the ship.
3.23.2.4 Location of quick disconnect fittings.
3.23.2.5 Identification of critical temporary services and any cautions for critical services.
3.23.2.6 Status of hull openings and access cuts and identification and location of closure materials.
3.23.2.7 De-watering capabilities.
3.23.2.8 Designated fire zone boundaries.
3.23.2.9 Critical temporary services and their shore side shut-off points shall be highlighted.

3.24 Install quick disconnect fittings (QDF) within 6 feet of hull penetrations used for personnel access to facilitate the deployment of smoke control curtains. Where it is necessary to support a service between a QDF and the designated boundary or hull penetration, the type of support shall not prevent rapid clearing of services from the opening.

3.24.1 For hull openings used for services only, a QDF is not required, provided the opening is fitted with an air and smoke control curtain that remains in place around the services.

3.24.1.1 Curtains shall be made of fire retardant fabric in accordance with 2.6.

3.25 Temporary enclosures erected around hull access openings shall be constructed with openings and removable covers to accommodate standard smoke control ventilation fans (e.g., damage control box fans). If the enclosure is constructed with ventilation fans installed, the fans shall be equipped with reverse air flow capability.

3.26 Ensure that adequate protection is provided during installation, operation, and removal of temporary services. For fluid systems, spray protection shall be installed at each mechanical joint of a temporary system that is inside of the hull of the vessel, in the vicinity of shore power or electrical equipment, or in the vicinity of hull openings to prevent fluids other than air spray on ship’s equipment. Spray protection shall consist of adequate see through sheeting (minimum 5 mils thickness) around each joint secured by several wraps of tape allowing view of the component as much as possible. Anti-chafing protection shall be installed around services in particular areas (i.e., hatches, high traffic areas, vicinity of sharp objects) where there is a high risk of damage.

4. NOTES:
4.1 Example equation for DDG-51 Class with 200-foot hose:
Parameters for the example:

Attachment A = 1000 GPM for DDG
Sample Cooling and flushing load: 250 GPM
Attachment B = 200 GPM for 200-foot hose of 2 and one-half inch hose

\[
\frac{(Attachment\ A + \text{Cooling and Flushing Load})}{Attachment\ B} = \text{# of hoses required}
\]

\[
\frac{(1000\text{gpm} + 250\text{gpm})}{200\text{gpm}} = 6.25 \text{ hoses}
\]

Requires 7 (rounded up to next whole number) 2 and one-half inch hoses to supply firefighting and cooling load.

4.2 "Hydraulically Remote" is defined as an area/location that will encounter the highest pressure loss, from both flow friction and elevation change, while encountering maximum possible flowrate.

4.3 Distribution Hose is defined any hose or pipe that transports water to the temporary hose manifold stations or ship’s firemain.

4.4 Handline Hose is defined as the hose(s) that transports water from the temporary hose manifold station to the hose fire nozzle.

4.5 Air and smoke control curtains are not intended to provide an air tight seal of the hull opening. The curtains are to ensure that emergency responders can control the flow of air and smoke through the opening to allow for de-smoking of compartments, and minimize “chimney” effects.

4.6 A "quick disconnect" is a coupling or connecting device/system designed to permit easy and immediate separation of lines without the use of tools and to ensure the contents do not escape.

1. SCOPE:

1.1 Title: Process Control Procedure (PCP); provide and accomplish

2. REFERENCES:

2.1 Standard Items

3. REQUIREMENTS:

3.1 Submit one legible copy of each PCP, in approved transferrable media, to the SUPERVISOR for approval. For planned availabilities, submission **must** be no later than 14 days prior to start of the required process, or as otherwise approved by the SUPERVISOR. At a minimum, Attachment A **must** be used for PCP development; ensure each element is contained within its respective section.

(V)(G) "START OF PROCEDURE"

3.2 Provide notification to the SUPERVISOR when ready to start the PCP.

3.2.1 Verify the PCP is approved.

3.2.2 Verify necessary parts and equipment are on hand to start work.

3.2.3 Attend job briefing conducted prior to start of work, to include personnel safety brief with ship’s force. **Specific to craft, ship’s force attendance is not required.**

3.2.3.1 For SI 009-88 PCP’s, the safety brief **must** include a hand-over-hand inspection and verification of the tagged-out piping/mechanical/electrical system.

3.3 Accomplish the requirements of the approved PCP.

3.4 Make pen-and-ink editorial changes to the PCP when required after work commences. Editorial changes are limited to those correcting typographical errors and do not create a technical change as defined in 3.5.
3.5 Submit one legible copy, in approved transferrable media, of a report to the SUPERVISOR identifying any technical changes required after work has commenced and prior to proceeding with the affected procedural steps. Technical changes include any change to work scope, work location, work sequence, testing, technical parameters (torque, test pressure, flow rate, etc.), material, inspections, repair processes, references, or change which otherwise alters any technical aspect of the work.

3.5.1 Make technical changes to the PCP and proceed when approved by the SUPERVISOR.

3.6 Ensure completed process control documentation provides a record of the data required to control and determine the satisfactory completion of the process.

4. NOTES:

4.1 A PCP is considered a report if data is recorded.
ATTACHMENT A
Process Control Procedure (PCP) Requirements

Section One - Identification

• Include the Process Title and Procedure Number with revision on each page.
• List the Ship’s name, Work Item and paragraph that the PCP fulfills.
• Include contractor/subcontractor's name and address.
• Include space for the Approval Signature and title of the contractor's representative. Include spaces for the Date Developed, Date of Submission and scheduled start date.
• If submitting a previously approved PCP, include the previous Government approval letter (if appropriate) and attach a letter of intent to use the PCP with the updated information required by this section. A revision of Section 1 of the previously approved PCP is not required. A previously approved PCP is defined as one that has been approved by the SUPERVISOR for a like system or component.

Section 2 - Personnel Qualifications

• List the qualifications of the personnel performing the work.
• Include a statement that a briefing will be conducted prior to beginning work to ensure personnel have direct knowledge of the requirements of the procedure and the safety requirements of the job.

Section 3 - Process Description

• Method utilized to control the procedure.
• List any specialized or critical equipment needed to perform the work.
• List any specialized or critical personnel safety equipment.
• State that Government Notification (V)(G) will be made at the start of the process as applicable.
• Describe the process as related to the sequence of work, including each critical factor which has a direct bearing on the process quality and safety.
• Provide inspections required for the process, to include (V), (I), and (G) symbols invoked by the Work Item applicable to the process.
• Provide inspection and documentation forms applicable to the process.
• List the acceptance and rejection criteria used for determining satisfactory process completion.
• Include a statement that a copy of the PCP will be provided at the work site during the performance of the work.

Section 4 - Hazardous Material

• State if no hazardous material/waste will be used or generated.
• Identify any hazardous material/waste used or generated during the performance of work.
• Describe the methodology to limit the quantity that will require control.
• Describe the methods of the disposal of hazardous material or hazardous waste.
1. **SCOPE:**

   1.1 Title: Asbestos-Containing Material (ACM); control

2. **REFERENCES:**

   2.1 29 CFR 1915.1001, Occupational Safety and Health Standards for Shipyard Employment, Asbestos

   2.2 MIL-STD-769, Insulation Requirements for U.S. Naval Vessels

   2.3 40 CFR Part 61, National Emission Standards for Hazardous Air Pollutants

3. **REQUIREMENTS:**

   3.1 Consider shipboard insulation, lagging, deck tile, underlayment, gasket, shipboard cabling (see 4.2), and mastic to be asbestos-containing material (ACM) until it can be established by laboratory analysis, or other reliable method(s), that the material does not contain asbestos, in accordance with 2.1. This includes reusable covers as defined in 2.2.

   3.1.1 Material containing asbestos that requires removal for interference shall not be reinstalled.

   3.1.2 Submit one legible copy, in approved transferrable media, of a report listing location and system identification of asbestos removed and non-asbestos installed which has not been identified elsewhere in the Job Order, to the SUPERVISOR.

   3.2 Apply the following requirements for the removal, disturbance, or disposal of all asbestos containing materials during the initial monitoring, daily monitoring, and control of ACM throughout the work areas, and to Class I, II, III, or IV activities as defined in 2.1.

   3.2.1 Ensure that responsibilities for personnel safety and environmental control of ACM existing or damaged during accomplishment of work are assigned and implemented.
3.2.1.1 Plan for the removal of ACM up to the specified amount provided in Attachment A.

3.2.1.2 If the total costs are less than the cost to remove the authorized square footage, remaining funds will be subject to recoupment. The contractor is not authorized to exceed these limits.

3.2.2 Maintain written substantiation of the credentials of the Qualified Person.

3.2.2.1 The Qualified Person shall take airborne samples, monitor work practices, maintain daily logs, conduct on-site inspections, set up regulated areas, be capable of specifying the necessary protection and precautions to be taken during work with ACM, and accomplish the other requirements in accordance with Class I, II, III, and IV activities as defined in 2.1. The Qualified person shall have successfully completed an initial EPA or state approved 40-hour Asbestos Supervisor's Course and annual refreshers.

3.2.2.2 Individuals performing airborne asbestos analysis must have successfully completed a NIOSH 582 course or equivalent and be rated proficient in either AIHA's PAT program or AAR program. Persons performing analysis of fiber type on bulk samples must have completed a McCrone Course in analysis of bulk asbestos samples and be rated proficient in either the NVLAP or AIHA's asbestos program.

3.2.2.3 Copies of certifications, licenses, notifications (such as advance notification to OSHA of new or modified control technology to be used to reduce exposure), and other documentation required by federal, state, and local regulatory authorities, shall be maintained at the worksite.

3.2.3 Identify removal routes and steps to be taken to protect insulation, repair damaged insulation, and to avoid asbestos contamination along those routes and obtain SUPERVISOR approval prior to proceeding.

3.2.4 Submit one legible copy, in approved transferrable media, of notifications made to regulatory authority, regarding ACM removal, to the SUPERVISOR within 2 days of providing such notices to the regulatory authority.

3.2.5 Submit a written notice to the SUPERVISOR and to the Commanding Officer's designated representative, and post at the Ship's Quarterdeck or other designated location for each job or separate area of ACM removed or damaged aboard ship where there may be ACM at least 4 hours, but not more than 24 hours, prior to the start of work. The notice shall contain the following information:

3.2.5.1 Ship's name and hull number

3.2.5.2 Work Item number
3.2.5.3 Compartment

3.2.5.4 Class of activity and type of insulation, lagging, deck tile, underlayment, and mastic, i.e., ACM or possible ACM (provide basis for determination)

3.2.5.5 Date and time to start to work

3.2.5.6 Deliver notification for work planned over a weekend or Monday following that weekend to the Commanding Officer's designated representative no later than 0900 on the Friday immediately preceding that weekend.

3.2.5.7 Deliver notification of work planned on a federal holiday and on the day following the federal holiday to the Commanding Officer's designated representative no later than 0900 of the last working day preceding the federal holiday.

3.2.6 Personnel accomplishing ACM work shall have a direct knowledge of the requirements of this procedure prior to beginning work. All training shall be under the direct supervision of a Qualified Person.

3.2.7 Monitor the affected areas daily to ensure compliance with 2.1. Monitoring shall include adjacent spaces to ensure the work area containments and work practices are effective. Results of surveillance shall be documented and the documentation shall be provided to the SUPERVISOR.

3.2.8 Submit one legible copy, in approved transferrable media, of a list of regulated areas, decontamination areas, and engineering controls to be established in accordance with 2.1, to the SUPERVISOR.

3.2.8.1 Identify configuration of critical barriers or isolation methods.

3.2.8.2 Identify location/configuration of decontamination areas, including the equipment room, shower (if necessary), and clean change room.

3.2.8.3 Identify ventilation and filtration requirements, including the negative pressure enclosure(s) if necessary.

3.2.9 Isolate or blank the ship's ventilation systems in work areas to prevent asbestos contamination.

3.3 Post prominent warning signs as required by 2.1 outside of regulated areas.
3.4 Monitor work areas.

3.4.1 Determine areas of airborne concentrations and potential personnel exposure to airborne asbestos fibers in accordance with the requirements of 2.1.

3.4.2 Take air samples and monitor regulated areas in the vicinity of access openings that are not tightly secured.

3.4.2.1 If the airborne concentration of asbestos fibers is at, or exceeds, 0.1 fiber, longer than 5 micrometers, per cubic centimeter of air, corrective action shall be taken to reduce the concentration to less than 0.1 fiber, longer than 5 micrometers, per cubic centimeter of air.

3.5 Accomplish ACM removal as follows:

3.5.1 Secure and tag out ventilation systems securing the work area.

3.5.1.1 Blank ventilation systems to prevent contamination of the ventilation systems and other compartments.

3.5.2 Air discharged to the environment from any containment zone shall have passed through a HEPA filter and otherwise conform to 2.3. A negative pressure will be maintained in the containment area where possible.

3.5.3 Remove materials which may contain ACM, using wet work practices and engineering controls that will minimize airborne contamination in and adjacent to the work area.

3.5.3.1 Removal tools and work practices shall minimize the generation of airborne contamination and the deposit of ACM in the work area.

3.5.3.2 Equip vacuum cleaners used to help prevent the dispersion of asbestos fibers with HEPA filters.

3.5.3.3 Clear the work area of loose ACM, including ACM dust, prior to returning the area to normal status.
3.5.4 Contain edges of insulation exposed by removal operations by cutting the exposed surface true and square and sealing the surface. Encapsulate exposed ACM surfaces with insulating cement conforming to ASTM C 195.

3.6 Dispose of ACM by bag method described below:

3.6.1 Collect and dispose of ACM waste, scrap, debris, and special clothing consigned for disposal, which may produce airborne concentrations of asbestos fibers, in sealed, impermeable polyethylene bags (minimum thickness, 6 mils). Prior to placing in bags, asbestos waste shall be wet down to reduce airborne concentrations of asbestos fibers.

3.6.2 Bag ACM scrap, debris, and waste at the worksite.

3.6.3 ACM shall be placed in sealed, 6-mil or heavier, impermeable polyethylene bags before removal from the work area. Pieces of insulation too large to fit into bags shall be encased in 6-mil, or heavier polyethylene film with edges sealed with tape conforming to MIL-C-20079.

3.6.4 Vacuum outer surfaces of bags containing ACM in affected areas immediately after removal from and adjacent to the worksite.

3.6.5 Place the ACM waste while wet in leak-tight double bags.

3.6.6 Label each bag, in accordance with 2.1 and 2.3, prior to removal from regulated areas.

3.6.7 Affix a legible label to each bag stating the contractor's name, the name of the ship the asbestos was removed from, the name of the facility where the work was performed and date of the removal. The label shall be in permanent waterproof marking.

3.6.8 Dispose of bags containing ACM waste in accordance with applicable federal, state, and local regulations. Provide a copy of the completed Waste Shipment Record to the SUPERVISOR within 15 days after initial shipment.

3.7 Monitor the area for asbestos upon completion of work and after cleanup.

3.7.1 The airborne concentration of asbestos fibers after work and cleanup shall be less than 0.1 fiber, longer than 5 micrometers, per cubic centimeter of air on an 8-hour, time-weighted average basis. The workspace shall not be released for entry of unprotected personnel until verification has been provided to the SUPERVISOR that the airborne level of asbestos is less than the 0.1 fiber level.

3.7.1.1 Submit one legible copy, in approved transferrable media, of the lab analysis listing results of air monitoring certifying the
area to be less than 0.1 asbestos fiber longer than 5 micrometers per cubic centimeter of air, to the SUPERVISOR.

3.8 Remove ACM from salvage or scrap equipment, piping, and structural components prior to delivery to the GOVERNMENT.

4. **NOTES:**

4.1 See additional notification requirements of NAVSEA Standard Item 009-01.

4.2 Shipboard cabling as used in 3.1 refers to all shipboard cabling, with the exception of low smoke, coaxial cables, and lamp cord cabling.

4.3 The following ACB circuit breakers listed by manufacturer contain non-friable asbestos arc chutes:

- **4.3.1 SPD, ITE, ITE/Gould:** 640R, 900RC, 901R, 1600R, 1600HR, 1600HRC, 2000HR, 2000RC (450V), 2601R, 2801R, 3200HR, 4000HR.

- **4.3.2 General Electric:** All types.

- **4.3.3 Westinghouse:** All DBN types.

4.4 The term "asbestos fibers" is defined in 2.1.

4.5 Salvage - Property has some value in excess of its basic material content, but repair or rehabilitation to use for the originally intended purpose is clearly impractical. Repair for any use would exceed 65 percent of the original acquisition cost.

4.6 Scrap - Material that has no value except for its basic material content.

1. **SCOPE:**

   1.1 Title: Insulation and Lagging; accomplish

2. **REFERENCES:**

   2.1 Standard Items

   2.2 MIL-STD-769, Insulation Requirements for U.S. Naval Vessels

   2.3 804-5959212, Surface Ship Machinery Insulation - Installation Details

   2.4 804-5959214, Piping Insulation - Installation Details

   2.5 804-5773931, Insulation for Compartments, Acoustic and Thermal Installation Details

   2.6 804-5773932, Insulation for Ducts, Acoustic and Thermal, Installation Details

   2.7 803-5184182, Insulation, Passive Fire Protection - Installation Details

   2.8 46 CFR Part 164, Materials

   2.9 S4823-C-3160935, Fasteners for Insulation and Lagging

3. **REQUIREMENTS:**

   3.1 Install new insulation, lagging, and reusable covers in accordance with 2.2 through 2.7, and the following:

   3.1.1 Use of elastomeric foam conforming to MIL-P-15280 and polyphosphazene conforming to MIL-I-24703 is not permitted.

   3.1.2 MIL-PRF-22344 insulation shall not be installed on hot piping above one-inch Nominal Pipe Size (NPS) and shall be installed only on piping with a vertical orientation or in low traffic areas.
3.1.3 Install insulation, anti-sweat and refrigerant, thermal foam conforming to MIL-PRF-32514 on anti-sweat and refrigeration piping systems that have an operating temperature of minus 20 degrees to 180 degrees Fahrenheit. (See Note 4.6)

3.1.3.1 Install with adhesive conforming to MIL-A-24179.

3.1.3.2 Install rewettable fibrous glass cloth lagging conforming to MIL-C-20079, Type I, Class 6 or 8, in high traffic areas. In addition to the requirements of MIL-C-20079, rewettable lagging shall meet the requirements of Section 164.009-3 of 2.8, unless otherwise approved by NAVSEA.

3.1.4 Utilize Polyimide foam insulation conforming to MIL-DTL-24688, Type I, for piping and machinery systems other than systems listed in 3.1.3, and with a maximum operating temperature of 400 degrees Fahrenheit.

3.1.5 Accomplishment of welding, fabrication, and inspection requirements for new fasteners (studs) to support insulation and lagging shall be in accordance with NAVSEA Standard Items (See Note 4.3).

3.1.6 Accomplishment of cleaning and painting requirements for surfaces to be insulated with the exception of non-ferrous and corrosion resistant steel (CRES) piping, plating, and vent ducting shall be in accordance with NAVSEA Standard Items (See Note 4.4).

3.1.7 Secure reusable covers using snap fasteners or laced with copper, brass or soft steel galvanized wire through hooks or rings in accordance with 2.9.

3.1.7.1 Stamp the surface of the lacing washers, piece 200 of 2.8, on the reusable cover with one quarter inch high letters, NO AB, located close to the outer edge of the washer and visible when the reusable cover is installed.

3.2 Accomplishment of cleaning and painting requirements for new insulation, lagging, and reusable covers to match surrounding areas shall be in accordance with NAVSEA Standard items (See Note 4.5).

4. NOTES:

4.1 Known source for EB Spec. 4013:

General Dynamics Company  
Dept. 447 Material Services  
Attn: K. Hamler  
75 Eastern Point Road  
Groton, CT 06340-4899  
Tel: 860-433-2373

4.2 Known sources for rewettable fibrous glass cloth lagging:
4.3 If welding of fasteners (studs) to support lagging and or insulation of 3.1.5 is required; the use of Category II Standard Item 009-12 "Welding, Fabrication, and Inspection Requirements; accomplish" of 2.1 will be specified in the Work Item.

4.4 If surfaces are to be insulated with the exception of non-ferrous and corrosion resistant steel (CRES) piping, plating and vent ducting of 3.1.6 is required; the use of Category II Standard Item 009-32 "Cleaning and Painting Requirements; accomplish" of 2.1 will be specified in the Work Item.

4.5 If cleaning and painting for the new insulation, lagging, and reusable covers to match surrounding areas of 3.2 is required; the use of Category II Standard Item 009-32 "Cleaning and Painting Requirements; accomplish" of 2.1 will be specified in the Work Item.

4.6 "Electric Boat Specification No. 4013 Anti-Sweat and Refrigerant Insulation Systems (EB Spec. 4013) and MIL-PRF-32514 are equivalent."
1. **SCOPE:**

   1.1 Title: Weld, Fabricate, and Inspect; accomplish

2.15 S9CGO-BP-SRM-010/CG-47CL, Technical Manual for CG-47 Class, Superstructure Cracking Repair

2.16 DM 10-623, SERMC, Quality Assurance Requirements for Welding 5XXX Series Aluminum Structures for CG-47 Class

3. **REQUIREMENTS:**

3.1 Utilize specific requirements of 2.2 through 2.12 listed in Tables One, 2, 3, and 4 of this item for determining the welder and brazer qualifications, electrodes, weld design, welding requirements, brazing requirements, welding procedures, brazing procedures, welding parameters and controls, inspection standards, and acceptance criteria.

3.1.1 Maintain a Welding Workmanship Program and a Welding Surveillance Inspection Program if conducting structural and fabrication work in accordance with 2.2.

3.1.2 Maintain a Welding Training Program in accordance with 2.5.

3.1.3 Maintain a Brazing Process Inspection in accordance with 2.6.

3.2 Weld bell-end fittings in accordance with Section 505c8 of 2.13. Nondestructive testing inspection *must* comply with Class P-2 piping systems as defined by 2.7.

3.3 Ground welding machines, for purposes of providing a return path for welding current, using a grounding bar or lead which *must* be connected directly from the machine ground return connection to the ship's hull, sized on the basis of 1,000,000 Circular Mil per 1,000 amps per 100 feet, but in no event using less than a Number One cable (85,037 Circular Mils).

3.3.1 Welding machines used for welding on machinery, pressure vessels, or piping, rotating ordnance, electronic, or fire control equipment *must* have the ground return connection in the immediate vicinity of the work to ensure that current does not flow through bearings, pipe hangers, or other areas where arcing or high resistance paths exist. For ships constructed of non-magnetic materials, the ground return cables *must* be connected directly to the component being welded – as close to the weld zone as feasible.

3.3.2 Shipboard power distribution system *must* not be used as the power source for welding equipment unless approved by the SUPERVISOR. External power source *must* be used.

3.4 Accomplishment of a Process Control Procedure (PCP) for the specific welding, brazing, and inspection operations in 3.4.1 through 3.4.9 *must* be in accordance with NAVSEA Standard Items (See Note 4.1) and the following:
3.4.1 Class A-F, A-1, A-2, A-3, A-LT, P-1, P-LT, M-1, and T-1 welding, as defined by 2.7. These procedures must include, as a minimum, the information required by Paragraph 4.1.3 of 2.7 and supporting data such as a sketch of the weld repair areas and associated ship components. Joint numbers must not be duplicated on ship during the availability.

3.4.2 Class P-3a special category silver brazing, as defined by 2.6. The procedure must include, as a minimum, the information required by Sections 4 of 2.5.

3.4.2.1 All brazing of steam piping must conform to 2.6, Class P-3a special category, including ultrasonic inspection, for all pipe sizes .840 inch outer diameter or greater including any (existing) copper to (new) copper-nickel transition joints. Brazed joints must not be used in steam pipe sizes less than .840 inch outer diameter.

3.4.2.2 In steam systems, where brazed piping and fittings are to be reused, or piping has to be sized to achieve proper fit-up, the option for a 5X visual inspection for cracks listed in Sections 5.5.3, 5.10.1, and 5.10.2 of 2.6 must not be used; liquid penetrant inspection must be required.

3.4.3 For bronze propellers, using 2.11 for guidance.

3.4.4 For propellers other than bronze, using 2.7 for guidance.

3.4.5 For propulsion shafting and rudder stocks, using 2.14 for guidance.

3.4.6 For titanium-based materials, using 2.7 for guidance.

3.4.7 Accomplish aluminum welding and nondestructive testing for superstructure of CG-47 Class ships in accordance with 2.15 and 5XXX series aluminum structures for CG-47 class ships in accordance with 2.16.

3.5 The use of a permanent backing strap in accordance with Section 11, Paragraph 11.1 of 2.2 is prohibited unless detailed in the original weld joint design or when authorized by the SUPERVISOR.

(I) or (I)(G) “NONDESTRUCTIVE TESTING”

3.6 Accomplish nondestructive testing in accordance with the following:

3.6.1 Manufacture, installation, and repair (welding, brazing, machining, or lapping) of Level I fittings or components:

3.6.1.1 Nondestructive Testing Visual Inspection - (I)
3.6.1.2 Nondestructive Testing Magnetic Particle, Liquid Penetrant and Ultrasonic Testing (Final Only) - (I)(G)

3.6.1.3 Nondestructive Testing Radiographic - (I)

3.6.2 Welding/brazing of P-1, P-LT, P-3a piping systems or Class A-F, A-1, A-2, A-3, A-LT, M-1, T-1 welding, and P-2 steam service:

3.6.2.1 Nondestructive Testing Visual Inspection - (I)

3.6.2.2 Nondestructive Testing Magnetic Particle, Liquid Penetrant and Ultrasonic Testing (Final Only) - (I)(G)

3.6.2.3 Nondestructive Testing Radiographic - (I)

3.6.3 Welding on ship/craft listed in Attachment A hull or structure when required by the fabrication document:

3.6.3.1 Nondestructive Testing Visual Inspection - (I)

3.6.3.2 Nondestructive Testing Magnetic Particle, Liquid Penetrant and Ultrasonic Testing (Final Only) - (I)(G)

3.6.3.3 Nondestructive Testing Radiographic - (I)

3.6.4 Weight handling equipment manufacture and repair:

3.6.4.1 Nondestructive Testing Visual Inspection - (I)

3.6.4.2 Nondestructive Testing Magnetic Particle, Liquid Penetrant - (I)(G)

3.6.4.3 Ultrasonic Testing (Final Only) - (I)(G)

3.6.4.4 Nondestructive Testing Radiographic - (I)

3.6.5 Corrective maintenance within the certified boundaries of cranes (as defined in NSTM 589):

3.6.5.1 Nondestructive Testing Visual Inspection - (I)

3.6.5.2 Nondestructive Testing Magnetic Particle, Liquid Penetrant - (I)(G)

3.6.5.3 Ultrasonic Testing (Final Only) - (I)(G)

3.6.5.4 Nondestructive Testing Radiographic - (I)
3.6.6 Maintenance on aircraft launch and recovery equipment:

3.6.6.1 Nondestructive Testing Visual Inspection - (I)

3.6.6.2 Nondestructive Testing Magnetic Particle, Liquid Penetrant and Ultrasonic Testing (Final Only) - (I)(G)

3.6.6.3 Nondestructive Testing Radiographic - (I)

(I)(G) "EVALUATION OF RT FILMS"

3.7 Accomplish RT film interpretation.

3.7.1 Provide the cognizant Government representative designated by the SUPERVISOR the evaluated radiographs and records within 2 days of the (G) point.

3.8 Provide and maintain a Welding Consumable Control System in accordance with 2.2, 2.3, 2.4, 2.6, 2.7, 2.11, 2.12, 2.14, and 2.16 which covers the control and issuance of filler materials. The system must be described in a written procedure that must be submitted to the SUPERVISOR for review and approval prior to the initiation of production work. This procedure only requires a one-time submittal/approval unless the Standard Items change and/or references change or are updated. The Welding Consumable Control System must be subject to periodic conformity audits by the SUPERVISOR throughout the contract period.

3.9 Utilize Attachment A to define combatant and non-combatant vessels and applicable table.

3.10 Where requirements in the repair and testing instructions for propulsion boilers conflict, 2.12 must take precedence.

4. NOTES:

4.1 If a Process Control Procedure (PCP) for all specific welding, brazing, and inspection operations in 3.4.1 through 3.5 is required; the use of Category II Standard Item 009-09 “Process Control Procedure (PCP); provide and accomplish” of 2.1 will be specified in the Work Item.

** - IDENTIFICATION OF "SURVEYOR" IN ABS RULES SIGNIFIES SUPERVISOR OF SHIPBUILDING (SUPERVISOR) ACTION. THE SUPERVISOR MAY USE MIL-STD-1689 FOR GUIDANCE WHERE ADDITIONAL DIRECTION IS NECESSARY. SUCH GUIDANCE MAY BE USED TO: ESTABLISH NDT REQUIREMENTS, ESTABLISH WELDING/NDT PROCEDURE AND PERSONNEL QUALIFICATION REQUIREMENTS, OR TO DEFINE OTHER ATTRIBUTES LISTED IN THE "MATERIAL EVOLUTION" LINE OF TABLE 3.

*** - THE SUPERVISOR MAY ALSO ALLOW THE SHIPBUILDER TO CHOOSE FROM THE FOLLOWING OPTIONS, PROVIDING:

- THE SHIPBUILDER'S UTILIZATION OF THE FOLLOWING OPTIONS MUST RESULT IN NO ADDITIONAL COST TO THE GOVERNMENT.
- THE SHIPBUILDER MUST UTILIZE THE FABRICATION DOCUMENT SELECTED FOR THE ENTIRE AVAILABILITY AND MUST NOT SWITCH BACK AND FORTH BETWEEN DOCUMENTS.
- THE SHIPBUILDER MUST NOTIFY THE SUPERVISOR OF WHICH FABRICATION DOCUMENT HAS BEEN SELECTED.

OPTIONS:

A) MIL-STD-1689 MAY BE UTILIZED BY THE SHIPBUILDER AT THE SHIPBUILDER'S DISCRETION. THE REQUIREMENTS OF TABLE 2 ABOVE WOULD THEN APPLY.

B) FOR DETERMINATION OF NDT METHOD(S) AND EXTENT OF NDT INSPECTION WHEN REPAIRS ARE TO BE ACCOMPLISHED, THE SHIPBUILDER MAY REQUEST TO UTILIZE THE SAME NDT REQUIREMENTS THAT WERE INVOKED IN CONSTRUCTION OF THE VESSEL. IN SUCH CASES, THE SHIPBUILDER MUST BE RESPONSIBLE TO DETERMINE THE ORIGINAL NDT REQUIREMENTS AND SUBMIT EVIDENCE SUCH AS DRAWINGS OR SPECIFICATIONS WHICH DETAIL THE REQUIREMENTS TO THE SUPERVISOR ALONG WITH A REQUEST FOR APPROVAL.

C) THE SHIPBUILDER MAY REQUEST TO UTILIZE PRE-ESTABLISHED WELDING AND/OR NDT PROCEDURES AND PERSONNEL QUALIFICATION PROGRAM(S) WHICH HAVE BEEN PREVIOUSLY UTILIZED IN THE PERFORMANCE OF SIMILAR ABS-ACCEPTED WORK. IN SUCH CASES, THE SHIPBUILDER MUST SUBMIT EVIDENCE OF SUCH ABS ACCEPTABILITY TO THE SUPERVISOR ALONG WITH DESCRIPTIVE DETAILS AND SUPPORTING DOCUMENTATION FOR THE PROPOSED PROGRAM(S). SUCH DOCUMENTATION MUST INCLUDE THE WELDING/NDT PROCEDURES AND METHODS OF WELDING/NDT PERSONNEL QUALIFICATION THAT WERE UTILIZED IN FORMER ABS-ACCEPTED WORK. THE SHIPBUILDER MUST ALSO SUBMIT OTHER SUPPORTING EVIDENCE THAT MAY BE REQUESTED BY THE SUPERVISOR TO ENSURE THAT THE PROPOSED PROGRAMS HAVE BEEN PREVIOUSLY UTILIZED FOR SIMILAR ABS-ACCEPTED WORK.

**NOTES:**

Letter prefixes to classification symbols may add identification:

- **E** -- Prototype ship or craft in an experimental or developmental status.
- **T** -- Assigned to MSC (Military Sealift Command)
- **F** -- Being constructed for a foreign government.
- **X** -- Often added to existing classifications to indicate a new class whose characteristics have not been defined.
1. **SCOPE:**

   1.1 Title: Meter, Gauge, Switch, and Thermometer; repair

2. **REFERENCES:**

   2.1 Calibration Requirements List (CRL) for Shipboard Installed Instrumentation

   2.2 NAVSEA OD 45845, Metrology Requirements List

   2.3 S9300-A6-GYD-010, Electrical Workmanship Inspection Guide for Surface Ships and Submarines

   2.4 ISO 17025, General Requirements for the Competence of Testing and Calibration Laboratories, First Edition

   2.5 ANSI/NCSL Z540-3, Requirements for the Calibration of Measuring and Test Equipment

   2.6 NAVSEA 04-04734, Naval and Marine Corps Calibration Laboratory Audit/Certification Manual

   2.7 NAVAIR 17-35TR-8, Technical Requirements for Calibration Labels and Tags

3. **REQUIREMENTS:**

   3.1 Prior to the installation verify instrument calibration requirements in applicable NAVSEA documentation to determine if the instrument requires calibration. Permanently installed instruments, are addressed by 2.1; all other non-installed instruments are addressed by 2.2.

   3.1.1 If installing a calibrated instrument, the instrument shall have at least two-thirds of its calibration life remaining. If it does not, the instrument shall be calibrated in accordance with 3.7.

   3.1.2 If the instrument is designated as No Calibration Required (NCR), perform a functional check to ensure proper functioning of the instrument if it is not required for system acceptance testing. Instrument identified as requiring calibration for system/acceptance testing/trials but designated as NCR in the ship’s CRL, shall be calibrated in accordance with
3.7 and shall be labeled with a special calibration label NAVSEA 4734/6, and an NCR label NAVSEA 4734/26. For meters the special calibration label shall be annotated to read, "CALIBRATION PERFORMED TO SUPPORT TESTING"; for gauges, switches and thermometers the calibration label shall be annotated to read, "CALIBRATION PERFORMED TO SUPPORT TESTING. THIS LABEL MUST BE REMOVED UPON COMPLETION OF TESTING/TRIALS TO REFLECT THE CRL CAL-N (NCR) DESIGNATION OF THE INSTRUMENT". All such special calibration labels shall be removed and the instrument shall have NCR labels affixed upon completion of testing/trials.

3.1.3 System or chain calibrations (designated as Level 2 in the ship's CRL) are not to be performed by commercial activities. For system calibration, contact the SUPERVISOR. Level 2 calibrated meters installed in systems shall be subject to system or chain calibrations at the next available period. (See 4.5)

3.2 Disconnect and remove each meter and associated impeders, reactors, resistor boxes, and shunts.

3.2.1 Record and retain hook-up data and mounting hardware.

(V) "CONDITION OF WIRE LEADS"

3.2.1.1 Inspect lead wires and insulation; broken or partially broken lead wires shall be cut back to remove damaged/questionable portions of the wire and new terminal ends installed in accordance with 2.3.

3.2.2 Remove existing and install new conductor identification sleeving in place of conductor identification sleeving identified to be illegible. Install new sleeving where missing. New conductor identification sleeving shall conform to SAE-AMS-DTL-23053, Class One, white, marked with indelible ink.

3.3 Disconnect and remove each gauge, switch, and thermometer.

3.3.1 Remove sealed gauges as a complete unit.

3.3.2 Clear gauge lines from instrument side of root connection of obstructions by blowing clean, dry air through the lines.

3.4 Disassemble and clean equipment to remove loose paint and foreign matter.

3.4.1 Do not disassemble sealed gauge unit.

3.5 Repair each instrument and associated equipment to manufacturer's specifications.

3.5.1 Remove existing and install new components in place of those identified to be defective. Install new components where missing.

3.5.2 Free-up and adjust moving parts.
3.5.3 Restore unit cases to original finish.

3.6 Assemble equipment. Install new seals and gaskets conforming to manufacturer's specifications.

3.7 Calibrate and adjust each instrument, including associated accessories, to manufacturer's specifications, using appropriate calibration procedures and test equipment in accordance with 2.1 for permanently installed-instruments, or 2.2 for other/non-installed instruments.

3.7.1 Calibration laboratories shall be accredited to either 2.4 or 2.5 by a Commercial Accreditation Activity, or certified by a Navy Certification Activity to 2.6, and the scope of accreditation must cover the appropriate measurement parameters and ranges of the calibrations performed. Calibration must meet a minimum Test Accuracy Ratio (TAR) of 4:1, or a Test Uncertainty Ratio (TUR) equal to or greater than 4:1, or a Probability of False Accept (PFA) not to exceed 2 percent.

3.7.2 In the absence of manufacturer's specifications, tolerances shall be in accordance with Section 1 of 2.2.

3.7.3 Affix a calibration label to the face of each instrument, denoting the name and location of the calibration facility, the NAVSEA Lab Code if assigned, the date of calibration, and date of next calibration. Department of the Navy calibration activities and Test, Measurement, and Diagnostic Equipment (TMDE) custodians shall use calibration labels and tags in accordance with 2.7.

3.7.4 The calibration interval assigned for shipboard installed instrumentation shall be in accordance with 2.1. All other meters shall have a calibration interval assigned in accordance with 2.2.

3.7.5 Submit one legible copy, in hard copy and approved transferrable media (in Excel format), of a calibration events data file in accordance with Attachment A for each contractor and subcontractor-performed calibration event to the ship's Field Calibration Activity (FCA), Engineering/Maintenance Officer and AIMD Officer (if assigned) via the SUPERVISOR on a bi-weekly basis.

3.8 Install and connect each meter, including associated accessories, using hook-up data and mounting hardware retained in 3.2.1.

3.9 Install and connect each gauge, switch or thermometer, installing new seals, gaskets and fasteners.

4. NOTES:

4.1 The SUPERVISOR will supply the contractor with a copy of the CRL provided by the Ship's Chief Engineer.
4.2 The SUPERVISOR will provide a copy of the calibration data to the Ship's Force Calibration Coordinator for the purpose of updating the ship's RECALL list.

4.3 NAVSEA 04RM3 Approved list of Accrediting Bodies (AB).

- ANSI-ASQ National Accreditation Board (ANAB), http://anab.org/
- Laboratory Accreditation Bureau (L-A-B), http://l-a-b.com/
- Perry Johnson Registrars (PJLA), http://www.pjr.com/
- The American Association for Laboratory Accreditation (A2LA), https://www.a2la.org/
- National Voluntary Laboratory Accreditation Program (NVLAP), https://www.nist.gov/nvlap
- International Accreditation Service (IAS), http://www.iasonline.org

Contact NAVSEA 04RM3 for information on commercial accreditation in accordance with 2.4 and 2.5 by NAVSEA approved commercial Accrediting Bodies (AB).

4.4 This item does not apply to Oxygen gauges.

4.5 Point of contact for Level 2 system or chain calibrations is NAVSEA 04RM.

4.6 Contact one of the following Navy Certification Activities for certification requirements in accordance with 2.6:

| Mid-Atlantic Regional Maintenance Center Laboratory Certification Branch (Code 212) | Southwest Regional Maintenance Center Laboratory Certification Branch (Code 240C) |
| Phone: (757) 400-0735 | Phone: (619) 556-6699/(619) 556-1346 |
| FAX: (757) 400-3160 | FAX: (619) 556-4877 |
ATTACHMENT A

- Entries in the calibration events file shall not be abbreviated.

- The event data for NOFORN/Reactor/Steam plant instruments shall be handled in accordance with the applicable SEA 08 directives.

- For existing, permanently installed instruments, the calibration events file data set shall include the nomenclature, CRL reference number, condition received (i.e., In Tolerance (IT) or Out of Tolerance (OOT)), date calibrated, date due, procedure used, calibration standard used, servicing lab code and service label applied (i.e., calibrated, special calibration, rejected, etc.) in accordance with 2.7.

- For existing, non-installed instruments, the calibration events file data set shall include the nomenclature, National Stock Number, Sub-Category (SCAT) Code, instrument serial number, manufacturer’s Commercial and government Entity (CAGE), procedure used, calibration standard used, sub-custodian, work center. Manufacturer’s model number, condition received, Metrology Requirements List (METRL) cycle, servicing laboratory code (if applicable), date serviced, due date, and servicing label attached.

- For newly added instruments, the minimum data set includes manufacturer, model, serial number, nomenclature, manufacturer's CAGE, range, procedure used, calibration standard used, date calibrated, date due, servicing lab code, service label attached, location, part-of (System), function within the system (if permanently installed), National Stock Number and SCAT Code.
1. **SCOPE:**

   1.1 Title: Rotating Machinery; balance

2. **REFERENCES:**

   2.1 Standard Items

   2.2 S9086-G9-STM-010/CH-231, Propulsion and SSTG Steam Turbines

   2.3 MIL-STD-167, Mechanical Vibration of Shipboard Equipment (Type I-Environmental and Type II-Internally Excited)

   2.4 S9245-AR-TSM-010/PROP, Marine Propeller Inspection, Repair and Certification

3. **REQUIREMENTS:**

   3.1 Measure and record the maximum eccentricity of the rotor shaft and installed components relative to the points of support using dial indicators.

   3.2 Balance rotating machinery assemblies or components in accordance with the following requirements and procedures:

      3.2.1 Balance multistage steam turbine rotors in accordance with 2.2.

      3.2.1.1 Contact the SUPERVISOR prior to directing balance work for multistage steam turbine rotors.

      3.2.1.2 Multistage steam turbine rotors shall only be balanced at high speed (operating speed), in accordance with Section 231-8.13 of 2.2. Balance work must be performed by the OEM, OEM certified equivalent, or NAVSEA approved contractor who has a proven capability to high speed balance rotors in accordance with 2.2, 2.3 and the OEM balance specification for the rotor.

      3.2.1.3 No attempt shall be made to straighten a turbine rotor assembly.

      3.2.1.4 Steam turbine rotors shall be balanced with the overspeed trip governor installed.
3.2.1.5 Post-repair testing (sea trials for propulsion units) for multistage steam turbines where turbine repairs have been accomplished, shall include a bearing cap vibration survey.

3.2.1.6 Submit one legible copy, in hard copy or approved transferrable media, of an equipment overhaul report to the SUPERVISOR. Report shall include a balance report in accordance with Section 231-8.13 of 2.2 and a vibration survey report in accordance with 009-104 of 2.1. Unsatisfactory vibration balance levels recorded in the post repair testing, as determined by the SUPERVISOR, shall be corrected by in-place balancing in accordance with Section 231-8.13 of 2.2.

3.2.2 Except for propellers, if the design operating speed of the component to be balanced is less than 150 revolutions per minute (RPM), the rotor including shaft shall be balanced by symmetrically supporting the rotor on 2 knife edges and applying a correction to attain a gravity balance.

3.2.3 Except for propellers, if the design operating speed of the component to be balanced is equal to or greater than 150 RPM, the rotor including shaft shall be balanced with equipment which requires rotation of the work piece.

3.2.4 Propellers shall be balanced in accordance with 2.4.

3.2.5 Types of correction:

<table>
<thead>
<tr>
<th>TYPES OF CORRECTION</th>
<th>N 1/</th>
<th>ROTOR CHARACTERISTIC 1/</th>
</tr>

</tbody>
</table>

1/ 

L = Length of rotor mass, exclusive of shaft  
D = Diameter of rotor mass, exclusive of shaft  
N = Maximum operating RPM

3.2.6 Allowable unbalance: The values determined by Paragraph 5.2.2.2 of 2.3 are permitted in each plane of correction, except for multistage steam turbine rotors which shall be in accordance with Section 231-8.13 of 2.2.
3.2.7 When the computation for converting displacement measurements to ounce-inches of force unbalance is an approximation, verification shall be made by adding a trial weight to the rotor, equal and opposite to the calculated ounce-inches of force. If putty is used as a trial weight, it shall be removed, weighed and a permanent compensating weight shall be installed in its place.

3.3 Submit one legible copy, in approved transferrable media, of a report listing results of the requirements of 3.1 and 3.2 to the SUPERVISOR. The report shall include the following information:

3.3.1 Ship's name and hull number
3.3.2 Contractor and subcontractor
3.3.3 Job Order and Work Item number
3.3.4 Unit and component identification
3.3.5 Manufacturer and model number of balance machine
3.3.6 Date of last calibration, by whom it was calibrated, and when the next calibration is due for the balancing machine
3.3.7 Maximum total indicated runout of rotor or balancing arbor
3.3.8 Weight of rotor assembly in pounds
3.3.9 Design operating RPM of rotor
3.3.10 Computation of allowable unbalance in ounce-inches
3.3.11 Measured unbalance, prior to and after balancing, in ounce-inches
3.3.12 Computations or procedures for converting displacement measurements to ounce-inches of unbalance force, when the machine used to balance components indicates displacement measurements in lieu of direct unbalance forces.

4. NOTES:

4.1 For multistage steam turbine rotors only:

4.1.1 Prior to performing machine or in-place balance, SUPERVISOR shall contact NAVSEA 05Z22.

4.1.2 SUPERVISOR shall forward as-found/final balance result and shipboard vibration survey to NAVSEA 05Z22 and NSWCCD-SSES Code 922.
1. **SCOPE:**

1.1 Title: Electronic Equipment; repair

2. **REFERENCES:**

2.1 Equipment Technical Manual

2.2 407-5291780, Standard Electromagnetic Interferences (EMI) Survey Procedures

2.3 SE000-01-IMB-010, Navy Installation and Maintenance Book (NIMB), Section VI, Electronics Installation and Maintenance Book - General Maintenance (Source CD: N0002400003)

2.5 S9300-A6-GYD-010, Electrical Workmanship Inspection Guide for Surface Ships and Submarines

2.6 IA PUB-5239-31, Information Assurance Shipboard Red/Black Installation Publication

2.7 NSTISSAM TEMPEST/2-95, Red/Black Installation Guidance (FOUO)

2.8 MIL-STD-1310, Shipboard Bonding, Grounding, and Other Techniques for Electromagnetic Compatibility, Electromagnetic Pulse (EMP) Mitigation, and Safety

3. **REQUIREMENTS:**

3.1 Disassemble equipment for cleaning, inspection, and repair, using 2.1 for guidance. Record and retain electrical hook-up data.

3.1.1 **Accomplish visual** inspection of components prior to cleaning to detect evidence of casualties and deteriorating conditions that may not be apparent after cleaning.

3.1.2 Clean equipment and remove foreign matter.
3.1.3 Dry equipment, removing moisture and cleaning solvents.

3.1.4 Inspect equipment for applicable electromagnetic interference (EMI) fixes using Shipboard Electromagnetic Compatibility Improvement Program (SEMCIP) Technical Assist Network (STAN) in accordance with 2.2. Record results.

3.2 Inspect and test electrical and mechanical components, assemblies, subassemblies, equipment enclosures, internal circuitry, and enclosure hardware to design characteristics and determine missing and defective components, circuitry, and enclosure hardware in accordance with 2.1. Record results.

3.2.1 Remove existing and install new electrical and mechanical components, assemblies, subassemblies, internal circuitry, and enclosure hardware in place of those identified to be defective; install new where missing. New material must conform to the requirements of 2.1.

3.2.1.1 Accomplish soldering, desoldering, and removal of components and circuitry in accordance with Section 4 of 2.3.

3.2.1.2 Accomplish miniature and microminiature repair of printed circuit boards in accordance with Sections 5 and 6 of 2.3.

3.2.1.3 Ensure new wiring conforms to MIL-DTL-16878. Wire size and color code must be in accordance with 2.1. Individual wires in harnesses and chassis wiring may be plain white conductors with conductor identification sleeving at each end, stenciled with indelible ink to indicate color coding.

3.3 Inspect braided wire shielding terminations for conformance to Paragraph 2-19.3 of 2.4.

3.3.1 Remove existing and install new grounding sheath connectors in place of those identified to be defective; install new where missing. Installation must be in accordance with Paragraph 2-14 of 2.4.

3.4 Inspect terminal board wire connections for termination with lugs conforming to SAE-AS7928 of each conductor at the terminal board connections.

3.4.1 Remove existing and install new lugs in place of those identified to be defective, using 2.5 for accept or reject criteria; install new where missing. New lugs must conform to SAE-AS7928.

3.5 Inspect for missing and defective conductor identification sleeving.

3.5.1 Remove existing and install new conductor identification sleeving in place of those identified to be defective, using 2.5 for accept or reject criteria; install new where missing. New conductor identification sleeving must conform to SAE-AMS-DTL-23053, Class One, white, marked with indelible ink.
3.5.1.1 Mark conductor identification sleeving in accordance with 2.1.

3.6 Correct discrepancies identified in terminal board connections in accordance with 2.1 and as modified by applicable field changes identified on the field change accomplished plate.

3.7 Inspect existing cabling and cable harnesses between hinged parts and between chassis and parts which are subject to removal for slack to prevent breaking of individual wires by repeated flexing and for chafing protection.

3.7.1 Provide slack in accordance with Paragraph 2-15 of 2.4 to prevent breaking of individual wires.

3.7.2 Install new chafing protection in accordance with Paragraph 2-15 of 2.4.

3.8 Secure loose wiring harness clamps. Remove existing and install new plastic clamps where identified to be defective; install new where missing. Installation must be in accordance with Paragraph 2-15.3 of 2.4.

3.9 Submit one legible copy, in approved transferrable media, of a report listing inspection and test results of 3.1 and 3.2, to include the applicable EMI fixes not installed and EMI fixes that have been improperly installed, a list of discrepancies corrected, and a list of new components and wiring installed, to the SUPERVISOR.

3.10 Tie loose harness lacing in accordance with Paragraph 2-15.2 of 2.4.

3.11 Adjust relays and burnish contacts in exposed type relays and switches.

3.12 Remove high spots on pinion and gear teeth by stoning.

3.13 Adjust and align mechanical components in accordance with 2.1.

3.14 Assemble equipment, using 2.1 for guidance.

3.14.1 Tighten loose controls and hardware. Free-up binding in moving parts, controls, switches, chassis slides, and runners.

3.14.2 Lubricate equipment in accordance with 2.1.

3.14.3 Install heat-dissipating tube shields conforming to MIL-DTL-24251.

3.15 Bond and ground equipment in accordance with 2.6 through 2.8.

(V)(G) "OPERATIONAL TEST"
3.16 Energize the equipment; calibrate, adjust, and align to achieve optimum operational characteristics in accordance with 2.1.

3.17 Update field change accomplished plate to indicate completed field changes when the Work Item directs the installation of new field changes.

4. **NOTES:**

4.1 Equipment technical manual will be listed in the invoking Work Item.

1. **SCOPE:**

   1.1 Title: Rotating Electrical Equipment; repair

2. **REFERENCES:**

   2.1 Standard Items

   2.2 Equipment Technical Manual

   2.11 MIL-STD-1310, Shipboard Bonding, Grounding, and Other Techniques for Electromagnetic Compatibility, Electromagnetic Pulse (EMP) Mitigation, and Safety

   2.12 407-5291780, Standard Electromagnetic Interference (EMI) Survey Procedures

3. **REQUIREMENTS:**

   3.1 Disconnect equipment mechanically and remove, including rotating components connected directly to the shaft, using 2.2 for guidance.
3.1.1 Accomplish the following prior to disconnecting: measure air gap readings; measure bearing clearances for sleeve bearing equipment only; measure alignment readings; inspect couplings for cracks, broken segments, wear, and misalignment in excess of tolerances specified in 2.2; measure shaft thrust and run out readings; identify associated cables/wiring and hook-up data. Record data.

3.1.2 Identify associated cables and wiring. Disconnect equipment mechanically, using 2.2 for guidance. Record list of accessories.

3.1.3 Remove entire vaneaxial and tubeaxial fan assemblies from the duct system and transport to the shop for repair.

3.2 Accomplish a structural inspection of each foundation in accordance with 2.3. Record data.

3.2.1 Accomplishment of cleaning and painting requirements for foundations of equipment shall be in accordance with NAVSEA Standard Items (See 4.9).

3.3 Matchmark, disassemble, inspect, measure, and test the equipment removed in 3.1, using 2.2 and 2.4 through 2.8 for guidance.

3.3.1 Inspect and dimensionally measure end bells, frame, rabbet fits, shaft, sleeve and pedestal bearings, keyways, fan and running surfaces for wear, eccentricity, and other defects, using 2.2 for accept or reject criteria, and 2.7 for location and type of measurements to be taken. Record data.

3.3.2 Accomplish a 500-volt megger insulation resistance test, using Paragraphs 300-3.2.2 through 300-3.2.3, 300-3.4.8, 300-3.4.11, and 300-5.3.7.1 of 2.4 for guidance. Record data.

3.3.2.1 Disconnect solid-state devices and ground temperature-sensing leads prior to measuring insulation resistance of windings.

3.3.3 Accomplish a phase resistance balance test of windings, using a Wheatstone or Kelvin bridge, or with an ohmmeter capable of resolving one milliohm (0.001 ohm). Record phase balance for multi-phase equipment, using Paragraph 5.21 of 2.8 and 3.6.1 of 2.9 for guidance. Record data.

3.3.4 Accomplish a voltage surge test in accordance with Paragraphs 300-3.5.4 through 300-3.5.5 of 2.4. Record data.

3.3.5 Accomplish a DC HI POT test in accordance with Paragraph 300-3.5.2 through 300-3.5.2.3.4 of 2.4. Record data.

3.3.6 Accomplish a Polarization Index Test in accordance with Paragraph 300-3.4.12 of 2.4. Record data.
3.3.7 Measure resistance value of each winding temperature detector, heater, and heater strip using low voltage ohmmeter. Record data.

3.4 Clean, dry, and test the equipment and windings.

3.4.1 Clean in accordance with Paragraphs 300-4.5.1 through 300-4.5.5 of 2.4.

3.4.2 Dry by placing in an oven in accordance with Paragraph 300-5.3.2.3 of 2.4. Allow to cool to ambient temperature.

3.4.3 Repeat 3.3.2 and 3.3.5 tests. Record data.

3.4.4 Repeat cleaning, drying, and testing in 3.4.1 through 3.4.3 if DC HI POT test readings are questionable, or if insulation resistance readings (minimum of 500 Meg Ohms for motors with a VPI Sealed Insulation System) are not in accordance with the following: DC generators and motors (except propulsion and auxiliary generators for submarines) including exciters, Table 300-3-64 of 2.4; DC propulsion generators and motors and DC auxiliary generators for submarines, Table 300-3-7 of 2.4; AC generators and motors other than propulsion, Table 300-3-8 of 2.4; AC propulsion generators and motors, Table 300-3-9 of 2.4. Record data. (See 4.5)

3.4.5 Repeat 3.4.1 through 3.4.3 if satisfactory readings are not obtained after the second cleaning. Record data. (See 4.5)

3.4.6 Notify the SUPERVISOR if satisfactory readings are not obtained after a third cleaning.

3.4.7 Repeat 3.3.3 and 3.3.4 tests. Record data. (See 4.5)

3.5 Protect the windings and machined surfaces. Accomplishment of cleaning and painting requirements for equipment housing exterior, including fan(s) and interior and exterior of each end bell shall be in accordance with NAVSEA Standard Items. (See 4.9)

3.6 Inspect and test non-wound rotors for loose or cracked bars, localized overheating, and rubbing in accordance with 2.8. Inspect wound rotors, slip ring leads, and armatures for insulation damage and burns/hot spots. Inspect for loose coils and slot wedges. Inspect slip rings and commutators for damage and for wear limits, using 2.2 for criteria. Inspect brush rigging for cracks, chips, worn areas, distortion, spring condition, and insulating material for cracks and arc paths. Inspect leads and terminal lugs for damage and defects. Identify and tag leads with aluminum wrap-around bands with metal stamped or embossed markings. Record data.

(V) "VARNISH TEMPERATURE, VISCOSITY, AND GEL TIME TESTS"
3.7 Select the proper insulating process based on winding insulation classifications and to meet state or local air pollution standards. Select varnish methods and material, using Paragraphs 300-4.5.8 through 300-4.5.8.2 of 2.4 for guidance. Maintain the varnish in accordance with Paragraphs 300-4.5.8.3 through 300-4.5.8.3.3 of 2.4 and the varnish manufacturer's instructions. Maintain a current revision of the varnish manufacturer's instructions on storage, maintenance, and use of the type of varnish to be applied. Maintain a record of varnish temperature, viscosity and, for solventless varnish, gel time tests. Tests must show varnish is within varnish manufacturer's recommendations and have been accomplished in the intervals specified by the varnish manufacturer. The record must also show that the varnish is being stored as recommended by the varnish manufacturer. (See 4.5)

3.8 Varnish and bake windings in accordance with Paragraphs 300-4.5.8.4 of 2.4 and the varnish manufacturer's instructions. Do not immerse the leads. Wipe surfaces that affect assembly, such as rabbet fits and mounting flanges, with a cloth moistened with a solvent after draining and before baking. Remove excess varnish run-off from surfaces that affect assembly after baking. Apply a thin coat of air-dry varnish to metal surfaces exposed by the removal process in accordance with Paragraph 300-4.5.8.5 and 300-4.5.8.6 of 2.4. (See 4.5)

3.9 Repeat tests described in 3.3.2 through 3.3.5. Record data. (See 4.5)

3.10 Accomplish an AC HI POT test in accordance with Paragraphs 300-3.5.3 through 300-3.5.3.2.9 of 2.4. Record data. (See 4.5)

3.11 Repeat measurements described in 3.3.7. Record data.

3.12 True the commutator or collector rings. Eccentricity shall not exceed the requirements of 2.10. Resurface or machine each individual collector ring to the same exact diameter to allow symmetrical brush holder to ring clearance spacing. Ensure metal shavings are not permitted to contaminate the rotor or stator assembly. Each cut shall not exceed 0.010 inch. Finish thickness shall not be less than design wear tolerance as shown in 2.2. Undercut the mica between the commutator bars with the edge of the mica not exceeding a depth of 5/64-inch below the bars. Chamfer the bar edges and remove rough surfaces in accordance with Paragraph 7-4.1.3 of 2.9. Burnish the commutator with a very fine commercial burnishing stone conforming to A-A-58052. Polish collector rings to a mirror finish.

3.13 Accomplishment of the balancing requirement for each rotating assembly shall be in accordance with NAVSEA Standard Items. (See 4.8)

3.15 Repair lightly scored areas of frame, end bells, and shaft by manual methods. Recondition threads and fit key to keyway. Visually inspect keyway for deformed, cracked or chipped edges or high spots. Verify that fit between key and key-seat sides has a minimum clearance of 0.002 inch or maximum interference of 0.0005 inch. High spots in keyway may be removed by machining or grinding.

Do not unnecessarily repair any keyway; instead, use a step key up to a maximum of 0.010 inch oversize and, where possible, include a radius in step. If key tightness cannot be corrected with a step key, re-machine worn/damaged keyways to recommended over-sizes as follows: Maximum of 0.015 inch oversize for a 1/8-inch key and increasing oversize allowance of 0.010 inch for each 1/8-inch increase in key size up to a maximum of 0.075 inch. If key tightness cannot be corrected by keyway repair, replace part involved. Apply a thin coat of petrolatum to unpainted mating surfaces except for explosion-proof motors, which shall have clean, dry mating surfaces.

3.16 Prepare and refinish equipment. Protect machine surfaces, windings, and nameplates from being painted or otherwise damaged.

3.16.1 Accomplishment of cleaning and painting requirements for housing, fan, and interior and exterior of each end bell shall be in accordance with NAVSEA Standard Items (See 4.9).

3.17 Accomplish the following on equipment having other than sleeve-type bearings unless otherwise specified in the invoking Work Item, using 2.8 for guidance.

3.17.1 Install new bearings, seals, fittings, lock washers, and locknuts conforming to 2.2, using 2.7 and Chapter 6 of 2.8 for guidance, except as indicated in 3.17.1.1 (utilizing Attachment A for guidance).

3.17.1.1 Install Type III, Class 8 (double seal), bearings in motors meeting the criteria identified in Chapter 6 of 2.8. Only double seal bearings identified in Chapter 6 of 2.8 are acceptable for use.

3.17.1.2 Install Type III, Class 8 (double seal), bearings with a C3 (greater than normal) radial internal clearance, if not originally furnished or already accomplished during previous repair, in place of the Type 111 bearing originally furnished, for vaneaxial and tubeaxial fan motors not meeting the criteria of Chapter 6 of 2.8. Install Type 120 bearings in vaneaxial and tubeaxial fan motors originally furnished with Type 120 bearings.

3.17.1.3 Install new label plates with the inscription "DO NOT LUBRICATE" on equipment using double seal bearings (Type III, Class 8, or Type 120).

3.17.1.4 Install pipe plugs on all grease fills and drains, for equipment converted from re-lubricable bearings to double seal bearings.
3.17.1.5 Prepare a report that reflects the change in the maintenance requirements for the converted motor, for equipment converted from lubricated bearings to double seal bearings.

3.17.2 Lubricate bearings with grease conforming to DOD-G-24508 in accordance with Paragraphs 244-1.7.7.2 and 244-1.7.7.3 of 2.7, for equipment not using double seal bearings.

3.18 Assemble the equipment using 2.2 and 2.4 through 2.8 for guidance. Do not use materials containing silicone in the repair and assembly of equipment with commutator or collector rings. Install new gaskets on covers, inspection plates, and between the external connection box and the frame. Gaskets shall conform to MIL-PRF-1149 unless otherwise specified in 2.2. Set brush holders not less than 1/16-inch or more than 1/8-inch from commutator or collector rings unless otherwise specified in 2.2; set in electrical neutral plane and stagger brushes for maximum coverage of the commutator, in accordance with Paragraph 300-4.7.7.1.10 of 2.4; center over the collector rings; ensure the brushes do not extend beyond the edge of the collector rings; install new brushes in accordance with 2.2; sand new brushes to fit curvature of the commutator or collector rings in accordance with Paragraph 6-3.5 through 6-3.5.4 of 2.10; ensure brushes have a surface contact of 100 percent and are not chipped, cracked, or broken; remove sand, carbon, and other foreign matter resulting from fitting new brushes; adjust spring tension of brushes in accordance with 2.2. Adjust air gap as specified in 2.2, plus or minus 10 percent. Rotate shaft by hand a minimum of 3 revolutions. Rubbing or binding of rotating assembly shall not be allowed.

3.18.1 Install label plates conforming to MIL-DTL-15024 for those identified to be missing or damaged.

3.18.2 Install identification markers on wiring in the external connection box. Ensure markers shall be aluminum wrap-around type with metal stamped or embossed markings.

3.18.3 Inspect equipment for applicable electromagnetic interference (EMI) fixes using Shipboard Electromagnetic Compatibility Improvement Program (SEMCIP) Technical Assistance Network (STAN) in accordance with 2.12. Record results.

3.19 Accomplish a no-load shop test of the motor for a minimum of one-half hour. Verify proper direction of rotation. After one-half hour, measure current and voltage in each phase, speed and bearing temperature rise measured on the equipment's exterior near each bearing. Record data.

3.20 Accomplish an operational test, with the vaneaxial/tubeaxial fan reassembled for one hour after bearing and stator temperatures stabilize within one degree Celsius for 3 consecutive 15-minute intervals. Verify proper direction of rotation. Measure current, voltage, frame and bearing temperature rise and speed at 15-minute intervals. Bearing temperatures shall not exceed 180 degrees Fahrenheit, unless otherwise specified in the invoking
Work Item or equipment technical manual. Measure hot insulation resistances of winding to ground immediately upon completion of the operational shop test, using a 500-volt megger. Record data.

3.21 Submit one legible copy, in approved transferrable media, of a report listing results of the requirements of 3.1.1, 3.1.2, 3.3 through 3.3.7, 3.4.3, 3.4.4, 3.4.5, 3.4.7, 3.6, 3.10, 3.11, 3.17.1.5, 3.18, and 3.20 to the SUPERVISOR.

3.22 Install equipment. Install new gaskets conforming to MIL-PRF-900 on disturbed ventilation. Align in accordance with 2.2. Measure and record facial and peripheral coupling data. Install chocks, shims, shock mounts, sound damping pads, and other accessories. Connect electrical cables/wiring. Bond and ground equipment in accordance with 2.11, using new ground straps. Rotate shaft by hand a minimum of 3 revolutions. Rubbing or binding of rotating assembly shall not be allowed. Measure the air gap and bearing clearance (sleeve bearing equipment only), insulation resistance (at 500 volts DC), and thrust. Record data.

3.22.1 Accomplishment of pump and driver shaft alignment shall be in accordance with NAVSEA Standard Items. (See 4.910)

(V) (G) "OPERATIONAL TEST"

3.23 Accomplish an operational test of the assembled equipment at full system capacity for one hour after bearing and stator temperatures stabilize within one degree Celsius for 3 consecutive 15-minute intervals, unless otherwise specified in the invoking Work Item. When temperatures do not stabilize in four hours, stop test and contact the SUPERVISOR. Verify proper direction of rotation. Verify/establish oxide film coating of the commutator/collector rings, using 2.9 for guidance. Measure current, voltage, frame and bearing temperature rise, and speed at 15-minute intervals. Frame and bearing temperature rise and speed is not required for vaneaxial and tubeaxial fan assemblies. Bearing temperatures shall not exceed 180 degrees Fahrenheit, unless otherwise specified in the invoking Work Item or equipment technical manual. Record data.

3.23.1 Accomplish the requirements of 3.23 twice for two speed motors, once while operating at low speed, and once while operating at high speed.

3.23.2 Accomplish the requirements of 3.23 for limited duty motors, for a period of time equal to the duty cycle of the motor. For motors with a duty cycle equal to or less than 30 minutes, measure data every 10 minutes.

3.23.3 Measure hot insulation resistances of windings to ground immediately upon completion of test, using a 500-volt megger.

3.24 Submit one legible copy, in hard copy or approved transferrable media, of a report listing data recorded in 3.22, and 3.23 through 3.23.3 to the SUPERVISOR.
4. **NOTES:**

4.1 Equipment technical manual, Allowance Parts List (APL) (if applicable) and drawings will be listed in the invoking Work Item.

4.2 Shop test of generator will be addressed in the invoking Work Item.

4.3 The purpose of 3.4.4, 3.4.5, 3.4.7, 3.7, 3.8, 3.9, and 3.10 is to ensure the integrity of motors with a VPI Sealed Insulation System.

4.4 Utilize Attachment A for determination if the Navy’s motor bearing conversion program for Extended-Life Double Seal (ELDS) ball bearings is permissible.

4.5 Not required for motors with a VPI Sealed Insulation System.

4.6 MIL-B-17931 (Bears, Ball, Annular, for Quiet Operation) bearings are considered to be Long Lead Time (LLT) material. It is recommended these bearings be provided as Government Furnished Material (GFM).

4.7 Data received in 3.17.1.5 shall be used by the SUPERVISOR for the purpose of initiating action ensuring shipboard databases such as the Equipment Guidance List (EGL) are updated to reflect the change in maintenance requirements for converted motors. Additionally, where APL changes are initiated to convert to ELDS bearings, a COSAL feedback report shall be submitted, providing the NSN and part number for the ELDS bearing by the SUPERVISOR. Utilize the following website to initiate changes to Technical Manuals, APLs, etc.: [http://www.navy311.navy.mil](http://www.navy311.navy.mil).

4.8 If balancing of rotating equipment of 3.13 is required; the use of Category II Standard Item 009-15 “Rotating Machinery; balance” of 2.1 will be specified in the Work Item.

4.9 If cleaning and painting of 3.2.1, 3.5, or 3.16.1 is required, the use of Category II Standard Item 009-32 “Cleaning and Painting Requirements; accomplish” of 2.1 will be specified in the Work Item.

4.10 If pump and driver shaft alignment of 3.22.1 is required, the use of Category II Standard Item 009-58 “Pump and Driver Shaft Alignment; accomplish” of 2.1 will be specified in the Work Item.

ATTACHMENT A

1. To reduce motor maintenance and repair costs, the NAVY has implemented a program that allows for the use of Extended Life Double Seal (ELDS) bearings.

2. LIMITATIONS: The ELDS program does NOT apply to motors that are under the cognizance of NAVSEA 08.

3. APLs for motors meeting the conversion criteria requirements have been modified to identify ELDS bearings. In these cases, the APL bearing criteria will override any specifications delineated in the equipment technical manual or the motor "Original Equipment Manufacturer (OEM)" drawings. If ELDS bearings are not indicated in an APL, the following motor criteria must meet the applicability specifications for motors to undergo conversion to ELDS bearings:

   3.a Motor must be installed on a surface ship and must NOT be under the cognizance of NAVSEA 08.

   3.b Commercial motors are not eligible. Motors must have been furnished to the NAVY in accordance with MIL-DTL-17060 (Motors, Alternating Current, Integral Horsepower, Shipboard use), MIL-M-17413 (Motors, Direct Current, Integral H.P., Naval Shipboard [NAVY]) or MIL-M-17059 (Motors, 60 Cycle, Alternating Current Fractional H.P. [Shipboard Use]).

   3.c Motors using one or more noise-quiet bearings per MIL-B-17931 (Bearings, Ball, Annular, For Quiet Operation) are NOT eligible for ELDS conversion.

   3.d Bearings originally furnished with the motor must be Type 111 bearings per FF-B-171. Motors are NOT to be considered as candidates for ELDS conversion in situations where the equipment technical manual and/or the OEM motor drawings originally specified FF-B-171 bearings but have notes indicating that replacement bearings are to be in accordance with MIL-B-17931 (Bearings, Ball, Annular, For Quiet Operation).

   3.e The use of ELDS bearings is limited to motors where the full load speed and the size of both bearings are as follows:

      1. Maximum bearing size 306 or 206 and full load rpm between 1,801 and 3,600 rpm.
      2. Maximum bearing size 313 or 213 and full load rpm between 1,201 and 1,800 rpm.
      3. Maximum bearing size 318 or 218 and full load rpm less than 1200 rpm.

4. The repair process using ELDS bearings includes the following requirements:

   4.a Only ELDS bearings, in accordance with the following table (Attachment A / Table 1), can be used. Other double seal bearings will not provide an acceptable bearing life.
### Attachment A / Table 1

4.b Both bearings of each converted motor must be ELDS bearings.

4.c A label plate must be permanently attached to the motor indicating "Do Not Lubricate".

4.d Grease fills and drains, if present, must be fitted with a pipe plug, securely fastened. Fittings to accommodate grease guns must be replaced with pipe plugs."

   2.11 508-6644926, Insulation and Lagging Schedule, Pipe and Machinery

3. **REQUIREMENTS:**

   3.1 Provide and implement a procedure for maintaining a maximum permeability factor of 2.0 on board mine warfare ships and craft for material and equipment installed, repaired, or relocated during the accomplishment of work required by the Job Order. The procedure shall have been reviewed and accepted by the SUPERVISOR prior to the implementation.

   3.1.1 The procedure requires a one-time submittal/acceptance unless Standard Items and/or references change or are updated.
3.1.2 Describe a receipt inspection system to verify Government, contractor, and subcontractor furnished material is in compliance with the permeability limits.

3.1.3 Describe controls used in fabrication work to ensure compliance with the permeability limits after fabrication.

3.1.4 Describe the method used to determine magnetic content of materials removed from or brought on board the ship or craft including monitoring station locations.

3.1.5 Identify type of instrumentation, conforming to Method 3 of ASTM A 342, used to measure the magnetic permeability of material.

3.1.6 Describe the record and reporting system utilized to list material required, but determined to have exceeded the permeability factor 2.0 after fabrication and the maximum dimension of the part exceeds 2 inches or the maximum dimension of all parts having a similar function in a 30 foot section of the ship exceeds 60 inches. This list shall include material and equipment removed, repaired, installed, or relocated. The record and reporting system shall contain description, magnetic dimensions, approximate weight, location installed on board ship or craft, and a record verifying that the item is contained in the current Location of Magnetic Material electronic database, a new database entry made for previously NAVSEA-approved items missing an entry or both a new entry made and waiver granted for new items or substitutions. Use 2.1 thru 2.8 as applicable, and the electronic database to determine if the 60 inches in 30 foot rule above is met.

3.2 Maintain or reduce permeability of items at or below 2.0, including proposing alternative materials for existing designs to the SUPERVISOR. Where alternatives are not possible or practical, submit one legible copy, in approved transferrable media, of a report in the format of Attachment A, to document repaired or replaced items in excess of the magnetic material control limit of 3.1.6. Ensure the part number, permeability range, and magnitude and location match component material and design. Equipment which is magnetic and not currently authorized by applicable NAVSEA drawing or technical manual (i.e., substitution or new item) additionally requires evaluation and acceptance by the SUPERVISOR prior to installation.

3.3 Verify the following attributes on all reinstalled magnetic material, whether in accordance with current design or not, to minimize magnetic signature.

3.3.1 Vendor or stock number matches or crosses to NAVSEA document, if per current design.

3.3.2 Magnetic field location is limited to areas appropriate to the component (e.g., solenoids).
3.3.3 Magnetic permeability is appropriate for the specified material. Measured permeability will be affected by material, geometry, location temperature and degree of magnetization.

3.3.4 400 Series Monel and 304 CRES can be weakly magnetized by machining or welding; permeability must be less than 5 in accordance with Note 3.07 of 2.9.

3.3.5 Material Upgrades: Technical documentation may be used in lieu of surveys for identification for items that could become magnetic even if not when installed.

3.3.5.1 Upgrade low energy, non-safety critical system fasteners which are magnetic or potentially so, such as carbon steel, 304 CRES and 400 Series Monel to 500 Series Monel or 316L CRES as appropriate for the working environment. Replacement fasteners must be of identical thread size, type, shape and fit.

3.3.5.2 Submit one legible copy, in approved transferrable media, of a list of all proposed replacement fasteners with costs and sizes to the SUPERVISOR for approval prior to procurement.

3.3.5.3 Upgrade mechanical wire which is magnetic or potentially so, such as carbon steel wire used for lagging pad installation in accordance with 2.10, to 500 Series Monel or 316L CRES lockwire in accordance with Paragraph 5.5.1 of 2.11. Replacement wire must be of equivalent size.

3.3.5.4 Select 500 Series Monel or 316L CRES as appropriate for the working environment for items with material not specified in NAVSEA documentation, such as the lagging pad hooks and washers of 2.11.

3.3.5.5 Upgrade non-critical load bearing hardware which is magnetic or potentially magnetic, such as carbon steel, 304 CRES and 400 Series Monel hinges, hasps, latches, chair swivels, corner reinforcements, etc., to 500 Series Monel or 316L CRES as appropriate for the working environment.

3.3.5.6 Upgrade electrical fittings which are magnetic or potentially magnetic, such as carbon steel, 304 CRES and 400 Series Monel stuffing tube packing nuts, cover plates, knockout plugs, etc., to 500 Series Monel, 316L CRES or Underwriter’s Laboratory fire rated nylon or plastic as appropriate for the working environment.

3.3.6 Submit one legible copy, in approved transferrable media, of a report furnishing documentation provided by supplier, as required by 3.1.6.

4. NOTES:

4.1 The magnetic field of mine warfare ships and craft consists of the superposition of the magnetic field from 4 basic sources: ferrous field,
eddy current field, ship service stray field, and minesweep generator stray field. The stray field sources are the electric currents in cables and wiring associated with the operation of the equipment of the ship or craft. The ferrous field and eddy current field sources are as follows:

4.1.1 Ferrous Field Source: The ferrous field sources are the items on or part of the ship or craft which use a material in their construction that exhibits a relative magnetic permeability different than 1.0, the relative magnetic permeability of air. Each ferrous field source acts like a bar magnet whose magnetic field depends upon the material's relative magnetic permeability, volume (not mass), and shape of the earth's magnetic field. At a point or location external to a ferrous field source, the magnetic field of this source is essentially the same whether the source is hollow (such as a block or pedestal). A material whose relative magnetic permeability is 2.0 or less is arbitrarily defined to be nonmagnetic when used in conjunction with mine warfare ships and craft; otherwise, the material is said to be magnetic. Whether the material of an item is classified magnetic or nonmagnetic, according to the above arbitrary definition, a change in relative magnetic permeability of the material will, in general, result in a change in the magnetic field associated with this item.

4.1.2 Eddy Current Field Source: The eddy current field sources are the items on or part of the ship or craft which use a material in their construction that exhibits an electrical conductivity. A material whose electrical conductivity is less than 10.0 percent of the electrical conductivity of copper ($5.8 \times 10^5$/cm at 20 degrees Centigrade) is arbitrarily defined to be nonconductive when used in conjunction with mine warfare ships and craft; otherwise, the material is said to be electrically conductive. Each eddy current field source acts like a generator when it oscillates in the earth's magnetic field due to the rolling and pitching of the ship or craft. The current in this source, resulting from the generator action, has associated with it a magnetic field - an eddy current field. The magnitude of this field is dependent upon the conductivity of the material, the size of the electrical path in the material, the cross-sectional area of the electrical path, and the orientation of the source with respect to the earth's magnetic field due to the rolling and pitching of the ship or craft.

4.1.3 If an item is both highly magnetic and electrically conductive, such as mild steel or steel, the ferrous field will mask out the eddy current field. If an electrically conductive item is located inside a highly magnetic enclosure, such as mild steel or steel, the enclosure will mask the magnetic effects of its contents and will appear as if it were a solid magnetic block.

4.2 The SUPERVISOR will provide written direction for accomplishment of one of the following prior to reinstallation of temporarily removed existing or new material/equipment as a result of the deviation request.

4.2.1 Authorization for deviation request.
4.2.2 Identification and authorization of an acceptable Contractor Furnished Material (CFM) substitute material or equipment.

4.2.3 Receipt of an acceptable Government Furnished Material (GFM) substitute material or equipment.

4.2.4 Technical direction and information for manufacturing of acceptable material or equipment.

4.2.5 Other direction as determined acceptable by the ship class planning yard or higher authority.

1. **SCOPE:**

   1.1 Title: Provisioning Technical Documentation (PTD); provide

2. **REFERENCES:**

   2.1 9090-1500, Policies and Procedures Manual, Provisioning, Allowance, and Fitting Out Support (PAFOS), Chapter 4, Provisioning

   2.2 Interactive Computer Aided Provisioning System (ICAPS)

3. **REQUIREMENTS:**

   3.1 Provide Provisioning Technical Documentation (PTD) in accordance with 2.1, for all new and/or modified Contractor Furnished (CF), Allowance Parts List (APL) worthy, Hull, Mechanical, and Electrical (HM&E) and/or Electronics components. PTD **must** include a Provisioning Parts List (PPL) and Engineering Data for Provisioning (EDFP).

   3.1.1 PPL **must** identify each part subject to failure/replacement, or required for maintenance of the component, and **must** include the following SAE GEIA-STD-0007 Data Product Deliverables (DPDs):

   3.1.1.1 Provisioning Contract Control Number (PCCN)

   3.1.1.2 Provisioning List Item Sequence Number (PLISN)

   3.1.1.3 Indenture Code for non-electronic components

   3.1.1.4 Reference Designation for electronic components

   3.1.1.5 Commercial and Government Entity (CAGE) Code

   3.1.1.6 Reference Number

   3.1.1.7 Item Name

   3.1.1.8 Quantity Per Assembly (QPA)

   3.1.1.9 Quantity Per End Item (QPEI)
3.1.1.10 Unit of Issue (UI)

3.1.1.11 Unit of Issue Price (UI Price)

3.1.1.12 Component Identification Data (CID): Enter all available data

3.1.2 Ship Level Provisioning Parts List (SLPPL) must include items determined not to be APL worthy in accordance with Appendix G of 2.1, and must include the SAE GEIA-STD-0007 DPDs identified in 3.1.1.

3.1.3 Statements of Prior Submission (SPS) must be submitted in lieu of PTD, whenever PTD that meets the requirements of the contract has previously been furnished to the Government. An SPS certifies that all replacement parts are identical to those provided by the previously furnished PTD. The SPS must apply to the end item or to any component thereof and must include:

3.1.3.1 End item part number

3.1.3.2 Manufacturer's CAGE

3.1.3.3 Manufacturer's drawing number and revision

3.1.3.4 RIC (APL number)

3.1.3.5 Certification statement certifying that all replacement parts are identical to those identified by the APL or previously furnished PTD

3.1.4 If there are any changes to replacement parts, a PTD package (PPL and EDFP) that identifies the changes must be submitted in lieu of an SPS.

3.2 An EDFP must be provided with each PPL and SLPPL submittal. EDFP must be marked with Distribution Statements in accordance with DoD Directive 5230.24.

3.3 Provide a Contractor Furnished Material (CFM) report and a copy of the Purchase Order and receipt document for each procurement of equipment or components for which PTD or SPS is required. The report must include:

3.3.1 Contract number

3.3.2 Contractor's purchase order number

3.3.3 Description of material

3.3.4 Quantity ordered

3.3.5 Date scheduled to be ordered
3.3.6 Date ordered
3.3.7 Date required to meet production schedule
3.3.8 Proposed receipt date
3.3.9 A summary listing any problem areas
3.3.10 Date submitted to SUPERVISOR
3.3.11 Alteration number
3.3.12 Drawing and piece number
3.3.13 Manufacturer
3.3.14 Manufacturer's part number
3.3.15 Date received
3.3.16 Work Item number

3.3.17 Submit one legible copy, in approved transferrable media, of the CFM report to the SUPERVISOR no later than 30 days after the Job Order award, every 14 days up to availability start date, within 10 days after availability start date, then monthly thereafter to End of Availability (EOA).

3.4 Submit data for PPLs and SLPPLs via 2.2, or in accordance with the ICAPS compatible format identified in Appendix K of 2.1 to the SUPERVISOR. Submit SPSs in approved transferrable media (spreadsheet or document) to the SUPERVISOR within 20 days after the installation of the contractor's component or equipment.

4. NOTES:

4.1 EDFP is required for all systems or equipment that are acquired for Navy use and for which PTD is being acquired. EDFP is the data acquired to support Line Material Item supportability analysis. It is the technical data that provides definitive identification of dimensional, material, mechanical, electrical, or other characteristics adequate for provisioning of the support items of the end article(s) on contract. EDFP consists of but is not limited to data such as specifications, standards, drawings, photographs, sketches and descriptions, and the necessary assembly and general arrangement drawings, schematics, drawings, schematic diagrams, wiring and cable diagrams, etc. This data is necessary for the assignment of Source, Maintenance, and Recoverability (SMR) codes to assignment of Item Management Codes, prevention of proliferation of identical items in the Government inventory, maintenance decisions, and item identification necessary in the assignment of a National Stock Number (NSN).
4.2 2.1 is available at:

4.3 2.2 is available for download from:

https://nedcchrgw.dc3n.navy.mil

4.4 PTD data submitted to the SUPERVISOR is forwarded to:

NSWCCD-SSES
Attn: Code 9451
5001 S. Broad St.
Philadelphia, PA 19112-5083

4.5 PTD data for all Navy boats and craft submitted to the SUPERVISOR is forwarded to:

NSWCCD-Detachment Norfolk
Attn: Code 836
2600 Tarawa Ct. Suite 303
Virginia Beach, VA 23459-3239
1. SCOPE:

1.1 Title: Government Property; control

2. REFERENCES:

2.1 Federal Acquisition Regulation (FAR) Part 45, Government Property

2.2 Defense FAR Supplement (DFARS) Part 245, Government Property

2.3 Federal Acquisition Regulation (FAR) 52.245-1, Government Property

3. REQUIREMENTS:

3.1 Provide and maintain a property control system for government property in accordance with 2.1 and 2.2. The property control system shall include the following functional elements, modified by the additional requirements in the following paragraphs:

3.1.1 Property Management

3.1.2 Acquisition

3.1.3 Receiving

3.1.4 Identification

3.1.5 Records

3.1.6 Movement

3.1.7 Storage

3.1.8 Physical Inventories

3.1.9 Reports

3.1.10 Consumption

3.1.11 Utilization
3.1.12 Maintenance

3.1.13 Subcontractor Control

3.1.14 Disposition

3.1.15 Contract Property Close-out

3.2 Provide for receipt of Government Furnished Property (GFP) as follows:

3.2.1 Submit the names and signatures of persons authorized to receive and account for GFP to the SUPERVISOR.

3.2.2 Inspect GFP immediately upon receipt for possible shipping damage.

3.2.2.1 Note any damage on carrier's copy of the Government Bill of Lading and notify the SUPERVISOR.

3.2.2.2 Forward one signed copy of the Shipping Document (DD Form 1348-1 or DD Form 1149) and one copy of the Bill of Lading to the SUPERVISOR.

3.2.3 Inspect GFP within 5 days of receipt to verify conformance with description and requirements.

3.2.4 Submit one legible copy, in approved transferrable media, of a report within 2 days after inspection to the SUPERVISOR listing product quality deficiencies, including the following:

3.2.4.1 Date discovered

3.2.4.2 National Stock Number (if applicable)

3.2.4.3 Nomenclature

3.2.4.4 Manufacturer

3.2.4.5 Manufacturer's Part Number/Identification Number

3.2.4.6 Contract Number

3.2.4.7 Item condition (new or overhauled/repaired)

3.2.4.8 A specific description of the defect(s), listing drawing or technical manual dimensions, required and actual

3.2.4.9 If material is defective due to mishandling, rust, or moisture
3.2.5 Notify the SUPERVISOR immediately upon discovery of loss, damage, destruction, or theft of Government property.

3.2.5.1 Submit one legible copy, in hard copy or approved transferrable media, of a report in accordance with 2.3 to the SUPERVISOR within 5 days of the discovery.

3.3 Maintain records for GFP, containing the following information:

3.3.1 Ship's name and hull number
3.3.2 Job Order and Work Item numbers
3.3.3 Date received
3.3.4 Shipping document or Bill of Lading number
3.3.5 Date issued
3.3.6 Unit price and quantity

3.4 Dispose of government property as follows:

3.4.1 Return material purchased from the Government under the Cash Sale (Bailment) procedure and not incorporated into the end product being procured under the contract, or consumed directly in the performance of such contract, to the Government at the contractor's expense in the same condition as received. Submit one legible copy, in approved transferrable media, of turn-in document (DD 1348-1) showing material returned for credit, to the SUPERVISOR.

3.4.2 Process material permanently removed from the ship for replacement, substitution, or elimination, whether serviceable or not, including equipment units, parts, and items determined by the SUPERVISOR to be of value to the Government as follows. A written certification shall accompany the inventory schedule submitted to the SUPERVISOR for equipment that has been purged of fluorocarbon or halon materials.

3.4.2.1 Inventory, identify, and tag or otherwise mark such property. Identification shall include ship's name and hull number, Job Order and Work Item numbers, part number/stock number, and item description.

3.4.2.2 Assemble equipment prior to delivery to the Government except as specifically directed in the Work Item.

3.4.2.3 Remove valves or drill holes in empty gas cylinders prior to delivery to the Government.

3.4.2.4 Remove the chemicals from firefighting bottles, remove valves/stems, triple rinse the bottle, and stencil the bottle "Triple Rinsed".
3.4.2.5 Clean each item to be disposed of free of grease and/or substances considered to be hazardous in nature prior to delivery to the Government.

3.4.2.6 Submit one legible copy, in hard copy or approved transferrable media, of the inventory to the SUPERVISOR. The inventory shall be signed by the contractor's representative and submitted when directed by the SUPERVISOR, or in any case, immediately following the completion of each Job Order.

3.5 Submit Final Termination of Inventory Report within 14 days after completion of availability.

4. NOTES:

4.1 None.
1. **SCOPE:**

   1.1 Title: Alteration Verification, Logistics and Technical Data; provide

2. **REFERENCES:**

   2.1 None.

3. **REQUIREMENTS:**

   3.1 Accomplish reporting of alterations in accordance with the following:

   3.1.1 Meet with the ship's Commanding Officer's designated representative when required by SUPERVISOR within one day after start of the availability. Accomplish required reporting for each alteration in accordance with Attachments A through C.

   3.1.2 Meet with the Commanding Officer's designated representative when required by the SUPERVISOR throughout the availability.

   3.1.3 Submit one legible copy, in approved transferrable media, of completed Attachments A through C to the SUPERVISOR for each alteration within 3 days after alteration completion.

   3.2 Complete Attachment D for all Government Furnished Material (GFM) and Contractor Furnished Material (CFM) equipment or components installed or permanently removed. This applies to all configuration changes, including alterations and repairs not reported in accordance with 3.1.

   3.2.1 Provide individual Attachment D forms for each piece of equipment or component, including contractor submission and SUPERVISOR receipt signatures.

   3.2.2 Submit data required by Attachment D, in approved transferrable media (spreadsheet or word processing document), to the SUPERVISOR no later than 5 days after installation or removal of GFM and CFM equipment or components from shipboard system(s).
3.3 Submit all copies of technical manuals, Maintenance Index Pages (MIP), and Maintenance Requirements Cards (MRC) received with GFM and CFM equipment to the SUPERVISOR no later than 5 days after receipt of equipment.

3.4 Data received in 3.3 required for installation and testing will be provided to the contractor.

4. **NOTES:**

4.1 Alterations may include Ship Alterations (ShipAlts), Boat Alterations (BoatAlts), Ordnance Alterations (ORDALTs), Engineering Changes (ECs), Field Changes (FCs), Machinery Alterations (MACHALTs), Ship Change Document (SCD), Alteration Equivalent to Repair (AER), and other configuration changes authorized for accomplishment.

4.2 The requirements of this NAVSEA Standard Item will be accomplished by the activity installing the alteration.

4.3 The technical point of contact for the requirements contained in the NAVSEA Standard Item is the local Class Maintenance Team Logistician for the SUPERVISOR.

   2.6 S9086-RK-STM-010/CH-505, Shipboard Piping Systems

3. **REQUIREMENTS:**

   3.1 Do not remove components from the following systems as interferences, except when the scope of work requires repairs to components of these systems or when specified in the Work Item:

   3.1.1 Main steam and catapult systems

   3.1.2 Gaseous oxygen piping systems which operate at pressures higher than 100 PSIG, liquid oxygen piping from oxygen plant to the liquid oxygen charging carts, and the overboard drain piping from the liquid oxygen storage plant and spillage drain

   3.1.3 Degaussing systems

   3.1.4 Electric cables which cannot be removed without cutting

   3.1.5 Hydraulic systems

   3.1.6 High pressure air systems. High pressure air systems are those systems designed for pressures of 1,000 PSIG or greater.
3.1.7 Support systems (e.g., SCBA Charging and Swimmer and Diver support and protection systems, which supply breathable air.

3.1.8 Cryogenic systems
3.1.9 Spring hangers
3.1.10 Ship's strength members involving structural integrity
3.1.11 Halon systems
3.1.12 LEVEL I systems in accordance with 2.2
3.1.13 Sonar dome pressurization system
3.1.14 Passive countermeasure materials
3.1.15 Ballistic plating
3.1.16 Waveguides
3.1.17 Collective Protection System (CPS)
3.1.18 MRG Lube oil piping

3.1.19 For submarines and SUBSAFE capable ships only, in addition to the systems identified above, SUBSAFE components/systems in accordance with 2.3

3.1.20 For nuclear-powered ships only, in addition to the systems identified above, steam plant systems that carry steam, water, or gas and which introduce these fluids either directly or indirectly into the steam generators, including:

3.1.20.1 Main Steam
3.1.20.2 Steam Generating
3.1.20.3 Feed
3.1.20.4 Condensate
3.1.20.5 Auxiliary Steam/Reduced Pressure Steam
3.1.20.6 Auxiliary Exhaust Steam
3.1.20.7 Gland Seal and Exhaust Steam
3.1.20.8 Bleed Steam
3.1.20.9 High Pressure Drain
3.1.20.10 Reserve Feed (except for reserve feed day tanks in surface ships)

3.1.20.11 Fresh Water Drain/Low Pressure Drain/Turbine Drain Catapult Steam Drain (up to catapult fill/charging valves and associated high-pressure drain system)

3.1.20.12 Catapult Trough Heating and Drain Systems

3.1.20.13 Main Steam Supply to reboiler and reboiler drains to the Deaerating Feed Tank (DFT)

3.1.20.14 Heating steam and condensate return piping to and from distilling units and lithium bromide air conditioners

3.1.20.15 Those portions of the propulsion plant makeup water distribution system downstream of the distiller output or reverse osmosis outlet demineralizer used to supply water directly or indirectly to the steam plant

3.1.20.16 Nitrogen supply system used for sparging of aircraft carrier steam generators

3.1.20.17 Reactor Plant Fresh Water System (RPFW), Propulsion Plant Fresh Water System (PPFW), and Steam Generator Cooldown

3.1.20.18 Support systems (such as nitrogen systems, hydrostatic test rigs, and temporary steam generator makeup systems), which add water, steam, or gas directly or indirectly into steam generators

3.1.20.19 Any other systems or components governed by NAVSEA Instruction C 9210.4

3.2 Submit one legible copy, in approved transferrable media, of a report of components of the systems listed in 3.1 that must be removed as interferences and the work is not required by the Work Item, to the SUPERVISOR. The report must list the following information:

3.2.1 Identification of the item to be removed or disturbed:

3.2.1.1 Location/Space

3.2.1.2 Item description (e.g., piping size, valve number, cable identification, gauge number, etc)

3.2.1.3 System

3.2.2 Necessity for the action
3.2.3 Protective measures which will be taken to protect equipment from damage or contamination

3.2.4 Alignment procedures and details for tests that will be accomplished to verify acceptability after reinstallation

3.3 Visually examine interferences prior to and during removal for previous damage and deterioration.

3.3.1 Submit one legible copy, in approved transferrable media, of a report listing previously damaged and deteriorated interferences to the SUPERVISOR within 14 days after removal.

3.4 Remove interferences.

3.4.1 Protect interferences from damage or loss and prevent contamination of removed components and remaining parts of the system.

3.4.2 Submit one legible copy, in approved transferrable media, of a report listing interferences removed to the SUPERVISOR within 5 days of removal. The report must identify and include the following information for each interference that was disturbed:

3.4.2.1 Location/Space

3.4.2.2 Item description (e.g., piping size, valve number cable identification, gauge number, etc)

3.4.2.3 System

3.4.3 When energized components (e.g., lights, receptacles, sensors) greater than 30 volts are removed for interference and a path to ground will no longer exist, a temporary ground must be installed before the component is disconnected from its permanent ground connection. Verify ground connection exists and that it is securely fastened with metal-to-metal contact in accordance with 2.4.

3.4.3.1 Components will be adequately secured to a permanent structure so that there is no tension/stress on cable/energy source.

3.5 Install interferences removed in 3.4.

3.5.1 Install interferences that were neither reported as previously damaged or deteriorated, nor rendered unsuitable for reinstallation during removal.

3.5.2 Install interferences reported in 3.3.1 in the as-found condition or after authorized repairs have been accomplished.
3.5.3 Install new material in place of material rendered unsuitable for reinstallation during removal or storage.

3.5.3.1 New material must be equal in composition, strength, design, type, and size as existed prior to removal of the interferences.

3.5.3.2 Ground and bond AEGIS combat systems equipment and related electrical equipment enclosures, chassis, and cases in accordance with 2.5.

3.5.4 Accomplish the requirements of 2.6 for system cleanliness.

3.5.5 Accomplish the requirements of 009-12 of 2.1.

3.5.6 Accomplish the requirements of 009-71 of 2.1 for disturbed joints.

3.5.6.1 Test pressure and test medium must be in accordance with 2.6.

3.5.7 Accomplish the requirements of 009-37 of 2.1.

3.5.8 Accomplish the requirements of 009-11 of 2.1.

3.5.8.1 Damaged reusable covers must not be reinstalled.

3.5.8.2 Install new insulation, lagging, and reusable covers where missing.

3.5.9 Install new silicone coated aluminized cloth spray shields on mechanical joints and components in accordance with ASTM F 1138 in place of those removed as interference.

3.5.10 Install new gaskets and assemble in accordance with Section 5 of 2.6 when reinstalling interferences.

3.5.11 Accomplish the requirements of 009-32 of 2.1 for each new and disturbed surface.

3.5.12 Restore compartment, equipment, and systems labeling.

3.5.13 Accomplish the requirements of 009-26 of 2.1 for deck covering removed or damaged as interference.

3.5.13.1 New material must be equal to existing in color and composition.

(V)(G) "STRENGTH, TIGHTNESS, AND OPERATIONAL TESTS"
3.6 Align and accomplish appropriate strength, tightness, system cleanliness, and operational tests and ensure that the reinstalled interferences perform their normal functions within the system.

3.6.1 Tests **must** be incorporated into the contractor's Test and Inspection Plan.

4. **NOTES:**

4.1 An interference is any part of a ship, whether installed or portable, that must be moved or disturbed in the accomplishment of work specified in the Job Order.
1. **SCOPE:**

   1.1 Title: Authorization, Control, Isolation, Blanking, Tagging, and Cleanliness; accomplish

2. **REFERENCES:**

   2.1 Standard Items

   2.12 S9074-AR-GIB-010/278, Requirements for Fabrication Welding and Inspection, and Casting Inspection and Repair for Machinery, Piping, and Pressure Vessels

3. **REQUIREMENTS:**

   3.1 Accomplish the Work Authorization requirements of Volume IV, Chapter 10 of 2.2 for all non-nuclear work performed shipboard during Chief of
Naval Operations (CNO) Availabilities, Continuous Maintenance Availabilities (CMAV), Window of Opportunity (WOO), or Emergent Maintenance (EM) Availabilities. Ensure all work on ship’s systems and components is properly authorized and controlled in order to ensure rigorous personnel and ship safety standards are met. Include work such as planned maintenance, troubleshooting, corrective maintenance, and modernization and assessments.

3.1.1 Ensure all outside activity work (non-Ship’s Force) on ship’s systems and components, regardless of who performs the work, is formally authorized through a Work Authorization Form (WAF) completed and processed in accordance with Volume IV, Chapter 10 (including Appendix A) of 2.2. A copy of the authorized WAF must be maintained at the worksite during productive work.

3.1.2 For submarines only, accomplish the Work Authorization requirements of Volume IV, Chapter 10 of 2.2 for safety of ship maintenance item identification, listing, and control, or the requirements of 2.3 for Ship’s Plan of the Day (SPOD).

3.1.3 Maintain the WAF in the Work Authorization Log from the time of original authorization, through production work and testing, and until the WAF is formally closed out. When notified by the cognizant Repair Activity’s (RA) designated representative that the work is complete and ready for tags to be cleared, the RA’s designated representative will sign the WAF work completion block, then obtain ship’s concurrence to clear the associated Tagout Record Sheet line item(s). Additional sign-offs required by the WAF for testing and closure must be made as work progresses in accordance with Volume IV, Chapter 10 of 2.2.

3.1.4 When a WAF Coordinator (WAFCOR) is required in accordance with 009-106 of 2.1, all repair activities participating in the availability must submit properly prepared WAFs to the Lead Maintenance Activity (LMA) WAFCOR for processing.

3.1.4.1 Train and qualify contractor’s designated representative in the WAF process in accordance with 2.2. Maintain a current copy of the plan utilized to train and qualify contractor’s designated representative in accordance with 2.2 for reference by the SUPERVISOR.

3.1.4.2 The Repair Activity (RA) responsible for the work must accomplish the requirements of 2.4 and complete blocks 1, 2, and 4 through 10 of the WAF and submit to the WAFCOR.

3.1.4.3 The WAFCOR must obtain the appropriate WAF serial number from the Ship’s Force WAF Log and enter it into block 3 of the WAF. The WAFCOR must then submit the WAF to the ship’s Watch/Duty Officer for processing blocks 11 through 14. The WAFCOR will sign block 12 for concurrence to start work.

3.1.4.4 The RA responsible for the work must sign Block 14 in conjunction with the Ship’s Watch/Duty Officer.
3.1.4.5 The WAFCOR will issue a copy of the authorized WAF to the Repair Activity indicating authorization to begin work.

3.1.4.6 When work is complete, the RA will complete blocks 15 and 16 of the WAF in accordance with Volume IV, Chapter 10, Appendix A instructions of 2.2.

3.1.4.7 When all work and testing are completed, block 18 must first be signed by the WAFCOR and then the SF Watch/Duty Officer must be the final signature in block 18 to close the WAF.

3.2 Accomplish the requirements of 2.4 for equipment, systems, circuits, components, tanks, voids, piping, and valves that require isolation.

3.2.1 Ensure the isolation, de-energization, drainage of the isolated area, and depressurization of mechanical, electrical, electronics, and pressure system has been accomplished.

3.2.2 Individuals who perform shipboard work must receive training on basic purpose, use and restrictions of 2.4. Maintain a current copy of the plan utilized to train individuals in accordance with 2.4 for reference by the SUPERVISOR.

3.3 Accomplish the requirements of the contractor’s lockout/tags-plus program for unmanned craft and barges in accordance with 2.5.

3.3.1 Submit one legible copy, in hard copy or approved transferrable media, of contractor’s lockout/tags-plus program to the SUPERVISOR when requested.

3.3.2 Position equipment to achieve required isolation, by de-energizing, draining of the isolated area, and depressurization, and use lockout/tags-plus program when lock-out of equipment, systems, circuits, components, piping, or valves is required in accordance with 2.5.

3.4 Post warning signs and barriers and install temporary positive means to prevent closure or movement of components that create a safety hazard at hull and deck openings.

3.5 Complete and maintain a written record by work item using Attachment A (Accountability of Temporary Blanks and Plugs Check-Off Sheet), verifying installation and removal of temporary blanks/plugs used for Foreign Material Exclusion (FME), isolation of pressure boundaries, or hydrostatic testing. Location information must include the associated system/equipment name or tank number; frame, port or starboard, below or above water line.

3.5.1 Ensure the Accountability of Temporary Blanks and Plugs Check-Off Sheet (Attachment A) is at all tank closings; ensure the removal of blanks/plugs in tanks are verified and documented via signature on the check-off sheet by Ship’s Force representative and the SUPERVISOR prior to tank closing.
3.5.1.1 Submit one legible copy, in hard copy or transferable media, of the Accountability of Temporary Blanks and Plugs Check-Off Sheet (Attachment A) to the SUPERVISOR upon each satisfactory tank closing to document blanks/plugs were removed.

3.5.2 Maintain the Accountability of Temporary Blanks and Plugs Check-Off Sheet (Attachment A) for the duration of the availability.

3.5.2.1 Maintaining the Accountability of Temporary Blanks and Plugs Check-Off Sheet (Attachment A) for material that has been removed from the ship is not required; however that material must be entered in the Accountability of Temporary Blanks and Plugs Check-Off Sheet (Attachment A) when material is returned to the ship.

3.5.3 Submit one legible copy, in hard copy or approved transferrable media, of the completed Attachment A to the SUPERVISOR at the end of the availability.

3.6 Install identification tags on each removed piping section, valve, ventilation system, and equipment to indicate company name, ship's name, hull number, location, and Work Item number prior to removal from system. Tags must endure the repair process, and must stay attached and be readable until the removed piping section, valve, ventilation system, or equipment is reinstalled.

3.6.1 Include quantity when components are grouped/bagged/comingled together in a bucket or any other type of storage having only one identification tag.

3.6.2 Ensure FME is maintained on equipment removed from the ship.

3.7 Install and maintain blanks/plugs, nuts and bolts, painted blaze orange for use as FME immediately upon openings in equipment, valves, and piping systems not subject to pressure to prevent entry of foreign material and protect flanges and threaded areas. Existing system fasteners used for blanking that will be reused for installation are excluded from the requirement for blaze orange color. FME may be used for systems normally under pressure but are tagged-out for maintenance. The use of cloth, polyvinyl sheet, paper, tape, and rubber sheeting as FME is prohibited. All FME material must be applied with care, without using excessive force, to avoid damage to surfaces/components being protected.

3.7.1 Wood products, including damage control (DC) plugs are permitted for use as FME external to the ship for hull penetrations not in immediate vicinity of the flight deck. Wood products, including DC plugs, may be used as FME internal to the ship in piping and ventilation systems where permitted explicitly in the applicable Naval Ship's Technical Manual. DC plugs, wood, or wood products are prohibited for use in tanks/voids.

3.7.2 Piping, ventilation, and equipment components designated as scrap prior to removal do not need to be blanked to maintain cleanliness;
however, they must be properly marked as scrap material prior to removal. Precautions must be taken to preclude spillage of system contents.

3.8 Maintain the cleanliness of new, modified, repaired and disturbed non-nuclear piping systems and components of nuclear and non-nuclear powered naval vessels in accordance with 2.6 through 2.8. Cleanliness levels must be as assigned in 2.6.

3.8.1 Maintain cleanliness at the following acceptance standard:

3.8.1.1 Cleanliness Level II: Surface must be visually free of grease, oil, flux, scale, dirt, loose particles and any other contamination foreign to the base metal. Tap water residues on all metals and light superficial rust on carbon steel surfaces, caused by short time exposure to the atmosphere, are permitted. Light dust on cleaned surfaces is not objectionable, provided that the quantity and size of the particle does not adversely affect system operations.

3.8.1.2 Cleanliness Level III: Surface must be reasonably free of contamination and any remaining residue on the surface does not interfere with system operations or damage system components.

3.8.2 Re-establishing local cleanliness status: Local cleaning is permitted in accordance with 505j4 of 2.6. If existing system cleanliness has been lost in a localized area (such as metal shavings deposited in a pipeline while removing a section for replacement), cleanliness condition can be re-established by locally swabbing, wiping, vacuuming, etc. the area to meet the cleanliness requirements of 505j2 of 2.6. Local cleaning is limited to piping sections which can be accessed directly and the results of cleaning fully observed without the aid of borescopes, mirrors or other devices.

(V) "VERIFY CLEANLINESS"

3.8.3 Verify that existing cleanliness was maintained.

3.8.4 Submit one legible copy, in approved transferrable media, of a report identifying any location where cleanliness has not been maintained in accordance with 3.8.1 and cannot be restored by local cleaning in accordance with 3.8.2. Include the cause of system contamination and recommended actions for cleanliness recovery. (See 4.2)

3.9 Install and maintain blanks/plugs, nuts and bolts, colored blaze orange that will be used for hydrostatic testing on equipment, valves, and piping systems in accordance with 2.9 to withstand maximum system pressure for systems which will serve as the primary or secondary barrier to support hydrostatic testing. Existing system fasteners used for blanking that will be reused for installation are excluded from the requirement for blaze orange color. Secure blanks in place with gaskets and fasteners in accordance with 2.10 and 2.11, or weld in place. Ensure welding requirements for blanks meet the same requirement as the piping welds, in accordance with 2.8, 2.12, and 009-12 of 2.1. The use of cloth, polyvinyl sheet, paper, tape, and rubber sheeting as blanks is prohibited. DC plugs, wood, or wood products are
prohibited as blanks on pressurized systems, but may be used on non-
pressurized systems to include gravity drain piping.

3.9.1 Ensure pressure blanks have a positive means of attachment for
affixing tags. Tags must endure the repair process, and must stay attached
and be readable until the blanks are removed. Include company/contractor
name, Work Item number, WAF number, Contractor blanking/plugging log entry
number, along with system/equipment/component name, number, and location.

3.10 Ensure blanks, plugs or cable end protection installed is removed
and system/equipment is restored as soon as possible after completion of
work. Ensure all tag-out requirements of 2.4 are followed.

4. NOTES:

4.1 JFMM (2.2), 6010 (2.3), and TUM (2.4) are available on-line at:

4.2 FME is used to maintain system cleanliness. Accomplishment of NSI
009-107 of 2.1, or other means of cleanliness restoration, will be invoked
within the Work Item when cleanliness is lost or suspected of being lost.

4.3 General piping system cleanliness is addressed in Section 505 of
2.6.

4.4 Cleaning requirements for specific systems are addressed in
individual sections of 2.6 and 2.7.

4.5 The Lead Maintenance Activity (LMA) is defined in 2.2. MSRA/ABR
contractors tasked with availability schedule management under 009-60/009-111
of 2.1 are considered the LMA.

4.6 MSRA/ABR contractors fulfilling the role of Lead Maintenance Activity
under 2.2, or tasked with availability schedule managements under 009-60/009-
111 of 2.1 are not “component contractors” and are responsible for the full
scope of Repair Activity obligations under Volume IV, Chapter 10, of 2.2.

4.7 Worksite is defined as within the specific compartment or space where
physical productive work is occurring. For tanks and voids, the WAF may be
posted at the entry point of the space. For work performed on Navy boats and
craft or service craft, the “work site” is defined as on or near the vessel.

1. **SCOPE:**

   1.1 Title: Structural Boundary Test; accomplish

2. **REFERENCES:**

   2.1 S9AA0-AB-GOS-010, General Specifications for Overhaul of Surface Ships (GSO), Chapter 192

3. **REQUIREMENTS:**

   (I) (G) “COMPLETION AIR TEST”

   3.1 Accomplish a completion air test of spaces in accordance with Section 192 of 2.1 and the following:

   3.1.1 Install 2 independent pressure gauges.

   3.1.1.1 Gauge range must be such that the test pressure is in the middle third of the scale.

   3.1.2 Install 2 relief valves set at a maximum of 10 percent above test pressure.

   3.1.3 Install one vent valve.

   3.1.4 The air source must not exceed 25 PSIG and must have a supply capability less than the exhaust capability of either relief valve.

   3.1.5 Pressurize the tank/void/space to be tested to the pressure specified in the invoking Work Item.

   3.1.5.1 Isolate the pressure source and hold pressure for 15 minutes for temperature stabilization prior to commencing the pressure drop test.

   3.1.5.2 Measure the pressure drop of the tested space for 10 minutes. Allowable pressure drop must be as specified in the invoking Work Item.

   (I) “UNOBSERVED FLOW”
3.1.6 Accomplish unobstructed airflow test of air escape and overflow piping.

(V) "VISUAL INSPECTION"

3.1.7 Accomplish a visual inspection of disturbed mechanical joints for leakage upon completion of filling each tank. Allowable leakage: None.

(I)(G) "RUNNING AIR TEST"

3.2 Accomplish a running air test of spaces in accordance with Section 192 of 2.1, and the following:

3.2.1 Install 2 independent pressure gauges.

3.2.1.1 Gauge range must be such that the test pressure is in the middle third of the scale.

3.2.2 Install 2 relief valves set at a maximum of 10 percent above test pressure.

3.2.3 Install one vent valve.

3.2.4 The air source must not exceed 25 PSIG and must have a supply capability less than the exhaust capability of either relief valve.

3.2.5 Apply a soapy solution to the opposite side of the structure, associated tank piping, overflow and air escape piping, and inspect for leaks.

3.2.6 Inspect for leakage by observing for formation of bubbles. Allowable leakage: None.

(I) "UNOBSTRUCTED FLOW"

3.2.7 Accomplish unobstructed airflow test of air escape and overflow piping.

(V) "VISUAL INSPECTION"

3.2.8 Accomplish a visual inspection of disturbed mechanical joints for leakage upon completion of filling each tank. Allowable leakage: None.

(I)(G) "AIR HOSE TEST"

3.3 Accomplish a local air hose test in accordance with Section 192 of 2.1 and the following:
3.3.1 Air hose nozzle **must** be placed at less than 3 inches, but greater than zero inches, from the area to be tested and pressure directed at the structure under test in a manner most likely to disclose leaks.

3.3.1.1 The minimum nozzle diameter **must** be 3/8 inch and the nozzle pressure **must** be 90 plus or minus 5 PSIG as monitored at the nozzle.

3.3.2 Apply a soapy solution to the opposite side of the structure and inspect for leaks.

3.3.3 Inspect joint or fitting for leakage by observing for formation of bubbles. Allowable leakage: None.

(I)(G) "WATER HOSE TEST"

3.4 Accomplish a water hose test in accordance with Section 192 of 2.1 and the following:

3.4.1 Use a one and one-half inch hose with a minimum nozzle diameter of one-half inch. Pressure at the nozzle **must** be 50 to 55 PSIG at a maximum distance of 10 feet from the surface being tested.

3.4.2 The stream of water **must** be directed against the structure in a manner most likely to disclose leaks. The opposite side of the structure **must** be inspected to detect and locate leaks. Allowable leakage: None.

(I)(G) "VACUUM BOX TEST"

3.5 Accomplish a local vacuum box test in accordance with Section 192 of 2.1 and the following:

3.5.1 Apply a soapy solution to the structure being tested.

3.5.2 Install a vacuum box with a clear cover over each joint or each fitting being tested.

3.5.2.1 Install the vacuum box so that the pressure differential is in the direction of an air test.

3.5.3 Draw a vacuum of at least 10.2 inches of mercury and inspect for leaks.

3.5.3.1 Inspect the joint or fitting for leakage by observing through the clear cover for no formation of bubbles.

3.5.3.2 **When the joint length exceeds the available vacuum box size, a minimum of 10 percent of the previous inspection area must be overlapped with the new inspection area when moved to adjacent inspection area.**

(I)(G) "COFFERDAM TEST METHOD"
3.6 Accomplish a cofferdam test in accordance with Section 192 of 2.1 and the following:

3.6.1 Install the cofferdam over the joint or fitting to be tested so that the pressure differential will be in the same direction of an air test.

3.6.2 Pressurize the air space inside the cofferdam to the test pressure specified for the air test.

3.6.3 Apply a soapy solution to the opposite side of the structure being tested.

3.6.4 Inspect the joint or fitting for leakage by observing for formation of bubbles. Allowable leakage: None.

3.6.5 If the opposite side of the structure is inaccessible, an alternate method of proving tightness is to measure the drop in pressure within the cofferdam over a 10 minute period. The gasket and fittings in the cofferdam should be checked for leakage using a soapy solution. Allowable drop in pressure: None.

(I)(G) "CHALK TEST" (SEE 4.2)

3.7 Accomplish a chalk test of each knife edge and gasket on watertight doors, hatches, and scuttles.

3.7.1 Apply chalk to the bearing surface of the knife edge and close the door, hatch or scuttle by normal procedure.

3.7.2 When the door, hatch or scuttle is opened, the chalk from the knife must have been transferred to the gasket.

3.7.3 The chalk imprint must be in the center three-fifths of the width of the gasket with 100 percent continuous contact of knife edge to gasket.

3.8 Repaired areas requiring a structural boundary test must remain uninsulated and unpainted until completion of successful inspection and test.

4. NOTES:

4.1 Associated tank piping is defined as, "An assembly of pipe, tubing, valves, fittings, and related components forming a whole or a part of a system which starts or terminates in subject area, thus being common to and associated with same."

4.2 When a chalk test is required it must be accomplished prior to other structural boundary test on watertight doors, hatches, and scuttles.
1. **SCOPE:**

   1.1 Title: Deck Covering; accomplish

2. **REFERENCES:**

   2.1 Standard Items

   2.2 MIL-STD-1623, Fire Performance Requirements and Approved Specifications for Interior Finish Materials and Furnishings (Naval Shipyard Use)

3. **REQUIREMENTS:**

   3.1 All deck coverings materials specified herein **must** conform to the fire performance requirements of 2.2.

   3.2 Maintain a current copy of the NAVSEA-reviewed Shipbuilders and Marine Paints and Coatings Product/Procedure Data Sheet (ASTM F718) for the NAVSEA-approved deck covering system specified in the invoking Work Item for reference by the SUPERVISOR. Where the ASTM F718 does not exist for a product, maintain a copy of the manufacturer's technical data sheets.

   3.2.1 Submit one legible copy, in approved transferrable media, of specific documents when requested by the SUPERVISOR.

   3.2.2 All deck covering materials that are qualified to performance specifications (MIL-PRF) are to be applied in accordance with the manufacturer's NAVSEA-reviewed ASTM F718 product data sheet. The dry film thickness (DFT), temperature, relative humidity, and surface preparation requirements stated herein take precedence over the NAVSEA-reviewed ASTM F718 data sheets if there is a conflict. The NAVSEA-reviewed ASTM F718 data sheets **must** supersede any other manufacturer's ASTM F718 data sheets for that product, even if it is newer (more recent) than the NAVSEA-reviewed ASTM F718 data sheets. Copies of the NAVSEA-reviewed ASTM F718 data sheets are available from the Naval Surface Treatment Center (NST Center) website: [http://www.nstcenter.biz](http://www.nstcenter.biz).

   3.2.3 Comply with the NAVSEA-reviewed ASTMF718s, manufacturer’s Safety Data Sheet (SDS) and/or manufacturer’s instructions submitted in 3.2 for safety and health precautions during the removal, handling, and application of deck covering products.
3.2.3.1 Ensure that harmful vapors, fumes, and mists are ventilated to the exterior of the vessel.

3.3 Deck covering materials must be stored in a cool, dry place, not exposed to freezing temperatures or direct sunlight, and must be stored in accordance with NAVSEA-reviewed ASTM F718s and/or manufacturer's instructions.

3.4 Accomplish an unobstructed flow test of each deck drain, using clean fresh water prior to the disturbance of existing deck covering. Verify that all deck DC fittings are free, removable, and operational.

3.4.1 If any defects are identified in 3.4, submit one legible copy, in hard copy or approved transferrable media, of a report listing defects found to the SUPERVISOR.

3.4.2 Blank or plug each drain to prevent entry of contaminants.

3.5 Accomplish removal of the existing deck covering in its entirety (including base cove where installed) for locations requiring installation of a complete deck covering system.

3.5.1 Remove unused remnants, clips, brackets, and weldments from decks and vertical surfaces receiving new deck coverings.

3.5.1.1 Chip and grind surfaces flush and smooth in way of removals.

3.6 Accomplish a visual inspection of each exposed piping penetration, deck drain, deck plating and bulkheads for structural integrity, deterioration, pitting, cracks, and areas of damage or distortion.

3.6.1 If any defects are identified in 3.6, submit one legible copy, in hard copy or approved transferrable media, of a report listing defects identified to the SUPERVISOR.

3.7 Accomplishment of cleaning and painting for each deck surface, including up the adjacent vertical surfaces intersecting the deck up to one inch above the complete deck covering system level must be in accordance with NAVSEA Standard Items (See Note 4.4).

3.7.1 If solvent is used to clean the deck at any point in the installation process, the deck must be allowed to dry before application of any coating. No visible solvent must be present on deck surfaces prior to proceeding with the next process step.

3.7.2 Where waterproof membranes are to be installed, the required surface preparation and primer application must be completed 5 inches up the adjacent vertical surfaces intersecting the deck.
3.7.3 Decks receiving a MIL-PRF-3135 underlayment may also be primed using the primer or bond coat qualified as part of the deck covering system or with a coating conforming to MIL-DTL-24441, Type IV, Formula 150 at 4 to 6 mils or MIL-PRF-23236, Type V, VI, or VII, Class 5 or 7, at 4 to 8 mils DFT. No additional primer coating is required when the qualified bond coat is applied as part of the deck covering system.

3.7.4 Prior to the installation of MIL-PRF-3135, Type III or IV, underlayment, the surface preparation must be an SSPC-SP 3 substrate (i.e. direct-to-substrate without primer).

(I) "VISUAL INSPECTION" (See 4.3)

3.8 Accomplish a visual inspection of the exposed base coat or underlayment surfaces (after removing the top coats in accordance with the applicable Attachment) for a deck covering system repair that requires resurfacing or partial replacement and not a complete installation.

3.9 Installation of deck coverings.

3.9.1 Install new rings and/or collars around each sounding tube and deck drain. New rings must be CRES Grade 316, 3/8-inch high by 3/16-inch thick and installed 1/4-inch peripherally to sounding tube or deck drain. Seal each ring and/or collar to the deck, using epoxy compound conforming to MIL-PRF-24176.

3.9.2 Install resin-based underlayment conforming to MIL-PRF-3135, Type III or IV, in way of low spots, dish pans, and high points that cannot be ground flush, to provide a smooth and fair surface. Slope and fair as required to ensure positive draining to deck drains where installed. See additional requirements in the applicable Attachment. Underlayment must be installed in accordance with NAVSEA-reviewed ASTM F718s and/or manufacturer's instructions and procedure submitted in 3.2 beneath the following deck covering materials: wear resistant deck tile, chemical-resistant floorings, solid vinyl tile, vinyl composition tile, porcelain tile, and quarry tile.

3.9.2.1 If the deck may cause a tripping hazard or promote premature failure of the deck covering (i.e. not level, high weld seams), a MIL-PRF-3135 underlayment may be installed beneath carpet and electrical sheeting/matting as directed by the SUPERVISOR.

3.9.3 Except where MIL-PRF-3135, Type IV underlayment is used, install a waterproof membrane in each wet space (as defined in Table 2) and in locations adjacent to wet space bulkheads where the coaming to deck joint is not 100 percent seam welded, and any other locations identified in the individual Work Item or as directed by the SUPERVISOR, where there is an increased likelihood of water penetration under the deck covering (e.g., around refrigerated vending machine foundations, AC spot cooler drains, spaces leading to the weather, etc.).

3.9.3.1 The membrane must be in accordance with ANSI A118.10, and be certified by the manufacturer to be compatible with both the
underlayment and the installed deck covering. The membrane must be one continuous barrier covering the entire deck, including the cove base 100 mm (4 inches) up each vertical surface. For components less than 4 inches from the deck, cove base is not required. Provide smooth sloped transition from the membrane to the components. Where the surface will be prepared and primed in accordance with 3.7 (steel and aluminum surface including pipe penetrations, foundations, and etc. described in 3.9.3). The membrane must be applied up to vertical surfaces at the same height of cove base where tiles will be installed.

3.9.3.2 The use of a waterproof membrane is not required in areas where MIL-PRF-32584, Types I, II or III products are used.

(I)(G) "VISUAL INSPECTION"

3.9.3.3 Accomplish a visual inspection of the completely installed and cured waterproof membrane. The membrane must have a smooth, continuous surface that is free of air bubbles that penetrates any layer of the deck covering system. No embedded contaminants such as dust or fibers must be visible on the deck at 45 degrees to the surface when viewed using the as-installed ambient lighting source from a standing position.

3.9.4 Where the prevention of condensation on certain decks, e.g. above ballast tanks, or to reduce heat flow to decks located over hot machinery spaces, especially where these decks form the deck tops of living spaces, insulating deck covering material must be installed where designated by the SUPERVISOR. Install insulating deck covering material conforming to MIL-D-18873 or MIL-D-23134 in accordance with NAVSEA-reviewed ASTM F718s and/or manufacturer’s instructions.

3.9.5 Accomplish the requirements of Attachment A for the installation of new unglazed porcelain tile deck covering system, using the NAVSEA-reviewed ASTM F718 and/or the manufacturer’s instructions.

3.9.6 Accomplish the requirements of Attachment B for the installation of new wear resistant deck tile covering system, using the NAVSEA-reviewed ASTM F718 and/or the manufacturer’s instructions.

3.9.7 Accomplish the requirements of Attachment C for the installation of new, or the resurface of existing, chemical-resistant flooring systems, using the NAVSEA-reviewed ASTM F718 and/or the manufacturer’s instructions.

3.9.8 Accomplish the requirements of Attachment D for the installation of new electrical grade sheeting and matting deck covering system, using the NAVSEA-reviewed ASTM F718 and/or the manufacturer’s instructions.

3.9.8.1 Electrical grade sheeting is a continuous deck covering acting as the primary deck covering system across the entire deck of a space.

3.9.8.2 Electrical grade matting is installed over the
primary deck covering system in localized areas in way of electrical hazards.

3.9.9 Accomplish the requirements of Attachment E for the installation of new carpeting deck covering system, using the NAVSEA-reviewed ASTM F718 and/or the manufacturer’s instructions.

3.9.10 Accomplish the requirements of Attachment F for the installation of new vinyl composition and solid vinyl tile deck covering systems, using the NAVSEA-reviewed ASTM F718 and/or the manufacturer’s instructions.

3.9.11 Accomplish the installation of new light-weight concrete deck covering system, using the NAVSEA-reviewed ASTM F718 and/or the manufacturer’s instructions.

3.9.12 Accomplishment of cleaning and painting for each MIL-PRF-32584, Types I, II or III high durability deck coating and MIL-PRF-24667 nonskid applications must be in accordance with NAVSEA Standard Items (See Note 4.4).

3.9.12.1 Accomplish the requirements of Attachment G for the installation of new or replacement of MIL-PRF-24667, Type XI nonskid, using the NAVSEA-reviewed ASTM F718 and/or the manufacturer’s instructions.

3.9.13 MIL-DTL-15562 matting is required in areas where specific electrical hazards may exist in non-designated electrical spaces as designated by the SUPERVISOR.

3.9.14 Newly installed deck covering systems must be allowed to stabilize at room temperature for 24 hours prior to foot traffic and must not be washed for 48 hours.

(I)(G) "VISUAL INSPECTION"

3.9.15 Accomplish a visual inspection of the completely installed and cured deck covering system. Ensure that each deck covering system is in accordance with Tables One and 2, and is uniform and free of defects. Deck coverings with a sealer coat installed must have a continuous surface, free of blotchy areas, pooling, ridge marks or runs, with only negligible embedded surface contaminants. Air bubbles in the seal coat are acceptable; however, they must not penetrate any other layers of the deck covering system. Imperfections that may cause premature failure or do not meet the above requirements must be corrected before the surfaces are accepted.

(I) "UNOBSTRUCTED FLOW TEST AND POSITIVE DRAINING INSPECTION"

3.9.15.1 Remove each blank and plug installed in 3.4.2 and accomplish an unobstructed flow test of each deck drain (where installed), using clean, fresh water. No obstruction allowed. For wet space decks, accomplish a positive draining inspection, using a sufficient amount of clean, fresh water throughout each deck surface to ensure that new deck covering system slopes to the drains. Water must flow to drains and not stand or puddle.
3.9.15.2 Upon completion of deck covering installation, verify all deck DC fittings are free, removable, and operational. Ensure deck drain covers, remote operating gear deck box covers, and other DC fittings have not been sealed over during the installation of sealer coats and/or deck covering installation are removable and operational.

4. **NOTES:**

4.1 Table One provides the deck covering systems for dry interior spaces. Table 2 provides the deck covering systems for wet interior spaces. Wet interior spaces are defined as interior compartments that are exposed to wet conditions or potential immersion resulting from equipment in space, exposure to weather, or other service conditions of the space. Column A lists the approved decking materials for each group of spaces. Column B lists where electrical grade sheeting or matting, MIL-DTL-15562, **must** be used for non-designated electrical spaces where electrical hazards may exist in accordance with 3.9.13. Column C lists where nonskid **must** be used in working areas around machinery and walking areas in accordance with 3.9.12.

4.2 The SUPERVISOR will select type, color, and pattern of deck coverings (with input from Ship’s Force *(or custodian for boat or craft)*, when possible), using all available samples supplied by the manufacturer.

4.3 The exact location of work will be indicated in the invoking Work Item, including the type (and grade or class) of deck covering, the location (space name and number and if entire space, within the coaming, not under furniture, etc.) and the required Table, Line, and Column from 009-32 of 2.1 for surface preparation. Locations that are to retain underlayment or base coats **must** also be indicated as such in the invoking Work Item (e.g., replacing deck covering down to existing underlayment or base coats, replacing deck covering systems down to bare substrate or partial replacement of existing deck covering system).

4.4 If cleaning and painting of 3.7 or 3.9.12 is required; the use of Category II Standard Item 009-32 “Cleaning and Painting Requirements; accomplish” of 2.1 will be specified in the Work Item.
ATTACHMENT A
CERAMIC TILE (QUARRY AND PORCELAIN)

1. Ceramic tile includes both porcelain and quarry tiles and **must** be installed in locations listed in Table 2.

   A. Ceramic tile **must** meet the requirements of ANSI A137.1 (available from the Tile Council of North America) and be unglazed, with a minimum coefficient of friction (COF) of 0.7 dry and 0.6 wet when tested in accordance with ASTM C1028.

   B. Adhesive and grout **must** both be epoxy, chemical resistant, and water cleanable, in accordance with ANSI A118.3.

   C. The underlayment **must** be in accordance with 3.9.

D. Concrete.

   (1) Fabricate and install box units around hard to reach areas, i.e., vent ducting, stuffing tubes, and pipe brackets.

   (2) Apply concrete by pouring into boxed area to produce slope towards deck drains and to provide vertical surfaces and square corners that suit application of cove tiles.

   (3) Remove box units after concrete is cured.

E. Adhesive (mortar) and tile.

   (1) Apply an ANSI A118.3 epoxy adhesive to the deck and on vertical surfaces up 4 inches from the deck.

   (2) Ceramic cove base and bull nose top pieces **must** be used on the vertical portions of the tile system.

   (3) The tiles **must** be stored flat.

   (4) The application and installation of adhesive and tile may have to be accomplished in sections if the area is so large as to prevent laying tiles within adhesive pot-life.

   (5) Periodically lift a set tile and inspect to ensure that 100 percent contact between adhesive and tile is achieved and that there is no entrapped air in the adhesive.

   (6) Tiles, adhesive and deck **must** be allowed to stabilize to a temperature as close as practicable to room temperature, but in all cases between 64 degrees Fahrenheit and 81 degrees Fahrenheit for a period of 24 hours before, during, and after installation.

   (7) The deck should be protected from traffic for 24 hours after installation and **must** not be washed for 48 hours following installation.
F. Grout.

(1) Mix and apply an ANSI, A118.3 epoxy grout by working it into tile seams to ensure air pockets are eliminated.

(2) Clean epoxy grout residue from the surface of the tile.

(3) Protect tile from foot traffic for a minimum of 24 hours.

G. Deck drain sealant installation. In the area between the tile, adhesive, and collar joint, install a waterproof sealant conforming to SAE-AMS-S-8802, Class B; MIL-A-46106, Group I, Type I; 3M 5200 Fastcure Marine Sealant; or NAVSEA-approved equivalent, around the entire circumference of the deck drain to the tile and adhesive interface.
ATTACHMENT B
WEAR RESISTANT DECK TILE

1. Wear resistant deck tiles must be installed in locations listed in Table One.

A. The wear resistant deck tile materials must be qualified under MIL-PRF-32170.

B. The adhesive must be as recommended by the manufacturer. For adhesive application, the substrate temperature must be between 64 degrees Fahrenheit and 81 degrees Fahrenheit, with a maximum relative humidity of 75 percent. The temperature and relative humidity must be stabilized for 24 hours prior to installation and for 24 hours following the installation.

C. Tile:

(1) Tiles, adhesive and sub-floor should be allowed to stabilize to a temperature as close as practicable to room temperature, but in all cases must be between 64 degrees Fahrenheit and 81 degrees Fahrenheit for a period of 24 hours before, during and after tile installation.

(2) The tiles must be stored flat.

(3) The deck should be protected from traffic for 24 hours after tile installation and must not be washed for 48 hours following installation.

(4) Do not spring wear resistant deck tiles into position. Tiles requiring hand cutting must not be cut oversize and then sprung (forced) into position. The tile must be cut such that they fit neatly into position without a gap between them and not requiring bending or application by force. Tiles can be taped together with masking tape to pull joints together during curing of the adhesive.

(5) The deck should be rolled initially by hand with a vinyl seam roller. Two to 4 hours after application of the adhesive, but prior to adhesive setting, the tiled surface should be rolled with a 100 lb. floor tile roller to ensure a good bond between the tiles, adhesive, and sub-floor.

(6) Clean away excess adhesive before it is allowed to dry. For water based adhesive use a soft cloth moistened with denatured alcohol. Do not use mineral spirits, which will cause swelling and have a tendency to curl.

D. Seal all edges of the tile including penetrations for pipes, foundations, vents, and other structures with a waterproof sealant conforming to SAE-AMS-S-8802, Class B; MIL-A-46106, Group I, Type I; 3M 5200 Fastcure Marine Sealant; or NAVSEA-approved equivalent.
ATTACHMENT C
CHEMICAL-RESISTANT FLOORINGS

1. Chemical-resistant floorings must be installed in locations listed in Tables One and 2.

A. The chemical-resistant flooring materials must be qualified under MIL-PRF-32584, Types IV or V, and listed on the QPL.

B. If aggregate is required to meet the coefficient of friction (COF) requirements of MIL-PRF-32584, an aggregate (e.g., white aluminum oxide or glass beads) must be included in the final seal coat to provide slip resistance.

C. The materials must be stored at a temperature between 60 degrees Fahrenheit and 80 degrees Fahrenheit for best application properties.

D. Maintain deck surface and room temperature in accordance with the NAVSEA-reviewed manufacturer’s instructions and procedures submitted in 3.2 for proper curing during application and for at least 24 hours after installation.

E. For complete replacement of color-flake deck coverings, apply base coat, color coat, color chips and sealer coat (as applicable for the specified Class) in accordance with NAVSEA-reviewed ASTM F-718s and/or manufacturer's instructions submitted in 3.2. Color chips must be applied to the color coat in an even distribution, at an approximate 20 percent color chip area to total color coat area ratio. When multiple sealer coats are required, lightly abrade each sealer coat and solvent wipe the abraded surface before applying the next coat.

F. For resealing of color-flake deck coverings, abrade the existing sealer coat. Apply new color chips to maintain the approximately 20 percent chip coverage of the color coat and sealer coat in accordance with NAVSEA-reviewed ASTM F-718s and/or manufacturer's instructions. Repair localized areas of torn, punctured or defective base coat to achieve a consistent appearance. When multiple sealer coats are required, lightly abrade each sealer coat and solvent wipe the abraded surface before applying the next coat.
ATTACHMENT D
ELECTRICAL GRADE SHEETING AND MATTING

1. Electrical grade sheeting and matting **must** be installed in locations listed in Table One.

   A. The electrical grade sheeting and matting materials **must** be qualified under MIL-DTL-15562.

   B. The electrical grade sheeting adhesive **must** be installed over the entire deck in accordance with manufacturer’s instructions.

   C. Heat welded electrical seams **must** provide a continuous surface to prevent a path for grounding. Where seams are inaccessible they **must** be sealed with a waterproof sealant conforming to SAE-AMS-S-8802, Class B; MIL-A-46106, Group I, Type I; 3M 5200 Fastcure Marine Sealant; or NAVSEA-approved equivalent. Electrical matting seams **must** not be within 914 mm (3 ft) of electrical/electronic equipment, panels, and workbenches. If this is unavoidable, heat-weld the seams to provide a continuous surface free of seams, craters, or porosities.

   D. Seal all edges of the electrical sheet including penetrations for pipes, foundations, vents, and other structures with a waterproof sealant conforming to SAE-AMS-S-8802, Class B; MIL-A-46106, Group I, Type I; 3M 5200 Fastcure Marine Sealant; or NAVSEA-approved equivalent.

2. Exposed corners of electrical grade matting **must** be rounded off.

   A. Installation of the mat with adhesive is optional, but if the mat is installed without adhesive, an outline of the area covered by the mat **must** be stenciled on the deck. Inside the outlined area the following **must** be stenciled in 20 mm (0.8 inch) or larger letters: “ELECTRICAL GRADE MAT REQUIRED WITHIN MARKED LINES”.

   B. Over removable deck plates, the mats **must** be installed without adhesive and marked as detailed above. Seams **must** be backed with 20 mil thick polyvinyl chloride tape, with a high-tack adhesive, 7 kN/m (40 lb/in) breaking strength, a dielectric strength of 20,000 volts in accordance with ASTM D1000, and with a 50 mm (2-inch) minimum overlap under each side of the seam.
ATTACHMENT E
CARPETING

1. Carpeting **must** be installed in locations listed in Table One.

   A. Carpets **must** cover the deck completely, but **must** be fitted around all permanently installed furniture.

   B. Carpets **must** be installed without pad over underlayment, primed steel or aluminum deck by a tackless procedure, or with an adhesive as recommended by the carpet manufacturer. For DDG 51-Class ships, acoustic insulation is authorized for use under carpeting in CO and XO cabins.

   C. A clean, bright CRES or aluminum transition strip **must** be installed to secure the edges of the carpet in foot traffic areas where the carpet abuts other deck covering.
ATTACHMENT F
SOLID VINYL AND VINYL COMPOSITION TILE

1. Solid vinyl and vinyl composition tile must be installed in locations listed in Table One.

   A. Vinyl composition deck tiles must conform to ASTM F1066, Class 2, and must be 1/8-inch thick for maximum durability. Solid vinyl tile must conform to ASTM F1700, Class III (commercial), Type B.

   B. Vinyl tile epoxy adhesive must be a qualified proprietary part of the new deck covering system applied in accordance with NAVSEA-reviewed manufacturer's instructions and procedures submitted in 3.2.

   C. Installations must be bulkhead to bulkhead and squared off on adjacent stiffeners and stanchions. Where the exposed edge fails to butt up against a fitting or bulkhead, a vinyl beveled edge strip or a stainless/brass strip (one inch by 0.08 inch) must be installed (with epoxy adhesive) to the deck to protect the edge.

   D. Seal all edges of the tile including penetrations for pipes, foundations, vents, and other structures with a waterproof sealant conforming to SAE-AMS-8802, Class B; MIL-A-46106, Group I, Type I; 3M 5200 Fastcure Marine Sealant; or NAVSEA-approved equivalent.
ATTACHMENT G
MIL-PRF-24667, Type XI NONSKID (PEEL AND STICK)

1. MIL-PRF-24667, Type XI nonskid must be installed in locations listed in Tables One and 2. Exterior applications for MIL-PRF-24667, Type XI nonskid are located in Table 2 of 009-32 of 2.1.

   A. The MIL-PRF-24667, Type XI nonskid materials must be qualified under MIL-PRF-24667, Type XI, Comp PS.

   B. Spaces between adjacent pieces must have a minimum gap of 1/2 inch and maximum gap up to 1-1/2 inches. This spacing should align with weld seams to the maximum extent practicable so as to avoid the material from bridging these seams.

   C. For exterior applications only, seal all free edges of the MIL-PRF-24667, Type XI nonskid with the manufacturer’s approved sealer. Verify that the sealer bead covers both the edge of the product and the substrate surface. The edge sealer must be dry to the touch in accordance with ASTM D1640 prior to permitting foot traffic.

   D. MIL-PRF-24667, Type XI nonskid must not be used in areas frequently contaminated with hydrocarbons (e.g. hydraulic fluid, fuel, oil) as well as pallet jack, and fork truck traffic areas.

   E. Corners of MIL-PRF-24667, Type XI nonskid must be rounded.

2. If approved by the SUPERVISOR, existing areas of MIL-PRF-24667, Type XI nonskid can be repaired by removing worn or damaged areas. Product removal must be accomplished in accordance with the manufacturer’s instructions.

3. Surfaces must be prepared to a minimum surface preparation level of SSPC-SP 11 and be painted prior to application of the MIL-PRF-24667, Type XI nonskid.

   A. If approved by the SUPERVISOR, for areas where the paint is intact, surface preparation and painting is not required. The surface must be cleaned of all loose debris and be detergent washed or solvent wiped to remove all surface contaminants. Any existing areas of paint damage must be touched up.

4. MIL-PRF-24667, Type XI nonskid must be installed in accordance with manufacturer’s documentation.

5. Color topping is authorized as required for safety markings.
NOTES OF TABLES ONE AND 2 FOR SURFACE SHIPS

(1) High durability deck coating, MIL-PRF-32584, Types I and II, have significantly lower total ownership costs than all other decking materials.

(2) Chemical-resistant flooring, MIL-PRF-32584, materials qualified to Type V do not require an underlayment to create a coaming or slope to a drain and therefore have a lower total ownership cost than Type IV materials which require an underlayment.

(3) When no products are listed on wear resistant deck tiles, MIL-PRF-32170, Class I, qualified products database (QPD), solid vinyl tile in accordance with Attachment F may be substituted.

(4) Listed spaces may be designated as an electrical space, requiring electrical grade sheeting, MIL-DTL-15562. (For example: If the pilot house is designated an electrical space, the entire floor will require MIL-DTL-15562 sheeting.)

(5) If MIL-DTL-15562, Type I, electrical grade sheeting is not installed in designated electrical spaces, then localized installation of MIL-DTL-15562, Type II or III matting is required in areas where specific electrical hazards may exist in accordance with 3.9.13.

(6) Install MIL-PRF-24667, Type XI nonskid in working areas around machinery.

(7) INTENTIONALLY LEFT BLANK

(8) Two-inch square, three-inch square, or four-inch square tiles must be used.

(9) Quarry tile must be 0.5-inch by six-inch by six-inch.

(10) Four-inch square, six-inch square, or eight-inch square tiles must be used.

(11) If no products are listed on QPL-32584, utilize the legacy QPLs as listed below,
    a. MIL-PRF-32584, Type I: MIL-PRF-32171, Type I
    b. MIL-PRF-32584, Type II: MIL-PRF-32171, Type III
    c. MIL-PRF-32584, Type III: MIL-PRF-32171, Type IV
    d. MIL-PRF-32584, Type IV: MIL-PRF-24613, Types I, II, III, or IV
    e. MIL-PRF-32584, Type V: MIL-PRF-24613, Types V or VI
    f. MIL-PRF-32584, Type VI: MIL-D-21631

1. **SCOPE:**

   1.1 Title: Material Identification and Control (MIC) for Level I System; accomplish

2. **REFERENCES:**

   2.1 Standard Items
   
   2.2 0948-LP-045-7010, Material Control Standard
   
   2.3 S9086-GY-STM-010/CH-221, Boilers

3. **REQUIREMENTS:**

   3.1 Provide and maintain a Material Identification and Control (MIC) System in accordance with 2.2 for both Government furnished and contractor furnished materials utilized in the installation, alteration, and repair of systems or portions of systems designated as MIC LEVEL I by Work Items in the Job Order. The system shall be described in a written procedure that shall be submitted to the SUPERVISOR for review and approval prior to implementation. The procedure requires a one-time submittal/approval unless the Standard Items change and/or references change or are updated. The Material Identification and Control program for Level I Materials shall be subject to periodic conformity audits by the SUPERVISOR throughout the contract period. This procedure shall specifically address, as a minimum, the following:

   3.1.1 Assignments of responsibility for identification and control of LEVEL I material including working level instructions for:

   3.1.1.1 Procurement of pre-certified LEVEL I material from an authorized LEVEL I certifying activity or National Stock System.

   3.1.1.2 Inspection of pre-certified LEVEL I material in accordance with Section 3.4 of 2.2.

   3.1.1.3 Storage of LEVEL I material including segregation from non-LEVEL I materials.
3.1.1.4 Issue of LEVEL I material including transfer of marking for raw materials (e.g., bar, pipe, tube and threaded rod).

3.1.1.5 Identification and control of LEVEL I material during all phases of work (e.g., material movement, manufacturing, repair, ripout, installation).

3.1.1.6 Local manufacturing and testing of LEVEL I components manufactured from certified raw materials.

3.1.1.7 Visually verifying at the time of or subsequent to installation into a system subassembly or aboard ship that the permanent material designator markings, material type for fasteners or grade/type for consumable materials are correct in accordance with the generic material requirements of applicable drawing and/or NAVSEA-approved nonconformances and Engineering Changes.

3.1.1.8 Documentation of installation of LEVEL I material in accordance with Section 3.10.3 of 2.2.

3.2 Accomplishment of a Process Control Procedure (PCP) for all work within the LEVEL I boundary including manufacture, installation and repair of LEVEL I systems, components and material shall be in accordance with NAVSEA Standard Items (See Note 4.2) except for the following actions:

3.2.1 Software replacement (e.g., O-rings, packing glands, body-to-bonnet gaskets, silver seal replacements).

3.2.2 Inspection to support routine maintenance programs or troubleshooting.

3.2.3 Replacement of any non-pressure boundary parts which are not LEVEL I parts.

3.3 Submit one legible copy, in approved transferrable media, of the completed LEVEL I work item including the required installation records to the SUPERVISOR at the completion of work and/or a minimum of one day prior to system testing/operation.

3.3.1 For those work items that require a PCP per 3.2, in lieu of the report required in 3.3, submit one legible copy, in approved transferrable media, of the completed PCP documentation required by 009-09 of 2.1 at the completion of work and/or a minimum of one day prior to system testing/operation.

4. **NOTES:**

4.1 LEVEL I designation applies only to materials specified in 2.2 and Section 221-2.17 of 2.3.
4.2 If a Process Control Procedure (PCP) for all work within the LEVEL I boundary including manufacture, installation and repair of LEVEL I systems, components and material in 3.2 is required; the use of a Category II Standard Item 009-09 “Process Control Procedure (PCP); provide and accomplish” of 2.1 will be specified in the Work Item.
1. **SCOPE:**

   1.1 Title: Boiler Sample Tube; inspect

2. **REFERENCES:**

   2.1 S9221-C1-GTP-010, Main Propulsion Boilers; Repair and Overhaul

3. **REQUIREMENTS:**

   3.1 Remove tubes using tube-sampling methods in accordance with Paragraph 3.4 of 2.1.

      3.1.1 Cut generating tubes removed as samples 8 to 10 inches above the water drum.

   3.2 Identify and metal-tag tubes, tube stubs, and tube sections removed, with ship's name and hull number, Work Item number, boiler number, tube designation, bottom and top of sections, segment sequence, upstream side (furnace face), and downstream side of gas flow.

      3.2.1 Cut tube removed into 3-foot minimum segments and split longitudinally by mechanical method with tube dry (no oil) so that upstream side (furnace face) half is split from side downstream of gas flow half.

         3.2.1.1 There shall be 2 distinct, individual halves to each segment, tube stub, and bend.

         3.2.1.2 Each half (waterside/steamside and fireside) shall remain intact.

   3.2.2 Identify and metal-tag each segment and half in accordance with 3.2 so that full length of tube may be reconstructed and placement oriented.

   3.3 Inspect tube segments for the following:

      3.3.1 Steamsides/watersides:

         3.3.1.1 Oil deposits
3.3.1.2 Loose sludge
3.3.1.3 Hard baked-on sludge
3.3.1.4 Scale
3.3.1.5 Scabs/tubercles
3.3.1.6 Pitting
3.3.1.7 High temperature oxides
3.3.1.8 Waterside grooves
3.3.1.9 Corrosion fatigue fissures
3.3.1.10 General waterside thinning
3.3.1.11 Waterside burning
3.3.1.12 Waterside abrasion
3.3.1.13 Die marks
3.3.1.14 Steam tracking
3.3.1.15 Stress corrosion cracking (caustic embrittlement)

3.3.2 Firesides:
  3.3.2.1 General fireside thinning
  3.3.2.2 Fireside burning
  3.3.2.3 Tube enlargement
  3.3.2.4 Swaging
  3.3.2.5 Sagging
  3.3.2.6 Warping
  3.3.2.7 Heat blisters
  3.3.2.8 Thermal cracks
  3.3.2.9 Mechanical fatigue cracks
  3.3.2.10 Steam gouging
3.3.3 Submit one legible copy, in approved transferrable media, of a report listing results of the requirements of 3.3 to the SUPERVISOR.

3.4 Collect samples (equal to a heaping tablespoon each) of waterside soft and hard deposits for each boiler.

3.4.1 Soft deposits - Place the tube segments in a vise with the waterside up and wirebrush watersides. Collect loose residue in a bottle. Label bottle with the title Soft Deposits, ship, boiler number, and tube number.

3.4.2 Hard deposits - Place the tube segment in a vise with the waterside up and power wirebrush watersides to remove loose residue. Crimp the tube segment slowly allowing flakes of hard sludge to fall back into the tube. Collect the loose flakes in a bottle. Label bottle with title Hard Deposits, ship, boiler number, and tube number.

3.5 Package tubes, deposit samples, and a copy of report (3.3.3) and send to a laboratory qualified to accomplish chemical analysis.

3.5.1 Analyze the tube samples for the following:

3.5.1.1 Tube wall thickness at zero, 90, 180, and 270-degree positions

3.5.1.2 Extent of pitting (major pit depths and average overall pitting)

3.5.1.3 Thickness of hard scale mineral deposits

3.5.2 Analyze deposit samples for specific mineral composition in percentages of calcium, magnesium, and silicon oxide.

3.5.3 Submit one legible copy, in approved transferrable media, of a report listing results of the requirements of 3.5.1 and 3.5.2 to the SUPERVISOR.

4. NOTES:

4.1 Sample tube(s) replacement will be included in the invoking Work Item.
1. SCOPE:

1.1 Title: Boiler Waterjet Cleaning; accomplish

2. REFERENCES:

2.1 S6300-AE-MMA-010, Waterjet, Model WBD-150N, Operation, Maintenance, Repair and Overhaul Procedures

3. REQUIREMENTS:

3.1 Accomplish the requirements of this item for waterjet cleaning of boiler watersides, using manufacturer's equipment manual and 2.1 for guidance.

3.1.1 Portable extension lights shall conform to MIL-F-16377/49, Symbol 306.2 or MIL-F-16377/52, Symbol 286.

3.1.1.1 Ground each light fixture at the voltage source.

3.1.2 The high-pressure waterjet cleaning unit shall be operated at no more than 10,000 pounds per square inch (PSI).

3.1.3 Rope off and post warning signs in the areas where the unit is operating, where the high-pressure hose is run, and where the waterjet cleaning is to be accomplished.

3.1.4 Unit shall be stopped immediately if high-pressure leaks occur in pump, piping, high-pressure hose, or hose couplings.

3.1.5 While personnel are waterjetting, lance operator shall be in direct visual contact with control gun operator stationed outside of boiler. Control gun operator shall also maintain direct person-to-person voice communication with pump operator, using telephone, radio, or other positive direct means. Communication relay through intermediaries is not acceptable.

3.1.6 The control gun operator shall be able to regulate the flow of water to permit the system to be pressurized during the actual tube cleaning and have the nozzle pressure reduced to zero while the operator removes the lance from one tube and inserts it into the next tube to be cleaned.
3.2 Cleaning equipment shall meet minimum requirements listed herein:

3.2.1 Supply hose from the pump to the control gun shall be 1/2-inch inside diameter (I.D.) with 30,000 PSI minimum burst pressure and shall not exceed 400 feet in length. A 15-foot length of supply hose shall be attached between the control gun and the flexible lance.

3.2.2 Provide a high pressure return line from the control gun dump connection to the waterjet supply tank, on units that discharge pressure to the bilges between cycles.

3.2.3 Tube cleaning nozzle shall be non-rotating. Orifices in the nozzles shall be angled back 30 degrees. Nozzles shall have a minimum of 18 orifices evenly spaced around the circumference. Each orifice shall be 0.024 inch in diameter, plus or minus 0.001 inch.

3.2.4 Fan pattern nozzle attached to a rigid lance for cleaning drum and header surfaces.

3.2.5 Lance and nozzle burst pressure ratings shall be 25,500 PSI minimum. Lance shall be 0.229 inch or larger I.D. and shall have a smooth Teflon core, and shall not exceed 25 feet in length.

3.2.6 Waterjet cleaning solution shall consist of one pound of sodium nitrite to 100 gallons of clean, fresh water.

3.3 Maintain operating pressures and flow rates for boiler cleaning as follows:

3.3.1 Boiler tube cleaning - 10,000 PSI maximum, 9,000 PSI minimum pump discharge pressure at 20 gallons per minute.

3.3.2 Drum and header surface cleaning - 7,500 PSI maximum, 6,500 PSI minimum pump discharge pressure, at 12 to 14 gallons per minute.

3.4 Verify waterjet cleaning equipment capability prior to commencement of work.

3.4.1 Place the lance and nozzle that will be utilized in waterjet cleaning securely into a container. Ensure lance cannot break loose and that unit output is 20 gallons per minute.

3.5 Accomplish cleaning operations as follows:

3.5.1 Lance and nozzle shall traverse the entire length of every tube cleaned.

3.5.1.1 Downcomer, riser, and support tubes shall be traversed twice.
3.5.2 The lance and nozzle shall traverse the tubes at a maximum rate of one foot per second.

3.5.3 A fan nozzle shall be used to clean entire interior drum surfaces.

3.6 Pump waterjet wastewater effluent from boiler to a holding container or a waterjet wastewater recycling unit. Do not drain wastewater to bilges.

3.6.1 Waterjet wastewater recycling filter process shall be capable of filtering the wastewater effluent to meet the following criteria:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Limit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Suspended Solids</td>
<td>&lt; 10 mg/L</td>
</tr>
<tr>
<td>Sodium Nitrite</td>
<td>1100 - 1300 mg/L</td>
</tr>
<tr>
<td>pH</td>
<td>6.5 - 8.5</td>
</tr>
<tr>
<td>Nitrate</td>
<td>&lt; 10 mg/L</td>
</tr>
<tr>
<td>Oil and Grease</td>
<td>&lt; 5 mg/L</td>
</tr>
</tbody>
</table>

3.6.1.1 Recycled wastewater discharge samples shall be taken every 3,000 gallons to ensure levels do not exceed the above criteria.

3.6.2 Remove and dispose of spent chemicals and solutions in accordance with federal, state, and local regulations.

3.6.3 Accomplish a fresh water flush of all internal surfaces cleaned in 3.5.

3.7 Dry tubes, headers, drums, and downcomers using clean, dry air immediately upon completion of waterjet cleaning. Remove pockets of water and dry surfaces using clean rags.

(V)(G) "CLEANLINESS"

3.8 Inspect surfaces to ensure the following requirements are met:

3.8.1 Surfaces shall be dry.

3.8.2 There shall be no evidence of flash rusting.

3.8.3 There shall be a streaking effect seen when looking into the tubes. The streaking effect shall begin within one to 2 inches from the tube end and continue through the visible length of the tube.

3.8.4 Soft deposits and obstructions shall be removed.

3.8.5 Residual sodium nitrite deposits remaining after the surfaces are dried is acceptable.

4. **NOTES:**

4.1 None.
1. SCOPE:

1.1 Title: Cleaning and Painting Requirements; accomplish

2. REFERENCES:

2.1 Standard Items

2.12 S9086-CN-STM-020/CH-079, Damage Control - Practical Damage Control

2.13 S9086-RK-STM-010/CH-505, Piping Systems

3. REQUIREMENTS:

3.1 General Preservation Requirements:

3.1.1 Consider marine coatings, and abrasive blasting media to contain heavy metals (e.g., beryllium, cadmium, chromium, or lead),
hexavalent chromium, crystalline silica and/or other toxic or hazardous substances.

3.1.2 Accomplish safety precautions as specified in 2.2, 2.3, and the Work Item or task order during surface preparation and the application or removal of marine coatings.

3.1.2.1 For deck coverings installed onboard submarines, NAVSEA-approved deck covering systems shall comply with the requirements of 2.4.

3.1.3 Blast Media:

3.1.3.1 Maintain a current copy of material certification of abrasive blast media conforming to MIL-A-22262, A-A-1722, or A-A-59316 for reference by the SUPERVISOR. Copy shall be available prior to blasting. MIL-A-22262 abrasives must be listed on the Qualified Products List (QPL), or the repair activity shall have written notification from NAVSEA indicating pending listing on the QPL. Submit one legible copy, in hard copy or approved transferrable media, to the SUPERVISOR upon request. For A-A-1722 or A-A-59316 abrasives, a complete data package demonstrating compliance with the requirements must be provided by the supplier to the procuring activity. Exceptions are listed in 3.1.3.2 and 3.1.3.3.

3.1.3.2 Recyclable Encapsulated Abrasive Media material conforming to SSPC-AB 4 may be used as an alternative to obtain NACE 2/SSPC-SP 10 or SSPC-SP 11 cleanliness.

3.1.3.3 Recyclable ferrous metallic abrasive materials conforming to AB 3 of 2.5 may be used as an abrasive blast media for steel substrates. Cleanliness of recyclable ferrous metallic abrasive materials shall be measured and maintained in accordance with the requirements of AB 2 of 2.5.

3.1.3.4 For requirements specified in 3.1.3.3, maintain a current copy of the results of the quality control requirements of Paragraph 6 of AB 2 and quality assurance test required by Paragraph 5 of AB 3 of 2.5 for reference by the SUPERVISOR. Submit one legible copy, in hard copy or approved transferrable media, to the SUPERVISOR upon request.

3.1.3.5 Steel media, defined as steel shot, steel grit, stainless steel media, and SSPC-AB 4 media containing steel abrasive SHALL NOT be used for surface preparation on LHA, LHD, LPD, and LSD Class ship flight deck, hangar, vertical replenishment deck, elevators, catwalk, and superstructure above the flight deck. Steel media may be used on tanks and voids below the flight, hangar, and vehicle storage decks and associated ramps with containment that prevents release of the steel media onto the flight deck, hangar, vertical replenishment deck, elevators, catwalk, and superstructure above the flight deck. SSPC-AB 4 media that does not contain steel abrasive or MIL-A-22262 abrasive may be used on flight decks and other areas of LHA, LHD, LPD, and LSD Class ships. The following checkpoints apply ONLY when steel media is being used on an LHA, LHD, LPD, or LSD Class ship on tanks and voids below the flight, hangar, and vehicle storage decks and associated ramps.
3.1.3.6 Steel media blasting equipment, steel media, wastes from steel media blasting, materials used to contain steel media, and workers conducting steel media blasting shall not be allowed to transit or otherwise come into contact with the flight, hangar, and vehicle storage decks and associated ramps. Accomplish a start of blasting media containment inspection to ensure blast media is contained within the confines of the work area. Any media detected outside of the containment shall be reported to the SUPERVISOR.

3.1.3.7 Accomplish a blasting midpoint media containment inspection to ensure blast media is contained within the confines of the work area. Any media detected outside of the containment shall be reported to the SUPERVISOR.

3.1.3.8 Accomplish a post blasting media containment inspection to ensure blast media is contained within the confines of the work area. Any media detected outside of the containment shall be reported to the SUPERVISOR.

3.1.3.9 Accomplish a visual inspection to ensure all media, wastes from steel media blasting, and steel media blasting equipment is completely removed from the ship. Any media detected outside of the containment or left on the ship shall be reported to the SUPERVISOR.

3.1.4 Abrasive blast steel and aluminum plates, shapes, and ferrous piping, equal to NACE 2/SSPC-SP 10 of 2.5 and 2.10, establishing a surface profile that meets the requirements of 3.10.5, and coat, prior to shipboard installations except in the areas where weld joints remain to be accomplished, or unless specified otherwise in the invoking Work Item or task order. Material for fuel oil storage, fuel oil service, and diesel service tanks shall not be painted. If these materials are to be installed in potable water, reserve feedwater, or freshwater drain collection tanks, they shall be blasted and coated at a maximum 50 percent relative humidity from surface preparation checkpoint acceptance until cure to recoat time of final touch-up of the topcoat; for materials to be installed in all other areas, they shall be blasted and coated at a maximum 85 percent relative humidity; this requirement supersedes Notes (26) and (29A).

3.1.4.1 For tanks, when masking is removed from the open ends of piping, the piping may retain tightly-adherent paint or remain bare up to 6 inches above the open end. Loose or delaminating paint shall be prepared to SSPC-SP 2.

3.1.4.2 For non-ferrous piping which penetrates bulkheads, extend paint one to 2 inches (onto the pipe) beyond the bulkhead penetration pipe-weld.
3.1.4.3 Non-ferrous piping and cable pans, which are to be preserved shipboard, shall be prepared in accordance with SSPC-SP 2 or SSPC-SP 16 of 2.5. For painted non-ferrous piping and cable pans in tanks of nuclear powered ships, surface preparation shall be in accordance with SSPC-SP 16 of 2.5. Non-ferrous piping one inch in diameter or less shall not be prepared or painted; do not remove intact adherent coating from piping. Surface profile is not required.

3.1.4.4 Diffusers in reserve feedwater dump tanks shall not be painted.

3.1.5 With the exception of potable water, reserve feedwater, and freshwater drain collecting tanks, nonskid system applications (MIL-PRF-24667), and single coat applications (MIL-PRF-23236 Type VII Class x/18). For steel substrates on surface ships, preconstruction primer may be retained and overcoated with applicable coating systems specified in Tables One through 5, if the preconstruction primer application process meets the following:

3.1.5.1 The preconstruction primer shall be a zinc silicate material. Compatibility with the coating systems specified in Tables One through 5 shall be confirmed by the coating manufacturer.

(I) “PROCESS INSPECTION”

3.1.5.2 The preconstruction primer shall be applied in a process which is certified to ISO 9001, SSPC-QP 1, or SSPC-QP 3. The surface shall meet the requirements of NACE 2/SSPC-SP 10 of 2.5 and 2.10, and the process shall be verified to meet the technical requirements of 3.10.2, 3.10.5, and 3.10.6 a minimum of once per shift.

3.1.5.3 The maximum relative humidity requirement of 3.10.1 shall be 85 percent.

3.1.5.4 The secondary surface preparation, once the steel is installed shipboard, shall be accomplished in accordance with 3.1.5.5 through 3.1.5.8.

3.1.5.5 Accomplish degreasing/cleaning prior to surface preparation to ensure that the surface is free of contaminants in accordance with SSPC-SP 1 of 2.5.

3.1.5.6 Brush-off blast clean the preconstruction primer-coated surface to NACE 4/SSPC-SP 7 of 2.5 and 2.10 to remove contaminants and loose paint. A thorough pressure wash of the area with fresh water at 3,000 to 5,000 pounds per square inch (PSI) may be substituted for the degreasing/cleaning to SSPC-SP 1 and the brush-off blast to NACE 4/SSPC-SP 7. For cumulative surface areas less than 10 percent of the total area, with no individual area greater than 10 square feet, an SSPC-SP 3 cleaning followed by a fresh water wipe may be substituted for NACE 4/SSPC-SP 7.

3.1.5.7 For weld joints where the preconstruction primer was burned away, and for any other areas of visible rust where the
preconstruction primer had been previously damaged, clean the affected areas to the level required by applicable Line in Tables One through 5.

3.1.5.8 Upon completion of secondary surface preparation, the surface shall meet the requirements of SSPC-SP 1 of 2.5. A visual water break test (ASTM F-21 or F-22) on the surface may be used to validate SSPC-SP 1.

3.1.6 For touch-up, disturbed (terms are clarified in 3.6), and/or inaccessible areas, the minimum surface preparation shall be that shown in Tables One through 8, except that an SSPC-SP 11 is acceptable for areas originally requiring a NACE 2/SSPC-SP 10 or NACE/SSPC-SP WJ-2. The decision that an area is inaccessible shall be determined by inspection and agreed to by the SUPERVISOR prior to surface preparation. The degree of surface preparation required would be the maximum possible for that area, but could include retention of existing tightly adherent paint in inaccessible areas not to exceed 0.02 percent of the total surface area, with no individual areas larger than 2 square inches.

3.1.7 Feather edges of well-adhered paint remaining after cleaning for all surface preparation methods. Feathering is explained in more detail in 3.6.4.

3.1.8 Clean insulation and lagging prior to painting; ensure such areas are free of foreign matter and contaminants that would prevent adherence of paint.

3.1.9 Clean and dry all prepared and previously coated surfaces; ensure such surfaces are free of foreign matter that will affect adherence of coatings. Inclusions such as dust and debris in the coating film shall be removed prior to the application of the next coat.

3.1.10 Record and restore existing painted labels, compartment designations, hull markings, interior photoluminescent tape/markings and other painted information which will be removed or covered during cleaning and coating operations, except for Visual Landing Aid (VLA) markings. VLA marking installation is addressed in 3.11.13.

3.1.11 Install masking material for protection of equipment and items not to be coated during preservation. Shipboard items not to be coated are listed in 2.2 and 2.6. Remove masking material upon completion of final coating.

3.1.12 Clean shoe coverings shall be worn when walking on prepared or coated surfaces. Shoe coverings shall be selected that do not degrade and contaminate surfaces.

3.1.13 The requirements stated herein take precedence over all referenced documents if there is a conflict.

3.1.13.1 Unless otherwise specified herein, coatings listed on the QPL shall be applied. All coatings are to be applied in accordance with the manufacturer’s NAVSEA-reviewed ASTM F718 product data sheet. The
requirements stated herein take precedence over the NAVSEA-reviewed ASTM F718 data sheets if there is a conflict. The NAVSEA-reviewed ASTM F718 data sheets shall supersede any other manufacturer’s ASTM F718 data sheets for that product, even if it is newer (more recent) than the NAVSEA-reviewed ASTM F718 data sheets. Copies of the NAVSEA-reviewed ASTM F718 data sheets are available from the Naval Surface Treatment Center (NST Center) website: http://www.nstcenter.biz.

3.1.14 Store coating system components in a cool, dry place. Do not expose to freezing temperatures or direct sunlight. For all coatings, storage ambient temperature shall be maintained between 50 and 90 degrees Fahrenheit, or within the manufacturer’s recommended storage temperature range with written authorization from the SUPERVISOR. Low temperature nonskid systems (nonskid and primer) shall be stored between 65 and 85 degrees Fahrenheit with the optimal storage temperature being between 70 and 80 degrees Fahrenheit.

3.1.14.1 Monitor the storage temperature over the 24-hour period prior to initiation of the application process and document the minimum and maximum temperatures. If recorded manually, temperature shall be recorded once per shift (not to exceed 12 hours) during the 24-hour period. Manual readings are not necessary if monitoring equipment is used that tracks minimum and maximum temperature for the 24-hour period.

3.1.14.2 When approved by the SUPERVISOR, as an alternative to the storage monitoring requirement for coatings in 3.1.14.1, a maximum of 1 hour before application of products, measure individual components (after each is mixed, but before components are combined together) with a coating thermometer to confirm that each component of the system is within the required range.

3.1.14.3 When MIL-PRF-23236 Type VII coatings are applied using a plural component spray pump with recirculation and preheating, the 24-hour storage temperature requirement is waived.

3.1.15 All coating containers shall be free of leaks and ill-fitting lids and manufacturer labels shall be legible at time of application.

3.1.16 When applying paint, multiple coats shall be of contrasting colors, unless specifically stated otherwise in Tables One through 8.

3.1.17 When using multiple component (such as 2-part) coating systems (e.g., epoxies and polyurethanes), use of "partial kits" is prohibited unless using verified proportioning equipment or other verified measuring equipment (gravimetric).

3.1.18 Use of partial kits is prohibited for nonskid.

3.1.19 For surface ships, for commercial underwater hull coating systems including anti-corrosive paints and antifouling paints, the manufacturer's primer must be used with its antifouling paint. No substitution is allowed. Successive coats of anti-corrosive paints shall be
of a contrasting color. Coats of antifouling paints shall be of the colors stated in Tables One through 5.

3.1.19.1 For all ships, antifouling paint may be repaired, touched-up, and/or overcoated as defined in 4.3 with any other approved ablative antifouling system, and approved antifouling paints may be applied over any approved exterior anti-corrosive system. Antifouling paints must be Type I or II; this does not apply to foul release (Type III) coatings.

3.1.20 Apply the first coat of MIL-PRF-24647 antifouling paint when the last coat of epoxy paint is still tacky (as defined in 3.6.3) and in accordance with applicable NAVSEA-reviewed ASTM F718. If the maximum recoat time for the epoxy is exceeded, accomplish the overcoat window requirements of 3.5, then apply a tack coat of epoxy paint one to 2 milli-inches (mils) wet film thickness (WFT) over previously painted surfaces. The epoxy tack coat shall be allowed to cure until tacky, and then the first full coat of antifouling paint shall be applied.

3.1.21 Mix and apply all coatings in accordance with the product’s NAVSEA-reviewed ASTM F718, except for invoked requirements for surface preparation and DFT as specified in Tables One through 8.

3.1.21.1 Coatings that are past their shelf life / expiration date shall not be applied without written authorization from the SUPERVISOR.

3.1.22 Boats and small craft that are embarked on surface ships or otherwise deployed should meet the camouflage requirements of 2.7.

3.1.23 Utilize water-based latex fire retardant paints in preference to chlorinated alkyd-based fire retardant paints in areas where condensation, high humidity, and temperatures below 50 degrees Fahrenheit are not expected during application and cure. Such paints are available under MIL-PRF-24596.

3.1.24 Mix and apply the Navy Polyamide Epoxy MIL-DTL-24441 paints in accordance with the following, except the DFT shall be as specified in Tables One through 8. The MIL-DTL-24441 paints’ mixing ratio is one-to-one by volume. The components of the various formulas are not interchangeable. Blend each component thoroughly prior to mixing the components. After mixing equal volumes of the 2 components, the mixture must be thoroughly stirred. For Type III only, the stand-in times listed below must be observed. There is no induction time for Type IV.

3.1.24.1 Stand-in time (induction time) for MIL-DTL-24441 Type III is considered to be the time immediately following the mixing of components A and B, during which the critical reaction period of these components is initiated and is essential to the complete curing of the paint. During stand-in time, the mixture must be thoroughly stirred at least once every 20 minutes to avoid hot spots caused by localized overheating from the chemical reaction.
Surface Temperature at Job Site
(Degrees Fahrenheit) | Stand-In Time in Hours
--- | ---
35 to 50 | 2 hours at 70 degrees Fahrenheit (paint temperature)
50 to 60 | 2 hours at job site temperature
60 to 70 | One hour to 1-1/2 hours at job site temperature
70 to 90 | 1/2 to one hour at job site temperature

3.1.25 For proper curing, the maximum application and cure temperature for MIL-DTL-24441 products shall be 90 degrees Fahrenheit (ambient and surface temperature).

3.1.26 Powder coating application may be used if approved by the SUPERVISOR; otherwise use applicable Lines in Tables One through 8. Powder coatings may be overcoated with liquid paints. Powder coated items require near white metal blast, NACE 2/SSPC-SP 10 surface preparation. Any use of a chemical pretreatment (e.g., phosphate conversion coatings) requires approval by NAVSEA. For areas listed in 3.7, quality assurance (QA) checkpoints are still required for items that are powder coated.

3.1.26.1 Powder coatings are not practical for use on large components or ship structure. Any large-scale applications to ship structure require approval by NAVSEA.

3.1.26.2 Powder coating is not authorized for use on components, covers, or any parts to be installed in potable, reserve feed water, or freshwater drain collecting tanks aboard nuclear powered ships.

3.1.26.3 For surface ships, SUPERVISOR approval shall denote specific items or classes of items and applications.

3.1.26.4 For submarines, powder coating may be used if approved by the SUPERVISOR. Thermoplastic powder coatings (such as vinyls, nyons, polyethylenes, and polypropylenes) are not authorized for interior submarine applications and powder coatings are prohibited for use on those components and coating applications governed by reactor plant paint schedules. Application of thermoset powder coatings to approved components using the electrostatic spray method are to be accomplished in accordance with Uniform Industrial Process Instruction 0631-901, “Electrostatic Powder Coating” or equivalent as approved by the SUPERVISOR. Interior and exterior miscellaneous metal components to be powder coated shall be non-reactor plant miscellaneous components.

3.1.26.5 Air flasks may be powder coated as approved by the SUPERVISOR.

3.1.27 Accomplishment of installation of peel and stick nonskid (MIL-PRF-24667 Type XI, Composition PS) in interior and exterior applications on
surface ships shall be in accordance with NAVSEA Standard Items (see Note 4.10). Exterior applications require material designated as coarse on NAVSEA-reviewed manufacturer’s instructions.

3.1.27.1 For submarines, peel and stick nonskid are approved for limited interior application during Chief of Naval Operations availabilities in dry dock only.

3.1.27.2 Peel and stick nonskid shall not be painted or color-topped for cosmetic purposes. MIL-PRF-24667 color topping is authorized as required for safety or VLA markings.

3.1.27.3 Peel and stick nonskid are mandatory for use on masts, antenna platforms, and yardarms receiving nonskid.

3.1.27.4 Do not install peel and stick nonskid on diamond plate.

3.1.28 Paints used on interior spaces of submarines are approved under the Submarine Atmosphere Control Program and listed on the Submarine Material Control List. For interior use on submarines, only those MIL-PRF-23236 Type VII paints listed in Note (8A) may be used. For use in tanks, voids, and freefloods on submarines, only use paints listed in Table 8.

3.1.29 For submarines, inspections and repairs required by the SUPERVISOR shall be accomplished before the prime coat is applied if using high solids paints. Upon completion of structural repairs, the affected areas shall be abrasive blasted to NACE 2/SSPC-SP 10 prior to paint application unless otherwise specified.

3.1.30 Restrictions on repair activity personnel (which includes Contractors) working in propulsion plant spaces aboard nuclear powered ships shall be in accordance with NAVSEAINST 4350.2 (Series) (Contract Work Onboard Nuclear-Powered Ships).

3.1.31 For nuclear powered ships, surfaces covered by a reactor plant paint schedule shall use that schedule for all preservation and painting requirements for those surfaces.

3.1.32 For areas that require 100 percent preservation, coating removal may be accomplished prior to starting the repairs without the requirements of 009-32 applying until the full surface preparation can be accomplished in accordance with the applicable Table and Line.

(I) "CLEANING"

3.1.32.1 Accomplish the requirements of SSPC-SP 1 of 2.5 prior to coating removal. For areas prepared to NACE/SSPC-SP WJ-2 of 2.5 and 2.10 with ultra high pressure waterjetting (UHP WJ) equipment, the requirement of initial degreasing/cleaning is waived. A visual water break test (ASTM F-21 or F-22) on the surface may be used to validate SSPC-SP 1 and NACE/SSPC-SP WJ-2 of 2.5 and 2.10.
3.1.33 On surface ships, accomplish the requirements of SSPC-SP 15 of 2.5 and apply one coat of appropriate MIL-PRF-23236 primer or tank system coating at 6-8 mils, or 2 coats of appropriate MIL-DTL-24441 tank system coating at 2-4 mils/coat, for tank, void, and vent plenum bolting rings.

3.2 Stripe Coat Requirements:

3.2.1 For all areas where stripe coating is required, as denoted in Tables One through 8, apply stripe coat in accordance with applicable NAVSEA-reviewed ASTM F718 data sheet to edges, weld seams, welds of attachments and appendages, cutouts, corners, butts, foot/handholds (including inaccessible areas such as back side of piping, underside of I-beams), and other mounting hardware (non-flat surface). Stripe coat these areas after the previous coat has dried and inspections in accordance with 3.10.9 have been completed. The stripe coat shall encompass all edges as well as at least a one-inch border outside each edge and weld. For submarines, solvent-based paints shall have the stripe coat applied by brush.

3.2.1.1 Each stripe coat shall be of the specified paint system and shall be a different color from both the paint over which it is being applied and the next coat in the system (if a product only comes in 2 colors, the stripe coat shall contrast with the color of the previous coat). Full coat inspection shall be conducted prior to stripe coat application.

3.2.2 A stripe coat is no longer specified for MIL-PRF-23236 Type VII paints. Instead, MIL-PRF-23236 Type VII paints require additional DFT readings to be performed in accordance with Attachment A. These readings shall be performed following the last coat of MIL-PRF-23236 Type VII paint on the areas where the stripe coat would have been applied.

3.2.3 For MIL-PRF-23236 Type VII coatings, runs, drips and sags may appear. In areas where DFTs of runs, drips, and sags are 50 mils or less, no action is required; areas with DFTs in excess of 50 mils shall be assessed by the SUPERVISOR.

3.3 Cure time is dependent on temperature; products applied at lower temperature will need more time to cure. This includes low temperature coatings. Cure time of each coat shall be in accordance with NAVSEA-reviewed ASTM F718 unless otherwise specified in the following requirements:

3.3.1 Drying time between coats of a specified paint for potable, reserve feedwater, and freshwater drain collecting tanks shall be a minimum of 36 hours (for paint applied to more than 2 percent of the tank surface area) or 12 hours (for paint applied to 2 percent or less of the tank surface area) at a minimum temperature of 70 degrees Fahrenheit (substrate and ambient), using heated air if necessary to maintain temperature. Ventilation shall be sufficient to ensure continuous flow of air through the tanks with at least one complete air change every 4 hours. For potable water tanks coated with MIL-PRF-23236 Type VII Class 9 paints and reserve feedwater tanks on non-nuclear ships coated with MIL-PRF-23236 Type VII Class 11 and 11/18 paints, see Note (55) for surface ships and Note (39A) for submarines.
3.3.2 Following paint applications, potable, reserve feedwater, and freshwater drain collecting tanks shall be continuously ventilated with a minimum of one complete air change every 4 hours for at least 5 consecutive days prior to filling with water. During the ventilation period, maintain a minimum tank temperature of 70 degrees Fahrenheit (substrate and ambient). Verify and document daily that ventilation is properly installed and operating (document on QA Checklist Form Appendix 1). For potable water tanks coated with MIL-PRF-23236 Type VII Class 9 paints and reserve feedwater tanks on non-nuclear ships coated with MIL-PRF-23236 Type VII Class 11 and 11/18 paints, see Note (55) for surface ships and Note (39A) for submarines.

3.3.2.1 For potable water tanks, once the final topcoat is fully cured (as defined in the product's NAVSEA-reviewed ASTM F-718 data sheet), inspect the surface for cleanliness. Verify that the surface meets the requirements of SP 1 by wiping all tank surfaces with potable water applied to clean, light-colored rags. When wiping, the surface shall, when viewed without magnification, be free of all visible oil, grease, dust, dirt, and other foreign matter. Any surfaces producing visible contamination on a rag shall be re-cleaned until both rag and surface are visually free of contamination. As an option to wiping the tank, the tank shall be completely filled with potable water and drained at least twice to ensure tank cleanliness.

3.3.3 Prior to application of any MIL-PRF-24635 over an epoxy paint, the epoxy shall be dry to the touch but not fully cured (as defined on the epoxy paint’s NAVSEA-reviewed ASTM F-718 as cure to service) before overcoating. The epoxy shall be overcoated with MIL-PRF-24635 within 7 days of the epoxy application. Dry to the touch is defined in ASTM D1640.

3.3.4 Prior to application of any water-based paint, such as MIL-PRF-24596, over an epoxy paint, allow the epoxy to dry for at least 16 hours.

3.4 Overcoating of MIL-DTL-24441 with MIL-DTL-24441:

3.4.1 If less than 7 days has elapsed since the application of the prior coat, the next coat may be applied after visual inspection to confirm the absence of grease, dirt, salts, or other surface contaminants. If surface contamination is suspected as a result of visual inspection or for other reasons, the entire surface shall be cleaned in accordance with SSPC-SP 1 of 2.5. The next coat of MIL-DTL-24441 shall be applied after surfaces are completely dried.

3.4.2 If more than 7 days but less than 30 days has elapsed since the application of the prior coat, the entire surface shall be cleaned in accordance with SSPC-SP 1 of 2.5. Ensure the surface has fully dried, and then apply a mist coat (one to 2 mils WFT) of the last coat applied or Formula 150. The mist coat shall be allowed to cure (dry) for 4-8 hours; then apply the next full coat of the system. This condition can only be met one time during the painting system application.

3.4.3 If more than 30 days has elapsed since the application of the prior coat, the entire surface shall be cleaned in accordance with SSPC-SP 1 of 2.5. After allowing the surface to dry, the surface shall be lightly
abraded to degloss the epoxy, using a brush-off abrasive blast (preferred), power sanding, or hand sanding using 80-120 grit, then apply the next full coat of the system.

3.5 Overcoating of Non-MIL-DTL-24441 Epoxy Paints:

3.5.1 Follow the manufacturer's NAVSEA-reviewed ASTM F718 instructions for the allowable overcoat window, not to exceed 30 days. The 30-day maximum may be extended beyond 30 days if specifically approved in writing by NAVSEA. Where the base coat and topcoat are provided from different manufacturers, the term "manufacturer" refers to the manufacturer of the base coat. Application of a mist or tack coat shall not restart the 30-day window.

3.5.1.1 If either the manufacturer's NAVSEA-reviewed ASTM F718 instructions or the 30-day window (or a specific extension approved by NAVSEA) has been exceeded, the paint shall be reactivated by following the instructions of the manufacturer’s NAVSEA-reviewed ASTM F718 for reactivating the surface, as approved by the SUPERVISOR.

3.6 Clarification of Terms:

3.6.1 Touch-up of in-service coatings (i.e., not newly-installed coatings) is defined differently within this Standard Item for surface ships and submarines.

3.6.1.1 Touch-up is defined within this Standard Item for submarines as preservation operations on cumulative surface areas less than one percent of the total area (e.g., bilge, tank, space, etc.) being preserved, with no individual area greater than 4 square feet. Included under touch-up operations are new and disturbed surfaces of less than 4 square feet. Except for potable, reserve feedwater, or freshwater drain collecting tanks, the documentation requirements of 3.7 and 3.8.1 are replaced with Appendix 9 or Naval Shipyard QA Checklist Form Appendix 6 for touch-up of in-service coatings (3.8.1.1 is still required), and the requirements of 3.10.2, 3.10.5, 3.10.6, 3.10.7, and 3.10.9 shall be verified by the accomplishing activity as (I) inspections prior to coating applications.

3.6.1.2 For potable, reserve feedwater, or freshwater drain collecting tanks on nuclear powered surface ships, touch-up is defined within this Standard Item as preservation operations on cumulative surface areas less than 1 percent of the total area being preserved, with no individual area greater than 10 square feet. Included under touch-up operations are new and disturbed surfaces of less than 10 square feet.

3.6.1.3 For surface ship areas, except for potable, reserve feedwater, or freshwater drain collecting tanks on nuclear powered surface ships, touch-up is defined within this Standard Item as preservation operations on cumulative surface areas less than 10 percent of the total area (e.g., bilge, tank, space, etc.) being preserved, with no individual area greater than 10 square feet. Included under touch-up operations are new and disturbed surfaces of less than 10 square feet. The documentation requirements of 3.7 and 3.8 are waived for touch-up of in-service coatings,
and the requirements of 3.10.2/3.11.3, 3.10.5/3.11.4, 3.10.6/3.11.5, 3.10.7/3.11.6, and 3.10.9/3.11.10 shall be verified by the accomplishing activity as (I) inspections prior to coating applications.

3.6.1.4 Except for potable, reserve feedwater, and freshwater drain collecting tanks on nuclear powered ships touch-up of in-service MIL-DTL-24441 Type IV and MIL-PRF-23236 paint systems may be performed interchangeably using any of these paints.

3.6.1.5 On surface ships and submarines, for new and disturbed areas of individual areas 2 square feet or less totaling less than 0.03 percent of the total surface area, the requirements of Notes (26) and (29A) do not apply. Except for potable, reserve feedwater, fresh water drain collecting tanks, and flight deck nonskid, the requirements to perform and document the following paragraphs are waived: 3.10.1/3.11.2, 3.10.2/3.11.3, 3.10.5/3.11.4, 3.10.6/3.11.5, 3.10.7/3.11.6, and 3.10.9/3.11.10; the documentation requirements of 3.7 and 3.8 are also waived. The requirement of 3.10.1.1 shall be accomplished, but not documented. For paint application, apply paints in accordance with Tables One through 8 with the following exception: apply only one coat of primer on prepared substrate, followed by topcoat product applied to overlap intact paint by a minimum of one inch around primer.

3.6.2 Disturbed surfaces are defined as any surface that requires cleaning and/or coating due to existing coating finish being damaged in the accomplishment of work specified by the Work Item or task order.

3.6.2.1 Exterior surfaces of underwater hull closure plates/hull accesses and their associated welds will not be considered disturbed surfaces and shall be cleaned, prepared, painted, and documented in accordance with the applicable area. For surface ships, deviations from the requirements may be authorized by the SUPERVISOR based on size, location, application, or severity of condition of the paint system being applied.

3.6.2.2 Interior surfaces of underwater hull closure plates/hull access-associated welds shall have surface preparation in accordance with 3.1.6.

3.6.2.3 The word "new" in "new and disturbed surfaces" refers to all material installed on the ship by the repair activity regardless of source.

3.6.3 Tacky is defined as that curing (drying) timeframe when a fingertip pressed lightly, without twisting, against the paint film leaves no residue on the finger, until the time when the finger leaves only a slight impression on the surface of the paint film.

3.6.4 Feathering is used for transition of applying a fresh paint system to an area with an intact paint system that is not removed. To do this, visible areas of defective old paint shall be removed until an area of completely intact and adhering paint is attained around the defective area by feathering (tapering) the edges of tightly adhering old paint at an
approximate 30 degree slope into the newly prepared bare metal surface, thus preventing application of new paint over loose or cracked paint.

3.6.5 Solvent wipe is defined as cleaning a surface by pouring solvent on a clean, light colored rag and subsequently wiping the surface.

3.6.6 Initiation of the application process is defined as the time when a coating is removed from storage for staging at the work site, but is not the start date/time for applying the coating.

3.6.7 Creditable Cure Time (CCT) is defined as the accrued time for which data shows compliance with environmental requirements collected in accordance with 3.10.1. CCT is accrued based on established environmental data collection intervals (e.g., 4 hours, 12 hours, 24 hours) when consecutive environmental readings are shown to satisfy the requirements of 3.10.1. Regardless of elapsed overall time between consecutive acceptable environmental readings, CCT equivalent to a single data collection interval (e.g., 4 hours, 12 hours, 24 hours) is accrued.

3.7 The following ship structural surfaces are defined as critical coated areas:

<table>
<thead>
<tr>
<th>SURFACES</th>
<th>TYPE OF SUBSTRATE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Underwater hull, including appendages and surfaces below the waterline up to and including the boottopping</td>
<td>All</td>

3.7.1 Record and maintain in-process records in Coating QA Tool Kit (CQATK) paperless QA program (or NAVSEA-approved equivalent) or on QA Checklist Form Appendices as blasting, coating, inspections, and tests are being accomplished. CQATK program and installation setup are available upon request from the Global Distance Support Center (GDSC), [http://www.anchordesk.navy.mil](http://www.anchordesk.navy.mil), 1-877-4-1-TOUCH.

3.7.1.1 For surface ship nonskid work in multiple areas to be coated, a detailed sketch shall be completed for each area or zone of installation to indicate the area of work.

3.7.1.2 QA documentation shall include 3.7.1.3 through 3.7.1.11.

3.7.1.3 Ambient and substrate surface temperatures, relative humidity, and dew point during preservation process (QA Checklist Form Appendix 1);

3.7.1.4 Cleaning/degreasing prior to surface preparation inspection results (QA Checklist Form Appendix 2 or Naval Shipyard QA Checklist Form Appendix 6);

3.7.1.5 Surface profile readings and surface preparation method, including name of abrasive and QPL-22262 revision number from which the product was purchased, or copy of NAVSEA product approval letter. (QA Checklist Form Appendix 3 or Naval Shipyard QA Checklist Form Appendix 3 or 3A);

3.7.1.6 Surface conductivity or chloride test results (QA Checklist Form Appendix 4);

3.7.1.7 Surface cleanliness test results for dust (QA Checklist Form Appendix 5);

3.7.1.8 Name of coating, manufacturer, batch number, and date of expiration (QA Checklist Form Appendix 6);

3.7.1.9 Elapsed time between coats (QA Checklist Form Appendix 6);
3.7.1.10 DFT measurements (QA Checklist Form Appendix 7) and/or WFT measurements (QA Checklist Form Appendix 7A or Naval Shipyard QA Checklist Form Appendix 7);

3.7.1.11 Minimum and maximum storage temperatures of the coating over the 24-hour period prior to use (QA Checklist Form Appendix 1).

3.7.2 If using QA Appendices, submit one legible copy, in hard copy or approved transferrable media, of recorded in-process information on QA Checklist Forms to the SUPERVISOR within 72 hours of completion of preservation of each separate location listed in the invoking Work Item or task order.

3.8 Determine the type of surface preparation required and coating system options that are available for use in accomplishing the work.

3.8.1 Accomplish receipt inspection for coatings applied on aircraft carriers and submarines to areas listed in 3.7 (excluding underwater hull and nonskid systems) upon receipt from the manufacturer. Accomplish testing of the following properties in accordance with the requirement of the applicable specification and NAVSEA-reviewed ASTM F718. Receipt inspect coating components for density, fineness of grind, viscosity, and condition in container. Receipt inspect mixed coating for dry hard time, sag resistance, and color of dry film. Receipt inspection testing is not required for those characteristics that have satisfactory test data provided on the manufacturer's certificate of compliance or conformance test data forms, or another shipyard's receipt inspection test data forms that meet the applicable coating specification requirements. Submit one legible copy, in hard copy or approved transferrable media to the SUPERVISOR upon request.

3.8.1.1 On all ships for coatings applied to areas listed in 3.7, maintain on file the original manufacturer's certificate of compliance and material conformance test data in accordance with Section 11 of 2.2. Submit one legible copy, in hard copy or approved transferrable media to the SUPERVISOR upon request.

3.8.1.2 For areas listed in 3.7, if requested by the SUPERVISOR, prepare and submit one legible copy, in hard copy or approved transferrable media, of Coatings Application Product Summary (CAPS) sheet (QA Checklist Form Appendix 8).

3.9 Maintain the following certifications for accomplishing preservation operations to areas as listed in 3.7. Information for these certifications can be found at www.sspc.org and www.naceinstitute.org/Certification.

3.9.1 Coating inspectors shall be certified in accordance with the NAVSEA Basic Paint Inspector (NBPI) course, NACE International Coating Inspector Program (CIP) Level 1 or higher, or SSPC Protective Coating Inspector Program (PCI) Level 2. Coating inspectors shall also have a minimum of 2 years of marine coatings related work experience.

3.9.2 Organizations performing blasting operations (abrasive and waterjetting) or coating application shall be certified in accordance with QP
1 of 2.5 (with the exception of the Coating Application Specialist (CAS) requirement) or NAVSEA-approved equivalent.

3.9.2.1 For components that are removed from the ship and preserved, ISO 9001 may be substituted for QP 1.

3.9.3 Spray painters shall be certified in accordance with SSPC C-12, SSPC C-14, SSPC CAS Level 2, or NAVSEA-approved equivalent. For equivalent certifications, a copy of the NAVSEA approval letter shall be maintained by the repair activity.

3.9.4 Plural Component Pump Tenders and Applicators shall be certified in accordance with SSPC C-14 or NAVSEA-approved equivalent certifications. For equivalent certifications, a copy of the NAVSEA approval letter shall be maintained by the repair activity.

3.9.5 Blasters shall be certified in accordance with SSPC C-7, SSPC CAS Level 2, or NAVSEA-approved equivalent. For equivalent certifications, a copy of the NAVSEA approval letter shall be maintained by the repair activity.

3.9.6 Blasters performing UHP WJ shall be certified in accordance with SSPC C-13 or NAVSEA-approved equivalent. For equivalent certifications, a copy of the NAVSEA approval letter shall be maintained by the repair activity.

3.10 For all coating systems except surface ship nonskid, accomplish preservation operations in accordance with the following. For surface ship nonskid system application, refer to 3.11.

(V) "ENVIRONMENTAL READINGS"

3.10.1 For coatings, take ambient and substrate surface temperatures, relative humidity, and dew point from conditions on-site, in close proximity to the structure being coated, for all areas listed in Tables One through 8.

3.10.1.1 Unless otherwise stated within the Notes of Tables One through 8, and as noted in 3.10.1.2, 3.10.1.3, and 3.11.2.3, coatings shall be applied only when the ambient temperature and the temperature of the prepared substrate are 50 degrees Fahrenheit or greater and a minimum of 5 degrees Fahrenheit above the dew point. The maximum relative humidity shall be 85 percent. For areas listed in 3.7, readings shall be documented on QA checklist Form Appendix 1.

3.10.1.2 In areas where MIL-PRF-23236 Type VII Class 15B products are specified, these products are exempt from dew point and relative humidity requirements. For these products, dew point and relative humidity do not need to be recorded on QA Checklist Forms.

3.10.1.3 The only products that may be applied below 50 degrees Fahrenheit are those specified in the Tables and Notes for use below 50 degrees Fahrenheit.
3.10.1.4 These environmental readings shall be taken from the surface preparation acceptance checkpoint to 48 hours of creditable cure time after the application of a coat. Creditable cure time is defined in 3.6.7. For areas preserved under 3.6.1.1/3.6.1.3, environmental readings shall be taken at the surface preparation acceptance checkpoint to 24 hours after application of a coat. If a final coat fully cures to immersion/service in less than 48 hours (24 hours for 3.6.1.1/3.6.1.3), as defined in its NAVSEA-reviewed ASTM F718, environmental readings for that final coat shall be taken until the product's cure to immersion/service time is reached. For potable, reserve feedwater, and freshwater drain collecting tanks on submarines and aircraft carriers, during inspection of each coat, the (G) point inspection shall validate that the environmental readings during application and curing of that coat comply with applicable environmental requirements. All components blasted and primed in accordance with 3.1.4 shall have environmental readings taken until the cure to recoat time is reached.

3.10.1.5 For potable, reserve feedwater, and freshwater drain collecting tanks, environmental readings shall be taken from the surface preparation acceptance checkpoint to 5 days of creditable cure time after application of the final coat, unless otherwise stated in Tables One through 8.

3.10.1.6 The preferred method of measurement is use of a data logger. If a data logger is used, it shall collect data at a minimum of every one hour. A manual reading shall be taken once every 24 hours and at every evolution involving (G)-points with a separate calibrated device independent of the data logger. For areas listed in 3.7, manual readings shall be documented on QA Checklist Form Appendix 1. Maintain all data logger recorded data with the QA appendices.

3.10.1.7 For areas where a data logger is not used, environmental readings shall be manually taken every 4 hours and at every evolution involving (G)-points except as modified below. For areas listed in 3.7, readings shall be documented on QA Checklist Form Appendix 1.

3.10.1.8 For areas where relative humidity is maintained (through the use of dehumidification equipment or forced hot air) below 50 percent and the surface temperature is greater than 5 degrees above the dew point, manual readings where a data logger is not used are required once every 12 hours and at every evolution involving a (G)-point.

3.10.1.9 Environmental readings at (G)-points are only required within the timeframes given in 3.10.1.4 and 3.10.1.5.

3.10.1.10 Environmental readings shall be monitored during application of powder coating products, but they do not need to be recorded.

3.10.2 Accomplish degreasing/cleaning prior to surface preparation to ensure that the surface is free of contaminants in accordance with SSPC-SP 1 of 2.5. For areas prepared to NACE/SSPC-SP WJ-2 of 2.5 and 2.10 with UHP WJ equipment, the requirement of initial degreasing/cleaning is waived. A visual
water break test (ASTM F-21 or F-22) on the surface may be used to validate SSPC-SP 1 and NACE/SSPC-SP WJ-2 of 2.5 and 2.10. For areas listed in 3.7, document on QA Checklist Form Appendix 2 or Naval Shipyard QA Checklist Form Appendix 6.

3.10.2.1 Inspect the surface a maximum of 4 hours prior to start of coating removal to ensure accomplishment of SSPC-SP 1. For areas listed in 3.7, document on QA Checklist Form Appendix 2 or Naval Shipyard QA Checklist Form Appendix 6.

3.10.3 Except for tanks, surface preparation by abrasive blasting is prohibited on submarine interior surfaces, with the exception that use of self-contained Recyclable Encapsulated Abrasive Media material conforming to SSPC-AB 4 is permissible in submarine machinery spaces.

3.10.4 Limit the square footage of surfaces being prepared for preservation to an area that can be coated prior to the occurrence of flash rusting and/or oxidation. Remove any flash rust prior to coating, except as follows:

3.10.4.1 Surfaces cleaned by waterjetting shall meet the applicable NACE/SSPC Standard for flash rust. For submarines, the first coat of epoxy primer shall be applied within 24 hours of coating removal if removal is by non-automated waterjetting.

3.10.4.2 The water used in waterjetting shall not include detergents or inhibitors without written approval from the coating manufacturer and the SUPERVISOR.

(I) or (I)(G) "SURFACE PROFILE" (See 4.4)

3.10.5 One profile measurement shall be recorded for every 200 square feet for the first 1,000 square feet; for each additional 500 square feet or less, one profile measurement shall be taken. Profile measurements shall be taken in accordance with Method B or Method C of 2.9. For Method B of 2.9, one profile measurement shall be the average (mean) of 10 individual readings. For profile measurements taken in accordance with Method C of 2.9, use profile tape suitable to read subject profile (i.e., coarse to extra-coarse plus). For Method C of 2.9, one profile measurement shall be the average (mean) of 2 individual readings. If any individual reading is found to be greater than or equal to 5 mils, use Method B of 2.9 in those areas to determine existing profile. The retention of profile tape is not required. For areas listed in 3.7, document surface profile on QA Checklist Form Appendix 3 or Naval Shipyard QA Checklist Form Appendix 3 or 3A.

3.10.5.1 Following blasting or waterjetting operations, surface peak-to-valley profile must be checked. Surface profile shall be validated on areas without visible pitting. For Method B of 2.9, each profile measurement shall be between 2 and 4 mils. For Method C of 2.9, each profile measurement shall be between 2 and 4 mils, with no individual tape reading less than one mil or greater than or equal to 5 mils. If such profile is not present, repair activity shall establish the proper profile.
3.10.5.2 Following power tool cleaning to SSPC-SP 11 of 2.5, surface profile shall be checked. Profile measurements shall be 2 mils minimum for areas listed in 3.7 and one mil minimum for all other areas where accessible (inaccessible areas must be determined by inspection and agreed to by the SUPERVISOR).

3.10.5.3 For products without a NAVSEA-reviewed F718, manufacturer’s instructions may be substituted.

3.10.5.4 Avoid excessive power wire brushing or excessive grinding/sanding which results in a polished surface.

3.10.5.5 Conversely, excessive use of mechanical tools (grinders, sanders, chippers, etc.) must be minimized to avoid metal loss. Disc sanders and rotary impact tools fitted with cutter bundle assemblies are not authorized on aluminum substrates. Overly aggressive blasting which causes metal thickness loss over the amount required for surface profile shall also be avoided. Excessive depth of profile can cause problems with poor coating performance. A greater than recommended surface profile requires a paint film be applied to totally cover the profile to prevent pinpoint or flash rust. The increase in paint film thickness also increases the susceptibility of solvent entrapment, causing blistering and premature failure of the coating.

3.10.5.6 Due to the potential for excessive metal loss, for SSN-21 and SSN-774 Class submarines, only the following power tools may be used to obtain an SSPC-SP 11 surface: Scotch-Brite pads, needle guns and rotary peening tool. On submarines, any areas of potential metal loss by corrosion or mechanical means shall be documented and reported to the SUPERVISOR.

3.10.5.7 Recyclable Encapsulated Abrasive Media material conforming to SSPC-AB 4 may not establish a sufficient surface profile. If this method is employed and the profile is insufficient to meet the requirements, the repair activity shall establish a sufficient surface profile.

3.10.5.8 Waterjetting will not establish a surface profile. If this method is selected by the repair activity and a surface profile does not exist or is insufficient to meet the requirements, the repair activity shall establish a sufficient surface profile.

(I)(G) "CONDUCTIVITY OR CHLORIDE MEASUREMENT"

3.10.6 For surfaces listed in 3.7 (excluding potable water and reserve feedwater tanks on submarines, and freshwater drain collecting tanks on aircraft carriers), accomplish the requirements for conductivity or chloride measurements as follows:

3.10.6.1 Following coating removal, accomplish conductivity or chloride measurements in accordance with the requirements of 3.10.6.3.
3.10.6.2 Additionally, accomplish a visual inspection within 4 hours prior to application of each coat. If evidence of contamination of the surface exists, accomplish the requirements of 3.10.6.3.

3.10.6.3 Accomplish surface conductivity or chloride checks using available field or laboratory test equipment on the freshly prepared surface. One reading shall be taken for every 200 square feet for the first 1,000 square feet. One determination shall be conducted for every additional 500 square feet or less. For immersed applications, such as tanks and bilges, chloride measurements shall not exceed 3 µg/cm² (30 mg/m²); conductivity measurements shall not exceed 30 micro-siemens/cm. For non-immersed applications, chloride measurements shall not exceed 5 µg/cm² (50 mg/m²); conductivity measurements shall not exceed 70 micro-siemens/cm. Conductivity samples shall be collected using a product that meets the requirements of NACE SP0508-2010, “Methods of Validating Equivalence to ISO 8502-9 on Measurement of the Levels of Soluble Salts.” Document on QA Checklist Form Appendix 4.

3.10.6.4 Because conductivity testing measures more than just chlorides, for any conductivity check that fails, a confirmatory chloride check may be conducted to confirm chloride levels. If the chloride levels do not exceed the requirements in 3.10.6.3, the measurement passes the conductivity/chloride check.

3.10.6.5 If a conductivity check fails and the confirmatory chloride check is not conducted, or if chloride measurements exceed the respective values, water wash (3,000-5,000 PSI) the affected areas with potable water. Dry the affected areas and remove all standing water. Accomplish surface conductivity or chloride checks on affected areas in accordance with 3.10.6.3. Repeat step until satisfactory levels are obtained.

3.10.6.6 If, after a freshwater wash, the measurements exceed required levels, a salt remover may be used; however, the only salt remover products that may be used for a coating system are those specified on that coating's NAVSEA-reviewed ASTM F718.

(I) or (I)(G) "SURFACE PREPARATION" (See 4.4)

3.10.7 Verify surface preparation for the coating systems specified in the Work Item or task order and Tables One through 8 are in accordance with 2.5 and 2.10. For areas listed in 3.7, document on QA Checklist Form Appendix 3 or Naval Shipyard QA Checklist Form Appendix 6.

3.10.7.1 For surface ships, surface cleanliness for dust shall be accomplished for the underwater hull and documented on QA Checklist Form Appendix 5. Surface cleanliness for dust shall meet Rating 2, Class 2, of 2.11. One dust tape reading shall be taken for every 200 square feet for the first 1,000 square feet; for each additional 500 square feet or less, one tape reading shall be taken. The tape reading requirement is waived if the final stage of surface preparation for the entire surface is UHP WJ.
3.10.7.2 When waterjetting has been performed to a specified WJ level of cleanliness on a steel surface, and the level of flash rust (low, moderate, or high) cannot be agreed upon between the authorized coating inspector and the Contractor through the use of the written NACE/SSPC WJ standard or the SSPC-VIS 4 visual reference standard, the procedure in Attachment B shall be used to resolve the dispute.

3.10.7.3 The checkpoints of 3.10.5, 3.10.6, and 3.10.7 can be accomplished concurrently.

3.10.8 Coating systems shall be applied and cured in accordance with this NAVSEA Standard Item and applicable NAVSEA-reviewed ASTM F718s as defined in 3.1.13.

3.10.8.1 For surface ship preservation of areas not listed in Tables One through 5, see the Tables in Section 1 of 2.2. For submarine preservation of areas not listed in Tables 6 through 8, see the Tables in 2.6.

3.10.8.2 Coatings shall not be thinned.

3.10.8.3 Unless fully enclosed, (i.e., with containment), do not perform exterior paint application when sustained winds exceed 15 miles per hour (MPH).

(I) or (I)(G) "COATING INSPECTION FOR EACH COAT" (Consists of Coating Thickness, Holidays, and Cleanliness) (See 4.4)

3.10.9 Inspect each Prime, Intermediate, Stripe, Tack, and Top Coat (including Capastic) as follows:

3.10.9.1 Accomplish DFT measurements of each coat applied for the coating systems listed in Tables One through 8. This excludes any stripe coats and draft marks. For areas listed in 3.7, document on QA Checklist Form Appendix 7.

3.10.9.2 Accomplish a visual holiday check on each coat of the system. For areas listed in 3.7, document on QA Checklist Form Appendix 7. Any holiday found shall be identified and touched-up. These touched-up holidays do not constitute a new coat. Paint containing Optically Active Pigment (OAP) shall be visually inspected using violet light. Where an OAP primer is used, each primer and topcoat shall be visually checked using violet light. When this occurs, the inspector shall use a violet-light flashlight conforming to ASTM E2501 to enhance the normal visual inspection process. An ASTM E2501 flashlight produces violet light that activates the fluorescent OAP. The inspector shall wear yellow or amber-tinted glasses that block ultraviolet and violet light to accomplish the inspection. See ASTM E2501 for the light transmittance specification for tinted glasses and http://www.nstcenter.biz for a list of safety eyewear models that meet the specification. Guidance regarding OAP inspection practices is available in SSPC-TU 11.
3.10.9.3 Accomplish a visual inspection for surface cleanliness. If evidence of contamination exists, accomplish degreasing/cleaning a maximum of 4 hours prior to application of next coat to ensure removal of surface contaminants. For areas listed in 3.7, document on QA Checklist Form Appendix 7 or 7A or Naval Shipyard QA Checklist Form Appendix 6 or 7. If condition is UNSAT, then also use Appendix 2 or Naval Shipyard QA Checklist Form Appendix 6.

3.10.9.4 Accomplish a visual inspection for chloride contamination for areas listed in 3.7 (excluding potable water and reserve feedwater tanks on submarines, and freshwater drain collecting tanks on aircraft carriers). If evidence of chloride contamination exists, accomplish requirement of 3.10.6.5 on the affected area(s) approved by the SUPERVISOR, a maximum of 4 hours prior to application of next coat to ensure removal of surface contaminants. Document on QA Checklist Form Appendix 7 or 7A or Naval Shipyard QA Checklist Form Appendix 6 or 7. If condition is UNSAT, then also use Appendix 4 as required in 3.10.6.3 to 3.10.6.5.

3.10.10 For DFT readings required in 3.10.9.1, DFT readings for each coat shall be taken in accordance with Method PA 2 of 2.5. When measuring full coats to determine total system thicknesses denoted in Tables One through 8, DFT readings shall not be taken in areas where stripe coatings have been applied. When scanning technology is used in SSPC-PA 2 fixed batch mode (average of three readings), the average DFT displayed in each batch will be recorded in Appendix 7.

3.10.10.1 WFT readings are required in lieu of DFT readings for any coat that must be in a tacky state (as defined in 3.6.3) when the next coat is applied, for non-metallic surfaces, for anti-corrosive and antifouling paint applied over Capastic and sprayable shields, and when applied over existing coatings. For metallic surfaces, the number of WFT spot readings shall be 2 readings per 1,000 square feet. For non-metallic surfaces, the number of WFT spot readings shall equal the number of DFT readings that would have been taken. When WFT readings are used in this manner, the sampling frequency, distribution, and acceptance criteria shall be the same as described in SSPC-PA 2 of 2.5, except that only one WFT reading is required to represent a “spot measurement” instead of the three “gage readings” defined in SSPC-PA 2. WFT equals DFT divided by percent solids by volume (when percent solids by volume is expressed as a decimal, i.e., 60 percent equals 0.60). For areas listed in 3.7, document on QA Checklist Form Appendix 7A or Naval Shipyard QA Checklist Form Appendix 7.

3.10.10.2 If any coat measures less than its specified DFT, apply an additional coat of that product. The total DFT of these 2 coats shall not exceed the specified maximum thickness for the original coat as specified in Tables One through 8. If an additional coat is required, accomplish a cleanliness checkpoint in accordance with 3.10.9.3 prior to application of the additional coat.

3.10.10.3 During paint application, a WFT gage shall be used to verify the application of proper paint thickness for each coat of all coating systems listed in Tables One through 8. WFT readings shall be taken to confirm this, but need not be recorded.
3.10.10.4 Except to remediate small, localized drips or sags totaling less than 0.03 percent of the coated area, excessive DFT shall not be sanded to reduce DFT without approval of the SUPERVISOR.

3.10.11 With the exception of potable water, reserve feedwater, and freshwater drain collecting tanks, when performing QA inspections for holidays and DFT readings, for all areas where aesthetics are not an issue, permanent markers, as approved by the SUPERVISOR, are acceptable. These markings may be directly overcoated with the next coat of paint (or remain exposed if used on the final coat in an area where aesthetics are not an issue).

3.11 NONSKID. Except for peel and stick nonskid, which shall have preservation operations as specified in 3.10, accomplish preservation operations for surface ship nonskid systems in accordance with the following:

3.11.1 When installing nonskid systems to critical coated areas (listed in 3.7) within enclosed spaces, including exterior temporary structures for environmental control, the following conditions shall be maintained for a minimum of 48 hours after application of each coat of the nonskid system:

3.11.1.1 Maintain sufficient volumetric air changes to satisfy 2.3 requirements that ventilation be provided in sufficient quantities to keep the concentration of coating solvent vapors below ten percent of their lower explosive limit.

3.11.1.2 Continuously maintain airflow into and out of the enclosed space to satisfy the requirements of 2.3. Fully open hangar doors satisfy 2.3 requirements.

3.11.1.3 Orient input air such that airflow is directed towards or across the deck and in the direction of the exhaust ventilation ports. Locate exhaust ventilation ports such that the bottom of the exhaust duct/opening is less than one foot from the deck surface to ensure that “heavier than air” coating solvent vapor is effectively removed from the enclosed space.

3.11.1.4 Evenly distribute input and exhaust ports such that uniform air movement throughout the enclosed space and across deck surface is maintained. Ensure airflow is not “short circuited” from input to exhaust by maximizing distance between input and exhaust ports.

3.11.1.5 Ensure the ventilation system remains operational and powered throughout application of the nonskid system regardless of whether personnel are in the enclosed space.

(V) "ENVIRONMENTAL READINGS"

3.11.2 Accomplish the requirements of 3.10.1 (environmental) with the following additions:
3.11.2.1 Record ambient and substrate surface temperatures, relative humidity, and dew point readings at one-hour intervals during nonskid system application.

3.11.2.2 Unless fully enclosed (i.e., with a tent), do not apply nonskid primer when sustained winds exceed 15 MPH.

3.11.2.3 Unless the applicable NAVSEA-reviewed ASTM F718 is more stringent, ambient air temperature shall be 55-100 degrees Fahrenheit, deck temperature for primer application shall be 40-120 degrees Fahrenheit, and deck temperature for nonskid application shall be 40-110 degrees Fahrenheit. Deck temperature shall be a minimum of 5 degrees Fahrenheit above the dew point for nonskid system application. For application of Type VIII (low temperature) nonskid systems, ambient air and deck temperatures shall be between 35 degrees Fahrenheit and the upper limit specified by the NAVSEA-reviewed ASTM F718.

3.11.3 Accomplish the requirements of 3.10.2 through 3.10.4 with the following additions:

3.11.3.1 If cleaning is performed via solvent wiping, after solvent wiping, the deck shall be allowed to dry before application of any coating. No visible solvent shall be present on deck surfaces prior to proceeding with the next process step. Solvent wiping is defined in 3.6.5.

3.11.3.2 When a solvent wipe is performed, annotate Appendix 2 or Naval Shipyard QA Checklist Form Appendix 6 with type of solvent and time allowed to dry.

3.11.3.3 When cleaning exterior nonskid decks with High Pressure Water Cleaning (HP WC), cleanliness shall meet the requirements of SSPC-SP WJ-4/NACE WJ-4 instead of SSPC-SP 1.

3.11.3.4 For tie-downs prepared to SSPC-SP 2, 3, or 15 of 2.5, the initial SSPC-SP 1 is waived if the final stage of surface preparation is UHP WJ in accordance with NACE/SSPC-SP WJ-2 of 2.5 and 2.10.

(I) or (I)(G) "SURFACE PROFILE" (See 4.4)

3.11.4 Following blasting or waterjetting operations, surface peak-to-valley profile shall be checked. Surface profile shall be validated on areas without visible pitting. For each area of preparation, one profile measurement shall be taken every 100 square feet for the first 500 square feet. Only one profile measurement shall be taken for every 1,000 square feet remaining. Profile measurements shall be taken in accordance with Method B or Method C of 2.9; For Method B of 2.9, one profile measurement shall be the average (mean) of 10 individual readings. For Method B of 2.9, each profile measurement shall be between 3 and 6 mils. For profile measurements taken in accordance with Method C of 2.9, use profile tape suitable to read subject profile (i.e., coarse to extra-coarse plus). For Method C of 2.9, one profile measurement shall be the average (mean) of 2 individual tapes. For Method C of 2.9, each profile measurement shall be between 3 and 6 mils, with no individual tape reading less than 2.5 mils or greater than, or equal to 5 mils. If any individual tape reading is found to be greater than, or equal
to, 5 mils, use Method B of 2.9 in those areas to determine existing profile. If such profile is not present on decks and aircraft elevators, repair activity shall establish proper profile. The maximum profile requirement is waived for carrier aircraft elevators prepared via waterjetting. The retention of profile tape is not required. For areas listed in 3.7, document on QA Checklist Form Appendix 3 or Naval Shipyard QA Checklist Form Appendix 3 or 3A.

3.11.4.1 For nonskid areas that abrasive blast equipment or waterjet equipment cannot access, substrate shall be prepared to SSPC-SP 11, except that minimum profile shall be 2 mils where accessible. Underside of tie-downs shall be prepared to SSPC-SP 2 or SSPC-SP 3 of 2.5; however, feathering requirements of 3.6.4 are waived, while remainder of tie-down shall be prepared to SSPC-SP 15 of 2.5.

3.11.4.2 The requirements of 3.10.5.4 through 3.10.5.6 apply to nonskid systems.

3.11.5 Accomplish the requirements of 3.10.6 for conductivity/chloride measurements.

3.11.6 Accomplish the requirements of 3.10.7 for surface preparation.

3.11.6.1 Surface cleanliness for dust shall be accomplished for nonskid flight decks and documented on QA Checklist Form Appendix 5. Surface cleanliness for dust shall meet Rating 2, Class 2, of 2.11. Three individual readings shall be taken every 100 square feet for the first 500 square feet. If the tape readings are consistent, only one tape reading shall be taken for every 1,000 square feet remaining. The tape reading requirement is waived if the final stage of surface preparation for the entire surface is UHP WJ and the primer is applied within 6 hours of completion of surface preparation.

3.11.6.2 For flight deck areas receiving a nonskid system and prepared to NACE/SSPC-SP WJ-2, a minimum of 20 percent of the total area receiving a nonskid system shall be abrассively blasted to an NACE 2/SSPC-SP 10 level of cleanliness. The areas to be prepared to NACE 2/SSPC-SP 10 shall be as directed by the SUPERVISOR.

3.11.7 Nonskid systems shall be applied in accordance with the applicable Tables. A new nonskid system shall overlap existing nonskid system to the minimum extent necessary to create a continuous film as agreed upon by the SUPERVISOR.

3.11.7.1 Nonskid shall be rolled parallel to ship's main axis. Welds parallel with the direction of peaks and valleys shall be cross-rolled. Cross-rolling shall extend 3 to 6 inches on each side of the weld. The requirement to roll nonskid parallel to the ship's main axis is waived on LCS 2 class flight decks and any other areas with extruded aluminum plank decks as approved by the SUPERVISOR. In these areas, nonskid shall be rolled perpendicular to the ship's main axis.
3.11.7.2 Nonskid material remaining in the can after nonskid is poured onto primed deck surface shall not be removed from the can.

3.11.7.3 If probing the nonskid surface with a dull putty knife results in penetration of the putty knife into the nonskid, neither foot nor vehicular traffic shall be permitted.

3.11.7.4 DFT measurements of nonskid primer in overlap areas shall be no more than 15 mils.

3.11.8 Accomplish the requirements of 3.2 for stripe coat with the exception that stripe coat may precede prime coat.

3.11.8.1 For overcoating of stripe coat or stripe coating of the primer coat, refer to the applicable NAVSEA-reviewed ASTM F718. When the stripe coat is applied prior to overcoating with a full coat of primer, the stripe coat shall be dry to touch in accordance with ASTM D1640.

3.11.8.2 A second full coat of proprietary nonskid primer listed on the QPL for MIL-PRF-24667 may be applied if approved by the SUPERVISOR. The second full coat satisfies the stripe coat requirement.

3.11.9 Nonskid application shall begin within 36 hours of completion of final full primer coat application. For areas not listed in 3.7, nonskid overcoating application shall be in accordance with NAVSEA-reviewed ASTM F718. For areas listed in 3.7, use the following:

3.11.9.1 If nonskid application begins within 36 to 72 hours after completion of final full primer coat application, the primer coat shall be solvent wiped with solvent required by the NAVSEA-reviewed ASTM F718.

3.11.9.2 If nonskid application begins within 3 to 7 days after completion of final full primer coat application, the primer coat shall be solvent wiped with solvent required by the NAVSEA-reviewed ASTM F718, then lightly abraded, solvent wiped again, and a mist coat (one to 2 mils) of primer shall be applied and allowed to cure to recoat.

3.11.9.3 If the primer coat is not overcoated with nonskid within 7 days of final full primer coat application, the primer shall be removed and the surface preparation repeated. For zone tie-in areas where the primer is to be overcoated with itself (up to 12 inches of overlap), the recoat window shall be in accordance with the NAVSEA-reviewed ASTM F718; the primer shall be solvent wiped with solvent required by the NAVSEA-reviewed ASTM F718, then lightly abraded, then solvent wiped again.

3.11.9.4 Aircraft carrier landing areas not overcoated with nonskid within 72 hours of primer application completion shall have surface preparation repeated.

3.11.10 Accomplish the requirements of 3.10.9 through 3.10.11 for inspection of nonskid primer (full and stripe coats).

(I) or (I) (G) "NONSKID MIXING AND APPLICATION" (See 4.4)
3.11.11 Accomplish the following requirements during initiation of the mixing and application process:

3.11.11.1 Verify that nonskid mixing blade is free of previously cured coatings.

3.11.11.2 Verify that applicator meets NAVSEA-reviewed ASTM F718 mixing and application requirements, including: specified mixing equipment, pre-mix time, mix time, induction time, pot-life and any product specific application requirements.

(I) or (I) (G) "NONSKID SPREAD RATE AND HOLIDAY INSPECTION" (See 4.4)

3.11.12 Verify that nonskid spread rate meets the following requirement: Types I, V, VI, VII, and VIII - 18 square feet/gallon minimum and 30 square feet/gallon maximum; Types II, III, IX and X - 23 square feet/gallon minimum and 35 square feet/gallon maximum; and, Types IV and IX (sprayed) - 60 square feet/gallon maximum. Perform visual holiday inspection of nonskid and document on QA Checklist Form Appendix 7. Spread rate shall be determined by the following formula: 

\[(\text{square feet coated}) / ((\text{gallons per kit}) x (\text{number of kits}))\].

3.11.12.1 Holidays less than 4 square inches shall be touched-up as follows: 1) solvent clean primer with solvent required in product NAVSEA-reviewed ASTM F718, 2) lightly sand exposed primer, 3) solvent clean sanded surface with solvent required in product NAVSEA-reviewed ASTM F718, and 4) apply nonskid to primer to approximate texture of surrounding nonskid. Overcoat window restrictions do not apply to touch-up of holidays in non-landing areas. Holidays less than 1/8 of a square inch shall be exempt from touch-up.

3.11.13 Inspect the location and color of required VLA markings in accordance with Naval Air Warfare Center Aircraft Division (NAWCAD) Class Guidance Drawings, Air Capable Ship Aviation Facilities Bulletin, Amphibious Assault Ship Aviation Facilities Bulletin, Shipboard Aviation Resume (NAEC-ENG-7576), VLA General Service Bulletin No. 8 (latest revision) or by contacting the local NAWC (CAFSU/ASIR) Field Office.

3.12 For submarines, accomplish preservation of damping and acoustic tiles and surfaces in way of these tiles in accordance with the following. All exterior tiles and tiles inside tanks shall be installed over a surface prepared to NACE 2/SSPC-SP 10 and painted with the preservation system indicated in Table 8. Surfaces beneath exterior tiles and tiles inside tanks are considered critically coated. Care shall be taken to ensure blasting does not damage tiles. Surface preparation and preservation of steel restrained tiles shall be as listed in Table 8. Paint only steel portions of SSBN/SSGN-726 Class acoustic baffles. Before overcoating tile that is currently coated, sweep blast the surface to roughen the existing paint. Non-steel restraining covers are not required to be painted except for antifouling purposes. Overspray of otherwise unpainted covers is acceptable. Full paint out of non-steel damping restraining covers, unrestrained damping, and acoustic tile (including Gradual Transition Coating) and covers is not
intended. In interior spaces, exposed surfaces of acoustical absorptive treatments that are painted shall be prepared to SSPC-SP 1 and shall be painted with 1-2 mils of paint (avoid filling perforations) to match surroundings.

4. **NOTES:**

4.1 Wet space decks include sanitary spaces (washrooms, water closets, and showers), food service spaces (galley, scullery, butcher shop, bakery, meat prep rooms, and food service line), and trash compactor rooms.

4.2 Total DFT encountered during removal may exceed specified Table thicknesses.

4.3 Total removal of ablative coating is not required. An ablative copper antifoulant (AF) coating system shall not be removed by blasting prior to its specified service life unless it is blistered, peeling, or otherwise damaged beyond repair. Stable and intact ablative AF coatings shall be retained and overcoated. The total film thickness of the combined retained and freshly applied paint shall comply with Table One/Table 6. When the Work Item or task order calls for overcoating of retained intact ablative copper AF coating, AF surfaces shall be washed down with fresh water. For all ships except submarines and aircraft carriers, this fresh water washdown shall be performed at 2,000 PSI as the vessel comes out of the water, in order to prevent slime and oxidized paint from drying on the hull and inhibiting leaching of the paint when the ship is returned to the water. For submarines and aircraft carriers, instead, within 24 hours of the hull being released by cognizant shipyard authorities, pressure wash with fresh water between 2,000 and 5,000 PSI. The surface shall be cleaned and dried before new paint is applied. Apply any anti-corrosive (AC) paint to areas in need of repairs. Overcoat the AC paint with the approved AF paint of the same MIL-PRF-24647 Type. The Work Item or task order will specify the degree of removal.

4.4 The paragraphs referencing this note are considered an (I)(G) if the inspection/test is on a critical surface as listed in 3.7. If the inspection/test is not on a surface listed in 3.7, then the paragraph is considered an (I).

4.5 Refer to 009-03 of 2.1 as appropriate for requirements concerning potential exposure to toxic or hazardous substances and hazardous operations.

4.6 The repair activity may use environmental enclosures to control environmental conditions.

4.7 Preservation system repairs are an Unrestricted Operations (URO) Maintenance Requirement Cards (MRC) program attribute.

4.7.1 The Unrestricted Operations (URO) Maintenance Requirement Cards (MRC) program was developed by NAVSEA to monitor specific areas of interest to determine if the conditions of these areas are suitable for continued unrestricted operations. Maintaining the protective capability of the coating system is critical to maintaining structural integrity during the periods between inspections. For this reason, complying with requirements
for coating system application for all aspects of the preservation process is essential. Other systems that impact the URO MRC program are Special Hull Treatment (SHT) application process, including Mold-In-Place (MIP), maintenance of cathodic protection systems (Impressed Current Cathodic Protection (ICCP) and anodes) and installation of various types of tiles (acoustic, damping, etc.).

4.7.1.1 Substrate preparation and preservation are not authorized/covered in this Standard Item for vertical launch system (VLS) bathtub area, thin line towed array (TLTA) interior, surfaces covered by SHT, propulsor, and retractable bow plane recesses on submarines.

4.7.2 Preservation work in submarine tanks and enclosed spaces is usually scheduled to occur when the tanks and spaces are opened and entered to perform URO MRC structural inspections. Any time a tank or other enclosed space is entered, if a URO MRC 003 structural inspection is not authorized, an inspector qualified in accordance with URO MRC 003 will perform a structural visual examination.

4.7.3 Any URO MRC item being blasted and painted will have a URO MRC hull survey inspection performed by an inspector qualified in accordance with URO MRC 003 prior to blasting and again prior to repainting.

4.8 Painting of rubber piece parts of pipe hangers is permitted in the following areas: Main Ballast Tanks (MBTs), freeflood areas, and internal tanks which are normally painted. The rubber piece parts include the liners, grommets, and inserts found in steel strap and steel block type pipe hangers; also included is the block rubber type pipe hangers. Prior to painting rubber piece parts in surface ship potable water and reserve feedwater tanks, existing paint shall be removed to an SSPC-SP 2 level of cleanliness as approved by the SUPERVISOR. Do not paint rubber piece parts in surface ship FWDCDs, submarine RFTs, and hangers on nuclear piping that traverses other non-nuclear tanks.

4.9 Inspections such as URO inspections and inspection periodicities are addressed in 2.2 and 2.6.

4.10 For peel and stick nonskid, interior and exterior applications on surface ships in 3.1.26; Category II Standard Item 009-26 "Deck Covering Requirements; accomplish", including Attachment G will be specified in the work item.

4.11 Unless otherwise noted, aircraft carriers are considered surface ships throughout this document. The tables are split up between surface ships and submarines. Table One is for surface ship underwater hull areas. Table 2 is for surface ship exterior areas. Table 3 is for surface ship interior spaces. Table 4 is for surface ship tanks and voids. Table 5 is for surface ship miscellaneous areas. Table 6 is for submarine exterior hull areas. Table 7 is for submarine interior areas. Table 8 is for submarine tanks and voids.

4.12 The repair activity shall not coat reactor plant items cited in the ship’s reactor plant paint schedule in accordance with this Standard Item.
Attachment A

Edge DFT Measurement

In addition to the required DFTs per SSPC-PA 2, a separate set of “edge” DFT readings shall be taken in close proximity to corners and edges of area structural elements including, but not limited to stiffeners, “rat holes,” cut-outs, and frames. This data shall be taken in accordance with SSPC-PA 2 and reported separately from those required by 3.10.9.1, with the following modifications:

1) The “edge” gage readings shall be taken approximately ¼ inch (i.e., 0.5 cm) from edges using micro-probe gages with a probe less than or equal to ½-inch in diameter. For “edge” readings taken on substrates less than ¼-inch thick, readings shall be taken from the “middle” of the substrate. Microprobe gages shall be calibrated, in accordance with manufacturer’s direction, to measure paint thicknesses expected during application.

2) Welds not associated with corners or edges (i.e., a butt weld joining 2 flat plates) shall be inspected using standard visual techniques. The inherent roughness of the weld precludes the collection of reproducible data from these areas. Inspectors may, if they choose, take a spot reading within ¼ inch (i.e., 0.5 cm) from a butt weld.

3) An "edge" spot measurement shall consist of 3 gage readings taken within a 1.5 inch (i.e., 4 cm) diameter circle. Accomplish front, back, and edge DFT gage readings as shown in Figure A-1 (see attached). For each data set required for the flat surface data set the equivalent is required for the edge or corner data set. For example, if 20 spot DFT measurements are required for an area, then 20 DFT measurements are required using the front, back, edge method set and 20 for the flat surface set.

Figure A-1
Attachment B

NAVSEA Flash Rust Adjudication Procedure:

When waterjetting has been performed to a specified WJ level of cleanliness on a steel surface, and the level of flash rust (low, moderate, or high) cannot be agreed upon between the authorized coating inspector and the Contractor through the use of the written NACE/SSPC WJ standard or the SSPC-VIS 4 visual reference standard, the following procedure shall be used to resolve the dispute. Note that this procedure is not a substitute for the definitions contained in the NACE/SSPC standard, but rather is intended to provide objective quality evidence (OQE) that a disputed zone, surface, or area has a low, moderate or high level of flash rust.

1. **Ensure Surface Condition.** The zone, surface, or area shall have been cleaned to the required waterjetting level of cleanliness in accordance with 2.5 and 2.10 and possess a level of flash rust that cannot be readily gauged or appraised with certitude using the guidelines of 2.5, 2.10, and SSPC-VIS 4 alone.

2. **Determine Minimum Number of Samples.** One flash rust reading (consisting of one test measurement and one control measurement) shall be taken for every 200 square feet for the first 1,000 square feet of a zone, surface, or area. For each additional 500 square feet or increment thereof, one additional flash rust reading shall be taken.

   **CAUTION**

   Excessive pressure applied to the tape can crack the slide and create a dangerous, sharp surface.

3. **Prepare Test Sample and Control Sample.** Both the test and control samples are prepared by applying a 4-5 inch long piece of ISO 8502-3 dust tape to a 1.2 mm thick clean, clear microscope slide which is 50mm by 75mm or larger. The tapes for the test and control samples shall be prepared as described in the sub-paragraphs below. Fully adhere the adhesive side of the tape to the slide, centering the tape’s length over the 75mm dimension of the glass. To help secure the tape to the slide, not more than 1/4-inch of the tape end may be wrapped under the slide. Additional tape may interfere with the measuring devices. Any sample with air bubbles larger than 1/4-inch in diameter shall be rejected. Using a permanent marker to write on a non-test portion of the slide, date and uniquely identify each sample.

   3.1 **Test Sample Tape Preparation.** For each test sample, the dust tape is applied to a representative area of the flash rusted surface before being applied to the microscope slide. The inspector shall rub the tape onto the flash rusted surface with his/her thumb or other finger, pressing as hard as possible over the central 3-inches of the tape without damaging it. Remove the tape from the steel in a manner that retains as much of the adherent rust as possible; do not shake the tape or try to dislodge the rust.
3.2 Control Sample Tape Preparation. While avoiding transferring fingerprints to the central 3 inches of tape, apply a control piece of tape from the same roll as that used for the test sample to a separate clean, clear microscope slide.

4. Measure Transmittance. For each test and control tape/microscope-slide assembly, measure the transmittance using a Laser Labs Model LM100, Monroe PMP Model PD2.1, Monroe PMP Model PD3.0, or NAVSEA-approved equivalent transmittance measurement meter. Transmittance measurements shall not be made in direct sunlight or in an area where the ambient light level exceeds 100 foot candles. Insert the slide into the instrument with the tape facing the meter's light source. Record two measurements from different locations on the test sample. Record 2 measurements from the control tape, taking one measurement from each end. Subtract the average of the 2 test readings from the average of the two control readings. The difference in average transmittance of the test sample (i.e., sample with flash rust) and the average transmittance of the control sample shall constitute one transmittance reading.

5. Adjudicate Flash Rust Level. A difference in transmittance reading (i.e., control minus test sample) shall be applied to the entire zone, surface, or area which the measurement is intended to represent. The percentage difference between the average control and test sample values, as compared to the control sample, shall be used to establish the following flash rust levels:

- WJ "High" level of flash rust: greater than 20 percent difference in transmittance readings.
- WJ "Moderate" level of flash rust: 10 percent to 20 percent difference in transmittance readings.
- WJ "Low" level of flash rust: less than 10 percent difference in transmittance readings.

If the adjudicated flash rust level is determined to be greater than the requirements for the area allow, then the area shall be re-cleaned until the specification is met.

6. Retain Samples. All test transmittance samples and control transmittance samples shall be retained as objective quality evidence that the required level of surface cleanliness was obtained.
Attachment C

Process for Spot and Sweep Blast of the Underwater Hull and Freeboard

1. The "Spot and Sweep" method shall only be used if authorized by the SUPERVISOR prior to the start of work in these areas. The use of this Spot and Sweep process shall only apply to the underwater hull and freeboard areas of the ship and may only be considered for use on surface ships.

2. The spot and sweep blast process shall be performed by a robotic crawler unit that uses UHP WJ. For areas not accessible by the robotic crawlers, UHP lances and/or abrasive blasting may be used to create either a NACE/SSPC-SP WJ-4/M surface or an SSPC-SP 7 surface, respectively. SSPC-SP 3 power tool cleaning may be used for feathering in the spot and sweep-prepared surfaces.

3. Examine the existing coating on the ship’s hull and determine the color sequence of the current epoxy coating system prior to blasting. The anticipated sequence is red epoxy primer followed by gray epoxy tie coat. The examiner shall note these colors for use during inspection of the hull prior to application of the first coat of epoxy primer.

4. The UHP robotic crawler unit shall be set up to accomplish the following:

   (a) Remove all loose and degraded coating, rust and fouling from areas of bare metal to create a NACE/SSPC-SP WJ-2/M surface.

   (b) For the underwater hull: Remove all antifouling coating and remove approximately 1/2 of the thickness of the current MIL-PRF-24647 epoxy tie coat from the underwater hull area.

   (c) For the freeboard portion of the hull: Remove all of the MIL-PRF-24635 coating, regardless of thickness, and remove approximately 1/2 of the thickness of the top MIL-PRF-24647 or MIL-PRF-23236 epoxy coat from the freeboard area.

   (d) Smoothly feather or transition from areas of bare metal to the retained epoxy coating. Areas of sharp or "step" transition between bare metal and paint shall be noted on the applicable QA appendix form in the comments section. Also, feather edges as needed where the UHP robotic crawler leaves behind markings in the existing paint (concentric circles).

5. The use of the Spot and Sweep method does not waive any surface preparation QA steps. Conduct all QA inspections on bare metal areas and record QA data. Areas of retained paint shall be visually inspected and shall satisfy the following:

   (a) There shall be no more than two colors of paint visible in any area of retained coating. Inspectors shall observe the red primer adjacent to any bare metal areas and then continue observations into the bulk of the retained epoxy. Gray epoxy may be retained on top of the red primer, but any visual evidence of additional coats of red or black paint (indicating antifouling coating retention) or haze gray MIL-PRF-24635 (indicating silicon alkyd/polysiloxane coating retention) on top of the gray epoxy
shall be cause for closer inspection. Closer inspection shall be conducted from a minimum distance of 3 feet. Upon closer inspection, a solvent-wipe test with a white rag shall be conducted using an antifouling coating clean-up solvent. If the solvent wipe test shows color transfer onto the rag, the area shall be rejected. Rejected areas shall be cleaned again until no color transfers to the rag.

(b) Minimize areas of sharp transition or steps between bare metal and paint. Any such areas shall be inspected and tested with a dull putty knife to determine adhesion. If the paint flakes or can be dislodged, the area shall be rejected and cleaned again to remove the loose paint.

(c) Feather the transition areas where partial blasted areas occur next to bare steel blasted areas. Sharp edges shall be removed in accordance with SSPC-SP 3 and the areas feathered for a smooth transition.

6. The first step of the coating application process shall be as follows: Apply one coat of epoxy primer in accordance with Tables One and 2 to all areas in the zone or work area (i.e., both bare metal and retained epoxy primer) to achieve the specified epoxy coating thickness. Do not apply a thin or varied primer thickness when traversing areas between bare metal and retained epoxy.

7. Coating inspections shall be performed for each coat of paint in accordance with 3.10.9. In bare metal areas, DFT readings shall be measured and recorded. In areas of retained paint, however, WFT readings shall be measured and recorded in place of DFT readings for determining proper coating thickness for each coat. (Follow the requirement for taking WFT readings in place of DFT readings for accept/reject criteria). In areas of retained paint, DFT readings shall still be measured and recorded. However, high DFT readings shall not be cause for rejection; such readings shall only be measured for documentation purposes.

8. Once the primer has reached the cure to overcoat state, the surface area shall be inspected for edge lifting of the remaining epoxy that was overcoated. This inspection shall be conducted at a maximum distance of 15 feet. As it cures, the epoxy primer may lift any loose edges of the existing coating that may not have been visible during the initial surface preparation inspection. Any areas where the paint has lifted shall be prepared in accordance with SSPC-SP 3 and primed. This inspection may be included as part of the DFT/WFT and visual holiday inspection.

9. For underwater hull areas:

(a) Apply second / tie coat of epoxy and first coat of antifouling in accordance with Table One.

(b) Apply remaining antifouling system in accordance with Table One.

10. For freeboard areas, apply second coat of epoxy then the topcoat in accordance with applicable Line in Table 2.
Attachment D

ICCP Sprayable Dielectric Shields Application Instructions For Removed/New Anode Installation

1. Prior to surface preparation, remove existing anode. If new installation, install gland body and anode mounting studs.

2. Install plug or masking material for the protection of areas not to be painted.

3. Prepare surface in accordance with requirements listed in the Table and Line for “Dielectric Shields” and QA checkpoints are conducted in accordance with 3.7.
   a. For 8 foot anode, prepare area 15 feet by 22 feet in accordance with Figure D-1.
   b. For 4 foot anode, prepare area 15 feet by 18 feet in accordance with Figure D-1.
   c. For 2 foot anode, prepare area 15 feet by 16 feet in accordance with Figure D-1.

NOTE: All coatings shall be listed in the Table and Line for “Dielectric Shields” and be applied in accordance with their NAVSEA-reviewed ASTM F718. All QA checkpoints shall be conducted in accordance with 3.7.

4. Apply primer to the DFT required by the manufacturer’s NAVSEA-reviewed ASTM F718.

NOTE: Intermediate and topcoat cannot be applied at required thickness in single pass without significant runs and sags. To prevent application defects, apply coatings in two passes as instructed below.

5. Within the primer’s specified overcoat window, apply the first pass of the intermediate coat at a thickness between 13 and 18 mils. The intermediate coat shall be applied to the anode area within 5 to 7 inches of the primer boundary, leaving a 5 to 7 inch band of primer along the perimeter.
   a. For 8 foot anode, coat area 14 feet by 21 feet in accordance with Figure D-1.
   b. For 4 foot anode, coat area 14 feet by 17 feet in accordance with Figure D-1.
   c. For 2 foot anode, coat area 14 feet by 15 feet in accordance with Figure D-1.

6. Within 5 minutes of completion of the first pass, begin applying the second pass of intermediate coat to acquire the required minimum DFT of 30 mils.

7. Within the intermediate coat’s specified overcoat window, apply the first pass of topcoat coat at a thickness between 13 and 18 mils in a contrasting color. The topcoat shall be applied to the anode area within 5 to 7 inches of the intermediate coat boundary, leaving a 5 to 7 inch band of intermediate coat along the 5 to 7 inch band of primer.
a. For 8 foot anode, coat area 13 feet by 20 feet in accordance with Figure D-1.
b. For 4 foot anode, coat area 13 feet by 16 feet in accordance with Figure D-1.
c. For 2 foot anode, coat area 13 feet by 14 feet in accordance with Figure D-1.

8. Within 5 minutes of completion of the first pass, begin applying the second pass of topcoat to acquire the required minimum DFT of 30 mils.

9. Allow topcoat to cure for minimum recoat time and ensure the total coating system meets the required 70 mils minimum DFT and does not exceed 100 mils within the footprint of the anode.

10. Remove plugs and masking material from step 2.

11. Apply a 1/8 inch bead of MIL-A-46106 room-temperature volcanizing (RTV) silicone adhesive-sealant to neoprene mat around each stud holes leaving 1/2 inch clearance from the edge of the hole and around the edge of the entire mat, again leaving 1/2 inch clearance from the edge.

12. Place neoprene mat on hull (RTV silicone adhesive-sealant side towards the hull), leaving equal clearance around all studs and the gland socket.

13. Insert anode into the socket.

14. While holding the anode in place, apply RTV silicone adhesive-sealant around each stud up to the bottom of the counterbore.

15. Install the nuts handtight, then from the center out, torque the nuts to between 8 and 10 foot-pounds.

16. Apply RTV silicone adhesive-sealant up to the top of the counterbore and insert anode cap. Allow the RTV silicone adhesive-sealant to cure to service.

17. Protect the face of the anode, ensuring all of the platinum surfaces are covered to prevent damage.

18. Within the topcoat’s specified overcoat window, apply the underwater hull coating system over the entire dielectric shield area.

19. Remove masking from step 17.

Note: If any overcoat windows are breached, standard recovery methods apply – hand sand with 80 grit sandpaper to degloss, then solvent wipe to SSPC-SP 1 cleanliness and continue painting.

DS or Standard Anode
Attachment E

ICCP Sprayable Dielectric Shields Application Instructions Without Removal of Existing Anodes

1. If anode is determined to be in good condition, install a fitted metal covering to prevent damage during surface preparation and coating application.

2. Low pressure water wash the existing Capastic shield.

3. Abrasive blast the shield area to SSPC-SP 5, leaving a 10 inch diameter ring of Capastic around the anode. Feather the transition between bare steel and the anode, gradually tapering the Capastic from the height of the anode to the bare steel in one smooth transition. QA checkpoints are conducted in accordance with 3.7.

4. Inspect remaining Capastic to ensure it is tightly adherent, intact, and has no visible cracking. If the Capastic is in good condition, move to step 6.

5. If any unsound Capastic is found within the 10 inch ring, blast the area to SSPC-SP 5 and apply Capastic. If for any reason the Capastic is not able to be repaired, or damage to the anode is found, the anode shall be removed and the shield preserved in accordance with Standard Item 009-32.

6. Hand sand the remaining Capastic with 80 grit sandpaper and solvent wipe to SSPC-SP 1 cleanliness.

NOTE: All coatings shall be listed in the Table and Line for “Dielectric Shields” and be applied in accordance with their NAVSEA-reviewed ASTM F718. All QA checkpoints shall be conducted in accordance with 3.7.

7. Apply primer to the DFT required by the manufacturer’s NAVSEA-reviewed ASTM F718.
   
   a. For 8 foot anode, prepare area 15 feet by 22 feet in accordance with Figure E-1.
   
   b. For 4 foot anode, prepare area 15 feet by 18 feet in accordance with Figure E-1.
   
   c. For 2 foot anode, prepare area 15 feet by 16 feet in accordance with Figure E-1.

NOTE: Intermediate and topcoat cannot be applied at required thickness in single pass without significant runs and sags. To prevent application defects, apply coatings in two passes as instructed below.

8. Within the primer’s specified overcoat window, apply the first pass of the intermediate coat at a thickness between 13 and 18 mils. The intermediate coat shall be applied to the anode area within 5 to 7 inches of the primer boundary, leaving a 5 to 7 inch band of primer along the perimeter.
   
   a. For 8 foot anode, coat area 14 feet by 21 feet in accordance with Figure E-1.
   
   b. For 4 foot anode, coat area 14 feet by 17 feet in accordance with Figure E-1.
9. Within 5 minutes of completion of the first pass, begin applying the second pass of intermediate coat to acquire the required minimum DFT of 30 mils.

10. Within the intermediate coat’s specified overcoat window, apply the first pass of topcoat coat at a thickness between 13 and 18 mils in a contrasting color. The topcoat shall be applied to the anode area within 5 to 7 inches of the intermediate coat boundary, leaving a 5 to 7 inch band of intermediate coat along the 5 to 7 inch band of primer.

   a. For 8 foot anode, coat area 13 feet by 20 feet in accordance with Figure E-1.
   b. For 4 foot anode, coat area 13 feet by 16 feet in accordance with Figure E-1.
   c. For 2 foot anode, coat area 13 feet by 14 feet in accordance with Figure E-1.

11. Within 5 minutes of completion of the first pass, begin applying the second pass of topcoat to acquire the required minimum DFT of 30 mils.

12. Allow topcoat to cure for minimum recoat time and ensure the total coating system meets the required 70 mils minimum DFT.

13. Within the topcoat’s specified overcoat window, apply the underwater hull coating system over the entire dielectric shield area.

Note: If any overcoat windows are breached, standard recovery methods apply – hand sand with 80 grit sandpaper to degloss, then solvent wipe to SSPC-SP 1 cleanliness and continue painting.
Figure E-1: Area to abrasive blast

Figure E-2: Cross section of coating system and anode
NOTES OF TABLES ONE THROUGH 5 FOR SURFACE SHIPS

(1) Draft marks are applied directly over the complete antifouling system.

(2) Boottop - The boottopping is defined as the black area from minimum load waterline at which the ship is expected to operate to 12 inches above the maximum load waterline. The black paint is an antifouling paint conforming to MIL-PRF-24647. The haze gray MIL-PRF-24635 shall not overlap onto the black MIL-PRF-24647 antifouling topcoat.

(3) This area includes DDG-51 Class top of stacks (i.e., 05 level weather decks and bulwarks).

(4) For the structural decks within the machinery spaces above the bilge line, use the Table Lines for “INTERIOR DECK PASSAGEWAYS NOT RECEIVING DECK COVERINGS.”

(5) Applicable to mast and yardarm surfaces as approved by the SUPERVISOR.

(6) A minimum of 24 hours drying time shall be allowed after last coat prior to undocking.

(7) Within a zone or work area, a proprietary nonskid system listed on the QPL for MIL-PRF-24667 shall be used.

(8) For applications below 50 degrees Fahrenheit, MIL-PRF-24647 coatings shall be used in accordance with the NAVSEA-reviewed ASTM F-718 to determine lower application temperature limit. Do not apply these coatings below 35 degrees Fahrenheit.

(9) MIL-PRF-24596, Grade C, Classes 1 and 2 or MIL-DTL-24607 must be used if surface and ambient temperatures are less than 50 degrees Fahrenheit.

(10) The "inner shield" is defined as the portion of the dielectric shield that extends 3 ft. from the anode in all directions. The "outer shield" is defined as the portion of the dielectric shield from the inner shield to a distance of 6 ft. from the anode. Repair of the inner shield area is required when total deteriorated inner shield surface area is from 0 to 2 percent, and no single spot is greater than one square foot. Repair of the outer shield area is required when total deteriorated outer shield surface area is from 0 to 10 percent, and no single spot is greater than one square foot. Replacement (new installation) of the entire dielectric shield is required when either of the above criteria is exceeded (damage to the inner shield is greater than 2 percent, OR damage to the outer shield is greater than 10 percent, OR any single spot damage is greater than one square foot). Repair of this system shall be performed with EVOQUA Water Technologies LLC part number Capastic™ 35524 (W3T106410).

(11) Attachments D shall be used for sprayable dielectric shield application for removed and new anode installations. Attachment E shall be used for
sprayable dielectric shield application without removal of existing anodes.

a. During visual inspection, ensure anode surfaces are undamaged and free of paint and dielectric shield material.

b. The anode should remain covered with heavy cardboard or plywood to prevent damage or contamination by the ship’s underwater hull coating system until just before undocking.

(12) These systems may also be invoked for preservation of decks in spaces that are prone to wear and do not receive deck covering.

(13) Anchors below lower boottopping limit shall be painted in accordance with normal underwater hull anti-corrosion/anti-fouling system.

(14) For MCM class ships, use walnut shells, garnet, or crushed glass for abrasive blast media. Waterjetting to NACE/SSPC-SP WJ-2/L may be used in place of NACE 2/SSPC-SP 10. Waterjetting to NACE/SSPC-SP WJ-3/L may be used in place of NACE 3/SSPC-SP 6.

(15) Anchor chain and detachable links shall be marked and color-coded in accordance with NSTM Chapter 581 unless otherwise directed by the Work Item or task order.

(16) Apply polysulfide compound conforming to MIL-PRF-81733, Type II, Class 2, after primer application, prior to topcoat application.

(17) Colors shown in Tables 631-8-10 and 631-8-11 of 2.2 shall be specified by TYCOM or ship's Commanding Officer in accordance with Paragraph 631-8.18.3.2 of 2.2.

(18) Restore each compartment marking in accordance with 2.12 and 2.13.

(19) MIL-PRF-24667 nonskid systems shall be applied as a complete system from the same manufacturer. The use of another manufacturer’s MIL-PRF-24667 color topping is authorized.

(20) Prior to accomplishing painting of wooden underwater hulls, allow the hull to dry to a moisture content of 15 percent. Readings shall be taken with an electronic moisture meter, Sovereign Moisture Master or equal. Cover grounding plates and zincs prior to painting.

(21) Blasted surface metal must be degreased following walnut shell blasting. Even traces of residual oil will degrade paint adhesion. Appropriate safety precautions for working with flammable solvents must be enforced. Alternate procedure is a vigorous soap and water wash followed by pressurized fresh water rinse. Do not use a detergent and fresh water washdown when using aluminum oxide as an abrasive blast medium.

(22) Peripheral deck edging and areas not receiving nonskid may use either the manufacturer's MIL-PRF-24667 color topping at 2-3 mils or MIL-PRF-
24635 Type V. Aircraft tie-downs may be coated with MIL-DTL-24441 P-155 in lieu of nonskid color topping.

(23) Apply MIL-PRF-24635, Type V, Haze Gray to all launcher areas not receiving nonskid. For DDG Flight II class ships where troughs are installed, topcoat using Deck Gray for trough covers and troughs.

(24) This product shall be spray applied where possible. All references to "brush coat" or "brush application" may be accomplished using a paint brush or a paint roller or cartridge unit. Multiple coats applied by brush/roller/cartridge unit shall be substituted for one coat of the spray application of 20-30 mils total in areas where plural-component spray application is not feasible or for paint touch-up. For brush application, the spray version of each product may be brush-applied or the brush coat version of the product may be used.

For application of the "single coat" products (by brush, roller, or spray), the product shall be applied all at one time, meaning during a continuous spray and touch-up operation. Specifically, a "single-coat" system involves one color of paint, applied during one work evolution (i.e., no time is required to wait for the paint to dry), with a single pass or double pass. Because the spray application is one work evolution, coating inspection QA checkpoint 3.10.9 need only be conducted after completion of application of the full coat. Completing a single work evolution may involve actions over numerous days, but it is still one evolution, requiring one QA checkpoint. If a tank or void is touched-up with a contrasting color, it is acceptable for the area to have a multi-color appearance.

(25) Power impact tool cleaning using power-driven needle guns, chipping or scaling hammers, rotary scalers, single or multiple-piston scalers, or other similar impact cleaning tools shall not be utilized in the cleaning methods.

(26) For coating repair or replacement, maintain the relative humidity in the tank or void space at a maximum of 50 percent from surface preparation checkpoint acceptance until cure to recoat time of final touch-up of the topcoat; relative humidity shall be maintained at a maximum of 85 percent from cure to recoat for the final touch-up of the topcoat through cure to service. For in-service coating touch-up until cure to immersion of topcoat, maintain relative humidity at a maximum of 85 percent.

(27) Finish coats for boats and craft shall be as specified in Paragraph 631-9.3.2 through 631-9.3.3 of 2.2 unless otherwise specified in the invoking Work Item or task order.

(28) Thermal insulation shall be soap and water cleaned and hand sanded.

(29) Three coats of MIL-DTL-24441, Type III at 3-4 mils per coat can be substituted for 2 coats of MIL-DTL-24441, Type IV at 4-6 mils per coat, for total system DFT of 8-12 mils. Three full coats and 2 stripe coats of MIL-DTL-24441, Type III at 3-4 mils per coat can be substituted for
2 full coats and one stripe coat of MIL-DTL-24441, Type IV at 4-6 mils per coat, for total system DFT of 8-12 mils.

(30) Grit blasting to near white metal is the preferred method of surface preparation. Only where grit blasting is not possible should power tool cleaning be used with prior authorization by the SUPERVISOR. Power tool cleaning should not be used for well deck areas frequently exposed to LCAC exhaust.

(31) A low-pressure (3,000 to 5,000 PSI) fresh water washdown of the well deck area shall be performed before either grit blasting or power tool cleaning to remove dirt, oil, grease, salts, and loosely adherent paint.

(32) Upon completion of surface preparation, pH measurements must be taken. The pH must be in the range of 6.5 to 7.5. If the pH is not within this range, the surface must be washed with fresh water until the required pH is obtained.

(33) If approved by the SUPERVISOR, the surface preparation method of Spot and Sweep, described in Attachment C may be used in place of the surface preparation SSPC/NACE standard required in the Table Line.

(34) These systems may also be invoked for preservation of well deck bulkheads and decks.

(35) Topcoat JBD pits and barricade stanchions with one coat MIL-DTL-24441 or MIL-PRF-23236 Type VI, white, at 2-4 mils.

(36) SSPC-SP 11 shall be the surface preparation standard used, even if the applicable NAVSEA-reviewed ASTM F718 has a more stringent requirement.

(37) Total DFT specified for potable water tanks shall not be exceeded except in isolated areas adjacent to shapes and stiffeners. In no case shall the maximum DFT be exceeded by 2 mils. The isolated areas shall be less than 2 percent of the total area.

(38) Maintain the relative humidity in the tank at a maximum of 85 percent from the start of abrasive blasting to cure of the topcoat. By allowing 85 percent vice 50 percent relative humidity, this will reduce the service life of the tank from 15-20 years to 10-12 years.

(39) PPG Industries PSX 892HS shall not be used for surfaces that exceed 700 degrees Fahrenheit.

(40) Do not stripe coat inside surfaces of the Sonar Trunk Guide Rail angles.

(41) Apply 3 coats of a vapor barrier-coating compound, MIL-PRF-19565, in contrasting colors (final coat white), to thermal insulation within laundries, sculleries, galleys, drying rooms, and to thermal insulation on the warm side of refrigerated stores spaces.
(42) High temperature areas of exhaust pipe exteriors include BLISS caps, air eductors, and exhaust stacks.

(43) In lieu of white, use Light Gray, Color No. 26373 (Low Solar Absorption only). In lieu of black, use Ocean Gray, Color No. 26173 (Low Solar Absorption only).

(44) These systems shall also be invoked for Aircraft Electrical Servicing Stations (AESS) trunks.

(45) Passive Counter-measure System (PCMS) tile on the bow flares shall be painted with the same topcoat as the freeboard.

(46) For heavily pitted areas, substitute Sherwin-Williams Fast Clad primer or International THA787/785 for the prime coat; apply at 4-8 mils. Then apply the topcoat at 16-22 mils if spray applying or 2 coats at 8-11 mils each if applied by brush/roller/cartridge unit. The primer application constitutes a separate QA checkpoint from the topcoat; however, the checkpoint for the primer shall be (I) instead of (I) (G).

(47) The topcoats for ordnance/non-ordnance pyrotechnic locker sun shields shall be painted white or as directed by NAVSEA.

(48) All of the AC and AF coats in the product system must be from the same manufacturer.

(49) For touch-up of Sherwin-Williams Fast Clad ER, Fast Clad Brush Grade may be used. Fast Clad Brush Grade is applied at 8-10 mils/coat. For touch up of Interline 783, Interline 624 can be used. Interline 624 is applied at 4-8 mils/coat.

(50) "Cosmetic" color topping is not to be applied on top of nonskid on vertical replenishment or aviation decks.

(51) Inorganic zinc silicate coatings shall be applied in accordance with the manufacturer’s instruction.

(52) Do not blast fin stabilizers to near white metal. As-received fin stabilizers shall be brush-off blasted to NACE 4/SSPC-SP 7 (Brush-Off Blast Cleaning) in lieu of near white metal blast to ensure polymer fairing compound is not removed prior to application of paint. Blank, wrap, cover, or mask equipment, shafts and openings to preclude damage and prevent entry of contaminants prior to cleaning operation. Remove protective covering upon completion of preservation operations.

(53) "Total System" value is only listed when it is more stringent than the sum of the individual coats of the system.

(54) This Table Line does not apply to propulsion plant water tanks aboard nuclear-powered ships.
(55) For MIL-PRF-23236 Type VII Class 9, 9/18, 11, and 11/18 paints, follow the NAVSEA-reviewed ASTM F718 for temperatures, cure and recoat times. This supersedes the 70 degree Fahrenheit, 36/12-hour/5 day requirement.

(56) Do not apply nonskid to 7-inch wide strip of deck surface in way of the helo hangar door seal interface on DDG-51 Class Flight II-A ships.

(57) Painting PCMS tile on paint-allowed PCMS ships will be to match surrounding surfaces and as designated by the SUPERVISOR. Painting is prohibited on no-paint PCMS ships.

(58) Products used for the primer or single coat shall contain OAP.

(59) Composition L nonskid may be used in Composition G areas with TYCOM approval.

(60) MIL-PRF-24667 Composition L material shall be applied in areas designated by the VLA General Services Bulletin Number 8.

(61) For flight decks equipped with RAST tracks, see Figure One for guidance on RAST track plates.
NOTES:
1. APPLY NONSKID ONLY TO CROSS-HATCHED AREAS.
2. NO NONSKID ON 2-3/4 to 3-1/4 INCH DIAMETER CIRCLES CENTERED ON HOLES.

(62) Once the old nonskid system is removed, or if it is a new deck being prepared for nonskid system installation, the surface of the GRP fiberglass shall be lightly hand-sanded with 80-grit paper to roughen the surface.

(63) Nonskid shall be applied to within 2-3 inches of deck fittings and protrusions. Nonskid shall be applied to within 4-6 inches from coamings and deck edges. Areas underneath protrusions, such as stowage
racks or fire stations that are normally found on hangar decks, or coaming areas of decks not subject to vehicle or aircraft movement, need not comply with the 4-6 inch rule for applying nonskid near deck edges.

(64) Primer coat(s) shall be from the same manufacturer as the other coats in the system.

(65) Fuel oil storage, fuel oil service, and diesel service tanks are not required to be painted unless specifically addressed in the tables. For existing paints, when flaking occurs, SSPC-SP 3 surface preparation shall be accomplished and a light coat of system fluid shall be wiped over the surface prior to closing. If preconstruction primer was applied in accordance with 3.1.5, it may be retained, but it shall be overcoated with one coat MIL-PRF-23236, Type V, VI, or VII Class 5 at 4-8 mils.

(66) Do not apply primer to bulkheads and overheads.

(67) Intentionally left blank.

(68) For interior surfaces of stern tubes and extensions, strut barrels, fairwater interiors, shaft flanges (not exposed to seawater) and coupling covers, do not apply antifouling topcoat.

(69) Intentionally left blank.

(70) MIL-PRF-24635, Type III, Class 2, Grade B or C is permitted for touch-up repairs of existing MIL-PRF-24635, Type III, Class 2, Grade B or C.

(71) Any MIL-PRF-24667 color topping may be used on MIL-PRF-24667 Type XI nonskid.

(72) MIL-PRF-24667 Type I spray-applied products are not authorized for application to critical coated areas on CVNs.

(73) Runs, drips, and sags may appear in application of MIL-PRF-23236, Type VII paint. When wet, runs, drips, and sags shall be brushed out to form a smooth, uniform film. When cured, runs, drips, and sags shall be evaluated by the SUPERVISOR and if found to be detrimental to the coating system, shall be repaired.

(74) Painting over PCMS tile is not covered by this Standard Item, but is covered by the applicable PCMS specifications.

(75) The entire deck surface (i.e. forecastle, fantail, flight, etc.) containing a Vertical Replenishment Deck area shall be considered a critical coated area as addressed in 3.7.

(76) For aircraft carriers, substitute 1 stripe coat of primer for the 2nd primer full coat.
(77) The coating system for AFFF decks (i.e., under AFFF Proportioning Units) may be applied to bilge drain wells.

(78) SSPC-SP 3 of tightly adherent paint may be used for locations located 12 inches and above the inner bottom tank top for the bilge area, with the exception that the exterior structure of stand-alone tanks on aircraft carriers will require a minimum of SSPC-SP 11.

(79) These areas shall be considered heavily pitted.

(80) Maximum water pressure shall be such that 30 seconds of stationary operation of the vacuum self-contained equipment produces no visible degradation of the nonskid surface. Vacuum self-contained equipment shall be capable of cleaning within 4-inches of bulkheads, coamings, and other deck appurtenances.

(81) Abrade sides of dielectric shield anode bars by hand with 80 grit sandpaper to SSPC-SP 2 and verify SSPC-SP 1 cleanliness prior to first application of dielectric shield to the bar.

(82) Each cell hatch lip shall be prepared to SSPC-SP 2.

(83) Intentionally left blank.

(84) Use only when substrate temperature cannot be maintained above 50 degrees Fahrenheit.

(85) For DDG 1000 class ships, use one coat light gray MIL-PRF-24635 Type V or VI, Class 2, Grade B or C, 5-8 mils.

(86) For aircraft carriers only, MIL-PRF-24635, Type III, Class 2, Grade B or C may be substituted where MIL-PRF-24635, Type V and VI, Class 2, Grade B or C is specified.
NOTES OF TABLES 6 THROUGH 8 FOR SUBMARINES

(1A) Hull inserts shall be coated with the preservation system applied to adjacent surfaces. Extend paint system a minimum 1/2-inch on to non-ferrous liner or cladding. For MBT vent valves, preserve weld radius of the clad sealing surface and the vertical surface mating with the MBT vent valve gasket retainer; the only surface which is not painted is the horizontal clad sealing surface which mates with the MBT vent valve disc gasket.

(2A) Alternating AF colors may be used. Final coat can be red or black.

(3A) The upper boottop limit is extended to 12" above the maximum condition diving trim waterline. For all surfaces above max beam that are to receive AF, all coats shall be black. The final coat of all exterior paint systems above the upper boottop shall also be black.

(4A) A minimum of 24 hours drying time shall be allowed after last coat prior to undocking.

(5A) Products used for the primer or single coat shall contain OAP.

(6A) Blasting is not allowed in machinery spaces.

(7A) Topcoat color shall match surrounding paint on visible surfaces.

(8A) MIL-PRF-23236 Type VII Class 17 NAVSEA-reviewed paints for interior submarine use under the Submarine Atmosphere Control Manual are International Interbond 998 and Sherwin-Williams Euronavy ES301.

(9A) To minimize premature yellowing, chlorinated alkyd-based paints (MIL-DTL-24607) shall not be applied within 4 weeks before and after the application of amine-cured epoxy paints formulated to MIL-PRF-23236.

(10A) When using paints qualified to MIL-DTL-24607, use Table 631-8-10 of 2.2 to select approved colors.

(11A) MIL-PRF-24596 Class 2, Grade A, and Formula 25A may be substituted for MIL-DTL-24607 chlorinated alkyd enamels. Color shall match the existing surroundings.

(12A) The SSBN/SSGN-726 Class logistics escape trunk (LET) fasteners and bubble skirt knife edge in way of gaskets and fasteners for LET upper hatch fairings are to be left unpainted.

(13A) The Environmental Protection Agency (EPA) has found that samples of vermiculite ore contain asbestos fibers. Vermiculite was used as an anti-sweat treatment on the upper hatch covers on submarines. All facilities and workers shall assume vermiculite contains asbestos fibers until it has been tested. All facilities are to test new vermiculite or vermiculite in use prior to working with the material. Workers who are doing work with or near vermiculite should be aware that it may contain asbestos and proper precautions shall be used.
(14A) The requirements of SSPC-SP 1 shall be met via a HP or UHP fresh water washdown of the tank prior to blasting the tank to NACE 2/SSPC-SP 10.

(15A) Motor generators require protection from paints conforming to MIL-DTL-24441 or MIL-PRF-23236 during application and curing of the paint. When these paints are being applied or cured while venting in a space containing motor generators, the motor generators shall be protected using a NAVSEA-approved procedure. For 300 kilo-watt (kW) and 500 kW motor generators, a positive pressure unit according to Appendix A of the motor generator technical manual shall be used. Maintenance on motor generators shall not be performed for a minimum of 5 days after painting with MIL-DTL-24441 and MIL-PRF-23236 paints or any application of silicones (e.g., TT-P-28, MIL-PRF-24635 silicone enamels) in the engine room.

(16A) When lead is removed from lead bins, the structure shall be blasted to NACE 2/SSPC-SP 10 and preserved with an ultra-high solids paint, (even if the surrounding structure is being touch-up painted) prior to installing lead.

(17A) Immersed non-ferrous and corrosion-resistant steel piping and cable pans shall be completely coated with the specified tank or bilge paint system with the following exceptions: non-ferrous and corrosion-resistant steel piping and CRES torpedo system components in torpedo impulse tanks shall not be painted; non-ferrous and CRES piping above residual waterline in MBTs is not required to be painted; in all tanks, closed system piping one-inch diameter and less is to be protected from blast and is not required to be painted.

(18A) Succeeding coats of the coating system shall be of contrasting color, and the top coat shall be white or a very light pastel shade.

(19A) CRES fasteners (studs, nuts, washers) used to secure Type II vibration damping and acoustic tiles may be left unpainted.

(20A) Unpainted hydraulic oil, hydrophone, and Clean Fuel Oil (CFO) tanks shall remain unpainted. Lube oil sludge tanks on SSBN/SSGN-726 Class submarines are not painted.

(21A) Reduced touch-up paint curing procedures of Section 7 of 2.2 do not apply to these surfaces. Also, note accelerated touch-up times authorized by 2.2 are for non-reactor potable water tanks only, and therefore are not to be used for potable water, reserve feedwater, and freshwater drain collecting tanks unless specifically approved by NAVSEA.

(22A) Total DFT specified in Table 8 for potable water tanks shall not be exceeded except in isolated areas adjacent to shapes and stiffeners. In no case shall the maximum DFT be exceeded by more than 2 mils. The isolated areas shall be less than 2 percent of the total area. For touch-up or overcoating intact aged paint in good condition, the same requirements for each coat apply, and the total film thickness maximum
requirement may be corrected to allow for thickness of underlying aged paint.

(23A) Prior to surface preparation, flasks must be depressurized. Barrier protection shall be in accordance with NAVSEA S0400-AD-URM-010/TUM, Tag-Out User’s Manual (TUM), Appendix G.

(24A) Welds and area above welds will be coated with MIL-DTL-24441 primer (at 4-6 mils/coat) and 2 coats MIL-PRF-24635 (at 2-3 mils/coat). Tek-Haz paint system shall be applied in accordance with EB Specification 4277 and will extend to a line even with the underside of the ventilation plenum welds, but not including the welds.

(25A) Bilge and Drain Collection Tanks includes the following: Bilge Collecting Tanks, Bilge Collecting Sump Tanks, Non-Oily Drain Collecting Tanks (other than Fresh Water), Oily Drain Collecting Tanks, Bilge Water Processing Tank, Drain Water Collecting Tanks, VLS Drain Collecting Tank, Oil Collection Tanks.

(26A) For Moored Training Ships (MTS), the antifoulant coating is not required, because the tanks are blanked off and filled with fresh water.

(27A) Conduct low voltage holiday detection on 100 percent of potable water tanks when MIL-DTL-24441 Type III paint is being applied. Holiday detection shall also be performed on any repaired (touch-up) areas of an existing paint system. The holiday checks are to be performed after application of the topcoat using a low voltage wet sponge holiday detector. Any holidays (defects to bare metal) found shall be marked by the inspector and the area touched-up. Holiday checks shall be performed again on these areas after repair.

(28A) All painting with organic solvent-based paints (alkyd, epoxy, oil based) that exceeds 1 quart per day for the entire ship shall be completed 5 days prior to the date of departure as determined by the Commanding Officer. Date of departure, as it relates to painting, is the date of first dive after departure for a period of operation.

(29A) For coating repair or replacement, maintain the relative humidity in the tank or void space at a maximum of 50 percent from surface preparation checkpoint acceptance until cure to recoat time of final touch-up of the topcoat; relative humidity shall be maintained at a maximum of 85 percent from cure to recoat for the final touch-up of the topcoat through cure to service. For in-service coating touch-up until cure to immersion of topcoat, maintain relative humidity at a maximum of 85 percent.

(30A) Steam clean to remove excess oil.

(31A) Tank manhole covers are critical coated areas. Solvent-based paint systems may be used to paint manhole covers of tanks painted with high solids paint systems due to fit-up issues associated with high solids paint systems. Powder coatings shall not be applied to reserve
feedwater, potable water, freshwater drain collecting, and steam surge tank manhole covers.

(32A) Areas visible from above shall be topcoated either gray or black.

(33A) Total number of coats and total DFT specified in Table 7 for all interior spaces shall not be exceeded. Maximum system total DFT shall not exceed 17 mils for surfaces topcoated with MIL-DTL-24607, 21 mils for surfaces topcoated with MIL-PRF-24596, or 24 mils for surfaces topcoated with Formula 25A.

(34A) Naval Shipyards are allowed to work on these items. All other activities are to be approved by NAVSEA.

(35A) The David Taylor Research Center paint system (DTRC 2844-1110 and 2844-1109) may be used on other exterior hull areas. This is to allow areas adjacent to areas covered by MIP or SHT to be re-preserved the same as MIP or SHT areas. For areas requiring stripe coat, refer to 3.2.

(36A) Areas within the HOSUB Deep Submergence System/Scope of Certification (DSS-SOC) boundary are not covered by this Standard Item but are covered by the applicable DSS-SOC preservation maintenance standard. The SUPERVISOR should be contacted to specify the areas that are outside the DSS-SOC boundary.

(37A) Runs, drips, and sags may appear in application of MIL-PRF-23236, Type VII paint. When wet, runs, drips, and sags shall be brushed out to form a smooth, uniform film. When cured, runs, drips, and sags shall be evaluated by the SUPERVISOR and if found to be detrimental to the coating system, shall be repaired.

(38A) Final grooming of bow domes and chin arrays must be performed by qualified shipyard personnel. Final surface finish of bow domes must be 180 microinches Ra or smoother. Measure and record surface roughness in accordance with ASME B46.1-2009 Surface Texture (Surface Roughness, Waviness, and Lay.) If necessary, groom the surface of the dome to attain a maximum surface roughness of 180 microinches Ra. This additional grooming can be accomplished by wet sanding the surface by hand using 120 grit paper and fresh water. Refer to the appropriate bow dome manual for the class for more specific guidance on surface roughness, grooming and paint application.

(39A) For MIL-PRF-23236, Type VII, Class 9 and 9/18 paints, follow the NAVSEA-reviewed ASTM F718 for temperatures, cure, and recoat times. This supersedes the 70 degree Fahrenheit, 36/12-hour/5-day requirement.

(40A) This product shall be spray applied where possible. All references to “brush coat” or “brush application” may be accomplished using a paint brush or a paint roller or cartridge unit. Multiple coats applied by brush/roller/cartridge unit shall be substituted for one coat of the spray application of 20-30 mils total in areas where plural-component spray application is not feasible or for paint touch-up. For brush
application, the spray version of each product may be brush-applied or the brush coat version of the product may be used.

For application of the "single coat" products (by brush, roller, or spray), the product shall be applied all at one time, meaning during a continuous spray and touch-up operation. Specifically, a “single-coat” system involves one color of paint, applied during one work evolution (i.e., no time is required to wait for the paint to dry), with a single pass or double pass. Because the spray application is one work evolution, coating inspection QA checkpoint 3.10.9 need only be conducted after completion of application of the full coat. Completing a single work evolution may involve actions over numerous days, but it is still one evolution, requiring one QA checkpoint. If a tank or void is touched-up with a contrasting color, it is acceptable for the area to have a multi-color appearance.

(41A) Powder coatings approved for use on submarines are listed in 2.6.

(42A) Low Pressure Water Clean (LP WC) with a fan spray starting at a pressure of 1,000 PSI. Keep the cleaning lance nozzle tip perpendicular to and at least 4” from the surface. Increase pressure, if needed, in increments of 500 PSI up to a maximum of 5,000 PSI. Remove all paints down to sound gray or green anti-corrosive paint (F-151 or F-150) or bare GRP. Remove any remaining barnacle particles or other foreign objects with wood or plastic scrapers, or by sanding. Do not use wire brushes or other abrasive instruments.

(43A) Remove all marine growth and existing paint from the boot surface by LP WC or sanding with soft back dual action or soft back random orbital sanders and 60 grit paper. Observe extreme caution when LP WC. Measure stand-off distance and control nozzle pressure to assure that the boot is not damaged during the cleaning process. LP WC must be performed using fresh water with a starting pressure of 1000 PSI. Pressure must be increased in 500 PSI increments until the desired results are obtained. Scuff the entire boot surface using 60 grit paper or equivalent coarseness Scotch-Brite pad to remove any remaining paint and provide an adequately prepared surface for paint application. Clean the bare boot surface with PF-145HP degreaser (NSN 6850-01-378-0044) or degreasing solvent per MIL-PRF-680, Type I.

(44A) Do not apply nonskid to Fairwater Planes or Retractable Bow Planes.

(45A) MIL-PRF-24647 coatings may be used for cold weather applications below 50 degrees Fahrenheit. For cold weather applications of MIL-PRF-24647 coatings, the NAVSEA-reviewed ASTM F718 shall be used to determine lower application temperature limit. Do not apply these coatings below 35 degrees Fahrenheit.

(46A) Navy Formula F-187 cannot be applied over F-184.

(47A) If performing touch-up of paint in Steam Plant Surge Tanks, one coat Dampney Company ENDCOR 450 (no DFT required) shall be applied prior to application of the coats of Apexior No. 1.

   2.12 407-5291780, Standard Electromagnetic Interference (EMI) Survey Procedures

3. **REQUIREMENTS:**

   3.1 Disconnect equipment mechanically and remove, including rotating components connected directly to the shaft, using 2.2 for guidance.
3.1.1 Accomplish the following prior to disconnecting: measure air gap readings; measure bearing clearances for sleeve bearing equipment only; measure alignment readings; inspect couplings for cracks, broken segments, wear, and misalignment in excess of tolerances specified in 2.2; measure shaft thrust and run out readings; identify associated cables/wiring and hook-up data. Record data.

3.1.2 Matchmark, identify, and retain chocks, shims, shock mounts, sound damping pads, and other accessories associated with equipment. Record list of accessories.

3.1.3 Remove entire vaneaxial and tubeaxial fan assemblies from the duct system and transport to the shop for repair.

3.2 Accomplish a structural inspection of each foundation in accordance with 2.3. Record data.

3.2.1 Accomplishment of cleaning and painting requirements for foundations of equipment shall be in accordance with NAVSEA Standard Items (See 4.7).

3.3 Matchmark, disassemble, test, inspect, and measure the equipment using 2.2 and 2.4 through 2.8 for guidance.

3.3.1 Accomplish a core loss test prior to winding removal in accordance with Paragraphs 300-4.5.6 and 300-4.5.6.1 of 2.4. Inspect for hot spots in accordance with the Core Loss Tester Instruction Manual. Record data.

3.3.1.1 Accomplish a loop test in accordance with Paragraph 300-4.5.6.1.2 of 2.4 when core indicates a marginal satisfactory reading or when test equipment does not directly support equipment being subjected to testing. Record data.

3.3.2 Remove each winding, using Paragraph 300-4.5.7.2 of 2.4 for guidance for winding removal and 2.8 for core inspection. Verify the temperature limitations of the core material prior to exercising the burnout oven option. Record winding data. Verify conformance of recorded data to the manufacturer's winding data.

3.3.2.1 Repeat core loss test and inspection described in 3.3.1 and loop test described in 3.3.1.1 after winding removal. Record data.

3.3.3 Dip core in a 20 percent solution of varnish MIL-I-24092 and dry. In localities where MIL-I-24092 does not meet state and local Air Pollution Control District (APCD) standards, spray the iron core with a clear air-drying varnish.

3.3.4 Protect machined surfaces. Accomplishment of cleaning and painting for equipment housing exterior, fan(s), core and interior and
exterior of each end bell shall be in accordance with NAVSEA Standard Items (See Note 4.7).

3.3.5 Inspect and test non-wound rotors for loose or cracked bars, localized overheating, and rubbing in accordance with 2.8. Inspect wound rotors, slip ring leads, and armatures for insulation damage and burns/hot spots. Inspect for loose coils and slot wedges. Inspect slip rings and commutators for damage and for wear limits, using 2.2 for criteria. Inspect brush rigging for cracks, chips, worn areas, distortion, spring condition, and insulating material for cracks and arc paths. Inspect leads and terminal lugs for damage and defects. Identify and tag leads with aluminum wrap-around bands with metal stamped or embossed markings. Record data.

3.3.6 Inspect and dimensionally measure end bells, frame, rabbet fits, shaft, sleeve and pedestal bearings, keyways, fan and running surfaces for wear, eccentricity, and other defects, using 2.2 for accept or reject criteria, and 2.7 for location and type of measurements to be taken. Record data.

3.3.7 Accomplish commutator pre-installation and post-installation test, using Table 300-3-9 of 2.4 for guidance. Record data.

3.4 Rewind the equipment in accordance with Original Equipment Manufacturers (OEM) "for Navy use" winding data. Connect windings permanently only after successful completion of testing of 3.5.1 and 3.5.3 through 3.5.5. Install new material conforming to: Magnet wire, National Electrical Manufacturers Association (NEMA) MW-1000, Table MW 16 (round wire), or NEMA MW-1000, Table MW 20 (rectangular wire), or equivalent to OEM original; Slot and phase insulation, NEMA FI-3-2004; Slot wedge-spacers and fillers, MIL-I-24768/17; Lead wire, stranded, MIL-DTL-16878 except for type EPDM, which may be commercial grade; Glass banding, MIL-I-24178; Temperature detectors in accordance with 2.2.

3.5 Test, inspect, and measure the rewound equipment.

3.5.1 Accomplish a 500-volt megger insulation resistance test, using Paragraphs 300-3.2.2 through 300-3.2.3, 300-3.4.8, 300-3.4.11, and 300-5.3.7.1 of 2.4 for guidance. Record data.

3.5.2 Disconnect solid-state devices and ground temperature-sensing leads prior to measuring insulation resistance of windings.

3.5.3 Accomplish a phase resistance balance test of windings, using a Wheatstone or Kelvin bridge, or with an ohmmeter capable of resolving one milliohm (0.001 ohm). Record phase balance for multi-phase equipment, using Paragraph 5.21 of 2.8 and 3.6.1 of 2.9 for guidance. Record data.

3.5.4 Accomplish a voltage surge test in accordance with Paragraphs 300-3.5.4 through 300-3.5.5 of 2.4. Record data.
3.5.5 Accomplish a DC HI POT test in accordance with Paragraph 300-3.5.2 through 300-3.5.2.3.4 of 2.4. Record data.

3.6 Connect the windings permanently.

3.6.1 Repeat tests described in 3.5.1 and 3.5.3 through 3.5.5. Record data.

3.6.2 Accomplish DC bar-to-bar test on commutators after making coil connections to the risers in accordance with Paragraph 300-4.7.11.3 of 2.4. Record data.

3.6.3 Accomplish a Polarization Index Test in accordance with Paragraph 300-3.4.12 of 2.4. Record data.

3.7 Select the proper insulating process based on winding insulation classifications and to meet state or local air pollution standards. Select varnish methods and material, using Paragraphs 300-4.5.8 through 300-4.5.8.9 of 2.4 for guidance. Maintain the varnish in accordance with Paragraphs 300-4.5.8.3 through 300-4.5.8.3.3 of 2.4 and the varnish manufacturer's instructions. Maintain a current revision of the varnish manufacturer's instructions on storage, maintenance, and use of the type of varnish to be applied. Maintain a record of varnish temperature, viscosity and, for solventless varnish, gel time tests. Tests must show varnish is within varnish manufacturer's recommendations and have been accomplished in the intervals specified by the varnish manufacturer. The record must also show that the varnish is being stored as recommended by the varnish manufacturer.

3.8 Varnish and bake windings in accordance with Paragraphs 300-4.5.8.4 of 2.4 and the varnish manufacturer's instructions. Do not immerse the leads. Wipe surfaces that affect assembly, such as rabbet fits and mounting flanges, with a cloth moistened with a solvent after draining and before baking. Remove excess varnish run-off from surfaces that affect assembly after baking. Apply a thin coat of air-dry varnish to metal surfaces exposed by the removal process in accordance with Paragraph 300-4.5.8.5 and 300-4.5.8.6 of 2.4.

3.9 Repeat tests described in 3.5.1 and 3.5.3 through 3.5.5. Record data.

3.10 Accomplish an AC HI POT test in accordance with Paragraphs 300-3.5.3 through 300-3.5.3.2.9 of 2.4. Record data.

3.11 True the commutator or collector rings. Eccentricity shall not exceed the requirements of 2.10. Resurface or machine each individual collector ring to the same exact diameter to allow symmetrical brush holder to ring clearance spacing. Ensure metal shavings are not permitted to contaminate the rotor or stator assembly. Each cut shall not exceed 0.010 inch. Finish thickness shall not be less than design wear tolerance as shown in 2.2. Undercut the mica between the commutator bars with the edge of the mica not exceeding a depth of 5/64-inch below the bars. Chamfer the bar edges
and remove rough surfaces in accordance with Paragraph 7-4.1.3 of 2.10. Burnish the commutator with a very fine commercial burnishing stone conforming to A-A-58052. Polish collector rings to a mirror finish. Record data.

3.12 Accomplishment of the balancing requirement for each rotating assembly shall be in accordance with NAVSEA Standard Items (See Note 4.6).

3.14 Install identification markers on wiring in the external connection box.

3.14.1 Markers shall be aluminum wrap-around type with metal stamped or embossed markings.

3.15 Repair lightly scored areas of frame, end bells, and shaft by manual methods. Recondition threads and fit key to keyway. Visually inspect keyway for deformed, cracked or chipped edges or high spots. Verify that fit between key and key-seat sides has a minimum clearance of 0.002 inch or maximum interference of 0.0005 inch. High spots in keyway may be removed by machining or grinding. Do not unnecessarily repair any keyway; instead, use a step key up to a maximum of 0.010 inch oversize and, where possible, include a radius in step. If key tightness cannot be corrected with a step key, re-machine worn/damaged keyways to recommended over-sizes as follows: Maximum of 0.015 inch oversize for a 1/8-inch key and increasing oversize allowance of 0.010 inch for each 1/8-inch increase in key size up to a maximum of 0.075 inch. If key tightness cannot be corrected by keyway repair, replace part involved. Apply a thin coat of petrolatum to unpainted mating surfaces except for explosion-proof motors, which shall have clean, dry mating surfaces.

3.16 Prepare and refinish equipment. Protect machine surfaces, windings, and nameplates from being painted or otherwise damaged.

3.16.1 Accomplishment of cleaning and painting for housing, fan, and interior and exterior of each end bell shall be in accordance with NAVSEA Standard Items (See Note 4.7).

3.17 Accomplish the following on equipment having other than sleeve-type bearings unless otherwise specified in the invoking Work Item, using 2.8 for guidance.

3.17.1 Install new bearings, seals, fittings, lock washers, and locknuts conforming to 2.2, using 2.7 and Chapter 6 of 2.8 for guidance, except as indicated in 3.17.1.1 (utilizing Attachment A for guidance).
3.17.1.1 Install Type III, Class 8 (double seal) bearings in motors meeting the criteria identified in Chapter 6 of 2.8. Only double seal bearings identified in Chapter 6 of 2.8 are acceptable for this use.

3.17.1.2 Install Type III, Class 8 (double seal) bearings with a C3 (greater than normal) radial internal clearance, if not originally furnished or already accomplished during previous repair, in place of the Type III bearing originally furnished, for vaneaxial and tubeaxial fan motors not meeting the criteria of Chapter 6 of 2.8. Install Type 120 bearings in vaneaxial and tubeaxial fan motors originally furnished with Type 120 bearings.

3.17.1.3 Install new label plates with the inscription "DO NOT LUBRICATE" on equipment using double seal bearings (Type III, Class 8 or Type 120).

3.17.1.4 Install pipe plugs on all grease fills and drains for equipment converted from re-lubricable bearings to double seal bearings.

3.17.1.5 Prepare a report that reflects the change in the maintenance requirements for the converted motor, for equipment converted from lubricated bearings to double seal bearings.

3.17.2 Lubricate bearings with grease conforming to DOD-G-24508 in accordance with Paragraphs 244-1.7.7.2 and 244-1.7.7.3 of 2.7, for equipment not using double seal bearings.

3.18 Assemble the equipment using 2.2 and 2.4 through 2.8 for guidance. Do not use materials containing silicone in the repair and assembly of equipment with commutator or collector rings. Install new gaskets on covers, inspection plates, and between the external connection box and the frame. Gaskets shall conform to MIL-PRF-1149 unless otherwise specified in 2.2. Set brush holders not less than 1/16-inch or more than 1/8-inch from commutator or collector rings unless otherwise specified in 2.2; set in electrical neutral plane and stagger brushes for maximum coverage of the commutator, in accordance with Paragraph 300-4.7.7.1.10 of 2.4; center over the collector rings; ensure the brushes do not extend beyond the edge of the collector rings; install new brushes in accordance with 2.2; sand new brushes to fit curvature of the commutator or collector rings in accordance with Paragraph 6-3.5 through 6-3.5.4 of 2.10; ensure brushes have a surface contact of 100 percent and are not chipped, cracked, or broken; remove sand, carbon, and other foreign matter resulting from fitting new brushes; adjust spring tension of brushes in accordance with 2.2. Adjust air gap as specified in 2.2, plus or minus 10 percent. Rotate shaft by hand a minimum of 3 revolutions. Rubbing or binding of rotating assembly shall not be allowed. Record data.

3.18.1 Install label plates conforming to MIL-DTL-15024 for those identified to be missing or damaged.
3.18.2 Inspect equipment for applicable electromagnetic interference (EMI) fixes using Shipboard Electromagnetic Compatibility Improvement Program (SEMCIP) Technical Assistance Network (STAN) in accordance with 2.12. Record results.

3.19 Accomplish a no-load shop test of the equipment for a minimum of one-half hour. Verify proper direction of rotation. After one-half hour, measure current and voltage in each phase, speed and bearing temperature rise measured on the equipment's exterior near each bearing. Record data.

3.20 Accomplish an operational test, with the vaneaxial/tubeaxial fan reassembled, for one hour after bearing and stator temperatures stabilize within one degree Celsius for 3 consecutive 15-minute intervals. Verify proper direction of rotation. Measure current, voltage, frame and bearing temperature rise and speed at 15-minute intervals. Bearing temperatures shall not exceed 180 degrees Fahrenheit, unless otherwise specified in the invoking Work Item or equipment technical manual. Measure hot insulation resistances of winding to ground immediately upon completion of the operational shop test, using a 500-volt megger. Record data.

3.21 Submit one legible copy, in approved transferrable media, of a report listing results of the requirements of 3.1.1, 3.1.2, 3.2, 3.3.1 through 3.3.2.1, 3.3.5 through 3.3.7, 3.5.1, 3.5.3 through 3.5.5, 3.6.1 through 3.6.4, 3.9, 3.10, 3.11, 3.17.1.5, 3.18, 3.19, and 3.20 to the SUPERVISOR.

3.22 Install equipment. Install new gaskets conforming to MIL-PRF-900 on disturbed ventilation. Align in accordance with 2.2. Measure facial and peripheral coupling data. Install chocks, shims, shock mounts, sound damping pads, and other accessories. Connect electrical cables/wiring. Bond and ground equipment in accordance with 2.11, using new ground straps. Rotate shaft by hand a minimum of 3 revolutions. Rubbing or binding of rotating assembly shall not be allowed. Measure the air gap and bearing clearance (sleeve bearing equipment only), insulation resistance (at 500 volts DC), and thrust. Record data.

3.22.1 Accomplishment of pump and driver shaft alignment shall be in accordance with NAVSEA Standard Items. (See 4.8)
3.23 Accomplish an operational test of the assembled equipment at full system capacity for one hour after bearing and stator temperatures stabilize within one degree Celsius for 3 consecutive 15-minute intervals, unless otherwise specified in the invoking Work Item. When temperatures do not stabilize in four hours, stop test and contact the SUPERVISOR. Verify proper direction of rotation. Verify/establish oxide film coating of the commutator/collector rings, using 2.10 for guidance. Measure current, voltage, frame and bearing temperature rise, and speed at 15-minute intervals. Frame and bearing temperature rise and speed is not required for vaneaxial and tubeaxial fan assemblies. Bearing temperatures shall not exceed 180 degrees Fahrenheit, unless otherwise specified in the invoking Work Item or equipment technical manual. Record data.

3.23.1 Accomplish the requirements of 3.23 twice for two speed motors, once while operating at low speed, and once while operating at high speed. Record data.

3.23.2 Accomplish the requirements of 3.23 for limited duty motors, for a period of time equal to the duty cycle of the motor. For motors with a duty cycle equal to or less than 30 minutes, measure data every 10 minutes. Record data.

3.23.3 Measure hot insulation resistances of windings to ground immediately upon completion of test, using a 500-volt megger. Record data.

3.24 Submit one legible copy, in hard copy or approved transferrable media, of a report listing data recorded in 3.22 and 3.23 through 3.23.3 to the SUPERVISOR.

4. NOTES:

4.1 Equipment technical manual, Allowance Parts List (APL) (if applicable) and drawings will be listed in the invoking Work Item.

4.2 Shop test of generator will be addressed in the invoking Work Item.

4.3 Utilize Attachment A for determination if the Navy’s motor bearing conversion program for Extended Life Double Seal (ELDS) ball bearings is permissible.

4.4 Data received in 3.17.1.5 shall be forwarded to the SUPERVISOR for the purpose of initiating action ensuring shipboard databases such as the Equipment Guidance List (EGL) are updated to reflect the change in maintenance requirements for converted motors. Additionally, where APL changes are initiated to convert to ELDS bearings, a COSAL feedback report will be submitted, providing the NSN and part number for the ELDS bearing. The following website to initiate changes to Technical Manuals, APLs, etc.: http://www.navy311.navy.mil.
4.5 MIL-B-17931 (Bearings, Ball, Annular, For Quiet Operation) bearings are considered to be Long Lead Time (LLT) material. It is recommended these bearings be provided as Government Furnished Material (GFM).

4.6 If balancing of rotating equipment of 3.12 is required; the use of Category II Standard Item 009-15 “Rotating Machinery; balance” of 2.1 will be specified in the Work Item.

4.7 If cleaning and painting of 3.2.1, 3.3.4, or 3.16.1 is required; the use of Category II Standard Item 009-32 “Cleaning and Painting Requirements; accomplish” of 2.1 will be specified in the Work Item.

4.8 If pump and driver shaft alignment of 3.22.1 is required; the use of Category II Standard Item 009-58 “Pump and Driver Shaft Alignment; accomplish” of 2.1 will be specified in the Work Item.

4.9 Shipboard Electromagnetic Compatibility Improvement Program (SEMCIP) Technical Assistance Network (STAN) referred to in 3.18.2 is available at https://semcip.nswc.navy.mil/stan/modules/stan/default.asp.
ATTACHMENT A

1. To reduce motor maintenance and repair costs, the NAVY has implemented a program that allows for the use of Extended Life Double Seal (ELDS) bearings.

2. LIMITATIONS: The ELDS program does NOT apply to motors that are under the cognizance of NAVSEA 08.

3. APLs for motors meeting the conversion criteria requirements have been modified to identify ELDS bearings. In these cases, the APL bearing criteria will override any specifications delineated in the equipment technical manual or the motor "Original Equipment Manufacturer (OEM)" drawings. If ELDS bearings are not indicated in an APL, the following motor criteria must meet the applicability specifications for motors to undergo conversion to ELDS bearings:

   3.a Motor must be installed on a surface ship and must NOT be under the cognizance of NAVSEA 08.

   3.b Commercial motors are not eligible. Motors must have been furnished to the NAVY in accordance with MIL-DTL-17060 (Motors, Alternating Current, Integral Horsepower, Shipboard use), MIL-M-17413 (Motors, Direct Current, Integral H.P., Naval Shipboard [NAVY]) or MIL-M-17059 (Motors, 60 Cycle, Alternating Current Fractional H.P. [Shipboard Use]).

   3.c Motors using one or more noise-quiet bearings per MIL-B-17931 (Bearings, Ball, Annular, For Quiet Operation) are NOT eligible for ELDS conversion.

   3.d Bearings originally furnished with the motor must be type 111 bearings per FF-B-171. Motors are NOT to be considered as candidates for ELDS conversion in situations where the equipment technical manual and/or the OEM motor drawings originally specified FF-B-171 bearings but have notes indicating that replacement bearings are to be in accordance with MIL-B-17931 (Bearings, Ball, Annular, For Quiet Operation).

   3.e The use of ELDS bearings is limited to motors where the full load speed and the size of both bearings are as follows:

      1. Maximum bearing size 306 or 206 and full load rpm between 1,801 and 3,600 rpm.

      2. Maximum bearing size 313 or 213 and full load rpm between 1,201 and 1,800 rpm.

      3. Maximum bearing size 318 or 218 and full load rpm less than 1200 rpm.

4. The repair process using ELDS bearings includes the following requirements:

   4.a Only ELDS bearings, in accordance with the following table (Attachment A / Table 1), can be used. Other double seal bearings will not provide an acceptable bearing life.

__________________________
__________________________
__________________________
1. **SCOPE:**

   1.1 Title: Fire Protection of Unmanned Vessel at Contractor Facility; accomplish

2. **REFERENCES:**

   2.1 NFPA Standard 312, Standard for Fire Protection of Vessels During Construction, Repair, and Lay-up

   2.2 29 CFR Part 1915, Occupational Safety and Health Standards for Shipyard Employment

3. **REQUIREMENTS:**

   3.1 Accomplish fire protection for an unmanned vessel at a contractor facility in accordance with the requirements of 2.1 and 2.2 and this item.

   3.2 Maintain available for review, prior to commencement of work, a fire safety plan meeting the requirements of 2.2. In addition to the requirements of 2.2, the plan *must* include and identify the method for reporting fires, the firefighting equipment, and organization (paid or volunteer), the procedures for maintenance of clear fire lanes, and the nearest municipal firefighting organization, including the anticipated time of response.

   3.3 Provide fire protection equipment consisting of:

   3.3.1 Firefighting water, utilizing manifolds connected to a source capable of providing 150 GPM at 60 PSIG at the manifold *must* be in place before start of work.

   3.3.1.1 The number of manifolds *must* be sufficient to permit reaching all points on the vessel (including underwater body when the vessel is in dry dock or on a marine railway) with 2, 1-1/2 inch hoses of not more than 100 feet in length.

   3.3.1.2 Hoses *must* be attached to the manifolds and fitted with an all-purpose combination fog and straight stream nozzle.
3.3.1.3 Verify by the Pitot tube method or an in-line flow meter that the water volume and pressure meets these requirements.

3.4 Ensure access to temporary and Ship's Force firefighting equipment is not obstructed or restricted.

3.5 For Navy boats and craft the SUPERVISOR may waive the requirements of 3.3. If authorized by the SUPERVISOR, a portable fire extinguisher (or an equivalent means for fighting a fire) in the immediate vicinity of where the work is performed can be used in lieu of fire main.

4. NOTES:

4.1 The term "unmanned" is defined as without the physical presence of people in control; without a human operator.

   2.2 Equipment Technical Manual

   2.3 S9086-KC-STM-010/CH-300, Electric Plant - General

   2.4 MIL-STD-2003, Electric Plant Installation Standard Methods for Surface Ships and Submarines

   2.5 MIL-STD-1310, Shipboard Bonding, Grounding, and Other Techniques for Electromagnetic Compatibility, Electromagnetic Pulse (EMP) Mitigation, and Safety

3. **REQUIREMENTS:**

   3.1 Disconnect mechanically and remove each controller.

   3.1.1 Matchmark, identify, and retain shims and other accessories associated with the equipment.

   3.2 Inspect each foundation for cracks, areas of distortion, and deterioration in excess of 25 percent of the thickness of each member of the structure. Record results.

   3.3 Accomplishment of cleaning and painting for foundations of equipment removed in 3.1 shall be in accordance with NAVSEA Standard Items (See Note 4.2).

   3.4 Disassemble each controller and clean components free of foreign matter.

   3.5 Inspect each controller enclosure, mounting board, electrical and mechanical component, internal wiring, and hardware for conformance to 2.2 and controller wiring diagram, and determine any missing and defective
components and wiring. Record results. Record and retain electrical hook-up data.

3.5.1 Test internal wiring and each coil for open circuits. Test insulation resistance to ground and between conductors, using a 500-volt megger. Record readings. Minimum acceptable resistance to ground shall be one megohm.

3.5.1.1 Disconnect solid-state devices prior to measuring insulation resistance.

3.6 Submit one legible copy, in approved transferrable media, of a report listing retained accessories in 3.1.1 and results of the requirements of 3.2, 3.5 and 3.5.1 to the SUPERVISOR.

3.7 Repair each controller, using 2.2 for guidance.

3.7.1 Straighten each enclosure and door. Free-up hinges and align door. Plug and seal unused cable openings. Remove existing enclosure gaskets, molded-rubber switch covers, and ground straps.

3.7.2 Accomplishment of cleaning and painting of the interior and exterior of the enclosure shall be in accordance with NAVSEA Standard Items (See Note 4.2).

3.7.3 Install new enclosure gaskets and install new molded-rubber switch covers per equipment specification.

3.7.4 Install ground straps on each door on controllers with door mounted energized components in accordance with MIL-DTL-2036 in place of those identified to be missing or defective.

3.7.5 Remove existing and install new components in place of those identified to be missing, defective or of improper value. Remove existing and install new wiring in place of wiring identified to be defective or frayed. Install new wiring where missing.

3.7.6 Dress, and adjust contacts.

3.7.6.1 Resilver existing contacts in accordance with ASTM B 700.

3.7.7 Remove existing cadmium-plated parts and install new zinc-plated parts in accordance with ASTM A 153.

3.7.8 Wash, dip and bake, tape insulated coils and open transformers. Dipping shall be in varnish conforming to MIL-I-24092, Class 155.

3.7.8.1 Dip and bake coils and open transformers in Dolph 1105, Epoxylite Esterlite 605, or Schenectady International Isolite 862M.
varnish in localities where MIL-I-24092 varnish does not meet state and local Air Pollution Control District (APCD) Standards.

3.7.8.2 Repair and reinsulate coil and transformer leads.

3.7.9 Free-up and lubricate moving parts.

3.7.10 Adjust timing devices, relays, and contactors.

3.7.11 Repair defective connections.

3.7.12 Install a new wiring diagram and new heater table in each controller. The new diagram shall reflect actual configuration of the controller in which it is installed. New diagrams shall be sealed in transparent plastic and shall be mounted on the inside of each controller so as to be conveniently accessible.

3.8 Assemble each controller.

3.8.1 Dress and shape wiring and wire harnesses for neat appearance. Install wire clamps on both ends of wire hinges. Install flexible insulating tubing over wire hinges to prevent chafing.

3.9 Accomplish 500-volt megger insulation resistance test, using Paragraphs 300-3.2.2 through 300-3.2.3, 300-3.4.7, 300-3.4.10, and 300-5.3.7.1 of 2.3 for guidance. Record readings.

3.10 Connect internal wiring and solid-state devices.

3.11 Accomplish an operational test of each controller and adjust to ensure correct operation in accordance with the wiring diagram of 3.7.11, using 2.2 for guidance. Record results.

3.12 Submit one legible copy, in approved transferrable media, of a report listing results of the requirements of 3.9, 3.11, and a list of new components and wiring installed to the SUPERVISOR.

3.13 Install each controller using shims and other accessories retained in 3.1.1.

3.13.1 Remove existing and install new conductor identification sleeving in place of conductor identification sleeving identified to be illegible or missing. New conductor identification sleeving shall conform to SAE-AMS-DTL-23053, Class One, white, marked with indelible ink.

3.13.2 Repair and reinsulate cable ends terminating in the controller in accordance with Part One of 2.4. Resleeve conductors over 9,000 circular mils.
3.13.3 Remove defective and install new lugs, using 2.3 for accept or reject criteria. Install new lugs where missing. New lugs shall conform to MIL-T-16366 or SAE-AS7928.

3.13.4 Bond and ground equipment in accordance with 2.5.

3.14 Connect each controller with the exception of the motor leads and the brake leads if applicable, using retained data of 3.1.

(V) "PRELIMINARY SEQUENCE TEST"

3.14.1 Accomplish a preliminary sequence test of each controller by cycling the controller through 3 start and stop cycles from each local and remote pushbutton station. Observe controller for proper sequence. Correct deficiencies.

3.14.2 Connect the motor leads and brake leads, if applicable, at completion of preliminary sequence test.

(V)(G) "OPERATIONAL TEST"

3.15 Accomplish an operational test of each controller with its associated motor for designed sequence of operation. Verify correct speed selection, correct motor rotation in each mode, and correct value of overload setting or size of heater coils based on motor nameplate full load running current.

4. NOTES:

4.1 Equipment technical manual and drawings will be listed in the invoking Work Item.

4.2 If cleaning and painting of 3.3 or 3.7.2 is required; the use of Category II Standard Item 009-32 “Cleaning and Painting Requirements; accomplish” of 2.1 will be specified in the Work Item.
1. **SCOPE:**

1.1 Title: General Procedure for Woodwork; accomplish

2. **REFERENCES:**

2.1 Standard Items

2.2 0900-LP-015-1010, Wood: A Manual for Its Use as a Shipbuilding Material, Basic Wood Technology Applicable to Boat and Shipbuilding

2.4 0900-LP-015-1030, Wood: A Manual for Its Use as a Shipbuilding Material, Technical Data Applicable to Boat and Ship Design

2.5 0900-LP-015-1040, Wood: A Manual for Its Use as a Shipbuilding Material, Boat and Ship Construction Techniques

2.6 MIL-STD-1623, Fire Performance Requirements and Approved Specifications for Interior Finish Materials and Furnishings (Navy Shipboard Use)

3. **REQUIREMENTS:**

3.1 Accomplish the requirements of 2.2 through 2.5 for performing general woodworking procedures.

3.2 Install flush fitted wood plugs/dowels in holes resulting from the removal of fasteners.

3.2.1 Drill out holes to sound wood and install plugs/dowels. Plugs/dowels **must** be set in a commercial grade phenol and resorcinol resin base adhesive.

3.2.2 Where deterioration and decay exists around the perimeter of the fastener holes and where through-bolt holes have been elongated, enlarge the holes by drilling to a size (diameter) that will remove the deterioration, decay, and elongation, prior to installing plugs/dowels.
3.2.2.1 Clean-bore drill bit diameter **must** not be more than one inch larger than the original fastener hole diameter, unless otherwise specified.

3.2.3 Plugs/dowels **must** be of the same wood species as the member being repaired, with their grain installed parallel with the grain of the existing wood, and then driven the full depth of the hole being repaired.

3.2.4 Soak plugs/dowels for a minimum of 10 minutes and saturate the exposed fastener holes with copper naphthenate wood preservative applied in accordance with manufacturer's instructions, and allow to dry to a moisture content of 15 percent or less prior to installation of plugs/dowels.

3.3 Install new fasteners in accordance with NAVSEA Standard Items 2.1. *(See Note 4.2)*

3.3.1 Aluminum and aluminum alloy components and structural members **must** be installed using CRES, Grade 304 or 316 fasteners.

3.3.1.1 Fasteners with compositions of copper alloys **must** not be used in contact with aluminum and aluminum alloy components and structural members.

3.3.1.2 Install non-metallic (epoxy plastic, phenolic, polyimide [nylon], Teflon) sleeves over CRES fasteners where they come in contact with the aluminum and aluminum alloy components and structural members.

3.3.1.3 Install insulation tape, minimum thickness 20 mils, conforming to MIL-I-24391 (2 thicknesses) between faying surfaces of aluminum/aluminum alloy-to-CRES to extend approximately 1/4-inch beyond the faying surfaces.

3.3.1.4 Ensure that the surfaces of aluminum and aluminum alloy components and structural members which will come in contact with wood members and CRES fasteners are protected with a minimum of 2 coats of epoxy polyimide primer conforming to MIL-PRF-23236.

3.3.1.5 Apply one coat of phenolic modified clear varnish on wood members which will come in contact with aluminum and aluminum alloy components and structural members. Refer to the Master Painters Institute (MPI) Approved Product List, MPI #28, for procurement of exterior marine spar varnish.

3.3.2 To avoid bi-metallic corrosion, fastener material composition **must** be the same material composition as that of the metal components and structural members that they are fastening except as noted in 3.3.1.

3.4 Accomplish installation of new fasteners as follows:
3.4.1 Drill pre-bored pilot holes for screws and fetter ring nails prior to installation to prevent damage to wood members.

3.4.1.1 Diameter of pilot holes must not exceed 70 percent of the root diameter of screws for soft woods, and 90 percent for hard woods. For screw shanks, the hole in the material to be fastened must be 100 percent shank diameter.

3.4.1.2 Maximum depth of pilot holes must not exceed 90 percent of the length of screws.

3.4.1.3 Holes for fetter ring nails must be pre-bored not to exceed 60 percent of the nail diameter.

3.4.2 Screws must not be impact driven. The last ¼-inch of screws must be hand-tightened.

3.4.2.1 Fasteners must be set snug but not so tight as to weaken the material by rupture of wood fibers adjacent to the fasteners.

3.4.3 Bolt holes must be drilled for a tight fit.

3.4.4 Where watertight integrity must be maintained, the fasteners must be body bound.

3.4.5 Through-bolts and hull plank fasteners must be bedded in marine oakum conforming to T-0-56 or caulking cotton, and a NAVSEA approved natural bedding compound such as Interlux 214 or Dolchem 3400.

3.4.6 Counterbore wood fastener holes to permit the installation of a wood plug (bung) over the fasteners, unless otherwise specified. Install wood plugs over fasteners.

3.4.6.1 The depth of counterboring is fixed by the thickness of the planking, which in turn fixes the depth of the wood plug (bung) used. The depth (thickness) of a bung plug must be one-half to two-thirds its diameter to ensure that it will stay in place. The rule for counterboring for bung plugs is that the plug diameter must be no larger than necessary to allow the largest part of the fastener to enter the hole.

3.4.6.2 Plugs must be of the same wood species as the member being plugged and their grain must be installed parallel with the grain of the existing wood.

3.4.6.3 Soak plugs for a minimum of 10 minutes and saturate the fastener holes with wood preservative conforming to copper naphthenate, applied in accordance with manufacturer's instructions, and allow to dry for a minimum of 4 days prior to installation of plugs.

3.4.6.4 Coat plugs on faying surfaces with a NAVSEA approved natural bedding compound such as Interlux 214 or Dolchem 3400, prior to
installation and cut level and smooth with surrounding surfaces, unless otherwise specified.

3.5 New wood materials must conform to the following requirements, unless otherwise specified.

3.5.1 Wood materials used for new interior finish materials and furnishings must conform to the requirements of MIL-L-19140 and 2.6.

3.5.2 Types, grades, and species of wood (lumber) must be as specified in the invoking Work Item.

3.5.3 Lumber must conform to the specified grade after seasoning to the required moisture content and after being sized to the approximate dimensions of the members to be fashioned from it.

3.5.4 New wood members must be finished smooth on each side.

3.5.5 Uncaulked seams, joints, and faying surfaces must be fair and in continuous contact when assembled, except where specifically exempted, such as for hull sheathing.

3.5.6 New wood members, when assembled in place, must show no rupture as a result of overstraining.

3.5.7 Laminated member construction must conform to MIL-W-15154 for red or white oak.

3.5.7.1 When bonding together wood surfaces which rely on mechanical fastening for main strength, commercial grade phenol and resorcinol resin base adhesive must be used.

3.5.8 Plywood must conform to MIL-P-18066, Class 3A.

3.5.9 Moisture content of new wood materials must fall within the following parameters.

3.5.9.1 New lumber must have a moisture content of 13 percent, plus or minus 5 percent, at the time of installation.

3.5.9.2 New plywood must have a moisture content of 10 percent, plus or minus 5 percent, at the time of installation.

3.6 New lumber and plywood must be soaked for 10 minutes in wood preservative after boring, shaping, and fairing operations have been completed.

3.6.1 Apply one soaking brush coat of wood preservative on bare wood surfaces exposed by removals and machining operations before surfaces are covered.
3.6.2 Wood preservative must conform to copper naphthenate, applied in accordance with manufacturer's instructions, unless otherwise specified.

3.6.3 Allow preservative-treated wood to dry to a moisture content of 15 percent or less prior to gluing and/or painting operations.

3.7 Apply a heavy coating of a NAVSEA approved natural bedding compound such as Interlux 214 or Dolchem 3400 on the top surfaces of deck beams, frames headers, fillers, planking side of frames, deck beam ends, seams, and butts (except those to be caulked), and other faying (joining) surfaces before the faying surfaces are covered, except as follows: In between inner and outer layers of hull planking of crafts that do not have caulking seams, a wood bedding/sealant compound conforming to 3M-5200 must be installed.

3.7.1 Install one layer of canvas conforming to PIA-C-419, Type III (8 ounces or heavier) between faying surfaces of new leveling foundation pads installed on weather decks, in addition to a NAVSEA approved natural bedding compound such as Interlux 214 or Dolchem 3400.

3.7.2 Remove surplus bedding/sealing compound after squeeze-out.

3.8 No new butt joints must be established in any planking strake (hull shell or deck) that will leave a portion that is less than 12 feet in length. No new portion of a planking strake must be installed which is less than 12 feet in length.

3.8.1 Butt joints in adjacent strakes must be separated by a minimum of 3 strakes.

3.8.2 Butt joints in the same frame space must be separated by a minimum of 3 frame spaces.

3.8.3 Planking strakes may be scarf-joined to maintain butt joint schedule. Scarfing must be in accordance with 2.2 through 2.5.

3.9 Wood members requiring caulking seams must be installed with their faying surfaces tight and with an outgage (special bevel for caulking) in the side(s) to be caulked.

3.10 Accomplish the following work to ensure watertight integrity of caulked seams (including butt and rabbet seams).

3.10.1 Reef out by hand, defective caulking compound and loose and decayed caulking (cotton/oakum) from existing caulking seams requiring installation of new caulking and caulking compound.

3.10.1.1 Exercise care when reefing out caulking compound and caulking to preclude damage to existing caulking seams. Power tools must not be utilized for the reefing out process.
3.10.2 Where existing caulking is identified to be sound and in good condition, set the existing caulking deeper into the seam opening to ensure that it is driven solidly home and to make room for additional caulking.

3.10.2.1 Set the existing caulking by driving the caulking uniformly, to the same hardness in each seam. To prevent a wedging effect it must be set to a hardness that would not allow an awl to penetrate more than 3/8-inch.

3.10.3 Caulking seams must be clean and dry before installing new caulking and caulking compound.

3.10.4 Caulk deck planking caulking seams using treated caulking cotton and spun-type marine oakum conforming to T-O-56. Treat the caulking cotton as follows.

3.10.4.1 The untreated caulking cotton must be undyed, of not less than 3/4-inch staple length, and must be free from oil, fire-damaged or scorched cotton, added waste, and substantially free from linters.

3.10.4.2 The untreated caulking cotton must be soft and fully opened and contain no sizing. The amount or size of specks must not be objectionably noticeable upon casual examination.

3.10.4.3 The untreated caulking cotton must be well carded to form a sliver and must consist of not less than 9 nor more than 12 slivers laid parallel to form a composite untwisted strand. Each sliver untreated must measure approximately 500, plus or minus 50 feet, to the pound.

3.10.4.4 Treat the caulking cotton with a solvent solution of copper naphthenate-asphaltum to produce caulking cotton having a minimum of one percent metallic copper and 1-1/2 percent, plus or minus 1/2 percent, asphalt, based on the weight of the treated cotton. The copper must be uniformly distributed throughout the cotton.

3.10.4.5 The treated caulking cotton must be dry to the touch prior to installation.

3.10.5 Caulk hull shell planking caulking seams using treated caulking cotton conforming to the requirements outlined in 3.10.4.1 through 3.10.4.5 and spun-type marine oakum conforming to T-O-56.

3.10.5.1 Drive one to 2 strands of caulking cotton into the bottom of the seams, prior to installing marine oakum, to ensure that deep/tight seams are filled.

3.10.6 Caulking cotton and marine oakum caulking must be looped, tucked, and hard-driven to a depth that provides space for installation of seam caulking compound.
3.10.6.1 The size of the seam in width and depth determines the required amount of cotton/oakum caulking and must be filled to within 1/4-inch to 3/8-inch of the plank surface.

3.10.6.2 The amount of cotton/oakum caulking inserted must be carefully controlled to limit the possibility to "caulk off" a plank from its frames if too much is driven in and forced beyond the outgage bevel.

3.10.6.3 The cotton/oakum caulking must be driven uniformly, to the same hardness and depth in each seam, to prevent a wedging effect. It must be set to a hardness that would not allow an awl to penetrate more than 3/8-inch.

3.10.6.4 Butt caulking seams must be caulked ahead of adjoining longitudinal caulking seams to ensure that short ends of caulking will be locked in place.

3.10.6.5 The ends of sound existing caulking and new caulking must be drawn out and tapered so as to be married in a continuous bulk and then be installed as stated in 3.10.6 through 3.10.6.4.

3.10.6.6 Hull shell planking caulking seams of heavy planked ships must have the caulking set firmly home by means of a heavy horsing iron driven into the seams with a heavy mallet known as a beetle. This is a 2-man operation that requires one man to hold the long-handled horsing iron while the second man swings the horsing beetle. This operation ensures that the caulking will be well seated, will not work loose, and is the final means to stiffen the hull.

3.10.7 Pay (fill) deck planking caulking seams with polyurethane caulking compound conforming to MIL-S-24340, Type I, or marine glue MIL-G-413, as specified in the invoking Work Item.

3.10.7.1 The depth of the seam caulking compound must be one to 1-1/2 times the width of the seam but no deeper than 3/8-inch.

3.10.7.2 Seal the surfaces of the seams and the installed cotton caulking with a seam primer that is compatible with the caulking compound.

3.10.7.3 Install one-inch wide masking tape on both sides of each caulking seam to keep the caulking compound from penetrating the open grain areas of the deck planking.

3.10.7.4 Remove the tape installed in 3.10.7.3 upon completion of caulking operations.

3.10.8 Pay hull shell planking caulking seams with caulking compound in accordance with the following requirements.
3.10.8.1 Pay underwater hull caulking seams with Interlux 30 brown underwater seam compound (oleoresinous material cut with an aromatic solvent).

3.10.8.2 Pay hull caulking seams above the waterline with Interlux 31 white seam compound (oleoresinous material cut with an aromatic solvent).

3.10.8.3 The depth of the seam caulking compound must be one to 1-1/2 times the width of the seam.

3.10.8.4 Paint the surfaces of the seams and the installed cotton/oakum caulking with anti-fouling paint conforming to MIL-PRF-24647, Type II, Class 1, prior to filling underwater hull shell planking seams with caulking compound.

3.10.8.5 Seal the surfaces of the seams and the installed cotton/oakum caulking with a seam primer that is compatible with the caulking compound on hull shell planking seams existing above the waterline.

3.10.9 Prior to paying the caulking compound installed in 3.10.7 and 3.10.8, seams must be thoroughly cleared and cleaned of foreign matter.

3.10.9.1 The caulking compound may be applied with a caulking gun but must be handworked into the seams to eliminate air pockets and voids in the seams.

3.10.9.2 Remove surplus caulking compound from surrounding surfaces.

3.10.9.3 Pay and complete seams daily, leaving no exposed cotton/oakum caulking at the end of each work shift to ensure the cotton/oakum caulking remains dry and clean.

3.10.9.4 When installing caulking compound and its compatible primer, the manufacturer's instructions must be strictly adhered to. Seams greater than 1/2-inch width must be payed in 2 applications spaced 24 hours apart.

3.11 Blank openings resulting from removals and relocations, unless otherwise specified, in accordance with the following.

3.11.1 Blank deck planking as follows:

3.11.1.1 Route a 3/8-inch deep indentation on both the top and underside of the deck planking, centered over the area to be blanked.

3.11.1.2 The routed area must extend a minimum of 3 inches beyond the perimeter of the area to be blanked.
3.11.1.3 Fit and install a Douglas Fir insert in the area to be blanked.

3.11.1.4 Fit and install a 3/8-inch thick plywood insert in each routed-out indentation.

3.11.1.5 Bed faying surfaces of the inserts with a NAVSEA approved natural wood bedding compound such as Interlux 214 or Dolchem 3400, and secure with round head bolts to ensure watertight integrity. Remove surplus wood bedding compound left after squeeze-out.

3.11.2 Blank plywood bulkheads and plywood decks as follows:

3.11.2.1 Enlarge the hole to be blanked to a minimum of 4 inches square.

3.11.2.2 Install a fitted plywood insert in the resulting opening in the deck or bulkhead.

3.11.2.3 Install a plywood lap cover on one side of and centered over the area to be blanked. The lap cover \textit{must} extend a minimum of 3 inches beyond the perimeter of the area to be blanked.

3.11.2.4 Bed faying surfaces of the insert and the lap cover in a NAVSEA approved natural wood bedding compound such as Interlux 214 or Dolchem 3400, and secure with round head bolts to ensure watertight integrity. Remove surplus wood bedding compound left after squeeze-out.

3.11.3 Blank double-sheathed bulkheads as follows:

3.11.3.1 Enlarge the opening in the inner sheathing to a minimum of 4 inches square.

3.11.3.2 Enlarge the opening in the outer sheathing to a size that extends a minimum of 3 inches beyond the perimeter of enlarged inner sheathing opening.

3.11.3.3 Install a fitted plywood insert in each opening. The plywood inserts \textit{must} be the same thickness as the sheathing.

3.11.3.4 Install one layer of canvas conforming to PIA-C-419, Type III (8 ounces or heavier), between the 2 inserts, the same size as the larger insert.

3.11.3.5 Bed faying surfaces of the inserts and the canvas in a NAVSEA approved natural wood bedding compound such as Interlux 214 or Dolchem 3400, and secure with round head bolts to ensure watertight integrity. Remove surplus wood bedding compound left after squeeze-out.

3.11.4 Sand new plywood blanks and disturbed surfaces to fair in with surrounding areas.
3.11.4.1 Accomplishment of cleaning and painting for bulkhead sheathing sanded surfaces must be in accordance with NAVSEA Standard items (See Note 4.1).

4. NOTES:

4.1 If cleaning and painting for bulkhead sheathing sanded surfaces of 3.11.4.1 is required; the use of Category II Standard item 009-32 "Cleaning and Painting Requirements; accomplish" of 2.1 will be specified in the Work Item.

4.2 Existing screws removed per this Standard Item are to be replaced with new, all other fasteners will be replaced per NAVSEA Standard Items 009-84 Threaded Fastener Requirements; accomplish.
1. **SCOPE:**

   1.1 Title: Boiler, Catapult Accumulator and Reboiler Dry Lay-up; accomplish

2. **REFERENCES:**

   2.1 S9086-GY-STM-010/CH-221, Boilers

   2.2 S9587-B1-MMA-010, Catapult Steam Support Systems for CV/CVN Class Ships

   2.3 525-7270424, Steam Accumulator Dehumidification

   2.4 0989-036-0000, CVN 68 Class Steam Plant Manual (CONFIDENTIAL)

   2.5 S9534-AD-MMA-010, Steam Reboiler

3. **REQUIREMENTS:**

   3.1 Boiler: Prepare boiler for dry lay-up in accordance with Paragraph 221-2.3.3 of 2.1.

   3.1.1 Fill or drain water in steam drum to a level below the bottom of the manhole.

   3.1.2 Inject 10 pounds of sodium nitrite for each 1,000 gallons of boiler water in a slurry solution to the water in the boiler using table 221-2-1 of 2.1 for guidance.

   3.1.2.1 If boiler is pressurized, inject sodium nitrite after pressure drops to 100 PSIG or less.

   3.1.3 Fill the steam drum to bring water level to the top of the gauge glass using water conforming to the following requirements:

<table>
<thead>
<tr>
<th>CONSTITUENT or PROPERTY</th>
<th>REQUIREMENT</th>
</tr>
</thead>
<tbody>
<tr>
<td>pH</td>
<td>5.8 to 8.0</td>
</tr>
<tr>
<td>Conductivity</td>
<td>2.5 micromho/cm (at point of delivery)</td>
</tr>
<tr>
<td>Dissolved Silica</td>
<td>0.2 ppm (0.2 mg/L) max</td>
</tr>
</tbody>
</table>
3.1.3.1 Prevent water level from carrying the solution over into the superheater.

3.1.4 Empty boiler of water and chemicals by pumping at the hose connection in the bottom blow line. The bottom blow, superheater drain, drum vent, and economizer drain valves must be open during pumping.

3.1.4.1 Do not drain the solution to the bilge.

3.1.5 Remove each drum manhole plate and header handhole plate from boiler.

3.1.5.1 Do not remove seal welded handhole plates.

3.1.6 Blow out horizontal tubes with clean air to remove any water. Dry remaining solution from water walls, economizers, superheater headers, steam and water drums.

3.1.7 Circulate heated air with positive flow through the firesides and watersides, as long as the boiler is in a dry lay-up condition, in accordance with Paragraph 221-2.3.3.1 of 2.1. (See Note 4.1)

3.1.7.1 Introduce and exhaust heated air in accordance with Table 221-2-2 and Table 221-2-3 of 2.1.

3.2 Catapult Accumulator, Drain Accumulator: Open manway access, dry out and remove standing water in accordance with Paragraph 5.5.1 of 2.2.

3.2.1 Install temporary closures (FME) in accordance with Paragraph 5.5.3 of 2.2.

3.2.2 Provide source of heated air to the accumulator through the manway opening in accordance with Paragraph 5.4.4 of 2.2.

3.2.3 Introduce heated air through a 4.0 inch hose penetrating the temporary manhole cover in accordance with Table 221-2-3 of 2.1, Unit Type IV.

3.2.3.1 Manufacture manway cover in accordance with details 10-E through 15-E of 2.3.

3.2.4 Accomplish dehumidified air lay-up in accordance with 2.2, using 2.3 for guidance.

3.3 Reboiler Shell Side, Drain Reboiler: Accomplish dry lay-up in accordance with 2.4 and Chapter 3 of 2.5.
3.3.1 Open manway access, conduct feed water wash down of the tube bundle and internal areas of the shell with high pressure water lance in accordance with Chapter 3 of 2.5.

3.3.2 Dry out and remove standing water.

3.3.3 Manufacture and install a plexiglass cover to seal the manway opening, using details 10-E through 15-E of 2.3 for guidance. Cover must have a 4.0 inch hole in the middle to allow penetration of air vent duct (supply) and 4 each 0.75 inch holes for air exhaust points in accordance with Chapter 3 of 2.5.

3.3.4 Introduce heated air through a 4.0 inch hose penetrating the temporary manhole cover in accordance with Table 221-2-3 of 2.1, Unit Type I.

3.3.5 Install vent ducting hose (supply) from outlet of the heater through the manway cover to the conical section (rear) of the Reboiler and align air exit points by opening drum vent valve RB-V280 and Bottom Blow valves RB-V105A/105B/108 in accordance with Chapter 3 of 2.5.

(V) "INSPECT BOILER, ACCUMULATOR AND REBOILER LAY-UP"

3.4 Inspect the boiler, accumulator and reboiler daily and at the end of each work shift and ensure dry lay-up conditions are maintained in accordance with Paragraphs 221-2.4.6.2 and 221-2.4.6.3 of 2.1.

3.5 Remove and dispose of spent chemicals and solutions in accordance with federal, state, and local laws, codes, ordinances, and regulations.

4. NOTES:

4.1 For ships using chelant treatment, the use of sodium nitrite prior to placing boiler on hot air or desiccant lay-up is prohibited unless the ship is in a CNO Availability.

4.2 Catapult accumulator and reboiler requirements apply to CVN only.

4.3 Aluminum material may be used to manufacture manway covers when authorized by the SUPERVISOR.
1. **SCOPE:**

1.1 Title: Technical Manual Contract Requirement (TMCR) for a New Technical Manual for Commercial Equipment/Component; accomplish

2. **REFERENCES:**

2.1 NDMS-000172-000, Technical Manual Contract Requirement (TMCR); Commercial Off-The-Shelf (COTS) Equipment Requirements

2.2 NDMS-000173-000, Technical Manual Contract Requirements TMCR); Hull, Mechanical and Electrical (HM&E) Equipment Technical Manual Requirements

2.3 NDMS-000174-000, Technical Manual Contract Requirement (TMCR); Technical Manual Revision Requirements

2.4 NDMS-000175-000, Technical Manual Contract Requirement (TMCR); Technical Manual Change Package Requirements

3. **REQUIREMENTS:**

3.1 For a New Technical Manual for Commercial Equipment/Component, accomplish the requirements of 2.1.

3.1.1 Deliver the data items listed in Paragraph 1.3 of 2.1 as follows:

3.1.1.1 Submit 3 advance copies to the SUPERVISOR for review within 10 days upon receipt of equipment/component from the vendor.

3.1.1.2 One copy *must* be in a form suitable for offset printing.

3.1.2 Submit supplementary data for commercial manuals in accordance with 2.1 to the SUPERVISOR.

3.1.2.1 Deliver the data items listed in Paragraph 1.4 of 2.1 as follows:
3.1.2.2 Submit 3 review draft copies (RDC) of the supplementary data to the SUPERVISOR for review within 10 days of receipt of equipment from vendor.

3.1.2.3 One copy of the commercial manual with supplementary data inserted must be in a form suitable for offset printing.

3.2 For a Topically Structured Technical Manual accomplish the requirements of 2.2.

3.2.1 Deliver the data items listed in Paragraph 1.3 of 2.2 as follows:

3.2.1.1 Submit 3 review draft copies (RDC) to the SUPERVISOR for review within 10 days of receipt of equipment.

3.2.1.2 Submit one proof copy and one reproducible copy with integrally related art to the SUPERVISOR not later than 30 days after receipt of the reviewed final reproducible copy (FRC).

3.3 For Updating Technical Manual accomplish the requirements of 2.3 or 2.4 as appropriate.

3.3.1 Deliver the data items listed in Paragraph 1.3 of 2.3 or 2.4 as follows:

3.3.1.1 Submit 3 review draft copies (RDC) to the SUPERVISOR for review within 10 days after receipt of equipment/component.

3.3.1.2 Submit one proof copy and one final reproducible copy (FRC) with integrally related art to the SUPERVISOR not later than 30 days after receipt of the reviewed draft copy.

4. NOTES:

4.1 References 2.1, 2.2, 2.3 and 2.4 are available and can be read online at: https://nsdsa.dc3n.navy.mil
1. **SCOPE:**

1.1 Title: Contractor Crane, Multi-Purpose Machine and Material Handling Equipment at a Naval Facility; provide

2. **REFERENCES:**

2.1 29 CFR Part 1910, Occupational Safety and Health Standards

2.2 29 CFR Part 1915, Occupational Safety and Health Standards for Shipyard Employment

2.3 29 CFR Part 1917, Marine Terminals

2.4 29 CFR Part 1926, Safety and Health Regulations for Construction

2.5 NAVFAC P-307, Management of Weight Handling Equipment

3. **REQUIREMENTS:**

3.1 Notify the SUPERVISOR one day prior to bringing any cranes, multi-purpose machines, material handling equipment, or construction equipment that may be used in a crane-like application to lift suspended loads on a Naval facility.

3.2 Comply with the requirements of 2.1 through 2.4, and Paragraph 11.1.b of 2.5, prior to bringing or using any contractor crane, multi-purpose machine and material handling equipment that may be used in a crane-like application to lift a suspended load on a Naval facility.

3.2.1 Maintain written documentation of the last weight test of the crane and all related weight handling equipment on site.

3.3 Ensure the handling and rigging gear and below the hook lifting devices and personnel comply with the following requirements:

3.3.1 Personnel performing rigging must have an understanding of all signs, notices, and operating instructions, and be familiar with the applicable hand signals prescribed by the ASME B30 standard for the type of crane in use.

3.3.2 Personnel performing rigging must be familiar with the rigging requirements in 2.1 through 2.4.

3.3.3 Provide qualified signal personnel in accordance with 2.4.
3.4 Inspect rigging gear in accordance with 2.1 through 2.4 and Paragraph 11.1.b of 2.5.

3.4.1 Maintain certification records on site available for review during all work.

(V) "INSPECT CRANE"

3.5 Contractor must:

3.5.1 Ensure all inspections are performed in accordance with 2.1 through 2.5 (daily, monthly, quarterly, and yearly), and retain the current documentation of inspections. Documents must be kept on site.

3.5.1.1 Perform daily pre-use inspections and testing on all load hoisting and lowering mechanisms, boom hoisting and lowering mechanisms, swinging mechanisms, traveling mechanisms (if to be used that day), and safety devices.

3.5.2 Cranes that have to be re-rated must be in accordance with SAE Recommended Practice, Crane Load Stability Test Code J765 and documentation maintained on site.

3.5.3 Have an operational anti-two-block device or a two-block damage prevention feature for all points of two-blocking.

3.5.4 Have a boom hoist disconnect, shutoff, or hydraulic relief to automatically stop the boom hoist when the boom reaches a predetermined high angle.

3.6 Conduct a joint verification with the Government representative to ensure that a legible and indelible completed copy of Appendix P, Figure P-1 of 2.6 is maintained on the crane, multi-purpose and material handling equipment used in a crane-like application to lift suspended loads. The following certification and testing documentation must be on site prior to entry and use on any Naval facility:

3.6.1 Crane, multi-purpose and material handling equipment used in a crane-like application to lift suspended loads certification

3.6.2 Load testing

3.6.3 Yearly, monthly, and daily inspection logs

3.6.4 Rope/sling certifications

3.6.5 Operator certifications/designations

3.6.6 Designation of person performing log inspections

3.6.7 Cranes that are permanently located on a Naval facility must have a quarterly joint verification.
3.7 Develop and maintain on site a critical lift plan in accordance with Attachment A.

3.7.1 Complete and maintain a copy of Attachment B for each lift.

3.8 Report verbally each accident to the SUPERVISOR immediately but not later than 4 hours of such an event.

3.8.1 Secure the accident site and preserve the scene until released by the SUPERVISOR.

3.8.1.1 Conduct an accident investigation to establish root cause(s) of any accident.

3.8.2 Withhold further crane, multi-purpose and material handling equipment operations until the cause is determined and corrective actions are implemented and approved by the SUPERVISOR.

3.8.3 A crane and rigging gear accident is when any of the following occurs during crane, multi-purpose and material handling equipment operations:

3.8.3.1 Personnel injury or death
3.8.3.2 Material or equipment damage
3.8.3.3 Dropped load
3.8.3.4 Derailment
3.8.3.5 Two-blocking
3.8.3.6 Overload
3.8.3.7 Collision, including unplanned contact between the load, crane, multi-purpose, material handling equipment and/or other objects

3.8.4 Provide a formal written report of the event to the SUPERVISOR within one day of each accident.

3.8.5 Submit one legible copy, in approved transferrable media, of the accident report consisting of a summary of circumstances, and explanation of cause(s), and corrective actions taken, using Attachment C, to the SUPERVISOR within 15 days of each accident.

4. NOTES:

4.1 None.

**Use space below to describe rigging plan:**
Attachment “A” Instructions

Location: Location where critical lift will be conducted, e.g. pier and vessel.
Date of critical lift: When critical lift will be conducted. A critical lift plan is required for each day.
Crane operator: Name of crane operator during critical lift.
Crane/Rigging Supervisor: Person supervising crane/rigging operations during critical lift.
Contractors: List all contractors involved with critical lift e.g. AITs, subcontractors and divers.
Ship's Force representative: S/F representative notified of critical lift e.g. CDO.
Work Item number: Navy work item number for which critical lift is being conducted.
Type of Critical Lift: See NAVFAC P-307, Management of Weight Handling Equipment.
Load Description: Self explanatory.
Weight of load being lifted: Self explanatory.
Size of load being lifted: Self explanatory.
Weight of Headache Ball: Self explanatory.
Weight of Block: Self explanatory.
Weight of Lifting Bar: Self explanatory.
Weight of Slings & Shackles: Self explanatory.
Total of other deductions: Self explanatory. List other deductions.
Total weight of load plus deductions: Self explanatory.
OEM's maximum load capacities for the entire range of the lift: Review load chart.
Crane position: Self explanatory.
Boom length: Self explanatory.
Boom angle: Self explanatory.
Height of lift: Self explanatory.
Radius for the entire range of the lift: Self explanatory.
Lift points: Where on the load will the load be lifted from.
Rigging gear: What rigging gear will be used during critical lift.
Rigging procedure: How will the load be rigged and path the load will travel to destination.

## CRANE AND RIGGING GEAR ACCIDENT REPORT

**Accident Category:**
- [ ] Crane Accident
- [x] Rigging Gear Accident

**From:**

**To:** SUPERVISOR

**Activity:**

**Report No.:**

**Crane No.:**

**Category:**

**Accident Date:**

**Time:** hrs

**Category of Service:**
- [ ] SPS
- [ ] GPS

**Crane Type:**

**Crane Manufacturer:**

**Was Crane/Rigging Gear Being Used in SPS?**
- Yes
- No

**Was Crane/Rigging Gear Being Used in a Complex Lift/Critical non-crane rigging operation?**
- Yes
- No

**Location:**

**Weather:**

**Crane Capacity:**

**Hook Capacity:**

**Weight of Load on Hook:**

**Fatality or Permanent Disability?**
- Yes
- No

**Material/Property Cost Estimate:**

### Accident Type:

- [ ] Personal Injury
- [ ] Overload
- [ ] Derail
- [x] Damaged Rigging Gear
- [ ] Load Collision
- [ ] Two Blocked
- [ ] Dropped Load
- [ ] Damaged Crane
- [ ] Crane Collision
- [ ] Damaged Load
- [ ] Other Specify

### Cause of Accident:

- [ ] Improper Operation
- [ ] Equipment Failure
- [ ] Inadequate Visibility
- [ ] Improper Rigging
- [ ] Switch Alignment
- [ ] Inadequate Communication
- [ ] Track Condition
- [ ] Procedural Failure
- [ ] Other Specify
- [ ] N/A

### Chargeable to:

- [ ] Crane Walker
- [x] Rigger
- [ ] Operator
- [ ] Maintenance
- [ ] Management/Supervision
- [ ] Other Specify

### Crane Function:

- [ ] Travel
- [ ] Hoist
- [ ] Rotate
- [ ] Luffing
- [ ] Telescoping
- [ ] Other
- [ ] N/A

**Is this accident indicative of a recurring problem?**
- Yes
- No

**If yes, list Accident Report Nos.:**

ATTACH COMPLETE AND CONCISE SITUATION DESCRIPTION AND CORRECTIVE/PREVENTIVE ACTIONS TAKEN AS ENCLOSURE (1). Include probable cause and contributing factors. Assess damages and define responsibility. For equipment malfunction or failure, include specific description of the component and the resulting effect or problem caused by the malfunction or failure. List immediate and long term corrective/preventive actions assigned and respective codes.

**Preparer:**

**Phone and email Code Date**

**Concurrences:**

**Code Date**

**Certifying Official (Crane Accidents Only):**

**Code Date**
CRANE AND RIGGING GEAR ACCIDENT REPORT INSTRUCTIONS

Electronic submission will be accepted without signatures but the names of the preparer, concurring personnel, and certifying official (for crane accidents only) must be filled in.

1. Accident Category: Indicate either crane accident or rigging gear accident.

2. From: The contractor that is responsible for reporting the accident.

3. Activity: The naval activity where the accident took place.

4. Report No.: The activity assigned accident number (e.g., 95-001).

5. Crane No.: The activity assigned crane number (e.g., PC-5), if applicable.

6. Category: Identify category of crane (i.e., 1, 2, 3, or 4), if applicable.

7. Accident Date: The date the accident occurred.

8. Time: The time (24 hour clock) the accident occurred (e.g., 1300).

9. Category of Service: Check the applicable service (SPS as defined by NAVSEA 0989-030-7000).

10. Crane Type: The type of crane involved in the accident (e.g., mobile, bridge), if applicable.

11. Crane Manufacturer: The manufacturer of the crane (e.g., Dravo, Grove, P&H), if applicable.

12. SPS: Was the crane or rigging gear being used in an SPS lift?

13. Complex lift: Was the crane or rigging gear being used in a complex lift?

14. Location: The detailed location where the accident took place (e.g., building 213, dry dock 5).

15. Weather: The weather conditions at time of accident (e.g., wind, rain, cold).

16. Crane Capacity: The certified capacity of the crane (e.g., 120,000 pounds), if applicable.

17. Hook Capacity: The capacity of the hook involved in the accident at the maximum radius of the operation, if applicable.

18. Weight of Load on Hook: If applicable, the weight of the load on the hook.

19. Fatality or Permanent Disability?: Check yes or no.

20. Material/Property Cost Estimate: Estimate total cost of damage resulting from the accident.

22. Accident Type: Check all that apply.

23. Cause of Accident: Check all that apply.

24. Chargeable to: Check all that apply.

25. Crane Function: Check the function(s) in operation at time of accident. Check all that apply. Check N/A if a rigging gear accident.

26. Is this a recurring problem?: Check yes or no. Identify any other similar accidents.

27. Situation Description/Corrective Actions: Self-explanatory.

1. SCOPE:

1.1 Title: Tapered Plug Valve; repair

2. REFERENCES:

2.1 S9086-RJ-STM-010/CH-504, Pressure, Temperature and Other Mechanical and Electromechanical Measuring Instruments

3. REQUIREMENTS:

3.1 Matchmark each valve part.

3.2 Disassemble, clean each internal and external surface free of foreign matter (including paint), and inspect each part for defects.

3.3 Repair valve as follows:

3.3.1 Machine, grind, or lap and spot-in plug to bore to obtain an 80 percent minimum surface contact, evenly distributed over 100 percent of the area.

(V) "INSPECT CONTACT"

3.3.1.1 Inspect contact using blueing method.

3.3.1.2 Vertical misalignment of ports in the plug valve and body with the plug fully seated shall not be of a degree that will restrict flow.

3.3.2 Chase and tap exposed threaded areas.

3.3.3 Dress and true gasket mating surfaces.

3.4 Assemble each valve installing new each packing, each gasket and each fastener for those removed in 3.2 in accordance with manufacturer's specification or instruction.

3.4.1 Lubricate each MIL-V-24509 valve with grease conforming to SAE-AMS-G-6032.
3.5 Hydrostatically test valve as follows:

3.5.1 Hydrostatic test equipment shall have the following capabilities:

3.5.1.1 Manual overpressure protection release valve.

3.5.1.2 Self-actuated and resetting relief valve with a set point no greater than 100 PSIG above the test pressure or 10 percent above the test pressure, whichever is less.

3.5.1.3 Master and backup test gauges with gauge range and graduation shown on Table 504-6-1 of 2.1. The backup gauge shall be cross-checked to the master hydrostatic test gauge up to the maximum test pressure just prior to start of testing. Master and backup gauges shall track within 2 percent of each other.

3.5.1.4 Protection equipment shall be accessible and test gauges shall be located where clearly visible and readable to pump operator and inspector.

(I) "SEAT TIGHTNESS"

3.5.2 Test for seat tightness with valve in closed position with opposite side open for inspection.

3.5.2.1 Plug shall be seated by hand force.

3.5.2.2 Test shall be continued for a minimum of 3 minutes if there is no evidence of leakage or, in the event of visible leakage, until accurate determination of leakage can be made.

3.5.2.3 Maximum allowable leakage for a metal-to-metal seated valve: 10 cubic centimeters (cc) per hour, per inch of nominal pipe size; 10 cc maximum per hour for valve sizes less than 1-1/2 inches.

3.5.2.4 Allowable leakage for soft seated plug: None.

(I) "SEAT TIGHTNESS"

3.5.3 Test plug valve of duplex strainer to each strainer chamber with unpressurized side top cover removed (2 tests per strainer). Allowable leakage: With the drain valve closed the non-pressurized side shall not fill within one hour.

4. NOTES:

4.1 Test pressures of 3.5.2 and 3.5.3 will be specified in Work Item.

4.2 Repair of valve operating gear will be specified in Work Item.
4.3 Test medium will be specified in Work Item.
1. **SCOPE:**

1.1 Title: Butterfly Valve, Synthetic and Metal Seated; repair

2. **REFERENCES:**

2.1 S9086-RJ-STM-010/CH-504, Pressure, Temperature and Other Mechanical and Electromechanical Measuring Instruments

3. **REQUIREMENTS:**

3.1 Matchmark each valve part.

3.2 Disassemble, clean each internal and external surface free of foreign matter (including paint), and inspect each part for defects.

3.3 Repair valve as follows:

3.3.1 Polish stem to remove raised edges and foreign matter.

3.3.2 Chase and tap exposed threaded areas.

3.3.3 Machine, grind, or lap and spot-in metal-to-metal seat to disc to obtain a leakage rate at or below that allowed in 3.5.5.

3.3.4 Polish seating surface of synthetic seated valve to remove high spots, nicks, and burrs.

3.4 Assemble valve installing new each bushing, each O-Ring, each V-Ring, each valve liner, each seat assembly, each washer, each pin, and each fastener for those removed in 3.2 in accordance with manufacturer's specifications or instructions.

3.5 Hydrostatically test valve as follows:

3.5.1 Hydrostatic test equipment shall have the following capabilities:

3.5.1.1 Manual overpressure protection release valve.
3.5.1.2 Self-actuated and resetting relief valve with a set point no greater than 100 PSIG above the test pressure or 10 percent above the test pressure, whichever is less.

3.5.1.3 Master and backup test gauges with gauge range and graduation in accordance with Table 504-6-1 of 2.1. The backup gauge shall be cross-checked to the master hydrostatic test gauge up to the maximum test pressure just prior to start of testing. Master and backup gauges shall track within 2 percent of each other.

3.5.1.4 Protection equipment shall be accessible and test gauges shall be located where clearly visible and readable to pump operator and inspector.

(I) "SEAT TIGHTNESS"

3.5.2 Test for seat tightness alternately on each side of the disc with opposite side open for inspection.

3.5.3 Disc shall be seated by hand force.

3.5.4 Test shall be continued for a minimum of 3 minutes if there is no evidence of leakage, or in the event of visible leakage, until accurate determination of leakage can be made.

3.5.5 Leakage rate of metal-to-metal seated valves:

3.5.5.1 Valves conforming to MIL-V-22133, Type II shall not exceed the following criteria:

<table>
<thead>
<tr>
<th>Valve size inches</th>
<th>Leakage rate gal/min</th>
<th>Valve size inches</th>
<th>Leakage rate gal/min</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>1.5</td>
<td>10</td>
<td>35</td>
</tr>
<tr>
<td>2-1/2</td>
<td>2.25</td>
<td>12</td>
<td>50</td>
</tr>
<tr>
<td>3</td>
<td>3.25</td>
<td>14</td>
<td>60</td>
</tr>
<tr>
<td>4</td>

<tr>
<td>8</td>
<td>25</td>
<td>24</td>
<td>200</td>
</tr>
</tbody>
</table>

3.5.5.2 Valves conforming to MIL-V-24624 shall have a maximum seat leakage rate of 10 cubic centimeters per inch of nominal pipe size per hour.

3.5.6 Allowable leakage for synthetic seated valve: None.
4. **NOTES:**

4.1 The test pressure of 3.5.2 will be specified in Work Item.

4.2 Repair of valve operating gear will be specified in Work Item.

4.3 Test medium will be specified in Work Item.
1. **SCOPE:**
   
   1.1 Title: Gate Valve; repair

2. **REFERENCES:**

   2.1 S9086-CJ-STM-010/CH-075, Fasteners

   2.2 S9253-AD-MMM-010, Maintenance Manual for Valves, Traps, and Orifices (Non-Nuclear), User's Guide and General Information

   2.4 S9086-RK-STM-010/CH-505, Piping Systems

3. **REQUIREMENTS:**

   3.1 Matchmark each valve part.

   3.2 Disassemble, clean internal and external surfaces free of foreign matter (including paint), and inspect each part for defects.

   3.2.1 The removal of body-bound studs only to determine the condition of threads is not required.

   (I) or (V) “TORQUE TEST” (See 4.3)

   3.2.2 Torque test each body-bound stud in accordance with Section 075-8.6.3.2(d) of 2.1.

   3.3 Repair valve as follows:

   3.3.1 Straighten stem to within 0.002-inch total indicator reading. Polish stem to a 32 Root-Mean-Square finish in way of packing surface and remove raised edges and foreign matter.

   3.3.2 Chase and tap each exposed threaded area.

   3.3.3 Dress and true each gasket mating surface.
3.3.4 Machine, grind, or lap and spot-in gate to seats (including backseat) to obtain a 360-degree continuous contact.

(I) or (V) "INSPECT CONTACT" (See 4.3)

3.3.4.1 Inspect contact using blueing method.

3.3.4.2 Transfer line shall not exceed 3/16-inch in width and shall appear within the lower 75 percent of the gate seating surface.

(I)(G) "VERIFY LEVEL I PARTS AND CLEANLINESS"

3.4 Assemble each valve installing new each packing, each gasket and each fastener for those removed in 3.2 in accordance with the manufacturer's specifications.

3.4.1 Pack feedwater, condensate, and steam valves with valve stem packing conforming to MIL-P-24503/24583 combination in accordance with Chapter 6 of 2.2.

3.4.2 Pack valves of systems other than feedwater, condensate, or steam with valve stem packing conforming to MIL-P-24396, Type B.

3.5 Hydrostatically test valve as follows:

3.5.1 Hydrostatic test equipment shall have the following capabilities:

3.5.1.1 Manual overpressure protection release valve.

3.5.1.2 Self-actuated and resetting relief valve with a set point no greater than 100 PSIG above the test pressure or 10 percent above the test pressure, whichever is less.

3.5.1.3 Master and backup test gauges with gauge range and graduation in accordance with Table 504-6-1 of 2.3. The backup gauge shall be cross-checked to the master hydrostatic test gauge up to the maximum test pressure just prior to start of testing. Master and backup gauges shall track within 2 percent of each other.

3.5.1.4 Protection equipment shall be accessible and test gauges shall be located where clearly visible and readable to pump operator and inspector.

(V)(G) or (I)(G) "SEAT TIGHTNESS" (See 4.4)

3.5.2 Test for seat tightness alternately on each side of gate for double seated valves, and on outboard side only on single-seated valves, with the opposite side open for inspection.
3.5.2.1 Do not exceed the handwheel closing force specified in Table 505-11-2 of 2.4.

3.5.2.2 Test shall be continued for a minimum of 3 minutes if there is no evidence of leakage, or in the event of visible leakage, until accurate determination of leakage can be made. Maximum allowable leakage: 10 cubic centimeters (cc) per hour, per inch of nominal pipe size; 10 cc maximum per hour for valve sizes less than 1-1/2 inches.

4. **NOTES:**

4.1 The test pressures of 3.5.2 will be specified in Work Item.

4.2 Repair of valve operating gear will be specified in Work Item.

4.3 The paragraph referencing this note is considered an (I) if the valve is Level I. If the valve is not Level I, the paragraph is considered a (V).

4.4 The paragraph referencing this note is considered an (I)(G) if the valve is Level I. If the valve is not Level I, the paragraph is considered a (V)(G).

4.5 Test medium will be specified in Work Item.
1. **SCOPE:**

   1.1 Title: Pressure Seal Bonnet Valve Shop Repair; accomplish

2. **REFERENCES:**

   2.1 S9086-CJ-STM-010/CH-075, Fasteners

   2.2 T9074-AS-GIB-010/271, Requirements for Nondestructive Testing Methods

   2.3 MIL-STD-2035, Nondestructive Testing Acceptance Criteria

   2.4 803-6074287, Repair Guide, Pressure Seal Valves

   2.5 803-5001021, Pressure Seal Rings Standard and Oversize Valve Pressure Class 600-1500

   2.6 S9253-AD-MMM-010, Maintenance Manual for Valves, Traps, and Orifices (Non-Nuclear), User's Guide and General Information

   2.7 S9086-RJ-STM-010/CH-504, Pressure, Temperature and Other Mechanical and Electromechanical Measuring Instruments

   2.8 S9086-RK-STM-010/CH-505, Piping Systems

3. **REQUIREMENTS:**

   3.1 Matchmark each valve part.

   3.2 Disassemble, clean each internal and external surface free of foreign matter (including paint), and inspect each part for defects.

      3.2.1 The removal of body-bound studs only to determine the condition of threads is not required.

      (I) or (V) "TORQUE TEST" (See 4.3)

      3.2.2 Torque test each body-bound stud in accordance with Section 075-8.6.3.2(d) of 2.1.
(I) "LIQUID PENETRANT INSPECT"

3.2.3 Accomplish liquid penetrant inspection of seats (including back seat), discs, or gate and body inlay area in accordance with 2.2.

3.2.3.1 Acceptance criteria shall be in accordance with Paragraph 7 of 2.3, except hairline cracks in hard-faced areas of seats and discs or gate are acceptable provided the valve does not show evidence of leakage.

3.3 Repair valve as follows:

3.3.1 Straighten stem to within 0.002-inch total indicator reading. Polish stem to a 32 Root-Mean-Square (RMS) finish in way of packing surface and remove raised edges and foreign matter.

3.3.2 Chase and tap each exposed threaded area.

3.3.3 Dress and true each gasket mating surface.

3.3.4 Inspect and repair sealing surfaces of each inlay area and bonnet as follows:

(I) or (V) "VISUAL INSPECT" (See 4.3)

3.3.4.1 Inspect valve body to verify that stainless steel inlay is free of steam cuts and cracks and diameter of inlay area is round to within 0.003 inch and free of non-design taper. Measure diameter at top and bottom of inlay area in increments of 45 degrees, on each circle.

3.3.4.2 For the inlay, correct out-of-round, non-design tapered condition and provide 32 RMS finish. Finished inlay diameter shall provide 0.002 to 0.005 inch clearance on the standard size diameter for seal rings described by 2.4.

3.3.4.3 Machine valve bonnet tapered area for concentricity and design angle to within 0.002 inch total indicator reading and 32 RMS finish.

3.3.5 Machine, grind, or lap and spot-in discs or gate to seats (including back seat) to obtain a 360-degree continuous contact.

(I) or (V) "INSPECT CONTACT" (See 4.3)

3.3.5.1 Inspect contact using blueing method.

3.3.5.2 Transfer line for gate valve shall not exceed 3/16 inch in width and shall appear within the lower 75 percent of the gate seating surface.
3.3.5.3 Transfer line for globe valve shall not exceed 1/16 inch in width.

(I)(G) "VERIFY LEVEL I PARTS AND CLEANLINESS"

3.4 Assemble each valve installing new each fastener for those removed in 3.2 in accordance with manufacturer’s specification or instruction.

3.4.1 Install new seal ring in accordance with 2.4, using 2.5 for guidance.

3.4.1.1 The SUPERVISOR must approve fitting new seal ring to inlay bores above first oversize.

3.4.1.2 Attach a metal identification tag to the valve bonnet indicating the size of seal ring installed, straight or tapered body neck, name of installing activity, and date of installation.

3.4.2 Install new valve stem packing conforming to MIL-P-24503/24583 combination in accordance with Chapter 6 of 2.6.

3.5 Hydrostatically test valve as follows:

3.5.1 Hydrostatic test equipment shall have the following capabilities:

3.5.1.1 Manual overpressure protection release valve.

3.5.1.2 Self-actuated and resetting relief valve with a set point no greater than 100 PSIG above the test pressure or 10 percent above the test pressure, whichever is less.

3.5.1.3 Master and backup test gauges with gauge range and graduation in accordance with Table 504-6-1 of 2.7. The backup gauge shall be cross-checked to the master hydrostatic test gauge up to the maximum test pressure just prior to start of testing. Master and backup gauges shall track within 2 percent of each other.

3.5.1.4 Protection equipment shall be accessible and test gauges shall be located where clearly visible and readable to pump operator and inspector.

(V)(G) or (I)(G) "SEAT TIGHTNESS" (See 4.4)

3.5.2 Test for seat tightness alternately on each side of gate for double seated valves, and on outboard side only on single seated valves, with the opposite side open for inspection.

3.5.2.1 Do not exceed handwheel closing force specified in Table 505-11-2 of 2.8.
3.5.2.2 Test shall be continued for a minimum of 3 minutes if there is no evidence of leakage, or in the event of visible leakage, until accurate determination of leakage can be made. Maximum allowable leakage: 10 cubic centimeters (cc) per hour, per inch of nominal pipe size; 10 cc maximum per hour for valve sizes less than 1-1/2 inches.

(V)(G) or (I)(G) "SEAT TIGHTNESS" (See 4.4)

3.5.3 Test globe valve in the direction tending to open valve.

3.5.3.1 Do not exceed the handwheel closing force specified in Table 505-11-2 of 2.8.

3.5.3.2 Test shall be continued for a minimum of 3 minutes if there is no evidence of leakage, or in the event of visible leakage, until accurate determination of leakage can be made. Maximum allowable leakage: 10 cubic centimeters (cc) per hour, per inch of nominal pipe size; 10 cc maximum per hour for valve sizes less than 1-1/2 inches.

4. NOTES:

4.1 The test pressures of 3.5.2 and 3.5.3 will be specified in Work Item.

4.2 Repair of valve operating gear will be specified in Work Item.

4.3 The paragraph referencing this note is considered an (I) if the valve is Level I. If the valve is not Level I, the paragraph is considered a (V).

4.4 The paragraph referencing this note is considered an (I)(G) if the valve is Level I. If the valve is not Level I, the paragraph is considered a (V)(G).

4.5 Reference 2.5 provides guidance with respect to applicable APLs and other information not in direct conflict with the material and hardness requirements for seal rings specified in 2.4.

4.6 Test medium will be specified in Work Item.
1. **SCOPE:**

   1.1 Title: Pressure Seal Bonnet Valve In-line Repair; accomplish

2. **REFERENCES:**

   2.1 S9086-CJ-STM-010/CH-075, Fasteners

   2.2 T9074-AS-GIB-010/271, Requirements for Nondestructive Testing Methods

   2.3 MIL-STD-2035, Nondestructive Testing Acceptance Criteria

   2.4 803-6074287, Repair Guide, Pressure Seal Valves

   2.5 803-5001021, Pressure Seal Rings Standard and Oversize Valve Pressure Class 600-1500

   2.6 S9253-AD-MMM-010, Maintenance Manual for Valves, Traps, and Orifices (Non-Nuclear), User's Guide and General Information

3. **REQUIREMENTS:**

   3.1 Matchmark each valve part.

   3.2 Disassemble, clean free of foreign matter (including paint), and inspect each part for defects.

      3.2.1 The removal of body-bound studs only to determine the condition of threads is not required.

      (I) or (V) "TORQUE TEST" (See 4.3)

      3.2.2 Torque test each body-bound stud in accordance with Section 075-8.6.3.2(d) of 2.1.

      (I) "LIQUID PENETRANT INSPECT"
3.2.3 Accomplish liquid penetrant inspection of seats (including back seat), discs or gate, and body inlay area in accordance with 2.2.

3.2.3.1 Acceptance criteria shall be in accordance with Paragraph 7 of 2.3, except hairline cracks in hard-faced seats and discs or gate are acceptable provided the valve does not show evidence of leakage.

3.3 Repair valve as follows:

3.3.1 Straighten stem to within 0.002-inch total indicator reading. Polish stem to a 32 Root-Mean-Square (RMS) finish in way of packing surface and remove raised edges and foreign matter.

3.3.2 Chase and tap each exposed threaded area.

3.3.3 Inspect and repair sealing surfaces of each inlay area and bonnet as follows:

(I) or (V) "VISUAL INSPECT" (See 4.3)

3.3.3.1 Inspect valve body to verify that stainless steel inlay is free of steam cuts and cracks and that diameter of inlay area is round to within 0.003 inch and free of non-design taper. Measure diameter at top and bottom of inlay area in increments of 45 degrees, on each circle.

3.3.3.2 For the inlay, correct out-of-round, non-design tapered condition and provide 32 RMS finish. Finished inlay diameter shall not exceed oversize number one diameter, plus 0.002 to 0.005-inch clearance described by 2.4.

3.3.3.3 Machine valve bonnet tapered area for concentricity and design angle to within 0.002-inch total indicator reading and 32 RMS finish.

3.3.4 Machine, grind, or lap and spot-in discs or gate to seats (including back seat) to obtain a 360-degree continuous contact.

(I) or (V) "INSPECT CONTACT" (See 4.3)

3.3.4.1 Inspect contact using blueing method.

3.3.4.2 Transfer line for gate valve shall not exceed 3/16-inch in width and shall appear within the lower 75 percent of the gate seating surface.

3.3.4.3 Transfer line for globe valve shall not exceed 1/16-inch in width.

(I)(G) "VERIFY LEVEL I PARTS AND CLEANLINESS"
3.4 Assemble each valve, installing new each fastener for those removed in 3.2 in accordance with manufacturer's specification or instruction.

3.4.1 Install new seal ring in accordance with 2.4, using 2.5 for guidance.

3.4.1.1 The SUPERVISOR must approve new seal rings to inlay bores above first oversize.

3.4.1.2 Attach a metal identification tag to the valve bonnet indicating the size of seal ring installed, straight or tapered body neck, name of installing activity, and date of installation.

3.4.2 Install new valve stem packing conforming to MIL-P-24503/24583 combination in accordance with Chapter 6 of 2.6.

4. **NOTES:**

4.1 Operational test of the valve will be specified in Work Item.

4.2 Repair of valve operating gear will be specified in Work Item.

4.3 The paragraph referencing this note is considered an (I) if the valve is Level I. If the valve is not Level I, the paragraph is considered a (V).
1. **SCOPE:**

   1.1 Title: Horizontal Swing Check Valve; repair

2. **REFERENCES:**

   2.1 S9086-RJ-STM-010/CH-504, Pressure, Temperature and Other Mechanical and Electromechanical Measuring Instruments

3. **REQUIREMENTS:**

   3.1 Matchmark each valve part.

   3.2 Disassemble, clean each internal and external surface free of foreign matter (including paint), and inspect each part for defects.

   3.3 Repair valve as follows:

      3.3.1 Chase and tap each exposed threaded area.

      3.3.2 Dress and true each gasket mating surface.

      3.3.3 Machine, grind, or lap and spot-in disc to seat to obtain 360-degree continuous contact.

      (V) "INSPECT CONTACT"

         3.3.3.1 Inspect contact using blueing method.

         3.3.3.2 Transfer line for swing check valve shall not exceed 1/16-inch in width.

   3.4 Assemble each valve installing new each gasket, each bushing, each disc retaining nut, each hinge pin, and each plug for those removed in 3.2 in accordance with manufacturer's specifications or instruction.

   3.5 Hydrostatically test valve as follows:

      3.5.1 Hydrostatic test equipment shall have the following capabilities:
3.5.1.1 Manual overpressure protection release valve.

3.5.1.2 Self-actuated and resetting relief valve with a set point no greater than 100 PSIG above the test pressure or 10 percent above the test pressure, whichever is less.

3.5.1.3 Master and backup test gauges with gauge range and graduation in accordance with Table 504-6-1 of 2.1. The backup gauge shall be cross-checked to the master hydrostatic test gauge up to the maximum test pressure just prior to start of testing. Master and backup gauges shall track within 2 percent of each other.

3.5.1.4 Protection equipment shall be accessible and test gauges shall be located where clearly visible and readable to pump operator and inspector.

(I) "SEAT TIGHTNESS"

3.5.2 Test for seat tightness in the direction tending to close the valve (back pressure) for a minimum of 5 minutes. Allowable leakage as follows:

<table>
<thead>
<tr>
<th>VALVE SIZE (NOM)</th>
<th>LEAKAGE RATE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Up to 2 inches inclusive</td>
<td>25 cc/hr./in. dia.</td>
</tr>
<tr>
<td>2-1/2 inches - 10 inches inclusive</td>
<td>50 cc/hr./in. dia.</td>
</tr>
<tr>
<td>Over 10 inches</td>
<td>100 cc/hr./in. dia.</td>
</tr>
</tbody>
</table>

The back pressure applied shall be in accordance with the following:

<table>
<thead>
<tr>
<th>VALVE PRESSURE RATING</th>
<th>TEST BACK PRESSURE</th>
</tr>
</thead>
<tbody>
<tr>
<td>150 PSIG and Below</td>
<td>50 PSIG</td>
</tr>
<tr>
<td>Over 150 PSIG</td>
<td>100 PSIG</td>
</tr>
</tbody>
</table>

4. NOTES:

4.1 Test medium will be specified in Work Item.
1. SCOPE:

1.1 Title: Relief Valve; repair

2. REFERENCES:

2.1 S9086-RJ-STM-010/CH-504, Pressure, Temperature and Other Mechanical and Electromechanical Measuring Instruments

3. REQUIREMENTS:

3.1 Matchmark each valve part.

3.2 Disassemble, clean each internal and external surface free of foreign matter (including paint), and inspect each part for defect.

3.3 Repair valve as follows:

3.3.1 Straighten stem to within 0.002-inch total indicator reading. Polish stem to a 32 Root-Mean-Square finish and remove raised edges and foreign matter.

3.3.2 Machine, grind, or lap and spot-in metallic disc to seat to obtain a 360-degree continuous contact.

(V) "INSPECT CONTACT"

3.3.2.1 Inspect contact using blueing method. Transfer line shall not exceed 1/16-inch in width.

3.3.3 Dress and true each gasket mating surface.

3.3.4 Chase and tap each exposed threaded area.

3.4 Assemble valve installing new each packing, each soft seat, each gasket, and each fastener for those removed in 3.2 in accordance with manufacturer's specifications or instruction.

3.5 Hydrostatically test valve as follows:

3.5.1 Hydrostatic test equipment shall have the following capabilities:

3.5.1.1 Manual overpressure protection release valve.
3.5.1.2 Self-actuated and resetting relief valve with a set point no greater than 100 PSIG above the test pressure or 10 percent above the test pressure, whichever is less.

3.5.1.3 Master and backup test gauges with gauge range and graduation in accordance with Table 504-6-1 of 2.1. The backup gauge shall be cross-checked to the master hydrostatic test gauge up to the maximum test pressure just prior to start of testing. Master and backup gauges shall track within 2 percent of each other.

3.5.1.4 Protection equipment shall be accessible and test gauges shall be located where clearly visible and readable to pump operator and inspector.

3.5.2 Set valve to lifting pressure. (See Note 4.1 through 4.3.)

3.5.3 Seat tightness test shall be accomplished for a minimum of 3 minutes. Allowable leakage: None.

3.5.4 Purge valve of test medium.

3.5.5 Install wire and lead lock seals.

3.6 Attach a metal tag to valve, stamped with the following information:

3.6.1 Ship name and hull number

3.6.2 Valve number or identification

3.6.3 Valve lifting pressure

3.6.4 Date valve tested and set

3.6.5 Name of repair facility

4. NOTES:

4.1 Test medium, seat tightness, and lifting pressures will be specified in Work Item.

4.2 Steam relief valves shall have setpoint established using steam as the test medium.

4.3 Steam system service and heating boiler pressure relief valves constructed to MIL-DTL-20065, ASME BPVC Section VIII or ASTM F1508 shall have setpoint established using steam, nitrogen/dry, oil-free air or a combination of water and nitrogen/dry, oil-free air as the test medium, as specified in the work item.
1. **SCOPE:**

   1.1 Title: Bolted Bonnet, Globe, Globe Angle, and Globe Stop Check Valve Shop Repair; accomplish

2. **REFERENCES:**

   2.1 S9086-CJ-STM-010/CH-075, Fasteners

   2.2 T9074-AS-GIB-010/271, Requirements for Nondestructive Testing Methods

   2.3 MIL-STD-2035, Nondestructive Testing Acceptance Criteria

   2.4 S9253-AD-MMM-010, Maintenance Manual for Valves, Traps, and Orifices (Non-Nuclear), User's Guide and General Information

   2.5 S9086-RJ-STM-010/CH-504, Pressure, Temperature and Other Mechanical and Electromechanical Measuring Instruments

   2.6 S9086-RK-STM-010/CH-505, Piping Systems

3. **REQUIREMENTS:**

   3.1 Matchmark each valve part.

   3.2 Disassemble, clean each internal and external surface free of foreign matter (including paint), and inspect each part for defects.

       3.2.1 The removal of body-bound studs only to determine the condition of threads is not required.

       (I) or (V) “TORQUE TEST” (See 4.3)

       3.2.2 Torque test each body-bound stud in accordance with Section 075-8.6.3.2(d) of 2.1.

       (I) "LIQUID PENETRANT INSPECT"
3.2.3 Accomplish liquid penetrant inspection of each seat (including back seat), discs, or gate in accordance with 2.2.

3.2.3.1 Acceptance criteria shall be in accordance with Paragraph 7 of 2.3, except hairline cracks in hard-faced areas of seats and discs or gate are acceptable provided the valve does not show evidence of leakage.

3.3 Repair valve as follows:

3.3.1 Straighten stem to within 0.002-inch total indicator reading. Polish stem to a 32 Root-Mean-Square finish in way of packing surface and remove raised edges and foreign matter.

3.3.2 Chase and tap each exposed threaded area.

3.3.3 Clean and spot-in each bonnet to each body gasket mating surface.

3.3.4 Machine, grind, or lap and spot-in gate or discs to seats (including back seat) to obtain a 360-degree continuous contact.

(I) or (V) "INSPECT CONTACT" (See 4.3)

3.3.4.1 Inspect contact using blueing method (soft seated valves excluded).

3.3.4.2 Transfer line for gate valve shall not exceed 3/16 inch in width and shall appear within the lower 75 percent of the gate seating surface.

3.3.4.3 Transfer line for globe valve shall not exceed 1/16 inch in width.

(I)(G) "VERIFY LEVEL I PARTS AND CLEANLINESS"

3.4 Assemble valve, installing new each gasket and each fastener for those removed in 3.2 in accordance with the manufacturer's specification or instruction.

3.4.1 Pack each feedwater, condensate and steam valve with each valve stem packing conforming to MIL-P-24503/24583 combination in accordance with Chapter 6 of 2.4.

3.4.2 Pack each valve for systems other than feedwater, condensate, and steam with each valve stem packing conforming to MIL-P24396, type B.

3.5 Hydrostatically test valve as follows:

3.5.1 Hydrostatic test equipment shall have the following capabilities:
3.5.1.1 Manual overpressure protection release valve.

3.5.1.2 Self-actuated and resetting relief valve with a set point no greater than 100 PSIG above the test pressure or 10 percent above the test pressure, whichever is less.

3.5.1.3 Master and backup test gauges with gauge range and graduation in accordance with Table 504-6-1 of 2.5. The backup gauge shall be cross-checked to the master hydrostatic test gauge up to the maximum test pressure just prior to start of testing. Master and backup gauges shall track within 2 percent of each other.

3.5.1.4 Protection equipment shall be accessible and test gauges shall be located where clearly visible and readable to pump operator and inspector.

(V)(G) or (I)(G) "SEAT TIGHTNESS" (See 4.4)

3.5.2 Test for seat tightness alternately on each side of gate for double seated valves, and on outboard side only on single seated valves, with the opposite side open for inspection.

3.5.2.1 Do not exceed handwheel closing force specified in Table 505-11-2 of 2.6.

3.5.2.2 Test shall be continued for a minimum of 3 minutes if there is no evidence of leakage, or in the event of visible leakage, until accurate determination of leakage can be made.

3.5.2.3 For each hard seated valve, maximum allowable leakage: 10 cubic centimeters (cc) per hour, per inch of nominal pipe size; 10cc maximum per hour for each valve size less than 1-1/2 inches.

3.5.2.4 For each soft seated valve the maximum allowable leakage rate is none.

(V)(G) or (I)(G) "SEAT TIGHTNESS" (See 4.4)

3.5.3 Test globe valve in the direction tending to open valve.

3.5.3.1 Do not exceed the handwheel closing force specified in Table 505-11-2 of 2.6.

3.5.3.2 Test shall be continued for a minimum of 3 minutes if there is no evidence of leakage, or in the event of visible leakage, until accurate determination of leakage can be made.

3.5.3.3 For each hard seated valve, maximum allowable leakage: 10 cubic centimeters (cc) per hour, per inch of nominal pipe size; 10 cc maximum per hour for valves sizes less than 1-1/2 inches.
(V)(G) or (I)(G) "BACK PRESSURE TEST"  (See 4.4)

3.5.4 Back pressure test globe stop check valve with stem in the open position. Allowable leakage as follows:

<table>
<thead>
<tr>
<th>VALVE SIZE (NOM)</th>
<th>LEAKAGE RATE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Up to 2 inches inclusive</td>
<td>25 cc/hr./in.dia.</td>
</tr>
<tr>
<td>2-1/2 inches - 10 inches inclusive</td>
<td>50 cc/hr./in.dia.</td>
</tr>
<tr>
<td>Over 10 inches</td>
<td>100 cc/hr./in.dia.</td>
</tr>
</tbody>
</table>

The back pressure applied shall be in accordance with the following:

<table>
<thead>
<tr>
<th>VALVE PRESSURE RATING</th>
<th>TEST BACK PRESSURE</th>
</tr>
</thead>
<tbody>
<tr>
<td>100 PSIG and Below</td>
<td>50 PSIG</td>
</tr>
<tr>
<td>Over 150 PSIG</td>
<td>100 PSIG</td>
</tr>
</tbody>
</table>

4. **NOTES:**

4.1 The test pressures of 3.5.2 and 3.5.3 will be specified in Work Item.

4.2 Repair of valve operating gear will be specified in Work Item.

4.3 The paragraph referencing this note is considered an (I) if the valve is Level I. If the valve is not Level I, the paragraph is considered a (V).

4.4 The paragraph referencing this note is considered an (I)(G) if the valve is Level I. If the valve is not Level I, the paragraph is considered a (V)(G).

4.5 Test medium will be specified in Work Item.
1. **SCOPE:**

   1.1 **Title:** Bolted Bonnet, Globe, Globe Angle, and Globe Stop Check Valve In-Line Repair; accomplish

2. **REFERENCES:**

   2.1 S9068-CJ-STM-010/CH-075, Fasteners

   2.2 T9074-AS-GIB-010/271, Requirements for Nondestructive Testing Methods

   2.3 MIL-STD-2035, Nondestructive Testing Acceptance Criteria

   2.4 S9253-AD-MMM-010, Maintenance Manual for Valves, Traps, and Orifices (Non-Nuclear), User’s Guide and General Information

3. **REQUIREMENTS:**

   3.1 Matchmark each valve part.

   3.2 Disassemble, clean free of foreign matter (including paint), and inspect each part for defects.

   3.2.1 The removal of body bound studs only to determine the condition of threads is not required.

   (I) or (V) "TORQUE TEST"

   3.2.2 Torque test each body-bound stud in accordance with sections 075-8.6.3.2(d) of 2.1.

   (I) "LIQUID PENETRANT INSPECT"

   3.2.3 Accomplish liquid penetrant inspection of each seat (including back seat), discs or gate in accordance with 2.2.

   3.2.3.1 Acceptance criteria shall be in accordance with Paragraph 7 of 2.3, except hairline cracks in hard faced areas of seats and discs or gate are acceptable provided the valve does not show evidence of leakage.
3.3 Repair valve as follows:

3.3.1 Straighten stem to within 0.002-inch total indicator reading. Polish stem to a 32 Root-Mean-Square finish in way of packing surface and remove raised edges and foreign matter.

3.3.2 Chase and tap each exposed threaded area.

3.3.3 Clean and spot-in each bonnet to body gasket mating surface.

3.3.4 Machine, grind, or lap and spot-in gate or discs to seats (including back seat) to obtain a 360-degree continuous contact.

(I) or (V) "INSPECT CONTACT" (See 4.3)

3.3.4.1 Inspect contact using blueing method.

3.3.4.2 Transfer line for gate valve shall not exceed 3/16-inch in width and shall appear within the lower 75 percent of the gate seating surface.

3.3.4.3 Transfer line for globe valve shall not exceed 1/16-inch in width.

(I)(G) "VERIFY LEVEL I PARTS AND CLEANLINESS"

3.4 Assemble valve installing new each packing, each gasket, and each fastener for those removed 3.2 in accordance with the manufacturer's specification or instruction.

3.4.1 Pack each feedwater, each condensate, and each steam valve with, valve stem packing conforming to MIL-P-24503/24583 combination in accordance with Chapter 6 of 2.4.

3.4.2 Pack each valve of each system other than feedwater, condensate, and steam with valve stem packing conforming to MIL-P-24392, type B.

4. NOTES:

4.1 Operational test of valve will be specified in Work Item.

4.2 Repair of valve operating gear will be specified in Work Item.

4.3 The paragraph referencing this note is considered an (I) if the valve is Level I. If the valve is not Level I, the paragraph is considered a (V).
1. **SCOPE:**

   1.1 Title: Regulating/Reducing Valve; repair

2. **REFERENCES:**

   2.1 T9074-AS-GIB-010/271, Requirements for Nondestructive Testing Methods

   2.2 MIL-STD-2035, Nondestructive Testing Acceptance Criteria

   2.3 S9086-RJ-STM-010/CH-504, Pressure, Temperature and Other Mechanical and Electromechanical Measuring Instruments

3. **REQUIREMENTS:**

   3.1 Matchmark each valve part.

   3.2 Disassemble, clean each internal and external surface free of foreign matter (including paint), and inspect each part for defects.

   (I) "LIQUID PENETRANT INSPECT"

   3.2.1 Accomplish liquid penetrant inspection of hard-faced each metallic seat and disc in accordance with 2.1.

   3.2.1.1 Acceptance criteria shall be in accordance with Paragraph 7 of 2.2, except hairline cracks in hard-faced areas of seats and discs are acceptable provided the valve does not show evidence of leakage.

   3.3 Repair valve as follows:

   3.3.1 Straighten stems and pushrods to within 0.002-inch total indicator reading. Polish stems and pushrods to a 32 Root-Mean-Square finish in way of packing or seal surfaces and remove raised edges and foreign matter.

   3.3.2 Chase and tap each exposed threaded area.

   3.3.3 Dress and true each gasket mating surface.
3.3.4 Machine, grind, or lap and spot-in metallic discs to seats to obtain a 360-degree continuous contact. 

(V) "INSPECT CONTACT"

3.3.4.1 Inspect contact using blueing method.

3.3.4.2 Transfer line shall not exceed 1/16-inch in width and shall appear within the lower 75 percent of the seating surface.

3.4 Assemble valve installing new each packing, each gasket, each diaphragm, each spring, and each soft seat and each fastener for those removed in 3.2 in accordance with manufacturer's specification or instruction.

3.5 Hydrostatically test valve as follows:

3.5.1 Hydrostatic test equipment shall have the following capabilities:

3.5.1.1 Manual overpressure protection release valve.

3.5.1.2 Self-actuated and resetting relief valve with a set point no greater than 100 PSIG above the test pressure or 10 percent above the test pressure, whichever is less.

3.5.1.3 Master and backup test gauges with gauge range and graduation in accordance with Table 504-6-1 of 2.3. The backup gauge shall be cross-checked to the master hydrostatic test gauge up to the maximum test pressure just prior to start of testing. Master and backup gauges shall track within 2 percent of each other.

3.5.1.4 Protection equipment shall be accessible and test gauges shall be located where clearly visible and readable to pump operator and inspector.

(I) "SHOP TEST"

3.5.2 Test and set valve in shop.

3.5.2.1 Test shall be applied for a minimum of 3 minutes.

3.6 Attach a metal tag to valve, stamped with the following information:

3.6.1 Ship name and hull number

3.6.2 Valve number or identification

3.6.3 Valve regulation range and set point

3.6.4 Date valve tested and set
3.6.5 Name of repair facility

4. **NOTES:**

4.1 Test medium and test pressure for valve inlet and regulated pressure/temperature, shall be specified in the invoking Work Item.

4.2 Nitrogen or air may be used for shop test of steam valves.

4.3 Repairs to pilot control will be specified in Work Item.
1. **SCOPE:**

   1.1 Title: Main Propulsion Boiler Wet Lay-Up; accomplish

2. **REFERENCES:**

   2.1 S9086-GX-STM020/CH-220, Boiler Water/Feedwater Test and Treatment

3. **REQUIREMENTS:**

   3.1 Accomplish carbohydrazide wet lay-up of each boiler.

   3.2 Notify the SUPERVISOR one day prior to lay-up of each boiler.

   3.3 Provide the volume of water required to fill each boiler, superheater, economizer, and associated piping by consulting Table 220-22-11 of 2.1. Include an additional 500 gallons for reserve in the total amount required in Table 220-22-11 of 2.1. Water used for lay-up must conform to the following requirements:

<table>
<thead>
<tr>
<th>CONSTITUENT or PROPERTY</th>
<th>REQUIREMENT</th>
</tr>
</thead>
<tbody>
<tr>
<td>SHORE STEAM AND CONDENSED SHORE STEAM USED AS FEEDWATER</td>
<td></td>
</tr>
<tr>
<td>pH</td>
<td>8.0 to 9.5</td>
</tr>
<tr>
<td>Conductivity</td>
<td>15 micromho/cm max</td>
</tr>
<tr>
<td>Dissolved Silica</td>
<td>0.2 ppm max</td>
</tr>
<tr>
<td>Hardness</td>
<td>0.10 epm max</td>
</tr>
<tr>
<td>Total Suspended Solids</td>
<td>0.10 ppm max</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>CONSTITUENT or PROPERTY</th>
<th>REQUIREMENT</th>
</tr>
</thead>
<tbody>
<tr>
<td>SHORE PROCESSED FEEDWATER (DEMINERALIZERS, REVERSE OSMOSIS)</td>
<td></td>
</tr>
<tr>
<td>Conductivity</td>
<td>2.5 micromho/cm max (at point of delivery)</td>
</tr>
<tr>
<td>Silica</td>
<td>0.2 ppm max</td>
</tr>
</tbody>
</table>

   3.3.1 The use of filming amines to control steam/steam condensate pH is prohibited.

   3.3.2 Provide a pierside tank that will hold the quantity of feedwater required. The tank must be used to mix the carbohydrazide layup solution.
3.3.3 For each 2,000 gallons of feed quality water to be treated, one-gallon of 6.5 percent carbohydrazide and 1/2 quart of 40-percent morpholine must be used, in accordance with Paragraph 220-22 of 2.1.

3.3.3.1 Transfer the required amount of carbohydrazide and morpholine to a narrow mouthed polyethylene bottle as appropriate to the volume needed. Pour the carbohydrazide and morpholine into the tank.

3.3.3.2 Immediately fill the tank with feed quality water to the level calculated in 3.3.

3.3.4 Remove water from the boiler, superheater, and economizer. Close boiler drains and openings with the exception of steam drum, superheater, and economizer vents.

3.3.5 Immediately fill the boiler, including superheater and economizer, taking suction from the carbohydrazide lay-up solution treated tank.

3.3.5.1 While filling the boiler, close each vent in turn as the treated water overflows. After the boiler is filled as shown by an overflow from the highest vent, crack each lower vent in turn to ensure that there are no trapped air pockets.

3.4 Maintain positive pressure on each boiler, not to exceed 150 PSIG, using a head tank, or shore steam in accordance with Paragraph 220-1.1 of 2.1.

3.5 Determine the carbohydrazide concentration on the day each boiler is placed under lay-up and weekly thereafter.

3.5.1 Draw a sample through the boiler water sample line after allowing the boiler water to flow for 5 minutes to flush the line. Rinse the sample bottle with boiler water sample prior to filling. Allow the sample bottle to overflow before capping the bottle to eliminate trapped air.

3.5.1.1 Determine the carbohydrazide concentration immediately after sampling.

3.5.1.2 If the carbohydrazide concentration falls below 2.0 ppm, the layup is lost and the boiler must be dumped and retreated or changed to an authorized layup.

3.6 Drain the superheater and bring each boiler to operating level. Dispose of removed solution in accordance with local, state, and federal regulations.

3.6.1 Do not drain the solution to the bilge.

4. NOTES:
4.1 None.
1. **SCOPE:**

   1.1 Title: Reduction Gear Security; accomplish

2. **REFERENCES:**

   2.1 Standard Items

   2.2 S9086-H7-STM-010/CH-262, Lubricating Oils, Greases, Specialty Lubricants, and Lubrication Systems

   2.3 S9086-HK-STM-010/CH-241, Propulsion Reduction Gears, Couplings, Clutches, and Associated Components

3. **REQUIREMENTS:**

   3.1 Accomplish the requirements of Paragraphs 262-3.5.6 and 262-3.5.7 of 2.2 to prevent entry of foreign matter into the lube oil system during work accomplished by the Work Item.

      3.1.1 Notify the ship's Engineering Officer via the SUPERVISOR before opening and closing each main reduction gear or main reduction gear attached components.

      3.1.2 Accomplish the requirements of Paragraph 241-3.5.2 of 2.3 to prevent rust/moisture damage to components when the reduction gear is going to remain inoperative in excess of 2 weeks.

   3.2 Remove and dispose of system fluids to accomplish the requirements of the Work Item.

   3.3 Provide and install temporary machinery protection in accordance with Paragraph 241-6.1.1.m of 2.3 and the following requirements:

      3.3.1 Establish a limited access area and the physical boundary of the security control area.

      3.3.2 The security control area shall be established prior to and maintained during the time an access to the reduction gears (including the main reduction gear [MRG] case, MRG sump, lube oil [LO] lines which terminate in the MRG, or LO cooler) is opened.
3.3.3 Notify the SUPERVISOR prior to opening any clean system or component within the area. The SUPERVISOR shall inspect and approve the security control area prior to start of work.

3.3.4 Maintain on site Accountability Logs, Attachments A and B, of all tools, equipment, and personnel entering and leaving the security control area to verify adherence to the requirements set forth in 3.7 and 3.8.

3.3.4.1 Inspect the log at the beginning and end of each shift to ensure that it describes the equipment and tools within the security control area.

3.3.4.2 Use Attachment A to log all tools, equipment, and personnel.

3.3.4.3 Use Attachment B for shift turnover verification.

3.3.5 Post warning signs at the entry points to the security control area and limited access area to maintain control of the area and inform personnel that the reduction gear is open.

3.3.5.1 Set up Limited Access Area with rope/line and signs to restrict unnecessary traffic.

3.3.6 Provide 24-hour continuous on-site surveillance by contractor personnel in the area as long as the reduction gear is exposed.

3.3.6.1 Policing of limited access area shall be routine while gear is exposed or systems which flow into the MRG are open (e.g., propulsion lube oil [PLO] system, dehumidifier, vent fog precipitator [VFP]).

3.4 Observe Ship's Force security control/accountability measures.

3.5 Provide reduction gear security in accordance with Paragraph 241-4.2 of 2.3 during periods that require the gear train to be exposed from access openings where direct or indirect paths to gearing will result.

3.5.1 Notify the ship's Engineering Officer or designated representative prior to disassembly and removal of the following gear casing components:

3.5.1.1 Hinged, pinned, or bolted gear casing covers, inspection ports, and plates

3.5.1.2 Sight flow indicators, gear mesh spray nozzles, thermometers, and associated fittings
3.5.1.3 Oil supply and return piping, vent lines, fittings, and plugs.

3.5.2 The ship's Engineering Officer or designated representative shall be present at all times when external connections are attached to the reduction gear casing, oil sump, and oil piping.

3.5.3 The surrounding limited access area shall be secured and policed to remove overhead or local dirt, loose objects, or any potential security violating objects prior to and during gear exposure.

(V)(G) "PRE-OPENING CLEANLINESS"

3.5.4 Prior to opening casing, ensure no foreign material exists on adjacent surfaces that could contaminate the internal areas upon lifting casing covers, piping, and associated equipment.

3.5.5 Construct a temporary cover over openings of the gear train, in addition to the required limited access area controls, if it becomes necessary to stop work with the casing/covers removed.

3.6 Protective coverings:

3.6.1 When repairs require the removal of main bolted cover plates, assemble an enclosure made from Herculite or canvas covering conforming to A-A-55308 over the top of the reduction gear housing, lashing the bottom of the enclosure to the deck structure or piping at deck level.

3.6.1.1 Snaps, staples, or similar shall not be used on enclosure. Utilize heavy duty zippers and Velcro hook-pile. Secure all grommets attached to enclosure with line or lanyard to prevent loss of grommets.

3.6.1.2 Lash the top edge of the enclosure to overhead structural members to form a work area over and around the reduction gear casing.

3.6.1.3 Lace the top flaps to the sides. The top shall utilize a center joint if lifting gear is utilized. Unlace center joint when utilizing lifting gear.

3.6.1.4 Lace all but one of the corners to each other, utilizing stiffeners, to form a secure work area. The unlaced corner shall be used for a security door constructed to be capable of being secured. Stencil "CONTROLLED AREA – AUTHORIZED PERSONNEL ONLY" on the sides and top of the enclosure or install signs at enclosure boundaries.

3.6.2 When repairs do not require removal of main bolted cover plates, protect planned open and accessible areas of the reduction gear by assembling an enclosure made from Herculite or canvas covering conforming to A-A-55308.
3.6.2.1 Submit one legible drawing or sketch of proposed enclosure(s) to the SUPERVISOR 5 days prior to entering the reduction gear. Drawing shall include enclosure access for installation of lifting gear (if required).

3.6.2.2 Snaps, staples, or similar shall not be used on enclosure. Utilize heavy duty zippers and Velcro hook-pile. Secure all grommets attached to enclosure with line or lanyard to prevent loss of grommets.

3.6.2.3 Stencil “CONTROLLED AREA - AUTHORIZED PERSONNEL ONLY” on the sides and top of the enclosure or install signs at enclosure boundaries.

3.7 Prepare an Accountability Log, Attachment A and B, immediately after limited access area has been approved by the SUPERVISOR, but prior to opening an access. Maintain the Accountability Log while reduction gears and attached components are open.

3.7.1 Station a Control Watch at the enclosure door/flap and maintain Attachment A for all material and hardware which is small enough to fit inside access opening.

3.7.2 The Control Watch shall record the date and time in the appropriate block on Attachment B each time accountability is started or stopped, and each time access is opened or closed. Any time the log is turned over to another Control Watch, both the outgoing and incoming Control Watches shall sign Attachment B to document that all items are accounted for.

3.7.3 Any material permanently or temporarily installed shall be noted as such in the remarks column on Attachment A.

3.8 Inspection equipment, tools, and personnel clothing shall be captured, secured, and accounted for to preclude introduction of foreign matter into the reduction gear.

3.8.1 Acceptable methods of capturing are:

3.8.1.1 Drilling and lockwiring
3.8.1.2 Tackwelding or silver brazing
3.8.1.3 Using nylock-type locking devices
3.8.1.4 Upsetting or staking threads
3.8.1.5 Attaching a lanyard
3.8.1.6 Taping with duct tape
3.8.2 All personnel working in or around an open gear casing shall have all eye glasses, buttons, zippers, and other loose items on their clothing properly taped to prevent them from breaking loose and falling into the gear casing. All jewelry, pens, change, metal objects, loose items, etc., shall be removed from the person and clothing pockets prior to entering area.

3.9 Notify the SUPERVISOR in all matters involving foreign material retrieval from the reduction gear. Report all incidents breaching reduction gear security to the ship's Engineering Officer or Engineering Duty Officer via the SUPERVISOR.

(V)(G) "INSPECTION PRIOR TO CLOSURE"

3.10 Accomplish a visual inspection of the exposed reduction gear and associated components prior to each closing (daily and final). Ensure no foreign matter has entered or remains within the reduction gear and/or components. Inspect each ledges, including the underside of ledges, pockets, gear teeth, and bearing journals and caps, using mirrors, periscopes, and borescopes.

3.10.1 The inspection shall be made jointly with the SUPERVISOR and the ship's Engineering Officer or designated representative.

3.10.2 Prior to each closing verify that all tools and equipment listed on Attachments A and B have been either logged out satisfactorily or are annotated as installed, permanently or temporarily, in the remarks column.

3.10.2.1 Accountability shall stop when the access is closed.

3.10.3 Attachments A and B shall be available for review by the SUPERVISOR at time of final closure.

3.10.3.1 Submit one legible copy, in hard copy or approved transferrable media, of completed Attachments A and B to the SUPERVISOR within 2 days of final closure.

3.11 Disassemble and remove the enclosure and limited area boundary when directed by the SUPERVISOR.

3.12 Accomplishment of cleaning and painting for new and disturbed surfaces shall be in accordance with NAVSEA Standard Items (See Note 4.3).

4. NOTES:

4.1 In support of emergency inspections, limited inspections or minor repairs to the propulsion reduction gear, the requirements for a security control area may be omitted at the discretion of the SUPERVISOR with the concurrence of the ship's Engineering Officer. If the security control area
is precluded during these special circumstances, the security of the reduction gear shall be maintained.

4.1.1 The requirements for contractor accountability cannot be waived.

4.2 Definitions of terms used are:

4.2.1 Clean Work Area: An area requiring a cleanliness/accountability level at least equal to that required for in-shop repair of similar equipment to permit the easy recovery of any dropped tools, material, etc. This area shall be free of excess moisture and contaminants, i.e., abrasive materials resulting from blasting, grinding, or other particle generating processes. Areas where this condition would apply are inspection and/or access covers removed or open.

4.2.2 Security Control Area: An area or enclosure that provides a physical boundary around access opening (Herculite) which will preclude the inadvertent introduction of any uncontrolled personnel, tools, equipment or foreign material. This area shall always meet the requirements of a Clean Work Area and can be upgraded to a Limited Access/Exclusion Area. A Controlled Area shall always require Physical Separation.

4.2.3 Full Enclosure: An enclosure that has all edges (sides, top, and bottom) secured with cabling that is woven through grommets and secured to stanchions, foundations, deck grating, etc. The enclosure will be considered adequately secured if a person cannot enter through any opening other than the designed entry accesses.

4.2.4 Limited Access Area: An area requiring the maximum level of concern and accountability for personnel and material. During this condition a Full Enclosure is required. This type of area isolation is required where the recovery of dropped or broken material would be difficult and/or requires extensive rework of the task in progress. The Full Enclosure shall be locked when unattended by production and during the unattended time keys shall be controlled by the Ship's Engineering Office. An area established outside the security control area to limit the personnel allowed to enter the reduction gear area and is intended to prevent unnecessary traffic.

4.2.5 Accountability: The method used to maintain foreign material exclusion from reduction gears by keeping a formal record (accountability log) of all materials, including tools and hardware that may pass through access opening.

4.3 If cleaning and painting for new and disturbed surfaces of 3.12 are required; the use of Category II Standard Item 009-32 “Cleaning and Painting Requirements; accomplish” of 2.1 will be specified in the Work Item.

* The person designated to sign for an action verifies, based on personal observation, and certifies by their signature that the action has actually been performed in accordance with the specified requirements.

Note 1: Verify personnel and material entering area meet the requirements of 3.8

Note 2: Existing material removed shall be documented with “Entered Area” marked “N/A”.

Note 3: Record if item is temporarily or permanently installed in system per para 3.7.3. Include additional remarks as required for clarification.
ATTACHMENT B
ACCOUNTABILITY LOG (WATCH TURNOVER VERIFICATION)

Logged items remaining within the exposed location at the change of watch shall be verified present by the in-coming and out-going control watches. This verification shall be accomplished by physically checking the area and confirming those items required to be logged. Both the outgoing and incoming watches shall sign the watch turnover verification to certify that the remaining items have been physically verified, no unnecessary items are left in accountability area, containments are satisfactory, and area is cleaned.

THIS LOG IS CLOSED. ALL ITEMS ARE ACCOUNTED FOR AS INDICATED.

Inspector**_______________ Date/Time_______________ Supervisor**_______________ Date/Time_______________

* The person designated to sign for an action verifies, based on personal observation, and certifies by their signature that the action has actually been performed in accordance with the specified requirements.
** The person designated to sign for an action verifies, based on personal observation or certified records, and certifies by their signature that the action has been performed in accordance with the specified requirements.
1. SCOPE:

1.1 Title: Pump and Driver Shaft Alignment; accomplish

2. REFERENCES:

2.1 S6226-JX-MMA-010, Instruction Manual for the Indicator Reverse Method of Pump Shaft Alignment

2.2 803-6397419, Standard Machinery Shim Kits

3. REQUIREMENTS:

3.1 Measure pump and driver shaft alignment using the indicator reverse method and the mathematical equations or graphs or alignment computer or laser based measuring instruments in accordance with 2.1.

3.1.1 Determine soft foot and correct in accordance with Section 2-2, 2-6.5.13 or 2-6.6.18 of 2.1. Shims must be in accordance with 2.2.

(V) "INSPECT PIPING ALIGNMENT PRIOR TO REMOVAL"

3.2 Inspect piping alignment in accordance with Section 2-3 of 2.1 prior to removal.

(V)(G) "INSPECT PIPING ALIGNMENT AT INSTALLATION"

3.3 Inspect piping alignment in accordance with Section 2-3 of 2.1 at installation.

3.4 Measure indicator sag in accordance with Section 2-4 of 2.1.

(V)(G) "COLD ALIGNMENT" (See 4.4)

3.5 Align each shaft to the offset and angular alignments in accordance with the cold alignment settings invoked in the Work Item (see 4.1). Cold alignments for horizontally mounted machinery must be accomplished in accordance with Chapter 2, Sections 2-1 through 2-7 of 2.1, and vertically mounted machinery must be in accordance with Chapter 5, Sections 5-1 through 5-3 of 2.1. Pumps/motors with magnetic couplings must be aligned in
accordance with 2.1. The results of this section must be used to complete the alignment data collection form (Page 7.2 of 2.1) (See 4.5).

3.5.1 If hot alignment is not required, complete cold final alignment verification. Accomplish a final alignment check of pump with dowels installed.

3.5.1.1 Fit and install new chocks and shims conforming to ASTM A 240 to accomplish alignment. Shims must be in accordance with 2.2.

3.5.1.2 Drill and ream foundations. Fit and install new SAE-AMS-QQ-S-763, Grade 304, dowels in each unit to retain final satisfactory unit alignment in accordance with Section 2-8 of 2.1.

3.5.2 Submit one legible copy, in hard copy or approved transferrable media, of a completed alignment data collection form (Page 7-2 of 2.1) (see 4.5) for the results of the requirements of 3.5 to the SUPERVISOR.

3.6 Align shafts so that offset and angular alignments are acceptable when the unit is hot. Acceptable alignment tolerances must be based on the rated speed of the pump and the alignment tolerance listed in Table 1-1 of 2.1 (see 4.2). Hot alignments for horizontally mounted turbine-driven machinery must be accomplished in accordance with Chapter 2, Section 2-1 through 2-8 of 2.1. Hot alignment is not required for vertically mounted machinery unless specified in the unit’s technical manual. Hot alignment is not required for horizontally mounted, motor-driven machinery. Accomplish hot alignment check only on units when the cold alignment has been compensated for thermal growth. (Hot alignment readings must be taken within 30 minutes of shutting down unit).

3.6.1 Fit and install new chocks and shims conforming to ASTM A 240 to accomplish alignment. Shims must be in accordance with 2.2.

3.6.2 Drill and ream foundations. Fit and install new SAE-AMS-QQ-S-763, Grade 304, dowels in each unit to retain final satisfactory unit alignment in accordance with Section 2-8 of 2.1.

(V)(G) "FINAL HOT ALIGNMENT"

3.7 Accomplish a final hot alignment check of pump in accordance with 2.1 with dowels installed.

3.7.1 Submit one legible copy, in hard copy or approved transferrable media, of a report listing results of the requirements of 3.7 to the SUPERVISOR. The report must include the completed alignment data collection form (page 7-2 of 2.1) (see Note 4.5) for final hot alignment condition.

4. NOTES:
4.1 Reference that contains the cold setting alignment will be identified in the invoking Work Item.

4.2 Hot alignment criteria if different from zero will be identified in the invoking Work Item.

4.3 Turbine driven unit must be run a minimum of 2 hours to achieve operating temperature.

4.4 (V)(G) of 3.5 is invoked only when hot alignment is not required.

4.5 If utilizing laser based measuring instruments, a completed results printout may be utilized in lieu of Page 7-2 of 2.1.
1. **SCOPE:**

1.1 Title: Schedule and Associated Reports for Availabilities Over 9 Weeks in Duration; provide and manage

2. **REFERENCES:**

2.1 Standard Items

2.2 S9AA0-AB-GOS-010, General Specifications for Overhaul of Surface Ships

3. **REQUIREMENTS:**

3.1 Develop one legible copy in Gantt Chart format of an Integrated Production Schedule (IPS) using Critical Path Method (CPM) Network Analysis principles, tools, and practices that reflects accurate scheduling data for each key event and milestone using automated Network Analysis tools in accordance with the following requirements:

3.1.1 Include Key Events, Milestones, tests, and work being accomplished by Alteration Installation Teams (AITs), Government-Contracted Third Party Maintenance Providers, Ship's Force (S/F), Commercial Industrial Services (CISs), and Fleet Maintenance Activities (FMAs).

3.1.1.1 Alteration (ALT) numbers, Job Sequence Numbers (JSNs), and Task Order numbers (TOs) are considered equivalent to the contractor’s Work Specification Work Items for the purposes of scheduling the work of these third-party organizations in accordance with this Standard Item.

3.1.1.2 The term Work Item is inclusive of these additional methods of identifying a body of work.

3.1.2 Schedule each Work Item to the Work Activity level, listing the planned start and planned completion dates, and durations for each Work Activity.

3.1.2.1 Assign each Work Activity with the appropriate predecessor and successor relationships within the contractor’s scheduling software that establish the logic relationship between schedule Work Activities. Each activity must have at least one predecessor and one
successor (no isolated or dangling Events or Activities), with the exception of the Key Event Start Availability (which may have no predecessors) and the Key Event Complete Availability (which may have no successors). Each Event and Activity may have more than one predecessor and more than one successor.

3.1.2.2 Assign appropriate predecessor relationships to each Key Event and Milestone(s) to ensure there is an accurate logical progression through all work activities leading to their assigned Key Event and Milestone(s), and ensure the IPS supports accurate prediction of Key Event and Milestone(s) attainment.

3.1.2.3 Schedule Stage 2 Weight Tests and Hydrostatic Tests, and all Stage 3 through Stage 6 required tests as Work Activities by Work Item. Include the predecessor/successor relationships between tests, the production work, and system restoration required to manage work-to-test progression. Test Stages are defined in Section 092 of 2.2.

3.1.3 Schedule production work final inspections and testing for work that has to be completed prior to pre-flood/undocking and which generates technical data requiring Government review to complete no later than four days prior to the scheduled undocking (when applicable) or provide a technical justification for not meeting this requirement.

3.1.4 Develop the Schedule of Record (SOR), a revised IPS at the start of the availability (A-0 day) that includes refined sequencing and completeness as a result of completed subcontracting actions, incorporation of additional Government Furnished Information (GFI), or any contract modifications increasing the scope of work between contract/delivery Order award and availability start. Work activities should be scheduled such that no portion of a Work Activity’s effort exceeds the dates of its assigned Key Event or Milestone(s).

3.1.5 Identify the amount of total float available on each Work Item Work Activity. Activity schedules should be based on a 5-day workweek unless otherwise specified. Manpower resource allocations must support accomplishment of the availability on a 5-day workweek basis.

3.1.6 Revise Weekly IPS at the Work Activity level to include additions, deletions, modifications, actual start and finish dates, progress, and completions. Progress must be based on degree of completion of physical work or accomplishment of the Work Activity.

3.1.6.1 Reassign Milestone and Key Event relationships for incomplete Work Activities when the associated Milestone or Key Event has passed and the Work Activity was authorized as an exception.

3.1.6.2 Activities that fall outside their assigned Key Event or Milestone must be identified and a mitigation plan must be developed.

3.1.7 Include the following minimum data elements for each Work Activity in the schedule, as appropriate. Elements listed in Table 1 are not
Table 1
Activity Data Elements and Descriptions

<table>
<thead>
<tr>
<th>Data Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Work Item Number (as appropriate)</td>
<td>4-E specification Work Item number</td>
</tr>
<tr>
<td>Work Activity Identifier</td>
<td>Numerical designator identifying the Work Activity within the Work Breakdown Structure (WBS)</td>
</tr>
<tr>
<td>Title</td>
<td>Descriptive title of Work Item and Work Activity</td>
</tr>
<tr>
<td>ICN (as appropriate)</td>
<td>Industrial Control Number (ICN): AIM/PSS system identifier for naval shipyard and FMA work</td>
</tr>
<tr>
<td>Key Event</td>
<td>Key Event applicable to the Work Activity (See 4.5)</td>
</tr>
<tr>
<td>Milestone (as appropriate)</td>
<td>Milestone applicable to the Work Activity</td>
</tr>
<tr>
<td>System (as appropriate)</td>
<td>System(s) affected (See 4.6)</td>
</tr>
<tr>
<td>Component (as appropriate)</td>
<td>Component Unit (For example: tank, valve, motor, pump)</td>

<td>Late Finish</td>
<td>Software determined date (See 4.1.16)</td>
</tr>
<tr>
<td>Actual Start</td>
<td>Actual date for the Work Activity’s start</td>
</tr>
<tr>
<td>Actual Finish</td>
<td>Actual date for the Work Activity’s finish</td>
</tr>
<tr>
<td>Percent Complete</td>
<td>Degree of completion based on the Work Activity’s work scope and degree of accomplishment</td>
</tr>
<tr>
<td>Duration</td>
<td>The total number of work periods required to complete a Work Activity.</td>
</tr>
<tr>
<td>Calendar Identification</td>
<td>Number of scheduled workdays per week</td>
</tr>
<tr>
<td>Total Float</td>
<td>The amount of time a Work Activity can be delayed without affecting the project finish date</td>
</tr>
<tr>
<td>Predecessor</td>
<td>An Activity or Event that immediately precedes one or more Activities or Events with a direct tie in the Total Project Network. Every Activity and Event in the Total Project Network must have at least one Predecessor (except Start Availability).</td>
</tr>
</tbody>
</table>
3.1.8 Develop an export of the IPS data elements in a sortable/filterable spreadsheet format compatible with Microsoft Excel.

3.2 Display the IPS in a time-oriented Gantt chart format that shows Critical Path and Controlling Work Items at the Work Activity level and assigned Key Events and/or Milestones.

3.2.1 Revise the Gantt Chart weekly in conjunction with the weekly IPS revisions of 3.1.6.

3.3 Develop a Critical Path Network in Precedence Diagram Method (PDM) format that displays the Critical Path of the availability and the Controlling Work Items with associated Key Events and Milestones. Display Critical Path and Controlling Work Items at the Work Activity level to provide visual representation of the logic relationships between displayed Work Activities.

3.3.1 The network or any sub-network thereof may be continued on additional pages.

3.3.2 Label each Work Item, Work Activity, Milestone, and Key Event of the network with each Activity box on every Precedence Diagram must contain the following data elements of 3.1.8: Activity Identifier, Activity Title, Early Start Date or Actual Start Date, if Started, Early Finish Dates or Actual Finish Date, if finished, Original Duration, Percent Complete, Calendar Identification, and Total Float.

3.3.3 Revise the network weekly in conjunction with the weekly IPS revisions of 3.1.6.

3.4 Provide Key Event and Milestone Analysis Report.

3.4.1 Generate a Key Event and Milestone Analysis Report that includes the following information for each Key Event and Milestone: Event Type, Event Title, Event Designator, Original Schedule Date, Revised Schedule Date, Actual Completion Date, Total Float (not including un-exercised Level of Effort (LOE)), and Comments.

3.4.1.1 The revised schedule date and actual date of accomplishment must be left blank on the initial submission and filled in to reflect actual conditions on subsequent submission of the report.

3.4.1.2 Revise the Key Event and Milestone Analysis Report weekly to reflect up-to-date contract performance.

3.5 Provide manpower management information.
3.5.1 Develop a total manpower-loading curve showing proposed manning throughout the contract period calculated in average men-per-day. The curve must indicate that portion of the total that is subcontractor provided.

3.5.2 Develop manpower curves showing proposed manning by trade throughout the contract period calculated in average men-per-day. The curves must indicate that portion of the total that is subcontractor provided. The curve must be incremented on a weekly progression.

3.5.3 Update the manpower curves of 3.5.1 and 3.5.2 weekly.

3.5.4 Develop a weekly manpower utilization report showing total mandays expended during the previous week, indicating that portion of the total that is subcontractor provided.

3.6 Provide a representative whose function is to coordinate and schedule AIT, Government-Contracted Third Party Maintenance Providers, S/F, CIS, and FMA work with contractor work into the IPS.

3.6.1 The representative must meet with the AIT, Government-Contracted Third Party Maintenance Providers, S/F, CIS, and FMA between A-90 and no later than A-5 and then daily thereafter commencing on A-0 to compare and coordinate programmed AIT, Government-Contracted Third Party Maintenance Provider, S/F, CIS, and FMA work with the IPS.

3.6.2 Coordinate AIT, Government-Contracted Third Party Maintenance Provider, S/F, CIS, and FMA work integration into the IPS prior to setting the Schedule of Record (SOR). (See 4.1.21)

3.6.2.1 The representative must develop a report identifying missing or incomplete schedule integration data for known participants in the availability when the SOR is submitted. Identification of missing or incomplete schedule integration data is required to highlight areas of elevated IPS uncertainty, but must not be cause for delay in establishing the SoR nor the delivery of reports required under this Standard Item.

3.6.3 Incorporate updated progress from AIT, Government-Contracted Third Party Maintenance Providers, S/F, CIS, FMA, and other maintenance providers into the IPS.

3.6.3.1 Provide a common template in Microsoft Excel compatible format to facilitate submission of progress updates of 3.6.3.

3.6.4 Identify, at the weekly progress meeting, schedule conflicts where programmed AIT, Government-Contracted Third Party Maintenance Provider, S/F, CIS, and FMA work interferes with previously scheduled contractor work.

3.6.5 Identify, at the weekly progress meeting, required AIT, Government-Contracted Third Party Maintenance Provider, S/F, CIS, and FMA
prerequisite actions necessary to support contractor testing and equipment operation schedule.

3.7 Provide cognizant shipyard management representation to participate in the weekly progress meeting at the time and location agreed to by the SUPERVISOR. The representative(s) must be authorized to make management decisions relative to the routine requirements, implementation of corrective actions for each schedule shortfall that, in good faith, commit the contractor. Discussion will include the Key Event and Milestone Analysis of 3.4 and each work item of concern.

3.8 Participate in review conferences at the 25, 50, and 75 percent points in the availability. Data from the most recent submission in accordance with 3.9.3 will be used at the review conferences. Review conferences will be held within two days of the Weekly progress Meeting of 3.7 or, subject to SUPERVISOR approval, may be held simultaneously with the Weekly Progress Meeting. The conferences will be scheduled at a time and place mutually agreeable to all parties. The contractor must:

3.8.1 Be prepared to discuss planned production manning versus actual production manning by total, trades, and subcontractors.

3.8.2 Identify known factors that may affect Key Events, Milestones and the contract completion. Provide recommended courses of action to resolve problem areas.

3.8.3 Provide the SUPERVISOR with the status of open and inspect reports and be prepared to discuss possible impact of growth work in these items at the 25 percent review conference.

3.8.4 Provide the SUPERVISOR with the following information for the 50 percent review conference:

3.8.4.1 A machinery reinstallation plan showing projected dates for installing the equipment on the foundation, hook-up of the equipment, and operational tests of the equipment.

3.8.4.2 A valve status list showing projected completion and reinstallation dates.

3.8.4.3 A list of items required for the next Key Event and Production Completion Date (PCD) that are not complete. Annotate those items on the list that may be in jeopardy of completing by the next Key Event and PCD.

3.8.5 Provide the SUPERVISOR with one legible copy, in approved transferrable media, of a test schedule for all planned underway equipment and system testing to the SUPERVISOR to support the 75 percent review conference.
3.9 Submit the following reports as listed in Adobe Acrobat (.pdf), Microsoft Excel (.xls), or Microsoft Word (.doc) compatible media as per Table 2 and Table 3:

Table 2 Deliverables.

4. NOTES:

4.1 Definitions.

4.1.1 Critical Path Method: A step-by-step network-based method for planning and executing complex, interdependent projects that identifies the Critical Path to each Key Event and Milestone using automated Network Analysis Tools. CPM is an important tool for project management because it identifies critical and non-critical tasks to prevent conflicts and bottlenecks. CPM is applied to the analysis of a project network precedence diagram to produce maximum practical efficiency and a focus on the most critical Work Activities in the project based on Total Float.

4.1.2 Work Breakdown Structure: The WBS reflects how each Work Item is broken down into Work Activities in the IPS, representing a manageable unit of work to be accomplished at a specific period of time in relation to other Work Activities in the IPS to complete the Availability. Typical WBS might break a Work Item down into Work Activities to Remove a component, Repair the component, Reinstall the Component, and Test the Component.

4.1.3 Industrial Testing: Conducted by using stages of testing for the progressive validation of the proper installation and performance of equipment and systems. Test Stages are identified in 009-67 of 2.1.

4.1.4 Integrated Production Schedule (IPS): A schedule used by the contractor as a means of planning, tracking, coordinating and de-conflicting work during the availability. It incorporates all work planned for accomplishment during the maintenance availability including: Alteration Installation Team (AIT), Government-Contracted Third Party Maintenance Providers, Ship's Force, Commercial Industrial Services (CIS), and Fleet Maintenance Activity (FMA) work.

4.1.5 Work Activity: A portion of an individual Work Item, which is a logical subdivision of the Work Item, representing a manageable unit of
work which must be accomplished at a specific period of time in relation to other Activities of the Job Order.

4.1.6 Duration: The total number of work periods (not including holidays or other nonworking periods) required to complete a scheduled Work Activity.

4.1.7 Key Event: An event that, if slippage occurs, could impact or delay the overall schedule, or prevent timely delivery of the vessel. Key Events are identified by the contract, the SUPERVISOR, or the contractor.

4.1.8 Milestone: A significant event identified by the Maintenance Team. Milestones are used as a scheduling aid and establish significant points where progress must be evaluated and confirmed. Accumulated failure to achieve Milestones on schedule may result in missed Key Events. Milestones may be identified by either the contractor or the SUPERVISOR.

4.1.9 Critical Path: That sequence of Work Activities which forms the work and test chain of the longest duration, and directly affects the completion of the availability. Factors that influence when a Work Activity is on the Critical Path include: time duration required for the Work Activity, space limitations, manpower available, and the predecessor/successor relationships between Work Activities. The Critical Path is determined by automated schedule analysis and will include any sequential set of Work Activities forming the longest chain of events extending throughout the schedule and which has the least Total Float.

4.1.10 Controlling Work Items: Those Work Items which include activities that are on the critical path of the IPS, which, by virtue of scope, material requirements, complexity, or other considerations, have the significant potential for impact on the scheduled project Key Events or completion of the availability.

4.1.11 Total Float: The total number of days that a path of Work Activities can be delayed without affecting the project finish date. A path of Work Activities is established by predecessor and successor relationships.

4.1.12 Logic Relationship: Defines an interdependence between Work Activities. It is established by assigning predecessor and successor relationships to Work Activities using the functionality provided by project scheduling software. An individual Work Activity will frequently have more than one predecessor or more than one successor.

4.1.13 Network: A graphic display showing the planned sequence and interdependent relationship of Work Activities, Milestones, or Key Events within the Job Order.

4.1.14 Resource: Labor and non-labor demands required to complete a Work Activity. These may include personnel (trade skills), material, special tools, facilities, space, and equipment.
4.1.15 Early Start: The earliest point in time that a Work Activity may start based on the IPS network logic and any other schedule constraints. Early start dates may change as the availability progresses.

4.1.16 Early Finish: The earliest point in time that a Work Activity may be completed based on the IPS network logic and any schedule constraints. Early finish dates may change as the availability progresses.

4.1.17 Late Start: The latest point in time that a Work Activity may begin without delaying the applicable Milestone or Key Event based on the IPS network logic.

4.1.18 Late Finish: The latest point in time that a Work Activity may be completed without delaying the applicable Milestone or Key Event based on the IPS network logic.

4.1.19 Integration: The incorporation of all work (including testing and availability work certification) for all organizations involved in an availability.

4.1.20 Precedence Diagram Method (PDM): Used in Critical Path Method Project Management for building a project schedule network diagram using lines and nodes to show the logical relationship between schedule activities.

4.1.21 Gantt Chart: A graphic display of schedule-related information. Typically, schedule Work Activities or work breakdown structure components are listed down the left side of the chart, dates are shown across the top, and Work Activity durations are shown as date-placed horizontal bars.

4.1.22 Negative Float: The amount of time by which the early start or finish dates of a Work Activity exceeds its late start or ending dates. The quantity of float then indicates the amount of time that must be recovered in order to achieve an imposed date.

4.1.23 Schedule of Record: The official IPS at the start of the availability (A-0 day) that includes refined sequencing and completeness as a result of completed subcontracting actions, incorporation of additional Government Furnished Information (GFI), or any contract modifications increasing the scope of work between contract/delivery Order award and availability start.

4.1.24 Un-Exercised Level of Effort: LOE which has not been settled and placed on contract.

4.2 The SUPERVISOR will provide, or direct provision, of the AIT, Government-Contracted Third Party Maintenance Providers, S/F, CIS, and FMA availability data required for schedule integration in 3.1.1, 3.1.2.3, and progress/de-confliction in 3.6.

4.3 The IPS data element export required by 3.1.8 may be used to support the development of the Master Requirements List (MRL) and Event Readiness.
List (ERL) of 009-04 of 2.1 and/or locally invoked certification requirements.

4.4 When invoked, the following Standard Items interface with this Standard Item: 009-67, and 009-81.

4.5 The following codes are provided as designators for Key Events within the IPS as directed in 3.1.7.

4.7 The following standard convention is used for identifying locations when applied to Work Activities in the IPS as directed in 3.1.7. The use of general terminology, such as “throughout ship”, as a means of documenting location must be minimized.

- Space/Compartment Number (i.e. 03-130-2-L, 6-81-0-E, etc.)
- Flight and Hangar Deck Locations: deck-frame-P or S (e.g. 04-190-S or 1-190-P)
- Weather Decks: closest deck-frame-P or S (e.g. 03-140-P-WEA)
- Span of Frames: deck-frame span-P or S (e.g. for flight deck frames 55 to 100 starboard side use 04-55/100-S)
- Masts: Use mast name (e.g. Main Mast, etc.)
1. **SCOPE:**

   1.1 Title: Shipboard Use of Fluorocarbons; control

2. **REFERENCES:**

   2.1 Standard Items

   2.2 29 CFR Part 1915, Occupational Safety and Health Standards for Shipyard Employment

   2.3 NFPA Standard 306, Standard for the Control of Gas Hazards on Vessels

   2.4 40 CFR Part 82, Protection of Stratospheric Ozone, Subpart F

3. **REQUIREMENTS:**

   3.1 Accomplish work associated with the use of fluorocarbons aboard ship in accordance with this item.

   3.2 Maintain at the work site a copy of the credentials of the Competent/Qualified Person who will monitor atmosphere, inspect and certify spaces are safe to enter, and who will supervise all activities.

   3.2.1 A Qualified Person is defined as a National Fire Protection Association Certified Marine Chemist, an Industrial Hygienist, or a Competent Person as defined in 2.2 and trained in accordance with 009-07 of 2.1. These Qualified Persons shall be capable of specifying the necessary protection and precautions to be taken during fluorocarbon operations, as designated in 2.2 and 2.3.

   3.3 Maintain a copy of a fluorocarbon control plan at the work site. The plan shall include the following information and shall be provided to the SUPERVISOR upon request:

   3.3.1 Identification of hose/piping routes and steps to be taken to protect hoses along those routes

   3.3.2 Type and location of warning signs
3.3.3 Type and location of portable ventilation required

3.3.4 Means of communication to be utilized

3.3.5 Type of hoses and material compatibility to fluorocarbons

3.3.6 Type of emergency breathing devices that are immediately accessible

3.3.7 Type and location of portable oxygen and halide monitoring detectors/alarms

3.3.8 Emergency evacuation and rescue procedures

3.3.9 Open flame and hot work controls

3.3.10 Results of preliminary tests, ensuring system integrity and absence of leakage

3.3.11 Provisions for periodic inspections that include adjacent spaces to ensure work area containment and work practices are effective

3.4 Submit written notification to the SUPERVISOR and the Commanding Officer's designated representative at least 4 hours, but not more than 24 hours prior to commencement, each time fluorocarbons are utilized aboard ship for any purpose. Identify the time, location, and purpose of each evolution. Notify the SUPERVISOR and designated ship's representative immediately prior to the actual start and upon completion of each evolution.

3.4.1 Deliver notification of work planned Tuesday through Friday to the Commanding Officer's designated representative at least 30 minutes and not more than 24 hours preceding start of work.

3.4.2 Deliver notification of work planned over a weekend or Monday following that weekend to the Commanding Officer's designated representative no later than 0900 on the Friday immediately preceding that weekend.

(I) "INSPECT FLUOROCARBON EQUIPMENT"

3.5 A certified technician shall, as required by 2.3, pressure test the fluorocarbon charging and flushing handling equipment, i.e., hoses, piping, valves, fittings, and manifolds, using dry nitrogen with trace amounts of HCFC-22 compound at 150 percent of charging equipment working pressure within 30 days prior to use aboard ship. Hold test pressure for 15 minutes. Allowable leakage: None.

3.5.1 Attach a solid metal tag with the following to each piece of equipment passing test:

3.5.1.1 Name and address of testing facility
3.5.1.2 Description of equipment
3.5.1.3 Date of test
3.5.1.4 Test pressure

(I)(G) "INSPECT WORK SITE AND PROCESS PRIOR TO FLUOROCARBON OPERATIONS"

3.6 Inspect work site to ensure the following prior to fluorocarbon operations:

3.6.1 Provide ventilation to maintain oxygen content above 19.5 percent and not greater than 22.0 percent by volume in spaces where fluorocarbon compounds are in use.

3.6.2 Establish and maintain telephone communication between the pumping station and the space involved when the fluorocarbon compound is being transferred by hose or pipe.

3.6.3 Ensure that all personnel in a space where fluorocarbon operations are being carried out have an emergency escape breathing device (EEBD) in their possession or in the immediate area so that they can quickly don the units in case of a leak.

3.6.3.1 Each person shall have received instruction and practice in the use of the particular EEBD to be used, prior to entering each space where fluorocarbon operations are being carried out.

3.6.4 Suspend hot work in spaces prior to hook-up, test, and disconnect operations in which fluorocarbon compounds are exposed to the atmosphere.

3.6.4.1 Hot work is permitted in spaces traversed by lines carrying fluorocarbon compounds provided the lines are clearly tagged and no hot work is attempted within 3 feet of a tagged line.

3.6.5 Provide a halide monitor with alarm or equivalent instrument to continuously monitor the atmosphere in spaces where fluorocarbon compounds are used. If the concentration of fluorocarbon compound in the space exceeds the Threshold Limit Value (TLV) for the fluorocarbon compound (where the instrument is set to alarm), clear the space of personnel, notify Quarterdeck Watch immediately and the SUPERVISOR as soon as practical but not more than 30 minutes after the instrument alarms.

3.6.6 Post a caution sign in the area and at each entrance to the area.

3.6.6.1 The sign shall read: CAUTION: No open flames. Do not enter without testing the air for fluorocarbons.

3.6.6.2 The sign letters shall be at least one-inch high.
3.6.7 Provide a minimum of 2 people trained and familiar with the operation while a fluorocarbon compound is being used in quantities exceeding 10 pounds.

3.7 Accomplish preliminary pressure tests of charging/flushing equipment after connecting aboard ship each time equipment is used. Pressure shall equal 100 percent of charging/flushing equipment working pressure. Hold test pressure for 15 minutes. Allowable leakage: None.

3.7.1 Ensure charging equipment is isolated from equipment to be charged prior to test.

3.8 A certified technician shall, as required by 2.4, ensure that fluorocarbon gases are not vented to the interior of the ship or to the atmosphere when pressure is released from the system by utilizing reclaiming/recycling equipment tested and certified by an Environmental Protection Agency (EPA) approved laboratory or organization.

3.8.1 Collect CFCs and HFCs for either recycling back into the same system/piece of equipment from which the material was removed or recovering the CFCs for turn-in.

4. **NOTES:**

4.1 Following are examples of commonly used fluorocarbon compounds:

- Trichlorofluoromethane, Freon 11, R-11 (CFC-11)
- Dichlorodifluoromethane, Freon 12, R-12 (CFC-12)
- Chlorotrifluoromethane, R-13 (also component of R-503) (CFC-13)
- Pentachlorofluoroethane (CFC-111)
- Tetrachlorodifluoroethane (CFC-112)
- 1,1,2 Trichloro-1,2,2 Trifluoroethane, Freon 113, Freon TF, Freon PCA, Genetron 113 (CFC-113)
- 1,2 Dichlorotetrafluorothane, R-114, Freon 114 (CFC-114)
- Chloropentafluoroethane, R-115 (also component of R-502) (CFC-115)
- Heptachlorofluoropropane (CFC-211)
- Hexachlorodifluoropropane (CFC-212)
- Pentachlorotrifluoropropane (CFC-213)
- Tetrachlorotetrafluoropropane (CFC-214)
- Trichloropentafluoropropane (CFC-215)
- Dichlorohexafluoropropane (CFC-216)
- Chloroheptafluoropropane (CFC-217)
- Tetrafluoroethane (HFC-134a)

4.2 EEBD equipment for Government representatives will be provided by the Government.

4.3 ODS material must be procured as Government Furnished Material (GFM) from the DOD ODS Reserve. Notify the SUPERVISOR at least 14 days prior to anticipated usage.
4.4 The following definitions are delineated by Navy policy:

4.4.1 Recover - To remove refrigerant in any condition from a system and store it in an external container without necessarily testing or processing it in any way.

4.4.2 Recycle - To reduce contaminants in used refrigerant by oil separation and single or multiple passes through devices such as replaceable core filter dryers that reduce moisture, acidity and particulate matter. The term usually applies to procedures implemented at the field job site or at a local service shop.

4.4.3 Reclaim - To reprocess refrigerant to new product specifications by means that may include distillation. Chemical analysis of the refrigerant is required to determine that appropriate product specifications are met. This usually implies the use of processes or procedures that are available only at refrigerant reprocessing or manufacturing facilities.
1. **SCOPE:**

   1.1 Title: Boiler Handhole, Manhole Seat and Plate; inspect

2. **REFERENCES:**

   2.1 S9221-C1-GTP-010, Main Propulsion Boilers; Repair and Overhaul

   2.2 803-841216, Handhole Plates and Arch Bars for Boilers

3. **REQUIREMENTS:**

   3.1 Remove each handhole and manhole plate from each header and drum of boiler. Each plate **must** be identified and tagged as to respective boiler.

   3.2 Wire brush clean to bare metal each handhole, manhole plate, stud, strongback, and fastener. Wire brush clean to bare metal each handhole and manhole gasket seating surface using a power driven wire cup brush. Ensure complete removal of rust and gasket material.

   3.2.1 Wire brush clean to bare metal external surfaces in way of "B" and "C" measurement contact areas using a power-driven wire wheel or needle gun.

   3.3 Visually inspect each gasket seating surface of handhole and manhole plates and the drum and header for erosion, corrosion, gouges, steam cuts, crack indications, excessive pitting, grooves, and any irregularities that may cause poor or leaky joints. Inspect external surfaces of headers in way of "B" and "C" measurement areas for erosion and corrosion. Inspect studs and nuts for deterioration and damaged and stripped threads.

   3.3.1 Visually inspect, measure, and record the following handhole and manhole gasket seating surface criteria in accordance with Paragraph 5-8.2 of 2.1 and Attachment A.

   3.3.1.1 Seat taper: Use template of flat stock and feeler gage to measure maximum taper around periphery of handhole and manhole seats.

   3.3.1.2 Minimum wall thickness: Measure header wall thickness using a point micrometer at each side of the header cross sectional minor axis.
3.3.1.3 Minimum seat thickness: Measure header seat thickness with a flat-faced micrometer at the 4 points of the header cross sectional major and minor axis.

3.3.1.4 Handhole Plate Overlap: Measure maximum gap clearance between shoulder of the handhole plate and handhole with handhole plate located in the most extreme misaligned position. Subtract the measurement from the plate seat width to establish the amount of plate overlap. Handhole plates used for measurements must conform to 2.2.

3.3.1.5 Manhole Plate Clearance: Measure clearance between shoulder of manhole plate and manhole at 8, 45-degree increments, with the manhole plate accurately centered.

3.4 Submit one legible copy, in approved transferrable media, of a report listing results of the requirements of 3.3 to the SUPERVISOR. Report must list each handhole and manhole seat which failed to meet the minimum allowable values listed in Appendices 5D, 5E, and 6C of 2.1.

3.5 Install each handhole and manhole plate, using new gaskets conforming to MIL-G-15342 and applicable boiler technical manual.

4. NOTES:

4.1 Equipment technical manual will be listed in the invoking Work Item.
1. **SCOPE:**

   1.1 Title: Lubricating Oil and Hydraulic Fluid; analyze

2. **REFERENCES:**

   2.1 S9086-H7-STM-010/CH-262, Lubricating Oils, Greases, Specialty Lubricants, and Lubrication Systems

   2.2 S9086-S4-STM-010/CH-556, Hydraulic Equipment (Power Transmission and Control)

   2.3 S9086-HB-STM-010/CH-233, Diesel Engines

3. **REQUIREMENTS:**

   3.1 Provide samples (lubricant oil or hydraulic fluids) to a certified laboratory as listed in Table 262-4-2 of 2.1 or a certified commercial laboratory (minimum ISO 9000 or ISO 17025 registered). Minimum sample label requirements include ship name, hull number, equipment name, date sampled, hours since last oil change (if applicable) and hours since last overhaul (if applicable).

   3.2 Accomplish tests of each sample in accordance with the specified test methods of Attachment A or Attachment B.

   3.2.1 Test selections shall be based on the sample type and service.

   3.3 Analyze each sample for metal content and water contamination by utilizing a spectrographic analysis in accordance with ASTM D-6595.

   3.3.1 Determine if water contamination is fresh or salt water based on high sodium levels.

   3.3.2 Record and report the concentration of the following elements in ppm with the indicated degree of accuracy:

<table>

</table>

   1 of 4
3.3.2.1 The sensitivity and reliability of the equipment used for the test shall be in accordance with ASTM D-6595.

3.4 Accomplish specific gravity test for each MIL-H-19457 hydraulic fluid sample and determine hydrocarbon oil content in accordance with Table 556-8-1 of 2.2.

3.5 Submit one legible copy, in hard copy or approved transferrable media, of a report listing completed test results of 3.2 through 3.4 for each sample to the SUPERVISOR.

3.5.1 Reports shall be submitted within 2 days after the qualified chemical laboratory receives each sample.

3.5.2 Reports shall include recommendations for continued use, disposal, or re-sampling of each tested oil or fluid sample.

3.6 Use Table 262-4-1 of 2.1 and Table 556-8-1 of 2.2 for guidance for test accept and reject criteria for each in-service sample.

3.6.1 Use Table 233-8-2 of 2.3 for test accept and reject criteria for 9000 Series lube oil/MIL-PRF-2104 lube oil.

3.7 Submit one legible copy, in hard copy or approved transferrable media, of original manufacturer's certificate of compliance and material conformance test data in accordance with Military Specifications listed in Attachment A and Attachment B, 7 days prior to use of new fluids and oils.

ITEM NO: 009-63  
FY-20
1. **SCOPE:**

   1.1 Title: Polychlorinated Biphenyls (PCBs); control

2. **REFERENCES:**

   2.1 40 CFR Part 761, Polychlorinated Biphenyls (PCBs) Manufacturing, Processing, Distribution in Commerce, and Use Prohibitions

   2.2 Toxic Substances Control Act (TSCA)

3. **REQUIREMENTS:**

   3.1 Verify equipment identified as containing PCBs for leaks, deterioration, and corrosion prior to opening, removing, or installing equipment.

   3.1.1 Submit one legible copy, in approved transferrable media, of a report listing results of the inspection conducted in 3.1 to the SUPERVISOR if a leak, deterioration, or corrosion is found.

   3.2 Consider wool felt to contain PCBs and chromium.

   3.2.1 Submit one legible copy, in approved transferrable media, of a report verifying wool felt (gasket or damping material), location, and approximate quantity to the SUPERVISOR.

   3.3 Provide a copy of a control, method of removal, and disposal plan in accordance with 2.1 and/or 2.2 to the SUPERVISOR.

4. **NOTES:**

   4.1 None.
1. SCOPE:

1.1 Title: Integrated Total Ship Testing; manage

2. REFERENCES:

2.1 Standard Items

2.2 S9AAO-AB-GOS-010, General Specifications for Overhaul of Surface Ships (GSO)

2.3 S9095-AD-TRQ-010/TSTP, Total Ship Test Program Manual

2.4 MIL-STD-2106 (SH), Development of Shipboard Industrial Test Procedures

2.5 Joint Fleet Maintenance Manual (JFMM)

3. REQUIREMENTS:

3.1 Develop an Integrated Total Ship Test Plan (ITSTP), using contracted work package and available GFI.

3.1.1 Prepare and manage a Comprehensive Test Plan (CTP) in accordance with Section 092c of 2.2; using 009-04 and 009-60 of 2.1, and 2.3 for guidance.

3.1.1.1 Define and document the responsibility, lines of authority, and interrelation of personnel who manage, assist, perform, or verify work.

3.1.1.2 Include provisions for completion of total ship testing through Stage 6 in accordance with section 092c of 2.2 and 2.3 prior to dock trials using data from 009-60 of 2.1 (See 4.1 for examples).

3.1.1.3 Submit one legible copy, in approved transferrable media, of the CTP to the SUPERVISOR no later than 15 days prior to availability start date.

3.1.2 Include a Test Schedule (TS). (See 4.3 and 4.4)
3.1.3 Include a list of special purpose test equipment and software, with required dates and responsible provider (See 4.6).

3.1.3.1 Provide the requirements for special purpose test equipment, weapon test shapes, dummy loads, and test weights, to accomplish total ship testing. Identify known and anticipated deficiencies in required type, quantity, calibration, or availability to support the production or test schedule.

3.1.4 Include organizational responsibility for equipment operation, start up, and accomplishment of testing, including manning requirements.

3.1.5 Include a list of SUPERVISOR, contractor, Alteration Installation Team (AIT), and Ship's Force key test team personnel, with test sign-off authority.

3.1.6 Include administrative procedures for submittal of Test Problem Reports (TPRs), Test Failure Reports (TFRs), and test status.

3.1.7 Submit one legible copy, in approved transferrable media, of the ITSTP to the SUPERVISOR no later than the start of the availability.

3.2 Accomplish Test Procedures (TP) for all Stage 3 through 7 Tests as specified in the work item.

3.2.1 Reuse existing Government approved test procedures when available. Test and Evaluation Automated Management Information System (TEAMIS), the government’s Non-Nuclear Surface Ship Test procedure management program, shall be the primary source for approved Government test procedures per 2.3.

3.2.1.1 Modify existing test procedures to limit scope to match repair and/or update to match current equipment or revised specifications for the test requirements using 2.4 for guidance.

3.2.2 Develop new test procedures when reusable product is not available for the required tests using 2.4 for guidance.

3.2.2.1 Cover sheet must designate ship or ship class and system or component, and provide completed review signatures.

3.2.3 Submit one legible copy, in approved transferrable media, of each test procedure to the SUPERVISOR for review and approval. Submission shall be no later than 14 days prior to start of the required test or as otherwise designated by the SUPERVISOR.

3.2.4 Submit one legible copy, in approved transferrable media, of each updated or changed test procedure to the SUPERVISOR at least 3 days
prior to implementation.

3.2.5 Make pen-and-ink editorial changes to the test procedure when required after testing commences. Editorial changes are limited to those correcting typographical errors. All other changes are considered technical and require SUPERVISOR approval. Technical changes are adjudicated by the SUPERVISOR’s Engineering Support Desk by annotating on the test procedure prior to proceeding with the affected procedural steps.

3.2.5.1 Submit one legible copy, in approved transferrable media, of any editorial or SUPERVISOR approved technical changes made to the test procedure to the SUPERVISOR within one day of making the change.

3.2.6 Submit one legible copy, in approved transferrable media, of the completed test procedure no later than 1 day after test completion.

3.3 Manage the Total Ship Testing Task Group (TSTTG) to coordinate the test program in accordance with Section 092c of 2.2.

3.3.1 The group shall consist of representatives of the SUPERVISOR (acts as Chairman), Contractor, AIT Team(s) on scene, Ship's Force, and others as requested by the SUPERVISOR or LMA (See 4.8) and shall meet weekly unless otherwise directed by the SUPERVISOR.

3.3.2 Evaluate and document all problems impacting schedule and/or satisfying technical requirements.

3.3.3 Maintain agendas and minutes. Agendas shall include tests completed since last meeting, tests not completed as scheduled with explanation and plan to resolve, issues impacting testing, and tests scheduled within the next 2 weeks. Minutes shall include a list of attendees, action items with assignments, highlights of proceedings, and identified problems with potential impact.

3.3.4 Distribute minutes and changes to the CTP and ITSTP to TSTTG members no later than 2 business days after each meeting.

3.4 Manage Total Ship Testing.

3.4.1 Accomplish the requirements of the ITSTP of 3.1.

3.4.2 Incorporate all updates to ITSTP and status of Total Ship Testing including growth and new work no later than 48 hours after each TSTTG meeting.

3.4.3 Coordinate testing in accordance with the ITSTP.

3.4.4 Coordinate stationing of test personnel in accordance with the ITSTP. Provide test procedures and test data sheets to test personnel.
3.4.5 Coordinate the performance of each test procedure and record test results.

4. NOTES:

4.1 Test stage examples, not all inclusive.

Stage 1 - Material Receipt Inspection and Shop Tests:
- Physical inspection of new material, equipment and systems, and associated documentation.
- Ensure receipt of equipment is in good physical condition.
- Formal test procedure not required typically.

Stage 2 - Shipboard Installation Inspection and Tests:
- Cable integrity verification and insulation resistance checks.
- Hydrostatic tests of piping systems.
- Coolant flushing.
- Pre-energizing tests.

Stage 3 - Equipment Tests:
- Equipment element level initial light off, diagnostic and functional tests.
- Hinged/retractable mast operational test.
- Shaft torsion meter performance test.

Stage 4 - Intra-System Tests:
- Propulsion seawater cooling system operational test.
- Auxiliary propulsion system operational test.
- Diesel generator parallel and reverse power load bank test.
- System local area network interface test.
- Navigation system alignment verification.

Stage 5 - Inter-System Tests:
- Search radar distribution & display interface test.
- SPS-73 external interface test.
- AN/SPQ-9B video and trigger verification.
- AN/SPN-41A stabilization verification.
- Integrated propulsion test.

Stage 6 - Special Tests:
- EMI Phase I test (dockside).
- Hull generated IMI test.
- Data Link operational demonstrations dockside.
- SSDS MK 2 MOD 4B Combat System Integration test (dockside).

Stage 7 - Trials Tests:
- Radar set operational test (at sea).
- EMI Phase I test (at sea).
- Landing system correlation verification test (at-sea).
- Propulsion plant performance tests.
- SSDS MK 2 MOD 4B detect to engage demonstration (at sea).
4.2 GFI required to develop the ITSTP may include: Portions of Integrated Test Package (ITP), FMA/FMR Work Schedule, Ships Force Work List (SFWL), IDIQ, Test Index, and known AIT test requirements unavailable to the contractor.

4.3 Coordination of preparations for Sea Trials, including the test schedule for all planned underway testing will be included with the requirements of 009-60 of 2.1.

4.4 The Test Schedule is composed of the export of Integrated Production Schedule (IPS) data elements, developed in accordance with 009-60 of 2.1, sorted to include only test work activities.

4.5 The ship's Commanding Officer will provide personnel for recording data during testing.

4.6 Special purpose test equipment and software are defined as having unique functions and whose use is controlled and managed by an outside activity.

4.7 This standard item interfaces with 009-01 and 009-04 of 2.1 for test and inspection records.

4.8 The Lead Maintenance Activity (LMA) is defined in 2.5. MSRA/ABR contractors tasked with availability schedule management under 009-60/009-111 of 2.1 are considered the LMA.
1. SCOPE:

   1.1 Title: Heavy Weather/Mooring Plan; provide

2. REFERENCES:

   2.1 845-6686999 Rev E, US Navy Vessel Water Depth, Mooring and Hull/Appendage Clearance Requirements for Transit and Berthing

   2.2 DDS 582-1, Design Data Sheet, Calculations for Mooring Systems

   2.3 S9086-TW-STM-010/CH-582, Mooring and Towing

   2.4 UFC 4-159-03, Mooring Design

3. REQUIREMENTS:

   3.1 Maintain a written Heavy Weather Plan that shall be implemented during gales, storms, hurricanes, and destructive weather, including mooring calculations in accordance with 2.1 and 2.2, using 2.3 and 2.4 for guidance. The documented Heavy Weather Plan shall be submitted to the SUPERVISOR for a document review and acceptance. The contractor shall have an acceptable documented Heavy Weather Plan, in accordance with this Standard Item, in place no later than 15 days prior to availability start date. The Heavy Weather Plan shall be subject to periodic conformity audits by the SUPERVISOR throughout the contract.

   3.1.1 Submit updated or changed plans to the SUPERVISOR as they occur.

   3.2 Ensure that the plan designates responsibility and implements procedures for prevention of damage to naval ships, craft, barges, and lighters. This includes periods when ships, craft, barges, and lighters are physically located in private contractors' plants; during times when work on ships, craft, barges, and lighters at naval facilities requires openings to hulls or decks; and when contractor owned/furnished floating equipment is tied alongside ships, craft, barges, and lighters.

   3.2.1 The plan shall contain specific responsibilities and detailed actions to be taken during the weather conditions listed below.
3.2.2 Conditions where there is substantial advance warning for approaching adverse weather are addressed by the following 4 categories:

3.2.2.1 Gale/Storm/Hurricane Condition IV: Trend indicates a possible threat of destructive winds of force indicated within 72 hours.

3.2.2.2 Gale/Storm/Hurricane Condition III: Destructive winds of force indicated are possible within 48 hours.

3.2.2.3 Gale/Storm/Hurricane Condition II: Destructive winds of force indicated are anticipated within 24 hours.

3.2.2.4 Gale/Storm/Hurricane Condition I: Destructive winds of force indicated are anticipated within 12 hours or less.

3.2.3 Conditions where there is little or no advance warning for approaching adverse weather are addressed by the following 2 categories:

3.2.3.1 Thunderstorm/Tornado Condition II: Destructive winds accompanying the phenomenon indicated are reported or expected in the general area within 6 hours. Lightning and thunder are also anticipated.

3.2.3.2 Thunderstorm/Tornado Condition I: Destructive winds accompanying the phenomenon are imminent. Lightning and thunder are also anticipated.

3.3 Ensure that the plan contains, as a minimum, the following information as dictated by conditions listed in 3.2:

3.3.1 Steps to be taken to remove or secure staging items or equipment on decks of ships, craft, barges, and lighters, pier or dry dock, including cranes that could become wind-borne.

3.3.2 Protection of ships, craft, barges, and lighters from damage from other floating equipment, such as barges, doughnuts, work floats, and other ships, craft, barges, and lighters.

3.3.3 Provisions for protection of government equipment and material in custody of the contractor from damage by pierside flooding.

3.3.4 Provisions for removal of temporary hoses, welding lines, air lines, oxygen/acetylene lines, etc., extending through watertight closures.

3.3.5 Provisions for security, emergency fire and flooding protection, emergency shipboard dewatering and fire main capability, emergency shipboard electrical generation, and emergency shipboard communications.

3.3.5.1 Specific requirements for emergency shipboard fire main capability are shown on Attachment A.
3.3.5.2 The minimum requirements for emergency shipboard electrical generation equipment are shown on Attachment B.

3.3.5.3 One portable dewatering pump and associated equipment for each 100 feet of ship’s length in addition to the dewatering equipment provided by 009-08 of 2.1 shall be available on the damage control or main deck adjacent to damage control lockers or temporary damage control equipment boxes. Pumps must be capable of providing a minimum of 200 gal/min at a discharge head of 50 feet of dewatering capacity and can be used at the scene of a casualty within 3 minutes of receiving an alarm. Additional dewatering capacity to provide 1,000 gal/min at a discharge head of 50 feet at the scene shall be available within 15 minutes. During the waterborne overhaul period, no damage control system associated with flooding prevention and control or any portion thereof shall be removed or made inoperable without prior notification of the SUPERVISOR and to the casualty-control station and until a back-up system has been established.

3.3.6 Provisions for access to the ship for personnel and emergency equipment during and immediately following the storm consistent with prudent safety precautions.

3.3.7 Assurance that all hull/deck openings are made watertight.

3.3.8 Steps to be taken to secure floating piers during high winds/high tides.

3.3.9 Provisions for messing contractor, Ship's Force, and SUPERVISOR duty personnel for 3 days (minimum). The maximum number of Navy personnel will be 15.

3.3.10 The name and telephone number (business and residential) of the private contractor's single point of contact. This person shall have the authority to commit the contractor to take necessary actions as requested by the SUPERVISOR.

3.3.11 Provisions for operation and manning of a Hurricane Control Center, with capabilities of telephone and portable radio communications with the ship and SUPERVISOR duty personnel.

3.4 Ensure that the plan contains the following mooring related information:

3.4.1 Specify steps to be taken to secure ships, craft, barges, and lighters to contractor's pier, dry dock, graving dock, marine railway, or contractor's other facility. Information must define specific precautions to be taken and supporting calculations, to include limits of docking blocks and dock stability for both normal and heavy weather conditions. Calculations for heavy weather configurations shall include wind and tidal considerations.

3.4.1.1 Provide the heavy weather state at which the ship must be undocked.
3.4.2 Submit mooring calculations for the worst anticipated loading condition during the availability. For ships with a self-compensating fuel system, the loading condition shall show the self-compensation fuel system full of water, fuel, or some combination of fuel and water, projecting the worse possible condition as shown in calculations for maintaining ship’s stability. Determine the combined loading due to wind load from each direction and both peak flood and ebb current loads at low and high tides. Calculations may require re-submittal if significant changes occur from the original estimate on which the calculations were based.

3.4.3 For ships in dry dock, provide limits and supporting calculations for listed conditions. Analyze both the "normal" dock configuration and the "heavy weather" configuration.

3.4.3.1 Maximum safe wind speed and surge for side block strength and stability. Include maximum loading of the side blocks on ship.

3.4.3.2 Maximum safe wind speed and surge for dry dock strength and stability.

3.4.3.3 Surge required to float ship.

3.4.3.4 Table or graph showing safe combinations of wind speed and surge.

3.4.4 For ships pierside, provide limits and supporting calculations for ship loading conditions specified in 3.4.2. Analyze the "heavy weather" mooring configuration that would be used during the conditions specified in 3.2. Analyze worst-case wind directions including frontal, broadside, and quartering.

3.4.4.1 Maximum safe wind speed for mooring strength. Include strength of pier, pier fittings, mooring lines, and shipboard fittings. Maximum applied load on any mooring line shall be the breaking strength of the mooring line divided by 2.5 (factor of safety of 2.5).

3.4.4.2 Maximum safe surge for mooring.

3.4.4.3 Maximum safe elongation of mooring lines. Include the following information:

- Size and type of mooring line;
- Percent elongation of mooring line at failure;
- Tattletale-free length and length between attachments.

3.4.4.4 Sketch, showing size, type, and location (vertical and horizontal angles) of all securing devices including fenders, bumpers, and camels.
3.4.5 Include the following statement, providing the necessary data:
USS __________ can be safely moored to withstand a maximum of ___ mph winds with a ___ knot current and a ___ foot storm surge.

4. NOTES:

4.1 The SUPERVISOR will set Conditions of Readiness consistent with the forecasts and advisories of the local Weather Service Office of National Oceanic and Atmospheric Administration (NOAA).

4.2 NOAA defines the 5 categories of hurricanes as follows:

<table>
<thead>
<tr>
<th>CATEGORY</th>
<th>WIND SPEED</th>
<th>STORM SURGE</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>74 - 95 MPH</td>
<td>OR 4 - 5 FT ABOVE NORMAL</td>
</tr>
<tr>
<td>2</td>
<td>96 - 110 MPH</td>
<td>OR 6 - 8 FT ABOVE NORMAL</td>
</tr>
<tr>
<td>3</td>
<td>111 - 129 MPH</td>
<td>OR 9 - 12 FT ABOVE NORMAL</td>
</tr>
<tr>
<td>4</td>
<td>130 - 156 MPH</td>
<td>OR 13 - 18 FT ABOVE NORMAL</td>
</tr>
<tr>
<td>5</td>
<td>157 MPH OR HIGHER</td>
<td>OR GREATER THAN 18 FT ABOVE NORMAL</td>
</tr>
</tbody>
</table>

4.3 Attachment C contains regional heavy weather conditions based on historical data and is provided as information only; the historical data is not intended to place limitations/restrictions on other values appropriate and/or previously authorized by a Naval Supervising Activity for their cognizant contractor(s) sites.

4.4 The Heavy Weather Plan submitted in 3.1 requires a one-time submittal/acceptance unless this NAVSEA Standard Item and/or references change or contractor's status changes.

GENERAL NOTES: The power requirement listed is the minimum considered necessary for emergency power if the main source of shore power is lost during heavy weather situations. Each contractor's heavy weather plan shall specify the individual power capacity for each ship connected to the ship's shore power distribution system. Electrical information referenced from MIL-HDBK-1025/2.

NOTES:

1 - CAPACITY IS GIVEN IN KW. UNLESS OTHERWISE INDICATED. INPUT VOLTAGE IS 450 VOLTS, 3 PHASE, 3 WIRE, 60 HERTZ, UNGROUNDED. POWER FACTOR IS APPROXIMATELY 0.8.

2 - REQUIREMENT IS TO SUPPORT AN EXISTING PORTABLE MOTOR GENERATOR SET WHICH CONVERTS THE 60 HERTZ POWER TO 400 HERTZ POWER. THE MOTOR GENERATOR SET NORMALLY ACCOMPANIES THE SHIP SUPPORT FACILITIES.

3 - POWER REQUIREMENTS FOR ANY SHIP TYPE NOT LISTED SHALL BE DETERMINED BY COMPARISON WITH A SHIP(S) OF SIMILAR DESIGN LOAD AND APPROPRIATE SHIP'S INFORMATION BOOK.

1. **SCOPE:**

1.1 Title: Confined Space Entry, Certification, Fire Protection, Fire Prevention and Housekeeping for Unmanned Vessels; accomplish

2. **REFERENCES:**

2.1 Standard Items

2.2 29 CFR Part 1915, Occupational Safety and Health Standards for Shipyard Employment

2.3 29 CFR Part 1910.134, Occupational Safety and Health Standards, Respiratory Protection

2.4 NFPA Standard 51B, Standard for Fire Prevention During Welding, Cutting, and Other Hot Work

2.5 NFPA Standard 312, Standard for Fire Protection of Vessels During Construction, Repair, and Lay-up

2.6 American Conference of Government Industrial Hygienists (ACGIH) Threshold Limit Values for Chemical Substances and Physical Agents

2.7 NAVSEA OP-4, Ammunition and Explosives Safety Afloat

3. **REQUIREMENTS:**

3.1 Comply with the requirements of 2.2 through 2.5 and this item for an unmanned vessel to determine whether or not an explosive or other dangerous atmosphere exists in tanks, spaces, and associated piping, including adjacent tanks, spaces, and piping, aboard the craft and control hot work and entry to those spaces to preclude damage to the craft or injury to personnel during the accomplishment of this Job Order.

3.1.1 Submit one legible copy, in approved transferrable media, of a list of tanks or spaces to be opened or certified to the SUPERVISOR at least one day prior to opening the tank or void.
3.1.1.1 Comply with additional requirements NAVSEA Standard Items when accomplishing work in Collection, Holding and Transfer (CHT) and Motor Gasoline (MOGAS) tanks, spaces, or associated piping. (See Note 4.6)

3.1.1.2 For fuel tanks or spaces that contain or have contained fuel, including F-76 and JP-5, in addition to the atmospheric testing required by 2.2, test for diesel fuel (CAS No. 68334-30-5; 68476-30-2; 68476-31-3; 68476-34-6, 77650-28-3) as total hydrocarbons in accordance with 2.6, and record total hydrocarbon test results on the Marine Chemist Certificate or Competent person’s tests/inspection record.

3.1.2 Provide initial and annual update training for Competent Persons by utilizing a National Fire Protection Association (NFPA) Certified Marine Chemist or NFPA Instructor. The length of the initial training class **must** be at least 24 hours. Annual update training **must** be at least 8 hours.

3.1.2.1 Maintain a current roster of designated Competent Person(s) and copies of certificates of completion for the training required in 3.1.2 for reference by the SUPERVISOR. Submit one legible copy, in approved transferrable media, of the specific documents when requested by the SUPERVISOR.

3.1.3 Post a copy of the Marine Chemist Certificate, Certified Industrial Hygienist's test/inspection record, or Competent Person’s test/inspection record at each access to the affected space while work in the space is in progress. When requested, a copy of the MCC or test/inspection record **must** also be delivered to a location designated by the SUPERVISOR. In the event that the space is identified to be NOT SAFE FOR WORKERS or NOT SAFE FOR HOT WORK, the space **must** be posted accordingly and other affected contractors, the SUPERVISOR and Ship’s Force (if applicable) **must** be notified immediately. The posted copy **must** be clearly visible and legible.

3.1.3.1 Initial certification of spaces that require a Certified MCC or Certified Industrial Hygienist's test/inspection record in support of work operations **must** be effective until conditions change which would void the certificate or test/inspection record. A Competent Person **must** conduct the same Atmosphere testing as annotated on the MCC Certified Industrial Hygienist's test/inspection record.

3.1.3.2 For those certified spaces which employees will enter, a Competent Person **must** visually inspect, test and record each space certified as ENTER WITH RESTRICTIONS or SAFE FOR WORKERS as often as necessary, and as a minimum, prior to entry by employees on a daily basis. If a space is not to be entered on any given day, it is not required to be inspected and tested by a Competent Person. The initial MCC remains valid if conditions have not changed, unless noted on the MCC.

3.1.3.3 For those certified spaces affected by hot work, a Competent Person **must** visually inspect, test and record each space certified as SAFE FOR HOT WORK as often as necessary and, as a minimum, daily prior to commencement of hot work to ensure that conditions established by the
certificate are maintained. When hot work is continuous, the affected spaces must be visually inspected, tested, and recorded on a daily basis to maintain the SAFE FOR HOT WORK certification.

3.1.3.4 If a Competent Person finds that the conditions within a certified space fail to meet the applicable requirements for which it was certified, work in the space must be stopped and may not be resumed until the space has been recertified by a Marine Chemist.

3.1.3.5 For those spaces where only Competent Person tests and inspections are required in accordance with 2.2, a Competent Person must visually inspect and test each space as often as necessary and, as a minimum, daily prior to entry or commencement of hot work to ensure that conditions are safe.

3.1.3.6 After the Competent Person has determined initially that a space is safe for entry and finds subsequently that the conditions within the tested space fail to meet the requirements of 2.2, work must be stopped until the conditions in the tested space are corrected, the space is retested, reinspected, and a new record of tests/inspections is recorded and posted.

3.1.3.7 Allow Navy civilian and military personnel to enter under the certificate or test / inspection record for inspection purposes.

3.1.4 Tank cleaning personnel must be trained annually on safety practices to include a discussion of safety information found in Subparts A, B, and Section 1915.152 of Subpart I of 2.2.

3.1.5 Maintain a current roster of the names of the Shipyard/Plant Rescue Team Members, along with contractor certification that training requirements of Subpart B of 2.2 have been accomplished and are current for each Rescue Team Member, or documentation of arrangements made for an outside rescue team to respond promptly to a request for rescue service in a contractor facility. Submit one legible copy, in approved transferrable media, of the specific documents when requested by the SUPERVISOR.

3.1.5.1 At a naval facility, the Navy will respond.

3.1.6 Spaces that are determined to contain Immediately Dangerous to Life or Health (IDLH) atmospheres must never be entered except for emergency rescue or for short duration for installation of ventilation equipment in accordance with 2.2 and 2.3. When entering IDLH spaces for the purpose of installing ventilation, notify the SUPERVISOR prior to entry. Notifications of rescue must be made as soon as management becomes aware of such an event.

3.1.7 Confirm that all personnel have exited the space prior to closure of tanks, voids, and cofferdams. Designate one person to account for all personnel who may have entered the space.
3.2 Provide a written notice for each job or separate area of hot work aboard craft.

3.2.1 The notice must state a description of the work to be done, the specific location, to include compartment number, of the hot work, and compartments adjacent to decks, bulkheads, and similar structures upon which hot work is to be accomplished, the time hot work will commence, current gas-free status of the area (if required), the absence or existence of combustible material within 35 feet in any direction of the operation (or further, if affected by the operation), and if combustible material exists, what action must be taken to protect the material from fire, the provision and assignment of a fire watch, and the affirmation that conditions at the work site (ventilation, temporary lighting, accesses) permit the fire watch(es) to have a clear view of and immediate access to all areas included in the fire watch.

3.2.2 The notice must affirm that a suitable, fully-charged fire extinguisher must be available at the work site and provide for an inspection of the area 30 minutes after completion of the hot work or the cessation of hot work at the work site unless the contractor's Hot Work Supervisor surveys the affected work area and determines that there is no further fire hazard as the final action to complete the notice.

3.2.3 The notice must be signed by a supervisor specifically designated as responsible for coordination of the hot work and the fire watch requirement for each shift where hot work is being conducted.

3.2.4 One copy of each notice must be given to the SUPERVISOR when requested and at a minimum, one copy of each notice must also be conspicuously posted at the location where the hot work is being accomplished.

3.2.4.1 Deliver written notification of hot work planned Tuesday through Friday to the SUPERVISOR at least 30 minutes and not more than 24 hours preceding start of work.

3.2.4.2 Deliver written notification of hot work planned over a weekend or Monday following that weekend to the SUPERVISOR no later than 0900 on the Friday immediately preceding that weekend.

3.2.4.3 Deliver written notification of hot work planned on a federal holiday and on the day following the federal holiday to the SUPERVISOR no later than 0900 of the last working day preceding the federal holiday.

3.2.4.4 The notice must be effective for 24 hours unless a shorter period is specified in the contract or the gas-free status of the work area or system requires stopping the work. A new notice is required if work is interrupted due to loss of gas-free status.
3.3 Provide trained fire watches, at all affected areas where hot work is being accomplished. Provide fire extinguishing equipment as described in 2.2, 2.4, and 2.5.

3.3.1 The program utilized to train fire watches must be in accordance with the requirements of 2.2 and 2.4, and include steps to be taken by the fire watch and hot work operator prior to accomplishment of hot work, proper selection and use of fire extinguishing equipment and other safety equipment, relationship between the fire watch and hot work operator, proper fire reporting procedures and other sounding of fire alarms, and reporting of fires to the ship's Quarterdeck. A means of communicating between all fire watches and their corresponding hot workers must be provided. This training must include theory and practical (hands-on) fire suppression techniques. This training must be provided to all newly assigned fire watches, with annual updates provided to personnel. Provide visible means of identifying trained fire watches, i.e., badge, sticker, vest, etc.

3.3.1.1 Submit one legible copy, in approved transferrable media, of the training program when requested by the SUPERVISOR.

3.3.2 Each fire watch attending worker(s) accomplishing hot work must be equipped with a fully-charged and operable fire extinguisher, have immediate access and an unobstructed view of the affected hot work area to which they are assigned and must remain at the work site for 30 minutes after the time the hot work is completed unless the contractor's Hot Work Supervisor surveys the affected work area and determines that there is no further fire hazard.

3.3.2.1 The fire watch must not accomplish other duties while hot work is in progress.

3.3.3 Where several workers are accomplishing hot work at one site, the fire watch must have a clear view of and immediate access to each worker accomplishing hot work.

3.3.3.1 No more than 4 workers must be attended by a single fire watch.

3.3.4 In cases in which hot material from hot work may involve more than one level, as in trunks, machinery spaces, and on scaffolding, a fire watch must be stationed at each level unless positive means are available to prevent the spread or fall of hot material.

3.3.5 In cases where hot work is to be accomplished on a bulkhead or deck, combustible material must be removed from the vicinity of the hot work on the opposite side of the bulkhead, overhead, or deck, and a fire watch must be posted at each location.

3.3.5.1 If multiple blind compartments are involved in any hot work job, fire watches must be posted simultaneously in each blind area.
3.3.6 Comply with the firefighting and fire prevention requirements of 2.7 prior to hot work operations in or adjacent to areas containing ammunition or explosives.

3.3.6.1 Hot work must not be conducted during any logistics or maintenance movement of ammunition or explosives.

3.3.7 No hot work must be performed without an operational general announcing system, i.e., Ship’s 1MC, or a documented communication strategy approved by the SUPERVISOR.

3.4 Locate oxygen, acetylene, fuel gas, toxic, oxygen depleting (OD) gas supply systems off the craft. Manifolds connected to pierside supply systems may be placed on board as long as they are equipped with a shutoff valve located on the pier. The pierside shutoff valve must be in addition to the shutoff valve at the inlet to each portable outlet header required by 2.2.

3.4.1 Oxygen, acetylene, fuel gas, toxic, and OD gas supply systems must be stored to prevent collisions by trucks, forklifts, falling objects, etc.

3.4.2 Liquid oxygen (LOX) tanks must be staged in designated locations on the quay wall/pier to be determined jointly by the contractor, Ship’s Force, and the SUPERVISOR.

3.4.3 When gas cylinders are in use on board the craft, they must be located on the weather decks or in a location determined jointly by the contractor and the SUPERVISOR and must be secured in cylinder racks, and in an upright position. The number of in-use cylinders must be limited to those which are required for work in progress and which have pressure regulators connected to the cylinder valves. On-board reserve gas cylinders must not exceed one-half the number of in-use cylinders and must be located in a remote area of the weather decks or in a location determined jointly by the contractor and the SUPERVISOR. Reserve acetylene cylinders must be secured in an upright position.

3.4.4 When not in use, gas cylinders and manifolds on board must have valves closed, lines disconnected, protective cover (cap) in place, and must be secured. Acetylene cylinders must be secured in cylinder racks and in an upright position.

3.5 Each inert gas/oxygen depleting (OD) fuel gas and oxygen hose run must be positively identified with durable unique markings that include maintenance activity name, service type, location, and shore side shut-off points. Tags must be located (at a minimum) at the source, point of entry aboard ship, at each connection point (including quick disconnects), and termination point.

3.5.1 Unattended hose lines or torches are prohibited in confined spaces.
3.5.2 Unattended charged hose lines or torches are prohibited in enclosed spaces for more than 15 minutes.

3.5.3 All hose lines must be disconnected at the supply manifold at the end of each shift.

3.5.4 All disconnected hose lines must be rolled back to the supply manifold or to open air to disconnect the torch; or extended fuel gas and oxygen hose lines must not be reconnected at the supply manifold unless the lines were given a positive means of identification when they were first connected and the lines are tested using a drop test to ensure the integrity of fuel gas and oxygen burning system. Alternate procedures must be approved by the SUPERVISOR.

3.5.5 Upon completion of system hook-up, accomplish a pressure drop test to include the torch, hoses, and gauges.

3.5.5.1 Apply pressure to the system. Back off pressure by turning off the valve supplying gases to the system. If the pressure on the gauge drops, a leak in the system exists. If the pressure on the gauge does not drop, the system is tight.

3.5.5.2 After applying pressure, wait 2 minutes to ensure pressure does not drop.

3.5.6 The use of gas hose splitters is prohibited.

3.6 Use fireproof or fire-retardant covering in accordance with MIL-C-24576, such as fireproofed canvas, fire-resistant synthetic fabrics, non-combustible fabrics, metal covers in accordance with ASTM D6413, or other suitable materials, to protect ship’s equipment from falling sparks or other potential sources of fire. Coverings must be in place prior to commencing hot work and be maintained throughout the hot work evolution. Proper documentation of fire retardancy must be available for review upon request.

3.6.1 Non fire-retardant temporary wooden structures located on the pier, dry dock edge, or in the dry dock (not including dry dock blocks) must be a minimum of 35 feet from the ship to prevent spread of fire.

3.6.2 Lumber, plywood, and staging boards, except that used for pallets, must be fire retardant in accordance with Category Two, Type II, of MIL-L-19140.

3.6.3 Storage of material aboard the craft must be limited to that which is required for work in progress.

3.6.4 Prior to bringing equipment or working material aboard the craft, its crating and packing must be removed. If the equipment or material may be damaged during handling, the crating and packing must be removed immediately after the equipment or working material is brought aboard and taken ashore for disposal. A small quantity of pallets may be staged in a
location determined jointly by the contractor and the SUPERVISOR aboard the craft for use in materials handling operations.

3.6.5 The quantity of flammable and combustible liquids brought onboard must be kept to a minimum, must not exceed that necessary for one shift’s use, and must not be left unattended.

3.6.6 Ensure at least one unobstructed access to each main and auxiliary machinery space.

3.7 Accomplish a fire prevention and housekeeping inspection during each shift whenever work is in progress. Once each manned/regular workday, the inspection must be made jointly with the SUPERVISOR. Deviation from this requirement for availabilities less than 30 days in duration must be adjudicated by the SUPERVISOR.

3.7.1 Submit one legible copy, in approved transferable media, of request for deviation to the SUPERVISOR.

3.7.2 Submit one legible copy, in approved transferrable media, of a written report of the discrepancies and corrective actions, using Attachment A, to be taken to the SUPERVISOR within 4 hours after completion of the inspection.

3.7.3 Provide a safety representative to accomplish the fire prevention and housekeeping inspection who at a minimum has completed the training required in 3.1.2 and the following OSHA Training Institute (OTI) courses or NAVSEA approved equivalents: 5410; Occupational Safety and Health Standards for the Maritime Industry, 3095; Electrical Standards.

3.7.3.1 Submit one legible copy, in approved transferrable media, of the certificates of completion for the required courses upon request by the SUPERVISOR.

3.8 Develop and implement a written fire safety plan in accordance with 2.2. Review the plan with contractor employees and subcontractors.

3.9 Ensure access to temporary firefighting equipment is not obstructed or restricted.

3.9.1 Ensure firefighting equipment is not relocated without written authorization from the SUPERVISOR. Provide a secure temporary storage facility for firefighting equipment that is moved from its original location.

3.10 Conduct a firefighting and fire prevention conference in conjunction with the arrival conference or no later than 5 days after start of the availability for availabilities in excess of 30 days. This conference must cover the contractor’s fire safety and fire response plan for fire prevention and firefighting and the procedures that will be in use by the contractor and
the region/installation or municipal fire and emergency services, as well as familiarize the contractor and the region/installation or municipal fire and emergency services with the craft arrangement, onboard fire prevention, and firefighting systems, equipment, and organization, and familiarize all parties with the scope of work and aspects of the work or craft conditions that have significance in fire prevention and firefighting.

3.10.1 The conference **must** specifically address the following matters:

3.10.1.1 Fire alarm and response procedures

3.10.1.2 Contractor firefighting capability and procedures

3.10.1.3 Region/installation or municipal fire and emergency services firefighting capability and procedures

3.10.1.4 Firefighting jurisdictional cognizance and incident command procedures

3.10.1.5 Communication system for fire reporting and control or firefighting efforts

3.10.1.6 Craft arrangement including access routes, availability or firefighting systems (installed and temporary), fire zone boundaries, and communication systems

3.10.1.7 Each Shipboard firefighting organization, systems, drills, and equipment to include rehabilitation procedures

3.10.1.8 Craft, space, and equipment security consideration

3.10.1.9 Compatibility of contractor, and region/installation or municipal fire and emergency services firefighting equipment

3.10.1.10 Industrial work scope, including location of craft, and effect on firefighting systems, access, and communications

3.10.1.11 The roles, responsibilities, and membership of the Fire Safety Council (FSC). Include the requirement to obtain permission from the FSC to perform work that affects the fire safety posture (e.g., securing the firemain, securing the IMC, undocking, transferring fuel/lube oil) of the ship.

3.10.1.12 Hotwork monitoring and confined space practices.

3.10.2 The firefighting and fire prevention conference **must** include a table top fire drill.

3.11 Provide a portable 300 KW diesel generator with associated cables, lugs/plugs to supply emergency power during transits to and from dry dock
when ship’s emergency power cannot be used or anytime during the availability
that the craft’s power is not available as an emergency back-up to installed
shore power.

3.12 Maintain available for review, prior to commencement of work, a fire
safety plan meeting the requirements of 2.2. In addition to the requirements
of 2.2, include and identify the method for reporting fires, the shipyard
firefighting facilities, equipment, and organization (paid or volunteer), the
procedures for maintenance of clear fire lanes in the shipyard and on the
piers, and the nearest municipal firefighting organization, including the
anticipated time of response.

3.13 Provide fire protection equipment consisting of:

3.13.1 Firefighting water, utilizing manifolds connected to a source
capable of providing 150 GPM at 60 PSIG at the manifold must be in place
before start of work.

3.13.1.1 The number of manifolds must be sufficient to permit
reaching all points on the vessel (including underwater body when the vessel
is in dry dock or on a marine railway) with 2, 1-1/2 inch hoses of not more
than 100 feet in length.

3.13.1.2 Hoses must be attached to the manifolds and fitted
with an all-purpose combination fog and straight stream nozzle.

3.13.1.3 Verify by the Pitot tube method or an in-line flow
meter that the water volume and pressure meets these requirements.

3.14 Ensure access to temporary and Ship’s Force firefighting equipment
is not obstructed or restricted.

3.15 For Navy boats and craft, all paragraphs of this standard item apply
except for 3.11.

3.16 For Navy boats and craft the SUPERVISOR may waive the requirements
of 3.13. If authorized by the SUPERVISOR, a portable fire extinguisher (or an
equivalent means for fighting a fire) in the immediate vicinity of where the
work is performed can be used in lieu of fire main.

4. NOTES:

4.1 In addition to CHT and MOGAS tanks, Hydrogen sulfide (H₂S) may be
found in AFFF, seawater, and firemain systems.

4.2 Booklet of General Plans and Tank Sounding Tables are available for
review at the office of the SUPERVISOR.
4.3 The term "unmanned" is defined as without the physical presence of people in control; without a human operator.

4.4 A "quick disconnect" is a coupling or connecting device/system designed to permit easy and immediate separation of lines without the use of tools and to ensure the contents do not escape.

4.5 The term "annual" means once a year, not-to-exceed 12 months.

4.6 When accomplishing work in Collection, Holding and Transfer (CHT) and Motor Gasoline (MOGAS) tanks, spaces, or associated piping is required; the use of Standard Item 009-88 of 2.1 "Collection, Holding and Transfer (CHT) and Motor Gasoline (MOGAS) Tanks, Spaces, and Piping, including Sewage or MOGAS-Contaminated Tanks, Spaces, and Piping; certify" will be specified in the Work Item.
## Fire Zone Boundaries

**Type Codes:**
ESH DISCREPANCY AND CORRECTIVE ACTION LOG INSTRUCTIONS

1. **Fire Zone Boundaries**: List the designated Fire Zone Boundaries.
2. **Attendees**: List Company and or Command and names of personnel present for walk thru.
3. **Ship Name/Hull Number**: Indicate ship name and hull number of the location of the walk thru.
4. **Location**: Indicate location where ship is moored or docked, i.e. name of contractor facility or pier at Naval Base or Station.
5. **Prime Contractor**: Indicate prime contractor who has the contract with the SUPERVISOR.
6. **Date**: Indicate date of walk thru being accomplished.
7. **Time**: Indicate start time (24 hour clock) of walk thru being accomplished.
8. **No. (number)**: List sequentially, each discrepancy noted during the walk thru. Number will continue where the numbering left off the previous day, until the end of the availability.
9. **Point of Contact**: Indicate Company/Command identified with the discrepancy.
10. **Date Corrected**: Date condition was corrected. If condition is not corrected, condition will be carried over to the next walk thru until condition is corrected.
11. **Location**: Indicate location of the condition, i.e. space number or frame number.
12. **Discrepancy**: Indicate condition that needs corrective action, be specific as necessary.
13. **Corrective Action**: Indicate corrective action taken to correct the condition and who is responsible for the corrective action.
14. **Code**: Indicate code, located at the bottom of ATTACHMENT A that condition can be grouped with, i.e. lines on deck causing trip hazard would use code 14- Lines and Leads Hazards.

1. SCOPE:

1.1 Title: Piping System; test

2. REFERENCES:

2.1 S9086-RK-STM-010/CH-505, Shipboard Piping Systems

2.2 S9086-RJ-STM-010/CH-504, Pressure, Temperature and Other Mechanical and Electromechanical Measuring Instruments

2.3 S9074-AR- Gib-010/278, Requirements for Fabrication Welding and Inspection, and Casting Inspection and Repair for Machinery, Piping, and Pressure Vessels

2.4 T9074-AS- GIB-010/271, Requirements for Nondestructive Testing Methods

2.5 MIL-STD-2035, Nondestructive Testing Acceptance Criteria

3. REQUIREMENTS:

3.1 Accomplish testing of each new and disturbed piping systems in accordance with 2.1.

3.1.1 Each master and backup test gauge shall conform to gauge range and graduation shown on Table 504-6-1 of 2.2. The backup gauge shall be cross-checked to the master hydrostatic test gauge up to the maximum test pressure just prior to start of testing. Master and backup gauges shall track within 2 percent of each other.

3.1.1.1 Each master and backup test gauge used for vacuum testing shall consist of 2 compound gauges with a 30 inch-0-30 PSI range.

(I) "LIQUID PENETRANT INSPECTION" or "MAGNETIC PARTICLE INSPECTION"

3.1.2 Accomplish liquid penetrant or magnetic particle test on root layer of all P-1 and/or P-LT welded joints in accordance with Paragraph 505-11.1.2.6.a(1) of 2.1, and the requirements of 2.3 and 2.4 in systems which exceed the reduced energy criteria of operating conditions of 200
degrees Fahrenheit or 500 PSIG. The accept or reject criteria shall be in accordance with Class One of 2.5. (See 4.2)

(I) "LIQUID PENETRANT INSPECTION"

3.1.3 Accomplish liquid penetrant tests on final layer of all P-1 and/or P-LT welded joints in accordance with Paragraph 505-11.1.2.6.a(1) of 2.1 and the requirements of 2.3 and 2.4 in systems which exceed the reduced energy criteria of operating conditions of 200 degrees Fahrenheit or 500 PSIG. The accept or reject criteria shall be in accordance with Class One of 2.5. (See 4.2)

(I) "LIQUID PENETRANT INSPECTION"

3.1.4 Accomplish liquid penetrant tests on final layer of all Class P-2 welds in accordance with Paragraph 505-11.1.2.6.a(2) of 2.1 and the requirements of 2.3 and 2.4 in systems which operate above 200 degrees Fahrenheit. The accept or reject criteria shall be in accordance with Class 2 of 2.5. (See 4.2)

(I)(G) "VISUAL INSPECTION - SHOP TEST" (See 4.3)

3.1.5 Accomplish a shop hydrostatic test of replacement piping, fittings, and components that can be tested in the shop or cannot be tested and inspected IAW paragraph 3.1.6 after installing in to the ship’s system for evidence of external leakage and/or deformation. Allowable external leakage and/or deformation: None.

(I)(G) "VISUAL INSPECTION - HYDROSTATIC, LOW PRESSURE AIR, VACUUM, OR OPERATING PRESSURE TEST" (See 4.3)

3.1.6 Visually inspect the pressurized system or system under vacuum for evidence of external leakage and/or deformation. Allowable external leakage and/or deformation: None.

3.1.6.1 Each joint requiring inspection shall remain uninsulated and unpainted until completion of successful inspection. Each joint tested and inspected under 3.1.5 would not require re-inspection unless the joint was disturbed during installation. These joints can be insulated and painted.

3.1.6.2 Provide a sketch of that portion of the system to be tested, showing the location of blanks, isolation valves, test connection, joints previously tested/inspected under 3.1.5 and the location of air vents to vent air. Sketch shall be on the test site during the accomplishment of the test.

(V) "STATIC TEST"
3.2 Accomplish a static head pressure test of each new and disturbed gravity drain piping (unpressurized piping), using clean, fresh water for a minimum of 30 minutes. Allowable leakage: None.

(V)(G) "OPERATIONAL TEST"

3.3 Accomplish an operational test of each new and disturbed gravity drain piping for proper operation and unobstructed flow.

(V)(G) "OPERATIONAL TEST"

3.4 Accomplish an operational test of each new and disturbed sounding tube piping by inserting a 16-inch theft sampler into sounding tube until it bottoms. Accomplish the test a minimum of 4 times for each sounding tube. There shall be no binding or sticking of sampler during this test.

4. NOTES:

4.1 Boiler pressure vessel piping is defined as, "The piping from the pressure vessel drum or header up to the first valve off the pressure vessel drum or header."

4.2 Nondestructive testing requirements in 3.1.2, 3.1.3, and 3.1.4 apply only when the operating pressure test option has been selected.

4.3 Test pressure and test medium will be specified in invoking Work Item.
1. **SCOPE:**

   1.1 Title: Physical Security at a Private Contractor Facility; accomplish

2. **REFERENCES:**

   2.1 DODI 2000.16 DOD ANTITERRORISM (AT) PROGRAM IMPLEMENTATION: DOD FORCE PROTECTION CONDITION (FPCON) SYSTEM
   2.2 33 CFR Part 165, Regulated Navigation Areas and Limited Access Areas
   2.3 33 CFR Part 334, Danger Zone and Restricted Area Regulations

3. **REQUIREMENTS:**

   3.1 The requirements of 3.2.5, 3.2.6, 3.2.7, 3.2.8, and 3.2.9 are Force Protection measures the Contractor shall be able to meet at a Private Contractor Facility under Force Protection Conditions Normal, Alpha, Bravo, Charlie, and Delta, respectively. The solicitation shall define the Force Protection Condition. Additional measures may be directed by the SUPERVISOR in accordance with 2.1. Implementation of any other measures, when directed by the SUPERVISOR, will be the subject of an equitable adjustment.

   3.2 Provide a written plan which shall be implemented for the protection of personnel, U.S. Naval vessels, Government-owned floating dry docks, work in process, and the material and equipment to be installed therein, at the Contractor's facility, which addresses the requirements of this Standard Item. The written plan shall, as a minimum, be identified as "For Official Use Only (FOUO)".

   3.2.1 Provide written designation to the SUPERVISOR of the individual who will be in charge of the security effort.

   3.2.2 Attend security coordination meeting with Ship's Force and the SUPERVISOR to brief the Contractor's security plan and procedures prior to security conference of 3.2.3.

   3.2.3 Conduct a security conference with federal, state, and local authorities, Ship's Force, and the SUPERVISOR within 45 days prior to ship's arrival to ensure all parties are in agreement with the security procedures while the ship is in port.
3.2.4 Coordinate the establishment and enforcement of the land and water areas adjacent to U.S. Naval vessels as restricted areas or limited waterway areas in accordance with 2.2 or 2.3, in cooperation with the Navy, U.S. Coast Guard, and Army Corps of Engineers.

3.2.5 The Security Plan shall include the roles and responsibilities for application of deadly force in the protection of US Navy assets and crew.

3.2.6 Under Force Protection Condition NORMAL, establish and maintain physical security boundaries, positive access controls, and other security measures to provide safeguards against hazards, including unauthorized entry, malicious mischief, theft, espionage, sabotage, and terrorism at Contractor's facility in accordance with Attachment A, to include the following:

3.2.6.1 Perimeter physical barriers
3.2.6.2 Perimeter openings control
3.2.6.3 Access and circulation control
3.2.6.4 Armed security force
3.2.6.5 Protective lighting
3.2.6.6 Signs and posting of boundaries
3.2.6.7 Security force communications
3.2.6.8 Random antiterrorism measures (RAM)

3.2.7 Under Force Protection Condition ALPHA, establish and maintain the following requirements in addition to 3.2.5:

3.2.7.1 Additional plant boundary protection
3.2.7.2 Assistance from state, local, and other law enforcement agencies
3.2.7.3 Increased personnel, property, and perimeter security checks
3.2.7.4 Increased security force manning commensurate with the additional actions directed under this section
3.2.7.5 Increased waterfront surveillance
3.2.7.6 Place vehicle barriers to reduce ease of vehicular access adjacent to the ship
3.2.7.7 Brief the security force and the SUPERVISOR concerning the threat, the security precautions being implemented, and what action is to be taken with respect to strangers, unidentified vehicles, abandoned parcels or suitcases, or unusual activity in or near the Contractor's facility.

3.2.7.8 Increase security spot-checks of vehicles, persons, and buildings near U.S. Naval vessels.

3.2.7.9 Limit access points for vehicles and personnel commensurate with performance of the Job Order.

3.2.7.10 Inspect 100 percent of commercial vehicles entering the controlled industrial area and/or piers.

3.2.7.11 Test procedures for mass notification.

3.2.7.12 Review requirements related to implementing additional security actions in the event of an increased threat.

3.2.7.13 Review barrier plans.

3.2.8 Under Force Protection Condition BRAVO, establish and maintain the following requirements in addition to 3.2.5 through 3.2.6:

3.2.8.1 Request the Captain of the Port or U.S. Coast Guard District Commander to activate the Naval Vessel Protection Zones in accordance with 2.2.

3.2.8.2 Establish communications with state, local, and other law enforcement, fire, and emergency management agencies.

3.2.8.3 At the beginning of each workday, as well as at random intervals, inspect the interior and exterior of buildings in regular use for suspicious packages. Secure and regularly inspect buildings, rooms, and storage areas not in regular use for unusual conditions or suspicious activity.

3.2.8.4 Clear the area within 100 feet (30.5 meters) of U.S. Naval vessels of all non-mission-essential materials and vehicles as determined by the SUPERVISOR.

3.2.8.5 Review requirements related to implementing additional security actions in the event of an increasing threat.

3.2.8.6 Identify paths for critical materials to maintain production.

3.2.8.7 Brief all employees working at the facility, including the ship's crew and subcontractor employees, concerning the threat,
the security precautions being implemented and what action is to be taken with respect to strangers, unidentified vehicles, abandoned parcels, containers or suitcases, and any other suspicious or unusual activity.

3.2.8.8 Increase security presence and surveillance, and randomly inspect vehicles, persons and accompanying items entering the facility.

3.2.8.9 Review mail and material screening procedures at the facility.

3.2.9 Under Force Protection Condition CHARLIE, establish and maintain the following requirements in addition to 3.2.6 through 3.2.7:

3.2.9.1 Inspect the interior and exterior of buildings in regular use for suspicious activity or objects at frequent intervals.

3.2.9.2 Increase protection for crew berthing to reduce vulnerability.

3.2.9.3 List work that would be required to permit safe relocation of the vessel and its crew to the nearest Government facility as designated by the SUPERVISOR.

3.2.9.4 Determine work that will be stopped if the next higher Force Protection Condition is implemented. Determine a list of and inform mission-essential personnel, including Contractor work force. Communicate critical Work Items to the SUPERVISOR, ship's Commanding Officer, and/or Shipyard Commander.

3.2.9.5 Increase surveillance in and around waterside perimeter and facilities. Position floats, work boats, and barges along the sides of the U.S. Naval vessel and any occupied berthing barges to create a buffer zone.

3.2.9.6 Limit access points to strictly enforce entry control. Inspect all vehicles entering the controlled industrial area and/or pier. Review access procedures to ensure no unauthorized personnel gain access into the facility.

3.2.10 Under Force Protection Condition DELTA, establish and maintain the following requirements in addition to 3.2.6 through 3.2.9:

3.2.10.1 Immediately notify state and local law enforcement agencies and the U.S. Coast Guard of any knowledge of terrorist activity, suspicious persons or criminal activity.

3.2.10.2 Limit access points to the absolute minimum.

3.2.10.3 Strictly control all facility access points, ensure positive identification of all personnel, and search all vehicles and their
contents, suitcases, briefcases, and packages entering the Contractor's facility.

3.2.10.4 Accomplish continuous security patrols of all areas of the facility, to include the waterfront, occupied by U.S. Naval vessels and personnel.

3.2.10.5 Prepare U.S. Naval vessels for movement away from the Contractor's facility when directed by the SUPERVISOR.

3.2.10.6 Discontinue work except that directly related to the integrity of the vessel and as otherwise directed by the SUPERVISOR.

3.2.10.7 Implement the plan to deny access to individuals not essential or critical to the overall mission of protecting and/or moving vital Navy assets onto the facility and occupied buildings.

3.3 Submit one legible copy, in approved transferrable media, of the plan to the SUPERVISOR for review and approval no later than 15 days prior to availability start date.

3.3.1 Accomplish the requirements of the approved plan.

3.3.2 Any changes at the Contractor's facility affecting physical security or the approved plan shall be submitted to the SUPERVISOR for approval within 24 hours.

3.4 Provide procedures for coordinating the Contractor's security efforts with those of the SUPERVISOR, the Commanding Officer's designated representative, and any subcontractor when using the subcontractor's facility to host the vessel.

3.4.1 Identify whose physical security plan, prime or subcontractor, will be used for the availability.

3.5 Prepare an itemized statement of cost incurred for the work covered by this Standard Item. Submit one legible copy, in approved transferrable media, of the statement to the SUPERVISOR within 30 days of delivery or redelivery (as applicable) of the ship. The statement shall itemize the total direct labor hours with the applicable direct labor rates, overhead, General and Administrative (G&A) and/or other indirect rates, material, material handling charges, subcontractor costs, Other Direct Costs (ODC), and freight costs (as applicable). Where final overhead rates are not available, use the most current billing rate(s).

3.5.1 The Government may perform an audit of the Contractor's statement of cost incurred. The Contractor, upon request, shall make available to the SUPERVISOR all records, related correspondence, and the substantiating data upon which the statement of cost incurred is based.

4. **NOTES:**
4.1 U.S. Naval vessel means any vessel owned, operated, chartered, or leased by the U.S. Navy; any pre-commissioned vessel under construction for the U.S. Navy, once launched into the water; and any vessel under the operational control of the U.S. Navy or a Combatant Command.

4.1.1 For a non-nuclear new construction vessel in a private shipyard, a physical water barrier or a dedicated security boat, detailed in Attachment A, are applicable at Crew Move Aboard.

4.2 Controlled Industrial Area (CIA) means an area of the shipyard in which construction, conversion, repair, or overhaul of U.S. Navy vessels is conducted.

4.3 USFF AT OPORD 3300 (series) provides general security requirements for Fleet Activities. The SUPERVISOR will use this reference as a guide in applying force protection measures appropriate to the unique situation at each Contractor’s facility.

4.4 A vehicle is defined as a means of transportation that transports people or objects.

4.5 Water Barrier, is a continuous, modular, floating barrier that can be installed in lengths ranging from a few hundred feet to over a mile. The barrier is primarily intended to stop and/or delay hostile high-speed waterborne craft 65 feet or less. A water barrier is but one element of an integrated system.
ATTACHMENT A
OTHER SECURITY MEASURES

1. Perimeter Physical Barriers:

a. Physical barriers, including both natural (e.g., mountains, swamps, thick vegetation, rivers, bays, cliffs) and structural (e.g., Water Barriers, fences, walls, doors, gates, vehicle barriers) which control, delay, impede, and discourage access by unauthorized persons. To be effective, such barriers shall be augmented by armed security force personnel or other means of protection and assessment.

b. Physical barriers shall be employed along Contractor facility perimeters. The barrier or combination of barriers used shall afford an equal degree of continuous protection along the entire perimeter.

c. Structural barriers such as fences or walls shall be a minimum of 8 feet in height, and any uncontrolled opening shall be securable to afford protection against unauthorized entry.

d. The waterfront security required to protect the Navy asset is dependent on the asset. Damage to the dry dock gate could result in flooding of the dry dock resulting in possible damage or loss of the vessel. Therefore, the dry dock gate is not considered to be a physical or structural barrier and must be protected. Additionally, floating drydocks shall be protected commensurate with the provisions for the docked asset.

e. Closed Circuit Television (CCTV) installs will be planned for installation by using Chapter 4 of the Unified Facilities Criteria (UFC) 4-021-02NF. Plans will be submitted to the SUPERVISOR for approval, prior to installation. This UFC document provides guidance on how to design electronic security systems required by the current antiterrorism/force-protection environment.

<td>- Use water barriers to stop small boat threat</td>
</tr>
</tbody>
</table>
2. **Perimeter Openings**: Openings in the perimeter barrier shall be operated by the contractor and shall be kept to the minimum necessary for the safe and efficient operation of the Contractor facility. Access through such openings shall be controlled, or the openings shall be secured.

3. **Access and Circulation Control**:
   
   a. A system of personnel and vehicle movement control is required at Contractor facilities. The degree of control shall be in keeping with efficient operations yet afford defense-in-depth to provide graduated levels of protection.
   
   b. Armed or unarmed sentries may be assigned to check identification at pedestrian and vehicle entry control points to restrict and control movement by vehicles and unauthorized personnel from gaining access into the facility.
   
   c. The facility shall coordinate with the local postal and courier services in developing a plan for ensuring that all mail and courier delivered packages to the facility are properly screened by the delivery service prior to being delivered to the contractor facility's mailroom.

4. **Armed Security Force**: The Contractor security force shall consist of designated persons specifically organized, trained, and equipped to provide physical security. Security Force shall be armed with lethal and non-lethal weapons, and qualified in accordance Federal and/or State laws to carry and use firearms in the performance of protecting personnel and/or property.

5. **Protective Lighting**:
   
   a. Protective lighting, to include work lighting, increases the effectiveness of security forces and has considerable deterrent value.
   
   b. Contractors shall provide adequate illumination to discourage or detect attempts to enter facilities and reveal the presence of unauthorized persons within such areas.
   
   c. Lighting shall support security force activities such as identification of badges and personnel at perimeter openings, surveillance of facility perimeter/avenues of approach, and inspection of unusual or suspicious circumstances.

6. **Signs and Posting of Boundaries**:
   
   a. Trespass laws applicable to the jurisdiction in which the facility is located will govern signs and posting of perimeter boundaries at Contractor facilities.
b. Size, placement, and use of any language in addition to English should be appropriate for the stated purpose. Signs will read essentially as follows:

WARNING
RESTRICTED AREA
KEEP OUT
Authorized Personnel Only

c. Signs shall be posted at regularly-used points of entry and at intervals along the facility perimeter such that any reasonable person would conclude that everyone crossing the boundary into the facility would have been informed of the above.

7. Security Force Communications:

a. The activity security force requires sufficient equipment to maintain continuous, secure 2-way voice communications between elements (fixed/mobile posts, and supervisory personnel) of the security force and U.S. Naval vessel's watch section. Establish communications between the Contractor's security force and the U.S. Naval vessel's watch section.

b. The facility shall maintain a communication system for use in emergencies or crisis situations to facilitate effective two-way voice communications among state and local law enforcement agencies and the U.S. Coast Guard.

c. The facility shall establish a communication system, pre-recorded and/or live-voice, but capable of broadcasting information to all building occupants or personnel in the immediate vicinity during or prior to an emergency or crisis situation.

8. Random Antiterrorism Measures (RAM): As a deterrent, randomly apply the measures from higher Force Protection Conditions and other RAM including:

a. Keep personnel involved in implementing increased security requirements on call.

b. Inspect deliveries to protect against the introduction of unauthorized material.

c. Cars and other non-mission essential items shall be moved 100 feet from U.S. Naval Vessels and buildings where the crew is located or work is in progress.

d. Inspect mail for letter or parcel bombs.
e. On entry of visitors to the facility, physically inspect them and accompanying items.

f. Search vehicles entering the facility.

g. Erect barriers and obstacles to provide additional traffic controls to areas where U.S. Naval Vessels and crews are located.

h. Consult local authorities about closing public roads and facilities that might make sites more vulnerable.

i. Other site-specific RAM that shall be incorporated into the Contractor's physical security plan and/or company-specific implementation procedures.
Addendum One to Attachment A
of Standard Item 009-72

Waterborne Security Boats

Mission

The boats are primarily used to provide a dedicated waterborne presence and
deterrence in the immediate vicinity of no more than three (3) U.S. Naval
Assets. The word “dedicated” is defined as on-site, 24-hours a day, 7 days a
week, and responsive solely to the operational confines of the protected
asset(s). Normally, a single waterborne security boat will be designated for
each U.S. Naval Asset. Waterborne security boats must be capable of
conducting continuous patrols in the immediate vicinity of the protected
asset(s), or continuous monitoring of a patrol zone when assigned to protect
clustered U.S. Naval Assets (a patrol zone shall not exceed 200 yards and
shall not include more than 3 protected assets).

Waterborne security boats will be used to provide restricted area enforcement
by providing a layered defense and deterrence mechanism. This includes the
ability for early detection of intruders under day/night, and all-weather
conditions.

Projected Operating Environment

The projected operating environment of the waterborne security boats will
normally be in protected harbors or inland waterways. These boats will be
expected to operate in varying temperatures depending on the climate at the
location the boat(s) will be used. Temperatures can be expected to vary from
below 32 degrees Fahrenheit to above 100 degrees Fahrenheit. Storm conditions
and warnings often issued in the operating environment include: small craft,
gale, storm, and hurricane warnings.

General Characteristics

There are no specific hull material requirements for waterborne security
boats. Waterborne security boats must be visible from distances of at least
500 yards to the unaided eye, during periods of unrestricted visibility and
must possess all safety equipment required by federal and local regulations.
Waterborne security boats must also display a placard on both sides of the
vessel with the word "Security" of sufficient size and reflective composition
to be visible from 500 yards to the unaided eye, during periods of
unrestricted visibility (250 yards during periods of low-light) and in
accordance with federal and local regulations. These boats must possess a
hailing mechanism capable of warning/hailing approaching craft at 500 yards.
Hailing capability may consist of modified human voice (e.g., through the use
of a bull horn, PA system, etc.), or mechanical (e.g., siren, pulsating tone,
etc.).

The boat must have a weather resistant spot/flood light capable of rotating
360 degrees with instant start/restart and at least 6,000,000 candlepower.
The boat must have a fully operable marine band radio (VHF).

Length range: 27 feet to 40 feet  And why:

This size is necessary for safety and mission accomplishment, ease of discernment, crew accommodation, visual deterrent, and ease of maneuverability when responding to contacts of interest during all-weather patrols.

Breadth  8 feet 6 inches  And why:

The minimum breadth of 8 feet 6 inches is necessary to provide a stable platform, crew accommodation, visual deterrent, ease of maneuverability, safety and mission accomplishment when responding to contacts of interest during all-weather patrols.

Maximum Draft: 4.5 feet  The maximum draft of 4.5 feet is necessary for ease of maneuverability in and around the protected assets.

Number of Crew: Two. At least one coxswain and one observer/lookout shall be assigned to each boat for the duration of the patrol period. These personnel shall be qualified in the operation of the security boat, and shall be qualified with, and armed with personal protective weapons in accordance with SECNAVINST 5500.29C, DoDD 5210.56, as permitted by state and local regulations.

Required Cargo Capacity or Deck Space: Stowage space must be sufficient to accommodate at least four (including 2 spare) life vests, a flood light, a first-aid kit, a back board, and specialized tactical equipment, etc.

Propulsion System (e.g., Diesel inboard with outdrive, Diesel inboard with waterjet, or gasoline outboard) and why:

The propulsion system must be able to conduct multiple idle/sprint missions during each patrol period. Because of the limited operating area, propulsion systems must be capable of rapidly responding to a contact of interest (normally within the 200 yard operating zone) and rapidly reversing.

Speed 20kts. A minimum speed of 20kts is necessary to provide the capability to rapidly respond to contacts of interest or rapidly move out of the line of fire from shipboard responders in the event of a deadly engagement.
1. SCOPE:

1.1 Title: Shipboard Electrical/Electronic Cable Procedure; inspect, test, install, remove, and repair

2. REFERENCES:

2.1 Standard Items

2.11 NSTISSAM TEMPEST/2-95, Red/Black Installation Guidance (FOUO)

3. REQUIREMENTS:
3.1 Ensure only Qualified Personnel prepare electrical cable endings to receive connectors, assemble connector parts on the cable endings, attach the connectors to the cable endings, supervise, and inspect the execution of the process. (See 4.5 and 4.6)

3.1.1 Submit one legible copy, in hard copy or approved transferrable media, of the credentials of the Qualified Personnel accomplishing connector fabrication, Supervision, and QA Inspection to the SUPERVISOR prior to the start or continuation of work. Submit any change as it occurs.

3.2 Inspect existing affected cable installations and interferences within the first 25 percent of contract completion. Inspect for conformance in accordance with 2.2, and 2.4.

3.2.1 Submit one legible copy, in hard copy or approved transferrable media, of a report listing inspection results including cable installation conditions not in compliance with 2.2 and 2.4 to the SUPERVISOR, using Attachments A and B, within 4 days of completion of inspections. (See 4.7)

3.3 Accomplish a shipboard electrical/electronic cable test on affected cables.

3.3.1 Accomplish an insulation resistance test of each electric cable conductor using the appropriate direct current megger using Table 300-3-4 of 2.5 for guidance.

3.3.1.1 Disconnect low voltage equipment associated with circuits to be tested to prevent damage during tests.

3.3.1.2 Ensure the minimum acceptable readings of each cable conductor to ground and between conductors are:

<table>
<thead>
<tr>
<th>Circuit</th>
<th>Minimum Acceptable Reading</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lighting Circuit</td>
<td>0.5 Megohm</td>
</tr>
<tr>
<td>Power Circuit</td>
<td>1.0 Megohm</td>
</tr>
<tr>
<td>Degaussing Circuit</td>
<td>0.1 Megohm</td>
</tr>
<tr>
<td>Interconnecting Control Circuit</td>
<td>1.0 Megohm</td>
</tr>
<tr>
<td>Interior Communication Circuit</td>
<td>0.2 Megohm</td>
</tr>
<tr>
<td>Sound Powered Telephone Circuit (with telephone disconnected)</td>
<td>0.05 Megohm</td>
</tr>
<tr>
<td>Multiconductor Cables (with circ mil less than 1700)</td>
<td>0.05 Megohm</td>
</tr>
</tbody>
</table>

3.3.1.3 Ensure the minimum acceptable reading of coaxial cable are in accordance with Section 2.8.3.3 of 2.3:

<table>
<thead>
<tr>
<th>Cable Type</th>
<th>Length (feet)</th>
<th>Insulation Resistance in megohms</th>
</tr>
</thead>
<tbody>
<tr>
<td>Polyethylene or</td>
<td>100 (or less)</td>
<td>40,000</td>
</tr>
<tr>
<td>Dielectric Material</td>

</tr>
<tr>
<td>Dielectric Material arranged in layers of conducting and non-conducting rubber</td>
<td>Up to 1,000</td>
<td>500</td>
</tr>
</tbody>
</table>

3.3.1.4 Discharge coaxial cable to ground following insulation resistance test.

3.3.2 Test each cable conductor for continuity and complete circuit. Ensure terminal connections are tight.

3.4 Install each new cable, cableway, penetration, sleeving, lug, and connector in accordance with 2.2, 2.3, 2.6 and referenced drawings, to support work required by the individual Work Items. (See 4.2.1)

3.4.1 Ensure new cable conforms to MIL-DTL-24643 (low smoke) and MIL-DTL-24640 (lightweight). New Radio Frequency (RF) cables must conform to MIL-DTL-17 (low smoke).

3.4.2 Use existing cableways and penetrations wherever possible.

3.4.3 Ensure penetrations are the correct size in accordance with 2.2.

3.4.4 Install new cable conductor identification sleeving conforming to SAE-AMS-DTL-23053, Class One, white, marked with indelible ink. Mark in accordance with the referenced drawings and/or equipment technical manual.

3.4.5 Install new lugs of correct size and shape conforming to MIL-T-16366 or SAE-AS7928. Do not cut off strands of copper to reduce size of lead to fit lug. Use correct barrel and hole size.

3.4.6 Accomplishment of local air hose tests after the installation, removal and relocation of cables of each new and disturbed multi-cable transit device, multi-cable penetrators, stuffing tubes, kick pipes, and cable penetrations of tightness boundaries must be in accordance with NAVSEA Standard items (See Note 4.8).

3.4.7 Band disturbed cable in accordance with Part 4 of 2.2.

3.4.8 Bond and ground cable in accordance with 2.6.
3.4.9  Accomplish the requirements of 3.3 through 3.3.2 immediately prior to conductor or cable termination.

3.4.10 Connect each cable using referenced drawings.

3.4.11 Install new cable identification tags in accordance with 2.2 and 2.3.

3.5 Disconnect and remove each cable to be replaced in its entirety. Record and retain electrical hook-up data. (See 4.2.7)

3.5.1 Accomplish the requirements of 3.4 through 3.4.11.

3.6 Identify, disconnect and isolate each cable to be pulled back, reused, rerouted, relocated, or repurposed. Record and retain electrical hook-up data. (See 4.2.2 through 4.2.5)

3.6.1 Inspect each cable end to be disconnected for correct conductor identification sleeving, including size, type, and legible lettering in accordance with referenced drawing. Ensure lugs are secured to leads and are of correct size and type, and the insulation is not damaged. Accept and reject criteria for lugs and sleeving for cables must be in accordance with Chapters 3 and 4 of 2.7.

3.6.2 Accomplish the requirements of 3.3 through 3.3.2 for disconnected cables.

3.6.3 Remove each cable from equipment and pull back to predetermined locations. Coil each cable and secure to prevent damage. Protect disconnected connectors and wiring from the industrial environment and weather.

3.6.4 Accomplish the requirements of 3.4.2 through 3.4.11. Use retained electrical hook-up data.

3.7 Identify, disconnect, isolate and remove each cable designated for removal. (See 4.2.6)

3.7.1 Blank each bulkhead, deck penetration, and multi-cable transit device from which cable was removed and which will not be reused, in accordance with Part 3 of 2.2.

3.7.2 Blank each unused hole in equipment, in accordance with 2.2.

3.7.3 Remove unused hangers from which cable was removed and which will not be reused, in accordance with Section 070a of 2.8.

3.7.4 Install new banding for cableways affected by cable removals, in accordance with Part 4 of 2.2.
3.7.5 Accomplish the requirements of 3.4.6.

3.8 Weatherproof and seal connectors exposed to the weather in accordance with 2.9.

3.9 Remove, install, and relocate cables which are part of the secure electrical information processing systems or are located within a secure processing space in accordance with 2.10 and 2.11.

3.10 Submit one legible copy, in hard copy or approved transferrable media, of a report listing results of the requirements of 3.4.9 and 3.6.2, including circuit numbers, lead numbers, and readings obtained, to the SUPERVISOR within 3 days of completion of tests.

4. NOTES:

4.1 The requirements in this Standard Item apply to installation, repair, disconnect, connect, removal, relocation, test, and inspection of electrical/electronic cables affected by the work required by individual Work Items on Naval surface ships and submarines and personnel supporting these tasks. This Standard Item applies to the following cable usages; new, removed, replaced, pulled back, reused, rerouted and repurposed.

4.2 Cable Definitions

4.2.1 New Cable – a cable not previously installed.

4.2.2 Pulled Back Cable – a cable disconnected and physically removed from a wireway, conduit, or cableway to protect the cable from industrial use.

4.2.3 Reused Cable – a cable disconnected from the equipment to facilitate equipment removal.

4.2.4 Rerouted Cable – a cable disconnected from equipment and physically moved to a new wireway, conduit, or cableway and then reconnected in the new location to the same equipment.

4.2.5 Repurposed Cable – a cable with termination points changed.

4.2.6 Removed Cable – a cable disconnected from equipment and physically removed in its entirety and not being replaced.

4.2.7 Replaced Cable – a cable disconnected from equipment and physically removed to install with a new cable.

4.3 Cable installations consist of cable, banding, boxes, equipment, penetrations, cableways, hangers, cable separation and connection(s) and associated components.
4.4 Electrical connector fabrication is the preparation of cable endings to receive multi-pin connectors, coaxial connectors, and securing connectors to cables.

4.5 A Qualified Person is defined as a person who has successfully completed connector fabrication training and meets the qualification requirements stated below.

4.5.1 Emphasizes the importance of connector fabrication to the performance and long-term reliability of shipboard systems.

4.5.2 Uses 2.2, 2.3, and 2.7 for basic instructional material supplemented by connector manufacturer's instructional material as desired.

4.5.3 Requires classroom lecture, study, and demonstration of each topic in Appendix A of Part 5 of 2.2.

4.5.4 Requires individual student practice in the use of specified tools and performance of connector fabrication techniques and procedures described in Appendices B through H of Part 5 of 2.2 and Paragraph 2-20.2 of 2.3.

4.5.5 Requires a minimum of 32 hours of combined classroom lecture and laboratory practice in the type of connectors to be fabricated.

4.6 Connector fabrication qualifications consist of:

4.6.1 Connector Fabricator Qualification requirement: Successful completion of the training course required in 4.5.5 followed by successful completion of 40 hours on-the-job training under the tutelage of a qualified connector fabricator or a qualified connector fabrication supervisor in the type of connectors to be fabricated.

4.6.2 Connector Fabrication Supervisor Qualification requirement: Successful completion of the classroom training required in 4.5.5 plus be the incumbent of a supervisory electrical or electronic mechanic position.

4.6.3 Connector Fabrication Quality Assurance Inspector Qualification requirement: Successful completion of the classroom training required in 4.5.5 plus be the incumbent of a quality assurance specialist or inspector position.

4.7 Attachment B is provided as an aid to completion of Electrical Cableway Inspection Form.

4.8 If local air hose test of 3.4.6 is required, the use of Standard Item 009-25 of 2.1 “Structural Boundary Test; accomplish” will be specified in the Work item.

4.9 If cleaning and painting for new and disturbed surfaces are
required; the use of Standard Item 009-32 of 2.1 “Cleaning and Painting Requirements; accomplish” will be specified in the Work Item.

   2.6 Joint Fleet Maintenance Manual (JFMM)

   2.7 S0400-AD-URM-010/TUM, Tag-Out User’s Manual

   2.8 S9086-KC-STM-010/CH-300, Electric Plant - General

   2.9 29 CFR Part 1904.7, Recording and Reporting Occupational Injuries and Illness, General Recording Criteria

3. **REQUIREMENTS:**

   3.1 Establish, document, implement, and maintain a written Occupational Safety and Health Plan appropriate for the work to be accomplished. Provide a copy of the Occupational Safety and Health Plan to the SUPERVISOR upon request. At a minimum, the Occupational Safety and Health Plan **must** include the following elements:

   3.1.1 Method(s) of communicating potential hazards, prior to the start of any task, to contractor’s employees, subcontractor employees, and other potentially affected personnel.

   3.1.1.1 Hazards to be addressed **must** include but not be limited to emergency evacuation and muster policy, confined space, and energy control.
3.1.2 A process for performing a Job Safety Analysis/Job Hazard Analysis (JSA/JHA) for:

3.1.2.1 Processes and equipment new to the worksite.

3.1.2.2 Existing processes and equipment that have been involved in mishaps or near misses.

3.1.2.3 Maintain a copy of each JSA/JHA which **must** be available for review by the SUPERVISOR upon request.

3.1.3 A process for identification, communication, abatement, and prevention of unsafe conditions and work practices.

3.1.4 Method(s) to account for employees and subcontractors working in isolated areas, e.g. Confined spaces.

3.1.5 Method(s) to ensure work areas and walkways are adequately illuminated.

3.1.6 Method(s) to establish and maintain good housekeeping practices.

3.1.7 Method(s) to ensure that medical services and first aid are readily accessible.

3.1.8 Method(s) to provide adequate and readily accessible sanitation facilities.

3.1.9 A process for notifying the Quarterdeck and initiating emergency response.

3.2 Update the Safety Plan as circumstances warrant or at the request of the SUPERVISOR.

3.3 Provide a Safety Point of Contact to the SUPERVISOR before each project.

3.4 Provide appropriate Personal Protective Equipment (PPE) for employees and monitor utilization in accordance with 2.2.

3.5 Mark or tag material and equipment brought aboard naval facilities and vessels. Marking or tags must endure the repair process, and must stay attached and/or be readable until the material or equipment is dismantled.

3.5.1 Marking/tags **must** display the company name, point of contact, phone number, item description and contents.
3.6 Provide the SUPERVISOR a complete list of subcontractors (e.g., company name) hired by the contractor prior to subcontractor(s) commencing work aboard naval facilities or vessels.

3.6.1 Contractor must monitor, inspect, oversee, and abate hazardous or deficient conditions related to the conduct and work practices of subcontractor(s).

3.7 Ensure Material Handling Equipment (MHE) and Aerial Work Platforms (AWP) are operated and maintained in accordance with 2.3 and manufacturer's specifications.

3.7.1 Ensure operators of MHE and AWP meet applicable training and licensing requirements and provide documentation to the SUPERVISOR upon request.

3.7.2 Ensure operators conduct a daily operational check of the MHE or AWP before use.

3.7.2.1 Maintain copies of the daily operational checks for the duration of the performance period of the prime contract and provide copies to the SUPERVISOR upon request.

3.8 "Screw type" hose clamps are prohibited on any pressurized hose (e.g., compressed gas and air hoses).

3.9 Temporary lights must have 3-conductor cable, guard or shield, hook, and lamp holder. Exposed non-current-carrying metal parts of the fixture must be grounded either through a third wire in the cable containing the current conductors, or through a separate wire that is grounded at the fixture's voltage source.

3.9.1 Temporary lighting fixtures must not be used to power portable electric tools.

3.9.2. Maintain temporary lights in a safe condition. Splices must not be permitted in magazine and ammunition handling spaces.

3.10 Temporary services must be suspended using non-combustible high temperature devices, brackets, or material that meets test requirements of 2.4. Plastic tie wraps, string, rope, or other combustible material must not be used.

3.10.1 All temporary services must be positively identified with durable unique markings that include maintenance activity name, service type, location, and shore side shut-off points. Tags must be located (at a minimum) at the source, point of entry aboard ship, at each connection point (including quick disconnects), and termination point. Vital services must be designated by the SUPERVISOR.

3.11 Rigging of temporary services, such as but not limited to hoses, electrical lines, welding leads, and temporary lights must be kept clear of the decks utilizing temporary support trees or ship's structural members,
such as beams, braces, and welded brackets and be arranged to minimize tripping and other safety hazards and to allow free access through doors, hatches, and passageways.

3.11.1 Temporary service lines must be routed to allow emergency access and egress to all areas of the ship and must not impede damage control and watchstander performance of duties. Where appropriate, run temporary services outboard to keep passageways clear.

3.11.2 Remove temporary services from the ship when no longer needed.

3.11.3 Evaluate temporary services during the daily fire prevention and housekeeping inspection made jointly with the SUPERVISOR and Ship’s Force. Discrepancies must be promptly corrected.

3.11.4 Shipboard temporary ventilation systems used for exhausting toxic contaminants and/or flammable vapors must be constructed so that ducting within confined and enclosed spaces is under negative pressure.

3.11.4.1 Use fire retardant ventilation ducting. Proper documentation of fire retardancy must be available for review upon request of the SUPERVISOR.

3.12 Each employee must have a flashlight or other adequate light source onboard a navy vessel.

3.13 Notify personnel of lifting operations by audible alerts during crane operations (e.g., whistles or horns). Audible alerts must be utilized throughout the lifting evolution.

3.14 Comply with the fall protection requirements of 2.2.

3.15 Scaffolding must be built, maintained, and dismantled in accordance with 2.5 and manufacturer's specifications or under the direction of a Professional Engineer.

3.15.1 Provide manufacturer's specifications to the SUPERVISOR upon request.

3.15.2 Tag all scaffolding. Tags must endure the repair process, and must stay attached and be readable.

3.15.2.1 Tags must display the stage of completion, scaffold load capacity, and availability for use.

3.15.3 Erect scaffolding so that a swing gate is installed at each working level accessed by a ladder.

3.15.4 Ensure marine hanging scaffolding meets the guidance provided in 2.5.
3.15.5 When there is a danger of tools, materials, or equipment falling from a scaffold and striking employees below during the erection, dismantling, or altering of scaffolding, the area below the scaffold to which objects can fall must be barricaded and adequately identified with signs and danger tape. Employees not involved with the scaffolding operation must not be permitted to enter the hazard area.

3.16 Ensure protective measures are taken in accordance with 2.2 before creating a deck opening or an unguarded edge.

3.16.1 Deck openings and unguarded edges must not be left unprotected for any amount of time.

3.17 Crimping or pinching of fuel gas/oxygen/compressed gas hoses, air hoses, or hoses carrying hazardous/toxic/flammable materials is prohibited. All hoses must be disconnected at the manufacturer’s fittings. Prior to disconnecting hoses from equipment/tool, pressure must be released by disconnecting the hose from the source, e.g., manifold or gas cylinder.

3.18 Notify the SUPERVISOR and accomplish the requirements of 2.2, Volume IV, Chapter 10 of 2.6, and 2.7 prior to working aloft.

3.18.1 Accomplish the requirements of the vessel’s work aloft instruction and utilize the vessel’s working aloft request form.

3.18.1.1 The vessel’s working aloft request form must be routed in accordance with the ship’s aloft instruction for permission for working over the side or in aloft zones. Do not enter aloft zones or be suspended over the side by a crane without first obtaining written permission from the Officer of the Deck (OOD) in the form of working aloft request form.

3.18.1.2 Verify that the working aloft request form is active prior to going aloft each time.

3.18.2 Provide and use personal fall arrest system (PFAS), working lanyard, and climber safety device when going aloft where a climber safety rail is installed. If a climber safety rail is not installed, use a double lanyard configuration.

3.18.3 In the absence of a properly guarded work platform, position a safety observer on deck near the work being performed. The safety observer must keep the deck area beneath the work aloft free of unnecessary personnel.

3.18.4 In case of an emergency, the safety observer must notify the Quarterdeck or emergency services.

3.19 Accomplish safety precautions as specified in 2.8 for work on electrical/electronic circuits and equipment.

3.19.1 Obtain written authorization from the ship’s Commanding Officer before testing or entering components which are energized at a value greater than 30 volts.
3.20 Notify the vessels Quarterdeck and the Supervisor immediately by verbal means of each incident (accident causing damage to vessel, injury meeting the requirements of Ref 2.9, fire, flooding, and electric shock) which occurred, or is occurring on the vessel, dry dock where a naval vessel is docked or a pier/berth where the vessel is moored.

3.20.1 Secure and preserve the scene until released by the SUPERVISOR.

3.20.2 Submit one legible copy, in approved transferrable media, of a formal written report, Attachment A, of the incident to the SUPERVISOR within one day of each accident requiring medical treatment, each electrical shock, each fire, or any incident when requested by the SUPERVISOR. Provide daily updates within one day upon request by the SUPERVISOR, until the final report is submitted. The written report must contain the name of each injured person, date and time of incident/fire, extent of each personal injury or property damage, contractor/subcontractor name, Job Order/Work Item Number, type of incident/fire, location of event (ship name and hull number, space, compartment), a brief description of the event including occurrences leading up to the incident/fire, equipment involved, Contract Number, witness and/or individuals involved, short term and long term corrective action, and root cause analysis.

3.21 Repair and maintenance employees working aboard vessels, dry docks and piers must have a valid 10 hour OSHA Maritime Shipyard Employment Course #7615 or NAVSEA-approved equivalent completion card within 60 days of employment and must maintain the qualification.

3.21.1 Submit one legible copy, in hard copy or approved transferrable media, of a report listing the OSHA outreach training program report as documentation of completing Course number 7615 until completion cards are received to the SUPERVISOR upon request.

3.21.2 The authorized maritime trainer must have successfully completed the OSHA 5400 trainer course in occupational safety and health standards for the maritime industry. The authorized maritime trainer must have a current OSHA Training Institute ID number and must follow the OSHA outreach training program guidelines.

3.21.3 Maintain current copies of the training documents required by the guidelines for reference by the SUPERVISOR. Submit one legible copy in approved transferrable media when requested by the SUPERVISOR.

3.22 Install a temporary general announcing system which can be heard or seen in spaces that are not normally manned and the ship’s general announcing system cannot be heard, such as occupied tanks and voids, including tanks entered through hull cut access when in dry dock. The temporary general announcing system must be approved by the SUPERVISOR prior to the start of work.

3.23 Install casualty reporting non-dial red telephones with an indicator light that report to the Ship’s Quarter Deck or a system approved by the SUPERVISOR when the Shipboard Casualty Reporting System is nonoperational.
Install telephones in each fire zone at least every 100 feet of ship’s length on decks/platforms, placed on alternating sides of the deck/platform and located at a junction with athwartship passageways. Install a telephone on each level and each fire zone of the ship’s superstructure, such that a telephone is within 100 feet of any part of the level. Install telephones in each space of decks/platforms below the Damage Control or Main Deck less than 100 feet of ship’s length, within ten feet of all exit ladders. Install a telephone within ten feet of the exit to each tank open for maintenance. Label each phone with space location.

3.24 The use of tobacco products (cigarettes, cigars, smokeless tobacco, electronic cigarettes, and electronic nicotine delivery systems) is prohibited onboard vessels, adjacent piers and dry docks, except in designated areas.

3.25 Food and beverages (excluding water and “hydration supplements,” e.g., Gatorade) must not be permitted aboard vessels, except in areas designated by the SUPERVISOR.

3.26 Property taken onboard, such as bags and tool boxes, must be identified to include organization name, employee name and badge number.

3.27 Label compressed gas cylinders or cylinder storage racks with company name or unique identifier.

3.27.1 Secure all compressed gas cylinders in a cylinder rack.

3.27.2 Compressed gas cylinders must not be secured to pier or vessel structures.

3.27.3 Secure all compressed gas cylinders for transportation by pallet or cylinder rack.

3.28 Submit a written request to use Ship’s Force services (e.g., air, water and electrical power). Request must include rational for deviation, duration of use, and type and description of equipment that will be utilizing ship’s services.

3.28.1 Submit one legible copy, in approved transferrable media, of each request to the SUPERVISOR.

4. NOTES:

4.1 The term “medical treatment” is defined in 2.9.

4.2 Requests for deviations/waivers of training requirements will only be approved by NAVSEA and on a case-by-case basis. This includes equivalent training for foreign nationals.

4.3 The term “repair and maintenance employee” is defined as one whose employment relates to or is in conjunction with ship repairing, shipbuilding,
or shipbreaking work, including, but not restricted to, inspection, testing, and employment as a fire watch. This excludes employees who provide incidental services that do not influence shipyard employment such as delivery services.

4.4 A "quick disconnect" is a coupling or connecting device/system designed to permit easy and immediate separation of lines without the use of tools and to ensure the contents do not escape.

4.5 Meeting the requirements of 3.21.1 satisfies the requirement of 3.21.

4.6 OSHA 5400 trainers meet the requirement of 3.21.

4.7 When a Fact Finding Report is directed in accordance 009-120 of 2.1, complete initial submission of Attachment A as directed by this Standard Item, report corrective action and root cause analysis in accordance with 009-120 of 2.1.

### DESCRIPTION OF INCIDENT

### DISPOSITION OF INJURED (if applicable)

### IMMEDIATE CORRECTIVE ACTION

**INVESTIGATED BY (NAME):**

**TITLE:**

**SIGNATURE OF INVESTIGATOR:**

**DATE:**
SIGNATURE OF INVESTIGATOR: 

DATE:

Incident Report Instructions

REPORT NUMBER- Unique tracking number created by contractor

TYPE OF INCIDENT- Injury, fire or near miss

NAME(S) OF INJURED- Self Explanatory

INCIDENT DATE: - Self Explanatory

TIME: - Self Explanatory

COMPANY: - Prime and subcontractors involved

SUPERVISOR – Supervisor of employee(s) involved

LOCATION OF INCIDENT: - Base/Yard, Ship name and hull number, space number and compartment name

TYPE OF INJURY OR FIRE – i.e. broken arm, laceration to head or Class A, B, C fires, smoldering

CAUSE OF INJURY – i.e. Equipment failure, PPE, process

EQUIPMENT INVOLVED – Equipment working on and equipment being used to cause incident

WORK ITEM NUMBER – Work Item being accomplished when incident occurred

CONTRACT NUMBER: - Contract Number assigned by government agency i.e. RMC, Alteration Installation Team (AIT) Sponsor.

WITNESS AND/OR INDIVIDUALS INVOLVED – Name, company of witnesses and or individuals involved with the incident.

DESCRIPTION OF INCIDENT OR NEAR MISS – Short description of events leading up to incident and extent of injuries and or damage to equipment.

DISPOSITION OF INJURED – i.e. Transported to hospital via ambulance or POV, transported to clinic, released from hospital, name of hospital or clinic, limited duty or loss time (if known).

IMMEDIATE CORRECTIVE ACTION – i.e. Scene/space secured, ship notified (who and when), RMC notified (who and when) clean up of blood, equipment secured fire debris cleaned up.

INVESTIGATED BY – Self Explanatory.

TITLE – Self Explanatory.

SIGNATURE OF INVESTIGATOR – Self Explanatory.

DATE – Self Explanatory.

LONG TERM CORRECTIVE ACTION – What action(s) were taken so that incident does not reoccur, i.e. training, safety stand down or process/policy change.

ROOT CAUSE ANALYSIS – Process by which you will identify the cause or contributing factors of the incident.

Note: Attach additional information as necessary.
1. **SCOPE:**

   1.1 Title: Circuit Breaker; repair

2. **REFERENCES:**

   2.1 Equipment Technical Manual

3. **REQUIREMENTS:**

   3.1 Identify and pull back associated cables and wiring. Mechanically remove each circuit breaker, using 2.1 for guidance.

      3.1.1 Matchmark, identify and retain mounting hardware and fasteners.

      3.1.2 Protect exposed terminal connections and internal switchboard parts from foreign material including dirt and debris, and from damage.

      3.1.2.1 Each phase shall be isolated and protected from other phases.

   3.2 Disassemble each circuit breaker, using 2.1 for guidance.

      3.2.1 Inspect and test electrical and mechanical components, assemblies, subassemblies, internal circuitry, and hardware to design characteristics and determine missing and defective components, circuitry, and hardware in accordance with 2.1.

      3.2.1.1 Acceptance criteria for silver contacts is that wear shall be less than 50 percent of original thickness after dressing, contacts shall have no evidence of copper migration, and shall have no irregular, burnt, or pitted interface after dressing.

      3.2.1.2 Acceptance criteria for non-silver contacts is that, after dressing, wear shall be less than 10 percent of original thickness and contacts shall have no irregular, burnt, or pitted interface after dressing.

      3.2.2 Test internal wiring, coils, and transformers for open and short circuits and 500 volt megger insulation resistance to ground. Record readings. Minimum acceptable resistance to ground shall be one megohm.
3.2.3 Shop test and inspect each motor operator and motor in accordance with 2.1.

3.2.4 Test and inspect molded and insulation parts in accordance with the following criteria:

3.2.4.1 Phase-to-phase dielectric strength 2,000 volts minimum.

3.2.4.2 Surface burn marks and hairline cracks are acceptable but shall not deteriorate the mold surface or impair physical strength. Cracks are not permitted in wall section between phase and a ground plane when there is a conducting part in contact with the wall section. Cracks should not exceed 0.75 inch in length, and in no case should be greater than 50 percent of the length of the surface in which the crack appears.

3.2.4.3 Surface cracks should not exceed 1.5 inches in length, and in no case should be greater than 50 percent of the length of the surface in which the crack appears.

3.2.5 Submit one legible copy, in approved transferrable media, of a report listing test and inspection results and missing and defective components, circuitry and hardware to the SUPERVISOR.

3.3 Remove defective and install new electrical and mechanical components, assemblies, subassemblies, internal circuitry, and hardware. Install new electrical and mechanical components, assemblies, subassemblies, internal circuitry, and hardware where missing. New material shall conform to the requirements of 2.1 and shall be obtained from the Federal Stock System or the Original Equipment Manufacturer (OEM), except for non-restricted parts.

3.3.1 Clean each component free of dirt, lubricants, and other foreign matter.

3.3.1.1 Steam cleaning of circuit breakers is not authorized.

3.3.2 Resilver previously silver plated contacts in accordance with ASTM B 700.

3.3.3 Dress, burnish, adjust, and align arcing and main contacts (contacts that experience arcing in functional duty) in accordance with 2.1.

3.3.4 Replace existing cadmium-plated parts with zinc in accordance with ASTM A 153.

3.3.5 Dip and bake taped insulated coils and open transformers in varnish conforming to MIL-I-24092, Class 155.
3.3.5.1 Dip and bake insulated coils and open transformers in Dolph Varnish 1105, Epoxylite Esterlite 605, or Schenectady International Isolite 862M varnish in localities where MIL-I-24092 varnish does not meet state and local air pollution control district standards.

3.3.6 Remove defective existing and install new coil and transformer leads. Install new coil and transformer leads in place of those identified to be missing.

3.3.7 Repair defective connections.

3.3.8 Free-up and adjust moving parts and latching mechanisms.

3.3.9 Lubricate the current-carrying parts (except for interrupting contacts) and sliding joints with lubricant conforming to MIL-L-87177, Type I, Grade B. Lubricate mechanical pivots, excluding latch roller face components, with high performance multi-purpose grease conforming to DOD-G-24508.

3.3.9.1 Apply new lubricant sparingly and wipe off excess.

3.4 Reassemble each circuit breaker and accomplish adjustments and settings in accordance with 2.1. Record readings.

3.4.1 Align and true each set of stationary and movable contacts to the manufacturer's specifications. Record readings.

3.4.2 Accomplish millivolt drop test to each set of contacts in accordance with 2.1 or Original Equipment Manufacturer (OEM) requirements. Record readings.

3.5 Test, calibrate, adjust, and certify the trip units of each circuit breaker for time delay and instantaneous trip settings in accordance with 2.1. Record readings.

3.5.1 Accomplish a heat run test for repaired type ACB and AQB circuit breakers.

3.5.1.1 Connect each ACB type circuit breaker to a test set and apply rated current to each individual phase of the circuit breaker for 30 minutes. After 5 minutes, measure the voltage across the line to load contacts of each pole and calculate the contact impedance. Satisfactory impedance: 1,600-4,000 ampere ACB's, below 225 microhms; 600-900 ampere ACB's, below 1,050 microhms.

3.5.1.2 Connect each AQB-type molded case circuit breaker to a test set and apply rated current to each phase simultaneously for one hour. The AQB shall not trip within that hour.

3.5.2 Attach a calibration label to the face of each circuit breaker denoting the name and location of the calibration facility and date.
of calibration. In the event there is insufficient room on the face of the circuit breaker, attach the calibration label to the right hand side of the breaker as viewed from the front.

3.6 Submit one legible copy, in approved transferrable media, of a report listing results of the requirements of 3.4, 3.5, and a list of new components, assemblies, subassemblies, internal circuitry, and hardware installed to the SUPERVISOR.

3.7 Install and connect each circuit breaker, using retained mounting hardware and fasteners.

(V)(G) "OPERATIONAL TEST"

3.8 Accomplish final adjustments and test operate each circuit breaker, including control and safety devices.

3.8.1 Close and trip each circuit breaker electrically from local and remote stations. Three consecutive successful times required.

3.8.1.1 Ensure generator heater interlock is de-energized by the generator circuit breaker.

3.8.2 Repeat the requirements of 3.8.1 manually.

4. NOTES:

4.1 Equipment technical manual will be listed in the invoking Work Item.

4.2 Repair and overhaul will be accomplished by the Navy Designated Overhaul Point (DOP) at Puget Sound Naval Shipyard, the OEM, or a commercial repair facility that has demonstrated to the SUPERVISOR the capability to perform the work. Capability to perform circuit breaker overhaul and repair work includes having the facilities, trained mechanics, and access to the OEM’s qualified parts and repair procedures. Use of non-qualified restricted parts violates the integrity of the circuit breaker, nullifying the breakers prior qualification under the QPL process. Restricted parts must be obtained from the OEM either directly or via (if available) the Federal stock system. If a restricted part is replaced with an unqualified part, the qualification of the particular circuit breaker is revoked until the full set of QPL required tests are repeated and submitted to NAVSEA for approval.

4.3 Non-restricted parts are defined as nuts, bolts, screws, washers, lockwashers, cotter pins, O-rings, indicator lights, and indicator light globes (colored and clear) only.

4.4 The following ACB circuit breakers listed by manufacturer contain non-friable asbestos arc chutes:

4.4.2 General Electric: all types.

4.4.3 Westinghouse: All DBN types.
1. SCOPE:

1.1 Title: Waveguide and Rigid Coaxial Lay-Up; accomplish

2. REFERENCES:

2.1 SE000-01-IMB-010, Navy Installation and Maintenance Book (NIMB), Section IX, Installation Standards (Source CD: N00024000003)

3. REQUIREMENTS:

3.1 Disconnect each dry air pressure line at last mechanical joint as designated by the SUPERVISOR and connect temporary nitrogen or dry air lay-up control/monitor panels and associated equipment to ship’s dry air panel.

3.1.1 Where lay-up conditions permit, ensure temporary nitrogen or dry air lay-up control/monitor panels are operational for continuous monitoring of temporary nitrogen or dry air in the equipment space(s).

3.1.1.1 Use of ship’s dry air control/monitor panels may be an option, but only when lay-up conditions permit, and verified that equipment's dry air control/monitor panels are operational for continuous monitoring of temporary dry air in the equipment space(s).

3.2 Accomplish uninterrupted nitrogen or dry air lay-up for each waveguide and rigid coaxial cable in accordance with Paragraph 5-2.7 of 2.1.

3.2.1 Do not connect unregulated pressurized air to equipment sub-assemblies or components. Ensure that each temporary dry air pressure source is connected to prevent equipment damage due to over-pressurization. No pressurization must be supplied to waveguide in excess of the normal operating pressures specified for that equipment.

3.2.2 Ensure temporary dry air meets the requirements of Paragraph 5-1.14 and 5-1.15 of 2.1, and the following:

3.2.2.1 Dew Point: Minus 40 degrees Fahrenheit at 80 PSIG.

3.2.2.2 Quality of Air: Filtered to remove all particulate matter greater than one micrometer and filtered for a total amount of
contamination (including oil contaminants) not to exceed one part per million by weight.

3.2.3  Pressurize each line as specified for that equipment.

3.2.3.1 Where specific lay-up instructions are not available, pressurize those lines to 3 PSIG.

3.2.3.2 Install relief valve downstream of temporary source, setting relief pressure at 5 PSIG.

3.2.4 Identify leaks in accordance with Paragraph 5-2.7.2 and 5-2.7.3 of 2.1.

3.2.4.1 Submit one legible copy, in approved transferrable media, of a report listing results of the requirements of 3.2.4 to the SUPERVISOR.

3.3 Remove temporary pressurization when directed by the SUPERVISOR. If any ship’s dry air control/monitor panels were utilized, restore each and verify operational.

3.3.1 Connect each dry air pressure line disconnected in 3.1.

3.3.2 Purge and pressurize in accordance with Paragraph 5-2.7 of 2.1.

4. **NOTES:**

4.1 None.
1. **SCOPE:**

   1.1 Title: Cofferdam Installation; accomplish

2. **REFERENCES:**

   2.1 Standard Items

   2.2 S0600-AA-PRO-160/CH-16, Underwater Ship Husbandry Manual, Cofferdams

3. **REQUIREMENTS:**

   3.1 Maintain watertight integrity to a level 4 feet above the maximum calculated draft, including but not limited to the following operations: access openings, hull plating replacement, welding to the hull when pre-heating is required, modifications or repairs to damage or deterioration that will degrade watertight integrity or stability, or piping and mechanical repairs that are expected to result in less than double-valve protection.

   3.2 Accomplishment of a Process Control Procedure (PCP) to support installation of a cofferdam (e.g., plug, patch, dry chamber, stern tube seal) must be in accordance with NAVSEA Standard Items (See Note 4.4) and Attachment B, include the following:

      3.2.1 Include the Operational Checklist, Table 16-9 of 2.2, in the PCP.

      3.2.2 Prior to the start of the PCP, any time the installed cofferdam will serve as the only barrier to the sea (single valve protection), ensure Ship's Commanding Officer sign-off via the SUPERVISOR, as required by Paragraph 16-4.7.1.5 (plugs), or Paragraph 16-5.2.10 (patches), or Paragraph 16-6.6.10 (dry chambers), or Paragraph 16-7.6.5 (stern tube seals) of 2.2.

      3.2.2.1 The first page of the PCP must be stamped SINGLE VALVE PROTECTION, at the top, in minimum one-half inch letters.

      3.2.2.2 Attachment A must be used to document single valve isolation signatures.
3.3 Prior to the start of the PCP, submit one legible copy, in approved transferrable media, of Ship's Force notification in accordance with Paragraph 16-4.7.1.4 (plugs), or Paragraph 16-5.2.9 (patches), or Paragraph 16-6.6.10 (dry chambers), or Paragraphs 16-7.6.5 and 16-7.6.8 (stern tube seals) of 2.2 to the SUPERVISOR.

(I)(G) "COFFERDAM INSPECTION"

3.4 Verify cofferdams (plug, patch, dry chamber, or stern tube seal) and associated hardware installed in 3.2 have been removed.

3.5 Prior to the removal of the cofferdam, submit one legible copy, in approved transferrable media, of Ship’s Force notification of the location of the patch and level of protection (single or double barrier) to the SUPERVISOR.

(I)(G) “REMOVAL OF COFFERDAM”

3.6 Accomplish cofferdam removal in accordance with 2.2 Appendix D, steps 21 thru 29.

3.6.1 Verify cofferdams (plug, patch, dry chamber, or stern tube seal) and associated hardware installed in 3.2 have been removed.

4. NOTES:

4.1 2.2 and associated forms are available at:

https://secure.supsalv.org/00C5publications.asp

4.2 Maximum Calculated Draft (MCD) – The maximum draft, calculated during the period in which ship’s draft is affected due to evolutions which add, remove, or change weight. It represents the “worst case” cumulative effect at any one time on trim, list, or draft for the proposed weight changes throughout the period that hull penetrations are in a non-standard configuration. MCD must be known and utilized by SUPERVISOR and Ship’s Force in scheduling work and testing during waterborne maintenance periods.

4.3 A PCP to support installation of a cofferdam (e.g., plug, patch, dry chamber, stern tube seal) is required; the use of Category II Standard Item 009-09 “Process Control Procedure (PCP); provide and accomplish” of 2.1 must be specified in the Work Item.
ATTACHMENT A

AUTHORIZATION FOR SINGLE VALVE ISOLATION

Subj: PROVIDE NOTIFICATION OF SINGLE VALVE ISOLATION REQUIREMENT AND PROVIDE PRECAUTIONARY PROCEDURES TO BE EMPLOYED DURING REPAIRS/ALTERATIONS TO SEA-CONNECTED SYSTEMS.

Ref: (a) OPNAVINST 3120.32 Series

1. The procedures involved in this repair/alteration will subject the affected area to a flooding hazard during the time the repair is being accomplished. The purpose of this notification is to outline the responsibilities for precautionary measures placed upon the contractor and the ship while the repairs/alterations are in progress.

2. System: The repairs/alterations to be accomplished to the following system:

________________________________________________________Component/Space ____________________________

3. Prior to Commencing work, the contractor must provide:
   a. A procedure, in accordance with the requirements of NAVSEA Standard Item 009-77, has been developed and approved by the SUPERVISOR (Copy Attached).
   b. The sequence of repairs to be accomplished, including drawings of the system and valve locations. The proposed system isolation must be discussed and mutually agreed upon between the ship, SUPERVISOR, and the contractor.
   c. Identify possible hazards of single valve isolation failure. __________________________
   d. Expected start ______________ and completion ______________ for single valve isolation evolution.
   e. Watertight boundaries have been defined, sighted, tagged out and verified. __________________________

4. During the period of this repair, the following minimum precautions are required:
   a. Ship’s Supervisor, E-7 or above, must be present to verify single valve isolation and breaking of pressure boundary.
   b. Ship’s Force will provide a watch on the affected system and monitor for leaks, etc.
   c. Ship will maintain appropriate state of damage control readiness.

5. See attached drawing of system and valve locations.

______________________________       ________________________       ________________________

<td>2 (b) Affected hull opening</td>
<td></td>
</tr>
<tr>
<td>009-77</td>
<td>2 (c) Affected equipment/system(s)</td>
<td></td>
</tr>
</tbody>
</table>

### 3. PERSONNEL QUALIFICATIONS

#### 3.1. Diver Training Plan
Note the Diving Contractor’s Training Plan & documentation complies with Reference 3, 16-10.2.1 & 10.2.2.

<table>
<thead>
<tr>
<th>Item No</th>
<th>Subsection</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>009-77</td>
<td>3.1.5 Attachment A</td>
<td>16-10.2.1, 16-10.2.2</td>
</tr>
<tr>
<td>009-77</td>
<td>Attachment A</td>
<td>16-10.2.3.3.1, 16-10.2.3.3.2, 16-10.2.4.2.5, 16-10.2.4.2.8</td>
</tr>
<tr>
<td>009-77</td>
<td>3.1. Attachment A</td>
<td>16-10.2.4.3</td>
</tr>
</tbody>
</table>

#### 3.2. Diver Competency
Note the Divers:
- **(a)** Are ADCI recognized with 7 years (min.) commercial diving experience;
- **(b)** Have current medical physical screening;
- **(c)** Have current CPR and First Aid certification;
- **(d)** Have cofferdam program qualification;
- **(e)** Have performed six (6) cofferdam installations;
- **(f)** Have performed a cofferdam installation within the past six (6) months.

<table>

<thead>
<tr>
<th>ITEM NO: 009-77</th>
<th>6 of 15</th>
</tr>
</thead>
</table>

#### 4.3. Emergency Flooding Plan

Whenever single-valve protection is in place, include in the written notification to the ship a specific plan for immediate installation of a replacement piping component or internal sealing blank. Provide a note indicating that S/F is responsible for developing an on-site Emergency Flooding Plan (dewatering response), which includes additional emergency dewatering equipment that **must** be operationally ready before commencing work and available for the entire time single valve protection is in place.

| 3 | 16-4.7.1.5 |
| 3 | 16-5.2.10 |
| 3 | 16-7.6.5 |
| 3 | 16-10.2.6 |
| 3 | 16-10.2.6.9 |

#### 4.4. Joint Safety Brief

Note participation in a pre-job Joint Safety Brief, if Contractor attendance was required.

| 2 | 3.4.3 |

#### CF 4.5. Posted Safety Precautions – Warning Signs

Specify and describe each of the following (e.g., figure, sketch, etc.):

| 4.5.1. Warning Sign posted at Quarter Deck to space that contains the system impacted by the PCP. |
| 4.5.2. Warning Sign posted at entrance to space that contains the system impacted by the PCP. |
| 4.5.3. Warning Sign posted at seawater supply manifold (eductor), if applicable. |
| 4.5.4. Warning Sign at deck edge in way of cofferdam support rigging, if applicable. |

#### 5. COFFERDAM AND INTERNAL BLANK DESIGN.
5.1. Cofferdam Design. Specify a suitable capacity cofferdam, including:

<table>
<thead>
<tr>
<th>ITEM NO:</th>
<th>009-77</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.1.1. Supporting Documentation. Require design and maintenance records that comply with Reference 3, Paras. 16-5.2.7 (patches), or 16-6.6.4 (dry chambers), or 16-7.6.3 (stern tube seals), including, as necessary:</td>
<td></td>
</tr>
<tr>
<td>(a) Fabrication drawing(s)</td>
<td>4</td>
</tr>
<tr>
<td>(b) Inspections</td>
<td>3</td>
</tr>
<tr>
<td>(c) Engineering Calculations</td>
<td>3</td>
</tr>
<tr>
<td>(d) Cofferdam Rated depth</td>
<td>3</td>
</tr>
<tr>
<td>(e) Maximum hull opening size</td>
<td>3</td>
</tr>
<tr>
<td>(f) Gasket requirements</td>
<td>3</td>
</tr>
<tr>
<td>(g) Eductor and vent line requirements</td>
<td>3</td>
</tr>
<tr>
<td>(h) Patch specific hull opening</td>
<td>3</td>
</tr>
<tr>
<td>(i) Attachment and alignment requirements</td>
<td>3</td>
</tr>
<tr>
<td>(j) Maintenance records</td>
<td></td>
</tr>
</tbody>
</table>

Note: Commercially procured plugs from an approved manufacturer do not require a design sketch. Cofferdam designs from NAVSEA approved DWGs or Reference 3 do not require engineering calculations.

5.1.2. Identification. Require an installed data plate or engraved serial number on cofferdams, corresponding to supporting documentation.

<table>
<thead>
<tr>
<th>ITEM NO:</th>
<th>009-77</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.1.3. Templating. Note the cofferdam is contoured to fit the hull curvature, as necessary.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>ITEM NO:</th>
<th>009-77</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.1.4. Overall Dimensions. Specify the gross dimensions of the cofferdam.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>ITEM NO:</th>
<th>009-77</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.1.5. Material Types and Thicknesses. Specify the appropriate material types and thicknesses conforming to Reference 3, Section 9.</td>
<td></td>
</tr>
</tbody>
</table>

### ATTACHMENT B
**COFFERDAM PCP REVIEW GUIDE**
Minimum Requirements and Critical Factors

<table>
<thead>
<tr>
<th>ITEM NO:</th>
<th>009-77</th>
</tr>
</thead>
</table>

#### 5.1.6. Stiffeners
Specify the size and spacing of the stiffeners, as necessary.

- Referenced Sections: 16-2.1.2.2, 16-3.8, 16-5.1.1, 16-6.2, 16-9.1.1.2, 16-9.2.3.7, 16-9.5.4

#### 5.1.7. Eductor, Air Supply and Vent
Specify:

- **(a)** As necessary, attachment locations of the eductor, air supply and vent, including suction side closure valves.
  - Note: All patch pipe nipples used to attach external vent lines must have valves installed to secure the space when dewatering is complete.

- **(b)** As necessary, size and type of eductor, air supply and vent.
  - Note: External vent lines **must** be non-collapsible hoses.

- **(c)** As necessary, that the cofferdam **must** be vented to atmosphere by an internal vent or an external non-collapsible vent line.
  - Note: When using an internal vent, communications must be established between topside and internal space workers to ensure that the internal vent valve is open prior to eductor operation.

- **(d)** As necessary, that a vent line (internal or external) must be installed and opened before dewatering to prevent a vacuum and overloading the patch.

- **(e)** As necessary, a caution tag on all internal vents stating: “EXTERNAL COFFERDAM VENT VALVE. IF WATER PRESENT OR PRESSURIZED AIR RELEASED WHEN OPENED, TAKE ACTION TO CONFIRM COFFERDAM ADEQUACY.”

- Referenced Sections: 16-3.8, 16-3.9, 16-5.2.2, 16-5.2.14, 16-5.3.4, 16-6.7.5, Appendix A

#### 5.1.8. Gasket Design
Require gasket to be fabricated from ASTM D 1056-00 Type 2, Class B or C, Grade 1 or 2 closed cell foam and a minimum of 3 inches in width (complying with Reference 3, 16-9.3.1 or 16-9.3.2, as applicable).

- Referenced Sections: 16-3.8, 16-5.2.3, 16-9.3.1, 16-10.2.4.5, Appendix A

#### 5.1.9. Gasket Adhesive
Specify that a marine-grade adhesive was used to mount the gasket to the cofferdam flange.

- Referenced Sections: 16-5.1.1, Appendix A

#### 5.1.10. Positive Securing Device Design
Specify the method used to secure the cofferdam to the hull (e.g., J-bolt, hogging lines, etc.)

- Referenced Sections: 16-3.8, 16-3.12, Appendix F

#### 5.1.10.1. J-Bolt Minimum Requirements
Refer to, and include, Reference 3, Appendix F if a J-bolt is used.

- Referenced Sections: 16-9.2.3.4, Appendix F
<table>

<tr>
<td></td>
<td>5</td>
</tr>
</tbody>
</table>
5.3. **Rigging Plan.** Specify a rigging plan to positively secure the cofferdam to the hull, including, as necessary:

(a) Lifting requirements

(b) Suitable rigging equipment (e.g., chainfalls, turnbuckles, shackles, bellybands, hogging lines, chafing gear, counterweights)

(c) Securing and attachment requirements (e.g., padeye dimensions and locations) and consideration of rigging load requirements, per Reference 3, Section 9

(d) Manufacturer and weight testing requirements (Lifting Straps, Padeyes, Wire)

(e) Direction and magnitude of expected loads from installation, use, and removal of the cofferdam

(f) Rigging points and supporting structure designed with the factors of safety from Reference 3, Table 16-6.

Note: If rigging to existing ship structure include the following statement: "All existing ship structure selected for rigging purposes, in accordance with this procedure, **must** be visually inspected, before its use, for any questionable indications that would appear to compromise its strength (e.g., cracks, unintentional holes, severe corrosion) or items or structure that appear insufficient to carry the intended load(s). This authorization is ONLY applicable to the installation and removal of the cofferdam of this procedure." If Contractor personnel are unclear or unsure as to whether an item is acceptable to rig from, contact the SUPERVISOR immediately for clarification / approval.

5.4. **PREPARATION.**

5.4.1. **Patch and Plug Inspection.** Include Reference 3, Appendix C Patch and Plug Inspection Checksheet and require its completion confirming cofferdam inspection.

5.4.2. **Freeboard.** Note that watertight integrity of 4-feet (MIN) above the maximum anticipated draft **must** be maintained.

5.4.3. **Cofferdam or Access Cut Location.** To locate cofferdam, specify, as necessary:

5.4.3.1. Hull Opening Item #. Referenced on docking drawing.

5.4.3.2. Hull Opening Size. Referenced on docking drawing.
### 5.4.3.3. Hull Fairing
- Referenced on docking drawing.

### 5.4.3.4. Hull Opening Strainer Bars
- Detailed on the seachest drawing and referenced on the piping drawing.

### 5.4.3.5. Access Cut
- In lieu of hull opening, detail the location and access cut size.

### 5.4.3.6. Surface Preparation
- Inspect and clean hull surfaces to obtain a 100% seal.

### 5.4.3.7. Sealing Surface, Hull
- A 3-inch minimum sealing surface on the hull around the opening to accommodate the minimum cofferdam gasket width.

### 5.4.4. Briefing
- Specify a method ensuring cognizant personnel **must** have direct knowledge of the requirements before starting the process.

### 5.4.5. On-site Documentation
- Specify that the following on-site documentation **must** be available for the duration of the process, separately or as part of the PCP.
  - (a) Applicable System Drawings.
  - (b) Approved PCP
  - (c) Reference 3
  - (d) Applicable Standard Forms. Including but not limited to, Reference 3, Appendices C, D and G, as necessary
  - (e) Rigging Plan
  - (f) Cofferdam Design Package
  - (g) Emergency Flooding Plan
  - (h) Diving Contractor’s Safe Practices Manual
  - (i) Docking Plan Drawing.

---

**ATTACHMENT B**

**COFFERDAM PCP REVIEW GUIDE**

Minimum Requirements and Critical Factors
5.4.6. **PCP Control.** Specify a method establishing administrative control of the authorized PCP for the duration of the process, including a record of the data demonstrating satisfactory completion of the procedure.  
Note: This is normally accomplished by a First-Line Supervisor ensuring all personnel **must** maintain compliance with PCP requirements.

![Table with entries](image)
## Minimum Requirements and Critical Factors

### 5.4.11.1. Dewatering
If necessary, require installation, tagging (as required) and inspection of all vent lines, eductors and air supply lines (dry chambers), in accordance with Reference 3, Appendix D, as necessary.

| CF | 3 | 16-5.2.2 |
| CF | 3 | 16-5.2.14 |
| CF | 3 | 16-5.2.15 |
| CF | 3 | 16-5.2.18.1 |
| CF | 3 | 16-5.2.18.2 |
| CF | 3 | 16-5.3.4 |
| CF | 3 | 16-6.6.7 |
| CF | 3 | 16-6.7.5 |
| CF | 3 | 16-7.6.6 |

### 5.4.11.2. Pumping, Seawater Supply
If necessary, require maintenance of a seawater supply (supply valve wired open and either a backup fire pump or secondary fire main).

### 5.4.12. Operational Compliance Check-List
Include, and complete, the Operational Check-List, Reference 3, Table 16-9.

| CF | 4 | 3.2.3 |
| CF | 3 | 16-10.3.1 |

### 5.5. INSTALLATION

#### 5.5.1. Installation Checksheet
Include Reference 3, Appendix D Patch and Plug Installation Check sheet and complete only those steps pertaining to cofferdam installation.

| CF | 3 | 16-3.13 |
| CF | 3 | 16-4.7.1.3 |
| CF | 3 | 16-4.7.1.9 |
| CF | 3 | 16-5.2.11 |
| CF | 3 | 16-5.2.19 |

#### 5.5.2. Verify System and Hull Opening
Verify the removed valve or system corresponds to the system blanked and the hull opening.

| CF | 3 | 16-5.4.1 |

#### 5.5.3. Locate and Position Cofferdam
Require:
(a) Cofferdam to be located in conjunction with the Rigging Plan and Inspection Dive.
(b) A 4-foot minimum freeboard (conforming to GOS, S9AA0-AB-GOS-010, Section 045)
(c) A 6-inch minimum clearance between the cofferdam side and hot work area, if applicable. If the 6-inch minimum clearance cannot be maintained provide written justification.

| CF | 4 | 3.1 |
| CF | 3 | 3.6 |
| CF | 3 | 3.12 |
| CF | 3 | 5.3.5 |
| CF | 3 | 6.7.6 |
| CF | 3 | 7.7.5 |
| CF | 3 | App C: 1b, 1c |
| CF | 3 | App D: 1 |

#### 5.5.4. Verify Cofferdam Seal (Watertight Integrity)
Require Divers to verify cofferdam’s watertight integrity, and, if necessary, retightening of the primary means of cofferdam attachment to establish a watertight seal.

| CF | 3 | Appendix D |
## ATTACHMENT B
### COFFERDAM PCP REVIEW GUIDE

**Minimum Requirements and Critical Factors**

<table>
<thead>
<tr>
<th>ITEM NO: 009-77</th>
</tr>
</thead>
</table>

### 5.5.4.1. Notification of Cofferdam Seal. Require Lead Shop notification that a seal has been established. |

| 3 | Appendix D |

### 5.5.5. Internal Seal Blank. If necessary, require: |

- **(a)** The installation of an internal seal blank, conforming to the specified design requirements, immediately after removal of the damaged (or repair) component (internal piping or watertight boundary is opened) to maintain double-valve protection. |

| 3 | 16-3.4.2.1.(2) |
| 3 | 16-4.7.1.1 |
| 3 | 16-4.7.1.2 |
| 3 | 16-4.7.1.5 |
| 3 | 16-5.2.1 |
| 3 | 16-5.2.2 |
| 3 | App D: 2, 19 |

- **(b)** The Contractors to confirm that an internal seal blank with a less than ½” diameter vent valve has been installed immediately after removal of the damaged (or repair) component. |

### 5.5.6. Test & Inspection Plan; Acceptance & Rejection Criteria. Include a Test & Inspection Plan denoting the relevant acceptance and rejection criteria, in compliance with Reference 7, Paras. **3.9.1 and 3.10.1.** |

| 2 | Attachment A |
| 7 | 3.9.1 |
| 7 | 3.10.1 |

### 5.5.7. Monitoring. Require cognizant personnel (e.g., Divers or Ship’s Force) to monitor watertight integrity of all applicable cofferdams (with dewatering equipment secured) while actually providing single or double-valve protection at intervals no greater than every 7 days for patches and continuously for dry chambers (when occupied). |

- **Note 1:** The vent valve on internal seal blanks facilitates internal vent cofferdam monitoring. |

- **Note 2:** The blank vent valve may be left shut when not temporarily opened by the ship’s sounding and security detail for patch or plug seal monitoring or, upon approval by the Ship, the blank vent valve may be left continuously open to maintain cofferdam differential pressure. |

| 3 | 16-3.4.2.5(4) |

COFFERDAM PCP REVIEW GUIDE
Minimum Requirements and Critical Factors

<table>
<thead>
<tr>
<th>5.6. REMOVAL.</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>5.6.1.</strong> Removal Checklist. Remove cofferdam and complete those remaining steps in Reference 3, Appendix D Patch and Plug Installation Checksheet applicable to the removal phase of the cofferdam procedure.</td>
<td>3</td>
</tr>
<tr>
<td><strong>5.6.2.</strong> Removal/Reinstallation Equipment, On-site. Equipment to move/manipulate the component <strong>must</strong> be available on-site.</td>
<td>3</td>
</tr>
<tr>
<td><strong>5.6.3.</strong> Cofferdam Seal Verification. Either open the ½-inch vent valve or loosen blank fasteners to slightly spread (open) the seal and verify the cofferdam is holding back sea pressure. If leakage exists correct cofferdam seal.</td>
<td>3</td>
</tr>
<tr>
<td><strong>5.6.4.</strong> Internal Sealing Blank. Remove internal sealing blank and retain on-site for immediate installation, if necessary.</td>
<td>3</td>
</tr>
<tr>
<td><strong>5.6.5.</strong> Double Valve Protection. Verify reestablishment of double-valve protection after component has been installed and 24-hour surveillance or diver stand-by for single-valve protection is no longer required.</td>
<td>3</td>
</tr>
<tr>
<td><strong>5.6.6.</strong> Divers Stand-By, Removal. Require Divers to be on stand-by during removal of internal blank and re/installation of component.</td>
<td>3</td>
</tr>
<tr>
<td><strong>5.6.7.</strong> Verify System Integrity. Require loosening of cofferdam after the component is installed to verify the flange seal is tight (zero leaks) and, if not, the Divers <strong>must</strong> retighten the cofferdam to reestablish watertight integrity of the component. When seal is verified, remove the cofferdam.</td>
<td>3</td>
</tr>

</table>

**Notes.**
1. Items referenced to this note are considered “critical factors, which have direct bearing on the process quality and safety” in accordance with Reference 2, Para. 3.1.3 and are either only generally implied in the References or are not readily specified but are nevertheless considered critical and required for a successful cofferdam process. These Items are marked “CF” in this Review form.
2. Non-standard cofferdams are cofferdams other than those provided by Reference 4, Section 9.
3. Can be included as part of design sketch.
1. SCOPE:

1.1 Title: Passive Countermeasures System (PCMS) Material; repair

2. REFERENCES:

2.1 Standard Items

2.2 RIM, Passive Countermeasures System (PCMS) Repair/Installation Methods

2.3 PHS&T, Passive Countermeasures System Packaging, Handling, Storage and Transportation Plan

2.4 ACD 05P1, Passive Countermeasures System (PCMS) Access, Material Control and Disposal Manual

2.5 RIM, Passive Countermeasures System (PCMS) Repair/Installation Methods for PCMS Material Type 3R SLT3

2.6 PHST, Passive Countermeasures System Packaging, Handling, Storage and Transportation Plan for PCMS Material Type 3R SLT3

2.7 ACD, PCMS SLT3 Access, Control and Disposal Manual (CVN Class Ship PCMS Material)

3. REQUIREMENTS:

3.1 Remove existing and install new PCMS material in accordance with 2.2 through 2.4 on CG, DDG, and LPD class ships; and 2.5 through 2.7 on CVN class ships.

3.1.1 Accomplish additional PCMS material handling and storage requirements in accordance with 2.3.

(V) "ENVIRONMENTAL REQUIREMENTS"

3.1.2 Verify the environmental requirements of Section C.1 of 2.2 are met prior to application of primers, tiles, caulking, and paint.

(V) "WELD FAIRING"
3.1.3 Verify the fairing of weld seams is in accordance with Section C.3 of 2.2.

(V)(G) "FINAL INSPECTION"

3.1.4 Accomplish a final inspection of newly installed PCMS material to verify correct installation.

3.1.5 Accomplish surface preparation and preservation for topcoat of new PCMS material in accordance with Section C.6 of 2.2.

3.2 Accomplishment of cleaning and painting for new and disturbed surfaces must be in accordance with NAVSEA Standard Items (See Note 4.1).

4. NOTES:

4.1 If cleaning and painting for new and disturbed surfaces are required; the use of Category II Standard item 009-32 “Cleaning and Painting Requirements; accomplish’ of 2.1 will be specified in the Work Item.
1. **SCOPE:**

   1.1 Title: Government Owned Material (GOM) Status for Multi-Ship Multi-Option availabilities; report

2. **REFERENCES:**

   2.1 None.

3. **REQUIREMENTS:**

   3.1 Provide an accurate accounting of Government Owned Material (GOM), traceable to the Lowest Replaceable Unit (LRU), in the custody of the contractor. For this tasking, GOM is defined as government furnished material (GFM) and contractor acquired material (CAM) which the Navy has either paid for or provided directly to the contractor.

   3.2 Prepare and submit one legible copy of GOM Status Reports in approved transferrable media (similar or equal to Excel).

      3.2.1 This report must specify all the current inventory of GOM baseline, residual, and excess assets including COSAL material, installation and checkout (INCO) spares, GFM, and CAM. Specific content requirements must be as specified in 3.2.2 and must include the following:

         3.2.1.1 Allowance Parts List/Allowance Equipage List (APL/AEL). An alphanumeric code, minimum of 8 characters and maximum of 11 characters, that identifies the unique characteristics of an equipment or system provisioned by the Naval Inventory Control Point, or the non-installed material collectively known as equipage.

         3.2.1.2 Document GFM Requisition/CFM purchase order number.

         3.2.1.3 National Item Identification Number. Represents the last 9 digits of the 13-digit Naval Stock Number and identifies a specific item catalogued in the Federal Supply System.

         3.2.1.4 Part Number. A manufacturer’s part numbers, drawing numbers, and model, type, or source controlling numbers used to identify an item of production or supply.
3.2.1.5 Commercial and Government Entity (CAGE). A 5-digit number assigned to an individual supplier, manufacturer, corporation, or government activity for identification purposes.

3.2.1.6 Unit of Issue. A 2-character abbreviation code used to identify the types of units under which material is issued. For example, shoes would be issued as a pair (PR), while hammers would be issued one at a time or each (EA).

3.2.1.7 Allowance/Required Quantity. The total number of a given item of replacement allowed onboard.

3.2.1.8 Quantity on Order. The number of a given item for which requisitions are in process.

3.2.1.9 Quantity Received. The number of a given item acquired as a result of a requisition.

3.2.1.10 Quantity on Hand. The number of a given replaceable item currently in the storeroom/storage location.

3.2.1.11 Unit Price. The cost of the unit of issue (i.e., gross, pair, each, quart, gallon, ton, ounce, etc.).

3.2.1.12 Extended Price. The cost calculated by multiplying the unit price by the quantity of items.

3.2.1.13 Material Accessibility Code (MAC). A 2-character alphabetic code that defines the material's intended use and disposition. Generally speaking, excess assets are available as free issue redistributions while baseline and residual assets are either non-available for redistribution or are negotiable at the SUPERVISOR's discretion. A single item may have multiple MACs assigned to it; some of its quantity on hand could be in each category. Valid MACs include IC (Inaccessible and contractually required), ID (Inaccessible and Deferred), and AR (Accessible and Residual).

3.2.1.14 Unit Identification Code. A 5-digit accounting number that identifies a ship, shore activity, operational unit, agency, contractor or other organized entity that may be involved in acquiring and/or managing material.

3.2.1.15 Type Number Code. A one-digit alphabetic code that identifies the data in position 12-28 as either a document number [R] or a contract number (P).

3.2.1.16 Condition Code. A one-digit alphabetic code that identifies the condition of the material, whether it is ready for issue or in need of some level of repair.
3.2.1.7 Cognizance Code. A 2-position code. The first position identifies the stores account to which the item belongs and the second position identifies the combined technical and inventory manager having jurisdiction over the item.

3.2.1.8 Federal Supply Classification. A 4-position code assigned to designate various groups of common use, commercial type items.

3.2.1.9 COAR/Material Group. A 6-position code locally assigned by the SUPERVISOR to indicate the modernization program under which the work on the ship is being performed or the outfitting material group material is being purchased to support.

3.2.1.20 Item Name. A 48-position nomenclature assigned to an item to describe the item for allowance purposes.

3.2.1.21 Technical Characteristics. A 200-character field used to describe the technical characteristics of an item.

3.2.2 The GOM Report Format (character positions, data element numbers, and field lengths) must use the following table as an illustration of the data elements with their respective character positions and field lengths:

N/R = Not Required

3.3 Submit the GOM Status Report to the SUPERVISOR 4 days prior to the 50 percent conference and 5 days after the end of the availability.

4. **NOTES:**

   4.1 None.
1. **SCOPE:**

   1.1 Title: Ship Facilities; maintain

2. **REFERENCES:**

   2.1 None.

3. **REQUIREMENTS:**

   3.1 Accomplish the following requirements to keep the ship habitable and maintain the ship's facilities operational at times when spaces are inhabited by the crew.

      3.1.1 Maintain operational sanitary services.

      3.1.2 Identify span of time each CHT zone will be taken out of service.

      3.1.3 Install and maintain temporary, primary, and back-up CHT pumps during such time that ship's CHT system is inoperative.

      3.1.4 Ensure that the ship's power, steam, fire main, seawater service system, flushing system, heating system, CHT system, potable water, air conditioning, and ventilation is maintained operational.

      3.1.5 Install temporary cables, jumpers, pumps, spool pieces, valves, hoses, and ducts when required to maintain systems operational.

   3.2 Coordinate disruption of the facilities listed in 3.1 and systems listed in 3.1.4 with the ship via the SUPERVISOR.

   3.3 Submit one legible copy, in approved transferrable media, of a detailed schedule showing when each facility/system will be disrupted to accomplish 3.1.5 and include the following:

      3.3.1 Original schedule is due 5 days prior to availability start date.

      3.3.2 Submit updated schedules weekly throughout the entire availability.
3.3.3 Include each compartment disrupted and specify the system(s) affected, with the scope of the disruption.

3.4 Remove the temporary installations and restore the systems to operational conditions when directed by the SUPERVISOR.

4. **NOTES:**

4.1 The contractor is only required to maintain those systems operational which he disturbs or disrupts in the performance of work in the Job Order, and only to the extent possible, using temporary methods consistent with 3.1.5.
1. SCOPE:

1.1 Title: Compartment Closeout; accomplish

2. REFERENCES:

2.1 Standard Items

3. REQUIREMENTS:

3.1 Submit one legible copy, in approved transferrable media, of a compartment closeout schedule to the SUPERVISOR no later than the 50 Percent Review Conference for all CNO availabilities and non-CNO availabilities 9 weeks in length or longer.

3.1.1 The compartment closeout schedule will be based on the list of affected spaces provided by the SUPERVISOR during the bidding process which lists all affected spaces requiring a compartment closeout along with the assigned Key Event or Milestone. The compartment closeout schedule shall contain the following minimum information:

3.1.1.1 Identification of work not completed in each compartment by the Work Item number and associated Key Event or Milestone.

3.1.1.2 Any impact that known work by Ship's Force, Alteration Installation Teams (AIT), Fleet Maintenance Activity (FMA), or other third Party Maintenance Providers will have on the contractor’s ability to complete work in the compartment.

3.1.1.3 The date when the contractor expects to complete his work within each compartment. Highlight major trouble spots.

3.1.1.4 An index of the compartment closeout schedule by compartment number listing the page number of where the information about the compartment can be located.

3.1.2 Compartment closeout inspections shall be completed at least one day prior to the associated Key Event or Milestone, unless otherwise approved by the SUPERVISOR.
3.2 Accomplish a joint inspection with the SUPERVISOR and the Commanding Officer's designated representative upon completion, inspection, and acceptance, by the contractor, of work within each compartment. This inspection not required for those compartment covered by 009-117 of 2.1.

3.2.1 Acceptance criteria is completion of all contractor work within the compartment inclusive of associated Work Items, and settled changes to associated Work Items.

3.2.1.1 Provide a listing of all contractor work applicable to the compartment for use in evaluating the status of contractor’s work completion during the inspection.

3.2.2 Identify and list any incomplete work or discrepancies for each compartment on the compartment closeout schedule. Deficiencies shall be updated and reviewed at the weekly progress meeting until completed.

3.2.2.1 Inspection of each compartment shall be considered complete when all contractor responsible deficiencies are remedied or adjudicated. The SUPERVISOR, Commanding Officer’s designated representative and the contractor will sign the Compartment Closeout Schedule indicating contractor work in the compartment is complete.

3.2.3 Turn over each compartment accepted in accordance with 3.2.1 to Ship's Force for maintenance/use and indicate on the updated compartment closeout schedule as complete.

3.3 Update the compartment closeout schedule at the weekly progress meeting after the first report is published.

3.3.1 Include any new work or changes in work boundaries via the Contractor Furnished Report (CFR)/Request for Contract Change (RCC) process.

3.3.2 Highlight changes from the previous compartment closeout schedule.

3.3.3 Highlight each discrepancy that cannot be corrected prior to their associated Key Event or Milestone date, providing the reason and expected completion date.

4. NOTES:

4.1 The ship's Commanding Officer will furnish the SUPERVISOR the work by compartment, including the schedule, which is planned for accomplishment by Ship's Force on a weekly basis.

4.2 For purposes of this item, the term compartment includes compartments, tanks, and voids. The terms "space/spaces", "room/rooms", and "compartment/compartment" are synonymous.
4.3 Tanks inspected and closed with a work item are exempt from the requirements of 009-81 of 2.1.

4.4 Interface conflicts in the closeout schedule will be resolved as they occur.

4.5 The contractor is not required to conduct a compartment closeout for spaces in which only services were routed. If damage is caused by the routing of services, the contractor is only required to repair the damaged areas.
1. **SCOPE:**

   1.1 Title: Installation of Equal Component Vice Specified Component; report

2. **REFERENCES:**

   2.1 None.

3. **REQUIREMENTS:**

   3.1 Submit one legible copy, in hard copy or approved transferrable media, of a report listing the following data to the SUPERVISOR in each instance when the Work Item allows, and the contractor chooses, to install "an equal component" vice a "specified component" listed in the Work Item. Provide data to compare the equal component to that specified including the following:

   3.1.1 Physical dimensions of each

   3.1.2 Bolting pattern required to install the component

   3.1.3 Power requirements

   3.1.4 Size, location, and type of miscellaneous service connections

   3.1.5 Modifications required for installation

   3.1.6 Comparison of the characteristics, i.e., gallons per minute, cubic feet per minute, and temperature ranges

   3.1.7 Submission of the reports shall be no later than the 50 percent Conference.

4. **NOTES:**

   4.1 None.
1. **SCOPE:**

   1.1 Title: Wire Rope Assembly; Fabricate

2. **REFERENCES:**

   2.1 S9086-UU-STM-010/CH-613, Wire and Fiber Rope and Rigging

3. **REQUIREMENTS:**

   3.1 Comply with the following specifications when procuring wire rope fittings.

      3.1.1 SOCKETS - RR-S-550
      3.1.2 FIEGE-TYPE - MIL-S-21433
      3.1.3 SWAGE SLEEVES - Commercial, supplied by the same manufacturer as the swaging machine
      3.1.4 THIMBLES - FF-T-276 Type 3 only
      3.1.5 SHACKLES - RR-C-271
      3.1.6 BLOCKS - MIL-B-24141

   3.2 Comply with the following specification when procuring wire rope.

      3.2.1 WIRE ROPE AND STRAND - RR-W-410

   3.3 Fabricate wire rope assemblies from the materials specified in 3.1 in accordance with the assembly and testing requirements of 2.1.

   3.4 Submit one legible copy, in hard copy or approved transferrable media, of a report listing the certification and testing of each wire rope to the SUPERVISOR. The report shall list the following information:

      3.4.1 Wire Rope testing results in accordance with 2.1.
      3.4.2 Certification documentation of qualified assembly personnel in accordance with 2.1 if required.
3.5 Verify each fitting is legibly marked with manufacturer's name or trademark and size.

3.5.1 Shackles and blocks shall also be marked with safe working load.

3.5.2 Thimbles are not required to be marked.

4. **NOTES:**

4.1 None.
1. SCOPE:

1.1 Title: Threaded Fastener Requirements; accomplish

2. REFERENCES:

2.1 Standard Items

2.2 S9086-CJ-STM-010/075, Fasteners

3. REQUIREMENTS:

3.1 General

3.1.1 Replace the following non-Level I fasteners 1/2-inch nominal diameter and smaller with new fasteners of the same material, strength and design;

   3.1.1.1 Monel, QQ-N-281, FF-S-85, ASTM 468 Alloy 400

   3.1.1.2 CRES, 300 Series, FF-S-85

   3.1.1.3 Steel, ASTM A193/A193M B16

   3.1.1.4 Steel, Grade 5 and Grade 8

3.1.2 Inspect each fastener intended for reuse for wear and defects. For the exposed portion of each body-bound stud use 075-8.2 of 2.2 for accept or reject criteria. For each other fastener, use Attachment A and paragraph 075-8.3 of 2.2 for accept or reject criteria.

3.1.3 Fasteners larger than 1/2-inch nominal diameter must be retained for reuse to the maximum extent possible. Reuse existing fasteners if the acceptance criteria of Attachment A and paragraph 075-8.3 of 2.2 are met.

   3.1.3.1 Maintain fastener accountability to ensure fasteners meeting the criteria of this item are reused in the same joint from which they came.

   3.1.3.2 Clean each fastener free of foreign matter (including paint).

   3.1.3.3 Chase and tap exposed threaded areas.

3.1.4 Install new threaded fasteners, washers, and lock washers in place of those identified to be missing or defective.
3.1.4.1 Utilize table one and 2.2 to select each replacement fastener when necessary.

3.1.5 Use of black-oxide coated brass threaded fasteners (BOCBTF) is prohibited in the accomplishment of any work. BOCBTTFs are most commonly marked with “462”, “464”, “F467C”, “F467D”, “F468C”, and “F468D.”

3.1.6 Fasteners, body-fitted bolts, and studs requiring a permeability factor of 2.0 or less must conform to 500 Series Monel, 316L CRES, or 304 CRES where required.

3.2 Externally threaded fastener installation acceptance criteria unless otherwise specified or approved:

3.2.1 The minimum thread protrusion for each male threaded fastener must be one full thread beyond the face of the nut. The maximum thread protrusion for each male threaded fastener is 10 full threads beyond the face of the nut.

3.2.2 For self-locking (plastic insert) nut installations, the minimum thread protrusion for bolt or stud end may be flush with the face of the nut after the threaded fastener(s) have been installed and tightened. The maximum thread protrusion for self-locking nuts must be 5 threads after the threaded fastener(s) have been installed and tightened.

3.3 Internally threaded fastener installation acceptance criteria must be in accordance with paragraph 075-7.6 of 2.2.

3.4 Use of Temporary Fasteners

3.4.1 Maintain a single log/file of installed/removed temporary fasteners with the following information:

3.4.1.1 System
3.4.1.2 Component (valves, flanges, foundations, brackets)
3.4.1.3 Location (deck, frame, port, starboard, tank, manhole)
3.4.1.4 Company name/badge number/name of mechanic
3.4.1.5 Date installed/date removed

3.4.2 Paint temporary fasteners blaze orange unless an alternate color has been authorized by the SUPERVISOR. Minimum requirements for painting fasteners are as follows:

3.4.2.1 Nut Bearing faces (top)
3.4.2.2 Bolt Top of bolt head
3.4.2.3 Stud Both ends of stud
3.4.2.4 Washer Faces (edge and bottom of washer)

3.4.3 Remove temporary fasteners prior to any testing, lagging, and/or painting of systems or components.
3.4.4 Logging-in of temporary fasteners must be accomplished no later than the end of the work shift.

3.4.5 Existing system fasteners used for blanking that will be reused for installation are excluded from the requirement of 3.4.2.

3.5 Torque wrenches will be selected in such a manner that the required final torque falls within 20 percent to 90 percent of the torque wrench range.

4. NOTES:

4.1 For purposes of this item, temporary fasteners are defined as those fasteners that are installed in lieu of the final fasteners that are specified for system installation. Examples would include temporary fasteners used to hold fittings, valves, or machinery in place.

4.2 One complete thread or one thread length is defined as one complete rotation (360 degrees on a single thread), starting at a point along the thread.
Attachment A

The following criterion applies to the inspection of fasteners:

1 General inspection: Fasteners must bear markings identifying material to be compatible with the system. Black-oxide coated fasteners and fasteners without markings are not acceptable. Joints with mixed material fasteners are not acceptable.

2. Engaged Thread Area: Cracks are not acceptable.
   
   2.1 Broken, chipped, or missing threads or other indications of brittle material failure, are not acceptable.
   
   2.2 Galling, spalling, or pitting is not acceptable.
   
   2.3 Major defects are not acceptable. A major defect is a single defect (after removal of sharp edges and raised metal) that has a depth over one-half the thread depth.
   
   2.4 Isolated minor defects are acceptable. A minor defect is a single nick, gouge, or flattened thread (after removal of sharp edges and raised metal) that has a depth greater than 1/64-inch, but less than one-half the thread height (depth), and a width less than the thread spacing (pitch). Defects less than 1/64-inch deep may be ignored.
   
   2.4.1 An isolated minor defect that exceeds the width criterion for a minor defect is acceptable when the total length of the defect does not exceed 15 percent of one thread length in any one complete thread.
   
   2.4.2 Any combination of minor defects is acceptable when the total combined length of the defects does not exceed 15 percent of one thread length in any one complete thread.
   
2.5 Repaired threads that engage with a non-self-locking Class 3-B fit nut, turned with fingers, are acceptable.

3. Non-Engaged Thread Area:
   
   3.1 Cracks are not acceptable.
   
   3.2 For externally threaded fasteners, no minimum thread form is required, except as needed to provide initial thread engagement and passing of the nut.

4. Self-locking nuts must have positive reinstallation torque. Cuts, tears, or looseness in self-locking elements or the adjacent metal are not acceptable.
   
   4.1 Determine adequate torque values (i.e., positive reinstallation, breakaway, running) in accordance with Table 075-5-1 of 2.2.

5. Deformed or damaged flats on fasteners are not acceptable.

6. Discard fasteners not meeting the acceptance requirements of this item.

### NOTES

1/ Alloy steel is of Composition A - 2-1/4 percent Chromium, one percent Molybdenum, Composition B - 1-1/4 percent Chromium, 1/2 percent Molybdenum, and Composition C - Carbon Molybdenum.

2/ Nonferrous Alloy except Aluminum.

3/ Studs must be Class 2 or 3 fit on the nut end and Class 5 fit on the stud and, except that a Class 3 fit with a thread locking compound may be used where temperatures do not exceed 250 degrees Fahrenheit. The thread locking compound must conform to ASTM D 5363. Check Class 3 fit stud ends in accordance with SAE-J2270.

4/ Fasteners of Nickel Copper Aluminum must be the only type used on sea chest and hull valves.

5/ Nuts of Nickel Copper Alloy, conforming to QQ-N-281 Class A or B, or Nickel Copper Aluminum conforming to QQ-N-286 must be the only type used on sea chest and hull valves.
## ATTACHMENT C (DDG-51 Class)

1. **SCOPE:**

   1.1 Title: Government Sponsored Planning Yard/Configuration Data Manager (CDM) On-Site Representative Facility; provide

2. **REFERENCES:**

   2.1 None.

3. **REQUIREMENTS:**

   3.1 Provide a separate, lockable, and secure office space for use by the Government Sponsored Planning Yard/CDM On-Site Representative furnished with 2 desks with chairs, lights, heat, air conditioning, electrical outlets, sanitary facilities, filing cabinets, telephone service, janitorial service, and 2, 15-pound fire extinguishers and 24-hour service for the entire contract period.

   3.1.1 The facility shall have a minimum of 240 square feet of floor space.

   3.1.2 The facility shall be located within one-quarter mile of the ship.

   3.1.2.1 Provide a parking area adjacent to the facility. The area shall be lighted and accommodate 2 automobiles simultaneously.

   3.1.3 Lighting shall provide 28 foot candles of illumination measured at the desktop level.

   3.1.4 Heating and air conditioning shall be capable of maintaining the temperature between 65 and 78 degrees Fahrenheit.

   3.1.5 Provide 2 double-pedestal desks 30-inches wide by 60-inches long.

   3.1.5.1 Provide one telephone desk set and one 115-volt, shock resistant, double electrical receptacle for each desk. Each receptacle shall be a convenient height and located adjacent to each desk.
3.1.5.2 Provide one swivel chair and one straight-back chair for each desk.

3.1.6 Provide telephone communications with separate circuits for each desk set, between the facility, shipyard, ship, and the municipal telephone system. One telephone line shall be capable of digital transmission.

3.1.6.1 Telephone systems designated long distance shall be installed in such a manner that the only way long distance calls can be made will be with a long distance calling card (credit card) that shall be obtained by the On-Site Representative prior to availability start date.

3.1.7 Provide 4-drawer filing cabinets with lock and keys.

3.1.8 Provide sanitary facilities equipped with drains, hot and cold potable water, and the following:

3.1.8.1 Hot water shall be maintained at 120 to 140 degrees Fahrenheit.

3.1.8.2 One lavatory

3.1.8.3 One water closet

3.1.8.4 One soap dispenser

3.1.8.5 One towel dispenser

3.1.9 Facilities shall be provided 2 days prior to contract start date through 2 days after the contract completion date unless otherwise specified.

3.2 Provide janitorial services to include sweeping, mopping, buffing, and trash pickup on a daily basis.

3.3 The facility shall be in accordance with local building codes, sanitary and current fire regulations. The facility shall include smoke alarms, 2, 15-pound fire extinguishers, and sprinkler systems.

3.4 Furnishings and equipment in this item shall be maintained in a fully operable condition by the contractor.

3.5 The facility shall be delivered to the Government clean, sanitary, damage free, and vermin free.

4. **NOTES:**

4.1 The On-Site Representative will retain the keys during the entire contract period.
4.2 The SUPERVISOR will identify the Government Sponsored Planning Yard/CDM On-Site Representatives upon request of the contractor.

4.3 The Government Sponsored Planning Yard/CDM On-Site Representatives shall obtain the telephone credit card specified in 3.1.6.1 from their command.
1. **SCOPE:**

   1.1 Title: Recovery and Turn-In of Ozone Depleting Substance (ODS); accomplish

2. **REFERENCES:**

   2.1 49 CFR Part 173, General Requirements for Shipments and Packagings

   2.2 Department of Defense Ozone Depleting Substances Turn-In Procedures, Defense Logistics Agency (DLA), Dated December 2015

3. **REQUIREMENTS:**

   3.1 Recover Chlorofluorocarbons (CFC) refrigerants and halon materials listed in Attachment A that are not recycled back into the specific system's equipment from which they were removed as follows:

   3.1.1 Fire suppression (halon) cylinders and canisters with electrical charges or initiators must be deactivated and safety caps must be used to cover exposed actuating mechanisms and discharge ports prior to shipping the intact cylinder.

   3.1.2 Recover other halon and CFC materials for turn-in to the DoD ODS Reserve at the Defense Depot Richmond VA (DDRV). Empty cylinders shall be used to recover the materials. Empty recovery cylinders can be requisitioned through normal MILSTRIP stock ordering procedures from DDRV. The cylinders used to recover CFC shall be painted orange and cylinders used for halon shall be painted red. Both cylinders shall have yellow tops and shall also have dual port valves to ease the recovery process.

   3.1.2.1 Do not mix new materials with used materials and do not mix different types of materials in the same cylinders.

   3.1.3 Ensure the recovered materials cylinder is tagged. The tag should be placed beneath the cylinder protective cap or attached securely to the container. Do not stencil on cylinder. The tag shall contain the following information:

   3.1.3.1 The shipper's DOD Activity Address Code (DODAAC). If the turned-in material originates from a ship or submarine, use the DODAAC of the ship/submarine on the tag.
3.1.3.2 The shipping activity with point of contact and telephone number.

3.1.3.3 The National Stock Number (NSN) that applies to the filled cylinder being returned.

3.1.3.4 The identity of the recovered material (Navy recovered R-XXX, CFC-XXX, or HALON-XXXX).

3.1.3.5 The amount, in pounds, of recovered materials in the cylinder. Do not fill more than 80 percent of its water weight capacity.

3.1.3.6 Apply a warning/hazardous label to the cylinder in compliance with 2.1.

3.1.3.7 The quantity of containers on the pallet or within the shipping crate. When multiple containers with the same NSN are shipped palletized or in a box/crate, apply only one tag/label to the shipment, not to each item.

3.2 Prior to shipping the reclaimed materials to DDRV, notify the SUPERVISOR so that a DD Form 1348-1 MILSTRIP can be prepared and transaction authorization procured.

3.3 Upon receipt of the completed DD Form 1348-1, and transaction authority from the SUPERVISOR, ship the reclaimed materials to:

Defense Depot Richmond Virginia (DDRV)
SWO400
Cylinder Operations
8000 Jefferson Davis Highway
Richmond, VA 23297-5000

4. **NOTES:**

4.1 If your activity is personally transporting ODS to the DoD ODS Reserve, be sure to schedule your delivery with the DDRV Dispatch Office at DSN 695-3834 or (804) 279-3834.

4.2 Current NSNs for cylinders are available from the SUPERVISOR.

4.3 Condition codes for cylinders are as follows:

4.3.1 Condition Code A: To be used for returning original cylinders whose seal was never broken or for recovery cylinders.

4.3.2 Condition Code B: To be used for returning full, original cylinders or for standard DOD refillable cylinders.
4.3.3 Condition Code F: To be used to return partially depleted cylinders whose purity cannot be guaranteed or for returning other (non-standard/commercial) cylinders.

4.4 Definition of Recover – To remove refrigerant in any condition from a system and store it in an external container without necessarily testing or processing it in any way.
**ATTACHMENT A**

1. **SCOPE:**
   
   1.1 Title: Chemical Disinfection Procedure; accomplish

2. **REFERENCES:**

   2.1 NAVMED P-5010-6, Manual of Naval Preventive Medicine, Chapter 6, Water Supply Afloat

3. **REQUIREMENTS:**

   3.1 Accomplish a chemical disinfection of each affected potable water system (e.g., tank, pump, piping and hoses) in accordance with 2.1.

   3.2 Accomplish a halogen (chlorine) residual test for each affected potable water system. Acceptable free available chlorine (FAC) shall meet minimum levels specified in 2.1.

       3.2.1 Submit one legible copy, in approved transferrable media, of the chlorine residual test to the SUPERVISOR not later than one day after the completion of the test, stating that minimum FAC level has been met in accordance with 2.1.

   3.3 Secure and tag out each affected potable water system upon completion of the chlorine residual test.

   3.4 Accomplish a bacteriological test for each affected potable water system.

       3.4.1 Bacteriological testing must be accomplished at laboratories certified by state regulatory agencies in states having primacy, or by the Regional EPA Office in states not having primacy.

       3.4.2 Submit one legible copy, in approved transferrable media, of completed report to the SUPERVISOR not later than one day after the completion of the test, with certification that the water is safe for human consumption.

   3.5 Remove each tag upon completion of satisfactory bacteriological test and release each potable water system for Ship’s Force use.
3.6 Accomplish chemical localized disinfection of each new and disturbed pipe fitting, pipe end, and valve in accordance with Article 6-22d(2) of 2.1 ensuring, at a minimum, each method is consistent with METHOD 2 of Table 6-2.

3.7 Remove and dispose of chlorinated water and all rinse water in accordance with federal, state, and local laws, codes, ordinances, and regulations.

4. **NOTES:**

4.1 Do not take calcium hypochlorite in dry powder form aboard ship. Mixing is to be done ashore.

4.2 2.1 can be accessed at:

   http://navymedicine.med.navy.mil (use link to Navy Medicine Directives, Publications and Manuals)

   or

1. **SCOPE:**

   1.1 Title: Collection, Holding and Transfer (CHT) and Motor Gasoline (MOGAS) Tanks, Spaces, and Piping, including Sewage or MOGAS-Contaminated Tanks, Spaces, and Piping; certify

2. **REFERENCES:**

   2.1 Standard Items

   2.2 29 CFR Part 1915, Occupational Safety and Health Standards for Shipyard Employment

   2.3 NFPA Standard 312, Standard for Fire Protection of Vessels During Construction, Repair, and Lay-up

   2.4 NFPA Standard 306, Standard for the Control of Gas Hazards on Vessels

   2.5 S9086-T8-STM-010/CH-593, Pollution Control

   2.6 Compressed Gas Association Commodity Specification for Air, Pamphlet G-7.1

   2.7 29 CFR Part 1910.134, Occupational Safety and Health Standards, Respiratory Protection

3. **REQUIREMENTS:**

   3.1 Certify ENTER WITH RESTRICTIONS, SAFE FOR WORKERS and/or SAFE FOR HOT WORK in accordance with 2.2 through 2.4, using 2.5 and 2.6 for guidance, Collection, Holding and Transfer (CHT) and MOGAS tanks, spaces, and associated piping, and inspect and certify adjacent tanks, spaces, or piping, where the scope of repairs will result in a need for certification during the accomplishment of this Job Order.

   3.1.1 A National Fire Protection Association (NFPA) Certified Marine Chemist shall be present during the opening of CHT or MOGAS tanks, spaces, or associated piping. The Marine Chemist shall personally certify all CHT or MOGAS tanks, spaces, and associated piping for initial entry.
3.1.2 Submit one legible copy, in approved transferrable media, of a list of tanks or spaces to be certified to the SUPERVISOR at least one day prior to commencement of work.

3.1.3 Accomplishment of a Process Control Procedure (PCP) to support a step-by-step procedure of how the certification process will be accomplished shall be in accordance with NAVSEA Standard Items (See Note 4.4).

3.1.3.1 Procedures for CHT systems shall include, as a minimum, personnel requirements, notification of emergency response personnel, disinfecting of CHT tank and associated piping, removal of product, diagram and tag-out of affected piping, protective clothing, respiratory protection, ventilation requirements, and a list of spaces affected.

3.1.3.2 Procedures for MOGAS systems shall include, as a minimum, personnel requirements, notification of emergency response personnel, removal of product from the draw-off tank and MOGAS tank and associated piping, removal of inert gas (carbon dioxide) from the cofferdam around the MOGAS tank, tag-out of affected MOGAS and inert gas (CO2) piping, fire protection/fire prevention, protective clothing, respiratory protection, ventilation requirements, and control of other hazards such as benzene and lead.

3.2 Provide a written notice of opening of CHT and MOGAS tanks, spaces, and associated piping.

3.2.1 Deliver written notification to the SUPERVISOR and the Commanding Officer's designated representative at least 4 hours prior to the planned opening of CHT or MOGAS tanks, spaces, and associated piping.

3.2.2 Deliver written notification to the SUPERVISOR and the Commanding Officer's designated representative of opening of CHT or MOGAS tanks, spaces, and associated piping planned over a weekend or Monday following that weekend no later than 0900 on the Friday immediately preceding that weekend.

3.2.3 Deliver written notification to the SUPERVISOR and the Commanding Officer's designated representative of opening of CHT or MOGAS tanks, spaces, and associated piping planned on a federal holiday and on the day following the federal holiday no later than 0900 of the last working day preceding the federal holiday.

3.3 Accomplish the requirements of 2.2 for tanks, spaces, or piping that have the potential to become Immediately Dangerous to Life or Health (IDLH).

3.3.1 Spaces that are determined to contain IDLH atmospheres shall never be entered except for emergency rescue or for short duration for installation of ventilation equipment in accordance with 2.2 and 2.7, and the requirements of 3.3.1.1 and 3.3.1.2. When entering IDLH spaces for the
purpose of installing ventilation, notify the SUPERVISOR prior to entry. Notifications of rescue shall be made as soon as possible.

3.3.1.1 Provide a full facepiece, pressure demand, self-contained breathing apparatus (SCBA) certified by National Institute for Occupational Safety and Health (NIOSH) for a minimum service life of 30 minutes, or a combination, full facepiece, pressure demand supplied-air respirator (SAR) with an auxiliary self-contained air supply. The size/volume of the auxiliary self-contained air supply shall be based on the contractor's assessment of the unique characteristics/hazards of the space being entered to allow employees to safely escape.

3.3.1.2 In the case of MOGAS tanks and the associated cofferdams, the auxiliary self-contained air supply shall be a minimum of 15 minutes or more depending on the required assessment in 3.3.1.1.

3.3.2 NIOSH-approved atmosphere-supplying respirators shall be used by personnel entering CHT tanks, MOGAS tanks or spaces, or opening associated piping. Atmosphere-supplying respirators may be either a combination, full facepiece, pressure demand SAR, or a full facepiece, pressure demand SCBA. The source of breathing air for SARs shall be either a compressor capable of delivering an adequate quantity of breathing air at the pressure required by the respirators used and meeting the requirements of the specification for Grade D breathing air described in 2.6, or a bank of cylinders cascading to provide at least 4 to 6 hours of breathing air meeting the above specifications at the pressure needed by the respirators used. The source of breathing air for SCBAs shall meet the requirements of 2.6. Compressed and liquid oxygen shall meet the United States Pharmacopoeia requirements for medical or breathing oxygen. Compressed oxygen shall not be used in atmosphere-supplying respirators that have previously used compressed air. SCBA respirators shall have a minimum service life of 30 minutes.

3.3.3 All personnel required to use the respiratory equipment mentioned above shall receive training in accordance with 2.2 in the actual use of the respirator equipment including operation of all controls and breathing under pressure-demand conditions.

3.3.4 An adequate and attended lifeline shall be utilized for each employee who must enter the IDLH or potentially IDLH atmosphere.

3.4 An observer, whose only duty shall consist of oversight of the work area and spreading the alarm in the event of a casualty, shall be stationed at the access to the work site. The observer must be able to have visual contact or communication with persons in the space at all times.

3.4.1 The observer shall be provided with and trained to use the same personal protective equipment required for the personnel accomplishing the work. In addition, the observer shall be knowledgeable in the work process being accomplished.
3.4.2 The observer shall establish communication between the ship's designated 24-hour manned casualty control location, e.g., Quarterdeck, Damage Control Center (DCC), Casualty Control Station (CCS), and the observer's location to facilitate notification of the ship in the event of a casualty. This communication may be in the form of 2-way radios, temporary portable-wired alarm system, or other effective devices. The communication devices shall be tested every 30 minutes, as a minimum, to ensure the observer's ability to sound the alarm in the event of a casualty.

3.5 Ventilation suckers, suction ducting, tools, flashlights, and other equipment shall be non-sparking type.

4. **NOTES:**

4.1 Booklet of General Plans and Tank Sounding Tables are available for review at the office of the SUPERVISOR.

4.2 Refer to 009-07, or 009-70 of 2.1, as appropriate, for other requirements concerning confined space entry, certification, fire prevention, and housekeeping.

4.3 For the purpose of this Standard Item, the words "associated piping" means any piping or fixture physically connected to the CHT or MOGAS system.

4.4 A PCP to support a step-by-step procedure of how the certification process will be accomplished is required; the use of Category II Standard Item 009-09 “Process Control Procedure (PCP); provide and accomplish” of 2.1 shall be specified in the Work Item.
1. SCOPE:

   1.1 Title: Contractor Furnished Anode Purchase and Inspection; accomplish

2. REFERENCES:

   2.1 None.

3. REQUIREMENTS:

   3.1 Purchase of zinc anodes shall meet the requirements of MIL-DTL-18001.

   3.2 Purchase of aluminum anodes shall meet the requirements of MIL-DTL-24779.

   3.3 Accomplish a visual inspection to ensure that each anode displays the following information:

      3.3.1 MILSPEC revision letter

      3.3.2 Manufacturer name or logo

      3.3.3 Heat or melt number

   3.4 Maintain a chain of custody record for pencil-type anodes that are unable to display the information listed in 3.3.

   3.5 Submit one legible copy, in hard copy or approved transferrable media, of the chemical analysis of each heat or melt number for each anode furnished.

   3.6 Maintain segregation of anodes by lot numbers.

4. NOTES:

   4.1 None.
1. SCOPE:

1.1 Title: Technical Representative; provide

2. REFERENCES:

2.1 None.

3. REQUIREMENTS:

3.1 Provide the services of a qualified on-site Technical Representative to provide assistance in the process or processes, including NAVSEA pilot coating system application, and repair and testing of the equipment specified in the invoking Work Item. The Technical Representative shall meet the following minimum qualification requirements:

3.1.1 Have technical knowledge of the specified equipment or process and have a documented history of successful performance or repairs on similar equipment or processes.

3.1.2 Have demonstrated competency in analyzing repair requirements and process performance and making recommendations based on process or disassembly inspection results.

3.1.3 Have current/active documented and verified access to Original Equipment Manufacturer (OEM) proprietary plans, specifications, procedures, material, and parts.

3.1.4 Provide certification from the OEM or the SUPERVISOR that the individual is an authorized service provider.

3.1.5 Submit one legible copy, in approved transferrable media, of the name and qualifications of the Technical Representative to the SUPERVISOR for approval 15 days prior to commencement of work. Qualification documentation shall include information supporting the requirements of 3.1.1 through 3.1.4.

3.1.5.1 Obtain written approval from the SUPERVISOR prior to substituting the Technical Representative.
3.2 The Technical Representative shall review, sign, and date all required reports, for technical adequacy prior to submittal to the SUPERVISOR for acceptance. Associated Process Control Procedures shall be reviewed, signed, and dated by the Technical Representative prior to the start of work.

3.3 The Technical Representative does not have the authority to direct modifications to the equipment, processes, or items specified in the invoking Work Item or deviate from the Work Item without signed authorization from the SUPERVISOR.

3.3.1 The Technical Representative has the responsibility to notify the SUPERVISOR and recommend interruption of the execution of any specific Work Item if they recognize that repair procedures (e.g., PCP, etc.) are ineffective, the Executing Activity is not following the repair procedures, or not using good craftsmanship practices.

3.4 Minimum requirements for the services of the Technical Representative are as follows:

3.4.1 Witness pre-repair operational tests, adjustments, and inspections to determine equipment condition, when required by the Work Item.

3.4.2 Inspect equipment and component parts during disassembly, to include process material and process performance.

3.4.3 Verify process documents where as-found reports are required, to include clearances and conditions, and submit as-found report. Include in as-found report the information required by 3.4.3.1 through 3.4.3.4.

3.4.3.1 Provide dimensional measurements and comparisons to minimum/maximum design tolerances for equipment.

3.4.3.2 Provide sketches of suspect and defective areas with notations to describe defects.

3.4.3.3 Provide list of recommended repair parts or material in addition to those specified in the invoking Work Item.

3.4.3.4 Provide recommendations for future process improvements.

3.4.4 Inspect new and repaired areas and component parts of the equipment prior to re-assembly to ensure compliance with Navy technical manual requirements and Standard Items.

3.4.4.1 Any deviations or departure from the specifications and/or the requirements of 3.4.4 require an approval from the SUPERVISOR prior to equipment re-assembly.
3.4.5 Inspect and provide technical guidance and assistance during process performance, equipment re-assembly and adjustment, and when specified, coating application. Verify re-assembly procedures, sizes, and clearances comply with manufacturer's requirements, Navy technical manual requirements, and coating application procedures when specified.

3.4.5.1 Verify and document mechanical and electrical alignments, final closing sizes, and clearances.

3.4.6 Witness operational tests, make adjustments, and document test and process performance results, including, when required, final inspections of coating systems.

3.4.7 Submit one legible copy, in approved transferrable media, of an overall condition report to the SUPERVISOR within 5 days of completion of the requirements of the Work Item and/or coating system application or other process specified in the invoking Work Item.

3.4.7.1 The report shall provide a brief of the repairs accomplished and the Technical Representative's assessment of the post-overhaul equipment condition or process performance.

3.5 Notify the SUPERVISOR upon initial arrival and prior to final departure of the Technical Representative.

4. **NOTES:**

4.1 None.
1. SCOPE:

1.1 Title: Propeller In-Place Inspection; accomplish

2. REFERENCES:

2.1 S9086-HP-STM-010/CH-245, Propellers and Propulsors

3. REQUIREMENTS:

(I) "VISUAL INSPECTION"

3.1 Clean and accomplish a visual inspection of each propeller and propeller cap in accordance with Section 3 of 2.1.

3.2 Record all inspection data taken in 3.1.

3.2.1 Submit one legible copy, in approved transferrable media, of completed Propeller Visual Technical Inspection Report Forms, NAVSEA 9245/3, listing results of the visual inspection and a sketch showing the size and location of any cracks or defects to the SUPERVISOR.

3.2.2 Cover the entire periphery of each propeller blade with metal edge guards and secure them with steel straps in accordance with 2.1.

3.3 Stake each screw and plug on the exterior of each propeller cap to prevent backing out.

(V) "INSPECT BLADE ALIGNMENT"

3.4 Inspect for the existence and accuracy of the word "BLADE" in line with each propeller blade on the coupling flange at the main reduction gears.

3.4.1 Stamp coupling hub with the word "BLADE" in line with each propeller blade. Stamping shall be 1/8-inch to 1/4-inch lettering, low stress markings. Etching is prohibited.

3.5 Just prior to undocking, remove blade edge protection installed in 3.2.2.
3.5.1 Inspect to ensure that blade edge protection has been removed.

4. **NOTES:**

4.1 Additional inspections or requirements will be specified in invoking Work Item.

4.2 NAVSEA Form 9245/3 is available on the Web at:
1. **SCOPE:**
   
   1.1 Title: Resilient Mount; install

2. **REFERENCES:**

   2.1 Standard Items

   2.2 Equipment Technical Manual

   2.3 S9073-A2-HBK-010, Installation and Inspection Information Resilient Mount Handbook

3. **REQUIREMENTS:**

   3.1 Inspect for the presence of heavily mis-loaded or deformed mounts prior to mount removal using 2.2 and 2.3 for guidance.

      3.1.1 Submit one legible copy, in approved transferrable media, of heavily mis-loaded or deformed mounts to the SUPERVISOR within 3 days of identifying the condition.

   3.2 Remove resilient mount assemblies, using 2.2 and 2.3 for guidance.

      3.2.1 Inspect each equipment foundation for structural integrity, deterioration, pitting, cracks, and areas of damage or distortion.

         3.2.1.1 Submit one legible copy, in approved transferrable media, of a report listing results of the requirements of 3.2.1 to the SUPERVISOR within 5 days after equipment removal.

   3.3 Select, procure, assemble, install, load, and adjust new resilient mount assemblies including load bolts, foundation bolts, nuts, and snubbers in accordance with 2.3.
3.3.1 Stamp the installation date on each resilient mount flange adjacent to the identification date. The date shall be visible and legible when the mount is installed with 1/8-inch minimum lettering size.

3.3.2 Submit one legible copy, in approved transferrable media, of a report listing results of the requirements of 3.3 and 3.3.1 to the SUPERVISOR. The report shall include the following:

3.3.2.1 Identity of equipment

3.3.2.2 Amount and designation of mounts installed

4. **NOTES:**

4.1 Equipment technical manual and drawings referenced in invoking Work Item may identify mount designation and loading requirements.

4.2 This item does not apply to turbine enclosure mounts.

4.3 If cleaning and painting for disturbed surfaces of each foundation where resilient mount assemblies have been removed of 3.2.2 is required; the use of Category II Standard Item 009-32 “Cleaning and Painting Requirements; accomplish” of 2.1 will be specified in the Work Item.
1. **SCOPE:**

   1.1 Title: Emergency Planning and Community Right-to-Know Act (EPCRA) and Pollution Prevention Act (PPA) Information; provide

2. **REFERENCES:**

   2.1 42 U.S.C. 110001, et seq (1986) Emergency Planning and Community Right-to-Know (EPCRA)

   2.2 Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA), Section 102(a)

   2.3 40 CFR Parts 300, 302, 355, 370, and 372, Protection of Environment

   2.4 OPNAV M-5090.1, Enviromental Readiness Program Manual

3. **REQUIREMENTS:**

   3.1 Contractor facility availabilities:

      3.1.1 Designate a primary and secondary point of contact to receive reports/notifications from the SUPERVISOR applicable under this item.

      3.1.1.1 These reports/notifications will include quantities of hazardous substances stored or accidentally released by Government activities in accordance with Sections 302, 304, 311, 312, and 313 of 2.1. In accordance with 2.4, material maintained under the ship’s custody is not subject to the reporting requirements of 2.1 (See Note 4.1).

      3.1.2 Submit the names of the primary and secondary point of contact to the SUPERVISOR in writing prior to availability start date.

   3.2 Government facility availabilities:

      3.2.1 Provide reports/notifications required in 3.2.2 through 3.2.6.2 to the SUPERVISOR regardless of threshold quantities delineated in 2.1 through 2.3.

      3.2.2 EPCRA Section 302 requirements:
3.2.2.1 Submit one legible copy, in approved transferrable media, of Safety Data Sheet (SDS) for each Extremely Hazardous Substances (EHS) listed in 2.3 brought aboard the Government facility.

3.2.2.2 Report quantities of all chemical products containing EHS brought aboard the Government facility.

3.2.3 EPCRA Section 304 requirements:

3.2.3.1 Provide verbal notification of the release of a reportable quantity of an EHS or Hazardous Substance (HS) released at the Government facility to the SUPERVISOR immediately after initial applicable notifications have been made in accordance with local regulations. This verbal notification shall be followed by a written notification to the SUPERVISOR within one day.

3.2.4 EPCRA Section 311 requirements:

3.2.4.1 Provide SDS and quantity (by weight) of each HS and EHS in accordance with 2.3, stored on the Government facility.

3.2.5 EPCRA Section 312 requirements:

3.2.5.1 Provide SDS and Tier I and Tier II reports, including quantities processed or used, of all products or substances listed in accordance with 2.3.

3.2.6 EPCRA Section 313 requirements:

3.2.6.1 Provide SDS and quantities processed or used of all products or substances listed in Section 313 lists in accordance with 2.3.

3.2.6.2 The Standard Industrial Classification (SIC) Code exception for reporting under Section 313 of 2.1 shall be disregarded when making the required reports.

3.3 All availabilities:

3.3.1 Submit one legible copy, in approved transferrable media, of non-emergency reports and copies of SDS(s) to the SUPERVISOR upon request.

3.3.2 All emergency reports shall be made immediately upon becoming aware of the existence of the release.

3.3.3 Utilize individual contract numbers on all reports/notifications.

4. NOTES:

4.1 None.
1. **SCOPE:**

   1.1 Title: Mechanically Attached Fitting (MAF); install

2. **REFERENCES:**

   2.1 MIL STD 777, Schedule of Piping Systems, Valves, Fittings, and Associated Piping Components for Naval Surface Ships

   2.2 S9086-RK-STM-010/CH-505, Shipboard Piping Systems

3. **REQUIREMENTS:**

   3.1 Provide control over the use of mechanically attached fittings (MAFs) when approved in accordance with 4.46 of 2.1 as an alternative to the standard welding or brazing of fittings in shipboard piping systems. Select and install MAFs in accordance with Paragraph 505-6.8 of 2.2.

   3.2 Prepare a written procedure for approval by the SUPERVISOR identifying the specific MAF process that may be utilized. The procedure requires a one-time submittal/acceptance unless Standard Items and/or references change or contractor's status changes.

   3.2.1 The procedure shall be in accordance with 2.2 and shall include quality control requirements, inspection and documentation forms, safety requirements, installation criteria (procedures), responsibilities, and training program requirements.

   3.2.2 Submit one legible copy, in approved transferrable media, of the procedure to the SUPERVISOR at least 7 days prior to initial implementation of procedure.

   3.2.2.1 Submit updated or changed procedures to the SUPERVISOR at least 3 days prior to implementation.

   3.3 Accomplish the requirements of the approved procedure.

   3.3.1 Submit one legible copy, in approved transferrable media, of a report to the SUPERVISOR identifying the type of MAF, location (space), and system where the contractor exercises the option to install MAFs in lieu of weld fittings.
4. **NOTES:**

4.1 None.
1. **SCOPE:**
   
   1.1 Title: Ball Valve; repair

2. **REFERENCES:**

   2.1 S9086-RJ-STM-010/CH-504, Pressure, Temperature and Other Mechanical and Electromechanical Measuring Instruments

3. **REQUIREMENTS:**

   3.1 Matchmark valve parts.

   3.2 Disassemble, clean each internal and external surface free of foreign matter (including paint), and inspect each part for defects.

   3.3 Repair valve as follows:

      3.3.1 Polish the seating surface of the valve ball to a 32 Root-Mean-Square finish to remove high spots, nicks, and burrs.

      3.3.2 Remove each existing and install new valve soft seats using those compatible with the system fluid, in accordance with manufacturer's specifications.

      3.3.3 Chase and tap exposed threaded areas.

      3.3.4 Dress and true gasket mating surfaces.

   (I)(G) "VERIFY LEVEL I PARTS AND CLEANLINESS"

   3.4 Assemble each valve installing new each packing, each gasket, each diaphragm, each spring, and each soft seat, and each fastener, for those removed in 3.2 in accordance with the manufacturer's specifications or instruction.

      3.4.1 Lubricate each MIL-V-24509 valve with grease conforming to SAE-AMS-G-6032.
3.5 Inspect alignment of ports in the ball valve and body with the ball fully seated. Ball misalignment shall not be of a degree that will restrict flow.

3.6 Hydrostatically test valve as follows:

3.6.1 Hydrostatic test equipment shall have the following capabilities:

3.6.1.1 Manual overpressure protection release valve.

3.6.1.2 Self-actuated and resetting relief valve with a set point no greater than 100 PSIG above the test pressure or 10 percent above the test pressure, whichever is less.

3.6.1.3 Master and backup test gauges with gauge range and graduation in accordance with Table 504-6-1 of 2.1. The backup gauge shall be cross-checked to the master hydrostatic test gauge up to the maximum test pressure just prior to start of testing. Master and backup gauges shall track within 2 percent of each other.

3.6.1.4 Protection equipment shall be accessible and test gauges shall be located where clearly visible and readable to pump operator and inspector.

3.6.2 Test for seat tightness alternately on each side of ball valve with the opposite side open for inspection.

3.6.2.1 Ball shall be seated by hand force.

3.6.2.2 Test shall be continued for a minimum of 3 minutes if there is no evidence of leakage or, in the event of visible leakage, until accurate determination of leakage can be made.

3.6.2.3 Allowable leakage for a soft-seated ball valve: None.

4. NOTES:

4.1 Test pressures of 3.6.2 will be specified in Work Item.

4.2 Repair of valve operating gear will be specified in Work Item.

4.3 The paragraph referencing this note is considered an (I) if the valve is Level I. If the valve is not Level I, the paragraph is considered a (V).
4.4 The paragraph referencing this note is considered an (I)(G) if the valve is Level I. If the valve is not Level I, the paragraph is considered a (V)(G).

4.5 Test medium will be specified in Work Item.
1. **SCOPE:**

   1.1 Title: Ship Departure Report; provide

2. **REFERENCES:**

   2.1 None.

3. **REQUIREMENTS:**

   3.1 Provide the following completion data, which will be used to close all completed 2-Kilos and generate the Ship Departure Report, no later than 60 days after the availability end date for scheduled CNO and scheduled Fleet Maintenance Availabilities and no later than 60 days after completion of the work for unscheduled and emergent Fleet Maintenance Availabilities. Provide this data in the Navy Maintenance Database (NMD), either directly in the application or indirectly via another computer system using a web interface.

   3.1.1 Verify that the following fields are correct: Execution Availability, Contractor, Definitized Amount, Contract Number, Availability Start Date, and Availability End Date.

   3.1.2 Verify that the following Work Item fields are correct for each Work Item completed in the work package: SPEC and RCC.

   3.1.3 For COST contracts, provide the following data for each Work Item and Request for Contract Change (RCC) completed in the work package: M/D, LABOR, CFM, subcontractor information, COMPLETION DATE, ACTION TAKEN code (see 4.2), and AS FOUND CONDITION (if required by the Work Item).

   3.1.3.1 Return cost data shall be entered separately for each Original Work Item and RCC. The RCC costs are those costs associated with a change in scope from the Original Work Item. The Original Work Item costs plus all associated RCC costs must equal the actual costs from the C+60 Final Cost Report or equivalent financial report for that completed Work Item. If the contractor is unable to segregate charges between Original Work Items and RCCs, it is acceptable to report RCC settled costs (M/D, LABOR, CFM, and subcontractor information) as the return costs for the RCC, and to subtract the settled costs of all RCCs for the Work Item from the total Work Item actual costs to derive the return costs associated with the Original Work Item.
3.1.3.2 The sum of all Work Items, including all RCC costs and new Work Items, shall equal the actual cost of the availability without fees from the C+60 Final Cost Report or equivalent financial report.

3.1.4 For FFP contracts, provide the following data for each Work Item and Request for Contract Change (RCC) completed in the work package: COMPLETION DATE, ACTION TAKEN code (see 4.2), and AS FOUND CONDITION (if required by the Work Item).

3.2 For COST contracts, verify the subcontractor percentages are correct or adjust as necessary. (See 4.3)

3.3 Report completion to the SUPERVISOR.

4. NOTES:

4.1 Departure reports are not accounting documents; however, they will be handled as business sensitive material.

4.2 Definitions for Action Taken codes can be found in NAVSEAINST 4790.8, Paragraph B-2.5.2.

4.3 If the distribution of subcontractor information is known, enter the data in the appropriate fields (SUB-M/D, SUB-LABOR, and SUB-MAT). If only a total cost of subcontracted work is known, enter that cost in the SUB-MAT field and leave SUB-M/D and SUB-LABOR blank.

4.4 For non-alteration Work Items and RCCs, if only GFM was used, enter an ACTION TAKEN Code of 1 (Maintenance Action Completed; Parts Drawn From Supply). If only CFM was used, enter an ACTION TAKEN Code of 2 (Action Complete; Parts Not Drawn From Supply). If no material was required, enter an ACTION TAKEN Code of 3 (Action Complete; No Parts Required). If both GFM and CFM were used, enter an ACTION TAKEN Code of 1 (Maintenance Action Completed; Parts Drawn From Supply).

4.5 Attachment A defines terms used in this Standard Item.

4.6 For activities not using NMD, Attachments B and C are provided as examples of the required format for departure reports.
ATTACHMENT A

GLOSSARY

ACTION TAKEN CODE: Code which describes the final disposition of the
Work Item/RCC

AS FOUND CONDITION: Code which describes the necessity of the Work
Item/RCC

AVAILABILITY END DATE: Date of actual availability completion
(month/day/year)

AVAILABILITY START DATE: Date of actual availability start
(month/day/year)

CFM: Contractor-furnished material cost

CONTRACT NUMBER: Identifying number of the contract authorizing the
work

CONTRACTOR: Name of contractor

DEFINITIZED AMOUNT: Contract price plus growth pool

EXECUTION AVAILABILITY: Number assigned to the availability, showing
contractor, SPP (code to describe the availability type and contract
method), and the fiscal year of execution

GFM: Government furnished material cost

JCN: The 5-digit ship UIC plus the 8-character Job Sequence Number

LABOR: Cost for contractor labor

M/D: Man-days; contractor man-hours divided by 8

ORIGINAL WORK ITEM: A Work Item that existed at definitization/award.
It is the original scope of work for that work Item

RCC: Request for contract change

SETTLED WORK ITEM: The estimated costs (M/D, LABOR, CFM, and
subcontractor information) at the time the RCC is settled

SPEC: Work Item

SUB-LABOR: Cost for subcontractor labor (if known)

SUB-MAT: Subcontractor-furnished material cost (or total subcontractor
cost if SUB-M/D, SUB-LABOR, and SUB-MAT are not known)

SUB-M/D: Subcontractor man-days; subcontractor man-hours divided by 8
(if known)
TYPE AVAIL: The type of availability. Examples: ROH - Regular Overhaul; COH - Complex Overhaul; SRA - Selected Restricted Availability; DSRA - Docking Selected Restricted Availability; PMA - Phase Maintenance Availability; DPMA - Docking Phase Maintenance Availability; INA - Inactivation; ACT - Activation; CONV - Conversion; CMAV - Continuous Maintenance Availability; PSA - Post Shakedown Availability; PIA - Planned Incremental Availability; DPIA - Docking Planned Incremental Availability; RCOH - Refueling Complex Overhaul

1. **SCOPE:**
   1.1 Title: Ship's Stability; maintain

2. **REFERENCES:**
   2.1 Standard Items
   2.2 541-6687001, Compensating Fuel Oil Tanks on CG-47 Class Ships, Guidance for Process Control Procedure While Waterborne
   2.3 541-6686789, Compensating Fuel Oil Tanks on DDG-51 Class Ships, Guidance for Process Control Procedure Preparation While Waterborne

3. **REQUIREMENTS:**
   3.1 Accomplish the requirements of 009-09 of 2.1, to include engineering calculations, for maintaining ship's stability during the accomplishment of modifications, repairs, removal or repositioning of equipment, ballasting, and off-loading/on-loading of fluids for the duration of the availability, using 2.2 (CG-47) or 2.3 (DDG-51) and the following for criteria:
      
      3.1.1 The ship's list shall not exceed 2 degrees.
      3.1.1.1 If the ship's list exceeds 2 degrees, it shall be corrected within 4 hours.
      3.1.1.2 Provide weights or water boxes at the locations and amounts as determined by the engineering calculations.
      3.1.1.3 Add and remove weights or water to maintain the ship's stability.

4. **NOTES:**
   4.1 None.

2.2 845-6686999, US Navy Vessel Water Depth, Mooring and Hull/Appendage Clearance Requirements for Transit and Berthing

3. **REQUIREMENTS:**

3.1 For all non-Aircraft Carrier ships over 100 feet in length at a contractor facility, channels, berth, and turning basin shall comply with 2.2.

3.1.1 Minimum water depth shall be maximum navigable draft plus 2 feet at mean low water.

3.1.1.1 The approach channel, vessel turning radius, and berth/pier shall be clearly marked with channel markers in areas where the 2 feet minimum does not extend beyond the minimum approach channel, vessel turning radius, and berth/pier requirements specified in 2.2.

3.1.1.2 Install temporary fixed reference points at each end of the approach channel and berth. The reference points shall mark the center of the approach channel and berth.

3.2 Maintain a minimum of 4 feet between the highest point on the ship and overhead projections at mean high water.

3.3 Maintain a minimum horizontal clearance of 17 feet 6 inches between each side of the ship's extreme beam (35 feet total) and any fixed structures such as bridges.

3.4 Submit one legible copy, in approved transferrable media, of a report listing results of the requirements of 3.1 through 3.3 to the SUPERVISOR 15 days prior to availability start date.
4. **NOTES:**

4.1 This item is for all ships over 100 feet in length entering contractor's facility.

4.2 Mooring requirements are prescribed in 009-69 of 2.1.
1. **SCOPE:**
   
   1.1 Title: Weight and Moment Change Data; provide

2. **REFERENCES:**
   
   2.1 None.

3. **REQUIREMENTS:**

   3.1 Provide final weight and moment data in the format identified in Attachment A.

   3.1.1 Maintain an account of weight and moment changes resulting from work accomplished during the availability as follows:

   3.1.1.1 Weights removed and location of removal

   3.1.1.2 Weights added and location of addition

   3.1.1.3 Longitudinal, vertical, and transverse moment of removed weights

   3.1.1.4 Longitudinal, vertical, and transverse moment of added weights

   3.1.2 Submit one legible copy, in approved transferrable media, of a report listing results of the requirements of 3.1.1 to the SUPERVISOR.

   3.1.2.1 The data shall be a summation of total weight and moment (longitudinal, vertical, and transverse) changes resulting from weights added, removed, and relocated during the availability.

   3.1.2.2 Submit a separate data sheet for each applicable Work Item number.

   3.1.2.3 Submissions shall be progressive as Work Items are completed.
4. **NOTES:**

4.1 The SUPERVISOR will provide the Alteration Installation Team (AIT), Ship’s Force, Commercial Industrial Services (CIS), and Fleet Maintenance Activity (FMA) availability data required in 3.1.

1. **SCOPE:**

   1.1 Title: Vibration Testing and Analysis; accomplish

2. **REFERENCES:**

   2.1 S9073-AX-SPN-010/MVA, Vibration Analysis, Machinery

   2.2 Equipment Technical Manual

3. **REQUIREMENTS:**

   3.1 Minimum personnel qualifications:

      3.1.1 For vibration testing, personnel *must* have the equivalent of 1,000 man hours of combined experience in: vibration concepts and terminology, the use of vibration equipment, performing equipment calibration, using electronic data collectors for monitoring and recording of vibration data, the attachment of transducer mounting disks and blocks, the selection and location of transducers, calculating machine frequencies, and have a qualified Vibration Category I certification from the Vibration Institute, or equivalent experience and training.

      3.1.2 For vibration analysis, personnel *must* have the equivalent of 3,000 man hours experience in: the use of FFT analyzers and data collectors, identifying machinery faults, performing spectral analysis, performing vibration testing, and have a knowledge of the engineering units involved, have a qualified Vibration Category II certification from the Vibration Institute, or equivalent experience and training.

      3.1.3 Submit one legible copy, in hard copy or approved transferrable media, of written substantiation of the credentials of the personnel to the SUPERVISOR 7 days prior to the start of vibration testing.

      3.1.3.1 Submit any change of certification and/or personnel as it occurs to the SUPERVISOR.

(V) (G) "TESTING AND ANALYSIS"

3.2 Accomplish vibration testing and analysis of the equipment in accordance with 2.1, using the ship’s applicable Vibration Test and Analysis Guide (VTAG), and the following.

   3.2.1 Test the equipment at normal operational speed and load, using 2.2 for guidance. Commence vibration testing upon satisfactory completion of shipboard operational testing.
3.2.2 Vibration data must be recorded after obtaining stabilized bearing temperatures for continuous duty equipment.

3.2.2.1 Prior to collecting any data, operate pumps with electric motor drivers a minimum of 4 hours.

3.2.2.2 Operate pumps with auxiliary turbine drivers a minimum of 2 hours.

3.2.2.3 Operate other equipment a minimum of one hour.

3.2.2.4 For auxiliary turbine drivers or other variable speed equipment, data must be acquired within plus or minus 5 percent of the specified speed.

3.2.3 Intermittent or special duty equipment must have vibration data collected during the normal operating cycle.

3.2.4 Acceptable vibration data results must not exceed like unit average machine values (statistically averaged signatures maintained in the ship's/Class program database). New or newly overhauled units must be compared to the Mean plus one Standard Deviation of the statistically averaged machine data as criteria. If only one component, the driver or the driven component, was replaced or overhauled and no repair action was accomplished to the other, the unit vibration signature must be compared to the Mean plus 2 Standard Deviations of the statistically averaged machine data as criteria.

3.2.5 If VTAG information is not available, collect and analyze vibration data in accordance with the following:

3.2.5.1 Record vibration data in accordance with Paragraph 3.1.2 and 3.3 of 2.1.

3.2.5.2 Vibration data must not exceed the criteria of Paragraph 3.4.3 of 2.1.

3.2.5.3 Test equipment in accordance with 3.2.1 through 3.2.3.

3.2.5.4 For reciprocating machinery, take a minimum of 2 data points, one at each end of the crankshaft centerline, or as close to centerline as possible.

3.2.5.5 Number each vibration measurement location, starting on the driver end furthest from the driven unit. For 2 drivers on a single driven unit, the numbering must be from one driver end to the other. For 2 driven units from a single driver, the numbering must be from one driven unit to the other.

3.2.5.6 Provide a sketch of the unit with the following information:
Drive Unit(s)
Driven Unit(s)
Location of Bearings
Location and numbering of vibration measurement points

3.2.5.7 Scale vibration amplitudes on plot to show the best representation of the magnitudes.

3.2.5.8 For machinery consisting of a drive and driven unit, take vibration data on both pieces of equipment, even if only one piece of equipment was subject to overhaul, to allow a complete analysis of the vibration data, including vibration transmitted between the pieces of equipment.

3.2.6 Record results of vibration analysis on a test data sheet, Attachment A.

3.2.6.1 Submit one legible copy, in hard copy or approved transferrable media, of the following to the SUPERVISOR within 2 days of completion of vibration analysis:

Completed Attachment A
Machine’s vibration data plots
VTAG applicable to the machine
Average machine values applicable to the machine

4. NOTES:

4.1 Equipment performance must satisfy vibration requirements of specific average machine values if the machinery item is included in the ship’s machinery vibration analysis (MVA) program. Such programs are in compliance with 2.1 and depend on the ship’s applicable VTAG to identify machinery, provide pertinent measurement locations, numbering conventions, test conditions, manufacturer’s configuration information, analysis ranges and major forcing frequencies.

4.2 For surface ships, other than aircraft carriers, VTAG and average machine values are available from Technical Points of Contact (TPOCs) at 215-897-8471 or 215-897-7424.

4.3 For aircraft carriers, VTAG and average machine values are available from Supervisor of Shipbuilding Newport News, Aircraft Carrier Planning Office (757-688-5183).

4.4 Equipment Technical Manual will be listed in the invoking Work Item.

4.5 For new or newly overhauled equipment, start of vibration testing can only commence upon satisfactory completion of shipboard operational testing, which will be addressed in the invoking Work Item. Also consider any other adjacent work in the machinery space that may affect accomplishment of vibration testing.

List of Abbreviations: R= Vertical / A= Axial / T= Tangential
1. **SCOPE:**

1.1 Title: Thermal Sprayed Coating for Machinery Component Repair; accomplish

2. **REFERENCES:**

2.1 Standard Items

2.2 T9074-AA-GIB-010/1687, Thermal Spray Processes for Naval Ship Machinery and Nonskid Applications

2.3 0948-LP-045-7010, Material Control Standard

3. **REQUIREMENTS:**

3.1 For non-LEVEL I Material Identification and Control (MIC) material repairs, accomplish the requirements of 2.2 for thermal spray coatings on machinery components.

3.2 For LEVEL I MIC material repairs, accomplish the requirements of 2.2 for thermal spray coatings.

3.2.1 Restore LEVEL I markings after coating process in accordance with 2.3.

3.2.2 Accomplishment of Material Identification and Control (MIC) for level I Systems *must* be in accordance with NAVSEA Standard Items (See Note 4.1).

4. **NOTES:**

4.1 If Material Identification and Control (MIC) for Level I Systems of 3.2.2 is required; the use of Category II Standard item 009-27 “Material Identification and Control (MIC) for Level I Systems; accomplish” of 2.1 will be specified in the Work Item.
1. **SCOPE:**

   1.1 Title: Work Authorization Form Coordinator (WAFCOR); provide

2. **REFERENCES:**

   2.1 Joint Fleet Maintenance Manual (JFMM)

3. **REQUIREMENTS:**

   3.1 Provide a representative whose function is to coordinate the Work Authorization and Control Process, known as the Work Authorization Form (WAF) Coordinator (WAFCOR), from 30 days prior to the actual scheduled start date of shipboard work, or not later than 5 days after award for Firm Fixed-Price contracts, to the completion of shipboard work.

   3.2 The WAFCOR shall be responsible for the work authorization control process for all Repair Activity (RA) work being performed during the contract performance period. The WAFCOR shall receive, process, compare, and coordinate all WAFs and Technical Work Documents (TWDs) submitted by RAs in accordance with the requirements of Volume IV, Chapter 10, of 2.1. The WAFCOR shall meet daily with the designated representatives from each RA, the Commanding Officer's designated representative, and the SUPERVISOR to eliminate any tag-out conflicts, and to advise the SUPERVISOR of any work authorization problems that could impact the RA's or the ship's work operations and testing.

   3.2.1 The WAFCOR shall ensure that each RA submits a properly filled out WAF. The WAF/TWD shall show or explain the job description for each work authorization. The WAFCOR shall assign a tracking number and submit the WAF to the Commanding Officer's designated representative. The Commanding Officer's designated representative will determine if adequate isolation and plant/system conditions exist to safely and properly conduct the work, authorize and hang tag-outs, and sign the WAF. Each individual RA must submit work authorizations even if multiple RAs are working on the same components.

   3.2.2 The WAFCOR shall legibly sign concurrence on the WAF for start of work.
3.2.3 The WAFCOR shall ensure that WAF revisions or changes submitted by the cognizant RAs are processed prior to proceeding with the work necessitating the change/revision to the WAF.

4. NOTES:

4.1 Repair Activity (RA) is any activity (public or private) other than Ship's Force involved in the construction, testing, repair, overhaul, refueling, or maintenance of the ship. Repair Activities include the prime contractor, all subcontractors, government provided contractors or agencies, Alteration Installation Teams, Fleet Maintenance Activities, Naval Shipyards, and others.

4.2 Training requirements are listed in NAVSEA Standard Item 009-24.
1. SCOPE:

1.1 Title: Piping System Cleanliness Restoration and Flushing (Non-Nuclear); accomplish

2. REFERENCES:

2.1 Standard Items

2.2 S9AA0-AB-GOS-010, General Specifications for Overhaul of Surface Ships (GSO)

2.3 0902-018-2010, General Specifications for Deep Diving SSBN/SSN Submarines

2.4 S9086-RK-STM-010/CH-505, Shipboard Piping Systems

2.5 MIL-STD-1330, Precision Cleaning and Testing of Shipboard Oxygen, Helium, Helium-Oxygen, Nitrogen Systems, and Hydrogen Systems

2.6 MIL-STD-419, Cleaning, Protecting, and Testing Piping, Tubing, and Fittings for Hydraulic Power Transmission Equipment

2.7 MIL-STD-1622, Standard Practice for Cleaning of Shipboard Compressed Air Systems

2.8 S9086-RW-STM-010/CH-516, Refrigeration Systems

3. REQUIREMENTS:

3.1 Accomplish the general cleaning requirements of 2.2 through 2.4 for new, modified, or repaired non-nuclear piping systems and components of nuclear and non-nuclear powered naval vessels. Accomplish the system cleaning requirements of 2.5 through 2.8.

3.1.1 Clean to the following acceptance standard:

3.1.1.1 Cleanliness Level II: Surface must be visually free of grease, oil, flux, scale, dirt, loose particles and any other contamination foreign to the base metal. Tap water residues on all metals and light superficial rust on carbon steel surfaces, caused by short time exposure to the atmosphere, are permitted. Light dust on cleaned surfaces is not objectionable, provided that the quantity and size of the particle does not adversely affect system operations.
3.1.1.2 Cleanliness Level III: Surface must be reasonably free of contamination and any remaining residue on the surface does not interfere with system operations or damage system components.

3.2 Accomplishment of a Process Control Procedure (PCP) for the cleaning, flushing, and acceptance criteria of compressed air systems must be in accordance with NAVSEA Standard Items (See Note 4.3) and Section 551 of 2.2 and 2.7.

(I)(G) "VERIFY CLEANLINESS"

3.2.1 Verify cleanliness in accordance with acceptance standards.

3.3 Accomplishment of a Process Control Procedure (PCP) for the cleaning, flushing, and acceptance criteria of oxygen, nitrogen, and helium systems must be in accordance with NAVSEA Standard Items (See Note 4.3) and Section 552 of 2.2 and 2.5.

(I)(G) "VERIFY CLEANLINESS"

3.3.1 Verify cleanliness in accordance with acceptance standards.

3.4 Accomplishment of a Process Control Procedure (PCP) for the cleaning, flushing, and acceptance criteria of hydraulic systems must be in accordance with NAVSEA Standard Items (See Note 4.3) and Section 556 of 2.2 and 2.6.

(I)(G) "VERIFY CLEANLINESS"

3.4.1 Verify cleanliness in accordance with acceptance standards.

3.5 Accomplishment of a Process Control Procedure (PCP) for the cleaning, flushing, and acceptance criteria of fuel oil systems must be in accordance with NAVSEA Standard Items (See Note 4.3) and Section 541 of 2.2.

(I)(G) "VERIFY CLEANLINESS"

3.5.1 Verify cleanliness in accordance with acceptance standards.

3.6 Accomplishment of a Process Control Procedure (PCP) for the cleaning, flushing, and acceptance criteria of steam systems must be in accordance with NAVSEA Standard Items (See Note 4.3) and Section 253 of 2.2.

(I)(G) "VERIFY CLEANLINESS"

3.6.1 Verify cleanliness in accordance with acceptance standards.

3.7 Accomplishment of a Process Control Procedure (PCP) for the cleaning, flushing, and acceptance criteria of condensate systems must be in accordance with NAVSEA Standard Items (See Note 4.3) and Section 255 of 2.2.

(I)(G) "VERIFY CLEANLINESS"
3.7.1 Verify cleanliness in accordance with acceptance standards.

3.8 Accomplishment of a Process Control Procedure (PCP) for the cleaning, flushing, and acceptance criteria of lube oil systems must be in accordance with NAVSEA Standard Items (See Note 4.3) and Section 262 of 2.2.

(I)(G) “VERIFY CLEANLINESS”

3.8.1 Verify cleanliness in accordance with acceptance standards.

3.9 Accomplishment of a Process Control Procedure (PCP) for the cleaning, flushing, and acceptance criteria of each fresh water system must be in accordance with NAVSEA Standard Items (See Note 4.3) and Section 532 of 2.2.

(I)(G) “VERIFY CLEANLINESS”

3.9.1 Verify cleanliness in accordance with acceptance standards.

3.10 Accomplishment of a Process Control Procedure (PCP) for the cleaning, flushing, and acceptance criteria of refrigerant systems must be in accordance with NAVSEA Standard Items (See Note 4.3) and 2.8.

(I)(G) “VERIFY CLEANLINESS”

3.10.1 Verify cleanliness in accordance with acceptance standards.

3.11 Accomplishment of a Process Control Procedure (PCP) for the cleaning, flushing, and acceptance criteria of HP/LP steam drains must be in accordance with NAVSEA Standard Items (See Note 4.3) and Section 534 of 2.2.

(I)(G) “VERIFY CLEANLINESS”

3.11.1 Verify cleanliness in accordance with acceptance standards.

3.12 Accomplishment of a Process Control Procedure (PCP) for the cleaning, flushing, and acceptance criteria of divers air systems must be in accordance with NAVSEA Standard Items (See Note 4.3) and Section 592 of 2.2.

(I)(G) “VERIFY CLEANLINESS”

3.12.1 Verify cleanliness in accordance with acceptance standards.

3.13 Accomplishment of a Process Control Procedure (PCP) for the cleaning, flushing, and acceptance criteria of gasoline and JP-5 systems must be in accordance with NAVSEA Standard Items (See Note 4.3) and Section 542 of 2.2.

(I)(G) “VERIFY CLEANLINESS”

3.13.1 Verify cleanliness in accordance with acceptance standards.

3.14 Accomplishment of a Process Control Procedure (PCP) for the cleaning, flushing, and acceptance criteria of distillate piping systems must be in accordance with NAVSEA Standard Items (See Note 4.3) and Section 531 of 2.2.
4. **NOTES:**

4.1 This Standard Item does not apply to systems of nuclear-powered ships covered by NAVSEAINST 9210.36, Steam Plant Cleanliness Control, or nuclear piping systems on nuclear-powered ships.

4.2 See Attachment A for Level II and Level III piping systems.

4.3 If a Process Control Procedure (PCP) of 3.2 through 3.11 is required; the use of Category II Standard Item 009-09 “Process Control Procedure (PCP); provide and accomplish” of 2.1 will be specified in the Work Item.
ATTACHMENT A
CLEANLINESS LEVEL II AND III

CLEANLINESS LEVEL II PIPING SYSTEMS:

- DIVERS AIR (NOTE 1)
- ELECTRONICS DISTILLED WATER COOLING (NOTE 1)
- HIGH PRESSURE AIR (NOTE 1)
- HYDRAULIC PIPING SYSTEMS (NOTE 1)
- LUBRICATING OIL SYSTEMS (NOTE 1)
- MISSILE HEATING AND COOLING
- REFRIGERANT SYSTEM (FREON AND LITHIUM BROMIDE) (NOTE 1)
- OXYGEN SYSTEM (NOTE 1)
- AIR CONDITIONING CHILLED WATER SYSTEM
- AUXILIARY STEAM SYSTEM
- CONDENSATE SYSTEM (NOTE 1)
- DIESEL FRESHWATER COOLING
- AIR FOR DIESEL CONTROL, VITAL AIR, ELECTRONICS SYSTEMS, ABC SYSTEMS AND PNEUMATIC CONTROL (NOTE 1)
- EXHAUST PIPING (STEAM)
- FEEDWATER SYSTEM (NOTE 1)
- POTABLE WATER SYSTEM (NOTE 1)
- FUEL SERVICE SYSTEM (NOTE 1)
- DISTILLATE PIPING SYSTEMS
- FUEL TRANSFER SYSTEM (NOTE 1)
- GASOLINE SYSTEM
- HIGH AND LOW PRESSURE DRAIN SYSTEM (NOTE 1)
- MAIN STEAM SYSTEM (NOTE 1)
- MEDIUM PRESSURE AIR (ABOVE 250 PSI AND BELOW 1500 PSIG) (NOTE 1)
- NITROGEN PIPING SYSTEM (NOTE 1)
- JP-5 PIPING SYSTEM
- OTHER SYSTEMS AS SPECIFIED BY THE SUPERVISOR

NOTE 1: SEE INDIVIDUAL GSO SECTIONS FOR ADDITIONAL SPECIAL CLEANING REQUIREMENTS

CLEANLINESS LEVEL III PIPING SYSTEMS:

- AIR ESCAPE (TANK VENT)
- AIR CONDITIONING SEAWATER COOLING SYSTEM
- AFFFF CONCENTRATE AND AFFFF/SW SYSTEMS
• AUXILIARY SEAWATER SYSTEM
• CO2 SYSTEM
• DIESEL EXHAUST SYSTEM
• DIESEL SEAWATER COOLING SYSTEM
• DISTILLING PLANT, BRINE OVERBOARD DISCHARGE SYSTEM
• DISTILLING PLANT, SEAWATER FEED SYSTEM
• ESCAPE PIPING (STEAM)
• FIREMAIN SYSTEM
• HALON
• MAIN SEAWATER COOLING SYSTEM
• PLUMBING SYSTEM
• SANITARY AND FLUSHING PIPING SYSTEM
• SHIP SERVICE LOW PRESSURE AIR SYSTEM (NON-VITAL)
• OTHER SYSTEMS AS SPECIFIED BY THE SUPERVISOR
1. SCOPE:

1.1 Title: Non-SUBSAFE Work on SUBSAFE-Certified Vessel; accomplish

2. REFERENCES:

2.1 0924-LP-062-0010, Submarine Safety (SUBSAFE) Requirements Manual
2.2 0905-LP-485-6010, Control of Testing and Ship Conditioning
2.3 S9510-AB-ATM-010, Nuclear Powered Submarine Atmosphere Control Manual
2.4 Joint Fleet Maintenance Manual (JFMM)

3. REQUIREMENTS:

3.1 Provide a written training plan for accomplishing non-SUBSAFE work on SUBSAFE-certified vessels, using 2.1 through 2.3 and Volume IV, Chapter 10 of 2.4 for guidance.

3.1.1 Submit one legible copy, in approved transferrable media, of the training plan to the SUPERVISOR no later than 15 days prior to availability start date.

3.1.2 Submit revisions to the training plan to the SUPERVISOR for review and acceptance prior to use.

3.1.3 Implement the approved training plan prior to commencement of non-SUBSAFE work on SUBSAFE-certified vessels.

3.2 Train all personnel (including subcontractors) assigned to perform work on SUBSAFE-certified vessels in accordance with the approved training plan of 3.1 prior to start of work.

3.2.1 All personnel shall have direct knowledge of work control procedures, be able to recognize and initiate alarms, be familiar with actions to be taken to evacuate the vessel, and reporting submerged safety draft marks.
3.2.2 Submit one legible copy, in approved transferrable media, of a list of qualified contractor and subcontractor personnel to the SUPERVISOR no later than 15 days prior to start of work. The list shall include company name, badge number, and date training was provided, along with certification documentation showing that training requirements have been met.

3.2.2.1 Submit updates to the list as changes occur throughout the availability.

3.3 Accomplish a joint on-site brief and walkthrough of the work site with the SUPERVISOR and the Commanding Officer's designated representative prior to start of work.

3.3.1 Include identification of SUBSAFE components and/or systems located in the area of work, components and/or systems which may be affected by the work, and lessons learned from previous or similar work. Include identification of Unrestricted Operations (URO) Maintenance Requirement (MRC)-related equipment located in the area of work.

3.3.2 Ensure that URO MRC-measured parameter is not violated. (See Volume V, Part-I, Chapter 5 of 2.4.)

3.4 Maintain approved written instructions for accomplishing non-SUBSAFE work on the work site at all times.

3.4.1 Do not accomplish work or disturb any system or component without specific approved written instructions for accomplishing non-SUBSAFE work.

3.5 Prohibit the following items from being brought onboard any nuclear-powered vessel or nuclear support vessel:

3.5.1 Any mercury bearing equipment such as mercury thermometers, portable fluorescent lights, black lights or any other items containing mercury.

3.5.2 Nickel-Cadmium fasteners.

3.5.3 Any device that contains a source of radioactivity.

3.5.4 Bright yellow tools, bags, or equipment.

4. NOTES:

4.1 The SUBSAFE program is a certification program implemented by NAVSEA to ensure strict work controls, material controls, and testing to verify submarine system integrity and prevent loss of submarine personnel and equipment.
4.2 The URO MRC program was developed by NAVSEA to monitor specific areas of interest to determine if the conditions of these areas are suitable for continued unrestricted operations.

4.2.1 URO MRC Manuals:

4.2.1.1 T9081-AD-MMO-010 & 020 (SSN 21 Class)

4.2.1.2 0924-LP-064-8010 (SSN 688 Class)

4.2.1.3 T0700-AA-PRO-010 (SSBN/SSGN 726 Class)

4.2.1.4 T9081-AE-MMO-010 (SSN 774 Class)
1. SCOPE:

1.1 Title: Non-Nuclear Work on a Nuclear Vessel; accomplish

2. REFERENCES:

2.1 Joint Fleet Maintenance Manual (JFMM)

3. REQUIREMENTS:

3.1 Provide a written training plan for accomplishing non-nuclear work on nuclear vessels, using Volume IV, Chapter 10 of 2.1 for guidance.

3.1.1 Submit one legible copy, in approved transferrable media, of the training plan to the SUPERVISOR no later than 15 days prior to availability start date.

3.1.2 Submit revisions to the training plan to the SUPERVISOR for review and acceptance prior to use.

3.1.3 Implement the approved training plan prior to commencement of non-nuclear work on nuclear vessels.

3.2 Train all personnel (including subcontractors) assigned to perform work on a nuclear vessel in accordance with the approved training plan of 3.1 prior to start of work.

3.2.1 All personnel shall have direct knowledge of work control procedures, be able to recognize and initiate alarms, and be familiar with actions to be taken to evacuate the vessel.

3.2.2 Submit one legible copy, in approved transferrable media, of a list of qualified contractor and subcontractor personnel to the SUPERVISOR no later than 15 days prior to start of work. The list shall include company name, badge number, and date training was provided, along with certification documentation showing that training requirements have been met.

3.2.2.1 Submit updates to the list as changes occur throughout the availability.
3.3 Accomplish a joint on-site brief and walkthrough of the work site with the SUPERVISOR and the Commanding Officer's designated representative prior to start of work.

3.3.1 Include identification of all nuclear equipment including nuclear temporary/support systems and radiological containment materials located in the area of work, components and/or systems which may be affected by the work, and lessons learned from previously accomplished or similar work.

3.3.2 Evaluate services/temporary systems to be installed by the contractor that run through spaces containing nuclear equipment for possible leakage/spray protection.

3.3.3 The contractor shall identify all possible contact with nuclear equipment or nuclear temporary/support system identified in the space prior to start of work.

3.3.4 Evaluate the rigging path for potential collateral damage to nuclear components/piping. All inadvertent contact with nuclear equipment or nuclear temporary/support system in the work area during the work shall be brought immediately to the attention of the SUPERVISOR.

3.3.5 Submit one legible copy, in approved transferrable media, of a written report of the requirements of 3.3 to the SUPERVISOR within one day after completion of the briefing and walkthrough.

3.4 Maintain approved written instructions for accomplishing non-nuclear work on the work site at all times.

3.4.1 Do not accomplish work or disturb any system or component without specific approved written instructions for accomplishing work on nuclear vessels.

3.5 Material (permanent or temporary) shall not contact nuclear piping/components unless specifically authorized by the SUPERVISOR. Some examples are cleaning fluid sprays, dripping grease or liquids, inadvertent paint splatter, attaching rope or strings, wood, tape, plastic bags, temporary contractor’s services that contact hot or cold nuclear piping and components.

3.6 Report immediately inadvertent contact with or damage to nuclear equipment regardless of how minor (e.g., gouges, scratches, dents, slag, carbon arc, corrosion) to the SUPERVISOR.

3.7 Prohibit the following items from being brought onboard any nuclear-powered vessel or nuclear support vessel:

3.7.1 Any mercury bearing equipment such as mercury thermometers, portable fluorescent lights, black lights or any other items containing mercury.
3.7.2 Nickel-Cadmium fasteners.

3.7.3 Any device that contains a source of radioactivity.

3.7.4 Bright yellow tools, bags, or equipment.

4. **NOTES:**

4.1 None.
1. **SCOPE:**

   1.1 Title: Schedule and Associated Reports for Availabilities 9 Weeks or Less in Duration; provide and manage

2. **REFERENCES:**

   2.1 S9AA0-AB-GOS-010, General Specifications for Overhaul of Surface Ships (GSO)

3. **REQUIREMENTS:**

   3.1 Develop an Integrated Production Schedule (IPS) for work packages in duration that reflects the manner in which the availability will be accomplished. The IPS shall include:

       3.1.1 Schedule each Work Item to the Work Activity level listing the start and completion dates, and durations for each Work Activity.

       3.1.1.1 Assign each Work Activity in the IPS a short title to describe the nature of the Work Activity, system and equipment or machinery involved.

       3.1.1.2 Integrate all known Alteration Installation Team (AIT), Government-Contracted Third Party Maintenance Provider, Ship's Force, Commercial Industrial Services (CIS), and Fleet Maintenance Activity (FMA) work. Alteration (ALT) numbers, Job Sequence Numbers (JSNs), and Task Order numbers (TOs) are considered equivalent to the contractor’s Work Specification Work Items for the purposes of scheduling the work of these third-party organizations in accordance with this Standard Item. The term Work Item is inclusive of these additional methods of identifying a body of work.

       3.1.1.3 Each Work Activity shall be scheduled by location and system, and integrated into the IPS.

       3.1.2 The latest allowable receipt date for contractor and government furnished material (CFM and GFM) to maintain production schedule.

       3.1.3 Scheduled Key Events and Milestones.
3.1.3.1 Assign appropriate predecessor relationships to each Key Event and Milestone(s) to ensure there is an accurate logical progression through all Work Activities leading to their assigned Key Event and Milestone(s), to ensure the IPS supports accurate prediction of Key Event and Milestone(s) attainment.

3.1.4 Critical Path and Controlling Work Items.

3.1.5 Scheduled start and completion dates of all Stage 3 through Stage 6 required tests.

3.2 Revise Production Schedule/IPS at the Work Activity level weekly to include additions, deletions, modifications, actual start and finish dates, progress, and completion of Work Items for work packages identified in 3.1 and 3.2. Progress shall be based on degree of completion of physical work or accomplishment of the Work Activity.

3.3 Coordinate and schedule AIT, Government-Contracted Third Party Maintenance Providers, Ship’s Force, CIS, and FMA work with contractor work into the IPS for work packages identified in 3.1 when the SUPERVISOR has identified such work to take place during the availability. (See 4.2)

3.3.1 Develop a report identifying missing or incomplete schedule integration data for known participants in the availability when the IPS is submitted. Identification of missing or incomplete schedule integration data is required to highlight areas of elevated IPS uncertainty, but shall not be cause for delay in establishing the IPS nor the delivery of reports required under this Standard Item.

3.4 Provide cognizant contractor management representation to participate in the weekly progress meeting at the time and location agreed to by the SUPERVISOR for work packages identified in 3.1. The representative(s) must be authorized to make management decisions relative to the routine requirements of the Job Order that, in good faith, commit the contractor. AIT Managers and/or On-Site Installation Coordinators (OSIC) shall participate and represent respective alteration teams in scheduled weekly progress meetings.

3.4.1 Weekly progress meeting participants shall be prepared to address Critical Path and Controlling Work Items, and offer reasonable solutions to problems which may have impact on scheduled Key Events and Milestones or completion date. Contractors scheduled work and planned AIT and Ship’s Force work shall be discussed to support and de-conflict any testing and equipment operation scheduled.

3.5 Develop one legible copy, in approved transferrable media, of an availability status report that includes the revised IPS for work packages identified in 3.2. Provide the following for each Work Item:

3.5.1 Percent of production work completed.
3.5.2 Action taken or proposed to resolve inadequate production progress, material delivery that does not support production schedule, and other problems placing completion of any work item in jeopardy.

3.6 Provide cognizant contractor management representation to participate in a review conference to be held at the 50-percent point in the availability and a completion conference to be held no later than 3 days prior to availability completion date to determine the scope of remaining work for work packages identified in 3.1.

3.6.1 Data from the most recent submission in accordance with 3.2 and 3.5 will be used at the review conference. Review conferences will be held within two days of the Weekly Progress Meeting of 3.4 or, subject to SUPERVISOR approval, may be held simultaneously with the Weekly Progress Meeting. The conferences will be scheduled at a time and place mutually agreeable to all parties.

3.7 Manage work progression to support scheduled light-off of machinery space equipment.

3.7.1 Develop a list of work required to be completed prior to light off for work packages identified in 3.1.

3.7.1.1 Revise the list of unfinished work, including machinery and systems discrepancies, daily throughout the light-off phase.

3.7.2 Schedule daily meetings to resolve problems/unfinished work relating to light-off. Meetings shall commence 2 weeks prior to light off, and continue until completion of testing. This meeting may be held in conjunction with the daily production meeting.

3.7.3 Accomplish a walk-through with Ship's Force and the SUPERVISOR 5 days prior to completion of work in machinery spaces.

3.8 Submit the following reports to the SUPERVISOR as listed in Adobe Acrobat (.pdf), or Microsoft Word (.doc) compatible media as per Table 1.

### 4. NOTES:

4.1 Definitions.

4.1.1 Industrial Testing: Conducted by using stages of testing for the progressive validation of the proper installation and performance of equipment and systems. These stages are: Test Stages are identified in 009-67 of 2.1.

4.1.2 Production Schedule: The schedule used by contractor and subcontractor personnel as a means of planning, tracking, and coordinating the accomplishment of contract work.

4.1.3 Integrated Production Schedule (IPS): A schedule used by the contractor as a means of planning, tracking, coordinating and de-conflicting work during the availability. It incorporates all work planned for accomplishment during the maintenance availability including: Alteration Installation Team (AIT), Government-Contracted Third Party Maintenance Providers, Ship's Force, Commercial Industrial Services (CIS), and Fleet Maintenance Activity (FMA) work.

4.1.4 Work Activity: A portion of an individual Work Item, which is a logical subdivision of the Work Item, representing a manageable unit of work, including material procurement which must be accomplished at a specific period of time in relation to other activities of the Job Order.

4.1.5 Key Event: An event that, if slippage occurs, could impact or delay the overall schedule, or prevent timely delivery of the vessel. Key Events are identified by the contract, the SUPERVISOR, or the contractor.
4.1.6 Milestone: A significant event identified by the Maintenance Team. Milestones are used as a scheduling aid and establish significant points where progress must be evaluated and confirmed. Accumulated failure to achieve Milestones on schedule may result in missed Key Events. Milestones may be identified by either the contractor or the SUPERVISOR.

4.1.7 Critical Path: That sequence of Work Activities which forms the work and test chain of the longest duration, and directly affects the completion of the availability. Factors that influence when a Work Activity is on the Critical Path include: time duration required for the Work Activity, space limitations, manpower available, and the predecessor/successor relationships between Work Activities. Typically, the Critical Path is determined by automated schedule analysis and will include any sequential set of Work Activities forming the longest chain of events extending throughout the schedule and which has the least Total Float.

4.1.8 Controlling Work Items: Those Work Items which include activities that are on the critical path of the IPS, which, by virtue of scope, material requirements, complexity, or other considerations, have the significant potential for impact on the scheduled project Key Events or completion of the availability.

4.1.9 Total Float: The total number of days that a path of Work Activities can be delayed without affecting the project finish date. A path of Work Activities is established by predecessor and successor relationships.

4.2 The SUPERVISOR will provide, or direct provision, of the AIT, Government-Contracted Third Party Maintenance Providers, Ship’s Force, CIS, and FMA availability data required for schedule integration in 3.4 and progress/de-confliction in 3.5.1.
1. SCOPE:

1.1 Title: Prevention of Radiographic-Inspection Ionizing-Radiation Hazard; accomplish

2. REFERENCES:

2.1 NAVMED P-5055, Radiation Health Protection Manual
2.2 10 CFR Part 20, Standards for Protection Against Radiation
2.3 10 CFR Part 34, Licenses for Industrial Radiography and Radiation Safety Requirements for Industrial Radiographic Operations

3. REQUIREMENTS:

3.1 This item applies to all contracts that utilize radiographic inspection as part of their work. “Foreign contractor” refers to a contractor that is contracted from the U.S. Navy host country in which U.S. Navy contracts may be executed onboard U.S. Government property and/or vessels.

3.2 Each foreign contractor must comply with the regulatory standards of the host country when conducting radiographic inspections on U.S. Government property and/or vessels.

3.3 Submit one legible copy, in hard copy or approved transferrable media, of completed Radiography Operations Planning Work Sheet, Attachment A, to the SUPERVISOR fourteen days prior to start of work (unless otherwise approved by the SUPERVISOR) and obtain approval prior to commencement of radiography operations.

3.4 Submit one legible copy, in hard copy or approved transferrable media, of a diagram illustrating the boundary where the exposure rate must not exceed 2 mr/hr (0.02 mSv/hr) or under special circumstances the dose to an individual in any unrestricted area would not exceed 2 mrem (0.02 mSv) in any one hour, to the SUPERVISOR no later than 14 days prior to start of work. In addition, the boundary must meet the requirement that no individual member of the public will receive a dose in excess of 100 mrem (1 mSv) in a calendar year from the radiographic work, exclusive of background radiation in accordance with 2.1 and 2.2.
3.4.1 In addition to the boundary requirements of 3.4, the foreign contractor must also illustrate the foreign radiation-boundary requirements.

3.5 Establish a physical boundary where the exposure rate is 2mr/hr or less. In some circumstances the boundary may be established at a point where the dose to an individual in any unrestricted area would not exceed 2 mrem in any one hour. The perimeter of the radiation area must be a physical barrier established by an enclosure or by stanchions and rope, as necessary. Post this boundary with tri-foil radiation warning symbol, “Radiation Area”, “Radiography in Progress”, and “Keep Out” signs written in English and host-country language. The signs must be visible to any person approaching the radiation area barrier from any accessible direction.

3.5.1 Radiographer must maintain constant surveillance of the entire area boundary through direct observation or Radiation Safety Officer (RSO)/Radiation Safety Oversight Manager (RSOM) approved positive communication with boundary monitor who is in a position to provide visual surveillance in accordance with 2.3.

3.5.2 Monitor the entire boundary using radiation detection equipment appropriate for the source of radiation during the first radiation exposure of the day. If the beam’s orientation, kVp, mA, collimation, or shielding is changed between exposures, the boundary must be re-surveyed and re-established in accordance with 3.5, if necessary.

3.5.2.1 Submit one legible copy, in hard copy or approved transferrable media, of a report listing results of the requirements of 3.5.2 to the SUPERVISOR, within one day. The report must include Attachment A diagram identifying survey locations, time, date and location of the survey, the highest radiation level recorded, the kVp, mA, and beam direction of the x-ray machine or, if using gamma source material, the half value of the collimator and beam direction at the time of exposure.

3.6 If an unauthorized individual crosses the boundary, the boundary monitor must immediately notify the radiographer who will immediately stop radiography operations.

3.6.1 Report any boundary violation immediately to the SUPERVISOR, using the most expeditious form of communication. Submit one legible copy, in hard copy or approved transferrable media, of a follow-up report, to the SUPERVISOR, within 4 hours of the violation, using Boundary Violation Report, Attachment B.

3.7 Upon discovery of loss or theft of radioactive material or x-ray producing devices or any deviation from the Operations Planning Worksheet (Attachment A), the radiographer must cease and make safe all radiographic operations and immediately notify the SUPERVISOR.

3.7.1 Report verbally each incident immediately to the SUPERVISOR.
3.7.1.1 Submit one legible copy, in approved transferrable media, of a formal written report of the incident within one day to the SUPERVISOR.

4. NOTES:

4.1 The SUPERVISOR must perform oversight and surveillance of all radiography operations on U.S. Government property and/or vessels associated with contracted work.

4.2 The technical point of contact for the requirements contained in this Standard Item is SUPERVISOR’s RSO or RSOM for radiographic inspections conducted in the host-country and any U.S. Government Detachment.

4.3 This Standard Item complies with 10 CFR Parts 19, 20, and 34 and 29 CFR 1910.1096.
ATTACHMENT A

RADIOGRAPHY OPERATIONS PLANNING WORK SHEET

A. General Information

1. Prime Contractor Name: ________________________________

2. Subcontractor Name (if applicable): ________________________

3. Proposed Date(s) and Time(s) of Planned Radiography: _________

4. Purpose of Radiographic Operation: ____________________________

5. Host country regulatory standards applicable to radiographic inspections preferably translated to English.

B. If conducting gamma radiography complete the following:

1. Radioisotope: ________ Serial Number: ________________

2. Activity: ________ Date of Determination of Activity: ________

3. Collimator Serial Number: __________________________

4. Half Value Thickness: __________________________

5. Total number of Exposures (estimated): __________

6. Direction of the Beam: ______________

7. Transportation and vehicle information:
   a. Manufacturer: ________________________________
   b. Model: ________________________________
   c. License Plate Number: ______________________
   d. Sign on Vehicle: ________________________________
   e. Driver’s Name: ________________________________
   f. Passengers: ________________________________
   g. Location of radiography operation site (ship, submarine, building, pier): ________________________________
   h. Transportation route to be taken to and from work site while on Government activity: ________________________________
C. If conducting x-ray radiography complete the following:

1. Machine Manufacturer: ____________________________

2. Serial Number: ____________________________

3. Maximum kVp: ____________________________

4. Maximum mA: ____________________________

5. Total Number of Exposures (estimated): ______

6. Direction of Beam: ____________________________

D. Provide a diagram of each work site that illustrates:

1. Each location of the radiography, including major features such as walls, bulkheads, tanks, walkways or passageways that may provide shielding or difficulty in controlling the area.

2. The location of the exposure device drive cable, guide tube, and end stop if using gamma radiography equipment, or the location of the tube head and control panel if conducting x-ray radiography.

3. The location of the 2 mr/hr (0.02 mSv/hr) controlled boundary.

E. Provide the calculations for the 2 mr/hr (0.02 mSv/hr) controlled boundary from the distance from the gamma radiography source, or the x-ray machine tube head, to the location where the boundary must be established.

F. Review/Approval:

Contractor’s Radiographer: ____________________________

DIAGRAM SHOWING THE LOCATION OF THE VIOLATION AND THE EGRESS PATH IN RELATION TO THE SOURCE

SIGNATURE OF REPORTING INDIVIDUAL: ___________________________ DATE: ___________________________
ATTACHMENT B
FOR OFFICIAL USE ONLY

Incident Report Instructions

REPORT NUMBER: Unique tracking number created by contractor

NAME OF REPORTING INDIVIDUAL: – Self Explanatory

DATE/TIME OF THE VIOLATION: – Self Explanatory

LOCATION OF THE VIOLATION: – Base/Yard, Ship name and hull number, space number and compartment name

COMPANY: – Prime and subcontractors involved

SUPERVISOR – Supervisor of employee(s) involved

EQUIPMENT INVOLVED – Self Explanatory

WORK ITEM NUMBER – Work Item being accomplished when incident occurred

CONTRACT NUMBER: – Contract Number assigned by government agency i.e. RMC, AIT Sponsor.

INDIVIDUALS WHO VIOLATED THE BOUNDARY: – Name, Department and Organization/Company of individuals that violated the boundary.

NAMES OF THE RADIOGRAPHY CREW MEMBERS, INCLUDING NAMES OF BOUNDARY MONITORS: – Name, Department and Company of the members of the radiography crew, including names of boundary monitors.

DESCRIPTION OF BOUNDARY VIOLATION: – Narrative description of the boundary violation including the sequence of events, time line, estimated exposures to individuals who violated the boundary, the immediate corrective actions taken to secure operations and emergency notifications that were made.

DIAGRAM SHOWING THE LOCATION OF THE VIOLATION AND THE EGRESS PATH IN RELATION TO THE SOURCE: – A diagram of the location of the boundary violation showing the egress path and location of the individual(s) that violated the boundary, location of the source, beam direction (for x-ray machine radiography or gamma radiography if collimator was used) and the location of any barriers, walls, or equipment that would provide shielding.

SIGNATURE OF REPORTING INDIVIDUAL: – Self Explanatory.

TITLE – Self Explanatory.

DATE – Self Explanatory.
NAVSEA
STANDARD ITEM

ITEM NO: 009-113
DATE: 31 AUG 2018
CATEGORY: II

1. SCOPE:

1.1 Title: Rotating Electrical Equipment with a Sealed Insulation System (SIS); rewind

2. REFERENCES:

2.1 Standard Items

2.2 MIL-STD-2037, Procedure to Obtain Certification for Electric Motor Sealed Insulation Systems

2.3 Equipment Technical Manual

2.4 S9086-DA-STM-010-/CH-100, Hull Structures

2.5 S9086-KC-STM-010/CH-300, Electric Plant - General

2.6 S9086-KE-STM-010/CH-302, Electric Motors and Controllers

2.7 S9086-KN-STM-010/CH-310, Electric Power Generators and Conversion Equipment

2.8 S9086-HN-STM-010/CH-244, Propulsion Bearings and Seals

2.9 S6260-BJ-GTP-010, Electrical Machinery Repair, Electric Motor, Shop Procedures Manual

2.10 MIL-DTL-17060, Motors, Alternating Current, Integral-Horsepower, Shipboard Use

2.11 MIL-STD-1310, Shipboard Bonding, Grounding, and Other Techniques for Electromagnetic Compatibility, Electromagnetic Pulse (EMP) Mitigation, and Safety

3. REQUIREMENTS:

3.1 Ensure only Repair Activities certified by Naval Sea Systems Command (NAVSEA) in accordance with 2.2 rewind motors with a Sealed Insulation System (SIS). (See Note 4.1)
3.1.1 Submit one legible copy, in hard copy or approved transferrable media, of the NAVSEA Certification Recertification letter confirming the Repair Activity has fulfilled the requirements for the SIS process to the SUPERVISOR. The NAVSEA letter shall indicate the type of motors and the range of motor frame sizes the activity is qualified to rewind.

3.1.2 Submit any change of certification as it occurs to the SUPERVISOR.

3.2 Disconnect equipment mechanically and remove, including rotating components connected directly to the shaft, using 2.3 for guidance.

3.2.1 Accomplish the following prior to disconnecting; measure air gap readings; measure bearing clearances for sleeve bearing equipment only; inspect couplings for cracks, broken segments, wear, and misalignment in excess of tolerances specified in 2.3; measure shaft thrust and run out readings; identify associated cables/wiring and hook-up data. Record data.

3.2.2 Matchmark, identify, and retain chocks, shims, shock mounts, sound damping pads, and other accessories associated with equipment. Record list of accessories.

3.3 Remove equipment including rotating components connected directly to the shaft.

3.3.1 Remove entire vaneaxial and tubeaxial fan assemblies from the duct system and transport to the shop for repair.

3.4 Accomplish a structural inspection of each foundation in accordance with 2.4. Record data.

3.4.1 Accomplishment of cleaning and painting requirements for foundations of equipment shall be in accordance with NAVSEA Standard Items. (See Note 4.8)

3.5 Matchmark, disassemble, test, inspect, measure, rewind, insulate, and bake the equipment in accordance with the Repair Activity SIS Rewind Procedure (SISRP), using 2.3 and 2.5 through 2.9 for guidance, and the following:

3.5.1 Accomplish a core loss test prior to winding removal. Record data.

3.5.1.1 Accomplish a loop test in accordance with Paragraphs 5.1.2.3.3(a) (1) through (16) or 5.1.2.3.3(b) (1) through (12) as applicable of 2.2 when core indicates a marginal satisfactory reading or when test equipment does not directly support equipment being subjected to testing. Record data.
3.5.1.2 Inspect for hot spots in accordance with the Core Loss Tester Instruction Manual. Record data.

3.5.2 Remove each winding. Accomplish core inspection in accordance with 2.9. Record data.

3.5.2.1 Verify the temperature limitations of the core material prior to exercising the burnout oven option. The surface temperature of the laminated iron surface shall be determined by thermocouple and shall not exceed 370 degrees Centigrade (698 degrees Fahrenheit). Record data.

3.5.2.2 Record winding data. Verify conformance of recorded data to the manufacturer's winding data.

3.5.2.3 Repeat core loss test, loop test, and inspection for hot spots, described in 3.5.1 through 3.5.1.2, after winding removal. Record data.

3.5.3 Dip core for preservation.

3.5.4 Protect machined surfaces. Accomplishment of cleaning and painting for equipment housing exterior, fan(s), interior and exterior of each end bell shall be in accordance with NAVSEA Standard Items (See Note 4.8).

3.5.5 Inspect each rotor for cracked bars, localized overheating, rubbing, insulation damage, and burns/hot spots. Record data.

3.5.6 Inspect and dimensionally measure end bells, frame, rabbet fits, shaft, sleeve and pedestal bearings, keyways, fan and running surfaces for wear, eccentricity, and other defects, using 2.3 for accept or reject criteria, and 2.8 for location and type of measurements to be taken. Record data.

3.5.7 Rewind the equipment, using the Original Equipment Manufacturer’s (OEM) “for Navy use” winding data. Connect windings permanently only after successful completion of testing of 3.5.8 through 3.5.11. Install new material conforming to: SISRP; Temperature detectors conforming to 2.3. Record data.

3.5.8 Accomplish 500-volt megger insulation resistance test, using Paragraphs 300-3.2.2 through 300-3.2.3, 300-3.4.8, 300-3.4.11, and 300-5.3.7.1 of 2.5 for guidance. Record data. Record data.

3.5.9 Accomplish a phase resistance balance test of windings, using a Wheatstone or Kelvin bridge, or with an ohmmeter capable of resolving one milliohm (0.001 ohm), using 3.6.1 of 2.10 for guidance. Record phase balance for multi-phase equipment. Record data.

3.5.10 Accomplish a voltage surge test. Record data.
3.5.11 Accomplish a DC HI POT test. Record data.

3.5.12 Connect the windings permanently.

3.5.12.1 Repeat tests described in 3.5.8 through 3.5.11. Record data.

3.5.13 Select varnish methods and material. Maintain the varnish in accordance with the varnish manufacturer's instructions. Maintain a current revision of the varnish manufacturer's instructions on storage, maintenance, and use of the type of varnish to be applied. Maintain a record of varnish temperature, viscosity, and, for solventless varnish, gel time tests. Tests must show varnish is within varnish manufacturer's recommendations and have been accomplished in the intervals specified by the varnish manufacturer. The record must also show the varnish is being stored as recommended by the varnish manufacturer. Record data.

3.5.14 Insulate the windings using the Vacuum Pressure Impregnation (VPI) procedure. Do not immerse the leads. Wipe surfaces that affect assembly such as rabbet fits and mounting flanges with a cloth moistened with a solvent after draining and before baking.

3.5.15 Bake windings. Remove excess varnish runoff from the component locations described in 3.5.14 after final baking.

3.5.16 Prime equipment housing, fan(s), and end bells with one coat P-84 Alkyd Zinc Molybdate TT-P-645 (1.5 mils dry film thickness).

3.5.17 Submerge wound assembly in fresh water for 24 hours. Accomplish a Submerged Insulation test. Record data.

3.5.18 Repeat test described in 3.5.8. Record data.

3.5.19 Accomplish an AC HI POT test. Record data.

3.5.20 Repeat test described in 3.5.10. Record data.

3.5.21 Repeat test described in 3.5.8. Record data.

3.5.22 Measure resistance value of each winding temperature detector, using a low voltage ohmmeter. Record data.

3.6 Submit one legible copy, in approved transferrable media, of a report listing data recorded in 3.2.1, 3.2.2, 3.4, 3.5.1, 3.5.1.1, 3.5.1.2, 3.5.2 through 3.5.2.3, 3.5.5, 3.5.6, 3.5.8 through 3.5.11, 3.5.12.1, 3.5.13, and 3.5.17 through 3.5.22 to the SUPERVISOR.

3.7 Accomplishment of the balancing requirement for each rotating assembly shall be in accordance with NAVSEA Standard Items. (See Note 4.9).
3.8 Install identification markers on wiring in the external connection box.

3.8.1 Ensure markers shall be aluminum wrap-around type with metal stamped or embossed markings.

3.9 Repair lightly scored areas of frame, end bells, and shaft by manual methods. Recondition threads and fit key to keyway. Step keys shall not be used. Apply a thin coat of petrolatum to unpainted mating surfaces except for explosion-proof motors that shall have clean, dry mating surfaces.

3.10 Prepare and refinish equipment. Protect machine surfaces, windings, and nameplates from being painted or otherwise damaged.

3.10.1 Accomplishment of cleaning and painting for housing, fan, and interior and exterior of each end bell shall be in accordance with NAVSEA Standard Items (See Note 4.8).

3.11 Accomplish the following on equipment having other than sleeve-type bearings unless otherwise specified in the invoking Work Item, using 2.9 for guidance.

3.11.1 Install new bearings, seals, fittings, lock washers, and locknuts conforming to 2.3, using 2.7 and Chapter 6 of 2.9 for guidance, except as indicated in 3.11.1.1 (utilizing Attachment A for guidance).

3.11.1.1 Install Type 111, Class 8 (double seal) bearings in motors meeting the criteria identified in Chapter 6 of 2.9. Only double seal bearings identified in Chapter 6 of 2.9 are acceptable for this use.

3.11.1.2 Install Type 111, Class 8 (double seal) bearings with a C3 (greater than normal) radial internal clearance in place of the Type 111 bearing originally furnished, for vaneaxial and tubeaxial fan motors not meeting the criteria of Chapter 6 of 2.9, if not originally furnished or already accomplished during previous repair. Install Type 120 bearings in vaneaxial and tubeaxial fan motors originally furnished with Type 120 bearings.

3.11.1.3 Install new label plates with the inscription "DO NOT LUBRICATE" on equipment using double seal bearings (Type 111, Class 8 or Type 120).

3.11.1.4 Install pipe plugs on all grease fills and drains, for equipment converted from re-lubricable bearings to double seal bearings.

3.11.1.5 Prepare a report that reflects the change in the maintenance requirements for the converted motor, for equipment converted from lubricated bearings to double seal bearings.
3.11.2 Lubricate bearings with grease conforming to DOD-G-24508 as required in Paragraphs 244-1.7.7.2 and 244-1.7.7.3 of 2.8, for equipment not using double seal bearings.

3.12 Assemble the equipment, using 2.3 and 2.5 through 2.9 for guidance. Do not use materials containing silicone in the repair and reassembly of equipment with commutator or collector rings. Install new gasket on covers, inspection plates, and between the external connection box and the frame. Gaskets shall conform to MIL-PRF-1149 unless otherwise specified in 2.3. Set brush holders not less than 1/16-inch or more than 1/8-inch from commutator or collector rings unless otherwise specified in 2.2; set in electrical neutral plane and stagger brushes for maximum coverage of the commutator in accordance with paragraph 6-3.5 through 6-3.5.4 of 2.5; center over the collector rings; ensure the brushes do not extend beyond the edge of the collector ring; install new brushes in accordance with 2.3; sand new brushes to fit curvature of the commutator or collector rings; ensure brushes have a surface contact of 100 percent and are not chipped, cracked, or broken; remove sand, carbon, and other foreign matter resulting from fitting new brushes; adjust spring tension of brushes. Adjust air gap as specified in 2.3, plus or minus 10 percent. Rotate shaft by hand a minimum of 3 revolutions. Rubbing or binding of rotating assembly shall not be allowed. Record data.

3.12.1 Install labels plate conforming to MIL-DTL-15024 for those identified to be missing or damaged.

3.13 Accomplish a no-load shop test of the equipment for a minimum of one-half hour. Verify proper direction of rotation. After one-half hour, measure current and voltage in each phase, speed and bearing temperature rise measured on the equipment's exterior near each bearing. Record data.

3.14 Accomplish an operational test, with the vaneaxial/tube axial fan reassembled, for one hour after bearing and stator temperatures stabilize within one degree C for three consecutive 15-minute intervals. Verify proper direction of rotation. Measure current, voltage, frame and bearing temperature rise and speed at 15-minute intervals. Bearing temperatures shall not exceed 180 degrees Fahrenheit, unless otherwise specified in the invoking Work Item or equipment technical manual. Measure hot insulation resistances of winding to ground immediately upon completion of the operational shop test, using a 500-volt megger. Record data.

3.15 Submit one legible copy, in approved transferrable media, of a report listing data recorded in 3.11.1.5, 3.12, 3.13, and 3.14 to the SUPERVISOR.

3.16 Install equipment. Install new gaskets conforming to MIL-PRF-900 on disturbed ventilation. Align equipment in accordance with 2.3. Measure and record facial and peripheral coupling data. Install chocks, shims, shock mounts, and sound damping pads. Connect electrical cables/wiring. Bond and ground equipment in accordance with 2.11, using new ground straps. Rotate shaft by hand a minimum of 3 revolutions. Rubbing or binding of rotating
assembly not allowed. Measure the air gap and bearing clearance (sleeve bearing equipment only), insulation resistance (at 500 volts DC), and thrust. Record data.

3.16.1 Accomplishment of pump and driver shaft alignment shall be in accordance with NAVSEA Standard Items (See Note 4.10).

(V)(G) "OPERATIONAL TEST"

3.17 Accomplish an operational test of the assembled equipment at full system capacity for a minimum of one hour after bearing and stator temperatures stabilize within one degree C for three consecutive 15 minute intervals, unless otherwise specified in the invoking Work Item. If temperatures do not stabilize in four hours, stop test and contact the SUPERVISOR. Verify proper direction of rotation. Measure current, voltage, frame and bearing temperature rise, and speed at 15-minute intervals. Frame and bearing temperature rise and speed is not required for vaneaxial and tubeaxial fan assemblies. Bearing temperatures shall not exceed 180 degrees Fahrenheit unless otherwise specified in the invoking Work Item/equipment technical manual. Record data.

3.17.1 Accomplish the requirements of 3.17 twice for two speed motors, once while operating at low speed, and once while operating at high speed. Record data.

3.17.2 Accomplish the requirements of 3.17 for limited duty motors, for a period of time equal to the duty cycle of the motor. For motors with a duty cycle equal to or less than 30 minutes, measure data every 10 minutes. Record data.

3.17.3 Measure hot insulation resistance of windings to ground immediately upon completion of test using 500 volt megger. Record data.

3.18 Submit one legible copy, in hard copy or approved transferrable media, of a report listing data recorded in 3.17 through 3.17.3 to the SUPERVISOR.

4. NOTES:

4.1 This Standard Item is concerned primarily with the requirements to rewind rotating electrical equipment with a SIS in accordance with 2.2. Each Certified Repair Activity has developed a SIS Rewind Procedure (SISRP) that has been reviewed, approved by and filed with NAVSEA. In most cases, these Repair Activity SISRPs are treated as proprietary and may not be available to the SUPERVISOR for process review. The NAVSEA approved Repair Activity SISRP is the guiding document by which the equipment is to be rewound and supersedes any specification detailed in this Standard Item.

4.2 Equipment technical manual, Allowance Parts List (APL) (if applicable) and drawings will be listed in the invoking Work Item.
4.3 Shop test of generator will be addressed in the invoking Work Item.

4.4 For the current list of NAVSEA-certified facilities for Vacuum Pressure Insulation (VPI) Sealed Insulation Systems, contact Naval Surface Warfare Center Carderock Division, Department 934, Phone (215) 897-7245.

4.5 Utilize Attachment A for determination if the Navy’s motor bearing conversion program for Extended Life Double Seal (ELDS) ball bearings is permissible.

4.6 Data received in 3.11.1.5 shall be forwarded to the SUPERVISOR for the purpose of initiating action ensuring shipboard databases such as the Equipment Guidance List (EGL) are updated to reflect the change in maintenance requirements for converted motors. Additionally, where APL changes are initiated to convert to ELDS bearings, a COSAL feedback report shall be submitted, providing the NSN and part number for the ELDS bearing by the SUPERVISOR. Utilize the following website to initiate changes to Technical Manuals, APLs, etc.: http://www.navy311.navy.mil.

4.7 MIL-B-17931 (Bearings, Ball, Annular, For Quiet Operation) bearings are considered to be Long Lead Time (LLT) material. It is recommended these bearings be provided as Government Furnished Material (GFM).

4.8 If cleaning and painting of 3.4.1, 3.5.4, or 3.10.1 is required; the use of Category II Standard Item 009-32 “Cleaning and Painting Requirements; accomplish” of 2.1 will be specified in the Work Item.

4.9 If balancing of rotating equipment of 3.7 is required; the use of Category II Standard Item 009-15 “Rotating Machinery; balance” of 2.1 will be specified in the Work Item.

4.10 If pump and driver shaft alignment of 3.16.1 is required; the use of Category II Standard Item 009-58 “Pump and Driver Shaft Alignment; accomplish” of 2.1 will be specified in the Work Item.
ATTACHMENT A

1. To reduce motor maintenance and repair costs, the NAVY has implemented a program that allows for the use of Extended Life Double Seal (ELDS) bearings.

2. LIMITATIONS: The ELDS program does NOT apply to motors that are under the cognizance of NAVSEA 08.

3. APLs for motors meeting the conversion criteria requirements have been modified to identify ELDS bearings. In these cases, the APL bearing criteria will override any specifications delineated in the equipment technical manual or the motor "Original Equipment Manufacturer (OEM)" drawings. If ELDS bearings are not indicated in an APL, the following motor criteria must meet the applicability specifications for motors to undergo conversion to ELDS bearings:

   3.a Motor must be installed on a surface ship and must NOT be under the cognizance of NAVSEA 08.

   3.b Commercial motors are not eligible. Motors must have been furnished to the NAVY in accordance with MIL-DTL-17060 (Motors, Alternating Current, Integral Horsepower, Shipboard use), MIL-M-17413 (Motors, Direct Current, Integral H.P., Naval Shipboard [NAVY]) or MIL-M-17059 (Motors, 60 Cycle, Alternating Current Fractional H.P. [Shipboard Use]).

   3.c Motors using one or more noise-quiet bearings per MIL-B-17931 (Bearings, Ball, Annular, For Quiet Operation) are NOT eligible for ELDS conversion.

   3.d Bearings originally furnished with the motor must be type 111 bearings per FF-B-171. Motors are NOT to be considered as candidates for ELDS conversion in situations where the equipment technical manual and/or the OEM motor drawings originally specified FF-B-171 bearings but have notes indicating that replacement bearings are to be in accordance with MIL-B-17931 (Bearings, Ball, Annular, For Quiet Operation).

   3.e The use of ELDS bearings is limited to motors where the full load speed and the size of both bearings are as follows:

      1. Maximum bearing size 306 or 206 and full load rpm between 1,801 and 3,600 rpm.
      2. Maximum bearing size 313 or 213 and full load rpm between 1,201 and 1,800 rpm.
      3. Maximum bearing size 318 or 218 and full load rpm less than 1200 rpm.

4. The repair process using ELDS bearings includes the following requirements:

   4.a Only ELDS bearings, in accordance with the following table (Attachment A / Table 1), can be used. Other double seal bearings will not provide an acceptable bearing life.

____________________________
____________________________
____________________________
1. SCOPE:

   1.1 Title: Mold Remediation; accomplish

2. REFERENCES:

   2.1 EPA 402-K-01-001, Mold Remediation in Schools and Commercial Buildings

   2.2 29 CFR Part 1915, Occupational Safety and Health Standards for Shipyard Employment

3. REQUIREMENTS:

   3.1 Conduct and document an initial determination of potential personnel exposure to materials contaminated with mold or mold spores prior to the start of work.

   3.1.1 Provide a copy of the documentation, signed by a Competent Person as defined in 29 CFR 1915.4, to the SUPERVISOR upon request.

   3.2 Ensure the remediation of material contaminated with mold or mold spores meets the guidance provided in 2.1.

   3.3 Provide a notice and remediation plan to the SUPERVISOR and to the Commanding Officer's designated representative prior to start of work.

   3.3.1 The remediation plan must be on the work site and include at a minimum the following information:

      3.3.1.1 Scope and location of the remediation area.

      3.3.1.2 Method(s) to be used to remediate material contaminated with mold or mold spores.

      3.3.1.3 List of Personal Protective Equipment (PPE) in accordance with 2.2 to be used during remediation process.
3.3.1.4 Engineering controls (i.e., ventilation and containment) to be used to eliminate exposure to personnel and other spaces/ compartments.

3.3.2 Post a notice at the ship's Quarterdeck and at all entrances to the work areas for each job or separate area of potential exposure to mold or mold spore remediation operations at least 4 hours, but not more than 24 hours, prior to the start of work.

3.3.3 The notice must contain the following information:

- 3.3.3.1 Ship's name and hull number
- 3.3.3.2 Work Item number
- 3.3.3.3 Compartment or frame number
- 3.3.3.4 Identification of hazard
- 3.3.3.5 Date and time of work process
- 3.3.3.6 Identification of engineering and work practice controls

3.3.4 Deliver notification of work planned over a weekend or Monday following that weekend to the Commanding Officer's designated representative not later than 0900 on the Friday immediately preceding that weekend.

3.3.5 Deliver notification of work planned on a Federal holiday and on the day following the Federal holiday to the Commanding Officer's designated representative not later than 0900 on the last working day preceding the Federal holiday.

3.3.6 The notice and remediation plan must be submitted to the SUPERVISOR for review prior to commencement of the work operation. Authorization of the SUPERVISOR must be obtained before proceeding with the work.

3.4 Provide for isolation and blanking of ship's ventilation systems in work areas to prevent mold or mold spore contamination of ventilation systems or other compartments/spaces.

3.5 Post warning signs and establish regulated areas for monitoring and authorized personnel entry.

3.6 Visually monitor the affected areas during work operations to ensure compliance with 2.1 and 2.2. Monitoring must include adjacent spaces to ensure the work area containments and work practices are effective. Results of surveillance must be documented and documentation must be made available to the SUPERVISOR.
3.7 Conduct a final visual inspection jointly with the SUPERVISOR and Commanding Officer’s designated representative to verify that all visible mold and mold-damaged materials have been removed.

4. **NOTES:**

4.1 Reference 2.1 is available at http://www.epa.gov/mold/mold_remediation.html
1. **SCOPE:**

   1.1 Title: Bearing Rebabbitting; accomplish

2. **REFERENCES:**

   2.1 Standard Items

   2.2 SL460-AA-HBK-010, Handbook for Inspection, Packaging, Handling, Storage and Transportation

   2.3 DOD-STD-2188, Babbitting of Bearing Shells (METRIC)

   2.4 T9074-AS-GIB-010/271, Requirements for Nondestructive Testing Methods

3. **REQUIREMENTS:**

   3.1 Crate and secure each bearing identified in the work item. Packaging shall conform to 2.2. Reuse crate for return shipping.

      3.1.1 Ship crated material prepaid to and from the contractor’s facility.

      (I)(G) "SHIPPING CRATE INSPECTION"

      3.1.2 Prior to packing and crating, visually inspect the crate for conformance and proper packaging and securing of each bearing.

      3.2 Accomplishment of a Process Control Procedure (PCP) for the process of rebabbitting each bearing shall be in accordance with NAVSEA Standard Items (See Note 4.3), each bearing drawing, 2.3, and ASTM B339. The PCP shall provide for accomplishment of all steps from receipt inspection to final dimensional inspection and verify compliance with and documentation of the following steps:

         3.2.1 Receipt inspection of babbit and tin to the requirements of 2.3 and ASTM B339.

         3.2.2 Receipt inspection of bearing
3.2.3 Removal of existing babbit
3.2.4 Bearing shell machining
3.2.5 Bearing shell cleanliness
3.2.6 Bearing shell fluxing
3.2.7 Bearing shell tinning temperatures
3.2.8 Bearing shell babbitting, centrifugal and or static
3.2.9 Centrifugal casting rotation speed
3.2.10 Static casting rodding
3.2.11 Pouring babbit temperatures of babbit and bearing shell
3.2.12 Post babbit machining

(I)(G) “VERIFICATION OF BOND”
3.2.13 Bond testing in accordance with DOD-STD-2188 and 2.4.
3.2.14 Final inspection to determine conformance to referenced drawing dimensional requirements.

(I)(G) “SHIPPING CRATE INSPECTION”
3.2.15 Packaging and crating inspection and conformance to 2.2 packaging requirements.

3.3 Submit one legible copy, in hard copy or approved transferrable media, of the PCP with all substantiating documents within one day of completion of the requirements of 3.2.15. Provide one additional legible hard copy of the completed PCP with the bearing when shipped.

4. NOTES:
4.1 Known source: American Metal Bearing Company
7191 Acacia Avenue,
Garden Grove, CA 92841-5297
Contact number; 714-892-5527 or 800-888-3048

4.2 If drawing for bearing is not available, invoke NSI 009-90 to ensure bearing is correctly refurbished in conformance with equipment manufacturer’s requirements and specifications.

4.3 If a Process Control Procedure (PCP) for the process of rebabbitting each bearing in 3.2 is required; the use of Category II Standard Item 009-09 “Process Control Procedure (PCP); provide and accomplish” of 2.1 will be
specified in the Work Item. If rebabbitting is accomplished by the OEM or other NAVSEA approved organization, a NAVSEA approved process may be used in lieu of a PCP.
1. SCOPE:

1.1 Title: Waste Heat Boiler Sodium Nitrate Wet Layup; accomplish

2. REFERENCES:

2.1 S9086-GX-STM-020/CH-220, Boiler Water/Feedwater Test and Treatment

3. REQUIREMENTS:

3.1 Accomplish sodium nitrite wet layup of each auxiliary/waste heat boiler.

3.2 Notify the SUPERVISOR one day prior to layup of each boiler.

3.3 The sodium nitrite layup solution must be prepared with sufficient solution to fill boiler and to provide a reservoir in a pier side tank or ship’s feedwater tank.

3.3.1 For each 100-gallons of feed quality water (conductivity maximum of 15-micromho/cm) to be treated, dissolve one pound of sodium nitrite in accordance with Paragraphs 220-29.24.3 and 220-30.29.4 of 2.1.

3.3.1.1 Mixing is accomplished by dissolving the sodium nitrite in feed quality water (10 pounds will dissolve in 2-gallons of water), and then adding the dissolved chemicals to the feedwater in the tank. The tank is then circulated for 30-minutes to mix the solution.

3.3.2 A head tank is the easiest and preferred method of maintaining positive pressure. If a head tank method is used, locate and pipe the head tank above the highest boiler vent.

3.3.3 Fill the boiler with the sodium nitrite layup solution and maintain pressure using a head tank or feed pump.

3.3.4 Provide an authorized source of heat to the fireside/gas-side areas to prevent corrosion in accordance with 2.1.
3.4 Layup is lost when the head tank level or pump discharge pressure is not maintained and cannot be reestablished. Apply dry layup if layup is lost.

3.5 To prepare for boiler operation, dump the boiler, feed tanks and associated piping. Flush by refilling the boiler, feed tanks, and associated piping with feed-quality water. Do not light-off with sodium nitrite layup solution in the boiler, DFT (if applicable) or feed tank. Dispose of removed solution in accordance with local, state, and federal regulations.

3.5.1 Do not drain the solution to the bilge.

4. **NOTES:**

4.1 None.
1. SCOPE:

1.1 Title: Combat Systems, Light-Off Support; provide

2. REFERENCES:

2.1 Standard Items

2.2 S9095-AD-TRQ-010/TSTP, Total Ship Test Program

3. REQUIREMENTS:

3.1 Complete work in designated compartments and support systems prior to the Command, Control, Communications, Computer, Combat Systems and Intelligence (C5I) Light-Off (C5ILO) Key Event to the degree required to support uninterrupted completion of government AIT installations as well as all Stage 3 and follow-on C5I tests. Stage test definitions are detailed in 2.2. Designated compartments and support systems required to support AIT production and testing are listed in a Compartment Release Schedule (CRS) which is provided to the Lead Maintenance Activity (LMA) by the SUPERVISOR as Government Furnished Information (GFI). The selected Stage 3 through 7 or Operational Verification Tests to be conducted during the C5I Light-Off period are to be identified in the LMA’s Integrated Test Schedule (ITS) required by SI 009-67 of 2.1.

3.1.1 Obtain from the SUPERVISOR, no later than A-30, a C5I Compartment Release Schedule (CRS), indicating compartments and Combat Systems Support Equipment (CSSE) required in support of C5I Light-Off.

3.1.2 Ensure all work and testing required to meet CRS dates are fully integrated into the Integrated Production Schedule (IPS) and Integrated Test Schedule (ITS) required by 009-60 and 009-67 of 2.1. Include all work and testing planned for accomplishment by all organizations involved including Commercial Industrial Services (CIS), Alteration Installation Teams (AIT), Ships Force, Government-Contracted Third Party Maintenance Providers, and Fleet Maintenance Activity (FMA).

3.2 Release compartments to the Government no later than the dates indicated in the approved CRS.
3.2.1 Submit one legible copy, in approved transferrable media, of a report listing the status of CRS completion including a list of preliminary C5I Light-Off discrepancies to the SUPERVISOR weekly beginning at the 50 Percent Review Conference. Submission can be concurrent with reports required by 009-60 and 009-81 of 2.1.

3.2.2 Notify the SUPERVISOR immediately upon determination of any discrepancies that cannot be corrected prior to scheduled compartment release dates for each compartment. Include the reason for the discrepancy and when applicable, highlight the new expected completion date on a revised CRS.

(V) (G) “JOINT INSPECTION”

3.2.3 Accomplish a joint inspection of the compartments to be released with the SUPERVISOR, PEO IWS designated Combat Systems Project Engineer (if assigned), and Ship's Commanding Officer (or designated representative), upon completion inspection, and acceptance of industrial work and prior to the required release date per the CRS.

3.2.3.1 The joint inspection team shall document the discrepancies and determine if the scope and nature of work to correct the discrepancies will impede uninterrupted testing. This inspection satisfies the requirements of 009-81 of 2.1.

3.2.3.2 Identify each discrepancy as contractor responsible or government responsible. Develop and implement a discrepancy correction plan for contractor responsible discrepancies identified during the compartment inspection process that allows the release of compartments to the government in support of government responsible work.

3.2.3.3 Submit one legible copy, in approved transferrable media, of a report listing the discrepancies identified during each inspection that will impede testing and the discrepancies identified that will not impede testing, to the SUPERVISOR.

3.2.3.4 Ensure the joint inspection team identified in 3.2.3 will sign the report upon completion of discrepancy correction.

3.2.4 Allow no work in compartments released to the government until the end of the availability without written permission of the SUPERVISOR.

3.3 All industrial work in compartments and work on CSSE listed on the CRS shall be complete to the degree that allows for the safe and uninterrupted operation and testing of the ship’s C5I equipment. When required, so as not to cause delays in the Light-Off test schedule, suitable temporary support systems and services may be considered acceptable but only after joint concurrence by the SUPERVISOR, PEO IWS Combat Systems Project Engineer (if assigned), and Ship's Commanding Officer.

3.3.1 Industrial work in 3.3 includes but is not limited to hot work, cutting, grinding, deck work (PRC, nonskid, Terrazzo, NOMEX) and spray painting. Repair and installation of electronics equipment, antennas, machinery, equipment, piping systems, gauges, thermometers, meters, operating instructions and warning plates, remote shutdown devices, strainer shields, valves and hand wheels, access door and scuttles, ventilation
systems, lighting systems, electric cables and runs, alarm systems, ground
straps, flex hose, resilient mounts, safety devices, interior communication
systems, tachometers, and resiliently mounted pipe hangers must be
completed. Newly installed or repaired gauges, thermometers, and meters must
be calibrated.
Access routes need not be released but must be passable or alternate routes
made available at all times. Services, either ship or shore based, must be
available on a reliable basis. These services are dependent on ship class
and include, but are not limited to, 60Hz/400Hz, Air Conditioning (AC),
Chilled Water (CW), Firemain or AEGIS Salt Water Cooling pumps, Ventilation,
Electronic Cooling Water (ECW) (demineralized water), Dry Air, High Pressure
Air (HP), Low Pressure Air (LP), Fwd and Aft SPY skids (AEGIS only), Sonar
skid, AN/SPS 49 skid, Command and Decision (C&D) skid (AEGIS only), AN/SLQ
32 Cooling Unit and CIWS heat exchanger. In addition, the Electric Plant
Control Equipment (EPCE) console or remote 400Hz console must be available.
Cabling from 60Hz Power panels, Chilled Water (CW) hoses (if CHW cooled) and
routes must be intact to 400Hz converters. ECW modifications must be
completed and all contractor flushes accomplished. If the ship is in dock,
and installed equipment or systems (i.e. AC plants, Cooling Skids, Fire-main)
must be placed in operation to support C5ILO, then acceptable means to contain
overboard discharge(s) must be installed, when directed by the Supervisor.

3.3.2 When in the best interests of the test program, the
SUPERVISOR may waive the requirement for final decking installation as part
of the initial compartment release. In these cases, install/remove temporary
decking to allow safe use of the space will be installed, and final decking
installation will occur at a time that does not impede the test program, as
authorized by the SUPERVISOR.

3.3.3 C5I testing shall not begin in a compartment which has not
been formally released per the joint inspection process in 3.2.3. When
discrepancies prevent final compartment release, the SUPERVISOR, PEO IWS
Combat Systems Project Engineer (if assigned), and Ship's Commanding Officer
will determine if industrial work is completed to the degree allowing for the
safe and uninterrupted operation and testing of the ship's C5I Systems and
Combat Systems Support Equipment.

4. NOTES:

4.1 C5ILO is an availability Key Event scheduled to allow the start of a
comprehensive testing and operation of the ships C5I equipment. C5ILO marks
the Project Team’s and Combat Systems Project Engineer’s (if assigned)
transition from industrial production work to testing and installation of
alterations not able to be performed coincident with industrial work. If
discrepancies which preclude uninterrupted testing are identified prior to
C5ILO, those discrepancies must be corrected prior to the C5ILO Key Event
being declared met.

4.2 The PEO IWS designated representative (if assigned) will provide
all CRS documentation, including a list of spaces and systems/equipment
along with required completion dates to the SUPERVISOR at A-240 for use in
planning and contract award.
1. SCOPE:

1.1 Title: CG Deck Loading; accomplish

2. REFERENCES:

2.1 671-8416047, CG47 Class Topside Laydown Areas & Load Limits

3. REQUIREMENTS:

3.1 Accomplish the requirements of 2.1 for topside deck loading of contractor equipment and supplies.

3.1.1 Submit one legible drawing or sketch of a proposed deck loading plan to the SUPERVISOR for review and acceptance 3 days prior to the start of the availability.

3.1.1.1 Submit updated or changed plans to the SUPERVISOR as they occur.

4. NOTES:

4.1 None.
1. SCOPE:

   1.1 Title: Fact Finding and Critique of Unplanned Event; manage

2. REFERENCES:

   2.1 Standard Items

3. REQUIREMENTS:

   3.1 Accomplish each fact finding and each critique of a severity Level One event and the requirements of this Standard Item upon discovery of an unplanned event as directed by the Commanding Officer of the SUPERVISOR.

   3.1.1 Stop work and ensure immediate actions are taken to mitigate the impact of the unplanned event, reduce or confine the area of concern, and place the work site in a safe and stable condition.

   3.1.2 Initiate a preliminary investigation to identify and capture relevant facts regarding the unplanned event. Provide ongoing updates to the SUPERVISOR on immediate actions being taken and the status of the preliminary investigation. Complete the preliminary investigation and submit Attachment E to the SUPERVISOR within 24 hours of receiving direction to initiate actions under this Standard Item.

   3.1.2.1 The Preliminary Investigation shall contain at a minimum a summary of the relevant facts, chronology of events, actions and results of those actions, damage estimations, where it occurred, who was present and who took action, and any additional circumstances of the event. There should be enough detail to give an overview of the event, to establish the severity level, and allow for the determination of follow on actions. Document the preliminary investigation using Attachment E.

   3.1.3 Determine the severity level of problems associated with the unplanned event using Attachment A (Severity Classification Guide).

   3.1.4 Obtain SUPERVISOR concurrence that adequate immediate corrective actions have been taken. Resume work only when authorized by the SUPERVISOR.
3.1.5 When directed by the SUPERVISOR, proceed with the Fact Finding Investigation and, if directed, conduct a Critique Meeting.

3.2 Assign a Fact Finding Investigator/Critique Chairperson (See 4.1.3, 4.1.4 and 4.1.5)

3.2.1 Accomplish initial Fact Finding Investigation and prepare a Preliminary Fact Finding Report using Attachment B, Fact Finding Report and Preparation Requirements. Submit a copy of the Preliminary Fact Finding Report to the SUPERVISOR within 3 days of being directed by the SUPERVISOR to proceed in accordance with 3.1.5 or 4 hours prior to the scheduled Critique Meeting, whichever occurs first. Request for additional time shall be submitted to and approved by the SUPERVISOR. The Preliminary Fact Finding Report shall contain a complete chronological statement of the facts relative to the occurrences leading up to and through the unplanned event, the immediate corrective actions taken, a working copy of Cause and Corrective Action Form to be refined during the Critique Meeting and any other documents used during the fact finding investigation. Include only facts such as what happened, when, where, who was present, who took action, etc.

3.2.2 Obtain written independent statements from all witnesses to the unplanned event to establish the relevant facts.

3.2.3 Compile and review all appropriate references, technical work documents, or other information pertinent to the problem.

3.2.4 Review similar unplanned events from the previous 3 years and corrective actions previously documented to identify repeat problems and the effectiveness of those previous corrective actions.

3.2.5 Coordinate the time and location of the Critique Meeting with the SUPERVISOR and meeting members. Ensure appropriate personnel (including Ship's Force) are notified of the time, location and subject of the Critique Meeting.

3.2.5.1 A Critique Meeting may be deemed not warranted based on the results of the Fact Finding investigation. The problem(s) resulting in the unplanned event must be fully understood and cause(s) clearly known. The SUPERVISOR must concur in the decision to not hold a Critique Meeting and a Final Fact Finding Report must still be prepared and submitted. Authorization for conducting of a Critique must be approved by the Commanding Officer of the SUPERVISOR.

3.2.6 Obtain a unique Fact Finding Report Serial Number from the SUPERVISOR. This number shall be used as the serial number for the Fact Finding Report and all related documents.
3.3 Conduct Critique Meeting within 3 days of being directed by the SUPERVISOR to conduct a critique.

3.3.1 Commencement of the Critique Meeting may be extended with SUPERVISOR authorization.

3.3.2 Introduce all meeting members at the commencement of the Critique Meeting. Document all attendees using Attachment C, the Critique Meeting Attendance Sheet.

3.3.3 Ensure all pertinent documentation is available and distributed at the Critique Meeting (e.g. Fact Finding Report, appropriate references, technical work documents, chronological statement of relative facts, other information relevant to the problem and a list of any similar problems and corrective actions previously documented).

3.3.4 Brief all attendees that the purpose of the meeting is to encourage open discussion of the relevant facts and problems associated with an unplanned event, so that apparent causes of the problems and effective solutions can be determined. Critique Meetings are not examinations or investigations for the purpose of disciplinary action. Any disciplinary action investigation will be conducted separately and independently of this critique process.

3.3.5 Review all pertinent documentation and open the floor for discussion to determine any additional relevant facts. Obtain agreement/consensus on the relevant facts from all attending personnel.

3.3.6 Update the chronological statement of relevant facts to reflect additional pertinent information discovered during the Critique Meeting.

3.3.7 Document each problem identified during the Critique Meeting on a Cause and Corrective Action form(s), Attachment D.

3.3.8 Coordinate with the SUPERVISOR to assign actions for each problem to the appropriate contractor or designated representative of an organization.

3.3.8.1 More than one action may be required for each problem. All corrective actions must have an actual or estimated completion date. The terms "continuing" or "continuous" are not acceptable. If an action is of a repetitive or continuous nature, the completion date will match the date the policy for that action was disseminated.

3.3.8.2 Ensure the contractor or designated representative of the organization assigned an action item signs the Fact Finding Report Form, Attachment B, acknowledging concurrence.
3.3.8.3 Ensure a Cause and Corrective Action (CCA) form, Attachment D, has been issued to the appropriate organization for follow-up and action.

3.3.8.4 Changes to the Fact Finding Report after the Critique Meeting was adjourned or after the fact finding report has been accepted/signed by the SUPERVISOR, will only be made by the Chairperson with SUPERVISOR concurrence.

3.3.9 Submit one legible copy, in hard copy or approved transferrable media, of the Critique paperwork and associated reports to the SUPERVISOR within 3 days after conclusion of the Critique Meeting.

3.3.10 Track all corrective actions assigned in the Final Fact Finding Report to completion. Ensure the organization assigned actions from the Critique Meeting/Fact Finding provides documentation of completion using the Cause and Corrective Action Form, Attachment D, for all actions taken or in progress within 3 days of assignment and as required thereafter.

3.3.10.1 Notify the SUPERVISOR of any new problems related to the unplanned event that are discovered while working action items.

3.4 Submit one legible copy, in hard copy or approved transferable media, of the Final Fact Finding Report listing the results of the investigation, along with all associated paperwork, to the SUPERVISOR within 30 days of being directed to investigate the Unplanned Event.

3.4.1 Plan for 2 each Fact Finding and one each Critique for a Chief of Naval Operations (CNO) Availability or one each Fact finding and one each critique for a Continuous Maintenance Availability (CMAV).

3.4.1.1 Plan for 12 mandays of labor and 250 dollars of material to accomplish each Fact Finding of an Unplanned Event. If the total costs are less than the authorized manday and dollar amounts, remaining funds will be subject to recoupment. The contractor is not authorized to exceed these limits.

3.4.1.2 Plan for 8 mandays of labor and 250 dollars of material to accomplish each Critique of an Unplanned Event. If the total costs are less than the authorized manday and dollar amounts, remaining funds will be subject to recoupment. The contractor is not authorized to exceed these limits.

3.5 Maintain a record of all Fact Finding and Critique process documents for a minimum of 4 years.
3.5.1 Stored records shall be used to conduct trend analysis for any similar problems and corrective actions previously documented to identify repeat problems and to evaluate the effectiveness of those corrective actions.

4. **NOTES:**

4.1 Definitions.

4.1.1 Apparent Cause: The most likely reason for a problem to have occurred based on a review of relevant facts determined during the preliminary investigation, subsequent investigations and the critique. There may be more than one apparent cause for a problem. The determination of an apparent cause for a significant problem provides added assurance that the corrective and preventive actions taken shall minimize the potential for the problem to reoccur.

4.1.2 Critique: A formal meeting to review a critical or major unplanned event (as defined in Attachment A, Severity Level Classification Guide) to determine the relevant facts, to provide an accurate and documented chronology of the relevant occurrences surrounding the event (before, during and after), to determine the apparent causes of problems and their severity levels, and to validate the adequacy of the immediate corrective actions taken. Apparent cause(s) and corrective and preventive action(s) for each problem should be determined during the critique. Participants will include personnel directly involved with or knowledgeable about the incident, system, or work processes and a cross-section of senior level management.

4.1.3 Critique Chairperson: Appointed by the contractor and responsible for ensuring that the problems associated with unplanned events are properly identified, characterized by severity level, investigated, critiqued (if necessary), have adequate short and long-term corrective actions identified, and are reported in a timely manner. Collects the Cause and Corrective Action (CCA) memos for each problem identified in the critique meeting, reviews them for adequacy, prepares the final Fact Finding Report and obtains the concurrence of the SUPERVISOR with the final Fact Finding Report.

4.1.4 Fact Finding Investigation: An analysis of the unplanned event to corroborate the chronology of events and relevant facts, determine the effectiveness of the immediate corrective actions, identify apparent causes, and who was responsible. Additional corrective and preventive actions may be identified and subsequently implemented during the investigation. An investigation is not as in-depth as a Critique, and therefore does not require a formal meeting or the degree of personnel involvement as the Critique.
4.1.5 Fact Finding Investigator: Appointed by the contractor to conduct Investigation of an unplanned event to determine the relevant facts, chronology, and circumstances of the event and to determine if the event warrants conducting a critique meeting. Provides results of the investigation to the Critique Chairperson.

4.1.6 Fact Finding Report Serial Number: Each unplanned event to be investigated is assigned a unique serial number used for accountability and tracking. Serial Numbers will be provided by the SUPERVISOR.

4.1.7 Immediate Corrective Action: Action(s) taken immediately upon discovery of an unplanned event to put the component or system in a safe condition and correct any problems requiring immediate attention so that it does not escalate into a greater problem.

4.1.8 Short-Term Corrective Action: Actions taken for an unplanned event to collect or mitigate a component or system to a safe condition. Such actions minimize the probability or problem reoccurrence and allow work to continue until long term corrective actions are taken.

4.1.9 Long-Term Corrective Action: Actions taken for an unplanned event to restore a component or system to its original condition or better before the unplanned event. This may also include changes in procedures, additional training or supervision.

4.1.10 Preliminary Investigation: An investigation performed immediately after the occurrence of an unplanned event to quickly determine the relevant facts, chronology, who is responsible and circumstances of the event, to determine the severity level and whether the event warrants conducting a Critique or issuing a Trouble Report.

4.1.11 Unplanned Event: An unexpected occurrence that is not normal behavior or anticipated condition for the process.

4.2 Problems identified to Ship’s Force will only require a response for immediate and short-term corrective action. Long-term corrective actions will be taken through the established processes within the command. Systemic problem areas identified may be addressed through other administrative reporting procedures with cognizant Immediate Superior In Command (ISIC) personnel.

4.3 If problems are identified to contractors working for AIT managers, the Alteration Installation Team (AIT) managers are required to initiate and conduct the Fact Finding process for unplanned events. The SUPERVISOR shall participate as necessary to ensure effectiveness.
4.4 Each Crane accident occurring on US Naval installations will be reported and investigated in accordance with 009-40 of 2.1 unless otherwise directed by the SUPERVISOR.

4.5 Initial submission of Attachment A under 009-74 of 2.1 may be substituted for Attachment E under this Standard Item. Duplicate submission of Attachment E is not required.
ATTACHMENT A

SEVERITY LEVEL CLASSIFICATION GUIDE

1. PROBLEM SEVERITY LEVELS:

1.1 Problems associated with unplanned events shall be assigned one of 3 levels of severity (Level One, 2, or 3) to distinguish those problems that have the most impact on an activity in accomplishing its mission. Severity levels also help ensure appropriate resources are focused on the most significant problems.

1.2 For each unplanned event identified, attempt to determine the level of severity of the problem(s) during the preliminary investigation.

1.2.1 Problems meeting the criteria of Levels One normally require both a Fact Finding Investigation and a Critique Meeting to determine and correct the cause(s) of the unplanned event.

1.2.2 Problems meeting the criteria of Level 2 or 3 shall be investigated to determine and correct the cause(s) of the unplanned event, normally on the spot, but a Fact Finding Report is not required for a Level 2 or 3 problem. For completeness, Level 2 or 3 problems identified in conjunction with a Fact Finding Investigation for a Level One problem shall be included in the Fact Finding Report.

1.3 The severity level for each problem shall be determined using the following guidelines:

1.3.1 Level One “CRITICAL”

1.3.1.1 A problem or trend which has or could result in significant rework, significant environmental hazard, radiological incident, equipment malfunctions, nuclear violations, serious personnel injury or renders safeguards ineffective. A Level One deficiency often results in significant recovery time and cost. Level One problems normally require Technical Authority and/or senior management attention to resolve.

1.3.1.2 Level One deficiencies often result in significant recovery time/cost. A series or trend of Level 2 deficiencies should be grouped together and identified as Level One.

Examples of Level One problems include:
- Equipment damage greater than $50K
- Any rework costing over $100K
- Breakdown in Work Control (not administrative errors)/Tag Out processes leading to personnel injury or equipment damage
Crane accident resulting in an event such as derailment, overload, injury to personnel, dropped material, equipment damage, unplanned contact between the load, crane or object
-Serious personnel injury (e.g., chemical burn, electric shock, fall)
-Flammable liquid spill
-A shipboard or facility fire that cannot be (or was not) controlled by a Firewatch and requires Ship’s Force in port Emergency Response and/or Fire Department assistance to extinguish
-Broken weight handling equipment (while in use)
-Personnel in a toxic environment without proper gas free certification (space not gas free)

1.3.2 Level 2 “MAJOR”

1.3.2.1 A problem or trend which, if not identified and corrected, has the potential to result in a Level One problem or which results in equipment degradation requiring DFS approval. Level 2 problems may require Technical Authority involvement and senior management attention.

1.3.2.2 A series or trend of Level 3 deficiencies should be grouped together and identified as Level 2.

Examples of Level 2 problems include:
-Equipment damage of less than $50K
-Using improper test procedures
-Loss of cleanliness of a system or equipment
-Component identified out of position (i.e. valve or switch open in lieu of shut)
-Systemic problems regarding safety requirements
-Personnel in a toxic environment without gas free certification properly posted (not posted but space was Gas Free)
-Not following written procedures (e.g., Process Control Procedures, Test Plan)
-Safety discrepancies that pose an immediate threat or danger
- Minor shipboard or facility fire that can be extinguished with handheld fire extinguisher or hose by a Firewatch. (NOTE: If a Firewatch or hot worker extinguishes minor sparks or flames as part of the hot work process, then it is a Level 3 event.)

1.3.3 Level 3 “MINOR”

1.3.3.1 Isolated deficiencies with minimal overall impact and no significant consequences. Level 3 problems are normally corrected on the spot (i.e. document the deficiency and brief personnel involved) with an immediate corrective action.

Examples of Level 3 problems include:
-Any problem not categorized as Level One or Level 2
- Required notification of the problem was not made in a timely manner
- Paint sample taken at incorrect location
- Required procedures not on site
- OQE or reports not recorded or submitted in required time
- Unsafe work practices
- Poor craftsmanship
- Repeated housekeeping violations
Attachment B

FACT FINDING REPORT AND PREPARATION REQUIREMENTS

*Note: Mark the security classification on the report as applicable based on the sensitivity of the information contained in the report.

1. Preliminary Fact Finding Report:

   1.1 An in-progress report that shall consist of the following:

      1.1.1 Fact Finding Report Form filled out with the “Preliminary Report” box checked.

      1.1.2 Chronological statement of relevant facts.

      1.1.3 Working copy of cause and Corrective Action Form(s) Attachment (D)

      1.1.4 Any other document(s) used during the Fact Finding Investigation.

2. Final Fact Finding Report:

   2.1 A final Fact Finding Report shall consist of the following:

      2.1.1 Completed Fact Finding Report Form with the “Final Report” box checked and senior manager review.

      2.1.2 Complete chronological statement of relevant facts from the unplanned event.

      2.1.3 Completed Cause and Corrective Action Form(s) (Attachment D)

      2.1.4 Any other document(s) used during the Fact Finding Investigation (e.g. Independent statements from individual(s), appropriate references, technical work documents).

      2.1.5 Critique Meeting attendance form (Attachment C), if a Critique Meeting was held.

      2.1.6 Identify any similar Unplanned Event(s).

## SUMMARY OF EVENT

## IMMEDIATE CORRECTIVE ACTION (include who performed the action)

## INVESTIGATED BY (PRINT NAME):

**TITLE/PHONE NUMBER:**
1. **SCOPE:**

   1.1 Title: Ship Assessment/Inspection; accomplish

2. **REFERENCES:**

   2.1 None.

3. **REQUIREMENTS:**

   3.1 Provide the services of qualified on-site technical representatives and resources to accomplish Ship Assessments/Inspections.

   3.1.1 Provide Assessors that meet all qualification requirements for each specific Assessment/Inspection area assigned and the following general qualification requirements.

      3.1.1.1 Have technical knowledge of the specified equipment or process, and have a documented history of conducting Material Assessments/Inspections on similar equipment or processes.

      3.1.1.2 Have demonstrated competence with required Standard Work Templates (SWT) and procedures specified in the Class Maintenance Plan (CMP) and the Planned Maintenance system (PMS) database.

      3.1.1.3 Have demonstrated competence with submitting technically accurate documentation of both satisfactory and unsatisfactory Assessment/Inspection results (OPNAV 4790 2-Kilo’s and Automated Work Requests).

   3.1.2 Comply with the following requirements when conducting Assessments/Inspections and reporting deficient material conditions of assigned ships equipment/systems.

      3.1.2.1 Integrate work requirements, setting of priorities, coordinating with the ship, and de-conflicting of other ship Assessments/Inspections as agreeable by the SUPERVISOR.

      3.1.2.2 Conduct Assessments/Inspections only using tasks from the Class Maintenance Plan (CMP) or Assessment Procedures (AP) Maintenance Requirement Cards (MRC) in the Planned Maintenance System (PMS) database.
3.1.2.3 Verify all established procedures (e.g., CMP, MRC) are reviewed for technical accuracy and ability to comply with the procedure as written.

3.1.2.4 Inform the SUPERVISOR of any deficiencies or technical inaccuracies in the Assessment/Inspection procedures.

3.1.2.5 Submit Technical Feedback Report (TFBR) to the SUPERVISOR to address any deficiencies or technical inaccuracies in the Assessment/Inspection procedure. Ensure TFBR describes what is required to properly perform Assessment/Inspection.

3.1.3 Document all Assessment/Inspection findings, whether satisfactory or unsatisfactory using an OPNAV 4790 2-Kilo or Automated Work Request (AWR).

3.1.3.1 The SUPERVISOR is the ultimate approval authority for review of 2-Kilo’s and AWR’s written during an Assessment/Inspection. Any corrections identified as necessary due to error or omission by the contractor shall be promptly corrected by the contractor.

4. NOTES:

4.1 None.
1. **SCOPE:**

   1.1 Title: Temporary Padeye; install and remove

2. **REFERENCES:**

   2.1 Standard Items

   2.2 804-5184133, Padeye, Machinery Lifting

   2.3 MIL-STD-1689, Fabrication, Welding, and Inspection of Ships Structure

   2.4 S0600-AA-PRO-160, Underwater Ships Husbandry Manual

3. **REQUIREMENTS:**

   3.1 Fabricate each temporary padeye and rigging attachment in accordance with 2.2 and 2.3.

      3.1.1 Except as specified in 3.1.1.1, each temporary padeye for weight handling on surface ship and non-nuclear loads *must* be designed with a safety factor of six, based on ultimate strength of materials for safe working load.

      3.1.1.1 Configuration and safety factors for temporary padeyes used solely in the handling and attachment of cofferdams or other underwater fixtures *must* meet the requirements of 2.4.

      3.1.2 Submit one legible copy, in hard copy or approved transferrable media, of a report listing the design of each planned temporary padeye not in compliance with 2.2 for SUPERVISOR approval 7 days prior to planned installation. Include material specification, dimensional drawing(s), weld joint design, and installation location.

   3.2 Install and inspect each temporary padeye in accordance with 2.2 and 2.3.

      3.2.1 Inspect each temporary padeye and support structure for cracks and deformation prior to installation.
3.2.1.1 Submit one legible copy, in hard copy or approved transferrable media, of a report listing results of the requirements of 3.2 and 3.2.1 to the SUPERVISOR.

3.2.2 Accomplish the requirements of 009-12 of 2.1, including Table 2, Columns A, B, or C, lines one through 7.

3.2.3 Maintain a log of each temporary padeye installed to include a unique serial number, Safe Working Load, location by Compartment and approximate frame, date installed and date removed.

(I) “Non-Destructive Testing”

3.3 Accomplish a NDT of each temporary padeye, attachment weld, and attachment point to ship’s structure for deformation, elongation, and cracking. Allowable Defects: None.

3.3.1 For steel temporary padeyes with a Safe Working Load (SWL) over “2,000” accomplish MT in accordance with 2.3. For steel temporary padeyes with a SWL less than “2,000” accomplish VT in accordance with 2.3.

3.3.2 For aluminum temporary padeyes with a SWL over “1,500” pound accomplish PT in accordance with 2.3. For aluminum temporary padeyes with a SWL less than “1,500” pound accomplish VT in accordance with 2.3.

3.4 Upon completion of satisfactory testing and inspection, label each temporary padeye with paint, paint stick or other permanent marking. Include the padeye serial number, “T” for Temporary, and Safe Working Load (Example: NNN T SWL “2000” pounds).

3.5 Chip and grind surfaces in way of removals each temporary padeye at the conclusion of the work for which they were installed. Removal must be in accordance with Section 14.10 of 2.3.

3.5.1 Weld repair each temporary padeye removal site in accordance with Section 14.10 of 2.3.

3.5.1.1 Accomplish the requirements of 009-12 of 2.1, including Table 2, Columns A, B, or C, lines one through 7.

3.6 Accomplishment of the requirements of 009-32 of 2.1 for new and disturbed surfaces.

3.7 Submit one legible copy, in hard copy or approved transferrable media, of completed log of 3.2.3 to the SUPERVISOR within 72 hours after removing all temporary padeyes, or prior to ship’s departure, whichever occurs first.

4. NOTES:
4.1 Weight handling padeyes or devices which are proof-tested to 200 percent of their SWL with a post-test visual inspection in accordance with paragraph 3.3 do not require inspection of welds by penetrant or magnetic methods unless otherwise specified.

4.2 If cleaning and painting of 3.6 is required, the use of Category II Standard Item 009-32 "Cleaning and Painting Requirements; accomplish" of 2.1 will be specified in the Work Item.
1. SCOPE:

1.1 Title: Fiber Optic Component; inspect, install, repair, remove, and test

2. REFERENCES:

2.1 Standard Items

2.2 MIL-STD-1678, Fiber Optic Cabling Systems Requirements and Measurements

2.3 MIL-STD-2042, Fiber Optic Cable Topology Installation Standard Methods for Surface Ships and Submarines

2.4 MIL-STD-2003, Electric Plant Installation Standards for Surface Ships and Submarines

2.5 IA PUB-5239/31, Information Assurance Shipboard Red/Black Installation Publication

2.6 NSTISSAM TEMPEST/2-95, Red/Black Installation Guidance (FOUO)

2.7 SE000-01-IMB-010, Navy Installation and Maintenance Book (NIMB), Section IX, Installation Standards (Source CD: N00024000033)

2.8 S9086-PF-STM-010/CH-408; Fiber Optic Cable Topology

2.9 S9AA0-AB-GOS-010, General Specifications for Overhaul of Surface Ships (GSO)

3. REQUIREMENTS:

3.1 Ensure employees accomplishing work (e.g., installer, QA oversight, direct supervision) on fiber optic systems have accomplished Navy Shipboard fiber optic training and achieved certification in accordance with requirement 1306 of Part 1 of 2.2.
3.1.1 Maintain current certification for each employee working on fiber optic systems. Employees must present certification card when requested by the SUPERVISOR.

3.1.2 Submit one legible copy, in hard copy or approved transferrable media, of a report listing all personnel involved in accomplishing fiber optic installation or repair (e.g., installers, QA oversight, direct supervision) to the SUPERVISOR prior to the start or continuation of production work. Submit any changes as they occur.

3.2 Inspect existing affected cable installations and interferences within the first 25 percent of contract completion. Inspect each fiber optic cable (conventional and Blown Optical Fiber (BOF)) in accordance with Method 6A1 of 2.3.

3.2.1 Submit one legible copy, in hard copy or approved transferrable media, of a report listing results of the requirements of 3.2 including cable installation conditions not in compliance with 2.3 to the SUPERVISOR within 4 days of completion of inspections.

3.3 Accomplish fiber optic installations in accordance with 2.3.

3.3.1 Install each new Fiber Optic Interconnection Box (FOICB), Tube Routing Box (TRB), patch panel, fusion splice tray holder, and cable, cableway, and penetration, including those to be protected from the weather, in accordance with 2.3.

3.3.2 Install saddles on BOF cabling to prevent crushing the BOF tubes when tightening cableway bands in accordance with 2.3.

3.3.3 Use existing ship cableway and penetrations wherever possible. Penetrations must be correct size in accordance with 2.3 and 2.4.

3.3.3.1 Accomplishment of a cableway inspection for each modified cableway and penetration must be in accordance with NAVSEA Standard Items (See Note 4.7).

3.3.4 Install each fiber optic cable and components which are part of a secure information processing system or are located within a secure processing space in accordance with 2.5 and 2.6.

3.3.5 Install each new fiber optic connector of the correct size and type conforming to MIL-DTL-83522, MIL-PRF-28876, or MIL-PRF-64266 in accordance with Part 5 of 2.3.

3.3.5.1 Ensure each fiber optic connector is not exposed to the industrial environment or weather.
3.3.5.2 Accomplish inspection and cleaning of both fiber optic connectors prior to mating in accordance with Method 6M1 of 2.3.

3.3.6 Accomplish the optical link loss test in accordance with Method 6C1 or Method 6C2 of 2.3 upon the completion of connector attachment, slack management, banding, and penetration closeout for each fiber optic cable.

3.3.7 Accomplish the optical continuity test in accordance with Method 6D1 of 2.3 for cables with fibers that are not terminated on each end.

3.3.8 Accomplish the optical return loss test in accordance with Method 6K1 of 2.3 for single mode fiber links upon the completion of connector attachment, slack management, banding, and penetration closeout for fiber optic cables.

3.3.9 Accomplish the tube seal verification test in accordance with Method 6J1 of 2.3 for BOF cables after installation of connectors and for unused BOF tubes within BOF cables. Accomplish the ball bearing test in accordance with Method 6H1 of 2.3 for unused BOF tubes within BOF cables.

3.3.10 Accomplish the BOF tube end sealing in accordance with Method 2J1 of 2.3 for all empty BOF tubes in tube routing boxes, fiber optic interconnection boxes, and equipment.

3.3.11 Install new cable identification tags in accordance with Part 4 of 2.3, using 2.7 for guidance. Mark each cable, tube, furcation unit, Optical Fiber Cable Component (OFCC) and connector in accordance with the referenced drawings, equipment technical manual and 2.3.

3.3.12 Accomplish post-installation visual inspection in accordance with Method 6A1 and attenuation test Method 6E1 or Method 6E2 of 2.3. For single mode links, accomplish return loss test in accordance with Method 6L1 of 2.3. Use Method 6A1 to verify no mechanical damage exists to the installed fiber optic cables. Use Methods 6E1 or Method 6E2 and 6L1 to measure the optical loss and return loss (respectively) over a series of concatenated optical links, performed after interconnection of the Fiber Optic Cable Topology (FOCT) local and trunk cables.

3.3.13 Accomplish inspection and cleaning of each new and existing fiber optic connector immediately prior to mating in accordance with Method 6M1 of 2.3.

3.3.14 Install connectorized cables to equipment, using system drawings or other technical documents. Light Duty connectors **must** only be installed within fiber optic interconnection boxes (FOICBs) or within
equipment enclosures/racks. Heavy Duty connectors must be installed externally to equipment enclosures/racks.

3.4 Accomplish fiber optic repair, relocation, and removal in accordance with 2.3 and 2.8.

3.4.1 Install each Fiber Optic Interconnection Box (FOICB), Tube Routing Box (TRB), patch panel, fusion splice tray holder, cable, and fusion splice tray to be repaired and/or relocated in accordance with 2.3.

3.4.2 Use existing cableways and penetrations wherever possible. Penetrations must be the correct size in accordance with 2.3 and 2.4. Penetrations not reused must be blanked in accordance with 2.3 and 2.4.

3.4.3 Accomplish the continuity test in accordance with Method 6D1 of 2.3 for each conventional fiber optic cable prior to repair.

3.4.4 Accomplish inspection and cleaning of each new and existing fiber optic connector immediately prior to mating in accordance with Method 6M1 of 2.3.

3.4.5 Isolate and repair fiber optic cable jacket in accordance with Method 1B1 of 2.3.

3.4.6 Isolate and repair each fiber optic connector in accordance with Part 5 of 2.3.

3.4.7 Ensure fiber optic connectors, cables and boxes are not exposed to the industrial environment or weather in accordance with 2.3.

3.4.8 Identify and isolate each cable to be pulled back, rerouted, reused or repurposed.

3.4.9 Install new cable identification tags in accordance with Part 4 of 2.3, using 2.7 for guidance.

3.4.10 Install new banding for cableways affected by cable removals in accordance with Part 4 of 2.3.

3.4.11 Install saddles on BOF cabling to prevent crushing the BOF tubes when tightening cableway bands in accordance with 2.3.

3.4.12 Accomplish the visual inspection of Method 6A1 for each fiber optic cable (conventional and BOF) in accordance with 2.3 upon the completion of the repair and final banding.
3.4.13 Accomplish the link loss test of Method 6C1 or Method 6C2 for each fiber optic cable (conventional and BOF) in accordance with 2.3 upon the completion of the repair and final banding.

3.4.14 Accomplish the return loss test of Method 6K1 for single mode links only for each fiber optic cable (conventional and BOF) in accordance with 2.3 upon the completion of the repair and final banding.

3.4.15 Accomplish the visual inspection of Method 6A1 and the continuity test of Method 6D1 of 2.3 for repaired cables with fibers that are not terminated on each end.

3.4.16 Accomplish the tube seal verification test of Method 6J1 of 2.3 after installation of connectors and for unused BOF tubes within BOF cables. Accomplish the ball bearing test of Method 6H1 of 2.3 for unused BOF tubes within BOF cables.

3.4.17 Accomplish inspection and cleaning of each new and existing fiber optic connector immediately prior to mating in accordance with Method 6M1 of 2.3.

3.4.18 Connect each cable, using referenced drawing or retained hook-up data.

3.4.19 Identify, isolate, and remove each fiber optic cable designated for removal in its entirety.

3.4.19.1 Blank each bulkhead penetration, deck penetration, and multi-cable transit device from which cable was removed and which will not be reused, in accordance with 2.3 and 2.4.

3.4.19.2 Blank each unused hole in equipment, in accordance with 2.3 and 2.6.

3.4.19.3 Remove unused hangers from which cable was removed and which will not be reused, in accordance with Section 070a of 2.9.

3.4.20 Remove and relocate each fiber optic cable and component which are part of secure information processing systems or are located within a secure processing space in accordance with 2.5 and 2.6.

3.5 Accomplish fiber optic splicing in accordance with the BOF Cable Splice Method 1C1 of 2.3 or the fusion splice installation Method 2K1, Method 2K2 or Method 2K3 of 2.3. Install each fusion splice component (e.g., fusion splice, splice protector, fusion splice tray, fusion splice tray holder module) conforming to MIL-PRF-24623/6 and MIL-PRF-24728/8. Ensure each fusion splicer conforms to Commercial Item Description (CID) A-A-59799.
3.5.1 Accomplish the optical test in accordance with Method 6E1 or Method 6E2 of 2.3 upon the completion of fusion splicing, slack management, banding, and penetration closeout of each fiber optic cable.

3.5.2 Accomplish the return loss test in accordance with Method 6L1 of 2.3 for single mode fiber links only upon the completion of fusion splicing, slack management, banding, and penetration closeout of each fiber optic cable.

3.5.3 Accomplish inspection and cleaning of each new and existing fiber optic connector immediately prior to mating in accordance with Method 6M1 of 2.3.

3.5.4 Verify continuity of each spliced tube with a ball bearing in accordance with Method 6H1 of 2.3.

3.5.5 Accomplish the ball bearing test of Method 6H1 and the tube seal verification test of Method 6J1 of 2.3 for unused BOF tubes within BOF cables.

3.6 Accomplish fiber optic testing in accordance with Part 6 of 2.3.

3.7 Install new banding for cableways affected by cable installs, removals, pulled back, reused, rerouted, and repurposed in accordance with Part 4 of 2.3. Saddles must be used on BOF cabling to prevent crushing the BOF tubes when tightening cableway bands in accordance with 2.3.

3.8 Accomplishment of local air hose tests after the installation, removal and relocation of fiber optic cables of each new and disturbed multi-cable transit device, multi-cable penetrators, stuffing tubes, kick pipes, and cable penetrations of tightness boundaries must be in accordance with NAVSEA Standard items (See Note 4.8).

3.9 Accomplishment of cleaning and painting for new and disturbed surfaces must be in accordance with NAVSEA Standard Items (See Note 4.9).

3.10 Inspect fiber optic installations, repairs, relocations, and removals in accordance with 2.3.

3.11 Submit one legible copy, in hard copy or approved transferrable media, of a report listing results of the requirements of 3.3.1.1, 3.3.6 through 3.3.9, 3.3.12, 3.3.13, 3.4.3, 3.4.4, 3.4.8, 3.4.12 through 3.4.17, 3.5.1 through 3.5.5, and 3.6 to the SUPERVISOR within 3 days after recording the data.

4. NOTES:
4.1 The requirements in this Standard Item apply to installation, repair, removal, relocation, test, and inspection of fiber optic components on Naval surface ships and submarines and personnel supporting these tasks. This Standard Item applies to the following fiber optic cable usages; new, pulled back, reused, rerouted, repurposed, removed and replaced.

4.2 Definitions.

4.2.1 New Cable – a cable not previously installed.

4.2.2 Pulled Back Cable – a cable disconnected and physically removed from a wireway, conduit, or cableway to protect the cable from industrial use.

4.2.3 Reused Cable – a cable disconnected from the equipment to facilitate equipment removal.

4.2.4 Rerouted Cable – a cable disconnected from their equipment and physically moved to a new wireway, conduit or, cableway and then reconnected in the new location to the same equipment.

4.2.5 Repurposed Cable – a cable with termination points changed.

4.2.6 Remove Cable – a cable disconnected from equipment and physically removed in its entirety and not being replaced.

4.2.7 Replaced Cable – a cable disconnected from equipment and physically removed to facilitate replacement with a new cable.

4.3 Cable installations consist of cable, banding, boxes, equipment, penetrations, cableways, cable separation and connection(s) and associated components.

4.4 The formats of Attachment A, B and C are provided as guidance. Other reporting formats can be used with the approval of the SUPERVISOR.

4.5 Navy fiber optic Technical Authority policy letters and drawings, and the list of Certified Navy Shipboard Fiber Optic Trainers (CFOTL) can be located by sending an email to DLGR_NSWC_FOWEB@navy.mil with the specific subject line of: website URL request

4.6 The Navy Shipboard Fiber Optic Technical Authority is: DLGR_NSWC_FO_ENG@navy.mil
4.7 If local air hose test of 3.8 is required, the use of Standard Item 009-25 "Structural Boundary Test; accomplish" of 2.1 will be specified in the Work item.

4.8 If cleaning and painting for new and disturbed surfaces of 3.9 are required, the use of Standard Item 009-32 "Cleaning and Painting Requirements; accomplish" will be specified in the Work Item.

- **1** Record MIL-SPEC number if applicable.
- **2** Standard colors: Blue, Orange, Green, Brown, Slate, White, Red, Black, Yellow, Violet, Pink, Aqua.
- **3** IAW 6E1 or 6E2 of Reference 2.3.
- **4** IAW 6L1 of Reference 2.3.
- **5** For example, “Source Location → Detector Location”.

Connection List: ____________________________  Remarks: ____________________________

Signature: ____________________________
1. **SCOPE:**

1.1 Title: Thermal Spray Nonskid Application; accomplish

2. **REFERENCES:**

2.1 Standard Items

2.2 T9074-AA-GIB-010/1687, Thermal Spray Processes for Naval Ship Machinery and Nonskid Applications

2.3 Systems and Specifications - SSPC Painting Manual, Volume 2

2.4 ASTM F21, Standard Test Method for Hydrophobic Surface Films by the Atomizer Test

2.5 229 CFR 1915, Occupational Safety and Health Standards for Shipyard Employment, Subparts C and Z

2.6 NACE International Standards

2.7 ANSI/NACE SP0508, Methods of Validating Equivalence to ISO 8502-9 on Measurement of the Levels of Soluble Salts

2.8 ASTM D4285, Standard Test Method for Indicating Oil or Water in Compressed Air

2.9 ASME B46.1, Surface Texture (Surface Roughness, Waviness and Lay)

2.10 ASTM D4417, Standard Test Methods for Field Measurement of Surface Profile of Blast Cleaned Steel

2.11 ASTM D7127, Standard Test Method for Measurement of Surface Roughness of Abrasive Blast Cleaned Metal Surfaces Using a Portable Stylus Instrument

2.13 ASTM D522, Standard Test Methods for Mandrel Bend Test of Attached Organic Coatings
3. REQUIREMENTS:

3.1 Consider marine coatings, nonskid and abrasive blasting media to contain heavy metals (e.g., beryllium, cadmium, chromium, and lead), hexavalent chromium, crystalline silica, and/or other toxic or hazardous substances.

3.2 Maintain the following certifications for accomplishing Thermal Spray Nonskid (TSN) operations. Information for these certifications can be found at www.sspc.org and www.naceinstitute.org/Certification.

3.2.1 Organizations accomplishing thermal spray nonskid application must be certified in accordance with 2.2.

3.2.2 Thermal spray application personnel and the applicable procedure must be qualified as defined in 2.2.

3.2.3 Organizations accomplishing blasting operations (abrasive and waterjetting) and color topping application must be certified in accordance with 009-32 of 2.1.

3.2.4 Personnel accomplishing abrasive blasting, Ultra-High Pressure Waterjetting (UHP WJ), or preservation must be certified in accordance with 009-32 of 2.1.

3.2.5 Personnel qualifications for Low-Pressure Water Cleaning (LP WC) operations are as follows:

3.2.5.1 The contractor conducting LP WC operations to NACE/SSPC-SP WJ-4 on nonskid decks must be certified in accordance with SSPC-QP 1 of 2.3 or a NAVSEA-approved equivalent.

3.2.5.2 The onsite foreman must be certified in accordance with NAVSEA Basic Paint Inspector (NBPI) course, NACE International Coating Inspector Program (CIP) Level One or higher, or SSPC Protective Coating Inspector Program (PCI).

3.2.6 Coating inspectors must be certified in accordance with the NAVSEA Basic Paint Inspector (NBPI) course, NACE International Coating Inspector Program (CIP) Level One or higher, or SSPC Protective Coating Inspector Program (PCI) Level 2 or higher. The inspector must have passed the SSPC Thermal Spray Inspector Training course or NAVSEA-approved equivalent, and have a minimum of 6 months of thermal spray Quality Assurance (QA) experience.

3.3 Record and maintain in-process records on Appendix A and the QA Checklist Form Appendices One, 2, 3, 4, 5, 6, and 7 of 009-32 of 2.1.

3.3.1 Submit one legible copy of QA appendices in hard copy or approved transferrable media of recorded in-process information on QA Checklist Form Appendices to the SUPERVISOR within 72 hours of completion of
preservation of each separate location listed in the invoking Work Item or task order.

3.3.2 QA Checklist Form Appendices of 2.1 are available at http://www.nstcenter.biz.

3.4 Submit one legible copy of the containment design 14 days before erecting the containment for approval by the SUPERVISOR.

3.5 Complete the water break test when required in accordance with 2.4 with the following modifications:

3.5.1 Use deionized or distilled water.

3.5.2 Use a hand-held demineralizer water bottle, not an atomizer, to place water droplets on the surface areas to be tested. Use a Hach® demineralizer bottle (product number 1429900) or equivalent.

3.5.3 Evaluate the surface for hydrocarbon contamination in accordance with 2.4. Dry the surface using a lint free cloth.

3.5.4 The “testing of processing environments” described in 2.4 does not apply.

3.6 For TSN, conduct Film Thickness (FT) measurements as follows:

3.6.1 A Type 2 gage in accordance with SSPC-PA 2 of 2.3 with a probe diameter of 0.20 inches or smaller, a sample diameter of 0.12 inches or smaller, and capable of measuring TSN FT from 25 to 250 mils must be used.

3.6.2 For FT measurements, one spot measurement is the average of 10 individual gage readings that are made along a 24 inch straight line perpendicular to the application direction. Do not place FT probe on atypical high spots or irregularities (e.g., spatter).

3.7 Clarification of terms:

3.7.1 The term tie-in area must be defined as the area where MIL-PRF-24667 nonskid is applied over edges of the TSN.

3.8 Product storage:

3.8.1 Store TSN wire in a dry place. The temperature must be maintained between 50 degrees Fahrenheit and 90 degrees Fahrenheit, or within the manufacturer’s recommended storage temperature range with written authorization from the SUPERVISOR. Document the name of the thermal spray wire, manufacturer, batch/lot number, and date of expiration on 009-32 of 2.1, QA Checklist Form, Appendix 6. Record the batch/lot number for the thermal spray wire material in “Base Portion Batch No# (Part A)” section of 009-32 of 2.1, QA Checklist Form, Appendix 6.

3.8.2 Store and monitor liquid coatings in accordance with 009-32 of 2.1.
3.9 Do not use partial kits when using multiple component coatings that are to be applied to the TSN.

3.10 Install masking material appropriate for blasting and thermal spray activities, such as DeWAL Industries Inc. DW501 or equivalent material as approved by NAVSEA, for protection of equipment and items in work area not to be coated. Remove masking material upon completion of final coating.

3.10.1 Mask flight deck tie-downs, designated recessed flight deck lights, and other designated deck fittings that are not to be coated with the TSN using masking material.

3.11 Clean polyethylene shoe coverings must be worn when walking on prepared or coated surfaces. Shoe coverings must be selected that do not degrade and contaminate surfaces. Use of adhesive tape (e.g., duct tape) as shoe covering is prohibited.

3.12 Erect and maintain a containment structure and ventilation system over the designated work area in accordance with the design approved by the SUPERVISOR.

3.12.1 The containment must include a sub-containment enclosure, or spray equipment shrouding, within the overall containment. The enclosure must meet the dust mitigation requirements of 2.5. The enclosure, or spray equipment shrouding, must contain dust generated by the TSN process and capture dust in a bag house or other dust collection equipment as approved by the SUPERVISOR.

3.12.2 Verify installation of containment structure and operation of ventilation and dust collection systems in accordance with the design approved by the SUPERVISOR.

3.12.2.1 Containment and associated ventilation systems are to be in place and operational prior to start of any surface preparation operations and must remain in place and operational until cure to service of color topping.

3.13 Measure ambient and substrate surface temperatures, relative humidity, and dew point inside the containment and within close proximity to the enclosure. These data must be collected and recorded from the beginning of abrasive blasting through cure to service of the color topping.
3.13.1 Environmental readings must be measured and recorded at a minimum of once per hour with a data logger. Measure and record a manual reading once every 24 hours and at every (G)-point with a separate calibrated device independent of the data logger to confirm data logger readings. These manual readings must be documented on 009-32 of 2.1, QA Checklist Form, Appendix 1.

3.13.2 Apply TSN coating system under the following conditions: the ambient air temperature within the containment must be maintained between 55 degrees Fahrenheit and 90 degrees Fahrenheit; the deck temperature must be a minimum of 50 degrees Fahrenheit during coating system application and cure of the color topping and Visual Landing Aid (VLA) marking coatings. The maximum relative humidity within the containment must be 70 percent. The deck temperature must be a minimum of 5 degrees Fahrenheit above the dew point.

3.13.3 For the color topping, measure and record the environmental readings from prior to application of the coatings until 48 hours of creditable cure time as defined in 009-32 of 2.1. For coatings that fully cure to service in less than 48 hours, as defined on their NAVSEA-reviewed ASTM F718 data sheets, environmental readings for the final coat must be measured and recorded until the coating’s cure to service time is reached.

3.14 Remove existing deck coating in the TSN application area within the containment using vacuum, self-contained UHP WJ equipment.

3.14.1 Waterjet an additional 12 to 18 inches on each side of the intended TSN area to allow for a tie-in area.

(V) “PRIMARY SURFACE PREPARATION”

3.14.2 Verify primary surface preparation is in accordance with Table One, NACE/SSPC-SP WJ-2/L of 2.3 and 2.6. Document primary surface preparation on 009-32 of 2.1, QA Checklist Form, Appendix 2.

(I)(G) “CONDUCTIVITY MEASUREMENT”

3.14.3 Accomplish surface conductivity measurements on the prepared deck. One reading must be taken for the first 200 square feet. Additional readings must be taken for every additional 400 square feet or less. Conductivity measurements must not exceed 30 micro-siemens/cm. Conductivity samples must be collected using a product that meets the requirements of 2.7. Document on 009-32 of 2.1, QA Checklist Form, Appendix 4. Accomplish surface conductivity measurement within 8 hours prior to abrasive blasting.

3.14.3.1 Clean areas where conductivity exceeds requirements using LP WC equipment with potable water to NACE/SSPC-SP WJ-4 of 2.3 and 2.6. Dry the affected areas and remove any standing water. Accomplish surface conductivity measurements on affected areas in accordance with 3.14.3.

(I)(G) “CLEANLINESS PRIOR TO ABRASIVE BLASTING”
3.14.4 Accomplish degreasing/cleaning prior to surface preparation to ensure that the surface is free of contaminants in accordance with SSPC-SP 1 of 2.3.

3.14.4.1 Accomplish a visual water break test on the cleaned surface in accordance with paragraph 3.5. One water break test must be accomplished on every 200 square feet of the waterjet cleaned surface. In addition, water break tests must be accomplished on stained or discolored areas that visually indicate hydrocarbon contamination. Accomplish degreasing/cleaning efforts until the surface is free of hydrophobic contaminants as evident by water droplets spreading immediately to form a thin, continuous uniform water film. Document surface cleanliness on 009-32 of 2.1, QA Checklist Form, Appendix 2 and document the water break test results in the "COMMENTS" section.

3.15 Prepare surfaces to be coated with TSN in accordance with Table One, SSPC-SP 5/NACE 1 of 2.3 and 2.6.

3.15.1 Blast media must conform to SSPC-AB 1 of 2.3 and be a blend of 50 percent 16-mesh grit aluminum oxide and 50 percent 24-mesh grit aluminum oxide. Submit one legible copy, in hard copy or approved transferrable media, of the blast media conformance data package to the SUPERVISOR prior to blasting.

3.15.2 Initiate abrasive blasting within 10 hours of accomplishing UHP WJ in accordance with 3.14.2. When surface profile is not established within 10 hours the surface cleanliness must be verified in accordance with 3.14.2, 3.14.3 and 3.14.4.

3.15.3 Recycling or re-use of the abrasive is prohibited.

(V) "VERIFY COMPRESSED AIR QUALITY"

3.15.4 Abrasive media must be recovered with a vacuum. Remaining abrasive and dust in TSN application area must be blown down with clean, dry air to a localized area and vacuumed again for complete removal. The air must be free of water and oil in accordance with 2.8.

(I)(G) "SECONDARY SURFACE PREPARATION"

3.15.5 Verify secondary surface preparation is in accordance with Table One including the welds. Document secondary surface preparation on 009-32 of 2.1, QA Checklist Form, Appendix 3.

(I)(G) "SURFACE PROFILE"

3.15.6 Measure surface texture as defined in 2.9, using Root Mean Square Slope (RΔq), and measure surface profile as defined in 2.10. Document the profile data on QA Checklist Form, Appendix A.

3.15.6.1 Take one RΔq measurement every 400 square feet in accordance with 2.11. One RΔq measurement is defined as the mean of 5 individual readings. The measured RΔq must be 0.45 or greater.
3.15.6.2 Take one profile measurement every 200 square feet using Method B of 2.10. One profile measurement is defined as the mean of 10 individual gage readings. The 10 individual gage readings and the mean must be documented. The profile must be between 4.0 and 10.0 mils. Profile must not be measured within one inch of any weld.

(I)(G) “DUST TEST”

3.15.7 Accomplish a surface cleanliness inspection for dust and document on 009-32 of 2.1, QA Checklist Form, Appendix 5. Surface dust must be a maximum of Rating 2, Class 2, of 2.12. Three individual readings must be taken for every 400 square feet. Individual tape samples must be retained and applied to the back of the 009-32 of 2.1, QA Checklist Form, Appendix 5 and labeled with the date, time, and work area or zone.

3.16 Accomplish thermal spray application in accordance with Table One.

3.16.1 Initiate TSN coating application within 10 hours of the completion of abrasive blasting in accordance with 3.15. When TSN application is not initiated within 10 hours, the surface cleanliness must be verified in accordance with 3.15.5, 3.15.6, and 3.15.7.

(V) “VERIFY SECONDARY SURFACE PREPARATION PRIOR TO TSN APPLICATION”

3.16.2 Verify just prior to TSN application that the surface still satisfies requirements in Table One, Column B.

3.16.3 Prepare witness coupons in accordance with the following:

3.16.3.1 Prepare witness coupons within 3 hours of initiating TSN application during each work shift.

3.16.3.2 Witness coupons must consist of 3 cold-rolled steel test coupons of dimensions 2 inches by 8 inches by 0.0625 inches or as approved by NAVSEA. Clean each coupon using the same cleaning procedures used on the deck to satisfy the cleaning requirements of 3.15.5. Abrasive blast each coupon using the same abrasive blasting procedures used on the deck to satisfy the surface preparation requirements of 3.15.5 and 3.15.6. Take and record one surface profile measurement in accordance with Method B of 2.10 on each witness coupon. Record the profile for each witness coupon in QA Checklist, Form Appendix A.

3.16.3.3 Secure the witness coupons to masked tie-downs within the first application area of the work shift such that the panels do not move during thermal spray application. Space the test panels uniformly across the application area. The panels must remain in place during the application of the first layer of TSN to the deck so that the test coupons are coated simultaneously with the coating of the deck.

3.16.4 Accomplish TSN application to designated deck areas using the qualified procedure of 2.2.
3.16.4.1 Accomplish the requirements of 3.13.2 for environmental readings.

(I)(G) “THERMAL SPRAY APPLICATION MACHINE SETTINGS”

3.16.4.2 Verify thermal spray machine settings and spray parameters are in accordance with the qualified procedure of 2.2 at the start of each work shift.

3.16.4.3 Apply the TSN coating 6 to 12 inches beyond the designated TSN application area to facilitate the tie-in area to the surrounding MIL-PRF-24667 nonskid coating system.

3.16.4.4 Apply TSN to within 2 to 3 inches of deck fittings and protrusions. Apply TSN 24 to 36 inches from coamings and deck edges.

3.16.4.5 Overlap TSN between work zones in accordance with qualified procedure of 2.2.

3.16.4.6 Document start and end time for the application of each layer of thermal spray in 009-32 of 2.1, QA Checklist Form, Appendix 6.

(I)(G) “MANDREL BEND WITNESS COUPONS”

3.16.5 Test the 3 witness coupons immediately following the application of the first layer of TSN after allowed to cool to below 120 degrees Fahrenheit (surface temperature). Take 3 FT gage readings in accordance with 3.6 on each panel. Record each measurement in QA Checklist Form, Appendix A. Accomplish Test Method B - Cylindrical Mandrel Test of 2.13 on each panel. The mandrel rod diameter must be 2.25 inches. The coupon must be bent to 180 degrees and visually inspected without magnification for spalling, flaking or delamination in accordance with Attachment A. Any spalling, flaking, or delamination of the coating on any one of the 3 witness coupon must constitute a mandrel bend test failure. Cracking without spalling, flaking or delamination is acceptable. Flaking within 0.125 inches from the panel edges is acceptable. Record the mandrel test results in QA Checklist Form, Appendix A. The panels must be labeled regarding the date, time, and location and must be provided to the SUPERVISOR within 24 hours.

3.16.5.1 Notify the SUPERVISOR of any mandrel bend test failure. A mandrel bend test failure must require removal of TSN applied to the work zone during that work shift via abrasive blasting in accordance with 3.15. The TSN first layer must be re-applied in accordance with 3.16 with a new set of 3 witness coupons.

(V) “THERMAL SPRAY VISUAL INSPECTION”

3.16.6 Accomplish a visual inspection of each layer of the TSN system. There must be no blistering, delamination, spalling, or cracking of the TSN coating. The nonskid surface must be visually free of drips, beads, and spatter greater than one square inch in area. When determining FT conformance to the qualified procedure of 2.2 in the overlap area, the
coating FT **must** be in accordance with the requirements in the qualified procedure. Document inspection on QA Checklist Form, Appendix A.

3.16.6.1 Repair blistering, delamination, spalling, or cracking of the TSN coating using hand TSN application in accordance with 2.2. Cumulative hand TSN application area **must** not exceed a total of 5 square feet in each 150 square foot area. Blistering, delamination, spalling, or cracking of the TSN coating in excess of 5 square feet within each 150 square foot area **must** require complete removal and reapplication of TSN in the 150 square foot area.

3.16.6.2 Accomplish the requirements of SSPC-SP 1 of 2.3 on an existing TSN deck coatings and 12 to 18 inches on each side of the TSN repair zone as approved by the SUPERVISOR.

(I)(G) “FT MEASUREMENTS”

3.16.7 Accomplish FT measurements on the TSN only after the deck has cooled to less than 120 degrees Fahrenheit.

3.16.7.1 Record the 3 witness coupon FT measurements from 3.16.5 in 009-32 of 2.1, QA Checklist Form, Appendix 7. The panel FT measurements document the FT for the first layer of thermal spray.

3.16.7.2 Take deck FT measurements on final TSN system in accordance with 3.6. Five spot measurements as defined in 3.6.2 **must** be taken every 200 square feet. The measurements **must** be recorded in 009-32 of 2.1, QA Checklist Form, Appendix 7.

3.16.7.3 Evaluate areas of low FT identified in 3.16.7.2 by taking one FT reading at 3 inch intervals in 8 equally spaced directions radiating outward from the initial low FT reading as shown in Attachment B, until 2 consecutive conforming FT readings are achieved or until no additional measurements are possible. Record FT measurements and submit a sketch defining the areas of low FT in hard copy, or approved transferrable media, to the SUPERVISOR.

3.16.7.4 Accomplish the requirements of 3.16.6 and apply additional TSN in areas of low FT to meet the FT requirements of the qualified procedure of 2.2.

3.16.7.5 TSN areas with a FT greater than 250 mils **must** be abrasively blasted to bare steel in accordance with 3.15. The TSN first layer **must** be re-applied in accordance with 3.16.4. Drips, beads, and spatter with FT greater than 250 mils and smaller than one square inch in area are to be retained.

3.17 Accomplish cleaning of TSN in accordance with Table One following the completion of TSN application and prior to application of color topping coatings or VLA markings.

3.17.1 Sweep TSN area with a stainless steel wire or a stiff nylon bristle brush/broom to remove thermal spray dust and fragile nonskid peaks.
Blow down swept area with clean dry air and vacuum up loose particles. After cleaning, there must be no visible dust, broom bristles, or other foreign matter on the deck.

(I)(G) “TSN CLEANLINESS”

3.17.2 Accomplish a visual cleanliness inspection without magnification, for complete removal of surface contamination. Secure the cleaned area from traffic (e.g., personnel and equipment) and allow drying for a minimum of 12 hours at a maximum relative humidity of 70 percent and minimum deck temperature of 50 degrees Fahrenheit.

3.17.3 Verify TSN surface is free of contaminants in accordance with SSPC-SP 1, paragraph 2.1, of 2.3. Accomplish water-break tests on any discoloration or spots that visually indicate hydrocarbon contamination. Accomplish degreasing/cleaning efforts until the surface is free of hydrophobic contaminants as evident by water droplets spreading immediately to form a thin, continuous uniform water film. Document inspection result in 009-32 of 2.1, QA Checklist Form, Appendix 2 as specified in 3.14.4.1.

3.18 Apply color topping and VLA markings in accordance with Table One.

3.18.1 Accomplish thermal spray color topping application within 24 hours of completing thermal spray application and cleaning in accordance with 3.16.1.

3.18.1.1 Clean TSN surfaces that are not color topped within 24 hours using potable water and LP WC equipment to NACE/SSPC-SP WJ-4 of 2.3 and 2.6. Operate the LP WC equipment with potable water at 2,500 to 3,000 PSI. The LP WC equipment must include a rotating or reciprocating high pressure bar fitted with LP WC nozzles and a vacuum water and debris collection system. The nozzle type, such as fan or jet, and nozzle angles must be configured to provide the necessary cleaning pattern while not causing visible etching, patterns, or other damage on the TSN. The vacuum system must be configured to remove debris and water from the deck rapidly enough to prevent the formation of puddles on the TSN.

3.18.2 Accomplish the requirements of 3.15.3 for environmental readings.

3.18.3 Mask outermost 6 to 12 inches of TSN in areas where overcoating with MIL-PRF-24667 nonskid is required. Mask deck tie-down fittings extending 1 to 2 inches onto TSN.

3.18.4 Inspect the location and color of required VLA markings in accordance with 009-32 of 2.1, Naval Air Warfare Center Aircraft Division (NAWCAD) Class Guidance Drawings, Air Capable Ship Aviation Facilities Bulletin, Amphibious Assault Ship Aviation Facilities Bulletin, Shipboard Aviation Resume (NAEENG-7576), VLA General Service Bulletin No. 8 (latest revision) or by contacting the local NAWC (CAFSU/ASIR) Field Office. VLA markings are not to be applied over deck gray color topping. Overlap of VLA marking colors onto deck gray must not exceed 0.5 inch.
3.18.5 Mix and apply NAVSEA-approved TSN color topping in accordance with the product’s NAVSEA-reviewed ASTM F718 data sheet or as approved by NAVSEA.

3.18.5.1 Apply TSN dark gray color topping to the entire TSN area except for the areas to receive VLA marking colors and to 6 to 12 inches of TSN at the outer edge of the area that will be overcoated with MIL-PRF-24667 nonskid.

3.18.5.2 Prepare companion panels to verify the Wet Film Thickness (WFT) of the TSN color topping. Companion panels must be metallic and abraded with 80 grit sand paper. Companion panels must be free of oils/greases prior to coating application.

3.18.5.3 Secure 5 companion panels to the deck in areas adjacent to where the dark gray color topping will be applied such that the panels do not move during color top application. The panels must remain in place during the color top application so that the panels are coated simultaneously with the coating of the deck.

(V) “WFT MEASUREMENTS - COLOR TOPPING”

3.18.5.4 Accomplish in-process WFT measurements on color topped companion panels immediately after they have been coated. One WFT measurement per companion panel is required. WFT measurements must comply with Table One. Record the WFT readings on 009-32 of 2.1, QA Checklist Form, Appendix 7a.

3.18.5.5 Apply TSN VLA marking colors to areas defined in 3.19.4 after the dark gray color topping has cured to support foot traffic in accordance with the product's NAVSEA-reviewed ASTM F718 data sheet or as approved by NAVSEA. Apply VLA marking colors using a slit foam roller or other application equipment defined in the product's NAVSEA-reviewed ASTM F718 data sheet or as approved by NAVSEA.

3.18.6 Cure time of each coat must be in accordance with the NAVSEA-reviewed ASTM F718 or as approved by NAVSEA.

(I)(G) “COLOR TOPPING HOLIDAY INSPECTION”

3.18.7 Verify color topping coverage.

3.19 Accomplish MIL-PRF-24667 nonskid system application to tie in areas, deck tie-down fittings, areas around recessed flight deck lights, and to areas around other designated deck fittings in accordance with 009-32 of 2.1.

3.19.1 Apply MIL-PRF-24667 nonskid system in accordance with 009-32 of 2.1, table and line citation in the Work Item or task order, for the tie-in areas. The MIL-PRF-24667 nonskid system must overlap onto the newly applied TSN up to the edge of the TSN color topping. Overlap of MIL-PRF-24667 nonskid system onto TSN color topping must not exceed 0.5 inch.
3.19.2 Accomplish coating of deck tie-down fittings, areas around recessed flight deck lights, and other designated deck fittings in accordance with 009-32 of 2.1. The coating must overlap onto surrounding TSN up to the edge of the TSN color topping. Overlap of the coatings onto TSN color topping must not exceed 0.5 inch.

4. **NOTES:**

4.1 To reduce the risk of TSN shrinkage stress creating in-service cracks, avoid positioning the robotic TSN installation system such that the point at which the short axis of the thermal spray machine reverses direction (i.e. the position where the thermal spray heads stop moving in one direction and then move back in the other direction) is over a deck weld.

4.2 Orient enclosure parallel to ship's main axis. Orient the long axis of the thermal spray machine inside the enclosure parallel to the ship's main axis.
