3.9.1 Boiler Inspection Forms. Boiler inspections will be conducted using the appropriate BIRMIS forms. Include specific comments on the state of preservation and material condition of the boiler, hull structural members beneath the boiler and the effectiveness or ineffectiveness of the boiler water chemistry program.

3.9.2 Boiler Inspection Areas. A discrepancy is classified as an RBO when, if left uncorrected, it could endanger personnel safety. All RBO items must be corrected prior to boiler operation and re-inspected by a certified SGPI or NSWCCD LCEM Inspector as applicable, and preferably the same SGPI or NSWCPD Inspector who originally inspected the boiler. As inspected by an SGPI inspector, RBO discrepancies may include but are not limited to the following:

- a. Active oxygen attacking the boiler watersides.
- b. Hard scale or baked sludge.
- c. Significant lube oil or fuel oil contamination of watersides.
- d. Inoperative, misadjusted or missing safety devices.
- e. Refractory deterioration which allows heat penetration to casings or causes incomplete combustion.
- f. Ship's Force Boilerwater or Feedwater certifications, chemical inventory and shelf life not within requirements in reference (h).
- g. Inability to maintain water chemistry within limits. Ineffective Boilerwater or Feedwater program based on log review which, if left uncorrected, may result in

severe degradation of the boiler watersides. Inoperative or degraded treatment, sampling and blow-down systems.

- h. Excessively fouled or tacky firesides, fireside deposits built up on the crown of the water drum.
- i. Sliding feet that do not accept grease or do not show indication of movement.
- j. Lack of maintenance and preservation of the boiler, resulting in deterioration and weakening of boiler and hull structural members. This includes deterioration in the air casing which allows water and combustion air or gasses into the space.
- k. Lube oil contamination of Automatic Boiler Control (ABC) Systems.
- l. Fire hazards, safety hazards (fuel or lube oil in the machinery room), deteriorated or missing flange shields. Oil soaked lagging and insulation.
- m. Inoperative or missing firefighting equipment.
- n. ABC equipment inoperable or failed cold or hot checks.
- o. Steam smothering system inoperative (plugged nozzles, deteriorated or improperly installed piping).
- p. Deteriorated boiler smoke pipes which allow stack gas to escape. Clogged or deteriorated stack drains.
- q. Incorrectly adjusted burners or inoperative air registers. Safety Shut-off Devices which do not meet the leakage criteria of reference (b). Insufficient amount of sprayer plates, burner barrels and go-no-go gages to meet main space requirements as specified in reference (b).
- r. Boiler that does not pass design hydrostatic test.
- s. Non-deferrable defects or indications in the pressure vessel and piping boundary.
- t. Damaged or deteriorated internals.
- u. Defective tubes such as blistered, excessively warped or married tubes which prevent proper gas passage. Cracked tube bells.
- v. Ultrasonic test results on soot blower heads or pressure vessel piping that are currently or projected to be at or below minimum requirements, out of periodicity, or when visual inspection dictates replacement before the next scheduled ultrasonic inspection.
- w. Out of periodicity, in-operative temperature or pressure measuring instruments.
- x. In-operative, out of adjustment Forced Draft Blower counterweight shutters.
- y. Non-functioning DFT components or defects in the pressure vessel.
- z. In-operative fuel and steam systems remote isolation devices.
- aa. Valve tightness integrity and operation which limits its ability to perform its intended function and exceeds the criteria of reference (i).
- ab. Non-conformance of electrical safety and deteriorated or damaged wiring or components.

- ac. Any other discrepancy deemed by the SGPI which would cause injury to personnel.

NOTE: A SEVERELY DEGRADED DESIGNATION IS ASSIGNED TO A DEFICIENCY THAT IS NOT AN IMMEDIATE OR NEAR FUTURE DANGER TO PERSONNEL, BUT WILL HAVE MAJOR OPERATIONAL RESTRICTIONS. A SEVERELY DEGRADED DISCREPANCY PER THIS CHAPTER MUST BE CORRECTED OR REPAIRED PRIOR TO BOILER OPERATION UNLESS IT HAS BEEN PROPERLY APPROVED AS A MAJOR DFS.

3.9.3 Completion of Inspection. An oral critique and a preliminary inspection report, including a summary of restrictive deficiencies, will follow the inspection. Paragraph 3.7.2 of this chapter identifies official reporting requirements.

3.10 AUTOMATIC BOILER CONTROL SYSTEMS AND ONLINE VERIFICATION GUIDELINES.

- a. ABC Systems, which include Automatic Combustion Controls, Boiler Feedwater Level Controls, and Automatic Feed Pump Controls and DFT Level Controls have been designed and installed for the purpose of permitting steady and transient operation with the least variation possible. Proper utilization and maintenance of these systems will also allow a reduction of watch standers on station thereby enabling engineering personnel to devote more time to routine maintenance of machinery and upkeep of spaces, as well as providing the ship with instant response to signaled engine orders.
- b. The following guidelines must be adhered to regarding any or all ABC Systems installed:
 - (1) Ships must use the controls at all times while steaming. Manual operation at the control panel or console (remote manual) must be used when lighting off or securing the boiler. ABCs should be cut out and the boiler controlled in local manual only when required for casualty control, maintenance of equipment, or training of personnel. When ABCs cannot be operated in automatic, this fact must be reported by a CASREP message.
 - (2) Installed multi-element feedwater regulators must be cut in and used at all times except for periods devoted to training operators in the manual operation of feed check valves. Prime reliance for the control of water level in the boiler steam drum must be placed on the automatic regulator. When any indicator, alarm or feedwater regulating valve is not functioning properly, or is out of commission, a qualified checkman must be assigned. He or she must have no other duties as directed by temporary standing orders.
 - (3) Prior to boiler light off, all ABCs must be tested per EOSS.
 - (4) Maintenance and calibration of the ABC Systems must be accomplished by qualified technicians following the direction provided in applicable PMS, reference (j) and the manufacturer's technical manuals.
- c. Online Alignment Verification procedures provide a set of checks to verify proper performance of each of the sub-systems or control loops within the automatic

combustion, feedwater and feed pump control systems. Online Alignment Verification must be accomplished using the periodicity and procedures in PMS and applicable ABC ship specific technical manuals.

3.11 BOILER FLEXIBILITY TESTS. PMS and Online Alignment Verification procedures contain the necessary procedures for a boiler flexibility test. The periodicity is provided by and included in the PMS scheduling. The applicable Maintenance Requirement Card contains the NAVSEA guidelines governing the performance level of the boiler flexibility tests. Level I is the desired boiler flexibility performance level. Boilers with performance levels of II and III are considered safe to steam and safe for the conduct of Engineering Casualty Control Exercises. Boilers which cannot achieve a minimum level III flexibility are unsafe to steam and the ABC System should be reported by CASREP per the requirements of reference (d).

3.12 CERTIFIED BOILER WATER AND FEEDWATER TESTER REQUIREMENTS. All personnel who are required in the course of their duties to test, treat or manage boiler water or feedwater programs must be certified as specified in reference (k).

3.13 OPERATING AND CASUALTY PROCEDURES. Each ship with steam generating plants will have approved Steam Generating Plant Operations Procedures in the format prescribed by their respective TYCOM. They must contain detailed procedures and precautions for:

- a. Normal operations including startup and shutdown.
- b. Infrequent operations such as initial steam generating plant light-off following an availability.
- c. Operating parameters, limitations, alarms and set points.
- d. Casualty conditions including indications, immediate and supplementary actions.
- e. Propulsion fuel economy per references (l) and (m).
- f. JP-5 for use as boiler fuel.
- g. Management of boiler water and feedwater.
- h. Quality Assurance (QA) requirements for boiler repairs.
- i. Maintenance and storage of boiler burner atomizers.

APPENDIX C

SUMMARY OF BOILER INSPECTION SCHEDULING AND RESPONSIBILITIES

<u>Type Inspection</u>	<u>Schedule Date</u>	<u>Scheduling Responsibility</u>	<u>Responsibility for Inspections</u>
1. Routine	Every 24 months (LHD-1 Class) Every 18 months (LCC-19, CG-47)	ISIC or Ship	RMC SGPI
2. Pre-Start of Availability Inspection	Schedule PSAI and operational testing in conjunction with Routine boiler appraisal 3-12 months prior to availability	ISIC	NSWCPD INSPECTOR and RMC SGPI
3. Start of Availability Inspection	At start of overhaul, with strength and integrity inspection	Naval Shipyard RMC	NSWCPD INSPECTOR and RMC SGPI
4. Strength and Integrity Inspection	Once every 60 Months	ISIC or RMC	NSWCPD INSPECTOR and RMC SGPI
5. ISV*	During availability	Industrial Activity or Supervising Authority	NSWCPD INSPECTOR and RMC SGPI
6. CAI	To be conducted before reassembling boiler for final hydrostatic test	Industrial Activity or Supervising Authority	NSWCPD INSPECTOR and RMC SGPI
7. Inactivation or Reactivation	Prior to final action	Industrial Activity, Supervising Authority or Inactive Ship Facility	NSWCPD INSPECTOR and RMC SGPI
8. Engineer Officer	Per PMS and references (b) and (c)	Engineer Officer	Engineer Officer
9. Special	Subsequent to major repairs No-Notice at SGPI discretion	ISIC (Coordinate with Regional Maintenance Center)	NSWCPD INSPECTOR and RMC SGPI
10. Operational Inspection	Prior to and at completion of all CNO maintenance	TYCOM	RMC SGPI

*The ISV inspection may be waived by the TYCOM for availabilities of short duration.

LISTING OF APPENDICES.

A Diesel Maintenance Strategy for Surface Force Ships

4.1 PURPOSE. To provide guidance for the conduct of diesel engine inspections, timely correction of discrepancies and the general operation and maintenance of diesel engines.

4.2 DIESEL ENGINE INSPECTOR CERTIFICATION. The Diesel Engine Inspector (DEI) Program Manager is Naval Surface Warfare Center Philadelphia Division (NSWCPD). The Regional Maintenance Center (RMC) is the administrative manager for their respective region. DEI certification and certification extension requirements as outlined in reference (a), are amplified as:

- a. Initial Certification. All DEI candidates that have satisfactorily completed the required Certification course, Service School Command A-652-0311, must receive an Interim Navy Enlisted Classification (NEC). The DEI candidate will have a period of one year from course completion date to satisfactorily perform two diesel inspections

under instruction from a certified DEI. Upon completion of the second, successful inspection, the candidate must submit a request to be assigned the DEI NEC 4314, through his chain of command to the appropriate RMC for their review. The RMC will forward their endorsement to the Type Commander (TYCOM) for their endorsement, if required, and then to NSWCPD, who initiates the process of assigning the 4314 NEC. Initial qualification to perform diesel inspections will be for a period of 36 months. The requesting letter must contain:

- (1) A copy of the two completed inspection reports performed under the observation and supervision of a DEI.
 - (2) Date of graduation from the certification course of instruction.
- b. Transfer of the DEI will not require re-designation or re-qualification, as long as the DEI has maintained his qualifications per paragraph 4.2.c. of this chapter.
- c. Maintaining Certification. All DEIs must maintain up to date knowledge of approved inspection practices and policies. Certification will be maintained by:
- (1) Successfully conducting a minimum of two inspections annually per reference (b).
 - (2) In each calendar year, attending one of the semi-annual inspector seminars. DEIs unable to meet this requirement may obtain a waiver from the Program Manager.
 - (3) Extending Qualification. Qualified inspectors may request to extend their initial or subsequent qualifications, in 36 month increments, providing that the requirements in paragraph 4.2.c. of this chapter are met. To extend qualification:
 - (a) The DEI must submit a letter to the RMC requesting qualification extension that includes a brief description of the inspector's duties during the qualification period, specify the date of the latest seminar attended and provide as enclosures a copy of the two most recent inspection report cover letters performed by the inspector.
 - (b) The RMC must endorse the letter and forward it to the Diesel Program Manager.
 - (c) The TYCOM may require endorsement on these extension requests.
- d. Revoking Certification. If an inspector has not maintained the qualification requirements of paragraph 4.2 of this chapter, the RMC may submit a request to the Program Manager to have the DEI NEC4314, removed from the inspector. The TYCOM requires endorsement on this action.
- e. Reinstatement of Expired or Revoked Certification. A DEI whose certification either expired or was revoked may request reinstatement of his certification by submitting a letter to the Program Manager via his chain of command and the RMC. The letter must contain:

- (1) A brief description of the DEI's duties during and following the certification period.
- (2) Copies of the two most recent inspections performed. If the DEI's certification has been expired for more than six months prior to the request or was revoked, the two most recent inspections must be completed under the instruction of a certified DEI.

4.3 DIESEL INSPECTIONS.

NOTE: FOR THE ASSESSMENT OR INSPECTION OF MAIN PROPULSION DIESEL ENGINES (MPDE) AND SHIP SERVICE DIESEL GENERATORS SEE APPENDIX A.

4.3.1 Diesel Engines Requiring Inspections.

- a. All diesel engines, including main propulsion, ship service and emergency diesel generators onboard ships and submarines must be inspected per references (a) and (b).
- b. All small boat diesel engines, including main propulsion, ship service and emergency diesel generators that are 400 Brake Horsepower and above, unless otherwise determined by TYCOM, must be inspected per references (a) and (b). TYCOMs may exempt diesel engines on small boats and craft from inspection requirements where the engine or boat configuration provides insufficient access to accomplish the inspection.

4.3.2 Periodicity of Inspections. Diesel engines must be inspected per references (a) and (b) on the following events:

- a. Routine and Pre-Availability Inspections.
 - (1) Once during the unit's cycle, not to exceed 24 months. The normal interval between routine diesel inspections is 18 months. Routine and Pre-Availability Inspections may be performed as early as 12 months or as late as 24 months to allow for maximum scheduling flexibility and utilization of assessment findings. The TYCOM, Immediate Superior in Command (ISIC) and other Fleet Maintenance Managers must ensure the Routine and Pre-Availability Inspection is scheduled to allow adequate time prior to availabilities to utilize the inspection and assessment results to plan work on the diesel. As per reference (a), in no case must the interval between Routine Inspections exceed 24 months. A Routine or Pre-Availability Inspection normally consists of all three phases as discussed in paragraph 4.3.4 of this chapter. For Emergency Diesel Generators (EDG) onboard nuclear powered vessels, industrial activity work on the diesel engine(s) or its support systems will not normally be approved except during a Chief of Naval Operations (CNO) Availability. The TYCOM or ISIC must ensure that adequate upkeep time is made available prior to the availability to ensure there are a sufficient number of diesel engines with no outstanding discrepancies to provide the required standby power during the availability.
 - (2) For Submarine CNO Availabilities greater than six months.

- (a) The Pre-Availability Inspection must be integrated into the Shipyard's work definition period and must be considered the material health assessment for the EDG.
 - (b) SUBMEPP must enter this Pre-Availability Inspection in the applicable 000-Series SWLIN as a material health assessment assigned to Forces Afloat.
 - (c) The DEI must include the Executing Shipyard (Code 260) and the Supervisor of Shipbuilding or NAVSEA Shipyard Representative's Office, as applicable, on distribution for all DEI reports conducted as a Pre-Availability Inspection or during the availability.
 - (d) As Lead Maintenance Activity, the executing shipyard will work with the TYCOM to assign all deferred inspection deficiencies to the appropriate repair activity for repair.
 - (e) The Shipyard's technical review of this inspection report may satisfy the Pre-Availability technical assessment requirement of reference (c).
- b. Post Casualty or Pre-Overhaul. When major internal engine malfunctions have occurred or are suspected (e.g., crankcase explosion, major bearing, blower or crankshaft failure), or there are indications that the engine is in need for overhaul. Extent of disassembly or inspection is at the discretion of the DEI based on the casualty or observed indications. For Post Casualty Inspections, the DEI must determine the full extent of damage and the cause, along with recommendations for repairs. For Pre-Overhaul Inspections, the TYCOM may require the DEI confirm that an overhaul is required and determine the scope of the overhaul. Partial inspections do not satisfy the requirement for a complete Routine Inspection and this fact will be annotated in the DEI's written report.
- c. Post Overhaul or Repair. When an engine has been overhauled or significant maintenance or repair has been completed. A Post Overhaul or Repair Inspection must be conducted by a DEI prior to continuous operation. The DEI will make the final determination of whether the overhaul or repair was extensive enough to warrant a Post Overhaul or Repair Inspection. The inspection must consist of a review of actions taken to complete the overhaul or repair, external visual inspection, tests of safety devices, review of required readings or clearances and a Phase III operational test. Unless there are indications of internal discrepancies, Phase II (internal inspection) is waived and the Routine Inspection periodicity requirement in paragraph 4.3.2.a of this chapter will be considered complete and valid. The Post Overhaul or Repair inspection should be an integral part of the overhaul or repair vice a separate inspection. Specifically, the Phase III operational test should be part of the final operational testing of the overhaul or repair vice a separate operational test.
 - (1) For contractor accomplished work, the contractor specification will contain requirements for the contractor to document required readings or clearances on applicable forms and have appropriate check points made by a DEI or Industrial Subject Matter Expert (SME) during the overhaul or repair. If there is evidence of poor workmanship, use of improper parts, discrepancies in

reassembly or test documentation or missing information as part of the repair process or during the inspection, the DEI or Industrial SME will advise the Repair Project Manager of the quality issues and required actions. The Repair Project Manager will coordinate required actions with the RMC Technical Authority and Maintenance Team. The RMC must liaise with the TYCOM and obtain TYCOM concurrence on all required actions and must advise the TYCOM of all potential cost and schedule impacts.

- (2) For Ship's Force or Fleet Maintenance Activity accomplished engine overhauls, a Post Overhaul or Repair Inspection will be conducted by a DEI prior to starting the engine. The scope of the inspection will be as specified in paragraph 4.3.2.c of this chapter. Commanding Officer (or designated representative) permission is required to perform Phase II (internal inspection) when requested by the DEI.
- d. New Construction (Acceptance Inspection).
- (1) Prior to the delivery of a newly constructed ship, when requested by the Board of Inspection and Survey. An acceptance inspection will normally be conducted in conjunction with the open-and-inspect phase of Board of Inspection Survey acceptance trials. The acceptance inspection does not satisfy the requirements of a routine inspection.
 - (2) The initial Routine Inspection on a new construction unit must occur prior to initial startup by Ship's Force. The cognizant Supervisor of Shipbuilding should incorporate the DEI as part of the Government Test Plan or Acceptance Plan. The cognizant Supervisor of Shipbuilding must notify the DEI for new construction acceptance test prior to Ship's Force accepting responsibility of the diesel engine. This will ensure that an inspection baseline is established and construction discrepancies are identified and corrected early in the life of the unit.
 - (3) For submarine and CVN construction programs, the initial Routine Inspection on a new construction unit must occur prior to initial startup by Ship's Force. For ships with temporary systems in place or less than 95 percent load available, the Phase I (see paragraph 4.3.4a of this chapter) and Phase II (see paragraph 4.3.4b of this chapter) inspections must occur in conjunction with crew Operational Control Transfer including an operational test at available load. The Phase III (see paragraph 4.3.4c of this chapter) inspection must occur prior to ship delivery when sufficient loading is available. Any as found conditions requiring corrections must be adjudicated via the normal shipyard Operational Control Transfer inspections adjudication process. The routine diesel inspection periodicity must commence upon completion of all three diesel engine inspection phases.
- e. Reactivation of Engines in Inactive Equipment Maintenance. Prior to the first operation of engines which have been placed in Inactive Equipment Maintenance. The inspection consists of a complete review of the administrative records associated with the diesel engine including: actions taken to place the engine in and out of lay-up

status, a review of repairs accomplished since the last inspection, visual inspection, test of safety devices and an engine performance test. If sufficient load cannot be attained, a 1-hour operational test at maximum available load must be accomplished. Based on the administrative review and visual inspection, further internal inspections may be accomplished at the discretion of the DEI. This inspection should be requested far enough in advance of the first key event requiring use of the diesel. This will ensure any significant discrepancies found can be corrected prior to the start of the key event. This inspection does not satisfy the requirements of a routine inspection as per paragraph 4.3.2.a of this chapter unless a complete 3-phase inspection is accomplished. If a complete 3-phase inspection is not accomplished and administrative, visual and operational inspections are satisfactory, the reactivation inspection report letter or cover letter should provide revised dates for the next required inspection that account for the time in Inactive Equipment Maintenance status. The revised date for the next routine inspection must be equal to the completion date of the previous routine diesel inspection plus the number of whole months the engine was in Inactive Equipment Maintenance status plus 12, 18 and 24 months respectively for the earliest, normal interval and latest dates.

4.3.3 Inspection Scheduling.

- a. (SURFACE SHIPS ONLY) Diesel inspections are actively managed by SURFMEPP utilizing the Class Maintenance Plan. All routine diesel inspections will be pushed by SURFMEPP to the ship's Current Ships Maintenance Project as part of the ship's BAWP. SURFMEPP will also push non-routine inspections as requested by TYCOM or the Maintenance Team. As part of this process, the Maintenance Team must contact the local RMC or ISIC Diesel Inspector to coordinate the diesel inspection 120 days prior to the desired inspection date.
- b. Diesel inspections are scheduled by the ship with RMC, via ISIC when appropriate, per reference (a) and the Planned Maintenance System (PMS). As part of this process, units must contact the local RMC or ISIC Diesel Inspector to schedule the diesel inspection 120 days prior to the desired inspection date and submit a work request (OPNAV 4790/2K) to the appropriate RMC a minimum of 90 days in advance of the desired dates to allow for DEI scheduling.
- c. It is the responsibility of the Fleet Maintenance Managers (the ship, ISIC, and Ashore Ships Maintenance Managers, as appropriate) to schedule the diesel inspection with the RMC during a period where the inspection's condition assessment can be best utilized for repair planning. The inspection may require that each engine being inspected normally be placed out of commission for five to seven days at the minimum. This time frame may increase when significant Repair Before Operating (RBO) discrepancies are discovered that require extensive repairs. Sufficient time must be allowed for the performance of the operational phase of the inspection which requires specific load testing as defined by PMS. SSDGs normally have the operational phase performed inport, whereas operational assessment of MPDEs requires the ship to be underway for a minimum of one day. Units with MPDEs must allot underway time to allow the DEI to complete the operational phase. The operational phase of the inspection must be completed within 90 days of the start of

the inspection. If the operational phase cannot be completed within these 90 days, a TYCOM approved Departure From Specification (DFS) per Volume V, Part I, Chapter 8 of this manual is required. Without a DFS, the inspection will be terminated and rescheduled. Ships should integrate the operational phase of the inspection into the Fleet Response Training Plan underway schedule.

- d. A Diesel Inspection must be accomplished by an ISIC or RMC DEI. It is encouraged that persons holding the DEI NEC that may be assigned to the ship being inspected be part of this inspection.

4.3.3.1 Inspection Deferrals. Surface and Carrier Forces must submit a minor DFS for approval by the respective TYCOM for diesel inspections in the 18 to 24 month window. When an inspection cannot be accomplished within 24 months, Surface, Carrier and Submarine units must submit a DFS request to the TYCOM no later than the 23rd month since the last inspection, that includes satisfactory operating trend data reviewed by a DEI confirming that the engine is in sound operating condition. For inspection deferrals of greater than 24 months, the TYCOM will forward endorsement to NAVSEA 05Z for approval of the DFS.

4.3.4 Inspection Phases. The diesel inspection consists of a detailed records check, internal material condition inspection and observation of engine operating characteristics. During all phases of an inspection, all safety precautions with the engine and space must be strictly adhered to. The degree of the inspection must be decided by the DEI based on the results of reference (b) mandatory checkpoints, TYCOM directed check points, if any, operating data and other records maintained on the diesel engine. The inspection will include the following phases (See Appendix A):

- a. Phase I - Administrative Inspection. This is a complete review of the administrative records associated with the diesel engine(s).
- b. Phase II - Secured Inspection (partial disassembly). Based on the results of Phase I, the inspector will decide the degree of disassembly and will conduct a thorough evaluation of the internal condition of the engine as warranted by Phase I and Phase II findings. Per reference (b), disassembly of the engine will be minimized. Submarines must have a complete Phase II Inspection per reference (b).
- c. Phase III - Operation Inspection. The DEI will observe and analyze operating data on all inspected engines per reference (b) and PMS Maintenance Requirement Card (MRC) for performance testing or troubleshooting the engine. If no PMS guidance exists, then 100 percent or maximum attainable load on all inspected engines should be achieved.

4.3.5 Preparation for Diesel Engine Inspection.

- a. The DEI must meet with the inspected ship's Commanding Officer or his designated representative, Engineer Officer and a diesel system expert prior to the start of the inspection. Where appropriate, either the Reactor Officer or the Engineer Officer may fulfill this role. This visit will ensure that Ship's Force is aware of the extent of the inspection, what PMS is to be accomplished, required support to be provided to the DEI and interference to be removed to allow access to the diesel engine. Coordination between the ship and the DEI can significantly reduce the time the diesel will be out of commission for inspection purposes and maximize the training to Ship's Force.

15 Jan 2021

Ship's Force will perform diesel engine disassembly, reassembly and operation, as well as correcting Ship's Force capable discrepancies concurrent with the inspection. It is the responsibility of Ship's Force to order all software and repair parts for Ship's Force capable work, to include all gaskets, lockwire, etc., for engine reassembly. Discrepancies beyond Ship's Force capability will be scheduled to be corrected through the Fleet Maintenance Managers, utilizing the Current Ship's Maintenance Project. At all times during the inspection, safety precautions with the engine and the space will be strictly adhered to. The DEI will meet with the Main Propulsion Assistant or Engineer Officer on a daily basis to ensure the unit's leadership is informed and produce optimal coordination efforts.

b. The ship will:

- (1) Prepare the diesel engine for inspection.
- (2) Provide the DEI with dedicated time and the appropriate personnel to conduct the inspection. The inspection will be structured to maximize training of shipboard personnel. The ship should ensure continuity of personnel is maintained during the inspection or assessment.
- (3) Assign a Job Control Number for accomplishing the inspection and record all parts usage through the Maintenance and Material Management system.
- (4) Ensure all equipment directly associated with the engine(s) is operable.
- (5) Ensure all records are available and in good order.
- (6) Ensure that the tools listed on the appropriate MRCs, technical manuals, and DEI check sheets are available for use during the inspection.
- (7) Ensure that all applicable MRCs and technical manuals for the engine and related support systems are available.
- (8) Test diesel engine lubricating oil following the applicable Lube Oil Quality Management program, as defined by PMS, prior to the inspection. In most cases, this requires Navy Oil Analysis Program results of recent oil sample be available.
- (9) Test jacket water treatment following PMS prior to the inspection.
- (10) For SSN, SSBN and SSGN Class Submarine EDGs, the unit should evaluate existing conditions of battery capacity, propulsion plant status and shore power reliability. Based upon this evaluation, if conditions warrant, the ship will submit a request for a stand-by generator for emergency power during the diesel inspection.

4.3.6 Inspection Findings. The inspection will report "as found" conditions. Discrepancies found will be noted on the Administrative Review Sheet and the Engine Discrepancy Sheet as required by reference (b). Categorize discrepancies as Repair Before Operate (RBO), Severely Degraded, Major and Minor.

4.3.6.1 Repair Before Operating. An RBO condition is any condition existing that, if left unattended, would pose an immediate or near term hazard to personnel safety. Only a DEI that

is currently certified may issue an RBO. RBO deficiencies require re-inspection by a DEI that is currently certified after repairs and before the diesel engine is operated. A DFS will not be approved for RBOs. Discrepancies that may cause a finding of RBO include but are not limited to:

- a. Any condition existing that if left unattended, would definitely pose an immediate or near term hazard to personnel safety.
- b. Evidence of serious internal failure (bearing, connecting rod, crankshaft or piston failure).
- c. Uncontrollable lube oil, fuel oil or exhaust leaks. Reference (d) provides guidance for defining leaks.
- d. Malfunctioning overspeed governor or trip.

4.3.6.2 Severely Degraded. A finding of Severely Degraded will be assigned to a discrepancy which does not present an immediate or near term danger to personnel but does present risk to the equipment. A Severely Degraded finding will include specific operational restrictions. Severely degraded items must be corrected and re-inspected prior to operation or must have an approved major DFS. Discrepancies that may cause a finding of Severely Degraded include but are not limited to:

- a. Inoperative alarms or safety devices.
- b. Low lube oil pressure.
- c. Readings that exceed the limits of PMS or manufacturer specifications that during unrestricted operation would present a hazard to equipment.
- d. Lube oil fuel dilution above safe levels.

4.3.6.3 Major Discrepancy. This finding is made when major problems exist, but the engine is still operable with restrictions approved by the TYCOM. Any deficiency that has been noted as major, which has not been corrected by the end of the inspection shall have a JCN assigned. Discrepancies not corrected within 30 days shall be reported by Naval message in accordance with paragraph 4.4.b(3) of this chapter. This requirement does not alter the normal Casualty Reporting or DFS reporting requirements. In accordance with references (a) and (b), major deficiencies include, but are not limited to:

- a. Engine unable to maintain rated load.
- b. Automatic equipment inoperative or not functioning properly.
- c. Critical components exceed prescribed limits but do not meet the Severely Degraded criteria.
- d. Temperature and/or pressure between cylinders are not within specification.
- e. Either Remote or Local engine starting (one of two must be operational) or remote securing devices are inoperative.
- f. Excessive blower clearance readings.
- g. Air box exhaust belt/muffler is excessively dirty or oil laden.

- h. Clogged valves or ports.
- i. Malfunctioning fuel injection system.
- j. Jacket water treatment out of specification.

4.3.6.4 Minor Discrepancy. Categorize all other deficiencies as minor.

4.3.6.5 Re-inspections. Discrepancies assigned a grade of RBO must be re-inspected by a DEI prior to operation. A Departure from Specification will not be approved in the case of an RBO discrepancy. Discrepancies assigned a category of Severely Degraded require correction and re-inspection prior to operation or an approved Major Departure from Specification. Repairs to Major and Minor discrepancies may be approved at the unit command level and do not require re-inspection.

4.3.6.6 Recurring Discrepancies. A recurring discrepancy from previous inspections will be specifically noted in the inspection report.

4.3.6.7 Component Certification. (Aircraft Carriers only). With the exception of RBOs, deficiencies identified in the course of diesel engine inspections performed prior to or during a CNO availability do not necessarily affect component certification to support readiness conditions identified in references (c) and (d). Evaluation of specific deficiencies by Ship's Force and Naval Supervisory Authority/project team personnel is necessary to determine system readiness conditions are met. An emergency diesel generator is considered certified for operation per references (c) and (d) provided the diesel inspection and all required PMS are within periodicity, including completion of a satisfactory performance test.

4.4 REPORTING REQUIREMENTS.

- a. Casualty Reporting (submarines only).
 - (1) Purpose. To provide guidance for Casualty Reporting (CASREP) requirements for submarine diesel generators. CASREPs are in addition to, and do not replace the reporting requirements of other documents (e.g., Naval Reactors Technical Bulletins, Operational Orders, Mishap Reports, etc.).
 - (2) Background. The significance of a submarine's emergency and backup power supplies cannot be overstated. Reference (e) defines the CASREP types, requirements and format. CASREP requirements of Out of Commission power generating or storage equipment require additional clarification.
 - (3) SSBN and SSGN Class Submarine EDGs. Report EDG casualties by message as allowed by operational constraints.
- b. The ship's Commanding Officer must:
 - (1) Ensure that each inspection or assessment is entered in the applicable machinery history with a brief description of any RBO conditions found at the conclusion of the assessment or inspection.
 - (2) All maintenance actions and parts usage as the result of the inspection or assessment are properly documented per reference (f).
 - (3) Report by Naval message 30 days after the conclusion of an engines inspection and each 30 days thereafter the status of any discrepancy assigned a category

of Major or Minor that has not been corrected or brokered to a repair activity. Discrepancies not corrected or brokered will be identified by JCN. The message will be sent action to NSWC Philadelphia and the servicing Regional Maintenance Center. Information addressees are the ISIC, TYCOM N43, the applicable TYCOM Readiness Code for the ship class, and NAVSEA 05Z. The message will include the engine number, date of inspection, the type of inspection and the name of the inspector.

c. The DEI must:

- (1) The DEI shall ensure a maintenance ready 2-Kilo for every discrepancy is entered into the ships CSMP by M0001 file upload using the software approved by the DEI Program Manager and in accordance with the file upload procedures defined in Volume VI Chapter 42, paragraph 42.5.5 of this manual. The DEI will verbally report the findings of the inspection to the Commanding Officer or a designated representative upon completion of the inspection.
- (2) Ensure the inspection report, prepared in accordance with reference (b), is signed, serialized and transmitted within 30 days of the inspection completion date. When applicable the inspector shall include in the report the likely cause or condition that resulted in discrepancies rated Major or above and any actions taken during the inspection to correct any discrepancies. The Inspector shall upload a copy of the signed, serialized cover letter as the final enclosure to the report in the Report Generator. The appropriate Supervisor shall then approve the report in the Report Generator and upon approval, the inspection report is considered complete.
- (3) Utilize the Diesel Inspection Management Information System using the DEI report generator for classes of ships that are currently in use. For classes of ships that are not yet in the system, use the current guidance that is in reference (b). This inspection must be reviewed by the RMC or parent command prior to forwarding the report to the Commanding Officer of the inspected ship, with information copies to the ISIC, TYCOM, Fleet Maintenance Managers, the cognizant Shipyard (Code 260) and Supervisors of Shipbuilding or NAVSEA Shipyard Representative's Office (Pre-Availability and during Availability Inspections only) and In Service Engineering Agent.
- (4) Open the report in the Diesel Inspection Management Information System on the day of starting the inspection or assessment and will send an email to the DEI Program Manager that an inspection or assessment has started. Discrepancies found during the inspection or assessment shall be entered into the open report on a daily or weekly basis and AWRs shall be uploaded weekly.

4.5 OPERATION AND MAINTENANCE. This section does not supersede existing engine, ship or ship class specific guidance and is only meant to provide guidance where currently none exists.

- a. Per reference (g), the light loading of a diesel engine (less than 60 percent) should be avoided. Consistently light loading a diesel engine will cause one or more undesirable conditions, depending on specific engine design:
 - (1) A loss of cylinder compression due to glazed cylinder walls, leading to an unnecessary premature engine overhaul.
 - (2) Carryover of engine lube oil into the exhaust, causing excessive exhaust smoke and creating conditions for a possible exhaust stack fire.
 - (3) Fuel oil dilution of lube oil, leading to frequent oil changes.
 - (4) Carbon formation on exhaust valves, leading to valve failure.

In situations where light loading of a diesel engine is unavoidable, arrangements should be made to operate the engine at 60-80 percent rated load capacity for a minimum of thirty minutes, preferably three hours, unless other guidance exists specific to the engine's application. This can help offset the detrimental effects of light loading; however, it is not to be considered a suitable alternative to the avoidance of light loading. Further details are provided in Appendix A.
- b. Per reference (h), diesel engines that have online purification capability must operate the purifier continuously while the diesel engine is operating. On installations where multiple engines are serviced by one purifier, the purifier alignment should be shifted periodically within a 24-hour period to ensure all engines receive adequate oil purification and maintain satisfactory oil condition. Each engine's operating hours and oil condition should be considered when scheduling purification of several engines on a rotational basis.
- c. Per reference (i) and PMS, diesel engine jacket water treatment must be tested and maintained to ensure proper corrosion control and freeze protection, as applicable.
- d. Diesel engine operating hours since engine commissioning, engine overhaul and lifecycle maintenance requirement completions (PMS or Class Maintenance Plan requirements), at a minimum, must be maintained on all MPDEs, SSDGs, and EDGs. The hours must be documented and recorded in the appropriate machinery history records in order to assist with scheduling of overhauls and lifecycle maintenance requirements. An overhaul typically includes rebuilding or replacing, as complete sets to new criteria the following components: cylinder heads, piston rings, cylinder liners, main and connecting rod bearings. If one of these sets is not rebuilt or replaced, the repair is generally not considered an overhaul and engine operating hours since overhaul must not be zeroed, however, machinery history will be updated and lifecycle operating hours since the significant repairs must be tracked. A certified DEI must make the final determination if the extent of the work accomplished constitutes an engine overhaul for a particular engine or not during execution of the Post Overhaul or Repair Inspection detailed in paragraph 4.3.2(c) of this chapter.
- e. For any corrective maintenance action accomplished on the engine, an entry should be made to the diesel maintenance history log including date, engine hours and a brief narrative that provides the reason for and description of maintenance. The

maintenance history log should be reviewed periodically by the division officer and Department Head, as appropriate.

4.6 COMPLIANCE.

- a. All ships, submarines and craft must comply with the procedures herein for the operation, maintenance and inspection of installed diesel engines.
- b. Ship's Commanding Officers must ensure all diesel records are readily available for the inspector's review and Ship's Force use, including:
 - (1) Engine operating logs.
 - (2) Navy Oil Analysis Program test results, or, for submarines, the applicable oil analysis results.
 - (3) Onboard lube oil testing logs.
 - (4) Diesel Maintenance and history records to include all maintenance and significant items accomplished on the engine since last engine overhaul.
 - (5) Diesel operating and maintenance documents, including Engineering Operational Sequencing System, Steam Plant Manual, Ship System Manual (Submarines only), PMS, Engineering Standing Orders, etc., as appropriate.
 - (6) Engine hours' log.
 - (7) Diesel inspection reports since last overhaul and associated Naval message on the status of discrepancies.
 - (8) Fuel Oil Quality Management records.
 - (9) Diesel Engine Technical Manuals.
 - (10) References (g), (h) and (i).
 - (11) Appropriate diesel-related Training records.
 - (12) Jacket water logs.
- c. The TYCOM or ISIC must ensure that assigned ships operate and maintain diesel engines following the procedures in references (a), (b), (g), (h) and (i). Specifically, they must:
 - (1) Ensure ships are complying with all required instructions by observation of diesel engine operations during shipboard visits.
 - (2) Conduct follow-up action to ensure that any unsatisfactory conditions found are correct at the earliest possible date.
 - (3) Maintain a library of technical material and appropriate visual aids for use by assigned ships in training diesel operations.
- d. (Submarines only) Ensure the induction and exhaust systems are inspected following the appropriate Maintenance Requirement, or Maintenance Requirements for continued Unrestricted Operation.

- e. The Diesel Inspection Program Manager shall audit the diesel inspection programs of each Regional Maintenance Center and other DEI inspection activities annually. The audit report will be debriefed to the highest level available at the conclusion and copy of report will be provided to the Commanding Officer and NAVSEA 05.

4.7 SUBJECT MATTER EXPERT IN THE REPAIR AND MAINTENANCE OF DIESEL ENGINES. The SME provides technical oversight on all scheduled and emergent work performed by the RMC personnel, and contractor, as required. The SME ensures work packages include proper repair procedures and are used with maintenance standards and appropriate technical documentation related to the diesel engine assessment or inspection. The SME must have direct communication with the RMC Engineering Department regarding resolutions of repairs that do not meet Original Equipment Manufacturer specifications.

APPENDIX A

DIESEL MAINTENANCE STRATEGY FOR SURFACE FORCES

1. OBJECTIVE. This document is applicable only to non-nuclear surface force ships and craft. The objective of the Diesel Maintenance Strategy (DMS) is to baseline the class maintenance plan by technically validating Life Cycle Maintenance requirements. This provides guidance for Long-Range Maintenance Schedule provisioning and supports the management of Engineering Core Maintenance documentation (e.g., CMP, Technical Foundation Paper, and Ship Sheets). DMS is designed to improve the accuracy of work specifications and provide a closed loop work product evaluation and improvement process. DMS supports the Surface Maintenance Engineering Planning Program (SURFMEP) end-to-end maintenance philosophy throughout the Optimized Fleet Response Plan, reference (j), in accordance with the DMS Standard Operating Procedure, reference (k), through the following:

- a. DRS continuous assessment process including engine performance and lube oil and jacket water data in accordance with reference (l).
- b. Through direct engagement with ships force personnel.
- c. By evaluating engine material history for the purpose of validating technical documentation.
- d. Review of Integrated Condition Assessment System and Continuous Maintenance Assessment System data.
- e. Diesel Inspection Reports.

2. DIESEL MAINTENANCE STRATEGY MANAGEMENT. DMS Management is the responsibility of the In-Service Engineering Agent (ISEA) located at Naval Surface Warfare Center Philadelphia PA. The ISEA will manage the maintenance strategy on a ship class and engine type basis. The ISEA will report to the technical warrant holder in NAVSEA 05 for all DMS related technical matters. The ISEA DMS Manager is responsible for providing SURFMEPP with all technical requirements for diesel propulsion or power generation plant maintenance. The Diesel Lifecycle Engineering Representative (DLER) performs the ISEA Waterfront Technical Support function under the DMS organization.

3. DIESEL MAINTENANCE STRATEGY CORE ELEMENTS.

- a. Life Cycle Maintenance Branding Report. The Life Cycle Maintenance (LCM) Report aids the Maintenance Team in deconflicting maintenance plans by publishing major diesel maintenance for the upcoming O-FRP cycle and identifies long lead-time material requirements in accordance with references (m) and (n). Major maintenance is determined by the review of each class maintenance plan task against availability records, task history, and assessment reports. This report will also include routine maintenance based on ISEA LCM recommendations and the vessel's next availability date. This ensures critical life cycle maintenance tasks, mandatory assessment tasks, any active departures from specification and life-cycle impacting class advisories are identified early and incorporated into the availability work package. In addition to the LCM Branding Report an updated master Life Cycle Maintenance Matrix and 4790/2-Kilo Bulk Upload listing are provided via formal

- letter to SURFMEPP, TYCOM, Maintenance Team, Ships Force, and the local Regional Maintenance Center regarding mandatory diesel time-directed maintenance requirements. Logistics support is integrated during this period through the identification of long lead time and high cost material requirements. Early coordination with the Defense Logistics Agency and Navy Inventory Control Point is designed to reduce the likelihood of delay during the availability.
- b. **Mid-Cycle Assessment Process and Branding Report.** The Mid-Cycle Assessment (MCA) is the last opportunity to assess the condition of the engines prior to submission and approval of the final availability work package. Therefore the MCA is critical to ensuring that work is scheduled, scoped, planned, provisioned and executed in a successful manner. The MCA is an assessment, not an inspection or certification, and will be performed in accordance with Volume VI, Chapter 42 of this manual. For any discrepancies that may be considered operationally limiting Volume V, Part I, Chapter 8, paragraph 8.2.b of this instruction regarding a Commanding Officers discretion at-sea applies. Deferral of the MCA requires the approval of the TYCOM.
- (1) **MCA Execution.** The MCA is by design a non-intrusive assessment of the propulsion and power generation diesel engines overall condition including a detailed review of the Availability Work Package, Shipboard Automated Maintenance Modules (SAMM) or DRS data and a short (no more than 7 days notional) onboard assessment of engine condition and performance. High power (above 80%) tests of each main engine and Ship Service Diesel Generator with compression analysis may be performed based on the quality of existing DRS combustion analysis data. As this assessment is for the purpose of defining a work package, grooming of the engines prior to this testing is not required. This assessment may be tailored based on the completeness of the ships material history in SAMM and compliance with DRS compression testing and lube oil and jacket water test results. The assessment may even be performed virtually if there is sufficient data in SAMM to warrant that determination. The ISEA will provide a detailed schedule of events for this assessment no later than 30 days prior to the scheduled event with a complete listing of all Planned Maintenance System Maintenance Requirement Card's to be performed during the visit. This schedule of events document will include an executive summary brief to the Commanding Officer detailing the execution of the visit, will include all points of contact. The schedule of events will define the team and will assign the team leader. The MCA shall occur within the duration of the Availability Work Package Integrated Phase, prior to the 100% Package Lock milestone.

- (2) MCA Reporting and Branding Report. Upon completion of the MCA the team lead shall ensure maintenance ready 4790-2K's are provided to Ship's Force 3MC for upload in accordance with Volume IV Chapter 42 of this manual. The MCA Branding Report will include all branded 4790-2K's for the upcoming availability and shall be submitted within 30 days of completion but in any case prior to the 100% lock date. Completion of the MCA will be reported to the TYCOM by the ship via naval message.
- c. Package Lock Branding Report. The Package Lock Branding Report identifies CBM related work candidates that were not previously included in the LCM and MCA Branding reports. Condition Based Maintenance candidates are identified using DRS data analytics, knowledge of ship's condition and, when available and appropriate, onboard assessment/inspection results/reports. The Package Lock Branding Report may be submitted at multiple milestones as required to document Condition Based Maintenance related tasks and the final report shall be submitted no later than 30-days prior to the 100% Package Lock Milestone. The MCA Branded Tasks may be included with the Package Lock Report in lieu of a separate MCA Branding Report if the two report dates are within 60 days of each other.
- d. Diesel Engine Inspection Branding Report. Periodic diesel inspections will be conducted by the Regional Maintenance in compliance with reference (b). Upon completion of the inspection, deferred maintenance requirements will be uploaded to OMMS-NG in the form of a 4790-2K. The ISEA may choose to brand specific 2K's for accomplishment during an upcoming or future Chief of Naval Operations availability or continuous maintenance period.
- e. Industrial Support Visit Report. The objective of the Industrial Support Visit (ISV) is to document, measure and analyze the impact of growth and new work, the impact of collateral work, to assess the accuracy and timeliness of material to determine the impact on cost and schedule and seeks to determine if changes may be made in the ETE process to improve future work efforts.
- f. Integrated Propulsion Plant Alignment Procedure (IPPAP). The Integrated Propulsion Plant Alignment Procedure (IPPAP) is a detailed alignment procedure accomplished in accordance with the Integrated Propulsion Plant Alignment Manual for the applicable ship class, reference (o). The purpose of the IPPAP is to groom and align the main propulsion plant and the associated control system after a major maintenance period to produce the optimal plant performance to support training and deployment. IPPAP notionally begins as part of the end of availability initial light off and continues through sea trials.

4. DIESEL LIFECYCLE ENGINEERING REPRESENTATIVE

- a. Role of the Diesel Lifecycle Engineering Representative. The role of the Diesel Lifecycle Engineering Representative (DLER) is outlined in reference (b). The DLER acts as the waterfront point of contact for the execution of DMS. The DLER performs the following tasks in support of DMS.
 - (1) Maintains and updates the Lifecycle Maintenance Workbook.
 - (2) Attends IPTD meetings, Work Package Integration Conference, Work Package Execution Conference, Completion Conference, and the Interim Support Visits.
 - (3) Reviews and integrates condition based maintenance requirements into the availability planning process.
 - (4) Maintains and updates the DMS/DRS Workbooks for their assigned vessels.
 - (5) Submits all DMS Branding Reports required by reference (b) to support the SURFMEPP End-to-End Planning Process.
 - (6) Coordinates with logisticians to ensure proper ILS support for task scheduled in the Lifecycle Maintenance Matrix.
 - (7) Supports the technical evaluation of Departure from Specification requests on behalf of the In Service Engineering Agent.
- b. Qualifications of the DLER Position. The DLER must be a senior engineering technician with a minimum requirement of 15 years of active duty U.S. Navy experience or a minimum of five years as a field service representative for a diesel engine original equipment manufacturer. Prior qualification as a Diesel Engine Inspector or prior assignment as a main engine room supervisor on a diesel ship is desired. U.S. Coast Guard Engineers license may substitute for experience.

VOLUME IV
CHAPTER 5
MARINE SANITATION DEVICES

REFERENCES.

- (a) NAVSEAINST 9593.1 - Certification Program for Sewage Marine Sanitation Devices in U.S. Navy Surface Ships and Craft
- (b) OPNAVINST 5090.1 - Environmental and Natural Resources Program Manual
- (c) NAVSEA S9086-T8-STM-010 - NSTM Chapter 593 (Pollution Control)
- (d) NAVSEA S9086-CH-STM-030 - NSTM Chapter 074 V3 (Gas Free Engineering)
- (e) NWP 1-03.1 - Naval Warfare Publication Operational Report
- (f) NAVEDTRA 10500 - Catalog of Navy Training Courses

5.1 PURPOSE. To provide guidance in the operation, maintenance and certification of surface ship Marine Sanitation Devices (MSD) and to specify the requirements, procedures and responsibilities applicable to those systems.

- a. Sewage systems must be properly operated and maintained or serious health hazards can result. References (a) and (b) require that all MSD systems being installed on naval ships and craft be inspected and certified. The prevention of health, sanitation and safety problems associated with the various sewage handling and disposal systems must be a priority matter.
- b. Environmental considerations have made the operation of shipboard sanitation systems more restrictive with regard to the discharge of sewage to navigable waters. Local and State environmental laws are generally more restrictive than the requirements of reference (b). Senior Officer Present Afloat regulations are continually reviewed and revised to comply with the laws under which the Senior Officer Present Afloat is licensed to operate sanitation systems.
- c. This chapter is applicable to all surface ships, service craft and small boats on which pollution abatement sewage systems are installed, either during construction or by alteration. It includes all types of shipboard sewage handling and treatment systems or MSDs certified per reference (a) and described in Section 4 of reference (c). Reference (d) describes the procedures, equipment, and records to be used during maintenance of MSD system components where toxic or combustible gases may be present. The most common pollution abatement sewage system in use on ships and craft is the Collection, Holding and Transfer system. Other systems in use include the Pall Trinity, JERED, GATX MK1 and the Vacuum Collection, Holding and Transfer System.

5.2 CERTIFICATION. The purpose of MSD certification is to confirm that the system, as installed, meets established design requirements, that adequate logistic support is available onboard and that major installation deficiencies are corrected. A single level certification program has been implemented by Naval Sea Systems Command to supersede the older two

level system (provisional and full). Ships that presently hold a “Full” certification are considered to be certified and require no further certification inspections.

5.3 RESPONSIBILITIES. The cognizant Type Commander (TYCOM) will coordinate the operation, maintenance, and certification of MSD systems installed on all units following the procedures established by references (a) and (c).

5.3.1 Type Commander or Immediate Superior In Command. The TYCOM or Immediate Superior In Command must:

- a. Ensure surface ships participate in the pollution abatement program to the maximum extent possible by utilizing their pollution control equipment when within U.S. territorial waters (three miles).
- b. Ensure MSD systems are properly installed, operated and maintained and that shipboard personnel working with sewage systems are properly trained in health and sanitation procedures.

5.3.2 Commanding Officer or Officer In Charge. The Commanding Officer or Officer In Charge must:

- a. Oversee the correction of discrepancies on MSD system installations per reference (a).
- b. Prevent foodstuffs from being stored in areas adjacent to or below sanitation system valves, flanges or take down joints. Drip pans must be installed beneath all sanitation system valves, flanges and take down joints in health sensitive areas.
- c. Log the time, duration and justification for each unavoidable discharge of prohibited sewage in restricted waters. Notify the TYCOM and Immediate Superior In Command of each occurrence. In a situation where holding sanitary wastes would present a health or safety hazard, the system must be reported by Casualty Report per reference (e) and secured.

5.4 SYSTEM MAINTENANCE AND INSPECTION.

- a. Ship-to-Shop Work. All Fleet Maintenance Activities are capable of accomplishing repair and overhaul of all MSD components on a ship-to-shop basis. When components are delivered to the Fleet Maintenance Activity, their cleanliness will be certified in writing by the delivering ship's Medical Department representative.

NOTE: IF NONE OF THE METHODS IN SUB-PARAGRAPH (b) ARE AVAILABLE, AND AN EMERGENCY SITUATION EXISTS, REFER TO REFERENCE (b) FOR EMERGENCY DISPOSAL REQUIREMENTS.

- b. MSD Cleaning. The only authorized MSD pipe cleaning processes are hydroblast cleaning and acid cleaning. Acid cleaning may only be performed by qualified activities using the procedures of reference (c). Request cleaning for the removal of hard deposits which cannot be removed by ordinary shipboard means.
 - (1) Due to the extreme hazards involved in cleaning MSD systems, a high level of supervisory attention must be applied to all evolutions. An agreement on the procedures to be used by the Fleet Maintenance Activity and Ship's Force

must be established by a locally prepared Memorandum Of Agreement which describes all aspects of the operation.

- (2) Disposal of effluent must be accomplished in an environmentally safe manner. Depending on port availability, the following methods of disposal must be used in priority order:
 - (a) Discharge to pier side sewage system.
 - (b) Discharge to tank truck or barge.
 - (c) Discharge to sea (when hydroblasting while underway).

5.5 TECHNICAL SYSTEM ASSESSMENT.

- a. Technical System Assessments may be requested for training or, when necessary, to develop a work package.
- b. Technical assist visits and assessments are described in Volume VI, Chapter 42 of this manual.

5.6 TRAINING.

- a. Training courses in the maintenance and operation of MSD systems are offered by Fleet Training Centers at various locations. Consult reference (f) for current course offerings and details.
- b. On ships with Collection, Holding and Transfer and JERED systems installed, the following school graduates are required:
 - (1) An Officer responsible for the operation and maintenance of the system.
 - (2) Senior enlisted personnel assigned the responsibility for operation and maintenance of the system.
 - (3) Other maintenance personnel; at least one in each inport duty section.

VOLUME IV
CHAPTER 6
OXYGEN AND NITROGEN SYSTEMS

REFERENCES.

- (a) NAVSEA S9086-SX-STM-010 - NSTM Chapter 550 (Industrial Gases; Generating, Handling, and Storage)
- (b) MIL-STD-1330 - Standard Practice for Precision Cleaning and Testing of Shipboard Oxygen, Helium, Helium-Oxygen, Nitrogen and Hydrogen Systems
- (c) NAVAIR A6-332AO-GYD-000 - Laboratory and Aviators Breathing Oxygen Field Guide

6.1 **PURPOSE.** Oxygen - Nitrogen (O₂-N₂) producing storage and transfer systems are installed onboard all Aircraft Carriers, Submarine Tenders and other surface force ships and shore stations to provide liquid and gaseous oxygen and nitrogen for use by Ship's Force and embarked air wings. Guidance for the proper operation and maintenance of these systems is provided by this chapter and references (a) and (b).

6.2 **PRECAUTIONS.**

- a. Oxygen is not flammable but supports and rapidly accelerates the combustion of all flammable materials. Any substance that burns in a normal atmosphere will burn much more rapidly in concentrated oxygen with a much higher flame temperature. Combustible material (e.g., dirt, dust, soap, oil, cloth, paper, wood, cork, carbon black and gasoline) should not be allowed to come in contact with an enriched oxygen environment. Oxygen can cause combustion of substances not normally considered burnable (notably steel wool, thin gauge metals and certain types of cloth).
- b. Gaseous nitrogen is an almost totally inert gas, does not burn, and does not support combustion or respiration. It is not poisonous but can displace oxygen from the air and cause asphyxia.
- c. Cryogenic fluids (liquid oxygen and liquid nitrogen) are extremely dangerous. They can cause severe burns or frostbite if they contact the skin. Prolonged exposure to the cold vapors can damage delicate tissues such as those of the eye, windpipe and lung. The cold surface of piping components and vessels containing cryogenic fluid can burn or freeze bare flesh and cause it to stick to the cold metal. At the temperature of cryogenic fluids, many metals and other materials become brittle. Ship structural steel can crack if contacted by cryogenic fluid. Liquid oxygen and nitrogen will produce a very large volume of gas when they vaporize. In a closed compartment with inadequate ventilation, vaporizing liquid can create a hazardously high concentration of oxygen or nitrogen. The cloudy vapor that appears from vaporizing liquid, or cold gas venting is condensed moisture, making the issuing gas visible. When handling liquid cryogenic products, personnel must utilize protective clothing per the requirements of reference (b) and comply with all safety rules.

6.3 AVIATORS BREATHING OXYGEN TESTING.

- a. Because of the severe consequences of liquid oxygen failing to meet the standards for Aviators Breathing Oxygen (ABO), stringent requirements for testing and ABO certifications have been established. Liquid oxygen and nitrogen is to be sampled and tested for production and stowage per reference (a) and Planned Maintenance System procedures.
- b. All Aircraft Carriers producing ABO have certified ABO test sites and are capable of certifying shipboard produced liquid oxygen. These ABO test sites are under the control of the shipboard Aviation Intermediate Maintenance Department. The testing and surveillance requirements of Aircraft Carrier shipboard O₂-N₂ plant oxygen and nitrogen products must be accomplished per reference (a) and meet the spectrographic analysis requirements of reference (c).
- c. Aircraft Carrier O₂-N₂ producers are known to experience high levels of methane (i.e., aircraft exhaust fumes, Collection, Holding and Transfer system discharge and boiler or Emergency Diesel Generator exhaust gases) which exceed the current established maximum limit of 25 parts per million per reference (c). The following direction is established for aircraft carrier O₂-N₂ producer liquid samples as stated in reference (a).
 - (1) For shipboard produced liquid oxygen, the limit for methane, when sampled at the storage tank, is 75 parts per million. This limit must not be exceeded.
 - (2) Liquid oxygen samples drawn from the storage tank are “customer or user” samples, for issuance in compliance with the ABO surveillance program. Samples from the O₂-N₂ producer are Maintenance samples used for monitoring and contaminate analysis and correction.
- d. If at any time a liquid oxygen test sample or test method is found unsatisfactory, Ship's Force O₂-N₂ Plant operators and Aviation Intermediate Maintenance Department ABO laboratory personnel must work together to identify and correct the problem. Guidelines to follow for this are outlined in references (a), (b) and (c).
- e. Certification of high-pressure gaseous storage flasks must be performed per reference (b).

6.4 OPERATIONS AND MAINTENANCE.

- a. Per reference (a), only qualified personnel with full knowledge and understanding of the applicable safety requirements and hazards associated with oxygen production and handling must be permitted to handle gaseous and liquid oxygen aboard ship. Equipment such as O₂-N₂ producing plants, storage tanks, and pump-vaporizer units must be operated only under the supervision of a Fleet Cryogenics School graduate that holds a current Navy Enlisted Classification (NEC)-4283 qualification. Ideally, all operating personnel, as well as supervisory personnel, will be graduates of the Cryogenics School; however, there may be cases where sufficient personnel with this formal training are not available. In this event, operators trained by a currently qualified NEC-4283 supervisor may be used if they have successfully completed the required Personnel Qualification Standard and are designated in writing by the Commanding Officer.

- b. Only qualified personnel will be authorized to perform oxygen clean maintenance and repairs to shipboard oxygen or nitrogen system components. The procedures and guidelines, as stated in reference (b), must be followed.
- c. High-Pressure O₂-N₂ Producers onboard Aircraft Carriers are equipped with R-22 Refrigeration Units. When maintenance or repairs are being conducted on this equipment strict guidance must be followed to prevent the release of any ozone depleting substances (i.e., CFCs and HCFCs) to the atmosphere as mandated by the Environmental Protection Agency Clean Air Act. The Environmental Protection Agency Clean Air Act, Section 608 prohibits individuals from knowingly venting ozone-depleting compounds, used as refrigerants, into the atmosphere while maintaining, servicing, repairing, or disposing of air-conditioning or refrigeration equipment. Only the following four types of ozone-depleting substance venting releases are permitted under this section of the act.
 - (1) Absolute minimum quantities of refrigerant released in the course of making good faith attempts to recapture and recycle or safely dispose of refrigerants.
 - (2) Refrigerants emitted in the course of normal operation of air-conditioning and refrigeration equipment, (i.e., purging of air and non-condensable gases), as opposed to during the maintenance, servicing, repair or disposal of the equipment.
 - (3) Mixtures of nitrogen and R-22 that are used as holding charges or as leak test gases, because in these cases, the ozone-depleting compound is not used as a refrigerant. However, a technician may not avoid recovering refrigerant by adding nitrogen to a charged system.
 - (4) Small releases of refrigerant which result from purging hoses or from connecting or disconnecting hoses to charge or service appliances. Additionally, refrigerant recovery and recycling equipment must be equipped with low-loss fittings.
- d. Personnel who perform maintenance or repairs to equipment that utilize ozone depleting substances, are required to successfully pass an Environmental Protection Agency approved technician certification test and be licensed before any commencement of work begins.

VOLUME IV**CHAPTER 7****ACCOUNTABILITY AND CERTIFICATION OF NUCLEAR
PROPULSION PLANT TEST AND SUPPORT EQUIPMENT****REFERENCES.**

- (a) NAVSEA 0989-031-4000 - Reactor Plant Instrumentation and Control Equipment Maintenance
- (b) NAVSEA 0989-064-3000 - Cleanliness Requirements for Nuclear Propulsion Plant Maintenance and Construction

LISTING OF APPENDICES.

- A Nuclear Test Equipment Check-Out and Check-In Form
- B Nuclear Support and Test Equipment Certification Record

7.1 **PURPOSE.** To issue requirements for the certification and accountability of Nuclear Propulsion Plant Test and Support Equipment as required by the applicable Reactor Plant Manual (RPM) and reference (a). Nuclear Propulsion Plant Test and Support Equipment is commonly referred to as Nuclear Test Equipment (NTE).

- a. NTE specified by the applicable RPM and reference (a) to support planned and corrective maintenance of Nuclear Propulsion Plant systems must be carefully controlled. Maintaining accountability and certifying accuracy, operability, and reliability per the most current Field Changes and technical specifications is an essential element of reactor safety. The basic elements of the NTE program are certification and verification.
- b. Certification is the detailed technical evaluation of the equipment to conclude that the item conforms to the required specification. Certification is conducted prior to initial issue and after any event that invalidates the certification, such as repair, Field Change installation or a revision to the equipment reference drawing or figure and is recorded on a NTE Certification Record. Equipment will normally be maintained in a Ready for Issue, certified condition, requiring verification prior to each issue.
- c. Verification is the validation that the equipment is certified based on a review of records and is in a physically acceptable condition for issue and use. Verification is conducted prior to each issue and is recorded on a NTE Check-out and Check-in Form contained in Appendix A of this chapter.

7.2 **NUCLEAR TEST EQUIPMENT CATEGORIES.** For purposes of this chapter, NTE is divided into three categories.

- a. General Purpose Electronic Test Equipment.
- b. Electronic and Electrical Test Equipment, non-General Purpose Electronic Test Equipment (e.g., switchboard test equipment, scram breaker time response equipment, etc.).

c. Mechanical Test Equipment.

7.3 ACTION. The Repair Officer must implement the requirements of this chapter. The Nuclear Repair Officer is designated as the custodian of NTE and must ensure that assigned personnel carry out the requirements of this chapter.

7.4 PROCUREMENT. Only test equipment meeting the specifications of the applicable RPM and reference (a) may be used to conduct testing on Nuclear Propulsion Plant Systems. Requisitions for new equipment must contain sufficient detail to ensure the correct item is purchased. Allowance Equipage Lists for required NTE are provided in the tender Coordinated Shipboard Allowance List or Q-Coordinated Shipboard Allowance List. The requirements for General Purpose Electronic Test Equipment to support nuclear electrical and electronic testing are contained in the applicable Ship's Portable Electronic Test Equipment Requirements List.

7.5 NUCLEAR TEST EQUIPMENT CERTIFICATION. NTE must be certified using a Formal Work Package (FWP) for Electronic and Electrical Test Equipment and a Controlled Work Package (CWP) for Mechanical Test Equipment. Certification is required for new equipment prior to initial issue and following repairs or modifications which could impact performance. Periodic recertification is not required. The FWP or CWP should be as simple as possible. As a minimum, the FWP or CWP must provide the exact equipment reference and indicate the attributes that must be verified and the required testing. Recertification following repair must be a step in the repair FWP or CWP. Certification must be documented on NTE Certification Records and is discussed in detail in paragraph 7.5.4 of this chapter. Certification must be accomplished per paragraph 7.5.1 or 7.5.2 of this chapter. The ultimate objective is to demonstrate that the NTE available for Nuclear Propulsion Plant application is technically correct.

7.5.1 Electronic and Electrical Test Equipment. The FWP must require completing and retaining an NTE Certification Record.

- a. To certify new or existing measuring and recording equipment, such as a Visicorder or strip chart recorder, verify that the specifications given in the equipment technical manual match the specifications required by the applicable RPM, reference (a), or applicable test reference.
- b. To certify repaired or re-calibrated measuring and recording equipment, the repair or calibration activity must certify that the item still conforms to the original technical specifications and is properly calibrated (as evidenced by a calibration sticker). The Fleet Maintenance Activity Work Center performing the repair or calibration must complete the NTE Certification Record. If the repair or calibration was not performed by the Fleet Maintenance Activity, Nuclear Repair must certify the equipment. Work orders for repair must require conformance to referenced drawings and figures.
- c. To certify other existing electrical test equipment not previously certified, such as switch boxes, jumper boxes, cables, Under Voltage and Under Frequency test boxes, etc., each component and the wiring configuration must be compared to the referenced drawing for correctness.
- d. To certify other new electrical test equipment verify the test equipment as correct with respect to what was ordered and the nameplate data or other markings compared to the equipment requirements of the RPM, reference (a), or referenced test procedure.

7.5.2 Mechanical Test Equipment.

- a. To certify existing or newly manufactured mechanical test equipment, the CWP that manufactures the test equipment must include steps to verify that the material specifications and configuration match the equipment reference. The CWP must also include all required testing.
- b. To certify purchased mechanical test equipment, the CWP must include steps to verify the equipment as correct with respect to what was ordered, compare the equipment to the requirements of the RPM, reference (a) and or referenced test procedure and must also specify any testing that may be required prior to use.

7.5.3 Recertification Following Reference Revision. To certify existing equipment after a revision to the equipment configuration reference, take the actions necessary for the NTE to conform to the revision and complete an NTE Certification Record for recertification. The FWP for Electronic and Electrical Test Equipment and a CWP for Mechanical Test Equipment used to accomplish the equipment changes will specify recertification. A new NTE Certification Record will be generated regardless of whether or not the equipment required modification. The new certification record will serve to update the applicable revision and will provide evidence that the NTE was in fact validated to the correct revision.

7.5.4 Certification Documentation. The FWP or CWP must contain a NTE Certification Record. The minimum attributes are shown in Appendix B of this chapter.

- a. The Certification Record page (current and superseded) must be retained by the Nuclear Repair Officer for the life of the equipment. This record must be available for review by personnel checking out equipment.
- b. The active revision or advance change notice level of the reference to which the equipment was built must be specific enough to allow verification of the effects of future reference revisions. For example, while the RPM or reference (a) may be at revision 480, a figure showing test equipment details may be revision 453. The reference should be stated as the exact figure number and 453 should be recorded as the revision level.
- c. Existing records that contain proper certification data are acceptable and need not be replaced.

7.6 ACCOUNTABILITY.

- a. Electrical and electronic test equipment must be fitted with tamper resistant seals where unauthorized access to calibration settings or internal components may invalidate certification.
- b. Requests for test equipment are normally made using an OPNAV 4790/2L form and identifying the appropriate Master Job Catalog routine Job Sequence Number. The OPNAV 4790/2L form requesting the test equipment must be specific with respect to the fittings or other associated components required in addition to the specific piece of test equipment. For hydrostatic test equipment, sufficient information must be provided to complete the checklist requirements of Chapter 9 of this volume.

- c. Equipment should be issued for a specified period and delinquent equipment recovered as soon as possible.
- d. Activities receiving NTE must be briefed that only the issuing activity is authorized to repair NTE and that tampering will invalidate certification.
- e. Equipment Check-out and Check-in Forms will, as a minimum, contain the attributes contained in Appendix A of this chapter.
- f. Verification that the equipment is following the latest revision of the controlling reference must be accomplished by:
 - (1) Review of the NTE Certification Record prepared per Section 7.5 of this chapter to demonstrate that the item has been certified.
 - (2) Compare the revision level stated on the NTE Certification Record to the latest revision of the reference.
- g. When equipment is returned, those items of the issue and receipt procedure necessary to determine the condition of the equipment must be repeated. This will ensure that equipment requiring repair is identified in a timely manner. A check-in operational test need not be performed in every case, but would be appropriate if visible physical conditions indicate possible damage affecting operability.
- h. Prior to issue by the repair facility, mechanical NTE which is expected to be subjected to pressure greater than 10 pounds per square inch will be operationally pressure tested to the highest pressure expected during use in the propulsion plant. Individual gages are excluded provided they are issued as individual components without adapters or hoses (for normal installation in a system) and are properly calibrated.
- i. The activity requesting mechanical NTE will be specific when requesting NTE. The following data (at a minimum) will be specified as applicable:
 - (1) Maintenance for which the NTE is required.
 - (2) Gage range and required tolerance.
 - (3) Set-points of protective devices.
 - (4) Length of hose.
 - (5) Size and style of fittings for attachment to ships system (e.g., Swagelok SS 1/8" inverted 37 Degrees SAE flare fitting).
 - (6) Maximum temperature the NTE is expected to be subjected to during use.
 - (7) Date required.
 - (8) Any special requirements.

7.6.1 Lost or Damaged Test Equipment. Lost or damaged test equipment must be repaired or replaced in a timely manner. Equipment requiring repair will be entered in the Equipment Deficiency Log, assigned a Job Sequence Number and entered in the Current Ship's Maintenance Project. Out-Of-Commission equipment that results in an inability to provide necessary test equipment for reactor plant testing must be given high repair priority. Maintenance of NTE will only be accomplished by the issuing activity.

7.6.2 Cleanliness and Foreign Material Exclusion. Mechanical Test Equipment and Assemblies attached to Nuclear Propulsion Plant Systems must meet the requirements for cleanliness control and foreign material exclusion specified by reference (b). Verification of cleanliness will be incorporated into check-out and check-in forms and into FWPs and Technical Work Documents.

7.6.3 Stowage. NTE must be stowed in a location segregated from non-NTE. Ready For Issue equipment will be stowed apart from non-Ready For Issue equipment. Segregated stowage must be such that it precludes inadvertent mixing of equipment.

7.6.4 Inventory. NTE will be inventoried at least annually. A record of the most recent inventory will be retained by the Nuclear Repair Officer.

16 Oct 2019

APPENDIX A
NUCLEAR TEST EQUIPMENT
CHECK-OUT AND CHECK-IN FORM

Receiving Activity: _____ Date _____

Lending Activity: _____

1. **Equipment description and serial numbers.** Include all individual components. _____

2. Required return date:

ATTRIBUTE	CHECK-OUT			CHECK-IN		
	SAT	UNSAT	N/A	SAT	UNSAT	N/A
Physical condition of assembly or item						
Calibration current						
Tamper resistant seals intact						
Level of cleanliness is as required						
Operational test. Protective feature set point _____. For hydro rigs, complete Test Rig Determination and Inspection Check List (see Chapter 9 of this volume) and provide with hydro rig.						
Equipment previously certified. Review Certification Record Card						
Equipment verified correct to latest revision or advance change notice of referenced drawing or manual.						

3. Equipment found to be unsatisfactory has been segregated from satisfactory equipment and repair request submitted.

CHECK-OUT
YES (☐)CHECK-IN

VOLUME IV**CHAPTER 8****WEAPONS AND CARGO ELEVATOR ASSESSMENTS**

8.1 PURPOSE. To provide guidance in the preparation for and execution of shipboard weapons and cargo elevator assessments and assist visits by the Elevator Support Unit (ESU). Shipboard weapons and cargo handling elevators are supported through the elevator assessment and repair program, which is executed by the ESU. The ESU program, formerly the Program to Assess and Repair Shipboard Elevators for the Atlantic Fleet, and Weapons Elevator Support Unit for the Pacific and Atlantic Fleets, provides direct fleet support for the maintenance and modernization of shipboard elevators. The program is executed by the ESU on a per ship cycle, as dictated by the individual ship's deployment and maintenance schedules. Although ESU scheduled milestones are based on the maintenance cycle, the primary focus of the program is to achieve peak system readiness at the time of deployment by evaluating and repairing elevators throughout the ship's cycle. Additionally, DDG-51 Class 5"/54 and 5"/62 Ammunition Strike Down Equipment, which are similar to elevators, are supported through the ESU program.

8.2 ELEVATOR SUPPORT UNIT. The Regional Maintenance Center ESU is composed of skilled technicians qualified in the operation, repair, testing and training of weapons and cargo elevator systems. The ESUs are responsible for periodic material assessments, repair, technical assistance, on board operator maintenance training, and verification of Integrated Logistics Support (ILS) elements under this program.

8.3 SHIP'S FORCE ASSESSMENT RESPONSIBILITIES.

- a. Ensure that the Current Ship's Maintenance Project (CSMP) is up to date.
- b. Ensure operators and maintenance personnel are available to assist the Assessment Team.
- c. Require operators and maintenance personnel to accompany the Assessment Team for on the job training to increase self-sufficiency.
- d. Prepare and submit an OPNAV 4790/2K for each deficiency not corrected prior to completion of the assessment. Provide a listing of Job Control Numbers to the ESU.

8.4 ELEVATOR SUPPORT UNIT EVOLUTIONS. The specific components of each ESU evolution are defined in sub-paragraphs "a." through "d." of this paragraph. These evolutions are designed to ensure deficiencies are identified and repaired in a timely manner. Prior to commencement of any ESU evolution, a pre-brief will be conducted by the ESU representative and attended by the ship's Maintenance Manager and all applicable departmental representatives. The pre-brief will cover, but is not limited to, the following topics:

- a. Key evolution elements.
- b. Roles and responsibilities of:
 - (1) ESU technical personnel.
 - (2) Ship's Force personnel.
- c. Working relationship between ESU technical personnel and Ship's Force.

- d. Overall safety practices and precautions applicable to the evolution.

8.4.1 Material Condition Assessment Visit. A Material Condition Assessment visit will be used to determine a baseline and establish the scope of follow-on actions. This visit is accomplished once per Fleet Readiness Training Plan. The ESU uses assessment guidelines to determine the system's material condition, while ensuring the following is accomplished:

- a. The CSMP is validated to avoid redundancies during the assessment.
- b. The elevator system is assessed, repaired, groomed and operationally tested. The ESU will make every effort to correct all deficiencies prior to the end of the visit.
- c. On the Job Training (OJT) is conducted with Ship's Force to promote self-sufficiency.
- d. Working with the ship's cognizant Department(s) Maintenance Manager, and TYCOM coordinators, determine the preliminary level of effort required to correct the discrepancies.
- e. All discrepancies and corrected items have been documented in the ship's CSMP using the appropriate IT System.
- f. The Commanding Officer, or an officer designated by the Commanding Officer, is briefed on the elevator system material condition.
- g. A final report is issued to the ship, ISIC and TYCOM following the Material Condition Assessment visit. The report must address the following:
 - (1) Safety of systems, including "safe to operate" conditions.
 - (2) Major discrepancies found during the visit.
 - (3) System Operability Test results.
 - (4) Training status of Ship's Force with respect to Personnel Qualification Standards (PQS) and practical elevator system maintenance and operation.
 - (5) Status of authorized, completed, or programmed Ship Alterations.
 - (6) Recommendations to the In-Service Engineering Agent for system changes.
 - (7) In-Service Engineering Agent.

8.4.2 Repair Visit. The Repair Visit is designed to correct discrepancies identified in the ship's CSMP that could not be repaired during the assessment visit.

- a. Conduct multiple visits, as receipt of material permits, to repair as-found conditions.
- b. Provide logistics assistance as necessary.
- c. Conduct OJT with Ship's Force.

8.4.3 In Process Review. This review will be conducted on a case-by-case basis, contingent on the scope of repairs programmed for the maintenance availability. When tasked, the ESU will review the elevator system work package prior to the start of an availability. During the availability the ESU will:

- a. Monitor the progress and Quality Assurance of the repair contractor, coordinating with Supervisor of Shipbuilding and industrial activity representatives, Naval Surface

Warfare Center, Carderock Division, and TYCOM Maintenance Manager, as applicable.

- b. Provide technical and logistic support to Ship's Force.
- c. Monitor the CSMP status.
- d. Witness elevator tests, as tasked.

8.4.4 On-Board Maintenance Training. On-board maintenance training will be conducted at least once per Fleet Readiness Training Plan with each ship receiving training as a host ship or by having their personnel participate in training on another ship of the same class. It consists of operator and maintenance classroom instruction followed by hands-on training. The ship class on-board maintenance training documentation is tailored to be ship specific, giving the ship the most accurate and coherent training possible.

8.4.5 Integrated Logistics Support.

- a. A one-time ILS validation of elevator configuration, Allowance Parts Lists (APL), Coordinated Shipboard Allowance Lists (COSAL) and technical manuals will be conducted.
- b. Follow-on ILS visits will be accomplished at the TYCOM's request.

8.5 VISIT SCHEDULING. The ISIC will schedule all ESU visits through the TYCOM sponsored Quarterly Scheduling Conference. Visits will not be authorized without prior approval by the cognizant TYCOM.

8.6 REPORTS. Before departing the ship, the ESU will debrief the Commanding Officer, or designated officer, on the material condition of the elevator system. The ESU must provide the ISIC and TYCOM a report, outlining the results, not later than 30 days following the visit.

VOLUME IV
CHAPTER 9
SYSTEM TEST CHECK LIST

REFERENCES.

- (a) NAVSEA 0387-046-8000 - System Hydrostatic Test Requirements
- (b) NAVSEA S9086-RJ-STM-010 - NSTM Chapter 504 (Pressure, Temperature and Other Mechanical and Electromechanical Measuring Instruments)
- (c) NAVSEA S9505-AF-MMA-010 - Submarine Non-Nuclear Piping Systems Test Manual
- (d) NAVSEA S9086-RK-STM-010 - NSTM Chapter 505 (Piping Systems)

LISTING OF APPENDICES.

- A Nuclear Test Rig Determination and Inspection Check List
- B Non-Nuclear Test Rig Determination and Inspection Check List
- C Nuclear and Non-Nuclear Pre-Test Inspection Check List
- D Nuclear and Non-Nuclear Performance of Test Check List

9.1 PURPOSE. To provide standard check lists for the proper preparation for the conduct of and recovery from nuclear and non-nuclear tests. Appendices A through D of this chapter are applicable to installed ship systems, individual components and support equipment tested in conjunction with Formal Work Packages (FWP) and Technical Work Documents (TWD).

- a. Appendices A through D of this chapter are similar to a standard FWP that will require entries, prior to each use, to detail the specifics of the test to be performed. When TWDs are utilized, the locally developed FWP should direct execution of the checklists and need only direct other actions that are not included in the checklists. For example, since Forces Afloat rarely perform hydrostatic tests on hot systems, the checklists are prepared based on system temperatures less than 200 degrees F. In the event that a hydrostatic test is performed with temperatures greater than 200 degrees F, the locally developed FWP must contain additional requirements for the test from the referenced test manual.
- b. These lists are developed from references (a) through (d) and **are not inclusive of all requirements**. All applicable test references must be reviewed in preparation for the test to ensure no requirement or precaution is overlooked. Other references such as the Reactor Plant Manual (RPM), Propulsion Plant Manual, Steam Plant Manual, Steam and Electric Plant Manuals, Ship Systems Manuals, Ships Information Books, Test Pressure Drawings, component technical manuals, etc., provide additional guidance and requirements that must be included in the locally developed FWP for the test.

9.2 GENERAL INSTRUCTIONS.

- a. Blank spaces are provided throughout the checklists so that requirements for the specific test to be performed may be added. These specifics must be entered during FWP preparation.
- b. Portions that are not applicable must be marked “N/A” prior to FWP approval.
- c. Multiple “Completed by” signature blanks are provided at the end of each checklist since one individual may not be able to fully complete a particular checklist. Additional signature blanks may be added if required.
- d. The Test Rig Determination and Inspection Check List, Appendices A and B of this chapter, must be completed by the activity issuing the test equipment. It is the responsibility of both the issuing and receiving activity to ensure that the correct test gear is used. Local exceptions to gages specified in reference (b) Table 504-6-1 will be approved by an individual with a technical warrant. When gage exceptions are invoked, the approved exception must be included with associated test form. This may be accomplished by requesting the correct test equipment, and the issuing activity completing the check list and providing it with the test equipment for review. To satisfy the scope of this chapter, the activity requesting the test equipment must include in their request (OPNAV 4790/2L) the information necessary for the issuing activity to complete Item 1 of Appendices A or B of this chapter, as applicable.
- e. These check lists may also be used when a maximum operating pressure test is specified and an external pressure source is required to obtain this pressure. Installed system equipment must be used whenever possible to perform operating pressure tests.
- f. Appendices B, C, and D of this chapter may contain classified information when filled in (i.e., the nuclear information or classified test pressures). It will be the responsibility of the requesting activity to ensure the proper classification is annotated on the document when applicable.

9.3 RECORD RETENTION. System Check Lists do not require retention after the test has been satisfactorily completed, documented in the FWP or TWD, and the FWP or TWD is closed. Additional reviews of testing information are provided in sub-paragraphs “a” and “b”:

- a. For Ship's Force testing to recertify TWD work performed by the Fleet Maintenance Activity (FMA), the completed checklists, or copies must be provided with the test documentation provided to the FMA. When the FMA Quality Assurance Officer accepts the completed retest, the checklist may be discarded.
- b. For FMA shop testing of controlled work, the completed checklists, or copies, must be provided with the test documentation required by the Controlled Work Package until the FMA Quality Assurance Officer or Quality Assurance Supervisor accepts the testing objective quality evidence. Once the tests are accepted, the checklist may be discarded.

APPENDIX A
NUCLEAR
TEST RIG DETERMINATION AND INSPECTION CHECK LIST

References: (a) NAVSEA 0387-046-8000 - System Hydrostatic Test Requirements

ITEM NO.	ATTRIBUTE	CHECK OFF or N/A
1. Complete the following based on the information provided by the requesting activity.		
a.	System or component to be tested	
b.	Test Pressure _____ Reference _____	
c.	Number of test gages required: Total _____ Primary _____ (per reference (a) Appendix D). Backup _____ Indicate zero if multiple primary gages are required, one of which will also serve as a backup or if an installed system gage will be used.	
d.	Level of cleanliness required	
e.	Planned method of over pressure protection (e.g., manual using installed system valve plus one automatic relief included with test rig, or other combination). Unless otherwise specified, the rig will be provided with one manual and one automatic relief. _____ _____ _____	
2. GAGES: Normally installed instrumentation may be used as backup pressure indication. If an installed gage is not available and the backup gage will be a temporary gage, then complete Items a-f for both primary and backup gages. Otherwise, a-f apply to primary gage(s) only.		
a.	Complete and attach reference (a), Figure 8-2 for selection of test gages.	
b.	Reference (a), Figure 8-2 , Item 8 (maximum gage error at test pressure) must not exceed 2% of test pressure.	
c.	Nominal indicated test pressure must be no less than 25% of the primary gage's range. Nominal indicated test pressure must be no less than 10% of the backup gage's range, if the backup gage is a temporary gage.	
d.	The gage range must be capable of indicating the manual over pressure protection pressure at no greater than 90% of full range and the potential maximum overpressure (when using a relief valve) at no greater than 98% of full range .	
e.	Temporary gages must be single scale analog gages or digital pressure instruments calibrated in psig.	
f.	RECORD GAGE DATA: Primary gage range _____ psi Cal due date _____ Ser Number _____ Backup gage range _____ psi Cal due date _____ Ser Number _____	

(CONFIDENTIAL When filled in)

ITEM NO.	ATTRIBUTE	CHECK OFF or N/A
g.	<p>Gages have been calibrated within the required periodicity.</p> <p>Circle applicable item:</p> <p>(1) Normal metrology requirements list calibration frequency (This is the frequency unless specified otherwise for the specific test).</p> <p>(2) Special frequency _____ Required by _____ (Indicate required frequency and reference).</p>	
3. OVERPRESSURE PROTECTION:		
a.	The manual release of pressure is the primary method of protection.	
b.	Automatic backup relief valve will be provided.	
c.	If the temporary relief valves provided are to be installed in the system, installation must be such that it does not cause damage to the system or system components.	
d.	The over-capacity of relief valves should not cause excessive thermal and pressure shock. (Relief valve capacity should not be grossly higher than pressure source capacity).	
e.	The blow down characteristics must be compatible with the system being tested. (The reseating characteristics of automatic reliefs should be consistent with the requirements of the system being tested. For example, a relief that does not reseal until pressure is reduced to zero would not be acceptable for a primary hydro). (Review manufacturer's data).	
f.	Valve accumulation at the flow of the test pressure source must not exceed 10% of the relief valve set point.	
g.	Temporary automatic relief valves which have more than one inlet and therefore provide different relief valve performance characteristics (e.g., set pressure) must not be used.	
h.	<p>Temporary automatic reliefs which require no tools for set point adjustment (e.g., employ hand adjustment knob) must:</p> <p>(1) Have some means to positively lock the setting once it has been made or</p> <p>(2) Must be designed to prevent ready access to the adjustment knob.</p>	
4. OVERPRESSURE PROTECTION SETPOINT DETERMINATION:		
a.	Record required hydrostatic test pressure _____ psi.	
b.	<p>Record required overpressure protection set point _____ psi.</p> <p>Circle applicable determination method:</p> <p>(1) As specified in the applicable RPM.</p> <p>(2) Other Naval Sea Systems Command (NAVSEA) approved document (identify reference).</p> <p>(3) Using Reference (a), Figure 8-2 (attach).</p>	
c.	Potential maximum overpressure (Reference (a), Figure 8-2 , item 29) conforms to the requirements of reference (a) Section E.3.3.	

(CONFIDENTIAL When filled in)

ITEM NO.	ATTRIBUTE	CHECK OFF or N/A
5. TEMPORARY EQUIPMENT REQUIREMENTS:		
a.	Temporary connections and equipment (cap, spool pieces, jumpers, blank flanges, etc.) must be verified to be capable of withstanding hydrostatic test pressure.	
b.	Verify that within the last year and subsequent to disassembly or replacement of any test rig equipment, the assembled test rig (pump, hoses, gages, connecting tubing) has been satisfactorily tested to a pressure at least equal to the maximum pressure which might be encountered during this hydrostatic test. (Hydro is not required to test pressure gage and relief valve replacement or fittings between subassemblies designed to be broken for portability. Set point testing of the test rig relief valve while on the test rig meets this requirement).	
c.	Verify the rig has been cleaned to meet the system cleanliness requirements of the system being tested. If the rig is not maintained clean, comply with the cleanliness boundary requirements of reference (a), Section E.4.	
d.	No quick-disconnects with check features are to be used in the hydro rig.	
6. OPERATIONAL TEST:		
<p>INSTRUCTIONS: The following checks must be performed with the test rig isolated from the system being tested. This may be done by blanking the hose prior to connecting the rig to the system. Equipment provided by an FMA will be tested at the FMA prior to being issued to a tended ship. The operational test need not be repeated by the tended ship receiving the test gear.</p> <p>NOTE: FOR SHOP TEST FACILITIES (I.E., INTERMEDIATE MAINTENANCE ACTIVITIES, NAVAL SHIPYARDS AND TENDERS) WHERE HYDROSTATIC TESTS ARE CONDUCTED AT LEAST ONCE EVERY TWO WEEKS AND WHERE THE TEST GAGES (BACKUP AND MASTER) ARE COVERED UNDER THE NAVY METROLOGY AND CALIBRATION (METCAL) SYSTEM, CROSS CHECKING THE GAGES BEFORE TEST IS NOT REQUIRED.</p>		
a.	Mark hydro gages with a red pointer at the required relief set point.	
b.	<p>Raise rig pressure to the specified test pressure. If the backup gage is included with the test rig, (vice an installed system gage) verify primary and backup gages are in agreement. (Maximum difference after height correction is no more than the sum of the specified accuracies plus a readability error of one-half the smallest graduation of each gage).</p> <p>Required accuracy \pm or - _____ psig.</p> <p>If not in agreement, replace or re-calibrate and repeat this step until satisfied.</p>	
c.	<p>Record required overpressure protection set point _____ psig.</p> <p>Continue to raise pressure to the specified overpressure protection set point.</p> <p>If the manual relief is installed on the rig, with the pressure source operating at the specified manual relief set point, verify that the manual relief and associated piping relieve the capacity of the pressure source.</p>	
d.	<p>Set or confirm set point of the automatic relief valve.</p> <p>With the pressure source operating and at the relief set point, verify that the automatic relief and associated piping relieve the full capacity of the pressure source.</p>	
e.	Vent the rig to reduce pressure to reseal the automatic relief valve. Slowly raise pressure again to recheck the automatic relief set point.	

(CONFIDENTIAL When filled in)

ITEM NO.	ATTRIBUTE	CHECK OFF or N/A
f.	With the rig vented, verify that pressure gages that will be installed as primary or backup pressure indication, which are not equipped with a dial adjustment device read zero (within the gage accuracy plus the readability of one half of the smallest graduation on the dial face).	
g.	With the rig completely assembled, verify cleanliness by operating the pump to flush the pump and any attached piping or equipment.	
h.	Ensure cleanliness controls are established on the rig such that cleanliness is not lost in the interim period between flushing and the operational test and connection to the system being tested.

APPENDIX B
NON-NUCLEAR
TEST RIG DETERMINATION AND INSPECTION CHECK LIST

- References:
- (a) NAVSEA S9086-RJ-STM-010 - NSTM Chapter 504 (Pressure, Temperature and Other Mechanical and Electromechanical Measuring Instruments)
 - (b) NAVSEA S9505-AF-MMA-010 - Piping Systems/Submarine Non-Nuclear Piping Systems Test Manual
 - (c) NAVSEA S9086-RK-STM-010 - NSTM Chapter 505 (Piping Systems)

ITEM NO.	ATTRIBUTE	CHECK OFF or N/A
1. Complete the following based on information provided by the requesting activity.		
a.	System or component to be tested.	
b.	Test Pressure _____ Reference _____ (If Item Number)	
c.	Number of test gages required: Total _____ Primary _____ Backup _____ Indicate zero if an installed system gage will be used.	
d.	Level of cleanliness required _____	
e.	Planned method of overpressure protection (e.g., manual using installed system valve plus one automatic relief included with test rig, or other combination). Unless otherwise specified, the rig will be provided with one manual and one automatic relief. _____ _____ _____ _____ _____	
2. GAGES:		
NOTE: TYPICAL GAGES FOR MOST NON-NUCLEAR TESTS ARE LISTED IN REFERENCE (a), TABLE 504-6-1.		
CAUTION: REFERENCE (a) TABLE 504-6-1 ALLOWS EXCEPTIONS TO THE GAGES LISTED IN THE TABLE. IF USING A GAGE NOT LISTED ON THE TABLE, IT MUST STILL COMPLY WITH THE CRITERIA SPECIFIED IN THIS APPENDIX.		
a.	ANALOG GAGES The pressure gage range based on the maximum test pressure up to and including the relief valve setting must be: - greater than the test pressure and - not more than 200% of the maximum test pressure.	

ITEM NO.	ATTRIBUTE	CHECK OFF or N/A
	For tests 0-60 psi and below, the range may exceed 200% of the test pressure but will be as low as practical. Test gage pressure graduations are equal to or smaller than those specified by reference (a) Table 504-6-1. Gage accuracy must be at least + or - 1.0 % of the gage span. Primary gage accuracy must be at least + or - 1.0% of the gage span.	
b.	DIGITAL GAGES Digital gages are authorized for use by reference (b). Digital gages of any range may be used as long as the gage accuracy is equal to or better than + or - 1.0% of the gage span. Gage range may exceed 200 % of the test pressure as long as the gage accuracy is equal to or better than + or - 1.0% of the test pressure. Gage accuracy must be equal to or better than + or - 1.0% of the test pressure.	
c.	RECORD GAGE DATA: Primary gage range ____ psi Cal due date____ Ser Number_____ Backup gage range ____ psi Cal due date____ Ser Number_____	
d.	Gages have been calibrated within the required periodicity. Circle applicable item: (1) Normal metrology requirements list calibration frequency (This is the frequency unless specified otherwise for the specific test). (2) Special frequency ____ required by _____ (Indicate required frequency and applicable reference).	
3. OVERPRESSURE PROTECTION:		
a.	The manual release of pressure is the primary method of protection.	
b.	Backup relief valve, automatic or manual, will be provided. (Automatic preferred unless otherwise specified).	
c.	If the temporary relief valves provided are to be installed into the system, installation must be such that it does not damage the system or system components. Review reference (b) or (c), as applicable.	
d.	The over-capacity of relief valves should not cause excessive thermal and pressure shock. (Relief valve capacity should not be grossly higher than pressure source capacity).	
e.	The blow down characteristics must be compatible with the system being tested. (The reseating characteristics of automatic reliefs should be consistent with the requirements of the system being tested). (Review manufacturer's data).	
f.	Valve accumulation at the flow of the test pressure source must not exceed 10% of the relief valve set point.	
g.	Temporary automatic relief valves which have more than one inlet and therefore provide different relief valve performance characteristics (e.g., set pressure) must not be used.	
h.	Temporary automatic reliefs which have a rapid adjustment feature by which the set point may be inadvertently changed must not be used.	

15 Jan 2021

ITEM NO.	ATTRIBUTE	CHECK OFF or N/A
4. OVERPRESSURE PROTECTION SETPOINT DETERMINATION:		
a.	If performing a maximum operating pressure test, verify that installed system relief valves are unisolated and not blocked or gagged. The set point for the manual release of pressure must be based on installed system relief set points.	
CAUTION: WHEN PERFORMING MAXIMUM OPERATING PRESSURE TESTS, INSTALLED RELIEF VALVES PROVIDE SYSTEM PROTECTION. SYSTEM RELIEF VALVES MUST NOT BE REMOVED FROM SERVICE.		
b.	Record required hydrostatic test pressure _____ psi.	
c.	Record required overpressure protection set point _____ psi. Circle applicable determination method: the lesser of: (1) 100 psi over test pressure. (2) 10% above test pressure.	
5. TEMPORARY EQUIPMENT REQUIREMENTS:		
a.	Temporary connections and equipment (cap, spool pieces, jumpers, blank flanges, hoses, etc.) must be verified to be capable of withstanding the test pressure.	
b.	Verify that within the last year and subsequent to disassembly or replacement of any test rig equipment the assembled test rig has been satisfactorily tested to a pressure approximately 15% above the maximum pressure it will witness during the system hydrostatic test. (Hydro is not required to test pressure gage and relief valve replacement or fittings between subassemblies designed to be broken for portability. Set point testing of the test rig relief valve while on the test rig meets this requirement).	
c.	Verify the rig has been cleaned to meet the system cleanliness requirements of the system being tested.	
d.	No quick-disconnects with check features are to be used in the test rig.	
6. OPERATIONAL TEST:		
<p>INSTRUCTIONS: The following checks must be performed with the test rig isolated from the system being tested. This may be done by blanking the hose prior to connecting the rig to the system. References (b) and (c) provide a sample step-by-step procedure for these checks. Equipment provided by an FMA or Industrial Activity must be tested prior to being issued to a tended ship. If documentation is provided by the issuing FMA or Industrial Activity that the assembled test rig has been verified to meet all of the requirements of this appendix, the operational test need not be repeated by the end user.</p> <p>NOTE: FOR SHOP TEST FACILITIES (I.E., INTERMEDIATE MAINTENANCE ACTIVITIES, NAVAL SHIPYARDS AND TENDERS) WHERE HYDROSTATIC TESTS ARE CONDUCTED AT LEAST ONCE EVERY TWO WEEKS AND WHERE THE TEST GAGES (BACKUP AND MASTER) ARE COVERED UNDER THE NAVY METROLOGY AND CALIBRATION (METCAL) SYSTEM, CROSS CHECKING THE GAGES BEFORE TEST IS NOT REQUIRED.</p>		
a.	ANALOG GAGES: Mark all test gages with either a red grease pencil, red tape, or the use of an integral red hand or other suitable mark at the required relief over pressure protection set point, half way between the test pressure and the relief valve set point.	

15 Jan 2021

ITEM NO.	ATTRIBUTE	CHECK OFF or N/A
	DIGITAL GAGES: Digital gages must have the manual over-pressure value (red hand setting) posted in the immediate vicinity of the display with red digits approximately the same size as the digits in the instrument display. For example, red hand settings may be marked on a blank label plate of "Whiteboard" material affixed to the test rig and the setting entered using a non-permanent red marker (dry erase).	
b.	Raise rig pressure to the specified test pressure. Verify primary and backup gages are in agreement. Maximum difference between the two gage readings after height correction is no more than 2%. Calculate 2% for each gage using the full-scale pressure measured by each gage (i.e., a 0-100 psi gage, 2% = 2 psig, the maximum difference between two gages with a 0-100 psi scale at a given pressure is 2 psig). Required accuracy <u>+</u> or <u>-</u> _____ psig. If not in agreement, replace or re-calibrate and repeat this step until satisfied.	
c.	Continue to raise pressure to the specified overpressure protection set point. If the manual relief is installed on the rig (vice using an installed system valve), with the pressure source operating and at the specified manual relief set point, verify that the manual relief and associated piping relieve the capacity of the pressure source.	
d.	Set or confirm setting of the automatic relief valve. With the pressure source operating and at the relief set point, verify that the automatic relief and associated piping relieve the capacity of the pressure source.	
e.	Vent the rig to reduce pressure to reseal the automatic relief. Slowly raise pressure again to recheck the automatic relief set point.

APPENDIX C
NUCLEAR AND NON-NUCLEAR
PRE-TEST INSPECTION CHECK LIST

- References: (a) NAVSEA S9505-AF-MMA-010 - Piping Systems/Submarine Non-Nuclear Piping Systems Test Manual
 (b) NAVSEA 0387-LP-046-8000 - System Hydrostatic Test Requirements

ITEM NO.	ATTRIBUTE	CHECK OFF or N/A
1. REVIEW TEST PREPARATIONS: The following attributes are necessary for proper test accomplishment and may be included in the test procedure, indicated on the Quality Assurance (QA) form 26 or covered in the pre-test briefing.		
a.	Test equipment installation location and method of installation is clearly indicated in sketch on the QA form 26, or is clearly defined. Test accomplishment will be per reference (a) or (b) as appropriate.	
b.	Specific jumpers, gagging devices, blanks etc. are indicated for both installation and removal. These items must be danger or caution tagged.	
c.	Boundaries of test and specific inspection points are clearly identified.	
d.	Instructions are provided for returning the system to normal or to a specifically stated condition upon completion of the test.	
e.	Procedure minimizes the amount of system to be pressurized to accomplish the test.	
f.	All components within the test boundary are capable of withstanding the test pressure (gages not over-ranged, etc.).	
g.	Necessary precautions as identified on the test pressure drawing have been taken (List or none). Use reverse if additional space required.	
h.	Applicable chapter (maintenance section) or maintenance instruction of the RPM reviewed for test or flush requirements (List or none). Use reverse if additional space required. (Not applicable to non-nuclear tests).	

15 Jan 2021

ITEM NO.	ATTRIBUTE	CHECK OFF or N/A
i.	Specific actions and precautions taken are included in the test procedure as a result of a review of reference (b), sections 7.2.3, 7.2.4 and 7.2.5 to preclude damage to installed system components due to pressure or temperature conditions that may occur during the test (List or none). Use reverse if additional space required (Not applicable to non-nuclear tests).	
2. WALKTHROUGH OF THE TEST AREA: The attributes listed in Section 2 of this appendix are basic quality control checks that should be conducted or supervised by the Petty Officer in charge of the test.		
a.	Piping in the test boundary is free from dents, gouges, arc strikes and other external defects (Removal of additional lagging or other interference is not required to perform this check).	
b.	Conditions for detecting leaks are satisfactory (e.g., joints being tested are not covered or lagged).	
c.	Hot piping or equipment that could result in a safety hazard to personnel has been insulated or precautions have been taken to minimize the hazard.	
d.	The hydrostatic test will not be a hazard to other evolutions adjacent to the test area (e.g., Work on an open oxygen system adjacent to a seawater hydro).	
e.	Adequate measures have been taken to prevent spray damage to electrical equipment in the event of a leak during pressure testing.	
f.	Pipe hangers removed for work have been reinstalled.	
g.	All mechanical joints are re-made; system integrity established.	
h.	No obvious loose fasteners.	
i.	No obvious instances of missing fasteners or improper fastener material or material mismatch (e.g., no carbon steel fasteners in seawater systems, no improper use of black oxide coated fasteners).

APPENDIX D
NUCLEAR AND NON-NUCLEAR
PERFORMANCE OF TEST CHECK LIST

NOTE: DO NOT PRESSURIZE TEST PUMP WITH AIR AND WATER SUPPLY UNTIL READY TO ACTUALLY START THE TEST. DO NOT LEAVE TEST PUMP UNATTENDED DURING ANY PORTION OF THE TEST.

ITEM NO.	ATTRIBUTE	CHECK OFF or N/A
1. VERIFY SYSTEM LINE-UP:		
a.	Verify the system to be tested is aligned for the test by performing valve lineup checks or by aligning valves via procedural steps in the test procedure or by steps in an operating instruction.	
b.	Verify that required plant conditions have been established.	
c.	All valves are DANGER TAGGED OPEN that: Could block either the primary or backup pressure relief point from the pressure source unless they are to be used during the test to isolate the pressure source from the portion of the system being tested. Could block discharge from the pressure relieving point. Could block either the primary or the back up pressure gage from the pressure source. (To ensure pressure indication, a clear pressure path between the applied pressure source and at least one pressure gage must be confirmed by danger tagging any isolation valve in this path. Confirmation that the other pressure gage is not isolated will be made by comparison with the tagged open gage). Would isolate the test pressure gages and the portion of the system being tested. Are vent paths in adjacent systems when the design or test pressure of the adjacent system is less than that of the system being tested?	
d.	If a section of pipe will be pressurized downstream of a check valve and no provisions are available for measuring the pressure in that section of piping, ensure that: (1) Pressure sources in that portion of the system are isolated or inoperative as discussed in item 1.e of this appendix. (2) Provisions are included to manually depressurize any section of pipe isolated by a check valve as soon as possible after test completion.	
e.	Potential pressure sources within the test area boundaries that are not required for testing are isolated or rendered inoperative by danger tagging out fuses, danger tagging shut appropriate valves, etc.	
f.	There must be no valves in the pressure-relieving path which could shut as a result of depressurization and thereby block the relief path from relieving the applied test pressure.	
g.	System relief valves within the test boundary are rendered inoperable to permit reaching elevated test pressure.	

ITEM NO.	ATTRIBUTE	CHECK OFF or N/A
h.	Systems susceptible to chloride stress corrosion are isolated to protect in-leakage of chlorides from adjacent systems being tested to an elevated pressure. This isolation may be accomplished either by using double valve isolation with leak off in between or by pressurizing the system susceptible to chloride stress corrosion to prevent in-leakage. If such isolation cannot be attained by practical means or is not assured, then the system susceptible to chloride stress corrosion must be flushed outwardly before and after the elevated pressure test and appropriate samples taken to confirm the absence of contaminants. (Not applicable to non-nuclear tests).	
i.	Verify test equipment: (1) Installation is as specified on the QA form 26. (2) Test gages are within required calibration periodicity. (3) Automatic relief valves set point have been checked within 30 days prior to the test.	
j.	If test gages are provided with a dial adjustment which does not affect calibration, the dial should be adjusted to zero after the gage is installed for the test and prior to opening the valve that isolates the gage from the system being tested.	
k.	Verify calibration and dial adjustment devices, if readily accessible, are protected from inadvertent movement or adjustment during the test.	
l.	The discharge of test medium for overpressure protection is directed into areas where the discharge will not cause damage to equipment, create personnel hazards or radioactive problems.	
m.	Pressure gages must be clearly visible and readable by test personnel.	
n.	The location of gages is such that no path exists whereby pressure could be applied to any portion of the system undergoing test without a pressure gage (primary or backup) indicating this pressure.	
o.	The primary and backup pressure gages must be located on different branch lines (where this can be done without extending the test boundaries).	

ITEM NO.	ATTRIBUTE	CHECK OFF or N/A
2. VERIFY PERSONNEL ARE READY TO CONDUCT TEST:		
a.	<p>Brief personnel, ensuring that the following attributes are understood:</p> <ol style="list-style-type: none"> (1) Personnel assignments. (2) Maintaining communications. (3) Test gage requirements: <ul style="list-style-type: none"> - Gage locations. - Calibration cross checks. - Gage indication and pressure readings. - Primary pressure indications. - Back up pressure indications. (4) Overpressure set point. (5) Type and location of primary overpressure protection. (6) Type and location of back up overpressure protection. (7) Duties of test pressure source operator. (8) Duties of system inspector(s) and required inspection points. (9) Duties of manual overpressure relief operators. (10) Immediate action must be taken to secure the test pressure source and investigate the problem should any of the following occur: <ul style="list-style-type: none"> - Pressure gages fail to respond to changes in test pressure. - A rupture of a test gage occurs. - Pressure gage readings do not agree with the sums of their accuracies plus readability errors + or - _____ psig. - Changes in test pressures are erratic or operation of the test pumps after the system is filled solid does not produce a corresponding increase in pressure. (11) Immediate action must be taken to secure the test pressure source and relieve system pressure if the pressure at which manual overpressure protection is to be initiated is exceeded on any primary or backup pressure gage. (12) Plant and system status. (13) Preliminary leak checks. (14) Valve packing leak checks (if applicable). (15) Criteria for an acceptable elevated pressure test. (16) Pressurizing to elevated test pressure. (17) Depressurization following completion of test. 	
b.	<p>Manual overpressure protection relief valve operators have no other responsibilities assigned.</p> <p>NOTE: WHEN PRESSURE IS BEING APPLIED BY A HAND-OPERATED TEST PUMP OR WHEN THE PRIMARY AND BACKUP TEST GAGES AND THE MANUAL OVERPRESSURE PROTECTION VALVE(S) ARE ALL INSTALLED ON THE HYDROSTATIC TEST RIG, THE TEST PUMP OPERATOR MAY ALSO SERVE AS THE PRIMARY OVERPRESSURE PROTECTION WATCH, PROVIDED THAT:</p> <ol style="list-style-type: none"> (1) THE MANUAL OVERPRESSURE PROTECTION VALVE IS WITHIN EASY REACH. (2) PROPERLY SET AND TESTED BACKUP RELIEF VALVE PROTECTION IS PROVIDED (FOR OTHER THAN HAND-OPERATED TEST PUMPS, EITHER AN AUDIBLE OVERPRESSURE ALARM IS PROVIDED OR A SECOND BACKUP RELIEF VALVE IS INSTALLED ON THE TEST RIG). (3) THE USE OF THIS EXCEPTION DOES NOT RESULT IN ONE INDIVIDUAL BEING SOLELY RESPONSIBLE FOR SATISFACTORY TEST PERFORMANCE. 	

ITEM NO.	ATTRIBUTE	CHECK OFF or N/A
c.	Adequate communications have been established between testing personnel.	
d.	Rate of pressurization and depressurization is specified at 100 psi per minute maximum. If testing a small component or small volume system such that 100 psi per minute is not practicable, control rate as low as possible.	
3. PERFORM ELEVATED PRESSURE TEST:		
a.	Obtain permission to conduct test.	
b.	Verify that the water purity of the test medium will not degrade system cleanliness or the required purity of water already in the system.	
c.	Note depressurized gage readings of all primary gages for comparison later, at test completion. Location _____ psig Location _____ psig Mark all test gages with a red mark at the overpressure protection set point, half way between the test pressure and the relief valve set point.	
d.	Raise rig pressure to the specified test pressure. Verify primary and backup gages are in agreement. Maximum difference between the two gage readings after height correction is no more than 2%. Calculate 2% for each gage using the full-scale pressure measured by each gage (i.e., a 0-100 psi gage, 2% = 2 psig, the maximum difference between two gages with a 0-100 psi scale at a given pressure is 2 psig). Required accuracy <u>+</u> or <u>-</u> _____ psig. If not in agreement, replace or re-calibrate and repeat this step until satisfied.	
e.	If a less accurate gage is used for backup and is indicating higher than the primary gage during gage cross checks, increase the overpressure set point mark on the backup gage by the indication differential after the second crosscheck.	
f.	Increase pressure in increments and perform preliminary leak checks.	
g.	Unless required to be positioned differently (e.g., throttle valves), backseat all valves that were aligned for packing leak checks prior to increasing pressure above normal operating pressure.	
h.	Hold test pressure for 30 minutes prior to commencing final inspection unless otherwise specified.	
i.	Primary and backup gages are in agreement at test pressure. (Same criteria as in Section 3.d of this appendix) <u>+</u> or <u>-</u> _____ psig.	
j.	Results of inspection _____. Also record data on QA form 26. Remarks:	
k.	Slowly depressurize the test area at less than 100 psi per minute. If testing a small component or small volume system such that 100 psi per minute is not practicable, control rate as low as possible. For nuclear tests only: When depressurizing systems which are adjacent to systems potentially contaminated with chlorides, ensure that the potentially contaminated systems are depressurized before depressurizing the system susceptible to chloride stress corrosion to prevent in-leakage. Ensure that the depressurization path is selected such that any fluid flow produced by depressurization will tend to keep chlorides away from the system of concern.	

ITEM NO.	ATTRIBUTE	CHECK OFF or N/A
l.	Note the depressurized gage readings of all primary gages. Location _____ psig Location _____ psig Compare to pre-test depressurized readings. Gages must agree within the gage accuracy and readability error. Disagreement is not cause for rendering the elevated pressure test unsatisfactory, provided gage crosschecks in items 3.d and 3.i of this appendix are satisfactory. However, disagreement should be considered unusual and warrant further investigation.	
m.	Remove temporary equipment.	
n.	Perform system restoration as directed by the FWP.

- H Close-out Inspection Check-off List

10.1 **PURPOSE.** To provide the procedures for authorization and control of shipboard work.

10.2 **WORK AUTHORIZATION.** Work on ship's systems and components, as defined in Volume I, Chapter 1, Appendix D of this manual, must be properly authorized and controlled in

order to ensure rigorous personnel and ship safety standards are met at all times. All outside activity work on ship's systems and components, regardless of who performs the work, requires formal authorization through a Work Authorization Form (WAF) for the specific work to be accomplished. This applies to all U.S. Naval ships in all types of maintenance availabilities, public and private. The Work Authorization System and preparation of the WAF are discussed Sections 10.3 and 10.4 of this chapter. For the purpose of this chapter, the term "Repair Activity" is any activity other than Ship's Force involved in the construction, testing, inspection, repair, overhaul, refueling or maintenance of the ship.

10.3 WORK AUTHORIZATION CONTROL. Work on the Fleet's ships is conducted under positive Work Authorization Control in order to ensure rigorous personnel and ship safety standards are met at all times. The following considerations apply in meeting these standards:

- a. Work requiring formal authorization may include Planned Maintenance System (PMS), troubleshooting, corrective maintenance (repair) or alterations. It may also include removal of system components for repairs.
- b. As many ship systems, such as hydraulics and high-pressure air, are operationally interrelated, caution must be exercised in planning work so that other systems are not unintentionally disabled when setting work boundaries for the system to be worked.

10.4 WORK AUTHORIZATION SYSTEM. Work Authorization must be controlled.

- a. Designation of Work Requiring Formal Control. The WAF is the vehicle by which work requiring formal control is authorized for accomplishment and tracked to completion or otherwise no longer requiring isolation or authorization.
- b. A WAF, shown in Appendix A, is required to authorize the start of work on all ship systems and equipment by activities other than Ship's Force. Work includes all maintenance, repairs or modifications and installation or removal of temporary support systems and equipment. Repair activity non-intrusive work (e.g., painting, lagging, sheet metal work, deck plate, structural foundation) that does not affect ship or personnel safety does not normally require a WAF.
- c. For Ship's Force maintenance conducted in nuclear propulsion plants, the Engineering Department Manual contains the requirements regarding when a WAF is needed. For Ship's Force work conducted outside the nuclear propulsion plant, the cognizant department head must determine the necessity for a WAF.
- d. For availabilities where a repair activity is assigned responsibilities for work authorization control by Memorandum of Agreement (MOA), the requirement regarding when Ship's Force must submit a WAF must be specified in the MOA.

10.4.1 Administration. The following administrative process is to be used in executing Work Authorization Control:

10.4.1.1 Work Authorization Form. The WAF, shown in Appendix A, must be filled out by the organization conducting the work, or Ship's Force, as determined by the MOA signed for the availability per Volume II, Part I, Chapters 3 and 4 of this manual.

10.4.1.2 Work Authorization Log. The Work Authorization Log(s) must be maintained at the same location and administered by the same individuals as the ship's tagout logs or, when the

repair activity is assigned responsibilities for work authorization control by MOA, the repair activity must retain original WAFs with a copy of all WAFs (or as specified by local MOA) and the WAF index must be provided to Ship's Force either by hard copy or electronically via a database that can be easily accessed by the Ship's Duty Officers.

NOTE: FOR SHIP'S FORCE GENERATED WAFS, THE SERIAL NUMBER MUST USE THE SAME PREFIXES USED FOR THE TAGOUTS THAT SET THE SYSTEM ISOLATION FOR THE WORK. WHEN A REPAIR ACTIVITY IS ASSIGNED RESPONSIBILITIES FOR WORK AUTHORIZATION CONTROL, THAT ACTIVITY WILL SPECIFY THE SERIALIZATION PROCESS USED BY ALL ACTIVITIES INCLUDING SHIP'S FORCE FOR THE AVAILABILITY.

10.4.1.3 Technical Work Document Record Sheet. When the job description on the WAF covers multiple components and their associated Technical Work Documents (TWD), a TWD Record Sheet (Appendix B) in addition to the WAF may be used to document this work.

10.4.1.4 Work Authorization Form Continuation and Revision Sheets. If necessary, a WAF Continuation Sheet similar to the one shown in Appendix C may be used when information on the initial original WAF will not fit in the blocks provided in the WAF form in Appendix A. The WAF Continuation Sheet shown in Appendix C depicts the minimum blocks that must be filled out. Additional blocks may be utilized as deemed appropriate. Any changes necessary to the information on the WAF form after Block 14 is signed will be on the WAF Revision Sheet or changes to the existing WAF as described in paragraph 10.4.4 of this chapter. Existing WAF Continuation Sheets may be used until exhausted if desired. The WAF Revision Sheet, similar to the one shown in Appendix C, may be used to accomplish WAF revisions as permitted by paragraph 10.4.4 of this chapter. The WAF Revision Sheet shown in Appendix C depicts the minimum blocks that must be filled out. Additional blocks may be utilized as deemed appropriate.

10.4.1.5 Numbering Work Authorization Form Continuation and Revision Sheets. Revisions and continuation sheets generated by computer software may be numbered as determined by the software programming. Paper WAF continuation and revision sheets are to be numbered using the conventions of sub-paragraphs "a" through "c" of this paragraph:

- a. The WAF (Appendix A) will be identified as "Sheet 1".
- b. Continuation sheets will be identified as "Sheet 1A, Sheet 1B", etc.
- c. Revision sheets will be identified as "Sheet 2, Sheet 3", etc.

10.4.2 Work Authorization Procedure. The following procedure is to be followed for properly authorizing work:

- a. The WAF is presented to the Watch or Duty Officer by the division or repair activity tasked with the work.
- b. (Submarines Only) For Safety of Ship items, as defined in paragraph 10.4.8 of this chapter and reference (a), the Watch or Duty Officer must obtain the Commanding Officer's permission prior to authorizing work. When assigned, the Repair Activity's Ship Safety Officer signature is required.

- c. The Watch or Duty Officer will then determine if adequate isolation and plant or system conditions exist to safely and properly conduct the work including that the system is drained, de-energized and depressurized. The tagout is then established per reference (b). The work is not to be authorized if doubt exists on either of these points. For high energy systems (i.e., >200°F, >1000 psi) that could have the potential for trapped energies, the repair activity after consulting with Ship's Force, may provide a written plan (i.e., valve lineup, procedure, marked up drawings) to Ship's Force to ensure all parties are satisfied the system is properly drained and depressurized.
- d. When system isolation and plant conditions are satisfactory to conduct the work (e.g., tagout complete, system depressurized, drained and de-energized), the Watch or Duty Officer authorizes the work and signs the WAF. For repair activity generated WAFs, the Repair Activity Representative (RAR) also signs the WAF. The Watch or Duty Officer and RAR signature indicates that, based on personal observation, certified records or direct report from watchstanders or divisional personnel, that system isolation and plant or ship conditions are set and the division or repair activity is authorized to start work.

NOTE: ELECTRICAL SAFETY CHECKS (E.G., VOLTAGE CHECKS TO ENSURE CIRCUITS ARE DE-ENERGIZED) ARE PART OF THE WORK PROCESS, NOT PART OF THE TAGOUT PROCESS, AND THEREFORE SHOULD BE PERFORMED AFTER BLOCK 14 OF THE WAF IS SIGNED.

- e. Some component contractor personnel who perform work on ships are not knowledgeable of ship systems and are not qualified to determine if plant or ship conditions are satisfactory to conduct work. For such cases, the contractor's signature will be based on a direct report or briefing they receive from Ship's Force or the Naval Supervisory Authority, unless another method of providing the information to the contractor is specified in a MOA. The contractor's signature represents confirmation that the contractor understands the hazards presented by the ship's systems on which he will be working, and that he or she has received assurances the work area has been appropriately isolated, depressurized, de-energized or drained. As an alternative, the contractor may specifically agree via their contract that all repair activity responsibilities as defined in this chapter will be assigned to the Naval Supervisory Authority per paragraph 10.4.5 of this chapter. In all cases, appropriate information should be provided to the contractor prior to initiating work to ensure the contractor understands the hazards involved. A Regional Maintenance Center representative must sign MOA(s) only after ensuring all civilian contractor requirements detailed in any MOA(s) are contained within the applicable contracts.
- f. The original WAF is placed in the Work Authorization Log and a copy must be maintained with the TWD until the work is completed.
- g. Once the work is completed, the WAF is signed by the repair activity as work complete and forwarded to Ship's Force for clearing of Tagout Record Sheet line items per reference (b).

- h. Following completion of testing (if there is no formal test program) and setting of appropriate system status (e.g., clear tags and perform valve line-ups as appropriate for the situation), the WAF is signed as closed and forwarded to the cognizant department head for review.

10.4.3 Transfer of Non-Nuclear Systems and Nuclear Instrumentation and Control Systems (Depot availabilities only). During depot availabilities, large amounts of work will be performed on ship's systems. Formal work control practices in place by a shipyard enable Ship's Force to transfer non-nuclear systems and Nuclear Instrumentation and Control systems to the shipyard. Transfer of systems is the process by which Ship's Force transfers the authority to approve all actions within a system or portion of a system to a shipyard and subsequent return of systems back to Ship's Force prior to major events. Systems, or portions of systems, are transferred with or without transferring the ability to operate ship's equipment. By transferring a system or portion of a system to the shipyard, the shipyard is responsible for authorizing all work, testing and equipment operation within the boundary transferred. Transfer of systems does not diminish a Commanding Officer's overall responsibility for the safety of personnel, equipment and the ship. Although other activities may perform work within the boundaries and Ship's Force normally retains responsibility for operating ship's equipment, all actions (i.e., work, testing, equipment operations, etc.) within the boundary must be approved by the shipyard.

- a. The MOA between the shipyard and ship for the availability must include the following minimum attributes regarding transfers:
 - (1) Clearly state that all actions performed within the boundary being transferred must be approved by the shipyard.
 - (2) Normally, Ship's Force retains responsibility for operating ship's equipment. If any transfers with operations are planned, the MOA must define the extent to which the shipyard will operate ship's equipment within the boundaries.
 - (3) Normally, Ship's Force retains responsibility for PMS, unless otherwise specified in the MOA.
 - (4) Delineate who is responsible to maintain system status within the boundary.
 - (5) Identify the process (e.g., Joint Fleet Maintenance Manual Volume IV, Chapter 10, paragraphs 10.2 through 10.4.5) by which work control must be administered, including interface between the shipyard, Ship's Force and other applicable activities.
- b. A WAF must be used to transfer a system or portion of a system to the shipyard. Block 7 of the WAF must clearly state this intent (i.e., specify "transfer" or "transfer including operations"). Ship's Force formally transfers a system or portion of a system to the shipyard by signing Block 14 of the WAF. Unless Block 7 of the WAF states the transfer is "including operations", the shipyard is not authorized to operate ship's equipment within the transferred boundary.
- c. The shipyard returns a system or portion of a system back to Ship's Force by completing all authorized work and testing specified on the WAF and signing Blocks 16, 17 and 18 of the WAF. Ship's Force indicates acceptance of the work and testing and, if applicable, operation by signing Block 18 of the WAF. For nuclear powered

ships, the Engineering Department Manual contains requirements for accepting operational control from the shipyard.

- d. When the shipyard is responsible for operating ship's equipment as specified in the transfer MOA, operation of ship's equipment must be following shipyard or Naval Sea Systems Command (NAVSEA) procedures (e.g., test procedures, ship's operating instructions, Steam and Electric Plant Manual, etc.).
- e. When waterborne, Ship's Force must retain operation of hull and back-up valves.
- f. When portions of a system are required to be operational to support propulsion plant key events per NAVSEA Instruction 4730.1 and 4730.2 series, those portions of the system must be transferred back to Ship's Force.
- g. Ship's Force must have the capability to isolate the transferred area from components and systems under Ship's Force control. The valves, switches, breakers, fuses, blanks, etc., that provide this capability must remain under Ship's Force control.
- h. Any ship system which could directly affect the reactor plant or conduct of reactor plant testing must not be transferred to a shipyard until required nuclear temporary support systems are installed and the system is isolated from the reactor plant.
- i. Within the boundaries transferred to the shipyard, Ship's Force must be notified prior to commencing testing and when testing is interrupted and completed.
- j. All transfers on submarines must be consistent with ship's safety requirements and reference (a).
- k. In order to minimize subsequent changes to the WAF and ensure that Ship's Force is aware of the work scope, the WAF which transfers systems or portions of systems should include all known customer authorized work within the specified job description.
- l. This authority applies to all work performed by or sub-contracted by the shipyard.
- m. Within the boundaries approved by the WAF, the shipyard can add additional work to the WAF without Ship's Force approval by adding additional TWDs to a TWD Record Sheet (Appendix B) provided the additional work is within the original description of work and tagout boundaries (i.e., no additional tags are required). This method is applicable only when two independent reviews of the additional work by the shipyard confirms that the existing WAF and its associated tagout(s) provide adequate isolation and conditions for the work (see paragraph 10.4.5 of this chapter). TWDs (Task Group Instructions (TGI), Deficiency Logs, Deficiency Reports, etc.) that meet this criteria and require work control per paragraph 10.3 of this chapter will be added to the TWD Record Sheet. To ensure Ship's Force remains informed of all work being performed on ship's systems, the shipyard must verbally notify Ship's Force at the time work is added to the TWD Record Sheet and subsequently provide a hard copy of the changed TWD Record Sheet if it cannot be printed by the Ship's Duty Officer from an electronic database. Work added to the TWD Record Sheet does not need to be added to the associated Tagout Record Sheet.

- n. When other activities perform work and testing within boundaries transferred to a shipyard and the shipyard is acting as their RAR, the shipyard may add the other repair activity's work to the TWD Record Sheet. Otherwise, a separate WAF must be generated and a new line item must be added to the existing Tagout Record Sheet.
- o. Ship's Force performing work, testing or equipment operations within boundaries transferred to a shipyard must prepare a separate WAF processed as described in paragraph 10.4.2 of this chapter, add a new line item to the existing Tagout Record Sheet and obtain shipyard concurrence in Block 12 of the WAF. RAR signature is not required on the Tagout Record Sheet.
- p. For small depot availabilities (e.g., conventional surface ship availabilities less than six months in duration, submarine Selected Restricted Availabilities and Extended Refit Periods, Aircraft Carrier upkeeps), the provisions of this paragraph may be applied on a case basis where the amount of work on a system is extensive and warrants transferring a portion of a system. These exceptions require Type Commander approval.

10.4.4 Work Authorization Form Revisions. Changes to the scope of the existing job description or system transfer boundary must be authorized by a formal revision to the existing WAF. Except as noted for minor administrative changes, changes to conditions (i.e., Blocks 7, 8, 11, 13 or 14) established by an authorized WAF, including the associated tagout(s), also require a formal revision to the existing WAF. A formal revision to a WAF can be accomplished by either preparing a new WAF with the same number or revising the existing WAF.

- a. Prepare a new WAF. A new WAF with the same number will be used primarily for major changes to Block 7, Job Description or other major changes which warrant reverification of all aspects of the work authorization.
 - (1) A new WAF with the same number will be generated with changes included.
 - (2) In Block 9, enter revision (REV A, REV B, REV C, etc.) the reason for, and description of the change.
 - (3) Authorize the new WAF per the requirements of this chapter.
 - (4) Mark superseded WAF(s) "SUPERSEDED" and retain with the new WAF.
- b. Revise Existing WAF. The revised existing WAF will be used primarily for tag shifts or other minor changes.
 - (1) Enter all required changes. Include initials, date and revision with each entry.
 - (2) Line-out all changed or invalidated information. Include initials, date and revision with each line-out.
 - (3) Remake all affected signatures.
 - (4) In Block 9, enter reason for and description of the change. Sign and date the entry.
 - (5) Obtain authorization including verification of "Plant or Ship Conditions Set" by resigning Blocks 13 and 14 of the WAF.
- c. Revise existing WAF using the WAF Revision Sheet.

- (1) Fill in the information required by the WAF Revision Sheet, including the revision (REV A, REV B, REV C, etc.). Add additional blocks as deemed appropriate.
 - (2) Enter the reason for and description of the change. Sign and date the entry.
 - (3) Obtain all required signatures.
 - (4) Once the WAF Revision Sheet has been completed, it must be maintained with the original WAF in the WAF log.
- d. Minor Administrative Changes to Existing WAFs. The Watch or Duty Officer or the RAR may make pen and ink changes that are editorial or administrative in nature to the original WAF without processing a new or revised WAF. These changes must not affect the scope or sequence of shipboard work, and include items such as obvious typographical errors, erroneous job order numbers or spelling errors. Either the Watch or Duty Officer or Repair Activity may make these changes on the original WAF without resigning Blocks 13 and 14. The changes must be initialed and dated by the person entering the changes.
- e. Iterative Tagouts. When using the reference (b) Iterative Tagout procedure, a revision to the WAF is not required provided the specific tests or maintenance evolutions are controlled by a formal process. This process is to be defined and concurred with by a MOA established between Ship's Force and the Lead Maintenance Activity. The process must ensure that isolation is re-established and system conditions verified prior to recommencing work.

10.4.5 Centralized Work Control Procedures. It is the responsibility of the Lead Maintenance Activity to determine the need for centralized work control and to assign the responsibility for work authorization control. During depot availabilities, a centralized work control team will be established. For other availabilities, this decision is based on the number of repair activities performing work during the availability and the complexity of the work. When centralized work control procedures are invoked, the following process must be used:

- a. Work by all repair activities is processed by the centralized work control team including work covered by paragraph 10.4.3 of this chapter. Ship's Force involvement will be defined by MOA.
- b. The Lead Maintenance Activity will specify participation and supervision of the centralized work control team by MOA. Ship's Force is an integral part of the centralized work control team and should man the team with experienced officers or senior petty officers.
- c. The repair activity performing the work must prepare the WAF, sign as RAR on the Tagout Record Sheet and sign the WAF blocks 10, 14, 16 and 17 if applicable, unless specified otherwise by MOA (e.g., repair activity does not maintain qualified personnel). The Lead Maintenance Activity assigned responsibility for centralized work control is responsible for processing the WAF and signing all other repair activity blocks on the WAF.
- d. For work covered by paragraph 10.4.3 of this chapter, the Ship's Force member(s) of the centralized work control team would notify the responsible Division or Work

Center Supervisor and Duty Officer of added work to a TWD Record Sheet to ensure that Ship's Force remains informed of all work being performed on ship's systems.

10.4.6 Equipment Tagout Procedures. Tagouts must be accomplished per the requirements of reference (b).

10.4.7 Barrier Criteria.

- a. Barrier criteria for maintenance is located in reference (b) and applicable Reactor Plant and Steam and Electric Plant manuals.

NOTE: BARRIER CRITERIA REQUIRED BY REACTOR PLANT AND STEAM AND ELECTRIC PLANT MANUALS HAVE PRECEDENCE OVER REFERENCE (b) CRITERIA.

- b. (Submarines only) Specific guidance for hull penetrations is located in Appendix D.

10.4.8 Safety of Ship Maintenance Item Identification, Listing and Control (Submarines only).

- a. Safety of Ship Maintenance Item List (SOSMIL). Safety of Ship maintenance items are those evolutions having significant potential to impact the ship's watertight integrity, damage control capability or which require special attention to ensure ship safety.

NOTE: DESIGNATION OF SAFETY OF SHIP MAINTENANCE ITEMS FOR BOTH SHIP'S FORCE AND ANY OUTSIDE ORGANIZATION IS REQUIRED WHEN FLEET MAINTENANCE ACTIVITY (FMA), INDUSTRIAL ACTIVITIES AND CONTRACTOR PRODUCTION WORK IS IN PROGRESS. REQUIREMENTS OF PARAGRAPH 10.4.8 OF THIS CHAPTER OR A SHIP'S PLAN OF THE DAY, IF REFERENCE (a) IS IN EFFECT, WILL BE IMPLEMENTED ANY TIME WORK AFFECTING SAFETY OF SHIP ITEMS IS PERFORMED REGARDLESS OF AVAILABILITY STATUS.

- b. Safety of Ship Maintenance Items. The ship's Commanding Officer's permission is required prior to authorizing the maintenance evolution. The following, as a minimum, must be scheduled on the SOSMIL:
 - (1) All maintenance involving single closure isolation from sea.
 - (2) All maintenance which removes a means of blowing main ballast tanks.
 - (3) All maintenance requiring the use of flat patches, hull blanks or cofferdams, with specific entries identifying the actual installation and removal of these items.
 - (4) All maintenance which removes the capability to dewater the ship using either the trim or the main drain systems.
 - (5) All maintenance which removes the ship's installed firefighting capability (e.g., maintenance which prevents pressurization of the trim system).
 - (6) Bleeding or charging oxygen banks.
 - (7) Handling or loading of explosives or weapons.

- (8) All maintenance which removes portions of, or the entire Emergency Air Breathing system.
- (9) Fueling or defueling.
- (10) Diver operations.
- (11) Pumping or flooding the sonar dome.
- (12) Battery charges (all battery charges on submarines equipped on with an ASB-49 Main Storage Battery and during procedures that may reach or exceed 2.45 volts per cell on submarines equipped with a Submarine Valve Regulated Lead Acid Main Storage Battery).
- (13) Nitrogen load.
- (14) Refrigerant on or off load.
- (15) Evolutions with an expected draft change of >3 inches (e.g., ballasting, lead load, etc.).
- (16) Securing the Emergency Diesel Generator.
- (17) Other maintenance or evolutions which require special coordination between Ship's Force and maintenance providers to ensure safe accomplishment of authorized work (e.g., Loading Vertical Launch System Platform).
- (18) All maintenance that violates the integrity of the pressure hull, watertight bulkhead or watertight doors, excluding the routine operations of access hatches.
- (19) All maintenance that disables any bilge alarm or any portion of an emergency announcing circuit when temporary alarms or indications are not installed.
- (20) All maintenance that secures normal or emergency lighting circuits in a compartment or space such that damage control response would be significantly impacted.

NOTE: USE OF TEMPORARY SYSTEMS TO REPLACE FUNCTIONS OF SHIP'S INSTALLED SYSTEMS SHOULD BE CONSIDERED WHEN DEEMED NECESSARY. CLASS SUBMARINE ORGANIZATION AND REGULATIONS MANUALS AND SHIP SYSTEM MANUALS MAY PROVIDE FURTHER GUIDANCE.

- c. SOSMIL Preparation. The SOSMIL will be prepared by a person designated by the ship's Commanding Officer using written input provided by Ship's Force divisions and the FMA representative. A new SOSMIL will be prepared prior to the FMA Daily Production Meeting of Volume II, Part I, Chapter 4, paragraph 4.4.11 of this manual. Appendix E of this chapter is provided as an example and depicts the minimum attributes that must be documented on the SOSMIL. Appendix F of this chapter may be reproduced locally for use. The requirements to prepare the SOSMIL are:

- (1) Indicate ship's name, hull number, upkeep number, calculated maximum expected draft, actual morning draft and date prepared.

- (2) For each job, list the Job Control Number or WAF number (as applicable) (operating instruction, PMS item, operating procedure), job description, scheduled end date and any remarks.
 - (3) The SOSMIL should indicate planned work for the next seven days. A thick black line must be used on the left side of the current day to indicate the current days' work.
 - (4) In the job description block, indicate in parentheses a number that corresponds to the list at the bottom of the sheet as to why the job requires a SOSMIL entry.
 - (5) Items must remain listed on the SOSMIL until work has been verified complete and associated WAF has been completed or Block 11 of the WAF revised as no longer affects Safety of Ship.
- d. Maximum Expected Draft. For those items which will have an effect on ship's draft, expected draft changes greater than three (3) inches will be calculated fore and aft for that evolution and indicated in the remarks section. Draft calculations will be made by a Diving Officer of the Watch qualified individual. Additionally, for all ballasting evolutions, a second independent calculation will be performed and provided by a second Diving Officer of the Watch qualified individual. The worst-case draft change for each item will be totaled to arrive at a "maximum draft" and a maximum one foot buffer added to arrive at the "maximum expected draft". (The ship's Commanding Officer can decide to reduce the buffer as he desires. If Safety Draft Marks are in use, the bottom edge of the mark must match the "maximum expected draft".) The "maximum expected draft" is listed at the top of the SOSMIL. Calculation sheets will be retained until the job is no longer carried on the SOSMIL. If the ship exceeds the "maximum expected draft", the Duty Officer will stop the evolution, place the ship in a safe condition and notify all parties who signed the SOSMIL and the ship's Commanding Officer.

NOTE: THIS MUST IN NO WAY BE CONSTRUED AS LIMITING ACTIONS BY THE DUTY OFFICER OR NOTIFICATION OF THE SHIP'S COMMANDING OFFICER OF SMALLER DRAFT CHANGES. ANY UNEXPECTED DRAFT CHANGE SHOULD BE THOROUGHLY INVESTIGATED AND UNDERSTOOD.

- e. Morning Actual Draft. The actual ship's draft recorded each morning prior to the Daily Production Meeting. This draft will serve as a baseline value for draft changes that occur throughout the day.
- f. The Ship's Force Availability Coordinator will present the SOSMIL at the FMA daily production meeting for review and signatures. The SOSMIL will be signed by:
 - (1) Ship's Force (signed by a department head). Signature indicates that all evolutions that affect ballast have been identified, the form has been completed per this instruction and the correct drafts have been calculated and at least four feet of freeboard is available to all hull openings.

- (2) Immediate Superior In Command (ISIC) (signed by an ISIC representative). Signature indicates that all maintenance has been identified, the form has been completed per this instruction and the draft measurements are noted.
 - (3) Maintenance Organization (signed by appropriate senior level person of the repair activity, normally the Production Officer, as he leads the FMA Daily Production Meeting). Signature indicates all authorized Safety of Ship work items are listed. If any additional items are to be worked, a formal change to the SOSMIL will be required.
- g. Following review and signature, the Ship's Force Availability Coordinator will provide the original copy to the ship's Duty Officer. Reproduced copies for distribution must be made from the "original document" only. Copies will be provided to:
- (1) Each Production Meeting attendee listed:
 - (a) FMA Division Officers
 - (b) FMA Repair Duty Officer or Repair Duty Chief Petty Officer
 - (c) FMA Regional Maintenance Team Leader. He or she must receive enough copies to make further distribution to the FMA Duty Officers and each FMA Division Officer having work listed on the SOSMIL.
 - (d) Supply Repair Other Vessel Officer
 - (e) Ship's Force Availability Coordinator
 - (f) ISIC Material or Squadron Representative
 - (g) FMA Availability Coordinator
 - (2) The ship's Engineering Duty Officer.
 - (3) The ship's Below Decks Watch.
 - (4) The ship's Petty Officer of the Deck.
 - (5) Naval Submarine Support Center Representative.
- h. SOSMIL Use and Pre-Job Briefs. None of the evolutions or maintenance specified in paragraph 10.4.8.b of this chapter must commence unless it is scheduled on the current SOSMIL. The activity performing any maintenance or evolutions listed on the SOSMIL is responsible for a pre-job brief prior to commencing work. A pre-job brief is required for all items listed on the SOSMIL and will be attended by all parties involved as desired by the Ship's Duty Officer.

10.4.9 Ship in Dry Dock (Submarines Under Joint Fleet Maintenance Manual Controls).

- a. When the ship is in dry dock, Chapter 0872 of Navy Regulations requires the closing of all valves and other openings in the ship at the end of working hours when such closing is practical. In situations where there is extensive disruption of watertight integrity, making daily closing impracticable, it is prudent to protect the dry dock, rather than the ship, from inadvertent flooding. To this end, shipyards must maintain dry docks per reference (c).

- b. Temporary fluid systems must be considered a controlled constant fluid supply provided the following conditions exist:
 - (1) The temporary fluid supply contains two in-line isolation valves external to the ship between the source and the ship.
 - (2) The two isolation valves must be located to facilitate rapid isolation (e.g., close to the ship).
 - (3) The temporary fluid system, including both off hull isolations, must be formally transferred to, including operation of, Ship's Force.
 - (4) The supplied ship system must be tested to the temporary system operating pressure.
- c. Dry dock simulated waterborne conditions exist when water is introduced to the dry dock and kept at a level below that necessary to lift the vessel off the blocks. During this condition, the following minimum requirements must apply:
 - (1) The event must be authorized on the SOSMIL, contained in section 10.4.8 of this chapter (Submarines only).
 - (2) Hull openings must be maintained per reference (a).
 - (3) Seawater valves should normally be operated using ship's systems. A temporary system may be used to operate seawater valves after obtaining Commanding Officer's permission.
 - (4) Ship's dewatering capability meets the requirements of references (d) through (f).
- d. Dewatering capability. Each compartment must be capable of being dewatered at a rate of at least 200 GPM with pumping started within three minutes of the flooding being called away. Ship's Force will demonstrate adequate dewatering capability by planning and scheduling flooding drills to be observed by the ISIC and Lead Maintenance Activity Representative at the following times:
 - (1) Within seven days of docking and temporary systems being delivered.
 - (2) Just prior to undocking, normally within 30 days.

10.5 FINAL CERTIFICATION, CLOSEOUT AND RE-ENTRY OF SUBMARINE SPACES, TANKS AND VOIDS.

10.5.1 Purpose. To establish procedures for the final certification, closeout and re-entry of submarine spaces, tanks and voids.

10.5.2 Discussion. Historically during space, tank or void closeout, a large number of diverse and inconspicuous items have been overlooked. These items have, at times, seriously degraded both material readiness and acoustic signature of submarines. This section establishes a procedure to ensure a thorough certification of all spaces prior to final closeout and provides a check-off list when re-entry is required. The check-off list or sheet is not all-inclusive. Common sense and effective use of personnel experience and knowledge must be used to ensure complete and thorough inspections. A review of references (g), (h) and (i) should be performed to determine if a formal report of unscheduled visual inspection is required to be submitted for tank

and voids being entered or closed. Non-steel damping and acoustic restraining covers are not required to be painted. Accidental overspray is acceptable. Full paint out of damping restraining covers and acoustic tile covers is not the intent. If damping and acoustic tiles are painted, they must be checked to ensure that the paint will not bridge the gap between the rubber and the restraining cover more than 75% over an area. Degradation of the performance of tiles is possible. A suggested way to repair the area is to score the gap between the restraining cover and the damping tile and between the acoustic tile covers and the rubber. Previously painted serviceable tiles may remain in service. Reference (g) allows paint on piping.

NOTE APPENDIX G MAY BE USED AS AN AID FOR ENTERING SUBMARINE SPACES, TANKS AND VOIDS.

10.5.3 Action.

- a. The Damage Control Assistant (DCA) is designated the coordinator for the closeout of all spaces. As such, he is responsible for the following:
 - (1) Assigning responsible personnel to closeout or assist in closing out specific spaces, tanks and voids.
 - (2) Providing personnel designated to conduct tank, void, or space closeouts with a copy of Appendices G or H as applicable.
 - (3) Ensuring personnel performing closeouts are aware of their responsibilities and are adequately trained. He must provide, by periodic notice, a list of personnel qualified to perform closeout inspections.
 - (4) Maintaining a folder for completed copies of Appendix H. This folder will serve as a space, tank and void closeout certification record. Only the most recent copies of these Appendices are required to be retained. This folder should also include an index of all spaces, tanks and voids applicable to closeout certification and their status.
 - (5) Keeping the Commanding Officer and the Engineer Officer informed as to the status of closeouts and significant deficiencies noted.
- b. Personnel performing tank, void and space closeout or entry are responsible for:
 - (1) Obtaining a copy of Appendix G and Appendix H.
 - (2) Forwarding to the DCA completed copies of Appendix H.

NOTE A REVIEW OF REFERENCES (G), (H) AND (I) SHOULD BE PERFORMED TO DETERMINE IF A FORMAL REPORT OF UNSCHEDULED VISUAL INSPECTION IS REQUIRED TO BE SUBMITTED FOR TANKS AND VOIDS BEING ENTERED OR CLOSED.

- c. Responsibility for Re-Entry Controls (REC) and final certification are:
 - (1) In cases where entry is required to be made for production work by both Ship's Force and FMA personnel, the FMA will be responsible for REC and Ship's Force will be responsible for final certification closeout.
 - (2) For cases where only FMA work is anticipated, the FMA will be responsible for REC and Ship's Force will be responsible for final certification closeout.

For the cases in which only the maintenance activity has access (e.g., waterborne entry into mud tanks or ballast tanks by divers) the maintenance activity will be responsible for final certification closeout.

- (3) For cases where only Ship's Force work is anticipated, Ship's Force will be responsible for REC and final certification closeout.

10.5.4 Applicability. All SSN, SSBN and SSGN Class submarines and FMAs.

15 Jan 2021

☐ CHECK IF CONTINUED ON ANOTHER SHEET

Sheet _____

INSTRUCTIONS FOR COMPLETING WORK AUTHORIZATION FORM

Block 1. USS: Enter name or the hull number.

Block 2. SYSTEM: Enter the system noun name, abbreviation or identification number.

Block 3. WAF NO.: Enter the WAF serial number.

Block 4. JSN: Enter the Job Sequence Number or job order.

Block 5. DIVISION, Lead Work Center (LWC) or REPAIR ACTIVITY (RA): Enter ship's Division, LWC or repair activity Point of Contact responsible for conducting the maintenance.

Block 6. TECHNICAL WORK DOCUMENT: Enter the TWD (e.g., Controlled Work Package (CWP) or Formal Work Package (FWP), Task Group Instruction (TGI)) number(s) or enter "see attached TWD Record Sheet". If a TWD Record Sheet is used, it must be referenced in Block 6.

Block 7. JOB DESCRIPTION: Enter a description of work to be performed detailed enough for the Authorizing Officer or RAR to understand the scope of the work boundary and prepare or concur in the isolation established for this work. If necessary, use of an additional Continuation Sheet per Appendix C is authorized. Description of work can contain either a description of work boundaries or a description of components (see paragraph 10.4.3a of this chapter).

Block 8. POST WORK TESTING IS AS SPECIFIED: Check BELOW and identify test requirements when retest is not contained in a TWD or formal test program. Check FORMAL TEST PROGRAM if retesting will be tracked or completed in a program administered by the repair activity. If FORMAL TEST PROGRAM or NO TEST REQUIRED is checked, Block 17 is N/A.

Block 9. RESTRICTIONS, PRECAUTIONS AND REMARKS (OPENING): Enter any restrictions or precautions associated with the work item. If any information is entered in this block, the person making the entry must enter name, organization and date. If necessary, use of an additional Continuation Sheet per Appendix C is authorized.

Block 10. DIVISION OR REPAIR ACTIVITY READY TO COMMENCE WORK: Signature by Leading Petty Officer or Division Officer for Ship's Force work or repair activity indicates that sufficient prerequisites are met to commence isolation for production work.

NOTE: SHIPYARDS IMPLEMENTING SAFETY OF SHIP REQUIREMENTS FOR SURFACE FORCE SHIPS PER LOCAL MOAS MAY MODIFY AND USE BLOCK 11 TO DOCUMENT SHIP SAFETY DETERMINATIONS.

Block 11. SAFETY OF SHIP: For submarines, when required by paragraph 10.4.8 of this chapter or reference (a), check YES.

- (1) If the SPOD is used, the Repair Activity's Ships Safety Officer will sign concurrence.
- (2) If the SOSMIL is used, the qualified Watch or Duty Officer will verify that work is listed on the SOSMIL for that day and sign the block. NON-SAFETY OF SHIP WORK CONTROLS. Check NO. When safety of ship qualified RA or Ship's Force work control personnel process their respective WAFs, they may sign concurrence for non-safety of ship maintenance.

Block 12. **CONCURRENCES:** Concurrence signatures may be entered as necessary (e.g., nuclear or non-nuclear interface, assist work center(s), two cognizant department heads). The Authorizing Officer or RAR should define any needed concurrences by noting the concurring organization beneath the signature line in Block 12 and obtain the concurrences. Enter N/A if no concurrences are required.

Block 13. **TAGOUT REQUIRED:** If tagout is required, mark YES. When tagout is hung, enter tagout number(s) (Log Serial Number or Shift Operations Management System line item number) and Watch or Duty Officer will sign block. If no tagout is required, mark NO. Enter N/A in TAGOUT NO., and Watch or Duty Officer will sign block.

Block 14. **PLANT OR SHIP CONDITIONS** (e.g., drained, de-pressurized, de-energized, restrained) **SET, FMA, DIVISION OR REPAIR ACTIVITY ARE AUTHORIZED TO START WORK:** The Watch or Duty Officer signs in all cases for authorizing the start of all work. Note any restrictions, precautions, or both, in Block 9. If Block 11 is checked YES, the Watch or Duty Officer must ensure the work of the WAF is listed on the SOSMIL or Ship's Plan of the Day prior to authorization of the WAF. RAR signs for authorizing the start of work when the WAF is for repair activity work.

Block 15. **RESTRICTIONS, PRECAUTIONS OR REMARKS:** Enter any general conditions (e.g., outstanding work) that may affect system restoration. If any information is entered in this block, the person making the entry must enter name, organization and date. If necessary, use of an additional Continuation Sheet per Appendix C is authorized.

Block 16. **WORK IS COMPLETE:** A signature by Ship's Force or the repair activity is entered when the work described in Block 7 is verified complete and tags may be cleared with any exceptions listed in Block 15.

Block 17. **TESTING IS COMPLETE:** A signature by the activity performing the retest is entered when testing of Block 8 is completed. Block 17 is marked N/A if Formal Test Program is in effect or no test required.

Block 18. **WAF CLOSED OUT:** When work specified in Block 7 and testing as specified in Block 8 is completed, including all exceptions listed in Block 15, repair activity signature is entered to indicate the WAF is closed out. Ship's Force signature indicates acceptance of the work and testing and that appropriate system status has been set (e.g., clear tags and perform valve lineups as appropriate for the situation). Block 18 may be signed prior to completion of testing covered by a formal test program. A copy of the closed out WAF must be provided to Ship's Force if the repair activity is maintaining the original WAF.

APPENDIX B

TECHNICAL WORK DOCUMENT RECORD SHEET

[illegible]

☐ CHECK BOX IF CONTINUED ON ADDITIONAL SHEET PAGE _____

TECHNICAL WORK DOCUMENT RECORD SHEET COMPLETION INSTRUCTIONS

NOTE: THE ACTIVITY USING THE TWD RECORD SHEET MUST FILL IN ALL BLOCKS.

<u>BLOCK</u>	<u>INFORMATION REQUIRED</u>
SYSTEM OR COMPONENT	Enter system or component.
WAF SERIAL NO.	Enter WAF serial number.
TWD LINE ITEM NO.	Enter next sequential number (1, 2, 3, etc.).
TWD (TGI, DEFICIENCY LOG, DEFICIENCY REPORT, CWP, FWP)	Enter TWD (e.g., TGI, Deficiency Log, Deficiency Report or other unique document identification.)
BRIEF DESCRIPTION	Enter brief description.
1 ST CHECK	Initials of 1 st person who reviews and ensures the line item is within the WAF work description and tagout boundaries. (NOTES 1 and 2)
2 ND CHECK AND AUTHORIZATION	Initials of 2 nd person (independent from 1 st) who reviews and ensures work is within the WAF work description, tagout boundaries, that the WAF is in an authorized status and authorizes the line item. (NOTES 1 and 2)
DATE AUTH	Date line item was authorized. (NOTE 1)
STATUS	
LINE ITEM BLOCK (C/T/X)	Status of line item.
(INI) & DATE	Initials and date of person that verifies a line item is complete, transferred to another WAF or canceled.
REMARKS	Write any pertinent information (may be left blank).

NOTE 1: 1st and 2nd checks of TWD Record Sheet will be based on a review of the issued TWD. All TWDs not reviewed (i.e., left blank) at time of WAF authorization are not authorized until reviews are completed.

NOTE 2: Activities which choose to use the TWD Record Sheet must track and status only the TWDs approved and executed by their activity.

☐ CHECK IF CONTINUED ON ANOTHER SHEET

Sheet _____

APPENDIX D**BARRIER CRITERIA FOR HULL PENETRATIONS**

1. SYSTEMS WHICH PENETRATE THE HULL. Commanding Officers will review tag-outs and work procedures for systems which penetrate the hull to the detail considered necessary for safety. Any required work or testing which violates the requirements of this appendix should not commence without prior specific approval of the Commanding Officer.

2. HULL PENETRATIONS BELOW THE WATERLINE. The principle of double closure applies to all hull penetrations except for those mechanical and electrical penetrations (such as the secondary propulsion motor shaft and cable penetrations) which are designed for single closure. Double closure is accomplished by using installed valves, blank flanges, outside closure plates, shaft seal inflatable boots, or shaft seals. Positive control must be exercised by Ship's Force to maintain closure through the use of danger tags and interlocks, gagging devices, chains, mechanical locks, hydraulic locks, blanks etc., until the work, including the required testing, on the associated system has been completed.

- a. Single closure can be used only with the specific permission of the Commanding Officer. If single closure is approved, the barrier must be verified by a satisfactory leak check of the single closure before opening the system for maintenance as listed in sub-paragraphs (1) through (3):
 - (1) The system should be isolated using the single closure barrier.
 - (2) If the system has not been drained, open the closest system high-point vent to conduct a controlled leak check of the single closure.
 - (3) If the system has been drained, open the closest low-point drain to conduct a controlled leak check of the single closure.
- b. Prior to undocking:
 - (1) If undocking becomes necessary prior to completing all sea connected system maintenance and testing, obtain double closure through reassembly, then satisfactorily hydrostatic test all pressure boundary joints outboard of the backup valve seat and verify the integrity of the hull and backup valve seats by performing a hydrostatic seat leakage check of both valves.
 - (2) Where schedule, resources or other constraints prevent accomplishment of the requirements of sub-paragraph b(2) at the time of undocking, a blank flange(s) must be installed, tested and identified external to the hull penetration to provide double closure. This condition must be identified both internally and externally to prevent inadvertent removal. The installation of the blank flange must be approved by the Commanding Officer. Removal of these blank flange(s) must not commence until the required valve(s) and associated local Valve Position Indicator(s) have been reinstalled and tested to support removal of the blank and blank removal has been approved by the Commanding Officer.

3. HULL PENETRATIONS ABOVE THE WATERLINE. These penetrations or openings will also be protected by double closure or as listed in sub-paragraphs "a" and "b":

NOTE: THE DETERMINATION OF LESS THAN OR GREATER THAN FOUR FEET FROM THE WATERLINE WILL BE DETERMINED BY A MEASUREMENT FROM THE LOWEST LIP OF OPENINGS IN A PENETRATION TO THE ACTUAL WATERLINE.

- a. Hull penetrations less than four feet above the waterline.
 - (1) Cofferdams must be installed around all open hull access openings, including temporary hull cuts, which have less than four feet of freeboard at the opening. Cofferdams must be constructed and tested per reference (a) to maintain watertight integrity to at least four feet above the waterline. A hull opening such as an electrical cable penetration need not have a cofferdam installed if it is adequately blanked or plugged while the system is under repair. Cofferdams will be designed to permit personnel access, temporary services and equipment shipping, as applicable, without violating the required watertight integrity. The ship's topside freeflood structure may be used to achieve the four-foot requirement, however, the opening must be controlled in the same manner as a cofferdam. Positive control to maintain closure through the use of danger tags, and gagging devices, mechanical locks or blanks must be exercised for all hull access openings not in an as-built condition. Removal or changes in status must be approved by the Commanding Officer.
 - (2) Other penetrations or openings which do not meet this criteria or which cannot be isolated by some type of single closure will be attended at all times by personnel with access to equipment capable of securing flooding, should it ever occur. Exceptions require specific permission of the Commanding Officer. Single closure may be affected by any suitable temporary watertight closure.
- b. Hull penetrations greater than four feet above the waterline. Penetrations or openings not in their normal as-built condition are not required to be watertight but should be provided with protection against unwanted fluid entry.

4. INADVERTENT OPERATION OF HYDRAULIC ACTUATORS. For those conditions when the ship is waterborne with a hull or backup valve below the waterline installed but the associated inboard piping is not complete and the hull or backup valve hydraulic actuator lines are disconnected, the following guidance is provided for reconnecting the hydraulic actuators (which may cause valve movement):

- a. If an external blank flange is installed, any additional precautions should be determined by the Commanding Officer.
- b. If an external blank flange is not installed, then the hull and backup valves should be installed, hydrostatically tested and local valve position indication proven correct and reliable. Additional safety precautions such as not working the actuators for a particular hull and backup combination concurrently, shutting and danger tagging both valves at all times, isolating and danger tagging the hydraulic pressure source to the control valve for the specific actuator being worked and not pressurizing or operationally testing the actuators until the seawater system integrity has been

reestablished, should be employed to provide the additional assurance required to preclude the need for an external blank.

5. INSTALLATION OF HULL FITTINGS OR FLANGES. When maintenance is to be performed which requires a hull fitting or flange to be installed, the following actions will be taken:

- a. Ship's Force will identify the hull opening by noun name, docking plan number, frame number, side and distance off centerline and item number (as obtained from the ship's docking plan) and provide this information to the FMA.
- b. The FMA planning division will verify the data provided by Ship's Force and calculate the circumferential distance from the centerline.
- c. The FMA LWC will provide the verified data and the fitting or flange, including the required installation hardware, to the diving supervisor.
- d. Ship's Force must mark the fitting location using a weighted and marked line, referenced from frame marks topside.
- e. The Ship's Duty Officer must authorize the installation of the fitting or flange and coordinate the pre-brief for the installation evolution. As a minimum, the brief must be attended by the Ship's Duty Officer, LWC Supervisor and Diving Supervisor. The mechanism for authorizing the hull blank installation must be the Work Authorization Form (Appendix A), per this chapter.
- f. The divers, in conjunction with Ship's Force and the LWC Supervisor must verify the location of the hull opening and weighted or marked line prior to the divers entering the water.
- g. A diver accompanied by Ship's Force must tap on the internal hull opening until the in-water diver acknowledges the location by returning the signal except where permanent markings identifiable by a diver uniquely identify a specific hull fitting or penetration (markings such as a fitting name or number welded as raised characters on or adjacent to the fitting or penetration).
- h. After installation, the hull fitting or flange location and installation must be independently verified by a second diver.
- i. Divers, assisted by the LWC and Ship's Force, must verify the hull fitting or flange integrity with a 100-psig air test.
- j. Divers and the LWC Supervisor must mark the hull fitting or flange by attaching a tether from the fitting or flange to topside. At the topside attachment point, the tether must be labeled "Hull Fitting (Noun Name) Installed".
- k. Positive verification from inboard of the hull fitting or flange placement and integrity must be achieved for each installed fitting or flange prior to proceeding with any maintenance. The verification must be accomplished using the method for testing a single closure described in paragraph 2.a of this Appendix. If either of the leak check methods of paragraphs 2.a.(2) or (3) of this Appendix are not possible, the Commanding Officer must be notified and give specific permission for continuing or conducting the maintenance.

- l. If internal verification of hull fitting or flange integrity is not possible due to system configuration, the fasteners must not be fully removed from the pressure boundary being disassembled until the system is fully drained and hull fitting or flange integrity has been verified.
- m. If a hull fitting or flange is left installed for system or at sea operations, the guidance of Volume V, Part I, Chapter 8 of this manual concerning Departure From Specification must be followed.

6. REMOVAL OF HULL FITTINGS OR FLANGES. Prior to removal, divers, in conjunction with Ship's Force, must verify the label of the tether of the fitting or flange to be removed and check for the presence of danger or caution tags. The divers must then follow the tether to the fitting or flange to ensure the removal of the correct fitting or flange.

7. BULKHEAD VENTILATION VALVES. Bulkhead ventilation valves must either be operational and capable of being shut or made water tight with a blank. Bulkhead penetrations must either be in their normal condition or be rendered watertight if unattended. Temporary closures are permitted.

8. FABRICATION OF NON-NUCLEAR PIPING BLANKS. For fabrication of non-nuclear piping blanks to be used during hydrostatic testing and maintenance on submarine piping systems, the following general guidelines apply:

- a. The material must be the identical type, level and pedigree required for the system application per reference (j) or as required by NAVSEA drawings.
- b. Blanks must be constructed such that the design sealing surface dimensions and fit-up characteristics of the system are maintained.
- c. Dimensions of blanks will be per reference (j).
- d. Applicable hydrostatic strength and porosity testing will be performed as required by system test pressure drawings.
- e. All blanks must be marked per reference (j). Maximum allowable pressure will be the hydrostatic test pressure (e.g. 6750 psi for a 4500-psi application, 4500 psi for a 3000-psi application, etc.). Additionally, mark piece with nominal operating pressure and material used. Ensure pressure markings are annotated "MAX" and "NOM" as appropriate.
- f. Blanks installed for maintenance or testing will be identified by a plain tag stating the purpose of the blank. This tag will be in addition to any danger tags used.

15 Jan 2021

APPENDIX E

SAFETY OF SHIP MAINTENANCE ITEM LIST EXAMPLE

Ship name: USS Bigcity Hull #: SSN-799	Upkeep #: 802	Maximum expected draft: Fore: 32'0" aft: 34'6"	Actual Morning Draft: Fore: 32'0" aft: 32'0"	Date Wednesday prepared: 23 SEP 98
---	---------------	---	---	---------------------------------------

NOTE: THE MAXIMUM EXPECTED DRAFT MUST IN NO WAY BE CONSTRUED AS LIMITING ACTIONS BY THE DUTY OFFICER OR NOTIFICATION OF THE SHIP'S CO OF SMALLER DRAFT CHANGES. ANY UNEXPECTED DRAFT CHANGE SHOULD BE THOROUGHLY INVESTIGATED AND UNDERSTOOD.

JCN/ WAF #	Job Description Reason on SOSMIL	Days work planned							Scheduled end date	Remarks
		28 Mon	29 Tue	23 Wed	24 Thurs	25 Fri	26 Sat	27 Sun		
EA01-2345/ WAF #	TD-101 repair (1,3)			testing	Remove flange				24SEP98	Restoration in progress
EM01-3456/ WAF #	Divers: inspect screw for fouling (2,10)			Brief 0830					23SEP98	
WQ01-1986/ WAF #	Inspect sonar dome/ (11)			Pump down dome, brief 0830					23SEP98	Draft change expected: 1' up fore 1.5' down aft
EA01-3509/ WAF #	TD-1 ball/seat repair (4,5)	Trim system restored					Stage temp firefighting	Testing	28SEP98	Valve worked in place; temporary firefighting capability staged
WK01-4568/ WAF #	Off-loading countermeasures (7)					Off-load			25SEP98	through weapons shipping hatch
EA01-3525/ WAF #	LP Blower MRC M-2, change oil on LP Blower (2)	Down for 1 hour at 1300							28SEP98	

The following items are Safety of Ship:

- | | | |
|---|---|---|
| 1. Single closure from sea | 8. EAB system maintenance | 15. Refrigerant on/off load |
| 2. MBT blow removed | 9. Fueling or defueling | 16. Evolutions with an expected draft change of >3 inches (e.g., ballasting, lead load, etc.) |
| 3. Belly bands, hull blanks, cofferdams | 10. Diver operations | 17. Securing the Emergency Diesel Generator |
| 4. Dewatering ability removed | 11. Pumping or flooding sonar dome | 18. Pressure hull watertight bulkhead/doors maintenance |
| 5. Firefighting capability removed | 12. Special coordination btwn S/F and FMA | 19. Bilge alarm/emergency announcing circuit maintenance |
| 6. Bleeding charging Oxygen banks | 13. Applicable Battery charges. See paragraph 10.4.8.b(12) | 20. Normal/emergency lighting maintenance |
| 7. Weapons handling | 14. Nitrogen load | |

Review and approval (all parties must sign):

APPENDIX G**PROCEDURES AND SAFETY PRECAUTIONS FOR ENTERING
SUBMARINE SPACES, TANKS AND VOIDS**

NOTE: IN ADDITION TO THE PRECAUTIONS NOTED IN THE STEPS OF THIS APPENDIX, SHIP'S FORCE MUST COMPLY WITH SAFETY PRECAUTIONS IDENTIFIED IN REFERENCES (k) THROUGH (p).

1. Prior to entry into any free-flood area or main ballast tank, check with the Engineering Duty Officer to ensure radiological surveys have been conducted to determine the radiological controls, if required.
2. Verify REC requirements, if any.
3. Obtain permission from the Duty Officer prior to entering any tank.
4. Ensure atmosphere surveys have been completed and adequate ventilation is available prior to entering the tank.
5. Obtain the necessary tools and equipment (i.e., rubber mallet, explosion proof flashlight or drop light, hardhat, wrenches, screwdrivers, etc.) required to enter or close out the space, tank or void.
6. Wear a hard hat when entering any Main Ballast Tank or free-flood area.
7. Use the buddy system with one man external to the tank or void at all times.
8. No smoking in any tanks or voids. Do not carry any naked lights or sparking electrical apparatus. Ensure all droplights are inspected and approved by the Electrical Division.
9. While inside the tank, make maximum use of ladders and walkways provided. Do not step on valves and piping.
10. Ensure positive measures are taken to identify the access to the tank or void to be opened (ship's plans, two-man check, label plate identification).
11. Ensure all system penetrations to the tank or void are isolated and all sources of potential pressurization danger tagged out per reference (b), to include gravity drain funnels, and the tank or void is vented to the atmosphere.
12. Ensure the tank or void fasteners are loosened to permit breaking the gasket seal. Remove fasteners only after the seal has been broken.
13. Use lanyards on tools and tethered sealable parts pouches.
14. Prior to entering a tank or void, remove all unnecessary items from your person (i.e., combs, lighters, wallets, etc.).
15. Take an inventory of all tools and materials with which he or she entered the tank or void. Have a second person verify the inventory before and after each entry.
16. A rubber mallet should be used to investigate for sound shorts, rattles, etc.

APPENDIX H

CLOSE-OUT INSPECTION CHECK-OFF LIST

Name of tank, void or space _____

	DESCRIPTION	PETTY OFFICER/ OFFICER INITIAL
1.	PAINT	
	a. Area does not have evidence of gross preservation system failure. (Note 1)	
	b. Zincs, transducers and hydrophones are not painted.	
2.	FRAMEWORK AND FOUNDATIONS	
	a. Inspect space framing and shell welds for visual defects.	
	b. Ensure nuts are lock-tight type or lockwired and screw engagement allows for at least one thread protrusion.	
3.	PIPING	
	a. Inspect all pipes for visual weld or sil-brazed joint defects. Ensure pipe walls have not been cut by grinding, denting, or struck or burned by welding equipment.	
	b. Check pipe penetrations for properly installed sleeves and weld fillets.	
	c. Pipe hangers should:	
	- prevent vibration when pipe is struck with mallet.	
	- have studs and nuts painted.	
	- have proper insulation between pipe and hanger.	
	- have stud nuts lockwired or locking cabled or have self-locking nuts used as required.	
	d. If blanks have been installed and will remain in-place following a preliminary closeout inspection, ensure the configuration has been evaluated for impact on ship conditions, system operation and are properly tracked to ensure removal during the final closeout inspection.	
4.	TRANSDUCERS, HYDROPHONES, CABLES AND CABLE WAYS	
	a. Ensure all rubber elements are not gouged, cut, or scraped. Ensure rubber elements are not painted in the following areas: submarine reserve feed water tanks and hangers on nuclear piping.	
	b. Ensure all sonar transducers and hydrophones and corresponding cables are installed per ship's plans.	
	c. Ensure only CRES banding and rubber channel insulation is used on cableways.	
	d. Ensure cableways and cable are properly supported.	
	e. Ensure electrical coamings are made and tight.	
	f. Ensure cable loop boxing covers (at hull fittings) are installed with appropriate plastic spacers such that vibration does not occur when struck with a mallet.	
	g. Ensure electrical hull penetrations are properly labeled.	
5.	BAFFLE PLATES AND SOUND DAMPENING TILES	
	a. Sound dampening tiles are the proper type per reference (m).	
	b. Tiles are not cut, gouged or loosely secured.	
	c. Baffle plates are properly bolted such that they are free from vibration when struck with a mallet.	

	DESCRIPTION	PETTY OFFICER/ OFFICER INITIAL
6.	MECHANISMS	
	a. Dynamic mechanisms are installed, hooked up and unpainted, with no evidence of damage or scraping of components.	
	b. Tank level floats, if applicable, are free to operate and have no visual defects.	
	c. Grease lines, if applicable, are installed properly with mechanical fittings tight and no evidence of leakage.	
7.	VENTS AND DRAINS	
	a. Adequate draining exists from each bay.	
	b. Vents are clear of loose gear and rags.	
	c. Ensure that vents or drains have no installed blanks.	
8.	GALVANIC PROTECTION	
	a. Zincs are properly located and installed such that vibration does not occur when struck with a rubber mallet.	
	b. (Galvanic protection) Mounting straps and bolts are not required to be painted.	
	c. Surfaces behind zincs are properly painted. Sacrificial anode surfaces must not be painted. Sacrificial anode surfaces must not have any coatings, sealants or fairing compounds added to the backside unless approved by NAVSEA. Painting of anode straps and hardware is recommended for all sacrificial anode applications. Coatings for zinc anode straps and hardware may be omitted due to galvanizing of the strap. Painting of aluminum anode straps and hardware is required for all alternate immersion applications (e.g., Main Ballast Tanks or bilges).	
9.	CLEANLINESS	
	a. Check space clear of loose gear and rags.	
	b. Check space clean and free of dirt.	
10.	COMPLETION	
	a. All interior inspection items are clear of any discrepancies.	
	b. Take an inventory of all tools and materials with which he or she entered the tank or void. Verify all items carried into the tank or void have been removed.	
	c. All personnel are clear of the tank or void.	
	d. Tank or void cover gasket and gasket seat areas are in acceptable condition.	
	e. Tank or void cover studs and nuts are torqued to the specified values required and the lock tabs are properly engaged or spot-welded.	
	f. Inspect the exterior for incomplete work that would require a reinspection.	
	g. Ensure that all temporary services are removed from tank.	

NOTE 1: If evidence of gross preservation system failure exists, then a qualified preservation system inspector must be contacted to confirm that the preservation system meets the requirements

- (n) NAVSEA S9086-CV-STM-010 - Naval Ship's Technical Manual Chapter 086 Command Technical Manual Management

11.1 PURPOSE. This chapter defines the responsibilities with respect to the management of technical documentation and data and requires the establishment and operation of technical libraries. Unless otherwise noted, Aircraft Carriers are governed by references (a) and (b). Technical data and information are critical for the proper operation, maintenance, troubleshooting and repair of all plant equipment. Improper maintenance or equipment remaining not repaired and inoperative can result from a lack of proper documentation in the form of technical manuals, ship's drawings and blueprints, Military Specifications and standards, etc.

11.2 SHIPBOARD TECHNICAL DOCUMENT MANAGEMENT. Ships must maintain the Advanced Technical Information Support (ATIS) System up to date. ATIS updates are mailed out to the ship on Compact Disks (CD or DVD). Ship technical document distribution is based on configuration and therefore relies upon the Configuration Data Managers Database - Open Architecture being maintained up to date to accurately assign documents to the ship. To ensure ships maintain up to date technical documents, the following requirements must be met:

- a. The ship must assign a senior Petty Officer (E-6 or above) as the Technical Librarian who will maintain the ATIS systems up to date under the supervision of the 3M Systems Coordinator. Assignments as a Technical Librarian should be for a minimum

of 12 months. Technical Librarians on Aircraft Carriers are assigned for 18 months per reference (b). For Aircraft Carriers, the point of contact is the Maintenance Support Center (MSC) Officer and the Maintenance Officer. At Submarine Fleet Maintenance Activities (FMA), ashore and afloat, the Technical Librarian will work under the supervision of the Planning and Estimating Officer for ATIS and other databases maintained for FMA use.

- b. The Technical Librarian must promptly apply ATIS changes within one week of being received on board.
- c. 3M System Coordinator must report completion of ATIS updates to the Executive Officer. For Aircraft Carriers, the point of contact is the MSC Officer and the Maintenance Officer.

11.3 TECHNICAL LIBRARIES. Technical Library personnel maintain a complete master technical library including electronic or hard copies of technical manuals, drawings, aperture cards, Coordinated Shipboard Allowance Lists, provisioning Allowance Parts Lists (APL), computerized databases and any other technical documents or aids which support maintenance functions. The appropriate IT system computer programs will be used to maintain the library. In general, the technical library serves the following basic functions:

- a. Acquisition of new documents and data and the updating of existing materials.
- b. Cataloging, indexing and filing all documents, data and information materials to allow for effective use of library technical information.
- c. Accountability and control to ensure continuous integrity of the library collection and to enhance periodic inventories.
- d. Central control point for all technical documents received, held, used, transferred or disposed of by the repair department (FMA only) or command. For FMAs having a Nuclear Support Facility (NSF), all Naval Sea Systems Command Nuclear Propulsion Directorate (NAVSEA 08) controlled documents must be controlled by the NSF. For MSCs aboard aircraft carriers, all NAVSEA 08 controlled documents must be controlled by the Reactor Department Technical Publication Library. All aircraft maintenance related documents must be controlled by the Aircraft Intermediate Maintenance Department.
- e. Maintain access to the following computer networks and web sites whenever possible.
 - (1) Technical Data Management Information System (TDMIS).
<https://mercury.tdmis.navy.mil/default.cfm>
 - (2) Military Engineering Drawing Asset Locator System.
<https://public.logisticsinformationservice.dla.mil/PublicHome/MEDALS/default.aspx>
 - (3) Naval Surface Forces, Atlantic Planning and Execution of Alterations and Repair (FMA and COMNAVSURFLANT and COMNAVSURFPAC commands only) <https://www.spear.navy.mil> click on SPEAR info.
 - (4) Maintenance and Modernization IT Systems.

- (5) TMDER/ACN Report Tool.
<https://mercury.tdmis.navy.mil>
- (6) ASSIST Quick Search <http://quicksearch.dla.mil>

11.3.1 Technical Library Supervisor. The Technical Library Supervisor is responsible for keeping current plans, prints, specifications, manuals and all other technical documents and information needed by ship and FMA departments and for managing the daily operation of the library. The Technical Library Supervisor must:

- a. Have a sufficient understanding of technical library organization requirements in references (a) through (n) (as applicable) to supply the necessary technical information.
- b. Have a **minimum** security clearance equal to the highest security classification of any document held within the library.
- c. Supervise personnel assigned to library.
- d. Operate the technical library in the following manner:
 - (1) Schedule and carry out a frequent and recurring on the job training program for all personnel assigned to the technical library staff or to satellite librarian positions. As a minimum, training must include topics that provide guidance for performing each library or satellite library function. Satellite librarian training may be tailored to cover only those areas applicable to satellite libraries. Lesson plans must be developed for each topic.
 - (2) Maintain and provide applicable and current plans, prints, specification, manuals and all other technical documents and information needed by the cognizant department. FMAs will also provide technical documents to tended units, other FMAs, non-FMA government activities or qualified Department of Defense contractor personnel.
 - (3) Maintain an inventory of technical publications, manuals and manufacturer instruction books and other technical and repair documents available in the technical library or any satellite libraries (Work Centers and division offices, etc.).
 - (4) Develop a system for checking out or in and recall of library technical publications issued to individuals in order to maintain the integrity of the library and ensure revisions or changes are made as received and also to minimize lost materials due to unaccountability. The system should include a recall capability that would allow for the location and recall or reissue of materials after 90 days. FMAs issuing technical publications and documents to tended units should establish a 90-day or end of fleet maintenance availability recall whichever comes first.
 - (5) Requisition technical documentation needed for maintenance and repair procedures but not already available on board. Maintain a separate file of material on order. Track the status of requisitioned documents until received. Initiate follow-up action for those documents where supply status has not been

received for a 30-day period, unless previous supply status indicates no follow-up is required.

- (6) Ensure proper security for the contents of the technical library.
- (7) Exercise positive control over access to the Library Management or TDMIS database functions using locally generated procedures.
- (8) Maintain written procedures which describe how to perform each function carried out by the technical library (i.e., checkout or check-in of technical documents, updating library document files, operating reproduction equipment, performing updates, requisitioning, inventories and audits of library documents, etc.).
- (9) Ensure maintenance calls or contracts are made for all viewing, reproduction, computer and powered document retrieval systems or equipment used to carry out library functions. The program must include devices associated with this equipment.
- (10) Perform an inventory of technical publications and manuals and manufacturer's instruction books.
 - (a) Ships are to perform an annual inventory of technical publications and manuals and manufacturer's instruction books and other maintenance and repair documents available in the technical library and satellite libraries (work center and division offices).
 - (b) Shore facilities and submarine tenders are to perform an inventory of technical publications and manuals and manufacturer's instruction books and other maintenance and repair documents available in the technical library and satellite libraries (work center and division offices) every 12 months.
- (11) Ensure manuals within library's inventory contain applicable Advance Change Notices (ACN), or Interim Rapid Action Changes (IRAC). Verify each manual against the ACN report available from Naval Systems Data Support Activity (NSDSA), Port Hueneme, CA, and the NATEC IRAC Tracker Report.
- (12) Perform an annual data verification (configuration audit) of technical manuals and other repair documents available in the technical library and satellite libraries. Afloat libraries should perform verifications as often as operational constraints permit, within 6 months of major deployments, is recommended if verifications are not conducted annually.
 - (a) Verify each NAVSEA and Space and Naval Warfare Systems Command technical manual held with the data listed in TDMIS using LMD for manual or automated verification. Verify Naval Supply Systems Command (NAVSUP) manuals with the modem Internet access.
 - (b) Verify NAVSUP manuals against reference (c) (i.e., NAVSUP 600

- CD) or by performing a process verification file with LMD or TDMIS.
- (c) Compare each technical manual held with the ACN Report provided from NSDSA, Port Hueneme, CA. This should be performed monthly.
 - (d) Compare each technical manual held with TDMIS (Index of Technical Publications) to ensure library is receiving the technical manual automatically.
 - (e) Compare each technical manual held with the Technical Manual Deficiency Evaluation Report file to make sure information received from Technical Manual Deficiency Evaluation Report submissions is reflected in applicable technical manuals.
 - (f) Make sure each technical manual is in good material condition (i.e., does not have loose or unrepaired torn pages, is readable and has an outside cover).
 - (g) For Naval Air Systems Command manuals, submit an Automatic Distribution Requirements List annually to NATEC to update distribution and verify manuals per reference (a).
- (13) Keep a record of annual inventories for 24 months. The annual inventories should include an assessment of recorded deficiencies in the technical data management program to determine areas that require improvement.
 - (14) Establish procedures to incorporate changes or revisions to technical documents held within library or satellite libraries as soon as practical after receipt. Updates involving the safety of personnel or equipment (ACNs) must be entered within 48 hours of receipt. Routine changes must be installed before publication use or within 30 days of receipt, whichever occurs first.
 - (15) Establish procedures that assure positive control of all technical documents held by the library. If Process Instructions or documents listed in ASSIST Quick Search <http://quicksearch.dla.mil> or any alteration text documents are held in Satellite library inventories, verify that these documents are up-to-date at least semiannually.
 - (16) Establish procedures for issuing technical documents to Department of Defense contractor personnel using guidance provided in references (d) (FMA only).
 - (17) Be the department point-of-contact for the Integrated Logistics Overhaul team with respect to technical documentation.
 - (18) Ensure all superseded technical documentation is removed and disposed of following local procedures.

11.3.2 Technical Library Non-Supervisory Personnel. The Technical Library non-supervisory personnel will carry out the daily operations of the technical library as directed by the Technical Library Supervisor. The Technical Library non-supervisory personnel must:

- a. Be a reliable and motivated petty officer (E5 or above for FMA or MSC or full time civilian equivalent).
- b. Military should be assigned for at least 12 months. On Aircraft Carriers, they are assigned for 18 months per reference (b).
- c. Personnel assigned as satellite librarians will be reliable and motivated petty officers appointed in writing and assigned for at least 9 months. Satellite librarians will have a **minimum** security clearance equal to the highest security classification of any document held within the library per reference (n).

11.3.3 Technical Library Materials. The technical library has a wide variety of technical information and data in many different forms and formats. For FMA Technical Libraries eight broad categories of information exist which are described in reference (e).

11.3.3.1 Indices. Indices serve as reference or information sources that name systems, supplies and other information sources. Examples of indices include:

- a. Ships Drawing Index (SDI).
- b. Index of Technical Publications (ITP).
- c. TDMIS.
- d. Navy publications, forms and instructions (Reference (c)).
- e. ASSIST Quick Search <http://quicksearch.dla.mil>
- f. ATIS Systems

11.3.3.2 Technical Manuals. Technical manuals outline inspection and repair procedures for shipboard systems. Examples of technical manuals include:

- a. Ship's Information Books.
- b. General Information Books.
- c. Naval Ships' Technical Manual (NSTM).
- d. Propulsion Operating Guide.
- e. General Specifications for Overhaul.
- f. Equipment Technical Manuals.
- g. Organizational Maintenance and Management System - Next Generation (OMMS-NG).
- h. Ordnance Publications.
- i. Ordnance Data.

11.3.3.3 Drawings. Drawings have engineering and design requirements needed to repair equipment to original specifications. Drawings are also used to find the location of shipboard systems and system equipment and components. Drawings stored in technical libraries include:

- a. Ship's construction drawings.
- b. Ship Alteration installation drawings.

- c. Selected Record Drawings.
- d. Ship's Equipment Drawings.
- e. Vendor and Manufacturer's Drawings.
- f. Booklet of General Drawings.

11.3.3.4 Handbooks and Cataloging. Handbooks have detailed information about specific systems or equipment and may also list equipment repair procedures. Examples of handbooks include the following:

- a. Micro-Electronic Device Data Handbook.
- b. Identification Markings for Fasteners.
- c. Gasket Material (Non-metallic).
- d. Guide for Sampling Inspections.
- e. Shipyard welding procedures.

11.3.3.5 Military Specifications and Standards. Military specifications and standards are specific, detailed requirements for equipment or material. ASSIST Quick Search <http://quicksearch.dla.mil>

11.3.3.6 Documents and Lists. Documents and lists are catalogs of parts, equipment or publications and alteration records. The following are examples of documents and lists typically found in technical libraries:

- a. Navy Management Data List (NAVSUP Publication 4100).
- b. Navy Directive List.
- c. Introduction to Federal Supply Catalogs and Related Publications (NAVSUP Publication 4400).
- d. Ship Changes.
- e. Planning Yard Work Instructions.

11.3.3.7 Instructions, Technical Publications and Bulletins. These publications give guidelines for the operation of equipment, introduce new equipment and may have lists of available items. Instructions, technical publications and bulletins commonly stocked in technical libraries include:

- a. General Services Administration Supply Catalog.
- b. Electronics Information Bulletins.
- c. Field Change Bulletins.
- d. NAVSEA Instructions.
- e. Type Commander Instructions.
- f. Technical Directives.

11.3.3.8 Repair Standards. These standards are detailed repair procedures for the troubleshooting and overhaul of specific equipment and guidance for standard processes.

Examples of repair standards include:

- a. Technical Repair Standard.
- b. Maintenance Standard.
- c. Intermediate Maintenance Standard.
- d. Unified Industrial Process Instruction.

11.4 INDEX OF TECHNICAL PUBLICATIONS AND SHIP'S DRAWING INDEX. Due to the wide variety of types of materials that may be included in a technical library, it may be confusing as to what are the minimum titles and requirements needed for a particular ship. The ITP and SDI have been developed for each ship and list the titles and drawings applicable to the ship.

11.4.1 Index of Technical Publications. The ITP is a guide to facilitate the identification of technical manuals used on board a ship. The ITP is tailored to the configuration of a specific ship and lists technical manuals needed to operate, maintain and repair ship systems and equipment. It also lists any other general and ship related manuals needed by Ship's Force. The ITP will:

- a. Contain a list of the technical manuals needed on board a ship.
- b. Identify technical manuals for specific systems and equipment.
- c. List the systems and equipment supported by a specific technical manual.
- d. Include information about each technical manual.
- e. Be in electronic (EXCEL) format and sorted by APL or Repairable Identification Code and Hierarchical Structure Code.

11.4.2 Ship's Drawing Index. The SDI is a list of ship drawings and related design reference information that shows the actual current configuration of the ship. SDIs are required by General Specifications for Shipbuilding for all ships over 200 feet in length.

- a. The original SDI is prepared by the shipbuilder and approved by Supervisor of Shipbuilding. After acceptance of the ship by the Navy, the SDI is sent to the selected planning yard which is assigned as custodian of the index.
- b. Corrections to the SDI are submitted by the industrial activity to reflect work performed during Chief of Naval Operations maintenance availabilities and Fleet maintenance availabilities. Original SDIs are to be corrected by the planning yard to reflect changes reported by the ship or other activities when changes are made between regular overhauls.
- c. SDI information includes:
 - (1) Drawing title.
 - (2) NAVSEA drawing number and revision.

- (3) Builder or contractor drawing numbers of Hull Mechanical and Electrical drawings applicable to the individual ship.

11.5 MAINTENANCE SUPPORT CENTERS (AIRCRAFT CARRIERS ONLY).

- a. MSCs provide a centralized support facility to aid work center technicians in Integrated Logistics Support processing and problem resolution services. The MSC provides shipboard management of technical documentation and libraries in support of ship's maintenance and material requirements. The MSC will function within the policy and procedural guidelines of references (a) and (b).
- b. The MSC manages and maintains an accurate equipment or component configuration database, identification of required technical support (e.g., repair part APLs, drawings, technical manuals, test equipment, Planned Maintenance System, etc.), and facilitates resolution of repair part support problems.

VOLUME IV
CHAPTER 12
HULL INSPECTION OF SHIPS AND CRAFT

REFERENCES.

- (a) NAVSEA S9086-DA-STM-000 - NSTM Chapter 100 (Hull Structures)
- (b) ABS Guide for Building and Classing High Speed Naval Craft (2007)
- (c) NAVSEA T9074-AS-GIB-010/271 - Requirements for Nondestructive Testing Methods

LISTING OF APPENDICES.

- A Sample Layout of Inspection Areas
- B Hull Reporting Format

12.1 **PURPOSE.** To provide general guidance for the inspection of ship's hulls to detect structural defects or hull thickness degradation and to establish supplemental procedures and periodicities for the conduct of hull inspections of thin hulled ships and craft for the timely detection of corrosion or erosion.

12.1.1 **Scope.** Thin hull ships are defined as those ships and craft with hull plating less than 1/2-inch design thickness at any location below the waterline. Hull Inspections and repair for wooden hulled ships and craft are addressed in Chapter 24 of this volume. Guidance contained in this chapter applies to all thin steel hull ships and craft.

- a. Detailed direction for thin hull assessment can be found in reference (a) for the following classes of surface force ships:
 - (1) DDG 51
 - (2) FFG 7
 - (3) CG 47
 - (4) LPD 17
- b. The following classes of surface force ships were built to reference (b), therefore reference (a) does not apply:
 - (1) LCS
 - (2) PC

12.1.2 **Discussion.**

- a. All ship's hulls must be inspected per Planned Maintenance System (PMS). Reference (a) contains additional guidance and checklists for conducting a thorough internal and external visual hull inspection. Should visual hull inspections reveal suspect areas, these areas should be ultrasonically tested to determine the need for repairs.

- b. Hull inspections will reveal the ship's hull condition through self-inspection of inner shell structure by Forces Afloat. These inspections will permit detection of structural defects and hull thickness degradation resulting from the cumulative effects of unarrested corrosion, and identify any areas in need of repair or preservation. Shell plating areas which are inaccessible can be measured ultrasonically by divers from outside the hull.
- c. Besides verbal descriptions of damage, graphical layouts of hull structure for some ship classes are available for use in the inspection. These schematics are for the purpose of plotting damage locations, as well as assisting the inspector in orientation and report analysis in assessing damage effects.
- d. Main machinery spaces are most prone to corrosion due to the severe environmental extremes of temperature and humidity arising from continuous operation of the propulsion machinery and supporting systems. This alternate wetting and drying of the interior hull surfaces resulting from normal ship's operations and shutdowns over a long period produces oxidation cycles which lead to corrosion.
- e. Inspections should take place inport during a period when the machinery plant will be secured for at least one week. During the work definition period, prior to a scheduled dry-dock availability, an inspection should be scheduled so that it precedes the availability in enough time to permit the identification of all hull structure in need of repair (i.e., approximately nine to ten months prior to the scheduled availability). The ISIC or TYCOM will coordinate and schedule the inspections as requested by the ship's Commanding Officer.
- f. The inspection is primarily intended for areas which are subject to both high stress and heavy corrosion, namely, bottom shell structure in the main machinery spaces of the ship. Accordingly, all fire rooms and engine rooms must be surveyed for structural deterioration, with emphasis on the following areas:
 - (1) Under boilers and turbines, where access is difficult and environmental extremes are most severe.
 - (2) Around boiler feedwater tanks, which are continuously wet from "sweating".
 - (3) Around the various overboard intakes and discharges, where external turbulence often produces erosion.
 - (4) Along the interior of the side shell in way of the exterior waterline. Here the design thickness of the shell plating is thinnest, and exterior corrosion from wave action is always present.
 - (5) Around "wet" equipment, which continuously operate with steam or water emission (e.g., pumps, condensers, evaporator, etc.).
 - (6) Areas of the bottom shell which are subject to the corrosive action of bilge water.
- g. Items such as deck plating in way of uptake spaces, pump rooms, refrigeration spaces, heads, etc., are omitted from this inspection. These "wet" areas are considered to be "housekeeping" items and will be surveyed during the pre-overhaul hull inspection.

All tank and void spaces, which are in proximity to the machinery spaces being surveyed, are also omitted from this inspection, as these compartments do not meet the criteria in sub-paragraph “f”. The interiors of these spaces are inspected during industrial availabilities.

- h. Procedures regarding hull inspections which are associated with Pre-CNO Maintenance Availability planning are issued separately for each availability as determined by the requirements for each ship.

12.2 **ACTION**. Both internal and external hull inspections must be accomplished per reference (a) and (c) on all ships and craft identified in paragraph 12.1.1 of this chapter. Periodicities must be as specified by the TYCOM or as required by PMS.

- a. At the beginning of any dry-docking period, (regular overhaul, Docking Selected Restricted Availability, interim dry-docking, etc.) an extensive hull survey will be conducted using the ship’s plans and a sampling plan similar to that shown in Appendix A of this chapter. The inspection must be conducted using ultrasonic techniques, drill testing or caliper method as appropriate.
- b. A pre-overhaul inspection of the hull should be conducted prior to a dry-docking availability to ensure known hull repairs are included in the planned work package and to ensure unexpected costs are kept to a minimum. Dry-docking is not required for a pre-overhaul inspection; however, maximum use should be made of available tools and techniques to accurately determine the condition of the hull.
- c. A minimum of one hull reading every other frame, and every other strake (as shown in Appendix A of this chapter) up to the waterline, must be taken and the results recorded in the inspection report of Appendix B of this chapter. Suspect areas, as determined by visual inspection, must have several readings taken and the least thickness recorded. Any area showing a reading less than the minimum allowable must have additional readings taken in an expanding fashion to determine the actual extent of the excessive deterioration.
- d. In locations where there is an inner hull, such as bilge area tank tops, inside readings must be taken in addition to those readings taken on the hull. These readings must be taken every other frame, port and starboard, recorded in the format of Appendix B of this chapter, and submitted with the hull inspection report.
- e. In general, hull sections and structures which have suffered 25 percent or greater reduction in cross-sectional area from their original thickness should be cut out and replaced. Scattered pits of depth at least 25 percent, but not greater than 45 percent of the original thickness, may be repaired by clad welding.
- f. An engineering analysis considering current and probable future corrosion may be performed to determine if the corroded structure is within allowable stress levels, rather than performing an automatic repair when corrosion has resulted in a 25 percent or greater reduction of cross sectional area. The repair criteria must be based on the applicable General Specifications for Overhaul.

12.3 **REPORTS**. The results of all hull inspections must be forwarded to the ship, with an information copy to the TYCOM or ISIC, using the format of Appendix B of this chapter. Areas

having unsatisfactory results must be superficially noted in the report cover letter.

Unsatisfactory areas must be defined by size in feet and inches and location in relation to strake and frames.

APPENDIX A
SAMPLE LAYOUT OF INSPECTION AREAS

STRAKE	G	1	3	4	2	1	3	4	2	1	3
	F	4	2	1	3	4	2	1	3	4	2

13.1 PURPOSE. To ensure Weight Handling Equipment (WHE) is capable of continued reliable and safe operation.

- a. WHE must be of sufficient rated capacity to safely handle the calculated load; including, all slings, shackles, turnbuckles, strongbacks and chain hoists.
- b. The WHE selected must be inspected before each use for obvious material deficiencies, equipment capacity markings, and load test expiration date (as applicable).
- c. The following guidance has been utilized to incorporate both Naval Sea Systems Command (NAVSEA) and Naval Facilities Engineering Command (NAVFACSYSCOM) requirements:
 - (1) For shipboard WHE used both afloat and ashore, including Floating Drydocks, NAVSEA technical requirements are cited and invoked as the top-level guidance.
 - (2) For shore based WHE used only ashore, NAVFACSYSCOM and the Code of Federal Regulations technical requirements are cited and invoked as the top-level guidance.
 - (3) For general purpose lifting and rigging, shore based rigging gear and portable hoists meeting the requirements of reference (a) may be used aboard ship when the ship is pierside.
 - (4) For Reactor Plant Lifting and Handling Equipment and lifts of major reactor plant components, additional guidance is provided in Section 9400-0 of reference (b) and in reference (c). Reference (d) provides guidance for lifting radioactive material or reactor plant components when NAVSEA approved lifting equipment is not available (i.e., use of the B & M crane to lift portable effluent tanks or radioactive waste). These requirements apply to all commissioned ships, shipyards and Naval shore-based activities.

13.2 NAVAL SEA SYSTEMS COMMAND AFLOAT REQUIREMENTS.

13.2.1 Definitions.

- a. Dynamic Load Test. An operational overload test conducted to verify the ability of the lifting equipment to operate with rated load while being subjected to dynamic conditions associated with ship motions.
- b. Load Bearing Members. Those components or structural support members of the lifting and handling equipment which support the load; a failure of which could cause dropping, uncontrolled shifting or movement of the load.
- c. No-Load Test. A test which verifies equipment functional performance without a load.
- d. Rated Load. The maximum permissible load carried during use (also called "Safe Working Load"). The weights of handling gear; such as slings, strongbacks, handling dolly, which are not an integral part of the equipment being tested, must be considered as part of the rated load.
- e. Rated Load Test. A load test at 100 percent of the rated load, conducted at rated speed through the complete range of operating limits. The test is performed to determine the proper operation of the equipment, repeatability of functions and heat dissipation ability.
- f. Safe Working Load. See Rated Load.
- g. Factor of Safety. The ratio of the yield strength of a structure to the required strength (based on estimated maximum load in ordinary use).

$$\text{Factor of Safety} = \frac{\text{Actual Yield Strength}}{\text{Required Strength}}$$

- h. Static Load Test. A stationary overload test conducted to verify the structural and mechanical integrity of the lifting equipment. In this test, the lifting equipment holds the test load for a short period of time while the test inspector checks the equipment for signs of brake slippage or damage.

13.2.2 Procedure. Fabrication, repair and testing of Shipboard Weight Handling Equipment will be conducted using a Controlled Work Package developed per Volume V, Part I, Chapter 2 of this manual. This requirement does not apply to periodic weight test of Shipboard Weight Handling Equipment. Shipboard Weight Handling Equipment requiring a weight test based on Planned Maintenance System (PMS) or other periodic testing requirements, excluding tests in conjunction with repair or manufacture, will be inspected and tested using Technical Work Documents, such as a pre-existing maintenance procedure, test load methods drawing, technical manual or Formal Work Package. Periodic weight testing must be witnessed by a qualified inspector.

- a. Testing Sequence. Newly installed or overhauled equipment must be tested in the following order:
 - (1) No-load Test.
 - (2) Static Load Test.
 - (3) Dynamic Load Test.
 - (4) Rated Load Test.

- b. Results of completed weight tests will be documented on QA form 17W, using the procedures of Volume V, Part I, Chapter 11 of this manual. The serial number (if known) of the equipment must be recorded on the weight test record.
- c. Weight Handling Equipment that has satisfactorily passed the required inspections and load testing must be so marked by the activity conducting the tests. As a minimum, this marking must include the name of the testing activity, the date (year and month) tested, date of re-inspection due date, the rated load and a unique serial number that will allow it to be traced to its test and inspection documentation.
 - (1) Where there is little available space for surface marking, such as on wire rope slings, the item may be marked with a Periodic Load Test Record Strap as shown in reference (e).
 - (2) Nylon webbing slings must have etched leather tags sewn to each sling leg to identify the leg and indicate test results as described in reference (f).
 - (3) Stamped, etched or engraved metal tags, which are attached to the tested item with mechanical fasteners or adhesives, may also be used.
 - (4) Color coding, for local control only, may be used in addition to, but not as an alternate to, one of the authorized marking methods.
 - (5) Wire rope (1/32" through 3/16" diameter) may be used to attach metal tags to WHE provided that the wire rope is secured using mechanical fasteners designed to secure wire rope such as swedges. Metal tags attached using lockwire style twisted wires are prohibited.
- d. A permanent log, written or electronic, must be maintained to record the following information:
 - (1) Equipment identification.
 - (2) Date of the test or inspection.
 - (3) Description of the test or inspection.
 - (4) Weight used for the test, in pounds.
 - (5) Testing activity.
- e. New hooks, blocks, sheaves, wire rope, fiber rope, and other loose hardware or gear need not be load tested after installation if it has not been modified and has been purchased to Military Specifications (MILSPEC) or NAVSEA standard drawings through the Naval Supply System. Any load carrying loose gear procured otherwise must be tested prior to placing in-service to 200% of the SWL of the part in question. If any sheave, block or hook assembly is received that does not bear the manufacturer's test stamp, it must be tested to 200% of the SWL.
- f. Unless otherwise specified, all load test capacity tolerance must be +5%, -0%.

13.2.3 Load Test Types and Duration. For each test type, the equipment must withstand the required load for the specified amount of time, per the applicable reference(s) listed in paragraph 13.2.8.

13.2.3.1 No-Load Test. As a prerequisite to any load testing, a no-load test must be performed. During the test, the equipment or system must be operated through full ranges and directions of motions and in all operating modes. All safety devices and travel limits must be demonstrated during the test.

13.2.3.2 Static Load Test.

- a. Unless otherwise specified, all arrangements for handling and supporting weights (including weights of personnel), all arrangements for taking heavy strains, and all parts upon which the safety of the ship or life depend, must be given a static load test equal to twice the rated load. In cases in which the rated load is not specified, the test load must be based on the expected duty of the equipment or system. For hoisting arrangements, the static test load must be suspended clear of all supports and held suspended for a sufficient period of time to allow for the inspection of welds and other fastenings, but need not be lifted or moved by the system under test. After relieving the static test load, there must be no evidence of permanent deformation of structure.
- b. The equipment or system to be tested must not be used to lift the total static test load. Static load tests must be completed prior to performance of operational tests. Where static test loads exceed 40% of rope breaking strength, the ship's rope must not be used for the static test.

13.2.3.3 Dynamic Load Test. Weight handling arrangements must be tested to demonstrate capacity to withstand additional loads imposed on a system when operating under unfavorable sea conditions at reduced speed. The dynamic load test must be conducted to demonstrate handling equipment load capabilities throughout the complete operating range, but the load need not be lifted or moved at rated speeds. As far as practicable, test loads must be moved completely through the equipment operating range, within the limits of all operating modes.

NOTE: IF THE EQUIPMENT USES HYDRAULIC POWER, THE SYSTEM RELIEF VALVES MUST BE CHECKED FOR PROPER SETTINGS BEFORE PERFORMING A DYNAMIC LOAD TEST.

13.2.3.4 Rated Load Test. Following satisfactory completion of the dynamic load test, the rated load test must be conducted to demonstrate capability to operate with a full load, at rated speed, through the complete range of operating limits. As far as practicable, test loads must be moved completely through the equipment operating range, within the limits of all operating modes. Proper operational functions must be demonstrated at each speed in all operating modes. The mechanical safety devices must be tested for their ability to stop and hold when carrying rated load at rated speed.

13.2.4 Load Test Periodicity.

- a. In the interest of personnel safety and equipment protection, inspection and testing of all WHE not covered by PMS or other directives will be performed at intervals not to exceed four years.

NOTE: PER NAVSEA DIRECTION, STATIC, DYNAMIC AND RATED LOAD TESTING OF MAIN STORAGE BATTERY LIFTING GEAR INSTALLED IN SUBMARINE BATTERY COMPARTMENTS IS NOT REQUIRED UNLESS REPAIRS TO STRUCTURAL OR WEIGHT SUPPORTING COMPONENTS

HAVE BEEN ACCOMPLISHED. FOLLOWING REPAIRS, LOAD TESTING WILL BE ACCOMPLISHED DURING BATTERY REPLACEMENT AFTER THE BATTERY CELLS HAVE BEEN REMOVED.

- b. Testing of the following components is required when newly installed or after major structure repair or modification.
 - (1) Accommodation ladders.
 - (2) Cleats.
 - (3) Gangplanks.
 - (4) Leadsman platform.

NOTE: SSN 688 CLASS LIFELINE STANCHIONS DO NOT REQUIRE WEIGHT TESTING FOLLOWING MANUFACTURE OR REPAIR.

- (5) Life rails or stanchions.
- (6) Lifelines.
- (7) Padeyes.
- (8) Portable davits.
- (9) Reversible eyebolts.
- (10) Slings.
- (11) Safety nets (including deck edge safety nets).
- (12) Vertical ladders.

13.2.5 Shipboard Crane Program.

- a. A Shipboard Crane Program must be implemented on each ship with a crane installed or assigned, per reference (g).
- b. Guidelines for training and qualification of personnel responsible for shipboard crane operation and maintenance are contained in reference (g).

13.2.6 Daily Inspections. Daily, before use visual inspections must be conducted:

- a. For Weight Handling Equipment:
 - (1) A daily, before use visual inspection must be performed following PMS for the assigned equipment before any load handling operations.
 - (2) A no-load operational test must be conducted by each shift prior to handling ammunition.
- b. All handling equipment selected (including slings, shackles, turnbuckles, strongbacks, chain hoists and taglines) must be visually inspected before use for obvious material deficiencies, equipment capacity markings and load test expiration date (as applicable).
- c. Before beginning crane operations for each new day, a qualified crane operator must perform an inspection of each crane to check for discrepancies in the crane's structure

or operating controls using the crane Operator's Daily Check List provided in reference (g).

13.2.7 Use of Nylon Straps.

- a. The use of knotted nylon strapping as handling equipment is prohibited.
- b. Rigging with nylon straps is permitted only when nylon strapping is equipped with sewn (lifting) eyes and the strapping has been static load tested to 200 percent of rated load.
- c. When available handling equipment (for example, wire rope slings) cannot be properly attached, or load surface damage may occur, 6,000-pound (rated breaking strength) nylon strapping is permitted only for loads up to 1,000 pounds.
- d. Webbing slings must be inspected for abrasions and fraying of the webbing and stitching, and for broken stitches. Slings must not be used if signs of deterioration are visible.

NOTE: REFERENCE (a) IS TO BE USED ONLY WHEN THE SHIP IS ACTUALLY PIERSIDE.

13.2.8 Weight Test Procedure Matrix. The following matrix provides sources of load test procedures for shipboard equipment or systems that may require periodic load testing or testing following fabrication or repair:

<u>EQUIPMENT or SYSTEM INSPECTIONS AND TESTING</u>	<u>GOVERNING DOCUMENT(S) FOR MAINTENANCE</u>
Aircraft Elevators	Reference (h), PMS
Aircraft Tie-downs	References (i)
Anchoring	Reference (j), PMS
Ammunition Handling	References (e), (l) through (o), PMS
Boats & Boat Davits	Reference (f), PMS
Booms	Reference (p), PMS
Cargo & Weapons Elevators	Reference (q), PMS
Cleats	Reference (r)
Cranes	Reference (g), PMS
Deck Edge Safety Nets	References (s) and (t)
Deck Screw Reversible Eyebolts	Reference (u)
Hoists	Reference (v), PMS

<u>EQUIPMENT or SYSTEM INSPECTIONS AND TESTING</u>	<u>GOVERNING DOCUMENT(S) FOR MAINTENANCE</u>
Hull Fittings	Reference (w), PMS
Portable Davits	Reference (x)
Reactor Plant Lifting and Handling Equipment	References (b) through (d)
Stores & Provision Handling	Reference (v), PMS
Temporary Padeyes	Reference (y), Section 611
Trunk Safety Nets	Reference (z)
Underway Replenishment	Reference (aa), PMS
Vehicle Tie-downs	Reference (ab)
Weapons Handling Equipment SSN 688 Class	Reference (ac)
Vertical Launch System - Weapons Handling Equipment SSN 688 Class	Reference (ad)
Weapons Handling Equipment SSBN and SSGN 726 Class	Reference (ae)
Weapons Handling Equipment SSN 21 Class	Reference (af)
Wire and Fiber Rope and Rigging	Reference (ag)
Weapons Stowage and Handling Equipment - <i>Virginia</i> Class	Reference (ai)
Shipboard Crane and Miscellaneous Rigging Gear	Reference (g)

13.2.9 Identification of Equipment. Following the weight test, ensure the Weapons Handling Equipment is properly marked as detailed per reference (e) section 4.

13.2.10 Record Keeping. QA form 17W must be used to document Shipboard Weight Handling Equipment weight testing. The Weight Handling Test Inspector must sign the Quality Assurance blocks of QA form 17W. The signed QA form 17W or a copy must be provided to the activity who maintains the Shipboard Weight Handling Equipment in all cases. QA form 17W must be retained by the end user or maintaining activity until superseded by successive testing for each piece of Shipboard Weight Handling Equipment. QA form 17W used to document Shipboard Weight Handling Equipment testing in a Controlled Work Package will be retained with the Controlled Work Package as prescribed by Volume V of this manual.

13.2.11 Crane Material Condition Assessments. This section provides guidance in the preparation for and execution of shipboard crane assessments by qualified crane assessors per reference (g). A crane assessment is used to determine a baseline condition and establish the scope of any follow-on actions. The assessment is designed to evaluate the material condition of the crane and all safety features and ensure all repairs, maintenance actions and design changes conform to the applicable standards and specifications.

13.2.11.1 Ship's Force Assessment Responsibilities.

- a. Ensure that the crane's PMS is up to date.
- b. Provide qualified operators as necessary to safely perform all crane operations.
- c. Provide qualified maintainers as necessary to assist and learn from assessor.
- d. Ensure all members of the assessment team comply with shipboard safety requirements.
- e. Ensure all necessary tag-out procedures are accomplished following shipboard instructions.

13.2.11.2 Assessor Responsibilities.

- a. Conduct crane assessments based on assessment procedures and reference (g).
- b. Ensure the crane has been assessed, adjusted, repaired (where feasible) and operationally tested.
- c. Ensure all discrepancies and corrected items have been documented via an OPNAV 4790/2Ka in the ship's CSMP.
- d. Ensure before leaving the ship that the Commanding Officer, or an officer designated by the Commanding Officer, is briefed on the crane material condition, to include all completed and outstanding maintenance and repair actions.
- e. Issue a dedicated final report to the ship, SURFMEPP, ISEA, ISIC and TYCOM within 30 days following the assessment visit. The report must address the following:
 - (1) All discrepancies found during the assessment, specifically calling out any "In-Service Envelope" discrepancies (refer to reference (g)).
 - (2) Operational testing results.
 - (3) Any recommendations to the In-Service Engineering Agent for system changes.

13.3 NAVAL FACILITIES ENGINEERING COMMAND ASHORE REQUIREMENTS.

WHE assigned to naval shore activities and utilized only in ashore operations or aboard ships when the ship is pierside must be certified, tested, inspected and operated in compliance with reference (a). For general purpose lifting and rigging, shore based rigging gear and portable hoists meeting the requirements of reference (a) may be used aboard ship when the ship is pierside (this does not apply to ordnance or radiological lifting and handling). Reference (a) covers line-handling mechanisms on floating cranes, hoists and chain falls which are used in multiple locations, and portable and adjustable gantry cranes and floor cranes. Material handling equipment is covered by Naval Supply Systems Command criteria.

13.3.1 Certification Program. The Commanding Officer is responsible for ensuring safety within the activity and must designate a WHE certifying official who must ensure the activity's WHE is inspected, tested and certified per reference (a).

13.3.2 Operator Licensing Program. All Navy civilian and military personnel assigned duties involving the operation of Navy shore based Category 1, Category 2, Cab Operated Category 3 or Category 4 WHE must be qualified and licensed per the provisions of reference (a).

13.3.2.1 Operator Qualification and Testing. All applicants for Crane Operation Licenses must meet the requirements of reference (a).

13.3.2.2 Licensing Procedures and Documentation. Reference (a) contains the necessary procedural requirements for licensing and documentation.

13.3.3 Inspections.

- a. Pre-Use Check (Category 1, 2, Cab Operated Category 3 and Category 4 Cranes). The operator must perform an inspection of their assigned crane using a Crane Operator's Daily Checklist as required by reference (a).
- b. Specific instructions in reference (a) must be used for conducting and reporting the following inspections:
 - (1) Walk Around Check.
 - (2) Machinery House or Machinery Area Check.
 - (3) Operator Cab Check.
 - (4) Operational Check.
- c. Pre-Use Check (Non-Cab Operated Category 3 Cranes) must be performed per reference (a).

13.3.4 Test Procedures. Reference (a) contains instructions for performing crane test procedures.

13.3.5 Special Purpose Service. Activities using special purpose service cranes must follow the requirements of reference (ah) in addition to criteria contained in reference (a).

13.4 SLINGS. Slings used in conjunction with other material handling equipment for the movement of material ashore by hoisting are covered by references (a) and (g).

- a. A sling is an assembly which connects the load to the material handling equipment.
- b. Slings include those made from alloy steel chain, wire rope, metal mesh, natural or synthetic fiber rope (conventional three strand construction), and synthetic web (nylon, polyester, and polypropylene).

13.5 CRANE RIGGING GEAR AND MISCELLANEOUS EQUIPMENT. Reference (a) contains maintenance, inspection and test requirements for the following common rigging gear used ashore and reference (g) contains maintenance, inspection and test requirements for the following common rigging gear used shipboard. Reference (g) allows shore based rigging gear and portable hoists meeting the requirements of reference (a) to be used aboard ship with shipboard cranes when the ship is pierside.

- a. Slings.
- b. Shackles, links, rings, swivels, eyebolts, turnbuckles, hooks and swivel hoist rings.
- c. Tackle blocks.
- d. Portable load indicating devices (dynamometers, load cells, crane scales, etc.).
- e. Lashing (e.g., wire rope, synthetic rope, synthetic webbing).

VOLUME IV**CHAPTER 14****MAGAZINE SPRINKLER INSPECTION REQUIREMENTS****REFERENCES.**

- (a) NAVSEA S9522-AA-HBK-010 - Description, Operation and Maintenance Handbook for Magazine Sprinkler Systems
- (b) NAVSEAINST 4790.8/OPNAVINST 4790.4 – Ships’ Maintenance and Material Management (3-M) Manual

14.1 **PURPOSE.** To provide guidance for the performance of magazine sprinkler inspections.

14.2 **RESPONSIBILITIES.**

14.2.1 **Commanding Officers.**

- a. Ensure that sprinkler systems are tested following Planned Maintenance System.
- b. Ensure that magazine temperatures are checked and recorded daily.
- c. Ensure that magazines are properly maintained.
- d. Ensure that prior to acceptance of a sprinkler system in new construction or when design changes (Ship Changes) are made to a sprinkler system during construction or overhaul, the cognizant industrial activity provides written verification that each system is completely operational. A certified magazine inspector will perform the verification of system operability per reference (a).
- e. Ensure that magazine sprinkler system inspection requirements are conducted per reference (a) and when directed by Planned Maintenance System. These inspection requirements apply to both the thermo-pneumatic and hydraulic control systems. All tests will be per reference (a) and will be followed by a complete operational test by Ship’s Force using the appropriate Maintenance Requirement Card. A certified magazine inspector will conduct all thermo-pneumatic tests.
- f. Ensure that a magazine sprinkler system verification inspection is scheduled prior to ordnance on-load (if required by paragraph “d”. or “e” of this paragraph). A certified magazine sprinkler inspector must conduct the inspection.
- g. Take necessary action to correct all discrepancies noted during magazine sprinkler inspections. Within 30 days following receipt of the magazine sprinkler discrepancy list, report the status to the Immediate Superior In Command (ISIC) with an informational copy to the Type Commander via message, identifying corrective action(s) taken or applicable Plan of Action and Milestones.
- h. Ensure that design discrepancies are reported to the Type Commander and submitted into the Current Ships’ Maintenance Project. Procedures for reporting discrepancies are included in reference (b) and Type Commander instructions.

14.2.2 Verification Activity.

- a. Ensure Magazine Sprinkler System Inspector has completed applicable qualifications of the Magazine Sprinkler Systems Inspector Course (Course Number: K041-2137).
- b. Provide a sprinkler system discrepancy list by the categories **SAFETY, MAJOR, MINOR** and **INSTALLATION** to the Ship's Commanding Officer and ISIC.
- c. Provide written recommendations to the Ship's Commanding Officer and ISIC to continue or discontinue thermo-pneumatic certification until correction of any discrepancies and completion of satisfactory sprinkler system operational tests.

14.2.3 Immediate Superior In Command.

- a. Ensure that Shipboard Explosive Safety Inspection is scheduled per reference (a).
- b. Follow-up on all discrepancies reported by the verification activity. Those items that are discrepancies as a result of design problems should be reviewed by the cognizant Naval Engineering Agency and recommended corrective actions should be performed at the earliest convenient availability.
- c. Must act as sole grantor of all magazine sprinkler systems re-certification via message. Re-certification is based on verifying activity's recommendation.

VOLUME IV
CHAPTER 15
CIRCUIT BREAKERS

REFERENCES.

- (a) NAVSSES Philadelphia ltr 9320, Ser 934/010 dated 19 Mar 2001, titled Shipboard Circuit Breaker Maintenance and Overhaul Policy

15.1 PURPOSE. To issue the Naval Sea Systems Command (NAVSEA) policy on maintenance and overhaul of Navy shipboard shock-hardened circuit breakers of both ACB and AQB types specified in reference (a).

15.2 CIRCUIT BREAKER FUNCTION AND ACQUISITION ON NAVY SHIPS. Circuit breakers onboard Navy ships and submarines are used primarily to provide electrical system protection against disruptive and sometimes destructive abnormal currents. This protection is so precise that it selectively removes only the cause of the abnormal current (such as electrical system damage acquired in battle) while continuing to power other unaffected weapons, electronics and electrical systems. This continuous supply of electrical power is also ensured by the unique ability of these circuit breakers to maintain proper position during severe impacts produced by missiles, bombs, mines, torpedoes and other detonation sources. Due to the unique nature and critical function of Navy shock-hardened circuit breakers, their acquisition is controlled through a Qualified Products List (QPL) governed by requirements set forth in appropriate military specifications. There is no equivalent commercial requirement.

15.3 CIRCUIT BREAKER OVERHAUL FACILITIES AND PART PROCUREMENT. Type AQB circuit breakers with non-replaceable trip units (100 amp and smaller sizes) are not repairable. All other circuit breakers are classified as Depot Level Repairable. NAVSEA has designated Puget Sound Naval Shipyard and the Original Equipment Manufacturer (OEM) as Designated Overhaul Points (DOP) for these items. The current OEMs offering overhaul service for their products are SPD Technologies, Inc., Whipp & Bourne, and Eaton/Cutler-Hammer (for Westinghouse breakers). Other (obsolete) ACB and AQB circuit breakers are overhauled by the Navy DOP. The ability to repair and refurbish circuit breakers is a "core" Naval Shipyard function, with all Naval Shipyards expected to maintain and execute this capability. This does not imply all Naval Shipyards will be appointed DOP status. The single Navy DOP at Puget Sound Naval Shipyard along with the OEMs and their service centers provide production capability and capacity to meet the requirements for restoration of stock assets to Ready For Issue condition and meet other routine circuit breaker overhaul requirements. Prior to the initial listing of a vendor's circuit breaker on the QPL, the OEM must successfully demonstrate by appropriate tests and inspections that the circuit breaker passes all the requirements contained in the military specification. To maintain the integrity of the circuit breaker as a qualified product, NAVSEA prohibits the local manufacture or fabrication of certain (restricted) parts during repair or overhaul. Due to the critical nature and stringent materials and manufacturing requirements, the Navy restricts the manufacture of these parts to the OEM listed for the particular circuit breaker. Specifically, all replacement parts for circuit breakers, except fasteners and general hardware items, are restricted parts. Non-restricted parts include nuts, bolts, screws, washers, lockwashers, cotter pins, O-rings, indicator lights, and indicator light globes (colored and clear).

The restricted replacement parts must be obtained from the Federal Stock System, the OEM or approved material diversion.

15.4 SUBMARINE CIRCUIT BREAKERS. NAVSEA has established a pool of circuit breakers removed from inactivated SSN 688 Class submarines to support SSN 688, SSBN and SSGN 726 Class submarine's lifecycle requirements. The OEM has designated some circuit breakers still in use as obsolete and may no longer readily support them with parts. For obsolete breakers no longer supported by the Federal Stock System, Puget Sound Naval Shipyard and in some cases Ship's Maintenance Monitoring Support Performance Monitoring Teams (PMT), may be a source of parts. The ship must obtain the parts by approved material diversion. This will allow Puget Sound Naval Shipyard to either make parts or purchase parts from the OEM. The OEM can still manufacture the obsolete parts but the cost could be excessive. Even after the shipboard repairs are complete, the pay back is critical to ensure the lifecycle pool is maintained. If the lifecycle pool is allowed to deteriorate, circuit breakers for future requirements may not be available.

15.5 NAVY POLICY ON SHIPBOARD CIRCUIT BREAKER MAINTENANCE AND OVERHAUL.

- a. Not Repairable Circuit Breakers. Type AQB circuit breakers with non-replaceable trip units (100 amp and smaller) are not repairable. Any attempt to open and repair this type of circuit breaker results in an unacceptable risk to subsequent performance, even if retest is performed.
- b. Overhauls must be performed by the Navy DOP at Puget Sound Naval Shipyard or the OEM. Class A and B overhauls are defined as:
 - (1) Class A Overhaul. An extensive overhaul that involves complete disassembly and refurbishment, such as re-plating mechanical and electrical parts, and replacing the wire harness. The "most recent" design and technical specifications will be met. The end product must be in "like new" condition in appearance, operation and performance. All manufacturers' and technical manual performance standards and specifications, and all technical documentation, unless superseded by proper authority, must be met. The repair activity must demonstrate that the end product successfully meets all performance criteria of the governing specifications. Defining an overhaul as Class "A" means that all actions required to meet the definitions are authorized.
 - (2) Class B Overhaul. A less extensive overhaul that re-uses most of the existing parts to restore the operating and performance characteristics of a circuit breaker to its original design and technical specifications. Machinery Alterations, field changes and modifications, even if applicable, are not to be accomplished unless specified by proper authority. The repair activity must demonstrate that the end product successfully meets all performance criteria of the governing specifications.
- c. Non-OEM Vendors. When commercial repair facilities other than the OEM express an interest in performing repair and overhaul work, they must demonstrate to NAVSEA the capability to perform the work. Capability to perform circuit breaker

overhaul and repair work includes having the facilities, trained mechanics, and access to the OEM's qualified parts and repair procedures. Use of nonqualified, restricted parts violates the integrity of the circuit breaker, nullifying the breaker's prior qualification under the QPL process. Restricted parts must be obtained from the OEM either directly or via the Federal Stock System (with the exceptions as noted in subparagraph "b"). If a restricted part is replaced with an unqualified part, the qualification of the particular circuit breaker is revoked until the full set of QPL required tests are repeated and submitted to NAVSEA for approval.

- d. Fleet Maintenance Activities and Organizational Level Maintenance and Repair. Maintenance and repair of circuit breakers by Organizational and Fleet Maintenance Activities includes cleaning, inspection, lubrication, accomplishment of technical manual specified corrective maintenance, and operational testing and replacement of the bolt-on parts (obtained from qualified sources). Bolt-on parts include charging motors, arc chutes, auxiliary switches, closing relays, electronic trip units (only units that are adjustable with a portable trip unit calibration test set), indicator lights and indicator light transformers, rectifier units and resistors, secondary disconnects, shunt trip units, transformers, undervoltage trip units, and wiring and connections. Repairs which alter the breaker calibration, require major disassembly of the operating mechanism, or require re-plating must be performed at a depot level activity. Repairs of this type conducted by a non-depot level activity to meet operational commitments must be certified at the earliest available opportunity by an authorized depot activity (DOP or Naval Shipyard with demonstrated circuit breaker repair and retest capability). Type Commanders should ensure a Departure From Specification is processed for these types of emergent repairs.
- e. (Submarines Only) Performance Monitoring Teams. PMTs are permitted to perform in-depth circuit breaker maintenance and repairs as an augmentation to Forces Afloat maintenance when the PMT member is designated, trained, certified, and provided with the proper equipment. The PMT must not make calibration repairs or adjustments that require shop verification by primary current injections. These types of calibration and certification adjustments must only be accomplished by an authorized depot activity. NAVSEA 08 has authorized the Ship's Maintenance Monitoring Support PMTs to conduct repairs on NAVSEA 08 cognizant circuit breakers similar to those on non-nuclear applications.
- f. NAVSEA 08 cognizant circuit breakers. If questions or technical issues arise regarding NAVSEA 08 cognizant circuit breakers which cannot be resolved by consulting the applicable technical manual, prepare a Trouble Record or Liaison Action Request and submit to Assistant NAVSEA Technical Representative, Schenectady, NY following the Commissioned Submarine and Surface Ship General Reactor Plant Overhaul and Repair Specification.

VOLUME IV**CHAPTER 16****AIRCRAFT LAUNCH AND RECOVERY SYSTEMS FOR AIRCRAFT CARRIERS
ONLY****REFERENCES.**

- (a) NAVSEAINST 4790.8/OPNAVINST 4790.4 - Ships' Maintenance and Material Management (3-M) Manual
- (b) OPNAVINST 4790.15 - Aircraft Launch and Recovery Equipment Maintenance Program (ALREMP)
- (c) COMNAVAVIRLANTINST 4790.40/COMNAVAVIRPACINST 4790.39 - Aircraft Launch and Recovery Equipment Maintenance Program (ALREMP) Management Teams
- (d) OPNAVINST 3120.28 - Certification of the Aviation Capability of Naval Ships Operating Aircraft
- (e) COMLANTFLTINST 3500.18 - Certification and Readiness of Aviation Facilities in Naval Ships Operating Aircraft
- (f) NAVAIRINST 3120.1 - Lead Systems Command Procedures and Responsibilities for Certification of Aviation Facilities and Equipment in Naval Ships Operating Aircraft

16.1 **PURPOSE.** To provide guidance concerning the maintenance policies, procedures and responsibilities for Aircraft Launch and Recovery Equipment (ALRE) throughout the ship's operating cycle. The Aircraft Launch and Recovery Equipment Maintenance Program (ALREMP) is sponsored and directed by the Chief of Naval Operations, and is administered through the chain of command to provide material and technical support by the cognizant Systems Command. The ALREMP provides an integrated system for performing maintenance and related support functions on ship's installed aircraft launching and recovery systems and associated peripheral support systems and equipment.

16.2 AIRCRAFT LAUNCH AND RECOVERY EQUIPMENT MAINTENANCE PROGRAM.

16.2.1 **Applicability.** The ALREMP encompasses all Navy activities concerned with the operation, rework, repair, production and support of Aircraft Carrier ALRE, including catapults, arresting gear, Visual Landing Aids (VLA), and associated deck gear and accessories.

16.2.2 **Objectives.** The ALREMP establishes standard procedures to control maintenance, provide quality assurance performance verification and provide for a more effective ship's Maintenance and Material Management system in compliance with reference (a).

16.2.3 Responsibilities.

- a. Naval Air Systems Command (NAVAIR) must provide overall ALREMP management through the ALRE Program Manager (PMA 251).
- b. The ALRE Program Manager, or his direct representative, must establish and chair the ALREMP Working Committee.

- c. The Naval Air Warfare Center (NAVAIRWARCEN) Aircraft Division, Lakehurst will provide technical services and act as the technical manager for the ALREMP.
- d. The Type Commanders (TYCOM) must provide ALRE Maintenance Management Teams to conduct assist visits and annual audits of all units, per the requirements of reference (b). These assist visits and annual audits will ensure operation and maintenance of ALRE is conducted within the guidelines of the ALREMP as directed by reference (b).

16.2.4 Management Team. The ALREMP Management Team consists of a qualified ALRE Maintenance Officer and an experienced Senior or Master Chief Aviation Boatswains Mate (ABECS or ABCM) assigned to Commander Naval Air Force Atlantic (COMNAVAIRLANT) N433 or Commander Naval Air Force Pacific (COMNAVAIRPAC) N435. Audit assistance may be provided to the TYCOMs by the ALRE Program Office (PMA 251) Fleet Programs Team. The ALREMP Management Team provides the following services.

- a. Pre-implementation training for the ALREMP.
- b. Assistance to ships during the ALREMP implementation phase.
- c. Assist visits during industrial availabilities.
- d. Assist visits following an industrial availability or during a ship's work-up cycle.
- e. Formal audits, per references (c), prior to or during mid-deployment.

16.2.5 Assist Visits. Assist visits will be advisory in nature and will normally be scheduled to follow a ship's Selected Restricted Availability or during the work-up cycle. Units visited are encouraged to discuss maintenance and material quality assurance problems with team members. Upon completion of the visit, the team will debrief the Air Department Officer and designated Air Department personnel. An informal report of noted problems and recommendations will be provided at the debrief. The Commanding Officer will be debriefed at the discretion of the team leader. The ALREMP Management Team may be requested for additional assist visits at the ship's discretion via the applicable TYCOM.

16.2.6 Audits.

- a. Formal audits will be conducted upon completion of a Chief of Naval Operations availability, annually or prior to deployment, and will evaluate the overall ALREMP and quality assurance management procedures, including compliance with current OPNAV and TYCOM instructions.
 - (1) The Commanding Officer must be debriefed by the ALREMP Team Leader at the completion of the audit.
 - (2) A formal report listing all discrepancies will be forwarded to the Commanding Officer within fifteen days of the audit completion. A report of corrective actions taken will be submitted to the TYCOM no later than thirty days after receiving the formal audit report. Updates will be submitted monthly until all discrepancies are corrected.

- b. Semi-annually, the TYCOMs will provide the ALRE Program Office PMA 251 with an ALREMP status report detailing their respective carrier's performance. Reports will be used to evaluate overall ALREMP program effectiveness.

16.3 AVIATION CERTIFICATION. Aviation Certification, including ALRE certification, responsibilities, procedures, and waiver guidance are provided in references (d), (e) and (f).

16.4 CARRIER AND FIELD SERVICE UNIT.

- a. Carrier And Field Service Unit (CAFSU) is a branch of the NAVAIRWARCEN Lakehurst, ALRE Fleet Technical Support Competency. The organization is comprised of civilian technicians highly skilled and thoroughly qualified in the operation, maintenance, repair, installation, and testing of both shipboard and shore based ALRE and VLA systems. They are geographically located in field offices to provide instant technical assistance to Fleet personnel and industrial activities throughout the Fleet operating areas. CAFSU Field Offices are located at:
 - Naval Aviation Depot, JAX, Norfolk, VA Voyage Repair Team (VRT) Detachment
 - Naval Station, Mayport, FL
 - Naval Aviation Depot North Island, CA
 - Puget Sound Naval Shipyard Bremerton, WA
 - Ship Repair Facility Yokosuka, Japan
 - Supervisor of Shipbuilding Newport News, VA
 - Norfolk Naval Shipyard Portsmouth, VA
- b. The CAFSU Supervisor is located at TYCOM headquarters. Technicians are under the operational control of the Ship Installation Officer, TYCOM (N433 or N435). CAFSU functions as the technical representatives of NAVAIR, the TYCOM and NAVAIRWARCEN in all matters which concern launch, recovery, and VLA equipment. CAFSU is required to maintain technical liaison with the commands listed in sub-paragraph "a" and is responsible for the completion of work to the satisfaction of these commands and for providing all interested parties with timely information as required. CAFSU will provide technical assistance during Chief of Naval Operations Maintenance Availabilities and other availabilities, and to ships not in a repair status. All industrial activity repairs, modifications, and operational tests of shipboard, launching, recovery and VLAs will be monitored by a CAFSU representative. All technical questions concerning the equipment may be directed to the local CAFSU representative. CAFSU must recommend approval or disapproval of work after consultation with the TYCOM. CAFSU will submit timely written reports concerning repairs, alterations and work accomplished to the Commanding Officer NAVAIRWARCEN for appropriate action and distribution.

16.5 RESPONSIBILITIES.

16.5.1 Aircraft Carrier Commanding Officer.

- a. Request CAFSU technical assistance when required, by message, letter, or informal means from the TYCOM. In the case of a formal request, direct an information copy to the local CAFSU field office.

- b. Provide appropriate berthing and messing facilities for CAFSU representatives when embarked.
- c. Pass to the TYCOM (N433 or N435) any comments concerning meritorious or substandard performance of CAFSU representatives.
- d. Upon completion of the CAFSU assignment at sea, ensure timely departure from the ship.

16.5.2 Industrial or Repair Activity.

- a. Provide support to the CAFSU representative, as appropriate to allow for accomplishment of the objectives set forth in paragraph 16.2.2 of this chapter.
- b. Refer technical questions concerning the launching, recovery and VLA equipment to the local CAFSU representative for timely resolution.

16.6 NAVAL AVIATION DEPOT.

- a. The Naval Aviation Depots maintain and operate facilities to perform:
 - (1) A complete range of industrial level rework operations on designated weapon systems, accessories and equipment.
 - (2) Manufacturing of parts and assemblies as required.
 - (3) Engineering services in the development of change hardware design.
 - (4) Technical and other professional services for Aircraft Carrier maintenance and logistic problems.
 - (5) Other levels of Aircraft Carrier maintenance for eligible activities upon specific request or assignment.
 - (6) Other functions as directed by NAVAIR.
- b. In order to meet the material support needs of the operating forces, by accomplishment of the mission, the following specific functions are assigned:
 - (1) Perform depot maintenance functions for aircraft, engines and their components and accessories. Ground Support Equipment trainers and training equipment as specified in appropriate Aircraft Maintenance Program directives.
 - (2) Provide engineering, technical and professional services in support of rework of specific aircraft, engines, aeronautical components, Peculiar Ground Support Equipment, trainers and training equipment.
 - (3) Perform shipwork designated as Ship Installations Equipment and systems with the same priority as aircraft rework.
 - (4) Serve as the major maintenance, repair and modification point for assigned missiles.
 - (5) Provide calibration services as assigned by higher authority.

- (6) Perform as the NAVAIR Weapons System Support Officer for the overall management of the NAVAIR Engineering Support Office, Weapon Systems Management Office for assigned weapons, and Integrated Logistic Support Office.
- (7) Perform as a Cognizant Field Activity for assigned aircraft, equipment, and Peculiar Ground Support Equipment.

16.7 NAVAL AVIATION DEPOT VOYAGE REPAIR TEAM.

- a. Naval Aviation Depot Operations Instruction 13800.1 denotes organizational relationships between the TYCOM and the VRT and defines the TYCOM's responsibility, authority for workloading, and operational control of the VRT. Control is exercised through the TYCOM (N433 or N435).
- b. To provide industrial level support for Ship Installation Equipment (ALRE) the VRT is used to support the following:
 - (1) Casualty Reports.
 - (2) Enroute maintenance or underway repairs.
 - (3) Miscellaneous repairs beyond Ship's Force capability.
 - (4) Rotatable spare overhaul.
 - (5) Special reports.
 - (6) Preparation for Overseas Movement repairs.
 - (7) Service Change installations.
 - (8) Modernization or repair of components in conjunction with Chief of Naval Operations Maintenance Availabilities and Planned Maintenance System availabilities.
- c. The capabilities of the VRT are such that almost any task related to launch and recovery equipment is feasible, assuming adequate support from Ship's Force is available. The following ship's support for the VRT is required:
 - (1) Timely Current Ship's Maintenance Project deferral submission for the Maintenance Manager and TYCOM screening and programming.
 - (2) Providing sufficient V-2 Division personnel to assist the team, in such areas as providing forklifts, obtaining necessary parts, gaining machine shop assist and space access, etc.

LISTING OF APPENDICES.

- A Sample Catapult Accumulator Inspection Request
- B Sample Inspection Confirmation Letter
- C Summary of Catapult Accumulator Inspection Scheduling and Responsibilities
- D₁ Sample Catapult Accumulator Inspection Report Cover Letter
- D₂ Sample 5 Year Strength and Integrity Catapult Accumulator Inspection Report Cover Letter
- D₃ Sample Other Catapult Accumulator Inspection Report Cover Letter
- E Sample Catapult Accumulator Inspection RBO-Deficiencies Message
- F Sample 30 Day Update Message
- G Sample Catapult Accumulator Rescission Message

17.1 **PURPOSE.** To establish policy and provide procedures and inspection requirements for Steam Catapult Accumulators and support systems including:

- a. Inspection scheduling.
- b. Required preparations.
- c. Inspection guidelines.
- d. Reporting requirements.

17.2 **POLICY.** Periodic standardized inspections are required of all steam catapult accumulators and associated support systems including steam fill and blowdown systems, feed water fill and drain systems, steam piping and accumulator drain systems, control and indicating systems associated with the fill, pressurization and blowdown of the steam catapult accumulators, and steam supply and drain piping for the trough heating system. Inspections must be conducted by a certified Steam Generating Plant Inspector (SGPI) or Naval Surface Warfare Center, Philadelphia Division (NAVSURFWARCEN PD), as applicable per the requirements of

reference (a). The maximum interval between inspections and other occasions requiring inspections, as well as responsibilities for continuation and standardization of the inspection program, are formally assigned in reference (a). Specific inspection criteria, attributes and intervals are detailed in reference (b).

17.3 TYPES OF INSPECTIONS.

- a. Routine Inspection.
- b. Pre-start of Availability Inspection (PSAI).
- c. Start of Availability Inspection (SAI).
- d. Strength and Integrity Inspection.
- e. Industrial Support Visit (ISV).
- f. Completion of Availability Inspection (CAI).
- g. Inactivation or Reactivation inspection.
- h. Special Inspections.

17.4 RESPONSIBILITIES.

17.4.1 Naval Sea Systems Command. Naval Sea Systems Command (NAVSEA) must provide Technical Authority oversight over all steam catapult accumulators and associated equipment. The designated NAVSEA Technical Warrant Holder must:

- a. Assure safe and reliable system operation.
- b. Set and enforce all technical requirements.
- c. Be the approval authority for all major Departure from Specifications (DFS).
- d. Provide technical oversight and management of the SGPI and NSWCPD programs.
 - (1) Establish and enforce requirements for SGPI certification and recertification.
 - (2) Ensure periodic SGPI Seminars are conducted.
 - (3) Ensure periodic technical audits of all Integrated Logistics Support documentation and training.
 - (4) Maintain the Steam Catapult Inspection and Repair Management Information System (SCIRMIS).
 - (5) Routinely evaluate and ensure state of the art inspection, maintenance and repair tools and techniques are used.

17.4.2 Naval Surface Warfare Center, Philadelphia Division.

- a. Provide support to NAVSEA for the SGPI and NSWCPD programs. Ensure that the required technical documentation to support the SGPI or NSWCPD Inspector programs is maintained current.
- b. Establish and monitor the requirements and standards for routine and industrial inspections of steam catapult accumulators.

- c. Develop, implement and maintain a program to train and certify NSWCPD Inspectors per reference (a).
- d. Ensure that inspection of ships undergoing major overhaul or conversion are conducted per this instruction.
- e. Conduct periodic technical audits of the SGPI Training Course per reference (a).
- f. Provide management of technical data, SCIRMIS accumulator history associated repair management information database system.
- g. Provide technical support to the semiannual SGPI seminars.
- h. Maintain a roster of all Certified SGPIs by name, rating, duty station, date of certification and expiration date of certification. Recommend inspector certification and initiate action to decertify inspectors who fail to comply with the requirements of reference (a).
- i. Ensure that the requirements for SGPI certification, recertification and certification extensions are met prior to final approval.
- j. Conduct PSAI, SAI, ISV, Strength and Integrity Inspections, CAI and Special Inspections as specified in section 17.6 of this chapter and reference (b).

17.4.3 Type Commander.

- a. Provide or arrange for certified SGPIs to perform inspections per the requirements of reference (b).
- b. Schedule inspections of all catapult accumulators and support systems required by reference (b). Coordinate the inspections with the appropriate technical activities to avoid unnecessary opening of accumulators.
- c. Assist Commanding Officers in arranging for the corrective action of deficient items which are beyond the capability of Ship's Force to perform. Monitor the follow-up action required to correct these deficiencies.
- d. Review the SCIRMIS to ensure deferred inspection deficiencies are entered into the Current Ship's Maintenance Project (CSMP) and are planned or programmed for repair.

17.4.4 Regional Support Group, Regional Maintenance Center and Fleet Maintenance Activity Commanding Officers. Maintenance Activity Commanding Officers must provide a certified SGPI, when requested by the ship, Immediate Superior in Command (ISIC) or Type Commander (TYCOM), to conduct the accumulator inspections.

17.4.5 Ship Commanding Officer.

- a. Request inspections via Naval Message with the desired primary and alternate dates to the TYCOM with info copies to Cognizant Regional Maintenance Center (RMC) and NSWCCD for accomplishment of the inspections using the format in Appendix A.
- b. Prepare for the scheduled inspections per references (a) and (b).
- c. Conduct Ship's Force responsible inspections and provide reports required by reference (b).

- d. Review inspection results and initiate corrective action for those deficiencies within Ship's Force capability. Initiate requests for those corrective actions beyond Ship's Force capability. If any discrepancies of paragraph 17.9.2 of this chapter cannot be corrected within 72 hours following completion of the inspection, or if said discrepancies will impact ship's operational schedule, initiate a Casualty Report for the affected catapult accumulator(s) per reference (c).
- e. Assess the impact of corrective actions (if any) on the ship's operating schedules and advise the TYCOM and operational commanders of any adverse effects.
- f. Submit reports per paragraph 17.7.2 of this chapter.
- g. Schedule catapult accumulator inspections as required by appropriate Planned Maintenance System (PMS) or Class Maintenance Plan items.

17.4.6 Regional Maintenance Center Senior Inspector. RMC Senior Inspector must:

- a. Ensure all assigned SGPIs maintain current SGPI certificates per reference (a).
- b. Perform catapult accumulator inspections per reference (a).
- c. Review and submit reports per paragraph 17.7.2 of this chapter.
- d. Coordinate inspections in cognizant maintenance areas.
- e. Send inspection confirmation messages using Appendix B of this chapter.
- f. Maintain an up to date list of required catapult accumulator inspections which must include the latest inspection for all ships assigned to the RMCs in their geographic area of responsibility.

17.4.7 Steam Generating Plant Inspector.

- a. Maintain certification per the requirements of reference (a).
- b. Perform inspections per the requirements of reference (a), (b) and section 17.9 of this chapter when directed.
- c. SGPIs are part of the technical authority chain-of-command and are accountable to the NAVSEA Technical Warrant Holder for the performance of their inspection duties.

17.5 INSPECTION SCHEDULING. Commands will initiate inspection requests in a timely manner to assist with inspection scheduling coordination. Commands must ensure inspection scheduling complies with reference (b) and the following:

- a. Commanding Officers or Officers In Charge of ships must request inspections by message. In addition, OPNAV 4790/2-Kilo must be submitted to the RMC requesting a certified SGPI or NSWCPD inspector as required to conduct inspections.
- b. Inspections should coincide with the required routine waterside maintenance.
- c. Inspection services must be coordinated by geographic areas for optimum utilization of SGPIs or NSWCPD Inspectors.
- d. The TYCOM may utilize PSAIs and CAIs, which are documented in SCIRMIS to satisfy the pressure vessel portion of a routine inspection. This will reduce the number

of catapult accumulator openings. A Routine Inspection will not be considered completed until an SGPI has certified all items required have been accomplished.

17.6 SAFETY PROCEDURES. The safety of personnel must be given the highest priority. Observance of good engineering practices will reduce the frequency of pressure vessel entry.

- a. Ensure idle accumulator condition is accomplished following the provisions of the Catapult Engineering Operational Sequencing System and reference (b) in preparations for the inspection. Where conflicts occur, an Engineering Operational Sequencing System feedback form should be submitted for resolution.
- b. Ensure the idle catapult accumulator is tagged out (valves wired shut and danger tagged). Observe two-valve protection per Chapter 10 of this volume. Open to the atmosphere the drain connections on all dead interconnecting piping to observe drainage.
- c. Place signs warning at the catapult control console and central charging panel that personnel are working in the accumulator and in conspicuous places in the accumulator room and in rooms containing fill and blowdown isolation valves. The signs must remain there until the work has been completed and personnel are clear of the secured accumulator.
- d. Ensure all precautions cited in Section 5.3 of reference (b) are followed before entering an accumulator.
- e. Do not enter any part of the accumulator until it has been fully ventilated and certified by a Naval Maintenance Facility Gas Free Engineer or National Fire Protection Agency Marine Chemist as safe for entry. Ensure all safety precautions associated with entry into sealed tanks, voids or pressure vessels including gas-free certification are performed per the requirements of references (d), (e) and (f), as applicable, and Chapter 25 of this volume.
- f. The use of unshielded or non-approved lighting in an open accumulator is prohibited. Portable lighting must be watertight (National Stock Number (NSN) 9S-6230-00-701-2947).
- g. Station an attendant outside the accumulator to provide assistance when any personnel are working inside the accumulator.
- h. Maintain accountability of all items taken into an accumulator. Foreign Material Exclusion closures will be used to the maximum extent practical to prevent tools or other foreign materials from being inadvertently left in the accumulator or associated ship's systems.
 - (1) Personnel entering accumulators will remove all jewelry and empty their pockets of all unnecessary items.
 - (2) Removal of all items and foreign material exclusion closures from the accumulator will be verified and accounted for prior to conducting a final closeout inspection. Final closeout inspection of the catapult accumulator must be accomplished by the Chief Engineer or his designated representative.

17.7 CATAPULT ACCUMULATOR INSPECTIONS AND REQUIREMENTS. Catapult accumulator inspections conducted per the requirements of reference (b) must fulfill all other catapult accumulator inspection requirements. When practical, various inspections should be scheduled for coincidental performance. Appendix C of this chapter is a summary of inspection scheduling and responsibilities.

17.7.1 Routine Inspection. Routine inspections will be conducted at least once every 30 months not to exceed 36 months from its last inspection. For newly constructed ships, the 30-month period must begin at the completion of the Board of Inspection and Survey Acceptance Trials. The normal interval between routine inspections must be 30 months. The 30-month period begins with the first warm-up of the catapult accumulator to normal operating temperature and pressure following the previous routine inspection. To provide scheduling flexibility, inspections may be performed as early as 24 months not to exceed 36 months after the previous inspection. Inspections that exceed the 30-month interval will require a minor Departure From Specification to the TYCOM with concurrence from NSWCPD. Any catapult accumulator which exceeds the inspection interval must be placed out of commission until inspected by a certified SGPI or a Major DFS is approved by the NAVSEA Technical Warrant Holder to operate beyond 36 months without a Routine inspection.

- a. The catapult accumulator inspection will be scheduled by the TYCOM.
- b. The catapult accumulator inspection will be performed by a certified SGPI.
- c. The TYCOM may utilize PSAIs, CAIs and Strength and Integrity Inspections which are documented in SCIRMIS, to satisfy the pressure vessel portion of a routine accumulator inspection. This will reduce the number of boiler openings. A Routine Inspection will not be considered completed until an SGPI has certified all items required have been accomplished. Once completed, this resets the periodicity required for the next inspection to 18 months not to exceed 24 months.
- d. A Safe to Steam assessment shall be conducted as a condition of approval for both minor (beyond 30 months but within 30-36 month timeframe) and major (beyond 36 months) DFSs. The Safe to Steam assessment will be accomplished by a SGPI and documented in SCIRMIS.

17.7.2 Pre-Start of Availability Inspection. The PSAI may be required at the discretion of the TYCOM to support early bid specification and work package development.

- a. The PSAI will be scheduled by the TYCOM.
- b. The PSAI will be performed by the NSWCPD Inspector and an SGPI.

17.7.3 Start of Availability Inspection. The SAI is required to be accomplished at the beginning of an availability to better define or re-evaluate the accumulator bid specification and identify those major repair items which may impact ship's operational schedule.

- a. The SAI will be scheduled by the TYCOM, Industrial Activity or Supervising Activity as applicable.
- b. The SAI will be performed by the NSWCPD Inspector and an SGPI.

17.7.4 Strength and Integrity Inspection. The normal interval between strength and integrity inspections must be 60 months. Strength and Integrity Inspections may be conducted as early as

48 months not exceed 72 months after the last Strength and Integrity Inspection to provide flexibility in scheduling. Inspections that exceed the 60-month interval will require a minor DFS to the TYCOM with concurrence from NSWCCD-SSES. Any catapult accumulator which exceeds the inspection interval must be placed out of commission until inspected by a certified SGPI, or a Major DFS is approved by the NAVSEA Technical Warrant Holder to operate beyond 72 months without a Strength and Integrity Inspection.

17.7.5 Industrial Support Visit Inspection. The ISV inspection must be scheduled during the availability, but may be waived by the TYCOM for availabilities of short duration.

- a. The ISV inspection will be scheduled by the industrial activity or Supervising Authority, as applicable.
- b. The ISV inspection will be performed by an NSWCPD Inspector and an SGPI.

17.7.6 Completion of Availability Inspection. The CAI will be conducted prior to final closeout of the catapult accumulator.

- a. The CAI will be scheduled by the industrial activity or Supervising Authority, as applicable, and may be conducted in conjunction with a Routine inspection.
- b. The CAI will be performed by an NSWCPD Inspector and an SGPI, preferably the same SGPI who conducted the SAI.

17.7.7 Inactivation or Reactivation Inspection. This Inactivation or Reactivation inspection must use the attributes of a strength and integrity inspection and must be conducted prior to the final action (in the case of inactivation) unless a strength and integrity inspection has been conducted in the last 18 months. In this instance, the last inspection report may be used to document accumulator lay-up condition. For reactivations, a strength and integrity inspection must be scheduled by the cognizant activity and conducted by NSWCCD and a cognizant RMC SGPI prior to reactivation of the unit.

17.7.8 Special Inspections. Additional catapult accumulator inspections, arranged by Ship's Force in coordination with the TYCOM and performed by an SGPI, will be conducted per the requirements of reference (a) whenever the following conditions exist:

- a. Variations in end speed exist. Whenever variations in catapult end speed are experienced, a special inspection will be accomplished by an NSWCPD Inspector and an SGPI.
 - b. Re-inspection of replaced manifold gasket. Whenever the internal steam charging flanged joint gasket is replaced, the joint must be re-inspected on a not to interfere with operations basis, upon the first cool down following initial operations. This Inspection is accomplished by the Engineering Officer.
 - c. Whenever major work as defined by reference (b) is accomplished, the inspection is arranged by Ship's Force in coordination with the TYCOM and performed by a NSWCCD-SSES LCEM inspector and an SGPI.
- (1) Repair or adjustments to safety devices or remote isolation devices.

- (2) Repairs to the accumulator pressure vessel, including nozzles, circumferential welds, shell and head plates, manhole plate and attachment hinge welds which exceed reference (b), section 5.8 criteria.
- (3) Repairs to or replacement of pressure vessel piping and valves.
- (4) Repairs to the internal charging manifold.
- d. When the TYCOM desires to assess the material condition, the inspection is arranged by Ship's Force in coordination with the TYCOM and performed by a NSWCCD-SSES LCEM inspector and or an SGPI.
- e. Readiness to deploy (RDI) will be conducted by a SGPI 2 - 4 months prior to deployment. If an RDI cannot be accomplished per the above, the cognizant SGPI will schedule and accomplish a Mid-Cycle Inspection (MDI) to occur 15-21 months after the last Routine inspection or Strength and Integrity inspection. The RDI and MDI will include all items currently accomplished Ref (b) Chapter 5 figure 5-5. Both inspections results will be documented in SCIRMIS and reported by Naval message by the cognizant SGPI.

17.8 INSPECTION GUIDELINES AND REPORTS.

17.8.1 Guidelines.

- a. All inspections will be conducted using the requirements of reference (b). The catapult accumulator, including the support systems identified in paragraph 17.1.1 of this chapter will be inspected and the results documented in the SCIRMIS.
- b. Routine Inspection of catapult accumulators and associated systems will be conducted by an SGPI.
- c. All Repair Before Operate (RBO) deficiencies must be corrected and re-inspected by a certified SGPI or NSWCPD inspector and preferably the same SGPI, NSWCCD-SSES or LCEM inspector who originally identified the discrepancy prior to warm-up of the catapult accumulator. As RBOs are safety related, all inspector-designated RBO discrepancies discovered per reference (b) and section 17.9.2 of this chapter must be corrected prior to catapult operation and reinspected by a certified SGPI or NSWCPD Inspector, as applicable, and preferably the same SGPI or NSWCPD Inspector who originally inspected the accumulator. RBO discrepancies include those for which continued unrestricted operation could endanger personnel. RBOs may not be departed via DFS. If there is not an immediate or near future danger to personnel, the discrepancy must be assigned as SEVERELY DEGRADED with major operational restrictions.
- d. All catapult accumulator related DFSs will be verified by the SGPI during the inspection for conformance with JFMM requirements prior to placing the accumulator into operation.

17.8.2 Reports. The inspector(s) conducting the inspection must personally debrief and provide a preliminary report of the inspection results to the ship's Commanding Officer (or designated representative) following completion of the inspection. The results must also be entered into the SCIRMIS database. A copy of the final report will be provided to the TYCOM, Regional

Maintenance Center or Fleet Maintenance Activity and NSWCCD no later than 10 days after the completion of all repairs identified during the inspection using the Appendix D₁, D₂ or D₃ cover letter format, as appropriate.

- a. The inspector conducting the inspection must report RBO deficiencies discovered during the inspection to the TYCOM by message within 24 hours using the format in Appendix E of this chapter.
- b. The SGPI must report by message to the TYCOM, using the format in Appendices F and G of this chapter, the correction and re-inspection of all RBO deficiencies prior to closeout and warm up of the accumulator.
- c. The ship's Engineering Officer must report corrected deficiencies, by message, using the format in Appendix F of this chapter within 30 days of the completed inspection and at 30-day intervals thereafter until all deficiencies are corrected.

17.9 CATAPULT ACCUMULATOR INSPECTION PREPARATION.

- a. Demonstrate the performance of the catapult electronic controls, including the uninterruptible power source and the safety devices of the fill and blowdown valves.
- b. Prepare the accumulator per reference (b) paragraph 5.6.1 for routine inspections and paragraph 5.6.2 for strength and integrity inspections.
- c. Wire shut and danger tag all steam and water valves to the catapult accumulator per the Ship's Tag-Out Instruction and the Tag-Out User's Manual. Post warning signs, PERSONNEL WORKING IN ACCUMULATOR, per reference (a).
- d. The ship's Engineering Officer must ensure all Ship's Force responsibilities are complete.

17.10 CATAPULT ACCUMULATOR INSPECTION.

17.10.1 Catapult Accumulator Inspection Forms. Catapult accumulator inspections will be conducted using the appropriate SCIRMIS forms. Include specific comments on the state of preservation and material condition of the accumulator and all support systems.

17.10.2 Catapult Accumulator Inspection Areas. A discrepancy is classified as "Repair Before Operating" if left uncorrected it could cause injury to personnel. All RBO items must be corrected prior to operation and re-inspected by a certified SGPI or NSWCPD inspector, as applicable, and preferably the same inspector who originally inspected the accumulator. RBO discrepancies may include but are not limited to the following:

- a. Inoperative or misadjusted safety devices.
- b. Fire hazards or Safety hazards, oil soaked lagging, oil leaks or other fire hazards such as inoperative or missing firefighting equipment.
- c. Inoperative electronic controls (Fairmont controllers, Smars transmitters, uninterruptible power source).
- d. Non-deferrable defects, defects indications within the pressure vessel boundary.

- e. Ultra-sonic test results of pressure vessel piping that are below minimum requirements, out of periodicity or inspectors discretion of piping of questionable service.
- f. Improperly assembled internal steam charging flanged joint.
- g. Improperly assembled flanged joints (mixed fasteners, undersized flexitallic gaskets, non-level in Level I systems).
- h. In-operative system remote isolation devices.
- i. Out of periodicity, in-operative temperature or pressure measuring instruments.
- j. Valve tightness integrity which limits its ability to perform intended function and exceeds the criteria of reference (g).
- k. Non-conformance of electrical safety and deteriorated or damaged wiring or components.

17.10.3 Completion of Inspection. A debrief and a preliminary inspection report, including a summary of restrictive deficiencies, will follow the inspection. Paragraph 17.7.2 of this chapter identifies official reporting requirements.

17.10.4 Automatic Controls Systems Inspection Guidelines. The automatic control system consists of a series of transmitters, controllers, interface devices, control valves and positioners. Inspection, calibration and alignment of this equipment is detailed in reference (h) and applicable system PMS for test and inspection guidelines.

17.10.5 Operating and Casualty Procedures. Each ship with steam catapults will have approved Operating Procedures in the format prescribed by their respective TYCOM. They must contain detailed procedures and precautions for:

- a. Normal operations including startup and shutdown.
- b. Infrequent operations such as initial charging following an availability.
- c. Operating parameters, limitations, alarms and set points.
- d. Casualty conditions including indications, immediate and supplementary actions.
- e. Quality Assurance requirements for repairs.

APPENDIX D₁**SAMPLE CATAPULT ACCUMULATOR INSPECTION REPORT COVER LETTER**

From: Commanding Officer, Regional Maintenance Center

To: Commanding Officer, USS (Ship's name and Hull No.)

Subj: Routine Inspection of Catapult(s) Number(s)

Ref: (a) COMUSFLTFORCOMINST 4790.3, Joint Fleet Maintenance Manual

(b) NAVSEA S9587-B1-MMA-010, Catapult Steam Support System CV/CVN Class
Ships; Description, Operation and Maintenance

Encl: (1) Catapult Inspection Report of Catapult(s) Number(s)

(2) Catapult Operational Test sheets (Figure 5-5 of Ref (b))

1. (Parent Command) Steam Generating Plant Inspector(s) (Inspector's Name) inspected Catapult(s) Number(s) in USS (Ships Name and Hull No) on (date) while (ship's location).
2. Discrepancies, which require corrective action, are outlined in enclosures (Number of Enclosures).
3. Catapult operational test results are outlined in (Number of Enclosure).
4. Advance copies of Enclosure(s) have been delivered to the Ship's Commanding Officer.
5. (Command) point of contact is (Senior Inspector), Code (Number), commercial telephone (Number), DSN (Number) e-mail address is: (Address).

COPY TO (W/ENCL):

VOLUME IV
CHAPTER 18
SUBMARINE SALVAGE INSPECTION

REFERENCES.

- (a) NWP 1-03.1 - Naval Warfare Publication Operational Report

LISTING OF APPENDICES.

- A SSN 21 Class Submarine Salvage Inspection Check-Off List
- B SSN 688 Class Submarine Salvage Inspection Check-Off List
- C SSBN/SSGN 726 Class Submarine Salvage Inspection Check-Off List
- D SSN 774 Class Submarine Salvage Inspection Check-Off List
- E Sample Pre-Inspection Information or Certification
- F Sample Report of Salvage Inspection Forwarding Letter

18.1 PURPOSE. To ensure the continued readiness and quality of maintenance performed on submarine rescue and salvage equipment.

18.2 INSPECTIONS.

18.2.1 Periodicity. The readiness of submarine rescue and salvage equipment is determined by periodic salvage inspections. Salvage inspections will be conducted within a 72-month interval, or :

- a. Whenever requested by the submarine.
- b. Prior to initial builder's trials for new construction ships, prior to initial sea trials for ships in Chief of Naval Operations (CNO) Maintenance Availabilities, and prior to initial sea trials for ships in Interim Dry Docking.
- c. A partial salvage inspection will be completed for all items worked during an availability (i.e., hatches, salvage air valves, DISSUB stowage alterations, etc.).
- d. Once every five years for SSBNs and SSGNs.
- e. Prior to Sea Trials for repairs of damage from collision or grounding where deformation is observed to be in the hull integrity envelope or supporting structure.

18.2.2 Procedures and Reports. The specific rescue and salvage items to be inspected and the type of submarines to which they are applicable are identified in Appendices A through D of this chapter. Appendix E of this chapter is a sample pre-inspection form to be completed by the submarine prior to the salvage inspection. Appendix F of this chapter is a sample Submarine Salvage Inspection forwarding letter. Inspection attributes or elements of Appendices A through D may not be locally waived or have equipment substituted. Temporary changes to the attributes or elements of Appendices A through D will only be revised by the Type Commander (TYCOM) and the revision must be documented in formal correspondence. Any attributes or elements of Appendices A through D as applicable to the respective ship class not met or which fails inspection is underway limiting until corrected or waived by the TYCOM.

NOTE: IF NO QUALIFIED INSPECTORS ARE AVAILABLE, CONTACT THE TYPE COMMANDER FOR DIRECTION.

18.2.3 Inspection Resources. The hatch and watertight door portion of this inspection will be conducted by members of the local Ship's Maintenance Monitoring Support Performance Monitoring Team (PMT) (i.e., personnel who have successfully completed Submarine Structural Closure Inspection course or personnel designated by NAVSEA). Other portions of the inspection should be conducted by personnel who, by their rate and experience, are qualified in that particular section. Inspection teams are to be assembled, as required, from the following sources in order of the priority shown:

- a. Undersea Rescue Commands.
- b. Submarine Fleet Maintenance Activities.
- c. Immediate Superior in Command (ISIC) Staffs.
- d. Submarines of the same class.
- e. Other submarines.
- f. Salvage ships (ARS).

18.3 RESPONSIBILITIES. The responsibility for the preparation, conduct, and completion reporting for a salvage inspection is listed in the remainder of Section 18.3.

18.3.1 Immediate Superior in Command.

- a. Schedule salvage inspections for assigned submarines as specified in paragraph 18.2.1 of this chapter. The inspection should be conducted early enough in the availability to allow for the correction of deficiencies prior to Fast Cruise.
- b. Designate the inspecting team using the guidance provided in paragraph 18.2.3 of this chapter to conduct the salvage inspection.

18.3.2 Commanding Officer or Officer in Charge.

- a. Request the ISIC to conduct a salvage inspection per the periodicity set forth in paragraph 18.2.1 of this chapter.
- b. Coordinate support requirements as may be needed by the inspecting team to fulfill the requirements of the applicable Appendix of this chapter.

NOTE: HATCHES THAT ARE FOULED WILL PREVENT THE SATISFACTORY COMPLETION OF THIS INSPECTION. COORDINATION BETWEEN THE SHIP, INSPECTING TEAM AND MAINTENANCE ACTIVITY IS THE RESPONSIBILITY OF THE COMMANDING OFFICER OR OFFICER IN CHARGE.

- c. Complete and forward a pre-inspection information letter to the Senior Inspecting Officer using the sample provided in Appendix E of this chapter as a guideline. Modify Appendix E as necessary to align required attributes with the applicable class-specific checklist.
- d. Assemble all ship's data indicated in the applicable Appendix of this chapter prior to the inspection for ease of reference by the inspecting team.
- e. Upon receipt of the Senior Inspecting Officer's report, take action to correct the discrepancies found and report by letter or message their corrections to the ISIC with a

copy to the TYCOM and Supervising Authority (when assigned) prior to commencement of Fast Cruise.

- f. Submit a Casualty Report (CASREP), if applicable, per reference (a) for each item which degrades the Submarine Rescue Chamber (SRC) or Submarine Rescue Diving Recompression System (SRDRS) capability.

18.3.3 Senior Inspecting Officer.

- a. Assemble the inspecting team designated by the ISIC.
- b. Conduct the salvage inspection per the applicable Appendix of this chapter. Ensure Appendix E of this chapter is received prior to commencement of the inspection. The inspection should be completed at least 14 days prior to commencement of Fast Cruise, or for new construction ships and ships in a CNO Maintenance Availability, at least 28 days and no sooner than 60 days, prior to the scheduled commencement of Sea Trials. This examination should normally be performed close to Phase I crew certification, if possible.
- c. At the completion of the salvage inspection, report the following to the Commanding Officer or Officer in Charge of the inspected ship:
 - (1) Completion of the inspection. When ships are in a CNO availability, the shipyard and the Project Team must be formally notified of the scheduled date of the Salvage Inspection and any deficiencies identified.
 - (2) Which, if any, systems or equipment have not been restored to normal operating conditions (due to maintenance or required repairs, etc.).
 - (3) That an advance copy of the inspection results has been provided to the ship to facilitate early correction of deficiencies found.
- d. Submit the inspection report to the Commanding Officer or Officer in Charge of the inspected ship in the format of Appendix F of this chapter within three working days following the completion of the inspection, with a copy to the cognizant ISIC.

APPENDIX A**SSN 21 CLASS SUBMARINE SALVAGE INSPECTION
CHECK-OFF LIST**

General Information

1. Items pertaining to rescue seating surfaces and buoy cable angle tests require substantial support equipment and are designated for industrial activity accomplishment.
2. Configuration differences are noted as comments in the reference column.
3. Portions of the Salvage Inspection (as specified by the maintenance activity) may be conducted prior to the start of CNO availabilities as “pre-availability inspections” to support planning of the availability. These items need not be re-inspected provided no work was performed during the availability which affects their status. When specified, these items will be performed by Ship’s Force and written certification by the Commanding Officer provided to the maintenance activity, the ISIC and the Senior Inspecting Officer.
4. The user is directed to use the most latest revision of the Planned Maintenance System (PMS) maintenance requirement.

PART I: SALVAGE

INSPECTION TEAM (SSN 21 CLASS)	Reference Note	Sat	Unsat	Submarine Inspector Signature	Inspection Team Member Signature
1. <u>Salvage Drawings:</u>					
a. Verify salvage drawings: (1) Have been updated during ship's new construction period or last CNO Maintenance Availability. or (2) Latest revision is identified in ship's plan index.	Navy Modernization Process Management and Operations Manual NAVSEA SL720-AA-MAN-030 Ship Dwg. Consolidated Index Number 594 or 845				
(3) Have correct distribution.					
(4) Are identified as Selected Record Drawings					
2. <u>High and Low Salvage Connections:</u>					
a. Verify deck touch plate markings are installed and per plan.	Ship's Plans				
b. Check that each valve is free to operate with the inspecting command's salvage wrench.	Notes 1 and 2				
c. Perform a "J" pressure and a low pressure 100-psi seat tightness test from the sea side. No leakage is allowed.	Note 1				
d. External salvage system caps: (1) Verify the ship's salvage system arrangement plan contains a note that Roylyn type fittings are installed.	Note 3				

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION TEAM (SSN 21 CLASS)	Reference Note	Sat	Unsat	Submarine Inspector Signature	Inspection Team Member Signature
(2) Remove cap assembly, test connect and disconnect with the inspecting command's female fitting.	Kaiser Aero Space & Electronics Dwg. 9495 (Formally Roylyn Inc.)				
(3) Inspect all Roylyn caps. Ensure cap operates properly and is free of paint and debris. Reinstall cap with safety wire, where applicable.					
e. Verify strainers are properly installed on all compartment low salvage lines and are clear of debris.					
3. <u>Internal Air Salvage:</u>					
a. Test satisfactory operation of all internal salvage air valves.	Note 4				
b. Verify all compartment pressure gages are in calibration as indicated on calibration label. AHP-45-GA-008 AHP-45-GA-017 AHP-60-GA-018 AHP-629-GA-006 AHP-629-GA-007	Note 5				
4. <u>Bulkhead Flappers:</u>					
a. Test satisfactory local and remote (as applicable) operation of all ventilation system bulkhead flappers. VH-6 VH-7					

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION TEAM (SSN 21 CLASS)	Reference Note	Sat	Unsat	Submarine Inspector Signature	Inspection Team Member Signature
b. Verify from ships' records that applicable ventilation system bulkhead flapper maintenance has been completed for VH-8 within required periodicity.	Note 5				
5. <u>Hull Access Hatches, Watertight Doors and Torpedo Loading Hatches:</u> Inspection performed by local PMT.					
a. Perform or witness hatch maintenance to complete salvage inspection and reference the PMT annual inspection.	Note 5				
6. <u>External Gagging Devices:</u>					
a. Witness demonstration that all valves with external gagging devices can be gagged from open to shut with the inspecting command's salvage wrench and with the number of turns specified on the ship's salvage system arrangement plan. Record number of turns to operate: _____ turns.	Notes 2, 6, and 7				
b. Witness resetting of each gagging device and demonstrate satisfactory operation of the valves by normal means.	Notes 7 and 8				
7. <u>Air Bank Dew Points:</u>					
a. Verify from ships' records that applicable air bank air sampling maintenance has been completed, is in specification and within required periodicity.	Note 5				
b. Perform or witness AHPD Operational Test and Measure Dew point of Effluent.	Note 5				

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION TEAM (SSN 21 CLASS)	Reference Note	Sat	Unsat	Submarine Inspector Signature	Inspection Team Member Signature
8. <u>Towing Equipment</u>					
a. Verify from ships' records that Towing Equipment maintenance has been completed within required periodicity.	Note 5				

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

PART II: DISABLED SUBMARINE (DISSUB) 7-DAY SURVIVAL, ESCAPE AND RESCUE

INSPECTION ITEM (SSN 21 CLASS)	Reference Note	Fwd		Aft		Submarine Inspector Signature	Inspection Team Member Signature
		Sat	Unsat	Sat	Unsat		
1. <u>Submarine Rescue Chamber (SRC) and Submarine Rescue Diving and Recompression System (SRDRS) Fittings:</u>							
a. Verify four rescue vehicle hold-down sockets are installed per plan or authorized alteration on all escape trunk seating surfaces. From one socket per hatch, remove cap screw and plug; demonstrate guide is free.	NSTM S9086-T9-STM-010 Chapter 594 Ship's Plans Note 9						
b. Perform inspection of the LETs rescue seating surface. (1) Remove rescue seating surface protective cover and perform rescue seating surface inspection.	Notes 5						
(2) Verify rescue seating surface PMR's performed within periodicity.	Note 9 SMS 1230-081-008 SMS 1230-081-045						
c. Remove plug from hatch fairing. Check condition of SRC downhaul shackle. Verify downhaul shackle is free of corrosion and can be operated by hand. Use of plastisol or powder coating on downhaul shackle is not authorized.	Ship's Plans Note 9						
d. AN/BQN-13: (1) Inspect AN/BQN-13 Beacon to ensure that: (a) Cable is free of abrasions, cuts or damage. (b) Cable plug and encapsulation are free of defects. (c) Unit has no physical damage.							

(d) Transducer is free of oil leaks, bubbles and paint.							
---	--	--	--	--	--	--	--

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION ITEM (SSN 21 CLASS)	Reference Note	Fwd		Aft		Submarine Inspector Signature	Inspection Team Member Signature
		Sat	Unsat	Sat	Unsat		
(2) Perform or witness AN/BQN-13 maintenance.	Note 5						
2. <u>Escape Trunks, Logistics Escape Trunks and Forward Lockout Trunks:</u>							
a. Escape trunk hatch fairings must be maintained in a condition to be easily disassembled to support submarine rescue. Verify Planned Maintenance has been completed within the required periodicity on all escape trunk hatches. Visually inspect escape trunk hatch fairings for compliance with the specifications called out in the PMS. Paint fouling or corrosion of fairing fasteners must be immediately corrected. Demonstrate the ability to remove one fastener in each fairing piece required to be removed in the fairing disassembly procedure.	Notes 5 and 10						
b. Demonstrate that each access hatch operates satisfactorily with all respects of locking, unlocking, opening and shutting from below and above (with salvage wrench or hand wheel as applicable).							
c. Demonstrate that each access hatch can be opened with 5 th percentile swing force operability criteria for surfaced emergency egress.							

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION ITEM (SSN 21 CLASS)	Reference Note	Fwd		Aft		Submarine Inspector Signature	Inspection Team Member Signature
		Sat	Unsat	Sat	Unsat		
d. Demonstrate satisfactory operation of the escape hatch closing mechanisms per the installed instruction plates and equipment.							
e. Demonstrate satisfactory installation of Improved Powered Hatch Operator with intensifier and compensator as one mode of hatch operation of Logistics Escape Trunks. (1) Verify inventory of all parts. (2) Verify periodic pressure testing of hoses. (3) Verify assembly of intensifier and gearbox to upper hatch operator. (4) Verify installation of upper hatch operator compensator. (5) Demonstrate satisfactory operational check of intensifier pump and gears.	Ship's Drawing Note 5						
f. Demonstrate satisfactory operation and examine the condition of the following equipment: (1) Vent valves (trunk and compartment).							
(2) Blow valves (trunk and compartment).							

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION ITEM (SSN 21 CLASS)	Reference Note	Fwd		Aft		Submarine Inspector Signature	Inspection Team Member Signature
		Sat	Unsat	Sat	Unsat		
(3) Flood and drain valves (including remote operation mechanisms and strainer installations).							
(4) Demonstrate satisfactory operation and examine the condition of the following equipment: Conduct Hood Inflation System or Stole Charging Valve operational check to confirm valves operate properly and verify watertight caps installed.	Note 5						
(5) Pressure proof lights checked to ensure correct globe sealing and verified that globe is free from cracks.							
(6) Verify from ships' records that applicable maintenance to clear sea pressure sensing lines has been completed within required periodicity.	Note 5						
g. Verify the following equipment installed: (1) Diver's knife. (2) Ballpeen hammer. (3) Persuader (crows' foot).	Note 11						
h. Check Flood Line Orifice.	Not Clogged						

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION ITEM (SSN 21 CLASS)	Reference Note	Fwd		Aft		Submarine Inspector Signature	Inspection Team Member Signature
		Sat	Unsat	Sat	Unsat		
i. Verify gages are in calibration as indicated on calibration label. (1) FWD Escape Trunk TD-618-GA-96 (SSN 23 only) TD-800-GA-35 ALP-800-GA-2 ALP-800-GA-1 ALP-618-GA-3 IPHO-FWD-LET-001							
(2) AFT Escape Trunk TD-64-GA-64 ALP-64-GA-28 ALP-64-GA-27 ALP-62-GA-26 IPHO-AFT-LET-002							
j. Verify upper watertight hatch cavity drain valve operation is satisfactory.							
3. <u>Emergency Communications Equipment (SEPIRB):</u>							
a. Perform or witness SEPIRB maintenance.	Note 5						

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION ITEM (SSN 21 CLASS)	Reference Note	Fwd		Aft		Submarine Inspector Signature	Inspection Team Member Signature
		Sat	Unsat	Sat	Unsat		
4. <u>Life Saving and Safety Equipment:</u>							
a. Inventory allowance (randomly, type and quantity as applicable) and witness satisfactory performance of PMS procedures on the following: (PMS procedures are to be demonstrated on one representative candidate from each of the sub groups listed). (1) Auto-Inflatable life preservers QTY (26)	Note 5						
(2) Inherently buoyant life preservers. QTY (10)	Note 5						
(3) Man overboard bag.	Note 5						
(4) Safety harness (belts). QTY (20)	Note 5						
(5) Safety track.	Note 5						
(6) Distress marker lights. QTY (2)	Note 5						
(7) Life lines and stanchions.	Note 5						
(8) SESSPE Suits.	Note 5						
(9) Crash Bags.	Note 5						
b. Qualified swimmer designated for man overboard.	Note 12						

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

NOTES
(SSN 21 CLASS)

1. All high and low salvage valves are to be tested for freedom of operation at the frequency specified, except during the salvage inspection conducted incident to an overhaul. Salvage Air valve testing completed up to one year prior to the start of an availability will satisfy the salvage inspection requirements provided that certified records verifying the tests are available. Written certification by the Commanding Officer that specified external salvage valves have been overhauled by the industrial activity or Ship's Force and have been successfully hydrostatically tested will constitute certification that the valve operates freely, providing all inspections (Part I, items 2.b. and 2.c. of this Appendix) for each valve so certified are satisfactory. If the results of the inspection of operating gear are not satisfactory, or doubt exists concerning freedom of operation, the specific valves in question must be checked. Provide appropriate container for collecting anti-freeze drained from salvage piping when hull valve is cycled. Ensure controlled re-assembly per Quality Assurance requirements is performed when installing salvage caps. Exercise caution to prevent liquid in salvage air piping from impinging on nearby equipment when hull valve is cycled. Ensure anti-freeze is added to piping after inspection to prevent freezing.
2. The inspected ship's, vice the inspecting command's, salvage wrench must be used if the inspecting command is another submarine. Discrepancies in the actual, versus plan, number of turns which are greater than one full turn must be noted in addition to the number of actual turns recorded.
3. Discrepancies between physical installation and salvage plans are to be reported to the TYCOM with an information copy to all plan holders.
4. Exercise extreme caution when testing operation of 4500-psi compartment pressurization valves.
5. The current submarine Salvage Inspection PMS Conversion Matrix is available on the JFMM web site at <https://www.navsea.navy.mil/Home/SUBMEPP/Products/JFMM/> under the TYCOM Doc/Form tab for PMS completion of the Salvage Inspection item.
6. When inspecting the gagging gear for the inboard ventilation exhaust valve and the inboard ventilation induction valve, the valve linkages must be inspected and the valves must be adjusted per the requirements in the Non-Primary Plant Valves Technical Manual or individual ship's valve drawing.
7. Prior to testing Outboard Diesel Exhaust Valve, ensure replacement spring-loaded locking pin is available onboard.
8. On some designs, operation of the gagging device overrides the regular operating gear of the valve indicator in such a manner that the entire mechanism must be reset or readjusted before the normal operating gear or the valve position indicator will function as intended. If the gagging mechanism is operated or used for any reason, the mechanism must be reset and the valve subsequently opened and closed by the normal operating gear in every manner in which the gear is designed to function to ensure the valve is in proper operating condition.

9. Unsatisfactory conditions degrade the SRC or SRDRS capability and require a CASREP be submitted per reference (a), and additional DFS reporting requirements per Volume V, Part I, Chapter 8 of this manual.
10. One or more of the Logistics and Escape Trunks (LET) will be removed during refit. When removed, the LET is isolated from service air and electric power. Communications circuits, electrical power, and charging manifold tests should be conducted prior to LET removal to ensure piping and electrical system continuity, and tested again upon reinstallation.
11. Diver's knife and ballpeen hammer may be stored in secure stowage in escape compartment.
12. Man overboard swimmer to be competent as a swimmer or qualified diver as designated by Commanding Officer per MILPERS MAN Art. 1414-010 Series.
13. A minimum of 30 Granular LiOH canisters are required onboard to support NON-DISSUB applications and may be stowed forward or aft. LiOH canisters reserved for DISSUB must be segregated from NON- DISSUB canisters with quantities and location(s) logged by the crew.
14. Oxygen candle quantity and location impacts inspection acceptance criteria.
 - a. Mission appropriate oxygen candle quantities reserved for NON-DISSUB must be in excess of quantities reserved for DISSUB. Oxygen candles supporting NON-DISSUB applications may be stowed forward or aft.
 - b. Oxygen candles reserved for DISSUB must be segregated from NON-DISSUB candles with quantities and location(s) logged by the crew.
 - c. Oxygen candle igniters must be of a quantity and location (FWD or AFT) that supports onboard candle load-out.
15. DISSUB pre and post D7DS supplies:
 - a. If total ships manning exceeds designated 153 personnel (SSN 21 and SSN 22) or 220 personnel (SSN 23), refer to OPORD 2000 to determine adjusted quantities of supplies.
 - b. If SHIPALT 4731D (SSN 21/22) or SHIPALT 4752D (SSN 23) has not been installed, perform step 7 and omit step 8.
 - c. If SHIPALT 4731D (SSN 21/22) or SHIPALT 4752D (SSN 23) has been installed, perform step 8 and omit step 7.
 - d. These Pre and Post DISSUB quantities are from COMSUBLANT msg 231132Z Jul 15 and NAVSEA ltr 4700 Ser 391/0348 of 4 Dec15.

APPENDIX B**SSN 688 CLASS SUBMARINE SALVAGE INSPECTION
CHECK-OFF LIST**

General Information

1. Items pertaining to rescue seating surfaces and buoy cable angle tests require substantial support equipment and are designated for industrial activity accomplishment.
2. Configuration differences are noted as comments in the reference column.
3. Portions of the Salvage Inspection (as specified by the maintenance activity) may be conducted prior to the start of CNO availabilities as “pre-availability inspections” to support planning of the availability. These items need not be re-inspected provided no work was performed during the availability which affects their status. When specified, these items will be performed by Ship’s Force and written certification by the Commanding Officer provided to the maintenance activity, the ISIC and the Senior Inspecting Officer.
4. The user is directed to use the most latest revision of the PMS maintenance requirement.

PART I: SALVAGE

INSPECTION TEAM (SSN 688 CLASS)	Reference Note	Sat	Unsat	Submarine Inspector Signature	Inspection Team Member Signature
1. <u>Salvage Drawings:</u>					
a. Verify salvage drawings: (1) Have been updated during ship's new construction period or last CNO Maintenance Availability. or (2) Latest revision is identified in ship's plan index.	Navy Modernization Process Management and Operations Manual NAVSEA SL720-AA-MAN-030 Ship Dwg. Consolidated Index Number 513 or 845				
(3) Have correct distribution.					
(4) Are identified as Selected Record Drawings					
2. <u>High and Low Salvage Connections:</u>					
a. Verify deck touch plate markings are installed and per plan.	Ship's Plans				
b. Check that each valve is free to operate with the inspecting command's salvage wrench.	Notes 1 and 2				
c. Perform a "J" pressure and a low pressure 100-psi seat tightness test from the sea side. No leakage is allowed.	Note 1				

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION TEAM (SSN 688 CLASS)	Reference Note	Sat	Unsat	Submarine Inspector Signature	Inspection Team Member Signature
d. External salvage system caps: (1) Verify the ship's salvage system arrangement plan contains a note that Roylyn type fittings are installed.	Note 3				
(2) Remove cap assembly, test connect and disconnect with the inspecting command's female fitting.	Kaiser Aero Space & Electronics Dwg. 9495 (Formally Roylyn Inc.)				
(3) Inspect all Roylyn caps. Ensure cap operates properly and is free of paint or debris. Reinstall cap with safety wire, where applicable.					
e. Verify strainers are properly installed on all compartment low salvage lines and are clear of debris.					
3. <u>Internal Air Salvage:</u>					
a. Test satisfactory operation of all internal salvage air valves.	Note 4				
b. Verify all compartment pressure gages are in calibration as indicated on calibration label. AHP-631-GA-014 AHP-62-GA-015	Note 5				
4. <u>Bulkhead Flappers:</u>					
a. Test satisfactory local and remote (as applicable) operation of all ventilation system bulkhead flappers. VH-6 VH-7 VH-8					

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION TEAM (SSN 688 CLASS)	Reference Note	Sat	Unsat	Submarine Inspector Signature	Inspection Team Member Signature
b. Verify from ships' records that applicable ventilation system bulkhead flapper maintenance has been completed for VH-9 within required periodicity.	SMS 5120-081-097				
5. <u>Hull Access Hatches, Watertight Doors and Torpedo Loading Hatches:</u> Inspection performed by local PMT.					
a. Perform or witness hatch maintenance to complete salvage inspection and reference the PMT annual inspection.	Note 5				
6. <u>External Gagging Devices:</u>					
a. Witness demonstration that all valves with external gagging devices can be gagged from open to shut with the inspecting command's salvage wrench and with the number of turns specified on the ship's salvage system arrangement plan. Record number of turns to operate: _____ turns.	Notes 2 and 6				
b. Witness resetting of each gagging device and demonstrate satisfactory operation of the valves by normal means.	Note 7				
7. <u>Air Bank Dew Points:</u>					
a. Verify from ships' records that applicable air bank air sampling maintenance has been completed, is in specification and within required periodicity.	Note 5				
b. Perform or witness AHPD Operational Test and Measure Dew point of Effluent.	Note 5				

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION TEAM (SSN 688 CLASS)	Reference Note	Sat	Unsat	Submarine Inspector Signature	Inspection Team Member Signature
8. <u>Towing Equipment</u>					
a. Verify from ships' records that Towing Equipment maintenance has been completed within required periodicity.	Note 5				

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

PART II: DISSUB 7-DAY SURVIVAL, ESCAPE AND RESCUE

INSPECTION ITEM (SSN 688 CLASS)	Reference Note	Fwd		Aft		Submarine Inspector Signature	Inspection Team Member Signature
		Sat	Unsat	Sat	Unsat		
1. <u>Submarine Rescue Chamber (SRC) and Submarine Rescue Diving and Recompression System (SRDRS) Fittings:</u>							
a. Verify four rescue vehicle hold-down sockets are installed per plan or authorized alteration on all escape trunk seating surfaces. From one socket per hatch, remove cap screw and plug; demonstrate guide is free.	NSTM S9086-T9-STM-010 Chapter 594 Ship’s Plans Note 8						
b. Perform inspection of the LETs rescue seating surface. (1) Remove rescue seating surface protective cover and perform rescue seating surface inspection.	Note 5						
(2) Verify rescue seating surface PMR’s performed within periodicity.	Note 8 SMS 1230-081-016 SMS 1230-081-046						
c. Remove plug from hatch fairing. Check condition of SRC downhaul shackle. Verify downhaul shackle is free of corrosion and can be operated by hand. Use of plastisol or powder coating on downhaul shackle is not authorized.	Ship’s Plans Note 8						
d. AN/BQN-13: (1) Inspect AN/BQN-13 Beacon to ensure that: (a) Cable is free of abrasions, cuts or damage. (b) Cable plug and encapsulation are free of defects.							

(c) Unit has no physical damage.							
----------------------------------	--	--	--	--	--	--	--

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION ITEM (SSN 688 CLASS)	Reference Note	Fwd		Aft		Submarine Inspector Signature	Inspection Team Member Signature
		Sat	Unsat	Sat	Unsat		
(2) Perform or witness AN/BQN-13 maintenance.	Note 5						
2. <u>Escape Trunks:</u>							
a. Escape trunk hatch fairings must be maintained in a condition to be easily disassembled to support submarine rescue. Verify Planned Maintenance has been completed within the required periodicity on all escape trunk hatches. Visually inspect escape trunk hatch fairings for compliance with the specifications called out in the PMS. Paint fouling or corrosion of fairing fasteners must be immediately corrected. Demonstrate the ability to remove one fastener in each fairing piece required to be removed in the fairing disassembly procedure.	Note 5						
b. Demonstrate that each access hatch operates satisfactorily with all respects of locking, unlocking, opening, shutting from below and above (with salvage wrench or hand wheel as applicable).							
c. Demonstrate the escape upper hatches have the minimum specified pop-up.							

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION ITEM (SSN 688 CLASS)	Reference Note	Fwd		Aft		Submarine Inspector Signature	Inspection Team Member Signature
		Sat	Unsat	Sat	Unsat		
d. Demonstrate satisfactory operation of the escape hatch closing mechanisms per the installed instruction plates and equipment.							
e. Demonstrate that escape trunk upper hatch maximum hydraulic closing pressure is satisfactory. Demonstrate that the hydraulic accumulator maintains the nitrogen pre-charge as specified in OP 61-1 (rig-for-dive) and that the hand pump operates satisfactorily.							
f. Demonstrate satisfactory operation and examine the condition of the following equipment:							
(1) Vent valves (trunk and compartment).							
(2) Blow valves (trunk and compartment).							
(3) Flood and drain valves (including remote operation mechanisms and strainer installations).							

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION ITEM (SSN 688 CLASS)	Reference Note	Fwd		Aft		Submarine Inspector Signature	Inspection Team Member Signature
		Sat	Unsat	Sat	Unsat		
(4) Demonstrate satisfactory operation and examine the condition of the following equipment: Conduct Hood Inflation System or Stole Charging Valve operational check to confirm valves operate properly and verify watertight caps installed.	Note 5						
(5) Pressure proof lights checked to ensure correct globe sealing and verified that globe is free from cracks.							
(6) Verify from ships' records that applicable maintenance to clear sea pressure sensing lines has been completed within required periodicity.	Note 5						
g. Verify the following equipment installed: (1) Diver's knife. (2) Ballpeen hammer. (3) Persuader (crows' foot).	Note 9						
h. Check Flood Line Orifice.	Not Clogged						
i. Verify valve hand wheels are properly color coded and labeled per Ship's Drawing Index, Ship's placards and Posted Information Plates.	NSTM S9086-RK-STM-010 Chapter 505						

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

NOTES
(SSN 688 CLASS)

1. All high and low salvage valves are to be tested for freedom of operation at the frequency specified, except during the salvage inspection conducted incident to an overhaul. Salvage Air valve testing completed up to one year prior to the start of an availability will satisfy the salvage inspection requirements provided that certified records verifying the tests are available. Written certification by the Commanding Officer that specified external salvage valves have been overhauled by the industrial activity or Ship's Force and have been successfully hydrostatically tested will constitute certification that the valve operates freely, providing all inspections (Part I, items 2.b. and 2.c. of this Appendix) for each valve so certified are satisfactory. If the results of the inspection of operating gear are not satisfactory, or doubt exists concerning freedom of operation, the specific valves in question must be checked. Provide appropriate container for collecting anti-freeze drained from salvage piping when hull valve is cycled. Ensure controlled re-assembly per Quality Assurance requirements is performed when installing salvage caps. Exercise caution to prevent liquid in salvage air piping from impinging on nearby equipment when hull valve is cycled. Ensure anti-freeze is added to piping after inspection to prevent freezing.
2. The inspected ship's, vice the inspecting command's, salvage wrench must be used if the inspecting command is another submarine. Discrepancies in the actual, versus plan, number of turns which are greater than one full turn must be noted in addition to the number of actual turns recorded.
3. Discrepancies between physical installation and salvage plans are to be reported to the TYCOM with an information copy to all plan holders.
4. Exercise extreme caution when testing operation of 4500-psi compartment pressurization valves.
5. The current submarine Salvage Inspection PMS Conversion Matrix is available on the JFMM web site at <https://www.navsea.navy.mil/Home/SUBMEPP/Products/JFMM/> under the TYCOM Doc/Form tab for PMS completion of the Salvage Inspection item.
6. When inspecting the gagging gear for the inboard ventilation exhaust valve and the inboard ventilation induction valve, the valve linkages must be inspected and the valves must be adjusted per the requirements in the Non-Primary Plant Valves Technical Manual or individual ship's valve drawing.
7. On some designs, operation of the gagging device overrides the regular operating gear of the valve indicator in such a manner that the entire mechanism must be reset or readjusted before the normal operating gear or the valve position indicator will function as intended. If the gagging mechanism is operated or used for any reason, the mechanism must be reset and the valve subsequently opened and closed by the normal operating gear in every manner in which the gear is designed to function to ensure the valve is in proper operating condition.
8. Unsatisfactory conditions degrade the SRC or SRDRS capability and require a CASREP be submitted per reference (a), **and additional DFS reporting requirements per Volume V, Part I, Chapter 8 of this manual.**
9. Diver's knife and ballpeen hammer may be stored in secure stowage in escape compartment.
10. Man overboard swimmer to be competent as a swimmer or qualified diver as designated by Commanding Officer per MILPERS MAN Art. 1414-010 Series.

11. A minimum of 30 Granular LiOH canisters are required onboard to support NON-DISSUB applications and may be stowed forward or aft. LiOH canisters reserved for DISSUB must be segregated from NON- DISSUB canisters with quantities and location(s) logged by the crew.

12. Oxygen candle quantity and location impacts inspection acceptance criteria:

- a. Mission appropriate oxygen candle quantities reserved for NON-DISSUB must be in excess of quantities reserved for DISSUB. Oxygen candles supporting NON-DISSUB applications may be stowed forward or aft.
- b. Oxygen candles reserved for DISSUB must be segregated from NON-DISSUB candles with quantities and location(s) logged by the crew.
- c. Oxygen candle igniters must be of a quantity and location (FWD or AFT) that supports onboard candle load-out.

13. DISSUB pre and post D7DS supplies:

- a. If total ships manning exceeds designated 154 personnel, refer to OPORD 2000 to determine adjusted quantities of supplies.
- b. If SHIPALT 4735, SHIPALT 4812D or A&I N3576 have not been installed, perform step 7 and omit step 8.
- c. If SHIPALT 4735, SHIPALT 4812D and A&I N3576 have been installed, perform step 8 and omit step 7.
- d. These Pre and Post DISSUB quantities are from COMSUBLANT msg 231132Z JUL15 and NAVSEA ltr 4700 Ser 391/0348 of 4 Dec 15.

APPENDIX C**SSBN AND SSGN 726 CLASS SUBMARINE SALVAGE INSPECTION
CHECK-OFF LIST**

General Information

1. Items pertaining to rescue seating surfaces and buoy cable angle tests require substantial support equipment and are designated for industrial activity accomplishment.
2. Configuration differences are noted as comments in the reference column.
3. Portions of the Salvage Inspection (as specified by the maintenance activity) may be conducted prior to the start of CNO availabilities as "pre-availability inspections" to support planning of the availability. These items need not be re-inspected provided no work was performed during the availability which affects their status. When specified, these items will be performed by Ship's Force and written certification by the Commanding Officer provided to the maintenance activity, the ISIC, and the Senior Inspecting Officer.
4. The user is directed to use the most latest revision of the PMS maintenance requirement.

PART I: SALVAGE

INSPECTION TEAM (SSBN and SSGN 726 CLASS)	Reference Note	Sat	Unsat	Submarine Inspector Signature	Inspection Team Member Signature
1. <u>Salvage Drawings:</u>					
a. Verify salvage drawings: (1) Have been updated during ship's new construction period or last CNO Maintenance Availability. or (2) Latest revision is identified in ship's plan index.	Navy Modernization Process Management and Operations Manual NAVSEA SL720-AA-MAN-030 Ship Dwg. Consolidated Index Number 513 or 845				
(3) Have correct distribution.					
(4) Are identified as Selected Record Drawings					
2. <u>High and Low Salvage Connections:</u>					
a. Verify deck touch plate markings are installed and per plan.	Ship's Plans				
b. Inspect external valve operating gear for conditions of the salvage valve; i.e., excessive paint, lack of lubrication, distortion, damaged or missing grease boots.	Note 1				
c. Check that each valve is free to operate with the inspecting command's salvage wrench.	Notes 2 and 3				
d. Perform a "J" pressure and a low pressure 100-psi seat tightness test from the sea side. No leakage is allowed.	Note 2				

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION TEAM (SSBN AND SSGN 726 CLASS)	Reference Note	Sat	Unsat	Submarine Inspector Signature	Inspection Team Member Signature
e. External salvage system caps: (1) Verify the ship's salvage system arrangement plan contains a note that Roylyn type fittings are installed.	Note 4				
(2) Remove cap assembly, test connect and disconnect with the inspecting command's female fitting.	Kaiser Aero Space & Electronics Dwg. 9495 (Formally Roylyn Inc.)				
(3) Inspect all Roylyn caps. Ensure cap operates properly and is free of paint or debris. Reinstall cap with safety wire, where applicable.					
f. Verify strainers are properly installed on all compartment low salvage lines and are clear of debris.					
3. <u>Internal Air Salvage:</u>					
a. Test satisfactory operation of all internal salvage air valves.	Note 5				
b. Verify all compartment pressure gages are in calibration as indicated on calibration label. SA-20-GA-01 SA-52-GA-02 SA-55-GA-03 SA-71-GA-04	Note 6				

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION TEAM (SSBN AND SSGN 726 CLASS)	Reference Note	Sat	Unsat	Submarine Inspector Signature	Inspection Team Member Signature
4. <u>Bulkhead Flappers:</u>					
a. Test satisfactory local and remote (as applicable) operation of ventilation system bulkhead flappers. VH-11 VH-12 VH-13 VH-14					
b. Verify from ships' records that applicable ventilation system bulkhead flapper maintenance has been completed for VH-18 within required periodicity.	Note 6				
5. <u>Hull Access Hatches, Watertight Doors and Torpedo Loading Hatches:</u> Inspection performed by local PMT.					
a. Perform or witness hatch maintenance to complete salvage inspection and reference the PMT annual inspection.	Note 6				
6. <u>External Gagging Devices:</u>					
a. Witness demonstration that all valves with external gagging devices can be gagged from open to shut with the inspecting command's salvage wrench and with the number of turns specified on the ship's salvage system arrangement plan. Record number of turns to operate: _____ turns.	Notes 3, 7 and 8				

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION TEAM (SSBN AND SSGN 726 CLASS)	Reference Note	Sat	Unsat	Submarine Inspector Signature	Inspection Team Member Signature
b. Witness resetting of each gagging device and demonstrate satisfactory operation of the valves by normal means.	Notes 8 and 9				
7. <u>Air Bank Dew Points:</u>					
a. Verify from ships' records that applicable air bank air sampling maintenance has been completed, is in specification and within required periodicity.	Note 6				
b. Perform or witness AHPD Operational Test and Measure Dew point of Effluent.	Note 6				
8. <u>Towing Equipment:</u>					
a. Verify from ships' records that Towing Equipment maintenance has been completed within required periodicity.	Note 6				

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

PART II: DISSUB 7-DAY SURVIVAL, ESCAPE AND RESCUE

INSPECTION ITEM (SSBN AND SSGN 726 CLASS)	Reference Note	Fwd		Mid		Aft		Submarine Inspector Signature	Inspection Team Member Signature
		Sat	Unsat	Sat	Unsat	Sat	Unsat		
1. Submarine Rescue Chamber (SRC) and Submarine Rescue Diving and Recompression System (SRDRS) Fittings:									
a. Verify four rescue vehicle hold-down sockets are installed per plan or authorized alteration on all escape trunk seating surfaces. From one socket per hatch, remove cap screw and plug; demonstrate guide is free.	NSTM S9086-T9-STM-010 Chapter 594 Ship’s Plans Note 10								
b. Perform inspection of the LETs rescue seating surface. (1) Remove rescue seating surface protective cover and perform rescue seating surface inspection.	Notes 6								
(2) Verify rescue seating surface PMR’s performed within periodicity.	Note 10 SMS 1230-081-003 SMS 1230-081-044								
c. Remove plug from hatch fairing. Check condition of SRC downhaul shackle. Verify downhaul shackle is free of corrosion and can be operated by hand. Use of plastisol or powder coating on downhaul shackle is not authorized.	Ship’s Plans Note 10								

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION ITEM (SSBN AND SSGN 726 CLASS)	Reference Note	Fwd		Mid		Aft		Submarine Inspector Signature	Inspection Team Member Signature
		Sat	Unsat	Sat	Unsat	Sat	Unsat		
2. <u>Escape Trunks, Logistics Escape Trunks and Forward Lockout Trunks:</u>									
a. Escape trunk hatch fairings must be maintained in a condition to be easily disassembled to support submarine rescue. Visually inspect escape trunk hatch fairings for compliance with the specification called out in the Submarine Maintenance Standard (SMS). Paint fouling or corrosion of fairing fasteners must be immediately corrected. Demonstrate the ability to remove one fastener in each fairing piece required to be removed in the fairing disassembly procedure.	Note 11 SMS No. 1670-081-011								
b. Demonstrate that each access hatch operates satisfactorily with all respects of locking, unlocking, opening, shutting from below and above (with salvage wrench or hand wheel as applicable).									
c. Demonstrate the escape upper hatches have the minimum specified pop-up.									
d. Demonstrate satisfactory operation of the escape hatch closing mechanisms per the installed instruction plates and equipment.									

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION ITEM (SSBN AND SSGN 726 CLASS)	Reference Note	Fwd		Mid		Aft		Submarine Inspector Signature	Inspection Team Member Signature
		Sat	Unsat	Sat	Unsat	Sat	Unsat		
e. Demonstrate satisfactory installation of Improved Powered Hatch Operator with intensifier and compensator as one mode of hatch operation of Logistics Escape Trunks. (1) Verify inventory of all parts.	Ship's Drawing Note 6								
(2) Verify periodic pressure testing of hoses. (3) Verify assembly of intensifier and gearbox to upper hatch operator. (4) Verify installation of upper hatch operator compensator. (5) Demonstrate satisfactory operational check of intensifier pump and gears.									
f. Demonstrate satisfactory operation and examine the condition of the following equipment: (1) Vent valves (trunk and compartment).									
(2) Blow valves (trunk and compartment).									
(3) Flood and drain valves (including remote operation mechanisms and strainer installations).									

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION ITEM (SSBN AND SSGN 726 CLASS)	Reference Note	Fwd		Mid		Aft		Submarine Inspector Signature	Inspection Team Member Signature
		Sat	Unsat	Sat	Unsat	Sat	Unsat		
(4) Demonstrate satisfactory operation and examine the condition of the following equipment: Conduct Hood Inflation System or Stole Charging Valve operational check to confirm valves operate properly and verify watertight caps installed.	Note 6								
(5) Verify from ships' records that applicable maintenance to clear sea pressure sensing lines has been completed within required periodicity.	Note 6								
g. Verify the following equipment installed: (1) Diver's knife. (2) Ballpeen hammer. (3) Persuader (crows' foot).	Note 12								
h. Check Flood Line Orifice.	Not Clogged								
i. Verify valve hand wheels are properly color coded and labeled per Ship's Drawing Index, Ship's placards and Posted Information Plates.	NSTM S9086-RK-STM-010 Chapter 505								

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION ITEM (SSBN AND SSGN 726 CLASS)	Reference Note	Fwd		Mid		Aft		Submarine Inspector Signature	Inspection Team Member Signature
		Sat	Unsat	Sat	Unsat	Sat	Unsat		
j. Verify gages are in calibration as indicated on calibration label. (1) FWD Escape Trunk TD-86-GA-030 ALP-86-GA-002 ALP-86-GA-003 ALP-10-GA-001 IPHO-1 (FWD)									
(2) MID Escape Trunk TP-89-GA-031 ALP-89-GA-020 ALP-89-GA-047 ALP-55-GA-045 IPHO-2 (MID)									
(3) AFT Escape Trunk TD-91-GA-032 ALP-91-GA-019 ALP-91-GA-048 ALP-74-GA-046 IPHO-3 (AFT)									
k. Verify upper watertight hatch cavity drain valve operation is satisfactory.									
3. <u>Emergency Communications Equipment:</u>									
a. SEPIRB (1). Perform or witness SEPIRB maintenance.	Note 6								

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION ITEM (SSBN AND SSGN 726 CLASS)	Reference Note	Fwd		Mid		Aft		Submarine Inspector Signature	Inspection Team Member Signature
		Sat	Unsat	Sat	Unsat	Sat	Unsat		
b. AN/BQQ-6 Emergency Communications and Distress Beacon Groups. (1) Verify from ships' records that applicable maintenance for the AN/BQQ-6 has been completed within required periodicity.	Note 6								
(2) Check that the AN/BQQ-6 Emergency Communications Group receptacle is marked "61/62/63 Receptacle/Emergency Communications for AN/BQQ-6".									
4. <u>Life Saving and Safety Equipment:</u>									
a. Inventory allowance (randomly, type and quantity as applicable) and witness satisfactory performance of PMS procedures on the following: (PMS procedures are to be demonstrated on one representative candidate from each of the sub groups listed). (1) Auto-Inflatable life preservers QTY (30)	Note 6								
(2) Inherently buoyant life preservers. QTY (10)	Note 6								
(3) Man overboard bag.	Note 6								
(4) Safety harness (belts). QTY (20)	Note 6								

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

		Sat	Unsat	Sat	Unsat	Sat	Unsat		
(5) Safety track.	Note 6								
(6) Distress marker lights. QTY (2)	Note 6								
(7) Life lines and stanchions.	Note 6								
(8) SESSPE Suits.	Note 6								
(9) Crash Bags.	Note 6								
b. Qualified swimmer designated for man overboard.	Note 13								
c. Guard Books. FWD: REV ____ CHG ____ MID: REV ____ CHG ____ AFT: REV ____ CHG ____	Latest Revision								
d. SSM OP 61-1 REV ____ CHG ____ SSM OI 638-3 REV ____ CHG ____ SSM OI 638-4 REV ____ CHG ____	Latest Revision								
5. <u>Escape Training</u> :									
a. Verify that all hands are trained in SESSPE escape.									

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION ITEM (SSBN AND SSGN 726 CLASS)	Reference Note	Fwd		Mid		Aft		Submarine Inspector Signature	Inspection Team Member Signature
		Sat	Unsat	Sat	Unsat	Sat	Unsat		
6. <u>Launchers</u> :									
a. Demonstrate satisfactory operation of each launcher manually and hydro-pneumatically as applicable.									
b. Verify a minimum of six Red Submarine Emergency Identification Signals and Submarine Floating Signal pyrotechnics stowed in compartment with launcher.									
c. Operational verification must include a demonstrated launch (water slug) from both remote and local operating stations.									
7. <u>DISSUB Survival</u> : Pre D7DS Note 16									
a. Portable Desalinators: (1) Inventory quantity onboard: FWD: _____ MID: _____ AFT: _____	2 FWD; 2 MID; 2 AFT								
(2) Verify from ships' records that applicable MROD maintenance has been completed within required periodicity.	Note 6								

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION ITEM (SSBN AND SSGN 726 CLASS)	Reference Note	Fwd		Mid		Aft		Submarine Inspector Signature	Inspection Team Member Signature
		Sat	Unsat	Sat	Unsat	Sat	Unsat		
b. <u>Atmosphere Control</u> : (1) CO ₂ absorbent canisters: (a) Amount onboard: FWD: _____ MID: _____ AFT: _____	Required: AEL 2-3300230 series for LiOH canister								
(b) Verify from ships' records that applicable CO ₂ absorbent canister maintenance has been completed within required periodicity. Additionally, randomly select 10% of canisters onboard and weigh them per the applicable MRC.	Note 6								
(2) LiOH Curtain Kits: (a) Amount onboard: FWD: _____ MID: _____ AFT: _____	Required: (SSBN) 6 FWD; 2 MID; 0 AFT (SSGN) 6 FWD; 7 MID; 0 AFT								
(b) Verify from ships' records that applicable LiOH curtain kit maintenance has been completed within required periodicity.	Note 6								
(3) O ₂ candles. (a) Amount onboard: FWD: _____ MID: _____ AFT: _____	Note 15 Required: AEL 1-230013100								
(b) O ₂ candle Ignitors:	Note 15								

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION ITEM (SSBN AND SSGN 726 CLASS)	Reference Note	Fwd		Mid		Aft		Submarine Inspector Signature	Inspection Team Member Signature
		Sat	Unsat	Sat	Unsat	Sat	Unsat		
(4) O ₂ candle furnace: (a) Amount onboard: FWD: _____ MID: _____ AFT: _____	Required: (SSBN) 0 FWD; 1 MID; 0 AFT (SSGN) 0 FWD; 1 MID; 0 AFT								
(5) Emergency Air Breathing: (a) Masks (test random 5% for proper operation per applicable MRC).	Note 6								
(b) Inspect 10% per compartment of emergency air breathing manifold in-line filters and filter housing for presence of corrosion.	Note 6								
c. <u>Atmosphere Monitoring</u> : (1) O ₂ and CO ₂ Gas Monitors (Analox SUBMKIIP): (a) Amount onboard: FWD: _____ MID: _____ AFT: _____	Stored in same locker as Crash Bag Required: 1 FWD, 1 MID, 1 AFT								
(b) Verify from ships' records that applicable Analox SUBMKIIP maintenance has been completed within required periodicity.	Note 6								
(2) Verify from ships' records DISSUB Detector Gas Kit (Draeger) maintenance has been completed within required periodicity.	Note 6								

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

NOTES
(SSBN AND SSGN 726 CLASS)

1. Reach rods, universal joints, and connecting links in the superstructure should be secured with non-corrosive pins. Inspect valve stems for misalignment and ensure that reach rod connection is one of square socket design with the non-corrosive pin used only to secure the reach rod to the universal.
2. All high and low salvage valves are to be tested for freedom of operation at the frequency specified, except during the salvage inspection conducted incident to an overhaul. Salvage Air valve testing completed up to one year prior to the start of an availability will satisfy the salvage inspection requirements provided that certified records verifying the tests are available. Written certification by the Commanding Officer that specified external salvage valves have been overhauled by the industrial activity or Ship's Force and have been successfully hydrostatically tested will constitute certification that the valve operates freely, providing all inspections (Part I, items 2.b., 2.c. and 2.d. of this Appendix) for each valve so certified are satisfactory. If the results of the inspection of operating gear are not satisfactory, or doubt exists concerning freedom of operation, the specific valves in question must be checked. Provide appropriate container for collecting anti-freeze drained from salvage piping when hull valve is cycled. Ensure controlled re-assembly per Quality Assurance requirements is performed when installing salvage caps. Exercise caution to prevent liquid in salvage air piping from impinging on nearby equipment when hull valve is cycled. Ensure anti-freeze is added to piping after inspection to prevent freezing.
3. The inspected ship's, vice the inspecting command's, salvage wrench must be used if the inspecting command is another submarine. Discrepancies in the actual, versus plan, number of turns which are greater than one full turn must be noted in addition to the number of actual turns recorded.
4. Discrepancies between physical installation and salvage plans are to be reported to the TYCOM with an information copy to all plan holders.
5. Exercise extreme caution when testing operation of 4500-psi compartment pressurization valves.
6. The current submarine Salvage Inspection PMS Conversion Matrix is available on the JFMM web site at <https://www.navsea.navy.mil/Home/SUBMEPP/Products/JFMM/> under the TYCOM Doc/Form tab for PMS completion of the Salvage Inspection item.
7. When inspecting the gagging gear for the inboard ventilation exhaust valve and the inboard ventilation induction valve, the valve linkages must be inspected and the valves must be adjusted per the requirements in the Non-Primary Plant Valves Technical Manual or individual ship's valve drawing.
8. Prior to testing Outboard Diesel Exhaust Valve, ensure replacement locking pin is available onboard.
9. On some designs, operation of the gagging device overrides the regular operating gear of the valve indicator in such a manner that the entire mechanism must be reset or readjusted before the normal operating gear or the valve position indicator will function as intended. If the gagging mechanism is operated or used for any reason, the mechanism must be reset and the valve

subsequently opened and closed by the normal operating gear in every manner in which the gear is designed to function to ensure the valve is in proper operating condition.

10. Unsatisfactory conditions degrade the SRC or SRDRS capability and require a CASREP be submitted per reference (a), **and additional DFS reporting requirements per Volume V, Part I, Chapter 8 of this manual.**

11. One or more of the Logistics and Escape Trunks (LET) will be removed during refit. When removed, the LET is isolated from service air and electric power. Communications circuits, electrical power and charging manifold tests should be conducted prior to LET removal to ensure piping and electrical system continuity, and tested again upon reinstallation.

12. Diver's knife and ballpeen hammer may be stored in secure stowage in escape compartment.

13. Man overboard swimmer to be competent as a swimmer or qualified diver as designated by Commanding Officer per MILPERS MAN Art. 1414-010 Series.

14. A minimum of 30 (SSBN) or 67 (SSGN) Granular LiOH canisters are required onboard to support NON- DISSUB applications and may be stowed forward or aft. LiOH canisters reserved for DISSUB must be segregated from NON- DISSUB canisters with quantities and location(s) logged by the crew.

15. Oxygen candle quantity and location impacts inspection acceptance criteria.

- a. Mission appropriate oxygen candle quantities reserved for NON-DISSUB must be in excess of quantities reserved for DISSUB. Oxygen candles supporting NON-DISSUB applications may be towed forward or aft.
- b. Oxygen candles reserved for DISSUB must be segregated from NON-DISSUB candles with quantities and location(s) logged by the crew.
- c. Oxygen candle igniters must be of a quantity and location (FWD or AFT) that supports onboard candle load-out.

16. DISSUB pre and post D7DS supplies:

- a. If total ships manning exceeds designated 165 personnel (SSBN) or 166 personnel (SSGN), refer to OPOD 2000 to determine adjusted quantities of supplies.
- b. If TZ-0951 (SSGNs), or TZ- 0937B, or TZ-0957A (SSBNs) have not been installed, perform step 7 and omit step 8.
- c. If TZ-0951 (SSGNs), or TZ- 0937B, or TZ-0957A (SSBNs) have been installed, perform step 8 and omit step 7.
- d. These Pre and Post DISSUB quantities are from COMSUBLANT msg 231132Z JUL15 and NAVSEA ltr 4700 Ser 391/0348 of 4 Dec 15.

APPENDIX D**SSN 774 CLASS SUBMARINE SALVAGE INSPECTION
CHECK-OFF LIST**

General Information

1. Items pertaining to rescue seating surfaces and buoy cable angle tests require substantial support equipment and are designated for industrial activity accomplishment.
2. Configuration differences are noted as comments in the reference column.
3. Portions of the Salvage Inspection (as specified by the maintenance activity) may be conducted prior to the start of CNO availabilities as “pre-availability inspections” to support planning of the availability. These items need not be re-inspected provided no work was performed during the availability which affects their status. When specified, these items will be performed by Ship’s Force and written certification by the Commanding Officer provided to the maintenance activity, the ISIC, and the Senior Inspecting Officer.
4. The user is directed to use the most latest revision of the PMS maintenance requirement.

PART I: SALVAGE

INSPECTION TEAM (SSN 774 CLASS)	Reference Note	Sat	Unsat	Submarine Inspector Signature	Inspection Team Member Signature
1. <u>Salvage Drawings:</u>					
a. Verify salvage drawings: (1) Have been updated during ship's new construction period or last CNO Maintenance Availability. or (2) Latest revision is identified in ship's plan index.	Navy Modernization Process Management and Operations Manual NAVSEA SL720-AA-MAN-030 Ship Dwg. Consolidated Index Number 594 or 845				
(3) Have correct distribution.					
(4) Are identified as Selected Record Drawings					
2. <u>High and Low Salvage Connections:</u>					
a. Verify deck touch plate markings are installed and per plan.	Ship's Plans				
b. Check that each valve is free to operate with the inspecting command's salvage wrench.	Notes 1 and 2				
c. Perform a "J" pressure and a low pressure 100-psi seat tightness test from the sea side. No leakage is allowed.	Notes 1 and 3				
d. External salvage system caps: (1) Verify the ship's salvage system arrangement plan contains a note that Roylyn type fittings are installed.	Note 4				

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION TEAM (SSN 774 CLASS)	Reference Note	Sat	Unsat	Submarine Inspector Signature	Inspection Team Member Signature
(2) Remove cap assembly, test connect and disconnect with the inspecting command's female fitting.	Kaiser Aero Space & Electronics Dwg. 9495 (Formally Roylyn Inc.)				
(3) Inspect all Roylyn caps. Ensure cap operates properly and is free of paint or debris. Reinstall cap with safety wire, where applicable.					
e. Verify strainers are properly installed on all compartment low salvage lines and are clear of debris.					
3. <u>Internal Air Salvage:</u>					
a. Test satisfactory operation of all internal salvage air valves.	Note 5				
b. Verify all compartment pressure gages are in calibration as indicated on calibration label. AHP-45-GA-055 AHP-519-GA-001	Note 6				
4. <u>Bulkhead Flappers:</u>					
a. Test satisfactory local and remote (as applicable) operation of ventilation system bulkhead flappers. VH-71 VH-72					
b. Verify from ships' records that applicable ventilation system bulkhead flapper maintenance has been completed for VH-73 within required periodicity.	Note 6				

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION TEAM (SSN 774 CLASS)	Reference Note	Sat	Unsat	Submarine Inspector Signature	Inspection Team Member Signature
5. <u>Hull Access Hatches, Watertight Doors and Torpedo Loading Hatches:</u> Inspection performed by local PMT.					
a. Perform or witness hatch maintenance to complete salvage inspection and reference the PMT annual inspection.	Note 6				
6. <u>External Gagging Devices:</u>					
a. Witness demonstration that all valves with external gagging devices can be gagged from open to shut with the inspecting command's salvage wrench and with the number of turns specified on the ship's salvage system arrangement plan. Record number of turns to operate: _____ turns.	Notes 2, 7 and 8				
b. Witness resetting of each gagging device and demonstrate satisfactory operation of the valves by normal means.	Notes 8 and 9				
7. <u>Air Bank Dew Points:</u>					
a. Verify from ships' records that applicable air bank air sampling maintenance has been completed, is in specification and within required periodicity.	Note 6				
b. Perform or witness AHPD Operational Test and Measure Dew point of Effluent.	Note 6				
8. <u>Towing Equipment</u>					
a. Verify from ships' records that Towing Equipment maintenance has been completed within required periodicity.	Note 6				

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

PART II: DISSUB 7-DAY SURVIVAL, ESCAPE AND RESCUE

INSPECTION ITEM (SSN 774 CLASS)	Reference Note	Fwd		Aft		Submarine Inspector Signature	Inspection Team Member Signature
		Sat	Unsat	Sat	Unsat		
1. <u>Submarine Rescue Chamber (SRC) and Submarine Rescue Diving and Recompression System (SRDRS) Fittings:</u>							
a. Verify four rescue vehicle hold-down sockets are installed per plan or authorized alteration on all escape trunk seating surfaces. From one socket per hatch, remove cap screw and plug; demonstrate guide is free.	NSTM S9086-T9-STM-010 Chapter 594 Ship’s Plans Note 10						
b. Perform inspection of the LET and LOT rescue seat. (1) Remove rescue seating surface protective cover and perform rescue seating surface inspection.	Notes 6						
(2) Verify rescue seating surface PMR’s performed within periodicity.	Note 10 SMS 1230-081-054 SMS 1230-081-055 SMS 1230-081-027 SMS 1230-081-048 SMS 1230-081-037 SMS 1230-081-047 SMS 1230-081-058 SMS 1230-081-059						
c. Remove plug from hatch fairing. Check condition of SRC downhaul shackle. Verify downhaul shackle is free of corrosion and can be operated by hand. Use of plastisol or powder coating on downhaul shackle is not authorized.	Ship’s Plans Note 10						
d. AN/BQN-13:							

(1) Inspect AN/BQN-13 Beacon to ensure that: (a) Cable is free of abrasions, cuts or damage. (b) Cable plug and encapsulation are free of defects. (c) Unit has no physical damage.							
(2) Perform or witness AN/BQN-13 maintenance.	Note 6						

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION ITEM (SSN 774 CLASS)	Reference Note	Fwd		Aft		Submarine Inspector Signature	Inspection Team Member Signature
		Sat	Unsat	Sat	Unsat		
2. <u>Escape Trunks, Logistics Escape Trunks and Forward Lockout Trunk:</u>							
a. Escape trunk hatch fairings must be maintained in a condition to be easily disassembled to support submarine rescue. Verify Planned Maintenance has been completed within the required periodicity on all escape trunk hatches. Visually inspect escape trunk hatch fairings for compliance with the specifications called out in the PMS. Paint fouling or corrosion of fairing fasteners must be immediately corrected. Demonstrate the ability to remove one fastener in each fairing piece required to be removed in the fairing disassembly procedure.	Note 11 Note 6						
b. Demonstrate that each access hatch operates satisfactorily with all respects of locking, unlocking, opening, shutting from below and above (with salvage wrench or hand wheel as applicable).							
c. Demonstrate that each access hatch can be opened with 5 th percentile swing force operability criteria for surfaced emergency egress.							

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION ITEM (SSN 774 CLASS)	Reference Note	Fwd		Aft		Submarine Inspector Signature	Inspection Team Member Signature
		Sat	Unsat	Sat	Unsat		
d. Demonstrate satisfactory operation of the escape hatch closing mechanisms per the installed instruction plates and equipment.							
e. Demonstrate satisfactory installation of Improved Powered Hatch Operator with intensifier and compensator as one mode of hatch operation of Logistics Escape Trunks. (1) Verify inventory of all parts. (2) Verify periodic pressure testing of hoses. (3) Verify assembly of intensifier and gearbox to upper hatch operator. (4) Verify installation of upper hatch operator compensator. (5) Demonstrate satisfactory operational check of intensifier pump and gears.	Ship's Drawing Note 6						
f. Demonstrate satisfactory operation and examine the condition of the following equipment: (1) Vent valves (trunk and compartment).							
(2) Blow valves (trunk and compartment).							

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION ITEM (SSN 774 CLASS)	Reference Note	Fwd		Aft		Submarine Inspector Signature	Inspection Team Member Signature
		Sat	Unsat	Sat	Unsat		
(3) Flood and drain valves (including remote operation mechanisms and strainer installations).							
(4) Demonstrate satisfactory operation and examine the condition of the following equipment: Conduct Hood Inflation System or Stole Charging Valve operational check to confirm valves operate properly and verify watertight caps installed.	Note 6						
(5) Pressure proof lights checked to ensure correct globe sealing and verified that globe is free from cracks.							
(6) Verify from ships' records that applicable maintenance to clear sea pressure sensing lines has been completed within required periodicity.	Note 6						
g. Verify the following equipment installed: (1) Diver's knife. (2) Ballpeen hammer. (3) Persuader (crows' foot).	Note 12						

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION ITEM (SSN 774 CLASS)	Reference Note	Fwd		Aft		Submarine Inspector Signature	Inspection Team Member Signature
		Sat	Unsat	Sat	Unsat		
h. Check Flood Line Orifice.	Not Clogged						
i. Verify valve hand wheels are properly color coded and labeled per Ship's Drawing Index, Ship's placards and Posted Information Plates.	NSTM S9086-RK-STM-010 Chapter 505						
j. Verify gages are in calibration as indicated on calibration label. (1) FWD LOT SDA-816-GA-044 SDA-816-GA-045 TD-816-GA-037 TD-510-GA-038 TD-510-GA-039 SDA-510-GA-039 SDA-510-GA-055 SDA-510-GA-056 SDA-510-GA-058 SDA-816-GA-077 IPHO-2 (LOT)							
(2) AFT LET ALP-801-GA-057 ALP-801-GA-058 ALP-801-GA-059 ALP-801-GA-060 TD-801-GA-522 TD-801-GA-523 TD-801-GA-524 IPHO-1 (LET)							

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

		Sat	Unsat	Sat	Unsat		
k. Verify upper watertight hatch cavity drain valve operation is satisfactory.							
l. Verify installation of lockout trunk high and low plugs, and demonstrate satisfactory plug operation.							
m. Witness satisfactory operation of lockout trunk partition removal and reinstallation.							
n. Air Sampling Valves F65 in LOT - See Figure 454-1 F62 in LET - See Figure 454-3	S9SSN-ZQ-SSM-FR0 Chapter 4-6-7						
(1) Valve Inspection. Remove the protective cap and the threaded pipe cap from the Air Sampling Valve. Verify that the needle valve is shut and that the internal portion is clean and free of debris.							
(2) Cap Inspection. (Controlled assembly required.) Reinstall the threaded pipe cap using the following controlled reassembly procedure:							
(a) Inspect the threaded cap to ensure the cap is clean, free of nicks, gouges or other defects which may cause damage to the Air Sampling Valve.							

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION ITEM (SSN 774 CLASS)	Reference Note	Fwd		Aft		Submarine Inspector Signature	Inspection Team Member Signature
		Sat	Unsat	Sat	Unsat		
(b) Reinstall Air Sampling Valve threaded cap to ensure proper fit.							
(c) Inspect the O-ring that seals the protective cap. Ensure that the O-ring is clean, free of cuts, cracks, hardening or irregularities.							
(d) Reinstall the protective cap ensuring proper fit.							
3. <u>Emergency Communications Equipment (SEPIRB):</u>							
a. Perform or witness SEPIRB maintenance.	Note 6						
4. <u>Life Saving and Safety Equipment:</u>							
a. Inventory allowance (randomly, type and quantity as applicable) and witness satisfactory performance of PMS procedures on the following: (PMS procedures are to be demonstrated on one representative candidate from each of the sub groups listed). (1) Auto-Inflatable life preservers QTY (26)	Note 6						
(2) Inherently buoyant life preservers. QTY (10)	Note 6						
(3) Man overboard bag.	Note 6						
(4) Safety harness (belts). QTY (20)	Note 6						
(5) Safety track.	Note 6						

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

		Sat	Unsat	Sat	Unsat		
c. Operational verification must include a demonstrated launch (water slug) from both remote and local operating stations.							
7. <u>DISSUB 7 Day Survival</u> : D7DS Note 14							
a. <u>Atmosphere Control</u> : (1) Inventory ExtendAir canister quantity onboard and inspect condition of the following: (a) Amount onboard for DISSUB: FWD:_____ AFT:_____	Required: AEL 2-3300232 series for ExtendAir						
(b) Verify from ships' records that applicable ExtendAir canister maintenance has been completed within required periodicity. Additionally, randomly select 10% of canisters onboard and weigh them per the applicable MRC.	Note 6						
(2) ExtendAir Deployment Kits: (a) Amount onboard: FWD:_____ AFT:_____	Required: 5 FWD; 0 AFT; Plus 1 additional NON-DISSUB Deployment Kit						
(b) Amount CO ₂ absorbent canisters (LiOH granular) onboard for NON-DISSUB: FWD:_____ AFT:_____	Note 15 Required: Additional 30 canisters						
(3) O ₂ candles: (a) Amount onboard for DISSUB: FWD:_____ AFT:_____	Note 16 Required: AEL 1-230013100						

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

INSPECTION ITEM (SSN 774 CLASS)	Reference Note	Fwd		Aft		Submarine Inspector Signature	Inspection Team Member Signature
		Sat	Unsat	Sat	Unsat		
(b) O ₂ candle Ignitors:	Note 16						
(4) O ₂ candle furnace: (a) Amount onboard: FWD:_____ AFT:_____	Required: 1 FWD; 1 AFT						
(5) Emergency Air Breathing: (a) Masks (test random 5% for proper operation per applicable MRC).	Note 6						
(b) Inspect 10% per compartment of emergency air breathing manifold in-line filters and filter housing for presence of corrosion.	Note 6						
b. <u>Atmosphere Monitoring</u> : (1) DISSUB O ₂ and CO ₂ Gas Monitors (Analox SUBMKIIP): (a) Amount onboard: FWD:_____ AFT:_____	Stored in same locker as Crash Bag Required: 1 FWD; 1 AFT						
(b) Verify from ships' records that applicable Analox SUBMKIIP maintenance has been completed within required periodicity.	Note 6						
(2) Verify from ships' records DISSUB Detector Gas Kit (Draeger) maintenance has been completed within required periodicity.	Note 6						

An asterisk (*) will be used in addition to a check mark (✓) in the unsat column to identify any exceptions. An explanation of the exception will be provided with the Salvage Inspection Report, Appendix F of this chapter.

NOTES
(SSN 774 CLASS)

1. All high and low salvage valves are to be tested for freedom of operation at the frequency specified, except during the salvage inspection conducted incident to an overhaul. Salvage Air valve testing completed up to one year prior to the start of availability will satisfy the salvage inspection requirements provided that certified records verifying the tests are available. Written certification by the Commanding Officer that specified external salvage valves have been overhauled by the industrial activity or Ship's Force and have been successfully hydrostatically tested will constitute certification that the valve operates freely, providing all inspections (Part I, items 2.b. and 2.c. of this Appendix) for each valve so certified are satisfactory. If the results of the inspection of operating gear are not satisfactory, or doubt exists concerning freedom of operation, the specific valves in question must be checked. Provide appropriate container for collecting anti-freeze drained from salvage piping when hull valve is cycled. Ensure controlled re-assembly per Quality Assurance requirements is performed when installing salvage caps. Exercise caution to prevent liquid in salvage air piping from impinging on nearby equipment when hull valve is cycled. Ensure anti-freeze is added to piping after inspection to prevent freezing.
2. The inspected ship's, vice the inspecting command's, salvage wrench must be used if the inspecting command is another submarine. Discrepancies in the actual, versus plan, number of turns which are greater than one full turn must be noted in addition to the number of actual turns recorded.
3. "J" pressure or seat tightness testing is not required for new construction ships.
4. Discrepancies between physical installation and salvage plans are to be reported to the TYCOM with an information copy to all plan holders.
5. Exercise extreme caution when testing operation of 4500-psi compartment pressurization valves.
6. The current submarine Salvage Inspection PMS Conversion Matrix is available on the JFMM web site at <https://www.navsea.navy.mil/Home/SUBMEPP/Products/JFMM/> under the TYCOM Doc/Form tab for PMS completion of the Salvage Inspection item.
7. When inspecting the gagging gear for the inboard ventilation exhaust valve and the inboard ventilation induction valve, the valve linkages must be inspected and the valves must be adjusted per the requirements in the Non-Primary Plant Valves Technical Manual or individual ship's valve drawing.
8. Prior to testing Outboard Diesel Exhaust Valve, ensure replacement locking pin is available onboard.
9. On some designs, operation of the gagging device overrides the regular operating gear of the valve indicator in such a manner that the entire mechanism must be reset or readjusted before the normal operating gear or the valve position indicator will function as intended. If the gagging mechanism is operated or used for any reason, the mechanism must be reset and the valve subsequently opened and closed by the normal operating gear in every manner in which the gear is designed to function to ensure the valve is in proper operating condition.

10. Unsatisfactory conditions degrade the SRC or SRDRS capability and require a CASREP be submitted per reference (a), and additional DFS reporting requirements per Volume V, Part I, Chapter 8 of this manual.
11. One or more of the Logistics and Escape Trunks (LET) will be removed during refit. When removed, the LET is isolated from service air and electric power. Communications circuits, electrical power, and charging manifold tests should be conducted prior to LET removal to ensure piping and electrical system continuity, and tested again upon reinstallation.
12. Diver's knife and ballpeen hammer may be stored in secure stowage in escape compartment.
13. Man overboard swimmer to be competent as a swimmer or qualified diver as designated by Commanding Officer per MILPERS MAN Art. 1414-010 Series.
14. DISSUB D7DS supplies:
 - a. If total ships manning exceeds designated 132 personnel, refer to OPORD 2000 to determine adjusted quantities of supplies.
 - b. These DISSUB quantities are from SUBLANT msg 231132Z JUL15 and NAVSEA ltr 4700 Ser 391/0348 of 4 Dec15.
15. A minimum of 30 Granular LiOH canisters are required onboard to support NON-DISSUB applications and may be stowed forward or aft. LiOH canisters reserved for DISSUB must be segregated from NON- DISSUB canisters with quantities and location(s) logged by the crew.
16. Oxygen candle quantity and location impacts inspection acceptance criteria.
 - a. Mission appropriate oxygen candle quantities reserved for NON-DISSUB must be in excess of quantities reserved for DISSUB. Oxygen candles supporting NON-DISSUB applications may be stowed forward or aft.
 - b. Oxygen candles reserved for DISSUB must be segregated from NON-DISSUB candles with quantities and location(s) logged by the crew.
 - c. Oxygen candle igniters must be of a quantity and location (FWD or AFT) that supports onboard candle load-out.

15 Jan 2021

APPENDIX E**SAMPLE PRE-INSPECTION INFORMATION OR CERTIFICATION**

From: Commanding Officer, USS (Ship's Name and Hull No.)
 To: Senior Inspecting Officer
 Subj: SUBMARINE SALVAGE INSPECTION OF USS (Ship's Name and Hull No.)
 Ref: (a) COMUSFLTFORCOMINST 4790.3; Joint Fleet Maintenance Manual,
 Volume IV, Chapter 18
 Encl: (1) SSN 688 Class Submarine Salvage Inspection Check-Off List

1. The overall responsibility for the coordination and assembly of reference plans and publications in support of the Ship's submarine salvage inspections is assigned to (preferably the XO, 1st Lt, or Weapons Officer). The Ship's Topside Coordinator is (Name), and the Ship's Below Decks Coordinator is (Name).

2. The following information and certification is presented per reference (a).

Reference:	Inspected Item:	Certification of Ship's Representative:
(a) Encl (1), Part I, para. 2	<u>High and Low Salvage.</u> External Salvage Valves have been overhauled & seat tightness tested.	Date: _____ Tested by: _____ (Overhauling Activity)
(b) Encl (1), Part I, para. 3.b., Part II, para. 2.i.	Gages have been tested or calibrated within the past 12 months. (list any discrepancies in para. 3)	_____ Ship's Force Representative
(c) Encl (1), Part I, para. 6.	<u>External Gagging Devices.</u> Valves will be lined up & reset by:	_____ Qualified Eng. Petty Officer
(d) Encl (1), Part II, para. 2.	Escape Trunks. Ship's representative for escape trunk will be:	_____ Ship's Representative
(e) Encl (1), Part II, para. 3.	<u>Emergency Communications Equipment</u> Operational and stowed with the following exceptions:	_____ Yes, or list exceptions in paragraph 2.

15 Jan 2021

Reference:	Inspected Item:	Certification of Ship's Representative:	
(f) Encl (1), Part II, para. 4	<u>Life Saving & Safety Equipment</u> PMS procedures last conducted on: (List discrepancies in paragraph 3.)	_____ Date	
	Inventories are:	Amount on Board	Required (COSAL)
	Number of escape or SESSPE valises.	_____	_____
	Location	_____	_____
		(Forward and Aft)	
		Amount on Board	Required (COSAL)
	Inflatable life preservers	_____	_____
	Number of non-inflatable life preservers	_____	_____
		Amount on Board	Required (COSAL)
	Number of safety harnesses	_____	_____
	Distress Marker Lights	_____	_____

NOTE: MUST CONFORM TO CURRENT PMS SCHEDULE.

(g) Encl (1), Part II, para. 5.	<u>Escape Training.</u> All hands are qualified in SESSPE escape.	_____ Yes, or list discrepancies in paragraph 3.
(h) Encl (1), Part II, para. 6.	<u>Signal Ejector or Launcher</u> operation and Red Submarine Emergency Identification Signal inventory will be accomplished by:	_____ Ship's Representative
	Signal Ejector or launcher operation cannot be demonstrated as muzzle is above waterline or ship is in dry-dock. The signal ejector was last operated	_____ (Date)

NOTE: IF EJECTOR WAS NOT OPERATED IN PAST THIRTY DAYS, OPERATION MUST BE DEMONSTRATED BY FLOODING THROUGH MUZZLE WITH FIRE HOSE.

Reference:	Inspected Item:	Certification of Ship's Representative:
(i) Encl (1), Part II, para. 7 or 8.	<u>DISSUB 7-Day Survival</u> Pre and Post D7DS	_____
	a. Portable desalinators (Required: 2 FWD and 2 AFT):	Amount
	b. Atmosphere Control. The following amount of absorbent is aboard:	_____
	The allowance is:	Type and Amount

	O2 candles applicable	Amount
	The following number of O2 candles are onboard:	Yes or No

VOLUME IV**CHAPTER 19****RETENTION OF MATERIAL DEFICIENCY REPORTS AND
RECORDS OF EQUIPMENT CHARACTERISTICS AND TESTS****REFERENCES.**

- (a) NAVSEA S9086-G9-STM-000 - NSTM Chapter 231 (Propulsion and SSTG Steam Turbines)
- (b) NAVSEA S9086-HK-STM-010 - NSTM Chapter 241 (Propulsion Reduction Gears, Couplings, Clutches and Associated Components)
- (c) NAVSEA S9086-HN-STM-010 - NSTM Chapter 244 (Propulsion Bearings and Seals)

LISTING OF APPENDICES.**A Bearing Log (Submarines Only)**

19.1 **PURPOSE.** This chapter provides a listing of the inspection reports and equipment records, including the retention requirements, which must be maintained by each ship.

19.2 **INSPECTION REPORTS.** A copy of each of the following inspection reports will be retained until superseded by a subsequent report:

- a. Board of Inspection and Survey Inspection Reports.
- b. Hull Surveys.
- c. Salvage Inspections.
- d. Docking Reports (CNO Maintenance Availability to CNO Maintenance Availability).
- e. Turbine Lifting and Repair Reports.
- f. Technical Assistance Reports by System Commands, Naval Sea Systems Command Technical Representatives, etc.
- g. Boiler Inspection Reports (retained until equipment is transferred or vessel is stricken. May be discarded if old data is incorporated in a new report).
- h. Battery Inspection Reports.
- i. Diesel Engine Inspection Reports since last overhaul and associated Naval message on the status of discrepancies.
- j. Main and Air Ejector Condenser Eddy Current (Probalog) Reports.

19.3 RETENTION OF RECORDS OF EQUIPMENT CHARACTERISTICS AND TESTS.

The following records will be maintained onboard until superseded:

- a. Anti-Submarine Warfare Test Program Reports.
- b. Structureborne, Airborne and Waterborne Noise Reports.
- c. (Submarine Force surface units only) Radar, Radio and Acoustic Radiation Patterns.
- d. Equipment Calibration and Alignment Graphs and Charts.

- e. Antenna and Superstructure Arrangement Photographs.
- f. Record of Shipboard Tests.
- g. Lube Oil and Trend Analysis Reports.
- h. Battery Record Book (test discharges, etc.).
- i. Diesel trend analysis records inspection reports since last overhaul and associated Naval message on the status of discrepancies.
- j. (Submarines only) Remote Temperature Element (RTE) Alarm Set point, Bearing Maximum Operating Temperature, Proximity to RTE Alarm, Installed Bearing Clearance, Actual Bearing Clearance, Bearing Replacement Clearance, Stamped Depth and Thrust Constant, Depth Micrometer Reading, and calculated bearing Wear for Main Thrust Bearings, Main bearings and Journals (required by reference (a) 231-7.2.1) for:
 - (1) Main Propulsion Shafting.
 - (2) Main and Auxiliary Engines.
 - (3) Main Propulsion Motors and Generators.
 - (4) Ship Service Turbine Generators.
 - (5) Reduction Gear (RTE Alarm Set point and Bearing Maximum Operating Temperature only).

Appendix A will be used to record data.

- k. Readings and Clearances for Main Bearings and Journals:
 - (1) Rudder and Diving Planes.
 - (2) Diesel Generator Bearings.
- l. Navigational Light Certification.
- m. Equilibrium Diagram.
- n. Panama Canal Tonnage Certification.
- o. Aviation Helicopter Certification.
- p. Weight Handling Equipment Certification.
- q. Cavitation Curves.
- r. Machinery or Vibration Survey Results.
- s. (SSN, SSBN, and SSGNs only) Resistance Test Records must be maintained for the following equipment in the Electrical Work Centers PMS Space Manual:
 - (1) Ship's Service Turbine Generators.
 - (2) Ship's Service Motor Generators.
 - (3) 400 Hz Motor Generators.
 - (4) Emergency Diesel Generators.

- (5) Emergency Propulsion Motors.
- (6) Secondary Propulsion Motors.
- (7) Trim and Drain Pump Motors.
- (8) Main and Shaft Lube Oil Pump DC Motors.
- (9) High Pressure Brine Pump Motors.
- (10) Low Pressure Blower Motors.

BEARING LOG

Bearing: _____

Ship: _____

Data Taker		Assembly Documentation			Measured Wear			RTE Alarms			Approval		
1	2	3	4	5	6	7	8	9	10	11	12	13	14
Date	Data Taker (Print Name)	Data Taker (Print Rate)	Data Taker Signature	Max Allowable Wear (Wmax)	Stamped Depth Constant (DC)	Depth Mic Reading (MR)	Measured Wear (=7-6) (W) (=MR-DC)	RTE Alarm Set point (ASP)	Max Operating Temperature (from logs) (Tmax)	Safety Margin (=9-10) (20°F min) (ASM) (=ASP-Tmax)	MLPO (initials)	MPA (initials)	ENG (initials)

Notes:

For thrust bearings, record the measured thrust clearance in column 7 and maximum thrust specification in column 5.

RTE Set points are: 270°F for Main propulsion turbine and SSTG thrust bearings.

250°F for Main propulsion turbine and SSTG journal bearings.

For remaining propulsion plant bearings, 30°F higher than the maximum observed during Sea Trials or the applicable HM&E Test Procedure (i.e., SUBMEPP Test Procedure or annual MRC to verify Set points).

APPENDIX A
BEARING LOG (SUBMARINES ONLY)

Date	Comments
	<p>Comments: Date each entry. Note the serial number (if any) of this bearing, date of any bearing replacement, nonstandard dimensions, applicable Liaison Action Requests, Departure From Specification if approved, unusual conditions of journal or bearing (if opened), any additional or abnormal readings taken, recent temperatures for this bearing, temperature of lube oil cooler outlet used to set RTE alarm, or any other notes that may be helpful in the future.</p>

BEARING LOG INSTRUCTIONS

Fill out for each Main Engine, Reduction Gear, Line Shaft, and SSTG Bearing.

A logbook should have a section for each piece of equipment (Port and Stbd SSTG, Port and Stbd Main Engine, Reduction Gear, and Line Shaft). To fill out the log, complete the following entries:

1. **Name of ship and hull number:** i.e., USS *SEAWOLF*, SSN 21
2. **Bearing Name and location:** i.e., #1 Propulsion turbine forward journal bearing.
3. **Name and date:** Print the data takers name and the date data was recorded.
4. **Data Taker Signature:** Signature of data taker.
5. **Max Allowable Bearing Wear (W_{max}):** The maximum increase in depth micrometer measurement above the stamped depth constant.
6. **Stamped Depth and Thrust Constant (DC) or Bearing Constant:** The depth micrometer reading taken when this bearing was installed, aligned and bolted down. It is found stamped on the bearing bracket near the depth micrometer hole. Thrust constants are normally not stamped. These must be obtained from builders new construction completed test procedures on microfiche or repair activity work documents when replaced.
7. **Depth Micrometer Reading (MR):** Depth measurement taken between machined surface of bearing bracket and top of rotor journal.
8. **Measured Wear (W):** Measured bearing wear. Calculated as $W = MR - DC$. (MR = Depth micrometer reading, DC = Stamped depth constant.) If the measured bearing wear (W) is greater than the maximum allowable wear (W_{max}) or wear limit per applicable PMS MRC, then the bearing must be disassembled, inspected and repaired or replaced.
9. **RTE Alarm Set point (ASP):** As determined by reference (a) (231-3.10.3.4.3, 231-3.10.3.4.4, and Table 231-3-2) and ships operating logs or by approved shipyard or repair activity test procedure meeting the requirements of the Naval Ships' Technical Manual (NSTM) or SUBMEPP test procedure.
10. **Bearing Full Load Maximum Operating Temperature (T_{max}):** The maximum operating temperature noted on the bearing during Post Construction or Overhaul Sea Trial testing following a SUBMEPP or Shipyard test procedure or the latest performance of RTE testing per appropriate NSTM or PMS MRC. The temperature should be compared to observed temperatures during normal ships operations for abnormalities.
11. **Alarm Safety Margin (ASM):** Calculated as $ASM = ASP - T_{max}$ (ASP = Alarm Set point, T_{max} = Maximum normal operating temperature). If the alarm set point does not meet the requirements of NSTM references (a), (b) or (c), as applicable, reset the alarms per the NSTM or SUBMEPP test procedure or PMS MRC, as required, following the guidance of the NSTM.
12. **Comments:** Date each entry. Note the serial number (if any) of this bearing, date of any bearing replacement, nonstandard dimensions, applicable Liaison Action Requests, Departure From Specification if approved, unusual conditions of journal or bearing (if opened), any additional or abnormal readings taken, installed (assembled clearances) and

15 Jan 2021

maximum clearances if the bearing is installed by Ship's Force, recent temperatures for this bearing, temperature of lube oil cooler outlet used to set RTE alarm, or any other notes that may be helpful in the future and applicable PMS MRC. Installed assembly documentation is not required to be retained in this log if bearing removal and installation was performed by an IMA, IMF, Regional Maintenance Facility or a Shipyard since data is maintained by those installations and can be obtained by the ship, if required, via ISIC. Ships are required to obtain initial depth micrometer readings to ensure stamped depth constant is updated any time a bearing is rolled out.

VOLUME IV
CHAPTER 20

DIVER LIFE SUPPORT SYSTEMS MAINTENANCE AND CERTIFICATION

REFERENCES.

- (a) NAVSEA SS521-AA-MAN-010 - U.S. Navy Diving and Manned Hyperbaric Systems Safety Certification Manual
- (b) NAVSEA TS500-AU-SPN-010 – U.S. Navy General Specification for the Design, Construction and Repair of Hyperbaric Equipment
- (c) NAVFAC 4-159-01N – Unified Facilities Criteria Manual
- (d) OPNAVINST 3150.27 - Navy Diving Program
- (e) NAVSEA 00C Instruction 10560.2 - Diving Equipment Authorized For Navy Use (ANU) Program

LISTING OF APPENDICES.

- A System Safety Certification Verses Authorized for Navy Use Requirements Matrix

20.1 PURPOSE. To provide guidance for the proper administration of a uniform maintenance program in support of the certification requirements for Diver Life Support Systems (DLSS).

20.2 DIVER LIFE SUPPORT SYSTEM MAINTENANCE AND CERTIFICATION.

20.2.1 General. This chapter of the JFMM is intended to cover all afloat, portable and shore-based diving and manned hyperbaric systems capable of supporting one or more divers, operators or occupants embarked in wet or dry pressurized environments which are certified per reference (a) by either the NAVSEA 00C4 or NAVFAC OFP Certification Authority. Submarine based diver life support systems such as Dry Deck Shelter (DDS), *Virginia* Class Lock-Out Trunks (LOTS), SSGN Lock-Out Chambers (LOCS) and Submarine Rescue Chamber (SRC) are handled by a Deep Submergence Systems (DSS) System Safety Certification program under NAVSEA 07Q4. These type of deep submergence systems are addressed in Volume V, Part III of the JFMM.

20.2.2 Objective. The objective of system certification is to verify, by use of an independent technical review, that a diving system provides acceptable levels of personnel safety throughout its specified operating range, when approved operating and maintenance procedures are followed. This review is accomplished by performing a detailed assessment of the material and procedural adequacy of the system. The certification process establishes maximum reasonable assurance that diving system personnel can be recovered without injury. Certification of a diving system does not relieve its operators from the responsibility of maintaining system safety on a continuing basis. System certification cannot positively ensure that an accident will not happen; it is, however, intended to provide “maximum reasonable assurance” that a catastrophic or critical accident will not occur.

20.2.3 United States Navy Diving and Manned Hyperbaric Systems Safety Certification. The requirements, procedures and guidance for the administration of the certification program for all

portable, surface ship afloat and shore-based DLSS must be per reference (a). In addition, references (b) through (e) provide further key guidance related directly to various aspects of DLSS.

- a. Reference (a) provides a single document which:
 - (1) Identifies the administrative and technical requirements leading to the initial dive system material and system certification.
 - (2) Documents the requirements for maintaining satisfactory material and operability conditions to support continued Unrestricted Operation to design depth.
 - (3) Identifies the responsibilities for implementing and executing the certification program policies and procedures.
 - (4) Provides procedures for requesting waivers to approved operating and maintenance procedures, and for departures from approved system design.
 - (5) Provides standardization for re-entry control (REC) procedures. These procedures provide the necessary instructions for maintaining the DLSS in the “as certified” condition. It is mandatory that these procedures be followed for any activity conducting work within the DLSS Scope of Certification (SOC).
- b. Reference (b) provides a wide variety of information, including diving system design, configuration management, materials, toxicity, flammability, pressure vessels, lubrication, construction, testing, QA, traceability and repair. It is intended to be used by the various U.S. Navy diving communities in case their existing system specific design documentation does not specifically address their particular need or application.
- c. Reference (c) supplements reference (b) providing specific building requirements for ashore manned hyperbaric systems.
- d. Reference (d) establishes Navy-wide diving program policy, requirements and guidance for the development, oversight and operation of all Navy diver DLSS and associated support systems and processes. It specifically delegates System Certification Authority to Commander, Naval Sea Systems Command for all portable and afloat systems and to Commander, Naval Facilities Engineering Command for all shore-based systems. Also, reference (d) identifies the Authorized For Navy Use (ANU) program for authorizing the use of diving life support and non-life support equipment. The ANU process for evaluating equipment for inclusion on the ANU is described in reference (e). The Appendix A matrix identifies what type of DLSS equipment is being handled by ANU or System Safety Certification program(s) as a general guide.

APPENDIX A
SYSTEM SAFETY CERTIFICATION VERSES AUTHORIZED FOR NAVY USE
REQUIREMENTS MATRIX

Equipment Type	Authorized For Navy Use	Certify
Deep Dive Systems		X
Hyperbaric Research Facilities		X
Recompression Chamber System		X
Diving Bells		X
Topside Surface Supported Diving Systems		X
Underwater Breathing Apparatus Used with Deep Dive Systems		X
Mixed Gas and O ² SCUBA Rebreathers		X
Open Circuit Air SCUBA	X	
Surface Supplied Hats (Air, HeO ²)	X	X Note 1
Divator MK 2 DP 1 or 2 Surface Supplied System		X
Diver Life Vests and Buoyancy Compensators	X	
Diver Operated Tools	X	
Diver Held Sonar, Navigation, etc.	X	
Diver Communications	X	
Wet Suits	X	
Variable Volume (Dry) Suits	X	
Air Compressors, Filters, etc.	X	X Note 2
Diving Accessories (Mask, Fins, Watches, Knives, Compass, Depth Gauges, Weight Belts, etc.)	X	

Notes:

1. Certification may be required for initial use.
2. When compressor or diving air systems are permanently installed as components of a diving or recompression system, they must be included in the SOC. The Commanding Officer or Officer In Charge must ensure that compressors and diving equipment are properly installed and maintained per reference (a).

VOLUME IV**CHAPTER 21****SUBMARINE OXYGEN GENERATING PLANTS****REFERENCES.**

- (a) NAVSEA S9515-AA-MMO-010/021/022/030/040 - 6L16 Electrolytic Oxygen Generator (EOG) Technical Manual, Volumes 1 through 4

- (c) NAVSEA S9515-A4-MMA-010/020 - Low Pressure Electrolyzer (LPE) Oxygen Generator Technical Manual Volumes 1 and 2
- (d) NAVSEA S9515-AL-MMA-010/020 - Integrated Low Pressure Electrolyzer (ILPE) Preliminary Technical Manual, Volumes 1 and 2
- (e) NAVPERS 18068 - Manual of Navy Enlisted Manpower and Personnel Classifications and Occupational Standards
- (f) COMNAVSUBFORINST 5400.25 - Standard Submarine Supply Department Organization and Regulations Manual
- (g) COMNAVSUBFORINST 5400.29 - Standard Submarine Navigation/Operations Department Organization and Regulations Manual
- (h) COMNAVSUBFORINST 5400.40 - Standard Submarine Combat Systems Department Organization and Regulations Manual (SSN)
- (i) COMNAVSUBFORINST 5400.41 - Standard Submarine SSBN 726 Class Weapons Department Organization and Regulations Manual
- (j) COMNAVSUBFORINST 5400.47 - Standard Submarine Combat Systems Department Organization and Regulations Manual (SSGN)

21.1 **PURPOSE.** To establish the prerequisites and procedures for qualification of personnel, operation and maintenance of shipboard submarine oxygen generating plants designated 6L16 Electrolytic Oxygen Generators (EOG), 6L16 Automated Electrolytic Oxygen Generators (AEOG), Low Pressure Electrolyzers (LPE) and Integrated Low Pressure Electrolyzers (ILPE).

21.1.1 **Policy.** Type Commander (TYCOM) policy regarding the operation and maintenance is:

- a. All current technical documentation must be available at the oxygen generator for operator use. As a minimum, the on hand documentation will include reference (a), (b), (c) or (d), as required, and the MRCs that support the installed unit.
- b. Planned Maintenance System (PMS) must be maintained current to the latest Periodic Force Revision and all scheduled and situational planned maintenance requirements must be accomplished.

NOTE: OXYGEN GENERATOR OPERATORS AND MAINTENANCE TECHNICIANS MUST BE LIMITED TO THOSE INDIVIDUALS HOLDING THE NAVY ENLISTED CLASSIFICATIONS (NEC) REQUIRED BY REFERENCE (e) FOR THE TYPE OF OXYGEN GENERATOR PLANT OPERATED OR MAINTAINED. REFERENCE (e) REFERS.

- c. At least two qualified operators and one qualified technician must be onboard during oxygen generator operation. Two qualified operators meet this requirement if at least one of the operators is also a qualified maintenance technician.
- d. **Safety related deficiencies must be corrected prior to oxygen generator operation.**
- e. There must be a minimum of two qualified Oxygen Clean Workers on board to conduct maintenance on oxygen systems and the oxygen generator (except submarines with LPEs and ILPEs).
- f. For *Virginia* Class submarines, the following hulls must be required to maintain a minimum of two qualified Oxygen Clean Workers on board: SSN 776, SSN 777, SSN 778, SSN 779, SSN 782 and SSN 784 or as determined by TYCOM.

21.1.2 Background.

- a. Oxygen generator casualties result primarily from improper maintenance, operation or insufficient operator familiarization with current operating instructions and safety precautions. The recurring nature of these casualties necessitates that positive action be taken to ensure operating and maintenance personnel are properly trained and qualified. Additionally, technical documentation must be continuously updated for use by the ship's oxygen generator operating, maintenance and support personnel.
- b. Naval Sea Systems Command (NAVSEA) and TYCOM Technical Notices and Advance Change Notices (ACN) provide the Fleet with the latest technical information and operating instructions concerning oxygen generators. These Notices and ACNs will remain in effect until cancelled by a subsequent Notice or ACN, or are incorporated as a revision to the applicable technical manual.

21.2 RESPONSIBILITIES.

21.2.1 Immediate Superior In Command.

- a. Ensure assigned units are in compliance with the policy stated in paragraph 21.1.1 of this chapter.
- b. Conduct periodic inspections and audits to ensure that:
 - (1) Operating and maintenance personnel proficiency is being maintained.
 - (2) Technical manuals, operating and maintenance notices and PMS documentation are current.
 - (3) Operation and maintenance is per this chapter, reference (a), (b), (c) or (d), as required, and the supporting PMS.
- c. Ensure Performance Monitoring Team (PMT) inspectors perform material inspections of the ship's oxygen generators approximately 90 days prior to entry and departure from a Chief of Naval Operations (CNO) Maintenance Availability. The material inspection, prior to the availability, will identify material deficiency corrective actions which must be corrected prior to completion of the availability.

21.2.2 Performance Monitoring Team.

- a. Conduct periodic and pre and post-CNO Maintenance Availability material inspections. Ensure a review of the inspected units Material Maintenance Log is part of the material inspection.
- b. Initiate a quarterly monitoring program for those units receiving an unsatisfactory grade during the material inspection. Maintain the units on the quarterly monitoring program until two consecutive satisfactory evaluations, with no safety related deficiencies noted.
- c. Provide copies of all reports following material inspections, monitoring periods and On Site Analysis Reports to the TYCOM and the ISIC.
- d. Ensure appropriate TYCOM personnel are contacted regarding safety related issues.
- e. Conduct an operational inspection following the applicable PMS prior to Fast Cruise during a CNO Maintenance Availability. Conduct oral interviews with all oxygen generator qualified personnel to determine individual knowledge levels and training effectiveness. The operational inspection will include:
 - (1) Start up checks.
 - (2) Power-Off maintenance check out.
 - (3) Start up.
 - (4) Operation to maximum allowable amperage.
 - (5) Performance of operational PMS.
 - (6) Shutdown.
 - (7) Placement in a static condition and restarted.
 - (8) Shutdown and purge complete.

21.2.3 Commanding Officer.

- a. Report reduced status following established procedures any time the personnel requirements stated in paragraphs 21.1.1.c and 21.1.1.e of this chapter cannot be met.
- b. Implement and execute a shipboard training program to qualify and maintain oxygen generator personnel qualifications.
- c. Prohibit operation of the oxygen generators if shipboard procedures are not in compliance with this chapter and reference (a), (b), (c) or (d), as required.
- d. Ensure the Oxygen Generator Material Maintenance Log is maintained and correctly reflects **all** corrective and planned maintenance performed.
- e. Ensure periodic reviews of the Oxygen Generator Material Maintenance Logs are conducted by the Division Leading Petty Officer, Division Officer and Engineer Officer.
- f. Ensure all safety related deficiencies are promptly entered into the Equipment Status Log.

- g. Prior to a CNO Maintenance Availability, ensure the PMT conducts a material inspection of the oxygen generators. Ensure oxygen generators are placed into Lay Up and adequately protected following Inactive Equipment Maintenance requirements.
- h. Ensure PMT conducts a Post-CNO Maintenance Availability material inspection prior to placing the oxygen generators in electrolysis.
- i. Ensure the PMT conducts an operational inspection per paragraph 21.2.2.e of this chapter prior to commencing Fast Cruise during a CNO Maintenance Availability. Oxygen generators will be operated by Ship's Force qualified operators as described in paragraph 21.1.1 of this chapter. The oxygen generators will be in a static shutdown condition, pressurized with nitrogen and meet the 3000 PSIG testing requirements of reference (a), (b), (c) or (d), as required.
- j. Ensure electrolysis is secured and units are placed in a safe condition prior to commencing any training drill which may cause a "loss of power" casualty (either normal or alternate power). If the oxygen generators are to be placed in a static condition for the duration of the training drill, ensure normal power will be restored to restart electrolysis, or alternate power will be available to conduct a complete purge, prior to the expiration of the 45-minute hold limitations of reference (a), (b), (c) or (d), as required.

21.3 REQUIREMENTS FOR SHIPBOARD PERSONNEL QUALIFICATION.

21.3.1 Training. Oxygen generator operators and maintenance technicians must be graduates of the training courses required for the appropriate NEC per the requirements of reference (e).

NOTE: PERSONNEL QUALIFIED TO PERFORM MAINTENANCE ON THE OXYGEN GENERATOR MUST ALSO BE GRADUATES OF OXYGEN CLEAN WORKER SCHOOL (EXCEPT SUBMARINES WITH LPEs AND ILPEs).

- a. The NECs required for EOG installations:
 - (1) NEC 4252: An individual certified to this NEC will have successfully completed EOG Operator and Maintenance Course A-852-0050.
 - (2) NEC 4752: An individual certified to this NEC will have successfully completed EOG Operator and Technician Course A-623-0039.
- b. The NECs required for AEOG installations:
 - (1) NEC 4208: An individual certified to this NEC will have successfully completed AEOG Operation and Mechanical Maintenance Course A-652-0087.
 - (2) NEC 4708: An individual certified to this NEC will have successfully completed AEOG Electrical and Electronic Maintenance Course A-623-0008.
- c. The NECs required for LPE installations:
 - (1) NEC 4253: An individual certified to this NEC will have successfully completed LPE Operation and Mechanical Maintenance Course A-652-0190.

- (2) NEC 4653: An individual certified to this NEC will have successfully completed LPE Electrical and Electronic Maintenance Course A-623-0050.
- d. The NECs or course completion required for ILPE installations:
 - (1) An individual certified by either holding NEC 4234 or successful completion of ILPE Operation and Mechanical Maintenance Course A-652-0093.
 - (2) NEC 4641: An individual certified to this NEC will have successfully completed ILPE Electrical and Electronic Maintenance Course A-623-0132.

21.3.2 Watchstanding Prerequisites. Prior to being certified as qualified for oxygen generator watches, the following watchstander prerequisites must be met:

- a. For 6L16 NEC 4252: Stand watches, under instruction, for a minimum of three (3) six (6) hour watches underway, with the oxygen generator(s) in operation.
- b. For 6L16 NEC 4752: Stand watches, under instruction, for a minimum of one (1) start-up, one (1) shutdown and purge, and one (1) three (3) hour watch underway with the oxygen generator(s) in operation. For technicians, this is a familiarization watch only. Technicians qualifying as operators are governed by paragraph 21.3.2.a of this chapter.
- c. For AEOG NEC 4208: Stand watches, under instruction, for a minimum of three (3) six (6) hour watches underway with the oxygen generator(s) in operation.
- d. For AEOG NEC 4708: Stand watches, under instruction, for a minimum of one (1) start-up, one (1) shutdown and purge, and one (1) three (3) hour watch underway with the oxygen generator(s) in operation. For technicians, this is a familiarization watch only; technicians qualifying as operators are governed by paragraph 21.3.2.c of this chapter.
- e. For LPE NEC 4253: Stand watches, under instruction, for a minimum of three (3) six (6) hour watches underway with the oxygen generator(s) in operation.
- f. For LPE NEC 4653: Stand watches, under instruction, for a minimum of one (1) start-up, one (1) shutdown and purge, and one (1) three (3) hour watch underway with the oxygen generator(s) in operation. For technicians, this is a familiarization watch only; technicians qualifying as operators are governed by paragraph 21.3.2.e of this chapter.
- g. For ILPE NEC 4234 or successful completion of course A-652-0093: Stand watches, under instruction, for a minimum of three (3) six (6) hour watches underway with the oxygen generator(s) in operation.
- h. For ILPE NEC 4641: Stand watches, under instruction, for a minimum of one (1) start-up, one (1) shutdown and purge, and one (1) three (3) hour watch underway with the oxygen generator(s) in operation. For technicians, this is a familiarization watch only; technicians qualifying as operators are governed by paragraph 21.3.2.g of this chapter.
- i. Demonstrate an understanding of the approved NAVSEA Oxygen Generator Log Sheets, including the significance of data recorded and operational limits.

- j. Demonstrate a knowledge of corrective action(s) to be taken in the event of sudden changes in equipment operating parameters.
- k. Successfully complete qualifications for the oxygen generator and support systems per references (f) through (j).

VOLUME IV
CHAPTER 22
SUBMARINE ANTENNA TESTING

REFERENCES.

- (a) NAVSEA S9425-CG-STD-010 - Installation Standards for Submarines

22.1 PURPOSE. To provide Type Commander policy with respect to pressure testing submarine communication antennas and Photonics systems. This policy is not applicable to periscopes, radar antennas and other non-communication masts and cabling. Amplifying information is contained in reference (a).

22.2 BACKGROUND. Submarine antenna and Photonics systems associated cable connections between the antenna and electrical hull fitting are sensitive to seawater intrusion. In the event that seawater enters an electrical hull fitting, radome or other powered component and the system is subsequently powered-on or used for transmission, significant component damage may occur.

22.3 POLICY.

22.3.1 Hydrostatic Pressure Testing.

- a. Hydrostatic pressure testing of submarine antennas with cables attached prior to initial installation (or after any maintenance actions that requires the disassembly of the antenna) is mandatory except for buoys and floating wires. This pre-installation test is intended solely to verify the correctness of the final assembly and does not equal or replace the more elaborate acceptance testing required for various individual manufactured components. Submarine communications antennas that are required to be hydrostatic pressure tested are:

NOTE: ALL OE-538/592 MAST ARE HYDROSTATICALLY TESTED AT EITHER THE OE-538/592 DEPOT OR WATERFRONT I-LEVEL FACILITY.

- (1) Multifunction Masts, OE-538 (SSNs) and OE-592 (SSBNs and SSGNs).

NOTE: ALL SUBHDR MASTS ARE HYDROSTATICALLY TESTED AT THE SUBHDR NATIONAL MAINTENANCE CENTER (NMC) PRIOR TO BEING ISSUED TO THE FLEET FOR INSTALLATION.

- (2) Submarine High Data Rate Mast, OE-562 (SubHDR).

- b. Buoys that are excluded are:

- (1) Submarine Launched One-Way Tactical (SLOT) Buoys (AN/BRT-1 and AN/BRT-1A).
- (2) Submarine Emergency Position Indicating Radio Beacon (SEPIRB) Buoy (T-1630/SRT or T-1630A/SRT).

- c. All versions of Floating wires are excluded (i.e. Buoyant Cable Antennas).

NOTE: THE TOWED BUOY ANTENNA, AN/BRR-6 (SSBN 730 - 738) AND THE AN/BRR-6B (SSBN 739 - 743) WILL BE HYDROSTATIC TESTED BEFORE INSTALLATION ACCORDING TO THE MAINTENANCE MANUAL.

22.3.2 Fleet Maintenance. Maintenance actions conducted by Fleet Maintenance Activities or Ship's Force regarding the watertight integrity test requirements between submarine antennas and their respective hull connectors, must be:

- a. When the antenna or cable is disconnected or replaced shipboard, the Technical Work Document will include the following checks in the assembly procedure to reconnect the cable to the base of the antenna or electrical hull fitting:
 - (1) Craftsman verification that surface finishes of O-ring seating surfaces are per applicable specifications.
 - (2) Craftsman verification that the O-ring is properly installed and per applicable specifications.
 - (3) For submarine SubHDR and Photonics systems outboard cable removal and replacement, accomplish per Volume V, Part I, Chapter 7, Appendix B, NOTE 31 of this manual.
- b. Prior to performing a deep dive certification after a maintenance action, passive testing or pre-energize testing, or both, must be performed following the system specific Technical Manual, SUBMEPP approved Maintenance Standard, SUBMEPP approved Standard Test Procedure or Maintenance Requirement Card (MRC) to ensure the system is not grounded prior to use.
- c. Upon completion of a deep dive certification for a maintenance action, passive testing, pre-energize testing, or both, must be performed following the system specific Technical Manual, SUBMEPP approved Maintenance Standard, SUBMEPP approved Standard Test Procedure or MRC to ensure the system is not grounded prior to use.

22.4 PROCEDURE.

- a. Upon completion of maintenance and before underway for submerged operations, the ship must place CAUTION tags on the Main Power Switch or transmit keys for the affected antennas. The Amplifying Instructions for the CAUTION tags will state - "DO NOT OPERATE OR TRANSMIT ON THIS ANTENNA UNTIL COMPLETION OF PASSIVE CHECKS FOLLOWING A DIVE TO TEST DEPTH. PASSIVE CHECKS MUST BE PERFORMED PRIOR TO EACH USE UNTIL THE DEEP DIVE IS COMPLETE."
- b. It is understood that in some cases, due to water depth restrictions, the deep dive may not be performed for quite some time. In these cases, the ship should dive to the maximum depth possible and conduct passive checks. Provided the checks are satisfactory, the CAUTION tag may be replaced with one stating - "DO NOT OPERATE OR TRANSMIT ON THIS ANTENNA FOLLOWING OPERATIONS GREATER THAN (enter max depth obtained). PASSIVE CHECKS MUST BE PERFORMED PRIOR TO EACH USE UNTIL THE DEEP DIVE IS COMPLETED."

- c. The tag(s) may be removed following completion of a deep dive to test depth and completion of satisfactory passive testing performed following the system specific technical manuals or Maintenance Index Pages and MRCs to ensure the system is not grounded.

VOLUME IV**CHAPTER 23****GAS TURBINE ENGINE INSPECTION FOR SURFACE FORCE SHIPS****REFERENCES.**

- (a) OPNAVINST 9220.3 - Propulsion and Auxiliary Plant Inspection and Inspector Certification Program
- (b) NAVSSSES 9332-GGTB 11 - General Gas Turbine Bulletin Number 11 (Gas Turbine Fleet Representatives)
- (c) NAVSEA S9086-HC-STM-000 - NSTM Chapter 234 (Marine Gas Turbines)
- (d) NAVSSSES 9352-GGTB 0 - General Gas Turbine Bulletin Number 0 (Technical Directive Zero Index)
- (e) NAVSSSES 933-GGTB 3 - General Gas Turbine Bulletin Number 3 (Marine Gas Turbine Logbook and Service Records)
- (f) OPNAVINST 3120.32 - Standard Organization and Regulations of the U.S. Navy

23.1 **PURPOSE.** The Marine Gas Turbine Inspector (MGTI) program is intended to provide for the timely identification of discrepancies prior to Planned Major Maintenance Availabilities, deployments, when mandated by operating hour requirements and to provide technical assistance to operational units when so directed by the Type Commander (TYCOM). This chapter provides the guidance for Marine Gas Turbine inspection requirements, including preparation, procedures, criteria and reporting and is applicable to all gas turbines on fleet surface, amphibious and auxiliary platforms and craft.

23.2 **DISCUSSION.** It has long been the Navy's practice for Ship's Force to accomplish as many repairs as possible at the organizational or intermediate levels. This maintenance philosophy requires trained and experienced personnel, capable of identifying problems so that planned and corrective measures can be recommended, planned for and accomplished in a timely manner. To address the need for experienced personnel the MGTI program has been developed. Reference (a) provides the details for the MGTI program.

23.3 MARINE GAS TURBINE INSPECTOR.

23.3.1 **Certification.** MGTI inspector certification and recertification requirements outlined in reference (a) are amplified as listed in sub-paragraphs "a" through "e":

- a. MGTIs function as the Naval Sea Systems Command (NAVSEA) Technical Representatives. All their technical decisions and recommendations are made in concert with and fully supported by their appropriate Regional Maintenance Center (RMC).
- b. Upon verification of competency, Naval Surface Warfare Center, Philadelphia Division (NSWCPD) will issue a 36-month certification. Certification will remain valid provided the MGTI conducts at least two (any combination) of the following: Gas Turbine Readiness Reviews (GTRR), Assessments, pre-deployment inspection, pre-Planned Major Maintenance Availability inspection and attends one MGTI seminar during the previous 12 months.

- c. MGTI certifications will be extended in 18-month intervals. Requests for extension must be submitted to NSWCPD with info to NAVSEA 05Z via the TYCOM. By endorsement, the Commanding Officer will certify that the MGTI meets the requirements of paragraph 23.2.1.b of this chapter. A MGTI whose certification has lapsed or been suspended will be required to recertify, under procedures established by NSWCPD, on a case-by-case basis.
- d. Commanding Officers will ensure MGTIs are afforded the opportunity to attend MGTI seminars and maintain certification. Commanding Officers are also encouraged to nominate to the TYCOM motivated and capable technicians for certification as MGTIs as outlined in reference (a).
- e. A MGTI assigned as ship's company cannot perform inspections as described in section 23.3 of this chapter on that ship. (No inspector will be permitted to inspect himself.)

23.3.2 Authorized Functions and Responsibilities.

23.3.2.1 Naval Sea Systems Command. NAVSEA must provide technical authority oversight over all marine gas turbines and associated equipment. The designated NAVSEA Technical Warrant Holder must:

- a. Assure safe and reliable system operation.
- b. Set and enforce all technical requirements.
- c. Approve all major Departures from Specifications (DFS).

23.3.2.2 Naval Surface Warfare Center, Philadelphia Division. NSWCPD must:

- a. Provide support to NAVSEA for the MGTI programs. Ensure that the required technical documentation to support the MGTI Inspector programs is maintained current.
- b. Establish and monitor the requirements and standards for routine and industrial inspections of marine gas turbine systems.
- c. Develop, implement and maintain a program to train and certify MGTIs.
- d. Ensure that inspections of newly constructed ships and ships undergoing major overhaul or conversion are conducted per this instruction.
- e. Conduct periodic technical audits of the MGTI Training Course.
- f. Provide management of technical data, gas turbine history and the associated repair management information database system.
- g. Conduct the semi-annual MGTI seminars.
- h. Maintain a roster of all certified MGTIs by name, rating, duty station, date of certification and expiration date of certification. Revoke inspector certification and initiate action to decertify inspectors who fail to comply with requirements of reference (a).
- i. Ensure that the requirements for MGTI certification, recertification and certification extensions are met prior to final approval.

- j. Provide technical oversight and management of the MGTI and NSWCPD programs:
 - (1) Establish and enforce requirements for MGTI certification and recertification.
 - (2) Ensure periodic MGTI seminars are conducted.
 - (3) Ensure periodic technical audits of all Integrated Logistics Support documentation and Training.
 - (4) Maintain the Gas Turbine Management Information System WEBLOG.
 - (5) Routinely evaluate and ensure state of the art inspection, maintenance and repair tools and techniques are used.

23.3.2.3 Fleet Commander. The Fleet Commander must:

- a. Identify and designate those fleet activities which have inspection responsibilities and maintain a base of certified MTIs within those activities.
- b. Ensure the availability of “school ships” to support MGTI Inspector training.
- c. Host the semi-annual MGTI seminars on an alternating coast basis.

23.3.2.4 Regional Maintenance Center. The RMC must:

- a. Provide certified MTIs to perform inspection.
- b. Review the guidelines and inspection requirements for all gas turbine inspections required by this instruction and ensure that each inspection report is recorded and updated into the Gas Turbine Management Information System.
- c. Schedule and coordinate inspections of all marine gas turbine systems required by this instruction with the appropriate technical activities to avoid the unnecessary opening of gas turbines.
- d. Provide a qualified MGTI when requested by the ship, Immediate Superior In Command (ISIC) or TYCOM.

23.3.2.5 Regional Maintenance Center Commanding Officers. RMC Commanding Officers must:

- a. Coordinate inspections in cognizant maintenance areas.
- b. Maintain an up-to-date status of required marine gas turbine system inspections which must include the latest inspection for all ships assigned to RMCs in their respective area of responsibility.

23.3.2.6 Immediate Superior In Command. The ISIC must:

- a. Monitor the follow-up action required to correct noted discrepancies by randomly sampling the ship’s deferred maintenance action file and most recent gas turbine inspection report.
- b. Assist Commanding Officers in arranging for the corrective action of items beyond the capability of Ship’s Force, when requested.

23.3.2.7 Ship Commanding Officer, Officer In Charge or Maintenance Team. Ship Commanding Officers, Officers In Charge or the Maintenance Team must:

- a. Request gas turbine inspections.
- b. Prepare for scheduled inspections to include required operational testing.
- c. Review inspection results and initiate corrective action for those items within Ship's Force capability. Initiate requests for the correction of items beyond Ship's Force capability. If any of the discrepancies cannot be corrected within 72 hours following completion of the inspection, or if said discrepancies will impact the ship's operational schedule, initiate a Casualty Report for the affected gas turbine(s).
- d. Assess the impact (if any) of corrective action on operating schedules and advise the operational commanders. Decide (with repair activities) the optimum timing of repair actions to minimize impact on operating schedules.
- e. Submit reports.
- f. Schedule gas turbine inspections as required by appropriate Planned Maintenance System (PMS) or Class Maintenance Plan item.

23.3.2.8 Marine Gas Turbine Inspectors. MGTIs are authorized and responsible for, but not limited to, performing the following:

- a. Perform periodic intermediate level inspections per Gas Turbine Bulletins (GTB) and Ancillary Equipment Bulletins.
- b. Perform GTRR, Assessments, post casualty investigations, pre-deployment inspections and pre-Planned Major Maintenance Availability inspections.
- c. Provide troubleshooting assistance to ships and Fleet Maintenance Activities (FMA).
- d. Oversee in-place gas turbine repairs if currently qualified for the specific repair.
- e. Oversee Gas Turbine Technical Directive installations.
- f. Monitor compliance with configuration status accounting and technical directive reporting requirements.
- g. Make engine change-out recommendations to NSWCPD via the RMCs.
- h. Act as team leader (if currently qualified for specific repairs) for in-place gas turbine repairs and gas turbine change-out if attendant FMA does not have a team leader qualified for the specific repair.
- i. MGTIs are part of the technical authority chain-of-command and are accountable to the NAVSEA Technical Warrant Holder for the performance of their inspection duties.

NOTE: THE SHIP'S FORCE MGTI CAN ONLY ACCOMPLISH SPECIAL INSPECTIONS AND OPERATIONAL ASSESSMENTS ON THEIR OWN SHIP. THE SHIP'S FORCE MGTI WILL ASSIST THE RMC MGTI DURING ROUTINE AND AVAILABILITY RELATED INSPECTIONS. THE SHIP'S FORCE MGTI MAY NOT INDEPENDENTLY CONDUCT ROUTINE, STRENGTH AND INTEGRITY INSPECTIONS ON THEIR OWN SHIP.

23.4 GAS TURBINE INSPECTIONS AND REQUIREMENTS.

23.4.1 Applicability.

- a. All gas turbine engines on surface, amphibious or auxiliary platforms or craft of the force will be inspected as prescribed in this section.
- b. Frequency of inspections of gas turbine installations by a certified MGTI will be scheduled for execution by the Commanding Officer using the Gas Turbine Assessment Class Maintenance Plan tasks issued by SURFMEPP. All Gas Turbine Readiness Review assessments and inspection will be conducted per references (a), (b) and (c), established PMS and GTB Inspection requirements as listed in reference (d). ISIC or TYCOM guidance may be solicited to avoid scheduling conflicts.

23.4.2 Pre-Planned Major Maintenance Availability.

- a. Prior to planned Depot level maintenance availabilities, a routine inspection should be performed on all ship's gas turbine engines to determine maintenance or overhaul requirements. Where possible TYCOM or ISIC should ensure there is adequate time set aside in the ships employment schedule to support these inspections.
- b. Results of this inspection will be entered into the Current Ship's Maintenance Project (CSMP) and will enable the ship to submit work requests for work accomplishment by FMAs or industrial activities during Planned Major Maintenance Availabilities.

23.4.3 Pre-Deployment.

- a. Gas turbine engines must be inspected by a certified MGTI prior to deployment. A deployment is defined as scheduled operational commitments of 90 days or greater away from a ship's homeport.
- b. Discrepancies resulting from this inspection will be entered into the ship's CSMP. Noted discrepancies provide the basis for but do not limit the work to be accomplished by Ship's Force or FMAs prior to deployment. A follow-up inspection may be scheduled 30 to 60 days before deployment or as operational commitments dictate to verify the status of repairs. The requirement to conduct a follow-up inspection will be determined by the MGTI. Follow-up inspections will be conducted when possible by the same MGTI who conducted the initial inspection.

23.4.4 Gas Turbine Bulletin Inspections.

- a. GTB Inspections are determined by engine operating hours and require scheduling 60 days prior to the inspection. Operating hours, updated monthly in the Marine Gas Turbine Information System WEBLOG via reference (e), are the engine hours used to determine inspections.
- b. Reference (d) lists all Technical Directives and their revisions and amendments.
- c. When GTB inspections are required coincidence with pre-availabilities or pre-deployments, they should be coordinated with pre-availability or pre-deployment inspections to minimize duplicate effort and optimize inspections.
- d. Any ship not able to complete required GTB Inspections within the required periodicity will request a DFS from the TYCOM.

23.4.5 Casualties. Ship's Force must conduct the initial investigation after a casualty following current directives. If Ship's Force is unable to identify the cause of the casualty or repairs required, a certified MGTI or an RMC Technical Representative must be requested to verify the nature of the casualty, investigate for cause and make recommendations for repairs. This may be a partial inspection covering failed areas only. However, the MGTI must ensure the inspection is sufficient in scope to determine the full extent of damage and necessary repairs.

23.5 REQUESTING PROCEDURES.

- a. Gas turbine inspections are to be scheduled by the ship per PMS, GTBs or ISIC or TYCOM directives.
- b. Gas turbine inspections are actively managed by SURFMEPP utilizing the Class Maintenance Plan. All routine gas turbine inspections will be pushed by SURFMEPP to the ship's CSMP as part of the ship's BAWP. SURFMEPP will also push non-routine gas turbine inspections as requested by TYCOM or the Maintenance Team.
- c. Once the Work Notification is available in the CSMP, the Maintenance Team may schedule the requisite inspection(s). Scheduling requests should be submitted a minimum of 60 days prior to the desired dates of routine inspections.
- d. Gas turbine inspections may be conducted in conjunction with assessment programs scheduled by the ISIC or TYCOM.

23.6 PREPARATION FOR INSPECTION. The MGTI must send out a preparation package 30 days prior to the inspection.

23.7 INSPECTION PROCEDURES.

23.7.1 Post Casualty Inspections. For post casualty inspections, the Commanding Officer, Engineer Officer, Main Propulsion Assistant (MPA) and leading Gas Turbine Technician (GS) should meet with the inspector on his arrival and, where possible, the Engineer Officer, MPA and leading GS should accompany the MGTI during the inspection.

23.7.2 Pre-Availability Inspections. For pre-availability inspections, pre-deployment inspections, GTRR and Assessments, the MPA and the leading GS should meet and where possible, accompany the MGTI during the inspection.

23.8 INSPECTION CRITERIA. Deficiencies and out-of-specification readings or observances noted should be immediately corrected or recorded as specified in the applicable bulletin(s) and re-inspections scheduled. Three categories of deficiencies must be recorded per the guidance of paragraphs 23.8.1 through 23.8.4. **Document the assessment finding of maintenance ready work notification (2-Kilo) per Volume VI, Chapter 42, paragraph 42.5.5 of this manual.**

23.8.1 Repair Before Operating. A Repair Before Operating (RBO) is any condition existing that, if left unattended, would definitely pose a hazard to personnel safety. Only a MGTI that is currently certified may issue a RBO. RBO deficiencies require re-inspection by a MGTI that is currently certified after repairs and before the gas turbine engine is operated. A DFS will not be approved for RBOs. The following items are examples of RBO items and **are not to be construed as a complete list**.

- a. Conditions existing that if left uncorrected would definitely result in an uncontained failure of the engine.

- b. Continuous Fuel Oil leak with puddling that poses risk of ignition.
- c. Loss of structural integrity in intake or exhaust ducts which may result in personnel injury.
- d. Exhaust duct crack(s) that may allow exhaust gas leakage into ship compartments.
- e. Non-functional over-speed trips.
- f. Lube oil leaks that exceed maximum limits in GGTB 17.
- g. Any disk cracks.

23.8.2 Severely Degraded. A severely degraded condition is any condition existing that if left unattended, would pose a hazard to equipment that may result in catastrophic failure rendering the gas turbine inoperable but does not pose a hazard to personnel safety. Any condition which is designated as severely degraded requires a Major DFS. A gas turbine with a severely degraded condition cannot be operated until it is corrected or repaired and re-inspected unless it has been properly approved as a Major DFS by the Technical Warrant Holder. The following items are examples of severely degraded items and are not to be construed as a complete list.

- a. Intake duct cracking that may allow foreign debris into inlet airstream.
- b. Blow-In-Door (BID) discrepancies resulting in unfiltered air entering the combustion air gas path as detailed in GGTB 27.
- c. Loose paneling, insulation, fasteners or other mechanical features in the inlet.
- d. Bent, broken or binding Variable Stator Vane (VSV) actuation arms.
- e. Compressor blade tip clang.
- f. Non-functional compressor surge control bleed valves.
- g. Casing cracks.
- h. Bearing debris found within lube oil sumps.

23.8.3 Major Deficiencies. This finding is made when major problems exist, but the engine is still operable with restrictions. Any deficiency that has been noted as major must require either immediate correction within 30 days of discovery or a report must be submitted and updated quarterly to the TYCOM per paragraph 23.8.c of this chapter until the deficiencies are corrected or resolved or brokered by the Maintenance Manager. Major deficiencies require re-inspection, by an MGTI that is currently certified, after repairs and before the gas turbine engine is operated. This requirement does not alter the normal Casualty Reporting or DFS reporting requirements. The following items are examples of major items and are not to be construed as a complete list.

- a. Improperly rigged or worn VSVs and bushings.
- b. Chafed fuel oil or lube oil lines. (Beyond serviceable limits of GGTB 6)
- c. Stall (no tip clang)
- d. Bent or damaged blades.
- e. Loose or missing casing split line bolts.
- f. GTB inspection periodicity or time limits exceeded.

- g. Combustor liner out of specifications.
- h. Degraded turbine shrouds beyond serviceable limits.
- i. Eroded turbine section beyond serviceable limits.
- j. Vertical or side mount out of specifications.
- k. Enclosure shock mounts exceeding GGTB 10 limit.
- l. Fuel nozzles not maintained per PMS or GTB.
- m. Turbine thermocouples not per technical manual requirements.
- n. Fuel nozzles not maintained per PMS.
- o. Broken or discrepant electrical harness cannon plugs on engine controller or sensor systems.
- p. Foreign Object Damage screen with cracks or missing wires that are beyond serviceable limits.
- q. Excessive compressor or bleed air leaks.
- r. Non-fuel hydraulic system leaks.
- s. Continuous vibrations exceeding alarm limits (not to include alarms that occur during transient operations).

23.8.4 Minor Deficiencies.

- a. Deficiencies exist which do not adversely affect reliability, performance or safety of the engine or operating personnel. These deficiencies, if not corrected, could result in gradual deterioration of the engine, reduced efficiency and eventually major repairs.
- b. Gas turbine engine can be operated with no restrictions. Discrepancies must be entered in the CSMP and scheduled for correction at earliest opportunity.

23.9 INSPECTION RESULTS. Upon completion of inspections, the MGTI will brief the Commanding Officer, Engineer Officer, MPA and senior GS of the results. Provide information for inclusion into the ships CSMP.

- a. Any RBO will be noted in Block 35 of the OPNAV 4790/2K.
- b. The engine cannot be started until RBO repairs are complete and re-inspected by an MGTI.
- c. A formal GTRR report must be submitted to the TYCOM Code N434 via the Navy Propulsion web site (<https://propulsion.navsses.navy.mil>). All Gas Turbine GTRR reporting to be in compliance with the latest revision of reference (b).

VOLUME IV
CHAPTER 24
WOOD HULLED SHIPS AND CRAFT

REFERENCES.

24.1 **PURPOSE.** This chapter contains procedures for the inspection, repair and maintenance of wood decks and structures on wood-hulled ships and craft.

24.2 **WOOD DECAY.**

24.2.1 **Primary Causes.** Wood decay is caused by a fungus growth which breaks down the cell structure within the wood. This fungus thrives in fresh water but its growth is significantly retarded by salt water. Wood decay generally occurs in those spaces which are poorly ventilated and where fresh water has gained access. Poor drainage, allowing fresh water to stand, even in small amounts, is particularly hazardous. The primary causes of wood decay found in ships using wood for hulls, decking and structures are identified as:

- a. Insufficient ventilation and air circulation especially in spaces plagued by dampness and high humidity (i.e., chill room platforms and areas around fresh water tanks).
- b. Obstructed drainpipes, scuppers, limbers, and drain holes.
- c. Uncaulked or poorly maintained deck seams, especially around plywood decking and deckhouse areas.
- d. Washing down with fresh water.
- e. Depressions in the deck from sanding which allows fresh water to stand.
- f. Leaking plumbing especially in heads, water closets, and food preparation areas.

24.2.2 **Recognition.** Decay in the deck and hull structure is often concealed and hard to detect. It is usually not recognizable by visible fungus except in joints between surfaces. Decay may be suspected if paint coating is discolored or the wood surface is cupped. The affected wood has a pronounced stringy, fibrous appearance. Thoroughly decayed wood is brittle which, when dry, breaks easily across the grain with a distinct brash fracture and may crumble into powder. Black stains spreading along the grain from ferrous metal fastenings are usually a result of chemical reactions instead of from decay fungi. Testing procedures for suspected decay areas are detailed in reference (a).

24.2.3 **Preventive Measures.** Detailed preventive measures are described in reference (a). General preventive measures for the reduction of wood decay are identified in the following paragraphs, and should be accomplished by Ship's Force.

- a. Correct or remove all interference with complete water runoff.
- b. Repair fresh water leaks in plumbing drains and fresh water supply systems.
- c. Maintain ventilation system in proper operation. Ensure ventilation system filters are kept clean, maintained clear of all foreign material, and ventilation terminals remain open.
- d. Carefully caulk and maintain deck seams, especially around plywood decking, deckhouse, hull fittings and foundation areas.
- e. In fair weather, open hatches and deck plates to supplement the air circulation.
- f. Remove wet dunnage or shoring in below deck spaces and permit to dry.
- g. Avoid washing down with fresh water. Use only salt water due to its preservation values.
- h. Wash down the ship or craft with salt water following periods of inclement weather to eliminate fresh water and restore salt washed away by the rainfall.
- i. Avoid heavy buildup of paint.
- j. Check MCM bilges and accessible voids for standing fluids once each watch. Identify and correct any leaks and promptly remove any fluids. MCMs are designed to operate with dry bilges. Prolonged contact with fluids will result in wood swell, which can lead to external glass reinforced plastic delamination, planking damage, and machinery misalignment.

24.2.4 Corrective Measures.

- a. Treat new wood, used during new construction or in repaired areas, with a copper naphthenate preservative. This product is produced in a clear and colorless form or in a bright green color. The green preservative has a higher level of copper and is considered to be the more durable and efficient of the two preservatives. If the treated wood is to be varnished, finished with light-colored paints or left bare, use the clear preservative since the green color will bleed through varnishes and light-colored paints.
- b. Build up a heavy concentration of the preservative with a series of three or more heavy applications using a brush, spray or immersing the wood in a preservative filled tank. On-going protection requires periodic application of the preservative to bare wood structures at about five-year intervals. Wood treated on this basis will last indefinitely.
- c. Early identification of decayed areas will allow damaged wood to be treated with an anti-decay product that will harden up the soft wood and prevent the further spread of decay. The product, available commercially, is a two-part mixture with deep penetrating properties that fills wood pores with a capillary action.
- d. Before a wood structure is so badly decayed that its replacement is necessary, a possible long lasting repair is made by drilling a series of 1/4" to 3/8" diameter holes in and around the affected areas and gravity feeding the anti-decay mixture in sufficient quantity to allow total penetration of the damaged area. A guide for proper application of this product is provided with each repair kit. Avoid removing or

disturbing bad wood during repairs, since the original wood, whether good or bad, serves as a container for the product and preserves the shape and size of the affected member. Initial curing of the product takes place about one hour after application. Total curing takes place after one week, at which time the treated wood resembles petrified wood and the growth of rot in the treated area is effectively stopped. Repairs should be accomplished by Ship's Force during regular maintenance periods.

24.3 DECK AND HULL MAINTENANCE.

24.3.1 Inspection Requirements. With reasonable care, wood-hulled ships can give many years of economical service. Make frequent inspections to detect any leaks beneath the covering board, around the deckhouse areas and seams in the deck planking. Reference (a) lists general maintenance requirements for wood-hulled ships.

24.3.2 Maintenance Policies. Specific maintenance policies and repair practices are described in the following paragraphs.

- a. As a general policy, because of the ever present risk of decay developing beneath any wood coating, leave wood strip planked decks uncoated and unpainted.
- b. Limit the cleaning of wood decks to scrubbing with mild detergents and salt water. Never use fresh water for wash-downs since it encourages growth of decay producing fungi. Do not use strong detergents, acids, and bleaches for deck cleaning. Do not sand decks.
- c. Set up a routine of daily wetting down of wood strip planked decks with salt water. This wetting down causes strip deck planking to remain swollen and creates a tighter fit between planks. Wetting down is especially necessary during warm weather periods when the sun's heat will quickly dry out the deck planking. Do not allow water to accumulate in deck recesses for any length of time.
- d. Cover all plywood decks with a coating following the application and deck preparation procedures of reference (b).
- e. Planking renewal will be approved by the TYCOM only on the basis of a technical survey that has positively shown specific need and complete justification for such renewal. Often used general terms such as "Rotten and Worn" are not considered sufficient justification. The technical basis for planking renewal must be formed in the following manner:
 - (1) Drill test bore holes in weather deck areas to find planking thickness in specific areas where plank wear is suspected. If the planking is not worn beyond the limits set forth in reference (b), the planking will not be renewed unless other extenuating and justifiable circumstances dictate, and replacement is authorized by the TYCOM.
 - (2) Take boring plug samples of planking suspected of being decayed. Notify the TYCOM of inspection results.
 - (3) Once planking has reached the maximum wear limits (found by bore test), the TYCOM will determine the need to replank or apply a deck coating.
- f. So far as practicable, repair deck leaks by recaulking deck seams.

- g. When deck planking wear limits have been reached, and other factors such as extensive deck leaks suggest use of a deck covering, a coating of polyurethane deck overlay may be used. Non-skid material must be Naval Sea Systems Command approved material compatible with the deck overlay as defined in reference (b).
- h. Reset metallic planking fasteners when fastener heads are level with, or protrude above, deck level. Where the planking level is within 1/4" or less of fastener head, filling with seam filler vice wooden plugging is authorized. Where bung plugs are installed, they must be set in black polyurethane seam filler per the requirements of reference (c).
- i. Ships currently having polysulfide or polyurethane coated strip deck planking in good condition must continue to use the applied covering. Make minor repairs to this polyurethane coating as necessary using either a polysulfide or polyurethane repair kit. When the polysulfide covering is no longer economically repairable, replace it with a polyurethane type coating. Repairing cracks and holes in impervious deck coatings must be accomplished as soon as practical. Failure to do so will lead to deck rot and costly repairs.

24.3.3 Deck Covering Repairs. Interior and exterior deck covering material is prescribed by Military Specifications and will be installed only as approved by the TYCOM. Repair previously installed deck coverings as necessary. Reference (b) prescribes approved materials and preparation procedures for wooden decks.

24.3.4 Caulking Techniques. Removal of old caulking from leaking seams and recaulking is the standard method for repairing deck leaks. Fill the caulked seams with a black polyurethane seam filler, per the requirements of reference (c). Before filling, caulk the seams with sufficient cotton. Seam out gaging (beveling) as specified in reference (d). Detailed instructions concerning equipment used, the preparation of seams, the method of application and primers to be used are described in reference (b).

24.3.5 Weather Deck or Planked Deck Repair.

- a. Remove all loose or decayed cotton or oakum caulking after removing all seam filler. In areas where caulking is found to be in good condition, set this material deeper into the seam opening, ensuring it is driven in solidly to make room for additional caulking.
- b. Small, tight seams will require a new single thread of cotton. The size of the seam in width and depth determines the amount of cotton or oakum required. Install sufficient cotton or oakum so that the level of the top of the caulking is 1/4" to 3/8" below the surface of the decking. This will allow room for the seam filler.
- c. Unless marine glue (pitch) is used as a seam filler, seal the surface of the caulked cotton or oakum with a special seam primer that is compatible with the seam filler. Do not use a rubber-type seam filler over oakum.
- d. Prime or fill newly caulked seams at the end of each day's caulking to keep moisture out of the caulking material and to protect the dry surface of the deck plank seams.
- e. Rubber type seam fillers that are installed in seams with a caulking gun must also be hand worked into the seam with a putty knife. This is necessary to eliminate air

pockets and voids in the seam. Hand working of the seam filler must be in one single direction to avoid air pockets.

24.3.6 Underwater Planking Repairs.

- a. The forward and after rabbet must receive a thorough inspection. The rabbet seam in the stern area is covered with an anchor chafe plate and is not available for inspection or repair unless the anchor chafe plate is removed. Slack or rotten caulking allows for infestation of marine burrowers and decay which, in the case of the rabbet seams forward, goes undetected.
- b. Inspect and test caulked plank seams covered with bottom sheathing for soundness whenever areas are exposed due to the removal of sheathing. In most cases, the seams have been covered for many years and have not been available for periodic maintenance. These seams, although covered with sheathing, do eventually waste away or become slack. The seams at the planking butts are more susceptible to slackening and erosion due to movement at the joints. Under normal conditions, it is necessary to recaulk these joints every 10 to 15 years.
- c. If the outer strand of oakum caulking appears to be satisfactory, then the seam may be repaired by setting the existing caulking deep into the seam and adding more strands of oakum to fill the seam depth. If the old caulking is wasted away or decayed, clean out the seam and remove all caulking and residue to make room for the new material.
- d. Before filling the newly caulked seam with a seam compound, paint the oakum and seam with anti-fouling paint. Painting the seam protects the oakum from marine burrowers and primes the wood in the way of the seam filler. Painting the oakum produces a hard surface finish which also makes a water barrier necessary for the protection of the oakum.

24.4 SURFACE PREPARATION AND PAINTING.

24.4.1 General Techniques. The greatest single factor affecting the performance of any paint system is the method and care used in the preparation of the surface to be coated. The preservation of wooden ships presents some unique problems not encountered in other types of ships. Reference (e) provides guidance for surface preparation materials and methods of application, techniques, and general safety precautions for painting.

24.4.2 Preparation and Painting Policies. Specific TYCOM policies pertaining to the preparation and paint application are identified in the following paragraphs:

- a. The use of torches to blister the existing paint coating for removal is authorized; however, care must be taken to guard against damage to other items or equipment in the vicinity. Avoid application of heat on or near items such as electric wiring, plastics, gaskets, and all flammable materials. Use only enough heat as required to blister the paint. Excessive heat chars the wood fibers and removal of the charred wood results in an uneven surface. Remove all interferences that can reasonably be removed before applying heat. This includes all label plates, brackets, clips, etc.
- b. Scraping tools used to remove blistered paint must be kept sharp to be effective. Do all scraping in the direction of the wood grain to prevent shredding of wood fibers and

gouging of the bare wood surface. This phase of paint removal is important in preparing the surface for sanding.

- c. All areas stripped as previously described are now ready for sanding before priming. Hand sanding, with wooden blocks where practicable, using the correct grit paper, is the prescribed final step. Careful dusting before paint application is absolutely necessary to achieve a good primer bond, or bond between subsequent paint coats.
 - (1) Power disc sanders are not authorized for use in surface preparation. Improper use of the disc sander is the biggest cause of uneven surfaces and damage.
 - (2) Belt sanders and vibrating sanders are authorized for use in preparing the hull freeboard for priming and top-coating.

24.5 WOODEN HULL BOTTOM SHEATHING. For bottom sheathing to be effective and to provide protection to the underlying hull planking, the sheathing must fit the shape of the vessel's contoured bottom, be securely fastened, and be faired to the level of adjoining pieces of sheathing. The sheathing must be installed per the requirements of reference (a).

- a. Sheathing the bottoms of wood vessels serves to protect the hull from burrowers, especially if the vessels are to endure long periods between dry-dockings.
- b. For vessels that are active and are dry-docked annually, the use of sheathing is not required.

24.6 WOODEN SEA CHEST FOUNDATIONS.

- a. To prevent overheating of the wood filler blocks and wood cap blocks in sea chests, the wood must be insulated from the metal fittings. Use of delron sleeves or bushings around the body of the through-hull fitting and around the bolt fastenings is one approved method.
- b. A Cathodic Corrosion Control system using an impressed current through anodes installed on boat bottoms isolates the anode fittings with the use of delron bushings and by the application of a mastic material applied over bare wood in a 36" diameter area around the anode.
- c. Replace wood fillers and caps that are badly decayed. If repairs cannot be made immediately, then treat the bad wood with a preservative or decay inhibitor to slow up the rate of deterioration until the bad wood can be replaced. When new fillers in the form of blocks and caps are fabricated, they should be treated with preservative prior to installation and after the wood has been finally shaped and fitted.

LISTING OF APPENDICES.

- A Gas Free Engineering Program Assessment Sheet

25.1 **PURPOSE.** To define Fleet Gas Free Engineering (GFE) inspection policy and oversight policy.

25.2 **SCOPE.** This chapter is applicable to all Gas Free service provided by all personnel (military and civilian) assigned to a Naval Maintenance Facility (NMF), Navy ship or submarine. **NMF is defined as Regional Maintenance Center (RMC), Regional Support Group (RSG), Ship Repair Facility (SRF), and Department of the Navy Shipyards.**

25.3 **DISCUSSION.** The correct application of GFE programs is varied and may be confusing to individuals unfamiliar with references (a) through (d).

- a. During ship repair operations including shipbuilding, ship repair, ship breaking, and related employment (related employment means any employment performed as an incident to or in conjunction with ship repairing, shipbuilding, or ship breaking work, including, but not restricted to, inspection, testing, and employment as a watchman).
- b. Table 25-1 shall be used to identify applicable requirements for the entity performing work.

Table 25-1

Entity performing ship repair operation and location of ship during those operations	NAVSEA SAF-010	NSTM 074 V3	OSHA 29 CFR 1915	Applicable guidance
Submarine Ship's Force Personnel entry into confined spaces including all tanks, voids, battery wells, missile tubes and reactor compartments when located at an NMF	X			<ul style="list-style-type: none"> • In port GFE services must be obtained from the local supporting NMF while pier side. If in port without a supporting NMF, the Medical Department Representative (MDR) may check spaces gas free only for submarine personnel. • The MDR shall not, under any circumstances, provide gas free services to DOD or contractor civilian personnel in port.
Submarine Ship's Force personnel entry into confined spaces, including all tanks, voids, battery wells, missile tubes and reactor compartments when underway		X		In accordance with reference (b), on submarines, the MDR serves as the GFE. The MDR's GFE services are strictly limited to underway periods.
Submarine Ship's Force Personnel entry into confined spaces including all tanks, voids, battery wells, missile tubes and reactor compartments when at a private shipyard	X		X	When pierside in a private shipyard, GFE services will be obtained from an NFPA marine chemist by Ship's Force through the governing contract with the private shipyard. If such support services are not provided for in the contract, Ship's Force shall obtain required GFE services through the local supporting NMF.

Entity performing ship repair operation and location of ship during those operations	NAVSEA SAF-010	NSTM 074 V3	OSHA 29 CFR 1915	Applicable guidance
Surface ship Ship's Force entry into confined spaces while ship is at a Naval Station berth.		X		For entry into confined spaces for inspections, preventive maintenance, and access to stowage reference (b) requirements will be followed or the ship may obtain NMF GFE/National Fire Protection Agency (NFPA) marine chemist services.
Surface ship Ship's Force hot work while ship is at a Naval Station berth.		X		<p>Follow reference (b) requirements or obtain NMF GFE/NFPA marine chemist services, as required below:</p> <ul style="list-style-type: none"> Hot work certifications will not be issued to conduct work where DoD civilians or contractors are working in the same space or may be affected by the hot work. The ship's GFE shall coordinate hot work with NMF GFE and/or NFPA marine chemists in advance to ensure awareness and coordination of Ship's Force work. The ship's GFE shall follow NMF GFE and NFPA marine chemist guidance as appropriate. When pier side, ship's force shall not certify hot work within, on or immediately adjacent (through heat transfer, spark, or hot slag contact) to: <ol style="list-style-type: none"> Spaces that contain or last contained combustible or flammable liquids or gases. Fuel tanks that contain or last contained fuel.

15 Jan 2021

Entity performing ship repair operation and location of ship during those operations	NAVSEA SAF-010	NSTM 074 V3	OSHA 29 CFR 1915	Applicable guidance
		X		<p>3. Pipelines, heating coils, pump fittings or other accessories connected to spaces that contain or last contained fuel.</p> <ul style="list-style-type: none"> • When in a port location without services from NMF GFE or NFPA marine chemist, the ship's GFE will seek approval to conduct certification for emergent hot work operations referenced above from the applicable Type Commander/Echelon III N43. • Ship's Force afloat Gas Free Engineer shall not provide GFE services to DoD or contractor civilian personnel under these circumstances. • With permission of the local supporting NMF or Marine Chemist, if conditions remain unchanged from the environment described on certifications the ship's GFE may maintain certificates initially issued by NMF GFE or NFPA certified marine chemist. If conditions change work must be stopped and recertification obtained by originating NMF GFE or NFPA marine chemist.

Entity performing ship repair operation and location of ship during those operations	NAVSEA SAF-010	NSTM 074 V3	OSHA 29 CFR 1915	Applicable guidance

X	X	X	<ul style="list-style-type: none"> • GFE services for operations noted will be obtained from the private shipyard through the governing contract with the private shipyard. • If such support services are not provided for in the contract, Ship's Force shall obtain required GFE services through the local supporting NMF or NFPA certified marine chemist.
Surface ship Ship's Force entry into confined spaces or hot work operations when in a Naval shipyard or Naval Ship Repair Facility.	X	X		<ul style="list-style-type: none"> • Follow reference (a) requirements. • While at a NMF, upon written approval from the NMF GFE or MCSPM, Afloat GFE Personnel may issue Navy Gas Free Certification and Test Logs for Ship's Force personnel in accordance with reference (b).
Tender, uniformed personnel, working on the tender or tended vessel not in a private shipyard, Naval shipyard or Naval Ship Repair Facility		X		Tenders shall follow reference (b) for all repair work on the tender or on tended vessels.
Tender, uniformed personnel, working on a tender or tended vessel while in a Naval shipyard or Naval Ship Repair Facility	X			<p>When work is conducted while vessels (tender/ship/submarine) is at an NMF, reference (a) becomes the governing instruction.</p> <p>See the requirements for "Ship's Force entry into confined spaces or hot work operations when in a Naval shipyard or Naval Ship Repair Facility" identified above.</p>

15 Jan 2021

Entity performing ship repair operation and location of ship during those operations	NAVSEA SAF-010	NSTM 074 V3	OSHA 29 CFR 1915	Applicable guidance
Tender, uniformed personnel, working on the tender or tended vessel while in a private shipyard.			X	<p>When work is conducted while vessels (tender/ship/submarine) is at private shipyard reference (c) is the governing instruction.</p> <p>See the requirements for “Ship’s Force entry into confined spaces or hot work operations when in a private shipyard” identified above.</p>
Department of Defense (DOD) civilians and NMF uniformed personnel performing any ship repair operations including hot work and entry into confined or poorly ventilated enclosed spaces regardless of the geographical location of the ship.	X			<ul style="list-style-type: none"> • NMF personnel shall follow reference (a) requirements. • In accordance with reference (d) Navy shore non-maritime commands performing ship repair operations shall comply with reference (a). <p>Examples of Navy shore non-maritime commands performing ship repair operations include:</p> <ol style="list-style-type: none"> 1. Assault Craft Unit personnel conducting landing craft repair work at its shore repair activity. 2. NAVAIR personnel performing hot work or confined space entry shipboard. 3. NSWC personnel entering confined spaces for inspections. 4. NSWC personnel using flammable materials to perform hull patching onboard ships.

15 Jan 2021

Entity performing ship repair operation and location of ship during those operations	NAVSEA SAF-010	NSTM 074 V3	OSHA 29 CFR 1915	Applicable guidance
Non-Department of Defense (DoD) Contractors (including foreign contractors) performing any ship repair operations including hot work and entry into confined or potentially dangerous atmospheres within U.S. territorial waters.			X	<ul style="list-style-type: none"> • Non-DoD (contractor) personnel: contractor personnel conducting ship repair work on ships located inside U.S. territorial waters are required to follow reference (c) requirements whether the ship is in a government or privately owned ship repair facility. • NSAs shall ensure all contracts include reference (c) requirements and ensure contractor compliance.
Non-Department of Defense (DoD) Contractors (including foreign contractors) performing any ship repair operations including hot work and entry into confined or potentially dangerous atmospheres outside U.S. territorial waters.		X	X	Provisions in reference (b) allow the shipboard GFE to provide GFE services to contractor personnel when the ship is located outside U.S. territorial waters. These provisions are intended solely as a last resort to accomplish mission and time critical work and are not intended to relieve contractors of the obligation to provide their own services in accordance with reference (c) whenever and wherever possible. Until this distinction can be formally addressed, the contracting office shall notify Ship's Force whenever a contractor cannot provide their own GFE services. Ship's Force will then seek applicable Type Commander/Echelon III N43 approval on a case-by-case basis prior to providing GFE services to contractor personnel (both foreign and U.S. nationals) outside U.S. territorial waters.

Notes:

1. NMF is defined as Regional Maintenance Center (RMC), Regional Support Group, Ship Repair Facility, Department of the Navy Shipyards.
2. Contractor work onboard naval vessels outside U.S. territorial waters: Provisions in reference (b) allow the shipboard Gas Free Engineer to provide GFE services to contractor personnel when the ship is located outside U.S. territorial waters. These provisions are intended solely as a last resort to accomplish mission and time critical work and are not intended to relieve contractors of the obligation to provide their own certified GFE services whenever and wherever possible. Until this distinction can be formally addressed, the contracting office must notify Ship's Force whenever a contractor cannot provide their own GFE services. Ship's Force will then seek applicable Type Commander or Echelon III N43 approval on a case-by-case basis prior to providing GFE services to contractor personnel (both foreign and U.S. nationals) outside U.S. territorial waters.
3. Example: An Assault Craft, conducting landing craft repair work at its shore repair activity.
4. When an RMC is conducting work on a naval vessel that is located pierside, NMF personnel must follow reference (a) requirements.
5.
 - a. Ship's Force should follow reference (b) requirements or may obtain NMF GFE or National Fire Protection Agency (NFPA) marine chemist services, if necessary, when pierside for Ship's Force entry into confined and enclosed spaces for inspections, preventive maintenance, and access to stowage.
 - b. Ship's Force should follow reference (b) requirements or obtain NMF GFE or NFPA marine chemist services, if necessary, when pierside for hot work certifications for Ship's Force work in confined and enclosed spaces, except as noted in paragraph c. of this note. Ship's Force will not provide hot work certification following reference (b) requirements to conduct work where DOD civilians or contractors are working in the same space or may be affected by work conducted by Ship's Force. The afloat Gas Free Engineer must coordinate hot work aboard ship with NMF Gas Free Engineers or NFPA marine chemists aboard ship in advance of specific Ship's Force evolutions to ensure awareness and coordination of Ship's Force work. The afloat Gas Free Engineer must follow NMF Gas Free Engineer and NFPA marine chemist guidance as appropriate.
 - c. Ship's Force, when pierside, must not certify hot work operations within, on or immediately adjacent (through heat transfer, spark or hot slag contact) to:
 - (1) Spaces that contain or last contained combustible or flammable liquids or gases.
 - (2) Fuel tanks that contain or last contained fuel.
 - (3) Pipelines, heating coils, pump fittings or other accessories connected to spaces that contain or last contained fuel.
 - d. Ship's Force, when pierside, must obtain support services for hot work operations listed in paragraph c. of this note through the local supporting NMF. When pierside in a private shipyard, optional GFE services for operations in paragraphs a. and b. of this

note and required GFE services for operations in paragraph c. of this note will be obtained from an NFPA marine chemist by Ship's Force through the governing contract with the private shipyard. If such support services are not provided for in the contract, Ship's Force must obtain required GFE services through the local supporting NMF.

- e. When in a port location without services from NMF GFE or NFPA marine chemist, the afloat Gas Free Engineer will seek approval to conduct certification for emergent hot work operations referenced in paragraph c. of this note from the applicable Type Commander or Echelon III N43. Ship's Force afloat Gas Free Engineer must not provide GFE services to DOD or contractor civilian personnel under these circumstances.
 - f. With permission of the local supporting NMF, if conditions remain unchanged from the environment described on the confined space entry tag, afloat Gas Free Engineer may maintain certificates initially issued by NMF Gas Free Engineer or NFPA certified marine chemist referenced in paragraphs a., b. and d. of this note. If conditions change, immediately evacuate space and obtain recertification by originating NMF Gas Free Engineer or NFPA marine chemist.
 - g. Submarine personnel must obtain GFE services from the local supporting NMF while pierside.
6. Tenders must follow reference (b) for all repair work, on the tender itself or ships or submarines, except when the work is conducted while the vessel (tender, ship or submarine) is at an NMF at which point reference (a) becomes the governing instruction. Locations where in port GFE services are not available ensure that entry into, or hot work in or on fuel tanks, spaces in which fuel tank vents terminate, piping or equipment servicing such spaces or other confined spaces known to contain flammable fuels or fuel vapors is permitted only if approved by the Commanding Officer (CO) for each occasion as specified in paragraph 074-19.4.b of reference (b). Treat tanks as Immediately Dangerous to Life or Health and follow procedures in paragraph 074-19.14 of reference (b).
7. Non-DoD (contractor) personnel: contractor personnel conducting ship repair work on ships located inside U.S. territorial waters are required to follow reference (c) requirements whether the ship is in a government or privately owned ship repair facility. RMCs must ensure all contracts include reference (c) requirements and ensure contractor compliance.

25.4 OVERSIGHT. To ensure compliance with reference (b), the afloat GFE program on surface ships, aircraft carriers and submarines must be evaluated using the following requirements:

- a. The CO must require the safety officer to evaluate the GFE program at least annually as outlined in reference (b). The safety officer, Damage Control Assistant, and submarine Medical Department Representative must use Appendix A, Gas Free Engineering Program Assessment Sheet, to conduct the annual evaluation. A copy of this report will be sent to the Type Commander (TYCOM) Safety Officer.
- b. The TYCOM Safety Officer must perform an annual evaluation of the afloat GFE program and provide a report to the Fleet N43 during the first quarter of the calendar year.

15 Jan 2021

- (1) TYCOM, as part of the annual evaluation, must collect and analyze data from assessment results from Safety Center Surveys, Board of Inspection and Survey (INSURV) material inspections, Afloat Training Group (ATG) program assessments, crew certification and Immediate Superior In Command (ISIC) assessments.
 - (2) TYCOM must also spot check afloat GFE programs using Appendix A to include in the annual self-evaluation.
- c. Submarine ISICs, INSURV, ATG, and TYCOM may use Appendix A to support scheduled assessments of afloat GFE programs. Table 25-2 outlines applicable sections to be assessed. Each assessing agent will have the option of expanding their assessment to other sections, if they deem necessary, based on any developing deficiency trends during the assessment. The assessing agent may elect to accept satisfactory results of another recent assessment, if it was performed within the last 3 to 6 months. Section 9 of Appendix A is the performance section that can be observed as a stand-alone event or in conjunction with planned unit drills.

Table 25-2

Periodicity	Assessing Agent	Section
Basic Phase of the Fleet Response Training Plan	ATG	Section 1, 2, 3, 5, 6, 9
Material Inspection (36 Months)	INSURV	Section 1, 2, 3, 5, 6, 9
Follow up based on assessment results	TYCOM or ISIC	All Sections

- d. Suggested changes or updates can be made to the TYCOM Safety Officer.

APPENDIX A
GAS FREE ENGINEERING PROGRAM
ASSESSMENT SHEET

Purpose: This assessment tool is comprehensive because it reviews the GFE Program administrative requirements, training records, equipment usage, GFE personnel performance and gas free evolutions.

Directions: This evaluation will take approximately 4 to 6 hours to complete. Review the assessment sheet in its entirety before starting. To ensure a complete and thorough assessment, applicable reference material, training records, 3-M documentation, equipment and coordinated drill observation with Ships Force personnel should be pre-arranged prior to starting the evaluation.

- a. If a line item requirement is met, annotate “yes” in the appropriate block.
- b. If a line item is not met, annotate “no” in the appropriate block.
- c. If a line item does not apply on the check sheet, depending on ship configuration, place not applicable (N/A) in the appropriate block.

NOTE: THE REFERENCES IDENTIFIED BELOW ARE SPECIFIC TO THIS APPENDIX, NOT THE MAIN BODY OF THE CHAPTER.

(074-18.6)	Does the command have at least 1 person trained, qualified and certified as the Afloat Gas Free Engineer?			

Reference (a)	Section 1: GFE Personnel (Cont'd)	Surface Ship	Aircraft Carrier	Submarine
(074-18.8) and (074-18.11)	Review members service record. Is the designation letter signed by the CO? Is a copy of the letter in the GFE notebook?			
	What is the date of the certification or recertification letter? Date: _____			
(074-18.9)	Is the Gas Free Engineer a graduate of one of the following courses: K-495-0051, A-4G-1111, or Navy Undersea Medical Institute?			
(074-18.8)	Did the Gas Free Engineer receive 40 hours On the Job Training (OJT) under the supervision of an official Afloat Maritime Gas Free Engineer or Navy Undersea Medical Institute?			
	Is the 40 hours of OJT documented?			
(074-18.8)	If the unit did not have a qualified Gas Free Engineer on board, did the CO waive (in writing) the 40 hour OJT requirement?			
	If 40 hour OJT is waived, did the Gas Free Engineer graduate from a Gas Free Engineer Course of Instruction within the last 36 months?			
(074-18.8, 074-18.9 and 074-18.11)	Does the command have a Gas Free Engineer Assistant? If so, is the Gas Free Engineer Assistant an E-6 or above and have satisfactorily completed one of the formal Gas Free Engineer training courses?			
	Review members service record. Is the designation letter signed by the CO to perform GFE functions? A copy in the GFE notebook?			
	What is the date of the certification or recertification letter? Date: _____			

15 Jan 2021

Reference (a)	Section 1: GFE Personnel (Cont'd)	Surface Ship	Aircraft Carrier	Submarine
(074-18.8 and 18.9)	Does the command have GFE Petty Officers (GFEPO)?			
	Is the GFEPO an E-4 or above and satisfactorily completed the formal Gas Free Engineer and Gas Free Engineering Petty Officer for Surface (Afloat) Operations Course K-495-0051?			
	Did the GFEPO complete NAVEDTRA 43704 (series) watch station 316, under the supervision of the shipboard Gas Free Engineer?			
	Does the GFEPO(s) have a designation letter signed by the CO to perform gas free engineering functions? (Review service record) A copy in the GFE notebook?			
(074-18.6)	Are there enough GFEPOs to include at a minimum, one GFEPO per ship's import or at sea fire party and each DC Repair Station?			
Reference (a)	Section 2: Recertification of Gas Free Engineering Personnel (GFEP)	Surface Ship	Aircraft Carrier	Submarine
(074-18.10 and 074-18.11)	Were GFEP recertified annually? Is a copy of certification or recertification in the GFE notebook? Proof of certification or recertification during Medical Readiness Inspection per reference (b).			
(074-18.10)	Did GFEP demonstrate that they have satisfactorily engaged in gas free engineering evolutions during the year? (At least 10 certificates)			

Reference (a)	Section 2: Recertification of Gas Free Engineering Personnel (GFEP) (Cont'd)	Surface Ship	Aircraft Carrier	Submarine
(074-18.10)	If GFEP were not actively engaged in gas free engineering (as defined by this appendix) did they complete a minimum of five gas free evolutions OJT under the direct supervision of a certified Gas Free Engineer?			
(074-18.10) Review how this was documented and if the method used was adequate and not over simplified just to recertify GFEP.	If the OJT recertification methods were not feasible, did GFEP recertify based on a practical and oral or written examination, both of which sufficiently demonstrate capability?			
(074-18.10)	Did all GFEP complete refresher training in emergency rescue procedures prior to recertification? Review training records.			
(074-18.10)	Was the periodicity of CPR refresher training per the requirements of the American Heart or American Red Cross Associations (biannual)? Review members CPR record or card.			
Reference (a)	Section 3: GFE Annual Program Evaluation	Surface Ship	Aircraft Carrier	Submarine
(074-18.10)	Does the Safety Officer evaluate the Gas Free Engineering program annually?			
(074-18.10)	Did the evaluation include recertification of GFEP?			
(074-18.10)	Did the Safety Officer evaluate the CPR program for compliance and effectiveness?			
(074-18.10)	Does the Gas Free Engineer and Safety Officer maintain a record of annual evaluation results?			

Reference (a)	Section 4: Gas Free Certification	Surface Ship	Aircraft Carrier	Submarine
Review annual evaluations. Safety Officer and Afloat Gas Free Engineer must have copies of these evaluations.	Did the evaluation identify deficiencies of the program? If so, was a plan of action developed to rectify the deficiencies?			
(074-18.15)	Is a gas free certificate issued for all confined space inspections or testing?			
(074-18.16)	Are the certifications maintained for a period no less than 12 months?			
(074-18.16) Appendix C of 074	Is the Gas Free Engineering notebook being maintained?			
(Section 20) Appendix D of 074 If hot work was performed during the gas free evolution, validate through site visits or review a random sampling of certificates maintained by the Gas Free Engineer to assess hot work compliance.	Is the gas free certification accurately filled out? Does the certification contain the following information at a minimum: <ul style="list-style-type: none"> - Date and time of test - Date and time of certificate expiration - Date and time of retesting and update of certificate - Signature of GFEP performing tests or retests, as applicable. - Name of the command - Location and identification of the space - The type of operation for which the certificate is requested such as hot work, spray painting, etc. - Category of conditions found to exist (e.g., "Safe for Personnel - Not Safe for Hot Work") - Requirements for conditions or operations within the space - Special conditions, as appropriate - Results of the test performed 			
(074-20.5)	Are there any abnormalities of testing results? Have follow-up actions been taken on the results?			

Reference (a)	Section 4: Gas Free Certification (Cont'd)	Surface Ship	Aircraft Carrier	Submarine
(074-20.2, 074-20.3 and 074-20.4)	Are GFEP issuing certificates for work they are authorized to? Did the GFE or GFEA delegate testing to GFEPOs? Were all the requirements for delegating met?			
(074-18.12.B)	While inport did S/F use a NMF Gas Free Engineer or NFPA Marine Chemist to certify hot work operations within, on or immediately adjacent to (review GFE certificates): (1) Spaces that contain or last contained combustible or flammable liquids or gases. (2) Fuel tanks that contain or last contained fuel. (3) Pipelines, heating coils, pump fittings or other accessories connected to spaces that contain or last contained fuel.			
(074-18.12.B)	Did S/F seek support services from local NMF for hot work operations on these spaces?			
(074-18.12.C)	Did the afloat Gas Free Engineer consult with NMF Gas Free Engineers or NFPA marine chemists where DoD civilians or contractors are working in the same space or may be affected by work conducted by Ship's Force?			
(074-19.14)	Has the command ever entered into Immediate Danger to Life and Health space? If so, was it under emergency conditions?			
	Did the CO authorize the opening and entry into Immediate Danger to Life and Health spaces?			

Reference (a)	Section 4: Gas Free Certification (Cont'd)	Surface Ship	Aircraft Carrier	Submarine
(074-19.5)	Did personnel working in a confined space have an observer or an attendant outside the space?			
	Did outside attendants maintain communication with personnel entering or working inside confined spaces?			
Reference (a)	Section 5: Command Training	Surface Ship	Aircraft Carrier	Submarine
(074-18.9)	Have all hands received gas free engineering program familiarization upon reporting aboard and annually thereafter?			
(074-18.9)	Are training records maintained by the division officer or in R-ADM? MDR?			
Appendix B	Does the lesson plan cover the key elements of Appendix B for command personnel on the GFE program?			
(074-25.7) Review drill packages	Does the Gas Free Engineer or Gas Free Engineer Assistant provide confined space rescue training to personnel participating in confined space rescue at least semi-annually?			
Reference (a)	Section 6: Gas Free Engineering Equipment	Surface Ship	Aircraft Carrier	Submarine
Reference (c) (Refer to ships Damage Control Repair Station Allowance Equipment List (AEL) and equipment AEL for total number of kits required.)	Is the gas free equipment quantities maintained per applicable AEL? (Compare the Damage Control Repair Station shortage list against inventory list.) Document shortage in remarks section.			
Submarine: Refer to equipment AEL	Does the shortfall list have current requisition numbers assigned?			
(074-27.14.b) Spot check calibration gas cylinders	Is the calibration gas within the expiration date?			

Reference (a)	Section 6: Gas Free Engineering Equipment (Cont'd)	Surface Ship	Aircraft Carrier	Submarine
Spot-check chemical detection tubes.	Are there any expired chemical detection tubes?			
Detection Equipment (references (d), (e), (f) or (g)).	Review PMS 13-week file. Was the maintenance performed following applicable MRCs? Any documented discrepancies?			
SAR or SCBA (references (h), (i) or (j))	Review PMS 13-week file. Has the maintenance been performed following the applicable MRCs within periodicity and when required? Any documented discrepancies?			
Review SAR or SCBA ASA DC Material Check Sheet (reference (k))	Is the ASA check sheet filled out and is there evidence of a quarterly review by DCA or LCPO? Are there any UNSAT marks, if so, is there any corrective action(s) documented (i.e., CSMP entry, 8 o'clock report entries)?			
Reference COMUSFLTFORCOMINST 4790.3	Section 7: JFMM Requirements for Inport GFE Operations	Surface Ship	Aircraft Carrier	Submarine
074-18.14 Or COMUSFLTFORCOMINST 4790.3 (Volume IV Chapter 25)	Did SF conduct GFE services for contractor personnel when the unit was outside U.S. territorial waters? Was this specified in the contract? Did the unit obtain TYCOM or Echelon III N43 approval prior to conducting GFE services?			
	When in a port location without services from NMF Gas Free Engineer or NFPA marine chemist, did the afloat Gas Free Engineer seek approval to conduct certification for emergent hot work operations from the Type Commander Echelon III N43?			
	Did submarine personnel obtain GFE services from the local supporting NMF while pierside?			

Reference COMUSFLTFORCOMINST 4790.3	Section 7: JFMM Requirements for Inport GFE Operations (Cont'd)	Surface Ship	Aircraft Carrier	Submarine
	Did the tender, in a port where GFE services are not available, ensure that entry into, or hot work in or on fuel tanks, spaces in which fuel tank vents terminate, piping or equipment servicing such spaces or other confined spaces known to contain flammable fuels or fuel vapors was approved by the Commanding Officer?			
Reference (a)	Section 8: Hot Work Annex	Surface Ship	Aircraft Carrier	Submarine
(074-22.3) Cleaning or ventilating for Hot Work (Field observation or certificate review)	Check for confined spaces where hot work is being performed, was the space tested, inspected, emptied of flammable cargo, cleaned and ventilated and certified Safe for Hot Work?			
	Are hot work sites always inspected for combustible or flammable materials before hot work is authorized?			
	If combustible materials cannot be removed from a hot work site, what is done?			
	What method of venting is used to prevent explosions?			
(074-22.4) Fire Watch (Field observation or certificate review)	<p>Was there a fire watch?</p> <p>Was the fire watch equipped with extinguishing equipment?</p> <p>Did the fire watch have the right personal protective equipment?</p> <p>Was the fire watch properly staged to extinguish a fire if it was to occur?</p> <p>Was there adequate number of fire watches?</p>			
(074-22.6) Boundary Spaces (Field observation or certificate review)	Prior to hot work, how are potential adjacent space hazards controlled?			

Reference (a)	Section 8: Hot Work Annex (Cont'd)	Surface Ship	Aircraft Carrier	Submarine
(074-22.6.2) Pipes, Tubes, Coils (Field observation or certificate review)	Are pipes, tubes, coils or similar items which service, enter or exit a confined space flushed, blown, purged or otherwise cleaned and certified Safe for Hot Work before the performance of hot work on such items?			
	Are valves to pipes, tubes or similar items closed, pipes blanked off and tagged out?			
(074-22.6.3) Hot work on Closed Containers or Structures (Field observation or certificate review)	Are hollow structures, drums, containers, jacketed vessels or similar items cleaned, flushed, purged, inerted, filled with water or otherwise made safe prior to hot work?			
	Are the items inspected, cleaned, tested and certified before performing hot work?			
	Before hot work, are items which are closed and subject to pressure build-up vented from any application of heat?			
	Is the method of venting selected to prevent ignition or explosion during the venting process?			
(074-24.3)	Are the requirements for Gas Inerting operations met? Are the requirements of 074-24.3.1 followed when vent holes must be drilled?			
Reference (a)	Section 9: Gas Free Engineering Performance (This can be assessed as a standalone event or in conjunction with planned drills.)	Surface Ship	Aircraft Carrier	Submarine
(074-27.9.1) Pre-Check of the Four-Gas Analyzer	Was the four-gas analyzer's battery charged and all the components inspected before use?			
	Was the sampling probe visually inspected to verify that the water barrier, filter, and O-ring in place?			

Reference (a)	Section 9: Gas Free Engineering Performance (This can be assessed as a standalone event or in conjunction with planned drills.) (Cont'd)	Surface Ship	Aircraft Carrier	Submarine
(074-27.13) Four Gas Analyzer Calibration	Before calibration, is the Four Gas Analyzer zeroed in a fresh air environment?			
	Were the four gas analyzers calibrated before each day's use?			
(074.L.4) Dreager Pump	Was the rapid opening time test performed?			
	Was the 30-minute leak test performed for model 21/31 or 15 minutes for Accuro? Was the counter zeroed?			
(074 25) Emergency Rescue Procedures (This will require a review of the section to determine if requirements were met.)	Were the procedures followed as outlined in Section 25? Annotate specific discrepancies in Remarks section.			
(074.19.11 Testing Procedures	Was initial testing performed from outside the space by drop test or by insertion of sample probe or hoses?			
	<p>Were the following tests conducted in this order? (May be some simultaneously depending on the instrument used).</p> <ol style="list-style-type: none"> 1. Oxygen 2. Combustible vapors or gases 3. Toxic gases

LISTING OF APPENDICES.

A INSURV Plan of Action and Milestones

26.1 PURPOSE. To define the responsibilities and provide guidance for the preparation and conduct of a Board of Inspection and Survey (INSURV) Inspection.

26.1.1 Scope. The policies and actions required by this chapter are applicable to all ships of the U.S. Navy.

26.1.2 Background. INSURV was established by Title 10, U.S. Code, Section 7304, as a board of Naval Officers to make recommendations to the Secretary of the Navy as to which vessels, if any, should be stricken from the Naval register. Additionally, per reference (a), INSURV has been tasked with providing assurance to the Chief of Naval Operations (CNO) regarding the ship's material readiness and command's self-assessment effectiveness.

26.1.3 Discussion.

- a. INSURV is charged with conducting four basic types of inspections.

NOTE: COMBINED TRIALS AND GUARANTEE MATERIAL INSPECTIONS (MI) ARE CONDUCTED ON SUBMARINES ONLY. ACCEPTANCE TRIALS AND FINAL CONTRACT TRIALS ARE CONDUCTED ON ALL OTHER SHIPS.

- (1) Combined Trials or Acceptance Trials for new construction or conversion ships. Details are discussed in Volume I, Chapter 4 of this manual.
 - (2) Guarantee Material Inspection or Final Contract Trials for new construction or conversion ships. Details are discussed in Volume I, Chapter 4 of this manual.
 - (3) MIs are conducted on U.S. Navy commissioned ships and submarines as discussed in this chapter and reference (a).
 - (4) Surveys for ships scheduled for decommissioning, Retention, Mobilization or as a Foreign Military Sale. Refer to reference (b) for additional information.
- b. Detailed procedures for reporting MI deficiencies in the Maintenance and Material Management (3-M) system are contained in reference (c).
 - c. Milestones for inspections are shown in Appendix A of this chapter.

26.1.4 Policy.

- a. As designated in reference (a), material inspections are to provide assurance to Commanding Officers and higher authority that mechanisms to identify, document and resolve material deficiencies are adequate. To this end, the ship will establish a program to complete administrative and organizational preparations for the INSURV inspection commencing approximately 12 months prior to the scheduled inspection. Ships must utilize the guidance shown in Appendix A of this chapter.
- b. Adequate preparation for an INSURV inspection does not imply that all deficiencies must be corrected. The goal is to present a ship that is fully aware of all existing deficiencies. All deficiencies must be properly documented and those which are considered to be mission degrading must be reported by Casualty Report (CASREP) per reference (d). Administrative preparations, in addition to deficiency documentation, must be complete and comprehensive.

26.2 RESPONSIBILITIES.

26.2.1 Type Commander. The Type Commander (TYCOM) must:

- a. Act as the cognizant authority for the conduct of INSURV inspections for all ships of the force (including new construction ships and submarines) and maintain a schedule of inspections due.
- b. Nominate ships and submarines for inspections and surveys by INSURV. Promulgate schedules of inspections to be conducted by INSURV on ships of the force.
- c. Schedule accomplishment of Class Maintenance Plan maintenance assessments per Volume VI, Chapter 42 of this manual.
- d. Review Safety Survey results and corrective action status report provided by the ship's Commanding Officer.
- e. Track and work to resolve historical issues with systems, equipment and processes identified by INSURV.
- f. Coordinate with the Immediate Superior In Command (ISIC) to disseminate the best practices and lessons learned.

26.2.2 Immediate Superior In Command. The ISIC must (TYCOM responsible if ISIC is not assigned):

- a. For Surface Force Ships only, if the ISIC is deployed, the ISIC will request the numbered fleet commander assign non-deployed local Squadron to assist with inspection preparations.
- b. Monitor Ship's Force preparation for the inspection.
- c. Send reports per Appendix A. Surface Ships ISIC will conduct an inspection readiness assessment prior to submitting. Develop and disseminate a standardized Schedule of Events for assigned ships.
- d. Ensure preparation for the sequence of accomplishing inspection underway demonstrations is conducted in advance of inspection.
- e. Ensure post inspection reporting procedures are followed.
- f. Attend post-INSURV inspection critiques.
- g. Ensure supporting subordinate commands are prepared for the scheduled INSURV.
- h. Ensure that the ship is prepared to discuss Current Ship's Maintenance Project (CSMP) deficiencies which have not been corrected, and those items which have been removed from the CSMP and passed to history.
- i. Monitor the reporting and correction of inspection deficiencies through the CSMP.

26.2.3 Ship Commanding Officer. The Commanding Officer must:

- a. Ensure that the ship is prepared for the inspection.
- b. Promulgate a ship wide Plan of Action and Milestones (POAM) in preparation for INSURV.
- c. Be prepared to discuss with the senior member of the board any item from the previous INSURV Inspection which is still on the CSMP, all items which were determined to be not correctable and designated "pass to history", or those for which reporting had been deferred by the TYCOM, including supporting rationale and reference material.
- d. Designate an officer as INSURV Coordinator and a Chief Petty Officer, preferably the 3-M Coordinator, as his assistant.
- e. Assign a senior coordinator for each INSURV functional area as defined in paragraph 26.4.2.b of this chapter.
- f. (Surface Force Ships Only) Submit a letter of concern to INSURV, TYCOM and ISIC.

26.2.4 INSURV Coordinator. The INSURV Coordinator must:

- a. Brief all Department Heads on the review of the CSMP, confirm existing Job Control Numbers as valid, and report any existing deficiencies which are not in the CSMP.
- b. Review the Automated Work Request (AWR) or CSMP package with the TYCOM or ISIC Maintenance Document Control Office to ensure quality (e.g., readability, proper printing and page-break by Work Center).

- c. Segregate the AWR originals by INSURV departmental designations for turnover to the INSURV team.
- d. Provide the original of the complete CSMP Report to the INSURV team.
- e. Retain a copy of the AWRs and the CSMP for use during the inspection.
- f. Distribute copies of the AWRs to Department Heads and Work Centers.
- g. Collect and track all INSURV deficiencies identified during the inspection.
- h. Coordinate Work Center updating of the CSMP and the processing of updated OPNAV 4790/2Ks or AWRs.

26.2.5 Regional Maintenance Centers. In support of the tasking and funding, the Regional Maintenance Centers (RMC) will:

- a. Provide RMC support coordination for INSURV in each home port.
- b. Upon TYCOM direction, provide a weekly or, if required, daily update for critical path inspection repairs.
- c. Provide or obtain subject matter experts with the experience and system knowledge for assessment to accomplish INSURV approved procedures based on the tasking, schedule and funding provided by INSURV.
- d. Provide documented subject matter experts findings to, and formatted for, INSURV.
- e. Utilize subject matter expert resources in the most cost effective manner to support the tasking.
- f. Develop annual INSURV budget estimate based on projected INSURV schedule. Mid-Atlantic Regional Maintenance Center INSURV Support Coordinator will correlate individual estimates for transmittal to INSURV.

26.3 INSPECTION SCHEDULING.

26.3.1 Combined Trial or Acceptance Trial Inspections. The scheduling of these trials for new construction or conversion ships will be coordinated by the TYCOM and Program Executive Officer (PEO) Submarines per Volume I, Chapter 4 of this manual and reference (e).

26.3.2 Guarantee Material Inspection or Final Contract Trials. The scheduling of the Guarantee Material Inspection or Final Contract Trials will be coordinated by the PEO Ships or PEO Aircraft Carriers per Volume I, Chapter 4 of this manual and reference (e).

26.3.3 Material Inspections. Scheduling the INSURV MI at a consistent time in the Fleet Response Training Plan will provide invaluable independent assessments of how well naval maintenance processes perform.

- a. An INSURV MI will be included in a unit's five-year plan. The desired outcome is for INSURV's MIs to be conducted at a consistent time within the Fleet Response Training Plan, and in a manner not to interfere with carrier strike group or amphibious readiness group operations. In achieving this end state, TYCOMs will avoid scheduling INSURV MIs in the time frame between the numbered fleet commander deployment certification event (e.g., Composite Training Unit Exercise, Joint Warrior, etc.) and the end of post-deployment stand down.

- (1) Surface Force Ships. The MI will optimally be conducted after the Unit Level Training phase and prior to the start of the Integrated Level Training phase, after every other deployment, not to exceed 54 months. With these scheduling considerations, the overall average time between examinations for surface ships will be about 48-54 months.
 - (2) Aircraft Carriers. The optimal time to conduct MIs is 60 to 90 days following the completion of the CNO maintenance availability. Avoid conducting MIs after the air wing is embarked for carrier qualification. With these scheduling considerations, the overall average time between examinations for carriers will be about 48-54 months, not to exceed 60 months.
 - (3) Submarines. INSURV MIs are integrated into the submarine engineered operating cycle per reference (f). MIs should be scheduled post major availability and at mid-cycle. With these scheduling considerations, the overall average time between examinations for submarines will be about 65-70 months, not to exceed 84 months.
- b. Conduct of INSURV MIs outside of these time frames requires approval from Commander US Fleet Forces Command or PACFLT (N43). Material inspections of surface ships and aircraft carriers that cannot be conducted within 60 months, and submarines that cannot be conducted within either 84 months or within 180 days of completion of a major CNO availability planned for greater than 180 days in duration require a formal waiver of periodicity requirements from CNO per reference (a).
 - c. Scheduling the INSURV inspection at a consistent time in the Fleet Response Training Plan will provide invaluable independent audits of naval maintenance processes. Coordinating these inspections with TYCOM assessment events reduces the burden on sailors and saves money.
 - d. Assessment planning must be per Volume VI, Chapter 42, paragraph 42.5.4 of this manual.

26.4 PREPARATION FOR INSURV INSPECTION.

26.4.1 Active Preparation. Ships routinely must maintain their CSMP in accurate condition, continuously monitor, and accurately report their own material readiness posture per reference (d). However, due to outside agency assessments, audits, inspections and certifications the scheduling of an inspection should occur at an optimum time when full material condition awareness is maximized. Active preparation for the INSURV inspection will commence upon receipt of the TYCOM approved proposed INSURV inspection schedule. The TYCOM will notify the Commanding Officer (via the ISIC if applicable) of the proposed dates with specific guidance for the preparation and execution of the inspection. Direct and early liaison with the INSURV is essential to ensure agenda approval, facilitate travel arrangements, berthing and other similar items. Ships should make use of the information and data available at the INSURV web site (<http://www.public.navy.mil/fitfor/insurv>) to better understand and prepare for an inspection. Ships are strongly encouraged to liaison with INSURV regarding current material problem areas that may exist within the fleet and to actively resolve them as appropriate within their own command.

26.4.2 Ship's Internal Organization. The ship will establish an internal organization for the INSURV. While the details of such an organization will vary from ship to ship, two key elements must be addressed:

- a. Specific personnel assignments must be made to ensure that all necessary logistic and support arrangements for the INSURV are adequately covered (e.g., transportation, berthing, laundry, clerical assistance).
- b. INSURV inspects by functional areas, which may not exactly correspond to the standard ship's organization. For purposes of the inspection, the ship will assign one-to-one correspondence for each inspector, with a senior coordinator for each INSURV functional area. Assigned individuals should be thoroughly familiar with each CSMP deficiency, show the inspector exactly where the deficiency is, be able to explain why it has not been corrected and answer questions about related items in the same category, etc. Knowledgeable ship's representatives are essential for a successful inspection.

26.4.3 Updating the Current Ship's Maintenance Project.

- a. The CSMP must be reviewed, updated and purged of all completed maintenance actions. All outstanding corrective maintenance should be documented as a deferral. This evolution is important since the CSMP is the primary source of deficiencies that will be presented to INSURV. A vital part of the review is to ensure that deficiencies are properly assessed and documented.
- b. Any deficiencies noted during the pre-inspection audit will be entered in the CSMP and reissued for final INSURV documentation.

26.5 BOARD OF INSPECTION AND SURVEY INSPECTION CONDUCT AND DOCUMENTATION.

26.5.1 Inspection Conduct. The inspection will be conducted as specified in reference (g) for surface ships and reference (f) for submarines.

- a. Flight operations (if applicable) and other ship evolutions will not be scheduled during the conduct of the inspection, except when scheduled in direct support of the inspection or when specifically requested by INSURV.
- b. A proposed "open and inspect" list will be submitted to the ship's assigned senior coordinator for each INSURV functional area no later than the start of the underway portion of the inspection. The senior INSURV member may modify the "open and inspect" list at any time.

26.5.2 Deficiency Documentation.

- a. Preparation of INSURV deficiency forms will be per references (c), (h) and this instruction.
- b. INSURV will provide the ship with a copy of new deficiencies found during the inspection.
- c. The final forms generated by INSURV will be screened by the TYCOM following the inspection. Whenever an item is considered not cost-effective to correct or is

inconsistent with reference (c), the TYCOM will authorize passing the item to the history file.

- d. Deficiencies corrected while INSURV is on board are still required to be properly documented.

26.6 POST BOARD OF INSPECTION AND SURVEY INSPECTION ACTIONS.

26.6.1 Deficiency Processing and Resolution.

- a. INSURV deficiencies will be reported by entering them into the ship's CSMP within 30 days following completion of the inspection (90 days for Naval Air Force ships).
- b. Upon completion of the INSURV inspection, Ship's Force must take the following actions:
 - (1) With TYCOM assistance, screen all INSURV deficiencies. Identify those which are mission degrading or safety items.
 - (2) Initiate prompt action on all mission degrading and safety items. All Part I "Mission Degrading" items and any additional items that are deemed to significantly degrade the ability of the ship to carry out its assigned mission must be documented by an appropriate CASREP per reference (d).
 - (3) Correct all deficiencies within the capability of Ship's Force as soon as possible. Deficiencies corrected within seven days must be documented as completed maintenance actions. All other outstanding deficiencies originated by INSURV must be incorporated into the CSMP as soon as possible but no later than 30 days following the inspection.
 - (4) Modify deficiencies previously identified and processed to include the assigned INSURV number and any modifications, per the requirements of reference (c).
 - (5) Comply with the requirements of reference (c) if instances occur where INSURV enters multiple deficiencies under a single INSURV number.

26.6.2 Post INSURV Inspection Reports. INSURV will issue a final report per reference (i). The report will contain a recommendation on the material condition of the ship per reference (a).

26.6.3 Unsatisfactory Finding. Upon a finding of "Unsatisfactory" by the Board of Inspection and Survey:

- a. The ship must submit by message to the ISIC or TYCOM, an analysis of the causes of the Part I deficiencies found during the INSURV inspection and a plan of corrective actions within one week after completion of the inspection. This plan should include estimated completion dates for the corrective actions that will be performed by the ship. For corrective actions that are deferred to a Fleet Maintenance Activity, the Naval Supervising Activity Lead Maintenance Activity must provide to the ship and the TYCOM estimates or recommended dates for the corrective actions that will be performed by the Fleet Maintenance Activity.
- b. The TYCOM will coordinate and direct all actions associated with restoring the ship to operational readiness for those Part I deficiencies judged unsatisfactory or

incomplete by INSURV. The TYCOM must submit to the appropriate chain of command a POAM to correct these Part I deficiencies and restore the ship to operational readiness. In addition, the TYCOM must:

- (1) Evaluate the ship's and ISIC preparations for the INSURV inspection.
- (2) Review corrective actions and training plans submitted by the ship. Ensure these plans not only correct the specific deficiencies noted by INSURV, but that they also address the fundamental underlying causes of the deficiencies.
- (3) Take action as required to assist in correcting the Part I deficiencies (e.g., scheduling, outside technical assistance, training, etc.).
- (4) Re-examine those areas that were judged unsatisfactory or incomplete within 60 days of the completion of the INSURV inspection. Report the results to the appropriate chain of the command and to INSURV.
- (5) Report by message to the appropriate Fleet Commander when the ship is adequately restored to operational readiness.

APPENDIX A
INSURV PLAN OF ACTION AND MILESTONES

<u>MILESTONE</u>	<u>DUE</u>	<u>RESPONSIBLE ACTIVITY</u>
Notify Ship of Scheduled INSURV	I-365 days	TYCOM
(Naval Surface Forces) Maintenance Team define and schedule assessments desired prior to INSURV	I-365 days	Ship or RMC
Develop Departmental and Ship's Plan of Action and Milestones (POAM) for INSURV Preparation	I-330 days	Ship
Begin Review and Update of Current Ship's Maintenance Project	I-180 days	Ship
(Naval Air Forces) Download applicable INSURV instructions and check sheets and distribute to Ship's Force	I-180 days	Ship
Review Previous Inspection Reports (INSURV, Initial Assessment, Underway Demonstration, etc.)	I-180 to I-90 days	ISIC and Ship
Update Ship's POAM verify on track	I-180 days	Ship
Identify Ship's INSURV Coordinator to INSURV	I-180 days	Ship
Develop a program to conduct and practice INSURV material checks and identify and correct training deficiencies	I-180 days	Ship
Schedule INSURV pre-brief	I-120 days	Ship
Download applicable INSURV instructions and check sheets and distribute to Ship's Force	I-120 days	Ship
INSURV Package delivered to Ship	I-120 days	INSURV
(Naval Air Forces) Develop and send linked events request message from TYCOM to INSURV	I-120 days	TYCOM and Ship
Provide hull baseline tasking to RMC	I-90 days	INSURV
Update Ship's POAM verify on track	I-90 days	Ship
Conduct INSURV pre-brief	I-90 to I-60 days	INSURV and Ship
Conduct Pre-Trial Self Audit	I-60 days	(TYCOM or ISIC) and Ship
Update CSMP following Self Audit	I-60 to I-45 days	Ship

<u>MILESTONE</u>	<u>DUE</u>	<u>RESPONSIBLE ACTIVITY</u>
Send 45-DAY INSURV readiness status message to TYCOM. Message should describe the ship's level of preparedness for INSURV, significant issues and CASREPs, significant preparations and grooms, and the ISIC's determination of the ship's readiness for the inspection	I-45 days	ISIC or Ship
Utilizing INSURV proposed trial and inspection Summary of Events agenda listed in references (f) and (g) (reference (j) for new construction), submit trial and inspection Summary of Events agenda to INSURV and RMC	I-45 days	Ship
INSURV tasking requirements to RMC locked	I-45 days	INSURV and RMC
For all surface ships, complete and deliver CO letter of concerns to INSURV (copy to TYCOM)	I-45 days (Naval Surface Forces)I-30 days (For Naval Air Forces)	Ship
(Naval Air Forces) Develop and send readiness to conduct inspection message from TYCOM to INSURV including embarkation points, security clearance forwarding data, and other pertinent event notices such as time of check in for underway personnel.	I-30 days	TYCOM and Ship
Send update 14-DAY INSURV readiness status message to TYCOM N43. Message should describe the ship's level of preparedness for INSURV, significant issues and CASREPs, significant preparations and grooms, and the ISIC's determination of the ship's readiness for the inspection	I-14 days	ISIC
RMCs provide subject matter expert names to ship and INSURV	I-7 days	RMC
RMC ensure timely subject matter expert support	I-0	RMC
Submit CASREPs as appropriate; Enter all Mission Degrading and Safety Deficiencies into CSMP	I+1 day	Ship
Report the ship's return to port and any significant results to TYCOM N43	I+1 day	ISIC or TYCOM Rep

16 Oct 2019

<u>MILESTONE</u>	<u>DUE</u>	<u>RESPONSIBLE ACTIVITY</u>
Report the time ship cleared for underway to TYCOM N43	I+2days	ISIC
Enter all Deficiencies into CSMP	I+30 days	Ship
Report status of INSURV Part I and Part I Safeties to RMCs and TYCOM	I+30 days	Ship or ISIC
Screen Remaining Deficiencies and assign Responsible Actions	I+45 days	ISIC or Ship
Submit Lessons Learned to TYCOM	I+45 days	ISIC
Submit Pass to History Items	I+120 days	Ship
Report status of all of Part I and Part I-S Safeties to RMCs and TYCOM until all deficiencies are completed	15 Jun and 15 Dec	Ship or ISIC

LISTING OF APPENDICES.

- A Sample Steam Reboiler Inspection Request
- B Sample Inspection Confirmation Message
- C Sample Steam Reboiler Inspection Report Cover Letter
- D Sample Boiler Inspection RBO or Severely Degraded Deficiencies Message
- E Sample 30 Day Update Message

27.1 PURPOSE. To establish policy and provide procedures and inspection requirements for Steam Reboilers and support systems, including:

- a. Inspection scheduling.
- b. Required preparations for inspections.
- c. Inspection guidelines.
- d. Reporting requirements.

27.2 POLICY. Periodic standardized inspections are required of all Steam Reboiler and associated support systems including outlet and inlet steam piping, safety devices, feed water and drain systems, control and indicating systems associated with maintaining system pressure and water level controls. Specific inspection criteria, attributes and intervals are detailed in references (a) and (b). Inspections will be conducted by a certified Steam Generating Plant Inspector (SGPI), Naval Surface Warfare Center, Philadelphia Division (NSWCPD) inspector and Ship's Force per the requirements of references (a), (b) and (c). Responsibilities for standardization of Steam Reboiler inspections will closely parallel those requirements and responsibilities of the boiler inspection program described in reference (b), as modified by references (a) and (d).

27.3 TYPES OF INSPECTIONS.

- a. Annually.
- b. Eddy current inspections (ECI).
- c. Routine (RTE).
- d. Pre-Start of Availability Inspection (PSAI).
- e. Start of Availability Inspection (SAI).
- f. Strength and Integrity (S & I).
- g. Completion of Availability Inspection (CAI).
- h. Special.
- i. Industrial Support Visit (ISV).
- j. Inactivation or Reactivation Inspection.
- k. Pre and Post Operational Assessments

27.4 RESPONSIBILITIES.

27.4.1 Naval Sea Systems Command. Naval Sea Systems Command (NAVSEA) must provide Technical Authority oversight for all Steam Reboilers and associated equipment. The designated NAVSEA Technical Warrant Holder must:

- a. Assure safe and reliable system operation.
- b. Set and enforce all technical requirements.
- c. Approve all major Departure From Specifications (DFS).
- d. Provide technical oversight and management of the SGPI and NSWCPD.
 - (1) Establish and enforce requirements for SGPI certification and recertification.
 - (2) Ensure periodic SGPI seminars are conducted.
 - (3) Ensure periodic technical audits of all Integrated Logistics Support documentation and Training.
 - (4) Maintain the Steam Reboiler Inspection and Repair Management Information System (RIRMIS).
 - (5) Routinely evaluate and ensure state of the art inspection, maintenance and repair tools and techniques are used.

27.4.2 Naval Surface Warfare Center, Philadelphia Division.

- a. Provide support to NAVSEA for the SGPI and NSWCPD Life Cycle Engineering Manager (LCEM) programs. Ensure that the required technical documentation to support the SGPI and NSWCPD-LCEM Inspector program is maintained current.
- b. Establish and monitor the requirements and standards for routine and industrial inspections of Steam Reboilers.

- c. Develop, implement and maintain a program to train and certify NSWCPD inspectors per references (b) and (c).
- d. Ensure that inspection of newly constructed ships and ships undergoing major overhaul or conversion are conducted per this instruction.
- e. Conduct periodic technical audits of the SGPI Training Course per references (b) and (c).
- f. Provide management of technical data, reboiler history and the associated repair management information database.
- g. Provide technical support to the SGPI seminars.
- h. Maintain a roster of all certified SGPIs by name, rating, duty station, date of certification and expiration date of certification. Recommend inspector certification and initiate action to decertify inspectors who fail to comply with the requirements of references (b) and (c).
- i. Ensure that the requirements for SGPI certification, recertification and certification extensions are met prior to final approval.
- j. Conduct SAI, ISV, Strength and Integrity Inspections, CAI and special inspections as specified in section 27.6 of this chapter and references (b) and (c).

27.4.3 Type Commander.

- a. Arrange for certified SGPIs to perform inspections per the requirements of references (a), (b) and (c).
- b. Schedule inspections of all Steam Reboilers and support systems required by reference (a). Coordinate the inspections with the appropriate technical activities to avoid unnecessary opening of Steam Reboilers.
- c. Assist Commanding Officers in arranging for the corrective action of deficient items which are beyond the capability of Ship's Force to perform. Monitor the follow-up action to correct these deficiencies.
- d. Review the RIRMIS to ensure deferred inspection deficiencies are entered into the Current Ships Maintenance Project (CSMP) and are planned or programmed for repair.

27.4.4 Regional Maintenance Center.

- a. Provide certified SGPIs to perform inspections per section 27.7 of this chapter.
- b. Review the guidelines and inspection requirements for all Reboiler inspections required by this instruction and ensure that each inspection report is recorded and updated into RIRMIS.
- c. Schedule and coordinate inspections of all reboilers required by this instruction with the appropriate technical activities to avoid the unnecessary opening of reboilers.
- d. Provide a qualified SGPI when requested by the ship, Immediate Superior in Command (ISIC) or Type Commander (TYCOM).

- e. Provide certified Subject Matter Experts (SME) to perform inspections per paragraph 27.4.10 of this chapter.

27.4.5 Regional Maintenance Center Commanding Officers.

- a. Coordinate inspections in cognizant maintenance areas.
- b. Maintain an up-to-date status of required Reboiler inspections, which shall include the latest inspection for all ships assigned to RMCs in their respective area of responsibility.

27.4.6 Immediate Superior In Command.

- a. Maintain overall cognizance of the Steam Generating Plant Inspection Program within their area of responsibility to ensure requirements and standards are met.
- b. Schedule routine Reboiler inspections in coordination with the cognizant RMC.
- c. Arrange for the availability of an SGPI during the SAI and CAI in coordination with NSWCPD and the cognizant RMC.
- d. Monitor the follow-up action required to correct noted discrepancies by randomly sampling the ship's deferred maintenance action file and most recent Reboiler inspection report.
- e. Assist Commanding Officers in arranging for the corrective action of items beyond the capability of Ship's Force, when requested.

27.4.7 Ship's Commanding Officer.

- a. Request inspections via Naval Message with desired primary and alternate dates to the Type Commander (TYCOM) with info copies to cognizant Regional Maintenance Center (RMC) and NSWCPD for accomplishment of inspections using the format in Appendix A.
- b. Prepare for the scheduled inspections to include required operational assessment in accordance with references (a), (b) and (c).
- c. Conduct Ship's Force responsible (Annual) inspections as required by references (a) and (c).
- d. Review inspection results and initiate corrective action for those deficiencies within Ship's Force capability. Initiate requests for those actions beyond Ship's Force capability and those items that are identified as being deferred. Submit a Casualty Report per reference (e) for any discrepancies that will impact operational schedule.
- e. Assess the impact of corrective actions on the ship's operating schedules and advise the TYCOM and operational commanders of any adverse effects. Decide (with repair activities) the optimum timing of repair actions to minimize impact on operating schedules.
- f. Submit reports per paragraph 27.8.2 of this chapter.
- g. Schedule boiler inspections as required by appropriate Planned Maintenance System (PMS) or Class Maintenance Plan item.

27.4.8 Regional Maintenance Center Senior Inspector. RMC Senior inspectors must:

- a. Ensure all assigned SGPIs maintain current SGPI certificates per reference (b) and (c).
- b. Perform Steam Reboiler inspections per references (a), (c) and section 27.7 of this chapter.
- c. Review and submit reports per paragraph 27.8.2 of this chapter.
- d. Coordinate inspections in cognizant maintenance areas.
- e. Send inspection confirmation message using Appendix B of this chapter.
- f. Maintain an up to date list of required Steam Reboiler inspections which must include the latest inspections for all ships assigned to their geographic area of responsibility.

27.4.9 Steam Generating Plant Inspector.

- a. Maintain certification per the requirements of reference (b) and (c).
- b. Perform Reboiler inspections per the requirements of references (a), (c) and section 27.7 when directed.
- c. Steam Generating Plant Inspectors (SGPI) are part of the technical authority chain-of-command and are accountable to the NAVSEA Technical Warrant Holder for the performance of their inspection duties.

27.4.10 Regional Maintenance Center Steam Subject Matter Expert.

- a. Review job specifications during work package development for completeness, adherence to proper technical documentation and requirements, and ensuring the work packages include proper repair procedures.
- b. Providing guidance, instruction and technical direction for evaluation and oversight of all shipboard steam generating plant repairs or overhauls performed locally by the RMC, as well as on naval ships or at naval or private shipyards located throughout the world.
- c. Provide technical oversight on all scheduled and emergent work performed by the overhauling activity personnel, contractors and Ship's Force (as required). This work includes scheduled depot level maintenance, major disassembly, repair, reassembly and testing of steam generating plants and their auxiliary systems.
- d. Attend periodic maintenance production meetings to assist in scheduling of events during the overhaul/availability and resolve technical issues. Attend other meetings as required to assist in schedule and funding issues for the project.
- e. Resolve technical barriers to the work effort and provide solutions to technical issues regarding shipboard steam generating plant repairs or overhauls.
- f. Coordinate all aspects concerning operation and testing (including support systems) with RMC, Ship's Force, SGPIs, and repair contractor to support pier side and underway operational assessments tests.

27.5 INSPECTION SCHEDULING. Commands will initiate inspection requests to assist with inspection coordination. Commands must ensure that the inspection scheduling complies with reference (c) and Commanding Officers must request Steam Reboiler inspections by message

using the format in Appendix A. In addition, an OPNAV 4790/2K must be submitted to the RMC requesting a certified SGPI or NSWCPD inspector as required to conduct inspections.

27.6 SAFETY PROCEDURES.

- a. Ensure idle Steam Reboiler condition is accomplished following the provisions of the Steam Plant Manual and reference (a) in preparation for the inspection.
- b. Ensure all safety precautions associated with entry into sealed tanks, voids or pressure vessels including gas-free certification are performed per the requirements of references (f), (g), and Chapter 23 of this volume.
- c. Ensure proper maintenance barriers are established per the requirements of Chapter 10 of this volume.
- d. Station an attendant outside the Steam Reboiler to provide assistance when maintenance and inspections are performed on the Steam Reboiler internals.
- e. Ensure all precautions and warnings cited in Chapter 5 of reference (a) are followed when conducting maintenance and inspections.
- f. Maintain accountability of all items taken into the Steam Reboiler. Foreign material exclusion enclosures will be used to the maximum extent practical to prevent tools or other foreign materials from being inadvertently left in the Steam Reboiler or associated ship's systems.
 - (1) Personnel entering Steam Reboilers will empty their pockets of all unnecessary items.
 - (2) Removal of all items and foreign material exclusion enclosures from the Steam Reboiler will be verified and accounted for prior to conducting a final closeout inspection.
 - (3) Final closeout inspection of the Steam Reboiler must be accomplished by the Reactor Officer or his designated assistant.

27.7 STEAM REBOILER INSPECTIONS AND REQUIREMENTS. Steam Reboiler inspections conducted per references (a), (b) and (c) must fulfill all other Steam Reboiler inspection requirements. All boiler inspections, including pre- and post-operational assessments, should be scheduled for coincidental performance. **Appendix A of this chapter is a summary of Reboiler inspection scheduling and responsibilities. Reboilers will be inspected by a certified SGPI at the intervals identified in paragraphs 27.7.1 and 27.7.2 of this chapter.**

27.7.1 Eddy Current Inspection. Eddy Current Inspection (ECI) must be accomplished at Post Shakedown Availability and every 32 months, per reference (g).

- a. The ECI will be scheduled by Planned Maintenance System (PMS) 312.
- b. The ECI will be performed by personnel trained and qualified in the use of ECI equipment and ECI data interpretation.

27.7.2 Routine Inspection. **RTE Inspections will be conducted at least once every 32 to 36 months by SGPI certified personnel in accordance with OPNAVINST 9220.3 and shall not exceed 42 months from its last inspection. The normal interval between RTE inspections shall be 32 months. To provide scheduling flexibility, inspections may be performed as early as 24**

months or as late as 42 months. Inspections that exceed the 32 month interval will require a minor Departure from Specifications (DFS) to the TYCOM with concurrence from NSWCPD Code 412. Extensions shall not result in the inspection interval exceeding 42 months. Any reboiler which exceeds the inspection interval of 42 months shall be placed out of commission until inspected by a certified SGPI. A major DFS with NAVSEA TWH approval is required to operate beyond 42 months without an RTE Inspection. The inspection shall be documented in the RIRMIS

- a. The Routine inspection will be scheduled by the TYCOM.
- b. The Routine inspection will be performed by a certified SGPI.
- c. The Routine inspection will be conducted concurrent with ECI or tube renewals.

27.7.3 Pre-start of Availability Inspection. The PSAI may be required at the discretion of the TYCOM to support early bid specification and work package development.

- a. The PSAI will be scheduled by the ISIC, as approved by the cognizant TYCOM.
- b. The PSAI will be performed by will be performed by an NSWCPD inspector and the cognizant SGPI.

27.7.4 Start of Availability Inspection. The SAI will be accomplished at the beginning of an availability to better define or re-evaluate the Steam Reboiler bid specification and identify those major items which may impact ship's operational schedule.

- a. The SAI will be scheduled by the TYCOM or PMS 312.
- b. The SAI will be performed by a NSWCCD Inspector and the cognizant SGPI.

27.7.5 Strength and Integrity Inspection. The normal interval between S & I Inspections shall be 64 months. S & I Inspections may be performed as early as 54 months or as late as 72 months after the last S & I Inspection to provide scheduling flexibility. S & I Inspections shall not exceed 72 months since the last inspection. Any reboiler which exceeds the inspection interval of 72 months shall be placed out of commission until inspected by an NSWCPD Code 412 inspector and a certified SGPI. A major DFS with NAVSEA Technical Warrant Holder (TWH) approval is required to operate beyond 72 months without a Strength and Integrity Inspection.

- a. The Strength and Integrity inspection will be scheduled by PMS 312.
- b. The Strength and Integrity inspection will be performed by an NSWCPD inspector and the cognizant SGPI.
- c. The Strength and Integrity inspection will be conducted concurrent with ECI or tube renewals.

27.7.6 Industrial Support Visit Inspection. The ISV inspection must be scheduled during the availability but may be waived by the TYCOM for availabilities of short duration.

- a. The ISV inspection will be scheduled by the industrial activity or supervising authority as applicable.
- b. The ISV inspection will be performed by an NSWCPD inspector and the cognizant SGPI.

27.7.7 Completion of Availability Inspection. The CAI will be conducted prior to final close out of the Steam Reboiler **shell watersides**.

- a. The CAI inspection will be scheduled by the industrial activity or supervising authority as applicable.
- b. The CAI will be performed by an NSWCPD inspector **and the cognizant SGPI**, preferably the **same NSWCPD inspector or SGPI** who conducted the SAI.
- c. **The inspection report will be dated when steam is aligned to the reboiler. This will reset the periodicity for both the RTE and the S & I Inspection.**

27.7.8 Inactivation or Reactivation. The Inactivation or Reactivation inspection must be conducted on all Steam Reboilers prior to the completion of the inactivation or reactivation.

- a. The Inactivation or Reactivation inspection will be scheduled by the industrial activity, Supervising Authority and Inactive Ship Facility as applicable.
- b. The Inactivation or Reactivation inspection will be performed by an NSWCPD inspector and the cognizant SGPI.

27.7.9 Special Inspection. An additional Steam Reboiler inspection when the TYCOM desires to assess the material condition of the Steam Reboilers.

27.7.10 Annual Inspection. An Annual inspection of the reboiler (shell side) will be conducted, as directed by references (a) and (c), by Ship's Force.

27.7.11 Operational Assessments. An operational assessment must be accomplished prior to and at the completion of all Chief of Naval Operations scheduled maintenance availabilities. These assessments are part of the Routine Strength and Integrity inspection requirements. These assessments will include both cold and hot plant in-port safety checks and an operational evaluation **per Chapter 5 of reference (a)**.

27.8 REBOILER INSPECTION GUIDELINES AND REPORTS.

27.8.1 Guidelines.

- a. Inspections conducted under paragraph 27.7.5 of this chapter normally encompasses the pressure vessel portion of the Steam Reboiler and associated piping connections as outlined by reference (c) and is conducted by NSWCPD inspectors accompanied by a certified SGPI. Other areas such as, Steam Reboiler controls and Steam Reboiler appurtenances, must be inspected as part of the Routine inspection prior to Steam Reboiler lite-off by a certified SGPI. Inspections to coincide with ECIs or tube renewals.
- b. Routine inspections of Steam Reboilers will be conducted by certified SGPIs. **Only an SGPI with a current certification may issue a Repair Before Operating (RBO) deficiency.**
- c. All RBO items must be corrected and re-inspected by a certified SGPI or NSWCPD inspector, and preferably by the same SGPI or NSWCPD inspector who originally identified the discrepancy prior to operation of the reboiler. RBO discrepancies include those for which continued unrestricted operation could endanger personnel. RBOs may not be departed via DFS. If there is not an immediate or near future

danger to personnel, the discrepancy must be assigned as SEVERELY DEGRADED with major operational restrictions.

- d. An SGPI-designated discrepancy discovered in accordance with reference (a) and paragraph 27.10.2 of this chapter which is assigned as severely degraded with major operational restrictions, and is considered for a DFS submission, is a major DFS and must be brought forward to the attention of the NAVSEA Boiler and Condenser Technical Warrant. A Major DFS must be forwarded for NAVSEA review and approval with accompanying engineering analysis recommendations from the originator. A severely degraded discrepancy in accordance with this chapter must be corrected or repaired prior to reboiler operation unless it has been properly approved as a Major DFS.
- e. The status of a reboiler related DFS will be verified by the SGPI during the inspection for conformance with the requirements of this manual prior to placing the reboiler into operation.
- f. Whenever Steam Reboilers are in a stand down status for routine maintenance or disassembly, an inspection should be conducted simultaneously. Prepare the Steam Reboiler as described in section 27.9 of this chapter for inspection of the Steam Reboiler shell watersides and Steam Reboiler controls and appurtenances.
- g. All deficiencies should be corrected as soon as possible, consistent with good engineering practices.

27.8.2 Reports.

- a. The NSWCPD Code 412 inspector or SGPI must provide an oral critique and preliminary report to the ship's Commanding Officer or his designated representative. The report will contain the findings of the inspection, with note of recurring discrepancies from previous inspections. The SGPI shall ensure a maintenance ready 2-Kilo for every discrepancy found during the inspection is entered into the Current Ship's Maintenance Project.
- b. The Senior inspector will forward a copy of the RIRMIS report with cover letter per sample shown in Appendix C to the ship's Commanding Officer no later than ten days after completion of all discrepancies.
- c. The SGPI must report all RBO deficiencies discovered during the inspection to the TYCOM and ship's Commanding Officer by message, using the format in Appendix D, within 24 hours. This message shall contain both RBO and severely degraded deficiencies as described in paragraph 27.10.2 of this chapter.
- d. The SGPI must report by message to the TYCOM the correction and re-inspection of all RBO deficiencies prior to start-up of an inspected Steam Reboiler.
- e. The ship's Commanding Officer must submit a copy of the Current Ship's Maintenance Project to the SGPI for verification of 2 Kilos.
- f. The ship's Commanding Officer shall report corrected deficiencies, by message, to the ISIC and TYCOM using the format in Appendix E of this chapter, within 30 days of the completed inspection and at 30 day intervals thereafter until all deficiencies are

corrected or deferred to a CNO Maintenance Availability. The TYCOM is the sole authority for deferral of deficiencies. Update messages shall list the RIRMIS item number/2K Job Sequence Number of those items which have been completed since the last update message.

- g. The ship's Commanding Officer must notify the TYCOM when a scheduled Steam Reboiler inspection cannot be conducted by submitting a DFS request. State the reason why the inspection cannot be conducted and recommend a revised date.

27.9 STEAM REBOILER INSPECTION PREPARATION.

- a. Conduct the pre-operational assessment prior to start of availability. Ship's Force will demonstrate the performance of the reboiler electronic controls, including the uninterruptible power source and safety devices per the guidance provided in reference (a) and documented in RIRMIS.
- b. Prepare the boiler using the guidance provided in reference (b).
- c. The ship's Reactor Officer shall ensure all Ship's Force responsibilities are complete using the guidance provided in reference (a).
- d. Wire shut and danger tag all steam and water valves to the Steam Reboiler using the Steam Plant Manual and reference (a) as guidance.
- e. Open manway, ventilate and gas free. Notify SGPI that watersides are available for inspection. The purpose of this inspection is to assess the effectiveness of the Steam Reboiler chemistry control procedures. Detailed waterside inspection will be conducted after completion of cleaning if determined by the inspector that a cleaning is necessary. Mechanically clean watersides to be inspected.
- f. Install temporary plugs in all nozzles, to prevent foreign debris from entering piping systems.

27.10 STEAM REBOILER INSPECTION.

27.10.1 Steam Reboiler Inspection Forms. Steam Reboiler inspections will be conducted using the appropriate RIRMIS forms. Include specific comments on the state of preservation and material condition of the Steam Reboiler.

27.10.2 Reboiler Repair Before Operate Criteria. A discrepancy is classified as an RBO which, if left uncorrected, could endanger personnel safety. All RBO items shall be corrected prior to reboiler operation and re-inspected by a certified SGPI or NSWCPD Code 412 Inspector as applicable, preferably the same SGPI or NSWCPD Code 412 inspector who originally inspected the reboiler. RBO deficiencies may include but are not limited to the following:

- a. Inoperative or misadjusted safety devices.
- b. Lube oil contamination of control systems.
- c. Control equipment inoperative in their automatic mode or failed cold checks.
- d. Steam Reboiler that does not pass design hydrostatic test.
- e. Non-deferrable defects or indications in the pressure vessel boundary.

- f. Ultra-sonic tests on pressure vessel piping that are less than minimum requirements, or when visual inspection dictates replacement.
- g. Tube leakage.
- h. Out of periodicity, in-operative critical temperature or pressure measuring instruments.
- j. Valve tightness integrity and operation which limits its ability to perform its intended function and exceeds the criteria of reference (i).
- k. Non-conformance of electrical safety and deteriorated or damaged wiring or components.
- l. Any other discrepancy deemed by the SGPI which will cause injury to personnel.

NOTE: A SEVERELY DEGRADED DESIGNATION IS ASSIGNED TO A DEFICIENCY THAT IS NOT AN IMMEDIATE OR NEAR FUTURE DANGER TO PERSONNEL, BUT WILL HAVE MAJOR OPERATIONAL RESTRICTIONS. A SEVERELY DEGRADED DISCREPANCY PER THIS CHAPTER MUST BE CORRECTED OR REPAIRED PRIOR TO REBOILER OPERATION UNLESS IT HAS BEEN PROPERLY APPROVED AS A MAJOR DFS.

27.10.3 Completion of Inspection. An oral critique and a preliminary inspection report, including a summary of restrictive deficiencies, will follow the inspection. Paragraph 27.8.2 of this chapter identifies official reporting requirements.

27.11 STEAM REBOILER CONTROL SYSTEMS AND ONLINE VERIFICATION GUIDELINES. Control systems which include steam pressure and water level controls have been designed and installed for the purpose of maintaining a steady pressure and volume of low-pressure steam throughout the hotel steam piping system.

- a. Ships must use controls at all times while the reboiler is in operation. Remote manual operation must be used when the reboiler is placed in operation and while securing. When the Electronic Automatic Boiler Control system cannot be operated in automatic, this must be reported via a Steam Plant Action Request (SPAR) to NSWCPD Code 412 or Code 518 and NAVSEA 05.
- b. Prior to operating the reboiler, all applicable testing must be completed per the Steam Plant Manual.
- c. Maintenance and calibration of the Electronic Boiler Control systems must be accomplished by qualified technicians following the direction provided in applicable PMS and the manufacturer's technical manual.

4.2.1	Eye Examination	V-I-4-2
4.2.2	Brazing and Welding Procedures	V-I-4-3
4.2.3	Brazing and Welding Personnel Knowledge.....	V-I-4-3
4.2.4	Brazer and Welder Identification Numbers.....	V-I-4-3
4.2.5	Validation of Qualification.....	V-I-4-3
4.2.6	Qualification Records	V-I-4-3
4.2.7	Effective Date of Qualification	V-I-4-4
4.3	Brazer Qualifications.....	V-I-4-4
4.3.1	Prerequisite	V-I-4-4
4.3.2	Qualification Test	V-I-4-4
4.3.3	Limitations.....	V-I-4-5
4.3.4	Test Assembly Evaluation.....	V-I-4-5
4.3.5	Maintenance of Qualification	V-I-4-5
4.3.6	Qualification Renewal	V-I-4-5
4.3.7	Transfer of Qualification	V-I-4-5
4.4	Qualification Requirements for Navy Enlisted Classification CODE 4955 Welders. V-I-4-5	
4.4.1	Qualification Prerequisites	V-I-4-5
4.4.2	Maintenance of Qualification	V-I-4-5
4.4.3	Qualification Renewal	V-I-4-6
4.4.4	Transfer of Qualification	V-I-4-6
4.4.5	Waiver of Qualification Tests	V-I-4-6

4.5	Non-Coded Hull Technicians.....	V-I-4-6
4.5.1	Authorization.....	V-I-4-6
4.5.2	Minor Structure Components	V-I-4-6
4.6	Qualification Requirements for Nondestructive Test Personnel.....	V-I-4-7
4.6.1	Purpose	V-I-4-7
4.6.2	Levels of Certification.....	V-I-4-7
4.6.3	Certification of Nondestructive Test Personnel	V-I-4-8
4.6.4	Renewal of Certification.....	V-I-4-8
4.6.5	Maintenance of Qualification	V-I-4-8
4.6.6	Qualification Administration.....	V-I-4-8
4.6.7	Approval of Nondestructive Testing Qualification Examinations	V-I-4-8
4.6.8	Transfer of Qualification	V-I-4-8
4.6.9	Nondestructive Testing Personnel Records.....	V-I-4-8
4.6.10	Nondestructive Testing Qualification Log	V-I-4-9
4.6.11	Qualification of Generic Material Identity Testing Personnel	V-I-4-9

CHAPTER 5 - IN-PROCESS CONTROL

5.1	Purpose	V-I-5-2
5.2	Test, Measurement and Diagnostic Equipment.....	V-I-5-2
5.2.1	General Requirements	V-I-5-2
5.2.2	Torque Wrenches.....	V-I-5-2
5.2.3	Gauges	V-I-5-5
5.3	Torque	V-I-5-5
5.3.1	General Requirements	V-I-5-5
5.3.2	Torque Requirements	V-I-5-5
5.4	Inspections.....	V-I-5-5
5.4.1	General Requirements	V-I-5-5
5.4.2	Inspection Records	V-I-5-5
5.4.3	Critical Inspections	V-I-5-5
5.4.4	Cleanliness Inspections	V-I-5-7
5.4.5	Nuclear Propulsion Plant and Nuclear Support Facility General Cleanliness Requirements	V-I-5-8
5.4.6	General Shipboard Steam Plant Systems Cleanliness Requirements.....	V-I-5-10
5.4.7	Set Stud Inspection	V-I-5-12
5.5	Software Acceptability	V-I-5-13
5.6	Submarine Safety Maintenance Certification and Re-Entry Control, Nuclear and Non-Nuclear.....	V-I-5-14
5.6.1	Purpose	V-I-5-14
5.6.2	Re-Entry Control Program	V-I-5-15
5.6.3	Nuclear Submarine Safety System Re-Entry	V-I-5-16
5.6.4	Re-Entry Control Administrative Procedures	V-I-5-16

5.6.5	Using a Controlled Dive Departure from Specification to Close a Maintenance Certification Record or Re-Entry Control	V-I-5-19
5.6.6	Voyage or At Sea Repairs	V-I-5-20
5.6.7	Exceptions to Re-Entry Control	V-I-5-21
5.6.8	Certification Continuity Report.....	V-I-5-21
5.7	Reactor Plant Work Accomplishment Report (Submarines Only)	V-I-5-22
5.7.1	Purpose	V-I-5-22
5.7.2	Specific Instructions for Completing Reactor Plant Work Accomplishment Report Cover Sheet	V-I-5-23
5.7.3	Specific Instructions for Completing Reactor Plant Certification When New or Previously Uncertified Material is Installed in a Submarine Safety Application.....	V-I-5-23
5.7.4	Specific Instructions for Completing Reactor Plant Certification When Previously Certified Material is Reinstalled	V-I-5-24
5.8	Material Condition Monitoring Unrestricted Operations Maintenance Requirement Card Program (Submarines Only)	V-I-5-24
5.9	Submarine Fly-By-Wire Maintenance Certification	V-I-5-25
5.9.1	Purpose	V-I-5-25
5.9.2	Submarine Flight Critical Component Boundary Work Control Procedures	V-I-5-26
5.9.3	Submarine Flight Critical Component Boundary Work Control Closeout.....	V-I-5-26
5.9.4	Objective Quality Evidence to Support Controlled Work on Fly-By-Wire Ship Control System Submarine Flight Critical Component	V-I-5-27
5.10	Aircraft Carrier Maintenance Document.....	V-I-5-27
5.10.1	Purpose	V-I-5-27
5.10.2	Non-Nuclear Deviations, Waivers and Departure from Specifications ...	V-I-5-28
5.10.3	Liaison Action Requests - Nuclear Cognizant Areas	V-I-5-29
5.10.4	Nuclear Liaison Inquiry - Nuclear Cognizant Areas	V-I-5-30
5.10.5	Steam Plant Action Request - Non-Nuclear Cognizant Areas	V-I-5-30
5.10.6	Steam Plant Liaison Inquiry - Non-Nuclear Cognizant Areas	V-I-5-32
5.10.7	Reactor Plant Configuration Change Report.....	V-I-5-33
5.10.8	Technical Manual Deficiencies and Manual Change Requests	V-I-5-36
5.10.9	Fleet COSAL Feedback Report.....	V-I-5-37
Appendices		
A	Determining Software Usability.....	V-I-5A-1
B	Format for Submarine Certification Continuity Report	V-I-5B-1
C	Format for Fleet Maintenance Activity Certification Report to Tended Submarine.....	V-I-5C-1
D	Format for Non-Fleet Maintenance Activity Certification Report to Tended Submarine.....	V-I-5D-1
E	RPCCR Cover Letter for SHIPALTs (Sample)	V-I-5E-1

CHAPTER 6 - MATERIAL CONTROL

6.1	Purpose	V-I-6-1
6.1.1	Discussion.....	V-I-6-1
6.2	Nuclear	V-I-6-2
6.2.1	Controlled Material Determination	V-I-6-2
6.2.2	Controlled Material Procurement	V-I-6-3
6.2.3	Receipt Inspection of Nuclear Controlled Material.....	V-I-6-4
6.2.4	Marking of Nuclear Repair Parts.....	V-I-6-8
6.2.5	Nuclear Repair Parts Downgrading.....	V-I-6-11
6.2.6	Storage, Issue and Handling of Nuclear Repair Parts	V-I-6-11
6.3	Non-Nuclear	V-I-6-18
6.3.1	Controlled Material Determination	V-I-6-18
6.3.2	Quality Assurance List (Submarines only).....	V-I-6-25
6.3.3	Controlled Material Procurement	V-I-6-25
6.3.4	Receipt Inspection of Controlled Material	V-I-6-27
6.3.5	Receipt Inspection of Open Purchase (Non-Supply System) or Locally Manufactured Material or Upgrading Supply System Material to Level I (Fleet Maintenance Activity only).	V-I-6-35
6.3.6	Authorized Material Certification Activities.....	V-I-6-37
6.3.7	Marking of Level I Stock Program Material and Controlled Material.....	V-I-6-38
6.3.8	Level I Submarine Flight Critical Component Stock Program Material Downgrading	V-I-6-43
6.3.9	Storage, Issue and Handling of Level I, Scope of Certification or Submarine Flight Critical Component Stock Program Material	V-I-6-43

CHAPTER 7 - TESTING REQUIREMENTS

7.1	General	V-I-7-1
7.1.1	Key Element	V-I-7-2
7.1.2	Testing Requirements for Systems, Portions of Systems and Components	V-I-7-2
7.2	Testing	V-I-7-4
7.2.1	Test Procedures	V-I-7-4
7.2.2	Test Requirements	V-I-7-5
7.2.3	Test Pressure Source References.....	V-I-7-6
7.2.4	Non-Nuclear Pressure Drop Tests	V-I-7-6
7.3	Weight Handling Equipment.....	V-I-7-8
7.4	Exemptions or Alternative Test Requirements (Non-Nuclear).....	V-I-7-10
7.4.1	General	V-I-7-10
7.4.2	Exemptions and Alternatives to Test Requirements (Non-Nuclear unless Specifically Addressed in Nuclear Technical Documents)	V-I-7-11
7.5	Reactor Plant and Nuclear Support Facility Testing	V-I-7-13
7.5.1	Hydrostatic Tests, Pneumatic Tests or Drop Tests.....	V-I-7-13
7.5.2	Mechanical Joint Fasteners.....	V-I-7-14

7.5.3	Valve Seat Leak Tests	V-I-7-14
7.6	Supplemental Test Criteria (Non-Nuclear)	V-I-7-15
Appendices		
A	Testing Requirements for Surface Ship Systems	V-I-7A-1
B	Testing Requirements for Submarine Systems.....	V-I-7B-1
CHAPTER 8 - DEPARTURE FROM SPECIFICATION (DFS, WAIVERS, NUCLEAR LIAISON ACTION REQUEST, AND STEAM PLANT ACTION REQUESTS)		
8.1	Purpose	V-I-8-1
8.1.1	Background.....	V-I-8-1
8.1.2	Terminology	V-I-8-1
8.1.3	Specification	V-I-8-2
8.2	Departure From Specification	V-I-8-3
8.2.1	Reporting Departures from Specification.....	V-I-8-4
8.2.2	Reporting Departures from Specification while Conducting a CNO Availability Sea Trial (Submarines Only)	V-I-8-4
8.2.3	Types of Departures from Specification.....	V-I-8-4
8.2.4	Permanent and Temporary Approval of Departure from Specification	V-I-8-4
8.2.5	Major Departure from Specification	V-I-8-5
8.2.6	Minor Departure from Specification	V-I-8-9
8.3	Departure From Specification Procedures	V-I-8-11
8.3.1	General Administrative Requirements	V-I-8-11
8.3.2	Review of Outstanding Departures from Specification.....	V-I-8-13
8.3.3	Clearing of Departure from Specification by Exposing Sea Connected Systems and Hull Integrity Boundary Items to Submergence Pressure (Submarines only)	V-I-8-13
8.3.4	Incorporation of Departure from Specification in Selected Record Drawings, Data or Technical Variance Documentation.....	V-I-8-13
8.3.5	Preparations for Correction of Departure from Specification and Clearance During Depot Level Availabilities	V-I-8-14
8.3.6	Numbering of Departures from Specification	V-I-8-14
8.3.7	Submission and Approval of Departures from Specification.....	V-I-8-14
8.3.8	Departure from Specification Approval and Reporting for Ships While at Sea or at a Port Without a Fleet Maintenance Activity	V-I-8-16
8.3.9	Extending a Temporary Departure	V-I-8-17
8.3.10	Electronic Non-Conformance Administration	V-I-8-18
8.4	Nuclear Cognizant Areas	V-I-8-19
8.4.1	Nuclear Powered Surface Ships	V-I-8-19
8.4.2	Reactor Plant Systems	V-I-8-19
8.4.3	Propulsion Plant Systems (Aircraft Carriers only)	V-I-8-20
Appendices		
A	Departure From Specification Request Message Format	V-I-8A-1
B	Departure From Specification Clearance or Cancellation Report Message Format.....	V-I-8B-1

CHAPTER 9 - AUDITS, SURVEILLANCE, EVALUATIONS AND ASSESSMENTS

9.1	Purpose	V-I-9-1
9.2	General	V-I-9-1
9.2.1	Audits	V-I-9-1
9.2.2	Surveillance	V-I-9-2
9.2.3	Evaluation	V-I-9-2
9.2.4	Assessments	V-I-9-2
9.2.5	Key Elements	V-I-9-2
9.2.6	Record Retention	V-I-9-2
9.3	Responsibilities and Procedures	V-I-9-3
9.3.1	Ship's Force Audits, Surveillance and Evaluation Program	V-I-9-4
9.3.2	Fleet Maintenance Activity Audit, Surveillance and Evaluation Program	V-I-9-4
9.3.3	Immediate Superiors in Command Assessments, Audits and Surveillance	V-I-9-6
9.3.4	Type Commander Assessments	V-I-9-8
9.4	Reporting Audit, Surveillance and Assessment Results and Corrective Action	V-I-9-9
9.4.1	Reporting Requirements for External Audits, Surveillances and Assessments	V-I-9-9
9.4.2	Correcting Deficiencies in Certified Controlled Work Packages or Objective Quality Evidence Records	V-I-9-11
Appendices		
A	Vertical Audits	V-I-9A-1
B	Horizontal Audits	V-I-9B-1
C	Surveillances	V-I-9C-1
D	Submarine Quality Assurance Assessment Evaluation Criteria	V-I-9D-1
E	Quality Assurance Audit, Assessments and Surveillance Discrepancy Form	V-I-9E-1

CHAPTER 10 - QUALITY ASSURANCE RECORDS

10.1	Purpose	V-I-10-1
10.2	General	V-I-10-1
10.2.1	Quality Assurance Record Requirements	V-I-10-1
10.2.2	Record Retention in General	V-I-10-2
10.3	Type Commander Quality Assurance Record Retention	V-I-10-4
10.3.1	Assessment Record Retention	V-I-10-4
10.3.2	Departure from Specification Record Retention	V-I-10-4
10.3.3	Material Certification Statement Retention (Submarines only)	V-I-10-4
10.4	Immediate Superior In Command Quality Assurance Record Retention	V-I-10-4
10.4.1	Assessment and Surveillance Record Retention	V-I-10-4
10.4.2	Departure from Specification Record Retention	V-I-10-4
10.4.3	Material Certification Statement Retention (Submarines only)	V-I-10-5

10.5	Ship's Quality Assurance Record Retention	V-I-10-5
10.5.1	Controlled Work Package Log	V-I-10-5
10.5.2	Completed Controlled Work Packages	V-I-10-5
10.5.3	Controlled Material Records	V-I-10-5
10.5.4	Qualification Records	V-I-10-6
10.5.5	Departure from Specification Records	V-I-10-6
10.5.6	Assessments, Evaluations and Audits	V-I-10-7
10.5.7	Training	V-I-10-7
10.6	Additional Submarine and Nuclear Unique Quality Assurance Record Retention Requirements	V-I-10-7
10.6.1	Submarine Safety, Nuclear, Level I, Submarine Flight Critical Component, Scope of Certification and Other Certification	V-I-10-7
10.7	Fleet Maintenance Activity Quality Assurance Record Retention	V-I-10-9
10.7.1	Submarine Safety, Nuclear, Level I, Scope of Certification and Other Certification	V-I-10-9
10.7.2	Reactor Plant Work Accomplishment Report (Submarines only)	V-I-10-9
10.7.3	Controlled Work Package Log	V-I-10-9
10.7.4	Completed Controlled Work Packages	V-I-10-9
10.7.5	Controlled Material Records	V-I-10-9
10.7.6	Assessment, Audits, Surveillance and Evaluations	V-I-10-10
10.7.7	End of Fleet Maintenance Activity Certification Report to Tended Submarines (Submarines only)	V-I-10-10
10.7.8	Nuclear, Submarine Safety and Scope of Certification Work	V-I-10-10
10.7.9	Qualification Record	V-I-10-10

CHAPTER 11 - QUALITY ASSURANCE FORMS AND FORM INSTRUCTIONS

11.1	Purpose	V-I-11-1
11.2	Use of QA Forms	V-I-11-1
11.3	National Item Identification Number	V-I-11-1
11.4	Certification Signatures on QA Forms	V-I-11-1
11.5	List of Forms	V-I-11-1

CHAPTER 12 - SUBMARINE PRESERVATION

12.1	Purpose	V-I-12-1
12.2	General Preservation Requirements	V-I-12-1
12.3	Submarine Preservation Maintenance Processes	V-I-12-1
12.3.1	Maintenance Processes	V-I-12-1
12.3.2	Coating System Maintenance Authorization	V-I-12-2
12.4	Quality Assurance for Critical Coated Areas	V-I-12-2
12.4.1	Critical Coated Areas	V-I-12-2
12.4.2	Requirements for Critical Coated Areas	V-I-12-2
12.4.3	Test and Inspection Records	V-I-12-2

12.4.4	Blaster and Painter Certification	V-I-12-3
12.4.5	Coating Inspector Certification.....	V-I-12-3
12.4.6	Coating Inspector Responsibilities	V-I-12-3
12.4.7	Inspection of Final Coating System.....	V-I-12-4
12.4.8	Review of Records for Final Coating Evaluation.....	V-I-12-4
12.4.9	Acceptance or Rejection of Final Coating Systems.....	V-I-12-5

CHAPTER 13 - WIRE REMOVAL AND REPLACEMENT

13.1	Purpose	V-I-13-1
13.2	Action	V-I-13-1

Appendices

A	Wire Removal and Replacement Form MAT-2	V-I-13A-1
---	---	-----------

PART III

FOREWORD - SCOPE OF CERTIFICATION

1.1	Purpose	V-III-FWD-1
1.2	Scope	V-III-FWD-1
1.3	Need For Scope of Certification Quality Maintenance Processes	V-III-FWD-1

Appendices

A	List of Acronyms	V-III-FWD-A-1
B	Glossary of Terms	V-III-FWD-B-1

CHAPTER 1 – ORGANIZATIONAL RESPONSIBILITIES

1.1	Purpose	V-III-1-1
1.2	Responsibilities	V-III-1-1
1.2.1	Type Commander	V-III-1-1
1.2.2	Immediate Superior In Command	V-III-1-2
1.2.3	Sustaining Activity or User Activity	V-III-1-5

CHAPTER 2 - QUALITY MAINTENANCE PROCESSES

2.1	Applicability.....	V-III-2-1
2.2	Controlled Work Package	V-III-2-1

CHAPTER 3 - PERSONNEL QUALIFICATION AND TRAINING

3.1	Applicability.....	V-III-3-1
3.2	General	V-III-3-1
3.3	Discussion	V-III-3-1
3.4	Qualification Requirements.....	V-III-3-1
3.4.1	Qualifications	V-III-3-1
3.4.2	Scope of Certification Quality Maintenance Qualifications.....	V-III-3-1

3.5	Training	V-III-3-1
3.5.1	Scope of Certification Awareness Training (Submarines and Submarine Repair Facilities Only)	V-III-3-1
3.5.2	Immediate Superior in Command and Type Commander Training	V-III-3-1

CHAPTER 4 - WELDER, BRAZER AND NONDESTRUCTIVE TESTING QUALIFICATIONS

4.1	Applicability	V-III-4-1
-----	---------------------	-----------

CHAPTER 5 - IN PROCESS CONTROL

5.1	Purpose	V-III-5-1
5.2	Exceptions to Re-Entry Control	V-III-5-1
5.3	Planned Maintenance	V-III-5-1
5.4	Test, Measurement and Diagnostic Equipment	V-III-5-2
5.5	Torque	V-III-5-2
5.6	Inspections	V-III-5-2
5.6.1	General Requirements	V-III-5-2
5.6.2	Inspection Records	V-III-5-2
5.6.3	Critical Inspections	V-III-5-2
5.6.4	Cleanliness Inspections	V-III-5-4
5.7	Software	V-III-5-5
5.8	Scope of Certification Maintenance Certification and Re-Entry Control	V-III-5-5
5.8.1	Purpose	V-III-5-5
5.8.2	Re-Entry Control Program	V-III-5-5
5.8.3	Re-Entry Control Administrative Procedures	V-III-5-6
5.8.4	Using a Departure from Specification to Close a Maintenance Certification Record Re-Entry Control	V-III-5-10
5.8.5	Voyage or At Sea Repairs	V-III-5-11
5.8.6	Exceptions to Re-Entry Control	V-III-5-11
5.8.7	Certification Continuity Report	V-III-5-12
5.9	Material Condition Monitoring Hull Integrity Procedures Program (Submarines only)	V-III-5-12
5.10	Temporary Modifications	V-III-5-13
5.10.1	Temporary Modification Program	V-III-5-13
5.10.2	Configuration Control	V-III-5-13

Appendices

A	Message Format for Certification Continuity for DSS	V-III-5A-1
B	Letter Format for Certification Report to Tended DSS	V-III-5B-1
C	Message Format for DDS Transfer of Custody Certificate of Continuity for Off-loads	V-III-5C-1
D	Message Format for DDS Transfer of Custody Certificate of Continuity for On-loads	V-III-5D-1

E	Message Format for DDS Acceptance of Custody	V-III-5E-1
---	--	------------

CHAPTER 6 - MATERIAL CONTROL

6.1	Purpose	V-III-6-1
6.1.1	Material Control Divisions	V-III-6-1
6.1.2	Deep Submergence Systems-Scope of Certification	V-III-6-1
6.2	Controlled Material Determination	V-III-6-1
6.2.1	General Requirements	V-III-6-1
6.2.2	Scope of Certification Material Control Divisions	V-III-6-2
6.3	Receipt Inspection of Controlled Material	V-III-6-3
6.3.1	General Requirements	V-III-6-3
6.3.2	Quality Assurance Forms for Receipt Inspections	V-III-6-5
6.3.3	NAVSUP WSS DSS-SOC Stock Program Material	V-III-6-5
6.3.4	General Requirements for Receipt of Scope of Certification Material	V-III-6-7
6.3.5	Verification of Completion of Required Testing.....	V-III-6-14
6.3.6	Authorized Material Certification Activities.....	V-III-6-15
6.3.7	Marking of DSS-SOC Stock Program Material	V-III-6-15
6.4	Storage, Issue and Handling of Scope of Certification Material.....	V-III-6-16
6.5	Re-use of Previously Certified Scope of Certification Material	V-III-6-16
6.5.1	Material Removed from a Deep Submergence System or Operating Ship.....	V-III-6-16
6.5.2	Reuse of Scope of Certification Material	V-III-6-17
6.5.3	Material Recertification Required	V-III-6-18
6.5.4	Material Recertification Following Transfer to Outside Agency (Excluding Naval Shipyards)	V-III-6-19
6.5.5	Material Recertification Following Transfer to a Naval Shipyard	V-III-6-19

CHAPTER 7 - TESTING REQUIREMENTS

7.1	Purpose	V-III-7-1
7.2	Testing Requirements.....	V-III-7-1

CHAPTER 8 - DEPARTURE FROM SPECIFICATIONS

8.1	Purpose	V-III-8-1
8.2	Departure from Specification	V-III-8-1
8.2.1	Reporting Departures from Specification.....	V-III-8-1
8.2.2	Approval of Departures from Specification	V-III-8-1
8.2.3	Major and Minor Departure from Specification Classification.....	V-III-8-1
8.2.4	General Administrative Requirements	V-III-8-2
8.2.5	Submission and Approval of Departures from Specification.....	V-III-8-2
8.2.6	Departure from Specification Approval and Reporting for DSSs While at Sea.....	V-III-8-3

CHAPTER 9 - AUDITS, SURVEILLANCE, EVALUATIONS, ASSESSMENTS AND SURVEYS

9.1	Purpose	V-III-9-1
9.2	Responsibilities and Procedures	V-III-9-1
9.2.1	User Activity Surveillance and Evaluation Program.....	V-III-9-1
9.2.2	Sustaining Activity Audit, Surveillance and Evaluation Program	V-III-9-1
9.2.3	Immediate Superiors In Command Assessments, Audits and Surveillance	V-III-9-1
9.2.4	Type Commander Assessments.....	V-III-9-2
9.3	System Certification Authority Certification Surveys and Functional Audits.....	V-III-9-2
9.3.1	Certification Process.....	V-III-9-2
9.3.2	Certification Survey Cards	V-III-9-2
9.3.3	Administration of Survey and Audit Findings	V-III-9-3
9.3.4	Administration of Surveys for Initial Certification or Reinstatement of Certification.....	V-III-9-3
9.3.5	Manned Use in Pursuit of Certification or Reinstatement of Certification.....	V-III-9-5
9.3.6	Sustaining Certification Surveys	V-III-9-6
9.3.7	Continuation of Certification.....	V-III-9-8

CHAPTER 10 - QUALITY ASSURANCE RECORDS

10.1	Purpose	V-III-10-1
10.2	Departure from Specification Record Retention	V-III-10-1
10.3	User and Sustaining Activity Quality Assurance Record Retention.....	V-III-10-1

CHAPTER 11 - QUALITY ASSURANCE FORMS AND FORM INSTRUCTIONS

11.1	Purpose	V-III-11-1
11.2	List of Forms	V-III-11-1

VOLUME V
PART I
FOREWORD
QUALITY MAINTENANCE

LISTING OF APPENDICES.

- A List of Acronyms
- B Glossary of Terms

REFERENCES.

- (a) NAVSEAINST 5400.95 - Waterfront Engineering and Technical Authority Policy

1.1 PURPOSE. To provide procedures and guidance to ensure, with a reasonable level of confidence, that work performed on or for Navy ships is accomplished with first time quality. Further, it is to give the sailors who serve on U.S. Navy ships the confidence that their equipment and systems will operate reliably and safely, in peace or when in harm's way.

1.2 SCOPE.

- a. The guidance contained in this volume is applicable to every ship and activity of the fleet. The requirements are applicable to Ship's Force when performing maintenance on their own ship, to each Fleet Maintenance Activity (FMA) when performing work on tended ships, and to outside organizations (shipyards, contractors, Regional Maintenance Centers) performing work on ships. This volume does not currently apply to outside organizations (shipyards, contractors) when an availability is conducted in a depot facility and the contract specifies the use of other specifications.
- b. This volume is directive in nature and may be cited as authority for action as the need dictates. Where higher authority imposes more stringent requirements or conflicts exist with previously issued Fleet directives, such requirements must have precedence. When such conflicts are identified, they should be reported immediately to the Fleet and Type Commanders (TYCOM).
- c. The ultimate authority for risk acceptance (and all other matters pertaining to a ship regardless of platform) is the operational commander. Reference (a) contains the NAVSEA policy on what constitutes a non-conformance with technical requirements, and how those non-conformances are adjudicated. This manual defines how the operational commander implements the Departure From Specification process to originate a non-conformance and trigger the adjudication policy contained in reference (a).

1.3 MANUAL ORGANIZATION.

1.3.1 Basic Maintenance Principles. In order for repairs to be conducted reliably and with first time quality, several principles must be adhered to:

- a. The worker must have a process that guides him or her in the performance of maintenance (see Part 1 Chapter 2 of this volume).
- b. The worker must be trained so that work can be done safely and effectively (see Part I Chapter 3 of this volume).
- c. The worker must have the proper technical direction (see Part I Chapter 5 of this volume).
- d. The worker must have the proper material (see Part I Chapter 6 of this volume).
- e. For essential and critical systems, confidence must be established by appropriate testing (see Part I Chapter 7 of this volume).

1.3.2 Special Circumstances and Maintenance Support. In the course of conducting maintenance, special actions are required if technical requirements cannot be met. Other actions not directly related to conducting maintenance are required to support the conduct of maintenance. Other chapters in this volume discuss these:

- a. Resources (Organization) (see Part I Chapter 1 of this volume).
- b. Departure from Specification (DFS, Waivers and Nuclear Liaison Action Request) (see Part I Chapter 8 of this volume).
- c. Audits and surveillance (see Part I Chapter 9 of this volume).
- d. Retention of records (see Part I Chapter 10 of this volume).
- e. Blank reproducible forms and form instructions (see Part I Chapter 11 of this volume).

1.3.3 Order of Precedence. Guidance documents originate from a variety of sources. When a conflict exists, the following tables are provided to assist in determining precedence of the governing document on a case-by-case basis. However, the tables may not be exact for a particular case and may require adjudication by your Immediate Superior In Command. Equipment and material under the cognizance of Naval Sea Systems Command Nuclear Propulsion Directorate (NAVSEA 08) is maintained per NAVSEA 08 directives.

NOTE 1: TABLE 1 AND 2 ESTABLISH THE ORDER OF PRECEDENCE FOR OPERATIONS AND MAINTENANCE TECHNICAL DOCUMENTATION GUIDANCE.

NOTE 2: THE EXAMPLES PROVIDED IN THE TABLES ARE NOT LISTED IN ANY PARTICULAR ORDER OF PRECEDENCE.

1.3.3.1 Operations. Table 1 identifies guidance for aligning, starting, stopping and changing modes of operation of systems and equipment.

Table FWD-1 Operating Systems and Equipment

	Precedence	Examples
1	Operating Setting Advisories Issued Before October 2009	Operating Advisories (Fleet Advisories, Class Advisories). Gas Turbine Technical Directives (GTBs, AYBs, etc.)
2	Operating Procedures	Operating Sequence Systems (EOSS, CSOSS, AFOSS, etc.) Reactor Plant Manual, Steam Plant Manual, Steam & Electric Plant Manual, Ships System

		Manuals
3	Technical Manuals	Component Technical Manuals, NSTM, OEM Technical Manual
4	Directives	SORM, EDORM, NAVORDS
5	Instructions	NAVSEA Letters
6	Locally Generated OSS	Following the Operating Sequencing Systems (OSS) Users Guide

1.3.3.2 Maintenance and Technical. Table 2 identifies guidance used for preventive maintenance, troubleshooting, assessment, alignment, calibration, non-permanent changes and TEMPALTs.

Table FWD-2 Maintenance and Technical Documents

	Precedence	Examples
1	DFS and Requirement Setting Advisories Issued before October 2009	DFS, LAR-Waiver, Fleet Advisories, Class Advisories, Gas Turbine Technical Directives (GTBs, AYBs, etc.)
2	PMS	MRCs, PMRs, Steam Plant Manual, Steam & Electric Plant Manual, Maintenance Requirements
3	Requirements	JFMM, P9290, 7010, 0010, SSCB, FBW, CRL, CMP, DDGOS, GSO, URO-MRC, SOC Notebook
4	Drawings	NAVSHIP drawings, BUSHIP Drawings, NAVAIR Drawings TVDs, SYSCOM Approved Vendor Drawings, DDS Approved Drawings
5	Technical Manuals	Component Technical Manuals, NSTMs
6	Directives	SORM, EDOM, NAVORD, SYSCOM Technical Bulletins, Type Commander Technical Notes
7	Instructions	NWPs, SYSCOM Instructions
8	Maintenance Procedures	FWPs, CWPs, TWDs, UIPIs, PPIs, Maintenance Standards, Handbooks

The following abbreviations are used in table Table FWD-2:

0010	SUBSAFE Manual
7010	Material Control Standard
AFOSS	Aviation Fuels Operational Sequencing System
AYB	Ancillary Equipment Bulletin
CMP	Class Maintenance Plan
CRL	Calibration Requirements List
CSOSS	Combat Systems Operational Sequencing System
CWP	Controlled Work Package
DDGOS	Deep Diving General Overhaul Specifications
DDS	Dry Deck Shelter
DFS	Departures From Specification
EDOM	Engineering Department Organizational Manual
EOSS	Engineering Operational Sequencing System
FBW	Fly-By-Wire
FWP	Formal Work Package
GSO	General Specifications for Overhaul
GTB	Gas Turbine Bulletins
JFMM	Joint Fleet Maintenance Manual
LAR	Liaison Action Requests
NAVORD	Naval Ordinance
NSTM	Naval Ships Technical Manual
NWPs	Naval Warfare Publications
OEM	Original Equipment Manufacturer
OSS	Operational Sequencing System

15 Jan 2021

P9290	System Certification Procedures and Criteria Manual for Deep Submergence Systems
PMR	Planned Maintenance Requirements
PPI	Portsmouth Process Instruction
SOC	Scope of Certification
SORM	Ships Organization Requirements Manual
SSCB	SUBSAFE Certification Boundary Book
SYSCOM	System Command
TVD	Technical Variance Document
TWD	Technical Work Document
UIPI	Uniform Industrial Process Instruction
URO MRC	Unrestricted Operations Maintenance Requirement Card

1.3.4 Advisories. Commencing with Revision B CH-2, advisories (bulletins, class advisories, Fleet advisories, In-Service Engineering Activity advisories, etc.) will no longer be used to change or set requirements. Any change to requirements will be done by an appropriate document change form (e.g., Advance Change Notice (ACN)).

1.4 NEED FOR QUALITY MAINTENANCE PROCESSES.

- a. Quality maintenance processes play a vital role in the mission capability and personnel safety of many organizations. The three examples in sub-paragraphs (1) through (3) demonstrate how actions, which seem small and insignificant can result in severe consequences. In all cases, if a strong and effective quality process had been in effect, the tragic results may have been averted.
 - (1) On April 10, 1963, while engaged in a sea trials deep dive off the coast of Maine, a flooding casualty occurred in the engine room of the USS *THRESHER* (SSN 593). A piping failure in one of the salt water systems was subsequently determined to be the most likely cause for the loss of the ship and all personnel onboard. The comprehensive investigation, which followed, recommended numerous changes in the design and maintenance processes for submarines resulting in the Submarine Safety (SUBSAFE) Program, as it is known today.
 - (2) On January 28, 1986 the space shuttle Challenger was launched from Cape Canaveral Florida. Seventy-three seconds into flight, the spacecraft exploded and seven astronauts lost their lives. Subsequently, on June 6, 1986 a Presidential Commission concluded that the cause of the Challenger accident was the failure of the pressure seal in the aft field joint of the right solid rocket motor. Neither the National Aeronautics Space Administration nor the rocket engine builder developed a solution to the unexpected occurrences of O-ring erosion and blow-by, even though this problem was experienced frequently during shuttle flight history. The commission further concluded that a quality program would have tracked and discovered the reason for increasing erosion and blow by. Additionally, the commission found that the pressure to fly a launch schedule of 24 flights a year created pressure throughout the agency that directly contributed to unsafe launch operations. In short, the syndrome of “they’ve operated with that problem before and the risk is small” prevailed.

The safety and technical requirements became secondary to operational commitments.

- (3) On October 30, 1990, a major steam leak occurred in the fire room on board USS *IWO JIMA* (LPH 2) resulting in the deaths of ten watch standers. The investigation determined the cause to be failure of the bonnet fasteners of a ship service turbine generator root valve. The valve had just been repaired by a shipyard where the bonnet fasteners were replaced with mis-matched and incorrect material. The required fasteners were heat-treated steel studs and nuts. The fasteners installed during the maintenance were a mixture of bolts, studs and black oxide coated brass nuts. The high temperature and pressure placed on the fasteners during plant light off caused the brass nuts to fail catastrophically, which allowed the valve bonnet assembly to separate from the body. The replacement fasteners were furnished by Ship's Force, but no one (ship or shipyard) checked the fasteners, prior to installation, to ensure that the requirements of the technical manual and drawings were met.
- b. The examples in sub-paragraph "a" clearly demonstrate that, with the technical complexity of present day surface ships and submarines, the need for special administrative and technical controls necessary to ensure conformance to technical specifications during maintenance and testing is necessary. The necessity to perform the work correctly and following technical specifications is paramount in order to preclude loss of life or loss of a ship. The quality program was developed to assure maintenance of the modern day Fleet is performed following technical specifications, thus ensuring the highest state of material readiness.
- c. The fundamental rule for all maintenance is that technical specifications must be met at all times. If for some reason the specified technical requirements cannot be met, acceptable alternatives must be approved by the appropriate authority and documented as a Departure from Specification or Liaison Action Request (LAR) prior to the continued operation of the ship.

1.5 CHANGES AND CORRECTIONS. Changes, corrections and updates to this volume will be made by the Fleet as required to maintain the volume current with higher authority technical requirements. When higher authority directives are issued which impose more stringent requirements, the Fleet will issue implementing instructions. Comments and suggestions for improving this volume are encouraged from all users. Address comments, recommendations and proposed changes to Submarine Maintenance Engineering, Planning and Procurement Activity using the manual change request form in the front of this volume. If changes are submitted in electronic format, faxed or E-mail, each change request must contain the information required on the Change Request Form.

APPENDIX A

LIST OF ACRONYMS

ACCMP	Aircraft Carrier Class Maintenance Plan
AEL	Allowance Equipage List
AIT	Alteration Installation Team
AM	Additive Manufacturing
APL	Allowance Parts List
AQAO	Assistant Quality Assurance Officer
ASW	Auxiliary Sea Water
AWP	Availability Work Package
CA	Coordinating Activity
CAD	Certifying Activity Designator
CD ROM	Compact Disc Read Only Memory
CET	Carrier Engineering Team
CI	Critical Cleanliness Inspection
CMH	Controlled Material Handler
CMPO	Controlled Material Petty Officer
COSAL	Coordinated Shipboard Allowance List
CRA	Chemistry and Radiological Controls Assistant
CSB	Certification Signature Block
CSMP	Current Ship's Maintenance Project
CWP	Controlled Work Package
DDGOS	Deep Diving General Overhaul Specifications
DFS	Departure from Specification
DL	Deficiency Log
DMAC	Diagnostic and Maintenance Computers
DMP	Depot Modernization Period
DPMA	Docking Phased Maintenance Availability
DSS	Deep Submergence System
DSW	Diesel Sea Water
ECD	Estimated Completion Date
eDFS	Electronic Departure from Specification
EDSRA	Extended Docking Selected Restricted Availability
EHF	Electrical Hull Fitting
EMBT	Emergency Main Ballast Tank
EOH	Engineered Overhaul
ERO	Engineered Refueling Overhaul
ET	Eddy Current Testing
FBR	Feedback Report
FBW SCS	Fly-By-Wire Ship Control System
FMA	Fleet Maintenance Activity
FRC	Federal Records Center
FWP	Formal Work Package
GSO	General Specifications for Overhaul of Surface Ships
HFP	Horizontal Fixed Pipe
ICAR	Immediate Corrective Action Report

URO	Unrestricted Operations
UT	Ultrasonic Testing
VDD	Version Description Document
VFP	Vertical Fixed Pipe
VT	Visual Testing
VU	VIRGINIA Class Component
WC	Work Center
WCS	Work Center Supervisor

APPENDIX B

GLOSSARY OF TERMS

<u>TERM</u>	<u>DEFINITION</u>
Acceptance Trials	Trials and material inspections conducted underway by the INSURV Board for ships constructed in a private industrial activity to determine suitability for acceptance of a ship by the Navy.
Accepting Authority	The officer designated by the Chief of Naval Operations (CNO) to accept a vessel for the Navy, normally NAVSEA.
Acid Spot Test	See Generic Material Verification or Identification.
Additive Manufacturing	Additive manufacturing, also known as 3D printing, is a process used to create a physical (or 3D) object by layering materials one by one based on a digital model. Unlike subtractive manufacturing that creates its final product by cutting away from a block of material, additive manufacture adds parts to form its final product.
Alpha Trial	Builders Propulsion Trial; Acceptance Trial for SSN, SSBN, SSGN Propulsion Plant; Initial Tightness Dive (SSN, SSBN, SSGN); Dive to Maximum Authorized Depth (Selected SSN platforms).
As Built Drawing	Drawings approved by the Planning Yard (PY), used for installation, and revised to indicate the actual "as installed" configuration on the ship.
Assist Work Center	The Work Center or group on board ship or at a repair activity with responsibility for accomplishment of a work or maintenance procedure as assist to or under direction of a Lead Work Center.
Audit	A detailed analysis and evaluation of records to determine compliance with existing requirements.
Backup Valve	A valve which, when closed, provides, in part or in whole, the secondary isolation boundary to sea pressure.
Boundary	The specific limits of the physical area involved in work and testing accomplished. That line, point or location identified as the border between controlled and uncontrolled areas. Depending on the type of system involved, it means the system component nearest to the work area which is operated to regulate or shut off the flow of fluid or de-energize electricity to the portion of the system which is being worked.
Bravo Trial	Normally the initial Dive to Test Depth; Noise Trial (SSN, SSBN, SSGN); Strategic Weapons System Missile Testing (SSBN); Weapons testing (Surface Combatants).
Builder's Trials	Evaluation trials and inspections conducted underway by the builder to assure the builder and the Navy that the ship is, or will be, ready for Acceptance Trials. These trials should be a comprehensive test of all ship's equipment and be similar in scope to Acceptance Trials. For nuclear powered surface ships, this is the Acceptance Trial for the Nuclear Propulsion plant.
Casting	A part formed by pouring molten metal into a mold.

Certification	To provide assurance, in writing, that the component or system conforms to the technical requirements.
Certification (Material)	The process of receipt inspection of material received from the Naval Supply System, which establishes the correct level of essentiality and acceptability of the material following the appropriate specifications and material control standard.
Certified Oxygen Clean	Certified Oxygen Clean applies to material, which is intended for or installed in shipboard oxygen generating, storage and distribution systems. The Naval Sea Systems Command (NAVSEA) source document, which governs certification of oxygen cleanliness, is MIL-STD-1330, Standard Practice for Precision Cleaning and Testing of Shipboard Oxygen, Helium, Helium-Oxygen, Nitrogen and Hydrogen Systems.
Certifying Activity	The activity, approved by Systems Command, that is qualified to complete all of the necessary certifying requirements of the particular specification or standard.
Change In Configuration	<p>Ship's configuration is defined by drawings and drawing revisions specified in the Ship's Drawing Index and by equipment technical manuals applicable to equipment installed in the ship following these drawings. Changes, which do not conform to these documents are a change in configuration. For example:</p> <ul style="list-style-type: none"> a. Material substitutions. b. Pipe joint additions or deletions. c. Significant rerouting or relocation of piping, cabling and equipment. d. Seal welding of normally mechanically sealed assemblies. e. Changes in piece dimensions.
Charlie Trial	Combat Systems and retesting (SSN, SSBN, SSGN); Acceptance Trials (DDG).
Cleanliness	<ul style="list-style-type: none"> a. Reactor Plant - Minimum reactor plant cleanliness requirements according to NAVSEA 0989-064-3000; Cleanliness Requirements For Nuclear Propulsion Plant Maintenance and Construction. b. Steam Plant - Minimum steam plant cleanliness requirements according to NAVSEA 0989-064-3000. c. Commercial Cleanliness - A term that is used to describe the minimum level of cleanliness, which should be maintained during work on propulsion plant systems and equipment not covered by NAVSEA 0989-064-3000. Commercial cleanliness is the absence of foreign material, which could, if present, interfere with the function of these systems and components. d. Oxygen System - Minimum oxygen system cleanliness requirements according to MIL-STD-1330, Standard Practice for Precision Cleaning and Testing of Shipboard Oxygen, Helium, Helium-Oxygen, Nitrogen and Hydrogen Systems.

15 Jan 2021

Cleanliness Inspector or Certifier	Individuals trained and qualified to perform cleanliness inspections required by work procedures for systems or components requiring cleanliness controls.
Coaming (Submarine)	The structure surrounding holes in, and extending through one or both sides of the pressure hull structure. They are usually connected by a corner or tee weld. They provide complete or partial strength compensation for the hole. Coamings are used for items like manholes. Hull valves generally use an insert.
Combined Trials	Combined Trials are a combination of an Acceptance Trial with a Final Contract Trial. The INSURV Board normally conducts Combined Trials for nuclear powered submarines.
Component	A self-contained combination of parts, subassemblies, or assemblies which performs a distinctive function in the overall operation of an equipment.
Component Drawing	A vendor, NAVSEA, or shipbuilder drawing which shows the assembly and details of a component such as a valve or pump. Sometimes it is divided into two drawings, one showing the assembly and the other the details. The component drawing list of material usually has a column entitled Material Identification and Control (MIC) level. It is this column on the list of material that is the source of information on whether a piece has a non-nuclear designation of Level I or Level NA (Not Applicable). A material designation does not normally appear on a component drawing list of material. It is shown instead on a Quality Assurance List (QAL). If a component drawing list of material has no MIC level column, then drawing notes should be reviewed to determine if one or more parts are Level I.
Continuity of Submarine Safety Certification	A status defined by those procedures, tests, and inspections required when hardware is renewed or replaced within the Submarine Material Certification Boundary, as well as the periodic checks or inspections required to assure continued satisfactory material condition for certification.
Controlled Assembly	<p>Process used for Re-Entry Control (REC) Exceptions or Exceptions to Retest Requirements for Mechanical Joints and consists of:</p> <ol style="list-style-type: none"> Verification that surface finishes of gasket and O-ring sealing surfaces are following applicable specifications. Verification that fastener material and installation is following applicable specifications. Verification that gaskets and O-rings are properly installed and following applicable specifications. Assembly is documented on a Quality Assurance (QA) form 34. Inspected by a Quality Assurance Inspector (QAI) or Quality Assurance Supervisor (QAS).
Controlled Dive	Conduct of a dive in incremental stages by a submarine to maximum authorized operating depth as measured to the keel to accomplish inspections of those joints and penetrations worked within certified boundaries and not tested prior to ship's underway.

15 Jan 2021

Controlled Material	<p>Any material which must be identified, verified and regulated throughout the manufacturing, installation or repair process in order to meet the specifications required of the end product. Controlled material is comprised of the following:</p> <ol style="list-style-type: none"> a. Three special classes of material requiring NAVSEA or Naval Inventory Control Point mandated controls while held in the supply system and control and certification by the end user by use of the procedures in Part I, Chapter 6 of this volume: <ol style="list-style-type: none"> 1. Non-Nuclear Level I. 2. Submarine Flight Critical Component. 3. Nuclear Level I. b. Material which NAVSEA considers to be of sufficient criticality to warrant basic receipt inspection by the end user and segregated storage while in supply or a work center, but not necessarily the control and certification required by Part I, Chapter 6 of this volume: <ol style="list-style-type: none"> 1. Naval Nuclear Propulsion Plant Material stocked with SMIC X1, X3 or X5 (instrumentation drawers, low chloride lagging). 2. Non-Nuclear Materials stocked with SMIC SQ, CP, DG, QA, SP or VG. 3. HY-80, 100 or 130 plate.
Controlled Material Handler	An individual at the TRIDENT Refit Facilities who is qualified to perform the duties of a Controlled Material Petty Officer.
Controlled Material Petty Officer	An individual responsible for the receipt inspection and control of SUBSAFE, Level I, SAED, SAQAM, Project Target, Nuclear Level I and Scope of Certification materials after issue from the supply system.
Controlled Work Package	The records that provide the Objective Quality Evidence (OQE) necessary to certify that the completed maintenance was authorized, required tests were completed and work was certified. This consists of the Formal Work Package (FWP) and OQE.
Craftsman	A mechanic or other individual trained in QA methods and procedures (i.e., inspections, cleanliness, testing, documentation) to perform maintenance on ship's systems or components.
Deep Dive	The first dive to maximum operating depth. This depth will not necessarily coincide with the design test depth of the hull. See definition of Maximum Operating Depth.
Defect	An imperfection that impairs completeness or quality or does not meet required specification.

Delivery	The date the Navy accepts the ship from the ship builder. This requires a recommendation from the INSURV Board to accept or deliver the ship. Delivery of the ship is based on Acceptance Trials and satisfactory correction or resolution of deficiencies.
Departure From Specification	A lack of compliance with any authoritative document, plan, procedure, instruction, etc. See Part I, Chapter 8 of this volume for more information.
Design Intent	The revision of a drawing from which the original equipment or part was intended to be built, or the revision to which design intends the ship to be built. This revision is typically reserved for use by planning yards and should not be used by Organizational and Intermediate level maintenance activities.
Detrimental Material	A material which, when contacting hardware, may have a deleterious effect on the hardware.
Deviation	Any non-conformance of a component or product with specified requirements.
Dock Trial	Dock Trials are those ship trials conducted at the Industrial Activity to determine the ability of the ship, from a material standpoint, to conduct Sea Trials safely.
Documentation	The records of OQE establishing the requisite quality of the material, component or work accomplished. Documentation should be traceable from the item to the records and be filed in an auditable manner.
Downgrading	The formal process used to decertify (removal of MIC mark(s), general identification marks, and in some cases demilitarize) controlled material for general use or disposal.
Electrode	A consumable filler metal which fuses during the welding process and becomes an integral part of the material or non-consumable electrode that fuses the metal during the welding process, but does not become an integral part of the material (e.g., tungsten).
Emergent Work, Emergent Repair, Emergent Maintenance	A task which requires immediate repair in order to correct mission impacting maintenance.
Face Feeding	The manual addition of brazing alloy at the intersection of the fitting face and the pipe. Supplemental face feeding is the addition of brazing material to increase fillet size.
Fast Cruise	A period immediately prior to underway trials during which Ship's Force operates the ship for dockside training. Fast Cruise must, as far as is practical, simulate at-sea operating conditions.
Final Contract Trials	Trials that are conducted prior to the end of the guarantee period to determine if there are any defects, failures, or deterioration other than that due to normal wear and tear.

Fleet Introduction Team	A team of personnel assembled to support a pre-commissioning crew by monitoring progress of construction and coordinating training and facilities. They provide administrative support in all facets of new construction.
Fleet Maintenance Activity	FMA's include tenders, shore based maintenance activities (Regional Maintenance Centers, Naval Ship Repair Facilities, Naval Submarine Support Facilities, Naval Intermediate Maintenance Facilities (NAVIMFAC), TRIDENT Refit Facilities, Weapons Repair Facilities and other activities of that type) and supporting activities (port services, etc. that perform maintenance on Fleet assets).
Fly-By-Wire Ship Control System	A Ship Control System in which the controls are actuated by electrical impulses, as from a computer.
Foreign Material	Any material or object that should not be on or within clean hardware. Examples include, grit, chips, particles, oil, slag, scale, fibers, tape, tools, and loose articles.
Forging	Defined as a part formed by hammering or pressing a piece of heated metal to form a shape.
Formal Work Package	Written instructions, prepared per Part I, Chapter 2 of this volume for use in production and repair, delineating all the essential elements and guidance necessary to produce acceptable and reliable products.
Gas System Cleanliness Inspector or Certifier	Any person qualified under the requirements of this manual to perform the tasks of initial, in-process and final Cleanliness Certification Inspections for Gas systems.
Generic Material Verification or Identification	A broad identification of materials by simple, direct and rapid analysis methods or a combination of methods (e.g., Color, Magnetic Properties Test, Acid Spot Tests, Metal Comparator Tests). These tests are designed for simple screening and identification of materials by alloy family (as opposed to classification of specific alloys within a family).
Group	Normally that first 1-Star organization or Command above the Squadron before to TYCOM.
Guarantee Material Inspection	A material inspection, conducted in port prior to Post Shakedown Availability (PSA) by a Trial Board prior to the end of the guarantee period when CNO has authorized a Combined Trial to determine if contractor responsible equipment has operated satisfactorily during the guarantee period. It must include the opening and inspection of equipment designated by the Board together with the operation and visual inspection of equipment and the review of material maintenance records.
Guarantee Period (New Construction)	The period of time immediately following preliminary acceptance (delivery), normally eight or nine months (six months for nuclear powered ships), for which the industrial activity is responsible for the correction of deficiencies.
Guarantee Period (Post Shakedown Availability)	The guarantee period following PSA varies with the type of contract. Historically, a "cost plus" type contract has had a guarantee period of six months and a "fixed price" type contract a period of 90 days. The Supervising Authority will advise at the time of PSA the guarantee that applies.
Homogeneous Lot	a. Nuclear: A lot of material in which each piece is manufactured from the same heat, batch, or melt or has the same vendor traceability code number.

	<p>b. Non-Nuclear: A group of like items that are produced in a common heat or batch or are produced under continuous cast or pour process with the same vendor traceability numbers, are of the same nominal size, and are received in a single shipment. For batch or continuous cast or pour processes, samples for chemical and mechanical properties must be taken no less than once in every 8 hours of operation. If additional production processes are used that alter the mechanical properties of the material (e.g., heat-treat, cold or hot forge, extrusion), then all items of the same "Heat" number and additionally processed under the same conditions at the same time must be considered as a homogeneous lot.</p>
Hull Integrity Boundary	Pressure hull plating (shell plate), pipe, components, etc., NPS 1/2 inch and larger, from the inboard joint of the backup valve (or equivalent) outboard to the hull.
Hull Integrity Fasteners	Hull Integrity Fasteners (HF) are male threaded type items such as bolts, socket head cap screws, studs and bolt studs which are loaded by the differential sea pressure and internal hull pressure, and which are a part of pressure hull integrity components or of systems penetrating the Pressure Hull Structure, from the pressure hull to and including the inboard joint of the backup valve or its equivalent. Nuts and lock-washers are specifically excluded.
Hull Valve	A valve which, when closed, provides, in part or in whole, the first isolation boundary to sea pressure. The hull valve may also be referred to as the primary closure.
Immediate Superior In Command	<p>The ISIC is defined as:</p> <p>a. For Submarines - The Squadron or Group.</p> <p>b. For Aircraft Carriers - The TYCOM. The TYCOM may designate a representative in carrying out certain Immediate Superior in Command functions.</p> <p>c. For Surface Forces - The Command holding administrative control.</p>
Industrial Activity	The activity responsible for accomplishing construction or repair of ships whether private or public. This includes Naval shipyards, private shipyards, shipbuilders, vendors, Naval Aviation Depots, Naval Ship Repair Facilities, and other Naval Repair and Technical Activities (i.e., Naval Underwater Weapons Center, Naval Ships Weapons Center, etc.).
Initial Dive	For purposes of seawater valve and system testing, as defined in NAVSEAINST C9094.2, the first dive to a depth not previously reached during the trials.
Initial Tightness Dive	First submergence (a submarine's Alpha Trial).
In-Process Surveillance	The review of work in progress by personnel not directly involved with the work to assess such attributes as tagging and installation of controlled material, compliance with technical procedures, and recording of required data.
In-Service	Nuclear powered ships are assigned an active status of In-Service approximately two to four weeks (two to four months for aircraft carriers) prior to the commencement of Sea Trials and maintain this status until commissioning.

15 Jan 2021

Inspection	A certification conducted by a separate individual qualified as an inspector (QAS, QAI, Cleanliness Certifier or Cleanliness Inspector, Nondestructive Test (NDT), Radiological Controls Monitor, Radiological Controls Shift Supervisor) on any system or component, which by its nature, is critical to the successful completion of the task.
Inspection Record	Record data showing the results of an inspection with appropriate identifying information as to the characteristics inspected and item inspected.
INSURV	Prior to the acceptance and delivery of a new ship, whether built by a private or naval industrial activity, all machinery, electronics and weapons systems installed must be subjected to acceptance trials to determine that the installations are capable of meeting performance specifications. Depending upon your platform, these trials are referred to as either Acceptance Trials, Combined Trials or INSURV. This independent verification of the ship's readiness for acceptance and recommendation for fleet introduction is the responsibility of the President, Board of Inspection and Survey.
Latest Revision	The most recent authorized revision and change level of a drawing. The latest revision of a hull applicable drawing may not identify current configuration for a specific hull.
Leading Petty Officer or Work Center Supervisor	That person as defined by the appropriate Organization and Regulations Manual, responsible for ensuring the quality of work performed by his or her work center.
Lead Work Center	The Work Center or group on board ship or at a repair activity with prime responsibility for accomplishment of a work or maintenance procedure.
Level I	A designation for systems and components for which the Navy requires a high degree of assurance that chemical composition and mechanical properties of the installed materials meet the specified requirements.
Level of Essentiality	<p>A range of controls in two broad categories representing a high degree of confidence that procurement specifications for piping system components have been met. These categories are:</p> <ol style="list-style-type: none"> Verification of material, which ensures that the manufacturer has complied with procurement requirements for chemical composition and physical properties of the material. Confirmation of satisfactory completion of tests and inspections required by the ordering data (e.g., Liquid Penetrant Testing (PT), dimensions, hydrostatic strength and porosity).

15 Jan 2021

Liaison Action Request	A request for technical concurrence from Planning Yard or NAVSEA. Procedures for requesting information from the Reactor Plant Planning Yard are contained in Commissioned Submarine General Reactor Plant Overhaul and Repair Specification (NAVSEA 0989-LP-037-2000), Nuclear Support Facilities Overhaul and Repair Specification (NAVSEA 0989-LP-058-1000), Commissioned Surface Ship General Reactor Plant Overhaul and Repair Specification (NAVSEA 0989-043-0000) and TYCOM instructions. For non-nuclear systems and components, the LAR can be in any format which is convenient for the user, provided that it is identified as a LAR, clearly defines the exact information needed, lists the drawings in question, and states the date by which a reply is requested to support ship schedules. Volume II of the Fleet Modernization Program Management and Operations Manual contains a format for a non-nuclear LAR which FMAs may adapt for their use.
Loss of Traceability	A situation in which controlled material cannot be positively traced to the results of chemical and physical testing performed to prove that the material is that required by the specification to which it was made or bought. In each instance of loss of traceability, the FMA or ship Quality Assurance Officer must initiate action to restore traceability or use alternate, traceable material.
Maintenance Certification Record	The record (QA form 9) used to document the physical work boundaries, define the work involved, specify the material control and fabrication control procedures, specify inspection and test requirements, list the certification records involved, and provide approval and acceptance signatures and dates for work within the SUBSAFE boundary, a nuclear system or a Level I system or component.
Maintenance Manager	Those persons, such as Port Engineers, Ship Superintendents, Ship's Coordinators, and Maintenance Planning Managers, assigned to assist Ship's Force in the tracking of work candidates, development of work packages, and tracking of FMA or Industrial Activities assigned jobs.
Maintenance Requirement Card	Defines maintenance inspections and actions associated with the Planned Maintenance System (PMS).
Maintenance Standard	(Submarines only) A document which specifies minimum technical requirements for acceptable refurbishment of submarine components, including inspection and testing criteria and parts replacement information, following NAVSEA maintenance plans.
Major Repair	<p>Non-nuclear major repairs are those repairs which:</p> <ol style="list-style-type: none"> Structurally affect the pressure-containing portion of a piping system or component through welding (except as defined under Minor Repair), brazing or other fabrication process, including new mechanical joints in which a flange or union tailpiece is replaced using a weld or braze. Involve installation of new pressure boundary parts or components which have not been previously strength tested.

15 Jan 2021

Mapping Drawing	<p>A diagrammatic drawing, verified by ship check, that identifies and specifies the location of elements which must meet a SUBSAFE requirement of NAVSEA 0924-062-0010, SUBSAFE Requirements Manual. Pipe joints, flexible connections and castings are examples of items identified on the mapping drawing. Pipe joints are each numbered (e.g., MSW-56178) and the type of joint identified (e.g., WB - butt weld). The mapping drawing will also reference a QAL as applicable. Mapping drawings are discussed in the introductions of the SUBSAFE Certification Boundary Book. Most of the symbols seen on a mapping drawing are:</p> <table> <tr> <td>BF - Brazed joint, face fed</td><td>SL - Seal</td></tr> <tr> <td>BP - Brazed joint, pre-inserted ring</td><td>U - Threaded pipe union</td></tr> <tr> <td>CN - Casting</td><td>WA - Welded attachment</td></tr> <tr> <td>F or FG - Flange</td><td>WB - Butt weld</td></tr> <tr> <td>FH - Flexible connection</td><td>WF - Fillet weld</td></tr> <tr> <td>HF - Hull Integrity Fastener</td><td>WL - Seal weld</td></tr> <tr> <td>IN - Pressure hull insert</td><td>WM - Bimetallic weld</td></tr> <tr> <td>PE - Penetration</td><td>WN - Welded nozzle</td></tr> <tr> <td>PF - Pressure hull fitting</td><td>WR - Root connection (or boss)</td></tr> <tr> <td>PM - Pressure hull penetrating mast</td><td>WS - Socket weld</td></tr> </table>	BF - Brazed joint, face fed	SL - Seal	BP - Brazed joint, pre-inserted ring	U - Threaded pipe union	CN - Casting	WA - Welded attachment	F or FG - Flange	WB - Butt weld	FH - Flexible connection	WF - Fillet weld	HF - Hull Integrity Fastener	WL - Seal weld	IN - Pressure hull insert	WM - Bimetallic weld	PE - Penetration	WN - Welded nozzle	PF - Pressure hull fitting	WR - Root connection (or boss)	PM - Pressure hull penetrating mast	WS - Socket weld
BF - Brazed joint, face fed	SL - Seal																				
BP - Brazed joint, pre-inserted ring	U - Threaded pipe union																				
CN - Casting	WA - Welded attachment																				
F or FG - Flange	WB - Butt weld																				
FH - Flexible connection	WF - Fillet weld																				
HF - Hull Integrity Fastener	WL - Seal weld																				
IN - Pressure hull insert	WM - Bimetallic weld																				
PE - Penetration	WN - Welded nozzle																				
PF - Pressure hull fitting	WR - Root connection (or boss)																				
PM - Pressure hull penetrating mast	WS - Socket weld																				
Material Identification and Control Number or Marking	A unique number assigned to certified material by the Certifying Activity (for material) which provides traceability to OQE following the applicable Material Control Standard.																				
Maximum Operating Depth (Also Maximum Authorized Operating Depth)	The depth to the keel for a particular submarine which is authorized by Commander Submarine Forces Atlantic or Commander Submarine Forces Pacific upon the recommendation of NAVSEA, as the depth not to be exceeded in operations. This depth is normally the Test Depth but may be reduced in specific cases. The depth authorized may be less than, but in no case exceed, the depth recommended by NAVSEA.																				
Minor Repair	Minor repairs are operations that could be considered maintenance such as replacing packing and pressure seal ring, lubricating, lapping or grinding of seats, and replacing damaged parts such as stems and discs. For the purpose of this manual the definition in Naval Ships' Technical Manual Chapter 505 or NAVSEA S9074-AR-GIB-010/278, whichever is applicable, is used for the term "Minor" repair.																				
Moderate Speed	The range of speed that allows the submarine optimum recovery (as shown on applicable submerged operating envelope curves) if loss of stern plane control, flooding, or both, occurs. Normally 8-15 knots.																				
Naval Supervisory Authority or Supervisory Authority	The officer designated to represent the Navy Department at an industrial activity; normally a Supervisor of Shipbuilding (new construction), Regional Maintenance Center (Conversion and Repair) or the Commander of a Naval Shipyard.																				

New Mechanical Joint	A joint where either a flange or union is replaced. A new mechanical joint is a major repair and requires a hydrostatic test to the specific requirements of a particular system.
Nominal Operating Pressure	The approximate pressure at which an essentially constant pressure system operates when performing its normal function. This pressure is used for the system basic pressure identification.
Nondestructive Testing	<p>All methods of testing used to detect or measure the significant properties or performance capabilities or material, parts, assemblies, equipment, or structures which do not impair the service ability of the parts tested. These tests include:</p> <ul style="list-style-type: none"> a. Radiographic Testing (RT). b. Magnetic Particle Testing (MT). c. Liquid Penetrant Testing (PT). d. Ultrasonic Testing (UT). e. Visual Testing (VT). f. Eddy Current Testing (ET).
Nondestructive Testing (NDT) Supervisor	The NDT Supervisor is the individual designated by the respective Division Officer and is qualified in specific methods for which he is designated NDT Supervisor. (There may be more than one NDT Supervisor in an organization.)
Nuclear Regional Maintenance Department (NRMD)	NRMD performs intermediate level nuclear maintenance and repair work, consolidating efforts in a regional area, thus eliminating duplication of infrastructure and maximizing effective use of funds. This is accomplished by the use of military personnel integrated into the experienced nuclear production, radiological and engineering resources of the parent shipyard. NRMDs are an expansion of their parent shipyard.
Objective Quality Evidence	<p>Any statement of fact, either quantitative or qualitative, pertaining to the quality of a product or service based on observations, measurements, or tests which can be verified. (Evidence will be expressed in terms of specific quality requirements or characteristics. These characteristics are identified in drawings, specifications, and other documents which describe the item, process, or procedure).</p> <ul style="list-style-type: none"> a. Tests can be based on heat, batch, continuous cast or pour, or other manufacturing processes, providing the manufacturer can prove the test sample was representative of the material supplied. b. Material supplied will bear a unique traceability marking and report of supporting test quantitative data will bear an identical marking.
Oxygen Clean Inspector	A Cleanliness Inspector or Cleanliness Certifier qualified by the Oxygen Clean Instructor and certified by the Department Head or Commanding Officer to perform cleanliness inspections on systems under the requirements of MIL-STD-1330.
Oxygen Clean Instructor	An individual certified by his or her Commanding Officer to train and qualify personnel in the procedures and requirements of MIL-STD-1330.

Oxygen Clean Worker	An individual qualified by the Oxygen Clean Instructor and certified by the Department Head to perform maintenance on systems under the requirements of MIL-STD-1330.
Planning Yard	<p>The Naval Shipyard or other activity designated by NAVSEA to perform the following tasks pertaining to specifically assigned ships:</p> <ol style="list-style-type: none"> To provide, or coordinate the provision of technical and other services in design matters. To be responsible for the availability of a complete up-to-date file of working drawings, Selected Record Drawings, and Data. To provide a central repository, reproduction, and distribution services, or to coordinate such services, for working drawings, Selected Record Drawings, and Data. To provide these services to the fullest extent possible within the limits of the funds provided.
Positive Material Identification	Process by which the craftsman ensures that the material to be or being installed is the correct material as specified by the plan, technical manual, etc. This process is also referred to as "Positive Material Identification and Verification".
Post Shakedown Availability	An industrial activity availability following Final Contract Trials or Guarantee Material Inspection assigned to correct deficiencies found during the shakedown period or to accomplish other authorized improvements.
Pressure Boundary Part	An item which separates an internal fluid from the atmosphere (or another fluid at reduced pressure) or which joins two other pressure boundary parts.
Pressure Hull Fittings	All items and assemblies which penetrate the hull integrity boundary and are attached either mechanically or by welds penetrations, inserts or plating. This includes structural, piping, mechanical and electrical pressure hull fittings and mechanical stuffing boxes; specifically excluded are all cables, O-Rings, V type packing or packing around mechanical shafts.
Procedure	Written instruction designed for use in production and repair, delineating all the essential elements and providing guidance necessary to produce acceptable and reliable products. The term "procedure" includes PMS Maintenance Requirement Card (MRC), technical manuals, reactor plant manuals, standard operating procedures, ship's instructions, etc.
Product Quality Deficiency Reporting	A method for reporting deficiencies in new or newly reworked material which may be attributable with contractual or specification requirements or substandard workmanship performed by depots, naval shipyards, contractors or subcontractors.
Q-Point	Critical Quality Control Point. A work process, regardless of type (maintenance, training, administrative, etc.), whose proper accomplishment overwhelmingly affects the ultimate first time quality success of the process.

Quality Assurance	A systematic review of Quality Maintenance records and all production actions which will provide adequate proof and confidence that work performed or material manufactured will perform as designed and that there is documentary evidence to this effect.
Quality Assurance Inspector	The designated individual(s) in FMA and ship work centers who inspect the work of other individuals, not their own work. Certified as qualified by the Commanding Officer or Repair Officer.
Quality Assurance List	(Submarines only) QAL on NAVSEA Drawings specify NDT requirements for items scheduled for installation within the SUBSAFE boundary during new construction. The QALs should only be utilized for guidance subsequent to a ships' commissioning, since they will not necessarily reflect current NDT requirements.
Quality Assurance Officer	An individual assigned the responsibility for the organization, administration, training and execution of the QA Program.
Quality Assurance Supervisor or Specialists	Personnel assigned to the FMA Quality Assurance Officer to assist in implementing the QA Program. QASs are certified as qualified by the FMA Commanding Officer. A Quality Assurance Specialist is an individual at the TRIDENT Refit Facilities who is qualified to perform the duties of a QAS.
Quality Control	On the job supervision, management and inspection which identifies and ensures proper workmanship or materials are being produced.
Reactor Plant Cleanliness Inspector or Certifier	Any person qualified under the requirements of the manual to perform the tasks of initial, in-process and final Cleanliness Certification Inspections for Reactor Plant Systems.
Reactor Plant Work Accomplishment Report	A report submitted to the Reactor Plant Planning Yard by ships, FMAs and shipyards which certifies work accomplished by them on reactor plant hull integrity areas. These areas, identified on the ship specific Reactor Plant Work Accomplishment Report, are nuclear and are usually within the SUBSAFE boundary.
Re-Entry	Includes any and all work and testing in a SUBSAFE certified system including penetration of the pressure hull from the first breaching through final grooming, testing and return to final operation, (e.g., breaking a mechanical flange, a sil-braze, or welded joint, removal of a valve bonnet, repacking a gland).
Re-Entry Control	The controls used to document the re-entry and re-certification of SUBSAFE systems or components. The QA form 9 (Maintenance Certification Record) is used to document the acceptance of a completed SUBSAFE system Re-entry.
Reinstall	To use or install the previously installed item or component.
Re-Made Mechanical Joint	A flange or union joint which has been reassembled using existing or new threaded fasteners on which no brazing or welding was accomplished on the joint parts during the repair or modification process.
Repair	Refurbishment other than mere disassembly or cleaning.
Replace	To install a new item or component.

Rework	The unplanned repetition of a step or a series of steps in a Formal Work Package.
Sample	One or more units of a product selected at random from the material or process represented.
Selected Record Data	Tables, charts, drawing indices, allowance lists, damage control books and other data (excluding drawings) specifically selected for their reference value and maintained current throughout the life of the ship.
Selected Record Drawing	A designated group of drawings made applicable to an individual ship by illustrating final shipboard installations of important features, systems and arrangements that must be maintained up to date and correct throughout the life of the ship.
Ship	Any submarine, surface ship, tender, or other vessel assigned to the Fleet.
Ship's Drawing Index	A list of drawings, normally on microfiche, or Compact Disc Read Only Memory (CD ROM) which applies to each ship. It lists ship construction drawings, ship modification drawings and manufacturer (vendor) component drawings. It is here that system diagrams, mapping drawings and in some cases, QALs are identified by drawing title or by a code in a column after the drawing title and number. The SDI is located in ATIS and TVD applicability data.
Small Item	Items that have a marking surface less than 3/8 of a square inch area.
Software	Gaskets, packing and seals used in mechanical flange or union joints in piping systems.
Special Cleanliness	A requirement for components used in oxygen and nitrogen systems to prevent combustion of contaminants and maintain purity of the gas. The cleaning requirements are discussed in Naval Ships' Technical Manual Chapter 550, Industrial Gases: Generating, Handling and Storage.
Special Material Identification Code	<p>A two-digit letter or number code at the end of the National Stock Number or Navy Item Control Number to provide visibility to designated items to ensure maintenance of their technical integrity. The following SMICs from Appendix C of SPCCINST 4441.170 or Appendix B of SPCCINST 4441.176 are for material commonly used in the Fleet.</p> <p>CP An item that requires special cleaning and packaging for oxygen or nitrogen service (e.g., valves, piping system, generators).</p> <p>C1 An item that requires special cleaning and packaging for oxygen or nitrogen service (e.g., valves, piping system, generators) which also must meet the requirements of Level I.</p> <p>DG An item that requires special cleaning and packaging for oxygen or hydrogen service (e.g., valves, piping system, generators).</p> <p>D1 An item that requires special cleaning and packaging for oxygen or hydrogen service (e.g., valves, piping system, generators) which also must meet the requirements of Level I.</p>

15 Jan 2021

Special Material
Identification Code
(Cont'd)

- LI (Level I) An item that supports either a SUBSAFE or Level I system that has undergone the extreme material control or QA techniques that provide OQE of its acceptance for its appropriate application. Each item has certification papers (or special markings that provide traceability to the certification) that pedigree its material and physical properties, provide traceability to manufacturer, contract list and lot, and document the QA system or test requirements applied to the item.

- NT Annular ball bearings for quiet operation applicable to submarine usage (noise tested bearings).

- QA Equipment or parts requiring special material control and QA which supports surface ship or submarine applications.

- Q3 Items that support a Level I or SUBSAFE critical component or system that has undergone QA during the acquisition process (e.g., a ball and seat assembly utilized in a Level I or SUBSAFE ball valve based on ship system application). This, however, does not include Trash Disposal Unit, Signal Ejector, Salvage Air, and open ended applications which are procured as Level I or SUBSAFE. "Q3" SMIC invokes chemical and mechanical certifications traceable to the heat code permanently marked on the material. It should be noted that "Q3" SMIC coded material is not receipt inspected or MIC marked by the receipt inspection activities.

- SP An item which is unique to the Navy Strategic Systems Program Office controlled fleet ballistic missile weapon system. The SMIC SP establishes a weapons system relationship but does not signify the technical considerations as described in definition X2, X3 and LI.

- SQ SAQAM, which is administered by the SAED of the Naval Ship System Engineering Station, Mechanicsburg Detachment. It includes whole components and repair parts.

- SW SEAWOLF Class Ship Control System approved Ships Flight Critical Components.

- S1 An item which is unique to surface ship applications which also meets the requirements of Level I.

- TR TRIDENT Ship's Program.

- VG Equipment or parts requiring special material control and QA which support surface ship or submarine applications. Special cleaning and packaging for oxygen or hydrogen service is required.

- VU VIRGINIA Class Ship Control System approved Ships Flight Critical Components.

- X1 NAVSEA Nuclear Propulsion Directorate (08) controlled material identified as "2S" cognizance material with an "X1" SMIC.

15 Jan 2021

Special Material
Identification Code
(Cont'd)

- X2 Naval Reactor Plant material which is specially designed, manufactured or treated for use in a Naval Reactor Plant. In addition, this material is inspected (or sample inspected) by a Naval shipyard prior to being placed in Navy Supply System Stock.
- X3 Naval Reactor Plant material specially designed, manufactured or treated for use in a Naval Reactor Plant.
- X4 Naval Reactor Plant valves and auxiliary equipment used in secondary Nuclear Level I applications which are technically receipt inspected and certified as ready for use by a receipt inspection activity.
- X5 Naval Reactor Plant component level items not qualifying for X1, X2, X4 or X6 SMIC assignment. This material is not inspected by a Naval shipyard prior to being placed in Naval Supply Stock and will not have a Ready-For-Issue tag attached.
- X6 Naval Reactor Plant items specifically designed, manufactured or treated for use in Level I Naval Reactor Plant applications. All Level I items which do not qualify for SMIC X1, X2 or X4 assignment are assigned SMIC X6. Since the outer packaging of material received from the Naval Supply System may not be marked with an X6 SMIC, end users should consult applicable logistics information (e.g., the Q Coordinated Shipboard Allowance List, FEDLOG, Haystack, etc.) to determine the current applicable SMIC assignment. If an X6 SMIC is currently assigned in any of the applicable logistics information, the material is considered pre-certified Level I material and does not require a Ready-For-Issue tag.
- X7 Naval Reactor Plant material qualified and marked as acceptable for use in reactor plant clean and steam plant clean applications under the technical cognizance of the Naval Sea Systems Command (Directorate, Naval Nuclear Propulsion Program; NAVSEA 08) that is managed by Navy Supply Systems Command Weapon Systems Support and is specially designed, manufactured or treated for use in both reactor plant clean and steam plant clean applications.

Specification

Any directive, whether technical or administrative, in any format, such as instruction, technical manual, drawing, standard or publication.

Steam Plant Cleanliness
Inspector or Certifier

Any person qualified under the requirements of this manual to perform the tasks of initial, in-process and final Cleanliness Certification Inspections for Steam Plant Systems.

Submarine Antenna
Engineering Directorate -
Submarine Antenna
Quality Assured Material

Submarine antenna material which is quality assured by the SAED, (formerly the Submarine Antenna Quality Assurance Division) and marked or recorded to ensure proper documentation and traceability

Submarine Safety
Certification

Investigative effort and corrective action developed under the certification requirements for safety of submarine operations which has as its specific aim an order of magnitude increase in the safety of submarine operations. Accomplishment provides reasonable assurance that the integrity of defined critical systems and components, and the casualty recovery capabilities are adequate to permit unrestricted operations to test depth.

15 Jan 2021

SUBSAFE	The acronym for Submarine Safety which applies to all submarine classes. The SUBSAFE program provides a high level of confidence in the material condition of the hull integrity boundary and in the ability of submarines to recover from flooding and control surface (e.g., bow, rudder, stern plane) casualties.
SUBSAFE Attribute	Test and inspection requirements for SUBSAFE systems and components.
SUBSAFE Certification	That area within which the requirements of the SUBSAFE Requirements Manual apply. It includes those inboard piping and mechanical systems maintaining watertight integrity and recovery capability from a flooding casualty.
SUBSAFE Certification Boundary Book	A book presenting simplified diagrams or sketches which show the hull non-nuclear integrity and certified system boundaries for a specific submarine, class of submarine or group of submarines within a class.
SUBSAFE System	A submarine system or component designed, installed and maintained to: <ul style="list-style-type: none"> a. Prevent flooding of the submarine (e.g., failure would cause flooding of ship). b. Enhance recovery in the event of flooding (e.g., flood control). c. Ensure reliable submerged ship control (e.g., certain parts of the steering and diving system). d. SUBSAFE systems are shown in the SUBSAFE Certification Boundary Book.
Surveillance	Observations and analysis of actual work procedures and methods to verify compliance with technical requirements.
System	All components, piping, fittings, including electrical and mechanical items, which together form and contribute to the operation of an integrated functional arrangement. The “system” as used in this manual is not limited to piping only unless “piping” is specified. Any part which receives the fluid, controls, or is controlled by the fluid is included.
System Design Pressure (Non-Nuclear)	System design pressure is the pressure used in the calculation of piping and piping components minimum wall thickness and will not be less than the maximum system pressure (for general guidance, design pressure may be estimated within 2 to 3% by multiplying maximum operating pressure by 112%).
Target Material or Project Target Material	As defined in NAVSEA S9213-45-MAN-000. All material issued with a “Project Target Ready-For-Issue” tag for use as Nuclear Level I is either X1, X2 or X4 SMIC coded.
Technical Data	Recorded information (regardless of the form or method of recording) of a scientific or technical nature (including computer databases and computer software documentation). This term does not include computer software or financial, administrative, cost or pricing, or management data or other information incidental to contract administration. The term includes recorded information of a scientific or technical nature that is included in computer databases. For these purposes, technical data includes the characteristic of a particular science, trade or profession.

Technical Repair Standard	See Maintenance Standard. Document which provides minimum requirements for the acceptable repair and refurbishment of submarine equipment and components and identifies planned and contingency material necessary to ensure satisfactory operation until the next planned maintenance action.
Technical Variance Document	(Submarines Only) The document used to document configuration changes made during an overhaul, availability or refit that influence a maintenance, alteration and repair, but will not be incorporated in a revision to a drawing (SSN 688 Class, SSBN, SSGN 726 Class, and S5W Reactor Plant).
Technical Work Document	The work procedure that will provide the craftsman with clear, concise and technically correct instructions to complete the maintenance task while conforming to technical specifications. Technical Work Documents consist of three general types: Maintenance Procedures, Formal Work Packages and Controlled Work Packages.
Test Depth	For the purpose of the proper method of measuring and specifying Test Depth, the following applies: Test Depth must be measured to the bottom of the keel for all types of submarine operations. Builders trials and trials following major industrial activity availabilities greater than six months, must be at a tolerance of plus zero (0), minus twenty (20) feet of Test Depth when specified. All other trials can be conducted at 95% to 100% of Test Depth to satisfy all the requirements specified for 100% Test Depth.
Test-Drop	A pressure test used to determine the integrity of a system. It is performed upon satisfactory completion of the strength and porosity hydrostatic test and is accomplished by pressurizing the system to its system working pressure while it is arranged for normal operation. Pressure is applied using either air or an inert gas as applicable. The test is held and monitored for a specified period of time and the system tightness is determined by correcting the pressure drop for temperature change.
Test Equipment or Working Level Instruments	For purposes of this manual, test equipment will be interpreted as comprising all general purpose equipment (standard measuring instruments), special testing equipment, including such classes as checkout equipment, acceptance equipment, inspection equipment, gauges and associated accessories.
Test-Hydrostatic	A test where the system or a portion of the system is filled with fluid and pressurized above normal operating pressure to a specified hydrostatic test pressure and inspected for leaks and visible permanent deformation.
Test-Joint Completion	See Test-Mechanical Joint Tightness.
Test-Mechanical Joint Tightness	A pressure test where a portion of a system or the entire system is pressurized to its system nominal operating pressure or "J" test pressure to determine leak tightness after closing a mechanical joint where leak tightness is obtained by gaskets, seal welding or threads.
Test-Operational	(Non-Nuclear) <ul style="list-style-type: none"> a. A test of a system to nominal operating pressure using the system fluid, pumps and installed system gages vice test instrumentation to determine leak tightness; or

	<ul style="list-style-type: none"> b. A test of a system to assure that all items, components, controls and indications function as designed and following specifications.
Test-Pneumatic	A test where a portion of the system or the entire system is pressurized with gas and inspected for leaks.
Test Pressure Drawing	Drawings which have been developed from system diagrams for classes of submarines and contain strength and mechanical joint tightness pressures for all portions of piping systems. These pressures are displayed in “indicators” which contain two test pressure values as illustrated in the Submarine Non-Nuclear Piping Systems Test Manual, NAVSEA S9505-AF-MMA-010/PIPING SYSTEMS.
Test-Shop	A test performed on a section of piping or a system by an FMA work center when the subassembly piping or component is not installed in an onboard system.
Test-Soap	A method of determining the tightness of a system by applying a soap and water solution to the system joints while the system is being either pressure or vacuum tested. The test is held a sufficient length of time to permit a thorough examination for leaks. When vacuum testing the leak, the testing solution should be compatible with the system to preclude contamination and will be specified on the applicable Test Pressure Drawings.
Test-Strength and Porosity	A hydrostatic test conducted at a specified strength test or “H” pressure that is above nominal or system operating pressure.
Torque	<p>The twisting force exerted multiplied by the distance through which the force acts. In the Navy, torque is usually measured in foot-pounds or inch-pounds.</p> <ul style="list-style-type: none"> a. Breakaway Torque. The torque required to start the self-locking fastener moving when the locking element is fully engaged and with no axial load. b. Final Torque. When construction drawings specify that running torque has been incorporated into the required torque, final torque is the torque value specified in the construction drawing and running torque is NOT added to the required torque during joint assembly. c. Required Torque. The torque following the design drawing or technical manual requirements, the torque from appropriate torque tables in Submarine Fastening Criteria (Non-Nuclear), Description, Design, and Maintenance, NAVSEA S9505-AM-GYD-010 or the torque following an applicable approved process instruction. d. Running Torque. The torque required to continue turning a self-locking fastener prior to contact with the seating surface.
Traceability	A positive capability of finding all objective evidence, including receipt inspection data, for a particular piece of material given only the piece of material, marked following applicable material control standards.
Unrestricted Operation Maintenance Requirement Card	Unrestricted Operations Maintenance Requirement Card for continued unrestricted submarine operations to design test depth. Refer to the SUBSAFE Requirements Manual, NAVSEA 0924-062-0010.

Upgrading	The process of conducting the certification of open-purchased material to controlled material following the appropriate military and material control standard.
Valve Repair, Restoration, Overhaul	<ul style="list-style-type: none"> a. Repair. Any work done to improve the material condition or operation of the valve correcting deficient conditions such that the component may be returned to service, but which, in total does not meet the full intent of the applicable restoration or overhaul technical standard, is considered a repair. b. Restoration or Overhaul. All valve parts replaced or restored to the requirements of the applicable technical standard (e.g., the full intent of the restoration or overhaul technical standard is invoked).
Verification	Certification required to be performed by the craftsman.
Waterline	The term “waterline” in this manual refers to where the hull of a ship meets the surface of water when afloat.
Welded Fabrication or Weldment	The construction, alteration or repair of any welded assembly, or parts thereof, by welding and allied processes. Included are all operations such as pre-heat and post-heat treatments, forming, fairing and NDT that must be controlled to obtain weldments suitable for intended service.
Work	<ul style="list-style-type: none"> a. Any action that actually or potentially changes (including disassembly for the purposes of inspection or repair) the approved configuration of any part, component or ship’s system. b. Any action that removes or affects the ship’s ability to operate ship’s systems or components following ship’s systems or operating manuals or reactor plant manuals. c. Any testing or inspections required to establish, maintain or reestablish certification. d. Any design, engineering, planning or configuration management functions that involve the final review or approval of technical information. <p>Examples of work include the following:</p> <ul style="list-style-type: none"> 1. Action which disassembles or removes any part, component or ship’s system. 2. Action specified in a Technical Work Document. 3. Any action that removes or affects the ship’s ability to operate ship’s systems or components following ship’s systems manuals, operating manuals or reactor plant manuals, excluding tagout per the Tagout Users Manual, including but not limited to: <ul style="list-style-type: none"> (a) Component or system tests. (b) Intrusive inspections (such as breaking the plane of electrical panels requiring electrical safety). (c) Valve line ups that alter the normal system line up not governed by operating procedures.

- (d) Removing valve hand wheels, disconnecting of reach rods.

Work Center

For FMAs, the individual shops within divisions of the Repair, Weapons Repair Departments, etc. (e.g., 38A, 91A, 72A, 25A). For ships, usually the divisions within a department (e.g., Machinery Division, Sonar Division).

Working Standards
(Calibration)

These standards comprise a wide variety of equipment used throughout the laboratory in support of all measurements performed in the laboratory. These standards are used day-by-day in performing calibrations in the Fleet Electronic Calibration Laboratory or Mechanical Instrument Repair and Calibration Shop. Contrast, reference and transfer standards are used less frequently to support and assure the accuracy of working standards within the Fleet Electronic Calibration Laboratory, Mechanical Instrument Repair and Calibration Shop, Fleet Meter Calibration Laboratory or Field Calibration Activity.

- (k) SECNAVINST 4855.3 - Product Data Reporting and Evaluation Program (PDREP)
- (l) NAVSEA S9074-AQ-GIB-010/248 - Welding and Brazing Procedures and Performance Qualification
- (m) NAVSEANOTE 5000 - Activities Authorized to Perform SUBSAFE, FBW-SCS and DSS-SOC Work
- (n) CNRMCINST 4700.3 - Unplanned Events, Critiques and Trouble Reports
- (o) OPNAVINST 4790.15 - Aircraft Launch and Recovery Equipment Maintenance Program (ALREMP)
- (p) COMSUBLANT/COMSUBPACINST 4790.16 - Maintenance and Material Management (3M)

LISTING OF APPENDICES.

A Format for Submarine QA Pre-Underway Checklist

1.1 PURPOSE. To provide a list of responsibilities and duties of key personnel within the organizations that are involved in the Fleet Quality Assurance (QA) Program. Responsibilities and duties listed in this section are further amplified in other sections of this volume.

1.2 QUALITY ASSURANCE ORGANIZATION. The QA Program for the Fleet is organized into five levels of responsibility:

- a. Fleet.
- b. Type Commander (TYCOM).
- c. Immediate Superior in Command (ISIC).
- d. Ship Commanding Officer or Officer in Charge.
- e. Regional Maintenance Center (RMC) Commander or Fleet Maintenance Activity (FMA) Commanding Officer.

1.3 FLEET COMMANDER RESPONSIBILITIES. The Fleet is responsible to provide policy and direction for the implementation and operation of the QA program as listed in sub-paragraphs “a” through “f”.

- a. Promulgate the QA program through the guidelines and procedures of Volume V (Quality Maintenance) of the Joint Fleet Maintenance Manual.
- b. Promote effective and consistent use of Volume V (Quality Maintenance) of the Joint Fleet Maintenance Manual by TYCOMs.
- c. Ensure the scope of training through fleet schools provides the necessary skills for maintenance and management personnel to successfully support the QA program.
- d. Jointly authorize changes to this volume after evaluation and analysis of proposed changes by each TYCOM.
- e. Review TYCOM QA program by sponsoring an annual Quality Assurance Officer (QAO) Conference or Symposium, inviting TYCOM QAO and Naval Sea Systems Command (NAVSEA) technical authorities. The stated purpose should be to establish common trends, discussions of various QA concerns, improvements, and required actions.
- f. Ensure assessments of FMAs and RMCs occur per Volume IV, Chapter 2, paragraph 2.1.1 of this manual.

1.4 TYPE COMMANDER RESPONSIBILITIES.

- a. (Submarines only) Obtain NAVSEA approval for exception to Re-Entry Control (REC) requirements.
- b. Administer a Departure from Specification (DFS) system to:
 - (1) Establish and maintain an auditable method of processing requests for approval of DFS.
 - (2) Review and evaluate DFS requests and obtain clarification of technical specifications from NAVSEA where appropriate.
 - (3) Approve or disapprove DFS requests.
 - (4) Obtain NAVSEA approval of DFS when required by the appropriate NAVSEA technical specification or manual.
 - (5) Keep NAVSEA informed of all major DFS requests.

- (6) Provide a periodic status report of all outstanding major DFS to ISIC Material Officers for their action to ensure their records agree with TYCOMs and to pursue DFS clearance.
 - (7) Conduct liaison with NAVSEA on outstanding major DFS requiring NAVSEA action. Provide a periodic status report to NAVSEA of those DFS for which NAVSEA action is overdue.
 - (8) Ensure outstanding DFS for deploying or returning ships are passed between parent and deployed ISICs as required by paragraph 1.5.1.g.(6) of this chapter.
 - (9) (Surface Force Ships and Aircraft Carriers only). Maintain a file of all outstanding DFSs.
- c. Perform assessments of nuclear FMAs annually, not to exceed 18 months.
 - d. (Submarines only) Perform assessments of ISICs annually not to exceed 18 months.
 - e. Perform assessments of FMAs non-nuclear programs annually not to exceed 18 months.
 - f. At the discretion of the TYCOM perform random, unannounced ISIC, FMA and ship QA assessments and monitor visits.
 - g. Review and evaluate FMA and ISIC reports of corrective action taken on QA assessments to ensure compliance with this program.
 - h. (Submarines only) Maintain a system to provide Submarine Safety (SUBSAFE) certification for submarines.
 - i. Perform an annual self-evaluation of the QA program and provide a copy to the Fleet QAO. For Submarine TYCOMs, the self-assessment will also include SUBSAFE, Submarine Fly-By-Wire Ship Control System (FBW SCS) and Deep Submergence Systems programs and a copy of the assessment should be forwarded to NAVSEA.
 - j. Evaluate and analyze proposed changes to this volume.
 - k. (Submarines Only) Perform annual SUBSAFE, Scope of Certification (SOC) and FBW SCS awareness training for staff members that routinely review SUBSAFE, SOC or FBW SCS Objective Quality Evidence, make determinations on SUBSAFE, SOC or FBW SCS DFSs and perform other SUBSAFE, SOC or FBW SCS work oversight functions.
 - l. (Submarines only) For FBW SCS, DSS-SOC, and SUBSAFE, develop and implement the necessary instructions and procedures to meet the requirements of references (a), (b) and (c), to ensure these requirements are adhered to during the life cycle of the ship.
 - m. (Submarines only) Maintain FBW SCS certification per reference (a). In relation to the planning and performance of post Upgrade, Alteration or Major Repair Work Sea Trials for maintaining FBW SCS certification of previously certified submarine FBW SCS, TYCOM must:
 - (1) Approve at-sea testing developed by the In-Service Engineering Activity (ISEA) following Upgrade, Alteration or Major Repair Work and apply

15 Jan 2021

appropriate restrictions and in each message state that ship's speed is restricted to 20 knots or less when an FBW SCS fault condition results in a major nonconformance affecting control of ship's pitch, heading, depth and control surfaces. The ship's speed is restricted to 20 knots or less until satisfactory resolution of the major non-conformance and TYCOM approval to operate the FBW SCS to previously authorized conditions is granted, unless specifically addressed in the Sea Trial agenda or as stated in Departure From Specifications, Deviations or Waivers.

- (2) Following verification from the ISIC of satisfactory completion of all at-sea testing, correction of all mandatory deficiencies, receipt of certification that the FBW SCS material condition of those parts of the ship installed, repaired or tested by the ISEA or activity performing the work is satisfactory, and upon confirmation that FBW SCS certification was not affected for those portions of ship FBW SCS not affected by the ISEA or activity performing the work, issue a message to the ship, with copies to Chief of Naval Operations (CNO), ISIC and NAVSEA, certifying the FBW SCS and authorizing FBW SCS unrestricted use in support of submarine unrestricted operations or specifically identify any operating restrictions of the ship or system.
- n. (Submarines only) For assigned activities, provide NAVSEA 07Q informational copies of critiques, trouble reports and incident reports for SUBSAFE, FBW SCS, Deep Submergence System (DSS) or SOC issues that result in a problem severity level of Level 1 (critical) or Level 2 (serious) as defined in reference (d).

1.5 IMMEDIATE SUPERIOR IN COMMAND RESPONSIBILITIES. ISICs are responsible to the TYCOM for the following:

NOTE: (SUBMARINES ONLY) WHEN ISIC FUNCTIONS ARE DELEGATED OUTSIDE OF THE SQUADRON (NAVAL SUBMARINE SUPPORT COMMAND, SUBMARINE SQUADRON SUPPORT CENTER, ETC.) THERE MUST BE A FORMAL TRANSFER OF RESPONSIBILITY VIA A MEMORANDUM OF AGREEMENT (MOA) OR OTHER FORMAL METHOD.

- a. Organize and implement a QA program to carry out the provisions of this volume.
- b. (Submarines only) Organize and implement a program to verify performance of required maintenance to sustain the material condition necessary to support Unrestricted Operations (URO) to authorized operating depth per the applicable class URO Maintenance Requirement Card (MRC) manual, and this volume.
- c. (Submarines, Aircraft Carriers, Readiness Support Groups and RMCs only) Organize and implement a work request screening process such that those jobs requiring special controls are recognized and the supporting technical documentation is provided to the maintenance activity as required by this volume.
- d. (Submarines only) Review Ship's Force Controlled Work Packages (CWP) for FMA accomplished nuclear work as required by Part I, Chapter 2, Appendix E, Technical Work Document (TWD) Review and Approval matrix, of this volume.

- e. (Submarines only) Ensure ship's certification continuity report, when required by this volume, is received before the ship is underway. Review the ship's underway certification continuity report to ensure that it is in the proper format and includes all reports required. In particular, the ISIC will ensure all URO planned maintenance is up to date. Discrepancies noted must be resolved prior to underway.
- f. Review and sign the MOA required by Volume II, Part I, Chapters 3 and 4, of this manual. This agreement will list the responsibilities and actions of each party before start of any availability (e.g., unscheduled availabilities, Tiger Team repairs, technical assist visits) that involves work within SUBSAFE, FBW SCS, nuclear or Level I certification boundaries to ensure responsibilities for recertification of work performed is not split between maintenance activities and that each activity is responsible to certify the work they performed.
- g. (Submarines only) Administer a DFS system to:
 - (1) Establish and maintain system of processing requests for DFSs.
 - (2) Review and evaluate DFS requests and obtain clarification of technical specifications from TYCOM or NAVSEA where appropriate.
 - (3) Approve or disapprove DFS requests.
 - (4) Obtain TYCOM or NAVSEA approval of DFS when required by the appropriate TYCOM, NAVSEA directive, technical specification or manual.
 - (5) Ensure the deployed ISIC directing the supporting FMA will act as the cognizant ISIC for those actions required to approve, review and track DFSs for ships deployed. The parent ISIC, with concurrence from the deployed ISIC, may, on a case-by-case basis, perform these functions. In such cases, the parent ISIC will inform the deployed ISIC when such action(s) concurred upon is or are complete.
 - (6) The parent ISIC will provide a complete file of all outstanding DFSs to the deployed ISIC, prior to any ship deployment. The deployed ISIC will provide a complete file of all outstanding DFSs to the parent ISIC at the end of deployment.
 - (7) Specify procedures for:
 - (a) Submission of OPNAV form 4790/2K for DFS that require a future maintenance action to clear the departed condition.
 - (b) Submission of OPNAV form 4790/CK for permanent repair DFS which result in new Allowance Parts List and Coordinated Shipboard Allowance List support requirements.
 - (8) Keep parent ISIC apprised on the status of DFSs for deployed units.
 - (9) Maintain files of outstanding DFSs.
 - (10) Aggressively pursue clearing of DFSs.
- h. Monitor the QA program and procedures of assigned FMA periodically and monitor corrective actions on discrepancies noted during the last TYCOM audit.

- i. Schedule and conduct a QA Program assessment in conjunction with the Fleet Readiness Training Plan (or as determined by each TYCOM) of all assigned ships to ensure the repair actions undertaken by Ship's Force conform to the provisions of the QA Program as well as pertinent technical requirements.
- j. Review and endorse TYCOM audit report of assigned FMA(s).
- k. Conduct periodic monitoring of Ship's Force work and QA program on all assigned ships during maintenance periods.
 - (1) Perform at least one surveillance during each refit, upkeep or FMA availability.
 - (2) Conduct monitoring during industrial availabilities (e.g., Selected Restricted Availability, Drydocking Selected Restricted Availability, Extended Refit Period, Post Shakedown Availability, Phased Maintenance Availability, Docking Phased Maintenance Availability, Depot Modernization Period, Engineered Refueling Overhaul and Regular or Refueling Overhaul).
- l. (Submarines only) Perform annual SUBSAFE, SOC and FBW SCS awareness training for staff members (Submarine Squadrons and associated Naval Submarine Support Centers and Performance Monitoring Teams to include Weapons, Combat Systems and Material Departments with the associated Chain of Command) that routinely review SUBSAFE, SOC or FBW SCS objective quality evidence, make determinations on SUBSAFE, SOC or FBW SCS DFSs, perform other SUBSAFE, SOC or FBW SCS work oversight functions.
- m. (Submarines only) Conduct an oral interview of relieving Ship's Force QAO which covers the following topics as a minimum:
 - (1) URO Program Management including a review of the ship's current URO Schedules and Inventories and completion procedures.
 - (2) DFS Program Management including a review of all outstanding departures.
 - (3) QA Training and Qualification Program.
 - (4) QA Surveillance and Assessment Program including a review of the ship's last ISIC QA Assessment and corrective actions.
 - (5) CWP opening and closing review processes.
- n. Ensure fact-finding critiques are held to establish underlying causes and pursue corrective actions when necessary. When major errors or problems occur during maintenance that affect Nuclear, Level I, FBW SCS, Submarine Flight Critical Components (SFCC), DSS, SOC or SUBSAFE work, a critique may be necessary. Examples include when significant problems or trends occur or those that did result or could result in incidents, significant unplanned rework, serious equipment damage, malfunction or personnel injury. Minor problems are isolated deficiencies with minimal overall impact and no significant consequences; these should normally be corrected on the spot and without expending much time and effort.

15 Jan 2021

- (1) (Submarines only) Contact the ISIC immediately for issues which will result in a SUBSAFE, FBW SCS, DSS or SOC critique, SUBSAFE, FBW SCS, DSS or SOC trouble report, or SUBSAFE, FBW SCS, DSS or SOC fact-finding.
- (2) (Submarines only) Additional guidance and direction for critiques is contained in reference (d).
- (3) (Submarines only) Copies of critiques and incident reports for SUBSAFE, FBW SCS, DSS or SOC issues that result in a problem severity level of Level 1 (critical) or Level 2 (serious) will be sent to the TYCOM electronically.

NOTE: THE ISIC IS ONLY RESPONSIBLE TO AUDIT FBW WORK PERFORMED BY FORCES AFLOAT **OR** TYCOM MANAGED ACTIVITIES.

- o. (Submarines only) ISIC responsibilities. Maintain FBW SCS certification per reference (a). In relation to the planning and performance of post Upgrade, Alteration or Major Repair Work Sea Trials, for maintaining FBW SCS certification of previously certified submarine FBW SCS, the ISIC must:
 - (1) Provide sufficient time for crew training during the Upgrade, Alteration or Major Repair Work period to permit Ship's Force to attain a level of knowledge and proficiency of the FBW SCS adequate to ensure proper operation and safety of the ship and its personnel during Sea Trials. ISIC must also ensure crew has proper number of trained operators.
 - (2) Conduct FBW SCS Certification Audits of Upgrade, Alterations or Major Repair Work and issue report to the activity. Audits must be conducted using the TYCOM provided FBW Certification Audit Checklist at a minimum. Provide a copy of the FBW SCS Certification Audit Report to the Supervising Authority, ship's Commanding Officer, TYCOMs, Fleet Commanders and NAVSEA.
 - (3) Following Upgrade, Alteration or Major Repair Work report, by message, crew readiness and prior to each underway until certified, verification from the ISEA or activity performing the work that all work performed by the ISEA or activity performing the work necessary for at-sea testing or Sea Trials has been completed, including resolution of ISIC FBW SCS Certification Audit Deficiencies recommendations and status of incomplete ISIC FBW SCS Certification Audit Category Deficiencies, and that the material condition of those parts of the ship installed, repaired, or tested by the ISEA or activity performing the work is satisfactory, certify to the TYCOM, with information copies to the CNO, the appropriate Fleet Commander and NAVSEA, that the FBW SCS material condition of those parts of the ship installed, repaired or tested by the ISEA or activity performing the work is satisfactory for Sea Trials following approved at-sea tests or Sea Trial agenda.
 - (4) Following verification from the ISEA or activity performing the work of satisfactory completion of all at-sea testing or trials, completion of controlled dives, correction of all mandatory Sea Trial deficiencies, and resolution of all ISIC FBW SCS Certification Audit Category IA recommendations, certify to the TYCOM, with information copies to CNO, the appropriate Fleet

15 Jan 2021

Commander and NAVSEA, the FBW SCS material condition of those parts of the ship installed, repaired, or tested by the ISEA or activity performing the work is satisfactory, and recommend authorization for FBW SCS unrestricted use in support of submarine unrestricted operations, subject to ISIC verification that FBW SCS certification of areas outside ISEA or activity performing the work tasking has been sustained, or specifically identify any operating restrictions of the ship or system.

- p. (Submarines only) The ISIC will transmit a Submarine Material Transfer Message to the gaining ISIC for deploying or deployed submarines when the unit out chops to include the following:
 - (1) Status of outstanding Casualty Reports.
 - (2) Status of outstanding Z0ZZ.
 - (3) Status of outstanding (SUBS).
 - (4) Status of active DFS actions.
 - (5) Status of Periodic Maintenance Requirements (Integrated Maintenance and Modernization Plans and UROs) for accomplishment.
 - (6) Status of Alterations for accomplishment.
 - (7) Status of Pre-Overhaul Tests or Pre-Availability Testing for ships within 12 months of a scheduled CNO availability.
 - (8) Current Operational Interval or Operational Cycle expiration dates.
 - (9) Status of Material Condition Assessment if in progress.
 - (10) (SOC Only) Report the following information for assigned DSS (LOT, LOC, DDS):
 - (a) Date of last Internal Survey.
 - (b) Date of last Sustaining Certification Survey.
 - (c) Status of any outstanding survey audit cards.
- q. (Submarines only) Prior to submerged underway operations when submarines are in a port with an ISIC, or when a submarine is in an availability such as Continuous Maintenance Availability, Interim Drydocking, Emergent Availability or CNO Availability, the ISIC QAO must complete a QA Pre-Underway Checklist. Appendix A of this chapter provides the minimum requirements for the QA Pre-Underway Checklist.

1.6 SHIP RESPONSIBILITIES.

1.6.1 Ship's Commanding Officer. Commanding Officer is responsible to:

- a. Designate a QAO in writing who will have sufficient time on board to maintain program continuity.
- b. Approve Technical Work Document (TWD) as required in Part I, Chapter 2, Appendix E, TWD Review and Approval matrix, of this volume.

- c. (Submarines only) Provide the ISIC a written report of ship's certification continuity prior to underway, as specified in Part I, Chapter 5, paragraph 5.6.8 of this volume.
 - d. (Submarines only) Organize and implement a program to ensure performance of required maintenance to sustain the material condition necessary to support URO to authorized operating depth per the applicable class URO MRC manual and Volume VI of this manual.
 - e. (Submarines only) Organize and implement a program to ensure performance of required maintenance to sustain the material condition necessary to support FBW unrestricted operations per reference (a).
 - f. (Submarines only) Organize and implement a program to ensure performance of required maintenance to sustain the material condition necessary to support DSS-SOC certification (if required) per reference (b).
 - g. (Submarines only) Approve and sign all recertification Reactor Plant Work Accomplishment Reports (RPWAR) and ensure these documents are forwarded to the Reactor Plant Planning Yard with copy to NAVSEA Nuclear Propulsion Directorate (08), TYCOM and ISIC.
 - h. Certify all QA personnel qualifications (respective Department Head on Aircraft Carriers).
 - i. Review and sign with the shipyard or other industrial activity, RMC, FMA and ISIC, an MOA on responsibilities and action of each party with respect to work accomplishment prior to start of SUBSAFE, nuclear, FBW SCS or Level I work per this manual.
 - j. Approve DFSs per Part I, Chapter 8 of this volume.
- 1.6.2 Ship's Executive Officer. Executive Officer is responsible for the following:
- a. Monitoring the QAO's administration of the ship's QA Audit, surveillance, training and qualification programs.
 - b. Providing senior command level authority to back-up the QAO in the performance of the QAO's duties.
 - c. Spot checking performance of QA training by attending or monitoring training periodically.
 - d. Assigning an Assistant Quality Assurance Officer (AQAO) who is an E-6 or above to be an administrative assistant to the QAO.
 - e. (Submarines only) Ensure Department Heads, Division Officers and Work Center Supervisors are meeting all quality maintenance requirements for the control and documentation of material deficiencies. This should include verification that the ship, departments and work centers have an adequate process to ensure that Quality Maintenance deficiencies reported by outside agencies (e.g., PMT, TSRA, INSURV) are promptly and properly documented.
- 1.6.3 Ship's Department Head. Department Heads are responsible to:

- a. Ensure area(s) in or adjacent to their work centers, divisions and spaces are designated for the stowage of controlled material per Part I, Chapter 6 of this volume.
- b. Review or approve Formal Work Package (FWP) and TWD as required in Part I, Chapter 2, Appendix E, TWD Review and Approval matrix, of this volume.
- c. Ensure personnel in their departments involved in performing, planning, approving or supervising shipboard maintenance on SUBSAFE, nuclear, FBW SCS and Level I systems participate in QA training.
- d. Verify the department maintains sufficient numbers of qualified Quality Assurance Inspectors (QAI) and Controlled Material Petty Officers (CMPO).
- e. Participate in oral examination of shipboard QAI and Quality Assurance Supervisor (QAS) assigned to their departments.
- f. Ensure personnel within their departments perform QA surveillance, qualification, training, etc. as defined in this volume.
- g. Review and approve information submitted to the FMA for identification of controlled work. This information must include a TWD serial number when required by Part I, Chapter 2 of this volume. This review will also ensure that the work request identifies specific categories applicable in each of the following situations as required by this volume:
 - (1) SUBSAFE.
 - (2) Level I.
 - (3) Submarine Antenna Engineering Directorate (SAED).
 - (4) Nuclear.
 - (5) Special cleanliness requirements.
 - (6) Special testing requirements.
 - (7) Special fabrication requirements.
 - (8) DFS.
 - (9) SOC.
 - (10) SFCC.
- h. Ensure fact-finding critiques are held to establish underlying causes and pursue corrective actions when necessary. When major errors or problems occur during maintenance that affect Nuclear, Level I, FBW SCS, SFCC, DSS, SOC or SUBSAFE work, a critique may be necessary. Examples include when significant problems or trends occur or those that did result or could result in incidents, significant unplanned rework, serious equipment damage, malfunction or personnel injury. Minor problems are isolated deficiencies with minimal overall impact and no significant consequences; these should normally be corrected on the spot and without expending much time and effort.

15 Jan 2021

- (1) (Submarines only) Contact the ISIC immediately for issues which will result in a SUBSAFE, FBW SCS, DSS or SOC critique, SUBSAFE, FBW SCS, DSS or SOC trouble report, or SUBSAFE, FBW SCS, DSS or SOC fact-finding.
 - (2) (Submarines only) Additional guidance and direction for critiques is contained in reference (d).
 - (3) (Submarines only) Copies of critiques and incident reports for SUBSAFE, FBW SCS, DSS or SOC issues that result in a problem severity level of Level 1 (critical) or Level 2 (serious) will be sent to the TYCOM electronically.
- i. Review DFS for technical accuracy and sign.
 - j. Spot check performance of QA training by attending or monitoring training at least quarterly.
 - k. (Aircraft Carriers only) Certify QA qualifications for personnel assigned to their department by signing the applicable Personnel Qualification Standard cover sheet of reference (e).

1.6.4 Ship's Supply Officer. The Supply Officer is responsible to:

- a. Ensure procurement, receipt and stowage of Nuclear, SOC, SFCC, SAED - Submarine Antenna Quality Assured Material and Level I materials are in compliance with this volume, applicable material control standards and instructions.
- b. Designate and maintain areas for stowage of Level I (LI) and SOC stock program material, SFCC and Nuclear Repair Parts (NRP) in the custody of the supply department.
- c. File the Supervisor of Shipbuilding letter of certification for Level I, SFCC and NRP which are in the custody of the supply department.
- d. Turn over the material certification documentation (or copy of, when only partial issue of lot) for LI, SOC, SEAWOLF Class Component (SW) or VIRGINIA Class Component (VU) stock program material and NRP to the customer.
- e. Send LI, SOC stock program material, NRP, SW, VU and copies of material certification documents to FMA work centers when the ship is providing the material.
- f. Ensure copies of the material certification documents are forwarded to the requesting activity, when LI, SOC stock program material, SFCC and NRP items are removed from own ship's systems or from onboard repair parts.
- g. Return defective LI, SOC stock program material, SW, VU and NRP to the Navy supply system and submit defective material reports following supply department procedures.
- h. Ensure appropriate supply department personnel receive training on nuclear and non-nuclear controlled material certification, procurement, receipt inspection and LI, SOC stock program material, SW, VU and NRP stowage requirements.

1.6.5 Ship's Engineer Officer (Submarines only). The Engineer Officer is responsible to:

- a. Submit blank RPWAR forms to the FMA with each work request and CWP serial number, when FMA assistance is necessary for reactor plant SUBSAFE work. Ensure all work requests requiring special reactor plant SUBSAFE work controls are properly identified.
- b. Verify continuity of reactor plant SUBSAFE certification by controlling and documenting work and tests performed for each Re-Entry.
- c. Review and sign the necessary recertification information on the applicable RPWAR pages for repairs requiring RPWAR submission and forward the original to the Reactor Plant Planning Yard with a copy to NAVSEA 08, TYCOM and ISIC.
- d. Maintain current the reactor plant hull integrity records using the completed RPWAR, filed in an auditable manner with the latest revision of the NAVSEA drawing "Status of Reactor Plant Work Accomplishment Reports for (individual ship)". Reproducible blank RPWAR will also be maintained in this same file to support future maintenance. Documentation of the actual maintenance performed and testing accomplished by Ship's Force is to be maintained in the ship's completed CWP file required by this volume.
- e. Review or approve Oxygen, Nuclear and SUBSAFE CWPs as required by Part 1, Chapter 2, Appendix E of this volume.
- f. Coordinate with the Ship's QAO and Engineering Department Master Chief to incorporate QA training as required by Part I, Chapter 3 and Part III, Chapter 3 (as applicable) of this volume and reference (a) (as applicable) into the Engineering Department Training Plan.

1.6.6 Availability Coordinator (Submarines only). A submarine served, nuclear-trained Limited Duty Officer will be assigned to augment the normal ship's complement during Depot Modernization Periods, Engineered Refueling Overhauls, or Engineered Overhauls and will act as the Availability Coordinator for the ship. The Availability Coordinator's responsibilities include:

- a. Become a knowledgeable member of the availability project team.
- b. To support these requirements, the Availability Coordinator will be assigned as early as possible during the pre-availability test and inspection period, nominally 15 months before the availability starts. Prior to reporting to the submarine, the Availability Coordinator will be trained in shipyard processes and Availability Work Package requirements per reference (f), Appendix H. After reporting to the submarine, the Availability Coordinator should spend a significant portion of his time working with the shipyard project team prior to the start of the availability. This may require that he remain ashore during key pre-availability planning phases while the submarine is at sea. Finally, to prevent interference with his responsibilities for availability planning and execution, the Availability Coordinator should not be assigned routine watch standing duties. He should maintain proficiency requirements (about two watches per month), but his watch standing duties should not interfere with daily project management routine or the increased pace of coordination associated with major key events (e.g., undocking).

- c. Educate or train Ship's Force on shipyard tools and processes to be used during the availability. This responsibility does not circumvent the requirements placed on the industrial activity to train Ship's Force, but the Availability Coordinator will coordinate and complement the training provided by the industrial activity.
- d. Coordinate the integration and execution of Ship's Force responsibilities during the availability planning and execution.
- e. Act as the primary liaison between Ship's Force and the shipyard project team.

1.6.7 Ship's Maintenance Manager (Aircraft Carriers only). Maintenance Manager is responsible to establish and maintain a Quality Deficiency Reporting Program for resolving quality issues for work performed by outside activities and to ensure that each work request or job order is screened for Quality Control and QA requirements and marked up or stamped as to specific category applicable in each of the following situations as required by this volume:

- a. Nuclear.
- b. Level I.
- c. Special cleanliness requirements.
- d. Special testing requirements.
- e. Special fabrication requirements.

1.6.8 Ship's Principal Assistant. Principal Assistants will be responsible for duties as assigned by the Engineer or Reactor Officer.

1.6.9 Ship's Division Officer. Division Officers are responsible to:

- a. Review TWD as required in Part I, Chapter 2 Appendix E, TWD Review and Approval matrix, of this volume.
- b. Review the FWP as required in Part I, Chapter 2, paragraph 2.3.4 of this volume.
- c. Verify controlled work is accomplished following an approved CWP.
- d. Ensure personnel assigned to their divisions perform QA surveillance, qualification, training, etc. as defined in this instruction.
- e. Supervise QA training of division personnel.
- f. Provide timely response to QA 14, indicating root cause analysis and actions taken.
- g. Issue unique identification numbers for brazers and welders.
- h. Maintain a log of unique identification numbers assigned to brazers or welders.
- i. Ensure annual validation of qualification is performed for brazers or welders and entries are entered into the individual service records.
- j. Maintain an auditable file for each brazer or welder assigned.
- k. Maintain an auditable log of each brazer or welder for proper maintenance of qualification.

- l. (Submarines Only) Perform frequent reviews of the division's CSMP to ensure all quality maintenance requirements for control and documentation of material deficiencies have been properly entered.
- m. Ensure the CSMP references the active DFS and maintain a record of active DFS's in their work center.

1.6.10 Ship's Work Center Supervisor. Work Center Supervisor is responsible to:

- a. Review the FWP as required in Part I, Chapter 2, paragraph 2.3.4 of this volume.
- b. Have TWD prepared, when designated the Lead Work Center (LWC), and as required by Part I, Chapter 2, paragraph 2.2 of this volume:
 - (1) Verify the FWP provides the correct written instructions, both in sequence and requirements, to satisfactorily accomplish the controlled work.
 - (2) Verify the FWP contains or lists the correct technical specifications or requirements (e.g., torque values, dimensions, Nondestructive Testing (NDT) inspection, special cleanliness, recertification test) for certification attributes to be documented on the appropriate QA form.
 - (3) Ensure signatures for repair work attributes are annotated as requiring Certification Signature Block (CSB) or signature, as applicable, on the QA form and in the FWP as discussed in Part I, Chapter 2 of this volume by use of (R), (S), (C), (I), (Q) and (V) in the margin by the appropriate step.
- c. Ensure all controlled work is accomplished following approved CWP.
- d. Ensure proper work authorizations have been obtained prior to starting work.
- e. Ensure tools, measuring and test equipment used during maintenance and testing are of proper range, scale and in calibration.
- f. Conduct QA training of work center personnel.
- g. Ensure work center personnel are properly trained and qualified, if required, prior to assignment to tasks requiring QA or special cleanliness (e.g., oxygen, hydrogen, reactor plant, steam plant) certifications.
- h. Ensure only material specified by the applicable drawings, standards, or specifications is ordered and installed.
- i. Submit request for use of rejected material using a Reject Tag (QA form 3).
- j. Obtain written permission from the QAO to downgrade LI stock program material, NRP, or controlled material for non-level use.
- k. Supervise QA programs within assigned work centers.
- l. Review work for satisfactory completion.
- m. Ensure CWPs for completed controlled work are complete, properly reviewed and forwarded with all certifying documents.

- n. Initiate a DFS for non-nuclear or Liaison Action Request (LAR) for nuclear tests, inspections, material or other requirements of any maintenance action in which the requirements were not met.
- o. (Submarines Only) Frequently review all material deficiencies identified within the work center to ensure all quality maintenance requirements for control and documentation of material deficiencies are properly documented in the CSMP with emphasis on SUBSAFE, FBW-SCS and DSS-SOC as applicable. Verify deficiencies have an active DFS when required.
- p. Provide inputs to the QAO for any changes in CSMP entries for active DFS's.

1.6.11 Ship's Craftsman. Craftsman is responsible to:

- a. Perform all maintenance actions following the approved procedure. If that guidance is either incorrect, incomplete or unclear, stop and seek clarification from the work center or shift supervisor.
- b. Ensure QA forms associated with the maintenance are correctly completed per the applicable sections of this volume.
- c. Enter signature, printed name and date on all QA data forms completed.
- d. Initiate a DFS for non-nuclear or LAR for nuclear tests, inspections, material or other requirements of any maintenance action in which the requirements were not met.
- e. Ensure only Test, Measuring and Diagnostic Equipment (TMDE) (i.e., measuring devices, instruments, inspection tools, gauges, jigs or fixtures), which have current calibration stickers or records attached or available, are used for production, acceptance and testing. Uncalibrated or untested TMDE will be tagged and removed from service immediately.

1.6.12 Ship's Quality Assurance Officer. QAO is responsible to:

- a. Administer the ship's QA program.
- b. Review TWD as required in Part I, Chapter 2, Appendix E, TWD Review and Approval matrix, of this volume.
- c. Review the FWP as required in Part I, Chapter 2, paragraph 2.3.4 of this volume.
- d. Verify the FWP, in the CWP, specifies the correct OQE that is to be generated to prove recertification of the system or component.
- e. Verify the testing requirements for controlled work, called out in the FWP, are correct and per the latest applicable specifications as required by Part I, Chapter 2, paragraph 2.3 of this volume.
- f. Verify completed test results for controlled work fully satisfy test requirements, or corrective action is taken.
- g. Review and close out all TWDs for work on systems or components required for reactor plant startup, propulsion plant startup or ship's underway operations (e.g., if the work is on a spare component it may not be necessary to close the TWD) prior to startup or getting underway.

- h. Maintain the following record files per Part I, Chapter 10, paragraph 10.5 of this volume:
 - (1) Completed CWPs.
 - (2) QA Assessments, audits, surveillance and deficiency correction.
 - (3) Controlled material.
- i. Determine suitability for use of Level I, SOC, SFCC or Nuclear Level I material from another ship in own ship's system, when the transfer is directly from the donating ship.
- j. Provide disposition instructions for material rejected at receipt inspection.
- k. Obtain chemical analysis, NDT, destructive testing and generic materials identity testing results as required by Part I Chapter 6 of this volume to certify material for use in a certified (e.g., Level I, SUBSAFE, Nuclear, Scope of Certification) system.
- l. Provide technical services to the Supply Officer for determining material requirements.
- m. Authorize downgrading of LI stock program material, NRP or controlled material for non-level use.
- n. Review requests for DFS for accuracy and technical merit, and forward to Department Head.
- o. Maintain an auditable file of outstanding DFS and the record of DFS numbers assigned. Prior to each underway following any scheduled Fleet or CNO Maintenance Availability, the ship's QAO will audit active DFSs against associated Job Control Numbers to verify a current up to date entry in the Current Ship's Maintenance Project exists.
- p. Maintain a file of DFS which have been approved as permanent repairs and result in change in configuration until they are reflected in ship's drawings.
- q. Verify ship's mapping plans and selected records and drawings are updated (marked up) when approved DFS authorize a change in configuration as a permanent repair.
- r. Submit DFS clearance reports, using Departure Clearance Report (QA form 12A) to the approving authority when the work was done which corrects specific DFS. DFS clearance reports, using a QA-12A, may also be submitted by the ISIC or authorized repair NSA correcting the specific DFS. If unable to use a QA form 12A, use the message format of Part I, Chapter 8, Appendix B, of this volume.
- s. Manage the ship's internal QA Audit and Surveillance program as required by Part I Chapter 9 of this volume. Coordinate with the ship's Executive Officer to resolve surveillance scheduling and accomplishment problems.
- t. **The QAO will create and manage a long range training plan ensuring** that QA training is conducted as required by Part I, Chapter 3 and Part III, Chapter 3 (as applicable) of this volume and reference (a) (as applicable). The QAO will attend QA training when practical.

- u. Assess QA training and provide input to Engineering Department Master Chief and Ship's Engineer for incorporation into the periodic Engineering Department Training assessment as required by reference (g).
- v. Implement a formal qualification program for QAIs, CMPOs, Cleanliness Inspector, Certifiers, QASs, Work Center Supervisors and Maintenance Planners (if assigned).
- w. Conduct oral qualification interviews for QAIs, QASs, CMPOs, Cleanliness Inspector and Certifiers, Work Center Supervisors and Maintenance Planners.
- x. Maintain a current master list of qualified CMPOs, Controlled Material Handlers (CMH), Cleanliness Inspectors, QAIs, QASs (if assigned), Oxygen Clean Workers, Oxygen Clean Instructors, Work Center Supervisors and Maintenance Planners as specified in Part I, Chapter 10 of this volume.
- y. (Submarines only) Verify all reactor plant hull integrity area maintenance is accomplished following appropriate directives.
- z. (Submarines only) Verify the appropriate work control is initiated for work within the SUBSAFE, SOC and FBW SCS certification boundary.
- aa. (Submarines only) Maintain SUBSAFE and SOC RECs and FBW CWP records including the CWP log.
- ab. (Submarines only) Coordinate with the ISIC and the FMA to ensure the administration, scheduling and reporting of the URO MRC program is per the applicable class URO MRC manual, and this volume.
- ac. (Submarines only) Retain any QA form 34 generated in connection with controlled assembly performed as a REC exception per Part I, Chapter 5, paragraph 5.6.7, Note 3 of this volume.
- ad. Review in detail as many non-nuclear NDT weld records as possible (minimum of 10 percent per year) to ensure that all of the requirements of the applicable fabrication documents have been and are continuously being met.
- ae. Verify an active Job Control Number exists for all active temporary DFSs at the completion of all scheduled Fleet Maintenance Activity Availabilities, major or minor, CNO availabilities or at least quarterly and maintain an auditable record of the verification until superseded.
- af. (Submarines only) At the end of a scheduled FMA upkeep, verify all SUBSAFE deficiencies documented in the ship's Current Ship's Maintenance Project have been corrected or have an appropriate DFS.
- ag. (Submarines only) Prior to submerged underway operations when submarines are in a port with an ISIC, or when a submarine is in an availability such as Continuous Maintenance Availability, Interim Drydocking, Emergent Availability or CNO Availability, the ship's QAO **will** complete a QA Pre-Underway Checklist with the ISIC QAO. Appendix A of this chapter provides the minimum requirements for the QA Pre-Underway Checklist.

1.6.13 Ship's Assistant Quality Assurance Officer. A QAO is responsible to perform duties as assigned by the QAO.

1.6.14 Ship's Quality Assurance Supervisor. QAS, if assigned, will perform the duties as specified in paragraph 1.7.13 of this chapter.

1.6.15 Ship's Quality Assurance Inspectors. QAIs are responsible for coordinating and administering the QA Program within their respective work centers. The QAI will:

- a. Develop a thorough understanding of the QA program.
- b. After verifying work completed, enter initials or signature (as required by the form, tag or procedure), and the date on all applicable QA forms, tags and CWP steps.
- c. Verify QA form 2 is filled out correctly and attached to items removed from a controlled system for transfer to another Fleet activity and ensure items received from another ship have QA form 2 tags attached.
- d. As LWC QAI, review each CWP prepared which requires QAI CSBs to verify inspection requirements are adequately addressed before submission to QAO or Department Head as required by Part I, Chapter 2, Appendix E, of this volume.
- e. Verify all work inspected meets the minimum requirements set forth in latest applicable plans, specifications and directives of higher authority as stated in the FWP.
- f. Perform QA inspections of certification attributes as required by Part I, Chapter 5, of this volume.
- g. Ensure all inspections beyond the capability of the QAI are performed by FMA inspectors prior to final acceptance or installation of the product by the ship.
- h. Ensure only TMDE (i.e., measuring devices, instruments, inspection tools, gauges, jigs or fixtures), which have current calibration stickers with records attached or available, are used for production, acceptance and testing. Uncalibrated or untested TMDE will be tagged and removed from service immediately.
- i. Ensure items removed from controlled systems are tagged with QA form 2 when required by Part I, Chapter 6 of this volume. Tags are not required if material is nuclear non-Level (Level N/A) or non-nuclear non-level.
- j. Ensure controlled material (Level I, Nuclear Level I, Material Control Division A & B, SFCCs) delivered to a RMC or FMA work center for work is tagged with a QA form 2.
- k. Report all work and testing discrepancies or deficiencies to the department head and the QAO via chain of command. Ensure the deficiency is resolved before work continues.
- l. Sign QA form 2 when controlled material is installed for SUBSAFE and nuclear systems.
- m. As LWC QAI, review all completed QA forms and data sheets for accuracy, completeness and technical correctness.

- n. Reject untraceable, damaged, or unclean controlled material using a material reject tag (QA form 3).
- o. Witness controlled assemblies, as a second party not involved in the actual work.
- p. (Submarines only) Complete the necessary recertification information for maintenance performed by Ship's Force; for material changes, replacement, material generic identification (if not previously documented) or fastener torque on the applicable blank RPWAR pages and submit to the Engineer Officer for review prior to approval by the Commanding Officer. The general notes for report preparation and use, supplied with each RPWAR, will be used in completing the recertification form.
- q. Review certification testing as part of CWP preparation.
- r. Witness and document results of tests (hydrostatic, drop, joint tightness). Work center tests of components conducted by the FMA need not be witnessed, unless directed by the Department Head or FMA CWP. Promptly inform supervisors of unsatisfactory test results. Ensure test documentation is complete and accurate.
- s. Review DFS and LARs prepared by the work center for accuracy and technical merit, and forward to the Division Officer and QAO.
- t. Brief maintenance personnel and appropriate supervisors on applicable requirements before starting work. The brief must include at least the following:
 - (1) Inspection requirements.
 - (2) Acceptance criteria.
 - (3) Methods to maintain cleanliness.
 - (4) Required actions for a loss of cleanliness.

1.6.16 Ship's Controlled Material Petty Officer. CMPOs are responsible to:

- a. Ensure all material under their cognizance is stored and controlled to the requirements of references (a) or (f).
- b. Receipt inspect all LI stock program material, SFCC and NRP received by work center or division.
- c. Request disposition instructions for rejected material.
- d. Remove QA form 3 from previously rejected and now accepted controlled material, annotate the material acceptance on the QA form 2 and file the QA form 3 with the CWP.
- e. Maintain custody of controlled material in segregated stowage per reference (h).
- f. Inspect controlled material storage areas of their work center semi-annually, as a minimum per Part I, Chapter 6 of this volume.
- g. Ensure controlled material is properly stowed and handled so the identification of the subject material and its certification are always maintained.
- h. Ensure nuclear material received without Ready for Issue tags is certified to the required "Level of Essentiality".

- i. Reject unsatisfactory material. Fill out and attach QA form 3 and request disposition instructions.
- j. Send any material certification documents for material which has been provided by the ship to the RMC or FMA QA office. Ship should retain original.
- k. Perform receipt inspection of package alteration kits that contain controlled material when ready for use.
- l. Ensure controlled material markings are on all pieces when cutting a smaller piece from a larger one.
- m. Ensure controlled material markings are moved to an unaffected area, if the controlled material item will lose the markings due to a fabrication process (e.g., welding, machining) prior to the fabrication process.
- n. Ensure all controlled material is identified, color coded, marked and tagged as required by this volume and the applicable material control standard.

1.6.17 Ship's Cleanliness Inspector or Certifier. Cleanliness Inspectors or Certifiers are responsible to perform initial, in process and final cleanliness inspections during maintenance or repairs for those systems requiring cleanliness controls per Part I, Chapter 5, paragraph 5.4, of this volume.

1.6.18 Ship's Nondestructive Test Examiner. The ship's NDT Examiner must be appointed in writing by the Commanding Officer and must be responsible for all aspects of the command's Nondestructive testing program. NDT Examiner qualification and certification requirements are specified in reference (i). The following must comprise the core responsibilities of the ship's NDT Examiner:

- a. Coordinate the efforts of other assigned NDT examiners at the activity.
- b. Act as the command's point of contact for NDT technical issues. In addition, act as the command's point of contact with NAVSEA for NDT issues.
- c. Develop the command's NDT examiner guidelines, to include the command's written practice for NDT certification when required by reference (j) utilizing the input of all participating NDT examiners.
- d. Ensure submittal of required reports of certification or recertification to higher authority as required by reference (k).
- e. Review all requests for NDT training courses and examiner certification services. Provide recommendations to the chain of command regarding eligibility of the requestor, and the need for such training or certification based on current and projected NDT personnel resources.
- f. Approve examination material for all NDT methods utilized at the activity for which they are certified. Ensure examination material reflects changes made to applicable fabrication documents.
- g. Approve, and qualify NDT procedures for each method utilized at the activity. Revise and approve procedures as necessary when changes are made to applicable fabrication documents.

- h. Schedule and perform NDT Inspector surveillance. Maintain records of surveillance in order to perform trend analysis of inspector abilities and program effectiveness.
- i. Schedule and administer NDT examinations. Maintain records of examinations sufficient to trace inspector qualifications to original examination material. Maintain a matrix of high miss questions in order to assess inspector knowledge and program effectiveness.
- j. Train, certify and monitor NDT Inspectors as required by applicable specifications and Part I, Chapter 3 paragraph 3.5.1.a of this volume.
- k. Schedule eye examinations for NDT Inspectors.
- l. Ensure each NDT Inspector's service record is kept updated with qualification status.
- m. Maintain individual records of qualification for NDT inspectors.
- n. Monitor the welder or brazer qualification and training per reference (1).
- o. Review all welder or brazer qualification records for completeness, semi-annually.
- p. Review completed NDT inspection reports for technical completeness and accuracy and sign, where indicated on the report, on completion of work.
- q. Review, approve and monitor the command's welder or brazer training and qualification program as required by reference (1).
- r. Prepare and execute the training and qualification program for each NDT method that leads to inspector certification in each method and maintains inspector competency in each method.

1.6.19 Ship's Nondestructive Test Inspector. NDT Inspectors are responsible to:

- a. Verify CWP's which include NDT inspections properly identify the inspection requirements and acceptance criteria.
- b. Ensure NDT inspections are completed correctly and following the applicable requirement and inspection reports are technically complete and accurate.
- c. Ensure use of only TMDE (i.e., measuring devices, instruments, inspection tools, gauges, jigs or fixtures), which have current calibration stickers with records attached or available, for production, acceptance and testing. Uncalibrated or untested TMDE will be tagged and removed from service immediately.
- d. When no NDT Examiner is assigned, monitor the welder or brazer qualification and training per reference (1).

1.6.20 Ship's Maintenance Planner (Submarines and Aircraft Carriers only). Maintenance Planners are responsible to:

- a. Prepare the FWP or CWP as required in Part I, Chapter 2, paragraph 2.3.1.b of this volume.
- b. Perform ship check or job check to verify equipment configuration supports work package development.

- c. Develop FWP or CWP with the correct written instructions, both in sequence and requirements, to satisfactorily accomplish the work.
- d. Develop FWP or CWP with the correct technical specifications or requirements (e.g., torque values, dimensions, NDT inspection, special cleanliness, recertification test) for certification attributes to be documented on the appropriate QA form. Fill in all preplaced data required by QA form instructions prior to routing CWP.
- e. Ensure signatures for repair work attributes are annotated as requiring CSB or signature, as applicable, on the QA form and in the FWP as discussed in Part I, Chapter 2 of this volume by use of (R), (S), (C), (I), (Q) and (V) in the margin by the appropriate step.
- f. Ensure correct materials, spare parts and special test equipment to be used during maintenance and testing are called out in the materials section of the FWP.
- g. Initiate revisions to FWP or CWP when requirements of Part I, Chapter 2, paragraph 2.3.7.3.b(2)(b) and (d) of this volume are met.
- h. Maintain file of Standardized FWPs per Part I, Chapter 2, paragraph 2.3.7.10.e. of this volume, for their respective divisions. Submit Standardized FWPs to LWC Supervisor for approval prior to use.
- i. Initiate procurement of material specified by the applicable drawings, standards or specifications to complete the designated repairs.
- j. Prepare and route a DFS for non-nuclear or LAR for nuclear tests, inspections, material or other requirements of any maintenance action in which the requirements were not met.

1.7 REGIONAL MAINTENANCE CENTER OR FLEET MAINTENANCE ACTIVITY RESPONSIBILITIES.

1.7.1 RMC Commander or FMA Commanding Officer. Responsible for QA in the maintenance, repair and alteration of fleet ships as listed in sub-paragraphs “a” through “f”:

- a. Designate the RMC or FMA QAO in writing.
- b. (Submarines only) Provide a written report of certification to the tended ship, at the conclusion of a maintenance period and prior to a tended ship’s next underway.
- c. Certify the qualifications of QA personnel.
- d. Ensure the RMC or FMA has an effective audit and surveillance program capable of assessing work performance and identifying areas of poor performance.
- e. Initiate a semi-annual evaluation of the RMC or FMA QA Program by the QAO.
- f. (Submarines only) Implements all aspects of the SUBSAFE and FBW-SCS programs as delineated by references (a), (c), (d) and (m).

1.7.2 RMC Deputy Commander or FMA Executive Officer. Responsible for the following:

- a. Monitoring the QAO’s administration of the RMC or FMA’s QA surveillance, training and qualification programs.

- b. Providing senior command level authority to back-up the QAO in the performance of the QAO's duties.
- c. Spot checking performance of QA training by attending or monitoring training periodically.
- d. Assigning an AQAO who is an E-7 or above or a senior civilian to be an administrative assistant to the QAO.
- e. Assigning sufficient QASs and QAIs to the QA Division.

1.7.3 RMC Production Officer or FMA Repair Officer. Production Officer or Repair Officer is responsible to:

- NOTES: 1. AT TRIDENT REFIT FACILITIES SOME OF THESE RESPONSIBILITIES MAY BE UNDER THE COGNIZANCE OF THE PLANNING OFFICER. HOWEVER, THEY WILL NOT BE DELEGATED TO A LEVEL LESS THAN A DEPARTMENT HEAD.
2. WHERE NOTED, SOME OF THESE RESPONSIBILITIES MAY BE UNDER THE COGNIZANCE OF THE ENGINEERING DEPARTMENT HEAD AT AN RMC.
- a. Implement a work request screening process such that jobs requiring special controls are recognized.
 - b. Implement a QA Program that ensures all work accomplished by the Production or Repair Department meets the material and workmanship requirements of approved plans and specifications.
 - c. Provide liaison with other department heads when their functions are directly or indirectly related to the QA requirements of the Production or Repair Department.
 - d. Review and approve TWD as required in Part I, Chapter 2, Appendix E, TWD Review and Approval matrix, of this volume.
 - e. Review and approve the FWP as required in Part I, Chapter 2, paragraph 2.3.4 of this volume.
 - f. (Submarines only) Approve and sign all recertification RPWAR and ensure these documents are forwarded to the Reactor Plant Planning Yard with copy to NAVSEA 08, TYCOM and tended ship's parent ISIC.
 - g. Review all DFS initiated by the RMC or FMA.
 - h. (Submarines only) Review and approve all LARs initiated by the FMA.
 - i. Maintain a sufficient number of qualified personnel to adequately staff the QA Division. At RMCs this may be performed by the Quality Assurance Department Head.
 - j. Implement a formal training and qualification program for all personnel assigned to the Production or Repair Department who perform, plan, or supervise controlled work, covering QA requirements and practices.

- k. Designate nuclear or non-nuclear Metallographic Test Method Examiner and Generic Material Alloy Identification Examiners (as applicable). At RMCs this may be performed by the Quality Assurance Department Head.
- l. Verify the RMC or FMA has an effective audit and surveillance program capable of assessing work performance and identifying areas of poor performance. At RMCs, this may be performed by the Quality Assurance Department Head.
- m. Ensure fact-finding critiques are held to establish underlying causes and pursue corrective actions when necessary. When major errors or problems occur during maintenance that affect Nuclear, Level I, FBW SCS, SFCC, DSS, SOC or SUBSAFE work, a critique may be necessary. Examples include when significant problems or trends occur or those that did result or could result in incidents, significant unplanned rework, serious equipment damage, malfunction or personnel injury. Minor problems are isolated deficiencies with minimal overall impact and no significant consequences; these should normally be corrected on the spot and without expending much time and effort. At RMCs, this may be performed by the Engineering or Quality Assurance Department Head.
 - (1) (Submarines only) Contact the ISIC immediately for issues which will result in a SUBSAFE, FBW SCS, DSS or SOC critique, SUBSAFE, FBW SCS, DSS or SOC trouble report, or SUBSAFE, FBW SCS, DSS or SOC fact-finding.
 - (2) (Submarines only) Additional guidance and direction for critiques is contained in reference (d).
 - (3) (Submarines only) Copies of critiques and incident reports for SUBSAFE, FBW SCS, DSS or SOC issues that result in a problem severity level of Level 1 (critical) or Level 2 (serious) will be sent to the TYCOM electronically.
- n. Ensure that each work request or job order is screened for Quality Control and QA requirements and marked up or stamped as to specific category applicable in each of the following situations as required by this manual:
 - (1) SUBSAFE.
 - (2) Level I.
 - (3) SAED.
 - (4) Nuclear.
 - (5) Special cleanliness requirements.
 - (6) Special testing requirements.
 - (7) Special fabrication requirements.
 - (8) SOC.
 - (9) SFCC.
- o. (Submarine Repair Facilities). Oversees the implementation of the SUBSAFE, DSS-SOC and FBW-SCS programs as directed by references (a), (b), (c) and (m).

1.7.4 FMA Supply Officer. Supply Officer is responsible to:

- a. Designate area(s) for stowage of LI, SOC, SW or VU stock program material and NRP in the custody of the supply department.
- b. Ensure procurement, stowage, and issue of SAED – Submarine Antenna Quality Assured Material, Nuclear, SOC, SFCC and Level I materials are in compliance with the applicable material control standards, instructions and this volume.
- c. Ensure accompanying certification documents remain with the LI, SOC stock program material, SW, VU and NRP for which the supply department has custody.
- d. Turn over material certification documentation (or copy, if issuing other than the entire lot) for LI, SOC stock program material, SFCC and NRP to the customer.
- e. Return defective LI, SOC stock program material, SW, VU and NRP to the Navy supply system following supply department procedures. Submit defective material reports.
- f. Ensure appropriate supply personnel receive training on nuclear and non-nuclear material covering material certification, material procurement, receipt inspection, and LI, SOC stock program material, SW, VU and NRP stowage requirements.
- g. Ensure semiannual inventories of supply's LI, SOC stock program material, SW, VU and NRP are conducted.

1.7.5 FMA Nuclear Repair Officer. When assigned, the Nuclear Repair Officer is responsible to:

- a. Determine and specify the material requirements and the certification requirements for the NRP to be used in nuclear controlled work.
- b. Initiate procurement action for NRP required for accomplishment of nuclear tasks.
- c. Review and approve the FWP as required in Part I, Chapter 2, paragraph 2.3.4 of this volume.
- d. Prepare and issue the CWP, when OQE is required at the conclusion of the nuclear work and as required by Part I, Chapter 2 of this volume.
 - (1) Verify the FWP is the correct procedure, both in sequence and requirements, to satisfactorily accomplish the controlled work.
 - (2) Verify the CWP contains or lists the correct technical specifications or requirements (e.g., torque values, dimensions, NDT inspections, special cleanliness, test) for certification attributes to be documented on the appropriate QA form.
 - (3) Ensure test requirements for controlled work comply with the latest applicable specifications.
 - (4) Ensure signatures for repair work attributes are annotated as requiring CSB or signature, as applicable, on the QA form and in the FWP as discussed in Part I, Chapter 2 of this volume by use of (R), (S), (CI), (G), (C), (I), (Q) and (V) in the margin by the appropriate step.

- e. (Submarines only) Review and sign the necessary recertification RPWAR pages, as required by Part I, Chapter 5, paragraph 5.7, of this volume for repair or maintenance actions performed in Reactor Plant SUBSAFE or Hull Integrity areas by the FMA and forward to the QAO for review.
- f. (Submarines only) Maintain copies of approved RPWAR forwarded to the Reactor Plant Planning Yard in an auditable fashion.
- g. Provide the tended ship the test requirements and joints or components to be tested for recertification of FMA work prior to commencing work on the tended ship.
- h. Conduct oral examinations for qualification of personnel as reactor plant Cleanliness Inspector or Certifier.
- i. Ensure only appropriately trained or qualified personnel perform nuclear work.

1.7.6 RMC or FMA Planning and Estimating Officer. Planning and Estimating Officer is responsible to:

- a. Determine and specify the material requirements and the certification requirements for the LI, SFCC and other materials to be used in non-nuclear controlled work.
- b. Initiate procurement action for LI, SFCC stock program material and other materials required for accomplishment of non-nuclear tasks assigned.
- c. Review the FWP as required in Part I, Chapter 2, paragraph 2.3.4 of this volume.
- d. Prepare and issue the CWP when OQE is required at the conclusion of the non-nuclear controlled work and as required by Part I, Chapter 2 of this volume.
 - (1) Verify the FWP is the correct procedure, both in sequence and requirements, to satisfactorily accomplish the controlled work.
 - (2) Verify the CWP contains or lists the correct technical specifications or requirements (e.g., torque values, dimensions, NDT inspections, special cleanliness, tests) for certification attributes to be documented on the appropriate QA form.
 - (3) Ensure test requirements comply with the latest applicable specifications.
 - (4) Ensure signatures for repair work attributes are annotated as requiring CSB or signature, as applicable, on the QA form and in the FWP as discussed in Part I, Chapter 2, paragraph 2.3 of this volume by use of (R), (S), (CI), (G), (C), (I), (Q) and (V) in the margin by the appropriate step.
- e. Provide the tended ship the test requirements and joints or components to be tested for recertification of FMA work prior to commencing work on the tended ship.

1.7.7 RMC or FMA Division Officer. Division Officers are responsible to:

- a. Supervise and direct QA program within work centers under their cognizance.
- b. Ensure divisional personnel understand the requirements for and of a CWP.

- c. Ensure all repair actions performed by their division conform to applicable specifications and any deviation from specifications is reported as a DFS for non-nuclear work or LAR for nuclear work.
- d. Ensure CMPOs are assigned, qualified and executing their duties for each work center handling or stowing controlled material.
- e. Ensure areas are designated and are appropriate for proper stowage of controlled material.
- f. Review the FWP as required in Part I, Chapter 2, paragraph 2.3.4 of this volume.
- g. Review each TWD as required in Part I, Chapter 2, Appendix E, of this volume.
- h. Conduct or monitor divisional and work center QA training.
- i. Obtain written permission from the QAO to downgrade LI Stock Program Material or NRP for non-level use.

1.7.8 RMC or FMA Work Center Supervisor. Work Center Supervisors are responsible to:

- a. Ensure controlled and non-controlled material to be installed is correct per plan, drawing or other specification.
- b. Review each TWD for the work center as required in Part I, Chapter 2, Appendix E, of this volume.
- c. Review the FWP as required in Part I, Chapter 2, paragraph 2.3.4 of this volume.
- d. Supervise QA programs within assigned work centers.
- e. Review work for satisfactory completion.
- f. Ensure CWP's for completed controlled work are complete, properly reviewed and forwarded with all certifying documents, when work is completed.
- g. Ensure work center personnel are properly trained and qualified, if required, prior to assignment to tasks requiring QA or special cleanliness (e.g., oxygen, hydrogen, reactor plant, steam plant) certifications.
- h. Ensure all personnel use only TMDE (i.e., measuring devices, instruments, inspection tools, gauges, jigs or fixtures), which have current calibration stickers with records attached or available, for production, acceptance and testing. Uncalibrated or untested TMDE will be tagged and removed from service immediately.
- i. Prepare DFS or LAR for non-conforming conditions found or caused by the work center, sign, and forward to QAO.

1.7.9 RMC or FMA Craftsman. Craftsman is responsible to:

- a. Perform all maintenance actions following the FWP. If that guidance is either incorrect, incomplete or unclear, stop and seek clarification from the work center or shift supervisor.
- b. Ensure QA forms associated with the maintenance are correctly completed as required by the applicable sections of this volume.

- c. Enter signature, printed name and date on all QA data forms completed.
- d. Ensure only TMDE (i.e., measuring devices, instruments, inspection tools, gauges, jigs or fixtures), which has current calibration stickers with records attached or available, is used for production, acceptance and testing. Uncalibrated or untested TMDE will be tagged and removed from service immediately.

1.7.10 RMC Quality Assurance Department Head (Code 130) or Industry Management Department (Code 400 at Puget Sound Naval Shipyard and Intermediate Maintenance Facility).
(For NAVSEA managed RMCs) These departments are responsible to:

- a. Implement a QA program per this volume that ensures all work accomplished by the Production or Repair Department meets the material and workmanship requirements of approved plans and specifications.
- b. Provides liaison with other department heads when their functions are directly or indirectly related to the QA requirements of the Production or Repair Department.
- c. Provide the Commander or Commanding Officer with a semi-annual evaluation of the overall adequacy and effectiveness of the RMC's QA program.
- d. Verify the RMC or FMA has an effective audit and surveillance program capable of assessing work performance and identifying areas of poor performance.
- e. Maintain sufficient number of qualified personnel to adequately staff the QA Department.
- f. Designate nuclear or non-nuclear Metallographic Test Method Examiner and Generic Material Alloy Identification Examiners (as applicable) (Code 130 responsibility at Puget Sound Naval Shipyard and Intermediate Maintenance Facility).
- g. Ensure fact-finding or critiques (as applicable) are held to establish underlying causes and pursue corrective actions when major errors, mistakes or problems occur during maintenance, or result in serious damage to equipment or injury to personnel. Notify Commander Navy Regional Maintenance Center of critiques and trouble reports per reference (n).
- h. Assign a qualified Quality Assurance Officer to the Code 133 division (RMC) or Code 450 (Puget Sound Naval Shipyard and Intermediate Maintenance Facility).

1.7.11 RMC Code 133 Division Head or FMA Quality Assurance Officer. Code 133 or QAO is responsible to:

- a. Organize and implement a QA program within the RMC or FMA to carry out provisions of this volume.
- b. Provide guidance and evaluate efforts to produce work of acceptable standards.
- c. Prepare QA procedures, where necessary, to implement the provisions of this volume.
- d. Assist the TYCOM or ISIC as requested in performing QA audits on tended ships.
- e. Assist the TYCOM or ISIC as requested in providing indoctrination training on the QA program to the Engineer Officers and QAOs of assigned ships. Provide QA training for tended ship's personnel qualifying as CMPO, CMH, QAS and QAI.

- f. Approve downgrading of controlled material.
- g. Determine suitability for use of controlled material received from one ship, for use on another ship, when the transfer is via an RMC or FMA work center.
- h. Provide disposition instructions for rejected material.
- i. Institute a formal qualification program for QA personnel.
- j. Train and qualify work center CMPOs or CMHs. Inform the appropriate Division Officer and the Production or Repair Officer in writing of those qualified and any changes.
- k. QAO will review FMA generated DFS for accuracy and technical merit, sign and forward to the Repair Officer. At an RMC, this function will be the responsibility of the NAVSEA Technical Authority Warrant Holder in Engineering Department.
- l. Obtain chemical analysis, NDT and destructive testing required to upgrade or certify material for nuclear and non-nuclear applications for both the RMC or FMA and tended ships.
- m. Establish and coordinate RMC or FMA procedures for material control as delineated in this volume.
- n. Review, open and close out TWDs as required in Part I, Chapter 2, Appendix E, TWD Review and Approval matrix of this volume. Establish positive controls to ensure that repairs which are not in conformance with specification are not accepted without an approved DFS for non-nuclear systems or LAR for nuclear systems.
- o. Review the FWP as required in Part I, Chapter 2, paragraph 2.3.4 of this volume.
- p. (Submarines only) Review and sign RPWAR.
- q. Develop a QA training program, in conjunction with the Training Officer, which includes training for personnel who perform, plan or supervise controlled work.
 - (1) Supervise training and qualification of:
 - (a) QAS.
 - (b) QAIs.
 - (c) CMPOs or CMHs.
 - (d) Cleanliness Inspectors or Certifiers.
 - (2) Review and evaluate training of all personnel performing controlled work. Ensure that the continuing training is in sufficient detail and depth to provide effective training in all topics and areas specified in Part I, Chapter 3 of this volume.
- r. Maintain a current master list of qualified QASs (if assigned), QAIs, CMPOs, CMHs, Cleanliness Inspectors, Oxygen Clean Workers and Oxygen Clean Instructors as specified in Part I, Chapter 10 of this volume.
- s. Establish and administer a comprehensive RMC or FMA QA audit and surveillance program capable of assessing the work performance, training and qualifications and

identifying areas of poor performance. Enlist the assistance of other repair department officers and senior enlisted personnel for audits and surveillance in the repair and supply departments.

- (1) Prepare and update a written surveillance and annual audit schedule.
 - (2) Provide the Quality Assurance Department Head (for RMC) and Commander or Commanding Officer (for FMA) with a semi-annual evaluation of the overall adequacy and effectiveness of the RMC's or FMA's QA program.
- t. Ensure record files are maintained for CWP, controlled material, audits, surveillance, audit deficiency corrections, qualifications and training.
 - u. Ensure all testing required for completion of TWD is complete and reviewed prior to the tended ship reactor plant startup, propulsion plant startup, or getting underway or a DFS for non-nuclear systems or LAR for nuclear systems has been submitted and approved.
 - v. Perform opening reviews of CWP as assigned to assure OQE generated will support work recertification. Perform closing reviews of CWP as assigned to assure technical accuracy and satisfactory OQE exists for record history.
 - w. Supervise QASs, QAIs, Cleanliness Inspectors, Certifiers, CMPOs, CMHs and other personnel, involved in controlled work, in the performance of their QA duties.
 - x. Conduct QA audits, surveillance and coordinate corrective actions to ensure compliance with specifications.
 - y. Maintain QA records and files, which includes completed CWPs including radiography film (if radiography used for acceptance of work), controlled material records (e.g., QA form 1, certification papers received with the material), training and qualification, etc.

1.7.12 RMC or FMA Assistant Quality Assurance Officer. AQAO is responsible to perform duties as assigned by the QAO.

1.7.13 RMC or FMA Quality Assurance Supervisor. QAS is responsible to:

- a. Ensure all testing required for completion of CWP is complete and reviewed prior to the tended ship reactor plant startup, propulsion plant startup, or getting underway or a DFS for non-nuclear systems or LAR for nuclear systems has been submitted and approved.
- b. Perform opening reviews of CWP as assigned to assure OQE generated will support work recertification. Perform closing reviews of CWP as assigned to assure technical accuracy and satisfactory OQE exists for record history.
- c. Train and supervise QAIs, Cleanliness Inspectors, Certifiers, CMPOs, CMHs and other personnel, involved in controlled work, in the performance of their QA duties.
- d. Conduct QA audits, surveillance and coordinate corrective actions to ensure compliance with specifications.

- e. Maintain QA records and files including completed CWP's (including radiography film if radiography used for acceptance of work), controlled material records (e.g., QA form 1, certification papers received with the material), training and qualification, etc.
- f. Review DFS for accuracy and technical merit and forward to QAO (FMA only).

1.7.14 RMC or FMA Quality Assurance Inspector. QAIs are responsible to:

- a. Review steps in CWP which require QAI signatures to verify all requirements are adequately addressed.
- b. Ensure all work inspected meets the requirements set forth in the latest applicable plans, specifications and directives of higher authority as stated in the CWP.
- c. Perform QA inspections of certification attributes.
- d. Verify permanent markings on controlled material are properly transferred and new material control tags are affixed.
- e. Ensure all personnel use only TMDE (i.e., measuring devices, instruments, inspection tools, gauges, jigs or fixtures), which have current calibration stickers with records attached or available, for production, acceptance and testing. Uncalibrated or untested TMDE will be tagged and removed from service immediately.
- f. Sign QA form 2 as controlled material is correctly installed for SUBSAFE, SOC and nuclear systems.
- g. Witness and verify testing and inspections. Promptly inform supervisors of unsatisfactory test results.
- h. Ensure all test results are completed, properly documented and the QA forms are returned to the CWP except for those specifically designated as work center records.
- i. Review DFS for accuracy and technical merit and forward to QAO.

1.7.15 RMC or FMA Controlled Material Petty Officer or Controlled Material Handler. CMPO or CMHs are responsible to:

- a. Receipt inspect all controlled material received by their work center or division.
- b. Ensure all material under their cognizance is stored and controlled to the governing material control requirements.
- c. Inspect controlled material storage areas of their work center semi-annually, as a minimum, per Part I, Chapter 6 of this volume.
- d. Ensure controlled material is properly stowed and handled so the identification of the subject material and its certification are always maintained.
- e. Reject unsatisfactory material. Fill out and attach QA form 3 and request disposition instructions.
- f. Send any material certification documents for material which has been provided by a ship along with the QA form 1 to the QA office. Ship must retain originals when the material has been issued for installation.

- g. Receipt inspect package alteration kits that contain controlled material when ready for use.
- h. Remove QA form 3 from previously rejected and now accepted controlled material, annotate the material acceptance on the QA form 2 and file the QA form 3 with the CWP.
- i. Retain custody of controlled material when it is not in the custody of a craftsman or in a controlled material storage area.
- j. Ensure controlled material markings are on all pieces when cutting a smaller piece from a large one.
- k. Ensure controlled material markings are moved to an unaffected area, if the controlled material item will lose the markings due to a fabrication process (e.g., welding, machining) prior to the fabrication process.

1.7.16 RMC or FMA Cleanliness Inspector or Certifier. Cleanliness Inspectors or Certifiers are responsible to perform initial, in process and final cleanliness inspections during maintenance or repairs for those systems requiring cleanliness controls per Part I, Chapter 5, paragraph 5.4 of this volume.

1.7.17 RMC or FMA Nondestructive Test Division Officer. The following must comprise the core responsibilities of the FMA NDT Division Officer:

- a. Coordinate the efforts of assigned NDT Examiners.
- b. Ensure submittal of required reports of certification or recertification to higher authority as required by reference (i).
- c. Review all requests for NDT training courses and examiner certification services. Provide recommendations to the chain of command regarding eligibility of the requestor and the need for such training or certification based on current and projected NDT personnel resources.
- d. Review completed NDT inspection reports for technical completeness and accuracy and sign, where indicated on the report on completion of work.
- e. Schedule eye examinations for NDT Inspectors.

1.7.18 RMC or FMA Command Examiner. When more than one NDT Examiner is assigned to the RMC or FMA, the Commander or Commanding Officer will designate (in writing) one of the NDT Examiners as the Command Examiner who will perform the following core responsibilities in addition to the responsibilities in paragraph 1.7.19.

- a. Perform the duties of the NDT Division Officer if one is not assigned.
- b. Act as the Command's point of contact for NDT technical issues. In addition, act as the Command's point of contact with NAVSEA for NDT issues.
- c. Develop the Command's NDT Examiner guidelines, to include the Command's Written Practice for NDT certification when required by reference (j) utilizing the input of all participating NDT examiners.

1.7.19 Nondestructive Test Examiner. RMC or FMA NDT Examiner is responsible to:

- a. Approve examination material for all NDT methods utilized at the activity for which they are certified. Ensure examination material reflects changes made to applicable fabrication documents.
- b. Approve and qualify NDT procedures for each method utilized at the activity. Revise and approve procedures as necessary when changes are made to applicable fabrication documents.
- c. Schedule and perform NDT Inspector surveillance. Maintain records of surveillance in order to perform trend analysis of inspector abilities and program effectiveness.
- d. Schedule and administer NDT examinations. Maintain records of examinations sufficient to trace inspector qualifications to original examination material. Maintain a matrix of high miss questions in order to assess inspector knowledge and program effectiveness.
- e. Train, certify and monitor NDT Inspectors as required by applicable specifications.
- f. Ensure each NDT Inspector's service record is kept updated with qualification status.
- g. Maintain individual records of qualification for NDT inspectors.
- h. Monitor the welder or brazer qualification and training per reference (I).
- i. Review all welder or brazer records for completeness semi-annually. This review may be performed by the welding engineers at Trident Refit Facilities (TRF).
- j. Review, approve and monitor the commands' welder or brazer training and qualification program as required by reference (I).
- k. Prepare and execute the training and qualification program for each NDT method that leads to inspector certification in each method and maintains inspector competency in each method.

1.7.20 RMC or FMA Nondestructive Test Inspector. NDT Inspectors are responsible to:

- a. Verify CWP's which include NDT inspections properly identify the inspection requirements and acceptance criteria.
- b. Ensure NDT inspections are completed correctly and following the applicable requirement and inspection reports are technically complete and accurate.
- c. Ensure use of only TMDE (i.e., measuring devices, instruments, inspection tools, gauges, jigs or fixtures), which have current calibration stickers with records attached or available, for production, acceptance and testing. Uncalibrated or untested TMDE will be tagged and removed from service immediately.
- d. Sign QA form 2 as controlled material is correctly installed.

1.8 OTHER ACTIVITY RESPONSIBILITIES. Activities other than RMC or FMAs will conform to the requirements of this volume through a formal MOA, as defined in Volume II, Part I of this manual, with the ISIC while conducting maintenance on fleet activities. This includes work performed by naval shipyards, government agents, civilian contractors and other activities not specifically mentioned in other sections of this instruction. NSA representative

must sign MOA(s) as assurance that any civilian contractor requirements detailed in MOA are contained within applicable contracts.

- a. Ship's Force is ultimately responsible for all work accomplished on board their ship.
- b. Ship's Force is responsible for the development of TWDs for use in technical assist visits.
- c. In some cases, technical assists may provide troubleshooting services or complete equipment changes. Technical representatives are expected to utilize approved QA procedures or observe the requirements of this manual. The contractor or representative must be able to explain what controls he or she will place on a given job, including testing and documentation to be provided for OQE.
- d. Technical support agencies and contracted organizations may not perform work inside the SUBSAFE boundary. Only activities that are listed in reference (m) are authorized to perform SUBSAFE work. In cases where RMCs or other activities are assisting on maintenance inside the SUBSAFE, DSS-SOC and FBW boundary, sub-paragraphs a and b of this chapter will be strictly adhered to.
- e. Product Quality Deficiency Reporting must be per reference (k), with the exception of Aircraft Launch and Recovery Equipment. Quality Deficiency Reporting associated with Aircraft Launch and Recovery Equipment is addressed in reference (o).

APPENDIX A
FORMAT FOR SUBMARINE QA PRE-UNDERWAY CHECKLIST

SSGN, SSBN, SSN _____		Date _____
URO Review (*with ISIC) (48-24 Hours Prior to Underway) (init)		
	All URO Data for UROs done for periodicity received and reviewed.	
	No URO will become due prior to next scheduled INPORT period with the exception of a scheduled URO-22 rise blow.	
	Plan approved to complete UROs due next INPORT, availability or underway (e.g. URO 022 rise blow).	
	* URO Schedules and Inventories are up to date.	
	Retests to certify URO parameter due to maintenance reviewed by QAO or Department Head.	
	* Latest URO MRC Change on hand and verified current. Latest Change _____.	
	* Review SUBMEPP URO and HIPs web site and the Schedules and Inventories to verify no URO or HIPs (as applicable) are due or will become due prior to return to port (This review is to be completed by the URO-PMR Coordinator and ISIC QAO).	
Other Reviews (48-24 Hours Prior to Underway)		
	REC Exception Binder, including QA-11A, updated for work performed this availability.	
	No CAT "A" A&I will become overdue prior to start of next availability or those that will become overdue have been adjudicated via an approved departure.	
	No underway limiting OSARs exist or any underway limiting OSAR has been adjudicated via an approved DFS. In addition to OSARs that may impose operational limitations for ships at sea, all deficiencies documented in an OSAR that require a DFS per Chapter 8 of this Volume are considered underway limiting.	
	No outstanding Audit, Assessment or Survey ICARS (CAT 1) exist _____. No overdue AS&E responses due. Next report of corrective actions due: _____.	
	DEI date_____, next DEI due date (18 months) _____ (DFS_____), Major Deficiencies corrected or not due (30 days and No RBOs).	
	The ship's QAO shall complete a QA Pre-Underway Checklist with the ISIC QAO.	
	Designated SOC Ships - If Manned Operations are scheduled, verify no SOC PMRs will become due prior to Manned Operations. Perform the PMR or submit a major DFS if the PMR will come due during scheduled manned operations.	
	The ship's QAO will be relieved on _____ (DD MMM YYYY)	

15 Jan 2021

<u>QA-11 Log Review</u> (Within 24 Hours of Underway)					
	FMA QA-11 Log Closed		Ship's QA-11 Log Closed Out		DDS QA-11 Log Received and Closed Out
<u>Custody Transfers</u> (Within 24 Hours of Underway)					
	DDS Custody Transfer Msg or letter Received or Issued.				
	Copy of DDS Continuity Message or Letter received following installation or removal received and reviewed.				
<u>DFS Review</u> (includes waiver and deviations) (Within 24 Hours of Underway)					
	No active DFS will expire prior during the ship's scheduled underway period without an approved plan to clear or extend the DFS to support ship's schedule.				
	All SUBSAFE, SOC, or FBW-SCS AT-SEA TESTING departures verified against Continuity Letter.				
	Ship has completed DFS to JCN audit.				
	All identified non-conformances adjudicated (no outstanding DFS awaiting approval).				
	Verify all CSMP entries are properly documented per references (p) and all SUBSAFE, Fly-by-Wire and DSS-SOC deficiencies are either cleared or documented on an approved DFS. Ship's QAO will use OMMS-NG for this review. ISIC QAO will use RMAIS for this review and report completion to ISIC QAO prior to ship's underway. Submarine Maintenance Coordinator will use the shore based CSMP for this review and report completion to ISIC Material Officer and ISIC QAO prior to ship's underway.				
<u>Continuity Letters, Certification or Completion Letter</u> Separate letters required from each activity performing SS, SOC, FBW-SCS SFCC work on ship system. For DDS installation or removal (only), Ship's Continuity Letter issued as USER and Sustaining Activity.					
	Lead NSA CERT (PHNSY/PSNS/PNSY/NNSY)		EB/SOSG (SS/FBW)		NGNN/SOSN (SS/FBW)
	Lead FMA/RMC		EB/SOSG (SOC)		NGNN/SOSN (SOC)
	FMA/RMC				Ship (SS or FBW) Continuity letter
					Ship (SOC) Continuity letter

Blue text can be tailored to list the regional activities

LISTING OF APPENDICES.

- A Technical Work Document Illustration
- B Work Package Decision Process
- C Certification Signature Requirements for Reactor Plant, Nuclear Support Facility and Controlled Industrial Facility Work
- D Formal Work Package Approval and Revision Sheet
- E Technical Work Document Review and Approval Matrix

2.1 PURPOSE. To provide the requirements for generating work procedures that will provide the craftsman with clear, concise, and technically correct instructions to complete the maintenance task while conforming to technical specifications. The work instructions will vary in complexity depending on the type of work to be performed, the amount of existing guidance available, the extent of preparation and system restoration required, and the technical ability of the craftsman.

2.2 TECHNICAL WORK DOCUMENTS. Technical Work Documents (TWD) consist of three general types: Maintenance Procedures (MP), Formal Work Packages (FWP) and Controlled Work Packages (CWP). Refer to Appendices A and B to determine which type of TWD is required.

2.2.1 Minimum Requirements for using Technical Work Documents.

- a. Nuclear Propulsion plant maintenance as defined in reference (a). This includes non-nuclear systems and components that could affect reactor plant operation.
- b. Repair or troubleshooting to Fleet Maintenance Activity (FMA) Nuclear Support Facility systems or components.

- c. Radioactive repair work as discussed in references (b) and (c). Major work accomplished in reactor compartments or high radiation areas as required by references (b) and (c).
- d. Manufacture and corrective maintenance of electrical or electronic nuclear support and test equipment (e.g., switchgear test equipment, scram breaker time response equipment).
- e. Propeller or propulsor replacement or repair.
- f. Any Freon systems including self-contained units when the gas path is penetrated.
- g. FMA work on tended ship's systems.
- h. Level I or Submarine Safety (SUBSAFE) system work.
- i. Tests for FMA non-nuclear controlled work, which requires hydrostatic testing for recertification.
- j. All flammable liquid shipboard systems.
- k. Electric motor rewind.
- l. (Submarines only) Repair of Masts and Antennas.
- m. Other Ship's Force repair or troubleshooting as determined by the Department Head.
- n. Troubleshoot and repair of Gas Turbines when:
 - (1) Repairs affect the gas path.
 - (2) Removal, repair or replacement of accessory gearbox and components.
 - (3) Repairs to bleed air piping.
- o. Troubleshoot and repair of Main Propulsion Turbines or Generator Turbines.
- p. Troubleshoot and repair of Propulsion and Generator Lube Oil systems.
- q. Troubleshoot and repair of Propulsion and Generator Reduction Gearing or Drive Train Assemblies.
- r. Troubleshoot and repair of Auxiliary Turbines and pumps in which disassembly is required.
- s. Troubleshoot and repair of Boilers, Diesel Engines and their support systems.
- t. Any work within the Scope of Certification boundary.
- u. Troubleshoot and repair to submarine towed array handling systems.
- v. Welding and brazing requiring a CWP per paragraph 2.2.4 of this chapter.
- w. Maintenance on Weight Handling Equipment.
- x. Maintenance on Recovery Assist, Securing and Traversing systems, per reference (d).
- y. Maintenance performed which invokes MIL-STD 1330 or MIL-STD 1622 cleanliness standards.
- z. Maintenance on Fly-By-Wire Ship Control Systems, per reference (e).

- aa. Steering Gear Systems
- ab. (Submarines only) Special Valves
- ac. (SSBN only) Troubleshooting and repair of Missile Gas, Missile Hydraulic and Missile Tube systems that remove the ability to inert and jettison the tube contents.
- ad. Any work on sea-connected (seawater) systems.
- ae. Any work on systems or components required to support ship recoverability.
- af. Any work on installed damage control systems or components.
- ag. (Carriers Only) Troubleshoot and repair of JP-5 purifiers and service pumps.

NOTE: THE HEX PLUGS (MS PLUGS) DISCUSSED IN THESE PARAGRAPHS ARE NOT EQUIVALENT TO THE MS PLUGS DESCRIBED IN TABLE 5-1, RE-ENTRY CONTROL EXCEPTIONS OF CHAPTER I-5 OF THIS VOLUME. THE FOLLOWING PARAGRAPHS REFER TO TABLE 2-1.

Table 2-1 Types of PTS and TPS Fittings			
Style	Description	Ship or Class	Drawing or Specification
Style 1	Rectangular block assembly	SSN 688 Class	NGNN 2300-818
Style 2	Integral assembly or TRIDENT style fitting	SSBN 726 Class SSN 774 Class	NAVSEA 845-4687601
Style 3	Threaded boss assembly or Shroeder test fitting	SSN 21 Class SSN 774 Class	MIL-V-24695
Pressure Test Stations (PTS) and Test Pressure Stations (TPS) in the SUBSAFE boundary refer to components of different design that perform a similar function.			

- (1) Style 1 and 2 PTSs and TPSs hex plugs form part of the secondary pressure boundary and serve as contaminant protection. Removal and reinstallation of the hex plug requires a TWD but does not require Re-Entry Controls or controlled assembly. The TWD must verify that seat leakage criteria and seating surface and hex plug inspections are performed following applicable technical specifications.
- (2) Re-Entry Controls are not required when operating Style 1 or 2 PTSs or TPSs associated needle valves following normal operating procedures identified in Ship Safety Manuals, Steam and Electric Plant Manuals or other NAVSEA-approved procedures. If a ship's operating procedure is unavailable, a locally prepared FWP will be generated to operate the valve.
- (3) Style 3 PTSs and TPSs have a Delrin cap. Removal and reinstallation of the Delrin cap requires a TWD but does not require Re-Entry Controls or controlled assembly. The TWD must verify that seat leakage criteria and seating surface and Delrin cap inspections are performed following applicable technical specifications.

- (4) Any disassembly for major or minor repair of Style 1, 2 or 3 PTSs or TPSs requires a SUBSAFE Re-Entry Control CWP.

2.2.2 Maintenance Procedure. MPs may be fully usable in their existing form. The minimum requirements to perform any work are a valid MP and permission to perform maintenance.

- a. (Submarines only) If an approved NAVSEA Submarine Maintenance Standard (SMS) is invoked to perform an emergent repair and there is no intention to reset the maintenance interval, then the SMS can be used as a guide to the extent necessary to perform repair. Parts removed can be inspected following the SMS. Inspection criteria for parts not addressed by the SMS (e.g., those parts identified as mandatory replacement parts) must be inspected following general acceptance criteria or the system drawing or the component technical manual. Additionally, the torque, lubrication, and test criteria cited in the SMS may provide revised values which differ from NAVSEA drawings or component technical manuals.
- b. The following are examples of existing MPs:
 - (1) Planned Maintenance System Maintenance Requirement Cards.
 - (2) SMSs.
 - (3) Ship Systems Manuals.
 - (4) Component Technical Manuals.
 - (5) Shipyard Process Instructions.
 - (6) Ship Alteration Instructions.
 - (7) Reactor Plant Manual Operating Procedures, Operating Instructions, Maintenance and Replacement Instructions, and Reactor Maintenance Requirement Page.
 - (8) Alteration and Improvement Instructions.
 - (9) Naval Sea Systems Command (NAVSEA) Drawings which include disassembly or reassembly instructions.
 - (10) Shipyard Task Group Instructions (TGI).
 - (11) Steam and Electric Plant Manual.
 - (12) (Surface Force ships only) Reference (f) Appendix 4E specifications.

2.2.3 Formal Work Package. An FWP coordinates in a single document materials required, initial conditions, MP, test and inspections, and system restoration for the selected maintenance task. In some instances, the maintenance task will not have an existing MP. This will require the activity to develop an FWP in order to ensure first time quality accomplishment of the maintenance task. FWPs should be only as detailed as required by the complexity of the work, craftsman knowledge, technical requirements, extent of tests, and level of worker supervision required (see Appendix B).

2.2.4 Controlled Work Package. A CWP is required when higher authority requires a record (Objective Quality Evidence (OQE)) of repairs, maintenance for fabrication, repair, installation, inspection and testing process for specific systems or components, such as Level I, SUBSAFE,

Submarine Flight Critical Components (SFCC) or nuclear. CWP's may be necessary when required by the level of work control of the system (nuclear, SUBSAFE, SFCC and Level I) or when other extensive and formal Quality Assurance (QA) or test requirements exist (weight test, crane repairs, etc.). In its simplest form a CWP will consist of, as a minimum, a MP and the required QA forms. Examples of required CWP's:

- a. Level I.
 - (1) Manufacture, installation, and repair of Level I components or systems except for the following actions, which may be controlled with TWDs other than CWP's.
 - (a) Software replacement (e.g., O-rings, packing glands, body to bonnet gaskets, silver seal replacements).
 - (b) Inspections to support routine maintenance programs or troubleshooting.
 - (c) Replacement of any non-pressure boundary parts which are non-Material Identification and Control (MIC) level pieces.
 - (2) Repair by welding, brazing, machining, lapping or manufacture of Level I fittings or components.
- b. Reactor Plant, Nuclear Support Facility or Controlled Industrial Facility.
 - (1) Manufacture, installation, and repair of nuclear Level I systems and components. The following actions may be controlled with TWDs other than CWP's provided all assembly procedures and inspections (Quality Assurance Inspector (QAI)) requirements specified in reference (g) are delineated in the procedure section of the FWP:
 - (a) Software replacement (e.g., O-rings, packing, body to bonnet gaskets, silver seal replacements).
 - (b) Inspections to support routine maintenance programs or troubleshooting.
 - (c) Replacement of any non-pressure boundary parts which are non-Material Identification and Control (MIC) level pieces.
 - (2) Hydrostatic testing as required by reference (h) to certify reactor plant work conducted.
 - (3) Welding and Nondestructive Testing (NDT) which provides OQE of the integrity of reactor plant piping, and structural welding.
 - (4) Work affecting the integrity of permanent shielding installations.
 - (5) Work affecting reactor plant brazed joints that are inaccessible during reactor operations.
 - (6) Manufacture and corrective maintenance of mechanical nuclear support and test equipment whose configuration is specified by NAVSEA technical

manuals or drawings (e.g., brittle fracture pressure limit rigs, nitrogen sparging rigs).

- (7) Ship's Force retests of FMA or Ship's Force performed nuclear work that requires hydrostatic testing or an external pressure source to perform the test or retest, including Pre-Overhaul Tests except a CWP is NOT required for routine gage or instrument calibrations.
- c. Work within SUBSAFE or hull integrity boundary.
 - (1) Work within SUBSAFE or hull integrity boundary, identified in reference (i), including:
 - (a) Submarine pressure hull grinding, cutting and welding.
 - (b) Adjustments that affect valve timing associated within the flood control system components or Unrestricted Operations Maintenance Requirement Card affected components to include cap removal or reinstallation of hydraulic variable restrictors.
 - (c) Pressure testing salvage air valves via the external connection.
 - (2) Any disassembly for major or minor repair of PTSs or TPSs in the SUBSAFE boundary.
- d. Welding or Brazing.
 - (1) P-1, P-LT, P-3a Special Category or Critical Piping Systems repair, alteration or fabrication, by welding and brazing per reference (j) and reference (k). (Small self-contained Freon units, such as ice cream machines, ice machines, etc., are excluded.)
 - (2) Pressure Vessel Class A-F, A-1, A-2, A-3, A-LT, M-1, T-1 repair, alteration or fabrication by welding and brazing per reference (j).
 - (3) Permanent repairs and alterations of the primary structure of surface ships, including ballistic plating and superstructure designed for blast loading. Records must be made and retained for category "C" repairs as required by references (l) and (m).
 - (4) Welding on submarine hull and structures per reference (n) as listed:
 - (a) Pressure hull envelope.
 - (b) Pressure hull structure.
 - (c) Support structure.
 - (d) Containment structure.
 - (e) Extended pressure hull structure.
 - (f) Interface structure.
- e. Weight Handling Equipment Manufacture and Repair except for cranes.

- f. Corrective maintenance within the certified boundaries (envelope) of cranes as defined in reference (o).
- g. (Submarines only) Performance of Category “A” (Safety of Ship) Alterations and Improvements.
- h. Maintenance within SUBSAFE boundaries of submarine antennas and masts.
- i. Maintenance on Recovery Assist, Securing and Traversing systems per reference (d).
- j. Maintenance on systems requiring cleanliness controls as defined by MIL-STD 1330 or MIL-STD 1622 (e.g., diver’s air, oxygen, nitrogen, hydrogen, helium-oxygen). For MIL-STD 1622 applications, only systems defined as “critical” require a CWP for cleanliness controls. If repair or replacement of any component requires a record of OQE (pressure testing, new Level I (LI) or Scope of Certification (SOC) material, welding, etc.), a Re-Entry Control (REC) or CWP as appropriate is required. However, the following exceptions apply:
 - (1) A CWP is not required for inspections specified in MIL-STD 1330 during maintenance of cleanliness when performed by Type Commander or Ship’s Force personnel on systems and equipment not certified by reference (i), reference (p) or reference (q).
 - (2) A REC or CWP is not required for maintenance performed following an approved Planned Maintenance System Maintenance Requirement Card by Ship’s Force personnel that states that performance of the maintenance does not require REC.
 - (3) A CWP is not required for inspections on systems defined as “critical” as specified in MIL-STD-1622 during maintenance of cleanliness when performed by Type Commander or Ship’s Force personnel and the maintenance of cleanliness is authorized to be performed as a REC Exception in the applicable Deep Submergence Systems SOC Notebook.
- k. Maintenance within the FBW SCS certification boundary, per reference (e).

2.2.5 Maintenance Certification Record or Controlled Work Package (Non-SUBSAFE).

Various sea water system components and portions of the *Virginia* Class submarine Virginia Payload Tube (VPT) System require frequent entry into the system boundary for routine operations or maintenance actions in order to enable the ship to carry out its mission. Table 2-2 of this paragraph includes certain systems and equipment which require Level I work controls (or similar type controls) that are frequently entered but must be exempt from Maintenance Certification Record (MCR) or CWP Controls. The VPT System (where installed) is not Level I but due to its design and system applications requires additional controls for those portions specified in reference (r). The operational requirements for these systems and equipment have been reviewed. Inherent operational controls and maintenance procedures in the present system are considered adequate and the items listed in Table 2-2 are considered safe exceptions to the formalized MCR or CWP system. The operational control which is considered as meeting the intent of the MCR or CWP requirements is listed beside each item and must be in effect in order to use the exception.

15 Jan 2021

NOTE: MCR EXCEPTIONS ARE FOR SHIP'S FORCE USE ONLY AND ARE NOT AUTHORIZED FOR USE BY REPAIR ACTIVITIES. REPAIR ACTIVITIES MUST NOT REQUEST THE SHIP TO INVOKE A MCR OR CWP EXCEPTION IN CONJUNCTION WITH REPAIR ACTIVITY WORK.

NOTE: MCR EXCEPTIONS ARE NOT AUTHORIZED TO BE USED FOR THE INSTALLATION OF NEW LEVEL I HARDWARE WITHIN THE LEVEL I BOUNDARY.

NOTE: EXCEPTIONS FROM MCRs OTHER THAN THOSE LISTED ARE NOT AUTHORIZED.

Table 2-2 Submarine Seawater & VPT System (where installed) MCR EXCEPTION ITEM (Non-SUBSAFE)

Submarine Seawater MCR & VPT System EXCEPTION ITEM	OPERATIONAL CONTROL REQUIREMENT	RECERTIFICATION TESTING
VPT System Applicable Portions	Controlled Assembly (Notes 1 and 2)	As specified in reference (r)
Cleaning Shaft Seal Cooling Water strainers or filters	Controlled assembly (Notes 1 and 2)	None
Cleaning of Auxiliary Sea Water system strainers	Controlled assembly (Notes 1 and 2)	None
Cleaning evaporator, distilling plant and Reverse Osmosis supply water strainers	Controlled assembly (Notes 1 and 2)	None
Shaft Seal Cooling Water Cyclone Separators	Controlled assembly (Notes 1 and 2)	None

Notes:

- (1) An FWP, per paragraph 2.2.3 of this chapter, will be used to control and document all work performed as a MCR exception.
- (2) Controlled assembly requirements are:
 - (a) Verification that surface finishes of gasket or o-ring sealing surfaces are following applicable specifications.
 - (b) Verification that fastener material and installation is following applicable specifications.
 - (c) Verification that gaskets or o-rings are properly installed and following applicable specifications.
 - (d) Assembly is documented on a QA form 34.
 - (e) Inspected by a QAI or Quality Assurance Supervisor (QAS).

2.2.6 Sequencing Document. A sequencing document is used to tie two or more TWDs together when a single TWD is insufficient (as determined by the Department Head or Principal Assistant for Aircraft Carriers) to complete a maintenance task. If the Department Head (Principal Assistant for Aircraft Carriers) determines a single TWD is insufficient to complete the task, a

sequencing document should be developed, which provides the craftsman with directions for going from one TWD to another. Normally, this sequencing document will be in outline format. The sequencing document will be approved as directed by the Department Head (Principal Assistant for Aircraft Carriers).

2.3 FORMAL WORK PACKAGE DEVELOPMENT.

2.3.1 Responsibility for Preparation of Formal Work Packages or Controlled Work Packages.

- a. For Ship's Force work processes, the FWP or CWP is prepared by the work center responsible for accomplishing the work.
- b. For submarines and aircraft carriers, the FWP or CWP is to be prepared by a qualified Maintenance Planner. The FWP or CWP may also be prepared by any member of the work center as long as it is reviewed by a qualified Maintenance Planner in that work center.
- c. For FMA work processes, the FWP or CWP is prepared by the appropriate planning division.

2.3.2 Security Classification. Attention must be paid to proper classification, handling, and marking of an FWP. As initially prepared, the FWP itself or as used in a CWP, is frequently unclassified and becomes classified as data is recorded. FWPs for nuclear propulsion plant systems are frequently CONFIDENTIAL, and almost always contain Naval Nuclear Propulsion Information and should be marked and controlled as required by the appropriate NAVSEA, Naval Operations (OPNAV), and Department of Energy Security instructions (e.g., NAVSEAINST 5510.45 Series, OPNAVINST N9210.3, OPNAVINST 5510.11 Series, CG-RN-1).

2.3.3 Formal Work Package Format. The FWP format in this paragraph identifies elements that may be beneficial when writing an FWP. Asterisk (*) elements are required for all FWPs. This format is a general guide and each element may not be required depending on the task being performed.

- a. List of References.
- b. List of Enclosures.
- c. List of Effective Pages (LOEP).
- d. General Information.
- e. Material. *
- f. Responsibilities.
- g. Precautions.
- h. Budgeted Man-Rem (if required by the Radiation Health Manual).
- i. Initial Conditions (plant or system conditions, prerequisites including tagouts). *
- j. Procedure. *
- k. Test and Inspection. *
- l. System Restoration. *

2.3.3.1 Formal Work Package Elements Defined.

- a. List of References. All references used must be listed in a manner which will allow positive identification of the references and will state the revision and advance change notice utilized for planning the FWP.
 - (1) Reference publications such as Component Technical Manuals, Planned Maintenance System Maintenance Requirement Cards, Maintenance Standards, Naval Ships' Technical Manuals, Standardized Class Shipboard Test Procedures, Ship System Manuals, and Reactor Plant Manuals must be the latest revision and advanced change notice when the FWP was prepared.
 - (2) Ship configuration drawings such as Selected Record Diagrams, piping arrangement drawings, structural drawings, welding and NDT maps, and mapping drawings should be the "As Built" revision as listed within the Ship's Drawing Index (SDI) per reference (s). All Technical Variance Documents (TVDs) contained within the SDI must be reviewed for applicability during the maintenance planning process. While the "as-built" should be used, it would be prudent to review the change summary of the latest revision of the drawing to determine if changes contained within later revisions are applicable for the specific ship work is being planned for.
 - (3) Component and equipment drawings will typically be the latest revision when the FWP was prepared; however, an earlier revision of the drawing may be applicable based on the currently installed component or equipment. It is incumbent to positively identify the currently installed component or equipment configuration and the scope of work to determine if the latest revision is applicable. The SDI must be used for verification of TVD. Of note, the latest revision of the drawing listed within the SDI may not be accurate and should be validated using the generic (non-SDI) portion of the ATIS system or other applicable drawing index and repository.
- b. List of Enclosures. Enclosures are any technical documents which are not readily available to the craftsman and are used to provide information, direct or document work, or direct contingency work. Each enclosure page will contain, as a minimum, the FWP (file) number, enclosure number, and enclosure sheet number for traceability purposes. Enclosures are not required to be listed as references. Examples of enclosures are:
 - (1) Diagrams, prints or applicable portions of technical manuals.
 - (2) Necessary QA forms (CWP only).
 - (3) Contingency repair (predictable event).
- c. LOEP. The LOEP is an accounting of every page, including enclosures that make up the FWP. Each time a change or revision adds, modifies, or deletes a page of the FWP, the LOEP sheet must also be revised. Original pages will be marked "-". Subsequent changes or revisions will reflect latest change or revision number.
- d. General Information. This section is used to provide useful information, clarifying remarks, and sequencing allowances.

15 Jan 2021

NOTE: NATIONAL ITEM IDENTIFICATION NUMBER (NIIN) MAY BE USED WHENEVER NATIONAL STOCK NUMBER (NSN) IS CALLED FOR, INCLUDING ALL QA FORMS. THE NATIONAL ITEM IDENTIFICATION NUMBER UNIQUELY IDENTIFIES MATERIAL IN SUPPLY SYSTEM AND IS ADEQUATE FOR OQE PURPOSES.

- e. Materials Required (required element). This section is used to list all material, spare parts, and special tools required to accomplish the job. Material listed in this section should be verified on hand prior to starting work. A Job Material List may be attached as a supplement to the Material List. Lead Work Center (LWC) Supervisor or Division Officer may add materials after the FWP is open that does not constitute a revision per paragraph 2.3.7.3 of this chapter using a non-technical pen and ink change. Example of a line in the materials required list or table:

<u>Item Name</u>	<u>Size/Class/Type</u>	<u>Qty</u>	<u>Matl</u>	<u>MIL-SPEC</u>	<u>Level</u>	<u>PC#/REF</u>	<u>Step/End Use</u>	<u>NSN/NIIN</u>
Bolt	½ -13UNCx2½	6ea.	Cr-Mo	MIL-S-1222	Level I	12/E	H.3/ASW-504	

NOTE: THE RESPONSIBILITIES SECTION OF THE FWP IS MANDATORY IF MORE THAN ONE REPAIR ACTIVITY IS INVOLVED IN THE WORK.

- f. Responsibilities. List the general responsibilities of all involved ship's divisions or FMA Work Centers and tended ship personnel. Examples are:
- (1) "38N will establish and maintain freeze seals as specified in the Freeze Seal Agreement."
 - (2) "51A will provide motor rewind and balancing services."
- g. Precautions. List precautions for personnel and equipment protection that are specific to the job. Three examples of precautions are:
- (1) Personnel: Hazards (e.g., toxic or explosive mixtures), stressors (e.g., high noise levels, high heat operations), and protective requirements needed to ensure personnel safety.
 - (2) Equipment: Safeguards, protective equipment, operating restrictions necessary to prevent equipment damage.
 - (3) Prevention of the loss of cleanliness: Specific precautions to prevent the loss of cleanliness for the task being performed.
- h. Budgeted Man-Rem. In this section, establish the Man-Rem estimate for accomplishment of the task. (See reference (t) for submarines.
- i. Initial Conditions (required element). This section contains those prerequisites and plant conditions that must be completed prior to commencing the MP. Examples are material certification, job briefings and actions required for safety precautions listed in the Precautions Section.
- (1) Prerequisites must be completed prior to starting the MP and include actions necessary to certify the material, conduct briefings and state safeguards taken

against hazards identified in the Precautions Section. Production work, other than shop work will not be performed as a prerequisite. Examples of prerequisites:

- (a) “EM01 or 38A: Record name plate data from component to be worked. Verify the FWP is consistent with the name plate data.”
 - (b) “Division Officer, Leading Petty Officer (LPO), Nuclear Repair Officer (NRO), Radiological Control (RADCON) Officer: Conduct a pre-work briefing. Complete attendance sheet provided as Enclosure ().”
- (2) List the initial plant or system conditions required to properly and safely accomplish the work to be done. This should include work boundaries which will be specified by the Ship or FMA depending on the job. The isolation boundaries will be determined and established by the duty officer or tagout authorizing officer prior to authorizing commencement of the maintenance (this includes the isolation valve lineup, power isolation, etc.). The extent of this section will vary depending upon the type of job.
- (a) For a Ship’s Force job, this section should identify work boundaries and plant or system conditions (e.g., Pressure or Temperature Band, cold iron). The duty officer or tagout authorizing officer will determine and set the isolation boundaries.
 - (b) For an FMA ship to shop job, this element is not applicable.
 - (c) For an FMA job on a tended ship, the FMA must determine the work boundaries and identify to the ship any plant conditions that must be maintained during the work. The ship will determine and set the isolation boundaries.
- j. Procedure (required element). This section contains the instructions on how to accomplish the work. Concentrate on putting the steps of the job in proper sequence. Don’t describe technically how to do a step (unless past experience has shown some of this type of information is required). The following steps describe how to write this section of the FWP:
- (1) Outline the various steps necessary to accomplish the work to be done. Whenever there is a need to provide information, or caution the reader, write the word (NOTE or CAUTION) in capital letters followed by a colon and the text of the note or caution in ALL CAPITAL LETTERS. The NOTE or CAUTION is to appear immediately before the step or section it is applicable to. NOTES and CAUTIONS do not perform work, but are used as the first sentence(s) in a work step. Where NOTES and CAUTIONS are used in the same work step, the CAUTION will be specified first.
 - (a) CAUTIONS should only be used whenever a specific danger to personnel, equipment, or the potential for loss of cleanliness exists.
- 1 **CAUTION: THE ANTI-SEIZE COMPOUND USED IN THIS STEP IS A HAZARDOUS MATERIAL AND REQUIRES SPLASH PROOF GOGGLES AND RUBBER**

GLOVES TO BE WORN WHILE HANDLING OPEN CONTAINER OR USING THE MATERIAL.

2 CAUTION: ENSURE CLEANLINESS PLUGS ARE STAGED FOR USE PRIOR TO BONNET REMOVAL.

- (b) NOTES should inform the reader about key information, sequence allowance or direct him or her to additional information.

1 NOTE: STEPS 8, 9, AND 10 MAY BE PERFORMED IN ANY SEQUENCE.

2 NOTE: STEPS 1 THROUGH 4 MAY BE PERFORMED SIMULTANEOUSLY.

- (2) Work Center Designations. This is not mandatory for Ship's Force work if a single Work Center is performing all steps contained in the FWP. Otherwise, each work step of the procedure must have a Work Center (i.e., 31A, EM01, etc.) designated responsible for performing that step. A specific designation (e.g., NRO, Engineering Officer of the Watch, Engineering Duty Officer, LPO or LWC Supervisor, LPO) may be substituted for Work Center designations where appropriate. More than one Work Center Designation may be used where dual responsibilities are needed. Examples of Work Center Designations:

- (a) "38A/93B: Perform a final disc-to-seat blue check. Verify that a satisfactory final seat-to-disc blue check has been performed."
- (b) "38N: NOTE: SEE FIGURE [1] OF ENCLOSURE (3) FOR CANOPY JOINT INFORMATION AND LOCATION. Fit-up the upper and lower body-to-bonnet canopy joints."

- (3) Symbols. These symbols are located in the margin of the FWP and indicate the following:

- | | | | |
|-----|------|---|--|
| (a) | (R) | = | Steps requiring verification or inspection as defined in references (b) and (c). |
| (b) | (S) | = | Steps in an FMA procedure requiring verification by a member of Ship's Force. |
| (c) | (C) | = | Steps requiring Cleanliness Inspection by craftsman. |
| (d) | (I) | = | Steps requiring inspection by a QAI or NDT Inspector. |
| (e) | (CI) | = | Steps requiring independent Cleanliness Inspectors (SCI, RCI). |
| (f) | (Q) | = | Critical Quality Control Points (Q-Point). |
| (g) | (V) | = | Steps requiring verification by a craftsman. |
| (h) | (G) | = | Government notification required. |

- (4) Signature Requirements in FWPs and CWPs. Certain steps require positive assurance that the step was actually performed or completed in a prescribed

manner. Signatures are also required for assurance of critical requirements, critical measurements, or requirements for OQE. If the step requires completion of a data form (e.g., inspection, NDT record, hydrostatic test data sheet), the signature block must be on the data form, not the procedure step. The following is a list of typical steps or examples requiring signatures:

- (a) Steps which require performance of QA checks or NDT that are documented on a QA form in order to provide traceability of signatures. Personnel who sign QA forms or other OQE documents will print their name along with their signature, badge number (where applicable) and date. These types of steps must include a statement of satisfactory compliance adjacent to the signature block in the associated QA form.
- (b) Completion of a strength test.
- (c) Hull and backup valve blue checks of seat and disc and stack height measurements.
- (d) Completion of Controlled Assembly steps.
- (5) For nuclear work, Certification Signature Blocks are required where specifically called out in NAVSEA technical documents as defined in Appendix C.

NOTE: WHEN INVOKING A SMS WHEN OTHER THAN A COMPLETE COMPONENT OVERHAUL IS PLANNED, THE SMS MAY BE USED AS A GUIDE. THERE IS NO NEED TO INVOKE THE ENTIRE SMS FOR SPECIFIC REPAIRS: E.G., PUMP MECHANICAL SEAL REPLACEMENT NEED NOT INVOLVE COMPLETE BREAKDOWN AND INSPECTION OF THE PUMP.

- (6) Procedure Detail. The procedure should be used to list the various tasks to be performed and the sequence in which they should be accomplished. Notes on proven craftsmanship skill techniques that significantly aid in first-time quality and are not addressed in other reference documents should be included. A well-written procedure is designed for use by trained personnel who have a requisite level of knowledge about their specialty and the work to be performed. A procedure must have sufficient detail to allow a determination of exactly what was done, material used, inspections required, and allow re-certification of the system or component.
- (7) Sequencing of Work. As the work package is being prepared, the steps of the job should be placed in a logical and proper sequence. In instances where work can be performed in parallel, identify those steps by use of a sequencing note.
- (8) Q-Points. Work processes, regardless of type (maintenance, training, administrative, etc.), have critical execution points whose proper accomplishment overwhelmingly affects the ultimate first-time quality success

of the process. Quality Maintenance Program work processes identify these crucial work process points as Q-Points. These concepts apply to Q-Points:

- (a) Q-Points in a work process are typically characterized by requiring high-level skills, proficiency, strong knowledge, working within narrow tolerances, or difficult environmental conditions which mandate close supervision.
 - (b) Q-Points are determined by the organizational unit (Work Center, division, command, etc.) having cognizance over the specific work process.
 - (c) Maintenance managers must give strong focus to Q-Points in work scheduling, personnel assignments, and appropriate supervision.
 - (d) Scheduling a Q-Point to occur late at night, with tired, fatigued personnel or with less than adequate supervision places the successful execution of that Q-Point at a great risk and compromises first-time quality completion of the work process.
 - (e) Q-Points are annotated in FWP's whether the FWP is used as a stand-alone or as the core of CWP. Not all FWP's will require the use of Q-Points. Q-Points are process control aids and do not require signatures.
- k. Tests and Inspections (required element). Only tests that are required to recertify the system or component after the repair work is complete will be listed in the test and inspection section of the FWP. Repair process tests, such as seat leakage tests or joint tightness tests performed in the shop, will be considered part of in process work and will be contained within the procedure section. If the testing results are required for OQE, then the necessary QA forms will be enclosures to the FWP.
- (1) Ship to shop work and FMA work on board tended units. For FMA work on tended units where components are removed from the ship and repaired in the shop and or repaired on board the tended unit:
 - (a) All testing that can be performed in the shop will be performed in the shop by the FMA. The FMA will write and conduct all shop tests and inspections.
 - (b) The FMA will provide the tended unit with all required testing and inspection requirements and QA forms for the shipboard testing needed to certify the work performed by the FMA. The FMA work package will specify the joints or components that require testing and the type of test(s) required that the tended unit must perform. The tended unit will review the test requirements and is responsible for writing the test FWP and conducting the test(s). The original completed test documents will be provided to the FMA for inclusion in their work package (FWP or CWP) for re-certification.
 - (c) The original completed test documents provided to the FMA will be reviewed by the FMA QAI or QAS for completeness, accuracy and will validate the test result satisfy the certification attributes or attributes

required to certify the maintenance or repairs performed by the FMA.

- (2) Careful planning and review prior to beginning work is needed to ensure all tests and inspections are identified before starting work. Various TWDs include tests and inspections required. Further guidance is also provided in Volume IV, Chapter 9 (System Test Check List) and Volume IV, Chapter 18 (Submarine Salvage Inspection) of this manual, and should be consulted when preparing and performing this section for the FWP.
 - (3) The range, serial numbers and calibration due date of any calibrated measuring and test equipment used for conducting the test must be documented on the QA form.
- l. System Restoration (required element). This section contains those steps necessary to restore the system to normal operating status. If the FWP resulted in an approved change to the equipment or component configuration (such as the performance of an approved Alteration and Improvement), this section must direct the ship to submit a Ship's Configuration Change Report (OPNAV 4790/CK) and a Fleet COSAL Feedback Report (NAVSUP 1371) to ensure accurate configuration accounting and technical or supply support are maintained. Ensure the requirements contained within Part I Chapter 8 of this volume are followed if the FWP resulted in an unapproved change to the equipment or component configuration.
 - m. (Submarines only) Ship's Force test FWPs for non-shipyard associated FMAs nuclear work will be provided to the Immediate Superior In Command (ISIC) for review.

2.3.3.2 Use and Transcribing of Source Documents. Retyping or scanning extensive step-by-step procedures from source documents into FWPs is discouraged. Ideally, the procedure should reference the source document. A reproduced copy of the appropriate section may be included in the work package as an Enclosure. If the source document steps are not lengthy, they may be written directly into the procedure. When work is per a referenced procedure or enclosure, specify the precise steps of the reference or enclosure that are to be performed. The applicable portion of an enclosure to be used by the craftsman must be marked or highlighted and portions not used will be marked out.

2.3.4 Formal Work Package Approval.

- a. FWPs developed for a job are routed and approved prior to the performance of the work. The appropriate work authorization and reference material, (including QA documents for CWPs), to conduct the FWP must accompany this routing.
- b. Review of the FWP by the Chemical RADCON Assistant or Quality Assurance Officer (QAO) may be appropriate.
- c. For FMAs, the FWP is reviewed by the Planning Officer, LWC and Assist Work Centers. The FWP can be approved by the Repair Officer as the standard FWP for that work process.
- d. Approval signatures are made on the FWP approval sheet (see Appendix D). Signature blocks not required will be marked NA. Signature blocks that are signed will be accompanied by a legible printed name and date.

- e. For Ship's Force standardized FWP's the LPO or LWC supervisor must verify that all references are current. For FMA Standardized FWP's the Planning Officer must perform the verification. If changes are required, the FWP must be revised and routed for approval.
- f. For FWP's that are part of a CWP, see CWP approval matrix, Appendix E.
- g. QAO will review all FWP's for components or systems assembled as a controlled assembly and performed as a REC or MCR exception. REC or MCR exceptions will be tracked using the REC or MCR Exception Controlled Assembly Log QA form 11A located in Part I, Chapter 11 of this volume.

2.3.5 Controlled Work Package Approval. When the FWP has been prepared, the following actions are required to prepare and approve the CWP:

- a. For controlled (i.e., Level I, Nuclear, Scope of Certification, SFCC) or SUBSAFE work to be performed by Ship's Force only, the ship's QAO will issue the CWP or REC numbers sequentially for entry in Block 4 of the ship's QA form 9. For controlled or SUBSAFE work performed by the repair activity on, or for a tended ship, the ship's QAO will issue CWP or REC numbers sequentially to the repair activity for entry in Block 4 of the repair activity's QA form 9. For controlled or SUBSAFE work to be performed by the repair activity only (in repair activity shops and the repair activity does no work onboard the ship, examples include ship to shop work; rotatable pool assets), the repair activity's QAO will issue the CWP or REC numbers sequentially for entry in Block 4 of the repair activity's QA form 9. The format of the CWP or REC serial numbers will be the serial number followed by the year (e.g., 1-90, 123-01).
- b. An MCR/REC (QA form 9), will be prepared by the planner or CWP preparer. A QA form 10 may be required as a supplement to the QA form 9.
- c. CWP approval is per Appendix E.

2.3.6 Formal Work Package In Process Use. The FWP or TWD will be at the job site during the performance of work. For multiple work sites, the FWP may be copied but all signatures and data will be recorded on the original or master FWP.

2.3.7 Formal Work Package Changes.

2.3.7.1 Pen and Ink Changes. Pen and ink changes to an FWP may be made for minor administrative changes that do not change the scope or intent of the FWP. Changes of this nature include additions or deletions of a Work Center assigned to a step, typographical or editorial errors, amplifying additional information to clarify a step, or a change in the sequence of steps.

- a. Pen and ink changes to an FWP will be made with the approval of the LPO or LWC Supervisor or Division Officer responsible for the affected step in the FWP.
- b. Pen and ink changes to the QA forms in a CWP must be made with the approval of QAO, QAS or QAI. Examples are: Additions or deletions of Work Centers assigned on a QA form, correction of typographical or editorial errors on a QA form, addition of information to clarify a QA form.

- c. Pen and ink changes must be accomplished by drawing a single line through the portion to be changed, and entering the necessary change adjacent to that portion. The person making the change will initial, date, and print the name of the approving authority for the change. If the change is per verbal direction, the name or title of the person authorizing the change will be annotated (per telcon with Division Officer, Repair Officer, etc.).
- d. Technical pen and ink changes are used to correct a technical error and must be approved by the department head. The same process will be used as in a non-technical pen and ink change except that it is documented in the “instructions for entering revision” area of the FWP revision sheet.
- e. When an error is made in the data recorded on a QA form (e.g., Craftsman records the wrong NSN), it will be corrected by the craftsman or individual who created the error by drawing a single line through the error, recording the correct entry, initialing, dating and printing the name of the person making the correction. A counter signature by a QAI, QAS or QAO is not required unless the correction is made after a QAI or QAS or QAO has signed the QA form.

2.3.7.2 Rework Addendum. Rework is the unplanned repetition of a step, or a series of steps in a CWP or FWP. A rework addendum specifies which steps must be repeated in a CWP or FWP and may be used in lieu of a revision when rework is required and the scope of the original work will not be changed. Any additional actions that were not included in the originally approved CWP or FWP constitute a change in scope or work boundaries and must be issued as a revision to the CWP or FWP. All rework must be documented.

- a. The craftsman doing the work must stop the work and notify the LPO or Work Center Supervisor (WCS) that rework is required.
- b. Clear directions on which steps are to be repeated must be provided. Reproducing QA forms may be required. All original and rework QA forms will be retained with the CWP. In addition to the page numbering format used in the TWD, documents and QA forms reproduced to perform rework will be annotated with the term “REWORK” and associated numbering or lettering used in the LOEP at the top of the documents or form(s) (for example - REWORK A, or REWORK 1.1).
- c. An updated LOEP is required when rework requires additional QA forms.
- d. A rework addendum is approved by the Division Officer (for CWPs, concurrence is obtained from the Production Officer or QA Officer).
- e. When rework is identified following signing blocks 17 and 18 of the QA-9, new signature and date blocks for blocks 17 and 18 must be documented on QA form 10.

2.3.7.3 Revisions. Revisions are any change to a CWP, FWP or TWD that meets the criteria listed in this paragraph. Revisions require formal review and approval.

- a. Reasons requiring a revision to a FWP or TWD:
 - (1) Scope of the work changes (e.g., replace software changed to machine the valve).

- (2) Boundary of the work changes (e.g., change location of or additional disconnected joints).
 - (3) Change in test requirements unless authorized by a Departure from Specification.
 - (4) Any change in material requirements, which result in a change in testing requirements.
 - (a) The LWC Division Officer or LWC Planner may add materials after the FWP is open that do not change testing requirements.
 - (b) For FWPs executed as a part of the CWP, the QAO or QAS will concur with the addition of material. Concurrence will be by initialing the new line item.
 - (c) At job completion the material list must accurately reflect new materials installed in the system or component.
 - (5) If RADCON is insufficient for the work, based on actual conditions at the worksite, and to change the type of contamination enclosure specified for the work (e.g., to use a drape in lieu of glove bag as specified in the FWP).
 - (6) MCR/REC form must be revised.
- b. Steps for making a revision to a CWP, FWP or TWD:
- (1) Work must stop immediately and the LPO or WCS must be notified when the need for a revision is identified.
 - (2) The revision is then initiated.
 - (a) For Surface Force Ships, an FWP revision is initiated by the originating Work Center and reviewed by the Division Officer responsible for the work associated with the revision.
 - (b) For submarines and aircraft carriers, an FWP revision is initiated by the originating Work Center Maintenance Planner and reviewed by the Division Officer responsible for the work associated with the revision.
 - (c) For Surface Force Ships, a CWP revision is initiated by the LWC and approved per the requirements of Appendix E of this chapter.
 - (d) For submarines and aircraft carriers, a CWP revision is initiated by the LWC Maintenance Planner and approved per the requirements of Appendix E of this chapter.
 - (3) A revision is normally made by page substitution. Revisions must be lettered consecutively starting with "A" with the revision letter entered on all affected sheets of the FWP. Revised portions of the FWP must be marked with a vertical line and the revision letter in the margin. New or replacement sheets may be added by labeling the added sheet with the number of the preceding page and a sub-letter (e.g., Page 5A of 15). Superseded pages (without signatures or recorded data) must be retained until the FWP is closed out.

- (4) A cover sheet for the revision is attached. The FWP revision sheets will be placed on top of the previous cover sheet with the most current cover sheet on top.
- (5) Routing and authorization of the FWP or TWD is performed.
 - (a) The revised FWP or TWD must be routed only to and reviewed by the divisions affected by the revision process.
 - (b) For an FWP concurrence with the revision is obtained from the Department Head prior to executing the revision. A revision, as a minimum, must be approved by the same level of personnel who approved the original FWP.
 - (c) CWP revisions must be approved by the QAO and officer(s) who approved the original (e.g., Repair Officer, Department Head and Commanding Officer).
- c. Other guidance on making revisions to an FWP or TWD.
 - (1) Revisions to issued FWPs may include non-technical modifications (e.g., lineouts). In addition, the following instructions are those permitted to be made in the Instructions for Entering Revisions area of Appendix D.
 - (a) Remove: Physically take out the page(s) as specified in the change instruction.
 - (b) Replace: Physically take out the page(s) specified in the change instruction. Put the replacement page(s) provided by the revision in place of the removed page(s) as specified.
 - (c) Insert: Physically insert the page(s) specified in the change instruction into the FWP as specified.
 - (2) A revision will not remove pages with or QA forms from the CWP, FWP or TWD with signatures or recorded data. The portion not yet complete on pages with signatures or data, including QA forms, will be lined out.
 - (3) Each activity affected will ensure that revisions are made and accounted for in an exact manner. The following intent will be adhered to regarding the revision process:
 - (a) All revisions will be entered into the body of the original FWP or will be added as an enclosure or attachment to the original FWP.
 - (b) Revisions must be numbered such that accountability is maintained.
 - (c) The LOEP will be modified each time a change is made.

2.3.7.4 Attachment. If additional work must be added to the FWP and it is relatively extensive but does not require a change in plant conditions or work boundary, it can be accomplished by using an attachment to the FWP. In this case, the attachment would be written and added to the FWP after the enclosures using the revision process (at a minimum, as a technical pen and ink change). This page would have an additional step that directs performance of the attachment. It would also indicate work sequence, for example whether the attachment would be worked in

series or parallel with original FWP work. The composition of an attachment is identical to an addendum except it is prepared after the FWP is issued based on an unexpected problem.

Example: Upon disassembly of a valve, it is determined the back seat of the bonnet must be repaired. This repair could be accomplished by attachment.

2.3.7.5 Supplement. Where additional work is required that is similar to or greater in scope to that on the original FWP or involves changes in plant conditions, testing, or major support equipment changes, a supplement could be used. A supplement is another stand-alone FWP containing detailed instructions to perform the additional work. A supplement will comply with the requirements of paragraph 2.2.3 of this chapter. The original FWP should indicate the additional work accomplished in the supplement, if required, to make the original FWP continue to stand alone.

Example: Recovery from loss of cleanliness where work boundaries are increased, additional components opened to obtain flush paths, etc. The original FWP would direct work to the supplemental FWP for recovery and then direct resumption of work per the original FWP. Once cleanliness is reestablished, the original work would continue. In this case, it is necessary to indicate satisfactory completion of the supplement, so that it is clear the condition is corrected.

2.3.7.6 Voiding. There are times during the performance of an FWP where events occur that render the rest of the FWP unnecessary. In this case, a revision would be issued to the FWP providing instructions such as directing work to a new FWP and would void the remainder of the original FWP. For a CWP traceability will be provided to the replacement REC. The document being voided must maintain traceability to the new activity's repair procedure when RECs are being transferred to another activity. Voided CWPs must retain traceability or continuity to the follow-on procedure.

Example: During the repair of a valve, defects are discovered that cannot be repaired, requiring the valve to be replaced instead of repaired as originally intended. Once it is determined the repair is no longer necessary, the repair instructions would be voided.

2.3.7.7 Formal Work Package Closeout. FWPs are reviewed and approved for closing by the LPO or LWC supervisor and designated assist LPO or WCSs for satisfactory completion. Signatures will be accompanied by a legibly printed name and date. The closeout review verifies these attributes:

- a. Maintenance was completed as specified in the FWP.
- b. Required signatures were made and names printed.
- c. Cleanliness requirements were satisfactorily met.
- d. Correct materials were used.
- e. Post-maintenance testing was properly completed.
- f. Equipment and systems were restored to normal conditions and configurations.
- g. Data was recorded properly and within specifications.

2.3.7.7.1 Completed Formal Work Packages. FWPs executed as stand-alone documents are not required to be retained following:

- a. Completion of the availability in which the work was performed.

- b. Completion of closeout reviews as required by paragraph 2.3.7.7 of this chapter.
- c. Recording of all required data (e.g., Material History).

2.3.7.8 Controlled Work Package Closeout. Upon completion of the maintenance task, each of the cognizant work centers and the QAO will perform a comprehensive review of CWP documentation for correctness and completeness. Once a satisfactory review is completed, CWPs will be closed out subject to the following guidance:

- a. CWPs required to support reactor plant or propulsion plant startup, equipment startup or ship's underway will normally be closed prior to the event.
- b. CWPs for spare equipment, equipment requiring reactor plant or propulsion plant operations to test, equipment requiring retest at sea or for equipment not required for reactor plant, propulsion plant or at-sea operations may be left open with the Department Head and Commanding Officer's concurrence.
- c. All nuclear CWPs must be reviewed for compliance with requirements and closed out prior to reactor plant or propulsion plant startup or ship's underway unless the Department Head and Commanding Officer's concurrence has been obtained to keep the CWP open to perform a critical heat up or critical operations to accomplish system or component retest. Prior to reactor plant or propulsion plant startup or ship's underway, any activities performing controlled maintenance on the ship will provide the status of the maintenance to the ship (and the ISIC for submarines). When critical operations or at sea testing is required to complete the task the following procedures will be used:
 - (1) The testing must be required by an approved NAVSEA procedure (e.g., Maintenance and Replacement Instruction).
 - (2) All open CWPs will be logged and tracked in the CWP REC Log.
 - (a) All deferred (follow-on) actions will be annotated in the CWP REC Log of the tended ship.
 - (b) The CWP must include documented transfer of responsibility for accomplishment of deferred actions from the FMA to the tended ship and must be signed by the Commanding Officer, Reactor Officer or Engineer Officer of the tended ship.
 - (c) The closeout review of the CWP will verify that the required documentation is contained in the CWP for all deferred actions.
 - (3) A copy of the test results will be provided to the FMA (as applicable) for final review and CWP closeout as soon as practical.
- d. In the event a CWP is prepared, the job is planned to be accomplished, but for some reason the job is cancelled or deferred the following actions should be taken:
 - (1) If work was authorized to start, the CWP must be revised to reflect that no work was accomplished and then administratively closed. The QA form 11 log will be annotated to show that the job was "Cancelled".

- (2) If work was not authorized to start, and the job was cancelled, annotate the remaining blocks of the QA form 9 with “N/A” and note that the CWP was cancelled and no work was accomplished. Blocks 20 (and 21 if the CWP has an REC) will be signed to formally cancel the CWP. If the CWP was prepared by a Repair Facility, a copy of the QA form 9 will be provided to the Tended unit. If a Certification Continuity Letter is required, the cancelled CWP must be provided with the Certification Continuity Letter. The QA form 11 log will be annotated to show that the job was “Cancelled”.
- (3) If work was not authorized to start and the job is deferred to a future maintenance period, the CWP is not required to be cancelled. The QA form 11 log will be annotated as “Deferred”. This is not considered to be an open CWP REC.
- e. There are no retention requirements for a CWP if work was not authorized to start and the job was cancelled.
- f. The closed CWP will be retained by the QAO per Part I, Chapter 10 of this volume.

2.3.7.9 Emergent Controlled Work. On those occasions when a component fails and the normal practice of processing a CWP would preclude meeting the ship’s operational commitment, work may begin without formal approval of the CWP, provided the concurrence of the FMA Repair Officer (if an FMA is involved), and the ship’s Commanding Officer and ISIC (if an FMA is involved) is obtained. The following is required:

- a. The MCR REC must be properly approved and, to the maximum extent possible, a CWP will be prepared prior to commencement of work.
- b. The task must be continuously monitored and all actions taken recorded by:
 - (1) QAS, if an FMA is involved or
 - (2) Ship’s Work Center LPO and a QAI, if the LPO is not a qualified QAI.
- c. All OQE must be completed and inspected as required by Part I, Chapter 5 of this volume.
- d. All records must be reviewed and verified complete and correct.
- e. Departure from Specification will be processed per Part I, Chapter 8 of this volume for any specifications not met during the repair.

2.3.7.10 Standardized Formal Work Package.

- a. FWPs, which have been performed and proven, may be retained on file to lessen the effort in preparing for a future task of a similar nature.
- b. Standardized FWPs can be used to accomplish the same maintenance task without routing for approval provided the LPO or LWC supervisor and Planning Officer (if assigned) verify that no changes to the reference documents have been issued since initial approval. When initially routed for approval as a standardized FWP, the RADCON OFFICER or Chemistry and Radiological Controls Assistant (CRA) will determine the need for evaluating RADCON for future maintenance actions. If the RADCON OFFICER or CRA determined it is necessary to evaluate RADCON for

each future maintenance action the RADCON OFFICER or CRA will check “YES” in CHOP FOR FURTHER USE. When “YES” is checked RADCON personnel are required to review the standardized FWP prior to each instance of use to verify RADCON controls in the standardized FWP are appropriate for the work. If the RADCON OFFICER or CRA determined it is not necessary to evaluate RADCON for each future maintenance action the RADCON OFFICER or CRA will check “NO” in CHOP FOR FURTHER USE? When “NO” is checked no additional RADCON review is required prior to use of the standardized procedure. If the LPO or LWC supervisor or RADCON personnel (when required) determine the FWP requires a change, it must be routed for approval as a revision to the FWP.

- c. Standardized FWPs developed by FMAs may be used by Ship’s Force. Implementation requires Division Officer recommendation and Department Head approval.
- d. Standardized FWPs developed by an FMA may be used at any FMA. Implementation requires Planning Officer recommendation and Department Head approval.
- e. Use of standardized FWPs requires a system to ensure the FWP is current.
 - (1) Maintain a master listing of standardized FWPs by name and revision number.
 - (2) Once approved as a standard FWP the cover sheet will be removed, the FWP will be annotated as the master copy, and retained on file.
 - (3) A copy of the approved master cover sheet will be attached to the standard FWP when work is in progress.
 - (4) All revision cover sheets will be retained with the previous master cover sheet.

2.3.7.11 Lost Controlled Work Packages Following Controlled Work Package Approval.

- a. Formally inform the ISIC and Type Commander.
- b. Conduct a formal critique for CWPs approved or opened and not closed, and provide a copy to the ISIC and Type Commander.
- c. Initiate corrective action using a QA form 14.

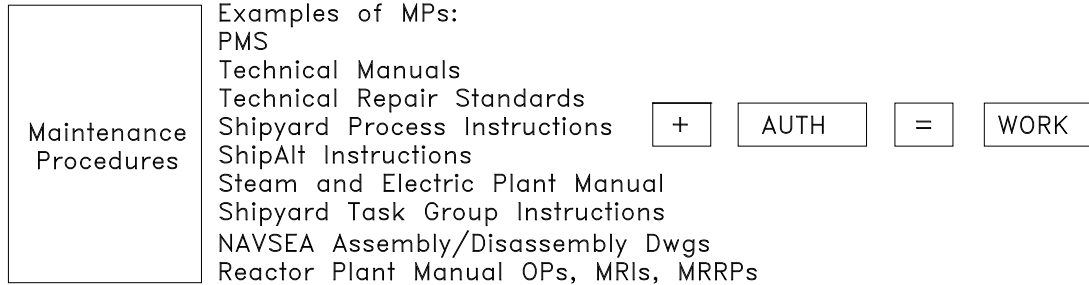

2.4 TROUBLESHOOTING.

- a. Troubleshooting a system which is being operated following the normal ship’s operating procedures in normal operation in response to a request for on-site Fleet Technical Assistance does not require an FWP provided the troubleshooting is non-obtrusive (i.e., visual inspection or observations only) and intended to evaluate the nature of the reported problem. Any manipulation of the system outside normal operating conditions requires an FWP.

- b. Troubleshooting equipment normally controlled by using an FWP or TWD, whether done by Ship's Force or by an outside activity, can seldom be precisely defined at the start of corrective maintenance. An FWP for troubleshooting must include well-defined initial conditions, boundaries and stop points within which troubleshooting can be accomplished. Detailed procedural steps are not required. Troubleshooting procedure may require some form of trial and error process of elimination. In order to determine the proper tests following troubleshooting, a record of actions performed must be kept. Once the problem is identified, the FWP must be revised to properly repair and test the affected equipment.

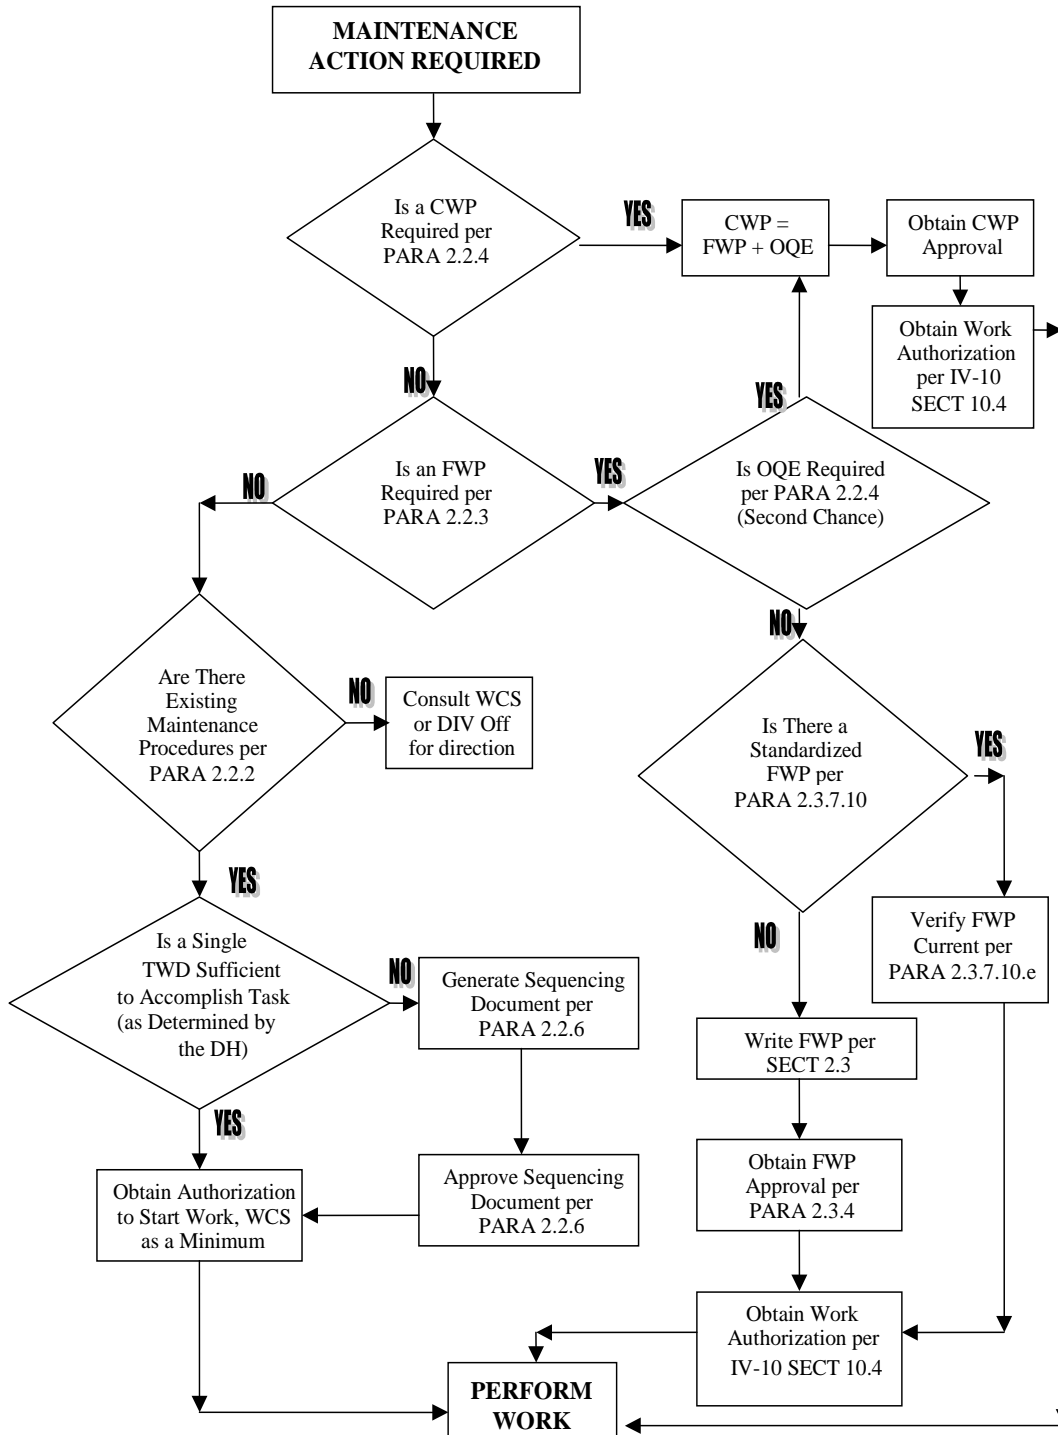

APPENDIX A

TECHNICAL WORK DOCUMENT ILLUSTRATION

APPENDIX B

WORK PACKAGE DECISION PROCESS

APPENDIX C

CERTIFICATION SIGNATURE REQUIREMENTS FOR REACTOR PLANT, NUCLEAR SUPPORT FACILITY AND CONTROLLED INDUSTRIAL FACILITY WORK

1. General Requirements. This appendix lists the instances when a signature is required to certify data or accomplishment of maintenance items. All attributes will be certified by verification or inspection. Appendix C is meant to be comprehensive. However, there could be a maintenance item performed by forces afloat and not listed in this appendix where a NAVSEA document requires a verification with a certification signature; in that event, the certification signature requirement should be met following the NAVSEA document.

- a. Certification **signatures in Nuclear Controlled Work Packages, required by this chapter**, that record OQE must be documented on QA forms and kept as required by references (u) and (v), as applicable. **Certification signatures listed in this appendix, which are not required to be documented on QA Forms, are not OQE and have no specific retention requirement.**
- b. Items that require inspection or verification **documented in TWDs other than a CWP** will require a **certification** signature only and are not OQE. Therefore, they do not need to be kept after the maintenance is complete and accepted.
- c. Where it is convenient to use a locally generated form to accomplish specific certifications, the CWP must refer to the form and the signatures will be on the form. These forms need not be kept unless a record is required.
- d. Indicate the individual responsible for performing the certification and the specific attributes being certified at the signature block.
- e. Certification signature statements must be referenced on each page, **or in the General Information element of the associated locally prepared TWD**, where a certification signature is required using references (u) and (v), as applicable, for reactor plant and Nuclear Support Facility maintenance respectively:
 - (1) "Direct report from watch standers" may be deleted from the second (**) Certification Signature Block statement for work where such an option would not be applicable.
 - (2) Single asterisk (*) or double asterisk (**) must be used at each Certification Signature Block to indicate the type of certification that is expected.

2. Specific Requirements.

- a. Cleanliness. Nuclear propulsion plant cleanliness, foreign material, and detrimental material control must be according to Table 2.4-6.1 of reference (w). **Cleanliness certification signatures are not required to be documented on QA Forms.**
 - (1) Reactor Plant:
 - (a) Inspection following entry into clean hardware where dirt producing (e.g., machining or grinding) or potentially dirt producing operations

(e.g., clean cuts of pipes) are used.

- (b) Inspection prior to final closure of each opening in clean hardware where the closure will prevent visual access to surfaces which contact system fluid.
- (c) Inspection during any operation in which a loss of cleanliness could occur that is not easily detected and corrected.
- (d) Inspection for re-verification of hardware cleanliness per section 2.6 of reference (w).
- (e) Final inspection following fabrication of hardware or dirt producing modification to hardware.
- (f) After removal of a controlled product as defined in reference (x) for internal surfaces of installed hardware and internal surfaces of hardware that contains crevices and inaccessible areas. (Applicable to shipyards and Nuclear Regional Maintenance Departments only.)
- (g) Following the cleaning of internal surfaces when crevices or inaccessible areas are exposed.
- (h) During assembly or disassembly of joints with thread sealant downstream of cleanliness filters to verify there is no visible thread sealant on internal surfaces following assembly.
- (i) Following dirt-producing modification to hardware with crevices and inaccessible areas.
- (j) The following **require certification by a craftsman** qualified to perform the verifications **and will be documented by the craftsman by signing a certification signature.** An independent inspection **is not required.**
 - 1 Verification of cleanliness following entry into clean hardware, except entry that is dirt producing (e.g., machining, grinding) or potentially dirt producing (e.g., clean cuts of pipe).
 - 2 Verification of cleanliness prior to and during assembly (including assembly that creates crevices).
 - 3 Verification of cleanliness prior to thermal treatment.
 - 4 Verification of cleanliness after any test that uses soft metal probes or tips; for example, alloy identity testing.
 - 5 Verification of cleanliness following cleaning except when performed for paragraphs (a) through (d) of this paragraph or when crevices or inaccessible areas are exposed.
 - 6 Verification of cleanliness following tape removal.
 - 7 Verification of cleanliness prior to closure of support system openings and connection of a clean support system to clean hardware.

- 8 Verification of final review of the accountability log.
 - 9 Verification of cleanliness prior to installation of support equipment to any vent and drain valve, other than a pressurized discharge.
 - 10 Verification of final cleanliness of cleanliness plugs provided the plugs are assembled from clean parts or sub-assemblies without crevices or inaccessible areas and if the assembly occurs in a clean room or clean area.
- (2) Steam Plant. Verification of cleanliness whenever cleanliness has been lost.
- b. Welding and Brazing. The following signature requirements apply:
 - (1) Inspections where records are required by reference (y) with the exception of in-process visual inspections, which may be verifications. These inspections will be documented on QA forms.
 - (2) Inspections where records are required by reference (z) with the exception of in-process visual inspections, which may be verifications. Inspection that gaskets, O-rings, or seals are either removed or scored as required before welding, so that they no longer function as a seal. These inspections will be documented on QA forms.
 - (3) Inspections for parameters or data where records are required by sections of reference (y) involving welding, with the exception of in-process visual inspections, which may be verifications. This information will be documented on QA forms.
 - (4) Inspections, where records are required, associated with reactor plant welds on piping systems and on components which are nuclear Level I or non-level piping system applications when welds are qualified, performed and inspected according to NAVSEA Nuclear Propulsion Directorate (08) documents other than those included in paragraphs 2.b.(1), (2) and (3) of this paragraph, with the exception of in-process visual inspections, which may be verifications. These inspections will be documented on QA forms.
 - (5) Inspections required by reference (k) for class P-3a brazed joints in nuclear Level I piping systems, where records are required. These inspections will be documented on QA forms.
 - (6) Verification that proper purge path is established before welding, both inlet and exit.
- c. Shielding. Inspections to verify the proper replacement of permanent shielding according to reference (c) or (aa), as applicable.
- d. Mechanical Joint Assembly.
 - (1) Verification of the following applicable attributes is required if maintenance is accomplished using a FWP or CWP.
 - (a) Joint identification.

- (b) Condition of flange faces, O-ring grooves, and other sealing surfaces.
 - (c) Joint alignment.
 - (d) Installation of O-rings or gaskets.
 - (e) Lubrication of fasteners.
 - (f) Thread engagement and stand-out.
 - (g) Final torque on fasteners.
 - (h) Gasket compression and flange parallelism.
- (2) For joints in Nuclear Level I systems, inspection of the following applicable attributes is required whether the maintenance is accomplished by a CWP or FWP.
 - (a) Final torque on fasteners when a torque is specified.
 - (b) Gasket compression and flange parallelism. (Gap measurement is only required when mating surfaces are not in contact).
- e. Pipe Bending. For pipe bending according to reference (ab), the following signature requirements apply:
 - (1) Inspection (NDT) of bent pipe. These inspections will be documented on QA forms.
 - (2) Visual inspections of bent pipe.
- f. Freeze Seal Operations. For freeze sealing according to reference (ac) the following signature requirements apply:
 - (1) Verification of dimensional measurements before and after freeze seal operations.
 - (2) Verification that the variation between before and after dimensional measurements does not exceed the allowed tolerance.
 - (3) Verification that the freeze seal is established.
- g. Hydrostatic Testing. The following signature requirements apply: Inspections required during hydrostatic testing according to reference (h) and the applicable reactor plant manual. The results of these inspections will be documented on QA forms.
- h. Locking devices. The following signature requirements apply:
 - (1) Internal locking devices. The proper installation of locking devices inside the pressure boundary of components containing primary coolant and all locking devices (internal and external) associated with reactor vessels, closure heads, and control rod drive mechanisms must be confirmed by inspection. The results of such inspection, including dimensions and clearances measured to confirm proper installation, will be documented on QA forms.

- (2) Verification of the proper installation of other reactor plant component locking devices. This verification is by the craftsman unless the component drawing requires an inspector to perform the check.
- i. Valve Repair. The following signature requirements apply:
 - (1) Inspection of the final measurement of the bellows restraint gap “x-dimension” of pilot actuated relief valves where required by applicable technical manuals.
 - (2) Verification of the final blue check of the disc-to-seat.
- j. Valve Testing. The following signature requirements apply to inspection during post installation testing and periodic testing of primary, steam generator, and charging pump relief valves:
 - (1) Proper blocking (gagging) and subsequent return to normal service.
 - (2) Locking devices, if required, on manual lift mechanism, locked.
 - (3) Manual lift mechanism removed, if so designed, after testing.
- k. Miscellaneous. The following signature requirements apply:
 - (1) Inspections required before, during, or after repair to remove surface discontinuities according to reference (v), (ad) or (ae), as applicable. Document these inspections on QA forms.
 - (2) Inspections required on reactor plant air flasks according to reference (af).
 - (3) Inspections required for determining reactor plant material acceptability according to the specifications requirements when the inspections specify reference (ag) or reference (ah).
 - (4) Inspection of penetrations in tanks to ensure all temporary plugs have been removed and the penetrations are free from obstruction, if maintenance has been performed in the tank.
 - (5) Inspections required by Article 242 of reference (aa) or Appendix D of reference (c), as applicable.
 - (6) Verification of removal of installed temporary reactor plant support equipment.
 - (7) Verification of satisfactory completion of reactor compartment closure tests including tests on individual penetrations.
 - (8) Verification of the Reactor Plant Work Accomplishment Report by designated officers.

Notes:

1. R = Review (May require signature on FWP Cover Sheet, QA-9, or both),
A = Approve (Approval Signified by signature on FWP Cover Sheet, QA Form 9, or both),
S = Acknowledgement signature noting that the REC or CWP has been opened **or** closed by the approving authority. For opening, this signature also grants permission for work to be conducted. Review or Approval signifies the following:
 - The FWP is correct both in sequence and requirements to satisfactorily accomplish the maintenance.
 - The CWP provides the correct technical specifications or requirements (e.g., torque values, dimensions, NDT inspections, cleanliness requirements, critical inspections, recertification tests) for certification attributes on the appropriate QA form.

2. For FWPs previously approved by the Department Head, the FWP may be authorized and issued as a standardized FWP per paragraph 2.3.7.10 of this chapter.
3. (Nuclear aircraft carriers only) The Reactor Officer will sign.
4. For items requiring Department Head approval the following signature requirements must apply:
 - FMA - Repair Officer (unless formally delegated for Other and LI)
 - SF - Cognizant Department Head (Principal Assistant for aircraft carriers)
5. Entries are to be signed by the Ship's Engineer only.
6. (Submarines only) ISIC Material Officer will review SF CWPs for retesting FMA accomplished nuclear work.
7. This block is not applicable for FMA only MCR RECs.
8. Accomplished by WC Supervisor.
9. Nuclear Repair Officer if assigned.
10. Applicable to Fleet I-Level activities only. Does not apply to I-Level activities controlled by Naval Shipyards.
11. QAO will review opening and closing of all FWPs for components or systems assembled and performed as a REC MCR exception.
12. (Submarines only) This signature is REQUIRED to complete certification of Re-Entry into SUBSAFE, Scope of Certification and Fly-by-Wire systems and components.

LISTING OF APPENDICES.

- A NAVEDTRA 43523 Qualification Matrix
- B Outlines of Typically Effective Training Topics
- C Recommended Training Topics for Selected Positions

3.1 **PURPOSE.** To define the requirements and guidance necessary to establish a standard qualification and training program for personnel who plan, perform, inspect or supervise the maintenance tasks listed in Part I, Chapter 2, paragraph 2.2.1 of this volume.

3.2 **GENERAL.** Personnel who screen, plan, perform, inspect and supervise the maintenance performed to the following requirements must be trained and qualified per this volume and reference (a).

- a. Maintenance requiring a Technical Work Document per Chapter 2, paragraph 2.2.1 of this volume.
- b. Maintenance listed as Material Certification Record (MCR) exceptions per Part I, Chapter 2, paragraph 2.2.5 of this volume.
- c. Maintenance listed as Re-Entry Control (REC) exceptions per Part I, Chapter 5, paragraph 5.6.7 of this volume.

NOTE: A CONTINUING TRAINING AND QUALIFICATION PROGRAM IS ESSENTIAL FOR ALL MAINTENANCE PERSONNEL TO ACHIEVE A MAINTENANCE PROGRAM WITH HIGH STANDARDS OF QUALITY. PERSONNEL INVOLVED IN THE APPROVAL, SUPERVISION, PLANNING OR PERFORMANCE OF SHIPBOARD MAINTENANCE WILL BE PARTICIPANTS IN THE TRAINING AND QUALIFICATIONS ASSOCIATED WITH THIS VOLUME.

3.3 QUALIFICATION. Qualification procedures established herein must be formal, and designed to heighten awareness of those tasked with the responsibility of administering, managing and executing the Fleet Quality Maintenance (QM) program.

- a. Each organization must maintain a personnel qualification list per Part I, Chapter 10, of this volume.
- b. Each organization must maintain a list of personnel authorized to sign off portions of reference (a).
- c. Maintenance personnel must be qualified through completion of formal qualification programs (e.g., Job Qualification Requirements or Personnel Qualification Standard (PQS), written exams, oral boards and formal schools). Reference (a) provides the standard PQS for the majority of QM qualifications. Appendix A provides a qualification matrix for maintenance personnel PQS requirements.
- d. All personnel performing the maintenance identified in Part I, Chapter 2, paragraph 2.2.1 of this volume must be 3-M 301 qualified and Craftsman 301 qualified or an equivalent Quality Assurance (QA) qualification for non-naval personnel.

3.3.1 Re-qualification. Personnel with prior documented qualifications may be re-qualified by written exam or oral board as directed by Quality Assurance Officer (QAO) or Department Head. Personnel found to be deficient in level of knowledge will be required to complete an upgrade program established by the QAO prior to re-qualification.

3.3.2 Required Service Record Entries. Record of qualification will be inserted in the individual's service record.

3.4 QUALIFICATION REQUIREMENTS.

3.4.1 Ship's Quality Assurance Officer.

- a. Should be a commissioned officer with engineering or repair experience.
- b. (Submarines only) Submarine officer must have completed submarine qualification and for nuclear powered ships should be nuclear trained.
- c. Designated in writing by the Commanding Officer.
- d. QA Officer course requirements are:
 - (1) A surface ship QAO must be a qualified Quality Assurance Supervisor (QAS) and must be a graduate of a QAO course.
 - (2) A submarine QAO must be a graduate of the Submarine Officers' and Supervisors' Quality Maintenance course, F-4H-0182. No other formal PQS qualification is required.

15 Jan 2021

- (3) An aircraft carrier QAO must be a graduate of the 5-week Quality Assurance Officer Course (S-4H-0001) for CVN officers. No other formal PQS qualification is required. With a formal waiver (Naval message or letter) endorsed by the ISIC and approved by the TYCOM, this requirement can be temporarily waived but the waiver may not exceed 6 months. The waiver must list the interim QAO and qualifications, the perspective QAO and graduation date from S-4H-0001 or the report date.
- e. (Submarines only) Complete an oral interview with the ISIC or submarine support component QAO.
- f. (Submarines only) Only an officer meeting the QAO qualification requirements of sub-paragraph d. may sign documents requiring a QAO signature.
 - (1) A qualified QAO must be onboard during underway operations.
 - (2) A qualified QAO must be onboard (i.e. not TAD or on leave) any time Quality Maintenance is being performed when in port.
 - (a) The QAO may be TAD in the same geographic location as the ship as long as the they can still perform all responsibilities assigned per Part I, Chapter 1, paragraph 1.5.12 of this volume, and when in port, or when in port available by phone (i.e. not TAD or on leave) when Quality Maintenance is being performed.
 - (b) If the QAO cannot perform these duties while TAD or on leave, an acting QAO meeting the requirements of sub-paragraphs a. through e. must be assigned except as exempted here.
 - (i) The Ship's Commanding Officer may waive the sub-paragraph d.(2) requirement to a period of time up to but not exceeding 2 calendar weeks to allow the QAO leave or short duration TAD.
 - (ii) With a formal waiver (Naval message or letter) endorsed by the Immediate Superior In Command (ISIC) and approved by the Type Commander (TYCOM), the sub-paragraph d.(2) requirement can be temporarily waived by the TYCOM but the waiver may not exceed 6 months. The waiver must list the interim QAO and qualifications, the perspective QAO and graduation date from F-4H-0182 or the report date.

3.4.2 Ship's Assistant Quality Assurance Officer.

- a. Normally E-6 or higher with engineering or repair experience.
- b. Designated in writing by the Commanding Officer.
- c. (Submarines only) Complete an oral interview with the ISIC or Submarine Support Component QAO.

3.4.3 Immediate Superior In Command.

- a. Quality Assurance Officer.

- (1) Should be a commissioned officer, but may be a civilian with engineering or repair experience.
 - (2) Should be a graduate of a QAO course. No other formal PQS qualification is required.
 - (3) Designated in writing by the ISIC.
- b. Assistant Quality Assurance Officer.
- (1) **Military personnel will be an** E-7 or higher, but **could be** a senior civilian with engineering or repair experience.
 - (2) Should be a graduate of a QAO course.
 - (3) Qualified as QAS. QAS qualification is not required if he or she is a graduate of the Norfolk Naval Shipyard Fleet Maintenance Support Branch QAO course.
 - (4) Designated in writing by the Commanding Officer. The duties assigned, including signature authority, must be clearly delineated.

3.4.4 Regional Maintenance Center or Fleet Maintenance Activity Quality Assurance Officer.

- a. Should be a commissioned officer, but may be a civilian with engineering or repair experience.
- b. Will not be assigned collateral duties or responsibilities that divert attention from primary duties of QM.
- c. Should be a graduate of a QAO course. No other formal PQS qualification is required.
- d. Designated in writing by the Commanding Officer.

3.4.5 Regional Maintenance Center or Fleet Maintenance Activity Assistant Quality Assurance Officer.

- a. **Military personnel will be an** E-7 or higher, but **could also** be a senior civilian with engineering or repair experience.
- b. Qualified as QAS or a graduate of a QAO course.
- c. Designated in writing by the Commanding Officer.

3.4.6 Quality Assurance Supervisor.

- a. Normally E-6 or higher, but may be a civilian.
- b. Complete PQS for QAS, and pass a written examination and oral board.
- c. QAS is a mandatory qualification for Fleet Maintenance Activities (FMA). Qualification of QAS for ships is at the TYCOM's discretion.

3.4.7 Quality Assurance Inspector.

- a. Normally a petty officer, but may be a civilian.
- b. Complete PQS for Quality Assurance Inspector (QAI) and pass a written exam and oral board.

- c. The qualification card may be split into separate nuclear and non-nuclear QAI qualifications. If this is done, the command must ensure QAIs do not inspect areas excluded from their qualifications.

3.4.8 Controlled Material Petty Officer or Controlled Material Handler.

- a. Normally a petty officer, but may be a civilian.
- b. Complete PQS for Controlled Material Petty Officer (CMPO) or Controlled Material Handler (CMH), and pass a written exam and oral board.
- c. Activities may modify the qualification card to allow CMPO or CMH qualification for specific materials only. If this is done, commands must have a method to ensure CMPOs or CMHs do not handle material excluded from their qualification.

3.4.9 Steam Plant Cleanliness Inspector or Certifier.

- a. Normally a petty officer, but may be a civilian.
- b. Complete PQS for Steam Plant Cleanliness Inspector and pass a written exam and oral board.

3.4.9.1 Qualification Requirements for Reactor Plant Cleanliness Inspector or Certifier.

- a. Normally a petty officer, but may be a civilian.
- b. Complete PQS, per reference (a), for Reactor Plant Cleanliness Inspector, pass written exam and oral board.

3.4.10 Gas Systems Cleanliness Inspector or Certifier.

- a. Normally a petty officer, but may be a civilian.
- b. Satisfactorily complete an Oxygen Clean Worker course of instruction per reference (b).

3.4.11 Oxygen Clean Instructors. An Oxygen Clean Instructor will be certified per reference (b). Oxygen Clean Instructors will re-qualify every three years. If an individual is scheduled for transfer within six months after the expiration of qualification, it is permissible to extend the qualification until transfer. The local command may exempt the senior instructor from re-qualification.

3.4.12 Ship's and Fleet Maintenance Activity Oxygen Clean Workers. Oxygen Clean Workers will be certified per reference (b). Oxygen Clean Workers will re-qualify every three years. If an individual is scheduled for transfer within six months after the expiration of qualification, it is permissible to extend the qualification until transfer.

3.4.13 Oxygen Calibration Technicians. Oxygen Calibration Technicians qualify to perform oxygen instrument cleaning and calibration by satisfactory completion of Oxygen Calibration School at the direction of the Naval Sea Systems Command (NAVSEA) Metrology and Calibration (METCAL) Quality Manager. Naval Sea Systems Command certifies successful candidates for two years following a report of satisfactory completion of Oxygen Calibration School. Local Regional Maintenance Center re-certifies Oxygen Calibration Technicians during the calibration capability reviews of FMAs or Strategic Systems Program Office capabilities and proficiency evaluation of SSBN and SSGN FMAs.

3.4.14 Work Center Supervisors and Planners. The qualification of QA Maintenance Planners and QA Work Center Supervisors is required in all work centers that perform maintenance tasks outlined in Part I, Chapter 2, paragraph 2.2.1 of this volume. Work Center Supervisors and Maintenance Planners will, as a minimum, complete the applicable qualifications of reference (a) prior to performing any unsupervised maintenance tasks. QA Maintenance Planners prerequisite fundamentals (QAI and Cleanliness Inspector) may be deleted in work centers that do not perform controlled work. Activities with separate planning organizations are exempt from having planners assigned to individual work centers. (Submarines Only) For work centers requiring a QA Work Center Supervisor, either the 3-M Work Center Supervisor or Leading Chief Petty Officer must be qualified QA Work Center Supervisor and have completed 3M PQS NAVEDTRA 43241 for Work Center Supervisor.

3.4.15 Qualification Requirements for Submarine Nuclear Propulsion Plant Operator Welders (Navy Enlisted Classification Code 3351 and Supervisor Welders 3361).

NOTE: INFORMATION ON THIS SUBJECT IS SAFEGUARDED PER REFERENCE (c). SPECIFIC PROGRAM REQUIREMENTS ARE IDENTIFIED IN REFERENCES (d) AND (e).

3.4.16 Qualification Requirements for Submarine Fly-By-Wire Ship Control System Maintenance Technician. Must be a graduate of the Ship Control System Maintenance Technician School (A-623-0118 for SSN 21 Class, A-623-0131 for SSN 774 Class).

3.5 TRAINING.

3.5.1 Maintenance Personnel Training. All personnel involved with planning, performing and supervising maintenance specified in Section 3.2 of this chapter will be trained using the following guidance:

- a. Appendices B and C of this chapter provide information on program elements normally contained in effective maintenance training programs. Appendix B is applicable to Ship's Force whereas Appendix C is applicable to Fleet Maintenance Activities (e.g., mechanics, Nondestructive Test (NDT) technicians, welders and planners). All appendices identified in this paragraph are provided as information only and are not to be considered mandatory listings.
- b. Findings from QA form 14s, audits, assessments and surveillance should be included, when appropriate, to re-emphasize the most recent problems experienced in the department.
- c. Include the training with existing topics where possible (i.e., CMPO training held with Repair Parts Petty Officer training or Steam Plant Cleanliness training held in conjunction with Machinery Divisions training on the Steam Plant). However, some areas may require separate training to be held.
- d. Joint training between departments and organizations is acceptable. The Department Head will coordinate with the QAO on training concerning QM. It is not the intent to create a separate training program, nor is the intent to hold one annual training session that covers all of the topics.
- e. In order to assess the effectiveness of the training program, the QAO should:

- (1) Periodically monitor training.
- (2) Assess knowledge level retention in conjunction with the conduct of annual QA and welder training and qualification program audit required by reference (a), **Part I, Chapter 9** paragraph 9.3.1 of this Volume.

3.5.2 **Requirements.** The QAO will create a Long Range Training Plan (LRTP), approved by the Executive Officer, to track topics desired to be given on a periodic basis. Reference (f) provides guidance on effective training planning and LRTP use.

- a. For personnel qualified 301 (craftsman) and above, in accordance with reference (a), the QAO will include applicable training topics using Appendices B and C of this chapter as a guide. These topics must be reviewed and updated annually or whenever a new long-range training plan is generated.
- b. For personnel responsible for planning, approving, inspecting or supervising maintenance on systems or equipment included in the QM Program, the QAO will include the following items in the LRTP.
 - (1) Requirements and generation of a controlled work package and formal work package including objective quality evidence, required inspections and critical QM points.
 - (2) Material certification, control and stowage requirements.
 - (3) In-process control including torqueing, controlled assembly, system cleanliness requirements for specific systems (e.g., air systems, hydraulic systems) and common mistakes noted in completed QA forms.
 - (4) Testing.
 - (5) Departure from specifications.
- c. The Ship's Supply Officer will ensure supply department personnel receive training on nuclear and non-nuclear controlled material certification, procurement, receipt inspection and LI/SOC stock program material, SW, VU and NRP stowage requirements.

3.5.3 **Submarine Safety Awareness Training (Submarines and Submarine Repair Facilities only).** All hands must receive Submarine Safety (SUBSAFE) awareness and Fly-By-Wire Ship Control (if assigned to, work on or over-see 21 Class or 774 Class submarines) training during initial indoctrination and annually thereafter, **not to exceed 12 months**. Personnel at Submarine Repair Facilities who supervise or manage SUBSAFE, Deep Submergence System-Scope of Certification or Fly-By-Wire-Ship Control System work will receive training on parent requirements to include (at a minimum) references (g), (h), (i) and (j). ISIC and TYCOM staff members that routinely review SUBSAFE and Fly-By-Wire Ship Control (if assigned to, work on or over-see 21 Class or 774 Class submarines) objective quality evidence, make determinations on SUBSAFE Departures from Specifications and perform other SUBSAFE work oversight will receive annual SUBSAFE awareness training to keep knowledge and proficiency levels high.

APPENDIX A
NAVEDTRA 43523 QUALIFICATION MATRIX

WATCHSTATION	PRE-REQUISITE WATCHSTATIONS	PRE-REQUISITE FUNDAMENTALS
301 Craftsman	None	101 Quality Maintenance Safety Precautions 102 Quality Maintenance Administration 103 Quality Maintenance Program 104 Craftsman
302 Controlled Material Petty Handler (CMPO or CMH)	301 Craftsman	105 Controlled Material Petty Officer or Controlled Material Handler (CMPO or CMH)
303 Steam Plant Cleanliness Inspector or Certifier (SCI)	301 Craftsman	106 Steam Plant Cleanliness Inspector or Certifier (SCI)
304 Reactor Plant Cleanliness Inspector or Certifier (RCI)	303 Steam Plant Cleanliness Inspector or Certifier (SCI)	107 Reactor Plant Cleanliness Inspector or Certifier (RCI)
305 Quality Assurance Inspector (QAI)	301 Craftsman 302 Controlled Material Petty Officer or Controlled Material Handler (CMPO or CMH)** 303 Steam Plant Cleanliness Inspector or Certifier (SCI)** 304 Reactor Plant Cleanliness Inspector or Certifier (RCI)**	109 Quality Assurance Inspector (QAI)
306 Maintenance Planner	301 Craftsman	106 Steam Plant Cleanliness Inspector or Certifier (SCI) 107 Reactor Plant Cleanliness Inspector or Certifier (RCI) 108 Gas Systems Cleanliness 109 Quality Assurance Inspector 110 Planner
307 Work Center Supervisor (WCS)	301 Craftsman	105 Controlled Material Petty Officer or Controlled Material Handler (CMPO or CMH) ** 106 Steam Plant Cleanliness Inspector or Certifier (SCI) 107 Reactor Plant Cleanliness Inspector or Certifier (RCI) 108 Gas Systems Cleanliness 109 Quality Assurance Inspector 110 Planner 111 Work Center Supervisor
308 Quality Assurance Supervisor (QAS)	305 Quality Assurance Inspector (QAI)	108 Gas System Fundamentals 110 Planner 112 Quality Assurance Supervisor

** Noted in the PQS as Command Specific. For these items, the necessity for the pre-requisites will be determined by the type of work the individual or command performs and that individual's PQS should be tailored accordingly.

APPENDIX B**OUTLINES OF TYPICALLY EFFECTIVE TRAINING TOPICS**

1. Work Authorization.
 - a. Topic.
 - (1) Work authorization forms.
 - (2) Tag-outs.
 - (3) Safety requirements.
 - (4) Ship responsibility for outside activity maintenance.
 - b. Reference: COMUSFLTFORCOMINST 4790.3; Joint Fleet Maintenance Manual, Volume V.
2. Formal Work Package **or** Controlled Work Package documentation.
 - a. Topic.
 - (1) Record retention requirements.
 - (2) Mandatory documents.
 - (3) Routing of documents and signature documents.
 - (4) Test requirements for FMA work.
 - b. Reference: COMUSFLTFORCOMINST 4790.3; Joint Fleet Maintenance Manual, Volume V.
3. In Process Control.
 - a. Topic.
 - (1) Torquing.
 - (2) Controlled assembly.
 - (3) Cleanliness requirements for:
 - (a) Air systems.
 - (b) Hydraulic systems.
 - (c) Reactor plant (nuclear powered ships only).
 - (d) Steam plant (non-nuclear and nuclear powered ships).
 - (e) Oxygen **or** Nitrogen systems.
 - (f) Seawater systems.
 - (g) Lubricating systems.
 - (h) Gas Turbine systems.
 - (i) Fuel systems.

- (j) Diesel systems.
 - (4) Use of formal work packages.
 - (5) Control of fasteners. (Include avoidance of carbon steel in seawater systems.)
 - (6) Material control.
 - (7) Re-work.
 - (a) Administration.
 - (b) Root cause and corrective action.
 - (8) Revisions: Administration.
 - (9) Critical QM points.
 - (10) Procedural compliance.
 - (11) Submarine antenna work including mast clamps.
 - (12) Departure from specifications.
 - (13) Submarine Flight Critical Components
- b. References.
- (1) COMUSFLTFORCOMINST 4790.3; Joint Fleet Maintenance Manual, Volume V.
 - (2) NAVSEA 0902-018-2010; General Overhaul Specifications for Deep Diving SSBN/SSN Submarines (DDGOS).
 - (3) NAVSEA S9505-AM-GYD-010; Submarine Fastening Criteria (Non-Nuclear), Description, Design and Maintenance.
 - (4) NAVSEA S9520-AA-MMA-010; Repair of Submarine Seawater Ball Valves (Non-Nuclear).
 - (5) Naval Ship's Technical Manuals (NSTM).
 - (6) MIL-STD 1330; Standard Practice for Precision Cleaning and Testing of Shipboard Oxygen, Helium, Helium-Oxygen, Nitrogen and Hydrogen Systems.
 - (7) NAVSEA 0900-LP-016-6080; QA Standard for Submarine Antenna and Mast Assemblies.
 - (8) NAVSEA S9AA0-AB-GOS-010/020/030; General Specifications for Overhaul of Surface Ships (GSO); AEGIS Supplement.
 - (9) NAVSEA T9044-AD-MAN-010 - Requirements Manual for Submarine Fly-By-Wire Ship Control Systems.

4. Testing.

- a. Topic.
 - (1) Hydrostatic test rig requirements including calibration.

- (2) Test pressure drawings.
- (3) Air blast, vacuum and other tests.
- (4) Use of FMA and shipyard test plans **or** procedures.
- (5) Conducting hydrostatic tests and completing hydrostatic test forms (including common mistakes).
- (6) NDT alternative in testing.

b. References.

- (1) COMUSFLTFORCOMINST 4790.3 Joint Fleet Maintenance Manual, Volume V.
- (2) Test Pressure Drawings.
- (3) NAVSEA S9505-AF-MMA-010; Submarine Non-Nuclear Piping System Test Manual.
- (4) NAVSEA 0902-018-2010; General Overhaul Specifications for Deep Diving SSBN/SSN Submarines (DDGOS).
- (5) NAVSEA S9086-RK-STM-010; NSTM Chapter 505 (Piping Systems).
- (6) NAVSEA S9AA0-AB-GOS-010/020/030; General Specifications for Overhaul of Surface Ships (GSO); AEGIS Supplement.

5. Material Certification.

a. Topic.

- (1) Level I material requirements.
- (2) Level I material exceptions.
- (3) Use of drawings for Quality Assurance Lists.
- (4) Submarine antenna material.
- (5) Upgraded systems to Level I requirements.
- (6) Upgrading components to meet Level I and SUBSAFE requirements.
- (7) Submarine Flight Critical Components requirements.

b. References.

- (1) SUBSAFE Certification Boundary Book.
- (2) Joint Identification Plans **or** Mapping Plans.
- (3) COMUSFLTFORCOMINST 4790.3; Joint Fleet Maintenance Manual, Volume V.
- (4) Ship's Coordinated Shipboard Allowance List (COSAL).
- (5) NAVSEA 0948-LP-045-7010; Material Control Standard (Non-Nuclear).

- (6) NAVSEA/NAVSUPINST 4855.1; Quality Assured Submarine Antenna Material: Policy and Procedures for Control and Implementation.
- (7) Applicable Class Material Identification and Control of Piping Systems Boundary Book.
- (8) NAVSEA T9044-AD-MAN-010 - Requirements Manual for Submarine Fly-By-Wire Ship Control Systems.

6. Material Procurement **or** Receipt Inspection.

a. Topic.

- (1) SUBSAFE, Level I **or** Submarine Flight Critical Component material.
- (2) Material substitution.
- (3) Stowage requirements for controlled material.
- (4) Ship's COSAL.

b. References.

- (1) COMUSFLTFORCOMINST 4790.3; Joint Fleet Maintenance Manual, Volume V.
- (2) NAVSEA 0948-LP-045-7010; Material Control Standard (Non-Nuclear).
- (3) NAVICPINST 4355.5; Receipt, Inspection, Storage and Issue of Level I Material.
- (4) NAVSEA 0948-LP-103-6010; Level I Stock Program Catalog, (Part I - Submarine Items, Part II - Surface Ship Items).
- (5) Applicable Class Material Identification and Control of Piping Systems Boundary Book.
- (6) NAVSEA T9044-AD-MAN-010 - Requirements Manual for Submarine Fly-By-Wire Ship Control Systems.

7. SUBSAFE.

a. Topic.

- (1) Determination of SUBSAFE **or** Hull Integrity boundaries.
- (2) Use of QA forms and tags.
- (3) Torquing of hull integrity fasteners.
- (4) Generation of an MCR/REC.
- (5) Unrestricted Operation **or** Periodic Maintenance Requirement.
- (6) Departure from Specification requirements.
- (7) REC exceptions.
- (8) Positive material identification requirements for hull integrity fasteners.

b. References.

- (1) SUBSAFE Certification Boundary Book.
- (2) NAVSEA 0924-062-0010; Submarine Safety (SUBSAFE) Requirements Manual.
- (3) COMUSFLTFORCOMINST 4790.3; Joint Fleet Maintenance Manual, Volume V.
- (4) Applicable Unrestricted Operation Maintenance Requirement Card program technical manual.

8. Audit and Surveillance (for personnel performing).

a. Topic.

- (1) Audit or surveillance requirements.
- (2) Purpose of audit or surveillance program.
- (3) Preparing for and conducting an audit including specific discussion of techniques to be used to make audits effective and useful to the organization.
- (4) Preparing for and conducting a surveillance includes a specific discussion of techniques to be used to make surveillance effective and useful to the organization.
- (5) Documenting an audit or surveillance.
- (6) Root cause identification.
- (7) Trends and trend analysis.

b. Reference: COMUSFLTFORCOMINST 4790.3; Joint Fleet Maintenance Manual, Volume V.

9. Additional Training Topics.

- a. Weight handling equipment testing, use and safety.
- b. Oxygen **or** Nitrogen plant maintenance.
- c. Working aloft and Sail Safety.
- d. Combat systems maintenance requirements.
- e. Electrical safety.
- f. Welding.
- g. Brazing.
- h. REC requirements on diving systems.
- i. Cleanliness requirements for diving systems.
- j. Controlled material requirements for diving systems.

NOTE: WHERE THERE ARE SIMILAR LECTURE TOPICS, IT IS SUGGESTED THAT THE TRAINING PRESENTED TO NUCLEAR TRAINED PERSONNEL CONSIST OF BOTH THE INFORMATION FROM TOPICS 1-9 OF THIS APPENDIX AND THE NUCLEAR SPECIFIC INFORMATION CONTAINED IN SECTION 10.

10. Nuclear Training Topics.

a. Material Certification.

- (1) This lecture should include discussion of Nuclear Level I requirements.
- (2) The following references provide information on this topic:
 - (a) NAVSEA 0948-LP-045-7010; Material Control Standard.
 - (b) NAVSEAINST C9210.34; Material Identification and Control Requirements for Naval Nuclear Reactor Plant Piping Systems.
 - (c) NAVSEA S9213-45-MAN-000 - Naval Nuclear Material Management Manual.
 - (d) NAVSEA 0989-LP-037-2000; Commissioned Submarine General Reactor Plant Overhaul and Repair Specification.
 - (e) NAVSEA 0989-LP-043-0000; Commissioned Surface Ship General Reactor Plant Overhaul and Repair Specification.
 - (f) NAVSEA 0989-LP-058-1000; Destroyer Tender and Submarine Tender Nuclear Support Facilities Overhaul and Repair Specification.
 - (g) NAVSEA 0989-064-3000; Cleanliness Requirements for Naval Nuclear Plant Maintenance and Construction.
 - (h) NAVSEAINST 9210.23; Naval Nuclear Work at Naval Activities and Private Shipyards - Certification of Work Accomplishment and Data, Retention of Associated Records and Retention of Design Records, Requirements for.

b. Material Procurement **or** Receipt Inspection. This lecture should include discussion of:

- (1) Nuclear Material.
- (2) Material Substitutions. Certifying material for use to Nuclear Level I.
- (3) The list of references in paragraph 10.a (2) of this appendix provides information on the topic.

c. In-Process Control.

- (1) This lecture should include discussion of:
 - (a) Cleanliness requirement for:
 - 1 Reactor Plant (nuclear powered ships only).
 - 2 Steam Plant (fossil and nuclear powered ships).

- (b) Requirements for a work package.
 - (c) Generation of a work package.
 - (d) Use of QA forms and tags.
 - (e) Setting plant conditions.
 - (f) Certification signature requirements.
 - (g) Use of material control tags.
 - (h) Reactor Plant Work Accomplishment Reports (RPWAR).
 - (2) The list of references in paragraph 10.a.(2) of this appendix provides information on the topic.
- d. Testing.
- (1) This lecture should include discussion of:
 - (a) Hydrostatic test rig requirements including calibration.
 - (b) Hydrostatic test forms.
 - (c) Conducting hydrostatic test.
 - (d) Setting plant conditions.
 - (e) Use of Reactor Plant Manual for test requirements.
 - (f) Weight Handling Equipment Testing.
 - (2) The following references provide information on this topic:
 - (a) Reactor Plant Manual.
 - (b) NAVSEA 0989-028-5000; Manual for the Control of Testing and Plant Conditions.
 - (c) NAVSEA 0387-LP-046-8000; System Hydrostatic Test Requirements.
 - (d) NAVSEA 0989-LP-058-0000; AS/AD Tender Nuclear Support Facilities Preventive Maintenance Index.
 - (e) NAVSEA 0989-LP-037-2000 - Commissioned Submarine General Reactor Plant Overhaul and Repair Specification.
 - (f) NAVSEA 0989-LP-043-0000 - Commissioned Surface Ship General Reactor Plant Overhaul and Repair Specification.
- e. Final work package documentation. This lecture should include discussion of:
- (1) Record retention requirements.
 - (2) Mandatory documents.
- f. Reactor Plant Fundamentals. This should be slanted toward the worker so that he **or** she understands the possible consequences of faulty workmanship, loss of cleanliness, etc., in the Reactor Plant.

- g. FMA Nuclear Planning Yard Basic Trade Skills Lesson Plans (when available).

APPENDIX C**RECOMMENDED TRAINING TOPICS FOR SELECTED POSITIONS**

1. Experience has shown that effective training should be related to job skills required by the individual.

- a. Mechanical craftsmen should cover areas like:
 - (1) Tools and their uses.
 - (2) Shop safety.
 - (3) Work authorization.
 - (4) Material identification.
 - (5) Rework and their causes.
 - (6) Valve construction and methods to perform:
 - (a) Stack height measurements.
 - (b) Blue checks.
 - (c) Lapping of a valve seat.
 - (7) Pump construction and methods to perform:
 - (a) Mechanical seal replacement.
 - (b) Alignments.
 - (8) Testing requirements.
 - (9) Cleanliness requirements.
 - (10) Technical manuals and their usage.
 - (11) Drawings and their usage.
 - (12) Work packaging administration.
- b. NDT inspectors and welders should cover the following areas:
 - (1) NAVSEA S9074-AR-GIB-010/278; Requirements for Fabrication Welding and Inspection, and Casting Inspection and Repair for Machinery Piping and Pressure Vessels.
 - (2) NAVSEA T9074-AD-GIB-010/1688; Fabrication, Welding and Inspection of Submarine Structures.
 - (3) MIL-STD-1689 (for Surface Ships only); Fabrication, Welding and Inspection of Ship's Structures.
 - (4) NAVSEA 0900-LP-001-7000; Fabrication and Inspection of Brazed Piping Systems.
 - (5) NAVSEA T9074-AS-GIB-010/271; Requirements for Nondestructive Testing Methods.

- (6) MIL-STD-2132; Nondestructive Examination Requirements for Special Applications.
- (7) Material control.
- (8) Cleanliness.
- (9) Work package administration.
- c. Planners should cover the following areas:
 - (1) SUBSAFE program.
 - (2) Level I program.
 - (3) QA forms.
 - (4) Welding requirements.
 - (5) Manufacturing specifications.
 - (6) Cleanliness requirements and specifications.
 - (7) Hydrostatic testing.
 - (8) Material control.
 - (9) Manufactured fittings specifications.
 - (10) Plant conditions.
 - (11) System flushes.
 - (12) NDT requirements.
 - (13) Testing requirements.
 - (14) Index of technical publications.
 - (15) Military standards and specifications.
 - (16) Selected record drawings **or** ship's drawing index.
 - (17) Maintenance data systems.
 - (18) Blue print reading.
 - (19) For activities involved in Scope of Certification maintenance:
 - (a) NAVSEA SS800-AG-MAN-010/P-9290, System Certification Procedures and Criteria Manual for Deep Submergence System.
 - (b) Scope of Certification material control classification.
 - (c) Implodability.
 - (20) Submarine Flight Critical Components.

2. Proven training methods include the use of mockups and training aids that show practical application of the lecture material. Hands on mockup training, performed by the workers is the most highly effective method followed by the demonstration of skills by the instructor.

NOTE: WHERE THERE ARE SIMILAR LECTURE TOPICS, IT IS SUGGESTED THAT THE TRAINING PRESENTED TO NUCLEAR TRAINED PERSONNEL CONSIST OF BOTH THE INFORMATION FROM TOPICS 1-2 AND THE NUCLEAR SPECIFIC INFORMATION CONTAINED SECTION 3.

3. Nuclear Training Topics.

a. Job Skill Training. Each work center should determine the skill requirements and incorporate their own training requirements. Examples are:

- (1) Nuclear planners should cover areas like:
 - (a) RPWAR.
 - (b) Manufactured fittings specifications.
 - (c) Freeze seal requirements.
 - (d) Plant conditions.
 - (e) Welding requirements.
 - (f) Radiological Controls.
 - (g) System flushes.
 - (h) Nondestructive Testing (NDT) requirements.
 - (i) Hydrostatic testing requirements.
- (2) The following references provide information on the topics of section 3.a(1):

4.1 **PURPOSE.** This chapter provides the requirements for qualification of Shipboard and Fleet Maintenance Activity Welders, Brazers, and Nondestructive Testing (NDT) personnel. Also included are qualification record requirements. The provisions of references (a) through (i) are amplified and expanded herein to ensure that all provisions of higher authority are implemented.

NOTE: ALTHOUGH THIS CHAPTER COVERS THE REQUIREMENTS FOR NAVY WELDERS, BRAZERS AND NDT PERSONNEL, THE PERFORMANCE QUALIFICATIONS FOR CIVILIAN WELDERS, BRAZERS AND NDT PERSONNEL WILL BE PER REFERENCES (b), (c) AND (d) RESPECTIVELY.

4.1.1 **General Requirements.** Each activity is responsible for establishing that each welder or brazer is qualified by demonstrating their ability to produce sound and satisfactory joints per references (a) through (c). References (a), (e) and (f) define welder and NDT qualifications by Navy Enlisted Classification (NEC) codes.

4.1.2 **Training.**

NOTE: NO WELDER MUST PERFORM QUALIFICATION OR PRODUCTION FABRICATION UNTIL AFTER RECEIPT OF THIS TRAINING AND PASS A WRITTEN EXAMINATION WITH A SCORE OF AT LEAST 75%.

- a. Activities must have a training program per references (b) and (d). Activities without a Level III examiner should obtain assistance from a Fleet Maintenance Activity.

- b. For those welds or brazes not frequently performed for production, proficiency should be demonstrated by satisfactory completion of a mock-up of the weld or braze prior to performing production work.

4.2 GENERAL REQUIREMENTS FOR BRAZERS AND WELDERS.

- a. The extent of welder qualification resulting from tests must be governed by references (a) and (b). The extent of brazer qualification must be governed by reference (c) for piping and pressure vessel applications.

NOTE: THE REQUIREMENTS ARE TAILORED TO THOSE OF REFERENCE (c), AS QUALIFIED PIPE BRAZERS ARE ALSO CONSIDERED QUALIFIED FOR ALL OTHER BRAZING WITHIN THE SCOPE OF THEIR PIPE QUALIFICATIONS (I.E., PROCESS, MATERIAL AND THICKNESS LIMITATIONS).

- b. To provide uniformity and enhance the effectiveness of the welder or brazer program the following conditions must apply:
 - (1) Once started, all qualifications must be completed as expeditiously as possible. Therefore, personnel attempting to qualify must be given ample opportunity to complete the qualification test in a timely manner. Qualification testing must not be assigned if anticipated workload, leave schedules, shiftwork or other controllable factors will delay test assembly completion.
 - (2) No more than three qualification tests per welder or brazer will be in progress at any one time.
 - (3) For training purposes, the Welding or Brazing Shop Supervisor must make arrangements with the NDT Supervisor to review the records (including radiographic film) of failed qualification test assemblies. The NDT Supervisor will discuss the results with the qualifier, focusing on the reasons for rejection, types and locations of defects found, and possible corrective actions. The arrangements should include welder or brazer observation of actual test results whenever possible.
 - (4) Because a welder or brazer meets the qualification requirements of a particular specification or standard does not always assure his or her proficiency in all phases of diversified production tasks for which he or she is qualified. To this end, activities should strive for continual improvement, both in the qualification and proficiency of its welders and brazers.
- c. Stud or Spot Welders. NEC 4955 welder or welding operator qualification is not required for operators of stud or spot welding equipment.

4.2.1 Eye Examination. Annual vision tests must be passed by each brazer and welder. Vision tests must be conducted by the medical department, cognizant NDT Examiner or delegated personnel, using standard methods for determining visual acuity. The standard for acceptance must be natural or corrected near distance acuity such that the brazer or welder is capable of reading J1 letters on a standard Jaeger type chart. Equivalent visual tests may be used. Corrective aids used during the visual test must be worn during qualification testing and production fabrication. Reference (b) contains the color test requirement for Titanium welders.

4.2.2 Brazing and Welding Procedures. Brazing and Welding procedures, qualified per references (b) or (c), as applicable, must be on hand for all applications for which performance qualification is intended. Although not specifically required, the brazer or welder should use the procedural requirements for training and familiarity purposes during qualification testing.

4.2.3 Brazing and Welding Personnel Knowledge. Each brazer and welder must receive documented training on the workmanship and detailed visual inspection requirements of fabrication documents used by the activity.

4.2.4 Brazer and Welder Identification Numbers. Upon meeting the requirements of this section, brazers and welders receive a unique identification number, issued by the respective Division Officer, for identification of brazing or welding performance.

- a. Brazer and Welder Identification Number Log. The Division Officer must maintain a log of unique identification numbers assigned to brazers or welders. The number assigned must be alphanumeric as illustrated in the following example:

A -12 -B or W.

Where: A = First letter in a brazer or welder's last name.

12 = Sequential number alphabetical in list of personnel.

B or W = B for brazer or W for welder.

- b. Each entry must contain the date the number was assigned, the brazer or welder's name and signature, the identification number, the date the brazer or welder completed the initial training specified in paragraph 4.2.3 of this chapter and the brazer or welder's projected rotation date.

4.2.5 Validation of Qualification. All brazer or welder qualifications, re-qualification and maintenance of qualification must be valid only if original qualification is recorded in the individual's service record per reference (a). A service record entry (NAVPERS 1070/613) must be made upon initial qualification, annually (not to exceed 12 months) and before transfer. This service record entry must include all subsequent re-qualifications and the most current vision test results. The brazer or welder's Division Officer must be responsible for ensuring these entries are made.

4.2.6 Qualification Records.

4.2.6.1 Individual Brazer or Welder Qualification File. In order to achieve proper monitoring of brazer or welder qualifications, the individual's Division Officer must maintain an auditable file for each brazer or welder assigned. This file is to be maintained for each brazer or welder for as long as he or she is assigned to a command and transferred with the welder or brazer to their next command. These files must include all information that is required by references (a), (b) and (c) and include the following:

- a. Brazer or Welder identification number (name, rate, individual identification number).
- b. Test date or Use of process date.

- c. Qualification test number, process, position, base material type, filler material type and size, or brazing alloy type and size.
- d. Test results (i.e., Accept or Reject). A statement as to the cause of rejection will be entered, if appropriate.
- e. Record of omission of space restriction when not used on pipe tests.
- f. Workmanship and visual inspection requirements examination results per reference (b).
- g. Certifying signature (Division Officer or designated representative).
- h. Vision test form:
 - (1) Identification.
 - (2) Test date.
 - (3) Test description.
 - (4) Test results.
 - (5) Corrective aids as required.
 - (6) Certifying signature (medical department, cognizant NDT Examiner or delegated personnel).

4.2.6.2 Maintenance of Qualification. Detailed records of maintenance of qualification need only be retained for the current and preceding quarter. In order to ensure proper maintenance of brazer or welder qualifications, a log must be maintained by each Division Officer. This log must include items a., b., d. and g. of paragraph 4.2.6.1 of this chapter. In addition, this log will also include the brazing or welding process (i.e., H-101, SMAW, GTAW, etc.) used during maintenance of qualification. This maintenance of qualification log may be a separate log from the brazer or welder file or it may be incorporated into the brazer or welder file as part of the file itself.

4.2.6.3 Method of Qualification Maintenance. Brazers and welders should maintain their qualifications on production jobs. If production work is unavailable, a brazing test assembly or test assembly weld joint meeting the requirements of reference (b) for welders and reference (c) for brazers may be used. Only joints meeting all applicable acceptance criteria will be used for this purpose. Surface Ships lacking NDT personnel may only allow the brazer or welder qualification to lapse with Type Commander approval. If a joint is assembled by personnel whose qualifications have lapsed or without the support of qualified NDT personnel, a Departure from Specification must be submitted and the joint must be reassembled using qualified personnel during the next maintenance support opportunity.

4.2.6.4 Renewal of Qualification. Renewal of qualification must be per reference (b) for welders and reference (c) for brazers.

4.2.7 Effective Date of Qualification. Effective date of qualification must be from the date that the test assembly brazing or welding is complete. Initial qualification is effective only after the final NDT is completed but the date of qualification is the date the weld or braze was completed. For re-qualification, the re-qualification is only effective after the final NDT is completed but the

effective qualification date must be the day the weld or braze was completed. The NDT Supervisor must ensure that:

- a. Qualification results are forwarded to the brazer or welder Division Officer.
- b. Each test assembly is marred, marked, or otherwise identified so as to preclude its re-use.

4.3 BRAZER QUALIFICATIONS.

4.3.1 Prerequisite. Prior to performing any qualification or production brazing the brazer must have successfully completed training in workmanship and detailed visual inspection requirements and passed a written examination with a grade of no less than 75%. The training and examinations for all brazers will be based on the requirements set forth in reference (c).

4.3.2 Qualification Test. A brazer qualification must be per reference (c) for piping and pressure vessels.

4.3.3 Limitations. Limitations will be per reference (c).

4.3.4 Test Assembly Evaluation. Test assemblies must be visually and ultrasonically inspected or a peel test may be conducted as specified in reference (c).

4.3.5 Maintenance of Qualification. A brazer maintains his or her qualifications by using the process(es) he or she used during initial qualification at least once in each calendar quarter subsequent to the quarter in which he or she qualified and four times in each subsequent calendar year.

NOTE: THE VERIFICATION OF PROOF OF PROCESS WILL BE DONE BY THE DIVISION OFFICER, OR HIS OR HER REPRESENTATIVE, AND DOCUMENTED.

4.3.6 Qualification Renewal. A brazer must renew his or her qualifications per reference (c).

4.3.7 Transfer of Qualification. Qualifications may be transferred from one activity to another when the requirements of reference (c) are met.

4.4 QUALIFICATION REQUIREMENTS FOR NAVY ENLISTED CLASSIFICATION CODE 4955 WELDERS.

4.4.1 Qualification Prerequisites.

4.4.1.1 Navy Enlisted Classification Code Achievement. To achieve a welding NEC the welder must successfully meet all the requirements of reference (a). Welders must attend welding school except for aluminum welding and brazing. Training for welding aluminum and brazing is conducted at parent commands.

4.4.1.2 Specific Qualifications. Qualifications for specific additional welding processes, filler metal groups and welding positions may be obtained as defined in reference (a).

4.4.2 Maintenance of Qualification. A welder maintains his or her qualifications by using the process(es) he or she used during initial qualification at least once during each three month period or calendar quarter. In addition, for titanium welders and welding operators, verification of process used on titanium base metal during each 6-month or two consecutive calendar quarters must also be maintained.

NOTE: THE VERIFICATION OF PROOF OF PROCESS WILL BE DONE BY THE DIVISION OFFICER, OR HIS OR HER REPRESENTATIVE, AND DOCUMENTED. FINAL ACCEPTANCE OF CONTROLLED WELDING STILL REQUIRES NDT PERSONNEL, BUT THE PROOF OF PROCESS FOR MAINTENANCE OF QUALIFICATION MAY BE DONE BY THE DIVISION OFFICER OR HIS OR HER REPRESENTATIVE.

4.4.3 Qualification Renewal. A welder must renew his or her qualifications per reference (b).

4.4.4 Transfer of Qualification. Qualifications may be transferred from one activity to another when the requirements of reference (b) are met.

4.4.5 Waiver of Qualification Tests. Qualification tests of welders working on assemblies as described in reference (b) may be omitted provided this omission is permitted by the applicable fabrication document or is approved.

4.5 NON-CODED HULL TECHNICIANS.

4.5.1 Authorization. Non-coded Hull Technicians are authorized to perform welding on a Minor Structure designated as Category F. Category F welds are repairs performed on “minor structure” assemblies, where the possibility of failure is remote, and failure would not result in danger to ship’s personnel or the ship. Minimum qualifications are:

- a. Be a qualified Hull Technician.
- b. Be a qualified Maintenance Worker per reference (g).
- c. Be a qualified Quality Assurance Craftsman per PQS 43523-B.
- d. Have completed Job Qualification Requirements.
- e. Have received documented training on the safety requirements associated with welding as outlined in reference (a).
- f. Will be qualified per reference (b) for Category F welds, except for being assigned a welding code NEC, and will maintain proficiency per reference (b).

4.5.2 Minor Structure Components.

- a. The following list identifies components which are considered “minor structure”.
 - (1) Nonstructural joiner bulkheads or non-watertight bulkheads.
 - (2) Partitions, lockers and gratings.
 - (3) Non-ballistic wire way and ventilation trunks.
 - (4) Pipe Hanger Brackets not attached to hull and are non-critical.
 - (5) Cableway Brackets not attached to hull and are non-critical.
 - (6) Galley fixtures.
 - (7) Label plates, nameplates.
 - (8) Furniture.
 - (9) Hand railings.

- (10) Operating platforms.
 - (11) Hand-grabs and ladders.
 - (12) Weld fills for deck plates.
 - (13) Stuffing tubes above weather decks.
 - (14) Ventilation and air conditioning ducts.
 - (15) Protective covers for gear belts and chain drives.
 - (16) Vents, overflows and drains.
- b. Some specific examples are:
- (1) Welding corners on lockers and rack pans fabricated by the sheet metal shop.
 - (2) Fabricating and weld framing for non-watertight doors, false bulkheads and office desks.
 - (3) Fabrication of collars for gas cylinders.
 - (4) Fabrication and welding of pipe hangers, cable hangers and ventilation hangers for systems which have operating pressures less than 50 psi or temperatures less than 200 degrees F.
 - (5) Brazing of funnels for later installation in shipboard gravity drain systems.

4.6 QUALIFICATION REQUIREMENTS FOR NONDESTRUCTIVE TEST PERSONNEL.

4.6.1 Purpose.

- a. To provide guidance on the procedures that must be followed to maintain NDT qualifications or attain NDT re-qualification per references (d) and (f).
- b. Naval NDT personnel are qualified by being examined by a NDT Examiner per references (d) and (f).

4.6.2 Levels of Certification. NDT personnel are certified per references (d) or (f). Military personnel certified per reference (f) will be assigned NECs per reference (e).

- a. Level I (NDT Operator): An individual certified to NDT level I is qualified to carry out NDT operations following written instructions and under the supervision of level II or level III personnel. The individual must have the skills and knowledge to properly perform specific calibrations, specific tests, set up equipment, carry out specific inspections, record the results obtained, classify the results following written criteria and report the results. He or she must not be responsible for the choice of the test method, technique to be used or for the final assessment of the test results.
- b. Level II (NDT Inspector): An individual certified to NDT level II is qualified to perform and direct non-destructive testing following established or recognized techniques. The individual must be competent to choose the test techniques to be used; to set up and calibrate equipment; to interpret and evaluate results following applicable codes, standards and specifications; to carry out all duties for which a level I individual is qualified; to organize and report the results of non-destructive tests. The individual must also be familiar with the scope and limitations of the methods for

which he or she is qualified, and be able to exercise assigned responsibility for on-the-job training and guidance of trainees and level I personnel.

- c. **Level III (NDT Examiner):** An individual certified to NDT level III must be capable of assuming full responsibility for a test facility and staff; establishing techniques and procedures; interpreting codes, standards, specifications and procedures; and designating the particular test methods, techniques and procedures to be used. Must develop NDT procedures per reference (d), adapted to the problems that are the subject of an NDT inspection; and to prepare written instructions. The individual must have the competence to interpret and evaluate results following existing codes, standards and specifications; have a sufficient practical background in applicable materials, fabrication and product technology to select methods, establish techniques and to assist in establishing acceptance criteria where none are otherwise available; have general familiarity with other NDT methods and have the ability to train level I and level II personnel.

4.6.3 Certification of Nondestructive Test Personnel. Only those individuals who have successfully completed the Naval NDT of Metals course or commercial equivalent for civilian personnel can be certified by a NDT Examiner. NDT Inspectors will re-certify per reference (d) or (f).

4.6.4 Renewal of Certification. NDT Examiners will re-certify per reference (d) or (f).

4.6.5 Maintenance of Qualification.

- a. NDT personnel will maintain qualification per reference (d).
- b. NDT testing personnel must pass an annual vision test per reference (d).

4.6.6 Qualification Administration.

- a. Command NDT Examiners must be designated in writing.
- b. Service Record Entries. Each NDT Inspector will have his or her service record updated to reflect current qualifications annually, as a minimum, and immediately prior to transfer. These periodic service record updates will be accomplished by entry on (NAVPERS 1070/613).
- c. NDT Examiner or Division Officer, as appropriate, will maintain an individual NDT personnel record per reference (d) for each NDT Examiner and Inspector.

4.6.7 Approval of Nondestructive Testing Qualification Examinations. A NDT Examiner must approve the NDT Inspector Qualification Examinations and visual test materials.

4.6.8 Transfer of Qualification. Qualifications being transferred from one naval facility to another must be evaluated to the satisfaction of the NDT Examiner of the new facility.

4.6.9 Nondestructive Testing Personnel Records. NDT Inspector or Operator records will be maintained by the NDT Examiner per reference (d) and will consist of:

- a. All qualification documentation must be per reference (d) (e.g., training and qualification documents).
- b. Copy of current eye examination.

4.6.10 Nondestructive Testing Qualification Log. The NDT Supervisor will maintain an NDT personnel qualification log that will be used to record and maintain qualifications for each individual assigned. Each operator or inspector will have a separate section in the NDT qualification log that satisfies the requirements of paragraph 4.6.9 of this chapter. The NDT Supervisor or designated representative will update the NDT personnel qualification log. This will be based upon the completion of NDT performed as shown by completed NDT reports. This log may be maintained either as a hard copy or electronic copy.

4.6.11 Qualification of Generic Material Identity Testing Personnel. Personnel who perform generic materials identity testing will be qualified as required by local procedure which will include the following minimum requirements:

- a. An eye examination satisfying the requirements of reference (a).
- b. Training on the procedures of reference (h).
- c. Training on the procedures for materials not in reference (h) used by the command.
- d. Training on standard requirements.
- e. Training on safety precautions associated with generic testing.
- f. Training on reagent requirements and shelf life.
- g. Testing requirements and designation of who performs the examinations.
- h. Certification by the Quality Assurance Officer.
- i. Re-qualification or qualification updating requirements.
- j. For other than chemical testing programs, qualification will be per reference (i) or other applicable equipment technical manuals.

4.6.11.1 Qualification Administration. Command Generic Material Identity Examiners must be designated in writing and must approve Generic Material Identity Test Inspectors qualification examinations and test materials.

4.6.11.2 Transfer of Qualification. Generic Material Identity Testing Personnel. Since qualification is by local procedure, testing personnel must perform at a level of proficiency which is satisfactory to the Test Examiner at the new activity.

LISTING OF APPENDICES.

- A Determining Software Usability
- B Format for Submarine Certification Continuity Report
- C Format for Fleet Maintenance Activity Certification Report to Tended Submarine
- D Format for Non-Fleet Maintenance Activity Certification Report to Tended Submarine
- E RPCCR Cover Letter for SHIPALTS (Sample)

5.1 PURPOSE. To provide the requirements or direct the user to the appropriate references to ensure that maintenance performed during the ship's life cycle (new construction through decommissioning) supports certification at all times. All material used within any nuclear and non-nuclear submarine pressure hull must be certified for use per reference (a).

5.2 TEST, MEASUREMENT AND DIAGNOSTIC EQUIPMENT.

5.2.1 General Requirements. Test, Measuring and Diagnostic Equipment (TMDE) for in-process work must be properly selected and used. TMDE requiring periodic calibration must be within its calibration periodicity when in use. All TMDE should be selected ensuring the equipment is of the proper range to perform the test, inspection or repair. The craftsman and Quality Assurance Inspector (QAI) should inspect all TMDE prior to use and reject questionable equipment. When inspections or measurements using TMDE are performed with the results documented on a Quality Assurance (QA) form, the type of equipment, range, serial numbers and calibration due dates for TMDE used will be recorded on the QA form as part of the Objective Quality Evidence (OQE).

5.2.2 Torque Wrenches.

NOTE: THE FOLLOWING APPLIES TO TORQUE WRENCHES USED ABOVE WATER OR SUBMERGED IN WATER (FRESH WATER OR SALTWATER).

- a. Selection. Torque wrenches should be selected in such a manner that the required final torque falls within 20% to 90% of the torque wrench maximum value. For example:
 - (1) A torque wrench with a **maximum** indicating **value** of 100 ft-lbs can be used for a maximum torque of 90 ft-lbs and a minimum torque of 20 ft-lbs.
 - (2) A torque wrench with a **maximum** indicating **value** of 250 ft-lbs can be used for a maximum torque of 225 ft-lbs and a minimum torque of 50 ft-lbs.
- b. Calibration. Calibration should be verified to be within the required periodicity (based on due date on the calibration label) prior to use. Most Navy torque wrenches are calibrated for use in one direction only. These tools will have a label affixed stating, "Use Clockwise Only" or "Use Counterclockwise Only". The tool can be used only in the direction indicated. Torque tools calibrated for bi-directional use will bear a yellow "SPECIAL CALIBRATION" tag or label indicating that the tool was calibrated for use in both directions. Navy torque wrenches can be calibrated for bi-

15 Jan 2021

directional use only if specifically authorized by model number in the latest Naval Sea Systems Command (NAVSEA) OD 45845.

- c. Micrometer adjustable torque wrenches. To ensure acceptable performance of micrometer adjusted torque wrenches, users must adhere to the following requirements:
- (1) Exercise the wrench (apply pressure until snap mechanism activates) six times at approximately 60 percent of the rated maximum value before each use. This procedure minimizes the erratic readings often experienced with this type of wrench during the first few activations.
 - (2) Micrometer-type wrenches to be used in counterclockwise applications should be calibrated in the counterclockwise direction and marked as such.
 - (3) Some micrometer “click” type torque wrenches do not accommodate torque values down to 20 percent of the maximum rated capacity. Requests to use a specific torque wrench or meter, outside of the ranges specified in subparagraph a. of this paragraph, require an engineering evaluation and written authorization from a technical warrant.
- d. Extensions or Adapters. Torque wrenches are calibrated based on the specific length of the wrench as established by the wrench manufacturer. Use of an extension changes the effective length of the wrench. The actual torque being applied to the fastener will be different than that indicated on the wrench dial. Any time extensions are used, the following mathematical formulas should be used to determine the wrench dial reading required for the required applied torque:

NOTE: EXTENSIONS CAN SIGNIFICANTLY AFFECT THE APPLIED TORQUE TO INDICATED TORQUE RELATIONSHIP. ANY EXTENSION OTHER THAN A DIRECT ATTACHMENT (I.E., CROWSFOOT) MUST BE TAKEN INTO ACCOUNT.

$$T_{ind} = \frac{T_{act} \times L_1}{L_1 + L_2}$$

Where:	T _{act}	=	Applied torque required
	T _{ind}	=	Torque indicated on dial
	L ₁	=	Length of torque wrench
	L ₁ + L ₂	=	Length of torque wrench plus length of extension

When an adapter or extension is used on a torque wrench, it increases the torque range of the wrench. The formula for computing torque when using an adapter or extension is explained in Figure 5-1 of this chapter.

Figure 5-1 Use of Torque Wrench Adapters**FORMULA FOR USING ADAPTERS**

C = ACTUAL TORQUE APPLIED TO WRENCH
B = LENGTH OF ADAPTER

A = DISTANCE FROM DRIVE TO PULLER'S HANDGRIP
T = TORQUE REQUIRED FOR FASTENER

FORMULA: $C = \frac{A \times T}{A + B}$

PROBLEM: $\frac{28 \times 200}{28 + 9} = \frac{5600}{37} \quad C = 150$

ADAPTER REQUIRING REVERSE CORRECTION

A = TOTAL LENGTH = 18"

B = TORQUE WRENCH LENGTH = 24"

C = CORRECTION FACTOR = $A \div B = 18 \div 24 = 0.75$

T = TORQUE REQUIRED FOR FASTENER

FORMULA FOR USE OF CORRECTION FACTOR

D = Actual Torque Applied to Wrench

C = Correction Factor = $A \div B$

Formula: $D = \frac{T}{C}$

Problem: $\frac{200}{.75} = 266$

5.2.3 Gauges.

- a. General. Gauges used for in-process functions, whether installed in the system or temporary, must be verified to be within calibration periodicity prior to use. Craftsmen should ensure the appropriate calibration information is recorded on the QA form.
- b. Non-Nuclear Hydrostatic Testing. Master test gauges and backup gauges used for hydrostatic testing must be selected and the calibration verified current per reference (b) and Volume IV, Chapter 9 of this manual.

5.3 TORQUE.

5.3.1 General Torque Requirements. Care must be used when torquing fasteners or plugs. Special attention is required to select the proper torque specification for a given application or specification as it is specifically selected to reduce the tendency for the fastener to loosen in service and to improve the fastener fatigue life.

5.3.2 Actual Torque Requirements. Torque requirements found in drawings, Submarine Maintenance Standards (SMS) or technical manuals, etc. will be used in preference to general guides for torquing. If no specific torque requirement exists, references (c), (d), (e), (f) or reference (g) may be used as guidance but ensure that the information applies exactly to the system and fastener type being torqued.

5.4 INSPECTIONS.

5.4.1 General Requirements. This section provides the minimum requirements and guidance for the performance of inspections. Inspections during the performance of maintenance form one of the fundamental elements essential in assuring that the task is completed properly and in compliance with all specifications. Inspections occur during the in-process phase of repair or maintenance (disassembly, repair, and re-assembly) and the re-certification phase (testing). Inspections serve to provide a careful and critical examination of the areas being inspected and form one of the cornerstones of a successful QA Program. Use of inspections have and will continue to establish the OQE necessary for ensuring compliance to technical requirements.

5.4.2 Inspection Records. Inspection records provide a lasting record that the inspection was performed and completed according to the applicable specifications. Inspection records will be maintained when required for OQE and will be documented on appropriate QA forms contained in this volume, or as Certification Signature Blocks in the Formal Work Package (FWP).

5.4.3 Critical Inspections. An inspection on any system or component, which by its nature is so critical to the successful completion of the task, that the inspection requires verification by a separate individual, other than the craftsman, qualified as an inspector. These inspections will be annotated in the written work procedure by the presence of an (I) or circle I, or in the case of Cleanliness Inspections (CI) or circle CI in the margin next to the applicable paragraph requiring the inspection and will be documented either as a Certification Signature Block (for those nuclear work items in Part I Chapter 2 Appendix C of this volume) or signature, as applicable, in the FWP or on the appropriate QA form.

NOTE: THESE ARE CONSIDERED MINIMUM REQUIREMENTS FOR USAGE OF AN INDEPENDENT INSPECTOR DURING THE PERFORMANCE OF CONTROLLED WORK. IT MUST BE UNDERSTOOD THAT THE REQUIREMENTS FOR AN INDEPENDENT INSPECTOR DO NOT NECESSARILY MEAN THAT THE DATA PROVIDED IS RETAINABLE AS OQE. VARIOUS SOURCE DOCUMENTS ADDRESS RECORD RETENTION AND MUST BE FOLLOWED FOR ENSURING THE PROPER OQE IS RETAINED.

- a. Critical Inspections applicable to all platforms are:
 - (1) Inspections performed for all acceptance testing (e.g., hydrostatic testing, drop tests, joint tightness tests, weight tests) for certification of work completed under a Controlled Work Package (CWP). (Nuclear and non-nuclear manually operated valves which have adjustable packing do not require certification by an independent inspector.)
 - (2) Inspections performed to verify permanent markings of Level I material (those which the Fleet Maintenance Activity (FMA) manufacture, upgrade, or transfer to smaller pieces of controlled material). These inspections may also be performed by a Controlled Material Petty Officer.
 - (3) Mechanical measurements used to verify wall thickness of components for work performed using a CWP.
 - (4) Inspections performed for post machining of any Level I component.
 - (5) All sealing surface inspections for work performed as a Controlled Assembly.
 - (6) Inspections for oxygen, nitrogen, and hydrogen systems cleanliness as required by reference (h). These independent inspections are performed by personnel qualified as Oxygen Clean Workers per reference (h).
 - (7) Material receipt inspection. These inspections may also be performed by a Controlled Material Petty Officer.
 - (8) Weight testing to certify or re-certify shipboard cranes when repairs are performed per reference (i).
 - (9) Performance of Emergent Controlled Work per Part I, Chapter 2 of this volume.
 - (10) Verification of body bound stud standout measurements and break away torque for stud installations in Submarine Safety (SUBSAFE) and Level I systems.
- b. Additional Critical Inspections applicable to submarines only.
 - (1) Sealing surface inspections for all SUBSAFE Hull Integrity joints.
 - (2) Hull Integrity joint body bound stud inspections. For new stud installations, this includes stud standout measurements and break away torque verification. For studs that were not removed and are to be reused, this includes verification of markings of significance (K. or KM) or completion of generic material identification check.

- (3) Final torque verification of SUBSAFE Hull Integrity joints.
 - (4) Verification of new controlled material installed into the SUBSAFE boundary.
 - (5) Verification of proper software installation in SUBSAFE Hull joints.
 - (6) Stack height measurement verification for hull packing installation (e.g., periscope, rudder, planes).
 - (7) Seat tightness tests of SUBSAFE hull and backup valves.
- c. Visual inspection of submarine structure in between Unrestricted Operations (URO) MRC 003 Inspections.

NOTE: NOT APPLICABLE TO SUBMARINES AT SEA OR SHIP'S FORCE MAINTENANCE ACTIONS OUTSIDE A SCHEDULED REFIT, FLEET MAINTENANCE AVAILABILITY OR CHIEF OF NAVAL OPERATIONS AVAILABILITY. THE SHIP MUST REPORT ANY UNUSUAL, UNEXPECTED OR POTENTIALLY DANGEROUS CONDITIONS OR LARGE PRESERVATION FAILURES TO THE TYPE COMMANDER (TYCOM) AS SOON AS POSSIBLE. CURRENT SHIP'S MAINTENANCE PROJECT ENTRIES MUST DOCUMENT DEFICIENCIES FOUND AND DEPARTURES FROM SPECIFICATION (DFS) MUST BE WRITTEN IF SO DIRECTED BY TYCOM.

- (1) Inspection, scheduling and reporting of inspection of URO MRC 003 structure which is not otherwise due for a URO MRC 003 inspection must be per reference (j) sections 1.j and 1.k. Defects identified during the Unscheduled Visual Inspection must be evaluated and corrected or adjudicated by the cognizant Technical Authority.
- (2) Inspection, scheduling and reporting of normally wetted, previously obscured URO MRC 003 structure must be per reference (j) sections 1.j and 1.k. Defects identified during the Unscheduled Visual Inspection must be evaluated and corrected or adjudicated by the cognizant Technical Authority.

5.4.4 Cleanliness Inspections. Cleanliness controls are required to prevent the entry of foreign material which could interfere with the operation of any system or component. Cleanliness controls are essential during maintenance with the degree of control depending upon the system and work to be accomplished. Steam plant system cleanliness controls are necessary to minimize corrosion of steam plant materials and prevent the entry of foreign materials into the steam plant. Improper cleanliness controls can result in damage to operating machinery, chloride contamination, or fouling of system components. The time spent making sure the work site is clean and system openings are properly controlled will help prevent premature component failure and rework.

- a. Cleanliness Inspectors are individuals who are trained and qualified to perform CI required by work procedures for systems or components requiring cleanliness controls. At the TRIDENT Refit Facilities, they are called Cleanliness Certifiers.

NOTE: ALL SYSTEMS REQUIRE VARYING DEGREES OF CLEANLINESS CONTROLS, BUT MAY NOT REQUIRE AN INDEPENDENT INSPECTOR.

CRITICAL QUALITY CONTROL POINT INSPECTIONS BY SUPERVISORY PERSONNEL SHOULD BE USED WHERE APPROPRIATE.

- b. Acceptance inspections of cleanliness by an independent inspector (Cleanliness Certifier or Inspector) are required for the following as a minimum:
 - (1) Oxygen, nitrogen, and hydrogen systems per reference (h).
 - (2) Naval Nuclear Propulsion systems as required by reference (l).
- c. Results of cleanliness acceptance inspections required by paragraph 5.4.4.b of this chapter must be documented in the Technical Work Document and certified by a signature for those inspections requiring independent inspection.
- d. There are no specific requirements for independent cleanliness inspection acceptance by a Cleanliness Certifier or Inspector, during steam plant (nuclear or fossil fuel) system maintenance. However, for maintenance involving steam plant (nuclear) systems, the cleanliness requirements for steam plant (nuclear) systems from Chapters 1 and 3 of reference (l) apply. For steam plant (fossil fuel) or general shipboard systems listed in paragraph 5.4.6 of this chapter, the cleanliness requirements must be determined during the work-planning phase. Many jobs may be performed using craftsman to verify cleanliness vice requiring independent Cleanliness Inspector presence. When the risk or consequence of loss of cleanliness is minimal during a maintenance action, such as work requiring bonnet removal from a small steam valve, maintenance of cleanliness may be verified by the craftsman. When the risk or consequences of loss of cleanliness is significant, such as when removing the bonnet from a main steam root valve, work involving opening of turbine throttles, or when the type or quantity of detrimental materials (e.g., cutting oils) pose a significant risk, the use of an independent inspector to verify maintenance of cleanliness should be considered by the Department Head, Quality Assurance Officer (QAO) and Planning Officer (if assigned).
- e. It is the responsibility of Ship's Force to ensure the appropriate cleanliness control requirements are incorporated in any maintenance for which clear responsibility for cleanliness is not assigned.

5.4.5 Nuclear Propulsion Plant and Nuclear Support Facility General Cleanliness Requirements.

5.4.5.1 **Reactor Plant.** For work involving the cleanliness requirements of Chapters 1, 2 and 3 of reference (l), inspector presence is required for initial opening of a reactor plant system when the opening is accomplished using a dirt producing procedure such as a butt weld cut or pipe cut. For non-dirt producing methods, such as socket weld cuts, cuts on canopy seals and the opening of a flange, the worker may verify cleanliness without the presence of a Cleanliness Inspector. For either case, the worker will first establish a clean area and then open the system. The system will then be inspected for cleanliness by the worker or inspector depending on the method used for opening the system. The worker will then install cleanliness plugs, disestablish the clean area and perform the required repair. Upon completion of the repair, the worker will clean the area and inspector presence is again required for system inspection prior to closure of the opening.

- a. Maintenance personnel and appropriate supervisors must be briefed by a QAI on applicable requirements before starting work. The brief must include at least the following:
 - (1) Inspection requirements.
 - (2) Acceptance criteria.
 - (3) Methods to maintain cleanliness.
 - (4) Required actions for a loss of cleanliness.
- b. Cleanliness plugs that are locally manufactured or procured through the Navy supply system must meet the requirements of reference (1). A logbook must be kept by the appropriate work center or work center supervisor recording all cleanliness plugs by serial number. Additionally, a QAI must document that the requirements of Chapter 1 of reference (1) for Temporary Seals and Plugs have been met regardless of procurement method or each plug recorded in the logbook.
- c. If a loss of cleanliness occurs as explained in reference (1), then cleanliness must be re-established according to the requirements and procedures of reference (1). Upon a loss of cleanliness, the Lead Work Center Division Officer, QAO and appropriate Department Head(s) will approve the recovery procedures.
- d. Use a Tool and Material Accountability Log to document the required accountability whenever foreign material exclusion controls are established. A formal written record must be maintained for all material (e.g., tools, equipment, temporary plugs and seals and tape) taken inside the physical boundary that are small enough to fit inside the material openings in the hardware and do not have lanyards attached. The record must describe the material, where it was introduced and when it was removed. Except for eyeglasses and goggles, accountability is required for all clear plastic material regardless of size.
- e. Control of tools must be as specified in reference (1) and this volume. Work center supervisors will be responsible for control of handling equipment and metal removal and finishing tools. Additionally, the following requirements consistent with reference (1) apply for metal removal and finishing tools: Except for cutting tools (drills, bits, taps, etc.), metal removal and finishing tools (files, wire brushes, grinding wheels, etc.) used on corrosion-resistant or carbon steel materials will be segregated from general work center metal removal and finishing tools and fasteners.

5.4.5.2 Steam Plant. Reference (1) provides a list of applicable steam plant systems and the minimum steam plant cleanliness requirements. It applies to all steam plant work performed in naval nuclear powered ships when not at a shipyard. This chapter also applies to steam plant work performed by forces afloat when at a shipyard.

- a. Nuclear powered ship steam plant maintenance affecting those systems listed in Chapter 1 of reference (1) must be assigned only to activities that have reference (1) in force.
- b. The Steam Plant Manual or Steam and Electric Plant Manual must be consulted for cleanliness requirements when performing steam plant maintenance.

- c. If a loss of cleanliness occurs as explained in reference (l), then cleanliness must be reestablished according to the requirements and procedures of reference (l). Additionally, upon a loss of cleanliness the QAO, the Lead Work Center Division Officer, and appropriate Department Head(s) will approve the recovery procedure.
- d. Control of tools and maintenance products will be per reference (l).
- e. Reference (l) cleanliness requirements for Nuclear Aircraft Carrier catapult steam and drain systems must be complied with regardless of which Department Head has responsibility for the system.

5.4.5.3 Nuclear Support Facility.

- a. Reference (m) provides specific cases that invoke reference (l) and reference (n).
- b. Where the references do not address a specific Nuclear Support Facility system or component, reference (l) may be used for guidance as determined to be appropriate. The component technical manuals and NSTMs should also be consulted for cleanliness requirements as appropriate.

5.4.5.4 Standard Lubricants and Penetrating Fluid. General overhaul specifications for reactor plants and Nuclear Support Facility Manuals for Submarine Tenders require the use of reference (o). Reference (l) contains requirements to control detrimental materials.

5.4.6 General Shipboard Steam Plant Systems Cleanliness Requirements.

5.4.6.1 Purpose. To define the general requirements for cleanliness controls during maintenance or repair of steam plant systems on Surface Force ships.

5.4.6.2 Applicability. The requirements of this paragraph are applicable to the following steam plant systems:

- a. Main Steam.
- b. Auxiliary Steam (Defined as steam which returns to the boiler).
- c. Feedwater.
- d. Condensate.
- e. High Pressure Drains.
- f. Reserve Feedwater.
- g. Heating steam and condensate return piping from distilling units.
- h. Steam drains.

5.4.6.3 Discussion. Significant contamination of boilers with chlorides or other detrimental materials has resulted from the introduction of foreign materials into steam plant systems during maintenance onboard conventionally powered ships. The guidance for foreign material exclusion and general cleanliness controls for steam plant system components (e.g., boilers, turbines, condensers) are formally published by NSTMs. However, there is no definitive NAVSEA guidance for many of the steam plant systems piping on conventionally powered ships during maintenance and repair. Therefore, the guidance for cleanliness controls provided in the following paragraphs is for those instances where there is no definitive NAVSEA guidance.

5.4.6.4 Requirements. During general maintenance that breaks the system boundaries, the following cleanliness controls will be implemented:

- a. Maintenance of cleanliness.
 - (1) Temporary covers or plugs will be installed on all steam system piping, components, and tanks opened for work except during the time that the opening must actually be uncovered to perform the work. Covers and plugs will be designed to preclude loose pieces from entering the steam system. Covers and plugs will be rubber, metal, or rigid plastic and will be securely fastened to the component or piping.
 - (2) Following maintenance and prior to removing plugs or covers from inside piping or components, inspect and thoroughly clean the work area to ensure that no tools, rags, lubricants, or other foreign materials are left inside. This includes removal of loose scale and other easily removed corrosion products, as well as removal of residue from grinding, chipping, welding, or other maintenance.
- b. Control of foreign material introduction.
 - (1) New or repaired components should be cleaned to the maximum extent practical without disassembly prior to installation into the system to ensure preservatives, desiccants, etc. are removed.
 - (2) Assembly and maintenance may require the use of lubricants, sealants, and other compounds. Those compounds should be used only as authorized and only applied in the flow path, if authorized by the process instruction.
 - (3) During all maintenance, ensure action is taken to ensure all foreign materials are removed following the maintenance and prior to system operations.
 - (4) Water used for cleaning or flushing steam plant systems must meet the criteria for steam plant makeup or feedwater.
- c. Verification of cleanliness. When verification of cleanliness is required, verification should be accomplished by visual inspection. If configuration of the system or component precludes visual inspection, and cleanliness has not been maintained, then flushing may be used to verify cleanliness.
 - (1) Visual inspections will be conducted using normal reading level lighting. Mirrors and borescopes may be used provided resolution is sufficient to verify cleanliness.
 - (2) Components should not be disassembled just to conduct visual cleanliness verification. Instead, a flush may be used to verify cleanliness. Valves may have the visual inspection performed on the accessible portions of the flow area.
 - (3) Flushes will be conducted for period of not less than five minutes.
 - (4) Visual inspection acceptance criteria.
 - (a) No grease, oil, or other foreign material.

- (b) For uncoated surfaces, tightly adherent corrosion products typical for the type of material (e.g., carbon steel) are acceptable. No loose corrosion products may be present.
 - (c) For coated surfaces, the coating must be acceptable to the process instruction used to apply the coating. No loose corrosion products may be present.
- (5) Flush acceptance criteria (Visual).
- (a) For water flushing, the water sample must be free of foreign material.
 - (b) For steam flushing, a sample of condensate downstream of the area being flushed must be free of foreign material.
 - (c) For lines flushed with compressed gas, place a white filter cloth at the outlet to collect debris. After flushing, the cloth must contain only light speckling or staining due to rust and dirt and must contain no readily apparent quantities of foreign materials (e.g., metal shavings, abrasive grit, oil).
 - (d) For piping where direct sampling of the flush effluent is not possible, the following requirements apply:
 - 1 For lines that cannot be directly sampled during flushing (e.g., lines that discharge into a tank or condenser without drains or sample taps between the area being flushed and the tank), flush for five minutes. Sample the collected discharge from the tank, the water sample must be free of foreign material.
 - 2 Dead-ended piping in a line being flushed by opening a mechanical connection, will have water, steam, or gas (as applicable) flushed past the dead end connection to the main stream for a minimum of five minutes at the maximum practical flow rate. When cleanliness is verified for the main stream, it is also verified for the dead-ended piping.
 - 3 For piping which cannot be sampled because it discharges overboard, flush for at least five minutes. No acceptance criteria are applicable.

NOTE: CLASS 3 STUDS KNOWN TO BE SET WITH ANAEROBIC SEALING COMPOUND BASED UPON DRAWINGS REQUIREMENTS OR OTHER OQE MAY USE THE “IN-SERVICE ANAEROBIC STUD ROTATION” CHECKS FROM QA FORM 34 TO DETERMINE THE ACCEPTABILITY FOR USE WITHOUT RESETTING.

5.4.7 Set Stud Inspection. During disassembly or reassembly, inspect set studs to ensure no rotation is exhibited during nut loosening and tightening. Where direct visual inspection is not possible, marking the top of the stud (e.g., felt tip marker) to a reference point on the assembly may be used. Rotation of any stud during disassembly is cause for rejection (except studs known to be class 3 studs set with anaerobic sealing compound) and the stud must be reset prior to final

assembly. If marking is used, use care to not remove material markings such as material color-coding during marking removal.

5.5 SOFTWARE ACCEPTABILITY. To assist in the determination of acceptability of non-metallic packing materials (e.g., O-Rings, wall seals) for installation in non-nuclear and nuclear systems, decision aids have been developed from reference (p) and are provided in Appendix A. In case of question or conflict, the requirements of reference (p) apply. Additional guidance regarding non-metallic seals is provided in the following paragraphs.

- a. It is Fleet policy that software (e.g., O-Rings, gaskets) will be reused only as a last resort. If new software is not available, software may be used after satisfactory inspection for damage, resiliency, discoloration, or cracking per reference (p).
- b. In all cases, the guidance provided in applicable NAVSEA technical documents (e.g., drawings, component technical manuals, references (p) and (q) for nuclear and non-nuclear applications) will be followed.
- c. Reuse of software during daily Planned Maintenance System (PMS) or other specified situations. The practice of not reusing software does not apply to items of daily PMS (e.g., drain pump strainer, lubricating oil strainers) or the Logistics Escape Trunk on submarines and, therefore, the O-Ring or gaskets may be reused provided the software has been inspected and is not damaged.
- d. Software which have exceeded their recommended shelf life may be used in naval reactor plant applications provided the following criteria are met:
 - (1) The software has been properly stored in its original package.
 - (2) Software must be inspected as part of issuing the software for a job or prior to installation. Inspection by a QAI or Controlled Material Petty Officer is not required. No certification signatures are required. The user activity must define who must test software with expired shelf lives to ensure they are adequately tested.
 - (3) Except for tubing, each surface of the material must be examined. For tubing, only the outside surface must be examined. The software must be resilient and show no evidence of cracking, discoloration, flaking, tackiness, brittleness, surface contaminants, or other physical damage. Further, each surface must be inspected and must exhibit no cracks under 5X magnification when it is deformed.
 - (a) For flat pieces, strips, and O-Rings, bend material onto itself over a rod of diameter (d) no greater than the cross sectional thickness (t) as illustrated in Figure 5-2:

Figure 5-2 Simple Software Deformation Inspection

- (b) For complex shapes or parts with non-uniform cross section which closely resemble flat pieces, strips, or O-Rings, bend the material at least 90 degrees over a rod of diameter (d) no greater than the maximum cross sectional thickness (t or w) as illustrated in Figure 5-3.

Figure 5-3 Complex Software Deformation Inspection

- (c) For parts which do not fall into the categories and parts which are too stiff to be deformed as required, approval must be obtained on a case basis from the respective Reactor Plant Planning Yard via a Liaison Action Request per Part I, Chapter 8, Section 8.4 of this volume.

5.6 SUBMARINE SAFETY MAINTENANCE CERTIFICATION AND RE-ENTRY CONTROL, NUCLEAR AND NON-NUCLEAR.

5.6.1 Purpose. To issue the policy and procedures for:

- Maintaining continuity of SUBSAFE certification during the operating cycle.
- General Maintenance Certification Record administrative requirements.

5.6.1.1 General.

- a. Reference (r) establishes the SUBSAFE certification criteria which must be accomplished on submarines in order for NAVSEA to recommend UROs to design test depth. Once the certification criteria are satisfied, NAVSEA will make a recommendation to the appropriate TYCOM that the submarine be authorized for URO to design test depth. Based upon the NAVSEA recommendation, TYCOM will authorize the submarine to operate to design test depth, or some lesser depth depending upon specific conditions. Each TYCOM summarizes the authorized operating depths and restrictions for ships in reference (s) or (t).
- b. Continued URO to design test depth is dependent on:
 - (1) The positive control and re-certification of all re-entries into the SUBSAFE or hull integrity boundaries of the ship and
 - (2) The satisfactory and timely completion of URO MRC requirements.

5.6.2 Re-Entry Control Program.

- a. Applicability. This section is applicable whenever work is accomplished within a SUBSAFE boundary as defined by SUBSAFE Requirements Manual, reference (r), and as depicted in the SUBSAFE Certification Boundary Book.

NOTE: SUBSAFE REQUIREMENTS MANUAL IS THE FINAL AUTHORITY FOR DETERMINING IF AN ITEM IS WITHIN THE SUBSAFE BOUNDARY. THE SUBSAFE CERTIFICATION BOUNDARY BOOK IS AN ILLUSTRATED REFERENCE TO AID IN THE DETERMINATION OF WHETHER AN ITEM IS SUBSAFE OR NOT.

- b. General. The Re-Entry Control (REC) Program includes those elements associated with maintenance or repair necessary to maintain the certification established by NAVSEA. The program provides auditable OQE of the following:
 - (1) What work was accomplished, including material and components used, re-test requirements, tests performed, and test data.
 - (2) Why work was required.
 - (3) Who authorized and accepted the REC.
 - (4) Who did the work.
 - (5) When and where the work was accomplished, including the work and re-test boundaries.
- c. When it becomes necessary to re-enter a SUBSAFE certified system or structure, it will be accomplished per the requirements and procedures of paragraph 5.6.4 of this chapter. Specific direction on completing the Maintenance Certification Record (MCR) (QA form 9) is contained in the instructions for QA form 9.
- d. Some exceptions to RECs are allowed due to frequent entry into the certified boundary for routine operations or maintenance actions. These exceptions and administrative or operational control requirements are contained in paragraph 5.6.7 of this chapter.
- e. NAVSEA SUBSAFE and FBW SCS Grams are not authorized for use by submarines, submarine ISICs, submarine Groups or maintenance activities managed by the

15 Jan 2021

TYCOM. SUBSAFE and FBW SCS Grams will be engineered into the Joint Fleet Maintenance Manual where appropriate.

5.6.3 Nuclear Submarine Safety System Re-Entry. When Re-Entry of a nuclear SUBSAFE system or a portion of a nuclear SUBSAFE system is necessary, the applicable Reactor Plant Manual, reference (e), and the ship's specific Reactor Plant Work Accomplishment Report (RPWAR) will be reviewed and used to provide technical guidance. Nuclear SUBSAFE Re-Entry will be per the requirements and procedures of Section 5.7 of this chapter. Nuclear SUBSAFE RECs must be marked in Block 2 of the QA-9 as SUBSAFE and NUCLEAR. Approval to open and close the Nuclear REC will be per Part I, Chapter 2, Appendix E of this volume using the "NUC" review and approval matrix.

5.6.3.1 Reactor Plant Planning Yard Liaison Action Requests.

NOTE: INFORMATION ON THIS SUBJECT IS SAFEGUARDED PER REFERENCE (u).

5.6.4 Re-Entry Control Administrative Procedures.

- a. General. REC procedures provide a continuous, auditable record of work done on fully certified systems to provide positive assurance that they remain "certified". Continuity of Certification is mandatory throughout the operational life of the ship to ensure URO to design test depth.
- b. REC. When re-entry of a SUBSAFE system or a portion of a SUBSAFE system (or component) is necessary, the work and re-certification of the work will be documented using the MCR/REC, QA form 9.
 - (1) A MCR/REC will be used for each re-entry of the pressure hull or each certified system, certified component or portion thereof as defined by the SUBSAFE certification boundaries.
 - (2) A MCR/REC will be restricted to a single system within a single mapping plan, a single component removed from a system, or a single component removed or worked that requires multiple mapping plans (e.g., trash disposal unit, Main Sea Water hull or backup valves and hydraulic actuators, modified after signal ejectors).
 - (3) When a MCR/REC is opened by a ship to permit removal of a component by Ship's Force for repair by an FMA as a "ship to shop" job, a MCR/REC must be opened by the FMA to cover the work and retesting of the work center work performed by the FMA.
 - (4) Where other certified systems must be re-entered to accomplish a MCR/REC, each system will have its own MCR/REC, except as described in paragraph 5.6.4.b.(2) of this chapter.
 - (5) The MCR/REC and records of MCR/REC will contain all of the OQE necessary to comply with paragraph 5.6.2.b of this chapter.
 - (6) The work procedures associated with a MCR/REC will contain sufficiently detailed instructions to assure that all requirements for certification are properly accomplished and documented.

- (7) Work and test boundaries will be defined in terms that are unique and directly identifiable with the specific mapping plan or task involved.
- (8) When work and test boundaries are different, both boundaries will be set forth. The work boundaries, test boundaries and pressure boundaries should be specified and should not be confused. Work boundaries define the limits to which work was performed. Test boundaries define the limits for testing to certify the work; these tests may involve actuators, indicators or components other than those actually repaired. Pressure boundaries define (perhaps by valve lineups) the limits of the system which were pressurized to hydrostatically test the work. The pressure boundaries and test boundaries may be the same.
- (9) On a “ship to shop” job the work boundaries may be best described by system joint designators even though those joints were not “disturbed” by the FMA (e.g., rebuild a Rubber Insert Sound Isolation Coupling (RISIC), the work or test boundaries will be the end flanges that bolt up to the system, the joint identification numbers may be clearest identification of that boundary point).
- (10) Previously certified hardware will be reused when certification is not affected by the re-entry, or when it can be recertified. The words “replace”, “repair”, and “re-install” should be used carefully. “Replace” means the use of a different or new component, while “re-install” indicates the use of the previously installed component, whether repaired or not. “Repair” indicates that some refurbishment, other than mere disassembly or cleaning, was performed.
- (11) Associated supporting documents such as Nondestructive Testing (NDT) records, material certification, test data, etc., will be specifically identified and referenced on the MCR/REC.
- (12) When it becomes necessary for an FMA to re-enter a certified component (periscopes, Auxiliary Sea Water pumps, Electronic Warfare Support Measures masts) which will not be returned to the ship from which it was removed, or when a component is re-entered when the ship on which it will be installed is not present, the FMA will control the work and document the re-entry using a QA form 9, MCR/REC. The MCR/REC will be initiated and closed out by the FMA. A copy of the completed MCR/REC will accompany the component when it is installed in a certified SUBSAFE submarine or shipped to another activity as proof of certification. These controls are required whether the certified component is to be installed in a SUBSAFE certified ship or stored. Each component must retain its certification. These RECs are separate from and in addition to any MCR/REC required for removal of a component from SUBSAFE system and are only necessary whenever the original component will not be returned during the current availability to the ship from which it was removed.
- (13) The CWP/REC Log, QA form 11 will be established and maintained by the QAO per the detailed instructions for QA form 11 in Part I, Chapter 11 of this

volume. The QA form 11 must be reviewed by the QAO to verify all MCR/RECs are closed prior to submerged operations. The FMA QAO will maintain a log for the FMA only and one for each tended ship RECs. The QA form 11 must be reviewed by the FMA QAO to verify all FMA MCR/RECs are closed prior to underway operations of each tended ship.

- (14) Revisions to the MCR/REC are required for the following:
- (a) Change in work boundaries (e.g., breaking additional or new mechanical joints not previously identified on the MCR/REC). A REC revision is not required to delete undisturbed joints. Deletion of joints must be authorized by cognizant technical authority and documented in the REC package. Block 14 must be annotated to reflect joint deletions prior to signing REC Block 17.
 - (b) Change in NDT or test requirements (e.g., “J” vice H hydrostatic test, when “H” was originally specified). This does not include a DFS for unaccomplished testing. A REC revision is not required for NDT incidental to minor repairs as defined in paragraph 5.6.4.b.(14) (d) of this chapter. NDT results must be documented in the REC package.
 - (c) Scope of work changes (e.g., originally replace software changed to weld repair sealing surfaces, originally replace software changed to metallic pressure boundary part replacement).
 - (d) The REC does not require revision in order to conduct minor repairs in support of the original scope of work. These minor repairs must be authorized by cognizant authority and documented in the REC package, with appropriate OQE generated and added to Block 16 prior to the signing of Block 17 of the QA form 9. Hot work is not classified as a minor repair. Minor repairs authorized to be performed without a revision are:
 - 1 Minor machining such that the machining is within the limits of the technical drawing, SMS, or technical manual (e.g., taking a skim cut on an O-Ring groove such that the final machined dimensions are within the tolerances of the technical reference).
 - 2 Epoxy repairs.
 - 3 Electroplate repairs.
 - 4 Preventive coating application.
- (15) A revision cannot be used when a new MCR/REC is required (e.g., different system must be entered to conduct repair).
- (16) REC Cancellation and REC Administrative Closeout. In the event a CWP is prepared and the job is planned to be accomplished but for some reason it was cancelled or deferred the following actions should be taken:
- (a) If work was authorized to start, the CWP/REC must be revised to reflect that no work was accomplished and the REC was revised to

close administratively. The QA form 11 log will be annotated that the job was “Cancelled”.

- (b) If work was not authorized to start, and the job has been cancelled, annotate the remaining blocks of the QA form 9 with NA and note that the REC was cancelled and no work was accomplished. Blocks 20 and 21 will be signed to formally close the REC. If the REC was prepared by a Repair Facility, a copy of the QA form 9 will be provided to the tended unit with the Certification Continuity Letter. QA form 11 log will be annotated that the job was “Cancelled”.
 - (c) If work was not authorized to start and the job has been deferred to a future maintenance period, the REC is not required to be cancelled. The QA form 11 log will be annotated as “Deferred”. This is not considered an open REC.
- (17) Prior to every underway for submerged operations, all SUBSAFE RECs must be closed. Commanding Officers of submarines will certify and acknowledge REC closure by signing the REC and submit to Immediate Superior In Command (ISIC) a written report per paragraph 5.6.8 of this chapter. SUBSAFE certification letter is only required after an inport period in which SUBSAFE work was performed.
- (18) Ship’s Force is responsible for providing “Buddy” SUBSAFE, FBW-SCS or DSS-SOC REC serial numbers to outside repair activities performing SUBSAFE, FBW-SCS or DSS-SOC work on shipboard SUBSAFE, FBW-SCS or DSS-SOC systems. The Buddy REC number is issued from ship’s QA-11 log and will be documented on repair activities RE-ENTRY CONTROL FORM. The use of the Ship’s Force Buddy REC number is NOT required for Chief of Naval Operations or TYCOM scheduled availabilities. The issue of the Ship’s Force Buddy REC is an administrative tool to make REC Log keeping easier and ensure the required certification letters are received prior to underway. The Ship’s Force Buddy REC does not result in a Ship’s Force REC Form, does not require Ship’s Force Record Retention and does not allow Ship’s Force to participate in the assigned activities work or certification process, except performance of testing. Ship’s Force will only issue Buddy RECs to SUBSAFE, FBW-SCS or DSS-SOC certified activities performing SUBSAFE Work.

5.6.5 Using a Controlled Dive Departure from Specification to Close a Maintenance Certification Record or Re-Entry Control. If a MCR/REC is closed by transferring at sea testing to a DFS (e.g., controlled dive to test depth for retest of a periscope hull gland, controlled dive for retest of a sea connected system in lieu of joint tightness test to “J” pressure of Test Pressure Drawing (TPD)), the ship will be restricted, as required by reference (r), as indicated in subparagraphs a through d of this paragraph.

NOTE: IF AN UNSATISFACTORY CONDITION OR SEAWATER LEAKAGE IN EXCESS OF THE SPECIFICATION IS FOUND DURING THE CONDUCT OF THE CONTROLLED DIVE TO TEST DEPTH, THE SHIP MUST CONTINUE

TO TEST DEPTH UNLESS THE COMMANDING OFFICER DETERMINES IT APPROPRIATE TO ABORT THE DIVE.

- a. Except for the controlled dive to test depth to retest the system or component, ship's depth will be limited to one half test depth plus fifty feet until satisfactory completion of inspections during the controlled dive. The ship will stay at test depth for the time required as detailed in the normal retest procedure (i.e., 30 minutes if the normal joint tightness test is for 30 minutes) plus adequate time to permit inspections.
- b. If inspections of the system or component during the controlled dive are satisfactory, the ship is released for UROs with no immediate report required. Clearance of the DFS will be reported as required by Part I, Chapter 8 of this volume.
- c. If inspections of the system or component during the controlled dive are unsatisfactory, the ship is restricted to one half test depth plus fifty feet as indicated in paragraph 5.6.5a. of this chapter, unless specific authorization is received from TYCOM approving URO or changing the depth restriction. The DFS approved to perform the controlled deep dive must be cancelled and a new major DFS for the failed testing must be initiated by the ship. An immediate report of unsatisfactory inspections will be made to ISIC and, if required, a request, including Commanding Officer's evaluation of unsatisfactory conditions and justification for request, for approval to conduct operations at depths deeper than one half test depth plus fifty feet will be made to TYCOM with information copy to ISIC and NAVSEA (07T). Deficiencies discovered that are not joints specified for inspection in the MCR/REC and DFS are dispositioned as required by Part I, Chapter 8 of this volume and are not cause for depth restrictions unless the Commanding Officer deems necessary.
- d. Should the presence of an installed Dry Deck Shelter preclude a component requiring deep dive testing from seeing submergence pressure, the requirements of paragraph 5.6.5a. of this chapter must apply upon removal of the Dry Deck Shelter and must be so annotated in the approval comments of the deep dive DFS.

5.6.6 Voyage or At Sea Repairs. If emergent repairs or at-sea repairs involve REC work, the ship is limited to 200 feet or less until the ship's Commanding Officer has signed for the closed REC.

- a. If equipment malfunctions (except for casualties affecting recoverability, salvage, watertight integrity, or operation of ship's control surfaces), or seawater leakage in excess of the specification is found during the conduct of the initial tightness dive or the controlled dive to test depth, the ship should continue to the required depth and execute the sea trial agenda unless the Commanding Officer determines it appropriate to abort the dive. The Commanding Officer should be particularly circumspect in the case of leakage locations not isolable by flood control or other closures (e.g., electrical hull penetrators, periscope hoist rods, etc.).
- b. Following completion of the initial tightness dive and the controlled dive to test depth, SUBSAFE deficiencies which result in seawater leakage exceeding the specification for acceptance must be reported to the TYCOM, NAVSEA and info to all concerned.

15 Jan 2021

- c. If leakage is from an unisolable joint, ship's depth will be limited to 1/2 test depth plus 50 feet until approval from the TYCOM is received to continue trials at depths greater than 1/2 test depth plus 50 feet.

NOTE: MCR/REC EXCEPTIONS ARE FOR SHIP'S FORCE USE ONLY AND ARE NOT AUTHORIZED FOR USE BY REPAIR ACTIVITIES. REPAIR ACTIVITIES MUST NOT REQUEST THE SHIP TO INVOKE A REC EXCEPTION IN CONJUNCTION WITH REPAIR ACTIVITY WORK.

NOTE: REC EXCEPTIONS ARE NOT AUTHORIZED TO BE USED FOR THE INSTALLATION OF NEW LEVEL I HARDWARE WITHIN THE SUBSAFE BOUNDARY.

5.6.7 Exceptions to Re-Entry Control. Exceptions to Re-Entry Control (REC) are listed in reference (r). The reference includes certain systems and equipment within the certified SUBSAFE boundary which require frequent entry into the certified boundary for routine operations or maintenance actions in order to enable the ship to carry out its mission. The operational requirements for these systems and equipment have been reviewed. Inherent operational controls in the present system are considered adequate. The operational control which is considered as meeting the intent of the REC requirements is listed beside each item and must be in effect in order to use the exception. Some REC exceptions permit removal of material from the installed system to perform maintenance or testing. The original material must be reinstalled or a complete REC (controlled work package) must be used to capture the installation of new Level I material or certification testing for new material.

5.6.8 Certification Continuity Report. In order to ensure continued certification of each submarine, periodic reports are required as indicated in sub-paragraphs a through c:

- a. Prior to each underway for submerged operations, all SUBSAFE RECs or REC exceptions requiring a controlled assembly must be closed. Commanding Officers of submarines will submit to ISIC (deployed ISIC, if deployed), a written certification continuity report, which addresses the status of Ship's Force SUBSAFE, Submarine Flight Critical Component (SFCC) CWP's or REC exceptions requiring a controlled assembly, testing of SUBSAFE, Fly-By-Wire Ship Control Systems (FBW SCS) systems, URO maintenance completed and RECs closed by transferring actions to a DFS. SSBN and SSGN class potable water shore service connection cap installation performed as a controlled assembly is exempt from reporting under this paragraph. Appendix B provides the minimum requirements for the letter. If no SUBSAFE, SFCC controlled work, REC exceptions requiring a controlled assembly, testing or URO MRCs were accomplished, no report is required. Certification Continuity Reports may be delivered in person by a command representative, transmitted as a naval message, transmitted via e-mail as an electronically signed PDF, transmitted via e-mail as a signed letter scanned as a PDF.
- b. Prior to the ship's underway after an FMA availability, refit or inport period when SUBSAFE, SFCC work was performed, the FMA Commanding Officer will issue a letter report to each tended submarine, with a copy to parent ISIC, which addresses the status of SUBSAFE, SFCC CWP's, testing of SUBSAFE, FBW SCS systems, URO

maintenance requirements completed and SUBSAFE non-conformances (i.e., DFS and LAR). Appendix C provides the minimum requirements for the letter.

- c. Prior to ship's underway, activities other than FMAs which perform SUBSAFE or SFCC maintenance on submarines will issue a letter report to the submarine with a copy to the parent ISIC, certifying that the maintenance performed meets the requirements of applicable specifications invoked by the governing document (e.g., unscheduled availabilities, contract) and the Memorandum of Agreement. Appendix D provides the minimum requirements for the letter.

5.7 REACTOR PLANT WORK ACCOMPLISHMENT REPORT (SUBMARINES ONLY).

5.7.1 Purpose.

- a. The RPWAR form is a listing of those pipe and components of the reactor plant which are SUBSAFE. It is specific for each ship and is provided by the Reactor Plant Planning Yard via the TYCOM. The RPWAR consists of:
 - (1) Status sheet.
 - (2) Cover sheet.
 - (3) RPWAR Master Pages.
 - (4) Addendum Sheet.
 - (5) RPWAR general notes.
- b. The reactor plant hull integrity area is comprised of those items on the RPWAR. Each ship must maintain the RPWAR current. Each completed RPWAR will be filed in an auditable manner along with the latest revision for the ship of the NAVSEA RPWAR status drawing. The reproducible blank RPWAR will be maintained in the same file. The ship will reproduce blanks as necessary to support reactor plant work.
- c. To properly complete the RPWAR, the preparer must review the general notes of the applicable RPWAR and the instructions in reference (e).
- d. To certify (or recertify) a nuclear SUBSAFE item, a RPWAR must be completed by the activity performing the maintenance (ship, FMA or shipyard) per reference (e) and forwarded as soon as possible to the Reactor Plant Planning Yard with copies to NAVSEA 08, TYCOM, ISIC and the ship. The RPWAR is to be signed in ink and the signed in ink copy should be forwarded to the Reactor Plant Planning Yard. Initials or typed signatures are not permitted. When work is complete, submit only those pages of the RPWAR line items that certify the work accomplished.
- e. The RPWAR does not, in any way, relieve the FMA or ship of its responsibility to comply with all applicable requirements specified in technical manuals, plans, and other NAVSEA documents.
- f. When the FMA works in an area covered by the RPWAR, the ship's Engineer Officer will provide the FMA with a reproduced RPWAR with the number filled in, notes, applicable certification forms and addenda sheet.
- g. Instructions contained in this section are in amplification of those included in reference (e) and the RPWAR drawing itself.

5.7.2 Specific Instructions for Completing Reactor Plant Work Accomplishment Report Cover Sheet.

- a. The ship's hull number must be specified in the space provided (if not already pre-printed).
- b. The reporting activity (ship, FMA or shipyard) must be listed.
- c. The report number must be included. The report number is the next consecutive number to that indicated on the latest completed RPWAR held by the ship.
- d. The report must be dated.
- e. The applicable block specifying when the work was accomplished must be checked.
- f. The signatures and titles of the personnel preparing, reviewing, and approving the RPWAR must be included. Each RPWAR submitted by ships is prepared by the Lead Work Center QAI, reviewed by the QAO and Engineer Officer, and approved by the Commanding Officer. Each RPWAR submitted by an FMA is prepared by the nuclear Planning and Estimating Work Center (10D), reviewed by the Nuclear Repair Officer and QAO, and approved by the Repair Officer.

5.7.3 Specific Instructions for Completing Reactor Plant Certification When New or Previously Uncertified Material is Installed in a Submarine Safety Application.

- a. The applicable revision of the drawing or plan must be referenced in the "DWG. NO. AND REV" block for each item worked on.

NOTE: IF A DRAWING OR PLAN OTHER THAN THAT REFERENCED IN THE "DWG. NO. AND REV" BLOCK IS USED BY THE REPORTING ACTIVITY, THE ACTUAL DRAWING OR PLAN USED SHOULD BE SPECIFIED IN EITHER THE "REMARKS" BLOCK OR ON THE ADDENDA SHEET AS A REFERENCED NOTE. THE REASON FOR USING A DIFFERENT DRAWING OR PLAN SHOULD ALSO BE SPECIFIED.

- b. The identification of the reporting activity's detailed record should be entered in the "DETAILED RECORD IDENTIFICATION" block if the inspections required by the applicable inspection category were performed by the reporting activity (ship or FMA).

NOTE: THE RECORD RETAINING ACTIVITY, IF OTHER THAN THE REPORTING ACTIVITY, SHOULD BE IDENTIFIED IN THIS BLOCK.

- c. Where sufficient space does not exist for entry of information, refer to the addenda sheet in the "REMARKS" block and enter the required information on the addenda sheet.
- d. The report number will be entered in "REMARKS" block for each line item worked on by the reporting activity.
- e. The signature block must be completed, indicating that the corresponding line item work has been satisfactorily completed and that records substantiating this are on file.

15 Jan 2021

- f. Where SUBSAFE work is accomplished following an Alteration, the reporting activity will reference, for each work item, the applicable Alteration with revision number in the "REMARKS" block.
- g. Waiver, if any, previously granted for each item must be identified, including reference to the NAVSEA approval letter.

NOTE: IF THE WORK PERFORMED ON THE SUBSAFE ITEM IS SUCH THAT THE PREVIOUS CERTIFICATION IS VOIDED (SUCH AS REPLACEMENT OF A SUBSAFE VALVE TAILPIECE), THE REPAIRED OR ALTERED ITEM MUST BE CERTIFIED AS NEW MATERIAL.

5.7.4 Specific Instructions for Completing Reactor Plant Certification When Previously Certified Material is Reinstalled.

- a. Reinstallation of previously certified material does not require a RPWAR unless specifically called out as a line item on the RPWAR requiring torque or installation verification.
- b. The fastener torque sheet is filled out in the following manner:
 - (1) The inspection document is the QA form 34, the FWP or CWP serial number and job sequence number.
 - (2) The signature block is signed by the QAI who verified the torque.
 - (3) If sufficient space is not available in the QA form 34, the addenda sheet should be used with the appropriate line item listed.

5.8 MATERIAL CONDITION MONITORING UNRESTRICTED OPERATIONS MAINTENANCE REQUIREMENT CARD PROGRAM (SUBMARINES ONLY).

- a. The URO MRC program provides the minimum material condition requirements for URO to design test depth, with an established periodicity to accomplish. It is one of the programs required to maintain SUBSAFE certification. Accomplishment of the URO MRC will identify changes within the SUBSAFE or hull integrity boundaries of the ship, which result from the degradation caused by the service environment.
- b. Administration, scheduling and reporting of the URO MRC program will be per the requirements of Chapter 25, Volume VI of this manual. A summary of URO MRC status will be reported by the submarine Commanding Officer per paragraph 5.6.8 of this chapter.
- c. When performing corrective maintenance, the following guidance is provided with regard to URO MRC:
 - (1) When performing corrective maintenance, associated URO MRCs should be reviewed to determine if the URO MRCs should be accomplished concurrently ahead of scheduled periodicity to preclude having to disassemble equipment again to accomplish the URO MRCs. Ship's schedule or FMA resources may preclude concurrent, early accomplishment of URO MRCs.
 - (2) If URO MRC criteria are used, in total or in part, during corrective maintenance, and a measured parameter is found out of tolerance and not

restored, a major DFS must be submitted, per Part I, Chapter 8 of this volume, even though the periodicity of the URO MRC has not expired.

- (3) When performing corrective maintenance that does affect a URO MRC measured parameter, perform that portion of the applicable URO MRC. A URO MRC measured parameter is any parameter that is documented on the Data Report Form during the performance of the URO MRC. The following are examples of corrective maintenance that may affect a URO MRC measured parameter:
 - (a) When the retest of the corrective maintenance is a documented URO MRC measured parameter (i.e., Emergency Flood Control Accumulator Tightness Test - URO MRC 026).
 - (b) When maintenance (such as opening mechanical joints or replacing hardware, adjustments, tests) affects the operation of a system inspected or tested by a URO MRC (i.e., Emergency Flood Control - URO MRC 025).
- d. Following installation of an alteration (Ship Alteration (SHIPALT), Alteration and Improvement, Temporary Alteration) that modifies the structure of the Ship, such that access to vital equipment is or may be impacted, the Ship must evaluate the need to perform URO MRC 029. If access to vital equipment could be restricted, the Ship must perform URO MRC 029 and provide a copy to the installing activity and the ISIC. Partial accomplishment of URO MRC 029 is acceptable if appropriate for the alteration. If partial accomplishment of the URO MRC is performed, provide a copy to the installing activity and the ISIC. If the complete URO MRC is accomplished, provide a copy to normal distribution.

5.9 SUBMARINE FLY-BY-WIRE MAINTENANCE CERTIFICATION.

5.9.1 Purpose. To issue the policy and procedure for:

- a. Maintaining continuity of the FBW SCS certification during the operating cycle.
- b. General Maintenance Certification Record administrative requirements.

5.9.1.1 General.

- a. Reference (v) establishes the FBW SCS certification criteria which must be accomplished on all applicable submarines in order to maintain system certification throughout the operating cycle of the ship. Once a submarine FBW SCS has been certified for unrestricted use or is accepted by the shipbuilder, all work within the FBW SCS certification boundary and testing to support that work must be accomplished, controlled and documented per reference (v).
- b. All other Performance testing within the FBW SCS Boundary, for work within the FBW SCS Boundary must be accomplished to support system certification and documented using the activity's normal work control processes.
- c. Work is defined as an action that actually or potentially changes (including disassembly and testing) the approved configuration of any part of the FBW SCS or SFCC Boundaries.

- d. The objective of this work control process for work within the FBW SCS certification boundary is to provide maximum confidence that any work and all applicable testing is authorized, controlled, identifiable, and auditable. It provides positive assurance that all SFCC equipment and FBW SCS is restored and tested to a fully certified condition.

5.9.1.2 Applicability. The requirements in this section must apply to *Seawolf* and *Virginia* Class Submarine FBW SCSs.

5.9.1.3 Submarine Flight Critical Component Boundary. The Submarine FBW SCS Boundary must consist of electronic hardware and software within the submarine FBW Boundary (see reference (v)) that process safety critical functions and data elements.

- a. Safety critical electronic components within the FBW SCS certification boundary must be determined per references (v) and (w) and must be identified as SFCCs.
- b. Safety critical software units within the FBW SCS certification boundary must be determined per references (v) and (w). Safety critical software units must require additional testing or analysis, be marked, configuration managed, and controlled per the requirements in reference (v).

5.9.2 Submarine Flight Critical Component Boundary Work Control Procedures.

- a. All fleet activities, In-Service Engineering Activity, repair activities or shipyards (public or private) must use REC to document the accomplishment of work within the FBW SCS certification boundary. RECs must provide greater assurance that any work accomplished is authorized, documented and executed per specifications and requirements, and is supported by OQE.
- b. Some exceptions to RECs are allowed due to frequent entry into the certified boundary for routine operations or maintenance actions. These exceptions and administrative or operational control requirements are contained in reference (v).
- c. Closed RECs must be retained by the work accomplishing activity and are subject to audit by cognizant activities (TYCOM, ISIC, shipyard, supervising authority or NAVSEA) during audits such as functional or certification audits.

5.9.3 Submarine Flight Critical Component Boundary Work Control Closeout.

- a. All RECs for work in the FBW SCS certification boundary must be closed prior to the system being released for unrestricted use, Fast Cruise or Sea Trials. As part of the work control procedure closeout process, RECs must receive an independent review within the activity performing the work to verify:
 - (1) Work was authorized and approved.
 - (2) Work stayed within the authorized boundaries.
 - (3) Post work or maintenance testing was accomplished satisfactorily.
 - (4) Appropriate Quality Assurance Forms are included to document Certification of Maintenance, and all forms are completed with required signatures.
- b. All testing of the FBW SCS Boundary must be verified closed prior to the system being released for unrestricted use, Fast Cruise or Sea Trials.

- c. As a policy, RECs for work within the FBW SCS certification boundary or test documents within the FBW SCS Boundary must not be closed out until resolution of all actions necessary to verify certification has been maintained when any breach of the boundary has occurred. An acceptable alternative, however, is to close out a REC or test documents within the FBW SCS Boundary by transferring remaining at sea testing actions to a separate auditable accountability system (e.g., Sea Trial Agenda). All RECs closed in this manner must be annotated by the activity with the reference documents that contained the transfer actions. This policy must be verified by the activity accomplishing the work, supervising authority, submarine Commanding Officer and ISIC.
- d. Prior to each underway for submerged operations, Commanding Officers of FBW SCS submarines will submit to ISIC (deployed ISIC, if deployed), a written certification continuity report, which addresses the status of Ship's Force FBW SCS REC, testing of FBW SCS, URO maintenance requirements in the format of Appendix B. If no FBW SCS controlled work or testing were accomplished, no report is required.

5.9.4 Objective Quality Evidence to Support Controlled Work on Fly-By-Wire Ship Control System Submarine Flight Critical Component. To standardize maintenance OQE, the subparagraphs a through c provide guidance on the key elements needed to be documented to certify the work process, whether routine maintenance, major repairs, system upgrades or alterations. Reference (v) provides OQE requirements including additional attributes to be included as part of the FBW SCS certification boundary work control process.

NOTE: THE ISIC IS ONLY RESPONSIBLE TO AUDIT FBW WORK PERFORMED BY FORCES AFLOAT OR TYCOM MANAGED ACTIVITIES.

- a. Activities performing work on FBW SCS within the FBW SCS certification boundary should use this information, along with source documents, as a guide in developing OQE records that document work, inspections and tests performed within the FBW SCS certification boundary.
- b. The elements listed are technical specifications and process documents required for a typical repair or system upgrade or alteration process.
- c. If Upgrades, Alterations or Major Repair Work of the FBW SCS was performed, the ISIC will accomplish a 100% audit, as defined in Part I, Chapter 9 of this volume, of the work. ISIC and TYCOM will use the FBW message reporting process for certification specified in Volume II, Part I, Chapter 3 of this manual, for availabilities of less than six months duration.

5.10 AIRCRAFT CARRIER MAINTENANCE DOCUMENTS.

5.10.1 Purpose. The purpose of this section is to provide amplifying or clarifying information on the processes involved and appropriate use of specific aircraft carrier maintenance related documents. Including:

- a. Request for Departure from Specification (DFS), Waivers or Deviation.
- b. Nuclear Liaison Action Request (LAR).
- c. Nuclear Liaison Inquiry (NLI).

- d. Steam Plant Action Request (SPAR).
- e. Steam Plant Liaison Inquiry (SPLI).
- f. Reactor Plant Configuration Change Report (RPCCR).
- g. Planned Maintenance System (PMS) Technical Feedback Reports (TFBR).
- h. Tech Manual Deficiencies & Manual Change Requests.
- i. Fleet Coordinated Shipboard Allowance List (COSAL) Feedback Reports.

5.10.2 Non-Nuclear Deviations, Waivers and Departure from Specifications. The terms “deviation” and “waiver” are often used synonymously. However, the principle difference is a deviation is requested prior to conducting work that will result in a non-conformance, where a waiver is requested after a non-conformance has been discovered. Requests for deviation and waivers must be retained and tracked within the DFS system by Ship’s Force and the ISIC or TYCOM until permanent documentation is confirmed to reflect the specific non-conforming condition. Use of the Web Based Electronic Departure from Specification or Electronic Waiver and Deviation programs facilitate meeting these requirements. A DFS (non-nuclear system or components only) is used specifically to identify a lack of compliance with plans, procedures, instructions, or authoritative documents during a maintenance action or operations.

5.10.2.1 During a Maintenance Action. A DFS is required for any lack of compliance with cognizant documents or drawings. For an “as found” condition during maintenance, the TYCOM, the ship and the Regional Maintenance Center (if involved) must evaluate the non-compliance using the guidance of paragraphs 8.2.5 and 8.2.6, of Part I, Chapter 8 of this volume to determine if the nonconforming condition meets the criteria as a Major or Minor DFS.

NOTE: IF THE SHIP IS AT SEA THE GUIDANCE OF PARAGRAPH 8.3.8 OF PART I, CHAPTER 8 OF THIS VOLUME APPLIES.

5.10.2.2 During Operations. A DFS is required for any lack of compliance with cognizant documents or drawings. For any “as found” conditions or equipment failures that result in a non-compliance, the ship (or TYCOM if in port) must evaluate the condition or failure using the guidance of paragraphs 8.2.5 and 8.2.6 of Part I, Chapter 8 of this volume to determine if the nonconforming condition meets the criteria as a Major or Minor DFS.

- a. If the nonconforming condition does not meet the criteria as a Major or Minor DFS, no DFS is required and the nonconforming condition will be entered in the ship’s Current Ship’s Maintenance Project (CSMP). This CSMP entry must include the DFS serial number, On-Site Analysis Report serial number (if applicable) or other technical references documenting or tracking the non-conformance.
- b. If a DFS is required, the request should be processed as soon as possible to enable an engineering evaluation of the non-conformance and subsequent approval or disapproval issued without disrupting ship’s operations.
- c. Requests for DFS will be submitted, approved and cleared per paragraph 8.3.7 or 8.3.8 of Part I, Chapter 8 of this volume. Use of the Web Based Electronic Departure from Specification and Electronic Waiver and Deviation programs are acceptable unless directed otherwise by TYCOM.

15 Jan 2021

- d. If a DFS is approved as “temporary” and requires rework to correct the discrepant condition at a later date, a new CSMP entry for correction of the discrepant condition will be initiated by the ship. This CSMP entry must include the DFS serial number, On-Site Analysis Report serial number (if applicable) or other technical references documenting or tracking the non-conformance. The ship’s QAO must ensure this action is accomplished.
- e. The QAO must verify that an active Job Control Number (JCN) exists for all active temporary DFSs at the completion of all scheduled maintenance availabilities or at least quarterly and must ensure that an auditable record of such verification is maintained until superseded.
- f. For all DFSs, deviations or waivers that have been adjudicated, the approving activity is required to provide a copy of the DFS, deviation or waiver to the ship’s QAO for retention and tracking per Part I, Chapter 8, paragraph 8.3.1.e of this volume.

5.10.3 Liaison Action Requests – Nuclear Cognizant Areas.

5.10.3.1 Technical Responsibilities. A memorandum of agreement exists between NAVSEA Nuclear Propulsion Directorate (08) and NAVSEA PMS 312/335 that details the division of responsibilities within the propulsion plants of nuclear powered ships. If a nuclear powered ship is unable to comply with specifications for reactor plant systems or components and also those systems identified as nuclear by the appropriate nuclear or non-nuclear interface diagram, then a review of NAVSEA 08 requirements must be requested via a LAR. A formal resolution of all LARs is generally required prior to reactor plant or propulsion plant startup.

5.10.3.2 Technical Resolution. In general, technical resolution to questions or problems for reactor plant systems or components requires the submission of a LAR for nuclear powered surface ships per the requirements set forth in Appendix 4 (Liaison Services) of reference (d).

- a. Request for DFSs for nuclear systems will neither be requested nor approved. If a ship has a question, problem, or is unable to comply with any nuclear specification, a request for technical resolution will be made using a LAR.
- b. A LAR should not be submitted for cases of out of specification seat leakage of nuclear valves following repairs. The Reactor Plant Planning Yard and Reactor Plant Prime Contractors do not have the authority to waive valve leakage specifications. When valve seat leakage exceeds reactor plant manual specification after attempted Ship’s Force or FMA repairs, the guidance of Part I, Chapter 8, paragraph 8.4.2.c. of this volume may be used to defer any rework to a later date and close out the CWP.
- c. A LAR is also never used for removing or reprogramming work, to or from, an Availability Work Package (AWP).
 - (1) AWP for Chief of Naval Operations availabilities are developed or changed per Section 5.1.1 and Appendix D or F of the Aircraft Carrier Class Maintenance Plan (ACCMMP).
 - (2) The ACCMP can be found on the Carrier Team One web site under “Resources/Library”.

15 Jan 2021

- d. An auditable LAR file must be maintained by the originating activity. A copy of the status of all liaison actions LAR must be kept as part of this file with a copy maintained in the applicable Controlled or Formal Work Package, as required.

5.10.4 Nuclear Liaison Inquiry – Nuclear Cognizant Areas. Refer to reference (d) for Nuclear Liaison Inquiry information.

NOTE: INFORMATION ON THIS SUBJECT IS SAFEGUARDED PER REFERENCE (U).

5.10.5 Steam Plant Action Request - Non-Nuclear Cognizant Areas. In 2003, the Propulsion Plant Engineering Activity (PPEA) was formed as an additional resource for assisting operational aircraft carriers with technical or operational issues, not associated with Ship Alteration Installation or configuration control.

- a. The Steam Plant Action Request (SPAR) is designed to allow the fleet and maintenance activities to submit requests for technical assistance on non-Ship Alteration related issues. The Carrier Engineering Team (CET) will assist in providing solutions which satisfy specification requirements, supply a technical evaluation or the basis for concurrence or non-concurrence with a deviation or proposed change. Where sufficient information is not available to resolve the problem, the CET may request additional information in a reply. Each SPAR will be categorized based on the type of action taken in the proposed reply.
- b. As with a LAR, if a ship or FMA has a question or technical problem or is unable to comply with a non-nuclear specification, technical assistance is available from the In-Service CET. CET Liaison services are requested using the SPAR discussed in detail in Appendix 4 of reference (d).

5.10.5.1 Usage. SPARs requesting changes or deviations from specification must not be submitted or approved by the CET. The SPAR is not a substitute for a Request for DFSS described in Part I, Chapter 8 of this volume.

- a. SPAR should be submitted by the ship or FMA to the PPEA to address technical, logistical or operational problems with the steam and electric plant systems. It is the intent of these requirements to ensure consistency between fleet units and overhaul and repair activities in the content, format and completeness of SPAR submissions. The SPAR is not intended to replace Ship's Force and Overhaul or Repair Yard communication with the CVN68 class Engineering Configuration Manager for drawing and Ship Change Document or ShipAlt installation and configuration control issues using LARs prepared per reference (x).
- b. Examples of when generation of a SPAR is appropriate are:
 - (1) Receipt of spurious De-Aerating Feed Tank level alarms during maneuvering transients that the performance of available preventive maintenance and technical manual troubleshooting does not correct.
 - (2) Failure of the Emergency Diesel Generator to parallel across the Emergency Diesel Generator output breaker during a normal Emergency Diesel Generator feedback per the Steam Plant Manual and troubleshooting do not correct or identify the cause of the failure.

- (3) Failure of a normal seeking Automatic Bus Transfer to transfer to its normal source upon a return of the normal power supply and Ship's Force is unable to identify the cause through available troubleshooting methods.
- c. The SPAR is not intended to replace:
 - (1) The CSMP for work requests or candidates.
 - (2) TFBRs for discrepancies with the PMS System.
 - (3) Technical Manual Deficiency/Evaluation Reports (TMDER) or Manual Change Requests for identifying discrepancies in technical manuals.
 - (4) Reporting changes to ship's configuration as a result of the Navy Modernization Program.
- d. A SPAR is also never used for removing or reprogramming work to or from an AWP.
- e. AWP for Chief of Naval Operations availabilities are developed per Section 5.1.1 and Appendix D or F of the ACCMP. The ACCMP can be found on the Carrier Team One web site under the "Resources/Library" tab.

5.10.5.2 Validation. Upon receipt of a SPAR, the PPEA makes a determination, with NAVSEA concurrence as needed, as to whether the SPAR is a valid request. Once validated, the PPEA will route the SPAR to the appropriate cognizant engineering activity for resolution. If the appropriate activity is not clear, i.e. in the case of overlapping areas of cognizance, NAVSEA 05V will determine which organization will provide resolution. SPAR responses meeting the following criteria DO NOT require NAVSEA approval and the PPEA has the authority to provide a final resolution to the requesting activity.

- a. The request concerns a PPEA cognizant system or component as defined in Enclosure (1) to PPEA-1.
- b. The request does not change:
 - (1) Engineering System Diagrams.
 - (2) System diagram attributes, such as system design or performance characteristics, material, pipe size, etc.
 - (3) Steam Plant Manual.
 - (4) Component Procurement Specifications.
 - (5) Component Technical Requirement documents.
 - (6) Component technical manuals.
 - (7) System testing requirements.
 - (8) GSO requirements.
- c. The request has no impact on Reactor Plant systems or components.

5.10.5.3 Categories. Actionable SPARs fall into one of four categories: Emergency, Urgent, Routine, and Date Needed By. Informational SPARs typically do not require a response.

Emergency, Urgent, Routine and Date Needed By SPARs require an approved response delivered to the originator as indicated here:

- a. Routine – within 20 business days.
- b. Urgent – within 5 business days.
- c. Emergency – within 1 business day (24 hours).
- d. Date Needed by: Date specified by the originating activity to support upcoming evolutions or ship's schedule.

5.10.5.4 Coordination. Once a CVN SPAR response is developed, it is subsequently forwarded to NAVSEA 05V for approval. NAVSEA 05V1 coordinates the review and approval process for the various NAVSEA agencies. Any NAVSEA comments to the SPAR response are communicated directly to the responding activity during the approval process and then adjudicated. The approved SPAR response is returned to PPEA, who distributes the response to the ships and appropriate activities. The PPEA provides record retention services for all SPAR responses.

5.10.5.5 Routing. In addition to preparing SPAR responses, the PPEA is tasked as the Process Manager for both the SPAR and SPLI Programs. This involves dispositioning SPARs received, routing to the appropriate activity for resolution, routing of responses to NAVSEA for approval and distribution of approved responses to the requestor and other activities as appropriate.

5.10.5.6 Status. The EFORMS application maintains the status of all SPARs. This application includes the date the SPAR was received, the date the responding activity approved the response, the date the SPAR response was sent to NAVSEA, the current responsible party and current routing status. Reports listing all outstanding and completed SPARs for a desired time period can be retrieved from the application via the search engine function.

5.10.5.7 Software. Naval Sea Logistics Center is responsible for maintaining the EFORMS application that tracks SPAR status from receipt to completion, maintaining a historical file of completed SPARs, and having the ability to provide CET and PPEA management with meaningful statistics on SPAR processing.

5.10.5.8 Process Map. The PPEA SPAR Process Map is shown in detail in Figure 5-4 of this chapter.

5.10.6 Steam Plant Liaison Inquiry – Non-Nuclear Cognizant Areas. SPLIs are the Steam Plant equivalent of an NLI. SPLIs are used by the CET to request information, disseminate technical information associated with the Steam Plant, or direct work that does not require a drawing change or affect system configuration control, to the Fleet and overhaul activities. This document is intended to be a data collection tool only, and in general will not direct Forces Afloat to accomplish any repair, modification, or alteration to systems or components. Following NAVSEA approval, a SPLI is issued to the applicable TYCOM(s), who will forward the request to the appropriate ships via official letter. Each activity must maintain an auditable file, containing all information associated with each incoming and outgoing (answered) inquiry. A SPLI may be necessary to obtain specific data and other information from Forces Afloat during development of SPAR responses and other CET products.

5.10.6.1 Process Manager. In addition to preparing SPLI's, the PPEA is tasked as the Process Manager for both the SPAR and SPLI Programs. Additionally, the PPEA is responsible for maintaining an SPLI logbook or database and providing a historical file of completed SPLIs.

- a. The PPEA is responsible for keeping track of SPLIs in routing for concurrence, SPLIs issued to the fleet for accomplishment and ensuring the logbook is updated as SPLIs are completed.
- b. The PPEA will route a copy of all SPLI responses received to the SPLI originator and other parties as applicable. If a SPLI request has exceeded the requested due date without the required response, the applicable CET representative must contact the TYCOM to establish a revised due date. The final status of an SPLI must be noted in the SPLI logbook or database.
- c. The status of outstanding SPLIs will be reported monthly. The activity's report will be maintained by the PPEA SPAR or SPLI Process Manager and will list only those SPLIs which require a response.

5.10.6.2 Amplifying Information. Amplifying information is provided in the NLI or SPLI Process Map (Figure 5-5 of this chapter).

5.10.7 Reactor Plant Configuration Change Report. RPCCRs are used to report any and all changes to the configuration of any NAVSEA 08 cognizant space. This includes SHIPALTs, Ship Class Drawings, NLIs or any other form of authorized change. Addresses can be found in reference (d) or obtained through the TYCOM as needed.

- a. Formal instructions for completion of RPCCRs is found in Appendix 11 of reference (d). Blocks 1 - 30 (31 if needed) must be filled out per the instructions found in Appendix 11.
- b. Commanding Officers are directed to forward RPCCR(s) to NAVSEA 08 by official letter, similar to the sample in Appendix E of this chapter, using ship's letterhead with copies to the TYCOM, ANSTR Pittsburgh and A4W/A1G RPPY.

Figure 5-4 - PPEA SPAR Process Map

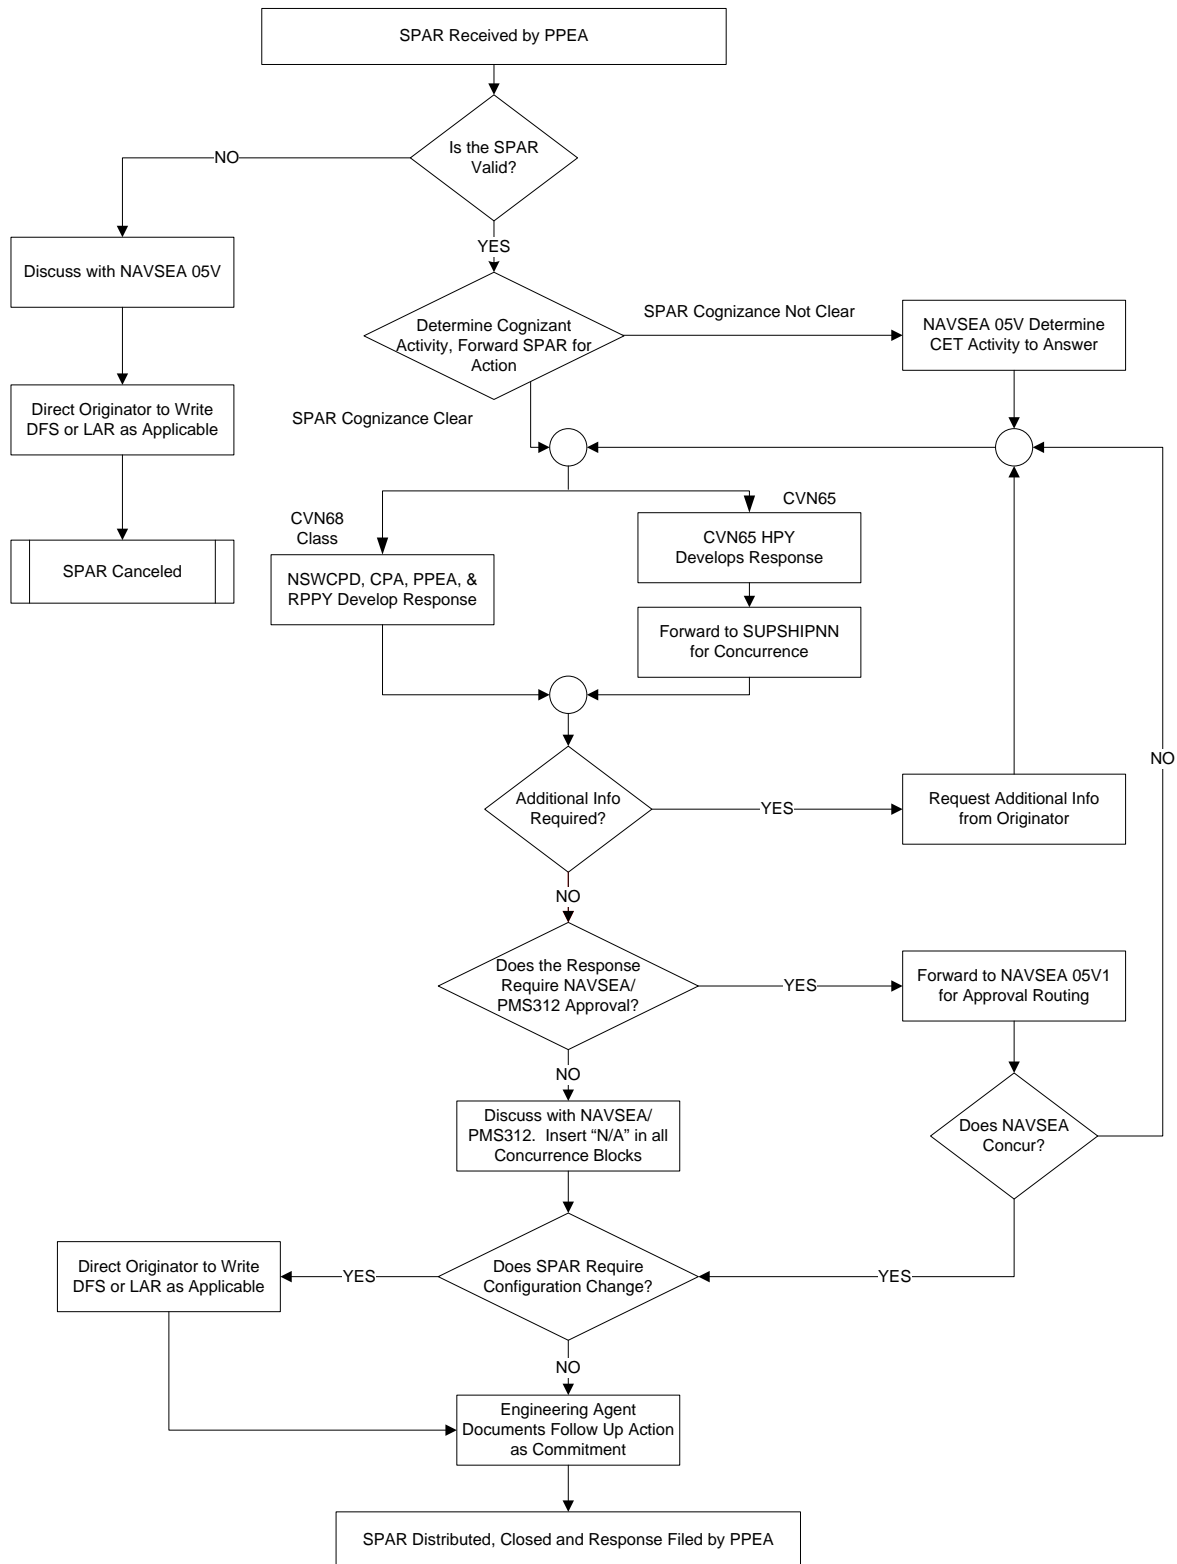

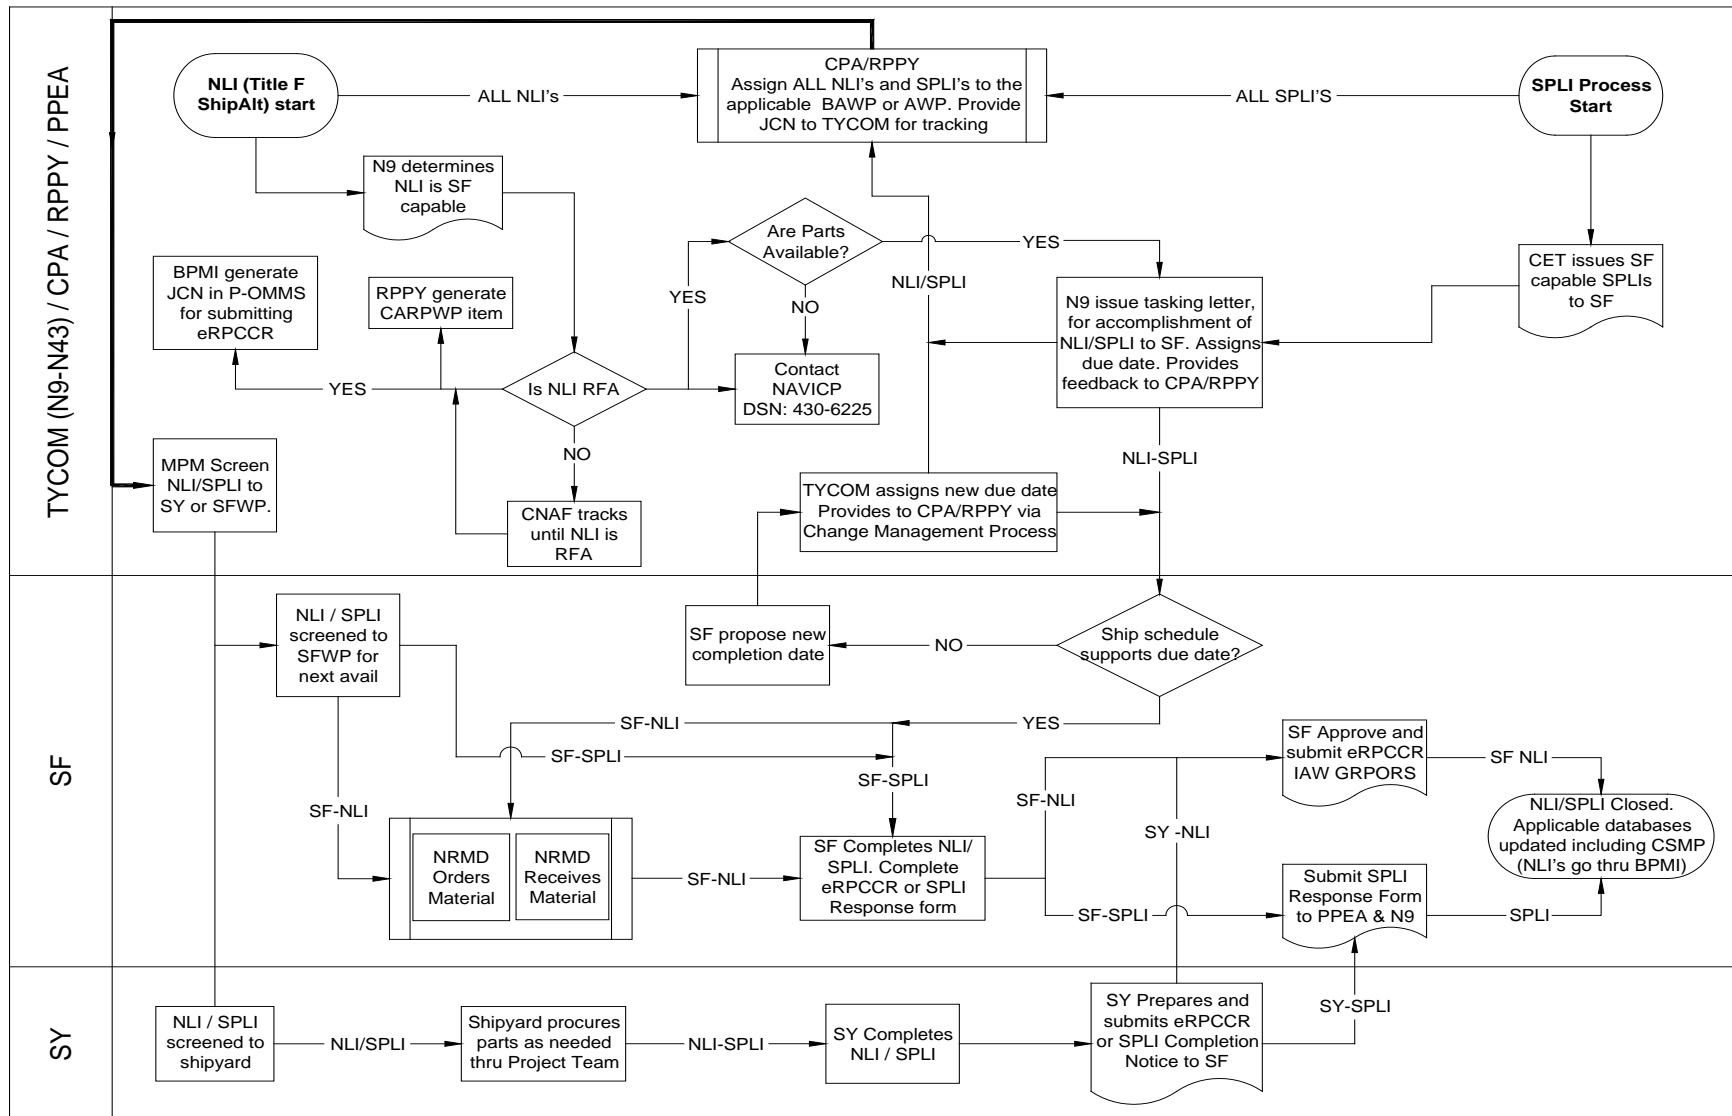

Figure 5-5 Overall NLI or SPLI Process Map

5.10.8 Technical Manual Deficiencies and Manual Change Requests.

5.10.8.1 Technical Manual Maintenance. Technical Manuals (TM) must be maintained current at all times. TMs associated with hardware must reflect current hardware configurations. Changes to hardware accordingly, must be accompanied by changes or revisions to the TMs. TMs must also be changed or revised to correct known deficiencies in the technical content in instances not related to hardware modifications.

5.10.8.2 Technical Manual Deficiency/Evaluation Report. The TMDER, (NAVSEA Form 4160/1), is used to identify technical and non-technical discrepancies or deficiencies (non-nuclear cognizant) in NAVSEA or **NAVWAR** technical manuals. It may be that a paragraph or page is missing, that measurements or troubleshooting procedures are incorrect, a safety step is omitted, instructions are unclear or that the text or illustrations are not legible. Whatever the issue, it must be corrected. The TMDER is a quick and efficient tool for reporting problems with technical manuals that are used every day.

5.10.8.3 URGENT Deficiencies.

- a. URGENT deficiencies should be reported to the Naval Systems Data Support Activity (NSDSA) by priority Naval Message addressed to:

COMMANDING OFFICER
CODE 310 TMDERs
NAVSURFWARCENDIV NSDSA
4363 Missile Way,
Port Hueneme, CA 93043-4307
- b. An editable TMDER (NAVSEA form 4106/1) can be downloaded from Navy Forms Online web site at <https://forms.documentservices.dla.mil/order/> and submitted hardcopy or completed online from the Navy 311 web site at <http://www.public.navy.mil/navwar/navy311/Pages/Links.html#EquipmentTechnical> under the Equipment/Maintenance section.
- c. For users with a Technical Data Management Information System (TDMIS) account, the most expedient manner of TMDER submission is via the TDMIS Web Site.
- d. Unclassified TMDERs can be submitted from the TDMIS database via the “deficiency module”. This method is strongly encouraged.

5.10.8.4 Routine Deficiencies.

- a. Routine TM documentation deficiencies and concerns are reported via the web or using a paper TMDER. The paper form should be available in the back of any ship, NAVSEA or **NAVWAR** system tech manual.
- b. An editable TMDER (NAVSEA form 4106/1) can be downloaded from Navy Forms Online web site at <https://forms.documentservices.dla.mil/order/> and submitted hardcopy or completed online from the Navy 311 web site at <http://www.public.navy.mil/navwar/navy311/Pages/Links.html#EquipmentTechnical> under the Equipment/Maintenance section.
- c. Again, TDMIS users may submit routine TMDERs via the “deficiency module” of TDMIS. Attachments may be uploaded in TDMIS.

5.10.8.5 Technical Manual Deficiency/Evaluation Report Process. TMDERs are received at NSDSA, logged into the TMDER tracking module and provided to the Technical Manual Maintenance Activity (TMMA) for review and response. The TMMA must:

- a. Review, analyze and resolve TMDERs for all assigned TMs.
- b. Determine the accuracy and criticality of a reported deficiency.
- c. Inform the TMDER originator and update the deficiency data in the deficiency module of TDMIS: Urgent reports - 3 working days. Routine reports - 90 calendar days.
- d. Prepare or procure Field Change Bulletins, change packages and revisions or prepare changes, to correct TMDER reported deficiencies, using the Rapid Action Change process.
- e. Letters of response should include the appropriate status and must be similar to the following:
 - (1) Your TMDER # _____ for TM # _____ has been received by this activity for action. The TMMA has determined that a change to the manual is required. A change package (or revision) is in work or work is planned to start this fiscal year. Distribution is scheduled on (Mo/Yr).
 - (2) Your TMDER # _____ for TM # _____ has been received by this activity for action. The TMMA has determined that a change to the manual is not required for the following reason(s):
 - (3) Your TMDER # _____ for TM # _____ has been received by this activity for action. The TMMA has determined that the deficiency reported will not impede the operation or maintenance of the equipment, and that it is not cost effective to prepare a change at this time. The deficiency will be considered for incorporation with the next change package or revision.
- f. Notify NSDSA and the Acquisition Manager, TMDER originator or Designated Ship Program Management Office when a TMDER for the assigned TM cannot be reviewed, resolved, or TM updated. This notification can be completed via the on-line TMDER form in the TDMIS deficiency module.

5.10.9 Fleet COSAL Feedback Report.

5.10.9.1 Usage. This report is used specifically to call attention to and seek correction of any technical deficiencies found on Allowance Parts Lists (APL) or Allowance Equipage Lists (AEL), including those covered under P-OMMS. For example:

- a. The part or item is not listed on the APL or AEL, but is considered to be a "maintenance significant item".
- b. APL is incomplete or is missing information, such as characteristics data, technical manual number, etc.
- c. Incorrect part or item listed on APL or AEL.
- d. Allowed quantity insufficient for PMS requirements.
- e. Part number in technical manual does not agree with APL.

15 Jan 2021

- f. Non-allowed part required for PMS.
- g. APL technical problem such as incorrect Minimum Replacement Unit assignment.
- h. Source, Maintenance and Recoverability Codes and Allowance Note Codes noted on APL or AEL are not defined in any publication held.
- i. Suspected error in code assignments, e.g., Source, Maintenance and Recoverability Codes, Note Codes, etc.
- j. Circuit symbol number in Electronics APL (Section B) crosses to incorrect reference number or stock number.

5.10.9.2 Misuse. This report is not to be used to:

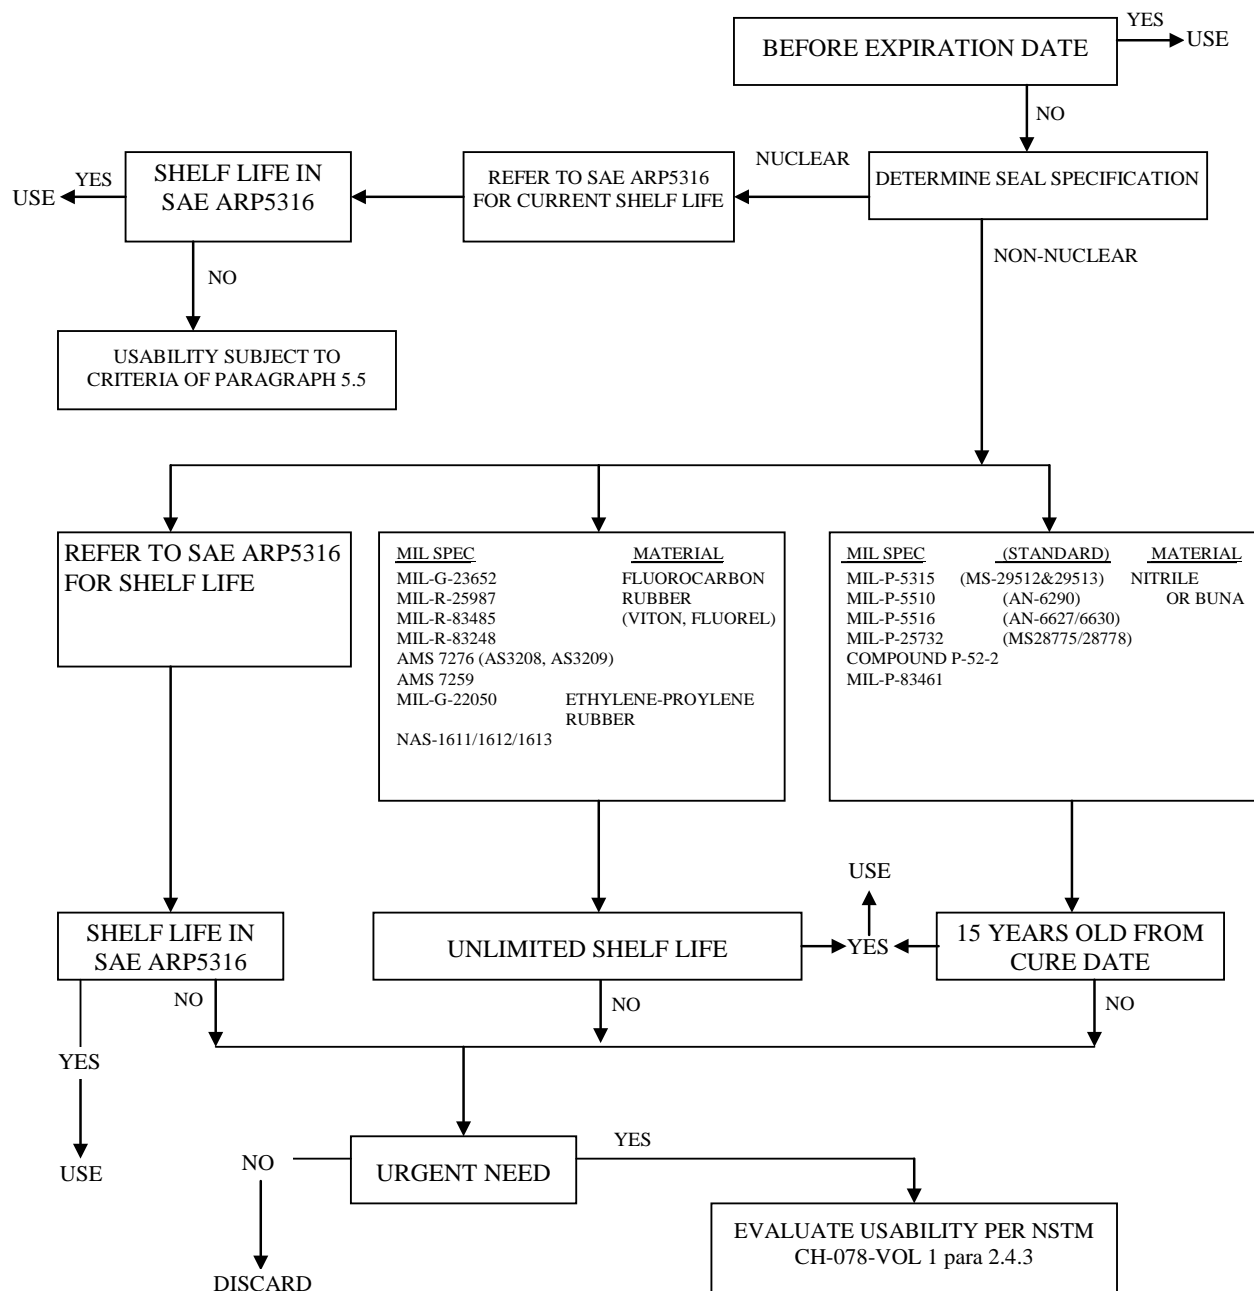

- a. Address any matters relating to Nuclear Reactor Plant COSAL ("Q" COSAL). Matters relating to Q-COSAL should be addressed by LAR through A4W RPPY
- b. Report equipment configuration changes. Ship's Configuration Change Form, OPNAV Form 4790/CK, is to be used for this purpose. RPCCR for nuclear cognizant systems.
- c. Request changes in allowance for repair parts or equipage. Use NAVSUP Form 1220-2, except in cases when the allowance problem is caused by technical deficiencies in the COSAL, such as incorrect Minimum Replacement Unit assignment, PMS requirement not reflected in Standard Navy Stock List or Installation Sequence List etc. See reference (y) for further details concerning this form.

5.10.9.3 Form Location. An editable Fleet COSAL Feedback Report (NAVSUP Form 1371) can be downloaded from Navy Forms Online web site at <https://forms.documentservices.dla.mil/order/> and submitted hardcopy or completed online from the Navy 311 web site at <http://www.public.navy.mil/navwar/navy311/Pages/Links.html#EquipmentTechnical> under the Equipment/Maintenance section. Distribution of the form should be:

- a. Original to NAVSEALOGCEN Code N42.
- b. Copy to Ship's Supply Officer.
- c. Copy retained by Originator.

APPENDIX B**FORMAT FOR SUBMARINE CERTIFICATION CONTINUITY REPORT**

From: USS (Ship's Name)
 To: ISIC _____ (Note 1) Deployed ISIC (If applicable)
 Info: Parent ISIC (Applicable in all cases when deployed)
 Additional Addrees (Note 2)

Subj: CERTIFICATION CONTINUITY

Ref: (a) COMUSFLTFORCOMINST 4790.3 - Joint Fleet Maintenance Manual, Volume V
 (b) NAVSEA 0924-062-0010 - Submarine Safety (SUBSAFE) Requirements Manual
 (c) NAVSEA T9044-AD-MAN-010 - Requirements Manual for Submarine Fly-By-Wire Ship Control Systems

1. Per reference (a) and (b), all work performed within the SUBSAFE Boundary has been completed and satisfactorily retested except as noted in paragraph 2. There are no outstanding RECs for equipment or systems required for underway operations.

2. The following Controlled Work Packages or RECs were closed by transferring the remaining at-sea testing to a Departure from Specifications.

<u>CWP/REC Serial No.</u>	<u>DFS Serial No.</u>	<u>Type</u>	<u>Component</u>
---------------------------	-----------------------	-------------	------------------

3. All URO MRC mandatory tests or inspections have been successfully accomplished within the required periodicity. The following URO MRC requirements which have become due since the last underway period or which would have become due during this scheduled at-sea period have been completed during the preceding inport period as indicated or require at-sea operations and will be accomplished prior to the listed due date:

<u>URO MRC</u>	<u>Component Ident</u>	<u>Next Due (MO/YR)</u>
----------------	------------------------	-------------------------

4. A copy of Ship's Force completed URO MRC completion letters and data report forms have been provided to the ISIC.

5. Per reference (a) and (c), all work performed within the Submarine Fly-By-Wire Ship Control System Boundary has been completed and satisfactorily retested. There are no outstanding MCRs for equipment or systems required for underway operations.

NOTE 1: THIS CERTIFICATION REPORT MAY BE PROVIDED TO THE ISIC IN THE FORM OF A MEMORANDUM, MESSAGE, OR LETTER.

NOTE 2: ADDITIONAL ADDEES SHOULD BE ADDED AS NECESSARY BASED ON SITUATION (E.G., REPORT FOR UNDERWAY TRIALS DURING MAJOR INDUSTRIAL AVAILABILITIES WOULD NORMALLY INCLUDE SHIPYARD, NAVSEA AND TYCOM).

NOTE 3: IF NONE WAS ENTERED IN PARAGRAPH 3 THEN OMIT PARAGRAPH 4. PARAGRAPH 4 IS ONLY REQUIRED IF URO MRC ITEMS WERE COMPLETED BY SHIP'S FORCE.

15 Jan 2021

NOTE 4: IF NO WORK ON THE SUBMARINE FLY-BY-WIRE SHIP CONTROL SYSTEM WAS PERFORMED, PARAGRAPH 5 IS NOT REQUIRED. PARAGRAPH 5 IS ONLY REQUIRED IF WORK ON THE SUBMARINE FLY-BY-WIRE SHIP CONTROL SYSTEM WAS PERFORMED.

NOTE 5: DELIVER THE CERTIFICATION CONTINUITY REPORT VIA ANY MEANS SUITABLE FOR OFFICIAL CORRESPONDENCE AGREED TO BY THE ISIC.

15 Jan 2021

APPENDIX C**FORMAT FOR FLEET MAINTENANCE ACTIVITY CERTIFICATION REPORT TO
TENDED SUBMARINE**

Ser

From: Commanding Officer, (FMA)
 To: Commanding Officer, (Tended Submarine)

Subj: CERTIFICATION CONTINUITY OF USS (*Tended Submarine*)

Ref: (a) COMUSFLTFORCOMINST 4790.3 - Joint Fleet Maintenance Manual, Volume V
 (b) NAVSEA 0924-062-0010 - Submarine Safety (SUBSAFE) Requirements Manual
 (c) NAVSEA T9044-AD-MAN-010 - Requirements Manual for Submarine Fly-By-Wire Ship Control Systems

Encl: (1) Copies of completed Re-entry Controls (REC)
 (2) Copies of approved Departures from Specification (DFS) and Liaison Action Requests (LAR)
 (3) Copies of completed MCRs for Submarine Fly-By-Wire Ship Control System

1. Per reference (a), (b) and (c), certification of those SUBSAFE or Fly-By-Wire Ship Control Systems or portions of SUBSAFE or Fly-By-Wire Ship Control Systems, on which the FMA performed maintenance, has been sustained by the FMA. All required re-certification of the maintenance has been completed except as noted in paragraphs 2 and 3.

2. All CWP's for SUBSAFE or Fly-By-Wire Ship Control Systems opened by the FMA for maintenance have been closed and a copy of each completed REC/MCR is forwarded as enclosures (1) and (3) respectfully:

<u>CWP Serial No.</u>	<u>Task Description</u>	<u>Reason Deferred</u>
-----------------------	-------------------------	------------------------

3. The following Departures from Specifications (DFS) and Liaison Action Requests (LAR) for deviations from specification were approved as part of FMA maintenance in the SUBSAFE or Fly-By-Wire Ship Control System boundary. Copies of each are provided as enclosure (2):

<u>CWP Serial No.</u>	<u>DFS or LAR Serial No.</u>	<u>Type</u>	<u>Component</u>
-----------------------	------------------------------	-------------	------------------

4. The following URO maintenance requirements were satisfied and are reported as complete by the FMA. The original data report forms will be mailed to SUBMEPP with copies to your ISIC within 30 days.

<u>URO MRC</u>	<u>EGL (if applicable)</u>	<u>Component Identification</u>	<u>JCN</u>
----------------	----------------------------	---------------------------------	------------

Copy to:
 Parent ISIC for ship
 Parent ISIC for FMA

15 Jan 2021

APPENDIX D**FORMAT FOR NON-FLEET MAINTENANCE ACTIVITY CERTIFICATION REPORT
TO TENDED SUBMARINE**

From: Commander, <Activity Name>
 To: Commanding Officer, <USS *Ship Name* and Hull Number> Commander <Squadron Number>

Subj: CERTIFICATION CONTINUITY OF USS <Ship Name and Hull Number>, <Availability Number>

Ref: (a) NAVSEA 0924-062-0010 <Insert Rev>, Submarine Safety (SUBSAFE) Requirements Manual
 (b) SS800-AG-MAN-010/P-9290 <Insert Rev> - System Certification Procedures and Criteria Manual for Deep Submergence Systems (DSS)
 (c) NAVSEA T9044-AD-MAN-010 <Insert Rev>, Requirements Manual for Submarine Fly-By-Wire Ship Control System (FBW SCS)
 (d) COMUSFLTFORCOMINST 4790.3 <Insert Rev>, Joint Fleet Maintenance Manual

Encl: (1) List of Closed Re-Entry Controls <optional>
 (2) List of Approved Departure From Specification (DFS) <optional>
 (3) List of Scheduled URO-MRCs or HIPs Accomplished by the Activity <optional>

1. Per references (a), (b), (c) and (d), certification of SUBSAFE, DSS or FBW SCS systems on which <Activity Name> performed maintenance has been sustained. All required recertification of the maintenance has been completed as noted in paragraphs 2 through 6.

2. All REC/MCRs for SUBSAFE, DSS or FBW SCS (SFCC) systems opened by <Activity Name> for maintenance have been closed as noted:

REC/MCR Serial No

Task Description

<See enclosure (1) if needed>

3. The following Departures From Specifications (DFSs) for SUBSAFE, DSS or FBW SCS (SFCC) systems were approved as part of <Insert Activity Name> maintenance:

DFS Serial No.

Type

Component

<See enclosure (2) Part A if needed>

4. In addition to the DFSs listed in paragraph 3, the following DFSs were generated for work accomplished by <Activity Name> for the purpose of testing at Sea. If at sea testing is required, request Ship's Force report via naval message and inform <Maintenance Activity> of the results of at sea testing.

15 Jan 2021

<u>DFS Serial No.</u>	<u>Type</u>	<u>Component</u>
-----------------------	-------------	------------------

<See enclosure (2) Part B if needed>

5. The following Scheduled URO-MRCs or HIPs were completed. URO-MRC or HIP data will be forwarded by <Activity Name> to SUBMEPP:

<u>URO-MRC or HIPs</u>	<u>EGL (if applicable)</u>	<u>Component ID</u>	<u>JCN</u>
------------------------	----------------------------	---------------------	------------

<See enclosure (3) if needed>

6. **<Note: This paragraph is only applicable to those activities acting as a NSA or LMA>**

Per reference (d) <Activity Name>, as Naval Supervisory Activity, reports that certification of SUBSAFE, DSS or FBW SCS systems for work accomplished by outside activities has been maintained based on the SUBSAFE, DSS or FBW SCS Certification Continuity letters as identified here:

<u>Supervising Activity</u>	<u>Letter Ser No./Naval Message</u>	<u>Description</u>	<u>ALT</u>

- (q) NAVICPINST 4355.5 - Receipt, Inspection, Storage and Issue of Level I/SUBSAFE Material

6.1 PURPOSE. To define responsibility and provide guidance for material control which includes procurement, receipt inspection, stowage, issue, in-process control, and records for controlled material used in maintenance.

6.1.1 Discussion. Controlled material is the term used in this manual to describe those materials designated for use in or removed from Submarine Safety (SUBSAFE), Level I (LI), Scope of Certification (SOC), Submarine Flight Critical Components (SFCC), and Nuclear LI systems which are in the custody of the end-user work center, division Controlled Material Petty Officer (CMPO) or are undergoing receipt inspection, have been certified for use and are tagged with the appropriate Quality Assurance (QA) forms of this manual. In this manual, material in the

custody of the Naval supply system, which includes the supply departments onboard ships and Fleet Maintenance Activities (FMA), is identified as LI stock program materials or nuclear repair parts. Reference (a) provides the special administrative and technical requirements that are levied by Naval Sea Systems Command (NAVSEA) for materials from fabrication to final installation for non-nuclear and nuclear controlled material, respectively. Section 6.3 of this chapter for non-nuclear material control provides direction for implementation of higher authority requirements pertaining to material control. Reference (b) and Part III, Chapter 6 of this volume provide specific requirements for receipt inspection and control of SOC material.

6.2 NUCLEAR.

NOTE: INFORMATION ON THIS SUBJECT IS SAFEGUARDED IN ACCORDANCE WITH OPNAVINST N9210.3.

6.2.1 Controlled Material Determination. This section describes the use of the specific references used to identify proper material for repair work. It is important that the difference between system and part Level of Essentiality be understood. A system may be LI, but this does not mean that every part in the system will be LI. This section also provides references and guidance necessary to obtain this understanding and to determine if controlled material is required, and if so, the proper level of control.

6.2.1.1 General Requirements. In order to determine the correct material to be installed in a ship and to properly certify the material prior to installation, the work center responsible for the specific area of the ship must first gather the appropriate reference material:

- a. Drawings that specifically define the system and component.
- b. System or Component Technical Manual.
- c. Applicable Allowance Parts List (APL) from the ship's Coordinated Shipboard Allowance List (COSAL).
- d. Component replacement manuals, etc.
- e. NAVSEA Instructions.
- f. Military Standards.

6.2.1.2 Determination of Required Repair Parts. Using the reference materials, the required repair parts will be determined by comparing the appropriate part number from the technical manual or drawing (if no technical manual) to the part numbers listed in the APL and therefore obtaining the National Stock Number (NSN) with associated Special Material Identification Code (SMIC), if assigned or listed on the APL.

NOTE: THE USE OF NUCLEAR REPAIR PARTS (NRP) WILL BE RESTRICTED TO THOSE SPECIFIC APPLICATIONS WHERE REQUIRED.

6.2.1.3 Determination of Level of Control. The next step is to determine if the material identified by the NSNs in paragraph 6.2.1.2 of this chapter is certifiable, if required, as controlled material for the system or component. In order to determine level of control required for the parts, the Level of Essentiality for the system and component must be determined for nuclear systems. Controlled material is used in systems designated with a Level of Essentiality per reference (c) for Nuclear LI.

NOTE: A SMIC (E.G., X1, X2, X3, X4, X5, X6, X7), IS ADDED TO THE END OF THE NSN. IT IS ASSIGNED TO SELECTED COMPONENTS AND REPAIR PARTS BY THE NAVAL SUPPLY SYSTEM AND IS USED FOR CONTROLLING THE ISSUANCE AND STOCKING OF THESE COMPONENTS AND REPAIR PARTS WITHIN THE NAVY SUPPLY SYSTEM. IT SHOULD NOT BE CONFUSED WITH THE LEVEL OF ESSENTIALITY. A SMIC IS AN ADMINISTRATIVE TOOL FOR THE SUPPLY SYSTEM. LEVEL OF ESSENTIALITY IS A TECHNICAL DESIGNATION APPLICABLE TO SPECIFIC PIPING SYSTEMS.

6.2.1.4 Nuclear Material Level Determination. The following can be used to assist in determining the required “Level of Essentiality” for the material:

- a. Determine if the system to be repaired is nuclear. References (f) or (g) provide the process to determine if a system or component is considered part of the reactor plant and provide a listing of all nuclear and non-nuclear interface drawings.
- b. Determine if the nuclear system and repair part is Nuclear LI by reviewing reference (c) and the piping system drawing. If the drawing designates the component as LI, or II, the component is equivalent to LI. Systems, material, or components designated as Nuclear Level III should be considered non-Level. In the absence of specific level designations, or if questionable or conflicting Levels of Essentiality exist, refer to references (a) and (c) for proper determination.

6.2.2 Controlled Material Procurement. This section provides general guidance for procurement of nuclear controlled material. It should be noted that NAVSEA and Naval Supply Weapon Systems Support (NAVSUP WSS) have adequate programs in place for procurement of controlled material for nuclear applications. Therefore, ships and repair activities should always obtain controlled material from the Navy supply system. This section also provides:

- a. Background regarding NAVSEA and NAVSUP WSS controlled material procurement programs.
- b. Summary of or reference to the NAVSEA and NAVSUP WSS requirements for nuclear controlled material procurement.

6.2.2.1 General Requirements.

- a. NRP are procured by several Nuclear Material Procurement Programs and certified, when required by certain NAVSEA specifications (e.g., reference (e) for 2S-X1 components). NRP are generally identified in the supply system by SMIC codes X1, X2, X3, X4, X5, X6 and X7.
- b. Nuclear LI material which meets acceptance criteria will be marked with a permanent Material Identification and Control (MIC) code when required by reference (a). A manufacturer’s marking which provides traceability may be used in lieu of a MIC number.

6.2.2.2 Controlled Material Procurement.

- a. Material for Nuclear Level I applications should be procured per references (a), (c) and (e). For reactor plant components and equipment, identified by a “2S” cognizance

NSN and “X1” SMIC, requisitions should include supplementary information required by reference (e). When substitute material must be used because the original material is no longer available, refer to references (f) and (g). Section 9020-0 of reference (f) for Submarines and Chapter 5 of reference (g) for Surface Ships identifies the Reactor Plant Replacement Component Technical Manual for each reactor plant.

- b. When ordering nuclear material, the Q-COSAL and reference (e) should be used.
- c. Nuclear Material Procured Outside the Supply System. Reference (e) states, “Fleet activities will not locally procure material for use in NRP applications. If non-stocked items are required, activities must submit non-standard requisitions to NAVSUP WSS according to Naval Supply Systems Command (NAVSUP) P-485”. Requisitions for NAVSUP WSS managed NRP material must be prepared according to NAVSUP P-485 and applicable Type Commander (TYCOM) directives. Requisitions for NAVSEA Nuclear Propulsion Directorate (08) managed 2S/X1 components must be prepared according to reference (e).

6.2.3 Receipt Inspection of Nuclear Controlled Material. This section provides the guidance and procedures for forces afloat and FMAs to conduct and document receipt inspections to certify controlled material as acceptable for installation.

6.2.3.1 General Requirements. Once the material ordered for use in LI systems is received, the material must be receipt inspected per reference (a). Receipt inspection of this material is required to establish positively that the material is the correct material for the job.

NOTE: THE TECHNICAL INSPECTION REQUIREMENTS OF THE APPLICABLE TECHNICAL MANUAL, DRAWING OR OTHER TECHNICAL REFERENCE AND PIPING SYSTEM MATERIAL REQUIREMENTS (E.G., CLEANLINESS, DIMENSIONS, SURFACE FINISH) ARE THE RESPONSIBILITY OF THE END-USER (WORK CENTER SUPERVISOR OR CRAFTSMAN) TO ACCOMPLISH PRIOR TO INSTALLATION AND ARE NOT PART OF THE RECEIPT INSPECTION OF THIS MANUAL.

- a. Reference (a) provides the controls and certain testing requirements that are levied by NAVSEA to cover the material from fabrication to final installation for nuclear material.
- b. For Nuclear LI material, the unique requirement for “traceability” is invoked, meaning that a marking system is employed which links the material to Objective Quality Evidence (OQE). OQE for the material is the quantitative and qualitative data proving that the material conforms to specified requirements. To meet the requirements for traceability, the following requirements are instituted:
 - (1) Receipt inspection of the material.
 - (2) Use of QA tags in association with the item(s).
 - (3) Segregated stowage for Nuclear LI.
 - (4) Custody by CMPOs, Controlled Material Handlers (CMH), Quality Assurance Inspectors (QAI) or qualified craftsman.

- (5) Use of material verification procedures, as required by reference (a), during installation of the material.
- c. For Nuclear LI material, all signatures made on QA-form 2 (Material Identification and Control Tag) are considered to be certification signatures as defined in reference (h). The individual responsible for performing the certification must be indicated in each signature block on the QA form 2 and that person must understand his or her signature to indicate the following: "The person designated to sign for an action verifies, based on personal observation, and certifies by their signature that the action has actually been performed following the specified requirements."

6.2.3.2 Quality Assurance Forms for Receipt Inspections. The QA forms necessary to complete and document receipt inspections (QA form 1 and QA form 2) are addressed in paragraph 6.2.3.5 of this chapter.

6.2.3.3 Nuclear Receipt Inspection. The receipt inspection requirements for NRP as required by reference (a) are provided in paragraph 6.2.3.5, and will be used for the receipt inspection of Nuclear LI material.

6.2.3.3.1 Receipt Inspection of Nuclear Material. Controlled material for nuclear applications is designated as Nuclear LI. Reference (c) discusses the Nuclear Systems and the associated Level of Essentiality as either Nuclear LI or Level-none. Project Target Ready for Issue (RFI) tag (NAVSEA 9210/2, Figure 6-1 of this chapter or NAVSEA 9210/2, Figure 6-2 of this chapter) will be attached to all SMIC X1, X2 or X4 Nuclear LI RFI material. X1 material components and repair parts furnished by NAVSEA 08 prime contractor may not have RFI tags attached; however, this material is considered pre-certified and ready for use. The RFI tags depicted in Figure 6-3 and Figure 6-4 of this chapter will be attached to Nuclear LI or non-LI material, respectively, previously inspected by a Naval shipyard. SMIC X6 components and repair parts will not have RFI tags attached. X6 includes material formerly classified as X3 and X5 items that were procured as LI Material per NAVSEA 0900-070-6010. Additionally, material may be received with other tags (e.g., hydrostatic test tags per reference (i)).

- a. Project Target is a NAVSEA nuclear material procurement program.
- b. NAVSEA Prime Contractor. Material supplied by NAVSEA prime contractors may or may not have an RFI tag attached, but such material should be receipt inspected and handled the same as material received with an RFI tag. Material supplied by NAVSEA prime contractors is identified by a 2S cognizance or X1 SMIC NSN and N00024 in the contract number.
- c. It should be noted that reference (a) only contains requirements for nuclear piping system MIC. Nuclear piping system material requirements (e.g., cleanliness, dimensions, surface finish) and requirements to perform technical inspections per the applicable material technical manuals are not included in reference (a).

6.2.3.4 General Requirements for Nuclear Material.

- a. Supply departments of Fleet activities will perform the basic receipt inspection required by the appropriate NAVSEA, NAVSUP WSS instruction prior to placing the material into stock inventory. QA forms of this manual are not required to be completed or placed on the material by supply department personnel.

15 Jan 2021

- b. Material identification must remain on or with the material throughout all stages of stowage, fabrication and installation.
- c. Material awaiting or undergoing receipt inspection will be segregated from accepted material.
- d. If guidance in addition to that specified in paragraph 6.2.3.5 of this chapter is required, reference (a), Section 3.4 and reference (e), specifies the certification and receipt inspection requirements for Nuclear LI material.
- e. The certification of the material, or verification the material is certified for use, will be accomplished by the end-user.
- f. New Construction Ships. During outfitting, Nuclear LI material may be received without an RFI tag. The Supervisor of Shipbuilding must provide a “by-serial-number” list of NAVSEA Prime Contractor SMIC X1 components provided to the shipbuilder directly by the prime contractor. Additionally, the letter should state that since the material is from a prime contractor, it is exempt from the requirements to perform a generic material identity verification. A copy of this letter must be kept on file for reference by the ship and this letter should be treated as a permanent record.
- g. Unit of Issue. QA form 2 (Material Identification or Control tag) will be attached to each accepted unit of issue (e.g., a valve, can of weld wire, length of barstock).
- h. Package Alteration Kits. Package alteration kits should not normally be opened until the ship or FMA is ready to proceed with the installation, provided that a certification of the contents and a copy of the installation instructions are in the envelope on the outside of the box. When the ship or FMA is ready to proceed with the installation, the lead work center CMPO will open the kit and perform the receipt inspection.

6.2.3.5 Nuclear Material Receipt Inspection Procedures. The following tables are to be used as a guide in conducting a proper receipt inspection per reference (a). Disassembly of the item is not required or intended by any of these procedures.

- a. Navy supply system material requisitioned for Nuclear LI applications.

NOTE: SHIP’S FORCE IS NOT REQUIRED TO USE A QA FORM 1 TO DOCUMENT RECEIPT INSPECTION OF NUCLEAR LI MATERIAL TO BE IMMEDIATELY INSTALLED FOR A SPECIFIC MAINTENANCE ACTION. A QA FORM 2 WILL BE USED TO DOCUMENT RECEIPT INSPECTION OF MATERIAL TO BE IMMEDIATELY INSTALLED.

<u>Procedure</u>	<u>Responsibility</u>
Visually check for damage.	CMPO or CMH
Visually check the item to ensure the item is what was specified or ordered and retain any supplied OQE (None is required to be provided).	CMPO or CMH
Check markings or nameplate on the item for correct correspondence with the shipping papers (or Ready for Issue Tag, NAVSEA 9210/2). (Figures 6-1, 6-2 and 6-3 of this chapter).	CMPO or CMH

15 Jan 2021

FMA assistance is required or another activity with a LI Certifying Activity Designator: If the Nuclear LI item has no permanent markings, (serial number, heat lot or batch number, etc.), the FMA will mark the item with a FMA nuclear MIC marking to allow traceability.	CMPO, QAI or CMH
--	------------------

Fill out QA form 1.	CMPO or CMH
---------------------	-------------

Fill out and attach a QA form 2 to the item.	CMPO or CMH
--	-------------

NOTE: THE RFI TAG AND QA FORM 2 MUST REMAIN ON THE MATERIAL UNTIL INSTALLATION.

<u>Procedure</u>	<u>Responsibility</u>
If the item does not pass the receipt inspection, attach a QA form 3 (Material Reject tag) to the material and reject the material.	CMPO or CMH
Verify that the item is what is required for intended use and has satisfactorily completed receipt inspection and is certified for use. Complete the appropriate blocks on the QA form 2 and print name and sign the QA form 2. Turn over the material to a craftsman for fabrication or installation or stow in a controlled material storage area.	CMPO or CMH
Forward QA form 1 to QA Office when material is issued for installation.	CMPO or CMH

b. Material supplied from the NAVSEA Prime Contractor received by the ship at new construction.

<u>Procedure</u>	<u>Responsibility</u>
Visually check for damage.	CMPO or CMH
Visually check the item to ensure the item is what was specified or ordered and retain any supplied OQE. (None is required to be provided).	CMPO or CMH
Visually check the material to ensure that material is as stated on the Supervisor of Shipbuilding supplied list including verification of serial number if provided.	CMPO or CMH
Fill out QA form 1. Attach all supporting documentation.	CMPO or CMH
Fill out and attach a QA form 2 to the item.	CMPO or CMH
Fill out applicable portion of QA form 2.	CMPO or CMH
If the item does not pass the receipt inspection, attach a QA form 3 (Material Reject Tag) to the material and reject the material.	CMPO or CMH
Verify that the item is what is required for intended use and has	CMPO or CMH

15 Jan 2021

satisfactorily completed receipt inspection and is certified for use. Complete the appropriate blocks on the QA form 2, print name and sign the QA form 2. Turn over the material to craftsman for fabrication or installation or stow in a controlled material storage area.

Forward QA form 1 to QA Office when material is issued for installation.

CMPO or CMH

- c. Nuclear LI material procured from a shipyard. (Does not include Naval supply system material with NSN and SMIC X1, X2, X4 or X6 material). Material which was procured or manufactured by a shipyard and which is then transferred to another activity may be accepted for use by the receiving activity if the shipyard provides certification that the material passed receipt inspection requirements (i.e., a tag or form that is equivalent to the NAVSEA 9210/2 (Figures 6-1 and 6-2) is acceptable proof of receipt inspection per reference (a)).

Procedure

Responsibility

Check item received to ensure that it is the one ordered or specified. Retain any OQE received.

CMPO or CMH

Check markings or nameplate data for correct correspondence with shipping papers.

CMPO or CMH

Fill out QA form 1. Attach all supporting documentation.

CMPO or CMH

Fill out and attach a QA form 2 to the item.

CMPO or CMH

Verify that the item is what is required for intended use and has satisfactorily completed receipt inspection and is certified for use. Complete the appropriate blocks on the QA form 2, print name and sign the QA form 2. Turn over the material to craftsman for fabrication or installation or stow in a controlled material storage area.

CMPO or CMH

Forward QA form 1 to QA office when the material has been issued for installation.

CMPO or CMH

6.2.4 Marking of Nuclear Repair Parts.

6.2.4.1 General Requirements. SMIC X1, X2, X4 and X6 NRP (except for SMIC X1 material provided by a prime contractor to the installing activity), passes from the manufacturers into the Navy supply system by way of Navy receipt inspection activities, which examine the material and subject it to a number of tests. Nuclear LI material which meets acceptance criteria is marked with a permanent MIC number. In some cases, the manufacturer's marking is used for material identification.

- a. The purpose of MIC marking is:
- (1) To denote that the marked material has been inspected, verified and accepted.
 - (2) To provide traceability from the installed material to OQE.

- (3) To preclude complete re-inspection of material accepted by an approved activity.
- b. Two problems arise in application which can defeat the purpose of the MIC marking.
 - (1) Internal components of an assembly which is MIC marked on the exterior, are usually not marked individually, and can lose their identity as NRP if separated during disassembly. Strict adherence to “bag and tag” requirements, using Fleet QA forms, overcomes this problem. Any part which becomes separated from its QA form (a loss of traceability), must be treated as uncontrolled material.
 - (2) Reference (a) permits the use of shortened MIC numbers in cases where the entire marking cannot be applied due to space limitations.

This problem is circumvented by a tag affixed by the receipt inspection activity directly to the material or to its container, which lists the complete MIC number. The complete MIC marking is recorded during receipt inspection. Although the complete MIC marking would not be visible once the item was installed, traceability is maintained through the retained QA paperwork and tags associated with the job, which will list the full MIC number.
- c. The MIC markings are in addition to the required manufacturer’s marking.
- d. Altering of a MIC marking is prohibited except to make documented corrections.
- e. Method of Marking Controlled Material. Nuclear physical marking methods are described in reference (j).
- f. Items not physically capable of being marked. Nuclear items such as small parts are packaged in homogeneous lots (i.e., same heat, batch or melt; and same vendor traceability) and the package is marked. If the package is opened, the individual items removed must be tagged with a QA form 2. The remaining items in the package will be controlled by the use of a single QA form 2 attached to the package.

6.2.4.2 Marking Requirements for Nuclear Repair Parts.

- a. Nuclear LI material is permanently marked by the manufacturer with the following information:
 - (1) The manufacturer’s name, trademark or symbol.
 - (2) Kind of material. Normally the generic material designations contained in the Material Designator Catalog, Volume II of reference (a).
 - (3) Traceability information. The traceability information enables the manufacturer to trace a LI component back to the chemical and physical test results which prove that the material fabricated meets procurement specifications.
- b. If the entire manufacturer marking cannot be affixed due to space limitations, then the following priority applies:
 - (1) Kind of material.

- (2) Traceability code number.
- (3) Manufacturer's name, trademark or symbol.
- c. Navy receipt inspection activities, which are primarily shipyards in the case of NRP, add their own marking to Nuclear LI items they accept. This MIC mark consists of:
 - (1) Kind of material.
 - (2) Traceability number.
 - (3) Activity identification letter.
- d. If a complete receipt inspection MIC mark cannot be affixed due to space limitations, then the following priority applies:
 - (1) Kind of material.
 - (2) Traceability number.
 - (3) Procurement identification letter.
- e. RFI Material.
 - (1) NRP, which have the SMICs X1, X2, and X4 associated with the NSN, are tagged as RFI once accepted by Navy receipt inspection activities. The RFI tag clearly marks the item as properly receipt inspected and RFI. Receipt inspection by end user is still required by reference (a).
 - (2) The X1 SMIC identifies high value reactor plant components. The X2 SMIC applies to pipe, tubing, fittings, flanges, barstock, welding consumables and some LI fasteners that are used in reactor plants. The X4 SMIC covers high pressure components used in reactor plant applications.
 - (3) There are four types of RFI tags. NAVSEA 9210/2 (Figure 6-1 of this chapter) is attached to all Nuclear LI RFI material except that which is SMIC coded X4. Nuclear LI RFI material coded X4 is tagged with NAVSEA 9210/2 (Figure 6-2 of this chapter). Nuclear LI material previously inspected by a Naval shipyard is tagged with the RFI tag depicted in Figure 6-3 of this chapter. Non-LI nuclear material previously inspected by a Naval shipyard is tagged with the RFI tag depicted in Figure 6-4 of this chapter.
- f. Sample MIC Markings.
 - (1) IN-804-8801-C 159 (N)

6.2.4.3 Assignment of Material Identification and Control Numbers for Items Manufactured from Certified Raw Materials. Nuclear LI items manufactured using certified Nuclear LI raw material (e.g., barstock, plate, forged shape) may be assigned the same MIC markings as the raw stock provided no work is done on the base material that would alter its chemical, physical or mechanical properties (machining and welding may be done).

6.2.5 Nuclear Repair Parts Downgrading. It is recognized that occasionally NRP and controlled material must be downgraded in order to support training or production work due to the unavailability of non-certified material. In order to maintain accountability of the end use of NRP and controlled material, the following procedure is required:

<u>Procedure</u>	<u>Responsibility</u>
Obtain written authorization to downgrade the material from the Quality Assurance Officer (QAO).	Leading Petty Officer or Work Center Supervisor
Remove all MIC markings from the controlled material as well as all controlled material tags and forms. The QA forms with RFI tag will be forwarded to the QAO (ship) or QA office (FMA) with the approved authorization.	CMPO or CMH

6.2.6 Storage, Issue and Handling of Nuclear Repair Parts.

6.2.6.1 Storage Requirements.

- a. The Supply Department onboard an FMA or a ship will stow, handle and issue NRP as required by the governing NAVSEA, or NAVSUP WSS instruction.

NOTE: NRP BECOMES CONTROLLED MATERIAL, FOR THE PURPOSES OF THIS MANUAL, WHEN THE MATERIAL HAS BEEN RECEIVED BY THE CMPO or CMH OF THE WORK CENTER OR DIVISION.

- b. Nuclear controlled material in the custody of customers (ship or FMA work centers) will be segregated by a physical barrier, in clearly marked dry, secure, clean stowage and handling areas.

NOTE: THE SEGREGATION AND PHYSICAL CONTROL REQUIREMENTS OF PARAGRAPHS 6.2.6.1.b.(1), (2), and (3) OF THIS CHAPTER DO NOT APPLY TO NUCLEAR COMPONENTS WHICH ARE NOT SUBJECT TO MIX UP NOR TO NUCLEAR MATERIAL WHILE IT IS CLEARLY MARKED OR TAGGED TO INDICATE ITS LEVEL OF ESSENTIALITY AND GENERIC MATERIAL TYPE.

- (1) Use of separate boxes, shelves, roped off or marked (e.g., painted lines) areas are acceptable methods of segregation or stowage, provided they are clearly marked, allowing separation of the following materials:
 - (a) Nuclear LI.
 - (b) Material staged for a specific job or process.
 - (2) These materials must be segregated from each other and from other materials. Segregation will be maintained from receipt through staging. Access to controlled material will be positively controlled.
 - (3) Within a given level of material, different generic materials will be segregated from each other physically such that similar appearing materials of different generic types are not mixed.
 - (4) Unidentified material or rejected material will be segregated from acceptable controlled material.
 - (5) Material waiting receipt inspection will be segregated from controlled material and from rejected material.
- c. Controlled material will be handled and stored in a manner to prevent damage and be sealed for cleanliness when applicable.
 - d. Material received not meeting the receipt inspection requirements of paragraph 6.2.3 of this chapter will be rejected, tagged with QA form 3, and placed in segregated stowage to await disposition.
 - e. CMPOs or CMHs will inspect controlled material storage areas of their work center, semi-annually as a minimum to ensure:
 - (1) Material is in designated area.
 - (2) Material is properly identified.

- (3) Material properly marked and tagged.
- (4) Material is protected from damage.
- (5) Material is kept clean.
- (6) Material segregated as required.

6.2.6.2 Staging Requirements. Controlled materials of different Levels of Essentiality and non-controlled material may be co-located when staging material for a specific job provided that:

- a. All QA forms or identification tags attached to the material are annotated with the same Job Control Number and
- b. Material is segregated from material staged for other jobs or processes.

6.2.6.3 Issue of Nuclear Controlled Material. Nuclear controlled material should be issued for only those specific applications for which the nuclear material is required.

6.2.6.4 Handling of Nuclear Controlled Material. All controlled material received by a work center, whether received from the supply department as onboard stock, work center stores or from a tended ship must be controlled as required by reference (a).

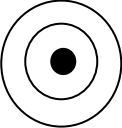

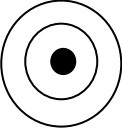

- a. Controlled material must at all times be in physical custody of either the work center CMPO or CMH, QAI, a craftsman or stowed in a work center controlled material stowage area.
- b. Lots of material (e.g., box of bolts) broken down for end use, will maintain the same identification and control as the parent controlled item using QA form 2 as appropriate.
- c. The QA form 2, or any other identification (e.g., RFI tag), must stay with the material at all times until it is installed or reinstalled in the system.
- d. Transfer of MIC marking during issue of barstock or pipe will be accomplished by transferring the MIC to a new location on the piece to be sectioned, prior to sectioning, and be verified by the work center CMPO or CMH or a QAI before the original marking is lost.
- e. If, during fabrication, the original piece must be broken down (such as cutting off a piece of barstock) or the MIC marking will be lost by machining, welding, etc., the proper MIC markings will be transferred to the piece(s) prior to cutting or to the container, in case of small parts, and a QA form 2 as appropriate will be attached to each new piece.
- f. On completion of shop or ship fabrication or assembly stage, the QAI will check the finished product against the attached material identification tags for required material markings. The QAI will inspect the finished product for conformance to specifications. If satisfactory and if the required markings are present, the QAI will print name and sign the QA form 2 as applicable.
- g. If for any reason at any time the product fails inspection, the QAI will reject the material, attach a QA form 3 and inform the QAO.

- h. The lead work center will be responsible for installation and the final acceptance block on all QA forms associated with a particular product. Assist work centers or divisions will be responsible for control of material which they use on a job.
- i. Material consumed (e.g., welding electrode, brazing alloy) in the fabrication process must have its identity (MIC number) recorded on the appropriate QA form that documents the weld or braze (e.g., QA form 18, QA form 20).
- j. Existing parts of certified Nuclear LI systems, retain their certification provided their traceability is maintained.
- k. All material, parts or components from controlled systems which are removed from the ship by Ship's Force, to be worked on by the FMA, must have a QA form 2 properly filled out and attached. If it is necessary for the FMA to disassemble such components, identification must be retained on each part which is controlled material using additional QA forms 2. The original QA form 2 will remain with the part or component until it is re-installed in the ship and then be removed and filed until final Controlled Work Package closeout. The QA-2 may then be disposed of.
- l. Each controlled component removed from a ship's system in order to allow repair or maintenance will be tagged with a QA form 2 as appropriate to maintain identification and traceability. If a nuclear component is further disassembled, each pressure boundary part will be tagged with a QA form 2. Controlled components (e.g., valves and valve bonnets, pumps, etc.) disassembled and reassembled in a temporary controlled jobsite (established in a work space or at a jobsite) do not require individual QA tags to be filled out and attached to each controlled component (controlled components are defined in reference (a)), provided that:
 - (1) Access to the temporary controlled jobsite is controlled by a physical boundary and is marked with a posted sign stating "Temporary Controlled Jobsite".
 - (2) Rejected material must be identified, tagged with QA form 3 and removed from the area.
 - (3) Work must be actively in progress and not be longer than a shift or one normal working day on a job site vice in a FMA repair shop.

FIGURE 6-1

Tags similar to those shown in Figure 6-1 and Figure 6-2 were previously used to identify material receipt inspected and certified RFI. Therefore, material received with RFI tags similar to Figures 6-1 and 6-2 is acceptable for use without re-tagging.

6.3 NON-NUCLEAR.

6.3.1 Controlled Material Determination. This section describes the use of the specific references used to identify proper material for repair work. It is important that the difference between system and part Level of Essentiality be understood. A system may be LI, but this does not mean that every part in the system will be LI. This section also provides references and

guidance necessary to obtain this understanding and to determine if controlled material is required, and if so, the proper level of control.

6.3.1.1 General Requirements. In order to determine the correct material to be installed in a ship and to properly certify the material prior to installation, the work center responsible for the specific area of the ship must first gather the appropriate reference material:

- a. Drawings that specifically define the system and component.
- b. System or Component technical manual.
- c. Applicable APL from the ship's COSAL.
- d. Ship's SUBSAFE Certification Boundary Book.
- e. LI Boundary Book.
- f. Military Standards (MIL-STD).
- g. Applicable ship class Fly-By-Wire Ship Control System Certification Boundary Book, per reference (k).

6.3.1.1.1 Determination of Required Repair Parts. Using the reference materials, the required repair parts will be determined by comparing the appropriate part numbers from the drawing to the part numbers or drawings listed in the APL and thereby obtaining the NSN with associated SMIC, if assigned or listed on the APL.

NOTE: THE USE OF LI STOCK PROGRAM MATERIALS AND CONTROLLED MATERIAL WILL BE RESTRICTED TO THOSE SPECIFIC APPLICATIONS WHERE REQUIRED.

6.3.1.1.2 Determination of Level of Control. The next step is to determine if the material identified by the NSNs in paragraph 6.3.1.1.1 of this chapter is certifiable, if required, as controlled material for the system or component. In order to determine level of control required for the parts, the Level of Essentiality for the system and component must be determined for non-nuclear systems:

- a. Controlled material is used in systems designated with a Level of Essentiality per reference (a) for LI. The definitions of LI systems and material per reference (a) are provided to the users of this manual as paragraph 6.3.1.3 and 6.3.1.4 of this chapter.
- b. The applicable LI material control boundary book provides an interpretation of the latest reference (a) requirements.

NOTE: A SMIC (E.G., S1, SB, LI, C1, VIRGINIA CLASS COMPONENT (VU), SEAWOLF CLASS COMPONENT (SW)), IS ADDED TO THE END OF THE NSN. IT IS ASSIGNED TO SELECTED COMPONENTS AND REPAIR PARTS BY THE NAVAL SUPPLY SYSTEM AND AIDS IN CONTROLLING THE ISSUANCE OF THESE COMPONENTS AND REPAIR PARTS WITHIN THE NAVY SUPPLY SYSTEM. SMIC IS AN ADMINISTRATIVE TOOL FOR THE SUPPLY SYSTEM. LEVEL OF ESSENTIALITY IS A TECHNICAL DESIGNATION APPLICABLE TO SPECIFIC PIPING SYSTEMS.

6.3.1.2 Non-Nuclear Material Level Determination. The crux of the controlled material program at the maintenance level is establishing the required Level of Essentiality for repair parts, to include determination of whether a specific part is LI. This is important for three reasons:

- a. To serve as a partial check that the supply system has provided the correct part.
- b. To determine record-keeping requirements. This is particularly important in the case of alterations, where drawings may provide no Level of Essentiality for the parts and systems involved, and also on older ships, where the drawings may reflect no Level of Essentiality information at all or may use previous revisions of references (a) or (l).
- c. To determine the correct SMIC in the case of non-nuclear repair parts where the COSAL and the applicable drawing conflict over the required Level of Essentiality.

6.3.1.2.1 Systems and Components. Paragraph 6.3.1.3 of this chapter provides the LI systems and paragraph 6.3.1.4 of this chapter provides the LI components of reference (a).

6.3.1.2.2 Emergent Situation Upgrading. Upgrading the Level of Essentiality of a repair part provided by the supply system may become necessary during the course of maintenance and can be done in emergent situations using the procedures specified in reference (a) and paragraph 6.3.5 of this chapter.

6.3.1.3 Non-Nuclear Level I Systems and Boundaries.

- a. Submarines.
 - (1) Air, nitrogen and other gas systems, except oxygen and hydrogen, with design pressures of 1500 psig and above. Oxygen and hydrogen systems with a design pressure of 100 psig and above.
 - (2) Feedwater system with a design pressure of 600 psig and above.
 - (3) Main steam system, and all branch piping from this system which is designed to the main steam system design pressure, up to and including the first valve downstream of pressure reducing valves and their by-pass valves. Included will be high-pressure steam drains up to and including the first valve downstream of the trap or orifice.
 - (4) Hydraulic systems for any steering or diving control surface, failure of which would cause loss of both the normal and emergency modes of operation for the control surface. Exceptions are internal wrenching bolts per reference (m), and Naval Aerospace Standard cap screws with NAS 1347, Type IV identification need not be to LI requirements.
 - (5) All circulating seawater systems (e.g., main seawater, auxiliary seawater, shaft seal water), or portions thereof, continually open to the sea below 200 feet. The brine and seawater feed portion of the distilling or reverse osmosis system which provides the through path of the shaft seal water to the main or auxiliary seawater system.

- (6) All seawater and sea connected systems or portions thereof, which are intermittently subject to submergence pressure below 200 feet, and which are within the SUBSAFE Certification Boundary as defined by reference (l).
- (7) Torpedo, signal ejector, launcher and trash disposal unit tubes. Included are the breech and muzzle doors and associated piping system components installed between the breech and muzzle doors that form part of the pressure boundary, up to and including the inboard joint of the backup closure.
- b. Surface Force Ships.
 - (1) Gaseous oxygen systems above 100-psig design pressure except for both the diver's recompression chamber and the diver's surface supplied oxygen systems, which are excluded from LI unless specifically invoked by NAVSEA in writing.
 - (2) Gaseous oxygen piping from the oxygen and nitrogen producer plant, storage tanks and fill station above 100 psig design pressure, including low pressure gaseous oxygen vent piping which is or can be cross-connected with high pressure gaseous oxygen piping.
 - (3) Surface Force. Main steam and all branch piping designed for temperatures above 775°F. Included will be high-pressure steam drains up to and including the last valve downstream of the trap or orifice designed for temperatures above 775°F.
- c. Aircraft Carriers.
 - (1) Feed systems with design pressure of 600 psig and above.
 - (2) Main steam, catapult steam (including the trough heating system), and reboiler systems, and all branch piping connected to these systems designed for main steam system design pressure. Included will be high-pressure steam drains up to and including the last valve downstream of the trap or orifice designed for main steam system design pressure.
 - (3) Gaseous oxygen systems above 100-psig design pressure except for both the diver's recompression chamber and the diver's surface supplied oxygen systems, which are excluded from LI unless specifically invoked by NAVSEA in writing.
 - (4) Gaseous oxygen piping from the oxygen and nitrogen producer plant, storage tanks and fill station above 100 psig design pressure, including low pressure gaseous oxygen vent piping which is or can be cross-connected with high pressure gaseous oxygen piping.
- d. Submarine, Aircraft carrier and Surface Force Ship Requirements. The LI boundary requirements listed in this paragraph apply to new construction, repairs, modifications, alterations and conversions for all submarines and surface ships regardless of the material identification and control requirements invoked, or not invoked, by the original shipbuilding specifications or system diagrams and component drawings.

NOTE: IT IS NOT THE INTENT TO REMOVE NON-LI MATERIAL SOLELY FOR THE PURPOSE OF INSTALLING LI MATERIAL. LI MATERIAL MUST BE INSTALLED IN NEW LI SYSTEMS OR COMPONENTS OR WHEN REPLACING MATERIAL INCIDENT TO THE REPAIR OR REFURBISHMENT OF A LI SYSTEM COMPONENT(S).

- e. LI Designated Systems. Cognizant NAVSEA technical codes are responsible for determining any additional scope and boundary of individual systems, including the components and parts of components, that are to be controlled as LI material.

6.3.1.4 Level I Components.

- a. Pressure Boundary Parts. Pressure boundary parts of components within LI systems must be controlled. LI pressure boundary parts include piping, tubing and the following:
 - (1) Bodies. In general, these are the parts of a component that are the pressure boundaries of the component, including end connections. Examples are:
 - (a) Valve bodies.
 - (b) Strainer bodies.
 - (c) Cylinders (flasks, reservoirs).
 - (d) Pipe fittings (elbows, tees, couplings, union assemblies, separately furnished union tailpieces).
 - (e) Trap bodies (housings).
 - (f) Orifice plates.
 - (2) Covers. In general, these are component parts which act as pressure boundaries for the bodies listed and other items. Examples are:
 - (a) Valve bonnets.
 - (b) Valve caps.
 - (c) Strainer caps.
 - (d) Closure plates for cylinders.
 - (e) Oxygen and nitrogen valve cartridges.
 - (3) Plugs. All plugs, including submarine zinc anode plugs, set screws, adjusting screws and vent and drain plugs which form a part of the LI pressure boundary, or otherwise opened to the sea below 200 feet.
 - (4) Fasteners. Bolts, nuts, studs, stud-bolts, and screws used when joining two pressure boundary parts. All hull integrity fasteners must be LI. Fasteners used for joining non-LI machinery or equipment to LI material must be LI when the component is located within the LI boundary.

15 Jan 2021

- (5) Extension Pieces. In general, these are branch systems connecting “bodies” and “covers” which are subject to piping system pressures and temperatures. In many cases, they are furnished with end connections for installing into either main or branch system piping. Examples are:
- (a) Blowdown or drain nipples (e.g., pipe, including pipe fittings or flanges).
 - (b) Union tailpieces when part of a component end connection (including flange union connections).
 - (c) Separate bosses (attached to “bodies” or “covers” and providing connections for external piping).
- (6) Miscellaneous.
- (a) Portions of submarine pressure hull penetrations, excluding hull structure items, which isolate seawater from the submarine atmosphere. Examples of hull penetrations are: hull fittings (electrical and fiber optic), rodmeters, periscopes, and periscope hoist cylinders, radar masts and antennas, main propulsion shaft seal housings, floating wire and towed array shear valve assemblies, and lubrication distribution valves.
 - (b) Brazing alloys and welding filler metals, including consumable inserts.
 - (c) Union nuts (both bonnets and end-connection unions).
 - (d) Hose assembly end fittings and the nipple, flange, and body of sound isolation couplings (e.g., Rubber Insert Sound Isolation Couplings (RISIC)) which form a part of the pressure boundary.
 - (e) All submarine seawater or sea connected hull and backup valve internal metallic pressure containing parts that serve to directly isolate seawater from the atmosphere or downstream connected system(s) (e.g., balls, disks, flappers, and poppets).
 - (f) Valve stems which penetrate the pressure boundary.
 - (g) Oxygen charging lines and assemblies.
 - (h) In-line instrumentation components and parts:

<u>INSTRUMENTS</u>	<u>LEVEL I PARTS</u>
Temperature	Thermowell (welded and flanged bare bulb)
Flow	Meter casing
Liquid level	Tank penetration fitting
Pressure	Root valve of pressure instrument piping
Gage column (MIL-I-20037)	Isolation valve
 - (i) Propulsion shafts for submarines.
 - (j) Through hull operating shafts for submarines.

- (k) Fasteners and plugs for the components listed in paragraph 6.3.1.4.b.(9) of this chapter, and LI systems as defined in paragraph 6.3.1.3 of this chapter, which satisfy the description of a LI pressure boundary part.
- b. Exclusions. Items and components specifically excluded from the classification of LI are:
 - (1) Packing gland assemblies located in the systems and their components identified in paragraph 6.3.1.3 of this chapter and stuffing boxes. This includes their associated flanges, fasteners, followers, and retainers.
 - (2) Pressure seal rings, gaskets, O-Rings, packing and similar sealing members used in conjunction with joining two pressure boundary parts.
 - (3) Silver braze flux.
 - (4) Flexible hoses and RISIC rubber elements.
 - (5) Gages, gage valves, pressure indicators, measuring instruments, and their associated piping installed downstream of root valves in instrumentation piping or that which does not form a part of the pressure boundary.
 - (6) Pipes, fittings, mufflers and Quiet Pressure Release Devices for the high pressure air system etc., continuously open to ambient conditions and only transiently subjected to pressures in excess of paragraph 6.3.1.3 of this chapter criteria (e.g., open-ended ballast tank piping outboard of the pressure hull penetration, open-ended vents and drains).
 - (7) Valve yokes and bonnet retainers restrained by the body inside diameter that do not directly form the pressure boundary, but retain parts that do form the pressure boundary, unless otherwise specified.
 - (8) Items not permanently installed (portable) and designated only for dockside use.
 - (9) Pumps, distilling plants, compressors, heat exchangers, oxygen generators, steam turbines, condensers, hydraulic accumulators and dehydrators.
 - (10) Washers.
 - (11) Valve stem retaining nuts that do not come in direct contact with system fluid and serve no other function than to retain the stem.
 - (12) Valve seat retainers and other internal parts that are totally enclosed within the pressure boundary except for those parts described in paragraph 6.3.1.4.a.(6)(e) of this chapter.
 - (13) Non-consumable weld backing rings.
 - (14) Piping system sleeves.
 - (15) Non-pressure boundary parts (e.g., label plates, locking devices, lockwire, lock-tabs, etc., that are attached to external portions of a pressure boundary, piping hangers, mechanical operators such as handwheels, wrenches, reach rods, gears, motors, etc).

6.3.2 Quality Assurance List (Submarines only). Quality Assurance Lists (QAL) on NAVSEA drawings specify Nondestructive Test (NDT) requirements for items scheduled for installation within the SUBSAFE boundary during new construction. The QALs should only be utilized for guidance subsequent to ship's commissioning, since they will not necessarily reflect current NDT requirements.

6.3.3 Controlled Material Procurement. This section provides general guidance for procurement of controlled material. It should be noted that NAVSEA and Naval Inventory Control Point (NAVICP) have adequate programs in place for procurement of controlled material for non-nuclear applications. Therefore, ships and repair activities should always obtain controlled material from the Navy stock system. This section also provides:

- a. Background regarding NAVSEA and NAVICP controlled material procurement programs.
- b. Summary of or reference to the NAVSEA and NAVICP requirements for controlled material procurement.

6.3.3.1 General Requirements.

- a. The LI material procurement program procures and certifies materials that are generally identified in the supply system by SMIC SB, LI, C1, D1, S1, etc. Stock system or installed items that fall under the SUBSAFE category are generally restricted to castings and fasteners. Stock system or installed items that fall under the LI category are generally restricted to metallic pressure boundary parts and components.
- b. The SFCC material procurement program procures and certifies materials that are identified in the supply system by SMIC VU and SW. Stock system or installed items that fall under SFCC are generally electronic circuit cards with embedded software.
- c. LI stock program material pass from the manufacturers into the Navy supply system by way of Navy receipt inspection activities, which examine the material and subject it to a number of tests. LI material which meets acceptance criteria is marked with a permanent MIC code as required by reference (a). Not all material within the SUBSAFE boundary supplied by the shipyard during new construction is **required to be marked. SUBSAFE castings receive a permanent LI marking. The MIC markings are in addition to the required manufacturer's marking, which need not be maintained after the MIC marking is added, except in the case of non-nuclear fasteners.**

NOTE: PER REFERENCE (I), ANY LI STOCK SYSTEM SUPPLIED ITEMS WITH LI 1990 OR LATER MIC ARE ACCEPTABLE FOR USE WITHIN THE SUBSAFE CERTIFICATION BOUNDARY WHEN THE APL OR DRAWINGS INDICATE LI SMIC MATERIAL IS REQUIRED. SS SMIC CODED ITEMS CURRENTLY IN STOCK MAY BE USED IN SUBSAFE APPLICATIONS WITHOUT FORMAL DOWNGRADING.

6.3.3.2 Controlled Material Procurement.

- a. Material Procurement. Requisitioning of LI or SFCC controlled material is done per standard supply instructions. Determination of the systems that require the use of LI or SFCC material is addressed in paragraph 6.3.1 of this chapter.
- b. Stock System LI or SFCC Material. Stock system LI or SFCC materials will be requisitioned per normal supply department procedures ensuring that the SMIC is identified, if assigned to the item.
- c. (Submarines only) Submarine Antenna Engineering Directorate (SAED)-Submarine Antenna Quality Assured Material (SAQAM) LI Material. SAED-SAQAM LI material will be requisitioned per normal supply procedures with the additional guidance from references (n), (o) and (p). The supply and QA standards are discussed in references (p) and (q).
- d. Other Controlled Material. Material procured for structural repairs, modifications or fabrication will be compatible with existing structure as specified in applicable plans and MIL-STDs.
- e. LI material to be procured outside the supply system.
 - (1) Requisitions for non-nuclear LI stock program material must be prepared according to reference (q) and other applicable NAVSUP documents.
 - (2) Reference (q) states in part:
 - (a) “Local purchases or manufacture of non-nuclear LI Stock Program stock numbered material, not available from the supply system, will be reported to NAVICP for demand recording purposes. The local purchase or manufacture action will be reported via a Demand Only Transaction (DOC ID DHA) per the procedures established in NAVSUP 437. A DHA will not be submitted when the original requisition was submitted with advice code 2C or 5C since NAVICP records demand for 2C/5C requisitions returned for local action.”

NOTE: THERE ARE NO LI STOCK PROGRAM ITEMS THAT ARE CODED FOR LOCAL PURCHASE.

- (b) “Local purchases or manufacture of LI Stock Program non-stock numbered material will be reported to NAVICP to record demand and usage to determine whether the item should be stock numbered. The local purchase or manufacture action will be reported via a Report of Local Purchase for Non-stock Numbered Items (DOC ID BHJ) per the procedures established in NAVSUP 437. A BHJ will not be submitted when the requisition for a non-stock numbered item is submitted to a stock point or to NAVICP for supply action.”
- (3) Procurement of non-nuclear LI material from other than the Navy stock system is not permitted except in emergent situations as discussed in Section 3 of reference (a). Such procurement will be through NAVICP Mechanicsburg only. Requisitions to NAVICP will include all of the information listed here:

- (a) If material certification requirements of reference (a) call for destructive tests, enough material must be procured in the lot for performance of such testing.
- (b) Complete specifications must be provided for all LI material requisitions for non-Navy stock system material. These specifications must include:
 - 1 Marking requirements, if applicable.
 - 2 Material designation.
 - 3 Military or federal specifications, that must be met (e.g., ultrasonic testing inspection of a fitting).
 - 4 Grade, class, type, form and manufacturing process (e.g., plate, class B, Type I, hot forged).
 - 5 American Society for Testing and Materials, American Iron and Steel Institute, Society of Automotive Engineers (whether item is procured in whole or in part).
 - 6 Request for a certification of compliance or detailed analysis if required.
 - 7 All ordering data required by applicable military or federal specifications or industry standards or specifications must be provided in the requisition.
- (c) Descriptive language on all documents will be clear and detailed so that no choice is left, either to the vendor or the activity concerned, as to what material is to be furnished.
- (d) The vendor will also be required to provide the following documentation with the material, to enable the material to be certified for “Level” application.
 - 1 Chemical: Quantitative analysis for principal constituent elements according to reference (a).
 - 2 Physical: Mechanical properties (e.g., yield strength, tensile strength, elongation or hardness testing) as specified in reference (a).
 - 3 Fabrication: Documented compliance with fabrication procedures including NDT (e.g., seamless tubing).

6.3.4 Receipt Inspection of Controlled Material. This section provides the guidance and procedures for forces afloat and FMAs to conduct and document receipt inspections to certify controlled material as acceptable for installation.

6.3.4.1 General Requirements. Once the material ordered for use in SUBSAFE and LI systems is received, the material must be receipt inspected per reference (a). Once the material ordered for use within the submarine Fly-By-Wire Ship Control System Certification Boundary is

received, the material must be receipt inspected per reference (k). Receipt inspection of these materials is required to establish positively that the material is the correct material for the job.

NOTE: THE TECHNICAL INSPECTION REQUIREMENTS OF THE APPLICABLE TECHNICAL MANUAL, DRAWING OR OTHER TECHNICAL REFERENCE AND PIPING SYSTEM MATERIAL REQUIREMENTS (E.G., CLEANLINESS, DIMENSIONS, SURFACE FINISH) ARE THE RESPONSIBILITY OF THE END-USER (WORK CENTER SUPERVISOR or CRAFTSMAN) TO ACCOMPLISH PRIOR TO INSTALLATION AND ARE NOT PART OF THE RECEIPT INSPECTION OF THIS MANUAL.

- a. Reference (a) provides the controls and certain testing requirements that are levied by NAVSEA to cover the material from fabrication to final installation for LI material. Reference (k) provides the controls and certain testing requirements that are levied by NAVSEA to cover the material from certification to final installation for SFCCs.
- b. For LI and SFCC material, the unique requirement for “traceability” is invoked, meaning that a marking system is employed which links the material to OQE. OQE for the material is the quantitative and qualitative data proving that the material conforms to specified requirements. To meet the requirements for traceability, the following requirements are instituted:
 - (1) Receipt inspection of the material.
 - (2) Use of QA tags in association with the item(s).
 - (3) Segregated stowage for LI or SFCC stock program material, and controlled material.
 - (4) Custody by CMPO or CMHs, QAIs or qualified craftsman.
 - (5) Use of material verification procedures, as required by reference (a), during installation of the material.

6.3.4.2 Quality Assurance Forms for Receipt Inspections. The QA forms necessary to complete and document receipt inspections (QA form 1 and QA form 2) are addressed in paragraphs 6.3.4.5.q and 6.3.5 of this chapter.

6.3.4.3 Receipt Inspection and Certification of Valve Balls. New stock system LI balls are certified for use prior to placing a “LI” SMIC on them. Refurbished Teflon coated valve balls also are certified for use according to the indicated SMIC (“LI”, “Q3” or “QA”).

- a. Balls received with a SMIC code “LI” are acceptable for use in SUBSAFE or LI system applications as specified by the applicable APL or drawing without further tests prior to installation.
- b. Balls received with a SMIC code “QA” or “Q3” are acceptable for use in SUBSAFE or LI system applications unless required to be LI per paragraph 6.3.1.4.a.(6)(e) of this chapter.
- c. Balls received with a SMIC code “QA” or “Q3” may be certified as acceptable for use in SUBSAFE or LI system applications defined in paragraph 6.3.1.4.a.(6)(e) of this chapter by either:

- (1) Request certification papers from NAVICP code 8452 based on the heat and lot data etched in the fluid flow path of the ball, if available, and based on the certification papers and satisfactory receipt inspection locally assign a MIC number or
 - (2) If certification papers are not available or heat and lot data is not present in fluid flow path, conduct a generic material identity test, hardness test, perform applicable NDT and obtain TYCOM approval of a major Departure from Specification (DFS) per Part I, Chapter 8 of this volume.
- d. Balls certified as acceptable for use per paragraph 6.3.4.3.c of this chapter must be marked with a locally assigned MIC marking in the fluid flow path of the ball per paragraph 6.3.7.1 of this chapter, providing traceability to applicable certification papers, test documentation, and approved DFS.

6.3.4.4 Level I and Submarine Flight Critical Component Receipt Inspection. The receipt inspection requirements for LI material from reference (a) are provided in paragraph 6.3.4.5 of this chapter and will be used for the receipt inspection of SUBSAFE and LI material. The receipt inspection requirements for SFCC material from reference (k) are provided in paragraph 6.3.4.5 of this chapter and will be used for the receipt inspection of SFCC material.

6.3.4.5 General Requirements for Level I and Submarine Flight Critical Component Material.

- a. Traceability for LI, and SAED-SAQAM material is to be maintained from the material back to its certification records. Material losing its identity will be considered unsuitable for use until identification can be positively re-established. It will be segregated from other controlled material, tagged and handled as rejected material. Traceability for SFCCs having a SMIC code of (VU) or (SW) is to be maintained from the material back to its certification records. Material losing its identity will be considered unsuitable for use until identification can be positively re-established. It will be segregated from other controlled material, tagged and handled as rejected material. Upon determination that the SFCC is nonconforming and unusable for Fly-By-Wire Ship Control Systems (FBW SCS) Flight Critical applications, the SFCC must be clearly identified as rejected with a QA Form 3 tag.
- b. Supply departments of Fleet activities will perform the basic receipt inspection required by the appropriate NAVSEA, NAVICP, or NAVSUP instruction prior to placing the material into stock inventory. QA forms of this manual are not required to be completed or placed on the material by supply department personnel.

NOTE: LI OR SFCC STOCK PROGRAM MATERIAL BECOMES CONTROLLED MATERIAL, FOR THE PURPOSES OF THIS MANUAL, WHEN THE MATERIAL HAS BEEN RECEIVED BY THE CMPO OF THE WORK CENTER OR DIVISION.

- c. Material identification must remain on or with the material throughout all stages of stowage, fabrication and installation. SFCC Certification OQE must be kept with the SFCC until the part is installed in the system.
- d. Material awaiting or undergoing receipt inspection will be segregated from accepted material.

15 Jan 2021

- e. Material which met specifications at the time of procurement, but cannot be used in the system for which it was procured because of a change in requirements occurring after submission of material requests, will be returned to the supply department with a QA form 3.
- f. LI. Material NAVICP procured for the LI Stock Program which meets the required SUBSAFE attributes will be inscribed with a MIC number which provides traceability back to the certification documents or certifying activity.

NOTE: NON-LI STOCK PROGRAM MATERIAL WILL NOT BE MARKED WITH A LI SMIC.

- g. (Submarines only) SAED-SAQAM Material with a “LI” SMIC. A “Certification Statement” required by reference (o) must accompany the material unless the material is certified and marked by an NAVICP certifying activity, and is received from the LI stock program.
 - (1) Submarine Periscope or Antenna SUBSAFE parts received after 31 July 1979 will be marked per reference (a).
 - (2) SUBSAFE Periscope or Antenna parts received prior to 31 July 1979 were marked “Ser 1991-921A <SS>” by Portsmouth Naval Shipyard or “Ser 1991-921A-061 <SS>” by Naval Surface Warfare Center, Carderock Division (Submarine Antenna Engineering Directorate).
 - (3) Parts not marked per paragraph 6.3.4.5.g.(1) of this chapter may be used providing the certification can be positively traced to certification records via certificate of conformance which records a traceable number on the material as recorded on the certificate of conformance. If certification records cannot be located, then an approved major DFS per Part I, Chapter 8 of this volume is required if the part must be used in lieu of a certified part.
- h. Transfer of LI and SFCC Material Between Activities. Material which is procured or manufactured and certified by an authorized certifying activity and which is then transferred to another activity may be accepted for use by the receiving activity after satisfactory receipt inspection per paragraph 6.3.4.5.q of this chapter.
- i. Non-Standard Stock Certification Documentation. Material procured from non-government sources or shipped direct from the manufacturer and not certified by the LI stock program must be receipt inspected per paragraph 6.3.5.1 of this chapter.
- j. Accepted Material. Each acceptable unit of issue (e.g., valve, fitting, can of welding rod) will have a Material Identification/Control Tag (QA form 2) attached.
- k. New Construction. The acceptable certification for LI and SFCC material provided to new construction ships by shipbuilders as on board repair parts consists of a written statement from the cognizant Supervising Authority. The letter will certify that the material is acceptable and has been proven by a sampling audit. The letter will also list the certified material furnished. A copy of this letter will be kept by the ship as a permanent record. After receipt of the initial letter during new construction and delivery of the ship, additional material will not be accepted without a letter being provided with or prior to receipt of the items. SUBSAFE, LI and SFCC on board

15 Jan 2021

repair parts, received with Certificates of Conformances after the start of Fast Cruise, do not require additional certification letters from the Supervising Authority.

- l. Package Alteration Kits. Package alteration kits should not normally be opened until the ship or FMA is ready to proceed with the installation, provided that a certification of the contents and a copy of the installation instructions are in the envelope on the outside of the box. When the ship or FMA is ready to proceed with the installation, the lead work center CMPO will open the kit and perform the receipt inspection.
- m. Installed material or upgraded existing material on a ship originally built or upgraded to SUBSAFE or LI standards involved in a repair will be assumed acceptable.

CAUTION: MATERIAL REMOVED FROM A SHIP UNDERGOING INACTIVATION CANNOT BE REINSTALLED IN A LI APPLICATION WITHOUT FOLLOWING THE GUIDELINES IN REFERENCE (a).

- n. Reuse of Previously Certified LI or SFCC Material. Material removed from a ship originally built or upgraded to LI or SFCC certified, which is subsequently installed in another ship, will be assumed acceptable provided control (traceability) is available in FMA or ship records proving the item was removed from a ship built or upgraded to LI or SFCC certified and verification of the following:
 - (1) The level of certification of the system in the ship from which the part was removed is the same as the level of certification required for end use.
 - (2) DFS log (for the ship from which the material is removed) does not identify any outstanding DFS against the item that would preclude end use. Copies of outstanding DFS must be provided with the material. Those outstanding DFS for the material on the supplying ship will be cleared and the receiving ship will process new DFS on board per Part I, Chapter 8 of this volume.
 - (3) The files of DFS approved as permanent repairs (for the ship from which the material was removed) have been reviewed and copies of applicable DFS provided with the material.
 - (4) Ship's plans (for the ship from which the material was removed) do not identify any drawing differences from the ship's plans for the ship onto which the material will be installed.
 - (5) End use installation is consistent with the previous service parameters such as the design pressure rating, design temperature rating, or system applicability of the component.

CAUTION: MATERIAL REMOVED FROM A SHIP UNDERGOING INACTIVATION CANNOT BE REINSTALLED IN A SUBSAFE APPLICATION WITHOUT FOLLOWING THE GUIDELINES IN REFERENCE (I).

- o. Reuse of Previously Certified SUBSAFE Material. (For commissioned ships only) Material removed from a ship originally built or upgraded to SUBSAFE, which is subsequently installed in another ship, will be acceptable under the following conditions:

- (1) A Maintenance Certification Record or Re-Entry Control is used to document removal from the supplying ship. The supplying ship must be SUBSAFE certified and re-entry control must be in effect.
- (2) All DFS (active and those accepted as permanent repairs that are not yet reflected in ship's selected record drawings or data or technical variance documentation), applicable technical variance documentation, the last accomplishment date and category of all applicable Unrestricted Operation (URO) Maintenance Requirement Card (MRC) inspections, and all legible component markings will be documented and supplied to the receiving activity along with a copy of the supplying ship's Maintenance Certification Record or Re-Entry Control. This documentation will be maintained and filed with the SUBSAFE Controlled Work Package that installed the component on the receiving ship. Those outstanding DFS for the material on the supplying ship will be cleared and the receiving ship will process a new DFS on board per Part I, Chapter 8 of this volume.
- (3) The receiving activity will conduct material inspection to verify the following conditions:
 - (a) Received component came from a ship that has been previously SUBSAFE certified and for which Re-Entry Control has been maintained since initial certification.
 - (b) Material marking on hardware matches material marking on supporting documentation.
 - (c) Applicable URO MRC inspections are current for the intended end use.
 - (d) End use installation is consistent with the previous service parameters such as the design pressure rating, design temperature rating, or system applicability of the component.
- (4) Receiving activity will update applicable technical data to document information and records provided by paragraph 6.3.4.5.o.(2) of this chapter (e.g., ship's drawing index for drawing revision, date of last URO MRC periodicity accomplishment, and documentation of outstanding DFS) into ship's Current Ship's Maintenance Project and other records.
- (5) Material which does not meet the requirements of paragraph 6.3.4.5.o.(3) of this chapter will be acceptable for use under the following conditions:
 - (a) For material which does not meet the requirements of paragraph 6.3.4.5.o.(3)(c) of this chapter, the material will be subjected to and comply with the applicable URO MRC inspections required for the receiving ship's end use application.
 - (b) For material which does not meet the requirements of paragraph 6.3.4.5.o.(3)(d) of this chapter, the material will be subjected to and satisfy the pressure and operability tests that would be required for a new component installed in the receiving ship, provided the design rating is consistent with the intended end use.

15 Jan 2021

- p. Reuse of material in the previously certified SUBSAFE work control boundary from a ship whose SUBSAFE certification has lapsed by virtue of inactivation availability commencement, must be per reference (l). Reuse of SFCC material from inactivated ships must be per reference (k).
- q. Material received from Navy stock system. LI or SFCC material received from the Navy supply system will be receipt inspected by the CMPO using the following procedure:

<u>Procedure</u>	<u>Responsibility</u>
Visually inspect the material.	CMPO or CMH
Check that quantity received is same quantity ordered.	CMPO or CMH
Check for completeness (i.e., are all parts of a component present); disassembly is not required or desired.	CMPO or CMH
Verify item has MIC number and MIC number is correct per paragraph 6.3.7 of this chapter (reference (k), Appendix E for SFCC).	CMPO or CMH
For Fasteners: Document the markings from the fastener to include either:	CPO or CMH
(1) The color code and the heat or lot number, material type and manufacturer's symbol (for nuts containing a self-locking insert, the color of the insert is the manufacturer's symbol).	
(2) The MIC number (when MIC number is on the fastener or on the individual tag for some small fasteners).	
For Flight Critical Components, verify that the SFCC certifying activity identified on the accompanying OQE is traceable to one of the NAVSEA approved activities listed in paragraph 2.4.1 of reference (k).	CMPO or CMH
For Flight Critical Components, ensure applicable SMIC marking is listed on supply documentation or component.	CMPO or CMH
For TRIPER Program Components, verify that the TRIPER Serial # identified on the component and TRIPER Program issued QA Form 2 match and that the material identified on associated Supply document(s) matches the component on-hand.	CMPO or CMH

NOTE: MORE THAN ONE MIC NUMBER MAY BE ON A COMPONENT (E.G., VALVE BODY MAY HAVE ONE MIC NUMBER AND THE BONNET MAY HAVE ANOTHER MIC NUMBER). IF THE COMPONENT HAS A SHORTENED MIC MARKING, ENSURE THE FULL MIC MARKING IS AVAILABLE ON THE SHIPPING DOCUMENTS, TAGS, OR PACKAGING. VERIFY THAT THE SHORTENED MIC MARKING IS CORRECT PER PARAGRAPH 6.3.7 OF THIS CHAPTER AND REFERENCE (a).

15 Jan 2021

For LI material, verify MIC number including proper "LI" markings.	CMPO or CMH
Check that the MIC number is traceable to a NAVSEA authorized certifying activity, (e.g., Is there an "A" for Portsmouth Naval Shipyard?). See paragraph 6.3.6 of this chapter for list of authorized certifying activities and paragraph 6.3.7.2 of this chapter for additional guidance on MIC marking.	CMPO or CMH
Check NSN on part and verify that it is the NSN ordered.	CMPO or CMH
For oxygen clean material, verify that the package is sealed and marked with a certified oxygen clean tag.	CMPO or Cleanliness Inspector or CMH
Fill out QA form 1 and attach the shipping papers, if provided.	CMPO or CMH

NOTE: QA FORM 1 IS NOT REQUIRED FOR SHIP'S FORCE WHEN PERFORMING RECEIPT INSPECTION OF MATERIAL TO BE IMMEDIATELY INSTALLED FOR A SPECIFIC JOB. IF ALL MATERIAL IS NOT UTILIZED IN THE ONGOING JOB, QA FORM 1 MUST BE FILLED OUT PRIOR TO PLACING THE MATERIAL IN A STOWAGE LOCKER OR AREA.

NOTE: IF THE COMPONENT HAS A SHORTENED MIC MARKING, ENSURE THE FULL MIC MARKING FROM THE SHIPPING DOCUMENTS, TAGS, OR PACKAGING IS ENTERED ON QA FORM 1 AND QA FORM 2.

<u>Procedure</u>	<u>Responsibility</u>
Fill out and attach QA form 2 to each unit of issue accepted.	CMPO or CMH
If material fails any of the steps, reject and attach QA form 3.	CMPO or CMH
Verify that the item is what is required for intended use and turn the material over to craftsman for fabrication or installation or stow in a controlled material storage area.	CMPO or CMH
Forward QA form 1 to the QA office when the material has been issued for installation.	CMPO or CMH

NOTE: LI MATERIAL RECEIVED FROM THE NAVY SUPPLY SYSTEM WITH PROPER MATERIAL MARKINGS DO NOT REQUIRE "H" PRESSURE TESTING AFTER RECEIPT INSPECTION.

- r. FBW Diagnostic and Maintenance Computers (DMAC) will be receipt inspected per sub-paragraph q. of this paragraph. The following are unique requirements specific to the DMAC:
 - (1) A QA form 1 will be used to document the DMAC receipt inspection.
 - (2) A QA form 2 is not required for the DMAC during or after receipt inspection.

15 Jan 2021

- (3) A QA form 3 is required for a DMAC that fails receipt inspection or is out of commission.
- (4) The QA form 1 must be completed per the QA form 1 instructions in Part 1 Chapter 11 of this volume. The QA form 1 must be retained in the ship Re-Entry Control exception folder until superseded by a new DMAC receipt inspection.
- s. SFCCs may be downgraded for use in non-SFCC, however, the component must not be subsequently reinstalled into any SFCC application if it was ever installed in a non-SFCC application. The SMIC markings on the SFCC must be obliterated and the certification records for the item annotated to indicate the item is no longer a certified SFCC prior to being installed.

6.3.5 Receipt Inspection of Open Purchase (Non-Supply System) or Locally Manufactured Material or Upgrading Supply System Material to Level I (Fleet Maintenance Activity only).

6.3.5.1 Uncertified Material Required for Level I Applications. For uncertified material required for use in a LI application, the item must comply with the requirements of reference (a). Fleet activities must not certify open purchase (non-supply system or no NSN) materials to LI requirements without specific authorization from TYCOM or NAVSEA. Additionally, unless authorized in advance, a major DFS per Part I, Chapter 8 of this volume must be processed.

- a. Uncertified material (supply system or NSN assigned) received or used as a starting material for a manufactured part for LI requirements must be receipt inspected per reference (a) by a certifying activity (e.g., shipyard, FMA).
- b. Upon completion of the requirements of reference (a) the following procedure will be used:

<u>Procedure</u>	<u>Responsibility</u>
Review vendor data (if provided with material), MIL-STD, or FMA manufacturing and test data to ensure that it all matches. See note at end of this table regarding vendor data.	FMA QAO
Place certifying FMA MIC markings on the item.	FMA CMPO, CMH, QAI
Fasteners will be appropriately marked and color-coded if required.	FMA CMPO, CMH, QAI
Fill out QA form 1 to document the receipt inspection.	FMA CMPO, CMH, QAI
File QA form 1 with all applicable documents.	FMA Quality Assurance Supervisor
Verify that the item is what is required for intended use and turn the material over to craftsman for fabrication or installation or stow in a controlled material storage area.	FMA CMPO, CMH, QAI
Forward QA form 1 to QA Office when the material has been issued for installation.	CMPO or CMH

15 Jan 2021

NOTE: VENDOR DATA - MATERIAL RECEIVED DIRECTLY FROM THE MANUFACTURER REQUIRES THE FOLLOWING CERTIFICATION DOCUMENTATION AS A MINIMUM:

- (1) CHEMICAL: QUANTITATIVE ANALYSIS FOR PRINCIPAL CONSTITUENT ELEMENTS PER REFERENCE (a).**
- (2) PHYSICAL: MECHANICAL PROPERTIES (YIELD STRENGTH, TENSILE STRENGTH, ELONGATION OR HARDNESS TESTING) AS SPECIFIED IN REFERENCE (a).**
- (3) FABRICATION: DOCUMENTED COMPLIANCE WITH FABRICATION PROCEDURES INCLUDING NDT (E.G., SEAMLESS CONDITION OF TUBING).**

- c. If all testing required by reference (a) cannot be accomplished, then, as a minimum, a generic materials identity test, hardness test, and visual inspection will be accomplished and a major DFS must be processed per Part I, Chapter 8 of this volume.

6.3.5.2 Uncertified Material Required for SUBSAFE Applications. For uncertified material required for use in a SUBSAFE application and requiring an "LI" certification, the item must first comply with the requirements for LI discussed and the requirements of reference (l). Fleet activities must not certify non-level materials to SUBSAFE requirements without specific authorization from TYCOM or NAVSEA and, unless authorized in advance, a major DFS per Part I, Chapter 8 of this volume must be processed.

6.3.5.3 Uncertified Material Required for Submarine Flight Critical Component Applications. Fleet activities must not install non-certified SFCC materials within the FBW SCS certification boundary without specific authorization from TYCOM or NAVSEA and, unless authorized in advance, a major DFS per Part I, Chapter 8 of this volume must be processed.

- a. Upon completion of the requirements of reference (k) the following procedure will be used:

15 Jan 2021

ProcedureResponsibility

Fill out QA form 1 to document the receipt inspection

FMA CMPO, CMH, QAI

NOTE: QA FORM 1 IS NOT REQUIRED FOR SHIP'S FORCE WHEN PERFORMING RECEIPT INSPECTION OF MATERIALS TO BE IMMEDIATELY INSTALLED FOR A SPECIFIC JOB. IF ALL MATERIAL IS NOT UTILIZED IN THE ONGOING JOB, QA FORM 1 MUST BE FILLED OUT PRIOR TO PLACING MATERIALS IN A STORAGE LOCKER OR AREA.

File QA form 1 with all applicable documents

FMA Quality Assurance Supervisor

Verify that the item is what is required for intended use and turn the material over to craftsman for installation or stow in a controlled material storage area.

FMA CMPO, CMH, QAI

Forward QA form 1 to QA Office when the material has been issued for installation.

CMPO or CMH

6.3.6 Authorized Material Certification Activities. This section provides a list of those activities that are currently authorized or have been authorized previously to receipt inspect and accept LI controlled materials. This list is provided as a reference to be used in performance of receipt inspections of paragraph 6.3.4 of this chapter.

6.3.6.1 Currently or Previously Authorized Material Certification Activities.

- a. For material ordered from NAVICP by forces afloat for SUBSAFE or LI applications. The following activities are authorized to receipt inspect and stock material for the LI Stock Program:

<u>Activity</u>	<u>Identification Code</u>
Portsmouth Naval Shipyard	A
Naval Weapons Station Yorktown	YT

- b. If material is not available through the activities listed in paragraph 6.3.6.1.a. of this chapter, NAVSEA has authorized the following activities to certify material as LI per reference (a) and this material may be used for SUBSAFE applications without further receipt inspection, other than normal receipt inspection of paragraph 6.3.4.5.q. of this chapter. The activities and their designator are:

<u>Activity</u>	<u>Identification Code</u>
Newport News Shipbuilding	NN
Naval Undersea Warfare Systems Center - Newport (NUWC)	NUSC
Norfolk Naval Shipyard	N
Charleston Naval Shipyard	C
Puget Sound Naval Shipyard	S
Pearl Harbor Naval Shipyard	P

15 Jan 2021

- c. Listed here are some of the LI activity designators assigned by NAVSEA to various activities.

<u>Activity</u>	<u>Identification Code</u>
<u>Naval Shipyard</u>	
Charleston	C
Long Beach	L
Mare Island	MS
Norfolk	N
Pearl Harbor	P
Philadelphia	H
Portsmouth	A
Puget Sound	S
<u>Supervisor of Shipbuilding</u>	
Groton	SSG
<u>Activity</u>	<u>Identification Code</u>
<u>Naval Weapons Station</u>	
Naval Surface Warfare Center Division, Crane	WQC
Naval Surface Warfare Center Ordnance Station, Louisville	NSL
Naval Weapons Station, Yorktown	YT
<u>Other NAVSEA Activities</u>	
Other	JCR
SRF, Guam	SRFG
SRF, Yokosuka	SRFY
Naval Undersea Warfare Center Detachment, New London	NUWC
Naval Inventory Control Point (formerly Navy Ships Parts Control Center)	X
Naval Submarine Support Facility, NLON	SFNL
Submarine Base, Pearl Harbor	SBPH
<u>Activity</u>	<u>Identification Code</u>
TRIDENT Refit Facility, Kings Bay	TRFK
TRIDENT Refit Facility, Bangor	TRFB
SIMAs or Tenders	AS-32, 33, 34, 36, 37, 39, 40, 41, etc.

6.3.7 Marking of Level I Stock Program Material and Controlled Material.

6.3.7.1 General Requirements. LI Stock Program Material passes from the manufacturers into the Navy supply system by way of Navy receipt inspection activities, which examine the material and subject it to a number of tests. LI material which meets acceptance criteria is marked with a permanent MIC number. SUBSAFE material supplied by the shipyard as onboard repair parts during new construction is required to be MIC marked. On older ships, the

SUBSAFE material supplied as onboard repair parts during new construction may not have been MIC marked, but will be listed on the Supervisor of Shipbuilding's letter of certified material.

- a. The purpose of MIC marking is four-fold:
 - (1) To denote that the marked material has been inspected, verified and accepted.
 - (2) To verify the material in hand by comparing it to the applicable drawings, plans, ordering requirements, and installing documents.
 - (3) To provide traceability from the installed material to OQE.
 - (4) To preclude complete re-inspection of material accepted by an approved activity.
- b. Two problems arise in application that can defeat the purpose of the MIC marking:
 - (1) Internal components of an assembly which is MIC marked on the exterior, are usually not marked individually, and can lose their identity as LI material, if separated during disassembly. Strict adherence to "bag and tag" requirements, using fleet QA forms, overcomes this problem. Any part that becomes separated from its QA form (a loss of traceability) must be treated as uncontrolled material.
 - (2) Reference (a) permits the use of shortened MIC numbers in cases where the entire marking cannot be applied due to space limitations. It is possible that some LI material will lack the traceability number providing the critical link to the OQE, which in turn serves as the basis for the designation "LI material or controlled material". This problem is circumvented by a tag affixed by the receipt inspection activity directly to the material or to its container, which lists the complete MIC number. The complete MIC marking is recorded during receipt inspection. Although the complete MIC marking would not be visible once the item was installed, traceability is maintained through the retained QA paperwork and tags associated with the job, which will list the full MIC number.
- c. SUBSAFE castings and aluminum bronze components receive a permanent LI marking.
- d. The MIC and SUBSAFE markings are in addition to the required manufacturer's marking.
- e. Altering of a MIC marking is prohibited except to make documented corrections.
- f. Method of marking controlled material. Physical marking methods are described in references (a) and (j).
- g. Items not physically capable of being marked. Items such as small parts are packaged in homogeneous lots (i.e., same heat, batch or melt; and same vendor traceability) and the package is marked. If the package is opened, the individual items removed must be tagged with QA form 2. The remaining items in the package will be controlled by the use of a single QA form 2 attached to the package.

15 Jan 2021

6.3.7.2 Level I Material. LI material has a MIC marking affixed to it by the activities which certify the material for the Navy supply system. The activities are listed in paragraph 6.3.6 of this chapter. Authorized FMAs may apply a MIC marking to a component prior to installation in a ship. MIC markings will be applied per reference (a). The following paragraphs provide general guidance regarding MIC marks and marking:

a. Elements of the MIC Marking. The normal MIC marking consists of three elements:

- (1) Material designator. The material designation comes from Volume II of reference (a) with the two or three letter code (e.g., KMA).

NOTE: MIC MARKINGS ON OLDER STOCK PIPING MATERIAL, VALVES, FITTINGS, ETC., RECEIVED FROM THE SUPPLY SYSTEM MAY CONTAIN FOUR LETTER MATERIAL DESIGNATORS. FOUR LETTER MIC MARKING MATERIAL DEFINITIONS ARE CONTAINED IN VOLUME II OF REFERENCE (a).

- (2) Traceability number. The traceability number is used by the marking activity to relate the piece to inspection records and consists of the last two digits of the year, Julian date when the material was inspected, a hyphen and lot number (e.g., 89364-043).
- (3) Certifying Activity Designator (CAD). The CAD denotes the activity that performed the certification testing and marking. The CAD indicates acceptance of the material. Only the government activities and private shipyards which are authorized by NAVSEA to certify inspect and mark LI material are assigned CADs. NAVSEA periodically issues a letter containing the list and identity code of government activities and private shipyards authorized to certify LI material. A listing of those activities authorized to certify LI material is provided in paragraph 6.3.6 of this chapter.

b. If all the markings cannot be affixed because of space limitations, then they are affixed per reference (a).

c. Sample MIC Markings. Three marking systems are in effect. Samples of MIC marks affixed to non-nuclear LI material from each of the marking systems follow:

- (1) CNB-91301-123 A (LI material, new marking system)

CNB	91301	123	A
Material code.	Julian date	Inspection	Inspection
70/30 copper	of inspection	lot number	Activity
nickel (from		(3 digits	(Portsmouth Naval
the Material		maximum)	Shipyard)
Designator			
Catalog)			

15 Jan 2021

(2) KMD-90204-123 A (LI material, new marking system)

KMD	90204	123	A
Material code.	Julian date	Inspection	Inspection
K Monel (from	of inspection	lot number	Activity
the Material		(3 digits	(Portsmouth
Designator		maximum)	Naval Shipyard)
Catalog)			

(3) 7150 001 A VBA (LI material, old marking system)

7150	001	A	VBA
Julian Date	Inspection	Inspection	Material code.
of inspection	lot number	activity	Valve bronze
		(Portsmouth	alloy
		Naval Shipyard)	

(4) 7100 005 CNB (LI material, old marking system)

7100	005	CNB
Julian date	Inspection	Material code.
of inspection	lot number	Copper nickel
		alloy

(5) SER 1991-921A LI (Marked by Portsmouth Naval Shipyard)

SER 1991-921A-061 LI (Marked by Naval Surface Warfare Center, Carderock Division Ship Systems Engineering Station (Submarine Antenna Engineering Directorate) (now NSWCPD))

d. Examples of LI MIC marks for periscope and antenna parts marked prior to 31 July 1979:

(1) NCD 8249-584 QQ LI

NCD	8249	584	QQ
Material code	Julian date	Inspection	Inspection
Nickel copper	of inspection	lot number	Activity
alloy		(3 digits	(Naval Surface Warfare
		maximum)	Center, Carderock Division)

(2) SER 1991-921A-AS18

FMA marking applied to previously unmarked antenna, mast or periscope parts within the SUBSAFE boundary documented by receipt inspection record (QA form 1) as being received prior to 31 July 1979 or are parts removed from an antenna, mast or periscope from an in-service SUBSAFE certified submarine.

(3) Fasteners are identified and color-coded per Appendix C of reference (a).

6.3.7.3 Assignment of Material Identification and Control Numbers for Items Manufactured from Certified Raw Materials.

NOTE: HEADED FASTENERS (CAPSCREWS, BOLTS, MACHINE SCREWS, ETC.)

MANUFACTURED FROM LI MATERIAL REQUIRE ADDITIONAL TESTING (i.e., WEDGE TENSILE OR AXIAL TENSILE TESTING AND HARDNESS TESTING).

- a. LI items manufactured using certified LI raw material (e.g., barstock, plate, forged shape) except fasteners with heads may be assigned the same MIC markings as the raw stock provided no work is done on the base material that would alter its chemical, physical or mechanical properties (machining and welding may be done).
- b. Headed fasteners will be assigned a unique MIC marking following local manufacture from existing LI material and satisfactory completion of certification testing. A DFS is required if certification testing is not completed.

NOTE: A NEW MIC MARKING MUST BE ADDED WHENEVER LI MATERIAL IS HEAT TREATED OR WORKED IN SUCH A WAY AS TO ALTER CHEMICAL, PHYSICAL OR MECHANICAL PROPERTIES. THE NEW MIC NUMBER MUST PROVIDE TRACEABILITY TO THE ORIGINAL MIC NUMBER AND RECERTIFICATION TEST REPORTS FOR CHEMICAL, PHYSICAL OR MECHANICAL PROPERTIES.

- c. The following procedures will be used by a FMA authorized to certify and assign MIC markings, per reference (a), to items manufactured from certified raw material that have had their chemical, physical or mechanical properties altered:
 - (1) Prepare a new QA form 1 for each new item.
 - (a) Complete Blocks 1, 2, 5, and 6 of QA form 1.
 - (b) Blocks 7 and 8 of QA form 1 will be marked "NA".
 - (c) In Block 9 of QA form 1, check "no", then print name, sign and date.
 - (d) Enter the appropriate codes for the required tests and inspections in Block 10 of QA form 1.
 - (e) Enter signed and dated statements in Block 11 of the QA form 1 that provides:
 - 1 The MIC number of the raw material and Controlled Work Package serial number used in manufacture, inspection and test of the item.
 - 2 The results of the tests and inspections designated in Block 10 of QA form 1
 - (f) Check the appropriate boxes in Blocks 12, 13 and 14, print name and sign Block 15 of QA form 1.
 - (g) If the item was found to be acceptable and certified to the appropriate Level of Essentiality, assign a new MIC number in the format shown in paragraphs 6.3.7.2.c.(1) or (2) of this chapter for non-nuclear material.
 - 1 Volume II of reference (a) should be consulted for the material designator since the fabrication processes may have altered the material.

15 Jan 2021

- 2 The date will be the date that the MIC number is assigned.
 - 3 Each item manufactured will be assigned a lot number and the appropriate test and inspection records for that item will be annotated with the lot number to ensure traceability.
- (2) Complete the new QA form 2 using the new MIC number.
- (a) Mark the certified material with the new MIC markings per paragraph 6.3.7.2 of this chapter. Block 5 of QA form 2 will be N/A.
 - (b) Remove the original QA form 2 with the raw stock MIC number. Enter a statement in the installation block that the item has been certified and the new MIC number that was assigned. The tag should then be filed with the new QA form 1.

6.3.8 Level I Submarine Flight Critical Component Stock Program Material Downgrading.

NOTE: MATERIAL CODED AS “SS” DOES NOT REQUIRE DOWNGRADING FOR USE IN LI APPLICATIONS.

6.3.8.1 Material Downgrading. Occasionally LI or SFCC Stock Program controlled material must be downgraded in order to support training or production work due to the non-availability of uncertified material. In order to maintain accountability of the end use of LI or SFCC Stock Program controlled material, the following procedure is required:

<u>Procedure</u>	<u>Responsibility</u>
For LI or SFCC, obtain written authorization to downgrade the material from the QAO.	Leading Petty Officer or Work Center Supervisor
Remove all MIC markings from the LI material and SMIC and SFCC markings from SFCC material as well as controlled material tags and forms. The QA forms will be forwarded to the QAO (ship) or QA office (FMA) with the approved authorization.	CMPO or CMH

6.3.9 Storage, Issue, and Handling of Level I, Scope of Certification and Submarine Flight Critical Component Stock Program Material.

6.3.9.1 Storage Requirements.

- a. The supply department onboard the FMA or a ship will stow, handle and issue LI, SOC or SFCC stock program material as required by the governing NAVSEA, NAVICP, or NAVSUP instruction.

NOTE: LI, SOC AND SFCC STOCK PROGRAM MATERIAL BECOMES CONTROLLED MATERIAL, FOR THE PURPOSES OF THIS MANUAL, WHEN THE MATERIAL HAS BEEN RECEIVED BY THE CMPO OF THE WORK CENTER OR DIVISION.

- b. Controlled material in the custody of customers (ship or FMA work centers) will be segregated by a physical barrier, in clearly marked, dry, secure, clean stowage and handling areas.
 - (1) Use of separate boxes, shelves, roped off or marked (e.g., painted lines) areas are acceptable methods of segregation or stowage, provided they are clearly marked, allowing separation of the following materials:
 - (a) Material within the SUBSAFE boundary.
 - (b) LI.
 - (c) SFCC.
 - (d) SOC MCD-A and MCD-B.
 - (e) Material undergoing receipt inspection.
 - (f) Rejected materials.
 - (g) Material staged for a specific job or process. Controlled materials of different Levels of Essentiality and non-controlled material may be co-located when staging materials for a specific job as long as all identification tags attached to the material are annotated with the same Job Control Number.
 - (2) These materials must be segregated from each other and from other materials. Segregation will be maintained from receipt through staging. Unidentified material or rejected material will be segregated from acceptable controlled material. Access to controlled material will be positively controlled.
 - (3) LI materials of different material types, grades or condition must be segregated through physical separation unless readily differentiated by other attributes, such as size or physical appearance. When physical segregation cannot be accomplished, an alternative positive system of control must be used. The method used must assure that different materials that appear to be similar are not mixed (unless the materials are approved alternates for each other as indicated by part or stock number).
- c. Controlled material will be handled and stored in a manner to prevent damage and be sealed for cleanliness when applicable (e.g., Oxygen Clean).
- d. Material received, or modified after receipt, not meeting the receipt inspection requirements of paragraph 6.3.4 of this chapter will be rejected, tagged with QA form 3, and placed in segregated controlled stowage to await disposition. Disposition examples:
 - (1) Disposal.
 - (2) Repair.
 - (3) Retention of components for future use.
- e. Material awaiting receipt inspection will be segregated from material accepted or material rejected.

- f. CMPOs will inspect controlled material storage areas of their work center, quarterly, as a minimum, to ensure:
 - (1) Material is in designated area.
 - (2) Material is properly identified.
 - (3) Material is properly marked and tagged.
 - (4) Material is protected from damage.
 - (5) Material is kept clean.
 - (6) Material is segregated as required.
- g. The QAO will, at a minimum of frequency of semi-annually, assign a surveillance of all work center controlled material storage areas.

6.3.9.2 Staging Requirements. Controlled materials of different Levels of Essentiality and non-controlled material may be co-located when staging material for a specific job provided that:

- a. All QA forms or identification tags attached to the material are annotated with the same Job Control Number.
- b. Material is segregated from material staged for other jobs or processes.

6.3.9.3 Issue of Level I, Scope of Certification and Submarine Flight Critical Component Controlled Material. LI or SOC controlled material issue will be restricted to those specific applications that have controlled material requirements. SFCC controlled material may be issued for non-Flight Critical applications without written authorization but must not be subsequently installed into components within the SFCC Certification Boundary.

6.3.9.4 Handling of Material. All controlled material received by a work center, whether received from the supply department as onboard stock, work center stores or from a tended ship must be controlled as required by reference (a) for LI, reference (b) for SOC or reference (k) for SFCC.

- a. Controlled material must at all times be in physical custody of either the work center CMPO, QAI, a craftsman or stowed in a work center controlled material stowage area.
- b. Lots of material (e.g., box of bolts) broken down for end use, will maintain the same identification and control as the parent controlled item using QA form 2 as appropriate.
- c. The QA form 2, or any other identification must stay with the material at all times until it is installed or reinstalled in the system or returned to the custody of Ship's Force.
- d. Transfer of a MIC marking during issue of barstock or pipe will be accomplished by transferring the MIC to a new location on the piece to be sectioned, and be verified by the work center CMPO, CMH or a QAI before the original marking is lost.
- e. If, during fabrication, the original piece must be broken down (such as cutting off a piece of barstock) or the MIC marking will be lost by machining, welding, etc., the proper material identification markings will be transferred to the piece(s) prior to

cutting or to the container, in case of small parts, and QA form 2 will be attached to each new piece.

- f. On completion of shop or ship fabrication or assembly stage, the QAI will check the finished product against the attached material identification tags for required material markings. The QAI will inspect the finished product for conformance to specifications. If satisfactory and if the required marking is present, the QAI will print name and sign the QA form 2.
- g. If for any reason at any time the product fails inspection, the QAI will reject the material, attach QA form 3 and inform the QAO.
- h. The lead work center will be responsible for installation and the final acceptance block on all QA forms associated with a particular product. Assist work centers or divisions will be responsible for control of material that they use on a job.
- i. Material consumed (e.g., welding electrode, brazing alloy) or installed (e.g., studs, valve ball) in the repair process must have its identity (MIC number, type or grade of the material) recorded on the appropriate QA form (e.g., QA form 18, QA form 20, QA form 34).
- j. For previously installed material in a SUBSAFE, LI, SOC or SFCC system which is removed and is to be re-installed, positive control and identification of the material must be maintained from removal through reinstallation by use of a QA form 2. Non-controlled material will be tagged with a QA form 2 or other positive means of traceability until reinstallation.
- k. Damaged existing material removed from a SUBSAFE, LI, SOC or SFCC system which will not be repaired or reused, and is immediately disposed of as trash, does not require a QA form 2 or QA form 3 to be attached. All MIC markings on damaged material that meets this criterion must be removed prior to disposal to prevent inadvertent reuse. If there is any potential for repair or re-use of the removed material, then paragraph 6.3.9.4.j applies and QA form 2 must be attached. Do not remove MIC numbers from controlled material that is required to be turned-in. Damaged controlled material that is required to be turned-in, such as depot level repairable items, must be rejected using the QA form 3 process.
- l. All material, parts or components from controlled systems which are removed from the ship by Ship's Force, to be worked by the FMA, must have a QA form 2 properly filled out and attached. If it is necessary for the FMA to disassemble such components, identification must be retained on each part which is controlled material using additional QA form 2. The original QA form 2 will remain with the part or component until it is re-installed in the ship.
- m. Material control tags (i.e., QA forms 2) must be used to positively identify controlled material in transit to avoid unauthorized movement, co-mingling and improper use.
- n. Each controlled component removed from a ship's system in order to allow repair or maintenance will be tagged with QA form 2 to maintain identification and traceability. Controlled components (e.g., periscopes, valves and valve bonnets, pumps, etc.) disassembled and reassembled in a temporary controlled jobsite (established in a work

space or at a jobsite) do not require individual QA tags to be filled out and attached to each controlled component (controlled components are defined in reference (a)), provided that:

- (1) Access to the temporary controlled jobsite is controlled by a physical boundary and is marked with a posted sign stating "Temporary Controlled Jobsite".
- (2) Rejected material must be identified, tagged with QA form 3 and removed from the area.
- (3) Work must be actively in progress and not be longer than a shift or one normal working day on a job site vice in a FMA repair shop.

6.3.9.5 Maintaining Accountability. All controlled material received by a work center and stored in a controlled material locker must have an attached QA form 2 and may have an associated QA form 1. The following process must be used when issuing material:

15 Jan 2021

<u>Procedure</u>	<u>Responsibility</u>
<p><u>Issuing a lot (single or multiple items) with no material remaining:</u> Update original existing QA form 2 to annotate the Name of the craftsman and workcenter or shop or organization the material is issued to.</p> <p>Update associated QA form 1 (if applicable) per QA form 1 instructions. Submit the associated QA form 1 with zero amount remaining to the QAO.</p> <p><u>Issuing a portion of a lot with material remaining:</u> Initiate a new QA form 2 for each quantity less than the entire lot of material to be issued specifically annotating the amount to be issued. Annotate the Name of the craftsman and workcenter or shop or organization the material is issued to. Do not modify the original QA form 2.</p> <p><u>Issuing a portion of a lot with material remaining:</u> Initiate a new QA form 2 for each quantity less than the entire lot of material to be issued specifically annotating the amount to be issued. Annotate the Name of the craftsman and workcenter or shop or organization the material is issued to. Do not modify the original QA form 2.</p> <p>Update associated QA form 1 to annotate amount issued and amount remaining in accordance with QA form 1 instructions.</p> <p>When the last material of a lot is issued, destroy the original QA form 2 with zero amount remaining. Submit the associated QA form 1 with zero amount remaining to the QAO.</p>	<p><u>CMPO</u></p> <p><u>CMPO</u></p> <p><u>CMPO</u></p> <p>CMPO</p> <p>CMPO</p> <p>CMPO</p>

LISTING OF APPENDICES.

- A Testing Requirements for Surface Ship Systems
- B Testing Requirements for Submarine Systems

7.1 GENERAL.

7.1.1 Key Element. Testing is a key element in the certification process of work accomplished by Ship's Force, Fleet Maintenance Activities (FMA), shipyards and private organizations on ships or submarines. It is the final physical check that the system or component has been returned to its normal operational state and will function as designed. Excessive re-testing of system components will cause unnecessary cycling stresses on system components and is not desired. Test only what has been repaired.

NOTE: THE PRESSURE TEST REQUIREMENTS FOR REACTOR PLANT FLUID SYSTEMS ARE DELINEATED IN REFERENCE (a).

7.1.2 Testing Requirements for Systems, Portions of Systems and Components. Research is necessary to determine all applicable test requirements prior to conducting repairs. It is important to note that all required tests may not be identified by a single source (e.g., a fitting or component that has been manufactured locally will have to satisfy both the testing required by the original manufacturing specifications as well as any installation tests). Unless specific guidance to the contrary is given, the following requirements will be followed:

- a. Shipboard (in place) testing. The following requirements apply:
 - (1) All valve lineups and operations necessary to meet the testing requirements and performance of the test will be accomplished by Ship's Force to include the generation and approval of a Formal Work Package detailing the test procedure.
 - (2) The FMA will provide the test equipment required for in place testing, if requested.
 - (3) For testing to recertify FMA work, the FMA will provide Ship's Force with the test requirements, Quality Assurance (QA) data forms for Controlled Work Packages (CWP) only, and list of affected joints (if applicable). The FMA will review the test records to verify the satisfactory accomplishment of the test(s) and maintain the original Objective Quality Evidence (OQE) in the FMA CWP for testing to re-certify work.
 - (4) The System Test Check List of Volume IV, Chapter 9 of this manual will be used in the preparation, conduct, and recovery from hydrostatic tests and tests above normal operating test pressure when an external pressure source is required.
- b. Shop or bench testing. To the maximum extent possible, all components to be installed in a ship's system will be work center or bench tested and inspected prior to installation, when required. This includes weld joint radiography, strength tests of welds or manufactured pressure boundary parts, valve seat leakage tests, etc. This results in a reduced number of cyclic stresses on the systems. The applicable portions of the System Test Check List of Volume IV, Chapter 9 of this manual will be used in preparation, conduct, and recovery from shop hydrostatic testing. QA form 28 will be used to document the OQE for shop testing.
- c. Hydrostatic or pneumatic testing. A QA form 26 will be used to document the OQE that the hydrostatic or pneumatic testing was completed satisfactorily. Nuclear hydrostatic, joint or pneumatic testing will be per reference (a) and paragraph 7.5.1 of this chapter. Non-nuclear hydrostatic, joint or pneumatic testing will be per reference (b) and (c) and Section 7.2 of this chapter.

- d. Miscellaneous testing, such as operational testing, will be documented on a QA form 17 when higher test authority requires a record and for which there is no other QA form.
- e. Drop testing. Used to test the integrity of a system by applying pressure and holding for a specified time and correcting the pressure drop for temperature changes. A QA form 27 will be used to document the OQE that the drop test was completed satisfactorily.
- f. Nondestructive Testing (NDT). Used to determine the integrity of metals with no detrimental effects to the subject metal. Specific guidance on NDT and required OQE is contained in reference (d) and Part I, Chapter 11 of this volume.
- g. Test instrumentation. Test instrumentation will be per the source documents.
 - (1) Installed master or primary and backup test pressure gages, including shop hydrostatic test stands, must be calibrated for accuracy as required by references (a), (c) and (e). These references may not include special test gage requirements and other source documents (e.g., Reactor Plant Manual (RPM), special test procedures, maintenance and replacement instruction requirements) may have to be consulted.
 - (2) Non-nuclear test instruments will be per references (c) and (e). Local exceptions to gage range and increments, or both, specified in references (c) and (e) will be approved by an individual with a technical warrant.
- h. Duration of tests. The duration of a shop or shipboard test will normally be established by the applicable technical reference (e.g., Test Pressure Drawing (TPD), technical manual, RPM, maintenance and replacement instructions), references (b) and (c) for non-nuclear piping systems, or reference (a) for nuclear systems. The following are general guidelines for duration of tests:
 - (1) Mechanical joint tightness tests. All operating pressure tests performed to verify the integrity of a remade mechanical joint, which has only software (e.g., flexitallic gasket, gasket, O-ring) replaced, a 30-minute soak period at test pressure prior to commencement of inspections is required to permit weepage or seepage to accumulate.
 - (2) Strength and porosity tests. Tests performed per references (a) or (b) and (c) to verify the integrity of untested pressure boundary parts (e.g., flanges, bonnets, valve cartridges) or newly brazed or welded joints must be soaked at test pressure for a minimum of 30 minutes prior to commencement of inspections.
 - (3) Periodic system hydrostatic tests. Periodic hydrostatic tests performed to verify the integrity and leak tightness of entire systems must be conducted per references (b) and (c), which require a minimum 30-minute soak at test pressure prior to commencement of inspections.
 - (4) Operational tests. All operational tests performed to assure that all items, components, controls and indications function as designed and per specifications will be conducted for as long as required to prove the operability of the item being tested.
 - (5) The pressurization time prior to commencing inspections for leakage may be reduced from the normal 30-minute period when pressurization for 30 minutes using installed system equipment is impractical or undesirable (e.g., to avoid generation of

radioactive liquid waste or hazardous waste, to avoid undesirable start or stop cycling of the normal system pressure source). In such cases where no minimum pressurization time is specified or it is impractical, maintain pressure for at least five minutes before inspecting joints.

- (6) When performing operating pressure tests on gas systems (e.g., air, oxygen, nitrogen) using a soap bubble leak test method, a 15-minute hold period at test pressure is required. If system configuration makes it impossible to pressurize the joints continuously for 15 minutes, they should be pressurized for as long as possible.
- i. Testing of valve stems. Replaced stems in non-nuclear valves do not require a strength or porosity test, but the re-assembled valves do require a mechanical joint tightness test after assembly as discussed in reference (c). This includes stems manufactured by an FMA from certified Level I barstock.
- j. Testing of new flanged valves received without drilled boltholes. New valves (e.g., Submarine Safety (SUBSAFE), Level I, nuclear Ready for Issue, and other valves received with certification) without bolt holes in the flanges require only mechanical joint tightness and operational testing in system, not strength testing, following machining bolt holes into flanges.
- k. Following routine maintenance and repair work performed on submarine Fly-By-Wire Ship Control Systems following submarine class maintenance plan, testing must be performed as identified in class Fly-By-Wire Ship Control System Technical Work Document and reference (f). Work impacting Unrestricted Operations/Maintenance Requirement Card 019 measured parameters must invoke conduct of applicable portions of Unrestricted Operations/Maintenance Requirement Card 019.

7.2 TESTING.

7.2.1 Test Procedures. Non-nuclear testing will comply with the detailed system or component plans of the source documents. TPDs have been developed for some classes of ships and contain strength test pressures, designated as “H” on the TPD, and mechanical joint tightness test pressures, designated as “J” on the TPD, for all portions of piping systems. Revisions and modifications to TPDs are documented in the SUBMEPP Strength and Tightness Standardized Test Procedure between periodic revisions to the TPDs. The Test Procedure should be reviewed for changes to the TPD. If TPDs do not exist, and test pressures are not identified on applicable system drawings, particular attention must be devoted to system design pressures and configuration. Technical Repair Standard (TRS) or Submarine Maintenance Standard (SMS) provide requirements for testing of many piping system components and generally are the source document for testing of those components. General guidelines for use of TPD “H” or “J” pressures and Appendices A and B Column 1 or Column 2 pressures are:

- a. TPD “H” or Appendices A and B Column 1 pressure is used following:
 - (1) Major repairs.
 - (2) Installation of new piping, components or fittings that have not been previously strength tested. DO NOT assume that new uncontrolled material from the Navy Supply System has been previously strength tested. Exceptions to the strength test

requirement exist only for reduced energy criteria systems, installation of approved mechanically attached fittings, seals (gaskets, including pressure seal rings and O-rings), fasteners, valve stems and material meeting the requirements of Note 1 following this sub-paragraph. A strength test is not required if the end user obtains adequate documentation that a strength test has been previously completed for a specific item.

- (3) (Submarines only) Re-making the mechanical joint between the hull and hull valve.

NOTE: “H” PRESSURE TESTING FOR NEW MATERIAL IS NOT REQUIRED IF ALL THE FOLLOWING ARE MET:

- 1. MATERIAL IS SUBSAFE SPECIAL MATERIAL IDENTIFICATION CODE (SMIC) OR LEVEL I MATERIAL RECEIVED FROM THE NAVY SUPPLY SYSTEM PROPERLY MARKED.**
- 2. A SATISFACTORY RECEIPT INSPECTION IS COMPLETED BY THE END USER.**
- 3. MATERIAL IS RECEIVED IN THE CONFIGURATION REQUIRED FOR USE WITHOUT REQUIRING ADDITIONAL MACHINING, WELDING OR OTHER MAJOR REPAIR. (BAR, INGOTS, PLATE, FORGINGS, ETC., WHICH ARE MACHINED, WELDED OR HAVE A MAJOR REPAIR, REQUIRE AN “H” PRESSURE TEST TO CERTIFY THE COMPONENT.)**

- b. TPD “J” or Appendices A and B Column 2 pressure is used following:

- (1) Minor repairs.
- (2) Re-made mechanical joints meeting requirements of reference (c).
- (3) Repairs, replacements and modifications of piping, components and fittings in reduced energy criteria systems (those operating at 500 psig or less and 200°F or less); the work must meet all applicable specifications and requirements and satisfactorily pass all other required non-destructive testing.
- (4) Installation of approved mechanically attached fittings meeting the requirements of reference (c).

7.2.2 Test Requirements. The following requirements pertain to non-nuclear testing:

- a. Reference (b), (c) and (e) contain the test rig, test gauges, and testing procedure requirements for performing non-nuclear testing. Additionally, ship or system specific manuals such as a Steam Plant Manual should be consulted where applicable. Test, Measuring and Diagnostic Equipment documentation for operating pressure tests is not required if normally installed system gages are used.
- b. When a test gauge is not listed in reference (e), a gauge where the test pressure falls within 50-90% of the gauge range will be used (not applicable for operating pressure tests using normally installed system gages).
- c. Portions of systems that are not designed for full test pressure will be isolated and provided with a relief or vent path to prevent over pressurization during testing.

- d. Hydrostatic or pneumatic test results will be documented on a QA form 26 and system drop tests will be documented on a QA form 27. Miscellaneous testing will be documented on a QA form 17.
- e. Where test requirements cannot be met, a Departure from Specification (DFS) will be processed per Part I, Chapter 8 of this volume.
- f. Shop test of replacement components will be conducted per reference (c).
- g. Renewal or replacement of non-nuclear mechanical joint fasteners. If mechanical joint fasteners are removed and re-installed or replaced one at a time, torqued following an approved procedure and using approved thread lubricants, the integrity of the mechanical joint has not been violated and a test for strength or tightness is not required. For submarines, this applies to joints both within and outside of hull integrity areas. Replacement must be controlled by a Technical Work Document.

7.2.3 Test Pressure Source References. Mechanical joint tightness tests are performed to test work performed on piping systems and components. The following list provides typical documents used to determine test pressures and operational requirements:

- a. TPD. The applicable TPD, if issued for a particular class of ship, can be found through the use of the TPD Index or Ship's Drawing Index or referenced in the Record of Shipboard Tests.
- b. RPM.
- c. Steam and Electric Plant Manual Maintenance and Replacement Instructions requirements.
- d. Component technical manual.
- e. Ship valves technical manual.
- f. Ship System Manual.
- g. Naval Ships' Technical Manual (NSTM) chapter dealing with the appropriate system.
- h. Record of Shipboard Tests.
- i. Standardized Class Shipboard Test Procedures.
- j. System diagrams or drawings.
- k. Vendor drawings.
- l. SMSs.
- m. Steam Plant Manual.
- n. Boiler Repair Manual (reference (g)).
- o. References (a), (b), (c), (d), (h), (i), (j), (k) and (l) of this chapter. In each case, every effort should be made to conform to the latest applicable specifications and detailed test requirements.

7.2.4 Non-Nuclear Pressure Drop Tests. (Submarines only)

7.2.4.1 General Instructions.

- a. When accomplishing pneumatic mechanical joint tightness tests on air, compressed gas systems, tanks or compartments as specified by the procedure, pressurize the space or system with the test medium (air, nitrogen, etc.) to the pressure specified. Isolate the test rig from the test area and allow the system to stabilize and remain isolated for the specified amount of time. The actual drop in test pressure corrected for temperature change must be calculated.
- b. This method of testing may also be used when testing valves for tightness or seat tightness using water. When test pressure is reached, lock in test pressure and isolate the pressure source from the test rig, and allow the system to stabilize and remain isolated for the specified amount of time. Acceptance criteria is no drop in pressure over the specified time (unless a specific drop in pressure is specified). Test duration must be as specified in the TWD. Generally, calculations for correction due to temperature changes are not required.

7.2.4.2 Calculations.

$$\text{a. METHOD: Pressure Drop, (psi) Temperature Corrected} = \frac{(P_1 + 14.7)(T_2 + 460)}{(T_1 + 460)} - (P_2 + 14.7)$$

WHERE:

T_1 = Initial Measured Temperature °F

T_2 = Final Measured Temperature °F

P_1 = Initial Measured Pressure, psig from Test Gage

P_2 = Final Measured Pressure, psig from Test Gage

14.7 = Atmospheric Pressure, psi (added to gage pressure to convert to absolute pressure)

460 = Absolute Temperature Scale (added to Fahrenheit temperature to convert to absolute temperature)

- b. The temperature value used for calculations must be the net effective temperature for the tested volume. For a submarine high-pressure air system under test, most of the system gas is in the flasks located in the main ballast tanks. Therefore, temperatures most nearly representing the flask(s) internal temperature(s) are required. The net effective temperature of a high-pressure air system on a waterborne submarine is calculated by a weighted average of temperatures using a weighing factor of nine (9) for seawater temperature and one (1) for average compartment temperature.

$$T_{\text{net}} = \frac{(\text{SEA WATER TEMP} \times 9) + (\text{COMPARTMENT TEMP})}{10}$$

7.2.4.3 Example. This paragraph provides a typical example of a Pressure Drop Test corrected for a temperature change:

Ships Air Bank Initial Pressure 4500 psig

* Sea Water Temperature Outside

Ballast Tank at Start of Test 44°F

15 Jan 2021

- * Sea Water Temperature Outside
Ballast Tank at End of Test 50°F
- ** Ship's Compartment Air
Temperature at Start of Test 70°F
- Ship's Compartment Air
Temperature at End of Test 72°F
- Ship's Air Bank Final Pressure 4520 psig
- Allowable Pressure Drop in 24 Hours at 1 % 45 psi

$$\text{Actual Pressure Drop} = \frac{(P_1 + 14.7)(T_2 + 460)}{(T_1 + 460)} - (P_2 + 14.7)$$

$$T_1 \text{ Net} = \frac{(44 \times 9) + (70 \times 1)}{10} + 460 = 507$$

$$T_2 \text{ Net} = \frac{(50 \times 9) + (72 \times 1)}{10} + 460 = 512$$

$$\frac{(4500 + 14.7)(512)}{(507)} = 4559.2$$

$$\begin{aligned} \text{Actual Pressure Drop} &= 4559.2 - 4534.7 \\ &= 24.5 \end{aligned}$$

RESULT: Final pressure drop in 24 hours corrected for temperature change is 24.5 psi, which is less than the allowable 45 psi; therefore, test is satisfactory.

- * Sea water temperature should preferably be taken at one-half (1/2) keel depth in proximity to air banks. For a ship in drydock, substitute air flask surface temperatures in the main ballast tanks in lieu of seawater temperatures.
- ** Compartment temperatures should be taken in close proximity to the air system piping and should include surface temperature of air flasks within compartments which are included in the test boundaries.

7.3 WEIGHT HANDLING EQUIPMENT. All weight handling equipment, fittings and fixtures, must be tested and marked or tagged to indicate completion of test prior to being placed into service.

- a. Shipboard Equipment. The following are sources of test procedures for shipboard equipment or systems that require tests upon completion of manufacture or repairs:

<u>Equipment or System</u>	<u>Governing Document(s)</u>
Davits	NSTM 583, Planned Maintenance System (PMS)
Cranes	NSTM 589, PMS
General stores & provisions handling (i.e., dumbwaiters, hoists, conveyors)	NSTM 572, PMS

Booms	NSTM 573, PMS
Underway replenishment	NSTM 571, PMS
Anchors & anchoring	NSTM 581, PMS
Elevators	NSTM 588, NSTM 772, PMS
Deck fittings	NSTM 9120, PMS
Deck edge safety nets	PMS, Naval Sea Systems Command (NAVSEA) Dwgs 53711-803-5000902 and 53711-803-5184097
Trunk nets	PMS, NAVSEA Dwg 53711-804-5184163
Ordnance handling	NAVSEA SG420-AP-MMA-010, NSTM 700
Slings:	
- General Purpose	NSTM 572
- Specialized	Per drawing or In-Service Engineering Activity guidance
Padeyes (temporary - installed for rigging purposes)	Install per NAVSEA S9AA0-AB-GOS-010
Portable weight handling equipment; chain falls (pneumatic or manual) and come-alongs	PMS, NSTM 572, ASME HST-3, MIL-H-904* *MIL-H-904 is inactive and used only for replacement parts. ASME HST-3 is used for new procurement.
Aircraft securing and engine run-up fittings	803-191630, PMS
Cargo tie down fittings	NSTM 572, PMS
Landing craft tie downs	NSTM 584, PMS
Vehicle tie downs	NSTM 575, PMS
Bridge cranes	NSTM 700
Hoists	NSTM 700

NOTE: PER NAVSEA DIRECTION, STATIC, DYNAMIC AND RATED LOAD TESTING OF MAIN STORAGE BATTERY LIFTING GEAR INSTALLED IN SUBMARINE BATTERY COMPARTMENTS IS NOT REQUIRED UNLESS REPAIRS TO STRUCTURAL OR WEIGHT SUPPORTING COMPONENTS HAVE BEEN ACCOMPLISHED. FOLLOWING REPAIRS, LOAD TESTING WILL BE ACCOMPLISHED DURING BATTERY REPLACEMENT AFTER THE BATTERY CELLS HAVE BEEN REMOVED.

- b. Reactor plant and Nuclear Support Facility (NSF) lifting and handling equipment testing requirements.

- (1) In addition to the respective ship class RPM, references (h) and (i) must be consulted for reactor plant lifting and handling tests and inspection requirements.
- (2) The applicable NAVSEA drawing, the respective ship class NSF manual and reference (m), specify the lifting and handling tests and inspection requirements for NSFs or CIFs.

7.4 EXEMPTIONS OR ALTERNATIVE TEST REQUIREMENTS (NON-NUCLEAR).

7.4.1 General. In some instances, the required test may not be able to be performed. The following exemption or alternative tests have been developed in order to properly recertify the system or component. These tests are non-nuclear unless specifically addressed in nuclear technical documents. A DFS will be used to document non-performance of the required testing or deferral of certification of the system to an at sea test.

NOTE: THE DFS APPROVAL WILL BE PER CHAPTER 8, PART I, PARAGRAPH 8.2.6.b OF THIS VOLUME TO IDENTIFY APPLICABLE RESTRICTIONS TO SHIP OPERATIONS (IF ANY) REQUIRED UNTIL SATISFACTORY COMPLETION OF THE CONTROLLED DEEP DIVE.

- a. (Submarines only) Technical Work Documents for maintenance or repair of seawater interface systems which require a “J” pressure test, equivalent to test depth pressure, to certify the maintenance boundaries must be closed prior to underway operations, if at sea, prior to operations below 200 feet. When controlled deep dive testing is required in lieu of a joint tightness test to “J” pressure, a QA form 12 must be used to establish accountability for the controlled deep dive test. If certification of the maintenance associated with the exception or alternative for non-SUBSAFE controlled systems or components (such as L1, O2, etc.) retest requires a controlled deep dive test in lieu of a joint tightness test to “J” pressure of TPD, the DFS will:
 - (1) Identify completion of the controlled assembly (if required).
 - (2) Identify results of the exception or alternative testing.
 - (3) Identify the at-sea testing requirements, acceptance criteria and restrictions, if any, for unsatisfactory testing. Generally, failed testing of work on a non-SUBSAFE system does not result in depth limitations.
- b. (Submarines only) If a Maintenance Certification Record/Re-Entry Control is closed by transferring at sea testing to a DFS (e.g., controlled dive to test depth for test of a periscope hull gland, controlled dive for test of a sea connected system (e.g., Main Sea Water (MSW), Auxiliary Sea Water (ASW)) in lieu of joint tightness test to “J” pressure of TPD), the ship will be restricted to the requirements of Part I, Chapter 5, Section 5.6.5a of this volume until satisfactory completion of a controlled deep dive per Volume VI, Chapter 26 of this manual.
- c. (Submarines only) If work on a non-controlled system requires an exception, alternative retest or at sea testing, the work must be performed in the following manner:
 - (1) A Formal Work Package per Part I, Chapter 2 of this volume, (e.g., PMS Maintenance Requirement Card, technical manual pages, detailed maintenance outline), will be used to control and document all work performed.

- (2) If a controlled assembly is required, the QA form 34 must be retained per Part I, Chapter 10 of this volume. Controlled assembly requirements are:
 - (a) Verification that surface finishes of gasket or o-ring sealing surfaces are following applicable specifications.
 - (b) Verification that fastener material and installation is following applicable specifications.
 - (c) Verification that gaskets or o-rings are properly installed and following applicable specifications.
 - (d) Assembly is documented on a QA form 34.
 - (e) Inspected by a Quality Assurance Inspector or Quality Assurance Supervisor.
- (3) If certification of the maintenance associated with the exception or alternative retest requires a controlled deep dive test in lieu of a joint tightness test to “J” pressure of TPD, the DFS will:
 - (a) Identify completion of the controlled assembly (if required).
 - (b) Identify results of the exception or alternative testing.
 - (c) Identify the at sea testing requirement(s) and acceptance criteria and restrictions, if any, for unsatisfactory testing. Generally, failed testing of work on a non-SUBSAFE system does not result in depth limitations.

7.4.2 Exemptions and Alternatives to Test Requirements (Non-Nuclear unless Specifically Addressed in Nuclear Technical Documents).

NOTE: 1. “H” PRESSURE TESTING FOR NEW MATERIAL IS NOT REQUIRED IF BOTH THE FOLLOWING ARE MET:

- 1. MATERIAL IS SUBSAFE SMIC OR LEVEL I MATERIAL RECEIVED FROM THE NAVY SUPPLY SYSTEM PROPERLY MARKED.**
- 2. A SATISFACTORY RECEIPT INSPECTION IS COMPLETED BY THE END USER.**

NOTE: 2. MATERIAL IS RECEIVED IN THE CONFIGURATION REQUIRED FOR USE WITHOUT REQUIRING ADDITIONAL MACHINING, WELDING OR OTHER MAJOR REPAIR. (BAR, INGOTS, PLATE, FORGINGS, ETC., WHICH ARE MACHINED, WELDED OR HAVE A MAJOR REPAIR, REQUIRES A “H” PRESSURE TEST TO CERTIFY THE COMPONENT.)

- a. Mechanical joints. For minor repairs on those mechanical joints previously strength tested (e.g., an “H” test has been conducted on the pressure boundary parts in the past) including hull joints, where system configuration makes mechanical joint tightness testing impractical, the following is considered a satisfactory alternate testing method.
 - (1) Perform a controlled assembly of the joint(s).
 - (2) Visually inspect the joint for leakage during first system pressurization to nominal or system operating pressure and document on a QA form 17.

- (3) (Submarines only) For submarine sea connected systems, initiate a minor DFS to document the lack of retest. Clearance will require joints to be visually inspected at each incremental depth during the first controlled dive. No leakage is allowed.
- b. Valve test. Following the in place repair of valves where configuration precludes mechanical joint tightness testing or seat tightness testing after minor repairs, the following is considered a satisfactory alternate testing method.

NOTE: (SUBMARINES ONLY) EXCEPT FOR EMERGENCY MAIN BALLAST TANK (EMBT) PARKER CHECK VALVES, THE FOLLOWING EXEMPTIONS DO NOT APPLY TO SUBMARINE HULL AND BACKUP VALVES OR ASSOCIATED HULL INTEGRITY JOINTS OUTBOARD OF THE BACKUP VALVE.

- (1) For lack of seat tightness testing, measure and document the following as applicable:
 - (a) A seat blue check for non-ball valves (100% contact required).
 - (b) For soft seated valves, such as Parker check valves, where a blue check is not practical, re-assemble the valve, perform the appropriate mechanical joint tightness test, and applicable portions of the Unrestricted Operation Maintenance Requirement Card (if applicable). A minor DFS is required to document the lack of seat tightness testing and the requirements to conduct inspections during a controlled dive to test depth to verify seat tightness.
 - (c) Dimensional verification or stack height for ball valves (satisfactory seat compression required).
 - (d) For welded or brazed in-line SUBSAFE valves (hull and backup valves are specifically excluded) and all non-nuclear, non-SUBSAFE valves repaired in place, no DFS is required.
 - (e) For bolted-in SUBSAFE valves repaired in place, initiate a major DFS to the Type Commander per Part I, Chapter 8 of this volume to document the lack of seat tightness test.
- (2) For lack of mechanical joint tightness testing for valves in submarine sea connected systems, perform a controlled assembly of the valve(s) mechanical pressure boundary joints and initiate a minor DFS to document the lack of test. Clearance will require that the affected joints be visually inspected during the first controlled dive.
- c. Welded joint options. Reference (c) contains options for testing welded joints.

NOTE: ELECTION TO INVOKE THE OPERATING PRESSURE TEST OPTION REQUIRES A CLEAR UNDERSTANDING OF THE SYSTEM OPERATING, TEST AND INSPECTION REQUIREMENTS OF REFERENCES (c), (d) AND APPLICABLE TEST METHODS. CONSIDERATION MUST BE GIVEN TO SAFETY, MAINTENANCE COST, TIME AND THE SPECIFIC SYSTEM UNDERGOING REPAIR. THE OPERATING PRESSURE TEST OPTION MUST BE PART OF THE PRE-PLANNED REPAIR PROCESS INCORPORATED INTO THE TECHNICAL WORK DOCUMENT.

- d. Nuclear interface systems. Nuclear interface systems should be tested per reference (a).

- e. Brazed joints.
 - (1) A hydrostatic test is not required after brazed repairs or replacements if all of the following criteria are met:
 - (a) System is a reduced energy system. (Normal operating pressure 200 psig or less and normal operating temperature 200 degrees F or less). Joints are not in “lethal” system as defined in reference (n). Joints are not in seawater or sea connected systems or portions thereof, which are subject to submergence pressure below 200 feet or to sections of piping that pass through sea pressure rated bulkheads and which are rated for submergence pressures greater than 200 feet.
 - (b) All applicable NDT on brazed joints is performed.
 - (c) Visually inspect for leakage during the first system pressurization to normal operating pressure.
 - (2) When a brazed joint of a system or component cannot be strength tested due to configuration, the following is considered to be an acceptable alternative:
 - (a) Initiate a major DFS to document the lack of strength test.
 - (b) Visually inspect the joint for leakage during first system pressurization to nominal or system operating pressure and document on a QA form 17.
- f. Mechanically attached fittings are not welded or brazed fittings. They must meet all QA requirements as specified in the applicable Uniform Industrial Process Instruction or Process Instruction for mechanically attached fitting installation per reference (c). Election of the operating pressure test option will not require a DFS if pre-planned into the repair process to ensure all original QA requirements and additional NDT required by reference (c) are performed.
- g. (Submarines only) When post deep dive passive or pre-energize testing is required by system specific Technical Manuals or Maintenance Index Pages/Maintenance Requirement Cards, outboard electrical connections subject to full submergence sea pressure will be documented on a QA form 12 as a minor departure to accomplish post deep dive passive or pre-energize testing. The departure will also indicate if a controlled assembly was performed.
- h. (Submarines only) For lack of mechanical joint tightness testing following replacement of BPS-16 upper RADAR mast seals, perform a controlled assembly of the mast mechanical pressure boundary joints and initiate a minor DFS to document the lack of test. Clearance will require that the affected joints be visually inspected during the first controlled dive.

7.5 REACTOR PLANT AND NUCLEAR SUPPORT FACILITY TESTING.

7.5.1 Hydrostatic Tests, Pneumatic Tests or Drop Tests. A QA form 26 or QA form 27 will be used to document the OQE that the hydrostatic, pneumatic, or drop testing was completed satisfactorily. Miscellaneous testing will be documented on a QA form 17 when higher test authority requires a record and for which there is no other QA form.

- a. When unable to accomplish the required test, a Liaison Action Request will be initiated per Part I, Chapter 8, of this volume.
- b. When unable to satisfactorily test repaired valves due to out of specification seat leakage, Part I, Chapter 8, of this volume describes the procedure to defer work and close out the CWP.
- c. Reference (a) contains the hydrostatic test requirements for reactor plant fluid systems and portions of systems. It contains requirements for test rigs, test gauges, and test precautions.
- d. Some reactor plant fluid systems have specific system hydrostatic test instructions and special test requirements in the RPM. Others must have local procedures prepared based on the requirements of reference (a) and the RPM.
- e. The Immediate Superior in Command will review Ship's Force test procedures for FMA accomplished nuclear work and will resolve questions or problems with test requirements.
- f. The System Test Check List in Volume IV, Chapter 9 of this manual will be used in preparation, conduct and recovery from test.
- g. Test, Measuring and Diagnostic Equipment documentation for operating pressure tests is not required if normally installed system gages are used.

7.5.2 Mechanical Joint Fasteners.

- a. When mechanical joint fasteners are removed and re-installed or replaced one at a time and torqued per an approved procedure, refer to reference (a) to determine the extent of test required.
- b. Test requirements for mechanical fasteners within the reactor plant SUBSAFE boundary are contained in Appendix 8 of reference (h).
- c. Replacement of fasteners must be controlled by a CWP per Part I, Chapter 2, of this volume, for hydrostatic tests and tests above normal operating pressure when an external source is required.

7.5.3 Valve Seat Leak Tests. Periodically and following any repair which affects seat tightness, installed valves (i.e., valves repaired in-place) seat leak tests must be performed per reference (o), in conjunction with the cognizant RPM. The necessity for seat tightness testing of replaced valves (with or without Ready for Issue) should be determined using the requirements of reference (o) and the cognizant RPM. Prior to installation or recertification as Ready for Issue, valves removed from the system for overhaul or refurbishment must be tested per the applicable component technical manual. Fleet Maintenance Support Branch Quality Engineering Division Note 18 provides information for troubleshooting and leak testing reactor plant valves.

7.6 SUPPLEMENTAL TEST CRITERIA (NON-NUCLEAR). This section is provided along with section 7.4 of this chapter to identify test requirements that may be used when more authoritative requirements are not available, or are incomplete. The performance of tests per these requirements will constitute satisfactory testing. A DFS will not be required unless specifically required as part of the alternative test. The applicable ship class source documents take precedence over Appendices A and B. Notes in the appendices also provide testing guidance that is to be applied even when the testing requirements are specified by TPD or other authoritative guidance. Appendix A applies to Surface ships systems and Appendix B applies to Submarines.

- a. Appendices A and B are intended as a general guide for testing where specific guidance is not provided. All portions of a given system may not necessarily be tested to the pressure specified (e.g., the 30 psig portions of a submarine Fuel Oil Filling, Transfer, and Compensating Water System should not be tested to 150% of test depth pressure).
- b. For component testing, where a TRS or SMS has been used for restoration or overhaul, TRS or SMS testing requirements should be followed. TRS or SMS requirements may differ from the test specifications on the drawing for the component. The drawing specifications are generally intended as manufacturing acceptance tests. Though no specific guide to precedence can be made, good engineering judgment and conservative approach to testing should prevail. If only part of a TRS or SMS was used in component maintenance, the testing requirements in the TRS or SMS may not apply. The use of submarine TRS or SMS in the testing phase of maintenance has, in the past, required an inordinate amount of work during submarine upkeep and refit periods. Where only minor repairs (as defined in the glossary) are accomplished using a TRS or SMS, only the applicable test requirements should be accomplished.

APPENDIX A
TESTING REQUIREMENTS FOR SURFACE SHIP SYSTEMS

System Note 1	Column 1 Strength and Porosity Test Pressure Notes 2, 3, and 4	Column 2 Mechanical Joint Tightness Test Pressure Notes 3, 4, and 5	Special Notes
Steam	135% system design pressure	100% nominal operating pressure	
Non-Nuclear structural tanks			
Feed and condensate	135% system design pressure	100% nominal operating pressure	
Fuel oil service	135% system design pressure	100% nominal operating pressure	
Lube oil fill, transfer, and service	135% system design pressure	100% nominal operating pressure	Note 3
Oxygen (except surface ship divers' life support systems)	135% system design pressure	100% nominal operating pressure	Notes 6, 7, and 8
Nitrogen	135% system design pressure	100% nominal operating pressure	Note 7
Fresh water cooling, chilled water, potable water	135% system design pressure	100% nominal operating pressure	
Fuel oil filling and transfer	135% system design pressure	100% nominal operating pressure	
Compressed air (except surface ship divers' life support systems, bleed air, and starting air)	135% system design pressure	100% nominal operating pressure	
Hydraulic (e.g., ship service, controllable pitch propeller, windlass)	135% system design pressure	100% nominal operating pressure	Notes 3 and 9
Boiler (within boundary valves)	See Note 10	See Note 10	
Fire main and flushing	135% system design pressure	100% nominal operating pressure	
Sea water cooling	135% system design pressure	100% nominal operating pressure	
Deck and plumbing drains, sound tubes open to the atmosphere	Not required	See Note 11	
Countermeasures washdown	50 psig	Operational test	
Divers' life support system (air, oxygen, helium)	135% system design pressure	100% nominal operating pressure	Notes 7, and 8

System	Column 1	Column 2	Special Notes
Note 1	Strength and Porosity Test Pressure	Mechanical Joint Tightness Test Pressure	
	Notes 2, 3, and 4	Notes 3, 4, and 5	
Sewage	135% system design pressure	100% nominal operating pressure	
Ballasting, sea water transfer	135% system design pressure	100% nominal operating pressure	
Primary and secondary drainage from pump	50 psig	Operational test	
Primary and secondary drainage from eductor	135% system design pressure	100% nominal operating pressure	
Bilge stripping system	50 psig	Operational test	
Main steam drain system	Relief valve setting	Operational test	
Feedwater drain collecting system	Fill with water and let stand		
Feedwater drain collecting tank and discharge from tank	135% system design pressure	Operational test	
Gage lines (all systems)	135% system design pressure for welded and brazed joints visual inspection for other joints	Operational Test	
Freon, Halon, hydrocarbons	135% system design pressure	See Note 12	
Valves	135% system design pressure		Note 13

NOTE 1: Testing requirements for surface ship piping and components not specified in this appendix will be 135% of system design pressure where repairs meet the criteria of a major repair.

NOTE 2: Strength and porosity test - Where a major repair is accomplished on the pressure boundary of a piping system or component, that portion of the system or component will be hydrostatically tested as indicated in column 1. Strength and porosity test duration is 30 minutes unless otherwise specified on a component, system, or TPD. The strength and porosity test pressure is identified on a TPD as the "H" pressure.

- a. Strength and porosity test pressure must be not less than 50 psig.
- b. New mechanical joints (as defined in the Glossary of Terms) are subjected to a strength and porosity test.

NOTE 3: Test fluids.

- a. If the test fluid for a mechanical joint tightness test is not specified, either clean fresh water or system fluid must be used. System fluid must be used for hydraulic and lubricating oil systems. Compressed gasses may be used for mechanical joint tightness tests provided they can be used safely.
- b. Observe safety precautions for air, industrial gases, and hydraulic systems found in NSTM, as well as the notes in this appendix, if system fluid or gas is used.

NOTE 4: Exceptions or alternatives to hydrostatic test requirements are provided in Section 7.4 of this chapter.

NOTE 5: Mechanical joint tightness test duration is 30 minutes unless otherwise specified on a component, system, or TPD. The mechanical joint tightness test pressure is indicated on a TPD as the “J” pressure or nominal operating pressure if performing an operational pressure test. Zero visual external leakage is normally the tightness acceptance criterion.

- a. Re-made mechanical joints (as defined in the glossary) are subjected to a mechanical joint tightness test.
- b. The tightness test must be performed with the thermal insulation removed from mechanical joints to be examined.

NOTE 6: Where oxygen piping or system components are re-installed by mechanical joints, these portions of the system will be tested to 100% operating pressure using nitrogen per reference (p). System fluid (oxygen) may be used in at-sea situations when use of nitrogen is not practical. The test pressure will be held for a minimum of 15 minutes plus the time required to conduct inspection of joints under test.

NOTE 7: Refer to reference (p) for testing requirements and procedures for oxygen, nitrogen, and hydrogen systems.

NOTE 8: Before testing oxygen stop valves with Kerotest Co. cartridges per Kerotest Drawing 72594765, ensure the valve is assembled per Kerotest Instruction K-673 and that the union is torqued to 160 - 170 ft.-lbs. This is necessary to ensure the cartridge is not damaged.

CAUTION: CARE MUST BE EXERCISED WHEN HYDRAULIC OIL IS USED AS A TEST LIQUID TO PREVENT SPRAY OR LEAKAGE FROM BECOMING A FIRE OR CONTAMINATION HAZARD.

NOTE 9: Where shop pre-tested hydraulic system components or hydraulic system piping are reinstalled by mechanical joints, those portions will be tested to column 2 requirements using hydraulic oil as the test fluid.

NOTE 10: All testing within the boundary valves of boilers must be accomplished per reference (g).

NOTE 11: System must be open to the atmosphere. Fill system with water and allow to stand for a minimum of 30 minutes. Examine disturbed joints for leakage; none is allowed.

NOTE 12: Refer to system, equipment, or component technical manual. Final test involves performance of pressure drop tests over various time periods. See also reference (p).

NOTE 13: Cycle valve during hydrostatic testing as required by NSTM.

APPENDIX B**TESTING REQUIREMENTS FOR SUBMARINE SYSTEMS**

System	Column 1	Column 2	Special Notes
Note 1	Strength and Porosity Test Pressure	Mechanical Joint Tightness Test Pressure	
	Notes 2, 3 and 4	Notes 3, 4 and 5	
Steam	135% system design pressure	100% nominal operating pressure	
Non-Nuclear structural tanks			Notes 13 and 18
Feed and condensate	135% system design pressure	100% nominal operating pressure	
Fuel oil service	135% system design pressure	100% nominal operating pressure	
Lube oil fill, transfer, and service	135% system design pressure	100% nominal operating pressure	Note 3
Oxygen (except surface ship divers' life support systems)	135% system design pressure	100% nominal operating pressure	Notes 10, 11 and 12
Nitrogen	135% system design pressure	100% nominal operating pressure	Note 11
Fresh water cooling, chilled water, potable water	135% system design pressure	100% nominal operating pressure	
Fuel oil filling and transfer	135% system design pressure (135% test depth pressure for those portions of submarine systems exposed to submergence pressure)	100% nominal operating pressure (100% test depth pressure for those portions of submarine systems exposed to submergence pressure)	
Compressed air including EMBT blow (except surface ship divers' life support systems, bleed air, and starting air)	135% system design pressure	100% nominal operating pressure. For submarines, this is up to the pressure hull cutout valve if the airline penetrates the pressure hull	Notes 6, 8 and 24
Hydraulic (e.g., ship service, steering and diving, windlass, flood control)	135% system design pressure	100% nominal operating pressure	Notes 3, 23 and 24
Hull glands, cables, shafts, masts			Notes 13, 25, 26 and 29
Escape trunks, hatches (including missile tube muzzle hatches on SSBN and SSGN Class Submarines), watertight bulkhead doors, Sonar Spheres			Notes 14, 21, 27, 28, 29, 32, 33 and 34
Periscopes			Note 16

15 Jan 2021

System	Column 1	Column 2	Special Notes
Note 1	Strength and Porosity Test Pressure	Mechanical Joint Tightness Test Pressure	
	Notes 2, 3 and 4	Notes 3, 4 and 5	
Antennas		Per NAVSEA 0900-LP-016-7007 and SS-404-1971420	Note 31
Diesel Sea Water (DSW)			Notes 6 and 9
Hydrogen	135% design pressure	100% nominal operating pressure	Note 11
Hovering or depth control, sea water circulating (e.g., ASW, MSW, Air Conditioning Seawater)	150% test depth plus pump shutoff pressure	100% test depth pressure	Notes 6, 7, 24, and 30
Plumbing system subjected to submergence pressure	150% test depth	100% test depth pressure	Note 6
Trim and drain systems subjected to submergence pressure	150% test depth pressure	100% test depth pressure	Notes 6, 7 and 24
Torpedo tube system, including the entire SUBSAFE portion of the system	100% test depth pressure plus 90 psig	100% test depth pressure plus 90 psig	Notes 17 and 24
Signal ejectors			Notes 20, 24 and 32
SSBN and SSGN bulkhead penetrator holes and covers			Note 22
Snorkel induction and exhaust lines			Notes 15 and 32
Cable plugs to EHF, EHPs, antennas, masts, radars and other component connection or joint exposed to submergence sea pressure (excluding photonics, shore power connectors and pressure proof caps used on EHF and EHPs)			Notes 31 and 35
SONAR Hydrophone, Transducer, Projectors and Outboard Components			Note 35

NOTE 1: Testing requirements for submarine ship piping and for submarine pressure hull envelope systems and components not specified in this appendix will be 135% of system design pressure where repairs meet the criteria of a major repair.

NOTE 2: Strength and porosity test - Where a major repair is accomplished on the pressure boundary of a piping system or component, that portion of the system or component will be pressure tested as indicated in the applicable TPD. The strength and porosity test pressure is identified on a TPD as the "H" pressure. In the absence of specific test pressure direction on a

TPD, test pressure must be per Note 1. Strength and porosity test duration is 30 minutes unless otherwise specified in a technical reference.

- a. Strength and porosity test pressure must be not less than 50 psig unless otherwise specified in the TPD.
- b. New mechanical joints (as defined in the Glossary of Terms) are subjected to a strength and porosity test.

NOTE 3: Test fluid.

- a. If the test fluid for a mechanical joint tightness test is not specified, either clean fresh water or system fluid must be used. System fluid must be used for hydraulic and lubricating oil systems. Compressed gases may be used for mechanical joint tightness tests provided they can be used safely.
- b. Observe safety precautions for air, industrial gases, and hydraulic systems found in NSTM, as well as the notes in this appendix, if system fluid or gas is used.

NOTE 4: Exceptions and alternatives to hydrostatic test requirements are provided in Section 7.4 of this chapter.

NOTE 5: Mechanical joint tightness test duration is 30 minutes unless otherwise specified on a component, system, or TPD. The mechanical joint tightness test pressure is indicated on a TPD as the “J” pressure or nominal operating pressure if performing an operational pressure test. Zero visual external leakage is normally the tightness acceptance criterion.

- a. Re-made mechanical joints (as defined in the glossary) are subjected to a mechanical joint tightness test.
- b. The tightness test must be performed with the thermal insulation removed from mechanical joints to be examined.
- c. This note does not apply to submarine hull and backup valves. (See NOTE 6 of this appendix)

NOTE 6: Where hull valves and backup valves are repaired or replaced, they will be tested in the following manner:

- a. Valves removed for repair. Hull valve or backup valves that are removed completely from the system for repair or maintenance will be tested in the following manner:
 - (1) Prior to installing in the system:
 - (a) Conduct a strength and porosity test to column 1 requirements with the valve ball or disc positioned such that the unproven pressure boundary parts and disturbed joints are exposed to test pressure.
 - (b) With the valve shut, test from seaside to column 1 requirements to test for seat leakage.
 - (c) If a mechanical joint leaks at column 1 pressure, decrease to column 2 pressure and verify no leakage.
 - (d) For minor repairs, test as in steps a.(1) (a) through a.(1) (c) of this Note, but to column 2 requirements.

- (e) Where valve internals can be visually inspected for leakage, seat tightness test pressure need only be maintained for three minutes unless specified otherwise in the applicable maintenance document.
- (2) After re-installation in system, test disturbed mechanical joints in the following manner:
 - (a) Apply test pressure of column 1 requirements to all mechanical joints to which major repairs were conducted and not strength tested prior to valve installation.
 - (b) Apply external (seaside) test to column 1 requirements of all mechanical joints between hull valve and hull. For other disturbed mechanical joints, test to column 2 requirements.
 - (c) For hull joints where testing is not feasible, controlled assembly followed by a controlled dive per paragraph 7.4.2 a of this chapter is a satisfactory alternative to the test.
- b. Valves repaired in place.
 - (1) If major repairs have been accomplished:
 - (a) Conduct a strength test to column 1 requirements with the valve ball or disc positioned such that the unproven pressure boundary parts and disturbed joints are exposed to test pressure.
 - (b) With the valve shut, test from seaside to column 1 requirements to test for seat leakage.
 - (c) If a mechanical joint leaks at column 1 pressure, decrease to column 2 pressure and verify no leakage.
 - (2) If minor repairs have been accomplished, test as in step b.(1) of this Note, but to column 2 requirements. If test to column 2 requirements is not possible, controlled assembly followed by a controlled dive per paragraph 7.4.2 of this chapter, is a satisfactory alternative to the test.
 - (3) For those mechanical joints in sea connected systems where testing is not feasible, controlled assembly followed by a controlled dive per paragraph 7.4.2 a. of this chapter, is a satisfactory alternative to the test.
- c. Operational test. In addition to the hydrostatic testing required by steps a. or b. of this Note, after repairs have been completed on the valve or hydraulic actuator, in-place operational testing of Emergency Flood Control hydraulic components or EMBT Blow valves will be conducted by performing applicable portions of the operational Unrestricted Operation.
- d. Trash Disposal Units (TDU). The TDU is a special purpose device which requires tests beyond those normally required of hull or backup valves. The specific testing required for the re-certification of the TDU after maintenance must be determined from SMSs or other reference documentation. A good reference to ensure adequate testing is the Index of Submarine Maintenance Engineering, Planning and

15 Jan 2021

Procurement (SUBMEPP) Standardized Test Procedures SSN/SSBN/SSGN
Submarines.

NOTE 7:

- A. For testing work performed on portions of the sea connected systems including the joint between the hull and hull valve, tests must be conducted for strength and porosity and mechanical joint tightness to the pressures specified on the applicable ship or class drawing. In some instances, the pressures specified will not reflect those on the individual TPDs provided to the ship. Errors in any TPD should be reported to SUBMEPP via SUBMEPP Feedback Form available at <https://ebiz.submepp.navy.mil/feedback/FOUO%20SUBMEPP%20Product%20Feedback%20Form.docx> (FOUO Only). For SSN 688, SSBN and SSGN 726 Class ships, the applicable TPDs must be used. The applicable ship or class drawings listed here should be used if TPDs are not available.

Ship or Class	Drawing	Strength	Tightness
SSN 21	830-6404016	#Item 18 plus 50 psi	Item 1
SSN 688	845-4456141	Item 3	Item 6
SSBN and SSGN 726	845-4640418	*Item 11	Item 1
SSN774	801-6984058	**Item 12	Item 18

- # Except for SSN23 LDT hull insert for TD-704 and 705 valve assembly which is tested to Item 1 of NAVSEA Dwg 830-6404016.
- * Except valves TD-2021 and TD-2022 and associated piping which are tested to Item 2 of NAVSEA Dwg 845-4640418.
- ** Except valves TD-116, TD-138 and TD-554 and associated piping which are tested to Item 2 of NAVSEA Dwg 801-6984058.

- B. Re-made mechanical joints, using existing material, in the following piping must be assembled using a controlled assembly, no additional testing is required:
- (1) Permanent blanks installed in piping (SSN 688 Class) P168 and P169 downstream of ASW-35 and ASW-36
 - (2) Permanent blanks installed in piping (SSN 21 Class) P81 and P82 downstream of ASW-39 and ASW-40.

CAUTION: CRYSTALLIZATION OR MELTING OF MAIN BALLAST TANK HULL STOP VALVE SEATS AND DOWNSTREAM EMBT BLOW VALVE SEATS MAY RESULT FROM RAPID PRESSURIZATION OF THE EMBT BLOW PIPING AGAINST SHUT MAIN BALLAST TANK HULL STOP VALVES.

NOTE 8: 4500 psig air system hull stop and bank stop valves will not be used as a boundary for hydrostatic test pressures greater than 4500 psig unless valve seats and software are replaced after the test and a mechanical joint tightness is performed.

NOTE 9: For repairs to the DSW system, inboard of the hull and backup valve, the column 1 test pressure is 122 psig and the column 2 test pressure is 88 psig. This is to prevent damaging the attached DSW pump.

15 Jan 2021

NOTE 10: Where oxygen piping or system components are re-installed by mechanical joints, these portions of the system will be tested to 100% operating pressure using nitrogen per reference (p). System fluid (oxygen) may be used in at-sea situations when use of nitrogen is not practical. The test pressure will be held for a minimum of 15 minutes plus the time required to conduct inspection of joints under test.

NOTE 11: Refer to reference (p) for testing requirements and procedures for oxygen, nitrogen, and hydrogen systems.

NOTE 12: Before testing oxygen stop valves with Kerotest Co. cartridges per Kerotest Drawing 72594765, ensure the valve is assembled per Kerotest Instruction K-673 and that the union is torqued to 160 - 170 ft.-lbs. This is necessary to ensure the cartridge is not damaged.

CAUTION: WHEN TESTS INVOLVE NUCLEAR BOUNDARIES, REFER TO REFERENCE (h), REFERENCE (q), AND THE APPLICABLE RPM BEFORE TESTING.

NOTE 13: When packing glands, stuffing tubes, manhole covers, etc., in hull envelope boundary tanks are entered and remade, the assembled unit will be tested by conducting a 12 psig air tightness test. With 12 psig air within the tank, apply soap solution to the work area and inspect for leakage. No leakage is allowed.

NOTE 14: Escape trunk penetrations not exposed to sea pressure during normal ship operation, escape and access lower hatches, and watertight bulkhead doors require only a completion test. The completion test is a 12 psig air test with no pressure drop allowed in 10 minutes. If unable to accomplish the completion test, perform an alternate test per note 25 of this Appendix. No inspection following the controlled dive is required.

NOTE 15: Where repairs are performed on the snorkel induction or exhaust piping or valves, refer to reference (r) for test requirements.

NOTE 16: Submarine Periscope Pressure testing, evacuation, charge and dew point testing will be per reference (s).

NOTE 17: Where minor repairs have been accomplished on torpedo tubes (including attached piping) or impulse tanks, the applicable portion of the system will be tested by performing sub-paragraph a., b. or c. of this note.

NOTE: WHEN REMOVAL OF THE TORPEDO TUBE SIGHT GLASS (SSN688 OR SSB(G)N726 CLASS) OR LIGHT PIPE (SSN21 AND 774 CLASSES) ASSEMBLIES IS REQUIRED TO INSTALL TEST INSTRUMENTATION, REINSTALLATION OF THE SIGHT GLASS MUST INCLUDE A VISUAL INSPECTION OF THE GLASS (CHECK FOR CHIPPING, CRACKS, ETC.) OR IF THE SIGHT GLASS HAS BEEN REMOVED FOR REPAIRS (LEAKS, BROKEN GLASS, STRIPPED THREADS, ETC.), TESTING MUST BE ACCOMPLISHED PER SUB-PARAGRAPH b.

- a. "J" pressure hydrostatic test pierside.
- b. Controlled assembly of components exposed to sea pressure, completion test and a watertight integrity test.

NOTE: DUE TO HIGH IN-SERVICE ALLOWABLE LEAKAGE RATES FOR AIR TURBINE PUMPS, TIGHTNESS TEST MAY NOT BE POSSIBLE. IT IS PERMISSIBLE TO UTILIZE THE AIR TURBINE PUMP INFLATABLE SEAL TO AID WITH TESTING. IF THE AIR TURBINE PUMP TEST IS STILL NOT ACHIEVABLE, A MAJOR DFS MUST BE SUBMITTED FOR FAILED TESTING.

NOTE: FOR SUBMARINES EQUIPPED WITH AIR TURBINE EJECTION PUMPS (SS(G)BN726 CLASS, SSN21 AND 774 CLASS), THERE IS AN ALLOWABLE LEAKAGE RATE (FRESH WATER OR SEAWATER) PAST THE TURBINE PUMP MECHANICAL SEALS. MAXIMUM ALLOWED LEAKAGE RATE FOR NEW AND RESTORED TURBINE PUMPS IS 55 CC PER HOUR. MAXIMUM ALLOWED LEAKAGE RATE FOR IN-SERVICE TURBINE PUMPS IS 5 GALLONS PER MINUTE.

- (1) For Torpedo Tubes and piping: The affected joints must be assembled as a controlled assembly and subjected to a 12 psig air tightness test for 10 minutes. Accomplish a soap bubble test of the affected joints. In addition, a minor DFS will be used to document requirement for inspections during a controlled dive in order to verify re-establishment of the watertight integrity for those repaired joints.
 - (2) If air soap test is impractical, or if the affected joint is inaccessible: The affected joints must be assembled as a controlled assembly and subjected to a drop test by pressurizing to 12 psig air. Allow time for pressure or temperature to stabilize. Hold for 10 minutes. No drop allowed. In addition, a minor DFS will be used to document the requirement for inspections during controlled dive in order to verify re-establishment of the watertight integrity for those repaired joints.
- c. For Impulse Tank: The affected joints must be assembled as a controlled assembly and subjected to a drop test by pressurizing to 12 psig air. Allow time for pressure or temperature to stabilize, hold for 10 minutes. No drop allowed. In addition, a minor DFS will be used to document requirement for inspections during a controlled dive in order to verify re-establishment of the watertight integrity for those repaired joints.
- (1) When drop test is conducted in drydock, record the highest pressure held. Minimum pressure must be five psig. No drop allowed. Repeat at 12 psig when waterborne.
 - (2) In lieu of drop test, the affected joints must be assembled as a controlled assembly and the tank subjected to a 12 psig air tightness test for 10 minutes. Accomplish a soap bubble test of the affected joints. In addition, a minor DFS will be used to document requirement for inspections during controlled dive in order to verify re-establishment of the watertight integrity for those repaired joints.

CAUTION: WHEN PERFORMING TESTING OF TANKS, COMPLY WITH REFERENCE (q), SECTIONS 50 THROUGH 54.

NOTE 18: NAVSEA drawing 126-5792666 provides the detailed requirements and guidance for tank testing.

NOTE 19: DELETED

NOTE 20: Signal ejectors and launchers are special purpose devices, which require tests beyond those normally required of hull or backup valves. The specific testing required for the re-certification of signal ejector or launcher after maintenance must be determined from ship's plans or other reference documentation. A good reference to ensure adequate testing is the Index of SUBMEPP Standardized Test Procedures SSN/SSBN/SSGN Submarines.

NOTE 21: Upper escape and access hatches (including missile tube muzzle hatches on SSBN and SSGN Class Submarines) and escape trunk penetrations exposed to sea pressure during normal ship operation require a completion test and a controlled dive to test depth. The completion test is a 12 psig air test conducted per Note 25 of this Appendix for 10 minutes. In addition, a minor DFS will be used to document the requirement to inspect for leakage by opening the escape trunk drain at depths for hull valve cycling per NAVSEA Instruction C9094.2B to verify re-establishment of the watertight integrity for the repaired items.

NOTE 22: Bulkhead penetration hole covers will be tested using the air hose test alternative of Note 25, step c. of this appendix. Upon successful completion of the air hose test, document test on a QA Form 17 and submit to the ship's Quality Assurance Officer. A DFS is not required.

CAUTION: CARE MUST BE EXERCISED WHEN HYDRAULIC OIL IS USED AS A TEST LIQUID TO PREVENT SPRAY OR LEAKAGE FROM BECOMING A FIRE OR CONTAMINATION HAZARD.

NOTE 23: Where shop pre-tested hydraulic system components or hydraulic system piping are reinstalled by mechanical joints, those portions will be tested to column 2 requirements using hydraulic oil as the test fluid.

NOTE 24: For maintenance involving a system or component monitored under the Unrestricted Operation Maintenance Requirement Card program, partial or full performance of in-periodicity operational Unrestricted Operation Maintenance Requirement Cards may be required as a retest. Consult NAVSEA 0924-062-0010, Submarine Safety Requirements Manual, Section 6.4.5 for additional information. Perform applicable portions of Unrestricted Operation-Maintenance Requirement Card 025. For "O" and "I" level activities, when a component in the Emergency Flood Control System is disturbed, the retest must consist of testing the entire Emergency Flood Control System, e.g., if a component in the Engine Room was disturbed, a retest of the entire Engine Room is required. If a component in the Forward Emergency Control System is disturbed, a retest of the entire Emergency Flood Control System in the Forward compartment is required.

NOTE: NAVSEA DRAWING 126-5792666 ALSO CONTAINS INFORMATION REGARDING TESTING OF SUBMARINE TANKS AND COMPARTMENTS.

NOTE 25: Hull Glands (e.g., cable stuffing tubes, shaft or mast packing glands, electrical or electronic hull fittings excluding the inboard packing assembly and pressure proof caps screwed onto EHF cable connection). Hull glands require a completion test (12 psig compartment test) and an acceptance or structural watertight integrity test (where the joint is exposed to full submergence depth pressure). If the structural watertight integrity test will be accomplished by

performing a controlled dive to test depth, the work is required to be accomplished using a controlled assembly, and a minor DFS for the controlled deep dive is required. The affected joints will be inspected during the first controlled dive. Performance of alternate completion tests are acceptable in lieu of a 12 psi compartment test and do not require a DFS. In the event that a 12 psig compartment test or an alternate completion test cannot be accomplished and the structural watertight integrity test will be accomplished by performing a controlled dive to test depth, the work is required to be accomplished using a controlled assembly and a major DFS for the controlled deep dive is required. The affected joints will be inspected during the first controlled dive. If required, perform one of the following alternate completion test methods when a 12 psi compartment test is not scheduled or practical.

a. Cofferdam Test Method.

- (1) A pressure cofferdam can be used to verify the tightness of hull or bulkhead patches or components after re-installation where it is physically possible to cover the item. A simple cofferdam can be constructed from six-inch diameter or larger pipe with length determined by item to be tested. One end of the pipe is capped and the other fitted with a suitable gasket to provide a seal. Sufficient pipe threaded penetrations should be provided for air supply, gauge, and relief valve fittings.
- (2) Cofferdam tests, used in lieu of 12-psig compartment air tests, will be performed in the following manner:
 - (a) Install the cofferdam over joint or fittings to be tested so that the pressure differential will be in the same direction as a full compartment or tank test. Secure the cofferdam by use of shores and wedges or hydraulic jacks braced against sound structure. Attach air supply and non-isolable gauge and relief valves.
 - (b) Pressurize the air space inside the cofferdam to the test pressure specified for the test of the applicable tank or compartment, as shown in the ship's test drawing.
 - (c) Apply a soapy solution to the opposite side of the structure and inspect for leakage.
 - (d) Acceptance criteria for cofferdam tests will be no evidence of leakage.
 - (e) Where the opposite side of the structure is inaccessible, an alternate method of providing tightness is to measure the drop in pressure within the cofferdam over a ten-minute period. The gasket and fittings in the cofferdam should be checked for leakage using a soapy solution.
 - (f) Acceptance criteria for this alternate cofferdam test will be no drop in pressure.

b. Vacuum Box Test Method.

- (1) A vacuum box can be used to test the same items tested by the cofferdam method. However, since the pressure differential is now in the opposition direction, it may be used in many locations where a cofferdam is not suitable.

Several portable vacuum pumps capable of pulling a vacuum in a small displacement test vessel are commercially available. An air eductor can be used to pull a vacuum for testing penetrations through the deck over a submarine battery space.

- (2) Vacuum box tests used, in lieu of 12 psig compartment air tests, will be performed in the following manner:
 - (a) Apply a soapy solution to the joint to be tested.
 - (b) Install the vacuum box over the joint or fitting to be tested so that the pressure differential will be in the same direction as a full compartment or tank test.

CAUTION: PROVIDE SUPPORT FOR THE VACUUM BOX WHERE A CHANGE IN THE INTERNAL PRESSURE COULD CAUSE THE BOX TO FALL.

- (c) Draw a vacuum to obtain a pressure differential comparable to the test pressure specified in the ship's test drawings.
- (d) Inspect the joint or fitting for leakage by observing through the Plexiglas cover of the vacuum box for the formation of bubbles which would indicate leakage.
- (e) Acceptance criteria for vacuum box tests will be no evidence of leakage.
- (f) An alternate test method of proving tightness with the vacuum box is to measure the rise in pressure within the vacuum box over a ten-minute period.

NOTE: A SOAPY SOLUTION SHOULD BE APPLIED TO THE GASKET, COVER, AND FITTINGS INSIDE THE VACUUM BOX. FORMATION OF BUBBLES ON THE INTERIOR OF THE VACUUM BOX INDICATES A LEAK IN THE BOX.

- (g) Acceptance criteria for this alternate vacuum box test will be no rise in pressure.

c. Air Hose Test Method.

- (1) An air hose test may be used to verify the tightness of piping or electrical penetrations directly accessible on both sides of the bulkhead or pressure hull for observation. Extreme caution will be used when this method is used to test periscopes, hydraulic control rods or other movable cylinders that penetrate bulkheads or the pressure hull due to the possibility of blowing abrasive material into the seals. Also, ensure that openings exist to prevent ambient pressure buildup.
- (2) Air hose tests will be performed in the following manner:
 - (a) The air hose nozzle must be about 3/8 inch in diameter and the pressure at the nozzle must be about 90 psig.

15 Jan 2021

- (b) Apply a soapy solution to the structure on the side opposite from the side the stream of air is to be applied. Communications are to be established to ensure air hose nozzle position and soap test are being accomplished at the same location (i.e., top, bottom, port, starboard).

WARNING: HIGH VELOCITY AIR IS A PERSONNEL HAZARD. ALL NON-ESSENTIAL PERSONNEL WILL BE CLEARED FROM THE AREA BEING TESTED. SAFETY GLASSES WILL BE WORN AT ALL TIMES. CARE MUST BE TAKEN SO THAT THE AIR STREAM IS NOT DIRECTED TOWARD ANY PERSONNEL.

- (c) The air hose must be located so as to produce a pressure differential in the same direction as would occur if a full compartment or tank test were performed. Hold the nozzle as close as possible, within two inches, if possible, to the joint or fitting under test and direct the air stream in the manner most likely to reveal leakage. The test must be accomplished for a minimum of 30 to 45 seconds on each quadrant or area.
 - (d) Inspect the soapy solution for the formation of bubbles during the test, which would indicate leakage.
 - (e) Acceptance criteria for air hose tests will be no evidence of leakage.
- d. Pressurized Water Testing Method for Submarine Main Propulsion Shaft Primary Seals (Shaft Seal Cavity Testing in advance of Controlled Deep Dive).
- (1) Conduct pressurized water testing of the shaft seal cavity following assembly of any seal repaired following applicable tech manual or maintenance standard.
 - (2) If no pressurized water test procedure is available,
 - (a) Pressurize the repaired shaft seal cavity with fresh water to 100 (95 to 105) psig.
 - (b) Measure leakage rate past the affected seal into the ship. Allowable leakage is 16 oz per minute maximum. Test pressure must be held for a 30 minute minimum.

NOTE 26: For steering and diving penetrations (and other hull V-Ring packing installations including associated o-rings), perform a controlled assembly and initiate a minor DFS to document the requirement for inspections during a controlled dive to test depth in order to verify re-establishment of the watertight integrity for those joints.

NOTE 27: Removable Logistics Escape Trunks and Logistics Plug Trunks require an inter seal tightness test and a controlled dive to test depth. The inter seal tightness test will be accomplished using air or nitrogen to 100% test depth pressure with no pressure drop allowed in 10 minutes. In addition, immediately following the first controlled dive to test depth, enter the trunk and remove the cleanliness cap from the drain or test connection and verify no leakage has occurred. A minor DFS will be used to document the requirement to inspect for leakage immediately following the dive to verify re-establishment of the watertight integrity for the reinstalled trunk.

NOTE 28: The Sonar Sphere requires a completion test and a controlled dive to test depth. The completion test is a 12-psig air test with no pressure drop allowed in 10 minutes. If unable to accomplish the completion test, perform an alternate test per note 25 of this Appendix. In addition, immediately following the first controlled dive to test depth, enter the sonar sphere and inspect for evidence of leakage. A minor DFS will be used to document the requirement to inspect for leakage immediately following the dive to verify re-establishment of the watertight integrity.

NOTE 29: Electrical/electronic hull fitting pressure proof caps manufactured per MIL-C-24231/12, 13 or 14 are not Level I or boundaries within the SUBSAFE Systems and do not require REC or testing when installed or operated.

NOTE 30: For preventative maintenance (e.g., PMS) to inspect and replace seawater heat exchanger pencil and disc type zinc anodes closed with an o-ring threaded plug with a nominal diameter of 1-5/8" or less accomplished without additional testing, the following conditions must be met:

- a. Work will be performed using a CWP within the SUBSAFE boundary and a Formal Work Package when performing work outside the SUBSAFE boundary.
- b. The joint will be assembled as a controlled assembly and documented on QA form 34.
- c. Complete a surfaced condition maximum operating pressure test with zero leakage for 5 minutes. Operate seawater pumps at maximum speed without causing cavitation or violating operating procedure restrictions.
- d. List "SURFACED" as the actual pressure on QA forms.
- e. No new pressure boundary parts are installed (excluding software).
- f. No testing is required for other maintenance or repair (e.g., ASW valve repairs) which would subject the zinc anode area to at least mechanical joint tightness pressure.

CAUTION: APPLYING POWER TO ANTENNA CONTROL CABLES OR TRANSMITTING ON RADIO FREQUENCY CABLES THAT HAVE NOT HAD THE ELECTRICAL CHECKS COMPLETED CAN SIGNIFICANTLY DAMAGE EQUIPMENT OR COMPONENTS. IF THE APPROPRIATE ELECTRICAL CHECKS CANNOT BE COMPLETED, CONSIDERATION OF AN EQUIPMENT TAG-OUT MAY BE APPROPRIATE.

NOTE 31: Submarine SubHDR and Photonics systems outboard cable removal and replacement.

- a. Insert plugs with new O-ring each time the cable is unplugged and assemble using a controlled assembly. The QA form 34 is required to be retained until the availability is complete or if accomplished outside of an availability, the QA form 34 will be retained until the package is closed and reviewed by the Quality Assurance Officer.
- b. After performing a deep dive, passive or pre-energize testing must be performed following the system specific Technical Manual, SUBMEPP approved Maintenance Standard, SUBMEPP approved Standard Test Procedure or Maintenance Requirement Card to ensure the system is not grounded prior to use.

- c. Controlled Assembly Process used for Re-Entry Control (REC) Exceptions or Exception to Retest Requirements for Mechanical Joints consists of:
- (1) Verification that surface finishes of gasket or O-ring sealing surfaces are following applicable specifications.
 - (2) Verification that fastener material and installation is following applicable specifications.
 - (3) Verification that gaskets or O-rings are properly installed and following applicable specifications.
 - (4) Assembly is documented on a Quality Assurance (QA) form 34.
 - (5) Inspected by a Quality Assurance Inspector (QAI) or Quality Assurance Supervisor (QAS).

NOTE 32: A partial salvage inspection must be accomplished per Volume IV, Chapter 18 of this manual for any item worked during an availability (i.e., hatches, salvage air valves, etc.).

NOTE 33: Repairs of SSGN Class Lockout Chamber and SSN 774 Class Lockout trunks and hatches within the certified Scope of Certification boundary require an 89-psig completion test. Minor repairs, in addition to an 89-psi completion test, require a minor DFS for a controlled dive to test depth to certify structural watertight integrity. Major repairs require a hydrostatic test at “H” pressure or an 89-psi completion test and a major DFS to perform a controlled dive to test depth to certify structural watertight integrity. Hydrostatic testing at “H” pressure satisfies all mechanical joint testing requirements for minor repairs.

NOTE 34: Specific repair and acceptance criteria for submarine watertight doors and hatches is defined in the following SUBMEPP Maintenance Standards:

- a. 1000-081-774
- b. 1000-081-726
- c. 1000-081-688
- d. 1000-081-021

NOTE 35: Post installation testing must be conducted following the applicable SUBMEPP Maintenance Standard or Combat System Test Procedure. Post deep dive testing must be accomplished per the applicable Combat System Test Procedure or Maintenance Requirement Card. For transducer or hydrophone replacements for spherical arrays (excluding SSBNs), a dental chart, or equivalent test, performed following the applicable technical manual or Maintenance Requirement Card must be performed prior to getting underway.

LISTING OF APPENDICES.

- A Departure From Specification Request Message Format
- B Departure From Specification Clearance or Cancellation Report Message Format

8.1 **PURPOSE.** To establish standard procedures to be used by the Fleet and all maintenance activities for reporting, requesting approval and clearance, at the earliest opportunity, of all non-conforming or departable conditions, Departures from Specification (DFS).

8.1.1 **Background.** Specifications are engineered requirements such as type of materials, dimensional clearances, vibration levels, flow rates, and physical arrangement to which ship components are purchased, installed, tested, and maintained. All ships are designed and constructed to specific technical and physical requirements. It is imperative that every effort be made to maintain all ship systems and components to their designed specifications. There are occasions when the applicable specifications cannot be met. In these cases, the nonconformance to specifications is controlled with a DFS.

8.1.2 **Terminology.**

- a. A DFS is the mechanism used to document and resolve a lack of compliance with any authoritative document, plan, procedure, instruction, etc., except in instances where NAVSEA has signed and issued formal correspondence adjudicating one of the

preceding such as a Liaison Action Request (LAR), Engineering Request (ER), or similar documents.

- b. Authorized Technical Authority. An Authorized Technical Authority is a representative designated by reference (a) to act for Naval Sea Systems Command (NAVSEA) in dispositioning nonconformance issues. They are also charged with providing technically sound maintenance alternatives to the Fleet upon which maintenance and operational decisions can be made.
- c. As determined by the ship and ISIC, temporary nonconformances, except SUBSAFE, Scope of Certification, and Fly-by-Wire nonconformances, that are minor which would not benefit from an engineering analysis or risk assessment will be entered into the CSMP. CSMP entries of this type do not require a corresponding DFS to adjudicate the condition and will be scheduled for repair in a future maintenance availability.
- d. The terms deviation and waiver are often used synonymously. The principle difference being that deviations are requested prior to conducting work that will result in a nonconformance and waivers are requested after a nonconformance has been discovered.

8.1.3 Specification. Technical specifications originate from a variety of sources. When a conflict exists between specifications, the governing requirement has to be determined on a case-by-case basis. The following listing is provided to assist in determining the governing specification. This listing may not be exact for a particular case and all pertinent technical documents will require review:

- a. Non-Nuclear listing of specifications which may be consulted when determining the governing specification:
 - (1) Volume V (Quality Maintenance) of the Joint Fleet Maintenance Manual.
 - (2) Fleet or Type Commander (TYCOM) Technical Notes.
 - (3) Ship's plans or drawings, NAVSEA Standard and Type drawings, and approved Technical Repair Standard or Maintenance Requirement Procedure, or Maintenance Standard.
 - (4) NAVSEA letters and Liaison Action Requests (LAR).
 - (5) The Military Standard (MIL-STD) and Military Specification (MIL-SPEC) series. MIL-SPEC for specific components being procured or manufactured, MIL-STD for specific processes being performed.
 - (6) NAVSEA approved component technical manuals.
 - (7) NAVSEA 0902-018-2010; General Overhaul Specifications for Deep Diving SSBN/SSN Submarines.
 - (8) TYCOM Instructions.
 - (9) Naval Ships' Technical Manuals and Technical Specifications.
 - (10) NAVSEA Instructions.

- (11) NAVSEA S9AA0-AB-GOS-010; General Specifications for Overhaul of Surface Ships.

NOTE: WHERE THIS MANUAL IS MORE RESTRICTIVE THAN OTHERS, THIS MANUAL WILL TAKE PRECEDENCE UNLESS SPECIFICALLY STATED THAT IT PROVIDES GUIDANCE ONLY. UNRESOLVED QUESTIONS ON PRECEDENCE SHOULD BE REFERRED TO THE TYCOM FOR RESOLUTION. IN SOME INSTANCES A SPECIFICATION OF LESSER PRECEDENCE MAY MODIFY OR SUPERSEDE A MORE SENIOR SPECIFICATION, I.E., A NAVSEA LETTER OR LAR RESPONSE COULD SPECIFICALLY MODIFY A TECHNICAL STANDARD PENDING REVISION.

- b. Nuclear listing of specifications which may be consulted when determining the governing document:
- (1) Reactor Plant Manual.
 - (2) Reactor plant component technical manuals.
 - (3) NAVSEA technical manuals (e.g., NAVSEA 250-1500-1 Welding Standard).
 - (4) Reference (b).
 - (5) Reactor Plant Drawings.
 - (6) NAVSEA instructions.
 - (7) TYCOM instructions.
 - (8) Reference (c).
 - (9) Reference (d).

8.2 DEPARTURE FROM SPECIFICATION. A DFS (non-nuclear only) is a lack of compliance with any authoritative document, plan, procedure, instruction, etc. General guidance regarding DFS is:

NOTE: FOR SURFACE FORCE SHIPS AND AIRCRAFT CARRIERS, THE TYCOM WILL PERFORM THE IMMEDIATE SUPERIOR IN COMMAND (ISIC) FUNCTIONS OF THIS CHAPTER.

- a. During a maintenance action, including temporary repairs, a DFS is required for lack of compliance with cognizant documents, drawings, etc. For “as found” conditions during maintenance, the ISIC, ship and Fleet Maintenance Activity (FMA) (if involved) must evaluate the non-compliance using the guidance of paragraph 8.2.5 and 8.2.6 of this chapter.
- b. For “as found” conditions or equipment failures during operations that result in non-compliance with cognizant documents, drawings, etc., the ship or ISIC (if in port) must evaluate the condition or failure using the guidance of paragraph 8.2.5 and 8.2.6 of this chapter to determine if the non-conforming condition meets the criteria as a Major or Minor DFS. Nonconformances meeting the criteria as a major or minor DFS must be submitted to the ISIC for adjudication when in a port with a FMA and must be approved by the Commanding Officer if at sea or in a port without an FMA. If at

sea, the guidance of paragraph 8.3.8 of this chapter will be followed.

8.2.1 Reporting Departures from Specification. It is incumbent upon ships, FMAs, and ISICs to discuss potential DFS as early as possible (prior to the work close out or component assembly if possible) to determine direction of actions, and alternatives to the DFS. Every effort must be made to correct each deficiency prior to equipment or system operation or underway of the ship. If a DFS has to be submitted, the request for it must be processed as soon as possible to enable a technical evaluation of the DFS request and final adjudication from the TYCOM.

8.2.2 Reporting Departures from Specification while Conducting a CNO Availability Sea Trial. (Submarines Only) Any failed inspection, test or as found deficient condition that would normally be documented on a DFS will be documented and reported in the daily Submarine Sea Trial Situation Report (SITREP) as required by Volume II, Part I, Chapter 3 of this manual. The only DFS required to be written during CNO Availability SEA TRIALS are those DFS used to close Re-Entry Controlled (REC) work performed at sea during the trials to accomplish testing below 200 ft.

8.2.3 Types of Departures from Specification. A DFS is classified as either Major or Minor depending on its significance. Major DFS are described in paragraph 8.2.5 of this chapter. Minor DFS are described in paragraph 8.2.6 of this chapter. Care must be exercised in evaluating and determining the type of DFS. All submarine DFS submitted for evaluation must be adjudicated prior to ship's underway operations except when executing berth shifts that do not involve open ocean movements (i.e. movements within a harbor or river). All submarine DFS submitted for evaluation must be adjudicated prior to operating the affected equipment except:

- a. A ship is in a Chief of Naval Operations availability and the affected system or component has been turned over to the Shipyard for maintenance or operation.

OR

- b. The system or component is entered into a formal test or test program, which controls operation.

8.2.4 Permanent and Temporary Approval of Departure from Specification. DFSs are approved as either permanent or temporary depending on the nature of the non-compliance and technical determination of whether the condition needs to be repaired.

- a. A temporary DFS requires subsequent action to correct the non-compliance and is approved with specific direction regarding duration and actions necessary to clear. A Major DFS accepting a temporary repair or condition is approved by the TYCOM following concurrence by an Authorized Technical Authority. A Minor DFS accepting a temporary repair will be approved by the TYCOM or ISIC as specified in paragraph 8.2.6 of this chapter.
- b. Temporary deviation or waivers initiated by the Authorized Technical Authority per reference (a) require TYCOM concurrence prior to approval.
- c. A permanent DFS requires no additional repair effort and is approved by NAVSEA. Technical Authority within NAVSEA for approval of a permanent DFS is specified in reference (a). As an exception, a permanent DFS may be approved only by the TYCOM or ISIC as specifically allowed in paragraph 8.2.6.a. of this chapter when previously approved precedent setting documentation that directly applies to the DFS

exists. The specific NAVSEA precedent must be referenced in the DFS approval.

NOTE: PARAGRAPH 8.2.5 OF THIS CHAPTER DOES NOT APPLY TO THE CATEGORY OF DFSs FOR CRANES COVERED UNDER REFERENCE (e). REFERENCE (e) LISTS THE CATEGORY REQUIREMENTS AND LEVEL OF APPROVAL FOR CRANE RELATED DFSs.

NOTE: AN OUT-OF SPECIFICATION PARAMETER IN A SUBMARINE FLY-BY-WIRE SHIP CONTROL SYSTEM FUNCTION MEASURED BY URO/MRC 019 IS ALSO CONSIDERED A MAJOR NONCONFORMANCE WHETHER OR NOT THE URO/MRC IS DUE FOR ACCOMPLISHMENT. URO MRC 019 PROVIDES THE REQUIREMENTS FOR PROCESSING URO MRC RELATED NONCONFORMANCES.

NOTE: THIS LISTING IS NOT ALL INCLUSIVE AND SITUATIONS MAY ARISE WHERE DEFICIENCIES NOT LISTED MAY BE OF SUCH A NATURE TO WARRANT A MAJOR DFS. FOR EACH DEFICIENCY DETERMINED TO DIRECTLY INVOLVE SAFETY OF SHIP, SAFETY OF PERSONNEL, OR CAUSE A REDUCTION IN THE INTEGRITY OR OPERABILITY OF EQUIPMENT ESSENTIAL TO SHIP'S MISSION, A MAJOR DFS MUST BE ISSUED.

8.2.5 Major Departure from Specification. A major DFS is one that affects performance, durability, reliability or maintainability, interchangeability, effective use or operation, weight or appearance (where they are a factor), health or safety, system design parameters such as schematics, flow, pressures, or temperatures, or compartment arrangements or assigned function. The following list identifies some deficient conditions which require a major DFS:

NOTE: IN SOME INSTANCES, THESE MAJOR DEPARTURES MAY SUBSEQUENTLY BE RECATEGORIZED BY THE LOCAL TECHNICAL AUTHORITY FROM MAJOR TO A MINOR PER REFERENCE (a).

- a. Use of unapproved joint design or additional joints.
- b. Nonconformances to plan specifications that result in a change in configuration. Examples are:
 - (1) Nonconformances to plan specifications resulting in a change in configuration or dimensions to pressure boundary parts or components. Examples would be "as found" dimensional or clearance differences from plan requirements for a Submarine Safety (SUBSAFE) valve bonnet and no authorization (e.g., Ship Alteration, Alteration and Improvement, Engineering Change Notice or NAVSEA letter) is available.
 - (2) Nonconformances to plan specification resulting in a change in configuration considered to be a permanent repair to pressure boundary parts. An example would be replacement of a failed valve of older design with one of more recent design because valves of the older design are no longer available and no authorization (e.g., Ship Alteration, Alteration and Improvement, Engineering Change Notice, NAVSEA letter) is available.
- c. Failure to meet all applicable standards for major repairs unless other alternatives are

authorized by this volume. Examples are linear indications, failed tightness test, hydrostatic test, use of unqualified welder or brazer, failed radiography, inadequate bond during brazing, etc.

- d. Pipe or component wall thickness below minimum specification without restoration. Epoxy and shim methods for ball valve repairs are not considered restorations of component wall thickness.
- e. Manufacture of a part or component without use or availability of applicable technical documentation (e.g., manufactured per sample due to non-availability of detailed drawings), regardless of whether the repair is considered temporary or permanent. A DFS is not required if the part or component is non-level and in a non-controlled system, it is fabricated from the correct material and the lack of technical documentation does not affect performance, durability, reliability or maintainability, interchangeability, use or operation, weight or appearance (where a factor), health or safety, or system design parameters.
- f. Failure to complete required retest of a SUBSAFE, Level I or Submarine Flight Critical Component (SFCC) component or system.
- g. Leakage from a SUBSAFE or Level I hull fitting, piping system, or component:
 - (1) Hull valve or fitting to hull flange leakage.
 - (2) Leakage or weepage through a component body or pipe wall. Completion of temporary repairs (e.g., plastic pipe patch) does not negate the requirement for a DFS.
 - (3) Leakage or weepage from a welded or brazed joint. Completion of temporary repairs (e.g., plastic pipe patch) does not negate the requirement for a DFS.
 - (4) Leakage upper escape and access hatches, leakage from hull glands (e.g., cable stuffing tubes, shaft or mast packing glands, electrical or electronic hull fittings excluding the inboard packing assembly and pressure proof caps screwed onto Electrical Hull Fitting cable connection) that is in excess of the allowable specification that cannot be repaired, immediately, by a packing adjustment or greasing.
- h. Installation of new pressure boundary parts which do not meet all applicable material certification requirements. The following are some departable conditions:
 - (1) (Submarines only) Non-Level I valve internals (e.g., ball, disc, poppet, flapper) installed in seawater or sea-connected hull valves and backup valves.
 - (2) Non-Level I weld rod, insert material, brazing filler, etc. installed in a SUBSAFE or Level I system welded or brazed joint.
 - (3) Non-Level I pressure boundary parts (e.g., stem, bonnet, studs, nuts) installed in or on SUBSAFE or Level I components or systems.
- i. (Submarines only) For any Unrestricted Operation (URO) Maintenance Requirement Card (MRC) measured parameter found out of tolerance and not restored, whether the MRC is due or not.

- j. (Submarines only) Failure to complete any URO MRC within required periodicity.
 - (1) Nonconformance requests that result in a change of the URO MRC inspection periodicity (not authorized by the MRC), a change in a URO MRC technical requirement, or deferral of required work require NAVSEA approval. TYCOM or Authorized Technical Authority approval is not authorized for these nonconformances.
 - (2) To support operational commitments, TYCOMs may authorize temporary periodicity extensions (not authorized by MRC) after consultation with NAVSEA 07T. The periodicity extensions should be limited to the next availability or in port period, where a submarine maintenance activity is available, and must be documented by a major DFS.
 - (3) When a URO/MRC periodicity becomes due during a maintenance availability, a DFS is not required when the TYCOM or ISIC takes positive actions to restrict submerged operations. Prior to the ship conducting underway surfaced or conducting submerged operations (except repositioning by tug or similar craft), all operational URO/MRC must be within periodicity (URO MRC 016, 019, 022, 025, 026, 029 and 036) and requirements must be complied with or a Major DFS must be approved. **Surfaced operations with an expired URO 036 do not require a DFS or waiver.**
- k. (Submarines only) For all submarine hatch (Logistics Escape Trunks, Lock Out Chambers, Logistic Plug Trunks, etc.) deficiencies which will not be repaired prior to ships underway involving the following:
 - (1) Non-operational submarine access hatch. (Upper Hatch Operability and Remote Operating Devices)
 - (2) Hatch clearance reading out of specification. (Hatch-to-Seat Clearance)
 - (3) Locking ring hatch lug alignment out of specification. (Coaming Lugs and Locking Rings)
 - (4) Locking ring hatch or trunk coaming lug metal-to-metal contact out of specification. (In Service Lug Engagement)
 - (5) Hatch gasket groove and hatch trunk seating surface out of specification. (Gasket and seating surface inspection)
- l. (Submarines only) Non-operational Emergency Main Ballast Tank Blow Valve, seawater system hull or backup valve, Modified After Signal Ejector or signal ejector muzzle ball valve, salvage air valve, etc.
- m. (Submarines only) Failure to complete any category “A” Alteration and Improvement.

- n. (Submarines only) A fault condition or unsatisfactory test within the FBW SCS certification boundary indicates a deficiency with a safety critical function per reference (f) and must be classified as a Major nonconformance under the following conditions:
 - (1) When the system design employs more than two redundant SFCCs and a deficiency degrades the redundancy to only two remaining SFCCs.
 - (2) When the system design employs two redundant SFCCs or a non-redundant SFCC and a deficiency results in the loss of a SFCC.
- o. Headed fasteners locally manufactured from Level I material (i.e., cap screws, bolts, machine screws, etc.) which have not been certified by tensile and hardness testing specified in MIL-DTL-1222 (Studs, Bolts, Screws and Nuts for Applications Where a High Degree of Reliability is Required; General Specification for) or FF-S-86 (Federal Specification, Screw, Cap, Socket Head) as applicable.
- p. (Submarines only) All high pressure compressed gas flasks designed to MIL-F-22606 specifications must be recertified at intervals not to exceed 20 years for SSN 688, SSN 21 and SSN 774 Classes and 21 years for SSBN and SSGN 726 Class. High-pressure air moisture separator flasks must be recertified at an interval not to exceed ten years for SSN 688, SSN 21, SSBN, SSGN 726 and SSN 774 Classes. All oxygen and gas management separator flasks designed to MIL-F-24032 specifications must be recertified at an interval not to exceed nine years for SSN 688, SSN 21 Class, SSBN and SSGN 726 Class. A major DFS, approved by NAVSEA, is required for any flask that will exceed the recertification periodicity.
- q. (Submarines only) Propulsion shafts must be replaced at intervals not to exceed six years for SSBN and SSGN 726 Class, seven years for SSN 688 and SSN 774 Classes and ten years for SSN 21 Class. A major DFS, approved by NAVSEA, with supporting operating information, including shaft turn count since shaft installation is required for shafts that will exceed planned replacement periodicity.
- r. (Submarines only) A Major DFS is required to document missing or damaged Special Hull Treatment removed from external structure only when the coating system beneath the Special Hull Treatment is missing or delaminated resulting in bare metal that is not repaired. Missing or damaged Special Hull Treatment removed from external structure is to be tracked using the CSMP process as long as the remaining coating system is intact or repaired (i.e., no bare metal) when the following conditions are met:
 - (1) The submarine is not currently in a Depot Level availability.
 - (2) Temporary repairs are performed following the requirements of the class specific hull treatment repair and maintenance manual.
 - (3) The CSMP item is scheduled to be cleared no later than the next scheduled Depot Level availability.
- s. (Submarines only) Torpedo Tube Muzzle Door K-Monel linkage components must be replaced every eight (8) years on all submarine classes. A major DFS, approved by NAVSEA, with supporting information including total waterborne exposure time of

existing components and torpedo tube recess anode type (LVA or Zinc), is required for any instance where this periodicity is exceeded. Note that this requirement is not applicable to SSN 688 Class submarines with Ordalt 18000 and SSBN and SSGN 726 class submarines with TZ-0932.

- t. Additive manufactured components with a NAVSEA Environment, Safety and Occupational Health Risk Matrix level of severity 1 thru 6 per reference (h).
- u. (Submarines only) Additive manufactured components must not be used for production of replacement components for any ship system that may affect ship safety, operation, integrity, or classified equipment which includes, but not limited to, SUBSAFE, LEVEL I, Fly-By-Wire, Scope of Certification, and other NAVSEA approved ship system components. The following information will be listed in the submarine DFS.
 - (1) The risk factor derived from table 10-3 of reference (h).
 - (2) The end use application of the AM part.
 - (3) The compartment the AM part is located.
 - (4) Weight of the AM part.
 - (5) All package label data from AM polymer feedstock or filament used.
- v. (Submarines only) For all rescue seating surface (Escape Trunks, Logistics Escape Trunks and Lockout Trunks) Periodic Maintenance Requirements (PMRs) not completed within periodicity. A major DFS, approved by NAVSEA, is required for rescue seats that will exceed planned PMR periodicity.
- w. (Submarines only) For all rescue seating surface (Escape Trunks, Logistics Escape Trunks and Lockout Trunks) paint or surface finish defects, not corrected prior to ships underway.

8.2.6 Minor Departure from Specification. A DFS which is not a Major DFS as defined in paragraph 8.2.5 of this chapter is considered to be a Minor DFS. All permanent Minor (and Major) DFSs will be approved by NAVSEA except those identified in paragraph 8.2.6.a. of this chapter, which may be dispositioned by the TYCOM or the ISIC. Temporary Minor DFSs identified in paragraph 8.2.6.b. of this chapter may also be dispositioned by the TYCOM or the ISIC. All other temporary Minor DFSs will be approved by the TYCOM. For submarines, TYCOM approval will follow the QA form 12 block 19 table. Temporary nonconformances, except SUBSAFE, Scope of Certification, and Fly-by-Wire nonconformances, that are minor which would not benefit from an engineering analysis or risk assessment will be entered into the CSMP and are not required to be submitted as a DFS. Paragraphs 8.2.6.a. through f. identify some deficient conditions which require a Minor DFS:

- a. Any condition which could be considered a Major DFS except for the fact that specific and definite (TYCOM or NAVSEA) guidance is available based on documented action for another identical (same component, same application, and same class ship) request in which no restriction was imposed. An example would be a previous DFS which was approved as a precedent setting DFS.
- b. Any condition which is associated with exemptions or alternatives to non-nuclear

retest requirements in Section 7.4 of Part I, Chapter 7, of this volume on testing, except where noted. Examples are:

NOTE: IF A MAINTENANCE CERTIFICATION RECORD/RE-ENTRY CONTROL IS CLOSED BY TRANSFERRING AT SEA TESTING TO A DFS (E.G., CONTROLLED DIVE TO TEST DEPTH FOR RETEST OF A PERISCOPE HULL GLAND, CONTROLLED DIVE FOR RETEST OF A SEA CONNECTED SYSTEM (E.G., MAIN SEAWATER, AUXILIARY SEAWATER) IN LIEU OF JOINT TIGHTNESS TEST TO “J” PRESSURE OF TEST PRESSURE DRAWING (TPD)), THE SHIP WILL BE RESTRICTED IN DEPTH AS REQUIRED IN PART I, CHAPTER 5, PARAGRAPH 5.6.5 OF THIS VOLUME.

- (1) (Submarines only) DFS for controlled dive following re-installation of a periscope.
 - (2) (Submarines only) DFS for controlled dive following work on a hatch exposed to sea pressure.
 - (3) (Submarines only) DFS for controlled dive following work on an Electrical or Electronic Hull Fitting.
 - (4) (Submarines only) DFS for installation of TYWRAPS in lieu of cable banding following waterborne cable replacement by divers.
 - (5) (Submarine only) DFS for controlled dive following for work lacking Mechanical Joint Tightness Testing of Torpedo Tube Flood and or Drain Electrodes.
 - (6) (Submarine only) DFS for conducting at sea operational testing such as Main Sea Water Fast Speed operations, shooting water slugs from 3" Launcher, Trim and or Drain Pump operations to measure Heat during operations.
 - (7) (Submarine only) DFS for deferral of System Operability Verification Testing.
- c. Any condition that requires at sea operations to certify planned maintenance or repairs excluding structural watertight integrity testing except as previously discussed.
 - d. Associated with a temporary repair to a system or component not involving ship or personnel safety or not involving integrity or operability of equipment essential to ship's mission.
 - e. For a material deficiency discovered during a maintenance action that will not be corrected prior to the ship's underway, and is not categorized as a Major DFS per paragraph 8.2.5 of this Chapter.
 - f. Additive manufactured components with a NAVSEA Environment, Safety and Occupational Health Risk Matrix severity level of severity 7 or “N/A” per ref (h).
 - g. (Submarines only) Additive manufactured components must not be used for production of replacement components for any ship system that may affect ship safety, operation, integrity, or classified equipment which includes, but not limited to, SUBSAFE, LEVEL I, Fly-By-Wire, Scope of Certification, and other NAVSEA

approved ship system components. The following information will be listed in the submarine DFS.

- (1) The risk factor derived from table 10-3 of reference (h).
- (2) The end use application of the AM part.
- (3) The compartment the AM part is located.
- (4) Weight of the AM part.
- (5) All package label data from AM polymer feedstock or filament used.

8.3 DEPARTURE FROM SPECIFICATION PROCEDURES.

NOTE: FOR SURFACE FORCE SHIPS AND AIRCRAFT CARRIERS, THE TYCOM WILL PERFORM THE ISIC FUNCTIONS OF THIS CHAPTER.

8.3.1 General Administrative Requirements. The following requirements pertain to all DFSs:

- a. Requests for DFS will be submitted, approved and cleared per paragraph 8.3.7 or 8.3.8 of this chapter. The Web Based Electronic Departure from Specification (eDFS) program is acceptable for use unless directed otherwise by the respective TYCOM.

NOTE: THE FORMS (QUALITY ASSURANCE (QA) FORM 12, QA FORM 12A) MENTIONED IN THE FOLLOWING DISCUSSION ARE COMPLETED ELECTRONICALLY WHEN USING eDFS.

NOTE: WHEN USING A NAVAL MESSAGE TO REQUEST A DFS OR REPORT A COMMANDING OFFICER APPROVED DFS THE EXACT FORMAT SHOWN IN APPENDIX A WILL BE USED. EACH PARAGRAPH IN THE NAVAL MESSAGE WILL HAVE A PARAGRAPH NUMBER, THE PARAGRAPH TITLE AND A COLON. ANY DEVIATION IN THE FORMAT MAY CAUSE A PROBLEM WITH THE AUTOMATIC DFS PROCESSOR. IF THE SHIP IS UNABLE TO CONNECT TO EDFS, A DEPARTURE MAY BE REQUESTED BY NAVAL MESSAGE USING THE FORMAT OF APPENDIX A.

- b. Requests for DFS will be normally submitted on a QA form 12. The approval of the DFS will normally be made on the QA form 12. If unable to use QA form 12, use the message format of Appendix A. Surface ships that are not able to generate a DFS using eDFS have the option of generating DFS per existing message based system or Command E-mail. The Command E-mail must be approved by the ship's Commanding Officer or his designated representative.
- c. The ship is responsible for all approved DFS relating to its systems or components until cleared or canceled. When a DFS is approved as a temporary repair requiring rework to correct the discrepancy, a CSMP entry for correction of the discrepant condition will be initiated by the ship or ISIC. This CSMP entry must include the DFS serial number, On-Site Analysis Report serial number (if applicable), or other technical references documenting or tracking the nonconformance. The ship's Quality Assurance Officer (QAO) will ensure that this action is done. Verify an active Job

Control Number (JCN) exists for all active temporary DFSs at the completion of all scheduled Fleet maintenance activity availabilities, major or minor, Chief of Naval Operations availabilities or at least quarterly and maintain an auditable record of the verification until superseded.

- d. The ISIC is responsible for all DFSs which have been approved or forwarded to TYCOM for approval until the DFS is cleared, canceled or formally transferred to another TYCOM. The ISIC is also responsible for ensuring that the CSMP entry is annotated on the DFS for temporary repairs.
- e. All DFS must be reported and controlled. Each activity must have an auditable system for reporting and controlling DFS. Deviation or waivers will be retained and tracked in an auditable fashion within the DFS system by Ship's Force and the ISIC or TYCOM until permanent documentation is confirmed to reflect the specific non-compliance. Use of the Web Based eDFS program will facilitate meeting these requirements.
- f. When work performed results in a DFS and requires future action (e.g., re-inspection, repair), the ship will submit an OPNAV 4790/2K (or equivalent) with a new Job Sequence Number. The CSMP Job Sequence Number will be included in Block 17 of the DFS. This Job Sequence Number will be added to the DFS prior to submission to the ISIC. The DFS or waiver will be retained in an auditable fashion with the DFS file. DFSs and waivers written exclusively to transfer accountability for testing do not require an OPNAV 4790/2K (or equivalent) with a new Job Sequence Number.
- g. To preclude last minute ship's operational delays, DFS should be processed as early as possible. Any request for approval for a DFS must contain all pertinent information on materials, processes, testing and procedures used, so that a complete and educated engineering evaluation can be made by the TYCOM, Local Technical Authority or System Command.
 - (1) (Carriers and Surface Force Ships) DFS serial numbers for Ship's Force initiated departures will be automatically supplied by eDFS (0000 series). For departures initiated by a depot level activity, the serial numbers will be automatically supplied by eDFS (1000 series). All outstanding departures must be submitted to the TYCOM for evaluation by a Local Technical Authority prior to a ship's underway. However, if the Local Technical Authority evaluation is not complete prior to the underway, the ship is responsible to ensure adequate temporary precautions or standing orders are in effect until the DFS evaluation is complete. For temporary departures expiring during an underway, as discussed in paragraph 8.3.9 of this chapter, the extension request must be made sufficiently in advance to allow the evaluation process to be completed before the expiration date and preferably prior to the underway in which the DFS expires.
 - (2) (Submarines only) DFS serial numbers for Ship's Force initiated departures will be maintained either in a handwritten or electronic log. For DFS serial numbers for work performed by NAVSEA managed activities, to include Public and Private shipyards or activities directed by TYCOM, must use 1000

series DFS numbers auto initiated by the eDFS software. For temporary departures expiring during an underway, as discussed in paragraph 8.3.9 of this chapter, the extension request will be made sufficiently in advance to allow the evaluation process to be completed before the expiration date (Temporary Approved Until Date) and prior to the underway in which the DFS expires.

- h. The activity originally requesting the DFS will track the DFS until it is approved or disapproved.
- i. For any DFS, Nonconformance, deviation or waiver that has been adjudicated, the approving activity is required to provide a copy of the DFS, Nonconformance, deviation or waiver to the ship's QAO for retention and tracking per paragraph 8.3.1e. of this chapter.
- j. (Submarines only) All departures must be adjudicated prior to the ship getting underway for submerged operations except as authorized by TYCOM where the approved existing DFS has a "Temporary Approved Until Date" that is the same or later than the unit's anticipated return to port date.

8.3.2 Review of Outstanding Departures from Specification. Commands responsible for tracking approved DFS will review them prior to each upkeep to establish FMA or shipyard work requirements to clear the DFS. DFSs should be cleared as soon as possible based on:

- a. Approval as a permanent repair.
- b. Condition has been corrected.
- c. Condition is no longer applicable as a result of an alteration.
- d. Condition is no longer applicable as a result of a change in the specification that originally resulted in the DFS request.

8.3.3 Clearing of Departure from Specification by Exposing Sea Connected Systems and Hull Integrity Boundary Items to Submergence Pressure (Submarines only). SUBSAFE certified submarines will submerge to 95% of design test depth, as a minimum, as measured to the keel, for clearing certain "Controlled Dive" DFSs. Satisfactory completion of the test and clearance of the DFS will be in the format of QA form 12A. If unable to use QA form 12A, use message format of Appendix B.

8.3.4 Incorporation of Departure from Specification in Selected Record Drawings, Data or Technical Variance Documentation.

- a. Those DFSs for a change in configuration which NAVSEA accepts as a permanent repair will be maintained in an auditable file by the ship and the ISIC until reflected in ship's selected record drawings, data or technical variance documentation. Examples are:
 - (1) An oversized shaft and bushing.
 - (2) A seal welded mechanical joint.
 - (3) Addition of piping joints or fittings.
 - (4) Different style or type valve.

- b. The activity submitting the DFS for permanent approval will inform the ship of the configuration change and provide sufficient data to support submission of Ship's Configuration Change Report (OPNAV 4790/CK) and a Fleet COSAL Feedback Report (NAVSUP 1371).
- c. For DFS approved as a permanent repair for material or component substitution resulting in a configuration change, the ship will submit a Ship's Configuration Change Report (OPNAV 4790/CK) and a Fleet COSAL Feedback Report (NAVSUP 1371) to ensure accurate configuration accounting and technical or supply support are maintained.
- d. The activity causing or discovering the nonconformance or departable condition that the DFS approved as a permanent repair, and affects selected drawings and records, will provide a copy of the marked up drawing to Ship's Force prior to underway and will forward a copy of the applicable portions of the work package and a marked up copy of the affected drawing or record to the planning yard as soon as practical. The ship and accomplishing activity will maintain a copy of the correspondence until the technical variance documentation or selected record drawing is issued.

8.3.5 Preparations for Correction of Departure from Specification and Clearance During Depot Level Availabilities. The following procedures will be used to schedule DFS for correction and report correction of DFS in depot level availabilities:

- a. Ship's Force or the parent ISIC will provide copies of DFS outstanding at the Availability Planning Conferences for incorporation into the work package as required by the Availability Baseline Work Package.
- b. DFS deferred to a Depot Availability for correction must be cleared by the submission of a QA form 12A as the shipyard accomplishes the work, provided that the shipyard "scope of work" corrected the DFS. Completion reports from shipyards are not required. These forms are submitted by Ship's Force to the ISIC or the NSA correcting the nonconformance. If unable to use a QA form 12A, use the message format of Appendix B.

8.3.6 Numbering of Departures from Specification. All DFSs will be identified by a unique sequential number issued by the affected ship. The sequential number will consist of the ship's designation and hull number, a hyphen, the sequential number portion, a hyphen, and the last two digits of the year (e.g., SSN 674-13-90, CVN 70-30-94). DFSs already assigned a number under another numbering system will be retained, as there is no intent to revise the numbers already used. DFSs established using the Web Based eDFS program will use the numbering conventions of those systems. Approved temporary departures requiring extension will not be assigned new Departure numbers.

8.3.7 Submission and Approval of Departures from Specification. The activity finding or causing a DFS will normally report the DFS to the appropriate approval authority using either a QA form 12, a naval message or electronically using the eDFS program. The DFS Request will be completed per the instructions. If unable to use QA form 12 or the electronic web based programs, use the naval message request format of Appendix A.

NOTE: IN THE FOLLOWING SECTION, IF USING eDFS, WHEN IT IS DIRECTED THAT THE QA FORM 12 IS SIGNED, AN ELECTRONIC SIGNATURE IS

15 Jan 2021

IMPLIED. ISIC AND UNITS ASSIGNED TO TYCOMs UTILIZING THE eDFS SYSTEM WILL SUBMIT DFSs TO THE TYCOM VIA THE eDFS PROGRAM. THIS PROGRAM REQUIRES A USER IDENTIFICATION AND PASSWORD SUPPLIED BY THE TYCOM. THE FOLLOWING PROCESSES WILL BE EXECUTED UNDER THE eDFS PROGRAM USING THE ELECTRONIC VERSION OF THE QA FORM 12 AND QA FORM 12A. THE SIGNATURES WILL BE ONLY THE PRINTED NAME AND TITLE OF THE INDIVIDUAL. SHIPS WITHOUT UNCLASSIFIED INTERNET ACCESS MAY SUBMIT DFSs AND DFS CLEARANCES TO THE ISIC VIA A MANUALLY PREPARED QA FORM 12 OR QA FORM 12A, THE STAND-ALONE MS ACCESS DATABASE FORMAT OR MESSAGE FORMAT IF AT SEA.

- a. The Work Center Supervisor, Leading Petty Officer, Craftsman or Quality Assurance Inspector will fill out the applicable portion of the QA form 12, ensuring the extent of the DFS and the recommendation for repair and re-certification must be clearly and completely stated, and deliver, after review by the cognizant division officer, to:
 - (1) For ship initiated DFS, the Ship's QAO or in his or her absence the Ship's Duty Officer.
 - (2) For FMA initiated DFS, the FMA QAO or in his or her absence the FMA Repair Duty Officer.
- b. The QAO or designated representative will:
 - (1) Review the QA form 12 for technical adequacy, accuracy, and completeness.
 - (2) Determine the latest time the answer must be received in order to carry out the ship's schedule, obtain and enter the next consecutive number from the affected ship's DFS log. For aircraft carriers, the numbering convention assigned by the Web Based eDFS program when submitting the DFS will be used.
 - (3) Deliver or forward to Department Head (ship) or Repair Officer (FMA).
- c. For ship initiated DFS, Ship Department Head (in his or her absence Ship's Duty Officer) will:
 - (1) Review the QA form 12 for technical adequacy, accuracy, and completeness.
 - (2) Sign the QA form 12 and deliver or forward to the cognizant ISIC QAO (in his or her absence ISIC Duty Officer).
- d. For FMA initiated DFS, FMA Repair Officer (in his or her absence his or her designated representative) will:
 - (1) Review the QA form 12 for technical adequacy, accuracy, and completeness.
 - (2) Sign the QA form 12 and deliver or forward it to the cognizant ISIC QAO (in his or her absence ISIC Duty Officer).
- e. For Depot initiated temporary waivers and deviations, responsible Depot personnel will:

- (1) Review the waiver or deviation for technical accuracy, adequacy, and completeness.
 - (2) Prepare and electronically sign a QA form 12 via eDFS and deliver or forward it to the cognizant ISIC representative QAO (in his or her absence the ISIC Duty Officer) for review and concurrence prior to approval. For a DFS initiated by a depot level activity, the ISIC will provide the JCN to the depot level activity when requested. For carrier repair activities, eDFS will automatically supply the next open DFS serial number. See paragraph 8.3.1g.(1) of this chapter for carriers and surface force ships and paragraph 8.3.1g.(2) of this chapter for submarines for a description of the current process for assigning DFS serial numbers.
 - (3) The ISIC representative QAO will review and concur with the waiver or deviation by signing the ISIC block of the QA form 12 or electronically signing in eDFS prior to Depot approval and return the waiver or deviation to the Depot. For temporary waivers and deviations, the ISIC representative will contact the Ship's Maintenance Planner or the Ship's QAO for a JCN and a Departure serial number (if required) prior to returning the waiver or deviation to the Depot.
- f. The cognizant ISIC QAO (in his or her absence his or her designated representative) will:
- (1) Review the QA form 12 for technical adequacy, accuracy, and completeness.
 - (2) Issue instructions regarding clearance and approve or disapprove and return QA form 12 to the Department Head (Ship) or Repair Officer (FMA) for action, filing in QA files, or both.
 - (3) Deployed Ships ISICs will ensure parent ISIC is an information addressee on all QA form 12s.
- g. Approval or disapproval of a DFS by the TYCOM or NAVSEA will be noted on the QA form 12.
- h. Upon completion of corrective action, the DFS will be cleared by the ship using the format of QA form 12A. The NAVSEA or TYCOM approval of a permanent repair requires no further administrative action.

NOTE: DO NOT DELETE ANY INFORMATION FROM AN eDFS ITEM THAT HAS RECEIVED TEMPORARY APPROVAL FROM EITHER THE ISIC, TYCOM OR AUTHORIZED TECHNICAL AUTHORITY.

NOTE: THE ABILITY TO ADD COMMENTS TO AN APPROVED DFS IS LIMITED BY THE ELECTRONIC SYSTEM'S ASSIGNED LEVEL OF ACCESS (I.E., ISICs CAN ADD COMMENTS ONLY TO THE ISIC PORTION OF THE DFS FORM).

8.3.8 Departure from Specification Approval and Reporting for Ships While at Sea or at a Port Without a Fleet Maintenance Activity.

15 Jan 2021

8.3.8.1 Evaluation. The Commanding Officer will evaluate any DFS and approve the corrective action to be taken including any necessary restrictions. The Commanding Officer will issue directions regarding clearance and approve or disapprove the DFS and return the QA form 12 to the Department Head for action, filing, or both. For any Commanding Officer approved DFS, a report of the condition and intended action will be made at the first opportunity to the ship's ISIC or TYCOM utilizing either a naval message in the "EXACT" format of Appendix A or the eDFS program.

8.3.8.2 Condition not Corrected. If the condition is not planned to be corrected or cannot be corrected during the next inport period (a port with a fleet maintenance facility), the Commanding Officer approved DFSs must be submitted to the applicable approval authority for adjudication prior to getting underway.

- a. (Submarines only) All departures must be adjudicated prior to the ship getting underway.
- b. (Aircraft Carriers and Surface Force Ships only) In the event the DFS evaluation is not completed prior to the ship's underway, the Commanding Officer approved DFS will remain in effect until the evaluation is completed and disposition provided.

NOTE: AN EXTENDED DEPARTURE WILL NOT BE ASSIGNED A NEW DEPARTURE NUMBER THAT CANCELS OR SUPERSEDES THE ORIGINAL DEPARTURE NUMBER.

8.3.9 Extending a Temporary Departure. In the event that a departed condition will not be corrected by the expiration date, the Ship's QAO is responsible to submit the departure(s) to the ISIC requesting an extension. The extension request will explain why the departure will not be corrected. The extension request must be made sufficiently in advance to allow the evaluation process to be completed before the expiration date. The Departure extension will be routed to the same level of approval authority as the original Departure.

- a. Nonconformances are expected to expire. It is acceptable for nonconformances to expire while the ship or Deep Submergence System (DSS) or Scope of Certification (SOC) asset is in a scheduled availability except as listed here:
 - (1) Nonconformances must not be permitted to expire for equipment or systems that are in operation or will be operated during the availability **except:**
 - (a) A ship is in a Chief of Naval Operations availability and the affected system or component has been turned over to the Shipyard for maintenance or operation.
 - OR
 - (b) The system or component is entered into a formal test or test program which control operation.
 - (2) Nonconformances associated with UROs must be approved and or extended prior to submarine underway operations unless the submarine is repositioned by tug or similar craft.

- b. (Submarines, DSS and SOC assets only) Must not get underway with expired nonconformances unless the submarine, DSS or SOC asset is repositioned by tug or similar craft.
- c. Extension requests via the eDFS program must be accomplished using the Request Extension feature accessed by clicking the associated button at the top of the QA form 12 for the most recent approved active DFS extension. If allowed by the TYCOM, changes to an existing nonconformance in the eDFS program may be accomplished by submittal of an "UPDATE" as directed in paragraph 8.3.10.c of this chapter. All changes to an existing nonconformance in the eDFS program that require NAVSEA approval must be accomplished by submittal of a DFS extension.

8.3.10 Electronic Nonconformance Administration.

- a. User access requires TYCOM or initiating agencies Point Of Contact (POC) approval for all levels of access.
- b. All attachments to the electronic nonconformances are preferred to be in Adobe Acrobat PDF format. If another format is used, ensure it is one that is readily available on government computers, such as Microsoft Word or Excel format. Nonconformances with attachments that cannot be opened by the ISIC or TYCOM will be rejected.
- c. Changes to an existing electronic nonconformance is normally accomplished by submittal of an "UPDATE" to the QA form 12.
 - (1) Changes must be disseminated via an e-mail alert.
 - (2) Deletion of QA form 12s will not be supported. Clear or cancel QA form 12s with a QA form 12A.
- d. The DFS CLEARANCE STATUS entry block must contain a brief description and status of the nonconformance (e.g., REPAIR GREASE DISTRIBUTION VALVE).
- e. Naval Sea Logistics Center (NAVSEALOGCEN) assistance is required to change an archived nonconformance. NAVSEALOGCEN will use the following process to change an electronic nonconformance:
 - (1) Database nonconformance changes (change to a QA form 12) will only be accomplished if requested by the TYCOM or the initiating agencies POC.
 - (2) Archived nonconformances requiring changes which were signed by multiple TYCOMS or multiple initiating agencies:
 - (a) Requires e-mail concurrence of all POC signatory users to the nonconformance prior to NAVSEALOGCEN making database changes or unarchiving the nonconformance (i.e., Supervisor of Shipbuilding, TYCOM and NAVSEA signed QA form 12).
 - (b) If a nonconformance is unarchived to allow TYCOMs or agency users to make changes, change will be accomplished per the requirement cited in paragraph 8.3.10.c. of this chapter.
 - (c) Each signatory level user should indicate their concurrence to the

change per the requirement cited in paragraph 8.3.10.c. of this chapter.

- (3) Archived nonconformances requiring change which were signed by a single TYCOM or single initiating agency:
 - (a) Requires e-mail concurrence of the POC signatory user to the nonconformance prior to NAVSEALOGCEN making database changes or unarchiving the nonconformance (i.e., Supervisor of Shipbuilding, TYCOM or NAVSEA signed QA form 12).
 - (b) If a nonconformance is unarchived to allow a TYCOM or agency user to make changes, change will be accomplished per the requirement cited in paragraph 8.3.10.c. of this chapter.

8.4 NUCLEAR COGNIZANT AREAS. Request for DFS for nuclear systems will be neither requested nor approved. If a ship or FMA has a question, problem, or is unable to comply with nuclear specifications, request for technical resolution will be made using a LAR. Formal resolution of the LAR is required prior to reactor plant or propulsion plant startup.

8.4.1 Nuclear Powered Surface Ships. A memorandum of agreement exists between NAVSEA Nuclear Propulsion Directorate (08) and NAVSEA PMS 312 or 335 that details the division of responsibilities within the propulsion plants of nuclear powered ships. This may be useful to Forces Afloat as an aid in directing inquiries and correspondence and has been distributed to all nuclear surface ships as a NAVSEA letter Ser 08J/C90-5873, dated 7 AUG 90.

8.4.2 Reactor Plant Systems. If a nuclear powered ship or nuclear capable FMA is unable to comply with specifications for reactor plant systems or components listed in enclosure (1) to reference (g) and also those systems identified as nuclear by the appropriate nuclear or non-nuclear interface diagram (references (b) and (c)), then a review of NAVSEA 08 requirements must be requested. In general, technical resolution to questions or problems for reactor plant systems or components requires use of a liaison inquiry according to the requirements of references (b) and (c).

- a. References (b) and (c) provide the requirements on submission of LARs for nuclear powered surface ships and submarines.

NOTE: LARs SUBMITTED MUST CONTAIN ALL INFORMATION REQUIRED BY REFERENCE (b) AND REFERENCE (c) TO ENSURE A RAPID, ACCURATE RESPONSE.

- b. Reference (d) provides the requirements on submissions of LARs for nuclear support facilities.
- c. A LAR should not be submitted for cases of out of specification seat leakage of nuclear valves after repairs. The Reactor Plant Planning Yard and Reactor Plant Prime Contractors do not have the authority to waive valve leakage specifications. When valve seat leakage exceeds reactor plant manual specification after attempted Ship's Force or FMA repairs, the following method may be used to defer rework and close out the Controlled Work Package (CWP):

NOTE: THIS ALTERNATIVE TO SATISFACTORY COMPLETION OF RETEST IS APPLICABLE ONLY TO VALVE SEAT LEAKAGE.

- (1) The ship must inform TYCOM (via squadron or group for submarines) by message with an info copy to NAVSEA 08. The message must include a description of the initial problem, repairs conducted, seat leakage rate, leak specification, dates of next availability, status of the following sub-paragraphs (2) through (5), and request for authorization to continue operation with out-of-specification seat leakage.
 - (2) All hydrostatic and tightness test requirements must be satisfactorily completed.
 - (3) All other portions of the CWP must be properly completed.
 - (4) A new maintenance deferred action must be submitted to the ISIC for repair of the valve seat leakage at the next FMA availability.
 - (5) The valve seat leakage must not constitute an operational problem (for submarines, Group or Squadron's determination and justification statement required).
 - (6) Based on Ship's justification statement, TYCOM will respond by message to all concerned regarding deferral of corrective maintenance. After satisfactory final review, closeout of the CWP can be made with an approved deferral of corrective maintenance in lieu of a satisfactory seat leakage test.
- d. A liaison action file, with a sequential index and containing all submitted Nuclear LARs, must be maintained by the originating activity. The file must contain a copy of LARs submitted. A copy of the liaison action must be kept with liaison requests in the Answered LARs section and in the CWP or Formal Work Package if applicable.
- e. Request for DFS for nuclear systems will be neither requested nor approved. If a ship, FMA or shipyard has a question, problem or is unable to comply with nuclear specifications, request for technical resolution will be made using an LAR or Trouble Record.

8.4.3 Propulsion Plant Systems (Aircraft Carriers only). If a ship or FMA has a question, problem or is unable to comply with non-nuclear specifications, technical assistance is available from the Propulsion Plant Engineering Activity (PPEA). The PPEA was formed to provide an additional technical resource for assisting operational aircraft carriers with technical or operational issues not associated with Ship Alteration installation and configuration control. PPEA Liaison services are requested using the Steam Plant Action Request (SPAR). The SPAR allows the Fleet and overhaul activities to submit requests to the PPEA for technical assistance on non-Ship Alteration related issues; the SPAR is not intended to replace the LAR process described in this chapter or non-nuclear LARs submitted to the Hull Planning Yard per reference (i). The PPEA can request information, disseminate technical information associated with the Steam Plant to the Fleet or overhaul activities, or direct work that does not require a drawing change or affect system configuration control using the Steam Plant Liaison Inquiry. Procedures for preparing SPARs are discussed in reference (c).

NOTES:

1. Office codes for TYCOMs are: COMNAVAIRLANT N43/N9; COMNAVAIRPAC N434; COMNAVSURFLANT N434; COMNAVSURFPAC N434; COMNAVSURFLANT/AIRLANT SNPMTT N02NB; COMNAVSURFPAC N434 AND COMNAVAIRPAC N9/N434; PACIFIC FLEET CVNs – COMNAVAIRPAC N9/N434; COMNAVSURFLANT N434 AND COMNAVAIRLANT N9/N43; ATLANTIC FLEET CVNs - COMNAVAIRLANT N9/N43; COMSUBLANT N4322; COMSUBPAC N4, N4322.
2. Office codes for NAVSEA are: PMS 392 and SEA 07TC (All SSN and SSBN/SSGN); PMS 399 (DEEPSUBM and DDS); OOC (DDS and DLSS). For URO related DFS, also include the appropriate NAVSEA codes listed in the URO MRC.
3. Include NAVSEA 07Q for informational purposes on all SUBSAFE DFS messages. Include the applicable Program Manager at NAVSEA for informational purposes on all SOC DFS messages. Include the NAVSEA 07T for informational purposes on all Fly-By-Wire Ship Control System (FBW SCS) DFS messages.
4. Include SUBMEPP only on URO related DFS.
5. Comply with current annotation and declassification requirements for classified messages.
6. Year/Month/Day.
7. Enter date of latest revision.

8. When non-approved parts are used, identify part by NSN, Mil Spec, drawing and piece number and MIC level.
9. When DFS is the result of part non-availability, identify APL and NSN or drawing and piece number and state that the part is not available until (year, month, day) or unknown.
10. Where new welded or brazed pipe joints are added, state the welding or brazing procedure used. State the NDT procedure(s) used (if applicable). State completed, or to be completed tests.

INSTRUCTIONS:

1. From Line - Command requesting or submitting the DFS.
2. To Line - List the respective ISIC, TYCOM and NAVSEALOGCEN Mechanicsburg PA. (see note 1)
3. Info Line - Any additional activities that should receive a copy of this DFS message. (see notes 2, 3 and 4)
4. Subject Line - Must include one of the following:

For a standard DFS request, the subject line will start out with:

DFS REQUEST FOR (SHIP'S NAME AND HULL NUMBER, THE DEPARTURE NUMBER ASSOCIATED WITH THE REQUEST, THE COMPONENT AND SHORT DESCRIPTION)

For a notification of a CO approved DFS the subject line will start out with:

NOTIFICATION OF COMMANDING OFFICER APPROVED DFS (SHIP'S NAME AND HULL NUMBER, THE DEPARTURE NUMBER ASSOCIATED WITH THE NOTIFICATION, THE COMPONENT AND SHORT DESCRIPTION)

5. Reference Line - List all required references. (see note 6)
6. AMPN Line - Used if only one reference is listed. (see note 7)
7. NARR Line - Used if there are two or more references listed. (see note 7)
8. RMKS Section - Must be completed exactly as shown here:

NOTE: THE COLONS MUST BE INSERTED EXACTLY AS SHOWN.

RMKS/1. DFS NUMBER: (enter the next sequential DFS number from the ship's DFS log. Note, this number may be changed during the input process due to previously entered departures that were entered prior to receipt of this message)

2. SHIP & HULL NUMBER: *(enter the ship's name and hull number)*

3. JCN: *(enter JCN of task that resulted in a discrepant condition or the lack of compliance)*

4. CWP NUMBER: *(enter the CWP serial number if a CWP was used or mark N/A if no CWP used)*

5. DATE OF DFS: *(enter the date the DFS was initiated)*

6. ORIGINATOR: *(name of person initiating the DFS)*

7. DEPARTURE TYPE *(at least one item under departure type will be YES. For submarines a yes will be entered by SUBSAFE, SOC, FBW and SFCC as needed)*

A. MAJOR: *(enter either YES or leave blank)*

B. MINOR: *(enter either YES or leave blank)*

C. SUBSAFE: *(enter either YES or leave blank)*

D. SOC: *(enter either YES or leave blank)*

E. FBW: *(enter either YES or leave blank)*

F. SFCC: *(enter either YES or leave blank)*

8. DEPARTURE CLASSIFICATION *(either DEVIATION or WAIVER will have a YES after it. FBWDR will be followed by YES if applicable for submarines)*

A. DEVIATION: *(enter either YES or leave blank)*

B. WAIVER: *(enter either YES or leave blank)*

C. FBWDR: *(enter either YES or leave blank)*

9. SYSTEM/COMPONENT/LOCATION/ESWBS: *(enter the system/component affected, location and ESWBS if known)*

10. NAVSEA DRAWING/PLAN NUMBER/PIECE NUMBER: *(enter the NAVSEA drawing number, plan number and piece number)*

11. REFERENCES: *(enter applicable references)*

12. APPLICABLE SPECIFICATIONS: *(enter the applicable specifications citing the reference from block 11. Be descriptive and specific. Enter the reference that provided the specification. This block should fully explain the specifications and include the Job Identification Number or part applicable (e.g., perform "J" pressure test to test pressure depth after mechanical assembly of joints "XXXX" in which software was replaced). This block must be explicit, so that no reference is required to the work procedure to understand the specifications.)*

13. SITUATION/DEGREE OF NON-COMPLIANCE: *(enter what the actual condition is. (enter qualitative/quantitative deviation description from block 12 including variations based on ship's conditions.) Sketches, drawings, QA forms, etc., may be attached, if they clarify the description of the non-conforming condition.)*

14. COMMENTS/RECOMMENDATION: *(enter justification, course of action, tests conducted, affected systems, ECD (if known))*

15. DATE ANSWER REQUESTED BY: *(MMDDYYYY enter the month, day and year that an answer to the DFS request is required by. For a Notification of a CO Approved DFS leave blank, no date is required)*

16. SUBMITTING ACTIVITY: *(enter the name of the activity submitting the departure)*

17. NEW JCN: *(enter the JCN that will be used to correct the non-compliance or discrepant condition)*

18. CO APPROVED DFS: *(enter either YES (if this is a Notification of a CO Approved DFS) or leave blank)*

15 Jan 2021

NOTES

1. Office codes for TYCOMs are: COMNAVAIRLANT N43/N9; COMNAVAIRPAC N43;
 COMNAVSURFLANT N434; COMNAVSURFPAC N434; COMNAVSURFLANT/AIRLANT

SNPMTT N02NB; COMNAVSURFPAC N434 AND COMNAVAIRPAC N9/N432N;
PACIFIC FLEET CVNs - COMNAVAIRPAC N9/N432N/N432; COMNAVSURFLANT N434
AND COMNAVAIRLANT N9/N43; ATLANTIC FLEET CVNs - COMNAVAIRLANT
N9/N43; COMSUBLANT N4322; COMSUBPAC N4, N4322.

2. Office codes for NAVSEA are: SEA 07TC (All SSN and SSBN/SSGN); PMS 399 (DEEPSUBM and DDS); OOC (DDS and DLSS). For URO related DFS, also include the appropriate NAVSEA codes listed in the URO MRC. Include the NAVSEA 07T for informational purposes on all Fly-By-Wire Ship Control System (FBW SCS) DFS messages.

3. Include SUBMEPP only on URO related DFS.

4. Subject line should be identical to subject line of TYCOM approval message.

5. Year/Month/Day.

6. Enter date of latest revision.

(*) Comply with current annotation/declassification requirements for classified messages.

VOLUME V**PART I****CHAPTER 9****AUDITS, SURVEILLANCE, EVALUATIONS AND ASSESSMENTS**REFERENCES.

- (a) NAVSEA ST700-AM-GYD-010 - Metrology and Calibration (METCAL) Laboratory Requirements and Certification Guide
- (b) NAVAIR 17-35QAL-15 - Naval Aircraft Carrier and Amphibious Assault Ships Metrology and Calibration (METCAL) Program Manual

LISTING OF APPENDICES.

- A Vertical Audits
- B Horizontal Audits
- C Surveillances
- D Submarine Quality Assurance Assessment Evaluation Criteria
- E Quality Assurance Audit, Assessments and Surveillance Discrepancy Form

9.1 PURPOSE. Provide requirements, procedures, and criteria for audits, surveillance, evaluations and assessments of the Fleet Quality Assurance (QA) Program.

9.2 GENERAL. Command evaluation is necessary in order to ensure that positive and effective corrective actions are determined and taken in any deficient areas. Audit, surveillance, evaluation and assessment programs are objective and constructive evaluations of the quality, effectiveness and efficiency with which repairs are being accomplished. The purpose of these programs is to determine the activity's compliance with established directives and to serve as tools to reduce rework, improve efficiency and produce permanent improvement in operational readiness. The internal audit and surveillance program must be flexible and dynamic. Specific grooming, concentrating on any recent problems, should be done on a regular basis to increase the benefit of the audit or surveillance. Infrequent repair efforts, components which have repetitive failures, first time repair efforts or time critical work are excellent examples of the types of jobs where extra monitoring could prove most beneficial. Guides used should lend themselves to evaluate recent command or division issues. Involvement of the highest levels of the command is essential to a highly effective program. QA form 14 can be a valuable tool to accomplish the tracking of corrective actions.

9.2.1 Audits. Audits are an internal systematic comparison of records and requirements to ensure compliance with technical and administrative requirements. Different types of audits may be performed depending on the area to be audited and the purpose of the audit. The audit categories are:

- a. Vertical Audit. These audits review all aspects of one repair or maintenance action. They track the system or component task from start to finish. This is done by verifying all aspects of the technical, material, process and documentation requirements associated with the work. These audits include attributes covering the entire spectrum of the task (e.g., training and qualification of personnel, technical and production requirements, cleanliness, material control). Appendix A provides guidelines for the preparation and conduct of vertical audits.
- b. Horizontal Audit. These audits are conducted on only one specific area or aspect of the QA program (e.g., Re-Entry Control (REC), welding, training, qualification, and testing). They focus on the particular area and do not track a job from start to finish. Appendix B provides guidelines for preparation and conduct of horizontal audits.

9.2.2 Surveillance. Surveillance involves observation of actual work in progress or specific areas of concern. Appendix C provides general guidance for the preparation and conduct of a surveillance.

9.2.3 Evaluation. Evaluations provide the Commanding Officer with an internal review of the overall adequacy and effectiveness of the QA program.

9.2.4 Assessments. Assessments are an external programmatic review of processes to ensure compliance with parent directives. Assessments are normally conducted by the Command's Immediate Superior In Command (ISIC) with participation of other commands, as determined by the ISIC.

9.2.5 Key Elements. Fleet Activities will use, as a minimum, the following key elements to assure the effectiveness of their audit or surveillance program.

- a. Conduct training on techniques for preparation, execution and the evaluation of findings prior to conducting an audit or surveillance for the first time.
- b. Development and use of attribute sheets and guides. These should be based on key attributes from the source documents and are not meant to limit the scope of the review.
- c. Selective use of QA form 14. QA form 14 is an effective tool to document and track those deficiencies that require further investigation and programmatic evaluation. Deficiencies that are minor in nature, or that do not indicate a weak area in the ship's or Fleet Maintenance Activity's (FMA) QA program, should be documented in the audit or surveillance conducted along with corrective action taken.

NOTE: CORRECTION OF SOME DEFICIENCIES ASSOCIATED WITH THE AUDITS OF RECORDS FOR CONTROLLED WORK MAY RESULT IN REWORK.

- d. Develop a thorough review process focusing on audit and surveillance deficiencies to identify adverse trends and recurring deficiencies.

9.2.6 Record Retention. The retention of records for audits and surveillance will be per Part I, Chapter 10 of this volume.

9.3 RESPONSIBILITIES AND PROCEDURES.

NOTE: THE WELDER REQUIREMENTS OUTLINED IN THIS CHAPTER ARE FOR PRODUCTION WELDERS ONLY AND DO NOT APPLY TO SUBMARINE NUCLEAR PROPULSION PLANT OPERATOR WELDERS (NEC Code 3351 and 3361).

9.3.1 Ship's Force Audits, Surveillance and Evaluation Program.

- a. Ship's Force personnel will conduct internal QA Audit and Surveillance as scheduled by the Quality Assurance Officer (QAO) as part of the ship's overall monitoring program. This program should focus on in-process controlled work and must use the guidance of Appendices A, B and C. QA form 14 should be used to document and track those deficiencies that require further investigation and programmatic evaluation. Minor deficiencies which do not affect certification of a component or system or the nature of the finding does not warrant specific follow up action, may be entered into a deficiency-tracking system for trend analysis or corrected without causal analysis or long-term corrective action unless recurring in nature.
- b. Ship's Force will schedule and conduct the following audits:
 - (1) Annual audits to be conducted:
 - (a) Material control.
 - (b) QA Audit and Surveillance program.
 - (c) QA and welder training and qualification programs.
 - (d) QA records and record retention.
 - (e) Departure from Specification (DFS).
 - (f) Cleanliness controls to include:
 - 1 Training and qualification.
 - 2 Local directives.
 - (g) Technical documentation availability and controls.
 - (h) Shipboard calibration facilities. (Aircraft Intermediate Maintenance Department calibration facilities only.)
 - (i) (Submarines only) Submarine Safety (SUBSAFE), REC, Fly-By-Wire (FBW) and Scope of Certification (SOC) program compliance.
 - (j) (Submarines only) Unrestricted Operation (URO) Maintenance Requirement Card (MRC) Program.
 - (2) Perform a closeout audit.
 - (a) Perform a closeout vertical audit of all Controlled Work Packages (CWP) on a quarterly basis, except RECs, when not in a Chief of Naval Operations availability.
 - (b) Perform a post closeout audit of all RECs within 60 days following availability completion or within 60 days of work completion if work was not accomplished in availability.

- (3) Written audit guides must be used for each audit. The QAO will develop audit guides for all audits. The audit guides should be tailored and customized for the specific organization or area being audited. One successful technique is to acquire a collection of audit findings from previous audits or other ships and incorporate these into the audit guides.
 - (4) All audits should be conducted on an annual basis unless a shorter period is specified. Those areas identified as weak should be audited more frequently. The periodicity of these audits must be adjusted by the QAO based upon the results of previous audits or surveillance.
 - (5) Maintain an auditable record of the most current Job Control Number to DFS verification.
- c. Administer an aggressive QA surveillance program to ensure compliance with all QA requirements and to support work process improvements. The surveillance program must include the following elements:
 - (1) Surveillance of in-process work of all types.
 - (2) Surveillance of shipboard calibration facilities.
 - (3) Surveillance of all work center controlled material storage areas at a minimum frequency of semi-annually. This surveillance must be conducted by a qualified CMPO, QAI, QAS, or QAO.
- d. Report results of all audits and Surveillances to the Commanding Officer with copies to the Executive Officer and cognizant Department Head or Division Officer.
- e. Annually, the ship's QAO will evaluate the effectiveness of the QA Audit and Surveillance program. This reviews the results of the internal Audit and Surveillance program to identify trends or areas requiring additional monitoring. It should also review external inspections or monitoring deficiencies to determine if immediate and permanent corrective actions have been effective or if additional surveillance is required in a specific area.

9.3.2 Fleet Maintenance Activity Audit, Surveillance and Evaluation Program.

- a. FMAs will schedule and conduct the following audits:
 - (1) Annual audits to be conducted:
 - (a) Material control.
 - (b) QA audit and surveillance program.
 - (c) QA, NDT, and brazer or welder training and qualification.
 - (d) QA records and record retention.
 - (e) Cleanliness controls to include:
 - 1 Training and qualification.
 - 2 Local directives.

- 3 Facilities such as permanent oxygen clean work areas, oxygen clean material storage areas and special clean or cleaning rooms (except for oxygen clean instrument room).
 - (f) Technical documentation availability and controls.
 - (g) Test equipment (mechanical, electrical and electronic) control, issue, receipt and maintenance.
 - (h) Audits of calibration facilities per references (a) and (b).
 - (i) (Submarine repairs only) Submarine Safety (SUBSAFE), REC, SOC and FBW program compliance.
 - (2) Perform a post closeout audit of all CWP's.
 - (a) Perform a post closeout audit of all CWP's quarterly except RECs.
 - (b) Perform a post closeout audit of all RECs within 60 days following availability completion.
 - (3) Written audit guides must be used for each audit. The FMA will develop audit guides for all audits. The audit guides should be tailored and customized for the specific organization or area being audited. One successful technique is to acquire a collection of audit findings from other FMAs and incorporate these into the audit guides.
 - (4) All audits should be conducted on an annual basis unless a shorter period is specified. Those areas identified as weak should be audited more frequently. The periodicity of these audits must be adjusted by the QAO based upon the results of previous audits or surveillance.
 - (5) Report results of all audits to the Commanding Officer with copies to the Repair Officer (Planning Officer at TRIDENT Refit Facilities) and cognizant Department Head or Division Officer.
- b. Administer an aggressive FMA QA surveillance program to ensure compliance with requirements and to support FMA work process improvements. The surveillance program must include the following elements:
- (1) Surveillance of in-process work of all types.
 - (2) Surveillance of calibration facilities per references (a) and (b).
- c. Evaluations. The FMA QAO will conduct a semi-annual evaluation of the overall adequacy and effectiveness of the FMA's QA program.
- (1) This evaluation should include the following areas:
 - (a) Findings of the annual internal audits.
 - (b) Results of the FMA's internal surveillance program.
 - (c) An evaluation of trends identified by the FMA QA audit and surveillance programs. Areas requiring additional monitoring should be identified.

- (d) A review of external inspections or monitoring deficiencies (ISIC, Radiological Controls Practices Evaluation and Naval Reactors Representative's Office surveillance) that relate to the FMA QA program or QA records.
 - (e) The previous semi-annual evaluation to determine the effectiveness of corrective actions.
 - (f) Review of the last FMA assessment to check for recurring deficiencies and effectiveness of corrective action.
- (2) Results of this evaluation will be provided to the Repair Officer, Department Head (Planning Officer at TRIDENT Refit Facilities) and Commanding Officer.

NOTE: IN THE CASE OF SHIPS WITH MULTIPLE CREWS (SUCH AS LCS, SSBN OR SSGN), ISIC APPENDIX D PROGRAM AREA EVALUATIONS MUST BE SUBMITTED FOR EACH CREW VICE A SINGLE REPORT REQUIRED BY THE TYCOM.

9.3.3 Immediate Superiors in Command Assessments, Audits, and Surveillance.

- a. QA Program Assessment.
 - (1) ISICs must schedule and conduct a QA Program assessment in conjunction with the Fleet Readiness Training Plan (or as determined by each Type Commander (TYCOM)) of all assigned ships. This assessment will review these areas:
 - (a) Vertical audit of CWPs, to include Level I, Submarine Flight Critical Components per reference (d) and nuclear work (i.e., CWPs), as applicable.
 - (b) Material identification and control, including procurement, receipt inspection, marking, storage, issuing and in-process use.
 - (c) Qualification and training of QA personnel.
 - (d) Metal fabrication, including welding, brazing, NDT qualification and processes.
 - (e) DFS.
 - (f) Cleanliness program.
 - (g) Audit and surveillance programs (to include QA-14 Binder).
 - (h) QA records and record retention.
 - (i) Effectiveness of corrective actions for previous audit findings.
 - (j) (Submarines only) SUBSAFE, SOC and FBW program compliance, to include REC exceptions.
 - (k) (Submarines only) URO MRC Program.

16 Oct 2019

- (2) (Submarines only) Assessments will be evaluated using the criteria provided in Appendix D. Electronic copies of the assessment reports will be forwarded to the TYCOM. Submission of the assessment may be via e-mail with appropriate cover letter.
- (3) (Surface Force Ships) Copies of the assessment reports will be forwarded to the TYCOM noting completion of assessment as satisfactory with findings documenting corrective action taken or proposed corrective action or corrective action required to be taken by the TYCOM or higher authority.
- b. ISICs will conduct the following additional periodic audits and surveillance:
 - (1) Conduct periodic monitoring of Ship's Force controlled work and QA program on all assigned ships during maintenance periods.
 - (a) Perform at least one surveillance during each refit, upkeep or FMA availability.
 - (b) Conduct monitoring during industrial availabilities.
 - (2) Conduct monitoring of assigned FMA's QA. This monitoring will include:
 - (a) Review of work procedures including opening and closing practices.
 - (b) Monitoring of in progress work both on tended ships and in FMA work centers.
- c. (Submarines only) Additional ISIC Requirements.
 - (1) On completion of a Selected Restricted Availability (SRA), Pre-Inactivation Restricted Availability (PIRA), Major Maintenance Period (MMP), Extended Refit Period (ERP), Docking Phased Maintenance Availability (DPMA) or Interim Drydocking (IDD), the ISIC will conduct an audit to include the following:
 - (a) Conduct a 100% audit of CWP's for SUBSAFE work accomplished by Forces Afloat (FMA and Ship's Force).
 - (b) Conduct an audit of UROs assigned to Forces Afloat (Ship's Force and the FMA) by the Availability Work Package (AWP) and ensure all URO MRCs have been satisfactorily completed and documented within the required periodicity. Verify that all URO MRC items coming due within six months of availability completion are complete or assigned to a follow-on fleet availability. ISICs are not responsible for auditing UROs assigned to the depot in the AWP.
 - (c) Conduct a review of all outstanding Forces Afloat DFSs.

NOTE: UPON COMPLETION, PROVIDE THE SHIP'S COMMANDING OFFICER AND THE FMA COMMANDING OFFICER A COPY OF THE RESULTS FROM THE REVIEWS CONDUCTED PER PARAGRAPH 9.3.3 OF THIS CHAPTER AND IDENTIFY ANY DEFICIENCY THAT MUST BE CORRECTED OR RESOLVED PRIOR TO UNDERWAY. REPORT SIGNIFICANT DEFICIENCIES TO THE TYCOM.

16 Oct 2019

- (2) For submarines scheduled to and undergoing a Post Shakedown Availability (PSA), Depot Modernization Period (DMP), Extended Docking Selected Restricted Availability (EDSRA), Engineered Overhaul (EOH), Engineered Refueling Overhaul (ERO), Refueling Overhaul (RFOH) or Regular or Refueling Overhaul (ROH), the following audits will be performed:
 - (a) Vertical audits of all Forces Afloat (including FMA) CWP's done since commencement of the PSA, DMP, EDSRA, EOH, ERO, RFOH or ROH prior to cold operations and prior to Fast Cruise. CWP's audited for cold operations do not have to be re-audited for Fast Cruise. These audits must be done sufficiently early to avoid impact on the PSA, DMP, EDSRA, ERO, EOH, RFOH or ROH schedule. If deemed necessary by the ISIC or based on the amount of Forces Afloat work, the ISIC may conduct vertical audits prior to other Key Events (e.g., hot operations, criticality, undocking).
 - (b) Prior to commencement of Fast Cruise for the PSA, DMP, EDSRA, EOH, ERO, RFOH or ROH conduct an audit of the following:
 - 1 Conduct an audit of UROs assigned to Forces Afloat (Ship's Force and the FMA) by the AWP and ensure all URO MRCs have been satisfactorily completed and documented within the required periodicity. Verify that all URO MRC items coming due within six months of availability completion are complete or assigned to a follow-on fleet availability. ISICs are not responsible for auditing UROs assigned to the depot in the AWP.
 - 2 All outstanding Forces Afloat DFS.
 - 3 Verify any non-conformance of a temporary nature has been correctly resolved per Part I, Chapter 8 of this volume.
- (3) The ISIC will perform a Submarine Operating Cycle Extension Assessment of each submarine per reference (c) when required by TYCOM.

NOTE: THE ISIC IS ONLY RESPONSIBLE TO AUDIT FBW WORK PERFORMED BY FORCES AFLOAT OR TYCOM MANAGED ACTIVITIES.

- (4) Conduct a 100% audit if Upgrades, Alterations or Major Repair Work of the FBW system were performed. Use the FBW message reporting process for certification specified in Volume II, Part I, Chapter 3 of this manual for availabilities of less than six months duration.

9.3.4 Type Commander Assessments. TYCOM QA Assessments of ISICs, where applicable, and submarine maintenance FMAs will be conducted annually, not to exceed 18 months. Assessments by TYCOMs will be accomplished concurrently with FMA assessments, explained in Volume IV, Chapter 2 of this manual, when scheduled in the same calendar year. Assessments will include review of the following areas as applicable:

- a. Level I, Submarine Flight Critical Components per reference (d) and nuclear work (i.e., CWP's).

- b. Material identification and control including procurement, receipt inspection, marking, storage, issuing, and in-process use.
- c. Qualification and training of QA personnel.
- d. (FMA Only) Metal fabrication including welding, brazing, NDT, qualification, and processes.
- e. DFS program.
- f. Cleanliness program.
- g. Audit and surveillance program.
- h. QA records and record retention.
- i. Effectiveness of corrective actions for previous audit findings.
- j. (Submarines only) SUBSAFE, REC, SOC and FBW program compliance.
- k. (Submarines only) URO MRC program.

9.4 REPORTING AUDIT, SURVEILLANCE AND ASSESSMENT RESULTS AND CORRECTIVE ACTION.

NOTE: WHEN REPEAT FINDINGS ARE NOTED, THE AUDITOR MUST DECIDE IF ROOT CAUSE ANALYSIS IS REQUIRED FOR THE SPECIFIC DEFICIENCY.

9.4.1 Reporting Requirements for External Audits, Surveillances and Assessments. Each Audit, Assessment and Surveillance Report finding should be a concise statement of the situation, complete to the extent that it will stand on its own as a summary of the condition. It should include the requirement for immediate corrective action where such action is indicated. In the event the finding is not a direct violation of a requirement or the nature of the finding does not warrant specific oversight from the auditing activity, yet it offers room for process improvement, no official response is required. These findings are offered to commands as a tool to improve their processes. Such findings will be clearly identified in the audit report reflecting that no official response is required. A discussion should generally be included to amplify the nature of the finding. If not included in the finding, identify positively what directives were violated. TYCOM, ISIC audit, assessment or surveillance findings will be reported using the format of Appendix E. The TYCOM or ISIC cover letter forwarding the QA Audit, Assessment or Surveillance Discrepancy forms (Appendix E) will include a summary of all areas. When repeat findings are noted, the effectiveness of the corrective action taken in response to previous audits should be addressed.

- a. Ship's Force will provide a report to the ISIC of completed corrective action, proposed corrective action and schedule of accomplishment within 60 days of receipt of the ISIC Official Audit, Assessment or Surveillance Report. Specifically, the Ship's Force report must:
 - (1) For individual findings that require immediate corrective action, include a root cause, causal analysis, immediate corrective action and permanent corrective action.

- (2) For areas evaluated as weak (i.e., Below Standards) or areas where repeat findings indicate that previous corrective action was not effective include:
 - (a) A discussion of the fundamental root causes.
 - (b) A discussion of action taken to correct the causes and an evaluation of the effectiveness of this action.
 - (c) A discussion of the reasons why previous corrective action was not successful in improving any area where repeat findings indicate that previous corrective action was not effective.
 - (3) For all other individual findings requiring an official response, include, at a minimum, a permanent corrective action taken to correct the deficiency.
- b. (Submarines and Submarine Repair Activities) For immediate corrective action items (items that must be corrected prior to certain operations):
- (1) (Within the SUBSAFE Boundary) The immediate corrective action must be complete and verified with the ISIC prior to the ship's next underway for submerged operations or within 15 days of receipt of the ISIC Official Audit, Assessment or Surveillance Report, whichever is sooner. All deficiencies which affect certification must be categorized as "IMMEDIATE CORRECTIVE ACTION".
 - (2) (Within the SOC Boundary) The immediate corrective action must be clearly identified as to whether it must be completed prior to manned operations whether in-port or at-sea, or prior to unmanned operations at-sea or within 15 days of receipt of the ISIC Official Audit, Assessment or Surveillance Report, whichever is sooner. This may require discussions with the Program Manager or the System Certification Authority (SCA). The corrective action must be complete and verified with the ISIC prior to the operation being conducted that was restricted.
 - (3) (Within the Level I Boundary) The immediate corrective action must be clearly identified as to what system operation restrictions must be in place prior to the completion of the corrective actions. The corrective action must be complete and verified with the ISIC prior to the operation of the system if restricted or prior to at-sea operations or within 15 days of receipt of the ISIC Official Audit, Assessment or Surveillance Report, whichever is sooner.
 - (4) (Within the FBW Boundary) The immediate corrective action must be complete and verified with the ISIC prior to the ship's next underway for surfaced or submerged operations or within 15 days of receipt of the ISIC Official Audit, Assessment or Surveillance Report, whichever is sooner. All deficiencies which affect certification must be categorized as "IMMEDIATE CORRECTIVE ACTION".
- c. FMAs will provide a report to TYCOM via ISIC (if applicable) on completed corrective action, assessment of root cause, proposed permanent corrective action, and schedule of accomplishment within 60 days of receipt of the TYCOM QA Audit, Assessment or Surveillance Official Report. Those items determined to need

immediate correction should be addressed on a case basis. No official response is required for those items indicated as not requiring a response.

- d. Naval Sea Systems Command (NAVSEA) Deep Submergence System and SOC Surveys. Findings for Deep Submergence System and SOC Surveys are reported per Part III paragraphs 9.3.4.2 or 9.3.6.3 of this volume, as applicable. Survey findings will be formally forwarded to the Sustaining Activity via the ISIC and an informational copy to the respective TYCOM and maintenance activity, as applicable. The Sustaining Activity response will be provided to the SCA via the operational chain of command. Survey findings to allow manned operations will be processed as indicated here:
- (1) When action identified by a specific card has been completed, a brief summary of the corrective action must be written on the card and the card must be signed by the Command responsible for the corrective action. All applicable Objective Quality Evidence (OQE) documenting the corrective action taken must be attached to the signed card and forwarded to the SCA via the ISIC and an informational copy to the respective TYCOM.
 - (2) For Category 1A, Category 1B and applicable Category 1C findings affecting manned operations, the corrective action must be completed and verified with the SCA prior to manned operations whether in-port or at-sea, or prior to unmanned operations at-sea, or within 30 days of receipt of the Official NAVSEA Survey Report, whichever is shorter.
 - (3) For all other findings, the Sustaining Activity will provide a report to NAVSEA, via the ISIC, of completed corrective action, proposed corrective action and schedule of accomplishment within 60 days of receipt of the Official NAVSEA Survey Report.

9.4.2 Correcting Deficiencies in Certified Controlled Work Packages or Objective Quality Evidence Records. Deficiencies identified in OQE of certified (closed) CWP or OQE records (such as retained for REC exceptions) require action to update or correct the OQE to support continued certification of the system. No changes are permitted to a certified CWP, the certified supporting documents listed on the Maintenance Certification Record/REC or certified OQE record except as noted below. Additional OQE that is generated to clarify the certified documents can include providing additional administrative information to clarify the OQE documentation, re-performance of the maintenance or performance of certification testing. The CWP OQE record must be annotated to associate the additional information to the document(s).

- a. A QA form 14 must be generated for each OQE deficiency identified. Each QA form 14 must identify the deficiency, root cause and corrective action required or completed. The corrective action taken must clearly identify the revised OQE attributes such as data, an attached certified QA form, a separate CWP number (to document a rework such as performance of a required test, inspection or assembly process) or approved DFS (if applicable).
- b. The QA form 14 serial number(s) must be annotated at the top of the QA form 9 or QA form to clearly indicate a QA form 14 has been generated to revise or update the OQE.

- c. Once all required actions are completed to revise or update the OQE, a copy of the completed QA 14 forms and any additional documentation generated must be attached to the CWP QA form record such that it is clear that the OQE was revised or updated and certification of the system was restored. The QA form 14 index log must be updated to indicate the action was completed and the log must be retained per Part I, Chapter 10 paragraph 10.5.6 of this volume.

APPENDIX A

VERTICAL AUDITS

1. The function of a vertical audit is to determine if a single job has been completed following the required specifications. It tracks the job from start to finish by using the documentation used to perform and certify the job. The following steps are considered the minimum requirements to conduct an audit:
 - a. Assemble the documentation for the job being audited.
 - b. Assemble the references.
 - c. Assign auditors who are familiar with the job being audited.
 - d. Develop (if not already existing) attribute sheets to be used during conduct of audit.
 - e. Assemble previous audit discrepancies, if applicable.
 - f. Brief auditors on the following:
 - (1) Purpose of vertical audit.
 - (2) Common discrepancies from previous audits.
 - (3) Audit attributes.
 - g. Conduct audit in the following manner:
 - (1) Review procedure against the governing references or documentation to ensure they reflect what was supposed to be accomplished, if it was accomplished, and how it was accomplished.
 - (2) Review all documentation pertaining to OQE to ensure that it actually reflects that the job was done correctly. Additionally, a check for accuracy and completeness of forms is required.
 - (3) All deficiencies noted, that require investigation or program evaluation to identify root cause and permit effective and permanent corrective action, will be documented on a QA Audit Discrepancy form (Appendix E), or QA form 14, as appropriate, and presented to the activity being audited.
2. There is no specific formula for the successful completion of a vertical audit other than time and attention to detail. If properly performed, this audit provides an excellent method to assess the effectiveness of the QA program, since it provides small concise snap-shots of several areas of the entire program.

APPENDIX B

HORIZONTAL AUDITS

1. The function of a horizontal audit is to review one specific area or part of an area to ensure compliance with the governing requirements. It focuses only on the documentation used to certify the area of concern. The following steps should be considered minimum requirements for an audit:
 - a. Assemble the source documents and references for the area being audited.
 - b. Assemble the documentation and records of area being audited.
 - c. Develop (if not already existing) attribute sheets and audit guide to be used during conduct of the audit.
 - d. Assemble previous audit findings (if available) for area being audited.
 - e. Assemble and brief auditors on the following:
 - (1) Purpose of audit.
 - (2) Audit attributes.
 - (3) Common discrepancies from previous audits (if available).
 - f. Conduct audit in the following manner:
 - (1) Review area being audited using attribute sheets and audit guide.
 - (2) Review the organization's implementation and adherence to the source documents.
 - (3) Review the documentation used to certify that the organization is in compliance with the governing requirements.
 - (4) Document deficiencies which require investigation or program evaluation to determine root cause and permit effective and permanent corrective action on a QA Audit Discrepancy form (Appendix E), or QA form 14, as appropriate, and present it to the organization being audited.
2. If properly performed this type audit provides an excellent assessment of a specific area within the overall QA program.

APPENDIX C

SURVEILLANCES

1. Surveillance programs provide an excellent method for activities to review in-process work and every day practices to determine if deficient conditions or areas exist. A surveillance is designed to observe in-process work on a particular job.
2. The following steps should be considered minimum requirements for surveillance:
 - a. Personnel assigned to conduct a surveillance must be knowledgeable and trained in how to conduct surveillance.
 - b. Personnel assigned to conduct a specific surveillance must be knowledgeable in the area to be monitored.
 - c. Once assigned, the individual should prepare for the surveillance in the following manner:
 - (1) Assemble the reference material for the surveillance (e.g., Technical Work Document, Formal Work Package, Planned Maintenance System MRC, URO MRC and process instruction).
 - (2) Review reference material. This review may indicate other documentation that must be reviewed. This review should concentrate on the specific steps or portions of the procedure, which will be monitored during the surveillance.
 - (3) Based on the review, attribute checklists may be developed and used, which are tailored to the area to be monitored.
 - (4) Individual assigned must stay abreast of the job progress to ensure that the surveillance is conducted as required to observe the critical aspects. It serves no purpose to conduct the surveillance, if the job has progressed to a point of insignificant importance (e.g., surveillance of a valve repair after valve is repaired and being reassembled).
 - d. Once all preparations are complete, the surveillance should proceed in the following manner:
 - (1) Upon arrival at the job site, inform individuals performing the job that a surveillance is being conducted.
 - (2) Position yourself so the job can be monitored but not to interfere with individual(s) performing the work.
 - (3) Ensure that all key elements and attributes are observed. The focus must be on technical requirements and adherence to it. In those instances, where a safety issue, incorrect assembly, or violation of a technical requirement critical to the job is noted, identify this to the individuals performing the job and request they stop until the problem can be resolved.
 - (4) Look beyond the items on the checklist, if used, for evidence that work is being done correctly.

- (5) Once the surveillance is completed, inform the individuals performing the job of any violations or comments noted during the surveillance. Findings will also be discussed with appropriate supervisor.
 - (6) Write up surveillance findings and provide them to the QAO with copy to the division officer in charge of the work surveyed.
- e. It is important that personnel involved in the surveillance program understand that they must focus their efforts towards improvement of the program by being objective and thorough when performing a surveillance. Identification of deficiencies should lead to effective corrective action and an overall improvement in the QA program.

APPENDIX D

SUBMARINE QUALITY ASSURANCE ASSESSMENT EVALUATION CRITERIA

1. The following guidance is provided to establish consistent grading standards across the Submarine Force. This will enable consistent evaluation of QA assessments in the Submarine Force and provide specific feedback to commands thus improving their ability to independently assess and maintain readiness in Undersea Warfare. The areas are based on the requirements of this chapter. The overall assessment will be graded as satisfactory or unsatisfactory. A grade of unsatisfactory will be assigned by the ISIC if any of the following criteria are met:
 - a. Unsatisfactory in any of the following areas:
SUBSAFE, REC, DSS-SOC, FBW-SCS Program or URO MRC Program or,
 - b. Unsatisfactory in Vertical Audit of CWPs and Audit, Surveillance, Evaluation and Assessment Program or,
 - c. Unsatisfactory in Vertical Audit of CWPs and QA Training and Qualification. Any additional trending may be provided by the ISIC. An overall grade of unsatisfactory will result in the ISIC restricting the ship from processing any controlled work and the ISIC will issue specific guidance for controlled work processing and performance up to and including assuming certification responsibilities for controlled work. This assumption of certification responsibilities by the ISIC will remain until the ISIC has deemed that adequate actions have been taken to correct the significant programmatic issues.
2. Quality Assurance Program Assessment area criteria.

NOTE: WHERE NOT PREVIOUSLY DEFINED BY REFERENCE (A), ISICS SHOULD GENERALLY REVIEW 20%, BUT NO LESS THAN 10 CWPS, OF THE TOTAL CWPS WORKED BY THE SHIP SINCE THE PREVIOUS AUDIT.

- a. Vertical Audit of CWPs: This review encompasses a sampling of RECs, REC Exceptions and Maintenance Certification Records. Deficiencies noted during the review that affect certification and require an Immediate Corrective Action Report (ICAR) are generally the grade drivers for this area of the assessment. Additionally, systemic weaknesses in documentation of OQE, determination of technical requirements (e.g., torque, retest) and ineffective supervisor reviews may also require an ICAR.

Vertical Audit of CWPs	
Grade	Attributes
Above Standards	No ICARs.

At Standards	≤ 2 ICAR.
Below Standards	≥ 3 ICARs or systemic problems in specific areas of work package development or review (i.e., inadequate supervisory reviews, inability to properly determine retest).
Unsatisfactory	ICARs written on four or more CWPs or ICARs written on 40% of the CWPs audited, whichever is greater.

- b. **Material Control:** This review focuses on storage, handling and documentation. Inspections of lockers are the usual source of deficiencies in this area. Cards are written based on the magnitude of deficiencies. The magnitude should be determined by taking the total items with deficiencies and dividing by the number of items in the inventory. Additionally, systemic failures to follow both local and Joint Fleet Maintenance Manual (JFMM) requirements or installation of uncertified material into a controlled system may require an ICAR.

Material Control	
Grade	Attributes
Above Standards	No Locker deficiencies.
At Standards	< 10% deficiencies No ICAR on material Control.
Below Standards	$\leq 25\%$ deficiencies or one ICAR on Material Control (Controlled work or Program Coordination).
Unsatisfactory	> 25% deficiencies or one ICAR on Material Control (Controlled work or Program Coordination).

- c. **DEPARTURES FROM SPECIFICATION:** This program review consists of a review of active DFSs and necessary OQE supporting clearance of DFSs against JFMM requirements. Deficiencies are normally centered on improper administration (e.g., incorrect Job Control Numbers) or inadequate record retention.

DFS	
Grade	Attributes
Above Standards	No deficiencies noted.
At Standards	Only minor (< 10) administrative deficiencies noted with program administration.

Below Standards	Multiple deficiencies with records (≥ 10) or systemic failure to follow JFMM and ISIC requirements for administration of program.
Unsatisfactory	Any ICAR assigned based on failure to follow DFS policies.

- d. **Audit, Surveillance, Evaluations and Assessment:** This review is an in-depth review of how the ship's ability to monitor, assess and determine corrective actions to prevent re-occurrence. This review is one of the more subjective areas and the auditor will have to be consistent in his methodology and provide specific comments. In general, the grades will be based on the ability to meet the requirements (e.g., conduct the required audits as required by the JFMM). Other driving factors may include repeat poor performance and systemic failure to follow both local and JFMM administrative requirements. An aggressive program is defined as one where the QAO demonstrates his surveillance schedule is dynamic and focuses on infrequent repair efforts, first time repairs and components that have repetitive failure in addition to previously noted weak areas. An aggressive program will also demonstrate how weak areas are assessed, assigned corrective actions that affect change and have been adequately re-assessed.

Audit, Surveillance, Evaluation and Assessment Program	
Grade	Attributes
Above Standards	All audits performed as scheduled or required. Aggressive surveillance program.
At Standards	≤ 1 Audit not performed. Only minor (< 10) administrative deficiencies noted with program administration.
Below Standards	≤ 2 Audits not performed. Multiple deficiencies with records (≥ 10) or systemic failure to follow JFMM and ISIC requirements for administration of program.
Unsatisfactory	> 5 Audits not performed. Continued below standards performance with program.

- e. **QA Training and Qualification:** This review will validate that the ship has an auditable qualification program and that the ship is maintaining the qualification (i.e., continuing training) as required by Part I, Chapter 3 of this volume.

QA Training and Qualification	
Grade	Attributes
Above Standards	Demonstrated QAO involvement in the QA Program. Demonstrated ability to incorporate lessons learned in QA Training Program. Demonstrated accountability in SUBSAFE, FBW-SCS and DSS-SOC awareness training

	for all required personnel.
At Standards	Only minor (< 10) administrative deficiencies noted with program administration. Adequate number of qualified personnel.
Below Standards	Multiple deficiencies with records (≥ 10) or systemic failure to follow JFMM requirements for administration of program (e.g., QA training plan not incorporated into Engineering Training Plan, qualification of personnel not auditable).
Unsatisfactory	Continued below standards performance with program.

- f. **QA Records and Record Retention:** Review will ensure that OQE and program records are being maintained per Part I, Chapter 10 of this volume.

QA Records and Record Retention	
Grade	Attributes
Above Standards	All required records are available and auditable.
At Standards	Records retained in an auditable fashion. Only minor (< 10) administrative deficiencies or missing records noted.
Below Standards	Multiple deficiencies with records (≤ 25) or systemic failure to maintain records as required by JFMM requirements.
Unsatisfactory	Records completely un-auditable or loss of a controlled work package.

- g. **SUBSAFE, REC, DSS-SOC and FBW-SCS Program:** This review ensures that the ship has maintained certification of SUBSAFE, REC, FBW-SCS and DSS-SOC systems following the applicable manuals. When ships utilize more than one level of control (e.g., SUBSAFE and FBW) then individual grades will be provided. ICARs of SUBSAFE, REC, FBW-SCS or DSS-SOC may influence the grade for this area as indicated here:

SUBSAFE, REC, SOC and FBW Program	
Grade	Attributes
Above Standards	No deficiencies noted.
At Standards	Only minor (< 10) administrative deficiencies noted with program administration.
Below Standards	Multiple deficiencies with records (≥ 10) or systemic failure to follow JFMM

	requirements for administration of program. Missing one or two REC Exception Documents.
Unsatisfactory	Failure to issue certification of continuity letters or failure to use REC controls when performing SUBSAFE, REC, DSS-SOC or FBW-SCS work when re-entry controls are required. Missing three or more REC Exception Documents.

- h. URO MRC Program: This program review is to ensure that the ship maintains certification on all systems that contain URO measured parameters. Ships are required to call out the correct retest and maintain appropriate documentation for the program per Volume VI, Chapter 25 of this manual.

URO MRC Program	
Grade	Attributes
Above Standards	Not applicable.
At Standards	All documentation on hand. All UROs within periodicity. All maintenance affecting URO parameters properly retested.
Below Standards	Missing or un-auditable URO documentation (records were recovered from other organizations). Failing to properly document a URO retest for associated maintenance (retest performed for some other reason, e.g., periodicity).
Unsatisfactory	Operated at sea with an Out of Specification, untested or overdue URO parameter.

3. The following metrics will be identified in the Quality Assurance Assessment report issued by the ISIC:

CWPs		REC EXCEPTIONS		Total	
ISSUED	AUDITED	ON-FILE	AUDITED	ICARS	CARS
QAO History (since previous audit)					
	Rank/Name		Duration Assigned (mm/yy-mm-yy)		
Current					
Prior					
Assistant QAO History (since previous audit)					

	Rank/Name	Duration Assigned (mm/yy-mm-yy)
Current		
Prior		
Qualification Status		
	Actual	Fleet Standard for Area
Craftsman		
Planner		
CMPOs		
QAI		
WCS		
Welders		
O2 Clean		
STP Clean		
RP Clean

10.1 PURPOSE. Provide record keeping and retention requirements for the Quality Assurance (QA) records used by the Fleet.

10.2 GENERAL. QA records provide the only lasting records and Objective Quality Evidence (OQE) that repairs and alterations performed on ships of the fleet were accomplished and subsequently tested following applicable specifications. The accuracy of these records will be beyond reproach and the record for each job will be complete so as to "stand alone", that is, the record will be understood without additional explanation.

10.2.1 Quality Assurance Record Requirements. Record keeping methods are of concern because they affect the apparent validity of a completed record. In order to ensure continued validity of Fleet maintenance records, and to provide the necessary OQE, the following record keeping rules are specified:

- a. Hand written Record and Certification Signature Block or signature will be legible, in ink and per reference (a). Erasures, write-overs, white outs, ditto marks, continuation arrows, signature stamps, etc., are not acceptable.
- b. Neatness and readability of the original record is paramount. Copying records to "make them neat" is prohibited.
- c. When an error is made, it will be corrected by drawing a single line through the error, recording the correct entry, initialing, dating and printing the name of the person making the correction.
- d. When a questionable item is recognized and is subsequently justified or accepted, remarks explaining the decision will be added or appended as appropriate.

- e. QA records pertaining to certification of nuclear work will be kept per the requirements of reference (b).

10.2.2 Record Retention in General. The following paragraphs summarize the general QA records that will be retained by each organizational group and how long they will be retained:

- a. **Reduced Size Records.** Records (except radiographic film) required to be maintained may be reduced in size (such as by microfilming or CD-ROM in .pdf format only). However, the activity (ship or Fleet Maintenance Activity (FMA)) responsible for the record will ensure that the reduced size records are clearly legible, reproducible, and will so certify prior to destroying the original records. The following procedure will be followed for record reduction:
 - (1) Record reduction must be per reference (c).
 - (2) Compare the reduced size record against the original record to ensure each page of the original record has been reduced. This comparison must ensure that the front and the associated back of QA forms and tags have been reproduced.
 - (3) Reproduce two randomly selected pages of the reduced record into paper copy. Verify completeness and legibility of reproduced pages by comparing against the original record.
 - (4) Person making comparison will sign the logbook or some other permanent record to certify that the reduced size record is complete and legible after being reproduced.
 - (5) After steps (1) through (4) are satisfactorily completed, the original record may be destroyed.
- b. **Storage and Disposal.**
 - (1) **Nuclear Records.**
 - (a) Records that are required to be retained for the life of the ship by reference (b) require Naval Sea Systems Command Nuclear Propulsion Directorate (NAVSEA 08) approval prior to record disposal.
 - (b) Records of nuclear controlled work will be retained at the activity (ship or FMA) for at least three years following completion of the work per reference (b). They may then be transferred to a Federal Records Center (FRC) or other designated records repository per reference (c), after these records are no longer required on board.
 - (c) Records stored at a FRC. Records stored at FRC will be per reference (c). Those records stored at a FRC or other designated repository will be appropriately cataloged to allow prompt retrieval if necessary. A copy of the list of records transferred to storage will be sent to the applicable Type Commander (TYCOM). TYCOM will retain these lists until the ship is stricken from Navy rolls. Activities may forward reactor plant work records to FRCs specifying that the records be destroyed 75 years from the date the records are sent to the FRC.

- (2) Level I Records.
 - (a) Non-Nuclear and Non-Submarine Safety (SUBSAFE) Level I Records will be maintained for a minimum of 75 years from the ship's delivery date for new construction or 75 years from the availability completion date for repairs, overhauls, conversions, etc. Disposition instructions will be requested from NAVSEA 05P via the appropriate TYCOM after that time.
 - (b) Records of Level I work will be retained at the activity (ship or FMA) for at least three years following the completion of the work. After three years, the records may be stored ashore.
- (3) Submarine Safety and Submarine Flight Critical Component (SFCC) Records.
 - (a) SFCC records must be kept per reference (d). The re-entry control log, completed Re-Entry Controls Forms (MCR/REC), and supporting documentation for SUBSAFE and SFCC work must be maintained for the life of the ship.
 - (b) Records of SUBSAFE and SFCC work will be retained at the activity (ship or FMA) for at least three years following the completion of the work. After three years the records, including completed RECs and supporting documentation, may be stored ashore or at a FRC in an auditable condition.
 - (c) Records stored at a FRC will be per reference (c). Those records stored at a FRC or other designated repository will be appropriately cataloged to allow prompt retrieval if necessary. Activities may forward SUBSAFE and SFCC records to FRCs specifying that the records be destroyed 75 years from the date the records are sent to the FRC.
 - (d) Approval to destroy non-ship-specific completed RECs, REC logs, completed RECs, and supporting documentation must be obtained from NAVSEA 07Q via the appropriate submarine TYCOM.
- (4) Scope of Certification (SOC) Records.
 - (a) The REC log, completed RECs and supporting documentation must be maintained for the operational life of the Deep Submergence System.
 - (b) The REC log, completed RECs, and supporting documentation of work performed by the Sustaining Activity must be maintained by the Sustaining Activity in an auditable condition for the period between major availabilities and between sustaining surveys. When work requiring REC is accomplished by an activity other than the Sustaining Activity, the Sustaining Activity's REC log must reflect this work and the Sustaining Activity must maintain a copy of the completed REC form (QA form 9 and QA form 10 when applicable). After this period, the records, including completed RECs and supporting documentation, may be stored ashore or at a FRC in an auditable condition.

10.3 TYPE COMMANDER QUALITY ASSURANCE RECORD RETENTION.

10.3.1 Assessment Record Retention. Retain copy of last assessment of FMAs and Immediate Superiors in Command (ISIC), where applicable, including the report of root causes and corrective action.

10.3.2 Departure from Specification Record Retention.

- a. Maintain outstanding Departure from Specification (DFS) File. This file may be maintained on electronic media.
 - (1) An index that reflects the major DFS unique serial number assigned, date approved, the system or component including brief description and status.
 - (2) A copy of each outstanding major DFS and all applicable correspondence.
- b. (Submarines only) A hard or electronic copy of cleared major SUBSAFE and SFCC DFSs with an index will be retained for life of ship.

10.3.3 Material Certification Statement Retention (Submarines only).

- a. A hard or electronic copy of the TYCOM and NAVSEA SUBSAFE Material Certification message from new construction, Depot Modernization Period (DMP), Engineered Overhaul (EOH), Engineered Refueling Overhaul (ERO), Refueling Overhaul (RFOH) and Regular or Refueling Overhaul (ROH) will be retained for life of ship.
- b. A hard or electronic copy of the Operating Cycle Extension Assessment used as basis for granting TYCOM extension of operating interval or operating cycle will be retained until the ship enters the next Selected Restricted Availability (SRA), DMP, EOH, ERO, RFOH or ROH for which the TYCOM extension applies.

10.4 IMMEDIATE SUPERIOR IN COMMAND QUALITY ASSURANCE RECORD RETENTION.

10.4.1 Assessment and Surveillance Record Retention.

- a. Copy of last ISIC or TYCOM assessment of assigned ships and FMA including report of root causes and corrective action.
- b. (Submarines only) Copy of the ISIC monitor surveillance reports of the FMA and assigned ships and the corrective action. Retain the past 18 months of monitor surveillance reports. These records may be kept with the other ISIC monitor program records.
- c. (Submarines only) Copy of the last TYCOM assessment of the ISIC and corrective actions.
- d. All SUBSAFE and Fly-By-Wire Certification Audit Reports of ships must be retained for the life of the ship per paragraph 10.2.2b. of this chapter.

10.4.2 Departure from Specification Record Retention.

- a. Outstanding DFS Files.

- (1) A hard copy or electronic media index that reflects the DFS unique serial number assigned, TYCOM major DFS number (if assigned), date approved, system or component including brief description and status.
- (2) A copy of each outstanding DFS and all applicable correspondence.
- b. A hard or electronic copy of cleared DFS with an index will be retained for 24 months.

10.4.3 Material Certification Statement Retention (Submarines only).

- a. The SRA or Tiger Team certification statements from industrial activities will be retained until the next SRA, DMP, EOH, ERO, RFOH or ROH of the affected ship.
- b. The ISIC request for Sea Trials (Volume II, Part I, Chapter 3, Appendix BK, and if used, Appendix BF of this manual) and the TYCOM message authorizing Sea Trials (Volume II, Part I, Chapter 3, Appendix BD, and if used, Appendix BG of this manual) for CNO availabilities less than 6 months until the next SRA, DMP, EOH, ERO, RFOH or ROH of the affected ship.
- c. The most recent FMA end of upkeep statement.
- d. The most recent ship generated, prior to underway, certification continuity report will be retained.
- e. The audit guide and justification used for any Operating Cycle Extension Assessment of assigned ships will be retained per paragraph 10.3.3 of this chapter.

10.5 SHIP'S QUALITY ASSURANCE RECORD RETENTION.

10.5.1 Controlled Work Package Log. The Quality Assurance Officer (QAO) will maintain a Controlled Work Package (CWP) log, using the QA form 11, for the life of the ship. Re-copying or consolidation of this log is not to be done.

10.5.2 Completed Controlled Work Packages. All CWPs (retain onboard per paragraph 10.2.2 of this chapter), which includes:

- a. Maintenance Certification Record (MCR/REC) (QA forms 9 and 10).
- b. References unique to this task (e.g., NAVSEA letters, Liaison Action Requests) will be retained with the CWP unless specifically identified to allow recall, if necessary.
- c. All enclosures documenting the OQE (e.g., QA forms and Ready for Issue (RFI) tags (NAVSEA 9210/2 and 9210)) will be retained.
- d. FWPs executed as the core of a CWP must be retained with the CWP. After three years when CWPs are moved ashore or placed in storage, the FWP portion of the CWP may be discarded.

10.5.3 Controlled Material Records. Controlled material records will be maintained with the associated CWP. Those records not associated with a CWP will be maintained on file by the QAO.

- a. The Supply Officer will maintain on file the letter of certification from the Supervisor of Shipbuilding, for all lots of Level I, SFCC Stock Program material and Nuclear Repair Parts during the new construction period. When the material is issued, a copy of this letter should be attached to the QA form 1.

NOTE: MATERIAL CONTROL RECORDS (E.G., QA FORM 2s) ARE NOT REQUIRED TO BE RETAINED FOR REMOVED AND REINSTALLED CONTROLLED MATERIAL AFTER THE CWP IS CLOSED.

- b. The QAO will maintain controlled material records as outlined here. These records should be included in the appropriate CWP to the maximum extent practical. Retain material certification files for all Nuclear Level I, SFCC and Level I material installed.
 - (1) RFI tags for Nuclear Level I items installed.
 - (2) For any Nuclear Level I items received and installed without a RFI tag retain all OQE used to certify.
 - (3) All OQE used to upgrade material for non-nuclear "Level" use.
 - (4) All QA forms 3 for any rejected items accepted for use.
 - (5) A file of QA forms 1 with certification documentation.

10.5.4 Qualification Records. The QAO will maintain a master list of qualified Work Center Supervisors and Maintenance Planners, Controlled Material Petty Officers (CMPO), Cleanliness Inspectors, Quality Assurance Inspectors (QAI), Quality Assurance Supervisors (QAS), Oxygen Clean Workers and Oxygen Clean Instructors. The records will be retained for the duration the individual is onboard. Records in the case of re-qualifications must consist of a written plan and sub-paragraphs a. through d., as applicable, based upon the plan defined by the QAO or Department Head. The file will consist of:

- a. Date Personnel Qualification Standard completed. For Oxygen Clean Workers and Oxygen Clean Instructors, the date the required course of instruction is completed.
- b. Qualification test results. This includes a copy of the examination cover sheet. In addition, a copy of the examination given with answers must be available either in electronic medium or hard copy. For Oxygen Clean qualifications, this entry is not required.
- c. A copy of the signed Final Qualification Page from the Personnel Qualification Standard.
- d. Copy of the signed oral interview sheets for each qualification record.
- e. (Submarines only) A master list of qualified Oxygen Clean Workers must be retained for the life of the ship.

10.5.5 Departure from Specification Records.

- a. Outstanding DFS Files.
 - (1) An index that reflects the DFS unique serial number assigned, date approved, the system or component including brief description, annotation for SUBSAFE and status.
 - (2) A copy of each outstanding DFS and all applicable correspondence.
- b. A copy of cleared DFS with an index will be retained for 24 months.

- c. A copy of all DFS approved as permanent repairs, with an index, will be retained until they are reflected in the ship's selected records and drawings or technical variation documents.

10.5.6 Assessments, Evaluations and Audits. The QAO will retain records of assessments, evaluation and surveillance for the past 24 months (unless otherwise stated). The records will consist of:

- a. QA form 14 index log that has the item numbers, work center responsible to correct and estimated date corrective action is due.
- b. Copy of last higher authority assessment and the corrective action for all items.
- c. Results of all Audits and Surveillances of the QA Program, including the root cause, immediate and permanent corrective action. (This may be kept with the rest of the monitor program records).
- d. Last annual QA Program evaluation performed.
- e. Maintain an auditable record of the most current Job Control Number to DFS verification.

10.5.7 Training.

- a. (Submarines only) The ship must maintain a record of completion for each member of the crew indicating the date of completion for annual SUBSAFE Awareness, Fly-by-Wire Awareness and SOC Awareness Training, as applicable.
- b. A hard or electronic copy of the record of lectures and seminars conducted during the past 12 months must be retained.
- c. The record should show the topic, the lecturer or seminar leader, the monitor, and the number of personnel in attendance. Topics should include a brief listing of material covered where appropriate.
- d. Attendance records by name are not required, except as noted in sub-paragraph a.
- e. This record should be kept in a format that enables it to be compared against the Long Range Training Plan to determine the utilization of that plan.

10.6 ADDITIONAL SUBMARINE AND NUCLEAR UNIQUE QUALITY ASSURANCE RECORD RETENTION REQUIREMENTS.

10.6.1 Submarine Safety, Nuclear, Level I, Submarine Flight Critical Component, Scope of Certification and Other Certification. The ship will retain the following records for the life of the ship or as indicated in this manual:

10.6.1.1 Reactor Plant Work Accomplishment Report (Submarines only). A copy of all completed Reactor Plant Work Accomplishment Reports.

10.6.1.2 Submarine Safety Material Certification (Submarines only). Copy of the TYCOM and NAVSEA SUBSAFE Material Certification message from new construction, DMP or overhaul until the ship's current status is reflected in reference (e). When the ship's current status is reflected in the notice, the messages may be destroyed, and the current notice will be retained.

10.6.1.3 End of Fleet Maintenance Availability Certification (Submarines only). Retain the last end of FMA Availability letter from the FMA.

10.6.1.4 Certification Continuity Reports (Submarines only). Retain the last certification continuity report sent by the ship.

10.6.1.5 Industrial Activity Certification Reports (Submarines only). A copy of all industrial activity and shipyard certification letters or messages from all SRA conducted between overhauls. In addition, a copy of the ISIC audit of SUBSAFE work performed by the industrial activity should also be kept. These may be disposed of at the next Extended Refit Period, SRA, DMP, EOH, ERO, RFOH or ROH.

10.6.1.6 Other Certification Reports (Submarines only). A copy of any other correspondence or messages that affect the certification of the ship or hull integrity should be retained until:

- a. Resolved via inspection or maintenance or DFS as required or
- b. As defined within the applicable correspondence or message.

10.6.1.7 Controlled Material (Submarines only). Except for Fly-By-Wire Diagnostic and Maintenance Computers (DMAC), Ship's Force is not required to use a QA form 1 to document receipt inspection of Level I, SFCC or SOC material to be immediately installed for a specific maintenance action. A QA form 2 will be used to document receipt inspection of material to be immediately installed. DMACs require a QA form 1 to document receipt inspection but do not require a QA form 2. The QA form 1 for the DMAC will be retained in the ship REC exception folder.

10.6.1.8 Nuclear Records. Nuclear records will be retained as required by reference (b). Reference (b) defines which nuclear records must be retained and length of retention as well as specifies requirements for retention of existing records. It is not intended to create new records for record retention requirements, if they do not already exist.

10.6.1.9 Nuclear Propulsion Plant Operator Welder Records (Submarines only). The Main Propulsion Assistant will retain the following qualification records per reference (f), for each welder as long as the welder is qualified onboard.

- a. Documentation certifying original weld school completion.
- b. QA form 20 for most current proficiency welds and qualification welds (the four most recent test assemblies).
- c. Copy of current eye examination report.

10.6.1.10 Re-Entry Control/Maintenance Certification Record Exception Objective Quality Evidence and Other Controlled Assembly Records.

- (a) Retain a file of the most recent QA form 34 generated for each component or system assembled as a controlled assembly and performed as a REC exception per **reference (g)** and Part III, Chapter 5, paragraph 5.8.6.1.b of this volume.
- (b) Retain a file of the most recent QA form 34 generated for each component or system assembled as a controlled assembly and performed as a MRC exception per Part I, Chapter 2, paragraph 2.2.5 Note 2 and Part I, Chapter 2, paragraph 2.3.7.7.1 of this volume.

- (c) Retain a file of the most recent QA form 34 record generated per Part I, Chapter 7, paragraph 7.4.1.c of this volume for non-controlled systems or components until the system or component testing is completed satisfactory (e.g. completion of a controlled deep dive).

10.6.1.11 Scope of Certification (Submarines only). Retain a copy of the NAVSEA and TYCOM, if applicable, Scope of Certification or Sustaining Survey Certification letter or message.

10.6.1.12 Unrestricted Operations (Submarines only). Retain records related to the Unrestricted Operations Program as defined by Volume VI, Chapter 25 of this manual.

10.7 FLEET MAINTENANCE ACTIVITY QUALITY ASSURANCE RECORD RETENTION.

10.7.1 Submarine Safety, Nuclear, Level I, Scope of Certification and Other Certification. The QAO or designated officer will retain material certification (SUBSAFE, Nuclear, Level I, Scope of Certification and CWP category "Other") records for the life of each tended ship.

10.7.2 Reactor Plant Work Accomplishment Report (Submarines only). The Nuclear Repair Officer will retain a legible copy of all FMA generated Reactor Plant Work Accomplishment Reports.

10.7.3 Controlled Work Package Log. The QAO will maintain a CWP log, using the QA form 11, for the life of the ship. Re-copying or consolidation of this log is not to be done.

10.7.4 Completed Controlled Work Packages. All CWPs (retain onboard per paragraph 10.2.2 of this chapter), which includes:

- a. MCR/REC (QA forms 9 and 10).
- b. References unique to this task (e.g., NAVSEA letters, Liaison Action Requests) will be retained with the CWP unless specifically identified to allow recall, if necessary.
- c. All enclosures documenting the OQE (e.g., QA forms and RFI tags (NAVSEA 9210/2 and 9210)) will be retained.
- d. FWP's executed as the core of a CWP must be retained with the CWP. After three years when CWPs are moved ashore or placed in storage, the FWP portion of the CWP may be discarded.

NOTE: MATERIAL CONTROL RECORDS (E.G., QA FORM 2s) ARE NOT REQUIRED TO BE RETAINED FOR REMOVED AND REINSTALLED CONTROLLED MATERIAL AFTER THE CWP IS CLOSED.

10.7.5 Controlled Material Records. Controlled material records will be maintained with the associated CWP. Those records not associated with a CWP will be maintained on file by the QAO. The QAO will maintain controlled material records as outlined in this paragraph. These records should be included in the appropriate CWP to the maximum extent practical. Retain material certification files for all Nuclear Level I, SFCC, Level I and SOC material installed.

- a. RFI tags for nuclear Level I items installed.
- b. For any Nuclear Level I items received and installed without a RFI tag retain all OQE used to certify the material for installation.

- c. All OQE used to upgrade material for non-nuclear "Level" use.
- d. All QA forms 3 for any rejected items accepted for use.
- e. A file of QA forms 1 with certification documentation.
- f. All material control records from receipt inspection through installation will be maintained throughout the life of Deep Submergence Systems.

10.7.6 Assessment, Audits, Surveillance and Evaluations. The QAO will retain records for the past 18 months (unless otherwise stated). The records will consist of:

- a. Last year and present year internal audit schedule.
- b. Completed audit plans and guides and results (Associated QA forms 14 or other discrepancy reports).
- c. QA form 14 index log that has the item numbers, work center responsible to correct and estimated date corrective action is due.
- d. Copy of last higher authority assessment, surveillance and the corrective action for all items.
- e. Schedule and results of internal surveillance of the QA Program, including the corrective action. (This may be kept with the rest of the monitor program records).
- f. Last two semi-annual QA Program evaluations.
- g. Two years' worth of records for calibration laboratory spot checks or sampling of outgoing work.
- h. Two years' worth of records for Field Calibration Activity spot checks or sampling of outgoing work, as applicable.

10.7.7 End of Fleet Maintenance Activity Certification Report to Tended Submarines (Submarines only). The QAO will retain a copy of the last End of Fleet Maintenance Activity Certification Report to tended submarines issued per Part I, Chapter 5, paragraph 5.6.8.b. or Part III, Chapter 5, paragraph 5.11.7.b of this volume, as applicable.

10.7.8 Nuclear, Submarine Safety and Scope of Certification Work. The master lists of qualified CMPO or Controlled Material Handler, Cleanliness Inspector, Cleanliness Certifier, QAI and QAS (if assigned), will be maintained by name, for the duration the individual is assigned to the repair activity.

NOTE: AT A FMA, CIVILIAN EMPLOYEE CONTINUING TRAINING KNOWLEDGE EXAMINATION QUESTIONS AND ANSWERS WILL BE RETAINED FOR TWO YEARS.

10.7.9 Qualification Record. The QAO will maintain a master list of qualified CMPOs, Controlled Material Handlers, Cleanliness Inspectors, QAIs, QASs, Oxygen Clean Workers and Oxygen Clean Instructors and a qualification file on each CMPO, Controlled Material Handler, Cleanliness Inspector, QAI and QAS. The records will be retained for the duration the individual is onboard. The file will consist of:

- a. Date Personnel Qualification Standard completed. For Oxygen Clean Workers and Oxygen Clean Instructors, the date the required course of instruction is completed.

- b. Qualification test results. For Oxygen Clean qualifications, this entry is not required.
- c. A master list of all qualified Oxygen Clean Workers must be retained for the life of the FMA.

VOLUME V**PART I****CHAPTER 11****QUALITY ASSURANCE FORMS AND FORM INSTRUCTIONS****REFERENCES.**

- (a) NAVSEAINST 9210.23 - Requirements for Naval Nuclear Work at Naval Activities and Private Shipyards - Certification of Work Accomplishment and Data Retention of Associated Records and Retention of Design Records

11.1 PURPOSE. Provide Quality Assurance (QA) forms and tags with instructions for preparation and usage. QA forms for DSS and SOC use are located in Part III, Chapter 11 of this Volume.

11.2 USE OF QA FORMS. QA forms are used to create Objective Quality Evidence (OQE) when required by higher authority. While QA form instructions identify requirements for usage, they are not self-invoking. The use of a QA form is initiated from requirements of previous chapters within Part I and Part III of this Volume. Examples of when QA forms are required by this volume include:

- a. To support capturing OQE for a Controlled Work Package (CWP) as required by Chapter 2.
- b. To support documenting a controlled assembly required by Maintenance Certification Record (MCR) exceptions (Chapter 2), SUBSAFE Re-Entry Control (REC) exceptions (Chapter 5), Alternate Testing (Chapter 7) or as specified in an approved Departure from Specification (DFS).
- c. Documenting receipt inspections and end usage as required by Chapter 6.
- d. Documenting DFS as required by Chapter 8.
- e. Correcting certified OQE as required by Chapter 9.

11.3 NATIONAL ITEM IDENTIFICATION NUMBER. National Item Identification Number (NIIN) may be used whenever National Stock Number (NSN) is called for, including all QA forms. The NIIN uniquely identifies material in supply system and is adequate for OQE purposes.

11.4 CERTIFICATION SIGNATURES ON QA FORMS. When certification signatures, as defined in reference (a) and Part I, Chapter 2, Appendix C of this volume, are documented on QA forms of Nuclear CWPs, the single “*” or double “**” and associated statement are not required on the individual form.

11.5 LIST OF FORMS. This chapter provides copies of the QA forms and tags discussed throughout this volume

- | | | | |
|----|------------|---|----------------------------------|

MATERIAL RECEIPT CONTROL RECORD
QA FORM 1 (BACK)

[illegible]

QA FORM 1 INSTRUCTIONSMATERIAL RECEIPT CONTROL RECORD

PURPOSE: To document the proper receipt, control, end use and certification of material to the required “Level of Essentiality” for controlled material.

PROCEDURE: The numbered blocks on QA form 1 correspond with the block instructions listed.

NOTE: ATTACH SHIPPING PAPERS, IF PROVIDED, TO QA FORM.

NOTE: SHIP’S FORCE IS NOT REQUIRED TO COMPLETE A QA FORM 1 TO DOCUMENT THE RECEIPT INSPECTION OF CONTROLLED MATERIAL IF THE ITEM(S) IS TO BE IMMEDIATELY INSTALLED FOR A SPECIFIC MAINTENANCE ACTION. IN THESE CASES, THE RECEIPT INSPECTION WILL BE CAPTURED ON A QA FORM 2. IF THE MATERIAL IS NOT UTILIZED DURING THE SPECIFIC MAINTENANCE ACTION FOR WHICH IT WAS PROCURED IT SHOULD BE TURNED BACK IN TO SUPPLY. IF THE MATERIAL IS TO BE RETAINED FOR A FUTURE MAINTENANCE ACTION, A QA FORM 1 MUST BE FILLED OUT PRIOR TO PLACING THE MATERIAL IN A CONTROLLED MATERIAL STORAGE LOCKER OR STORAGE AREA.

NOTE: IF THE COMPONENT HAS A SHORTENED MATERIAL IDENTIFICATION AND CONTROL (MIC) MARKING, ENSURE THE FULL MIC MARKING FROM THE SHIPPING DOCUMENTS, TAGS, OR PACKAGING IS ENTERED ON QA FORM 1 AND QA FORM 2.

NOTE: IF PORTIONS OF A COMPONENT WILL BE CANNABALIZED FOR INSTALLATION VICE INSTALLING THE ENTIRE COMPONENT, DISPOSITION IN ACCORDANCE WITH PART I, CHAPTER 6, PARAGRAPH 6.3.9.1.D OF THIS VOLUME.

BLOCK 1 - MATERIAL NOMENCLATURE

Enter the noun name of the material (e.g., 5/8” - 11 NICU studs, 10” O.D. CUNI Barstock).

BLOCK 2 - LEVEL OF ESSENTIALITY

Enter the applicable Level of Essentiality (SUBSAFE, Level I, Nuclear Level I, Submarine Flight Critical Component (SFCC) or Scope of Certification (SOC) Material Control Division (MCD)) for the material received. For assemblies such as valves, the Level of Essentiality will be the Level of Essentiality for the entire assembly, not individual parts.

- a. Nuclear Level I:
 - (1) Material received with a “Target” Ready for Issue (RFI) tag or Naval Sea Systems Command (NAVSEA) Prime Contractor Material determined to be Nuclear Level I.
 - (2) Material from stock system required to be certified as Nuclear Level I.
- b. SUBSAFE:

15 Jan 2021

- (1) Special Material Identification Code (SMIC) material with valid MIC markings.
 - (2) Submarine Antenna Engineering Directorate (SAED), (Submarine Antenna Quality Assurance Material) SMIC material.
 - (3) Open purchased and stock system non-level material required to meet SUBSAFE requirements.
- c. Level I:
- (1) LI, C1, S1 or D1 SMIC material with valid MIC markings.
 - (2) Non-level material required to be upgraded to Level I requirements.
- d. SOC MCD A or MCD B: The entry will be based on the SOC Level of Essentiality as determined in Part III, Chapter 6 of this volume.

BLOCK 3 - **MIC NO./I.D. NO.**

NOTE: THE PNSY “TRACE CODE” RESEMBLES A MIC NUMBER BUT DOES NOT INCLUDE THE GENERIC MATERIAL DESIGNATOR (E.G., 98205-003A).

- a. Enter the MIC or the identification number or name plate data (I.D. No. if no MIC No.) etched on the major part of the assembled material received (some individual parts may also have MIC numbers that need not be recorded). Fleet Maintenance Activity (FMA) will enter MIC upon completion of upgrading for FMA certified or upgraded material. Ships (Non-FMA) will enter the FMA MIC No. for material that the FMA certifies for the ship. For rotatable items, enter the appropriate rotatable pool serial number (e.g., rp-148a, tin-292-11893, etc.).
- b. For fasteners enter either the MIC number (when MIC number is marked on the fastener or the individual tag for some small fasteners) or the color code and the PNSY “trace code” provided on the shipper and the package or box.
- c. If the material is MCD B, enter Markings on the material or documented on the shipping papers providing identification to material type or military specification.
- d. If the material is MCD A, enter the Traceability Number.

BLOCK 4 - **REQUISITION NUMBER (REQ. NO.)**

Enter the Requisition No. (invoice number) that was used to order the material or appears on shipping documents (if provided).

BLOCK 5 - **JULIAN DATE**

Enter the five digit Julian Date (e.g., 90121, 91200, 92030) the material is received.

BLOCK 6 - **NUMBER RECEIVED**

Enter the total number received (must agree with the invoice). If the material is, for example, “Barstock” enter the number of pieces and total length. Only one QA form 1 is required if the entire lot has the same MIC number and is receipt inspected on the same day.

BLOCK 7 - **NSN/SMIC**

Enter the National Stock Number (NSN), including the SMIC, of material received. If material is identified only by drawing and piece number, enter them.

BLOCK 8 - **VENDOR'S MARKINGS**

- a. Enter any Vendor's Marking (heat, lot) present on the material.
- b. For fasteners, enter the heat or lot number, material type, and manufacturer's symbol (for nuts containing a self-locking insert, the color of the insert is the manufacturer's symbol).

BLOCK 9 - **REQUIRED CERTIFICATION DOCUMENTS FURNISHED
(SIGNATURE AND DATE)**

- a. If required certification documentation is provided, and the item passes receipt inspection per Chapter 6, enter an "X" in the "YES" block. Controlled Material Petty Officer (CMPO) or Controlled Material Handler (CMH) print name, sign and date the block to certify the item passed receipt inspection. Blocks 10 through 15 are completed as required, incomplete blocks are left blank. Attach a QA form 2. A copy of any certification documentation will be attached to the QA form 1.
- b. If the certification documentation is unacceptable or the material fails receipt inspection or the item is non-level material undergoing upgrading, enter an "X" in the "NO" block, attach a QA form 3 to the item, and notify the Quality Assurance Officer (QAO) or Quality Assurance Supervisor (QAS). CMPO or CMH print name, sign and date the block.

BLOCK 10 - **ENTER APPROPRIATE CODE**

QAO or QAS will mark the applicable blocks signifying attributes that must be verified for receipt inspection, by referring to the appropriate references, using the appropriate code; "X" (whenever records are required) or "O" (whenever records are not required, e.g., visual inspection).

BLOCK 11 - **INSPECTION RESULTS, REMARKS, SIGNATURE AND DATE**

- a. CMPO or Quality Assurance Inspector (QAI) or QAS will enter the results of all inspections and, if unsatisfactory, state the reason for failure.
- b. Print name, sign and date all entries which certifies the inspections, issues, and records.

NOTE: BLOCKS 12, 13 AND 14 ARE COMPLETED AS REQUIRED, INCOMPLETE BLOCKS ARE LEFT BLANK.

BLOCK 12 - **DISPOSITION**

Check the appropriate block based upon inspection results documented in Block 11 and fill out Blocks 13 or 14 as applicable.

BLOCK 13 - **CERTIFIED**

Check the appropriate block signifying the level of essentiality to which the material has been inspected or certified. For SOC material, enter the applicable MCD designator (A or B) in the blank.

15 Jan 2021

NOTE: NON-LEVEL ITEMS UPGRADED OR CERTIFIED WILL HAVE THE ASSIGNED MIC NUMBER ENTERED IN BLOCK 3 ABOVE PRIOR TO SIGNATURE IN BLOCK 15.

BLOCK 14 - DOWNGRADE

Check the appropriate block, if “reject” is checked in Block 12.

BLOCK 15 - SIGNATURE AND DATE

QAO or QAS responsible for Blocks 10-14 will print name, sign and date certifying the record as correct.

BLOCK 16 - Same as Block 1.

BLOCK 17 - Same as Block 2.

BLOCK 18 - Same as Block 3.

BLOCK 19 - Same as Block 4.

BLOCK 20 - Same as Block 7.

BLOCK 21 - Same as Block 6.

BLOCK 22 - Enter the date that the material is issued.

BLOCKS 23A, 23B, AND 23C - Enter the Unit Identification Code (UIC), Work Center (WC), and the job sequence number that the material is issued against.

BLOCK 24 - Enter the system that the material is issued for.

BLOCK 25 - Enter the Controlled Work Package (CWP) serial number that the material is issued for.

BLOCK 26 - Enter the amount of material issued.

BLOCK 27 - Enter the amount of material remaining after issue.

BLOCK 28 - CMPO or CMH issuing material, print name.

BLOCK 29 - Enter “Yes” or “No” as appropriate.

BLOCK 30 - Enter Level the material was downgraded to.

BLOCK 31 - QAO sign, signifying authorization to downgrade material.

NOTE: THE COMPLETED QA FORM 1 WILL BE FORWARDED TO THE QA OFFICE, WHEN THE MATERIAL HAS BEEN ISSUED FOR INSTALLATION.

QA FORM 2 INSTRUCTIONS

MATERIAL IDENTIFICATION (ID)/CONTROL TAG

LANTFLT 4790/2 (8-01) S/N 0103-LF-981-0300

PURPOSE:

1. Used for receipt inspection, certification and traceability of new controlled material.
2. Used to maintain traceability and identification of Level I, Nuclear Level I, SOC, SFCC and non-level controlled items removed from a controlled system or component during maintenance including transfer between organizations until reinstalled.

PROCEDURE: The numbered blocks on QA form 2 correspond with the block instructions listed. Two sets of instructions are provided depending on purpose.

PURPOSE 1: RECEIPT OF NEW MATERIAL FROM SUPPLY SYSTEM. CMPO OR CMH WILL COMPLETE BLOCKS 1-7 DURING THE RECEIPT INSPECTION.

NOTE 1: FOR NUCLEAR MATERIAL, ANY RFI OR OTHER CERTIFICATION TAGS ATTACHED TO THE ITEM WILL REMAIN ATTACHED UNTIL THE MATERIAL IS INSTALLED.

NOTE 2: IF PORTIONS OF A COMPONENT WILL BE CANNABALIZED FOR INSTALLATION VICE INSTALLING THE ENTIRE COMPONENT, ATTACH A QA FORM 2 (PURPOSE 1 INSTRUCTIONS) TO THE PORTIONS OF THE COMPONENT OR ASSEMBLY TO BE INSTALLED IN THE SYSTEM. REMOVE THE ORIGINAL QA FORM 2 (DISCARD) AND ATTACH A NEW QA FORM 2 (PURPOSE 1 INSTRUCTIONS) DOCUMENTING THE ACTUAL CONFIGURATION OF THE REMAINING PORTION OF THE ORIGINAL ASSEMBLY. DISPOSITION IN ACCORDANCE WITH PART I, CHAPTER 6, PARAGRAPH 6.3.9.1.D OF THIS VOLUME.

BLOCK 1 - TAG (A) OF (B)

- a. Block A – Enter “1”. For additional tags used during the fabrication, transfer or installation process, number the tags in sequential order as used (2, 3, 4, etc.).
- b. Block B - The last number reflects the total number of tags used for this item during this maintenance action. This block is filled in by the craftsman at the time Block 20 is signed for non-SUBSAFE or non-SOC systems. For SUBSAFE, Nuclear or SOC systems, this block is filled in by the QAI at the time Block 21 is signed on the last tag (e.g., 3 of 3).

BLOCK 2 - MIC NO./SERIAL NO.

NOTE: THE INFORMATION ENTERED FOR FASTENERS MAY NEED TO INCLUDE INFORMATION FROM BLOCKS 3 AND 8 FROM QA-1. DO NOT ENTER THE PNSY TRACE NUMBER FROM BLOCK 3 OF THE QA-1.

- a.
 - (1) New Material: Enter the MIC etched on the material. If the component has no MIC or a shortened MIC marking, ensure the full MIC marking from the shipping documents, tags or packaging is entered.
 - (2) For Flight Critical Components, enter the component serial number.
 - (3) For TRIPER Program Components, enter the TRIPER component serial number (e.g., tin-292-11893).
- b. Fasteners: Document the markings from the fastener to include either:
 - (1) The color code and the heat or lot number, material type, and manufacturer's symbol (for nuts containing a self-locking insert, the color of the insert is the manufacturer's symbol).
 - (2) The MIC number (when MIC number is on the fastener or on the individual tag for some small fasteners).
- c. If the material is MCD B, enter Markings on the material or documented on the shipping papers providing identification to material type or military specification.
- d. If the material is MCD A, enter the Traceability Number.

BLOCK 3 - MAT LEVEL

Check the NEW block and the appropriate block for Level of Essentiality [e.g., check LI, NUC LI, if Level I or Nuclear Level I, or check SOC, if Scope of Certification, or check SFCC if Submarine Flight Critical Component or check "OTHER" (e.g., SAED Controlled)]. This block should be the same as the "Level" on the QA form 1.

BLOCK 4 - MATL DESCRIPTION

Enter the quantity, size and noun name of the material (e.g., (6 each) 5/8" - 11 NICU studs, 10" O.D. CUNI barstock 6" long).

BLOCK 5 - NSN/SMIC

Enter the NSN, including SMIC, of the material. If none, enter "NONE".

BLOCK 6 - RECEIPT INSPECTION COMMENTS

Enter receipt inspection results (i.e., SAT or UNSAT). If inspection results are UNSAT in Block 6, initiate a QA form 3. For UNSAT results in Block 6, the CMPO will only sign Block 7 of the QA form 2 if the QAO disposes the item suitable for use on Block 12 of the QA form 3. For SAT receipt inspection of SOC MCD Level A or B material received without an RFI tag or an EB Blue tag, enter the following statement with the blank having the appropriate A or B entered:

"Material Receipt Inspected SAT and is certified as SOC MCD ____."

This entry will be signed by the QAO.

For SAT receipt inspection of SOC MCD A or B material received with an RFI tag or an EB Blue tag, enter the MCD Level (i.e., MCD A or MCD B) after the receipt inspection results.

15 Jan 2021

BLOCK 7 - **CMPO/CMH**

CMPO or CMH certifying the entries in Blocks 1-7 print name, enter signature and date.

NOTE 1: THE CMPO WILL VERIFY THAT THE ITEM IS WHAT IS REQUIRED FOR INTENDED USE PRIOR TO TURNING THE MATERIAL OVER TO CRAFTSMAN FOR FABRICATION OR INSTALLATION AND FILL IN BLOCKS 8 THROUGH 12 AT THE TIME THE MATERIAL IS ISSUED.

NOTE 2: IF A PARTIAL ISSUE IS MADE (E.G., A SECTION OF BARSTOCK IS CUT OFF A LARGER PORTION OR ONLY 4 OF 12 NUTS IN A BOX ARE USED), THE CMPO MAKING THE ISSUE WILL COMPLETE BLOCKS 1-12 OF A NEW QA FORM 2 FOR THE PARTIAL ISSUE PER PART I, CHAPTER 6, PARAGRAPH 6.3.9 OF THIS VOLUME AND UPDATE THE ASSOCIATED QA-FORM 1. THE ORIGINAL OR "PARENT" QA-FORM 2 DOCUMENTING ORIGINAL RECEIPT OF MATERIAL WILL NOT BE MODIFIED. THE QA-FORM 1 WILL TRACK DISTRIBUTION OF MATERIAL.

BLOCK 8 - **UIC, WC, JSN AND CWP SERIAL NO.**

At the time of issue, enter the Job Control Number (JCN) [UIC, WC and Job Sequence Number (JSN)] and CWP serial number.

BLOCK 9 - **WC NO.**

Enter the number of the WC receiving material (e.g., EM01, 10C, 38A).

BLOCK 10 - **DATE**

Enter date the WC received the material.

BLOCK 11 - **REMARKS**

Enter the reason for issue (e.g., issued to 31A for manufacture of fitting, issued to EM01 for installation).

BLOCK 12 - **CRAFTSMAN/CMPO/CMH/QAI**

For Initial Material Issue: Print name, enter signature signifying issue of material by CMPO or CMH. For Fabrication or Transfer (Additional QA form(s) 2 required). Print name, enter signature signifying receipt of material.

NOTE: THE REMAINING SECTIONS OF THE TAG ARE COMPLETED BY THE COGNIZANT CRAFTSMAN, CMPO, CMH OR QAI DURING THE FABRICATION OR +INSTALLATION PROCESSES.

NOTE: SATISFACTORY CONDITION OF MATERIAL EXCHANGED BETWEEN WCs IS ASSUMED, UNLESS AN ENTRY IS MADE IN REMARKS INDICATING MATERIAL IS REJECTED.

BLOCK 13 - **WC NO.**

Enter the number of the WC receiving material (e.g., 56A or EA01).

BLOCK 14 - **DATE**

15 Jan 2021

Enter date material received.

BLOCK 15 - REMARKS

Record work performed while the material was in the custody of the WC (e.g., drilled screws and installed Nyloc pellets).

BLOCK 16 - CRAFTSMAN/CMPO/CMH/QAI

Cognizant craftsman print name and sign to certify the blocks are complete and correct.

NOTE: IF 2 OR MORE WCs ARE INVOLVED IN THE FABRICATION PROCESS, ADDITIONAL QA FORMS 2 WILL BE FILLED OUT AND NUMBERED IN ACCORDANCE WITH THE INSTRUCTIONS ABOVE FOR BLOCK 1.

NOTE: IF FOR ANY REASON THE COGNIZANT CRAFTSMAN REJECTS THE MATERIAL HE OR SHE WILL COMPLETE AND ATTACH A MATERIAL REJECT TAG (QA FORM 3) AND LEAVE THE QA FORM 2 ATTACHED.

NOTE: BLOCKS 17 THROUGH 21 WILL CONTAIN THE RECORD OF FINAL INSTALLATION. IF ADDITIONAL TAGS ARE REQUIRED FOR THE MATERIAL DURING THE FABRICATION AND TRANSFER PROCESS (MORE THAN TWO WCs OR PROCESSES INVOLVED IN THE REPAIR), BLOCKS 9 THROUGH 12 AND BLOCKS 17 THROUGH 21 MAY BE USED.

BLOCK 17 - WC NO.

Enter the number of the WC responsible for installation of the material (e.g., 56A or EA01).

BLOCK 18 - DATE

Enter the date of installation.

BLOCK 19 - REMARKS

Enter the location where the material was installed into the system or component (e.g., installed in AHP-514, installed in system at joints ASW-70014(F) and ASW-70015(F), etc.).

BLOCK 20 - CRAFTSMAN

Cognizant craftsman print name and enter signature signifying that the material is the correct material, is installed correctly and per the applicable technical specifications. Remove the QA form 2 and file with the CWP if a QAI is not required.

NOTE: A QAI INSPECTION IS REQUIRED FOR NEW MATERIAL INSTALLATIONS FOR JOINTS AND ASSEMBLIES WITHIN THE HULL INTEGRITY BOUNDARY (INCLUDING ELECTRICAL HULL FITTING (EHF) TO PRESSURE HULL JOINTS), SOC JOINTS AND COMPONENTS, SUBSAFE SEAWATER OR SEA-CONNECTED FLANGED PIPE JOINTS, AND ALL NUCLEAR LEVEL I SYSTEM JOINTS AND COMPONENTS.

BLOCK 21 - INSPECTOR

When required, inspector print name and enter signature and date certifying that the material is the correct material, acceptable for application and correctly installed. Enter NA in QAI signature space when QAI is not required. Remove the QA form 2 and file with the CWP.

NOTE: IF, FOR ANY REASON, A CRAFTSMAN, CMPO, CMH OR QAI REJECTS MATERIAL, THEY WILL COMPLETE AND ATTACH A QA FORM 3, LEAVING THE QA FORM 2 ATTACHED. TAG USED ITEMS WHICH MUST BE TURNED IN TO SUPPLY AND ANY ITEM WHICH IS NOT PROPERLY DISCARDED (E.G., AT THE END OF WORK DAY OR SHIFT).

NOTE: WHEN EXISTING CONTROLLED MATERIAL IS REINSTALLED INTO THE SYSTEM, THE QA FORM 2 WILL BE COMPLETED AND RETAINED WITH THE CWP UNTIL THE CWP IS CLOSED OUT. THE ACCOUNTABILITY FOR CONTROLLED MATERIAL REINSTALLATION IS ON THE APPLICABLE OBJECTIVE QUALITY EVIDENCE (OQE) RECORD (E.G., JOINT OR COMPONENT REPAIR RECORD, QA FORM 34). THE QA FORM 2 MAY BE DISCARDED AFTER THE CWP IS CLOSED OUT.

PURPOSE 2: UPON REMOVAL FROM SYSTEM OR COMPONENT (EXISTING MATERIAL).

NOTE 1: DAMAGED EXISTING MATERIAL REMOVED FROM CONTROLLED SYSTEMS WHICH IS NOT INTENDED TO BE REPAIRED OR REUSED AND IS INTENDED TO BE DISPOSED OF AS TRASH DOES NOT REQUIRE A QA FORM 2 TO BE ATTACHED PROVIDED THE MATERIAL IS IMMEDIATELY DISCARDED. EXAMPLES OF THIS ARE DAMAGED VALVE STEMS, DAMAGED COMPONENT FASTENER NUTS AND STUDS. DOES NOT APPLY TO TURN-IN ITEMS SUCH AS DEPOT LEVEL REPAIRABLE.

BLOCK 1 - TAG (A) OF (B)

- a. Number the tags in sequential order as used (e.g., 1, 2, 3, etc.).
- b. The last number reflects the total number of tags written for each part removed from a disassembled component or system. This block is filled in by the craftsman at the same time Block 20 is signed for final installation of non-SUBSAFE or non-SOC systems. For SUBSAFE, Nuclear or SOC systems, the QAI will fill in this block at the time Block 21 is signed on the last tag (e.g., 3 of 3).

BLOCK 2 - MIC NO./SERIAL NO.

Enter the MIC etched on the material. Where there is no visible MIC number, enter existing material marking, such as color code for fasteners, heat or lot number, and manufacturer's symbol (for nuts containing a self-locking insert, the color of the insert is the manufacturer's symbol). If none, enter "NONE." For rotatable items, enter the appropriate rotatable pool serial number (e.g., rp-148a, tin-292-11893, etc.). For Flight Critical Components, enter the component serial number. For periscopes, enter the registry number. For mast, enter the MIC etched on the outer housing.

BLOCK 3 - MAT LEVEL

Check the EXISTING block and the appropriate block for Level of Essentiality [e.g., check LI, NUC LI, if Level I or Nuclear Level I, or check SOC if Scope Of Certification, SFCC, or check "OTHER" (e.g., SAED Controlled)].

15 Jan 2021

BLOCK 4 - MATL DESCRIPTION

Enter the quantity, size and noun name of the material (e.g., 6 each, 5/8" - 11 NICU studs, AHP-56 4500/2000 PSI Reducer).

BLOCK 5 - NSN/SMIC

Enter "NA".

BLOCK 6 - RECEIPT INSPECTION COMMENTS

Enter "NA".

BLOCK 7 - CMPO/CMH

Enter "NA".

BLOCK 8 - UIC, WC, JCN AND CWP SERIAL NO.

Enter the JCN, consisting of the UIC, WC, JSN, and CWP serial number in the appropriate blocks.

NOTE: CAUTION MUST BE TAKEN WHEN USING THE WORDS "REPAIRED", "REINSTALLED" TO ENSURE THAT THESE WORDS ARE USED PROPERLY.

TAG BACK SIDE

(This side is filled out by the QAI, CMPO, CMH or craftsman).

BLOCK 9 - WC NO.

Enter the number of the WC which completed Blocks 1-8 of the tag (e.g., 56X, EA01).

BLOCK 10 - DATE

Enter date material removed from system or component.

BLOCK 11 - REMARKS

Enter information regarding why component was removed (e.g., removed for repair of valve seats, removed for transfer to AS-40 for repair and testing).

BLOCK 12 - CRAFTSMAN/CMPO/CMH/QAI

The cognizant craftsman will print name and sign.

NOTE: IF MORE THAN ONE WC IS INVOLVED IN THE FABRICATION OR REPAIR PROCEDURE, BLOCKS 13-16 WILL BE FILLED OUT BY THE COGNIZANT CRAFTSMAN IN THE SAME MANNER AS BLOCKS 9 THROUGH 12 AS THE ITEM IS TRANSFERRED FROM ONE WC TO ANOTHER FOR FABRICATION, ETC. FOR A TOTAL SHIP'S FORCE JOB, THESE BLOCKS ARE NORMALLY "NA", UNLESS ANOTHER WC HAS TO DO SOMETHING TO THE MATERIAL.

If used for transfer of material between organizations, blocks 13-16 will be filled out by the receiving activity.

BLOCK 13 - WC NO.

15 Jan 2021

Enter the number of the WC receiving material (e.g., 56A, 38C).

BLOCK 14 - DATE

Enter date material received.

BLOCK 15 - REMARKS

Record work performed while in the custody of the WC.

BLOCK 16 - CRAFTSMAN/CMPO/CMH/QAI

Cognizant individual will print name and sign that all work performed was completed satisfactorily and per applicable technical requirements. This signature will be made prior to transferring the material back to the original organization from which it was received.

NOTE: BLOCKS 17 THROUGH 21 WILL CONTAIN THE RECORD OF FINAL INSTALLATION. IF ADDITIONAL TAGS ARE REQUIRED FOR THE MATERIAL DURING THE FABRICATION AND TRANSFER PROCESS (MORE THAN TWO WCs OR PROCESSES INVOLVED IN THE REPAIR), BLOCKS 9 THROUGH 12 AND BLOCKS 17 THROUGH 21 MAY BE USED.

BLOCK 17 - WC NO.

Enter WC responsible for installation.

BLOCK 18 - DATE

Enter date of final installation.

BLOCK 19 - REMARKS

Enter the location where the material was installed into the system or component (e.g., installed in AHP-514, installed in system at joints ASW-70014(F) and ASW-70015(F), etc.).

BLOCK 20 - CRAFTSMAN

Cognizant craftsman print name and enter signature signifying that the material is installed correctly and per applicable technical specifications. Remove the QA form 2 and file with the CWP.

NOTE: QAI VERIFICATION IS REQUIRED FOR NUCLEAR LEVEL I PRESSURE BOUNDARY JOINTS OR WHEN TRANSFERRED OR CANNIBALIZED MATERIAL IS INSTALLED WITHIN THE SUBSAFE OR SOC BOUNDARY.

BLOCK 21 - INSPECTOR

When required, inspector print name, and enter signature and date certifying that the material is the correct material, acceptable for application and correctly installed. Remove the QA form 2 and file with the CWP.

NOTE: IF, FOR ANY REASON, A CRAFTSMAN, CMPO, CMH OR QAI REJECTS MATERIAL THEY WILL COMPLETE AND ATTACH A QA FORM 3, LEAVING THE QA FORM 2 ATTACHED. TAG USED ITEMS WHICH MUST BE TURNED IN TO SUPPLY AND ANY ITEM WHICH IS NOT PROMPTLY DISCARDED (E.G., AT THE END OF WORK DAY OR SHIFT).

NOTE: WHEN EXISTING CONTROLLED MATERIAL IS REINSTALLED INTO THE SYSTEM THE QA-2 WILL BE COMPLETED AND RETAINED WITH THE CWP UNTIL THE CWP IS CLOSED OUT. THE ACCOUNTABILITY FOR CONTROLLED MATERIAL REINSTALLATION IS ON THE APPLICABLE OQE RECORD (E.G., JOINT OR COMPONENT REPAIR RECORD, QA-34). THE QA-2 MAY BE DISCARDED AFTER THE CWP IS CLOSED OUT.

QA FORM 3

CONTROLLED MATERIAL REJECT TAG

CONTROLLED MATERIAL REJECT TAG QA FORM 3	
PART I	
1. MIC/ID NUMBER	
2. <input type="checkbox"/> L/I	<input type="checkbox"/> NUC L/I
<input type="checkbox"/> MIL-SPEC	<input type="checkbox"/> OTHER
3. REASON	
4. REJECTED BY _____ DATE _____	
PART III	
FINAL DISPOSITION BY QA	
9. ACCEPT AS:	
10. DOWNGRADE TO:	
11. RETURN TO SOURCE	
12. REMARKS	
_____ 13. QAO APPROVED	
PART II

7. REASON	
_____ 8. DIVISION OFFICER DATE	

Red tag with black lettering.

QA FORM 3 INSTRUCTIONS
CONTROLLED MATERIAL REJECT TAG
S/N 0103-LF-655-1300

PURPOSE: This tag provides visual evidence and identification of rejected material or material in a hold status, and a request for QAO evaluation for final disposition.

NOTE: DAMAGED EXISTING MATERIAL REMOVED FROM CONTROLLED SYSTEMS WHICH IS NOT INTENDED TO BE REPAIRED OR REUSED AND IS INTENDED TO BE DISPOSED OF AS TRASH DOES NOT REQUIRE A QA FORM 3 TO BE ATTACHED PROVIDED THE MATERIAL IS IMMEDIATELY DISCARDED. EXAMPLES OF THIS ARE DAMAGED VALVE STEMS, DAMAGED COMPONENT FASTENER NUTS AND STUDS. DOES NOT APPLY TO TURN-IN ITEMS SUCH AS DEPOT LEVEL REPAIRABLE. ALL MIC MARKINGS ON DAMAGED MATERIAL WILL BE REMOVED OR OBSCURED TO PREVENT INADVERTENT REUSE.

NOTE: QA FORM 3 FOR PREVIOUSLY REJECTED AND NOW ACCEPTED CONTROLLED MATERIAL MUST BE FILED WITH THE APPLICABLE CWP.

PROCEDURE:

- a. Part I and Blocks 5 through 7 of Part II are filled out by personnel attaching the tag.
- b. Attach filled out tag to the material.
- c. Person attaching the tag will remove Part II, and forward to the QAO or QAS via the division officer.
- d. The QAO will determine the final disposition and fill out Part III.
- e. The numbered blocks on QA form 3 correspond with the block instructions listed.

PART I

BLOCK 1 - MIC/SERIAL NO.

Enter the MIC, serial number or other identifying permanent marking etched on the material, or if the item does not have a MIC number, serial number or other identifying marking visible, enter none or existing, as appropriate. Enter the same in Block 5.

BLOCK 2 - MATL LEVEL

Check the appropriate block indicating the Level of Essentiality for the material or fill in the blank for "other". When "other" is selected, enter in the amplifying remarks why the material is being tagged (e.g., SAED, Controlled or SOC).

BLOCK 3 - REASON

Enter the reason for rejection of the material (be explicit). Example: "Invalid MIC marking", "Linear indications on weld". Provide as much applicable information as possible concerning the item (e.g., rejection form(s) (Departure From Specification (DFS), Quality Deficiency Report, etc.), Drawing No., Piece No., Contract, Stock No., Control Work Procedure, etc.).

15 Jan 2021

BLOCK 4 - **REJECTED BY/DATE**

Cognizant individual print name, enter signature and date rejected.

PART II - **QA DISPOSITION REQUEST****BLOCK 5** - **MIC/SERIAL NO.**

Enter the same information that is in Block 1.

BLOCK 6 - **LOCATION**

Enter exact location of material (e.g., Rejected Material Locker WC 38A).

BLOCK 7 - **REASON**

Enter the reason why the rejected material should be released (e.g., located Nondestructive Test (NDT) records for material, etc.).

BLOCK 8 - **REQUESTED BY**

Cognizant division officer print name and enter signature.

NOTE: REMOVE AND FORWARD THE COMPLETED PART II OF THE REJECT FORM TO THE QAO VIA THE DIVISION OFFICER. SHIPS MAY NEED ASSISTANCE FROM THE FMA QAO IN DISPOSITIONING THE MATERIAL.

PART III - **FINAL DISPOSITION BY QA**

Enter all data used to determine final disposition.

BLOCK 9 - **ACCEPT AS**

Enter the level of essentiality to which the item is to be accepted (e.g., Non-Level to Level I) A DFS may be required. If this item will not be accepted, mark this blank "NA".

BLOCK 10 - **DOWNGRADE TO**

Enter Level of Essentiality to which the item is to be downgraded. If it is to be returned to its source, enter "NA" or "None".

BLOCK 11 - **RETURN TO SOURCE**

If to be returned to source, place an "X" or check in the block.

BLOCK 12 - **REMARKS**

Enter any remarks needed to explain the disposition of the material or why a particular decision was made. Identify the Objective Quality Evidence (OQE) or technical justification or documentation which authorizes use or disposal of material (e.g., DFS, Liaison Action Record (LAR), waivers, deviations, etc.).

BLOCK 13 - **QA OFFICER SIGNATURE AND DATE**

QAO who made the disposition decision print name, enter signature and date. The tag must stay with the material. Upon installation of the material, remove the tag and return to the QAO.

15 Jan 2021

QA FORM 9 INSTRUCTIONSMAINTENANCE CERTIFICATION RECORD/RE-ENTRY CONTROLPURPOSE:**NOTE: "N/A" ALL UNUSED BLOCKS.**

1. This form is used to authorize and certify maintenance within SUBSAFE, Nuclear Level I, Level I, SOC or SFCC boundaries and is used as a CWP cover sheet.
2. The instructions are broken down into two separate situations.

SITUATION 1. CONTROLLED WORK OR SUBSAFE RE-ENTRY CONTROL BY SHIP'S FORCE ONLY.

- a. The following instructions contain the minimum information and controls necessary to maintain certified systems on board ship when work is performed by Ship's Force on a certified ship.
- b. Each block number on the Maintenance Certification Record (MCR)/Re-Entry Control (REC), QA form 9 corresponds to the same block number in the instructions. The number identifies the purpose and use of the entry on the MCR/REC.
- c. Each block will be filled in or signed by the personnel assigned or their authorized representatives. Such authorized representatives will be designated in writing in an approved ship's instruction.

BLOCK 1 - PAGE 1 OF

Enter the total number of pages (QA form 9 plus any QA form 10 used as a supplement, should normally be 1 of 2).

BLOCK 2 - ☐ SUBSAFE/RE-ENTRY ☐ NUCLEAR ☐ LEVEL I ☐ SCOPE OF CERTIFICATION ☐ FBW-SCS/RE-ENTRY ☐ OTHER

Check or "X" the appropriate block(s) and, if "OTHER" is checked, will enter the appropriate level of control (e.g., P-1, P-3a, P-LT).

BLOCK 3 - SHIP HULL NO.

Enter ship's name and hull number.

BLOCK 4 - CWP SERIAL NO.

Obtain the next CWP serial number from the ship's QAO and enter in the block. Revision "-" (dash) will be entered on the initial version of all MCR/RECs. When a revision is required, enter the next revision letter. If necessary, prepare a new MCR/REC using the original numbers plus the next revision letter. Upon issuance of each REC revision, all prior revisions are canceled and superseded and must be so annotated and retained as OQE. A REC revision must go through the same approval process as the original REC. REC Supplement or continuation sheets (QA-10) must not be used as an alternate to revision of the REC.

BLOCK 5 - J.O./JCN

Enter the JCN for the maintenance action.

BLOCK 6 - ASSOCIATED CWP(s)/REC(s)

Shipyard use only.

BLOCK 7 - ORIGINATOR

Enter the name (and badge, grade or rank) of the person preparing the CWP.

BLOCK 8 - ORGANIZATION

Enter the division of the person preparing the CWP.

BLOCK 9 - SYSTEM REPAIRED/RE-ENTERED

Enter the system(s) being repaired or re-entered.

BLOCK 10 - REPAIR/RE-ENTRY LOCATION

Enter the physical location of the work.

BLOCK 11 - COMPONENT(s)

Enter the noun name of the component(s) being repaired or re-entered.

BLOCK 12 - JID MAP/DWG WITH REV

- a. Enter the number and revision of the appropriate mapping drawing(s) for the work. If no mapping drawing is available, list the most appropriate arrangement or component drawing or diagram. For component repair, enter the applicable document (Standard Navy Valve Drawing, Vendor Drawing, etc.) which depicts the disturbances of the item (work in place or shop work). Based on the scope of work planned, several drawings may need to be referenced. If necessary, local sketches are authorized.
- b. The general order of precedence for entering Joint Identification (JID) is:
 - (1) JID number from the SUBSAFE Joint Mapping Plan, if there is one.
 - (2) JID number from the Joint Index Drawing, ship or class, for welding.
 - (3) Joint description or JID from Assembly or Arrangement or Installation Drawing. The drawing chosen must adequately portray the joints to be broken.
 - (4) Drawings or diagrams from technical manual.
 - (5) A locally prepared sketch where other alternatives do not adequately describe the joints to be broken. Since the sketch will not be retrievable elsewhere, it must be kept in the REC package as OQE and must be documented on a QA-10.

BLOCK 13 - WORK AND TESTING TO BE PERFORMED AND WORK AND TEST REFERENCE DOCUMENTS

Enter the total scope of work and testing required for certification of this repair or re-entry (e.g., ripout, repair, restore, replace, reinstall). Enter the work and test description and make positive reference to the TWD, which contains the detailed work procedure, material requirements, testing and certification to be performed. Work and testing references will be identified for each action listed in this block. If additional space is needed to properly identify all elements, then a QA form 10 will be used to supplement this block. The information provided in Block 6 does not need to be repeated in Block 13. The description of work on

each REC revision must detail the total revised Scope of Work. Cumulative partial descriptions do not satisfy this requirement.

BLOCK 14 - **APPLICABLE JOINT NO(s), OR, IF NOT SUPPLIED, SPECIFIC BOUNDARIES**

Enter the JID to be repaired or re-entered. If joint numbers are not supplied, specify boundaries in specific terms (e.g., body to bonnet joint of valve ASW-29) or assign local joint numbers. If local joint numbers are assigned, the sketch used to identify the joints must be included as OQE in the completed CWP. Listing of work boundary “end points” in lieu of listing discrete individual joints does not satisfy this requirement.

BLOCK 15 - **PRIME APPROVAL SIGNATURE**

- a. BLOCK 15A. The QAO will sign, legibly print or stamp his or her name and badge, grade or rank and enter the date indicating the package is technically correct.
- b. BLOCK 15B. The Department Head will sign, legibly print or stamp his or her name and badge, grade or rank and enter the date granting permission for work to be conducted. **No work can start prior to this signature.**
- c. BLOCK 15C. For nuclear system work, the ship’s Commanding Officer (Reactor Officer for CVNs) will sign, legibly print or stamp his or her name and badge, grade or rank and enter the date granting permission for work to be conducted per Part I, Chapter 2, Appendix E of this Volume. No nuclear work can start prior to this signature. The Immediate Superior In Command (ISIC) Material Officer will counter sign and enter his or her badge, grade or rank to indicate review for testing of repair activity accomplished nuclear work per Part I, Chapter 2, Appendix E of this Volume. For oxygen, SUBSAFE, Scope of Certification or Safety of Flight Critical Component work, the ship’s Engineer Officer (Chief Engineer for CVNs) will sign, legibly print or stamp his or her name and badge, grade or rank and enter the date, granting permission for work to be conducted per Part I, Chapter 2, Appendix E of this Volume. **No nuclear, oxygen system, SUBSAFE, Scope of Certification or Safety of Flight Critical Component work can start prior to this signature.**
- d. BLOCK 15D. The Officer Of the Deck, Duty Officer or Engineering Officer of the Watch or Engineering Duty Officer, depending on the work to be performed, will sign, legibly print or stamp his or her name and badge, grade or rank and enter the date authorizing the work to start. The signature establishes the work and CWP start date and signifies that the system or component is in a condition to accomplish the work.

NOTE: COMPLETE BLOCKS 16, 17 AND 18 BEFORE PERFORMING ANY SHIPBOARD TESTING. IF REWORK BECOMES NECESSARY AS THE RESULT OF SHIPBOARD TESTING, THE REQUIREMENTS OF PART I, CHAPTER 2, PARAGRAPH 2.3.7.2 OF THIS VOLUME MUST BE FOLLOWED. FOR SHIP-TO-SHOP MAINTENANCE, BLOCKS 16, 17 AND 18 DO NOT NEED TO BE COMPLETED FOR IN-PROCESS TESTING IDENTIFIED AS PART OF THE CWP “PROCEDURE” SECTION. AFTER COMPLETING THE PROCEDURE AND BEFORE PERFORMING THE CWP “TESTING AND INSPECTION” SECTION, COMPLETE BLOCKS 16, 17, AND 18.

NOTE: RFI “TAGS” FOR MCD-A AND MCD-B MATERIAL MAY CONSIST OF A PHYSICAL TAG ATTACHED TO THE COMPONENT OR MARKINGS ON THE PACKAGING THAT CONTAIN THE RECEIPT INSPECTION SERIAL NUMBER, MCD LEVEL, NATIONAL STOCK NUMBER (NSN) WITH SMIC (D0, D4, D5, D6, D7, OR D8) AND CONTRACT NUMBER. WHEN THE RFI MARKINGS ARE CONTAINED ON THE PACKAGING, A PHOTO-COPY OF THE PACKAGING IS ACCEPTABLE FOR RECORD RETENTION PURPOSES.

BLOCK 16 - SUPPORTING DOCUMENTATION

The Lead Work Center (LWC) Division Officer will identify all supporting documentation required and generated as established by the CWP. For example, a typical entry would be: QA2(3), QA12(1), QA26(1), QA34(1), RFI Tag(1), LAR(2). List only QA form 2s for new material installed in the system or component. The cumulative documentation (OQE) must be listed on the latest revision. ((Submarines only) The QA-10 is a continuation sheet for the QA-9 and is not required to be listed in Block 16.)

BLOCK 17 - VERIFICATION OF WORK COMPLETION

The LWC Division Officer will sign, legibly print or stamp his or her name (and badge, grade or rank) and enter the date certifying that the production work described by the MCR/REC has been accomplished per the specified instructions and that the required documentation for the production work as described in Block 16 has been completed, reviewed and is correct. When rework is identified following signing blocks 17 and 18, new signature and date blocks for blocks 17 and 18 must be documented on a QA form 10.

BLOCK 18 - CERTIFICATION OF DOCUMENTATION OF PRODUCTION WORK

The QAO will sign, legibly print or stamp his or her name and badge, grade or rank and enter the date certifying that all documentation for the production work specified in Block 16 has been reviewed for accuracy and completeness and is complete and accurate. When rework is identified following signing blocks 17 and 18, new signature and date blocks for blocks 17 and 18 must be documented on a QA form 10.

BLOCK 19 - CERTIFICATION OF TESTING RESULTS

The QAO will sign, legibly print or stamp his or her name and badge, grade or rank and enter the date certifying that the testing invoked for this MCR/REC has been completed satisfactorily. The test documentation specified in Block 16 has been completed, has been reviewed, and is complete and accurate.

BLOCK 20 - FINAL MCR/REC CLOSEOUT CERTIFICATION

The Department Head will sign, legibly print or stamp his or her name and badge, grade or rank and enter the date certifying that all documentation related to this MCR/REC has been reviewed for accuracy and completeness and is complete and accurate. For oxygen, SUBSAFE, Scope of Certification or Safety of Flight Critical Component work, the ship's Engineer Officer (Chief Engineer for CVNs) must perform this certification and sign, legibly print or stamp his or her name and badge, grade or rank and enter the date.

BLOCK 21 - SHIP'S COMMANDING OFFICER SIGNATURE

15 Jan 2021

The ship's Commanding Officer (Reactor Officer for CVNs) will sign, legibly print or stamp his or her name and grade or rank and enter the date per Part I, Chapter 2, Appendix E of this Volume. (Submarines only) This signature is REQUIRED to complete certification of Re-Entry into SUBSAFE, Scope of Certification and Fly-by-Wire systems and components.

SITUATION 2. CONTROLLED WORK (NUCLEAR, LEVEL I, SOC, OTHER) OR SUBSAFE REC BY REPAIR ACTIVITY AND SHIP OR REPAIR ACTIVITY ONLY.

- a. The following instructions contain the minimum information and controls necessary to maintain certified systems on board ship, or to document new work for eventual certification when work is performed by Ship's Force and a repair activity or by a repair activity only on a certified ship or component.
- b. Each block number on the MCR/REC, QA form 9 corresponds to the same block number in the instructions. The number identifies the purpose and use of the entry on the MCR/REC.
- c. The planner will fill in Blocks 1 – 14. All other blocks will be filled in or signed by the personnel assigned or their authorized representatives. Such authorized representatives will be designated in writing in an approved ship's or activity's instruction.

BLOCK 1 - PAGE 1 OF

Enter the total number of pages (QA form 9 plus any QA form 10 used as a supplement).

BLOCK 2 - [] SUBSAFE/REC [] NUCLEAR [] LEVEL I [] SCOPE OF CERTIFICATION [] SFCC [] OTHER

Check or "X" the appropriate block(s) and, if "OTHER" is checked, will enter the appropriate level of control (e.g., P-1, P-3a, P-LT).

BLOCK 3 - SHIP HULL NO.

Enter ship's name and hull number.

BLOCK 4 - CWP SERIAL NO.

- a. For Ship's Force and FMA work, obtain the next CWP serial number from the ship's QAO and enter it in the block. For controlled or SUBSAFE work to be performed by the repair activity only (in repair activity shops and the repair activity does no work onboard the ship, examples include ship to shop work; rotatable pool assets) obtain the next CWP serial number from the FMA QAO and enter it in the block. Revision "-" (dash) will be entered on the initial version of all MCR/RECs. When a revision is required, enter the next revision letter. If necessary, prepare a new MCR/REC using the original numbers plus the next revision letter.
- b. For FMA work on a SUBSAFE system, the REC number will be obtained from the ship's QAO and entered after the CWP number (e.g., CWP/REC number). Upon issuance of each REC revision, all prior revisions are canceled and superseded and must be so annotated and retained as OQE. A REC revision must go through the same approval process as the original REC. REC Supplement or continuation sheets (QA-10) must not be used as an alternate to revision of the REC.

BLOCK 5 - **J.O./JCN**

Enter the JCN for the maintenance action.

BLOCK 6 - **ASSOCIATED CWP(s)/REC(s)**

Shipyard use only.

BLOCK 7 - **ORIGINATOR**

Enter the name (and badge, grade or rank) of the person preparing the CWP.

BLOCK 8 - **ORGANIZATION**

Enter the division of the person preparing the CWP.

BLOCK 9 - **SYSTEM REPAIRED/RE-ENTERED**

Identify the system(s) being repaired or re-entered.

BLOCK 10 - **REPAIR/RE-ENTRY LOCATION**

Identify the physical location (i.e., ship or shop) of the work.

BLOCK 11 - **COMPONENT(s)**

Identify the noun name of the component(s) being repaired or re-entered.

BLOCK 12 - **JID MAP/DWG WITH REV**

- a. Enter the number and revision of the appropriate mapping drawing(s) for the work. If no mapping drawing is available, list the most appropriate arrangement or component drawing or diagram. For component repair, enter the applicable document (Standard Navy Valve Drawing, Vendor Drawing, etc.) which depicts the disturbances of the item (work in place or shop work). Based on the scope of work planned, several drawings may need to be referenced. If necessary, local sketches are authorized.
- b. The general order of precedence for entering JID is:
 - (1) JID number from the SUBSAFE Joint Mapping Plan, if there is one.
 - (2) JID number from the Joint Index Drawing, ship or class, for welding.
 - (3) Joint description or JID from Assembly or Arrangement or Installation Drawing. The drawing chosen must adequately portray the joints to be broken.
 - (4) Drawings or diagrams from technical manual.
 - (5) A locally prepared sketch where other alternatives do not adequately describe the joints to be broken. Since the sketch will not be retrievable elsewhere, it must be kept in the REC package as OQE and must be documented on a QA-10.

BLOCK 13 - **WORK AND TESTING TO BE PERFORMED AND WORK AND TEST REFERENCE DOCUMENTS**

Enter the total scope of work and testing required for certification of this repair or re-entry (e.g., ripout, repair, restore, replace, reinstall). Enter the work and test description and make positive reference to the TWD, which contains the detailed work procedure, material

requirements, testing and certification to be performed. Work and testing references will be identified for each action listed in this block. If additional space is needed to properly identify all elements, then a QA form 10 will be used to supplement this block. The information provided in Block 6 does not need to be repeated in Block 13. The description of work on each REC revision must detail the total revised Scope of Work. Cumulative partial descriptions do not satisfy this requirement.

BLOCK 14 - **APPLICABLE JOINT NO(s), OR, IF NOT SUPPLIED, SPECIFIC BOUNDARIES**

Enter the JID to be repaired or re-entered. If joint numbers are not supplied, specify boundaries in specific terms (e.g., body to bonnet joint of valve ASW-29) or assign local joint numbers. If local joint numbers are assigned, the sketch used to identify the joints must be included as OQE in the completed CWP. Listing of work boundary “end points” in lieu of listing discrete individual joints does not satisfy this requirement.

BLOCK 15 - **PRIME APPROVAL SIGNATURE**

- a. BLOCK 15A. The QAO will sign, legibly print or stamp his or her name and badge, grade or rank and enter the date indicating the package is technically correct. **No work can start prior to this signature.**
- b. BLOCK 15B. The Department Head will sign, legibly print or stamp his or her name and badge, grade or rank and enter the date granting permission for work to commence. **No SUBSAFE work can start prior to this signature.**
- c. BLOCK 15C. For nuclear, oxygen, SUBSAFE, Scope of Certification or Safety of Flight Critical Component work, the ship’s Engineer Officer (Reactor Officer for CVNs) will sign, legibly print or stamp his or her name and badge, grade or rank and enter the date, granting permission for work to be conducted. **No nuclear, oxygen system, SUBSAFE, Scope of Certification or Safety of Flight Critical Component work can start prior to this signature.**
- d. BLOCK 15D. The Officer Of the Deck or Duty Officer or Engineering Officer of the Watch or Engineering Duty Officer, depending on the work to be performed, will sign, legibly print or stamp his or her name and badge, grade or rank and enter the date, authorizing the work to start. This signature establishes the work and CWP start date and signifies that the system or component is in a condition to accomplish the work. This signature is not required for repair activity generated MCR/RECs to repair ship to shop items from tended ships (e.g., periscopes, relief valves, antennae).

NOTE: COMPLETE BLOCKS 16, 17, AND 18 BEFORE PERFORMING ANY SHIPBOARD TESTING. IF REWORK BECOMES NECESSARY AS THE RESULT OF SHIPBOARD TESTING, THE REQUIREMENTS OF PART I, CHAPTER 2, PARAGRAPH 2.3.7.2 OF THIS VOLUME SHALL BE FOLLOWED. FOR SHIP-TO-SHOP MAINTENANCE, BLOCKS 16, 17, AND 18 DO NOT NEED TO BE COMPLETED FOR IN-PROCESS TESTING IDENTIFIED AS PART OF THE CWP “PROCEDURE” SECTION. AFTER COMPLETING THE PROCEDURE AND BEFORE PERFORMING THE CWP “TESTING AND INSPECTION” SECTION, COMPLETE BLOCKS 16, 17, AND 18.

NOTE: RFI “TAGS” FOR MCD-A AND MCD-B MATERIAL MAY CONSIST OF A PHYSICAL TAG ATTACHED TO THE COMPONENT OR MARKINGS ON THE PACKAGING THAT CONTAIN THE RECEIPT INSPECTION SERIAL NUMBER, MCD LEVEL, NATIONAL STOCK NUMBER (NSN) WITH SMIC (D0, D4, D5, D6, D7, OR D8) AND CONTRACT NUMBER. WHEN THE RFI MARKINGS ARE CONTAINED ON THE PACKAGING, A PHOTOCOPY OF THE PACKAGING IS ACCEPTABLE FOR RECORD RETENTION PURPOSES.

BLOCK 16 - SUPPORTING DOCUMENTATION

- a. The LWC Division Officer will identify all supporting documentation required and generated as established by the CWP. For example, a typical entry would be: QA2(3), QA12(1), QA26(1), QA34(1), RFI Tag(1), LAR(2). List only QA form 2s for new material installed in the system or component. The cumulative documentation (OQE) must be listed on the latest revision. ((Submarines only) The QA-10 is a continuation sheet for the QA-9 and is not required to be listed in Block 16.)
- b. For activities using the Task Group Instruction (TGI) process. Deficiency Logs (DL) do not have to be listed in this block since DLs are integral to the TGI. The TGI should be cited in Block 16 if not already cited in Block 13. QA forms and other individual OQE records must be listed.

BLOCK 17 - VERIFICATION OF WORK COMPLETION

The LWC Division Officer will sign, legibly print or stamp his or her name (and badge, grade or rank) and enter the date, certifying that the production work described by the MCR/REC has been accomplished per the specified instructions and that the required documentation for the production work as described in Block 16 has been completed, reviewed and is correct. When rework is identified following signing blocks 17 and 18, new signature and date blocks for blocks 17 and 18 must be documented on a QA form 10.

BLOCK 18 - CERTIFICATION OF DOCUMENTATION OF PRODUCTION WORK

The QAO will sign, legibly print or stamp his or her name and badge, grade or rank and enter the date, certifying that all documentation for the production work specified in Block 16 has been reviewed for accuracy and completeness and is complete and accurate. When rework is identified following signing blocks 17 and 18, new signature and date blocks for blocks 17 and 18 must be documented on a QA form 10.

BLOCK 19 - CERTIFICATION OF TESTING RESULTS

The QAO will sign, legibly print or stamp his or her name and badge, grade or rank and enter the date, certifying that the testing invoked for this MCR/REC has been completed satisfactorily. The test documentation specified in Block 16 has been completed, reviewed, and is complete and accurate.

BLOCK 20 - FINAL MCR/REC CLOSEOUT CERTIFICATION

The Department Head will sign, legibly print or stamp his or her name and badge, grade or rank and enter the date, certifying that all documentation related to this MCR/REC has been reviewed for accuracy and completeness and is complete and accurate.

15 Jan 2021

BLOCK 21 - SHIP'S COMMANDING OFFICER SIGNATURE

For "Ship's Force and FMA" MCR/REC, the ship's Commanding Officer (Reactor Officer for CVNs) will sign, legibly print or stamp his or her name and grade or rank and enter the date, per Part I, Chapter 2, Appendix E of this Volume. For "FMA ONLY" MCR/REC, this block is marked N/A.

15 Jan 2021

HULL NO. _____
CWP SER. NO. _____
REV. NO. _____
PAGE ____ OF ____

MAINTENANCE CERTIFICATION RECORD/RE-ENTRY CONTROL SUPPLEMENT
SHEET
QA FORM 10

QA FORM 10 INSTRUCTIONSMAINTENANCE CERTIFICATION RECORD/RE-ENTRY CONTROL SUPPLEMENT
SHEET

PURPOSE: MCR/REC Supplement Sheets are used to record supplemental data required by the MCR/REC, QA form 9. Examples of supplemental data are:

- a. Continuation of Blocks 12 (including local sketches), 13, 14 and 16 of the QA form 9.
- b. When rework is identified following signing blocks 17 and 18 of the QA form 9, new signature and date blocks for blocks 17 and 18 must be documented on a QA form 10.

PROCEDURE: The MCR/REC Supplement Sheet, QA form 10 may be used, as required, to record supplemental data required by the MCR/REC, QA form 9 (page number will normally be 2 of _). Record the QA form 9 block number and supplemental data. Record name and signature of the person recording the information (normally the person who is signing QA form 9) and date, except where the entry is preprinted by Planning prior to initial review for approval or opening.

CONTROLLED WORK PACKAGE (CWP)/RE-ENTRY CONTROL (REC) LOG
QA FORM 11

[illegible]

QA FORM 11 INSTRUCTIONSCONTROLLED WORK PACKAGE (CWP)/RE-ENTRY CONTROL (REC) LOG

PURPOSE: To provide a record of ship and repair activities entries into SUBSAFE, nuclear, Level I, Deep Submergence SOC and other certified systems or components. The CWP/REC Log will summarize the chronological record of CWP and REC for the life of the ship.

PROCEDURE: The numbered blocks on the CWP/REC Log, QA form 11 correspond to the same block number in the instructions. A CWP/REC Log will be maintained by each ship, FMA and naval shipyard per sub-paragraphs a through d.

- a. The log is maintained by the QAO for ships and repair activities.
- b. When the CWP/REC is performed by the ship alone, the serial number will be recorded in the ship's CWP/REC Log.
- c. The FMA will also have a tended ship CWP/REC Log that records entries for work on each tended ship.
- d. When the CWP/REC is a Ship's Force provided serial number, it will be recorded in both the ship's CWP/REC Log and in the FMA's tended ship CWP/REC Log.

BLOCK 1 - PAGE NO.

As each new page is started, the QAO will enter the appropriate page number(s).

BLOCK 2 - SHIP

The QAO will enter the ship's name and hull number. Locally pre-printed forms with the ship's name and hull number are acceptable.

BLOCK 3 - CWP/REC NUMBER

For controlled (i.e., Level I, Nuclear, Scope of Certification) or SUBSAFE work to be performed by Ship's Force only, the ship's QAO will issue the CWP/REC numbers sequentially for entry in Block 4 of the ship's QA form 9. For controlled or SUBSAFE work performed by the repair activity on, or for a tended ship, the ship's QAO will issue CWP/REC numbers sequentially to the repair activity for entry in Block 4 of the repair activity's QA form 9. For controlled or SUBSAFE work to be performed by the repair activity only, not associated with a specific ship (example – rotatable pool assets), the repair activity's QAO will issue the CWP/REC numbers sequentially for entry in Block 4 of the repair activity's QA form 9. The format of the CWP/REC serial numbers will be the serial number followed by the year (e.g., 1-90, 123-01).

NOTE: SOC IS A LEVEL OF WORK TERM FOR DEEP SUBMERGENCE SYSTEM WORK IN ACCORDANCE WITH NAVSEA SS800-AG-MAN-010/P9290 USED IN CONJUNCTION WITH WORK ON HOST SYSTEMS FOR DRY DECK SHELTERS.

BLOCK 4 - LEVEL OF WORK

The QAO will enter the level of the work (e.g., SUBSAFE, Nuclear, Level I, SFCC or SOC). For SUBSAFE or SOC work on a tended unit by a repair activity other than during a

15 Jan 2021

scheduled Chief of Naval Operations Availability, the repair activity will obtain a REC number from the ship's QAO and record it in this block (e.g., SUBSAFE/REC No.).

NOTE: IF THE MCR IS REVISED BEYOND REVISION "G", THE ADDITIONAL REVISION LETTERS WILL BE ENTERED AND CROSSED OUT IN THE REMARKS BLOCK, BLOCK 9.

BLOCK 5 - REVISIONS

The QAO will circle, cross out, and record the applicable revision. This column controls the revisions, with the first version being "-" (dash), the first revision being A, second revision being B, etc. When the initial CWP/REC number is issued the dash (-) will be circled, when subsequent revisions of the MCR are issued the appropriate letter (A, B, C) will be circled and the previously circled Revision Letter will be crossed out using an "X".

BLOCK 6 - SYSTEM/COMPONENT

The QAO will enter the same system as in Block 9 or component as in Block 11 of the QA form 9.

NOTE: COMPONENT IS PREFERRED IF IT IS A VALVE OR EQUIPMENT WITH A UNIQUE IDENTIFIER (e.g., ASW-617, NO. 1 MAIN CONDENSER, ETC.).

BLOCK 7 - PRIME RESPONSIBILITY WORK CENTER OR GROUP

The QAO will enter the division or organization responsible for the work. For a repair activity, this is the LWC as assigned by the Planning Officer. For the ship, this is the WC initiating the QA form 9.

NOTE: IF THE COMMANDING OFFICER OF THE SHIP IS REQUIRED TO REVIEW FOR CLOSING THE QA FORM 9, THEN THE DATE IN BLOCK 21 OF THE QA FORM 9 DOCUMENTING THE CO's REVIEW MUST BE DOCUMENTED IN BLOCK 8 OF THE QA FORM 11.

BLOCK 8 - DATE

The QAO will enter the date the MCR serial number is assigned in the column "ISSUED". In the column "STARTED", the QAO will enter the same date as in Block 15D of the MCR as soon as Block 15 is dated. In the column "CLOSED", the QAO will enter the same date documented in Block 20 or 21, as applicable, of the QA form 9.

BLOCK 9 - REMARKS

This column is to be used to record revisions of the MCR/REC, if more revisions are issued after revision "G", and to summarize the work description and any other pertinent information (e.g., repair ASW-22, accomplish Unrestricted Operation (URO) Maintenance Requirement Card (MRC) 008 on ASW-7, overhaul number 2 periscope).

REC/MCR EXCEPTION CONTROLLED ASSEMBLY LOG
QA FORM 11A

[illegible]

QA FORM 11A INSTRUCTIONSREC/MCR EXCEPTION CONTROLLED ASSEMBLY LOG

PURPOSE: To provide a record for the completion of maintenance on components or systems assembled as a controlled assembly and performed as a REC/MCR exception.

PROCEDURE: The numbered blocks on QA Form 11A correspond to the same block number in the instructions. A REC/MCR Exception Controlled Assembly log will be maintained by each ship.

- a. The log is maintained by the QAO for ships.
- b. The REC/MCR Exception and Controlled Assembly Log will summarize the chronological record of REC/MCR exceptions and controlled assemblies until all maintenance on the log sheet has been superseded.

NOTE: **EACH REC/MCR EXCEPTIONS LOG PAGE MUST BE RETAINED IN THE FRONT OF THE REC EXCEPTION BINDER UNTIL ALL ITEMS LISTED ON THAT PAGE ARE SUPERSEDED.**

BLOCK 1: - PAGE NO.

As each new page is started, the QAO will enter the appropriate page number(s).

BLOCK 2: - SHIP

The QAO will enter the ship's name and hull number. Locally pre-printed forms with the ship's name and hull number are acceptable.

BLOCK 3: - TWD

QAO will identify the TWD used to perform the REC/MCR exception controlled assembly, (i.e. FWP serial number, PMS MRC, component technical manual, etc.).

BLOCK 4: - LEVEL OF WORK

The QAO will enter the level of work (e.g. SUBSAFE, Level I, SOC).

BLOCK 5: - SYSTEM OR COMPONENT

The QAO will enter the system or component for the maintenance (e.g. Salvage Air SA-1 thru SA-8, RO Unit Wye Strainer).

BLOCK 6: - PRIME RESPONSIBILITY WORK CENTER OR GROUP

The QAO will enter the division or workcenter responsible for the work. This is the workcenter conducting the controlled assembly.

BLOCK 7: - DATE

QAO will enter date QA-34 was filed in REC Exception binder.

BLOCK 8: - REMARKS

This column is to be used to summarize the work description and any other pertinent information (e.g., Salvage Air SA-1 through 8, RO Unit Wye Strainer PMS, External Air Charging Conn). Enter "N/A" if block is not used.

QA FORM 12 INSTRUCTIONSDEPARTURE FROM SPECIFICATION REQUEST

NOTE: THE QA-12 WHEN PRINTED WILL DISPLAY AT A MINIMUM THE FIELDS DEPICTED IN THE QA-12 FORM BUT MAY BE ARRANGED OR SEQUENCED IN A DIFFERENT VIEW.

PURPOSE: Used to report and request approval of a DFS.

PROCEDURE:

1. The activity finding or causing a DFS will immediately report the DFS to the appropriate approval authority using this form.
2. The numbered blocks on QA form 12 correspond with block instructions listed.

BLOCK 1 - DEPARTURE NO.

Enter the next sequential number from the affected ship serial file.

BLOCK 2 - SHIP HULL NO.

Enter the name and hull number of the ship on which the DFS occurred.

NOTE: BLOCK 3 OR BLOCK 17 HAS TO BE FILLED IN TO SUPPORT A TEMPORARY DEPARTURE IF THERE IS SUBSEQUENT ACTION TO CLEAR A TEMPORARY DEPARTURE.

BLOCK 3 - JCN

Enter the JCN for the job that is intended to correct the DFS condition.

BLOCK 4 - CWP/REC SER. NO.

Enter the CWP/REC serial number or enter N/A if no CWP/REC is required. Do not list the CWP/REC revision.

BLOCK 4A - TECHNICAL WORK DOCUMENT

(SHIPYARD USE ONLY) Enter the technical work document that identified the non-conformance.

BLOCK 5 - DATE

Enter the date the DFS request is filled out.

BLOCK 6 - ORIGINATOR

Print or type the name of the originator of the DFS.

BLOCK 7 - DEPARTURE TYPE

Enter the applicable departure type. (Major or Minor) and classification as necessary (SUBSAFE, SOC, URO, FBW or SFCC).

BLOCK 7A - EXPECTED CLEARANCE DATE

The activity performing final approval must enter an expected clearance date in conjunction with approving the non-conformance. This date will normally be the expiration date but may

be a date earlier than the expiration of the non-conformance. The Ship, ISIC or TYCOM may revise this date to be earlier than the expiration date of the non-conformance.

BLOCK 7B - **TEMPORARILY APPROVED UNTIL DATE**

The Approval Activity will fill in the “TEMPORARILY APPROVED UNTIL DATE” for non-Electronic Departure from Specification departures. Electronic Departures from Specification will automatically populate with the TEMPORARILY APPROVED UNTIL DATE in conjunction with the approval authority signature.

BLOCK 8 - **ADDITIONAL CLASSIFICATION (SHIPYARD AND SOC USE ONLY)**

Enter the necessary information as required. If the departure is conditional, mark the appropriate block to indicate that ISIC concurrence is required.

BLOCK 9 - **SYSTEM/COMPONENT/LOCATION**

Enter the affected system, component, and location. A short description may be added if needed to fully identify the system, component and location.

BLOCK 10 - **NAVSEA DRAWING/PLAN NUMBER/PIECE NUMBER**

Enter the NAVSEA drawing number, plan number and piece number, as applicable, that shows the component or system on which the DFS is initiated.

BLOCK 11 - **REFERENCES**

Enter additional references used (e.g., Training Aid Booklet, Ships Information Book, Ships Systems Manual, Steam and Electric Plant Manual, SUBSAFE Certification Boundary Book, Tech Manual) as applicable.

BLOCK 12 - **APPLICABLE SPECIFICATIONS**

Enter the applicable specifications. Be descriptive and specific. Enter the reference that provided the specification. This block should fully explain the specifications and include the JID or part applicable (e.g., perform “J” pressure test to test pressure depth after mechanical assembly of joints “XXXX” in which software was replaced). This block must be explicit, so that no reference is required to the work procedure to understand the specifications.

BLOCK 13 - **SITUATION/DEGREE OF NON-COMPLIANCE**

Enter what the actual condition is. Sketches, drawings, QA forms, etc., may be attached, if they clarify the description of the non-conforming condition.

BLOCK 14 - **COMMENTS/RECOMMENDATION (TEST CONDUCTED, AFFECTED SYSTEMS)**

Enter comments and recommendations pertinent to the job. The comments will include recommendation and justification for approval of the DFS. Enter tests conducted and the results, SAT or UNSAT.

BLOCK 15 - **DATE ANSWER REQUESTED BY**

Enter date.

BLOCK 16 - **SUBMITTING ACTIVITY**

15 Jan 2021

Type or print name and enter signature.

NOTE: BLOCK 3 OR BLOCK 17 HAS TO BE FILLED IN TO SUPPORT A TEMPORARY DEPARTURE IF THERE IS SUBSEQUENT ACTION TO CLEAR A TEMPORARY DEPARTURE.

BLOCK 17 - NEW JCN NUMBER FOR CONDITIONAL DEPARTURES

If the JCN in block 3 does not include all the work necessary to clear the DFS condition, enter the JCN(s) for the additional work necessary to clear the DFS.

BLOCK 18 - APPROVAL ACTIVITY

List the activity who will be the final approval.

BLOCK 19 - COPY TO

Enter activities to receive copy.

For the ISIC, TYCOM, LOCAL TECHNICAL AUTHORITY and NAVSEA or NAVAIR TECHNICAL AUTHORITY blocks, the applicable activity will request, concur, approve, disapprove and indicate temporary, permanent or precedent setting as applicable. In the case of temporary non-conformances, specify the TEMPORARILY APPROVED UNTIL DATE (dd/mm/yyyy) that the noncompliance is acceptable prior to correction and list any restrictions.

ISIC: Check the appropriate blocks. Check the FWD to TYCOM/LOCAL TECH. AUTHORITY FOR ACTION block for any DFS requiring TYCOM action and print name, sign and date.

- a. (Surface Forces only) The originator of the non-conformance will check the appropriate blocks to forward the non-conformance to the appropriate activity for action.
- b. For an at sea generated DFS, the Commanding Officer will use the ISIC section to indicate approval of the DFS.
- c. In the instances where a depot activity forwards a conditional departure to the ISIC for concurrence, the ISIC will check the block labeled CONCUR, FORWARDED TO TYCOM FOR ACTION. The ISIC will type or print name, sign and date.

TYCOM: Check the appropriate blocks. Type or print name, sign and date. ((Submarines only) See QA-12 Block 19 table for approval guidance).

LOCAL TECHNICAL AUTHORITY: When appropriate, check the appropriate blocks and type or print name, sign and date. Check the FWD TO NAVSEA FOR ACTION BLOCK for any DFS requiring NAVSEA final approvals.

NAVSEA/NAVAL AIR SYSTEMS COMMAND (NAVAIR) action: The appropriate blocks will be checked and signed by NAVSEA.

NAME/SIGNATURE/DATE: The ISIC Material Officer, ISIC QAO, TYCOM Representative, Local Technical Authority Chief Engineer or Commanding Officer (for an at-sea initiated DFS) will type or print name and title, sign and date in the appropriate block signifying technical acceptance of the DFS. In the case of shipyard conditional departures, the ISIC signature only signifies acceptance that work to clear the deficient condition is acceptable to be delayed to a

15 Jan 2021

future time period. The ISIC signature in this case does not signify acceptance of the technical merit of the departure.

TYCOM: Check the appropriate blocks. Type or print name, sign and date.

NOTE: WHEN ANY OF THE FOLLOWING BLOCKS IN SECTION 7 ARE CHECKED, THE TYCOM MAY APPROVE THE DFS AS DEFINED IN THE FOLLOWING TABLE:

QA-12 Block 19 Table (Submarines Only)	
MAJOR	TYCOM may approve MAJOR non-conformances on a temporary basis with concurrence from the appropriate NAVSEA technical authority.
MINOR	TYCOM may approve all MINOR non-conformances not also marked SUBSAFE, FBW, SFCC, or SOC.
SUBSAFE	<p>TYCOM may approve the following MINOR departures:</p> <ol style="list-style-type: none"> (1) Departures to which a NAVSEA approved PRECEDENT-setting departure clearly applies. The NAVSEA approved departure cited as the PRECEDENT must be referenced and retained with the approved departure. (2) Departures administered solely for the purpose of transferring accountability to an alternative accountability system in support of at-sea testing. <p>The TYCOM may approve all other MAJOR or MINOR non-conformances within the SUBSAFE Certification Boundary following discussion with the designated NAVSEA technical authority or regional Chief Engineer.</p>
URO	With the exception of at-sea portions of URO MRC 022, the TYCOM must obtain NAVSEA technical approval of all URO MRC non-conformances.
FBW or SFCC	<p>TYCOM may approve the following MINOR departures:</p> <ol style="list-style-type: none"> (1) Departures to which a NAVSEA approved PRECEDENT-setting departure clearly applies. The NAVSEA approved departure cited as the PRECEDENT must be referenced and retained with the approved departure. (2) Departures in the FBW SCS Certification Boundary when the system design employs four (or more) SFCCs with the same function (quad redundant) and a deficiency degrades the operation of only one SFCC. (3) Departures in the FBW SCS Certification Boundary administered solely for the purpose of meeting the alternative accountability system requirement for at-sea testing. <p>The TYCOM may approve all other MAJOR or MINOR non-conformances within the FBW SCS Certification Boundary following discussion with NAVSEA 05U7.</p>
SOC	<p>MINOR non-conformances: Following agreement from NAVSEA that a condition is MINOR, may be approved by the TYCOM as a temporary SOC non-conformance provided that it does not affect the watertight integrity of the DDS and no DDS manned operations will be conducted.</p> <p>Non-conformances affecting any system, equipment or component within the SOC boundary, which are determined to be required by Part III, Chapter 8 of this volume, must be categorized and processed as a MAJOR departure, unless otherwise directed by NAVSEA, will require NAVSEA approval.</p>

DEPARTURE CLEARANCE REPORT

QA FORM 12A

1. FROM:	2. DATE	
3. TO:		
4. SUBJECT DFS NUMBER _____ DATED _____ ON SYSTEM/COMPONENT _____ IN USS _____		
5. REFERENCE(s): (A) COMUSFLTFORCOMINST 4790.3 - JOINT FLEET MAINTENANCE MANUAL (B) (C) (D)		
6. JUSTIFICATION		
7. CLEAR / CANCEL SUBJECT DFS IN ACCORDANCE WITH REFERENCE (A). (CIRCLE ONE)		
8. SIGNATURE	TITLE	DATE

QA FORM 12A INSTRUCTIONS
DEPARTURE CLEARANCE REPORT

PURPOSE: Provide document for reporting the clearance of a DFS.

PROCEDURE: The numbered blocks on QA form 12A correspond with the block instructions listed. QA form 12A should be completed by the ship, ISIC or the NSA correcting the non-conformance on which the DFS exists as soon as the discrepant condition has been corrected.

BLOCK 1 - FROM

Enter the ship's name and hull number or enter the name and activity of person clearing DFS.

BLOCK 2 - DATE

Enter date the DFS was cleared or cancelled.

BLOCK 3 - TO

Enter the appropriate ISIC or, if clearing ship approved DFS, enter "CO". For all others, enter the name and activity of person clearing DFS.

BLOCK 4 - SUBJECT

Enter the required data taken from the QA form 12.

BLOCK 5 - REFERENCE(s)

Enter all applicable references.

BLOCK 6 - JUSTIFICATION

Enter detailed justification for the clearance or cancellation listing all references, tests and inspections used for the DFS clearance.

BLOCK 7 - CLEAR/CANCEL

Circle or check the appropriate action.

BLOCK 8 - SIGNATURE

QAO or the activity correcting the non-conformance, print name, enter signature, title and date. For EDFS this must be an electronic signature.

15 Jan 2021

QA FORM 14 INSTRUCTIONSSURVEILLANCE/MONITORING/AUDIT DISCREPANCY RECORD

- PURPOSE:
- a. To provide as a result of conducting audits and surveillances, a method or means of reporting a discrepancy and ensuing corrective actions are taken by the WC or division.
 - b. To provide a method of recording discrepancies, reworks and processing actions until final clearance.
 - c. To provide the only approved method to correct or add Objective Quality Evidence to a certified CWP or closed QA Form.
 - d. To provide, when maintained in an auditable fashion, a record of completed corrective actions.
 - e. To provide, when completed, an ability to conduct trend analysis to improve overall FMA and ship's maintenance quality.

NOTE: A COPY OF ALL ASSOCIATED QA FORMS 14 MUST BE INCLUDED WITH THE CWP, QA FORM OR REC. DEFICIENCIES FOUND IN A CLOSED CWP, QA FORM OR REC THAT REQUIRE CORRECTION MUST BE DOCUMENTED ON A QA FORM 14. NO CHANGE TO THE CLOSED CWP, QA FORM OR REC IS PERMITTED EXCEPT AS CITED IN THIS NOTE. THE QA FORM 14 SERIAL NUMBER WILL BE ANNOTATED AT THE TOP OF THE QA FORM 9 OR QA FORM TO CLEARLY INDICATE A QA FORM 14 WAS WRITTEN AFTER THE CWP, QA FORM OR REC WAS CLOSED OR CERTIFIED AND THAT ADDITIONAL OQE IS ASSOCIATED WITH THE CLOSED CWP, QA FORM OR REC PACKAGE.

PROCEDURE: The numbered blocks in QA form 14 correspond with the block instructions listed.

BLOCK 1 - DATE

The person discovering or documenting the discrepancy will enter the date the report was initiated.

BLOCK 2 - SERIAL NUMBER

The QAS or QAO will enter the next sequential number from the QA form 14 Log.

BLOCK 3 - WC

Person discovering or documenting the discrepancy will enter the WC responsible.

BLOCK 4 - PART 1 - DISCREPANCY DESCRIPTION

Person discovering the discrepancy will enter a description of the discrepancy and the associated reference. If associated with a CWP, enter the CWP serial number.

BLOCK 5 - ORIGINATOR SIGNATURE

The individual discovering or documenting the discrepancy will sign, and legibly print, type or stamp his or her name.

BLOCK 6 - QA OFFICER/QA SUPERVISOR REVIEW SIGNATURE

The QAO or a QAS will sign and legibly print, type or stamp his or her name signifying a review of and concurrence with the validity of the discrepancy.

NOTE: BLOCK 7, WHEN COMPLETE, WILL SIGNIFY A COMPREHENSIVE PROCESS BY WHICH THE BLOCK 4 DISCREPANCY'S CAUSE, CORRECTION AND PREVENTION ARE IDENTIFIED AND TRACKED TO COMPLETION.

BLOCK 7 - PART 2 - CORRECTIVE ACTION

- a. **ROOT CAUSE**: When required by the QAO, the Division Officer of the WC responsible (Block 3) for causing the discrepancy will enter the root cause and a brief supporting discussion.
- b. **IMMEDIATE CORRECTIVE ACTION**: The Division Officer of the WC responsible for causing the discrepancy will enter a description of the IMMEDIATE CORRECTIVE ACTIONS (if applicable) that have been taken or are planned and indicate their Estimated Completion Date (ECD).
- c. **PERMANENT CORRECTIVE ACTION**: The Division Officer of the WC responsible for causing the discrepancy will enter a description of the PERMANENT CORRECTIVE ACTIONS (to prevent recurrence) that have been taken or are planned and indicate their ECD. Examples include process improvements and policy or procedural changes.
- d. **OBJECTIVE QUALITY EVIDENCE CORRECTIONS**: The Division Officer of the WC responsible for causing an Objective Quality Evidence discrepancy will enter all required information that adds or corrects existing discrepant OQE (described in Block 4) to a closed CWP, QA FORM or REC. In the event the deficiency identified in Block 4 is not related to OQE, this area must be marked NA.

NOTE: UPON SIGNING BLOCK 8, THE DIVISION OFFICER MUST RETAIN A COPY FOR TRACKING PURPOSES, UNTIL RESOLVED, AND PROVIDE A COPY OF THE QA FORM 14 TO THE QAO OR QAS.

BLOCK 8 - DIVISION OFFICER SIGNATURE

The Division Officer of the WC responsible for causing the discrepancy will sign, date and legibly print, type or stamp his or her name signifying comment validity and accurate corrective action or OQE correction (if applicable) exists.

NOTE: UPON SIGNING BLOCK 9, THE QAO OR QAS MUST FILE A COPY OF THE SIGNED QA FORM 14 WITH THE DISCREPANT CLOSED CMP, QA FORM OR REC (AS APPLICABLE) TO ALLOW IT TO STAND ALONE.

BLOCK 9 - QA OFFICER/QA SUPERVISOR SIGNATURE

The QAO or QAS will sign, date and legibly print, type or stamp his or her name indicating full acceptance of the Block 7 comments.

BLOCK 10 - PART 3 - EFFECTIVENESS RE-INSPECTION/AUDIT

15 Jan 2021

When required by the QAO, the QAO or QAS will enter a description of the necessary QAO or QAS re-inspections or audits that will support determining effectiveness of each Block 7 Corrective Action and indicate an ECD for each re-inspection or audit action. Examples include but are not limited to audits, surveillances, exams and level of knowledge interviews.

BLOCK 11 - **EFFECTIVENESS**

Upon completion of a Re-inspection/Audit (Block 10), the QAO or QAS will enter its effectiveness as “YES or NO”. If the effectiveness has been determined to be “NO”, the QAO or QAS must transfer the issue to a new QA form 14 (for further root causal analysis and corrective actions) and enter that new QA FORM 14 serial number in the space provided.

NOTE: UPON CLOSURE, THE QAO OR QAS MUST FILE THE COMPLETED AND CLOSED QA FORM 14 IN THE QA FORM 14 BINDER WITH A COPY FILED WITH THE DISCREPANT CLOSED CWP, QA FORM OR REC (AS APPLICABLE) TO ALLOW IT TO STAND ALONE.

BLOCK 12 - **EFFECTIVENESS REVIEW QA OFFICER/QA SUPERVISOR SIGNATURE**

Upon completion of all re-inspections or audits (Block 10), determination of effectiveness and deferral (by QA-14 for any corrective actions deemed NOT effective), the QAO or QAS must enter signature and date, and legibly print, type or stamp his or her name indicating acceptance and closure of the QA form 14.

TEST AND INSPECTION RECORD

QA FORM 17 Planning must fill in blocks identified by a ♦ prior to issuing

Page ___ of ___

♦1. SHIP	HULL NO.	♦2. JCN	♦3. LWC/SHOP	♦4. CWP/REC SER NO.	♦5. SYSTEM/COMPONENT
♦6. REFERENCES (COMPONENT DETAIL/ASSEMBLY DRAWING AND REV)

♦8. DESCRIPTION OF TEST AND/OR INSPECTION:					
9. RESULTS					
10. CRAFTSMAN SIGNATURE			DATE		
11. QA INSPECTOR SIGNATURE			DATE		
12. RECORD HAS BEEN REVIEWED FOR COMPLETENESS					
QA WCS SIGNATURE (QAO/QAS SIGNATURE FOR SUBSAFE/SOC/SFCC ONLY)				DATE	

QA FORM 17 INSTRUCTIONS
TEST AND INSPECTION RECORD

PURPOSE: To provide a report form for work, tests and inspections not covered by other QA forms. This form can be used for flushes, operational testing, shop inspections, cleanliness inspections, generic material identity test, and other tests, inspections, and information deemed necessary. The QA form 17 will not be used in lieu of a QA form 26A in DSS or SOC applications.

PROCEDURE: The numbered blocks on QA form 17 correspond with the block instructions listed. The planning organization must fill in Blocks 1 through 8 (identified by a ♦) prior to issuing the CWP.

BLOCK 1 - SHIP HULL NO.

Enter the ship's name and hull number.

BLOCK 2 - JCN

Enter the JCN.

BLOCK 3 - LWC

Enter the shop number of the LWC.

BLOCK 4 - CWP/REC SERIAL NO.

Enter the CWP/REC serial number or enter N/A if no CWP/REC is required. Do not list the CWP/REC revision.

BLOCK 5 - SYSTEM/COMPONENT

Enter the noun name of the system or component to be tested or inspected.

BLOCK 6 - REFERENCES (COMPONENT ASSY/DETAIL DRAWING AND REVISION)

Enter all references used to identify component parts, material information, and required test or inspection including revision letter and if applicable, the assembly number (Assy D, Assy RA, etc.). For original issue drawings (no revisions) enter a dash (-). For vendor drawings, include vendor name. Revisions for technical manuals are not required.

BLOCK 7 - PART DESCRIPTION/PIECE NO.

Enter the part number or description (pc 5, bonnet, stem bore, backseat, etc.).

BLOCK 8 - DESCRIPTION OF TEST AND/OR INSPECTION

Enter a detailed description of tests, inspections or work to be performed or note the reference used and paragraph or note number that specifies the inspection or test. Enter the required pressure, duration, medium and acceptance criteria of the test. If the test or inspection has a numerical value (e.g., maximum or minimum value), the values will be written in. If listing the pressure values would classify the work procedure, then the symbols "J" or "H" (with the applicable reference including paragraph, table, section or item number) may be used instead of classifying the document.

15 Jan 2021

NOTE: WHEN MANUFACTURING PARTS, ENTER THE MATERIAL SPECIFICATION OR NSN FOR RAW STOCK AND RECORD THE PLAN AND WHEN APPLICABLE, THE PIECE NUMBER OF THE PART MANUFACTURED.

NOTE: FOR URO MRCs TO BE PERFORMED AS A RETEST, LIST THE SPECIFIC APPLICABLE PORTIONS OF THE URO MRC (TO INCLUDE APPLICABLE PRE-REQUISITE STEPS) REQUIRED TO RECERTIFY THE SYSTEM.

BLOCK 9 - RESULTS

Enter the specific results of the test, inspection or work specified in Block 8. Indicate satisfactory or unsatisfactory results or completion. If UNSAT, the craftsman will:

- a. Initiate action to resolve the condition.
- b. Record actions taken in this block to correct the unsatisfactory condition.
- c. Sign in this block (Block 9).

Do not sign Block 10 unless signing for satisfactory results or completion are obtained or for an UNSAT condition that has been accepted.

NOTE: IF THE TEST OR INSPECTION REQUIRES THE USE OF TMDE, RECORD THE INSTRUMENT, RANGE AND SERIAL NUMBER AND CAL DUE DATE IN THE RESULTS BLOCK.

NOTE: WHEN VULCANIZING O-RINGS, ENTER THE STOCK NUMBER AND EXPIRATION DATE (IF PROVIDED).

NOTE: IF SKETCHES, DRAWINGS, URO DATA REPORT FORMS OR ADDITIONAL INFORMATION IS REQUIRED TO SUPPLEMENT THIS REPORT, EACH DRAWING, ETC., WILL BE LABELED AS AN ATTACHMENT TO ITS RESPECTIVE QA FORM 17, INCLUDING THE PAGE NUMBER, WHICH MUST BE SIGNED (INCLUDE PRINTED NAME, DATE) BY THE CRAFTSMAN AND QAI FILLING OUT THE QA FORM 17. (FOR ATTACHMENTS WITH MULTIPLE PAGES, ONLY THE FIRST PAGE REQUIRES SIGNATURES.)

NOTE: FOR OPERATIONAL JOINT TIGHTNESS TESTS, ENTER ACTUAL PRESSURE AND DURATION. TEST DURATION WILL INCLUDE THE REQUIRED TEST PERIOD AND THE TIME REQUIRED TO COMPLETE THE INSPECTION. IF LISTING THE ACTUAL TEST PRESSURE VALUE WOULD CLASSIFY THE WORK PROCEDURE, THEN THE SYMBOLS "J" OR "H" (WITH THE APPLICABLE REFERENCE, INCLUDING PARAGRAPH, TABLE, SECTION AND ITEM NUMBER) MAY BE USED INSTEAD OF CLASSIFYING THE DOCUMENT. FOR URO MRCs PERFORMED AS A RETEST, COMPLETE REQUIRED PORTIONS OF THE URO MRC DATA FORMS AND ENTER SATISFACTORY OR UNSATISFACTORY IN BLOCK 9.

BLOCK 10 - CRAFTSMAN/DATE

15 Jan 2021

Craftsman print name, enter signature and date after completing Block 9. Do not sign Block 10 unless satisfactory results or completion are obtained or the UNSAT condition has been accepted.

NOTE: FOR NDT INSPECTIONS, THE NDT INSPECTOR WILL SIGN BLOCK 10 AS THE CRAFTSMAN AND THE NDT SUPERVISOR WILL SIGN BLOCK 11 FOLLOWING REVIEW OF THE FORM.

BLOCK 11 - **QA INSPECTOR/DATE**

Inspector print name, enter signature and date verifying the accuracy of the data recorded in Block 9.

BLOCK 12 - **RECORD HAS BEEN REVIEWED FOR COMPLETENESS**

QAS or QAO will print name, enter signature and date for final review, signifying the accuracy of the completed form for SUBSAFE, SOC or SFCC items only. For other components, the QA Work Center supervisor must sign and date the form signifying the accuracy of the completed form.

15 Jan 2021

EPOXY REPAIR RECORD

Page ____ of ____

QA FORM 17A (06/05) Planning must fill in blocks identified by a ♦ prior to issuing

♦ 1. SHIP HULL NO.		♦ 2. JCN		♦ 3. LWC/SHOP		♦ 4. CWP/REC SER NO.		5. SYSTEM/COMPONENT/ROTATABLE POOL SER NO.		♦ 6. REFERENCES (COMP DETAIL/ASSY DWG & REV)

QA FORM 17A INSTRUCTIONSEPOXY REPAIR RECORD

PURPOSE: To document the proper OQE for epoxy repairs on components when directed by the Technical Work Document.

NOTES:

1. **EACH FORM ALLOWS FOR TWO EPOXY REPAIRS TO BE DOCUMENTED, BUT MUST BE LIMITED TO A SINGLE COMPONENT (E.G., TD-29/30 VALVE ASSEMBLY).**
2. **REWORK: IN CASES WHERE REWORK IS REQUIRED AFTER CRAFTSMAN CERTIFICATION OF A RECORD, A NEW RECORD AND WORK AUTHORIZING DOCUMENT IS REQUIRED.**
3. **IN CASES WHERE REWORK IS REQUIRED DUE TO AN IN-PROCESS FAILURE, THE FOLLOWING PROCESS MUST BE USED:**
 - a. **CHECK THE “UNSAT” BOX IN THE “TEST RESULTS” SECTION OF BLOCK 10 ALONG WITH AN EXPLANATION OF FAILURE IN BLOCK 11. LEAVE REMAINING UNSIGNED BLOCKS BLANK.**
 - b. **ENTER “REWORK FOR ITEM 9X” (WHERE X IS THE LETTER DESIGNATOR FOR THE BLOCK 9 ITEM LINE (E.G., 9A, 9B)) OR SIMILAR WORDS IN THE NEXT BLANK “PART NO./NAME/ DESCRIPTION OF DEFECT AREAS” BLOCK, ALONG WITH AN ASTERISK OR OTHER MARK WITH A CORRESPONDING EXPLANATION IN BLOCK 11 WITH SIGNATURE, BADGE NUMBER AND DATE. IF THERE IS NO EMPTY ITEM LINE, ANOTHER QA FORM 17A MAY BE USED AS A CONTINUATION SHEET. IF THE RECORD CONTAINS MULTIPLE PAGES, IDENTIFY THE PAGE THAT CONTAINS THE ITEM LINE FOR WHICH THE REWORK IS ACCOMPLISHED (E.G., 9A OF PAGE 1).**
 - c. **RE-ENTER ALL OF THE ORIGINALLY REQUIRED TESTS IN THE NEW ITEM LINE AND COMPLETE ALL BLOCKS EXCEPT THE “PART NO./NAME/DESCRIPTION OF DEFECT AREAS” BLOCK WHICH IS ANNOTATED AS DESCRIBED IN PARAGRAPH B. ABOVE. IT IS ACCEPTABLE FOR THE CRAFTSMAN TO COPY ENTRIES INTO PLANNING BLOCKS FROM THE ORIGINAL PLANNING ENTRIES.**

SCOPE: Documentation with this QA form is required for epoxy repair of the following:

- SUBSAFE components
- Scope of Certification (SOC) components
- Seawater ball valves

PROCEDURE: PLANNING DEPARTMENT: Provide guidance per UIPI 2560-107 or UIPI 6300-905, and provide QA-17A records as part of the TWD or DL.

The numbered blocks on QA form 17A correspond with the block instructions listed. Planning must fill in blocks identified by a ♦ prior to issuing QA form 17A. The shop craftsman is responsible for all other blocks on the form unless otherwise specified.

TOP OF FORM - PAGE OF

Enter page numbers.

BLOCK 1 - SHIP HULL NO.

Enter the ship's name and hull number or enter the appropriate rotatable pool system designator (e.g., TRIPER, CCRP, AERP, SSN 688CL, etc.).

BLOCK 2 - JCN

Enter the Job Control Number (JCN). Naval shipyards enter Job Order and Key Op.

BLOCK 3 - LWC/SHOP

Enter the lead shop (e.g., X38, outside machinist).

BLOCK 4 - CWP/REC SERIAL NO.

Enter the CWP/REC serial number or enter NA if no CWP/REC is required. Do not list the REC revision.

BLOCK 5 - SYSTEM/COMPONENT/ROTATABLE POOL SER NO.

Enter the noun name of the system and component (if applicable) (e.g., MSW-25). If the record is for in-shop restoration of rotatable or factory pool material, enter the serial number of the material.

NOTE: ROTATABLE POOL OR FACTORY SERIAL NUMBERS MAY BE ENTERED BY THE PLANNER, IF KNOWN, OR THE CRAFTSMAN AS SPECIFIED BY LOCAL INSTRUCTIONS.

BLOCK 6 - REFERENCES (COMP DETAIL/ASSY DWG & REV)

Enter all references used to identify component parts, material information and test or inspection requirements. Include revision letter and if applicable, identify the assembly number (e.g., Assy D, Assy RA, etc.). For original issue (non-revised) drawings, enter a dash (-). Revisions for Technical Manuals are not required. Include vendor name for vendor drawings.

BLOCK 7 - EPOXY REPAIRS ARE IAW

Check the "UIPI 2560-107" or "UIPI 6300-905" box when applicable; otherwise check the "OTHER" box and specify the procedure. Do not enter revision or change of procedure.

BLOCK 8 - LEGEND FOR EPOXY METHOD

Identifies the designators for Block 9 (EPOXY METHOD). Planning must specify the type of epoxy repair on the line following the "OT - OTHER" designator when a required repair method is not listed.

BLOCK 9 - DESCRIPTION OF REPAIR(S)

NOTE: PLANNING MUST COMPLETE ALL SECTIONS OF BLOCK 9. ADDITIONAL QA 17A FORMS MAY BE ADDED AS CONTINUATION SHEETS IF NECESSARY.

PART NO./NAME & DESCRIPTION OF DEFECT AREA(S)

Enter part number or name (e.g., pc 5, bonnet; pc 3, body, etc.) and description of defect areas (e.g., O-ring groove pitted, stem bore, backseat, etc.). Ensure each surface area being epoxy repaired is clearly identified.

NOTE: USE BLOCK 11, THE BACK OF THE SHEET, OR BOTH, FOR ADDITIONAL INFORMATION AND SKETCHES.

REF DWG LTR(S)

Enter the letters corresponding to the reference listed in Block 6 which provides the material, dimensional and testing or inspection information for the items listed in the "PART NO./NAME & DESCRIPTION OF DEFECT AREA(S)" block.

UIPI 2560-107 METHOD OR EPOXY METHOD

Enter the epoxy repair method code from UIPI 2560-107 when applicable, or use a symbol from the legend in Block 8 that identifies the method of epoxy repair being accomplished when UIPI 6300-905 or OTHER instruction is identified in Block 7. For an epoxy repair method not identified in the Block 8 legend, enter "OT" and specify the epoxy repair method on the line following "OT - OTHER" in Block 8.

BLOCK 10 - REPAIR(S) & TEST ACCOMPLISHED

NOTE: CRAFTSMAN MUST COMPLETE ALL SECTIONS OF BLOCKS 10A AND 10B. PLANNING MUST COMPLETE BLOCK 10C.

BLOCK 10A. - PRE-EPOXY DIMENSIONS

DEPTH OF MACHINING

When required by the TWD, record the thickness of the material removed during machining. Enter "NA" when not required by the TWD or material removal is not accomplished.

REMAINING WALL THICKNESS

When required by the TWD, enter the wall thickness dimensions after machining or removing material. Dimensions must take into account the depth of remaining defects. Enter "NA" when material is not removed or wall thickness documentation is not required by the TWD.

DEPTH OF REMAINING DEFECTS

Enter the maximum depth of remaining defects. Enter "No Defects Remain" if there are no remaining defects after machining.

SHIM/SLEEVE THICKNESS & MAT'L USED

Enter "NA" when shims are not used. Enter the thickness of the shim or sleeve (or bushing used as a sleeve) used (e.g., 0.032, 1/8 or 3/32, etc.). When installing "S", "L", or top hat shims, enter the thickness of the upper, the middle and the lower legs as

applicable. Enter the generic material (e.g., titanium) or a stock number of the shim when provided by the naval or local stock program. When this block is being used to document installation of the shim in lieu of a QA form 34, then the stock number (NSN), part number, drawing and piece number, generic or material spec marking, or results of generic material identity testing must be documented here also. If reinstalling an existing shim, enter "Reinstalled existing".

SIGNATURE/BADGE/DATE

Craftsman enter signature, badge number and date for pre-epoxy dimensions recorded in Block 10A.

BLOCK 10B. - EPOXY APPLIED

EPOXY MATERIAL & BATCH NO. USED

Enter the epoxy material (e.g., 3M Epoxy Adhesive EC-2216B/A) used and the batch number when provided on the container (e.g., Batch 1234).

SIGNATURE/BADGE/DATE

Craftsman enter signature, badge number and date signifying the epoxy was applied per the requirements and the data recorded in Block 10B.

BLOCK 10C. - REQUIRED TESTS/RESULTS

Enter the number(s) for the required test(s) from the legend.

TEST RESULTS FINAL SURFACE FINISH MEETS REQUIREMENTS

The craftsman must check the SAT or UNSAT block to indicate test.

SIGNATURE/BADGE/DATE

Craftsman enter signature, badge number and date signifying that each epoxy repair has been satisfactorily accomplished and tested per the requirements and the OQE documented in Blocks 7, 9, 10A, 10B and 11, and the surface finish meets requirements.

If UNSAT, the craftsman will initiate action to resolve the unsat condition and indicate the action taken in Block 11 and sign in Block 11. Do not sign Block 10 (for the specific line item) unless a satisfactory repair is completed or the unsat condition is accepted. If the condition is accepted, identify the document that grants acceptance in Block 11.

BLOCK 11 - ADDITIONAL INFORMATION/SKETCHES

This block can be used to provide additional information, signatures, and sketches (if required to clarify epoxy repair area(s) or shim or sleeve). If there is insufficient room, the back of the form or the addition of a second page is allowed for use. Include a signature, badge number and date with any additions to this block. Initials may be entered in lieu of an employee's signature and badge number, if a corresponding employee's signature and badge number appears elsewhere on the same page.

NOTE: IF MORE THAN ONE EPOXY REPAIR IS BEING ACCOMPLISHED, IDENTIFY THE ADDITIONAL INFORMATION, SIGNATURES AND SKETCHES BY THE LINE ITEM LETTERS IN BLOCK 9 (E.G., 9A, 9B).

15 Jan 2021

BLOCK 12 - QA INSPECTOR/SHOP SUPERVISOR SIGNATURE/BADGE
NO./DATE

Naval Shipyards: Production Shop Supervisor must sign that the records have been reviewed for completeness.

BLOCK 13 - QAS SIGNATURE/BADGE NO./DATE

For SUBSAFE or SOC Components Only, QAS or cognizant QA representative as defined by local instructions will sign, enter badge number and date in this block to indicate the completeness of the entries.

15 Jan 2021

QA FORM 17B INSTRUCTIONSELECTROPLATING REPAIR RECORD

PURPOSE: To document the proper OQE for electroplating repairs on components when directed by the work procedure.

PROCEDURE: The numbered blocks on QA form 17B correspond with the block instructions listed. The planner must fill in blocks identified by a ♦ (1 through 9 and 11) prior to issuing the CWP.

TOP OF FORM - Page ____ of ____

Enter page numbers.

BLOCK 1 - SHIP HULL NO.

Enter the ship's name and hull number, or enter the appropriate rotatable pool system designator (e.g., TRIPER, CCRP, AERP, SSN 688CL, etc.).

BLOCK 2 - JCN

Enter the Job Control Number (JCN). Naval shipyards enter Job Order and Key Op.

BLOCK 3 - LWC/SHOP

Enter the lead shop (e.g., X38, outside machinist).

BLOCK 4 - CWP/REC SERIAL NO.

(Work Packaging, Planning Organization or Craftsman) Enter the CWP or REC serial number or enter NA if no CWP/REC is required. Do not list the REC revision.

BLOCK 5 - REFERENCES (COMP DETAIL/ASSY DWG & REV)

Enter all references used to identify component parts, material information, and test or inspection requirements including revision letter and if applicable, the assembly number (e.g., Assy D, Assy RA, etc.). For original issue (non-revised) drawings, enter a dash (-). Revisions for Technical Manuals are not required. Include vendor name for vendor drawings.

BLOCK 6 - SYSTEM/COMPONENT/ROTATABLE POOL SER NO

Enter the noun name of the system and component (if applicable) being plated, (e.g., MSW-25). If the record is for in-shop restoration of rotatable pool material, enter the serial number of the material when known.

NOTE: ROTATABLE POOL SERIAL NUMBERS MAY BE ENTERED BY THE CRAFTSMAN IF NOT ENTERED BY PLANNING ORGANIZATION.

BLOCK 7 - ELECTROPLATING PROCESSES ARE IN ACCORDANCE WITH

Mark the applicable box for the electroplating process. Specify the process when OTHER is marked. Do not enter revision or change of procedure.

BLOCK 8 - LEGEND FOR TYPE OF REPAIR

Identifies the designators for Block 9 (TYPE OF REPAIR). For other than DYNAMIC (D) or STATIC (S) surfaces, PLANNING ORGANIZATION must specify the type of repair on the line following the "OT=OTHER" designator, or in Block 13 if additional space is needed.

BLOCK 9 - DESCRIPTION OF DEFECT & TYPE OF REPAIR

NOTE: PLANNING ORGANIZATION MUST COMPLETE ALL SECTIONS OF BLOCK 9 EXCEPT AS NOTED. ADDITIONAL QA 17B FORMS MAY BE ADDED AS CONTINUATION SHEETS IF NECESSARY.

PART NO./NAME/DESCRIPTION OF DEFECT AREA(S)

Enter part number or name (e.g., pc. 5, bonnet, body, etc.) and description of defect areas. Include dimension after machining and maximum depth of remaining defects prior to plating (e.g., Stem bore O-ring groove pitted, machined 0.010", removed all defects). For more than one of a kind component (XYZ fitting, threaded end) enter the total number of items (e.g., XYZ fitting, threaded end, 6 ea.). Identify each surface area being plated as a separate line item.

NOTE: USE BLOCK 13 AND THE BACK OF THE SHEET FOR ADDITIONAL INFORMATION, SKETCHES, OR BOTH.

REFERENCE DRAWING LETTER

Enter the letter(s) corresponding to the reference(s) listed in Block 5 which provided the material, dimensional, and test and inspection information for the items listed in the "PART NO./NAME/DESCRIPTION OF DEFECT(S)" block(s).

BASE MATERIAL

Enter the required base material.

EXISTING PLATING MATERIAL

Identify any known existing plating or mark the NONE box.

TYPE OF REPAIR

Enter the symbol from the legend in Block 8 that identifies the type of electroplating repair being accomplished.

HYDROGEN BAKE REQUIRED

Mark the YES box when hydrogen bake is required; otherwise mark the NO box.

PLATING MATERIAL REQ'D

Enter the plating material to be applied.

MAXIMUM THICKNESS OR RANGE ALLOWED

Enter the maximum plating thickness allowed or the allowable thickness range (minimum or maximum).

BLOCK 10 - MATERIAL VERIFICATION & REPAIR(S) ACCOMPLISHED

NOTE: THE CRAFTSMAN MUST COMPLETE ALL SECTIONS OF BLOCK 10.

BASE MATERIAL VERIFIED

Craftsman must visually compare the required base material identified and the base material to be plated for obvious discrepancies such as color of material or material markings, and ensure that all existing plating has been removed or identified as being existing. Perform a generic material test if existing material cannot be identified. Check the "SAT" block if no discrepancies are found. Report any discrepancies to PLANNING ORGANIZATION for resolution.

AFTER MACHINING DIMENSIONS

When required by the TWD, record the dimensions after machining.

REMAINING DEFECTS DEPTH

Record the depth of any remaining defects. If no defects remain, mark the NONE box.

APPLIED PLATING THICKNESS WITHIN MAX ALLOWED OR RANGE

Mark SAT if the thickness of plating meets the maximum thickness or range identified by PLANNING ORGANIZATION in Block 9.

PLATING MATERIAL APPLIED

Enter the generic plating material applied (e.g., nickel cap, copper fill, etc.).

NOTE: IF THE APPLIED PLATING THICKNESS IS BEYOND THE MAXIMUM ALLOWED OR NOT WITHIN THE SPECIFIED RANGE, STOP WORK AND OBTAIN FURTHER TECHNICAL DIRECTION.

ELECTROPLATING REPAIR HAS BEEN ACCOMPLISHED IN ACCORDANCE WITH REQUIREMENTS

Craftsman(s) must sign, record badge number, print name and date verifying that each ELECTROPLATING application has been satisfactorily accomplished per the requirements and the OQE documented in Blocks 7, 9 and 10 (and 13 when used) and is complete and accurate. For cases where further machining is required, the electroplating craftsman that completed the plating must sign this block to indicate application of electroplating only, prior to sending the component to the machining craftsman. After the machining and test have been accomplished, a final signature must be made indicating satisfactory completion of the form and the testing. The last signature indicates final acceptance. Use Block 13 for clarification of requirements.

BLOCK 11 - REQUIRED TEST(S)

Enter the designator(s) (i.e., 1-5) for the test(s) required to ensure proper installation or bonding. For "Other" (5), enter the type of test required in the block or in Block 13 if additional space is needed.

BLOCK 12 - TEST(S) RESULTS

2ND Operator, Inspector, or other person qualified to the plating procedure (other than the workpiece craftsman) must sign, record badge number, print name and date to indicate the coating meets the acceptance criteria of the required test(s).

NOTE: SATISFACTORY LIQUID PENETRANT TEST RESULTS MUST BE DOCUMENTED IN ONE OF THE FOLLOWING MANNERS:

- 1. A QUALIFIED NDT INSPECTOR OR QAI MAY SIGN, RECORD BADGE NUMBER AND DATE TO INDICATE SATISFACTORY TEST RESULTS.**
- 2. THE CRAFTSMAN MAY ENTER THE NON-DESTRUCTIVE TEST (NDT) RECORD NUMBER (OR ATTACH A COPY OF THE RECORD) THAT DOCUMENTS THE SATISFACTORY RESULTS OF NDT PERFORMED BY A QUALIFIED NDT INSPECTOR. THE CRAFTSMAN MUST SIGN (NAME, BADGE, DATE) FOR EACH ENTRY.**

BLOCK 13 - ADDITIONAL INFORMATION/SKETCHES

15 Jan 2021

This block may be used to provide additional information, signatures, and sketches (if required to clarify electroplate repair area(s)). If there is insufficient room, use of the back of the form or the addition of a second page is allowed. Include signature, badge number and date (except where the entry is pre-printed on the form by PLANNING ORGANIZATION with any entries in this block). Initials may be entered in lieu of an employee's signature and badge number, if a corresponding employee's signature and badge number or printed name appears elsewhere on the same page.

NOTE: IF MORE THAN ONE ELECTROPLATING REPAIR IS BEING ACCOMPLISHED, IDENTIFY THE ADDITIONAL INFORMATION, SIGNATURES, AND SKETCHES BY THE LINE ITEM NUMBERS IN BLOCK 9 (e.g., 9a, 9b, etc.). IF THE RECORD CONTAINS MULTIPLE PAGES, INCLUDE THE PAGE NUMBER OF THE REFERENCED ITEM LINE NUMBER.

BLOCK 14 - QUALITY ASSURANCE INSPECTOR/SHOP SUPERVISOR
SIGNATURE/BADGE NO.

Production shop supervisor must sign and print name that the record has been reviewed for completeness.

BLOCK 15 - QAS SIGNATURE/BADGE NUMBER/RECORD HAS BEEN
REVIEWED FOR COMPLETENESS

For SUBSAFE or SOC Components Only: QAS or authorized QAO representative, as defined by local instructions, will sign, enter badge number, print name and date this block to indicate the completeness of the entries.

COMPONENT REPAIR RECORD – (MACHINING/MANUFACTURING/MODIFICATIONS)

QA FORM 17C INSTRUCTIONSCOMPONENT REPAIR RECORD

PURPOSE: To document the proper OQE for multiple repairs to a single component (i.e., machining, manufacturing, modifications) when directed by the work document.

PROCEDURE: The numbered blocks on QA form 17C correspond with the block instructions listed. Planning must fill in blocks identified by a ♦ prior to issuing the CWP.

NOTE: THIS FORM ALLOWS MULTIPLE REPAIRS TO BE ACCOMPLISHED, BUT SHOULD BE LIMITED TO A SINGLE COMPONENT (E.G., TD-29/30 VALVE ASSEMBLY).

BLOCK 1 - SHIP HULL NO.

PLANNER - Enter the ship's name and hull number, or enter the appropriate rotatable pool system designator (e.g., TRIPER, CCRP, AERP, SSN 688CL, etc.).

BLOCK 2 - JCN

PLANNER - Enter the Job Control Number (e.g., 20884-EM01-2947, 3872556103/R01). Naval Shipyards enter Job Order and Key Op.

BLOCK 3 - LWC/SHOP

PLANNER - Enter the lead shop (e.g., X56, outside machinist).

BLOCK 4 - CWP/REC SERIAL NO.

(REC Originator or PLANNER as defined by local instructions) Enter the CWP/REC serial number if applicable; otherwise mark NA. Do not list the REC Revision.

BLOCK 5 - SYSTEM/COMPONENT/ROTATABLE POOL SER NO.

PLANNER - Enter the noun name of the system, component (e.g., MSW-25). If the record is for in-shop repair or manufacture of rotatable pool item, enter the serial number of the item when known.

NOTE: ROTATABLE POOL SERIAL NUMBERS MAY BE ENTERED BY THE CRAFTSMAN IF NOT ENTERED BY THE PLANNER.

BLOCK 6 - REFERENCES (COMPONENT DETAIL/ASSEMBLY DRAWING AND REVISION)

PLANNER - Enter all references used to identify component parts, material information and required testing or inspection. Include revision letter and if applicable, the assembly number (e.g., Assy D, Assy RA, etc.). For original issue (non-revised) drawings, enter a dash (-). For vendor drawings, include vendor name. Revisions for technical manuals are not required.

BLOCK 7 - DESCRIPTION OF REPAIR(S)

NOTE: PLANNING MUST COMPLETE ALL SECTIONS OF BLOCK 7.

<u>LINE NO.</u>	Pre-filled. A number to provide traceability to new material documented in Block 8.
-----------------	---

15 Jan 2021

PART NO./ Enter part number, description or component assembly (e.g., pc 5,
DESCRIPTION bonnet, body, stem bore, backseat, etc.).

NOTE: USE BLOCK 9 AND THE BACK OF THE SHEET FOR ADDITIONAL INFORMATION, SKETCHES, OR BOTH.

REF DWG LTR Enter applicable reference letter(s) of the drawing or document listed in Block 6 that provides the material or dimensional information for the items listed in the "PART NO./DESCRIPTION" block.

QTY Enter quantity of items to repair. Enter NA if not applicable.

DESCRIPTION OF MODIFICATION(S) / MANUFACTURING PROCESS /
 SUPPLEMENTAL INFORMATION / INSTRUCTION

Enter description of action to perform (e.g., drill and Nyloc per reference (b), **MF** stem per reference (c), **V** per reference (d), **MM** .005" to remove pits, splice o-rings, etc.). The description must clearly identify the surface(s) to be machined. Use legend for abbreviation.

NOTE: USE BLOCK 9 AND THE BACK OF THE SHEET FOR ADDITIONAL INFORMATION, SKETCHES, BOTH. IF ADDITIONAL SPACE IS REQUIRED, ADDITIONAL SHEETS MUST HAVE CONTINUING PAGE NUMBERS AND INFORMATION FROM BLOCKS 1 THROUGH 5 ON EACH SHEET.

REQUIRED MINIMUM/FINAL DIMENSION(S) AND TOLERANCE

When minimum or final dimension documentation is required, Planning must specify the final dimension(s) and tolerance(s) numerically, do not cite a drawing detail or other reference. Enter NA in this block and the Block 8 ACTUAL FINAL DIMENSIONS section if not applicable.

BLOCK 8 - RESULT OF REPAIR(S)

NOTE: THE CRAFTSMAN MUST COMPLETE ALL SECTIONS OF BLOCK 8 EXCEPT THE SECTION TITLED "TEST REQ'D".

ACTUAL FINAL DIMENSION(S)

When final dimension documentation is required by Planning, the craftsman must record the actual final dimension(s) identified in Block 7. If final dimension documentation is not required, Planning must enter NA in the block.

NOTE: CRAFTSMAN MAY ENTER "NA" IF REQUIRED OR MINIMUM FINAL DIMENSION(S) AND TOLERANCE SECTION OF BLOCK 7 IS MARKED "NA" BY PLANNING.

NEW MATERIAL - MANUFACTURED/INSTALLED

Enter the following information for any parts or material, Level I and non-level, in the appropriate blocks. If a portion of a new valve is used to replace parts (e.g., bonnet and disc assembly), document the Level I number of the new valve and list the parts that the

15 Jan 2021

assembly consists of in the remarks block with a note that the stem and disc assembly were taken from the new valve.

QTY Enter the quantity of the replacement parts installed. Enter NA for raw material used in manufacture.

NOTE: THE TERM “ASSEMBLY” REFERS TO ONE PACKAGE OF PARTS (E.G., STEM AND DISC ASSEMBLY OR BALL AND SEAT ASSEMBLY) WHERE THE ITEM IS ORDERED UNDER ONE STOCK NUMBER, AND IS ASSIGNED ONE LEVEL I NUMBER.

LOE (Level of Essentiality, Level I) – Enter the MIC level (e.g., “I” or “LI”) for the part or assembly. Enter NA or dash (-) for non-Level.

MATERIAL IDENT/ Identification must be per Table 1 or Forces Afloat.
DESCRIPTION Record one of the following for raw material used to manufacture components:

TABLE 1- DOCUMENTATION REQUIREMENTS	
Material Control Level	Required Information
Level I Material Other Than Fasteners	MIC Number and any other traceability number, including any local traceability number (e.g., PNSY MLN – examples Z142, AB12).
Level I Fasteners	Either the MIC number or Material Marking, Color Code, Heat or Lot Number, and Manufacturers Symbol (Note: For nuts containing a self-locking insert, the color of the insert is the Manufacturer's symbol).
Controlled Structural Material And SOC Control Division “A” Material	Traceability Number
SOC Control Division “B” Material	Markings providing identification to material type or specification
AERP And Other Rotatable Pool Material (688 Class, TRIPER, Etc.)	Enter the appropriate rotatable pool serial number (e.g. RP-148A, 4810-013-5812-A3-0113, TIN -292-11893, etc.)
Transferred And Cannibalized Material	Enter the Equipment Removal List No. or other material History or Traceability number (ERL# XXXX, SSBN-600 EHF #24, etc.)
Other Material Within The LEVEL I/SUBSAFE Boundary And SOC Control Division “C” Material	<ol style="list-style-type: none"> Enter at least one of the following documentation attributes: <ol style="list-style-type: none"> Stock Number (from package or container) Part Number (from package or piece) Part Number and associated Manufacturing Work Procedure (for manufactured items) Local Traceability Number (from piece or tag) Drawing and Piece Number (from piece or tag) Generic, MIL-SPEC, or Material Specification Marking (from piece) NDT record numbers or test results for items verified by generic material testing. For SOC components only: Enter the stock number of the “O-ring lubricant or any sealant used during assembly.

- MIC NUMBER
- RAW MATERIAL NSN
- GENERIC MATERIAL
- MIL-SPEC
- MATERIAL SPECIFICATION MARKING
- NDT RECORD OR TESTING RESULTS FOR GENERIC MATERIAL TESTING

NOTE: IF NDT IS REQUIRED, RECORD SATISFACTORY NDT REPORT NUMBER OR ENCLOSURE NUMBER IN THIS BLOCK AND ATTACH OR INCLUDE A COPY OF THE REPORT.

15 Jan 2021

TEST REQ'D

Planning must enter the test(s) (e.g., NDT, hydrostatic pressure testing, etc.) required to ensure proper certification.

PROCESS IDENTIFIED, MATERIAL AND TEST HAS BEEN SATISFACTORILY
ACCOMPLISHED IN ACCORDANCE WITH REQUIREMENTS

Craftsman must sign, record badge number and date of the signature, verifying that each repair process, material installed or utilized, and test has been satisfactorily accomplished per the requirements and the OQE documented in Blocks 7 and 8, respectively.

NOTE: IF UNSATISFACTORY, THE CRAFTSMAN WILL INITIATE ACTION TO RESOLVE THE UNSATISFACTORY CONDITION (E.G., SUBMIT A DF). INDICATE THE ACTION TAKEN TO RESOLVE THE UNSATISFACTORY CONDITION ALONG WITH A SIGNATURE, BADGE NUMBER AND DATE IN BLOCK 9. DO NOT SIGN BLOCK 8 (FOR THE SPECIFIC LINE NO.) UNLESS A SATISFACTORY REPAIR IS COMPLETED OR THE UNSATISFACTORY CONDITION IS ACCEPTED.

BLOCK 9 - ADDITIONAL INFORMATION/SKETCHES

This block can be used to provide additional information, signatures, and sketches (if required to clarify repair area(s)). If there is insufficient room, the back of the form or the addition of a second page is allowed. Include a signature, badge number, and date with any additions to this block. Initials may be entered in lieu of an employee's signature and badge number, if a corresponding employee's signature and badge number appears elsewhere on the same page.

NOTE: IF MORE THAN ONE REPAIR IS BEING ACCOMPLISHED, IDENTIFY THE ADDITIONAL INFORMATION, SIGNATURES, AND SKETCHES BY THE LINE ITEM NUMBERS IN BLOCK 7.

BLOCK 10 - QA INSPECTOR/SHOP SUPERVISOR/BADGE NO./DATE

NA if inspection is not required by the technical work document (e.g., TGI, FWP).

BLOCK 11 - QAS SIGNATURE/BADGE NO. (RECORDS HAVE BEEN
REVIEWED FOR COMPLETENESS)

For SUBSAFE or SOC Components Only: QAS or cognizant QA representative as defined by local instructions, will sign, enter badge number, and date in this block to indicate the completeness of the entries.

For other components: the Production Shop or Work Center Supervisor must sign that the records have been reviewed for completeness.

15 Jan 2021

QA FORM 17D INSTRUCTIONSSUBMARINE FLIGHT CRITICAL COMPONENT (SFCC) ACCESS, REMOVAL AND
INSTALLATION RECORDREFERENCES:

- (a) NAVSEA T9044-AD-MAN-010 - Requirements Manual for Submarine Fly-By-Wire Ship Control Systems

NOTE: PLANNING MUST FILL IN BLOCKS IDENTIFIED BY A ♦ PRIOR TO ISSUING.

PURPOSE: To provide a standard form to document the SFCC access, replacement, removal and installation record capturing the requirements of reference (a), Appendix H.

REQUIREMENTS:

1. The FORM 17D is required for all SFCC work within the boundary specified in reference (a).
2. Form 17D must be used for each component that requires controlled access, replacement, removal or installation.

NOTE: ANY BLOCK NOT USED WILL BE MARKED “N/A”.

BLOCK 1 - SHIP/HULL NO.

Planner enter the ship's name and hull number.

BLOCK 2 - JCN

Planner enter the Job Control Number (JCN).

BLOCK 3 - LWC/SHOP

Planner enter the lead shop assigned to install the component.

BLOCK 4 - CWP/REC SER NO.

Planner enter the CWP/REC serial number or enter NA if no CWP/REC is required. Do not list the CWP/REC revision.

BLOCK 5 - SYSTEM(S)/COMPONENT

Planner enter the noun name of the system and component (if applicable) (e.g., SCPU CHANNEL A CPU#2 or CIRCUIT 1DB). If record is for in-shop restoration, enter the serial number of the material if known.

BLOCK 6 - NOMENCLATURE

Planner enter the system or component nomenclature as described in the technical documentation.

BLOCK 7 - REFERENCE DESIGNATION

Planner enter the reference designation of the component as described in the technical documentation.

BLOCK 8 - REFERENCES

Planner enter the applicable component technical reference documents.

BLOCK 9 - **DIAGNOSTICS**

Check the block if diagnostic codes or data are continued on reverse of form. If necessary, additional diagnostic codes or data may be listed on reverse of form.

Craftsman record diagnostic data as appropriate for SFCC being replaced as part of repair efforts. Mark "N/A" if repair effort is not being performed.

- Alert Messages - Enter any observed Alert Messages displayed by the Ship Control Station
- Fault Status - Enter any fault status message observed at the system status display
- LRU Callout - Enter any Line Replaceable Unit (LRU) Callouts
- Additional Diagnostic Indications - Record any additional diagnostic information
- Existing pertinent fault data - Record any existing pertinent fault data identified on the MC/DMAC

NOTE: SFCC MATERIAL WILL HAVE CERTIFICATE OF COMPLIANCE (COC) OR A SMIC; EITHER IS ACCEPTABLE.

BLOCK 10 - **EXISTING SFCC REMOVAL**

List data required as appropriate for each of the provided blocks. Record the specific components software revision level. If software is pre-programmed on SFCC, record the software revision level identified on the applicable SFCC Certificate of Conformance.

NOTE: SFCC MATERIAL WILL HAVE CERTIFICATE OF COMPLIANCE (COC) OR A SMIC; EITHER IS ACCEPTABLE.

BLOCK 11 - **NEW SFCC INSTALLATION**

Craftsman mark as "SAT", "UNSAT" or list data required as appropriate for each of the provided blocks. Record the specific components software revision level. If software is pre-programmed on SFCC, record the software revision level identified on the applicable SFCC Certificate of Conformance.

BLOCK 12 - **SFCC RESTORATION**

Craftsman mark as "SAT" or "UNSAT" as appropriate.

BLOCK 13 - **OPERATIONAL VERIFICATION**

Craftsman mark as "SAT" or "UNSAT" as appropriate.

BLOCK 14 - **SOFTWARE INSTALLATION**

NOTE: BLOCK 14 ONLY USED DURING SYSTEM OR SOFTWARE UPGRADES OR ALTERATIONS.

Craftsman list data required as appropriate for each of the provided blocks (N/A if not used).

- Installation Software Rev - Record the Ship Control System operational software revision level identified in the change vehicle.

- VDD Checksum - Record the checksum value identified in the Version Description Document (VDD). Should match Installation Checksum.

BLOCK 15 - **SOFTWARE VERIFICATION**

NOTE: “INSTALLATION CHECKSUM” IS ONLY USED FOR PROGRAMMED SW SMIC SFCC COMPONENTS OR DURING VU SMIC UPGRADES OR ALTERATION (N/A IF NOT USED).

- Installation Checksum - Record the checksum as observed during installation. Should match VDD Checksum from original installation.
- New SFCC Configured Similarly as Removed SFCC - Verify that the SFCC is configured similarly as the SFCC removed from the FBW SCS chassis per the controlled work package documentation. This includes satisfactory VDD Checksum verification (if applicable).

BLOCK 16 - **REMARKS**

Craftsman or Alteration Installation Team (AIT) Lead will record amplifying information as required or additional space is required, and will sign, print name and date Block 16.

BLOCK 17 - **CRAFTSMAN SIGNATURE**

Craftsman must sign this block signifying that the work has been accomplished.

BLOCK 18 - **AIT LEADER/INSPECTOR SIGNATURE**

(SHIP'S FORCE) INSPECTOR or QAI will enter signature, date and badge number for final review, signifying the accuracy of the completed form and witnesses testing associated with Blocks 13, 14 and 15 (as applicable). If any entry is UNSAT, initiate action to resolve the UNSAT condition and indicate the action taken in the “Remarks” block. Do not sign unless a satisfactory repair is completed or the UNSAT condition is accepted.

BLOCK 19 - **RECORD HAS BEEN REVIEWED FOR COMPLETENESS**

The OSIC, QAS or QAO must sign, date and enter badge number for final review, signifying entries are complete and that the data agrees with the listed requirements.

STUD INSTALLATION RECORD

Planning must fill in blocks identified by a ♦ prior to issuing

QA FORM 17SI INSTRUCTIONSSTUD INSTALLATION RECORD

PURPOSE: To document the proper OQE for installing Level One studs in a SOC, SUBSAFE or Level One application when directed by the work procedure.

PROCEDURE: The numbered blocks on QA form 17SI correspond with the block instructions listed. Blocks marked with a ♦ must be completed by the planner prior to issue.

BLOCK 1 - SHIP HULL NO.

Enter the ship's name and hull number.

BLOCK 2 - JCN

Enter the JCN.

BLOCK 3 - LWC

Enter the shop number of the LWC.

BLOCK 4 - CWP/REC SERIAL NO.

Enter the CWP/REC serial number or enter N/A if no CWP/REC is required. Do not list the CWP/REC revision.

BLOCK 5 - SYSTEM/COMPONENT

Enter the noun name of the system and component being repaired. (e.g., MSW-25 Hull Insert). If the record is for in-shop repair or manufacture of rotatable pool item, enter the serial number of the item.

BLOCK 6 - NEW MATERIAL DESCRIPTION

NOTE: THE CRAFTSMAN MUST COMPLETE ALL SECTIONS OF BLOCK 6.

MATERIAL DESCRIPTION

Enter a description of the new studs installed in the joint. Include diameter, thread, and length (e.g., Stud, 5/8"-11x3").

QTY - Record the quantity of the new studs installed.

LOE - Enter the Level of Essentiality as "I" or "NA" as appropriate.

IDENTIFICATION/MIC/TRACEABILITY NO.

Document the markings from the fastener to include either:

- (1) The color code and the heat or lot number, material type and manufacturer's symbol (for nuts containing a self-locking insert, the color of the insert is the manufacturer's symbol).
- (2) The MIC number (when MIC number is on the fastener or on the individual tag for some small fasteners).

BLOCK 7 - DESCRIPTION OF STUD DATA REQUIREMENTS

NOTE: THE PLANNER MUST COMPLETE ALL SECTIONS OF BLOCK 7.**JOINT MAPPING DRAWING & REV**

Enter the joint mapping drawing and revision. Enter NA when no mapping drawing exists.

JOINT NO/JOINT DESCRIPTION

Enter the joint number if applicable or clearly describe the installation location. If joint numbers are assigned via a sketch in the TWD, identify the sketch enclosure number and TWD number.

REQUIRED STUD DIAMETER & THREAD SERIES

Enter the required diameter and thread series of the replacement stud.

DETAIL DRAWING & REV

Enter the detailed drawing and revision number. For original issue (non-revised) drawings, enter a dash (-). Include vendor name for vendor drawings. Revisions for Technical Manuals are not required.

STUD PIECE NO.

Enter the detailed drawing pertaining to the stud.

REQUIRED STUD LENGTH

Enter the required length of the stud.

REQUIRED CLASS OF FIT AUTHORIZED INSTALLATION METHOD

Mark the appropriate block for the required class of fit.

TORQUE REFERENCE

Enter the source for the torque value (e.g., NAVSEA S9505-AM-GYD-010, SAE J2270, drawing, SMS, etc.).

REQUIRED MIN BREAKAWAY TORQUE OR STUD SETTING TORQUE

Enter the required minimum breakaway torque, the tolerance or range, and mark the appropriate torque units box (ft-lb or in-lb).

BLOCK 8 - STUD INSTALLATION DOCUMENTATION**REQUIRED ANAEROBIC LOCKING COMPOUND: GRADE**

Planner enter the required grade of anaerobic locking compound. Leave blank for Class 5 installation method.

ACTUAL ANAEROBIC LOCKING COMPOUND MANUFACTURER & GRADE

Record the manufacturer and grade of the thread locking compound used. Leave blank for Class 5 installation method.

REQUIRED STUD STANDOUT & TOLERANCE

Enter the required stud standout and tolerance.

ACTUAL STUD(S) STANDOUT

Record the actual stud standout for each new or reset existing stud.

BLOCK 9 - SKETCH/REMARKS

Provide a sketch of the fastener circle, showing all the newly installed and all re-installed existing studs and their orientation to the component.

BLOCK 10 - CRAFTSMAN SIGNATURE/BADGE NO./DATE

Craftsman print name, enter signature, badge number and date after completing Blocks 6, 8 and 9. Do not sign Block 10 unless signing for satisfactory results. If unsat, the craftsman will report the unsat condition and document the rework on the applicable QA form. If only one fastener is unsat, the craftsman may sign for completing the installation of the remaining studs but must clearly annotate in Block 9 the location of the stud and reason for the unsatisfactory condition.

Craftsman signature signifies the following:

- Fastener size, length, and class of fit are per the stated requirements
- Minimum breakaway torque or stud setting or stud setting torque (as applicable) is satisfactory
- Stud installation complies with all installation requirements
- All new material meets specified requirements, is installed and listed in Block 6
- Material not listed as new is existing, and is acceptable for re-use and is installed

BLOCK 11 - QAI/SHOP SUPERVISOR SIGNATURE/BADGE NO./DATE**NOTE: REQUIRED FOR SOC, SUBSAFE AND LEVEL I COMPONENTS ONLY.**

Inspector or shop supervisor print name, enter signature, badge number and date certifying the accuracy of the data recorded in Block 6, 8 and 9. This signature is only required for SOC, SUBSAFE and Level I components.

BLOCK 12 - RECORDS HAVE BEEN REVIEWED FOR COMPLETENESS

QAS or QAO will print name, enter signature, badge number and date for final review, signifying the accuracy of the completed form for SUBSAFE or SOC items only. For other components, the Work Center supervisor must sign and date the form signifying the accuracy of the completed form.

15 Jan 2021

		THROAT OPENING				POINT A AND B	
TOP	BOTTOM	BEFORE	AFTER	BEFORE	AFTER	BEFORE	AFTER
		BEFORE	AFTER	BEFORE	AFTER	BEFORE	AFTER

QA FORM 17W INSTRUCTIONSHANDLING EQUIPMENT TEST RECORD INSTRUCTIONS

PURPOSE: To provide a report form for work, tests and inspections not covered by other QA forms. This form can be used for handling equipment weight testing except cranes and strategic weapons handling equipment.

PROCEDURE: The numbered blocks on QA form 17W correspond with the block instructions listed. When this form is used to certify manufacture or repair of handling equipment, the planning organization must fill in Blocks 1 through 11 (identified by a ♦) prior to issuing a procedure requiring use of this form. When this form is used to perform periodic handling equipment testing, the weight test supervisor or shop supervisor must fill in Blocks 1 through 12 (identified by a ♦) prior to performing testing.

BLOCK 1 - SHIP HULL NO.

Enter the ship's name and hull number.

BLOCK 2 - JCN

Enter the JCN.

BLOCK 3 - LWC/SHOP

Enter the shop number of the LWC.

BLOCK 4 - CWP/REC SERIAL NO.

Enter the CWP serial number or enter NA if no CWP/REC is required. Do not list the CWP/REC revision.

BLOCK 5 - EQUIPMENT DESCRIPTION

Enter the name and a readily understood description of the equipment or component name from the Test Load Methods Drawing (TLMD). If the equipment is permanently installed (e.g., a monorail or pad eye, etc.), enter the compartment location, (e.g., torpedo room, port, overhead, and frame 21.)

BLOCK 6 - LOG I.D. NUMBER

Enter log identification number from the TLMD when applicable.

BLOCK 7 - MANUFACTURER OR LOCAL SERIAL NUMBER

Enter the manufacturer or Local Serial Number when applicable (i.e., Hull No. - Work Center - Number).

BLOCK 8 - NAVSEA DRAWING NUMBER/REVISION

Enter NAVSEA drawing number and revision for drawing used to conduct the test.

BLOCK 9 - SAFE WORKING LOAD (SWL)

Enter the item's Safe Working Load (SWL), in pounds, from the TLMD.

NOTE: LIST THE SWL FOR BOTH THE SHORT AND LONG POSITIONS FOR LOADING POLES.

BLOCK 10 - **DYNAMIC TEST LOAD (DTL)**

Enter the item's Dynamic Test Load (DTL), in pounds, from the TLMD.

BLOCK 11 - **STATIC TEST LOAD (STL)**

Enter the item's Static Test Load (STL), in pounds, from the TLMD.

BLOCK 12 - **STL FREQUENCY**

Enter the frequency required for the static test in months.

NOTE: STRATEGIC WEAPONS HANDLING EQUIPMENT COVERED UNDER THE PREVENTIVE MAINTENANCE MATERIAL PROGRAM (PMMP) DOES NOT REQUIRE A QA FORM 17W. EQUIPMENT NOT COVERED UNDER THE PMMP MUST MEET THE REQUIREMENTS OF THIS MANUAL.

BLOCK 13 - **TEST TYPE**

Enter the test date, the action taken (e.g., STL, DTL, MT, VT, tension, compression, short or long for loading poles) and the name or hull number of the testing facility. Print the name (e.g., first name, middle initial and last name) of the test facility witness. The test facility witness must then sign the block above the name. If test facility witness signature or QA signature cannot be obtained, the source document bearing that signature will be obtained and retained in the weapons handling test record log. Only the latest source document applicable to any particular piece of equipment or component need be retained.

BLOCK 14 - **REMARKS**

(Craftsman, QAI, QAS or Planning) Enter any pertinent remarks or additional information related to the repair or assembly of the component. Each entry must contain signature, badge number and date except where the entry is pre-printed on the form by Planning.

FIGURE 1 Record measurement in blocks provided on the back of the QA form 17W when applicable.

- a. Hook throat opening measurements and tram point pre-test or post-test measurements when new, or as first recorded, per NSTM 700 or PMS.
- b. Length and link diameters of hoist load chains when new, or as first recorded, per NSTM 700 or PMS.

QA FORM 18 INSTRUCTIONSSILVER BRAZE FABRICATION AND INSPECTION RECORD

PURPOSE: To provide a standard form for documenting OQE for a silver brazed joint.

PROCEDURE: The numbered blocks on QA form 18 correspond with the block instructions listed. The planner preparing the work procedure will complete blocks identified with the diamond symbol. The craftsman will complete blocks without the diamond symbol. The NDT Supervisor will verify the completed form and sign in Block 38. A QA form 18A will be attached to this form to complete each brazed joint record.

NOTE: BLOCKS 13, 17, P-NUMBER, 20, F-NUMBER, AND 26 ARE FOR QUALIFICATION USE ONLY AND ARE NOT REQUIRED FOR PRODUCTION BRAZES.

PAGE OF Enter the page number, starting with page 1, of total number of QA forms 18 and 18A associated with the joint (e.g., 1 of 2, 1 of 3).

BLOCK 1 - SHIP HULL NO.

Enter the tended ship's name and hull number.

BLOCK 2 - JCN

Enter the JCN.

BLOCK 3 - LWC/SHOP

Enter the shop number for the LWC.

BLOCK 4 - CWP/REC SER NO.

Enter the CWP/REC serial number or enter N/A if no CWP/REC is required. Do not list the CWP/REC revision.

BLOCK 5 - SYSTEM/COMPONENT

Enter the system or component noun name.

BLOCK 6 - PURPOSE

Check appropriate block.

BLOCK 7 - INSTALLATION DRAWING

Enter the installation drawing number and revision.

BLOCK 8 - JOINT ID/DESCRIPTION

Enter the map joint number from the applicable plan (Block 10). If not a mapped joint, assign a local unique joint ID number or enter a description of the joint.

BLOCK 9 - JOB DESCRIPTION

Enter a brief statement describing the work.

BLOCK 10 - MAP JOINT DWG

Enter ship's plan number and revision, which show and identify the map number of the joint being brazed or enter "NA" if there isn't a map drawing.

BLOCK 11 - P-3A SPECIAL/P-3A/P 3B

Enter an "X" in the appropriate box.

BLOCK 12 - BRAZE PROCEDURE

Enter the braze procedure used, including revision and change.

BLOCK 13 - BRAZE PROCESS

Enter an "X" in the appropriate block per NAVSEA 0900-LP-001-7000.

BLOCK 14 - JOINT DESIGN

Enter an "X" in the appropriate boxes.

BLOCK 15 - ACCESS

Enter an "X" in the appropriate box.

BLOCK 16 - ORIGINAL/REPAIR

Enter an "X" in the appropriate box.

BLOCK 17 - FITTING, PIPE AND TUBE MATERIALS

- a. Enter the fitting piece and pipe or tube piece number from the installation drawing (Block 7) or NA if not available.
- b. Enter the size of the fitting and pipe or tube (e.g., 1/2 Normal Pipe Size (NPS)).
- c. Enter the thickness (.127 inches).
- d. Enter the actual thickness (minimum value) of the fitting and pipe or tube.
- e. Enter the material specification of the component (from Table 4-4 of NAVSEA 0900-LP-001-7000), when known. If existing, enter "existing".
- f. For qualification purposes, enter the applicable P-number from Table 4-4 of NAVSEA 0900-LP-001-7000.
- g. Enter an "X" in the appropriate New or Exist box.
- h. Enter the material marking of the component. Enter the MIC Number for new level I material installed or N/A. Enter other material markings if material is not required to be level I and marking is present. If fitting is existing and is not marked, an acid check when required by the TWD to ensure generic material is correct must be accomplished and documented in remarks block.

BLOCK 18 - LAND WIDTH

Enter the land width or socket depth for fittings without inserts. N/A blocks that are not applicable.

BLOCK 19 - FLUX

- a. Enter an "X" if minimum flux technique was used.

- b. Enter an “X” for flux type per FED-SPEC O-F-499.

BLOCK 20 - **BRAZE ALLOY**

Enter the Mil-Spec and the alloy grade. Enter the MIC Number when new level I brazing material is installed in a Level I application or enter “NA” for non-level applications when material is not required to be level I.

BLOCK 21 - **JOINT DATA IS CORRECT/CRAFTSMAN SIGNATURE**

Verify data entered is correct and actual material to be used or installed is as specified. Sign name, enter date and badge number to certify information is correct.

BLOCK 22 - **INSPECTION TYPE**

- a. Mark the appropriate type of inspection.
- b. Diametrical Clearance – Enter the actual measurement. Acceptance criteria is per Table 5.2 of NAVSEA 0900-LP-001-7000.
- c. Fit up Inspection-Acceptance criteria of paragraph 7.2.1.a of NAVSEA 0900-LP-001-7000.
- d. Alloy Draw-Acceptance criteria per paragraph 7.2.1.d of NAVSEA 0900-LP-001-7000.
- e. Evidence of Alloy-Acceptance criteria per paragraph 7.2.1.e of NAVSEA 0900-LP-001-7000.
- f. Clearance Acceptance criteria per paragraph 7.2.1.f of NAVSEA 0900-LP-001-7000.

BLOCK 23/24- **ACCEPT/REJECT**

Mark the appropriate column.

BLOCK 25 - **SIGNATURE**

Enter the signature, badge number and date.

BLOCK 26 - **BRAZED POSITION**

Mark the appropriate block for position brazing performed.

BLOCK 27 - **BRAZE PROCEDURE IS SATISFACTORY**

Brazer sign name and enter Brazer badge number and date to certify all joint information is correct.

BLOCK 28 - **NDT REQUIREMENTS**

- a. Enter an “X” if Ultrasonic Testing (UT) is not required.
- b. Enter the NDT procedure number.

BLOCK 29 - **SCANNING METHOD**

Enter an “X” in the appropriate box.

BLOCK 30 - **EQUIPMENT MANUFACTURER**

15 Jan 2021

Enter Equipment Manufacture Name, Model, Serial number and calibration Due Date of Equipment.

BLOCK 31 - TRANSDUCER MANUFACTURER

Enter Equipment Manufacture Name, Size, Serial number, and Frequency of Equipment.

BLOCK 32 - COUPLANT TYPE

Enter the name of the fluid used.

BLOCK 33 - LAND/PIPE/MID/FTG

Enter the percent of bond, X, NA or NP, as applicable. Enter the total for all segments used and the average percent bond for the lands (or passes of a non-insert fitting).

BLOCK 34 - TOTAL % BOND

Calculate and enter the total % bond for the joint.

BLOCK 35 - DISPOSITION

Enter an "X" in the appropriate box to accept or reject the joint.

BLOCK 36 - INSPECTOR/BADGE/DATE

UT inspector will sign, enter badge number and date, signifying the technical accuracy of the data recorded and acceptance or rejection of the joint.

BLOCK 37 - REMARKS

Enter any additional information.

BLOCK 38 - FINAL DISPOSITION/SUPERVISOR

NDT Supervisor print name, badge number, enter signature and date signifying all information in Blocks 1 through 36 is technically and administratively correct.

BLOCK 39 - FINAL DISPOSITION/RECORD HAS BEEN REVIEWED FOR COMPLETENESS/QAS

QAS or QAO will print name, enter signature and date for final review, signifying the accuracy of the completed form for SUBSAFE or SOC items only. For other components, the Work Center supervisor must sign and date the form signifying the accuracy of the completed form.

- NOTES:
1. INCREMENTS FOR WHICH NO ULTRASONIC READING CAN BE OBTAINED WILL BE MARKED AS FOLLOWS:
 "X" - INCREMENTS THAT ARE INACCESSIBLE DUE TO FITTING CONFIGURATION.
 "NA" - INCREMENTS THAT ARE INACCESSIBLE DUE TO PIPING CONFIGURATION OR LOCATION.
 "NP" - INCREMENTS IN WHICH THERE IS NO ULTRASONIC PENETRATION.
 2. INCREMENTS OF THE ABOVE TYPE WILL BE ASSIGNED PERCENT BOND VALUES AS FOLLOWS:
 "NA" = 0% BOND.
 "NP" AND "X" = INCREMENTS UP TO A TOTAL LENGTH NOT EXCEEDING 20% OF THE CIRCUMFERENCE OF THE LAND WILL BE ASSIGNED A % BOND VALUE EQUAL TO THAT OF THE LOWEST READABLE INCREMENTS ADJACENT TO THE "X" OR "NP" INCREMENTS OR 60% WHICHEVER IS THE LEAST. "X" AND "NP" INCREMENTS IN EXCESS OF 20% OF CIRCUMFERENCE WILL BE ASSIGNED A BOND VALUE OF 0%. THE INSPECTOR MAY AT HIS OR HER DISCRETION, SHIFT THE INCREMENTAL SCALE SO THAT THE MINIMUM NUMBER OF INCREMENTS CONTAIN "X", "NP" OR "NA" VALUES.

15 Jan 2021

QA FORM 18A INSTRUCTIONSULTRASONIC INSPECTION RECORD

PURPOSE: To supplement the QA form 18 to document UT inspection date, equipment used, and acceptability of UT results.

PROCEDURE: QA form 18A will be completed by the planner, UT NDT Inspector, or both. The numbered blocks on QA form 18A correspond with the block instructions listed.

BLOCK 1 - PAGE OF

Enter the page number, starting with page 2, of total number of QA forms 18A associated with the joint (e.g., 2 of 3, 3 of 3). The associated QA form 18 is always page 1 of ____.

BLOCK 2 - SHIP HULL NO.

Enter the tended ship's name and hull number.

BLOCK 3 - JCN

Enter the JCN.

BLOCK 4 - LWC/SHOP

Enter the LWC/Shop.

BLOCK 5 - CWP/REC SERIAL NO.

Enter the CWP/REC serial number or enter N/A if no CWP/REC is required. Do not list the CWP/REC revision.

BLOCKS 6-11 - EQUIPMENT MANUFACTURER/MODEL NO./SERIAL NO./TRANSDUCER MANUFACTURER/SIZE/FREQUENCY/SERIAL NO.

Enter the information for the equipment used to conduct the inspection.

BLOCK 12 - SCANNING METHOD

Place an "X" in the appropriate box.

BLOCK 13 - COUPLANT TYPE

Enter the name of fluid used.

BLOCK 14 - CAL EXP DATE

Enter the calibration expiration date of the equipment listed in Blocks 6-11.

BLOCK 15 - JOINT ID NO.

Enter the JID of the joint being UT inspected. If it is a qualification joint and not an actual production joint, enter the individual's name performing the qualification.

BLOCK 16 - DWG. NO.

Enter the number of the drawing or plan that identifies the joint listed in Block 15 if a production braze.

BLOCK 17 - REMARKS/NOTES

Enter any applicable remarks or notes.

BLOCK 18 - LAND/PIPE/MIDDLE/FITTING

Enter percent bond, X, NA or NP as applicable. Enter the total for all segments used and the average percent bond for the lands (or passes of a no-insert fitting).

BLOCK 19 - DISPOSITION

Place an "X" in the appropriate box to accept or reject the joint.

BLOCK 20 - TOTAL % BOND

Calculate and enter the total % bond for the joint.

BLOCK 21 - INSPECTOR/DATE

NDT Inspector print name, enter signature and date, signifying the technical accuracy of the data recorded and acceptance or rejection of the joint.

QA FORM 20 INSTRUCTIONSWELDING IN PROCESS CONTROL/NONDESTRUCTIVE TEST RECORD

PURPOSE: To document in process controls for welding and NDT of a completed weld.

PROCEDURE:

1. QA form 20 will be completed by the planner preparing the CWP, welder and NDT Inspector(s) observing or performing tests.
2. The numbered blocks on QA form 20 correspond to the block instructions listed. When the form is used for production welding, the blocks marked with a ♦ must be completed by the planner.

BLOCK 1 - PAGE 1 OF

Enter the page number, starting with page 1, of total number of QA forms 20 and 20A, if used, associated with the joint (e.g., 1 of 3, 1 of 2).

BLOCK 2 - SHIP HULL NO.

Enter the ship's name and hull number.

BLOCK 3 - JCN

Enter the JCN.

BLOCK 4 - CWP/REC SER. NO.

Enter the CWP/REC Serial Number or enter N/A if no CWP/REC is required. Do not list the CWP/REC revision.

BLOCK 5 - LWC

Enter the shop number of the LWC.

BLOCK 6 - DATE

Enter the date this form is initiated.

BLOCK 7 - SYSTEM

Enter the noun name of the system.

BLOCK 8 - COMPONENT

Enter the noun name of component.

BLOCK 9 - DWG NO.

Enter the JID or mapping drawing, if applicable. If not applicable, the planner will enter the applicable arrangement drawing, system diagram, or component drawing number, or locally prepared JID sketch.

BLOCK 10 - CWP STEP NO.

Enter the appropriate step number(s) of the CWP.

BLOCK 11 - JOINT ID

15 Jan 2021

Enter the JID from the joint identification or map plan if JID is unavailable, assign local JID. If for a qualification joint (and not production joint identification) enter individual name performing the qualification.

BLOCK 12 - JOINT DESIGN

Enter the joint design (e.g., P-73, PN-1A, P-14, PN-7) to be used.

BLOCK 13 - INST LOCATION

Enter the compartment, frame number, and check port, starboard or centerline where the component is located.

BLOCK 14 - WELDED LOCATION

Check the appropriate block.

BLOCK 15 - COMPONENT A/B

Enter the component name (e.g., pipe, valve).

BLOCK 16 - MATERIAL

Enter the material type (e.g., CUNI, CRES).

BLOCK 17 - SIZE

Enter the iron pipe size or NPS.

BLOCK 18 - THICKNESS

For nuclear welds, enter the design material thickness. For non-nuclear welds, enter the nominal thickness or the actual measured thickness, if taken, for determining penetrometer selection for radiographed piping joints per NAVSEA T9074-AD-GIB-010/271, NAVSEA S9074-AR-GIB-010/278, and NAVSEA T9074-AD-GIB-010/1688 and for determining fillet legs on partial penetration welds per NAVSEA T9074-AD-GIB-010/271, NAVSEA T9074-AD-GIB-010/1688 and MIL-STD-1689 (for Surface Force Ships only).

BLOCK 19 - MATL SPEC

Enter the appropriate material specification for the material.

BLOCK 20 - MIC NO.

Enter the MIC number for component A and B, if applicable. Verify the MIC number from the QA form 2 for new material. For existing material, if the required MIC number is not readable enter "existing".

BLOCK 21 - [] SEAL RING [] BACK RING/STRIP

Check the appropriate block for the type of backing.

BLOCK 22 - MATERIAL

Enter the material type (e.g., CUNI, CRES).

BLOCK 23 - SIZE

Enter the ring size.

BLOCK 24 - **THICKNESS**

Enter the actual measured thickness of the ring or strip.

BLOCK 25 - **MIL-SPEC**

Enter the appropriate MIL-SPEC for the ring or strip.

BLOCK 26 - **MIC NO.**

Enter the MIC number of the ring or strip, if applicable. Verify the number from the QA form 2.

BLOCK 27 - **TYPE OF FILLER(S)**

Enter the type of the filler material(s) used (e.g., 9010, 11018, 304, RN62).

BLOCK 28 - **SIZE**

Enter the size rod, wire, insert, etc.

BLOCK 29 - **MATL**

Enter the material type (e.g., CUNI, CRES).

BLOCK 30 - **MIL-SPEC**

Enter the appropriate MIL-SPEC for the filler and insert (if applicable) material.

BLOCK 31 - **MIC NO.**

Enter the appropriate MIC number for the filler and insert (if applicable) material. Verify the number from the QA form 2.

BLOCK 32 - **WELDING STANDARD**

Enter the applicable welding standard.

BLOCK 33 - **WELDING PROCEDURE**

Enter the weld procedure number.

BLOCK 34 - **DATA SHEET**

Enter the weld procedure technique sheet number.

BLOCK 35 - **POSITION**

Check the appropriate block for the weld position.

BLOCK 36 - **ACCESSIBILITY**

Check the proper block for the actual accessibility.

BLOCK 37 - **PREHEAT TEMP**

Enter the actual preheat temperature as measured just prior to welding.

BLOCK 38 - **PRE-HEAT METHOD**

Enter the required pre-heat method.

BLOCK 39 - **POST HEAT TEMP START TIME AND STOP TIME**

Enter the temperature required for the post weld heat and the start and stop time for post heat.

BLOCK 40 - PURGE GAS

Enter the type of purge gas.

BLOCK 41 - FLOW RATE

Enter the actual flow rate of the purge gas.

BLOCK 42 - SHIELD GAS

Enter the type of shield gas.

BLOCK 43 - FLOW RATE

Enter the actual flow rate of the shield gas.

BLOCK 44 - CUP SIZE

Enter the gas cup size.

BLOCK 45 - TUNGSTEN SIZE

Enter the tungsten size.

BLOCK 46 - WELD LAYER

Enter the layer of welding (i.e., tacks, root, intermediate, and final).

BLOCK 47 - PROCESS

Enter the type of welding process used (e.g., SMAW, GTAW).

BLOCK 48 - QUAL EXP DATE

Enter qualification expiration date.

BLOCK 49 - AMPS

Enter the welding amperage actually used.

BLOCK 50 - INTERPASS TEMP

Enter the maximum interpass temperature as measured during the process.

BLOCK 51 - WELDER SIGNATURE

Print name and enter signature certifying the data recorded in Blocks 46-51 for the layer welded.

BLOCK 52 - DATE

Enter the date Block 51 is signed.

BLOCK 53 - REMARKS

Enter additional remarks or sketches. Enter the appropriate Test, Measuring and Diagnostic Equipment as defined in Part I, Chapter 5, paragraph 5.2.1 of this volume. If required, a continuation of Block 53 is on the back of the form at the bottom for additional information.

BLOCK 54 - INSPECTION STANDARD

Enter the applicable inspection standard.

BLOCK 55 - WELD CLASS

Enter class 1 or 2, per the requirements of NAVSEA 250-1500-1, for nuclear welds. The class (e.g., A-1, A-2, A-F, A-LT, M-1, P-1, PL-T, T-1) for non-nuclear welds.

BLOCK 56 - ACCEPTANCE STANDARD

Enter the applicable acceptance standard.

BLOCK 57 - ACCEPT CLASS

Enter acceptance class 1 or 2, per the requirements of NAVSEA 250-1500-1, for nuclear welds. The class (e.g., I, II, III) for non-nuclear welds.

BLOCK 58 - WELD PREP - COMPONENT A/B

Enter the component names (e.g., pipe, valve) in the blocks titled Component A and Component B.

BLOCK 59 - INSPECTION METHOD

Enter the type and method of inspection performed (e.g., VT 5X, PT).

BLOCK 60 - ACCEPT/REJECT

Enter accept or reject to indicate disposition of the weld preps.

BLOCK 61 - NDT INSPECTOR SIGNATURE

NDT Inspector print name and enter signature certifying the disposition of the weld prep.

BLOCK 62 - DATE

Enter the date Block 61 is signed.

BLOCK 63 - JOINT FIT-UP

Enter results (i.e., inspection method, Accept or Reject, Inspector and date) of joint fit up inspections.

BLOCK 64 - INSP LAYER

Enter the weld layer inspected (i.e., tacks, root, intermediate, final, inside, backside, accessible or inaccessible).

BLOCK 65 - INSP METHOD

Enter the type and method of inspection performed (e.g., VT 5X, PT).

BLOCK 66 - INSP PROC NO.

Enter the inspection procedure number.

BLOCK 67 - ACCEPT/REJECT

Enter accept or reject to indicate disposition of the weld layer. If final disposition of the weld is rejectable, document reason(s) for rejection, description and location of the defect(s) in Block 53. Document the repair number, length, width and depth of the defect(s) in Block 70, 78, or 86, as applicable.

BLOCK 68 - NDT INSPECTOR SIGNATURE

NDT Inspector print name and enter signature certifying the disposition of the weld layer.

BLOCK 69 - DATE

Enter the date Block 68 is signed.

NOTE: IF REPAIRS ARE REQUIRED TO THE JOINT, RECORD THE INSPECTIONS IN BLOCKS 72 THROUGH 77, 80 THROUGH 85, AND 88 THROUGH 93 IN THE SAME MANNER AS BLOCKS 64 THROUGH 69. BLOCKS NOT COMPLETED WILL BE LEFT BLANK EXCEPT AS DIRECTED BELOW.

BLOCK 70 - REPAIR NUMBER/L W D

The NDT Inspector will enter the repair number, length, width and depth of the defect(s) if known. Enter N/A for length, width or depth if unknown based on the limitations of the inspection method performed.

BLOCK 71 - REPAIR METHOD/L W D

The welder will record the method of repair (e.g., file, excavate and weld, weld only). Document the length, width and depth of the excavation. If excavation was not required for weld repair, enter N/A for L W D.

BLOCK 78 - REPAIR NUMBER/L W D

The NDT Inspector will enter the repair number, length, width and depth of the defect(s) if known. Enter N/A for length, width or depth if unknown based on the limitations of the inspection method performed.

BLOCK 79 - REPAIR METHOD/L W D

The welder will record the method of repair (e.g., file, excavate and weld, weld only). Document the length, width and depth of the excavation. If excavation was not required for weld repair, enter N/A for L W D.

BLOCK 86 - REPAIR NUMBER/L W D

The NDT Inspector will enter the repair number, length, width and depth of the defect(s) if known. Enter N/A for length, width or depth if unknown based on the limitations of the inspection method performed.

BLOCK 87 - REPAIR METHOD/L W D

The welder will record the method of repair (e.g., file, excavate and weld, weld only). Document the length, width and depth of the excavation. If excavation was not required for weld repair, enter N/A for L W D.

BLOCK 94 - FINAL DISPOSITION

The NDT Inspector who completed the final inspection of the final weld will check acceptable or rejectable.

BLOCK 95 - NDT SUPERVISOR SIGNATURE DATE

NDT Supervisor print name, enter signature and date signifying all information in Blocks 1 through 93 is technically and administratively correct.

QA FORM 20A INSTRUCTIONSRADIOGRAPHIC TEST INSPECTION RECORD

PURPOSE: To provide a supplement to the QA form 20 to document the technical aspects of the radiograph and the acceptance or rejection of the item radiographed. Both the QA form 20 and QA form 20A are required for a complete radiographic record of a joint.

PROCEDURE: QA form 20A will be completed by the radiographer and the RT inspector. The numbered blocks on QA form 20A correspond with the block instructions listed.

BLOCK 1 - PAGE OF

Enter the page number, starting with page 2, of the total number of QA forms 20A associated with the joint (e.g., 2 of 3, 3 of 3). The associated QA form 20 is always page 1 of ____.

BLOCK 2 - SHIP AND HULL NO.

Enter the tended ship's name and hull number.

BLOCK 3 - JCN

Enter the JCN.

BLOCK 4 - CWP/REC SERIAL NO.

Enter the CWP/REC serial number or enter N/A if no CWP/REC is required. Do not list the CWP/REC revision.

BLOCK 5 - CWP STEP NO.

Enter the CWP step number(s).

BLOCK 6 - JOINT ID

Enter JID.

BLOCK 7 - REPAIR NO.

Enter ORIG or repair number (e.g., R-1, R-2).

BLOCK 8 - INSP STD & CLASS

Enter the inspection standard and class.

BLOCK 9 - QUALITY LEVEL

Enter the quality level required.

BLOCK 10 - RT COVERAGE REQ'D

Indicate the RT coverage required.

BLOCK 11 - PENETRAMETER

Record the penetrameter size and group. Indicate use of source or film side penetrameter.

BLOCK 12 - SPECIMEN MATL

Enter the material type of the item being radiographed (e.g., NICU, CFE).

BLOCK 13 - TM

Enter the nominal or actual, or design material thickness of the item being radiographed per NAVSEA 250-1500-1 or NAVSEA T9074-AS-GIB-010/271.

BLOCK 14 - TS

Enter the total specimen thickness.

BLOCK 15 - EXPOSURE TECH

Check the appropriate technique used (e.g., if a pipe was radiographed through two walls and the image of both walls are to be viewed for acceptance, enter an "X" in the brackets next to DWE/DWV).

BLOCK 16 - FILM

Enter the film type and brand. "X" the appropriate method used to load the film cassette.

BLOCK 17 - ISOTOPE

Record the listed information when using the source.

BLOCK 18 - X-RAY MACHINE MFG

Record the listed information when using the X-ray machine.

BLOCK 19 - X-RAY PARAMETERS

Record the listed information when using the X-ray machine.

BLOCK 20 - SFD

Enter the source to film distance used.

BLOCK 21 - RADIOGRAPHIC SHOOTING SKETCH

The radiographer will draw a sketch indicating the items listed.

BLOCK 22 - SHIM

Enter the shim material used and thickness.

BLOCK 23 - LEAD SCREENS THICKNESS

Record thickness, front and back of the intensifying screens.

BLOCK 24 - REMARKS

The radiographer will use this block to record any unusual technique requirements.

BLOCK 25 - RADIOGRAPHER

The radiographer will print name, sign and date upon verifying that all the information in Blocks 1 through 24 is correct.

BLOCKS 26 - RADIOGRAPHIC INTERPRETATION
thru 28

NOTE: BLOCK 26 WILL BE COMPLETED BY THE RT INSPECTOR AS THE FILM IS READ.

- a. One RT Inspector will evaluate the radiograph, check ACCEPT/REJECT as appropriate in Block 27, print name, enter signature and date in Block 28.
- b. It is important to note that all indications read must be recorded on the QA form 20A and dispositioned in the appropriate block.
- c. Additional sheets may be added to the report by the RT Inspector. The additional sheets will be properly numbered and will be authenticated with printed name and signature on each sheet by the RT Inspector making up the report.

BLOCK 29 - RT EXAMINER

The Command RT Examiner will review the weld record (including radiographic film) for completeness accuracy and compliance with applicable standards, print name, enter signature, unique identification number, and date.

QA FORM 20B (PART A) INSTRUCTIONSSTRUCTURAL PRIMARY RECORD

PURPOSE: To provide a standard form and instruction for documenting required structural welding and NDT completion data.

NOTES:

1. PLANNING AND ESTIMATING (P&E) MUST COMPLETE BLOCKS 1-14, 20, 21, 22-24 (PARTIAL), AND 26 (IF NECESSARY) FOR SUBMARINE RECORDS. ANNOTATED PERSONNEL MUST COMPLETE ALL REMAINING BLOCKS.
2. RECORD OF ACCOMPLISHMENT DEFINITION: A RECORD USED FOR SOME SUBMARINE WELDS THAT NAVSEA TECH PUB T9074-AD-GIB-010/1688 ALLOWS REDUCED NDT DATA REQUIREMENTS. IT IS PRIMARILY USED FOR MAGNETIC PARTICLE TESTING (MT) INSPECTION. MT INSPECTIONS THAT MAY USE A RECORD OF ACCOMPLISHMENT FOR COMPLETION DATA ARE DEFINED IN TABLES 6-1 AND 6-2 OF NAVSEA TECH PUB T9074-AD-GIB-010/1688, BY REFERENCE TO NOTE 8. NDT COMPLETION DATA FOR A RECORD OF ACCOMPLISHMENT IS DEFINED IN NAVSEA TECH PUB T9074-AD-GIB-010/1688, PARAGRAPH 5.3.1.
3. BLOCKS AND ROWS OF THIS RECORD MAY BE EXPANDED OR DELETED TO SUIT THE WORK BEING DOCUMENTED.
4. EACH SIGNATURE WILL BE ACCOMPANIED BY A PRINTED NAME AND DATE. AN EMPLOYEE MAY USE THEIR INITIALS PROVIDED THEIR SIGNATURE AND PRINTED NAME APPEAR ELSEWHERE ON THE SAME PAGE.

SCOPE: The scope of this instruction is limited to structural welding and NDT for overhaul and repair governed by NAVSEA Tech Pub T9074-AD-GIB-010/1688, or MIL-STD-1689A as invoked by Naval Ships Tech Manual S9086-CH-STM-010/CH-074, through NAVSEA S9AA0-ABGOS-010/GSO, NAVSEA 0902-018-2010 or COMUSFLTFORCOMINST 4790.3 Joint Fleet Maintenance Manual.

BLOCK 1 - RECORD NO.

Enter the Part A record number. The numbering convention is A-01, A-02, A-03 etc., in numerical order, depending on how many Part A records are generated for the TWD. Keep the number of Primary Records generated to a minimum.

BLOCK 2 - LWC/SHOP

Enter local work center or lead shop.

BLOCK 3 - SHEET

(P&E, Craftsman, Inspector) Enter the sheet number of the Part A record or Part A continuation sheet. Total number of sheets generated (e.g., 2 of 3) will be added by the supervisor at time of signature in Block 27. It is pre-printed for the first sheet. All

15 Jan 2021

continuation sheet numbers must be added. Sheet numbers for Part A, B and C records are not associated. They are unique only to the record Part A, B, or C the craftsman is dealing with.

BLOCK 4 - **SHIP/HULL NO.**

Enter the ship name, hull type, SSN, SSBN, SSGN, CVN, etc., and unique hull number for the ship, 759, 732, or 65, etc.

BLOCK 5 - **JCN**

Enter the Job Control Number (JCN).

BLOCK 6 - **CWP/REC**

Enter the CWP/REC serial number or enter N/A if no CWP/REC is required. Do not list the CWP/REC revision.

BLOCK 7 - **REFERENCES**

Enter references, drawings etc. that are to be used to describe joints. Do not enter references that are associated only with joints that require a Part B record.

BLOCK 8 - **JOINT NUMBER**

Enter the Joint Numbers.

BLOCK 9 - **SS/SOC**

Check the block associated with each joint number if it is SUBSAFE or Scope Of Certification (SOC). All joints that involve the SUBSAFE boundary must be checked whether they require re-entry control or not. For example, attachment welds to the boundary must be checked even though this work is not subject to re-entry control. For surface ship welds, enter NA.

BLOCK 10 - **REC (SHIPYARD USE ONLY)**

Check the block associated with each joint number if the joint requires re-entry control.

BLOCK 11 - **COMPONENT NUMBER 1 (Leave blocks blank for joints that require a Part B Record.)**

Enter the letter associated with the drawing number in Block 7, which describes the component and enter the piece number (if necessary to describe the joint) for the component. For joints that may require explanation, enter "See remarks" as a reference in a Block 7, refer to this note as the craftsman would a drawing and give the explanation in remarks.

The term "EXISTING" may be used to describe existing ship structure, provided the other component in the joint defines the joint location. To do this, add "EXISTING" as a reference in Block 7, refer to it as the craftsman would a drawing, and "N/A" the piece number. Enter the base material type (OSS, HY-80, HSS, etc.), S-Group Number from Table 1 of NAVSEA S9074-AQ-GIB-010/248, and the drawing material thickness (decimal or fraction).

BLOCK 12 - **COMPONENT NUMBER 2**

Make entries for Component 2 as described in Block 11. For repair sites, enter N/A in Component 2 columns.

BLOCK 13 - WELD INFO (Leave blocks blank for joints that require a Part B Record.)

JOINT DESIGN: Enter the joint design in terms of MIL-STD-22 joint numbering system (PT2S.1, PT2V.1, C2V.2, B2V.3 etc.). Use Remarks (Block 14) to describe "Special Joints", as described in paragraph 11.4.7 of NAVSEA Tech Pub T9074-AD-GIB-010/1688 or paragraph 11.2.7 of MIL-STD-1689A, including any special weld buildup required for the joint.

WELD SIZE: Enter the weld size in terms of fractions. Enter N/A for butt welds, plug welds, base material repairs, weld surfacing, corner welds with no reinforcing fillet, clad welds, and edge welds. For PT2V.3 and PT2V.4, enter sizes for both reinforcing fillets. Use Remarks blocks for local joint clarification or joint or sketch numbers.

BLOCK 14 - REMARKS

Enter any joint clarifying comments. This block may also be used to specify any special heat restriction instructions (e.g., preheat and interpass requirements). Each entry must contain signature, printed name and date except where the entry is pre-printed on the form by P&E.

NOTE: BLOCKS 15-18 ARE RESERVED FOR FUTURE USE.

BLOCK 19 - NDT METHODS & ACCEPTANCE PROCEDURES/REV/CHG

(INSPECTOR) Enter the NDT methods and acceptance standard procedure, revision, and change for NDT listed in Block 21 as the inspection is performed. This entry is not required for joints that do not list required NDT or that have Block 24 checked off. Leave unused blocks blank.

BLOCK 20 - JOINT NO.

(P&E) Repeat joint numbers listed in Block 8.

BLOCK 21 - NDT OR DATA REQUIREMENT

NOTE: LEAVE THIS BLOCK BLANK IF A PART B RECORD IS REQUIRED. IF A PART B RECORD IS NOT USED, ENTER REQUIRED NDT OR DATA REQUIREMENTS AS FOLLOWS:

- a. **DATA REQUIREMENTS:** List WELD COMPL (weld complete) as the first entry for each joint listed in Block 20 that does not require a Part B record.
- b. **NDT REQUIREMENTS:** List required NDT for the joint. List each required NDT as a separate line item in approximate order in which they will occur. Use the following convention: List NDT Type first (VT, 5X VT, MT, PT, ET, RT or UT), Wait Time second (8HR, 24HR, 7DAY, or AH (for after hydro) etc.), and Phase last (EXCAV, BACKGOUGE or FINAL). It is not necessary to give a wait time for ambient temperature NDT; it is assumed if not given. Typical examples are: MT EXCAV, MT BACKGOUGE, MT FINAL, ET FINAL, PT FINAL, RT 8HR FINAL, MT 24HR FINAL, MT 7DAY FINAL, MT AH FINAL, and VT FINAL.
- c. **WORKMANSHIP AND VT SPECIAL REQUIREMENTS:**
 - 1) Workmanship inspections are not normally listed as required NDT. Certification of satisfactory completion is made either by TWD signature when the joint does not require documentation using a Part A or Part B record, or by

signature on the Part A or Part B record when the joint does require documentation.

- 2) Joints that require VT only do not require a structural record. The VT is specified and certified by TWD. Certification of satisfactory VT completion for VT only welds can be made by a NDT inspector signature in the body of the TWD.

BLOCK 22 - **CERTIFICATION OF DATA ENTRY OR SAT NDT**

- a. (P&E) Enter "See Part B record" for joints that require a Part B record.
- b. (WELDER) Enter signature, printed name, and date beside each WELD COMPL data entry to certify that the weld is complete, and that fit-up and weld workmanship inspection requirements have been met. The weld is complete when all weld metal has been deposited, required weld soaks are completed, preheat is removed, weld has cooled to ambient temperature and the weld has been prepared to ensure the weld is ready for final NDT. When required, include the ambient temperature time in Block 23 as described in Block 23 instructions.
- c. (NDT INSPECTORS) Enter signature, printed name, and date for each NDT when the NDT is satisfactory. Except when a Part C record is required, this signature is made when the weld is complete and the NDT is satisfactory. Part C records are required only if local instructions require them or if the note "Initiate a Part C record if NDT fails" appears in Block 23. If a Part C record is required and the NDT rejects the weld, enter an X in Block 24 for the NDT that generated the reject and initiate a Part C record. Your signature in Block 22, in this case, indicates the NDT failed and a Part C record was generated. If indications are cleared by grinding or polishing only and the subsequent VT (final) is satisfactory, a Part C record is not required.

BLOCK 23 - **DATA ENTRY OR ADDITIONAL NDT REQMT**

- a. (P&E)
 - 1) Enter any NDT clarifying comments, (i.e., partial inspections or expansion requirements).
 - 2) Enter "AMB TIME:" for each WELD COMPL data requirement listed in Block 21.

NOTE: THE AMBIENT TIME IS ONLY REQUIRED IF SUBSEQUENT NDT HAS A WAIT TIME, SUCH AS A 24 HOUR MT.

- 3) Enter "PENETRANT:" for each PT requested in Block 21.
- 4) Enter "EQUIP No:" for each ET requested in Block 21.
- 5) For submarine envelope attachment weld MT inspections, enter "Initiate a Part C record if NDT fails" and "EQUIP No:".
- 6) For submarines, enter "Initiate a Part C record if NDT fails" for RT or UT listed in Block 21 (expansions are required when repair welding is required as a result of RT or UT inspection).

- b. (WELDERS) Enter military time when the weld reaches ambient temperature beside the “AMB TIME:” entry associated with each WELD COMPL data requirement. If this data is entered by someone other than who signed Block 22, a signature, printed name and date is required.

NOTE: THE AMBIENT TIME IS ONLY REQUIRED IF SUBSEQUENT NDT HAS A WAIT TIME, SUCH AS A 24 HOUR MT.

- c. (NDT INSPECTORS)
- 1) Enter penetrant used, manufacturer’s brand and type, beside each “PENETRANT:” entry.
 - 2) Enter equipment information beside each MT or ET with “EQUIP No:” entry:
 - (a) ET: Enter unique equipment identification, or instrument manufacturer and model number used.
 - (b) MT: if AC yoke is used, enter the word “Yoke”. Otherwise, enter unique equipment identification, or instrument manufacturer and model number used.

BLOCK 24 - **SUPPLEMENTAL RECORD (CHECK IF REQD)**

(NDT INSPECTORS) When required by local procedures to document deficiencies, or if the note “Initiate a Part C record if NDT fails” is listed in Block 23, a Part C record must be initiated to document defects. If a part C record is initiated, check the box in the row associated with the required NDT.

BLOCK 25 - **RECORD NO. OF REPAIR CYCLES (SURFACE SHIPS ONLY)**

(INSPECTOR or WELDER) Enter the number of repair cycles required to obtain a satisfactory NDT, (i.e., “1” for the first cycle, “2” for the second, etc.).

BLOCK 26 - **REMARKS**

(ALL) Enter any clarifying comments associated with the record. Add or refer to any expansion requirements here or in Block 14. Each entry must contain signature, printed name, and date except where the entry is pre-printed on the form by P&E.

BLOCK 27 - **SUPERVISOR**

(WELD SUPERVISOR) Certify final disposition of all welding and NDT for all joints listed in Block 20 (including continuation sheets) by entering signature, printed name, and date. This includes certification of any Part C records generated. Ensure that page numbering is correct.

BLOCK 28 - **QAS (SUBSAFE/SOC ONLY)**

(QAS) Enter signature, printed name, and date to certify completeness of entries. To aid the certification process, this block is repeated on the Part B record in Block 34. For joints being documented by Part B record, the individual signing for all joints must review the certification signature(s) on the Part B record(s) and sign the Part A record based on the Part B signature(s).

32. REMARKS								

QA FORM 20B (PART B) INSTRUCTIONSSTRUCTURAL WELD HISTORY

NOTE: P&E PERSONNEL MUST COMPLETE BLOCKS 1, 2, 4, 5, 7-11, 12 (PARTIAL), 14-15 (IN SPECIAL SITUATIONS), 27, AND 32 (IF NECESSARY). ANNOTATED PERSONNEL MUST COMPLETE ALL REMAINING BLOCKS. FOR CONTINUATION SHEETS GENERATED DURING PLANNING, P&E MUST COMPLETE BLOCKS 1, 4, 5 AND 32 (IF NECESSARY). ANNOTATED PERSONNEL MUST COMPLETE ALL REMAINING BLOCKS. FOR CONTINUATION SHEETS GENERATED DURING EXECUTION, ANNOTATED PERSONNEL MUST COMPLETE ALL BLOCKS.

NOTE: BLOCKS AND ROWS OF THIS RECORD MAY BE EXPANDED OR DELETED TO SUIT THE WORK BEING DOCUMENTED.

BLOCK 1 - JOINT NO.

Enter Joint Number. If the Part B record is referenced from a Part A record, the joint number on both records must match.

BLOCK 2 - LWC/SHOP

Enter lead work center.

BLOCK 3 - SHEET

(CRAFTSMAN, INSPECTOR, P&E) Enter the sheet number(s) of Part B continuation sheets generated. Inspector or Craftsman enter total number of sheets generated, (e.g., 1 of 3, 2 of 3 at the time of completion). (The first sheet, the Part B record, is pre-printed as "Sheet 1 of "). Sheet numbers for Part A, B and C records are not associated. They are unique only to the record, Part A, B, or C.

BLOCK 4 - SHIP/HULL NO.

Enter the ship name, hull type, SSN, SSBN, SSGN, CVN, etc., and unique hull number for the ship, 759, 732, or 65, etc.

BLOCK 5 - JCN

Enter the Job Control Number (JCN).

BLOCK 6 - CWP/REC

Check the [] Y box if CWP or REC is required, and enter CWP or REC number. Check the [] N box if a CWP or REC is not required.

BLOCK 7 - REFERENCES

Enter references, drawings etc. that are to be used to describe joints or material requiring traceability.

BLOCK 8 - COMPONENT NUMBER 1

Enter the letter associated with the drawing number in Block 7, which describes the component and enter the piece number (if necessary to describe the joint) for the component.

15 Jan 2021

For joints that may require explanation, enter “See remarks” as a reference in Block 7, refer to this note as the craftsman would a drawing and give the explanation in remarks. When piece number, material type, or material thickness is provided in Remarks, these columns should be left blank, or a dash entered.

The term “EXISTING” may be used to describe existing ship structure, provided the application is not SUBSAFE or SOC, and provided the other component in the joint defines the joint location. To do this, add “EXISTING” as a reference in Block 7, refer to it as the craftsman would a drawing, and “N/A” the piece number.

Enter the base material type (OSS, HY-80, HSS, etc.), S-Group Number from Table I of NAVSEA S9074-AQ-GIB-010/248 and the component thickness (decimal or fraction). If a component has more than one thickness or material type, enter each one on a separate row, or use Block 11 (Remarks).

BLOCK 9 - **COMPONENT NUMBER 2**

Make entries for Component 2 as described in Block 8. For repair sites, enter N/A in Component 2 columns.

BLOCK 10 - **WELD INFO**

Enter the joint design in terms of MIL-STD-22 joint numbering system (PT2S.1, PT2V.1, C2V.2, B2V.3, etc.). Use Remarks (Block 11) to describe “Special Joints”, as described in paragraph 11.4.7 of NAVSEA Tech Pub T9074-AD-GIB-010/1688, including any special weld buildup required for the joint. For base material repairs and weld surfacing, enter N/A, or describe the repair or surfacing in Remarks (Block 11).

Enter the weld size in terms of fractions. Enter N/A for butt welds, plug welds, corner welds with no reinforcing fillet, weld surfacing, base material repairs, and edge welds. For PT2V.3 and PT2V.4, enter sizes for both reinforcing fillets. Use Remarks for local joint clarification or joint numbers.

BLOCK 11 - **REMARKS**

Enter any joint clarifying comments. Add or refer to any expansion requirements here or in Block 32. Each entry must contain signature, printed name and date except where the entry is pre-printed on the form by P&E.

BLOCK 12 - **NEW MATERIAL**

- a. (P&E) Check the box “[] Y or [] N”, to indicate that material documentation is or is not required and enter reference letter from Block 7 and the associated piece number to describe the material requiring traceability. Block 12 is marked “No” when electrode only is installed (e.g., repair of a pit, or for cladding) because electrode is entered in Block 16.
- b. (CRAFTSMAN or QAI) At the time of installation, enter traceable material marking (e.g., MIC No., TSCM No., Heat No., or other) for the piece number listed and certify (signature, printed name, and date). If existing material is being reinstalled, enter “EXISTING” in the TRACEABLE MATERIAL-MARKING column and sign. If “No” is Checked by P&E, no entry is required.

BLOCK 13 - **WELD PROCEDURE, REV, CH, AND TECHNIQUE SHEET(S)**

(WELDER) Before welding, enter the Weld Procedure to be used. Include Technique Sheet if applicable.

BLOCK 14 - **MINIMUM PREHEAT**

(WELDER) Before welding, enter the required minimum preheat. In certain situations, when heat must be controlled using non-standard temperatures, P&E may complete this block.

BLOCK 15 - **MAXIMUM INTERPASS**

(WELDER) Before Welding, enter the required maximum interpass temperature. In certain situations, when heat must be controlled, P&E may complete this block.

BLOCK 16 - **WELD FILLER MATERIAL**

(WELDER) Just prior to welding, enter grade or type (e.g., MIL-11018-M or 11018-M) and MIC Number (e.g., WCAF 9093 202A) of electrode used. Filler letters, A, B, C, etc., are provided so that the data needs only to be entered once for that electrode and its corresponding traceability number. Enter the filler letter, A, B, C, etc., corresponding to the electrode used during the weld process in the FILLER LTR block, Block 20. The filler material information recorded in this block only applies to weld phases being documented on this sheet. If a continuation sheet is used, the filler material used to document welding on that continuation sheet must be recorded in Block 16 of that sheet.

BLOCK 17 - **FITUP SAT**

(CRAFTSMAN or QAI) Enter signature, printed name, and date when the workmanship inspection for fit-up or base material preparation for weld surfacing or repair is satisfactory. This signature certifies that the joint or base metal surface is ready for welding. For weld repairs, the signature certifies the excavation is ready for NDT (if required).

BLOCK 18 - **PHASE LETTER KEY**

No entry is required for this block. Use Phase Letter Key given to complete Block 19.

BLOCK 19 - **PHASE LETTER**

(WELDER) Using the Phase Letter Key given, enter the phase being accomplished during the weld process in the PHASE LETTER blocks provided. Check the box, “[] (See Structural Weld History Continuation Sheet)” when the record has insufficient room for the number of entries, and a continuation sheet is needed.

BLOCK 20 - **FILLER LETTER**

(WELDER) Enter the letter corresponding to the filler material information entered in Block 16 of the sheet being completed. If the phase does not involve the addition of filler metal, enter N/A.

BLOCK 21 - **PREHEAT & INTERPASS TEMP**

(WELDER) Check Preheat and Interpass Temperature for the phase being accomplished. Mark the block when satisfactory. Take corrective action if it is not satisfactory. Enter “NA” for phases that do not involve welding, (e.g., back-gouge phases).

BLOCK 22 - **WELDER AND WELD WORKMANSHIP**

15 Jan 2021

(WELDER) Enter signature, printed name, and date for the associated phase. Signing of this block certifies that all welding has been performed per the welding procedure entered in Block 13; the MIC number of welding rod(s) used is recorded in Block 16; Blocks 19, 20, and 21 are completed and required information is correct and that all weld workmanship inspection requirements have been satisfied. For back-gouge phase, the signature certifies that the weld has been back-gouged and the root meets the workmanship requirements. Block 22 signatures must be made based on personal observation.

BLOCK 23 - REMARKS

(WELDER) Enter remarks if necessary. If the remark is made by someone other than the welder who signed Block 22, entry must contain signature, printed name, and date except where the entry is pre-printed on the form by P&E.

BLOCK 24 - WELDING COMPLETE

(WELDER or WELDER SUPERVISOR) Enter signature, printed name, and date when welding is complete, all metal has been deposited, required weld soaks are completed, preheat is removed and weld meets workmanship inspection requirements. This signature must be made based on personal observation or by normal trade supervisory controls.

BLOCK 25 - JOINT IS AT AMBIENT TEMP

(WELDER OR WELDER SUPERVISOR) Enter military time weld reached ambient temperature and sign name (include name and date). The ambient time is only required if subsequent NDT has a wait time, such as a 24 hour MT.

BLOCK 26 - JOINT IS COMPLETE AND READY FOR FINAL NDT

(CRAFTSMAN) Enter signature, printed name, and date when the joint is complete and ready for final NDT (i.e., meets workmanship inspection requirements).

BLOCK 27 - REQUIRED NDT

(P&E) Choose the required NDT from the menu given or add NDT if necessary. The NDT menu given lists most NDT required by NAVSEA Tech Pub T9074-AD-GIB-010/1688. Choose the NDT desired by deleting the rows from the form for NDT that is not required. Include the Notes block at the bottom of the menu. After deleting NDT that is not required, ensure that the required NDT list will fit on a single page. If "MT EXCAV", "MT BACKGOUGE", and "MT EVERY LAYER" are not used, delete Note 2 from the note block. If "MT EVERY LAYER" is not used, delete Note 3 from the Note block.

BLOCK 28 - NDT & ACCEPTANCE PROCEDURE REV, CH

(INSPECTOR) Enter the NDT methods and acceptance standard procedure used.

BLOCK 29 - NDT REPORT, EQUIPMENT

(INSPECTOR) Enter NDT Report number or equipment used as directed on the form. Enter "Yoke" when performing an MT by yoke method. Equipment information is not required for MT by yoke. If "MT EXCAV", "MT BACKGOUGE" or "MT EVERY LAYER" is the NDT listed in Block 27, "Entry Not Required" may be entered in Block 29. (See example of Part B form).

BLOCK 30 - RESULTS A OR R

15 Jan 2021

(INSPECTOR) Enter "A" for accept or "R" for reject to indicate the inspection result. If indications are cleared by grinding or polishing only, and the subsequent VT (final) is satisfactory, a Part C record is not required.

BLOCK 31 - **INSPECTOR**

(INSPECTOR) Enter signature, printed name, and date for the inspections performed. When a NDT results in a deficiency, the results of any other NDT not performed yet in the process will be documented on the Part C record generated for the failed NDT. All blocks for NDT not yet performed will be left blank on this sheet.

BLOCK 32 - **REMARKS**

(ALL) Enter remarks. Add or refer to any expansion requirements here or in Block 11. Each entry must contain signature, printed name, and date except where the entry is pre-printed on the form by P&E.

BLOCK 33 - **WELD SUPERVISOR**

(WELD SUPERVISOR) Certify final disposition of all welding and NDT for the joint listed in Block 1 by entering signature, printed name and date.

NOTE: WHEN PERFORMING RECORD REVIEW, ALL CERTIFICATION DATA TO REPAIR DEFECTS (I.E., DEFECT EXCAVATION INFORMATION, REPAIR WELD HISTORY, FINAL NDT OF DEFECTS AND CERTIFICATION SIGNATURES, ETC.) ARE DOCUMENTED ON ASSOCIATED PART C RECORDS FOR THE JOINT AND PAGE NUMBERING IS CORRECT, INCLUDING ANY PART C RECORDS.

BLOCK 34 - **QAS (SUBSAFE/SOC/REC ONLY)**

(QAS) Enter signature, printed name, and date to certify completeness of entries for joints listed in Block 1.

STRUCTURAL WELD HISTORY CONTINUATION SHEET:

Follow corresponding block instructions in this attachment except as noted:

(WELDER) Transcribe entries from the associated Part B record (sheet 1) onto the continuation sheet for Blocks 1, 4, 5 and 6.

BLOCK 13 - **WELD PROCEDURE, REV, CH, AND TECHNIQUE SHEET(S)**

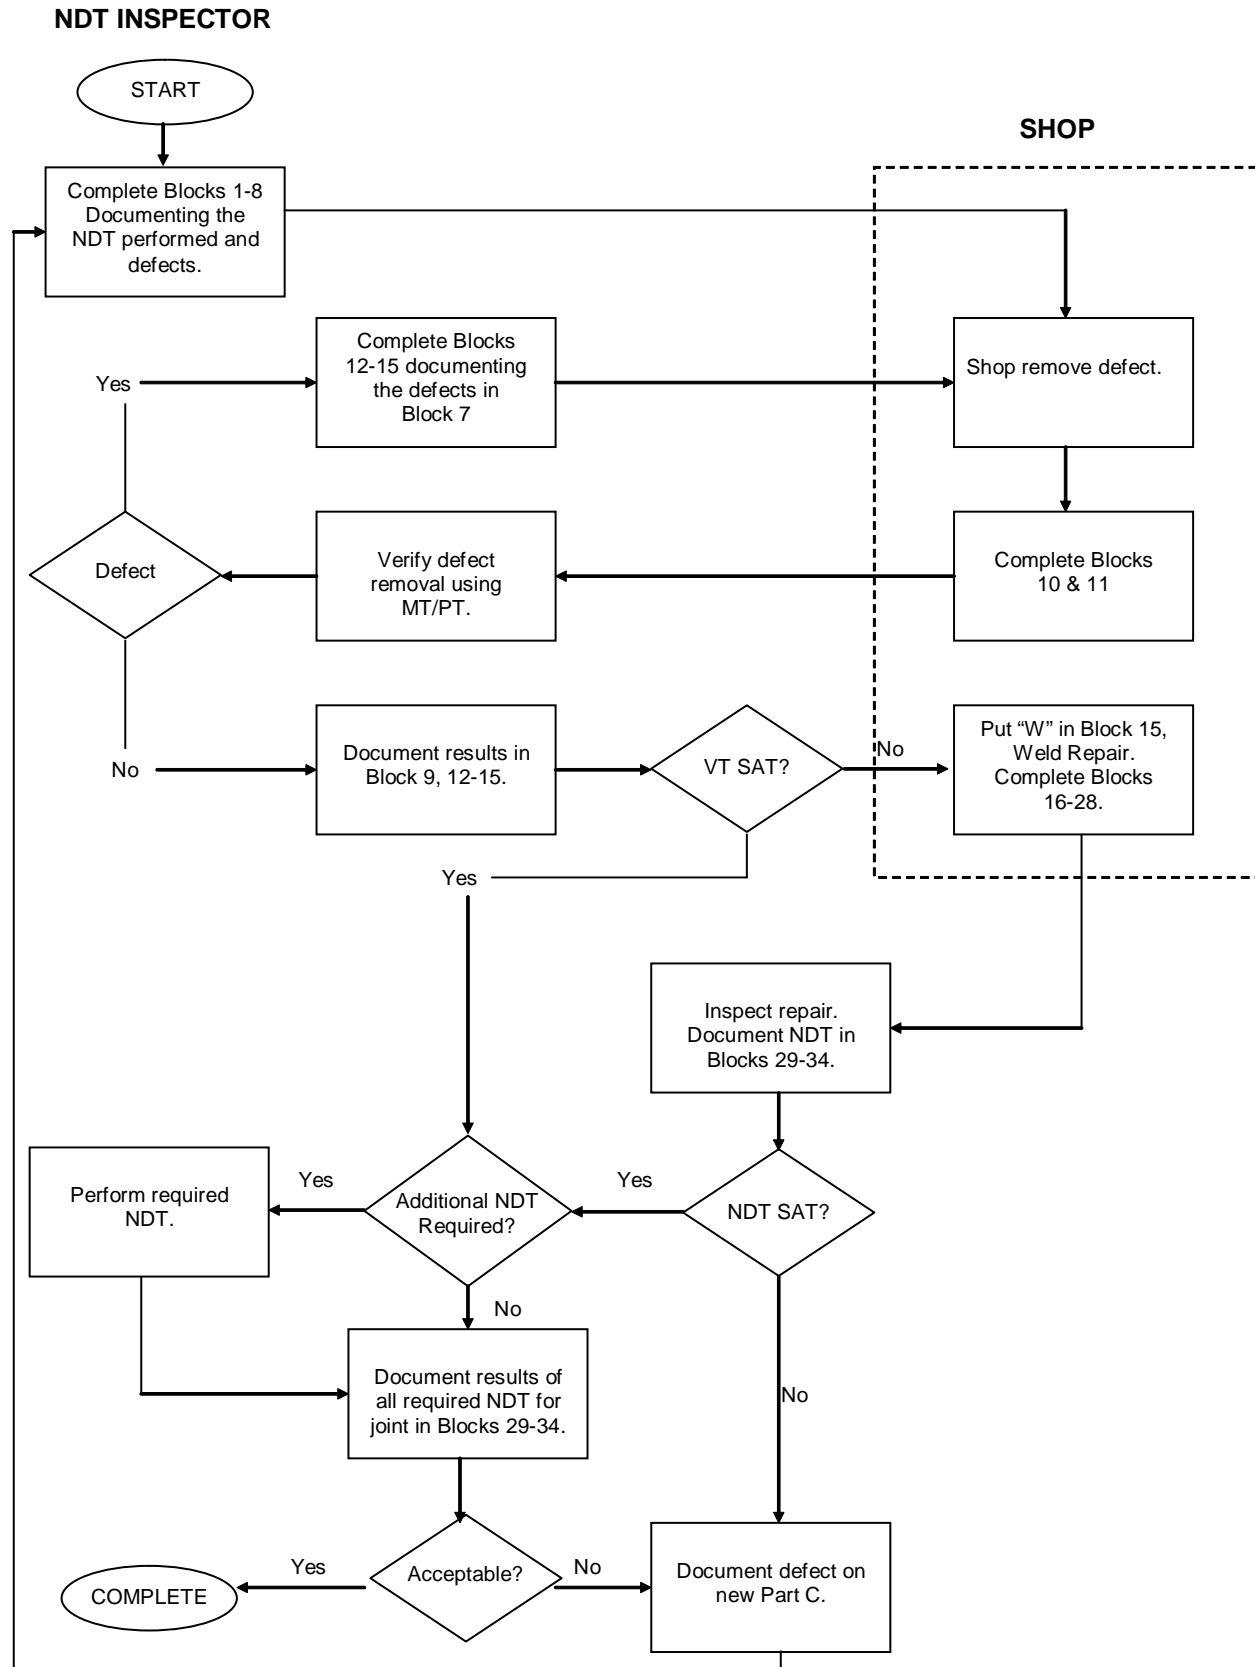

(WELDER) Check the box provided if the weld procedure and technique sheet (if applicable) used for the Block 19 phase(s) is the same as shown on the associated Part B record (sheet 1). Otherwise, enter the weld procedure and technique sheet (if applicable) used for the Block 19 phase(s) being documented on the continuation sheet.

QA-20B PART C FLOWCHART

15 Jan 2021

QA FORM 20B (PART C) INSTRUCTIONSSTRUCTURAL DEFECT RECORD

PURPOSE: To document defect completion data noted by failed NDT associated with a QA Form 20B Part A, Part B, or (if continued repair cycles are necessary) other Part C records. This form is only required for defects on the skin of the ship.

PROCEDURE: The numbered blocks on the QA Form correspond with block instructions listed. The P&E organization must complete Blocks 17, 18 (in special situations) and 35 (if necessary). The blocks and rows of this record may be expanded to suit the work being documented. Unused rows for multiple entries (i.e., Blocks 10-15) may be deleted as necessary such that the form fits on a single page. If unable to keep on a single page a continuation sheet must be used.

NOTE: EACH SIGNATURE WILL BE ACCOMPANIED BY A PRINTED NAME AND DATE. AN EMPLOYEE'S INITIALS MAY BE USED PROVIDED THEIR SIGNATURE AND PRINTED NAME APPEAR ELSEWHERE ON THE SAME PAGE.

NOTE: BLOCKS 1 - 10 WILL BE FILLED IN BY THE NDT INSPECTOR.

BLOCK 1 - JOINT NO.

Enter Joint Number.

BLOCK 2 - SHEET

Enter the sheet number of Part C record and additional Part C records generated and total number of sheets generated, (e.g., 1 of 2) at the time of completion. Sheet numbers for Part A, B and C records are not associated. They are unique only to the record, Part A, B, or C.

BLOCK 3 - SHIP/HULL NO.

Enter the ship name and hull number.

BLOCK 4 - JCN

Enter the Job Control Number (JCN).

BLOCK 5 - CWP/REC NO.

Check the [] N box if a CWP or REC is not required. Check the [] Y box if CWP or REC is required, and enter CWP or REC number. This information can be obtained from the associated Part A or B record.

BLOCK 6 - METHOD OF REJECTED INSPECTION

Check the box or indicate what NDT method has rejected.

BLOCK 7 - DESCRIPTION OF DEFICIENCY

Sketch, describe, or reference supporting documents to show defects. Label defects with an indication number. The numbering scheme must be consistent throughout the record.

BLOCK 8 - INSPECTOR

15 Jan 2021

The inspector that rejected the NDT must sign name and date for the NDT with exceptions for defects noted. (Signature certifies that all areas requiring inspection are satisfactory, except as noted in Block 7). If associated records are used to document acceptance, refer to the applicable records (e.g., RT, UT records).

BLOCK 9 - **NDT EQPT**

Enter equipment number or “YOKE” when MT is performed by Yoke method, or PT penetrant as directed on the form. The letters are to be annotated in Block 13 to correlate the equipment used with the NDT being performed. Check the box “[] (SEE ADDITIONAL STRUCTURAL DEFECT RECORD)” in the REPAIR section of the form when Block 10 has insufficient rows for the required number of entries.

BLOCK 10 - **IND NO.**

For each NDT performed on the repair excavation, list the indication number associated with the NDT being performed.

BLOCK 11 - **DEFECT REMOVAL**

(CRAFTSMAN) Enter signature and date for defect removal certifying the defect has been removed and the site is ready for VT and other NDT to verify defect removal.

NOTE: THE PURPOSE OF BLOCKS 12-15 IS TO DOCUMENT THE STEPS TAKEN TO EITHER BRING THE DEFECT TO THE POINT OF BEING CLEARED WITH NO ADDITIONAL ACTION OR TO THE POINT THAT REQUIRES WELD REPAIR.

BLOCK 12 - **NDT**

(INSPECTOR) Enter the NDT performed on the excavation site using one line per NDT entry. This must include all VT and other NDT performed to verify defect removal. Unless otherwise directed by TWD or DL, NDT of the excavation site to verify defect removal must be as indicated in sub-paragraph's a and b.

- a. For defects discovered by VT, MT or PT, defect removal must be verified by the NDT method (VT, MT or PT) that discovered the defect. All original required NDT must be accomplished and meet requirements to certify the weld.
- b. For defects discovered by ET, RT, or UT, defect removal must be verified by MT (Ferrous) or PT (Non-Ferrous). All original required NDT must be accomplished and meet requirements to certify the weld.

NOTE: THE MT OR PT PROVES SOUND METAL AFTER THE DEFECT IS REMOVED. ACTUAL DEFECT REMOVAL IS VERIFIED BY THE VOLUMETRIC INSPECTION THAT FOUND THE DEFECT (AFTER WELD REPAIR).

BLOCK 13 - **NDT EQUIP LTR**

(INSPECTOR) Enter the letter from Block 9 that corresponds to the equipment or penetrant used in the inspection. Enter N/A if not applicable.

BLOCK 14 - **REASON FOR REJECT OR EXCAVATION**

(INSPECTOR) If the inspection fails, indicate reason for failure (e.g., type, dimensions and location of indication). If it is a VT failure, indicate length, width, and depth of excavation. To show locations, modify sketch or description in Block 7 if possible. Such modifications must contain signature, printed name, and date.

BLOCK 15 - **FINAL NDT FOR DEFECT REMOVAL**

(INSPECTOR) Enter "A", "R", or "W" to indicate results of inspection and enter signature and date. "A" means the inspection is acceptable. "R" means reject, (i.e., defect is not removed). "W", which is entered by the VT inspector and means weld repair is required, (i.e., defect is removed but the weld does not meet criteria for completed weld). Check the box "[] (SEE ADDITIONAL STRUCTURAL DEFECT RECORD)" in the REPAIR section of the form when Block 10 has insufficient rows for the required number of entries.

BLOCK 16 - **WELD PROCEDURE, REV, CH, & TECHNIQUE SHEET(S)**

(WELDER) Check the box provided if Weld Procedure and Technique Sheet (if applicable) to be used for repair welding is the same as shown on the associated Part B record. Otherwise, before welding enter the Weld Procedure (including Revision and Change used for repair welding). Include Technique Sheet if applicable.

BLOCK 17 - **MINIMUM PREHEAT**

(WELDER) First, see Part A (Block 14) or B record (Block 14), to verify that no special heat restrictions apply. If no special restrictions apply, before welding enter the required minimum preheat temperature. If special heat restrictions apply, before welding, enter the preheat temperature applied as specified by the Part A or Part B record.

BLOCK 18 - **MAXIMUM INTERPASS**

(WELDER) First, see Part A (Block 14) Part B record, (Block 15), to verify that no special heat restrictions apply. If no special restrictions apply, before welding, enter the required maximum interpass temperature. If special heat restrictions apply, before welding, enter the interpass temperature applied as specified by the Part A or Part B record.

BLOCK 19 - **WELD FILLER MATERIAL**

(WELDER) Just prior to welding, enter grade or type (e.g., MIL-11018-M or 11018-M) and MIC Number (e.g., WCAF 9093 202A) of electrode used in repair welding. Filler letters A and B are provided so that the data needs only to be entered once for that electrode and its corresponding traceability number. Enter the filler letter, A or B, corresponding to the electrode used during the weld repair process in Block 23. The filler material recorded here is only applicable to this sheet. If an additional Part C sheet is used, the filler material used to document weld phases on that sheet is recorded in Block 19 of that sheet.

BLOCK 20 - **PHASE LETTER KEY**

No entry is required for this block. Use Phase Letter Key given to complete Block 22.

NOTE: Check the box

"[] (SEE ADDITIONAL STRUCTURAL DEFECT RECORD)" in the REPAIR section of the form when Block 21 or 22 has insufficient rows for the required number of entries.

BLOCK 21 - **IND NO.**

(WELDER) Enter the indication number(s) for the defect(s) that is or are being worked on.

BLOCK 22 - PHASE LETTER

(WELDER) Using the Phase Letter Key given, enter the phase being accomplished during the weld repair process in the PHASE LETTER blocks provided. For most repairs, the last entries for each indication must be "WC" (weld complete) and "AMB" (ambient temperature). Multiple phases may be accomplished and certified as one line item entry (e.g., "WC/AMB").

BLOCK 23 - FILLER LTR

(WELDER) Enter the letter corresponding to the filler material information entered in Block 19 of this sheet. If the phase does not involve the addition of filler material, enter NA.

BLOCK 24 - PREHEAT & INTERPASS TEMP

(WELDER) Check Preheat and Interpass Temperature for the phase being accomplished. Mark the block when satisfactory. Take corrective action if it is not satisfactory. Enter NA for phases that do not involve welding (e.g., WC and AMB).

BLOCK 25 - WELDER

(WELDER or WELDER SUPERVISOR) Enter signature, printed name, and date for the associated phase. Signing of this block certifies that all welding has been performed per the applicable welding procedure entered in Block 16, the traceability number of the filler material used is recorded in Block 19, Blocks 21 through 24 are completed and required information is correct, and that all weld workmanship inspection requirements have been satisfied. This signature must be made based on personal observation. For Phase Welding Complete (WC), signature indicates welding is complete, all metal has been deposited, required weld soaks are completed, preheat is removed and weld meets workmanship inspection requirements. This signature must be made based on personal observation or by normal trade supervisory controls. For Phase "AMB" enter military time that the weld reached ambient temperature (less than 125 Deg. F) in Block 26 and sign Block 25.

NOTE: THE AMBIENT TIME IS ONLY REQUIRED IF SUBSEQUENT NDT HAS A WAIT TIME, SUCH AS A 24 HOUR MT.

BLOCK 26 - REMARKS

(WELDER) Enter remarks if necessary. Ensure ambient temperature time is noted for the ambient temperature (AMB) phase after reaching ambient temperature (See note in Block 25). Each entry must contain signature, printed name and date except, (1) where the entry is pre-printed on the form by P&E, or (2) for ambient temperature time if "AMB" is listed in Block 22. These signature requirements are not necessary if the Block 26 entry is made by the welder who has signed for the acceptance requirements in Block 25.

BLOCK 27 - IND NO(S).

(CRAFTSMAN or SUPERVISOR) Enter indication numbers being certified ready for NDT in Block 28. The block is large enough to enter several indication numbers. Two blocks are provided if different craftsmen are signing for different indications. Unused blocks may be left blank.

BLOCK 28 - COMPLETE & READY FOR NDT

15 Jan 2021

(WELDER, WELDER SUPERVISOR or CRAFTSMAN) Enter signature, printed name, and date when the weld is ready for final NDT (i.e., meets workmanship inspection requirements). This signature must be made based on personal observation or by normal trade supervisory controls. This block may be signed by other than welder for non-weld issues.

NOTE: THE PURPOSE OF BLOCKS 29-34 IS TO PICK-UP THE JOINT NDT PROCESS AT THE POINT THE PART C RECORD WAS GENERATED AND TO DOCUMENT THE PROCESS FROM THAT POINT FORWARD. CHECK THE BOX “[] (SEE ADDITIONAL STRUCTURAL DEFECT RECORD)” IN THE REPAIR SECTION OF THE FORM WHEN BLOCK 29 OR 30 HAS INSUFFICIENT ROWS FOR THE REQUIRED NUMBER OF ENTRIES.

BLOCK 29 - IND NO.

(INSPECTOR) At the point the Part C record was generated, some required NDT may have already been completed and certified except for indications noted in Block 7. Other required NDT may yet need to be performed on the entire joint. Make block entries using this criteria:

- a. For inspections of repairs to clear indications in Block 7, list the indication number being inspected.
- b. For inspections on the entire joint that are not yet completed on a Part A or Part B Record, enter “N/A” beside the required NDT. The N/A entry means the required NDT applies to the entire joint.

BLOCK 30 - REQUIRED NDT

(INSPECTOR) List all required NDT to certify the defect being inspected.

- a. Ensure all the required NDT for the entire joint is documented and certified, including NDT previously certified on previous Part A, Part B, or Part C records (if required by local instruction), and all other NDT required to complete the joint, plus repair NDT. On the Part C record, at a minimum, list all NDT required to clear the defect and any remaining (not previously certified) NDT required to certify the joint. All NDT required, (previously certified and repair NDT) may be listed if required by local instructions. Required NDT can be found in Block 21 of the Part A record, in Block 27 of the Part B record, or in Block 30 of other Part C records generated for previous repair cycles. See discussion on expansion requirements in Block 35.
- b. On rare occasion the required NDT may change. In this case, the substituted NDT must be listed, not the original required NDT. These changes may be specified by P&E through TWD revisions.

BLOCK 31 - NDT & ACCEPTANCE PROCEDURE REV, CH

(INSPECTOR) Enter the NDT methods and acceptance standard procedure used for the NDT listed in Block 30.

BLOCK 32 - NDT REPORT, EQUIPMENT

(INSPECTOR) The purpose of this block is to record data for equipment or PT penetrant used. Enter equipment or PT penetrant information for the required NDT listed in Block 30 as directed on the form or list the NDT Report number that gives this information. Enter “Yoke” when performing an MT by yoke method. Equipment information is not required for MT by

15 Jan 2021

yoke. If the NDT listed is NDT previously completed satisfactorily and does not have to be repeated, enter "See Part (A or B or C)" as applicable. If "MT EXCAV", "MT BACKGOUGE" or "MT EVERY LAYER" is the NDT listed in Block 27, "Entry Not Required" may be entered in Block 29. (See example of Part B form). NA VT only inspections.

BLOCK 33 - **RESULTS A OR R**

(INSPECTOR) Enter "A" for accept or "R" for reject to indicate the inspection result. For NDT that has been accepted up to this point in the process enter "A". In this case, your entry is based on entries and certification signatures made on associated Part A, B, or C records.

BLOCK 34 - **INSPECTOR**

Enter signature, printed name, and date for entries in Blocks 29 through 33. Your signature for previous, acceptable NDT is based on entries and certification signatures made on associated Part A, B, or C records.

BLOCK 35 - **REMARKS**

(ALL) Enter remarks. Expansion requirements should be documented or referred to in this block. Each entry must contain signature, printed name and date except where the entry is pre-printed on the form by P&E.

NOTE: EXPANSION REQUIREMENTS MAY BE SPECIFIED BY P&E THROUGH TWDS.

15 Jan 2021

69. REMARKS				

QA FORM 20C INSTRUCTIONSPIPE, MACHINERY AND PRESSURE VESSEL WELD RECORD/WELD DEFECT REPAIR SHEET

PURPOSE: This instruction provides a form to document in process controls for welding and NDT of piping, machinery, pressure vessels, shafting and propellers including base metal repair and repair of castings per NAVSEA S9074-AR-GIB-010/278 (NSTP-278), MILSTD-2191, DOD-STD-2185 or per NAVSEA 250-1500-1. This Form does not contain all required data for accomplishment of Titanium Welds. Additional data is required as specified in local documents.

NOTES:

1. WHEN ADDITIONAL NDT AND OPERATIONAL TESTING (IN LIEU OF HYDROSTATIC STRENGTH TESTING) OF WELDED PIPE JOINTS IS SPECIFIED PER CHAPTER 505 OF NAVSEA S9086-RK-STM-010/CH505, PIPING SYSTEMS FOR NSTP-278 CLASS P-1 JOINTS, THE CWP OR TGI MUST CLEARLY SPECIFY THAT ADDITIONAL NDT IN LIEU OF HYDROSTATIC TESTING IS REQUIRED. ROOT LAYER MUST BE PT OR MT INSPECTED. THE 5X VISUAL INSPECTION SUBSTITUTION ALLOWED BY NSTP-278 IS NOT PERMITTED. THE FINAL LAYER MUST BE PT INSPECTED; MT IS NOT PERMITTED.
2. PLANNER MUST COMPLETE THE BLOCKS IDENTIFIED BY A RED DIAMOND PRIOR TO ISSUING.
3. PER NAVSEA S9074-AR-GIB-010-278, WHEN A SPECIFIC ITEM ON A RECORD IS NOT APPLICABLE THE LETTERS "NA" MUST BE ENTERED. IF A LINE ITEM HAS A "NA" BLOCK, CHECKING THE BLOCK MEETS THE INTENT OF ENTERING "NA" FOR THE REMAINDER OF THE BLOCKS FOR THAT LINE.

SCOPE: This weld record is required for NSTP-278 A-F, A-1, A-2, A-3, A-LT, P-1, P-LT, M-1, and T-1 welds, SUBSAFE welds, SOC welds, welding per MIL-STD-2191 (Main Shafts) and DOD-STD-2185 (Propellers) and other welds as required by the local Engineering authority.

PROCEDURE: Production and QA personnel make entries in QA form 20C as required. Signatures verify that all entries in the associated line item are correct. When adding Continuation or Repair Sheets, enter the Ship (from Block 1), Map Drawing Number (from Block 9) or JCN (from Block 2) if there is no Map Drawing and the Joint Number (from Block 10). Enter the page number, starting with page 2, for each supplemental sheet (Continuation Sheet or Defect Repair Sheet) associated with the joint.

PIPE, MACHINERY AND PRESSURE VESSELS WELDING DETAIL AND NDT RECORD IDENTIFICATION SECTION**BLOCK 1 - SHIP HULL**

Enter ship's name and hull number.

15 Jan 2021

BLOCK 2 - **JCN**

Enter Job Control Number.

BLOCK 3 - **LWC/SHOP**

Enter LWC.

BLOCK 4 - **CWP/REC SER NO.**

Enter REC serial number or NA as applicable. Do not list the REC Rev.

BLOCK 5 - **SYSTEM/COMPONENT**

Enter system or component to be welded, (e.g., Main Sea Water, 1MS-V23, HP Air flask, or #2 propulsion shaft).

BLOCK 6 - **FABRICATION STD.**

Mark the governing fabrication standard, NSTP-278 or NAVSEA 250-1500-1. For other fabrication standards (MIL-STD 2191, DOD-STD-2185) enter an asterisk or other identifying mark and record procedure in the Remarks block.

BLOCK 7 - **WELD CLASS**

Enter applicable weld class from NSTP-278 fabrication standard (e.g., P-1, A-2). Enter classification for NAVSEA 250-1500-1 welds.

BLOCK 8 - **JT DESIGN**

Enter joint design. This can be a MIL-STD-22D or NAVSEA 250-1500-1 joint number, a joint design from a drawing or technical manual or a description such as "Build-up" or "Seal Weld". More than one joint design may be entered if allowed by drawing, NSTP-278, the Weld Procedure and local policy. If necessary, enter "RMKS" and list allowed joint design(s) in the Remarks section.

BLOCK 9 - **SSMAP/JT ID DWG & REV**

Enter map drawing or joint identification drawing. Enter NA if there is no map or joint identification drawing. Note that most submarine work requires that P-1 joints are mapped to a drawing that is included in the Ship's Drawing Index. See Deep Diving General Overhaul Specifications (DDGOS) 9480-0-I.

BLOCK 10 - **JOINT NO.**

Enter joint number, including type (WB, WS etc.) if listed, from joint map drawing. Check the "Mark JT" block if the weld is not mapped. NSTP-278 requires weld joint marking of class A-F, A-1, A-2, A-3, A-LT, P-1, P-LT, M-1 and T-1 welds if not mapped. Fabrication, repair or cladding welds within components do not require marking if the weld location is clearly defined on the record such that the record is clearly applicable to only that location.

If there is no joint number or map drawing or other traceability from joint to record:

Check the "MARK JT" block if required by TWD or local instruction. This box identifies to the fitter that the joint must be marked, usually by vibra-tool, scribe or etch.

Example: Enter the Level I Certifying Activity Designator (CAD) letter(s) followed by a five-digit date number and a joint number. The date number is the two-digit year plus the

15 Jan 2021

Julian day when the record is created. A job at Norfolk Naval Shipyard that installs one elbow would need two joint numbers for records created on May 14 1999, N-99134-1 and N-99134-2. (The joint number is unique to the applicable job (JCN). Each job starts a new series so there is no need for joint number logs or pre-allocation of joint numbers).

BLOCK 11 - **PART DESCRIPTION**

- a. Enter information for each part to be joined or repaired.
- b. Enter description of piece (e.g., pipe, valve, clevis, plate, etc.).
- c. Enter NPS pipe size and schedule or class (pipe welds only, NA others including pipefittings).
- d. Enter arrangement drawing (preferred) or diagram and applicable revision.
- e. Enter piece number from drawing just entered (enter NA if there is no pc no.).
- f. Enter the base material type (normally from drawing) and the S-Group Number (e.g., ASTM A 178, Grade A (S-1), CUNI-70:30 (S-34), CRES 316 (S-8), 1-1/4Cr 1/2Mo (S-4)). S-group numbers are obtained from Table (1) of NSTP 278. Specify CRES by grade, Aluminum by grade and temper and Inconel (S-43) as either 600 or 625. In addition, for carbon steels (Group S-1) with carbon content greater than 0.30%, make a note of the maximum carbon content in the Remarks block. Include material spec if known (e.g., QQ-N-281, ASTM A182 F11). For new material, P&E verifies that information in Block 11, especially for material type, matches material ordering information in TWD. Use the Remarks block if additional space is needed.

NOTE: FOR BASE METAL REPAIRS, NORMALLY ONLY INFORMATION FOR PART 1 IS COMPLETED. ENTER "NA" IN PART 2 BLOCKS. FOR BASE METAL REPAIRS INVOLVING MORE THAN ONE MATERIAL TYPE, SUCH AS A REPAIR TO CU-NI BASE MATERIAL THAT TIES INTO AN ADJACENT NI-CU CLADDING, INFORMATION FOR BOTH MATERIALS MUST BE COMPLETED AS PART 1 AND PART 2.

INSTALLATION SECTION

NOTE: THE PURPOSE OF BLOCK 12 IS TO CONFIRM THE MATERIAL OF EACH PART IS THE SAME AS LISTED IN BLOCK 11.

BLOCK 12 - **PART NO.1 AND PART NO.2**

(Welder) Check New or Existing for each part. If the part is new, no further action is required. If existing, check the method used to verify the material and annotate the existing material markings found or the results of the generic material test in the results section. For base metal repairs, Part 2 will be left blank if Part 2 of Block 11 is blank as only one part exists.

BLOCK 13 - **PART NO.**

(Welder) Enter part number from Block 11 for each new part. Enter "NA" for backing rings or consumable inserts which are not included in Block 11.

BLOCK 14 - **DESCRIPTION**

(Welder) Enter piece description either from Block 11 or for additional pieces, such as backing rings or consumable inserts which do not have a part number.

BLOCK 15 - LEVEL I NO./OTHER TRACE NO./MATERIAL/SPECIFICATION MARKINGS

(Welder) For all new material, enter the material type (e.g., 316L, Inconel 625, ASTM A106 Grade B, etc.) when this information is on the piece or its accompanying tag or documentation. In addition, the following information is required:

- a. For new material in applications requiring traceability markings (e.g., Level I, SOC, etc.), enter the traceability marking.
- b. For new material not requiring traceability marking and not having a material type evident, enter the information required by Table 1 (this would normally be the stock number).

TABLE 1- DOCUMENTATION REQUIREMENTS	
Material Control Level	Required Information
Level I Material Other Than Fasteners	MIC Number and any other traceability number, including any local traceability number (e.g., PNSY MLN – examples Z142, AB12)
Level I Fasteners	Either the MIC number or Material Marking, Color Code, Heat or Lot Number, and Manufacturers Symbol (Note: For nuts containing a self-locking insert, the color of the insert is the Manufacturer's symbol)
Controlled Structural Material And SOC Control Division "A" Material	Traceability Number
SOC Control Division "B" Material	Markings providing identification to material type or specification
AERP And Other Rotatable Pool Material (688 Class, TRIPER, Etc.)	Enter the appropriate rotatable pool serial number (e.g., RP-148A, 4810-013-5812-A3-0113, TIN -292-11893, etc.)
Transferred And Cannibalized Material	Enter the Equipment Removal List No. or other material History or Traceability number (ERL# XXXX, SSBN-600 EHF #24, etc.)
Other Material Within The LEVEL I/SUBSAFE Boundary And SOC Control Division "C" Material	<ol style="list-style-type: none"> 1. Enter at least one of the following documentation attributes: <ol style="list-style-type: none"> a. Stock Number (from package or container) b. Part Number (from package or piece) c. Part Number and associated Manufacturing Work Procedure (for manufactured items) d. Local Traceability Number (from piece or tag) e. Drawing and Piece Number (from piece or tag) f. Generic, MIL-SPEC, or Material Specification Marking (from piece) g. NDT record numbers or test results for items verified by generic material testing 2. For SOC components only: Enter the stock number of the "O"-ring lubricant or any sealant used during assembly

- c. If an alternate material is authorized enter an asterisk or other identifying symbol and provide authorization (e.g., DFS #) in Block 39 (Remarks).
- d. For consumable inserts, enter the type (e.g., MIL-67) marked on the insert, the insert size and the Level I or certified material number from the tag.

BLOCK 16 - FITTER/INSPECTOR

Sign to verify that Block 15 entries match the markings on the piece or tag and to verify that the material matches that required by Block 11. Where material type is not annotated on the piece or its accompanying tag or documentation, material verification is accomplished by matching the identifying marking on the tag or documentation against the ordering information specified in the TWD.

BLOCK 17 - PART

No entry. Part numbers correspond to Block 11.

BLOCK 18 - **WALL THICKNESS REQUIRED**

Enter nominal wall thickness for piping and piping fittings.

NA may be entered for non-piping applications which are greater than ½ inch thick, or pipe socket fittings, valves, piping drilled after boss installation or piping passing through sleeves.

Nominal wall thickness is the nominal wall thickness for the associated system piping.

Minimum allowable piping installation wall thickness is that provided by the installation drawing or can be calculated by subtracting 10% from the nominal wall thickness. Tubing specifications generally specify a minimum wall thickness only. For NAVSEA 250-1500-1 welds and if required by local direction for NSTP-278 welds, the nominal wall thickness for tubing should be calculated by adding 10% to the tubing minimum wall thickness. If the basis for minimum wall thickness is different, document the special basis in the Remarks.

Enter minimum allowable installation thickness.

BLOCK 19 - **WALL THICKNESS ACTUAL**

(Welder) Enter minimum measured thickness after end preparation. “NA” may be entered for non-piping applications which are greater than ½ inch thick, or pipe socket fittings, valves, piping drilled after boss installation or piping passing through sleeves.

For casting repairs, record the wall thickness adjacent to the defect (excavation area). A sketch showing the size (length, width, and depth) and location of all nominal and special repair will be entered per the directions for the REMARKS section (Block 39).

BLOCK 20 - **FITUP**

Planner mark PREWELD NDT and FITUP AFTER TACK blocks “NA” when not applicable. Fitter check other appropriate blocks or make entry for:

- a. Completion of any required pre-weld NDT - See Block 35 and 36 and the TWD.
- b. Installed joint design - Annotate the joint design installed. The installed joint design must be as specified in Block 8. If an alternate joint design is authorized, enter an asterisk or other identifying symbol and provide authorization (e.g., DFS #) in Block 39 (Remarks). For base metal repair, sketch excavation in Remarks section. Sketches should include location, dimensioned from a reference surface or line, and length width and depth of excavation.
- c. Satisfactory fit-up - This means that the fit-up meets the procedure requirements for the joint design, and that any scribe line or joint number marking (required if “MARK JT” in Block 10 is checked) is complete.
- d. Satisfactory fit-up after tacking - If NA is not checked in advance by P&E, the SAT block will be checked after satisfactory fit-up after tacks by the NDT Inspector.

BLOCK 21 - **VERIFICATION**

(Fitter or NDT Inspector) Sign verification of proper fit-up.

WELDING SECTION**BLOCK 22** - **WELD PROC/REV/CH & TECH DATA SHEET**

(Welder) Enter weld procedure (including revision and change), tech data sheet or other welding instruction.

BLOCK 23 - **POSITION**

(Welder) Circle HFP (Horizontal Fixed Pipe), VFP (Vertical Fixed Pipe) or OOP (Out Of Position pipe) as applicable by local instruction.

BLOCK 24 - **MIN PREHEAT**

PREHEAT - (Welder) Enter minimum preheat temperature just prior to welding.

INTERPASS - (Welder) Enter maximum interpass temperature as measured during the process.

BLOCK 25 - **FABRICATION LOCATION**

(Welder) Enter location where work is performed. Compartment can be the damage control number or the common name such as UL MMR1, or Aux Machinery Space. Circle Port (P), Centerline (C), or Starboard (S).

BLOCK 26 - **LAYER(S)**

(Welder) Enter type of weld layer(s) (e.g., Tack (T), Root (R), Intermediate (I), or Final (F)). Record one line for each different welder or filler metal combination. (If a complete weld is done by the same welder, on the same day, using filler metal with the same traceability numbers, the layer may be indicated as T, R, I, F using only one line). However, the welder's signature is required prior to each specified inspection, (e.g., If a root PT or 5X is required, the R and I layers cannot be on the same line). Intermediate layers must be numbered (I1, I2, I3...) if needed, to record more than one filler metal lot or welder. Use continuation sheet if needed.

BLOCK 27 - **FILLER TYPE**

(Welder) Enter type of filler material used, (e.g., RN60, 9N10, etc.).

BLOCK 28 - **FILLER SERIAL NO.**

(Welder) Enter filler serial number (Level I numbers, traceability numbers) from filler or tag. Enter, "Non-Level I", for Non-level filler material.

BLOCK 29 - **WELDER**

(Welder) Sign, enter badge number and Date to verify that the entries made are correct and the weld is per the required procedure. For HY or HSLA welds enter the time and date that the weld reached ambient temperature in the remarks.

BLOCK 30 - **STRESS RELIEF REQUIRED**

Planner mark "Yes" if stress relief is desired for distortion control or is required by tech manual or drawing, otherwise mark "NO" block. If Block 30 is marked "NO", "NA" Blocks 31 and 32.

BLOCK 31 - **PROCEDURE**

Welder enter stress relief procedure used, temperature range and duration. Planner mark "NA" if Block 30 is marked "NO".

BLOCK 32 - **HEAT TREATER**

Heat Treater, sign to verify that the heat treatment was accomplished per the required procedure, temperature range and duration. Planner, mark "NA" if Block 30 is marked "NO".

BLOCK 33 - **WELDER/FITTER**

(Welder) (Fitter includes other trades as applicable). For welds that are machined or ground flush, include a sketch in the Remarks section including weld location from a reference surface or line, and the length and width of the weld prior to requesting NDT. Sign that all welding and surface preparation is correctly completed, reference line(s) and joint number (if checked in Block 10) are marked and weld is ready for NDT. The welder must sign this block for weld workmanship if welding is performed and should be co-signed by the shop performing the final action on the joint (if other than the welder) prior to inspection as specified by local direction.

WELD INSPECTIONS SECTION

BLOCK 34 - **ACCEPTANCE STANDARD/CLASS**

Planner enter NDT acceptance standard (e.g., MIL-STD-2035 or NAVSEA 250-1500-1) and acceptance standard class (if applicable). (NDT acceptance standard classes for NSTP-278 welds are found in NSTP-278 Table XI).

BLOCK 35 - **INSPECTION**

Planner mark inspection(s) required. Mark NA for inspections that are not required. Note that first line allows writing in inspections, especially pre-weld inspections like excavations or end-preps. Mark MT/PT-ID for joints which require MT or PT and have an inside accessible surface (e.g., non-backing ring butt welds).

BLOCK 36 - **INSPECTION TYPE**

Planner mark the types of NDT (VT, 5X, PT, MT or RT). Mark "Inside" when required for welds that allow for inside inspections. For welding of HY, HSLA and STS materials indicate when 8 hour RT or 24 hour MT are required by marking appropriate box.

(Inspector) Record equipment numbers as appropriate. Line out Type II [Method] C if that type penetrant dye and method are not used and record substitute PT types and methods in the Procedure or Remarks block. If a yoke is used for MT write "Yoke" in place of the unique equipment identification. Mark "inaccessible" or "partial inspection done", as appropriate, if full inspection of inside surface cannot be accomplished.

BLOCK 37 - **PROCEDURE USED**

(Inspector) Record inspection procedure used.

BLOCK 38 - **INSPECTOR**

(Inspector) Mark "SAT" for satisfactory or "REJ" for rejection of required inspections. Do not mark either for inaccessible inspections. Sign verification for inspections required by Blocks 35 and 36. Rejection is required if an inspection shows rejectable conditions that have

15 Jan 2021

not been satisfactorily repaired by polishing or light grinding and reinspected. If an inspection is rejected, add a Weld Defect Repair Sheet and complete Blocks 52-54. Carry rejected, voided, and incomplete inspections to Block 65 and 66. See Header instructions for adding a Repair Sheet. If PT or MT-ID (F) in Block 36 is marked "inaccessible", the Inspector will enter signature and leave "SAT" and "REJ" check box blank.

BLOCK 39 - **REMARKS**

(All) Record additional relevant information as directed in this instruction, by work document or identified in-process. Appropriate remarks entries or sketches include defect size and location, special weld joint designs, records of material weldability tests for casting repairs, or the additional records required for Titanium welding. Use a continuation sheet for additional space or reference a separate record. Each entry must contain a signature, printed name and date except where the entry is pre-printed on the form by P&E.

FINAL DISPOSITION

BLOCK 40 - **SUPERVISOR**

The NDT Supervisor will enter printed name, signature, badge number and date signifying all information on the record (including any rejects and repairs) is technically acceptable and administratively correct. Enter total pages in the Heading.

BLOCK 41 - **LOCAL GOVERNMENT INSP./QAS**

For shipyard use only.

15 Jan 2021

QA FORM 20C - CONTINUATION SHEET INSTRUCTIONS**WELD HISTORY**

BLOCKS 42 - 46 - LAYER, FILLER TYPE, FILLER SERIAL NO.,
PREHEAT/INTERPASS TEMP, WELDER

(Welder) See instructions for Blocks 24 and 26-29. Note any changes in Remarks on continuation sheet.

WELD INSPECTION

BLOCKS 47 - 50 - INSP, INSPECTION TYPE, PROCEDURE USED,
INSPECTOR

(Engineering, Planning, Inspector) See instructions for Blocks 35-38. Write out inspection type in Block 48. General instruction may be written in the Remarks section.

BLOCK 51 - REMARKS

(All) See Block 39 instructions for remarks. Each entry must contain signature, badge number and date except where the entry is pre-printed on the form by P&E. Initials may be entered in lieu if an employee's signature appears elsewhere on the same page.

QA FORM 20C - WELD DEFECT REPAIR SHEET**DEFECT DESCRIPTION**

BLOCK 52 - DEFECT DESCRIPTION

(Inspector) Place an "X" in the applicable defect description block that describes the defect.

BLOCK 53 - DEFECT LOCATION(S) AND EXTENT

(Inspector) Describe or sketch in remarks (Block 69) the defect location(s) and size(s). Defect location in reference to a permanent landmark is recommended.

BLOCK 54 - INSPECTOR

(Inspector) Verify that rejected inspections from page 1, continuation sheet or previous repair sheet are marked in Block 65 and 66 to be redone. Verify defect identification by signature.

DEFECT REPAIR

BLOCK 55 - TYPE OF REPAIR

(Welder) Mark type(s) of repair. Identify repair type (grind only, grind and weld, etc.). More than one repair type may be marked.

BLOCK 56 - REPAIR LOCATION(S) AND EXTENT

(Welder) Describe or sketch in Remarks section the repair locations and size (length, width and depth). Descriptions must include distances, degrees, or both, from "0" reference points or lines to locate repairs. Note that generally, the repair extends beyond the defect and this must be recorded.

BLOCK 57 - WELD PROC & REV/CH

(Welder) Mark "NA" if only grinding is needed for repair. Enter the weld procedure, revision and data sheet or mark "Same as original weld" if welding is required.

BLOCK 58 - **EXCAVATION NDT REQUIRED**

(Welder) Check if MT, PT or 5X VT is required for the excavation area. Also, mark Blocks 65 and 66. Any weld repair which originally required final MT or PT requires MT, PT or 5X VT of repair excavations. Consult P&E or local facility engineering if there is any uncertainty about the repair inspection requirements.

BLOCK 59 - **ROOT PASS INSPECTION REQUIRED**

(Welder) Mark if a new root pass inspection is required (when all or part of the root is replaced), also mark Blocks 65 and 66 root pass inspections. Repaired root welds which originally required inspections must require the same inspections when replaced or repaired. Consult P&E or local facility engineering if there is any uncertainty about the repair inspection requirements.

BLOCKS 60 - 64 - **LAYER, FILLER TYPE, FILLER SERIAL NO.,
PREHEAT/INTERPASS, WELDER**

See instructions for Blocks 24 and 26-29.

REPAIR INSPECTIONS

BLOCKS 65 - 68 - **INSP, INSPECTION TYPE, PROCEDURE USED,
INSPECTOR**

(As Appropriate) In-process repairs of weld rejects generally require the same inspections as the original weld with the addition of inspection of the excavation needed to remove the defect.

The inspector is responsible to carry forward all inspections, from page 1, a Continuation Sheet or a previous Repair Sheet, which were rejected (see Block 38).

The welder will mark any additional inspections required due to the extent of the repair.

Excavations must be 5X VT, MT or PT inspected if MT or PT is a requirement of the finished weld. Root inspections must be accomplished if all or part of the root is redone. Also, mark any intermediate layer inspections for repeat if these layers are removed by repair. These inspections must be done prior to covering by the repair. Blocks 58 and 59 serve to remind welders of this before the welding phase of the repair.

Previously accepted inspections must be redone if a subsequent inspection requires rework that could affect the previous inspection result. Voided inspections must be marked to be redone in the repair area. Any weld material removal for repair voids the completed finished surface inspections (F), VT, PT, MT, or RT inspections in Block 35.

Consult P&E, NDT Supervisor, or local facility engineering for repair inspection details. Note that your local activity may require that a discrepancy be clarified by a Liaison Action Request for formal direction or approved by a Departure from Specification prior to proceeding with in-process repair of welding defects.

BLOCK 69 - **REMARKS**

(All) Record additional details here, especially sketches of defect areas and repairs. Each entry must contain signature, printed name and date except where the entry is preprinted on the form by P&E. Initials may be entered if a corresponding employee's signature appears elsewhere on the same page. Use a continuation sheet for additional space. See Block 39.

QA FORM 26 INSTRUCTIONSHYDROSTATIC/PNEUMATIC TEST RECORD

PURPOSE: To document hydrostatic or pneumatic tests accomplished on piping systems or portions of a system to recertify the system after maintenance. It also provides a method for the FMA to specify the required retests for work they performed. The QA form 26 will not be used in DSS or SOC applications. Use QA form 26A located in Part III, Chapter 11 of this Volume.

PROCEDURE: The numbered blocks on QA form 26 correspond with the block instructions listed. Any block not used will be marked NA. The planning organization must fill in blocks identified with the diamond symbol prior to issuing the CWP.

BLOCK 1 - **SHIP HULL NO.**

Enter the ship's name and hull number.

BLOCK 2 - **JCN**

Enter the JCN.

BLOCK 3 - **LWC**

Enter the shop number of the LWC.

BLOCK 4 - **CWP/REC SER. NO.**

Enter the CWP/REC serial number or enter N/A if no CWP/REC is required. Do not list the CWP/REC revision.

BLOCK 5 - **SYSTEM/COMPONENT**

Enter the name of the system and component to be tested.

BLOCK 6 - **TEST REFERENCES**

Enter the applicable test reference or other applicable references (e.g., drawing number and revision used to obtain the required test pressure and conducting of the test).

NOTE: (FOR SUBMARINES ONLY) ENTER "S9505-AF-MMA-010/PIPING SYSTEMS" WHICH PROVIDES REQUIREMENTS FOR SHIP'S FORCE TO SET-UP AND CONDUCT TESTING.

BLOCK 7 - **REQUIRED TEST AND INSPECTION POINTS**

Enter the specific test requirements necessary to recertify the work. Specify test requirements (i.e., type of test, test fluid, special valve positions, duration, acceptance criteria, joints to be tested (if entire component or system is tested, so state)).

BLOCK 8 - **DIAGRAM OF TEST AREA**

Enter a diagram of the test area. Be specific. Include such things as relief valve locations, gage locations, blanks, gags, and valve positions, etc. The QAI will verify the diagram prior to performance of the test. For nuclear tests, identify major components to be isolated or vented to preclude unnecessary pressurization.

15 Jan 2021

NOTE: ALL VALVES WITHIN THE TEST BOUNDARIES MUST BE IDENTIFIED AND THEIR POSITION (OPEN OR SHUT) DURING THE TEST ANNOTATED.

NOTE: IF DRAWINGS OR ADDITIONAL INFORMATION IS REQUIRED TO SUPPLEMENT THIS REPORT, EACH DRAWING, ETC., WILL BE NUMBERED AND AUTHENTICATED WITH THE SIGNATURE BY THE CRAFTSMAN AND QAI MAKING UP THE REPORT.

NOTE: LOCAL EXCEPTIONS TO GAGE RANGE AND OR INCREMENTS WILL BE APPROVED BY AN INDIVIDUAL WITH A TECHNICAL WARRANT.

NOTE: SHIPS, FLEET MAINTENANCE ACTIVITIES AND REGIONAL MAINTENANCE CENTERS MANAGED BY UNITED STATES FLEET FORCES COMMAND OR TYCOMS MUST DISREGARD THE BLOCK 8 DIAMOND WHEN TESTING IS PERFORMED BY AN ACTIVITY OTHER THAN THE ACTIVITY PERFORMING REPAIR. THE ACTIVITY PERFORMING THE TESTING MUST COMPLETE THE DIAGRAM REQUIRED BY BLOCK 8.

BLOCK 9 - GAGE DATA

Enter the primary and backup gage data.

BLOCK 10 - REQ'D TEST PRESSURE (PSIG) AND TEST DURATION

Enter the required test pressure and test duration. If listing the test pressure would classify the CWP, enter "J", "H", Item 1 of Ref (a), etc. as appropriate from the applicable reference instead of classifying the document.

BLOCK 11 - ACTUAL TEST PRESSURE (PSIG) AND TEST DURATION

Enter the actual test pressure and the duration the test pressure was applied. Test duration will include the required test period and the time required to complete the inspection. If listing the test pressure would classify the CWP enter "J", "H", Item 1 of Ref (a), etc. as appropriate from the applicable reference instead of classifying the document.

BLOCK 12 - TEST RESULTS

- a. Check "SAT" block, if all inspections specified by Block 7 are complete and satisfactory.
- b. Check "UNSAT" block, if test results are unsatisfactory. Identify the specific inspection and reason for failure in the remarks section.

NOTE: IF A SATISFACTORY TEST CANNOT BE ACHIEVED, A DFS FOR NON-NUCLEAR TESTS OR LAR FOR NUCLEAR TESTS MUST BE PROCESSED IN ACCORDANCE WITH PART 1 CHAPTER 8 OF THIS VOLUME OR THE TASK MUST BE REWORKED AND RETESTED.

BLOCK 13 - REMARKS

Remarks pertinent to this test will be entered in this block.

BLOCK 14 - CERTIFICATION

15 Jan 2021

PERFORMED BY

Person performing the test print name, enter signature, badge number and date signifying accuracy of data recorded.

INSPECTED BY

QAI or Shipyard Representative print name, enter signature, badge number and date verifying the accuracy of test results recorded and inspection performed satisfactory.

15 Jan 2021

DROP TEST RECORD

QA FORM 27 (9/05)

QA FORM 27 INSTRUCTIONSDROP TEST RECORD

PURPOSE: To document drop tests accomplished on piping systems or portions of a system to recertify the system after maintenance actions have been accomplished. The QA form 27 will not be used in DSS or SOC applications. Use QA form 27A located in Part III, Chapter 11 of this Volume.

PROCEDURE: The numbered blocks on QA form 27 correspond with the block instructions listed. Any block not used will be marked NA. The planning organization must fill in blocks identified with the diamond symbol, the Required Initial Test Pressure of Block 10 and the maximum allowable pressure drop in Block 12 prior to issuing the CWP.

BLOCK 1 - SHIP HULL NO.

Enter ship's name and hull number.

BLOCK 2 - JCN

Enter the JCN.

BLOCK 3 - LWC

Enter the shop number for the LWC.

BLOCK 4 - CWP/REC SER NO.

Enter the CWP/REC serial number or enter N/A if no CWP/REC is required. Do not list the CWP/REC revision.

BLOCK 5 - SYSTEM/COMPONENT

Enter the name of the system or component (i.e., FWD ESCAPE TRUNK) to be tested.

BLOCK 6 - REFERENCES

Enter the applicable test reference or other applicable references (e.g., drawing number and revision used to obtain the required test pressure and conducting of the test).

NOTE: ENTER "S9505-AF-MMA-010/PIPING SYSTEMS" WHICH PROVIDES REQUIREMENTS FOR SHIP'S FORCE TO SET-UP AND CONDUCT TESTING.

BLOCK 7 - REQUIRED TEST AND INSPECTION POINTS

Enter the specific test requirements, including inspection points, necessary to recertify the work. FMAs will fill in this block and then provide the QA form 27 to Ship's Force so they can prepare the test procedure to retest FMA work.

BLOCK 8 - DIAGRAM OF TEST AREA

Enter a diagram of the test area. Be specific. Include such things as relief valve locations, gage locations, blanks, gags, valve positions, initial and final temperature (if applicable), etc. The QAI will verify the diagram prior to performance of the test. For nuclear tests, identify major components to be isolated or vented to preclude unnecessary pressurization.

15 Jan 2021

NOTE: ALL VALVES WITHIN THE TEST BOUNDARIES MUST BE IDENTIFIED AND THEIR POSITION (OPEN OR SHUT) DURING THE TEST ANNOTATED.

NOTE: IF DRAWINGS OR ADDITIONAL INFORMATION IS REQUIRED TO SUPPLEMENT THIS REPORT, EACH DRAWING, ETC., WILL BE NUMBERED AND AUTHENTICATED WITH THE SIGNATURE BY THE CRAFTSMAN AND QAI MAKING UP THE REPORT.

NOTE: LOCAL EXCEPTIONS TO GAGE RANGE AND OR INCREMENTS WILL BE APPROVED BY AN INDIVIDUAL WITH A TECHNICAL WARRANT.

NOTE: SHIPS, FLEET MAINTENANCE ACTIVITIES AND REGIONAL MAINTENANCE CENTERS MANAGED BY UNITED STATES FLEET FORCES COMMAND OR TYCOMS MUST DISREGARD THE BLOCK 8 DIAMOND WHEN TESTING IS PERFORMED BY AN ACTIVITY OTHER THAN THE ACTIVITY PERFORMING REPAIR. THE ACTIVITY PERFORMING THE TESTING MUST COMPLETE THE DIAGRAM REQUIRED BY BLOCK 8.

BLOCK 9 - GAGE DATA

Enter the primary and backup gage data.

BLOCK 10a - REQUIRED TEST PRESSURE

Enter the required test pressure (psig).

BLOCK 10b - ACTUAL TEST PRESSURE

Enter the actual test pressure.

BLOCK 11a - FINAL PRESSURE AT END OF TEST

Record final pressure reading when the required test time is completed.

BLOCK 11b - ACTUAL DURATION

Enter the actual duration of the test.

BLOCK 12 - ALLOWABLE PRESSURE DROP % IN MINUTES/HOURS

Enter the allowable pressure drop as a percentage of the test pressure in minutes or hours.
Cross out time measure not used.

BLOCK 13 - FINAL PRESSURE DROP CORRECTED FOR TEMPERATURE CHANGE

Record final pressure drop calculated with corrections for temperature change in the same units as Blocks 11 and 12.

BLOCK 14 - TEST RESULTS

Check "SAT" block, if all inspections specified by Block 7 are complete and satisfactory.

Check "UNSAT" block, if test results are unsatisfactory. Identify the specific inspection and reason for failure in the remarks section.

NOTE: IF A SATISFACTORY TEST CANNOT BE ACHIEVED, A DFS FOR NON-

15 Jan 2021

QA FORM 28 INSTRUCTIONSSHOP TEST RECORD

PURPOSE: To document the OQE required when performing in-shop testing.

PROCEDURE: The numbered blocks on QA form 28, SHOP TEST RECORD, correspond with the block instructions listed. The form will become part of the TWD, and the responsibilities for filling out the form are:

- a. Planning must fill in blocks identified by a ♦ prior to issuing QA form 28.
- b. QAI will complete Block 11 (when required by this manual).
- c. QAS must complete Block 12 for SUBSAFE or SOC Testing.
- d. Shop Supervisor must complete Block 12 for other testing.

BLOCK 1 - SHIP/HULL

Enter the ship's name and hull number, or enter the appropriate rotatable pool system designator (e.g., TRIPER, CCRP, AERP, SSN 688CL, etc.).

BLOCK 2 - JCN/Job Order & Key-Op

Enter the Job Control Number (e.g., 20884-EM01-2947, 3872556103/R01). Naval Shipyards enter Job Order and Key Op.

BLOCK 3 - LWC/SHOP

Enter the shop number of the Lead Work Center or the Assigned Key Shop.

BLOCK 4 - CWP/REC SERIAL NO.

Enter the CWP/REC serial number if applicable, otherwise NA. Do not list the CWP/REC revision.

BLOCK 5 - SYSTEM/COMPONENT/ROTATABLE POOL SER NO.

Planner enter the noun name of the system and component, or the name of the component being tested (e.g., ASW-80/81). If the record is for testing rotatable pool material, Planner or Craftsman enter the serial number of the material when available or known.

BLOCK 6 - TEST REFERENCES

Enter the document number that provides the test requirements other than those test requirements listed in the Task Group Instruction, JCN or Job Order listed in Block 2: (e.g., SUBMEPP Maintenance Standard (SMS) or Technical Repair Standard or (TRS) Revision and Change, Task Group Instruction, Technical Manual and Section No., Assembly Drawing Number & Revision, etc.).

BLOCK 7 - TEST GAGE RANGE/TEST INSTRUMENT USED, SERIAL NO. & CALIBRATION DUE DATE

Enter each test gage and each instrument (normally enter the gage or instrument range) used for testing any item or component. Enter the serial number of the gage or instrument, and Calibration Due Date. If the items are part of a computerized test stand, indicate the serial number of the test stand.

BLOCK 8 - RELIEF VALVE SET POINT

Enter the relief valve set point and verification signature of person setting the relief. The signature(s) in Block 8 include that the test was accomplished with the proper calibrated test equipment. Use Block 10 for additional space. If listing the test pressure would classify the CWP, enter "J", "H", Item 1 of Ref (a), etc. as appropriate from the applicable reference instead of classifying the document.

BLOCK 9 - TEST REQUIREMENTS & RESULTS

Planner enter all test requirements Test Procedure, Type of Test and Paragraph, required valve position and entry point (if not described by Test procedure, SUBMEPP Maintenance Standard or Technical Repair Standard, that is invoked in the Technical Work Document), Required Medium, Required Pressure, Minimum Duration, Allowable Leakage and any other test requirements. NA blocks if not applicable. Enter other test requirements, if applicable, in Block 9 or the Remarks Block 10. If listing the test pressure would classify the CWP, enter "J", "H", Item 1 of Ref (a), etc. as appropriate from the applicable reference instead of classifying the document.

NOTES:

1. For Scope of Certification Tests requiring Divers Air Clean Requirements, Planning add a SOC Cleanliness Maintained Test Requirement (annotate to verify that system cleanliness has been maintained) with signature, badge number and date for the craftsman.
2. For hydraulic actuators with relief valves which must be removed for the hydrostatic or tightness tests, relief valve reinstallation must be documented in one of the following manners:
 - a. On a QA form 34A
 - b. On a QA form 17C
 - c. Planning: Enter "Relief valve removed for test and reinstalled after test" in the QA Form 28 Remarks block and provide an area for the mechanic to record the following attributes for all new material installed:
 - Piece number
 - Drawing number or reference letter
 - Part description
 - Quantity
 - LOE

Mechanic: Record the data for each attribute listed for all new material installed. Provide signature, badge number and date for Objective Quality Evidence that the relief valve and o-ring were reinstalled after the test; all new material meets specified requirements, is installed and listed; and after verifying existing material is acceptable for re-use and is installed.

3. For hydraulic 2 position valve orientation, enter a requirement in the Remarks block for the operation of the valve ("PRESSURIZE C1 TO OPEN, PRESSURIZE C2 TO CLOSE"), signature, badge number and date for Objective Quality Evidence of the proper operation if not already identified in the Maintenance Standard Test requirements.

15 Jan 2021

Test or Production personnel enter the results of testing (Actual Medium Used, Actual Pressure, Actual Duration (including inspection time), Actual Leakage, and the results of testing (SAT or UNSAT) and enter signature, badge number and date. Signature also verifies that test instrumentation was calibrated, the correct test configuration was used to perform the test and any sequencing (e.g., valve cycling) listed in Block 9 or 10 was accomplished. If the results are unsatisfactory, enter the deficiency report number or DL serial number which documents the test deficiency or work accomplished to correct the deficiency. If unsat, the craftsman will report the condition on a Deficiency Form or document the re-work on the applicable QA Form. Further testing of the component should not continue until the unsat condition is resolved. NA blocks if not applicable.

NOTES:

1. For Test Procedure steps that require testing from both directions, annotate or record Actual Pressure, Duration, Leakage, and Results for each direction.
2. For SOC work, valves that act as a boundary closure between two distinct operating pressure systems or subsystems must have the test pressure of each port identified by a temporary tag when testing is performed in a shop or on a test bench, when the valve configuration is such that it could be installed two ways into the system, and the ports are not otherwise marked or identified. The temporary tags can be removed after the valves have been installed. The purpose of the tag is to alert personnel of the correct orientation of the valve into the system. (P9290 Appendix J, Paragraph J8 refers).

Enter any remarks in Block 10. Remarks must be accompanied by a signature, badge number and date, if not part of the original technical direction.

BLOCK 10 - REMARKS

Enter any remarks. Identify which test the remarks apply to. Remarks must have a signature, badge number and date except where the entry is pre-printed on the form by Planning, unless the pre-printed entry requires signature for OQE. Initials may be entered in lieu of an employee's signature and badge number, if a corresponding employee's signature and badge number appears elsewhere on the same page.

BLOCK 11 - QA INSPECTOR/SHOP SUPERVISOR SIGNATURE/BADGE NO

Quality Assurance Inspector or Shipyard Representative enter signature, badge number and date verifying the completeness of the data recorded in Blocks 7 through 9 and that the data agrees with the listed requirements (as implemented by local Shipyard instruction).

BLOCK 12 - QAS SIGNATURE/BADGE NO.

For SUBSAFE or SOC components only, QAS or cognizant QA representative as defined by local instructions, will sign, enter badge number and date in this block to indicate the completeness of the entries.

For other components, the Production Shop Supervisor must sign that the records have been reviewed for completeness.

PAGE _____ OF _____

Planning must fill in blocks identified by a ♦ prior to issuing

V-I-11-155

QA FORM 34 INSTRUCTIONSJOINT/COMPONENT TORQUE AND ASSEMBLY RECORD

NOTE: PLANNING MUST FILL IN BLOCKS IDENTIFIED BY A ♦ PRIOR TO ISSUING.

PURPOSE: To provide a standard form to document the assembly and torquing of Nuclear Level I system piping joints, SUBSAFE, and SOC mechanical joints and assemblies listed in the requirements. All other mechanical joints requiring assembly OQE, not listed, may be documented on a QA form 34A.

NOTE: ALTHOUGH JOINTS FOR CONTROLLED ASSEMBLIES AND NUCLEAR LEVEL I SYSTEM PIPING AND COMPONENT MECHANICAL JOINTS ARE CERTIFIED ON THIS FORM, TORQUE VALUES MAY NOT APPLY TO ALL JOINTS.

REQUIREMENTS:

1. Torque documentation is required for the following joints and must be documented on a QA form 34.
 - a. All nuclear Level I system piping and components mechanical joints.
 - b. All joints assembled as a Controlled Assembly.
 - c. SUBSAFE:
 - (1) Sea Connected or Seawater bolted pressure boundary joints NPS 1/2 inch and larger from the inboard joint of the backup valve (or equivalent) outboard (i.e., Hull Integrity (HI) joints).
 - (2) All sea connected or Seawater bolted pressure boundary piping and component joints from systems NPS 4 inches and larger inboard of the inboard joint of the backup valve.
 - (3) Electrical Hull Fitting Installation joints including EHF to pressure hull and EHF Shore Power joints.

NOTE: BOLTED PRESSURE BOUNDARY JOINTS ARE DEFINED AS JOINTS WHICH UTILIZE BOLTS, NUTS, STUDS, STUD-BOLTS, OR SCREWS TO JOIN TWO PRESSURE BOUNDARY PARTS.

- d. Scope of Certification:
 - (1) All SOC bolted pressure boundary piping and SOC component joints.
 - (2) In-line SOC union piping joints with torque values specified on drawing or document.

PLANNING THE SCOPE OF A QA 34 FORM: In order to support the execution process, it is necessary to properly limit the scope of Assembly Records. The following rules are provided to ensure proper breakdown:

- a. Each shipboard piping joint must have a unique joint record consisting of separate Block 9 entries.

15 Jan 2021

- b. All Level I material must be traceable to a specific joint. To ensure unique joint traceability, if any identical Level I parts are used in multiple joints within an assembly (normally this applies to fasteners), the craftsman will annotate which joint (Block 9A, 9B, etc.) the material was installed in.
- c. For complex assemblies (e.g., Shaft Seal installations), assembly records should be scoped to support testing evolutions.

PROCEDURE: The numbered blocks on QA form 34 correspond with block instructions listed. Any block not used will be marked N/A. Planning must fill in blocks identified by a ♦ prior to issuing the CWP. For QAI signatures, the planner will determine the need for a QAI prior to the start of the job. If no QAI is required, the planner will enter NA in the QAI signature block.

TOP OF FORM - PAGE _____ OF _____

Enter page numbers.

BLOCK 1 - SHIP/HULL NO.

Planner enter the ship's name and hull number, or enter the appropriate rotatable pool system designator (e.g., TRIPER, CCRP, AERP, SSN 688CL, etc.).

BLOCK 2 - JCN

Planner enter the Job Control Number (JCN).

BLOCK 3 - LWC/SHOP

Planner enter the lead shop assigned to assemble the joint (e.g., X31, X58, X56).

BLOCK 4 - CWP/REC SER. NO.

Planner enter the CWP/REC serial number or enter NA if no CWP/REC is required. Do not list the CWP/REC revision.

BLOCK 5 - SYSTEM/COMPONENT/ROTATABLE POOL SER NO.

Planner enter the noun name of the system and component (if applicable), (e.g., MSW-25). For Rubber Insert Sound Isolation Coupling (RISIC) enter the Selected Record Drawing (SRD) Line Item No. If Record is for in-shop restoration of rotatable pool material, enter the serial number of the material if known.

NOTE: ROTATABLE POOL SERIAL NUMBERS MAY BE ENTERED BY THE CRAFTSMAN IF NOT ENTERED BY THE PLANNER.

BLOCK 6 - REFERENCES

Planner enter all references used to identify component parts, joint, material and assembly information. Include revision letter and, when applicable, the assembly number (e.g., Assy D, Assy RA, etc.). Revisions for technical manuals are not required. If joint numbers are assigned via a sketch in a TWD or Planning sketch, include the TWD or Planning sketch number. Include both the assembly drawing and electrical holes' assignment drawing for Electrical Hull Fittings. NAVSEA Technical Manual S9502-AM-GYD-010 may be abbreviated as "GYD-010" if needed.

BLOCK 7 - NEW MATERIAL

Craftsman

PC NO: Enter the piece numbers of parts. List only the new parts being installed. New body bound studs documented on a QA form 17SI should not be documented on a QA form 34.

REF: Enter the letter corresponding to the reference listed in Block 6 that provides the material specification or assembly information for the piece listed in the "PC NO." block.

JOINT BLK ID: Enter the alphanumeric designator corresponding with the particular Block 9 or Block 14 entry (9A, 9B, 14A, 14B, etc.) that identifies the joint where the material is installed.

DESCRIPTION: Describe all new parts associated with the assembly or joint. For fasteners and nuts, include diameter and thread (e.g., bolt, ½"-13; stud, ½"-12; SHCS, ½"-13, etc.). Record shim thickness when shims are installed unless the installation is already documented on another QA form (not required for shims installed as a part of an epoxy repair).

NOTE: IF A PORTION OF A NEW VALVE OR COMPONENT IS USED TO REPLACE PARTS (E.G., BONNET AND DISC ASSEMBLY), ENTER A DESCRIPTION OF THE PART OR ASSEMBLY OF PARTS AND DOCUMENT THE LEVEL I NUMBER OF THE NEW VALVE OR COMPONENT IN THE IDENT SECTION. LIST THE PARTS THAT THE ASSEMBLY CONSISTS OF IN THE REMARKS BLOCK (A SINGLE COMPONENT MAY BE LISTED IN BLOCK 7) WITH A NOTE THAT THE PART(S) WERE TAKEN FROM THE NEW VALVE OR COMPONENT.

QTY: Record quantity of new material installed. Each quantity must be unique to one Block 9 joint.

LOE: Identify the Level of Essentiality (MIC Level). The material control level must be as identified by craftsman. Example: LI, NA. For SOC material, enter the appropriate Material Control Division (A, B, or C).

IDENT: Enter the marking on the part or on the packaging, container or tag (when the part is not marked) as shown in Table 1.

CRAFT INT: Craftsman: Installing craftsman enter initials for material installed. The initials must correspond to the related Block 9 craftsman's signature unless otherwise noted with a corresponding signature elsewhere on the form (e.g., Remarks block entry and signature).

NOTE: IF THE CRAFTSMAN INSTALLING THE MATERIAL IS OTHER THAN THE CRAFTSMAN SIGNING FOR JOINT DATA IN BLOCK 9 OR BLOCK 14, A CORRESPONDING SIGNATURE, PRINTED NAME AND DATE MUST BE ENTERED IN THE REMARKS BLOCK.

TABLE 1- DOCUMENTATION REQUIREMENTS	
Material Control Level	Required Information
Level I Material Other Than Fasteners	MIC Number and any other traceability number, including any local traceability number (e.g., PNSY MLN – examples Z142, AB12).

15 Jan 2021

Level I Fasteners	NOTE: THE INFORMATION ENTERED FOR FASTENERS MAY NEED TO INCLUDE INFORMATION FROM BLOCKS 3 AND 8 FROM QA FORM 1. DO NOT ENTER THE PNSY TRACE NUMBER FROM BLOCK 3 OF THE QA FORM 1. Document the markings from the fastener to include either: (1) The color code and the heat or lot number, material type, and manufacturer's symbol (for nuts containing a self-locking insert, the color of the insert is the manufacturer's symbol). (2) The MIC number (when MIC number is on the fastener or on the individual tag for some fasteners).
Controlled Structural Material And SOC Control Division "A" Material	Traceability Number
SOC Control Division "B" Material	Markings providing identification to material type or specification
AERP And Other Rotatable Pool Material (688 Class, TRIPER, Etc.)	Enter the appropriate rotatable pool serial number (e.g. RP-148A, 4810-013-5812-A3-0113, TIN -292-11893, etc.)
Transferred And Cannibalized Material	Enter the Equipment Removal List No. or other material History or Traceability number (ERL# XXXX, SSBN-600 EHF #24, etc.)
Other Material Within The LEVEL I/SUBSAFE Boundary And SOC Control Division "C" Material	1. Enter at least one of the following documentation attributes: a. Stock Number (from package or container) b. Part Number (from package or piece) c. Part Number and associated Manufacturing Work Procedure (for manufactured items) d. Local Traceability Number (from piece or tag) e. Drawing and Piece Number (from piece or tag) f. Generic, MIL-SPEC, or Material Specification Marking (from piece) g. NDT record numbers or test results for items verified by generic material testing. 2. For SOC components only: Enter the stock number of the "O-ring lubricant or any sealant used during assembly.

BLOCK 8 - BLUE/CHALK CHECK AND/OR VALVE BALL COMPRESSION DATA

NOTE: A QA-34 FORM IS NOT REQUIRED TO BE GENERATED SOLELY FOR CAPTURING BLOCK 8 DATA IF THE REMAINDER OF THE COMPONENT IS TO BE ASSEMBLED USING A QA-34A FORM. USE A QA-17 OR OTHER APPROPRIATE METHOD.

(PLANNING) A documented blue or chalk check or valve ball compression check is required for all controlled assemblies and is allowed by the DDGOS in lieu of a seat tightness test for welded in-line valves and components where a seat tightness test is not practical. Enter an X in the applicable NA box when Blue or Chalk Check or Valve Ball Compression is not applicable. When a Valve Ball Compression check is required, enter the required stack height and ball cavity dimensions. These dimensions should include maximum and minimum requirements.

(CRAFTSMAN) Record actual ball or seat stack heights and cavity dimensions when Planning has provided the required dimensions. If more than one blue check is required, enter additional checks in Remarks. For hull and back up valves where more than one ball or seat stack height dimension is required, enter in the following manner:

(3.213 or 3.567) where the first dimension is for one ball or seat combination and the second dimension is for the other one. Identify each dimension to its associated valve. Sign, date and print name after satisfactory accomplishment of a Blue or Chalk Check or Valve Ball Compression check.

BLOCK 9 - JOINT DATA FOR JOINTS REQUIRING TORQUE DOCUMENTATION

NOTE: WHEN MULTIPLE JOINTS ARE DOCUMENTED ON ONE QA 34 FORM,

15 Jan 2021

ENTER A SUCCESSIVE LETTER FOR EACH BLOCK 9_ USED (E.G., 9B, 9C, ETC.).

NOTE: THIS BLOCK MAY BE USED FOR SPECIFIC ATTRIBUTES THAT ARE NOT COVERED BY THE STANDARD ATTRIBUTES ON THE FORM.

- JOINT ID/JOINT TYPE: Planner enter the joint identification number including joint type (e.g., ASW-5744 F). For joint types, use “F” for flanged bolted joints, “U” for union joints, and “S” for screw joints. When a joint identification number is not available, a joint description (e.g., Tailpiece-to-Body (F)) must be used. Locally assigned joint numbers may be used when a joint description is not practicable and clarity is required. When additional attribute(s) applies to a component (e.g., hatches, etc.) that are not covered by the attributes already on the form, list the attribute and location (applicable reference) for the acceptance criteria (e.g., TWD, technical manual, etc.). For hatches, at a minimum list the “Seat Clearance Measurement”.
- JOINT REF: Planner enter the letter corresponding to the reference listed in Block 6 that identifies where the joint number or description information is found (e.g., Mapping Diagram, Drawing, Tech Manual, Work Procedure, etc.).
- REQ THREAD LUBE: Planner enter the type(s) of thread lubricant(s) that are authorized (e.g., MOLYKOTE P37, Fel-Pro C5A, etc. or options (e.g., MOLYKOTE P37 or Fel-Pro C5A)). Enter “None” if no lubricant is required.
- APPLIED THREAD Craftsman enter the thread lubricant actually used during assembly.
- LUBE: Enter “None” if no lubricant was used.
- HI FSTNR: Planner indicate (Yes or No) whether the joint contains Hull Integrity Male Fasteners. When “NO” is checked, enter “NA” in the “EXISTING HI MALE FASTENER MARKING” block.
- EXISTING HI MALE “FASTENER MARKING: (Craftsman) When the “HI FSTNER” block is marked Yes”, record the quantity of reused or existing male fasteners and the symbols of recognizable significance, as required by Part I, Chapter 5, paragraph 5.4.3.b(2) of this volume (e.g., 6 ea. .K., 2 ea. unmarked).

NOTE: (CRAFTSMAN) IF HULL INTEGRITY MALE FASTENERS (DRIVEN STUDS) ARE UNMARKED, ILLEGIBLE, OR THE SYMBOLS ARE NOT RECOGNIZABLE PER CRITICAL INSPECTION REQUIREMENTS OF PART I, CHAPTER 5, PARAGRAPH 5.4.3.b(2) OF THIS VOLUME, AND THEY WERE NOT REMOVED FROM THE HULL INSERT OR COMPONENT BODY:

- a. DOCUMENT THE QUANTITY**

- b. **ENTER THE WORDS “STUDS NOT REMOVED” IN THE REMARKS BLOCK**
- c. **REQUEST QAI PERFORM A GENERIC MATERIAL IDENTIFICATION TEST (E.G., ACID SPOT TEST).**

NOTE: (QUALITY ASSURANCE INSPECTOR) PERFORM A GENERIC MATERIAL IDENTIFICATION TEST ON HULL INTEGRITY MALE FASTENERS (DRIVEN STUDS) THAT ARE UNMARKED, ILLEGIBLY MARKED, OR MARKED WITH SYMBOLS THAT ARE NOT RECOGNIZABLE PER CRITICAL INSPECTION REQUIREMENTS OF PART I, CHAPTER 5, PARAGRAPH 5.4.3.b(2) OF THIS VOLUME AND FOR WHICH THE CRAFTSMAN HAS ANNOTATED “STUDS NOT REMOVED”. MARK STUDS THAT ARE IDENTIFIED AS HAVING THE CORRECT MATERIAL (I.E., K. OR KM). IF THE STUDS CANNOT BE MARKED DUE TO SIZE OR CONFIGURATION, ETC., ENTER THE RESULTS OF THE GENERIC MATERIAL IDENTIFICATION TEST IN THE REMARKS BLOCK.

Planner enter “NA” if not an HI joint or if no existing pressure boundary male fasteners are to be reused.

STUD ROTATION: Planner enter an X in the NA box of the Stud Rotation block when not applicable (e.g., when joint does not contain studs).

Craftsman record SAT after verifying all set studs to be tight during nut installation and torquing per Part I, Chapter 5, paragraph 5.4.7 of this volume.

- a. Anaerobic Stud Bonding Inspection - Newly Installed Studs. The following test procedures must be performed to ensure proper bonding after curing has been completed:
 - (1) Mark the end of the studs using a felt tip marker, paint pen or other appropriate marking pen by making a line in the direction of the center of the bolt circle.
 - (2) All newly installed studs must be tested using one of the following methods. Either method may be used unless otherwise specified. Both methods utilize the same lubricant as required for final assembly of the joint. Studs must not be restrained from turning during the test by any method other than the locking compound in the set end of the stud.
 - (3) Torque Method. Apply the minimum breakaway torque on each newly installed stud per TABLE 2. Double nuts or a stud extractor (Colette) must be used to apply the required torque. Acceptance criteria is per paragraph b.
 - (4) Self Locking Nut Method. Apply torque to each newly installed stud by installing and removing an unused self-locking nut per NASM 25027 or commercial spec IFI-100/107 with plastic elements. Install the nut to a point of stud thread protrusion that is at least 3 threads beyond the self-locking insert. Acceptance criteria is per paragraph b.
- b. The assembly is considered acceptable if there is no turning of the stud during the Breakaway Torque or Self-Locking Nut check. The assembly may also be considered

acceptable if a slight initial turning motion (up to 1/4 turn) of the stud is observed, and no further turning motion is observed during torquing or nut installation or removal. (A small turning of the set stud represents a breaking or powdering of the locking compound which actually increases resistance to further turning motion.) Report any failures to Engineering.

- c. In some cases, work-authorizing TWDs may specify that studs set with an anaerobic locking compound in submarine hull integrity applications be subjected to an ultraviolet light inspection. Engineering requests for this test will be based on accessibility and ability to view the stud hole. When ultraviolet light inspection is specified, properly installed anaerobic compounds should appear as a red dye and should fully encircle the stud. This is considered to be an extra line of defense above and beyond performance proof testing of paragraphs a.(1) through b. Under no circumstances should ultraviolet light inspection be used as a substitute for performance proof testing.
- d. In-Service Anaerobic Stud Rotation. Rotation of in-service Class 3 studs with anaerobic locking compound on subsequent tightening to the required torque is permissible, as long as the following check is performed:
 - (1) If the stud does rotate up to 1/4 turn during in-service nut tightening, then back off the nut 1/4 turn before continuing to torque it.
 - (2) If the stud does not rotate while backing off the nut or when torquing the nut afterwards, the stud is acceptable as long as the stud does not violate the standoff requirement for that application. In this case, the stud rotation represents further breaking or powdering of the locking compound which increases resistance to any further turning motion.
 - (3) If the stud rotates while backing off the nut, rotates when torquing the nut afterwards or violates the standoff requirement for that application, the stud must be removed and replaced. In this case, the stud rotation represents locking compound failure.

NOTE: IF ANY STUD ROTATION CAUSES THE STUD STANDOFF TO VIOLATE THE STANDOFF REQUIREMENTS FOR THAT APPLICATION, THEN THE STUD MUST BE REMOVED. THE STUD MAY BE CLEANED AND REINSTALLED IF IN ACCEPTABLE CONDITION OR REPLACED BY A NEW STUD.

TABLE 2 - Resistance Test Breakaway Torque Values for Anaerobic Locking Compounds

STUD SIZE	MIN TORQUE (FT-LBS.)	STUD SIZE	MIN TORQUE (FT-LBS.)	STUD SIZE	MIN TORQUE (FT-LBS.)
1/4	2.5	5/8	25	1-3/8	100
5/16	5	3/4	33	1-1/2	115
3/8	6.7	7/8	50	1 3/4-5	150
7/16	8.3	1	67	1 3/4-8	160
1/2	12.5	1-1/8	75	2	180
9/16	17	1-1/4	83	2-1/4	215

15 Jan 2021

FASTENER SIZE/TYPE: Planner enter the type, size and thread of the male fastener (e.g., 1-1/4"-7 Stud, 9/16"-18 SHCS, 3/4"-10 bolt, etc.). Planner enter "N/A" if the joint being assembled does not contain male threaded fasteners (bolts, studs, or stud-bolts, bolt-studs).

REQUIRED TORQUE TOLERANCE: Planner enter the torque and tolerance required AND for the component or fastener. Mark the appropriate block (in-lbs or ft-lbs). When special tightening or assembly instructions apply in lieu of torque, enter tightening or assembly instructions and reference document or drawing; use Remarks if additional space is required.

TORQUE REF: Planner enter the letter of the reference listed in Block 6 that identifies where the torque value was obtained, including paragraph or table when applicable.

AVERAGE RUNNING TORQUE: Craftsman enter the average running torque as measured. Mark the appropriate block (in-lbs or ft-lbs).
(Planning) Enter "N/A" in the block for joint assemblies where construction drawings specify that running torque has been incorporated into the required torque.

NOTE: RUNNING TORQUE DOES NOT NEED TO BE TAKEN INTO ACCOUNT FOR FASTENERS GREATER THAN 5/8 INCH DIAMETER UNLESS SPECIFIED IN THE TWD. THE INTENT IS TO ENSURE PROPER TORQUE IS APPLIED, TAKING RUNNING TORQUE INTO CONSIDERATION WHEN IT IS A SIGNIFICANT FACTOR WITH REGARD TO THE FINAL TORQUE. IF RUNNING TORQUE DOCUMENTATION IS NOT REQUIRED BY THE TWD FOR FASTENERS GREATER THAN 5/8", PLANNING SHOULD ANNOTATE THE BLOCK "NR" FOR NOT REQUIRED.

NOTE: CLICKER STYLE TORQUE WRENCHES AND HYTORC DEVICES ARE NOT TO BE USED TO MEASURE RUNNING TORQUE.

NOTE: THE AVERAGE RUNNING TORQUE MAY BE OBTAINED BY USING THE SAME DIAL TYPE TORQUE WRENCH THAT WILL BE USED FOR MEASURING THE FINAL TORQUE. A LOW RANGE DEVICE IS NOT REQUIRED AND RUNNING TORQUE DOES NOT HAVE TO FALL WITHIN THE 20% TO 90% SCALE REQUIREMENT. IF RUNNING TORQUE IS NOT MEASURABLE USING THIS DEVICE, ENTER "0" (ZERO) FOR THE AVERAGE RUNNING TORQUE.

NOTE: DOCUMENTATION OF THE TORQUE WRENCH USED FOR DETERMINING THE AVERAGE RUNNING TORQUE IS NOT REQUIRED. IF A DIFFERENT WRENCH IS USED TO TAKE THE RUNNING TORQUE BECAUSE THE FINAL TORQUE IS MEASURED WITH A CLICKER STYLE OR HYTORC DEVICE, THEN THE TORQUE WRENCH DATA MUST BE RECORDED.

FINAL TORQUE: Craftsman record the final torque observed on the torque device. The final torque observed must be the average running torque, as

15 Jan 2021

required, plus the required torque. When construction drawings specify that running torque has been incorporated into the required torque, final torque is the torque value specified in the construction drawing and running torque is NOT added to the required torque during joint assembly. Mark the appropriate block (in.-lbs or ft-lbs). Request QAI to verify final torque by direct observation for all Controlled Assemblies and hull integrity pressure boundary joints which contain Hull Integrity fasteners (as required in Table 3). In the event that a multiplier or HYTORC machine is used, place an asterisk or other symbol in this block and refer to the remarks block. In the remarks block add a statement such as "Torque multiplier was used, actual torque reading was XXX PSI. This converts to a torque value of XXX Ft-lbs." When a combination of torquing methods (e.g., torque wrench, turn-of-the-nut method, etc.) is used for a single joint, record the final torque applied, and document the alternate torquing process. Record the quantity of fasteners that were tightened using the alternate method. When special tightening or assembly instructions apply in lieu of torque, as identified in the required torque block, document the actual special tightening or assembly applied to the joint (tightened, wrench tight, cap installed, etc.).

TORQUE DEVICE/
INSTRUMENT USED:

Craftsman enter the range, serial number and calibration due date of the torque device used during assembly for the final increment. For HYTORC machine, enter "HYTORC", the HYTORC's head data (i.e., serial number), serial number of the pressure gauge used to read actual pressure applied for final torque and the calibration due date of that pressure gauge. If other calibrated instruments (e.g., torque multiplier, torque meter) are used, also enter data for these instruments.

CRAFTSMAN SIGNATURE/BADGE: Craftsman sign and date after satisfactory assembly of the joint.

QAI SIGNATURE/BADGE: When required, QAI must sign and date after the satisfactory completion of assembly per the requirements.
Planner enter NA when QAI is not required.

15 Jan 2021

Table 3 - QAI Inspection Requirements				
Location	Software Installation	Material Installations	Torque	Sealing Surface & Fasteners
Nuclear Level I piping system mechanical joints	Note 1	Yes - Existing and New LI	Yes (when a torque is specified)	No
Controlled Assemblies	Yes	Yes - New LI Only	Yes	Yes
SUBSAFE Hull Integrity Joints	Yes	Yes - New LI Only	Yes	Yes
SUBSAFE Bolted Pressure Boundary Joints	No	Yes - New LI Only	No	No
EHF Installations	Yes	Yes - New LI Only	Yes	Yes
SOC Bolted Pressure Boundary Joints	Yes	Yes - New LI Yes - MCD-A Yes - MCD-B Yes - MCD-C	Yes	Yes
SOC Unions	Yes	Yes - New LI Yes - MCD-A Yes - MCD-B Yes - MCD-C	Yes (When source is specified)	Yes

NOTE: YES - IF A FLEXATALLIC GASKET IS USED AND THE MATING SURFACES ARE NOT IN CONTACT. THE QAI IS NOT REQUIRED TO WITNESS INSTALLATION OF THE GASKET BUT MUST INSPECT THE MATING SURFACE GAP AND PARALLELISM AFTER SOFTWARE INSTALLATION AND FINAL TORQUE.

FOR JOINTS: CRAFTSMAN or QAI signature(s) certifies that the joint meets the requirements for the following:

- a. The applied lubricant is acceptable per the technical direction.
- b. All existing Hull Integrity Male Fasteners have been examined for markings of significance or have been verified by a generic material identification test to ensure they are of proper material. All markings have been recorded and if required, the results of any material identification testing are recorded in the Remarks block.
- c. All set studs have been verified to be tight during assembly per Part I, Chapter 5, paragraph 5.4.7 of this volume.
- d. The final required pre-load torque has been applied per specified requirements.
- e. Sealing surfaces meet the acceptance criteria of the applicable Maintenance Standard.
- f. Alignment, gap and parallelism meet the specified requirements for the joint.
- g. Male fasteners type and size agree with entries in the "FASTENER SIZE/TYPE" block and the specified criteria.
- h. Existing fasteners are reinstalled in the same joint and are not obviously incorrect based on markings, color, corrosion or other visual indication.
- i. Thread protrusion is satisfactory. Thread protrusion is the number of threads protruding above the nut. Minimum thread protrusion is one thread on non-

15 Jan 2021

self-locking fasteners or flush for self-locking fasteners. Maximum thread protrusion is ten threads unless authorized by drawing or technical manual.

- j. All new material associated with the joint meets specified requirements and is listed in Block 7. Existing material associated with the joint is acceptable and is correctly installed.
- k. The Craftsman will perform a visual check of new Level I material at the time of installation to verify the material meets the requirements of the TWD used to install the new material.

FOR OTHER THAN JOINTS: CRAFTSMAN or QAI signature(s) indicates compliance with the attribute(s) listed and the corresponding listed acceptance criteria. All new material associated with the joint meets specified requirements and is listed in Block 7. Existing material associated with the joint is acceptable and is correctly installed.

If UNSAT, the craftsman or QAI will initiate action to resolve the UNSAT condition (e.g., submit a DF) and indicate the action taken in the Remarks block. Do not sign unless a satisfactory repair is completed or the UNSAT condition is accepted.

BLOCK 10 - **LOCKWIRE/LOCKING CABLE/DEVICE INSTALLED OR REQD ACTION**

(Only required for SUBSAFE, DSS or SOC joints)

NOTE: THIS BLOCK APPLIES TO LOCKING DEVICES THAT ARE INSTALLED AFTER JOINT MAKE-UP OR FOR CASES WHEN AN ACTION MUST BE TAKEN AFTER JOINT MAKE-UP TO ENGAGE THE LOCKING DEVICE (E.G., FLIPPING OF A LOCKTAB, STAKING A FASTENER, ETC.) TO ALLOW JOINT MAKE-UP AND TESTING PRIOR TO INSTALLING OR ENGAGING THE LOCKING DEVICE. THIS DOES NOT INCLUDE SELF LOCKING NUTS, SELF LOCKING BOLTS, CAP SCREWS, LOCKWASHERS, ETC. THAT ARE PART OF THE JOINT MAKE-UP AND ARE LISTED IN BLOCK 7.

Planner enter an X in the NA box when not applicable. When an action is required to engage the locking device, enter a description of the required action.

Craftsman sign, date and check SAT when lockwire, locking cable or required locking device (e.g., locking ring for EHF's, barrel nut locking device, etc.) has been properly installed, or the required action has been accomplished. Enter description (e.g., lockwire, locking cable, lock tab) and ident (e.g., stock number, to include SMIC if given, MIL-SPEC, or piece number) of the lockwire, locking cable or locking device. Enter description and "Existing" for existing locking devices. If more than one locking device type (e.g., lockwire and lock tab washers) exists on the assembly, record additional information in the "Remarks block". When the installation of more than one of the same type of locking device is being documented in Block 10 (e.g., 2 setscrews), record the quantity in addition to the description (Block 11 may be used if additional space is needed). Recording the quantity is not required for lockwire or locking cable, nor when the locking device quantity is documented in Block 7. QAI sign, print and date in Block 11 for new MCD-C material installed by craftsman in Block 10 to ensure material conforms to specified requirements.

15 Jan 2021

BLOCK 11 - REMARKS

(Craftsman, QAI, QAS or Planning) Enter any pertinent remarks or additional information related to the repair or assembly of the component. Each entry must contain signature, badge number and date except where the entry is pre-printed on the form by Planning (adding an "N/A" does not require signature, badge number and date). For controlled assemblies on systems requiring MIL-STD-1622 for critical applications or MIL-STD-1330, document "Cleanliness maintained per (MIL-STD-1622 Critical Applications or MIL-STD-1330 (as applicable))" and include the Craftsman's signature and date.

BLOCK 12 - LWC SUPERVISOR/SHOP SUPERVISOR SIGNATURE/BADGE NO.

LWC Supervisor will enter signature, date and badge number for final review, signifying the accuracy of the completed form. If any entry is UNSAT, initiate action to resolve the unsat condition and indicate the action taken in the "Remarks" block. Do not sign unless a satisfactory repair is completed or the UNSAT condition is accepted.

BLOCK 13 - QAS/QAO SIGNATURE/BADGE NO.

QAS or QAO sign, date and enter badge number for final review, signifying entries are complete and that the data agrees with the listed requirements.

BLOCK 14 - JOINT DATA FOR JOINTS NOT REQUIRING TORQUE DOCUMENTATION

NOTE: THIS BLOCK MAY BE USED FOR SPECIFIC ATTRIBUTES THAT ARE NOT COVERED BY THE STANDARD ATTRIBUTES ON THE FORM.

NOTE: (SUBMARINES ONLY) THIS BLOCK MUST NOT BE USED FOR CONTROLLED ASSEMBLIES OR SOC PRESSURE BOUNDARY JOINTS.

JOINT ID/JOINT TYPE OR ATTRIBUTE DESCRIPTION: Planner enter the joint identification number including joint type (e.g., ASW-5744 F). For joint types, use "F" for flanged bolted joints, "U" for union joints, and "S" for screw joints. When a joint identification number is not available, a joint description (e.g., Bonnet-to-Body (S)) must be used. Locally assigned joint numbers may be used when a joint description is not practicable and clarity is required. When additional attribute(s) applies to a component (e.g., hatches, etc.) that are not covered by the attributes already on the form, list the attribute and location (applicable reference) for the acceptance criteria (e.g., TWD, technical manual, etc.). For hatches, at a minimum list the "Seat Clearance Measurement".

JT. REF: Planner enter the corresponding reference listed in Block 6 that identifies where the joint number or description information is found (e.g., Mapping Diagram, Drawing, Tech Manual, Work Procedure, etc.).

(C) FOR CRAFTSMAN OR (I) FOR INSPECTOR: Planner enter "C" on one line for each joint or attribute. Enter "I" on the remaining line for each joint or attribute that requires an inspector signature; leave blank if inspector signature is not required.

CRAFTSMAN SIGNATURE/BADGE/DATE: Craftsman sign and enter badge number and date on the line associated with the "C" after satisfactory assembly of the joint. If UNSAT, the craftsman will initiate action to resolve the UNSAT condition and indicate the action taken in

the Remarks block. Do not sign unless a satisfactory repair is completed or the UNSAT condition is accepted.

FOR JOINTS: This signature provides certification that the joint meets the requirements for the following:

- a. All driven studs have been verified to be tight during assembly. Stud rotation during torquing (and break away) is limited to 1/4 turn, but no more turning during installation or removal of the nut for newly installed Class 3 studs installed with locking compound.
- b. The joint has been tightened using an approved method. Recording of torque value is not required.
- c. Sealing surfaces meet the acceptance criteria of the applicable Maintenance Standard.
- d. Alignment, gap and parallelism meet the specified requirements for the joint.
- e. All new material associated with the joint meets specified requirements and is listed in Block 7. Existing material associated with the joint is acceptable and is correctly installed.
- f. The Craftsman will perform a visual check of new Level I material at the time of installation to verify the material meets the requirements of the TWD used to install the new material.
- g. The applied lubricant is acceptable per the technical direction.
- h. Existing fasteners are reinstalled in the same joint and are not obviously incorrect based on markings, color, corrosion or other visual indication.
- i. Thread protrusion is satisfactory. Thread protrusion is the number of threads protruding above the nut. Minimum thread protrusion is one thread on non-self-locking fasteners or flush for self-locking fasteners. Maximum thread protrusion is ten threads unless authorized by drawing or technical manual.

FOR OTHER THAN JOINTS: This signature indicates compliance with the attribute(s) listed and the corresponding listed acceptance criteria. All new material associated with the joint meets specified requirements and is listed in Block 7. Existing material associated with the joint is acceptable and is correctly installed.

INSPECTOR SIGNATURE/BADGE/DATE: (Inspector) When required, Inspector sign and enter badge number and date on the line associated with the “(I)” for verification that all new material associated with the joint meets specified requirements and is listed in Block 7. Existing material associated with the joint is acceptable and is correctly installed.

QA FORM 34A INSTRUCTIONSJOINT/COMPONENT ASSEMBLY RECORDFOR ASSEMBLIES NOT REQUIRING TORQUE DOCUMENTATION

PURPOSE: To provide a standard form to document the assembly of joints that do not require torque documentation. Planning must fill in blocks identified by a ♦ prior to issuing. The QA form 34A is not to be used in Nuclear or SOC applications.

REQUIREMENTS:

1. A QA form 34A is required for:
 - a. All non-nuclear Level I pressure boundary joints (e.g., “F”, “S”, and “U” type joints.
 - b. The following submarine applications:
 - (1) (Pre-688 Class) Submarine SUBSAFE Bolted Pressure Boundary Joints including in-line pipe joints as well as component (bonnet to body) joints less than 4-inch NPS inboard of the inboard joint of the backup valve.
 - (2) Other SUBSAFE joints:
 - (a) Non-Seawater or Non-Sea Connected piping and component joints to include non-pressure boundary joints (e.g., EMBT Blow, Artic Blow, Emergency Flood Control, Stern Diving).
 - (b) Non-bolted pressure boundary piping and component joints within the hull integrity boundary (e.g., Union (“U”) Bonnet Joints on Hull and Backup Valves, Hull and backup valve stem retainers (“S”), Boiler type Manhole Covers (“BTMC”) on Impulse Tanks).
 - (c) Non-bolted pressure boundary piping and components (e.g., “U” and “S” joints) not within the hull integrity boundary.
 - (d) Linkage or mechanical interlock joints.
 - (e) SUBSAFE or Non-SUBSAFE interface piping joints (e.g., “F” and “U” joints).

PLANNING THE SCOPE OF A QA 34A FORM: In order to support the execution process, it is necessary to properly limit the scope of Assembly Records.

- a. Each joint must have a unique joint record consisting of separate Block 8 entries.
- b. All Level I material must be traceable to a specific joint. To ensure unique joint traceability, if any identical Level I parts are used in multiple joints within an assembly (normally this applies to fasteners), the craftsman will annotate which joint (Block 8A, 8B, etc.) the material was installed in.
- c. For complex assemblies (e.g., Shaft Seal installations), assembly records should be scoped to support testing evolutions.

PROCEDURE: The numbered blocks on QA form 34A correspond with block instructions listed. Any block not used will be marked N/A. Planning must fill in blocks identified by a ♦ prior to issuing the CWP. For QAI signatures, the planner will

16 Oct 2019

determine the need for a QAI prior to the start of the job. If no QAI is required, the planner will enter NA in the QAI signature block.

TOP OF FORM - PAGE OF

Enter page numbers.

BLOCK 1 - SHIP HULL NO.

Planner - Enter the ship's name and hull number, or enter the appropriate rotatable pool system designator (e.g., TRIPER, CCRP, AERP, SSN 688CL, etc.).

BLOCK 2 - JCN

Planner - Enter the Job Control Number (JCN). Naval shipyards enter Job Order and Key Op.

BLOCK 3 - LWC/SHOP

Planner - Enter the LWC lead shop assigned to assemble the joint (e.g., X31, X38, X56).

BLOCK 4 - CWP/REC SER. NO.

Planner - Enter the CWP/REC serial number or enter N/A if no CWP/REC is required. Do not list the CWP/REC revision.

BLOCK 5 - SYSTEM/COMPONENT/ROTATABLE POOL NO.

Planner - Enter the noun name of the system and component (if applicable), (e.g., MSW-25). For Rubber Insert Sound Isolation Coupling enter the Selected Record Drawing Line Item No.

NOTE: ROTATABLE POOL SERIAL NUMBERS MAY BE ENTERED BY THE PLANNER, IF KNOWN, OR THE SHOP AS SPECIFIED BY LOCAL INSTRUCTIONS.

BLOCK 6 - REFERENCES

Planner - Enter all references used to identify component parts, joint, material and assembly information. Both the assembly drawing and electrical holes' assignment drawing must be listed for Electrical Hull Fittings (EHF). Include revision letter and, if applicable, the assembly number (e.g., Assy D, Assy RA etc.).

BLOCK 7 - NEW MATERIAL

PC NO: Craftsman - Enter the piece number of parts. List only the new parts being installed.

REF: Craftsman - Record the reference letter of the drawing or document listed in Block 6 which provides the material specification or assembly information for the piece listed in the "PC NO." block.

JOINT ID: Craftsman - Enter the alphanumeric designator corresponding with the particular Block 8 entry (8A, 8B, 8C, etc.) that identifies the joint where the material is installed.

DESCRIPTION: Craftsman - Describe all new parts associated with the assembly or joint. For fasteners and nuts, include diameter and thread (e.g., bolt, 1/2"-13; stud, 1/2"-12; SHCS, 1/2"-13; etc.). Record shim thickness when shims are installed unless the installation is already documented on another QA form.

16 Oct 2019

NOTE: IF A PORTION OF A NEW VALVE OR COMPONENT IS USED TO REPLACE PARTS (E.G., BONNET AND DISC ASSEMBLY), ENTER A DESCRIPTION OF THE PART OR ASSEMBLY OF PARTS AND DOCUMENT THE LEVEL I NUMBER OF THE NEW VALVE OR COMPONENT IN THE IDENT SECTION. LIST THE PARTS THAT THE ASSEMBLY CONSISTS OF IN THE REMARKS BLOCK (A SINGLE COMPONENT MAY BE LISTED IN BLOCK 7) WITH A NOTE THAT THE PART(S) WERE TAKEN FROM THE NEW VALVE OR COMPONENT.

QTY: Craftsman - Record quantity of new material installed.

LOE: Craftsman - Identify the Level of Essentiality (MIC Level) as "I" or "NA". The material control level must be as identified by Planning in the TWD.

IDENT: Craftsman - Enter the marking on the part or on the packaging, container or tag (when the part is not marked) as shown in Table 1.

CRAFT INT: Craftsman - Installing craftsman enter initials for material installed. The initials must correspond to the related Block 8 craftsman's signature unless otherwise noted with a corresponding signature elsewhere on the form (e.g., Remarks block entry and signature).

NOTE: IF THE CRAFTSMAN INSTALLING THE MATERIAL IS OTHER THAN THE CRAFTSMAN SIGNING FOR JOINT DATA IN BLOCK 8, A CORRESPONDING SIGNATURE, BADGE NUMBER AND DATE MUST BE ENTERED IN THE REMARKS BLOCK.

TABLE 1- DOCUMENTATION REQUIREMENTS	
Material Control Level	Required Information
Level I Material Other Than Fasteners	MIC Number and any other traceability number, including any local traceability number (e.g., PNSY MLN – examples Z142, AB12).
Level I Fasteners	NOTE: THE INFORMATION ENTERED FOR FASTENERS MAY NEED TO INCLUDE INFORMATION FROM BLOCKS 3 AND 8 FROM QA FORM 1. DO NOT ENTER THE PNSY TRACE NUMBER FROM BLOCK 3 OF THE QA FORM 1. Document the markings from the fastener to include either: (1) The color code and the heat or lot number, material type, and manufacturer's symbol (for nuts containing a self-locking insert, the color of the insert is the manufacturer's symbol). (2) The MIC number (when MIC number is on the fastener or on the individual tag for some fasteners).
Controlled Structural Material	Traceability Number
AERP And Other Rotatable Pool Material (688 Class, TRIPER, Etc.)	Enter the appropriate rotatable pool serial number (e.g. RP-148A, 4810-013-5812-A3-0113, TIN -292-11893, etc.)
Transferred And Cannibalized Material	Enter the Equipment Removal List No. or other material History or Traceability number (ERL# XXXX, SSBN-600 EHF #24, etc.)
Other Material Within The LEVEL I/SUBSAFE Boundary	1. Enter at least one of the following documentation attributes: a. Stock Number (from package or container) b. Part Number (from package or piece) c. Part Number and associated Manufacturing Work Procedure (for manufactured items) d. Local Traceability Number (from piece or tag) e. Drawing and Piece Number (from piece or tag) f. Generic, MIL-SPEC, or Material Specification Marking (from piece) g. NDT record numbers or test results for items verified by generic material testing.

BLOCK 8 - JOINT DATA

NOTES:

- (1) THIS BLOCK MAY BE USED FOR SPECIFIC ATTRIBUTES THAT ARE NOT COVERED BY THE STANDARD ATTRIBUTES ON THE FORM.
- (2) FOR OVERHAUL OF HYDRAULIC ACTUATORS AND HYDRAULIC CONTROL VALVE ASSEMBLIES, ONLY ONE ENTRY IS REQUIRED FOR THE ENTIRE ASSEMBLY IN LIEU OF LISTING INDIVIDUAL JOINTS AS LONG AS A CLEAR DEFINITION OF WORK BOUNDARIES HAS BEEN IDENTIFIED IN THE WORK PROCEDURE. FOR THESE CASES, LIST "ACTUATOR ASSEMBLY" OR "CONTROL VALVE ASSEMBLY" IN THIS BLOCK.
- (3) FOR FLEET ONLY: FOR NON-CONTROLLED ASSEMBLIES WHEN NO SPECIFIC ATTRIBUTE IS SPECIFIED, INSPECTOR SIGNATURE CERTIFIES ACCEPTANCE OF LEVEL I MATERIAL ONLY. NUCLEAR LEVEL 1, INSPECTOR SIGNATURE CERTIFIES WITNESSING GASKET COMPRESSION AND FLANGE PARALLELISM (GAP MEASUREMENT IS ONLY REQUIRED IF MATING SURFACES DO NOT CONTACT).

JOINT ID & JOINT TYPE OR ATTRIBUTE DESCRIPTION: Planner - Enter the joint identification number including joint type (e.g., ASW-5744 F). For joint types, use "F" for flanged bolted joints, "U" for union joints, and "S" for screw joints. When a joint identification number is not available, a joint description (e.g., Bonnet-to-Body (S)) must be used. Locally assigned joint numbers may be used when a joint description is not practicable and clarity is required. When an additional attribute(s) applies to a component (e.g., hatches, etc.) that are not covered by the attributes already on the form, list the attribute and location (applicable reference) for the acceptance criteria, (e.g., TWD, technical manual, etc.). For hatches, at a minimum list the "Seat Clearance Measurement".

JT. REF: Planner - Enter the corresponding reference listed in Block 6 that identifies where the joint number or description information is found (e.g., Mapping Diagram, Drawing, Tech Manual, Work Procedure, etc.).

(C) FOR CRAFTSMAN OR (I) FOR INSPECTOR: Planner - Enter "C" on one line for each joint. Enter "I" on the remaining line for each joint requiring an inspector signature.

CRAFTSMAN SIGNATURE/BADGE/DATE: Craftsman sign and enter badge number and date on the line associated with the "C" after satisfactory assembly of the joint.

For joints, this signature provides certification that the joint meets the requirements for the following:

- a. All set studs to be tight during nut installation and torquing per Part I, Chapter 5, paragraph 5.4.7 of this volume.
- b. The joint has been tightened using an approved method. Recording of torque value is not required.
- c. Sealing surfaces meet the acceptance criteria of the applicable Maintenance Standard or drawing.
- d. Alignment, Gap and Parallelism meet the specified requirements for the joint.

- e. All new material associated with the joint meets specified requirements and is listed in Block 7. Existing material associated with the joint is acceptable and is correctly installed.

For other than joints, the signature indicates compliance with the attribute(s) listed and the corresponding listed acceptance criteria. All new material associated with the joint meets specified requirements and is listed in Block 7. Existing fasteners are installed in the same joint and are not obviously incorrect based on markings, color, corrosion or other visual inspection.

INSPECTOR SIGNATURE/BADGE/DATE: (QAI) When required, Inspector sign, print and enter badge number and date on the line associated with the “(I)” for verification of the following:

- a. Controlled assemblies: All controlled assemblies must be documented on a QA Form 34.
- b. Non-Controlled assemblies: Inspector signature certifies:
 - (1) That new Level I material meets the specification for use and is properly documented in Block 7.
 - (2) That Hull integrity joint sealing surfaces for new or reused material meets acceptance criteria.
 - (3) That all new material, including software, installed in Hull Integrity joints meets specification, is properly installed and documented in Block 7.

If UNSAT, the craftsman or QAI will initiate action to resolve the UNSAT condition (e.g., initiate a DFS) and indicate the action taken in the Remarks block. Do not sign unless a satisfactory repair is completed or the UNSAT condition is accepted.

BLOCK 9 - LOCKING DEVICE INSTALLED OR REQD ACTION

NOTE: THIS BLOCK APPLIES TO LOCKING DEVICES ON SUBSAFE COMPONENTS THAT ARE INSTALLED AFTER JOINT MAKE-UP OR FOR CASES WHEN AN ACTION MUST BE TAKEN AFTER JOINT MAKE-UP TO ENGAGE THE LOCKING DEVICE (E.G., FLIPPING OF A LOCKTAB, STAKING A FASTENER, ETC.) TO ALLOW JOINT MAKE-UP AND TESTING PRIOR TO INSTALLING OR ENGAGING THE LOCKING DEVICE. THIS DOES NOT INCLUDE SELF LOCKING NUTS, SELF LOCKING BOLTS, CAP SCREWS, LOCKWASHERS, ETC. THAT ARE PART OF THE JOINT MAKE-UP, AND ARE LISTED IN BLOCK 7.

Planner - Mark the NA box when not applicable. When an action is required to engage the locking device, enter a description of the required action.

(CRAFTSMAN) Enter the Block 8 joint identifier (e.g., 8A) in the JT ID block, check the “SAT” box and sign, enter badge number and date when lockwire or required locking device (e.g., locking ring for EHF, barrel nut locking device, etc.) has been properly installed, or the required action has been accomplished. Enter description (e.g., lockwire, lock tab) and identification (e.g., stock number, MIL-SPEC or piece number) of the lockwire or locking device. Enter description and “Existing” for existing locking devices. If more than one locking

16 Oct 2019

device type (e.g., lockwire and lock tab washers) exists on the assembly, record additional information in the REMARKS block. When the installation of more than one of the same type of locking device is being documented in Block 9 (e.g., 2 setscrews), record the quantity in addition to the description (Block 10 may be used if additional space is needed). Recording the quantity is not required for lockwire or locking cable, nor when the locking device quantity is documented in Block 7.

BLOCK 10 - **REMARKS**

(CRAFTSMAN/QAI/QAS) Enter any pertinent remarks or additional information related to the repair or assembly of the component. Each entry must contain signature and date except where the entry is pre-printed on the form by Planning. Adding an "N/A" does not require signature and date.

BLOCK 11 - **LWC SUPERVISOR/SHOP SUPERVISOR SIGNATURE/BADGE NO.**

LWC or shop LWC Supervisor will enter signature, badge number and date for final review, signifying the accuracy of the completed form. If any entry is UNSAT, initiate action to resolve the unsat condition and indicate the action taken in the "Remarks" block. Do not sign unless a satisfactory repair is completed or the UNSAT condition is accepted.

BLOCK 12 - **QAS SIGNATURE/BADGE NO.**

QAS or QAO will print name, enter signature, badge number and date for final review, signifying the accuracy of the completed form. If any entry is UNSAT, the QAS will initiate action to resolve the unsat condition and indicate actions taken in the "Remarks" block. Do not sign unless a satisfactory repair is completed or the UNSAT condition is accepted.

QA FORM 35 INSTRUCTIONSTHICKNESS MEASUREMENT RECORD

PURPOSE: To document UT thickness measurements and acceptability of material measured based on design material thickness.

PROCEDURE: The numbered blocks in QA form 35 correspond with the block instructions.

BLOCK 1 - SHIP HULL NO.

Enter the ship's name and hull number.

BLOCK 2 - JCN

Enter the JCN.

BLOCK 3 - LWC

Enter the LWC.

BLOCK 4 - CWP/REC SER. NO.

Enter the CWP/REC serial number or enter N/A if no CWP/REC is required. Do not list the CWP/REC revision.

BLOCK 5 - SYSTEM/COMPONENT

Enter nomenclature and NPS (if applicable) for component being measured and if known, the end use (e.g., Valve body for ASW-352).

BLOCK 6 - REFERENCES

Enter the drawing number(s) or other references that show the material and design specifications for the component being measured (e.g., 845-4385050), the NDT inspection procedure number, and the drawing number and revision, material specification, or Military Standard used for acceptance criteria.

BLOCK 7 - MATERIAL

PC NO: Enter piece number of the part or component to be checked.

REF: Record the reference letter of the drawing or document listed in Block 6 which provides the assembly information for the piece listed in the "PC NO." block.

TYPE MATERIAL: Enter the material type (e.g., CRES-304, 7030 CUNI, 9010 CUNI).

MIL-SPEC: Enter the material MIL-SPEC or equivalent (e.g., ASTM, ASME, SPEC).

MATERIAL: Enter the abbreviation for the material being checked. If other than pipe, casting, or plate, write it in the block (e.g., forged) in the blank provided.

INSPECTION PROCEDURE: Enter the reference letter indicating the NDT inspection procedure number.

16 Oct 2019

ACCEPTANCE CRITERIA: Enter the reference letter indicating the drawing, material specification or Military Standard used for acceptance.

DESIGN MATL THICKNESS: Enter the design material thickness specified on the drawing, specification or standard.

MIN/MAX ACCEPT THK: Enter the drawing minimum acceptable thickness and if applicable the maximum drawing acceptable thickness with a MAX subscript.

ACTUAL THK: Enter the actual thickness as measured.

ACCEPT/REJECT: Check the appropriate box to indicate the results of the inspection.

BLOCK 8 - ULTRASONIC EQUIPMENT

INSTR (MOD/SER. NO): Enter the equipment model and serial number.

CAL DUE DATE: Enter the calibration due date of the equipment used during the measurement.

TYPE TRANSDUCER: Enter the type transducer used during the measurement. Check the appropriate block.

SIZE: Enter the transducer size used during the measurement.

FREQ: Enter the transducer frequency used during the measurement.

CAL STANDARD: Enter the serial no. of the calibration standard used.

COUPLANT: Enter the couplant used during the measurement.

BLOCK 9 - SURFACE FINISH ACCEPTABILITY

Enter the piece number being inspected and check the appropriate block (SAT or UNSAT) indicating the result of the surface finish inspection.

BLOCK 10 - INSPECTION AREA SKETCH/REMARKS

Enter a sketch of the area measured. In addition to the sketch, enter a list of any other references to determine acceptability of material thickness. Enter grid spacing if applicable. Enter a list of any other references to determine acceptability of material thickness. This block may also be used to record the results of multiple thickness readings on the same component. Enter remarks or comments pertinent to the inspection. Sign and date each entry.

BLOCK 11 - INSPECTOR/DATE

NDT Inspector(s) print name, enter signature and date signifying accuracy of the data recorded.

BLOCK 12 - NDT SUPERVISOR ID NO./DATE

NDT examiner or supervisor print name, enter signature, and date signifying the report as technically and administratively complete and accurate.

16 Oct 2019

SHIP TO SHOP TAG MAT-1 (GENERAL USE)

MAT-1 INSTRUCTIONS**SHIP TO SHOP TAG MAT-1 (GENERAL USE)**

S/N 0103-LF-984-3400

NOTE 1: NOT TO BE USED FOR CONTROLLED MATERIAL.**NOTE 2: THE MAINTENANCE PROVIDER WILL ESTABLISH A PROCESS FOR CONTROLLING MATERIAL BEING TRANSPORTED FROM SHIP TO SHOP. IF A PROCESS IS USED OTHER THAN DESCRIBED BELOW, ISIC APPROVAL IS REQUIRED.**

1. PURPOSE: To maintain positive identification and control of ship to shop transfer of equipment and components.

2. PROCEDURE:

- a. Ship's Force personnel will fill out all blocks in Part 1 and those marked with an asterisk (*) in Parts 2 and 3, attach the tag to the equipment or component and deliver to the Repair Activity. Verify correct EIC or APL is provided. Ensure accurate description of desired work is included in Job Brief/Equip Nomenclature Block. Example: No. 2 Main Lube Oil Pump Discharge Relief Valve Pop Test to 45 psi and attach test tag.
- b. When the component is delivered to the Repair Activity, ship's representative will sign and date Part 1 and 3 in the applicable blocks. The Repair Activity representative will sign and date Part 3 to acknowledge receipt of the equipment or component. Part 3 will be detached from the tag and given to the ship's representative.
- c. Upon completion of repairs, the Repair Activity will record work performed, sign and date Part 2 and forward Part 2 to the ship as notice that the equipment or component is ready to be picked up.
- d. The ship's representative will present Part 3 to the Repair Activity Shop when picking up the equipment or component. Ship's Force should sign the Work Request for job completion when the item is picked up. If desired, part 3 may be attached to the completed work request.

3. BLOCK DESCRIPTION:

- a. Part 1.

Ship	Ship's name and hull number
JCN	Job Control Number (UIC, Work Center and JSN)
EIC/APL	Equipment Identification Code or Allowance Parts
	List of item worked
Ser. No.	Equipment or Component Serial Number
Job Brief/Equip Nomenclature	Job Description and name of equipment or component
Lead W/C	Work center responsible for equipment or component
Date Delv'd	Date delivered to Repair Activity
Delivered By	Signature of person delivering item
- b. Part 2.

Ship	Ship's name and hull number
------	-----------------------------

16 Oct 2019

JCN	Job Control Number (UIC, Work Center and JSN)
Job Brief/Work Performed	
By Repair Activity	Job Description and brief explanation of work performed
Repair Activity Rep.	Signature of person verifying work complete
Date	Date of signature
c. Part 3.	
Ship	Ship's name and hull number
JCN	Job Control Number (UIC, Work Center and JSN)
Job Brief/Equip Nomenclature	Job Description and name of equipment or component
Received By	Signature of Repair Activity person accepting item for work
Date	Date of signature
Delivered By	Signature of person delivering item to
	Repair Activity
Date	Date of signature

PART I
CHAPTER 12
SUBMARINE PRESERVATION

REFERENCES.

- (a) NAVSEA SI 009-32 - Cleaning and Painting Requirements Accomplishment
- (b) NAVSEA S9086-VD-STM-010 - NSTM Chapter 631 (Preservation of Ships In-Service - General)
- (c) SMS 6310-081-015 - Submarine Preservation General Painting
- (d) NAVSEA ltr Ser 396A23/0641 of 25 June 93 - Trident Preservation Maintenance
- (e) NAVSEA ltr Ser 92T124/006 of 14 Mar 02 - Preservation QA Requirements for In-Service Submarines

12.1 PURPOSE. The purpose of this chapter is to specify maintenance requirements for preservation systems on submarines to the submarine maintenance community. This chapter provides the requirements for the Trident Repair Facilities to be used in all instances of maintaining, repairing, and replacing preservation systems on non-nuclear components and spaces of U.S. Navy submarines.

12.2 GENERAL PRESERVATION REQUIREMENTS.

- a. Reference (a) is the primary preservation document and complies with requirements of reference (b), except where deviations are specifically approved by Naval Sea Systems Command (NAVSEA). In instances where the requirements specified in reference (a) conflict with requirements specified in other standards (including but not limited to Naval Ships' Technical Manuals, Deep Diving General Overhaul Specifications, Maintenance Requirement Cards, Maintenance Standards, and Individual Ship's Paint Schedules), the criteria of reference (a) must govern. Supplemental information and requirements for submarines can be found in reference (c).
- b. To reduce overall maintenance and to help ensure that the maximum coating life is obtained, Section 11 of reference (b) and reference (a), as applicable, are invoked by reference (d) for all *Ohio* Class preservation maintenance. In that section, the term "shipyard" is to be interpreted to mean "Refit Facility".
- c. Preservation maintenance must be performed as authorized by work statements in work packages or as specifically authorized by NAVSEA or the Type Commanders. In process inspections must be performed per reference (a).

12.3 SUBMARINE PRESERVATION MAINTENANCE PROCESSES.

12.3.1 Maintenance Processes. Reference (c) provides additional requirements for accomplishing cleaning, surface preparation, inspection, and paint application to maintain or replace submarine coatings. The individual maintenance processes are organized into separate attachments which can be used independently to perform the particular maintenance, and provide guidance to accomplish

the minimum amount of work that has been historically required to support the safe operation of submarines.

12.3.2 Coating System Maintenance Authorization. Maintenance on a coating system is authorized by the work package or by the Current Ship's Maintenance Project, but it is the responsibility of the repair activity to evaluate the existing coating system to determine whether the authorized maintenance is adequate and proper to support reliable operation of the ship. When a repair activity determines, by inspection, that the level of repair needed is greater than authorized, they must obtain approval of the Type Commander for authorization to accomplish the additional work. The existing coating must be evaluated by a qualified technical evaluator who has, at a minimum, successfully completed the National Association of Corrosion Engineers (NACE) Level I Basic Coating Inspector Training (or equivalent) per reference (a).

12.4 QUALITY ASSURANCE FOR CRITICAL COATED AREAS. The Quality Control requirements of Section 11 of reference (b), and reference (a), as applicable, and reference (e) must form an integral part of a shipyard's overall Quality Control program. The maintenance activity Quality Assurance organization must be responsible for ensuring all requirements of this section are met.

12.4.1 Critical Coated Areas. Critical coated areas are areas where premature failure of the coating system cannot be detected by routine observation due to inaccessibility (such as inside ship's tanks) and those areas where restoration of the failed system cannot be undertaken without laying up the ship (e.g., nuclear space, ship's underwater hull requiring dry docking, and ship's tanks requiring separation from associated systems for access, cleaning and preservation).

12.4.2 Requirements for Critical Coated Areas. Critical coated areas must have:

- a. Surface preparation accomplished by certified blasters.
- b. Coatings applied by certified painters.
- c. Test and inspection records maintained per Table 631-11-1 of reference (b) and reference (a), as applicable.
- d. Key checkpoints signed off by certified coating inspectors. See additional Quality Assurance requirements for potable water tanks and other high purity water tanks in applicable sections of reference (b) and reference (a), as applicable.
- e. Any out-of-specification condition found is to be mitigated per reference (c), paragraph 9.

12.4.3 Test and Inspection Records. The maintenance activity must maintain auditable records of the tests and inspections listed in Table 631-11-1 of reference (b) and reference (a), as applicable, for critical coated areas. The records must be designed to provide objective quality evidence that applicable surface preparation and painting procedures were followed and that acceptable conditions and quality attributes were achieved for each parameter defined in Table 631-11-1 of reference (b) and reference (a), as applicable. A separate set of records must be maintained for each area painted. Records applicable to painting reported in docking reports must be incorporated into the docking report. The records must be available for three years after the delivery of the ship or completion of an overhaul or refit, unless otherwise specified. At the expiration of the records retention period, NAVSEA or its authorized representatives must be given a written notification. If no disposition instructions are received within six months from the notification, the records may be destroyed.

12.4.4 Blaster and Painter Certification. The maintenance activity must maintain a certification program for blasters and painters of critical coated areas. The program must include minimum training requirements and provide for adequate records verifying the completion and currency of training for each blaster or painter involved in surface preparation or application of coatings in critical areas. Documentation must be maintained verifying that only certified blasters and painters are used for preservation work in critical areas. Training must include all blasting and paint application techniques and procedures appropriate to the surface preparation and coating materials being used. These techniques and procedures include mixing, conditioning and thinning of paints, proper selection, control and maintenance of blasting and application equipment, and blasting and application techniques.

12.4.5 Coating Inspector Certification. The maintenance activity Quality Assurance Departments must maintain a certification program for paint inspectors of critical coated areas. The program must include minimum training requirements and provide for adequate records verifying the completion and currency of training for each paint inspector involved in inspecting surface preparation, or application of coatings in critical areas. Documentation must be maintained verifying that only certified paint inspectors are used for inspecting preservation work in critical areas. Training must include all techniques and procedures appropriate to inspecting the surface preparation and coating application being used. These techniques and procedures include determining the acceptability of surface preparation prior to commencement of paint application, determining the degree of compliance with blasting and painting procedures appropriate to the surface preparation and coating materials being used and determining the acceptability of finished products following established standardized acceptance criteria. At a minimum, coating inspectors must be certified and maintain certification to the NACE Level I Basic Coating Inspector training or equivalent per reference (a). Activities using application procedures such as thermal spray, resulting in deposition of flame sprayed aluminum or flame sprayed zinc, and other high technology coatings, are required to have at least one coating inspector professionally certified to NACE Level I or equivalent per reference (a). The coating inspector must be knowledgeable of the process and requirements.

12.4.6 Coating Inspector Responsibilities. Coating inspectors are responsible for providing reasonable confidence that material receipt and storage, surface preparation, paint application and paint curing are done per the requirements of references (a) and (b) and paint manufacturer instructions. These responsibilities require the coating inspector to:

- a. Inspect material storage and receipt inspection facilities.
- b. Ensure all inspection equipment requiring calibration certification is certified under organization metrology calibration programs.
- c. Perform in-process inspections of surface preparation and painting activities in critical coated areas.
- d. Verify successful completion of key checkpoints in the application process.
- e. Inspect and accept or reject final paint systems in critical coated areas.

12.4.6.1 Inspection of Storage and Receipt Inspection Facilities. Inspections of these areas must be done periodically to ensure paints are being stored and receipt inspected per manufacturer's product data sheets (American Society for Testing and Materials F718) and the requirements of reference (b) and reference (a), as applicable. It is an organizational level responsibility to obtain American

Society for Testing and Materials F718s and Material Safety Data Sheets for specified products. These documents must reflect the properties and requirements of the specified product as of the date of Navy approval for use. Records of inspection results must be maintained for NAVSEA audit, in a manner similar to the test and inspection records of paragraph 631-11.4 of reference (b) and reference (a), as applicable.

12.4.6.2 In-Process Inspections. Coating inspectors must be given notice and must perform an inspection of each critical coated area when the following key checkpoints are reached:

- a. Surface cleaned and ready for abrasive blasting.
- b. Surface abrasive blasted and ready for priming.
- c. Between each successive coat of paint and between stripe coats.
- d. Final coat of paint applied and area ready for final inspection.

The inspector is required to examine all data maintained by the paint foreman concerning environmental conditions, surface cleanliness, surface profile and paint thickness. Certain data must always be verified, depending on the checkpoint in question, including surface cleanliness, surface profile, dry film thickness and workmanship. Environmental data, such as temperatures, relative humidity and dew point need only be verified if the inspector is doubtful of the recorded values. Deficiencies in personnel training, certification, record maintenance, equipment maintenance or any matter that is not following good painting practice must be recorded. The coating inspector must verify successful completion of each checkpoint with a signature on an appropriate form, which must then be maintained per the instructions of paragraph 631-11.4 of reference (b) and reference (a), as applicable.

12.4.7 Inspection of Final Coating System. Inspection of final coating systems must be performed per section IV.1.e of Table 631-11-1 of reference (b) and reference (a), as applicable, by certified paint inspectors. The responsibility for proper application including all associated processes for the application of the coating systems resides with the maintenance activity. Coating imperfections found, which may cause premature coating failure, must be corrected before the paint system is accepted using appropriate touch-up procedures. Slight imperfections in the coating system are allowable, as long as they will not result in premature failure of the coating in the immediate vicinity of the imperfection. Such slight imperfections should be left intact, as trying to correct them could result in damage to the surrounding coating system. Failure to meet minimum dry film thickness requirements must result in application of an additional coat or coats of paint in deficient areas before the coating system is accepted.

12.4.8 Review of Records for Final Coating Evaluation. A certified paint inspector authorized to represent NAVSEA must review the paint records of each critical area to ensure the maintenance activity has maintained adequate control of the painting process. Records must include all the test and inspection data required by reference (b) and reference (a), as applicable. Failure to produce such records, or records which indicate that blasting and painting was done following governing specifications or instructions, may be grounds for rejection.

12.4.9 Acceptance or Rejection of Final Coating Systems. Certified coating inspectors independent of the group, shop or code accomplishing the preservation work are responsible for accepting or rejecting completed coating systems in critical coated areas. Acceptance or rejection of coatings

must be based on a review of the painting records for the area and an inspection of the area, per paragraphs 631-11.11 and 631-11.12 of reference (b) and reference (a), as applicable.

VOLUME V
PART I
CHAPTER 13
WIRE REMOVAL AND REPLACEMENT

LISTING OF APPENDICES.

A Wire Removal and Replacement Form MAT-2

13.1 PURPOSE. To establish requirements, procedures and administrative tools to control work involving wire removal and connection. The disconnecting and reconnecting of electrical leads must be formally controlled to preclude inadvertent equipment configuration changes. Improper wire connections during maintenance have caused incidents of equipment malfunction and damage, and may result in increased personnel hazard.

13.2 ACTION. All operations which involve the physical removal or connection of one or more wires from their termination point will be documented using Appendix A of this chapter. A separate form will be used for each separate component or system (e.g., maintenance on two instrumentation drawers should be documented on two separate forms).

- a. For maintenance actions which will result in an intentional wiring configuration change (e.g., Ship Alteration installation) Appendix A of this chapter must be documented such that the disconnecting of old wiring and the reconnecting of new wiring is verified to be per print.
- b. Blueprints, drawings and schematic diagrams will be reviewed prior to work. The expected configuration must be entered on the Appendix A of this chapter before any wires are disconnected or moved. This will identify any discrepancy between the reference drawing and the ship's wiring configuration. Temporary wire markings will be used for positive identification if necessary and all checks will include proper hardware stack-up (lugs, washers, fastener tightness, etc.).
- c. A clear method of identifying wire connections must be used (e.g., a worker who was not involved in the disconnection will be able to reconnect the wires without the need for further information sources). If necessary, a simple sketch can be generated and kept with the wire removal form to facilitate this, but the sketch is not intended to replace the use of Appendix A.
- d. Jumpers. Use of jumpers internal to cabinets requires use of Appendix A of this chapter, and if more than one jumper is used, a marking system must be used to identify them and prevent confusion (i.e., marked as Jumper-1, Jumper-2 or use different colored wires). When installing jumpers, fill out the "Wires Reconnected" blocks of Appendix A of this chapter first, then the "Wires Disconnected" blocks after the jumpers are removed. These procedures are not intended to replace any of the requirements of Section 4.d of Appendix F of the Tagout Users Manual.

APPENDIX A**WIRE REMOVAL AND REPLACEMENT FORM MAT-2**

Page ____ of ____

Job Description _____ Date _____

Equipment or Component Affected _____

Wiring Diagram used _____

WIRES TO BE DISCONNECTED					DISCONNECTED		WIRES TO BE RECONNECTED					RECONNECTED	
Lead Number	Terminal Board#	Color Code	1 st CK	2 nd CK	1 st CK	2 nd CK	Lead Number	Terminal Board#	Color Code	1 st CK	2 nd CK	1 st CK	2 nd CK

Print name and initials for each 1st and 2nd checker listed.

Initials	Print Name		Initials	Print Name

Supervisor Review _____ Title _____ Date _____

NOTES

1. Maintenance personnel are to review diagrams, drawings, etc. Complete the “Lead Number” and “Terminal Board” number columns on the “Wires To Be Disconnected” and the “Wires To Be Reconnected” sections of the wire removal form. If colors are specified on the drawing, that can also be filled in on the “Color Code” block of the “wires to be disconnected” and “Wires To Be Reconnected” sections of the wire removal form.
2. The first checker will open the panel or component where the wires are to be removed and check the configuration as compared to what was obtained from the drawings. If the colors have not been entered, they should be entered at this time in the “Wires To Be Disconnected” section of the form. The first checker should initial the 1st check block on the “Wires To Be Disconnected” section indicating that the individual checked the configuration and the identification of each wire compared to the form. The first checker will also complete the lead number, terminal board number and color code blocks in the “Wires To Be Reconnected” section and initial the “1st Check” block in the wires to be reconnected section. If the required configuration is different than the actual configuration, the technician will inform his appropriate chain of command and alter the wire removal form to reflect actual condition.

CAUTION: ALTHOUGH IN MOST CASES THESE COLUMNS WILL BE IDENTICAL TO THE WIRES REMOVED SECTION, THERE ARE SITUATIONS WHERE THEY WILL NOT BE. EXAMPLES INCLUDE SWAPPING OF FIELD LEADS DURING PERIODIC MAINTENANCE ON GENERATORS, FINDING EQUIPMENT NOT WIRED PER THE DRAWING OR REPLACING LEADS INSIDE EQUIPMENT. IF THE COLORS OF THE WIRES TO BE RECONNECTED ARE CHANGED, THE FIRST CHECKER SHOULD ANNOTATE THIS IN THE COLOR CODE BLOCK OF THE WIRES TO BE RECONNECTED BLOCK.

3. The second checker will perform the same process as the first checker independently and prior to removal of any wires. The intent of the 2nd check block is that an independent person verifies the wire configuration, including the color code, before the wires are removed.
4. The first checker will remove all of the wires and initial the “Disconnected 1st Check Block” to the right of the “Wires To Be Disconnected” section of the form.
5. The second checker will verify that the correct wires were removed and initial the “2nd Check” block to the right of the “Wires To Be Disconnected” section of the form.
6. When the work is completed, the first checker will re-attach each wire per the “Wires To Be Reconnected” section of the form and initial the form as each wire is reconnected (vice waiting until the end) to ensure there is no confusion or errors in reconnecting the wires. This step includes entry of the wire color code just in case a wire was replaced with a different color wire than what was removed. Once each wire is reconnected, the first checker will initial the “reconnected 1st check” block to the right of the “Wires To Be Reconnected” section.

7. The second checker will verify the wires were reconnected correctly one at a time and initial in the “2nd Check” block to the right of the “Wires To Be Reconnected” section of the form.
8. The leading chief petty officer for the applicable division will review the completed form and sign in the supervisor review block at the bottom of the form.

VOLUME V**PART III****FOREWORD****SCOPE OF CERTIFICATION****LISTING OF APPENDICES.**

- A List of Acronyms
- B Glossary of Terms

1.1 **PURPOSE.** Part III of this volume provides information to supplement Part I in the area of Scope of Certification. It provides processes and guidance to ensure, with a reasonable level of confidence, that work on Scope of Certification systems on Deep Submergence Systems (DSS) and Host Submarines and ships is accomplished with first time quality. It contains the necessary material and procedural requirements for DSS certification of manned noncombatant submersible, submarine oriented DSSs including diving systems, and the man rated portion of their handling systems.

1.2. **SCOPE.** This section is directive in nature and may be cited as authority for action. It is applicable to every ship and DSS in the fleet. Where higher authority imposes more stringent requirements, such requirements will have precedence. When such conflicts are identified they should be reported immediately to the Type Commanders (TYCOM) or Immediate Superior In Command as appropriate. In the absence of any guidance, refer to the order of precedence listed in Part I, Foreword, paragraph 1.3.3 of this Volume.

1.3 NEED FOR SCOPE OF CERTIFICATION QUALITY MAINTENANCE PROCESSES.

- a. The Deep Submergence Systems Program (DSSP) resulted from the Deep Submergence System Review Group (DSSRG) which was formed after the loss of the USS THRESHER (SSN 593) with all hands in April 1963. The Secretary of the Navy directed the DSSRG to examine the Navy's plans for the development and procurement of components and systems related to location, identification, rescue from and recovery of deeply submerged vessels from the ocean floor and to recommend a program that would result in optimizing the future effectiveness of such components and systems.
- b. During the development of the DSSP, there were a number of mishaps that emphasized the importance of such a program. These incidents emphasize the need for properly designed systems, meeting design requirements and operating, maintaining and monitoring systems following approved procedures.
 - (1) In the early 1970s, two separate commercial incidents claimed three lives. The better known, the Johnson Sea Link entrapment, was where two lives were lost when a DSV became entangled on a scuttled destroyer.
 - (2) In 1982, five divers lost their lives when a vacuum was inadvertently drawn onboard USS GRAYBACK (SS 574). This led to redesign of diving systems to ensure a vacuum could not be drawn. It also led to ensuring Naval Sea

Systems Command (NAVSEA) 00C is involved in the design of submarine oriented diving systems, in the approval of diving equipment, and in NAVSEA 07 SCA surveys of diving systems when NAVSEA 00C deems it necessary. Additionally, it led to requiring safety analysis during design for all systems within the Scope of Certification.

- (3) In the 1980s, two Navy submersibles had casualties that did not result in any injuries but had the potential for serious implications. One DSS became entangled on the ocean floor when it began operating in an unauthorized area. In 1987, the other DSS lost buoyancy on sea trials after an overhaul as a result of a ballast tank valve being installed backwards. In 1987 a civilian submersible viewport failed due to improper design resulting in the death of one of the operators.

APPENDIX A

LIST OF ACRONYMS

ADS	Atmospheric Diving System
CMH	Controlled Material Handler
CMPO	Controlled Material Petty Officer
COC	Certificate of Compliance
COMNAVSPECWARGRU	Commander, Naval Special Warfare Group
COT	Certificate of Test
CSP	Certification Survey Plan
CWP	Controlled Work Package
DDS	Dry Deck Shelter
DFS	Departure From Specification
DSS	Deep Submergence System
DSSP	Deep Submergence Systems Program
DSSRG	Deep Submergence Systems Review Group
EHF	Electrical Hull Fitting
FADS	Fly Away Dive Systems
FBW	Fly-By-Wire
FFF	Form, Fit, Function
FMA	Fleet Maintenance Activity
HIP	Hull Integrity Procedure
ISIC	Immediate Superior In Command
JCN	Job Control Number
LWC	Lead Work Center
MCD	Material Control Division
MIC	Material Identification and Control
MOA	Memorandum of Agreement
MRC	Maintenance Requirement Card
MTT	Material Tracking Tag
NA or N/A	Not Applicable
NAVSEA	Naval Sea Systems Command
NSN	National Stock Number
OQE	Objective Quality Evidence
PMS	Planned Maintenance System
PTC	Personnel Transfer Capsule
QA	Quality Assurance
QAI	Quality Assurance Inspector
QAO	Quality Assurance Officer
REC	Re-Entry Control

16 Oct 2019

RFI	Ready for Issue
SCA	System Certification Authority
SCS	Ship Control System
SDS	Salvage Dive Systems
SDV	Seal Delivery Vehicle
SMIC	Special Material Identification Code
SOC	Scope of Certification
SRC	Submarine Rescue Chamber
SRCFS	Submarine Rescue Chamber Fly Away System
SUBSAFE	Submarine Safety
TYCOM	Type Commander
URO	Unrestricted Operation
WSS	Weapons Systems Support

APPENDIX B**GLOSSARY OF TERMS**

<u>TERM</u>	<u>DEFINITION</u>
Atmospheric Diving System	The Atmospheric Diving System (ADS) is a one-man, one-atmosphere, dry, submersible used primarily for submarine rescue. It is a surface supported submersible with a primary mission of clearing debris from the hatch of a disabled submarine and connecting the downhaul cable for the Submarine Rescue Chamber.
Certification	The process of certification application, review, survey and approval of all items and procedures within a Deep Submergence System (DSS) Scope of Certification (SOC) that affect the safety of DSS personnel. Written statement attesting that an item, procedure or system meets specified requirements.
Certification Package	The certification package consists of the Objective Quality Evidence supporting conformance to certification requirements.
Certification Survey Plan	A detailed checklist derived from the SOC which is used to identify the description of requirements and the supporting documentation to substantiate the requirements. It is used as the basis for certification surveys. Certification Survey Plans replace Pre-Survey Outline Booklets which were previously used for this purpose.
Cognizant Technical Authority	The organization which the NAVSEA Chief Engineer has designated as having the authority to represent the Chief Engineer on a specific technical area.
Critical Explodable Item	Any explodable item, which by exploding, affects the safety of the DSS personnel.
Critical Implodable Item	Any implodable item, which by imploding, affects the safety of the DSS personnel.
Deep Submergence Rescue Vehicle	A non-combatant submersible, consisting of three spheres with the internal pressure of each sphere normally at one atmosphere, but slightly elevated internal pressures may be experienced, which carries crewmembers of a disabled submarine to the surface.
Deep Submergence System Certification	The authorization granted by the System Certification Authority (SCA) to operate a DSS within its prescribed parameters.
Deep Submergence System Personnel	The occupants or operators of the DSS. The safety of personnel involved with the external handling and external equipment operations of the DSS is not covered by the certification process unless a danger to their well-being imperils DSS personnel.
Deep Submergence System Unit	Those systems and components which, when working together, provide the capability for manned underwater operations. Elements may include a manned vehicle, shore training facilities, designated support equipment, those systems that are a temporary or permanent part of a submarine that are used to disembark or recover personnel such as a Dry Deck Shelter (DDS) or Lockout Trunk, and handling equipment.

Differential Loading	The presence of pressure on the interior or exterior surface of a component, piping system, sphere, implodable or other object which is more or less than the pressure located on the opposite surface.
Dry Deck Shelter	A unit consisting of three spheres which can be attached to a submarine or operated at designated shore base training facilities. The DDS has a specified external test depth and has specific internal pressure limits to which each sphere is operated. The DDS can deploy Special Operating Forces and their equipment, including SEAL Delivery Vehicles, while submerged.
Explodable Volume	Any pressure housing containing a volume of gas at a pressure above the external ambient sea pressure (at any depth) which has the potential to burst. Note that some volumes may be explodable at shallow depths and implodable at deeper depths.
Flotation	The materials, components or equipment that provide buoyancy to the DSS. Syntactic foam is a type of generally used flotation or buoyancy material.
Functional Audits	A functional audit is an audit of an activity performing SOC work. It is a review of policies, processes, controls, procedures and associated functions used to perform specific certification related tasks. The SCA will develop (define) an audit plan. This audit supplements the DSS construction, availability and sustaining surveys performed using the Certification Survey Plan.
Hull Envelope	The external hull and its penetrations including plates, inserts, frames, tanks, etc. It is the primary boundary between operators and the environment.
Hull Integrity Fasteners	Hull Integrity Fasteners (HF) are male threaded items such as bolts, studs and cap screws loaded by the differential between sea pressure and DSS internal atmospheric pressure and which are a part of pressure hull integrity component or of systems penetrating the pressure hull integrity boundary from the hull to and including the inboard valve. Does not include nuts and lock washers.
Hull Integrity Procedures (HIPs)	<p>A group of procedures (currently DDS only) that must be performed as scheduled to sustain certification. These procedures perform periodic tests and inspections to:</p> <ol style="list-style-type: none">1. Minimize the possibility of undetected degradation of hull integrity boundary materials due to their service environment.2. Provide evidence that acceptable material conditions are being maintained to provide confidence that safe operations may be continued.3. Provide specific guidance as to how the test or inspection must be conducted, extent of inspection, procedure by which to measure the material conditions, criteria of acceptance and the required intervals between inspections for scheduling purposes.
Hull Openings	Openings in the pressure hull used for access, escape and logistics, which are designed to withstand the differential of sea pressure to internal hull pressure at collapse depth.

Hyperbaric Chamber	Pressure resistant structure, including reinforced openings, penetrations, hatches, piping, boundary valves and medical lock that experience differential pressures and provides space for personnel. Recompression chambers are examples of hyperbaric chambers.
Immediate Superior In Command	For Submarine Type Commander (TYCOM) DSS assets it is the Squadron or Group. For DDS units it is Commander, Naval Special Warfare Group (COMNAVSPECWARGRU) Three. When the DSS unit is attached to a host ship the Immediate Superior In Command must be as identified in the Memorandum of Agreement.
Implodable Volume	Any pressure housing containing a non-compensated compressible volume at a pressure below the external sea pressure (at any depth down to the maximum operating depth) which has the potential to collapse. The outer shell volume is used when calculating the volume of an implodable. Subtracting the volume of items internal to the implodable is not allowed. Externally mounted lights, gauges, bottles, flasks, spheres, tanks and beacons are examples of implodable items.
Initial Certification	A certification process conducted on all DSSs procured for Navy use following demonstration of material and procedural adequacy.
Letter of Certification	A letter, message or other formal correspondence issued by the SCA, stating the terms and conditions of certification.
Life Support System	A structure (sphere, chamber or habitat at one atmosphere or greater internal pressure) which provides a livable environment for personnel or a piping system which provides or monitors a metabolic breathing mixture suitable and safe for use by divers or operators of DDS, Submarine Rescue Chambers or Recompression Chambers.
Manned Testing	The act of enclosing personnel inside a DSS asset and isolating them from the outside or host submarine atmosphere or environment, regardless of the time period involved during testing or training following a certification plan for initial certification or reinstatement of certification of the DSS as approved by the SCA per NAVSEA SS800-AG-MAN-010/P-9290, section 2.9.
Manned Use	The act of enclosing personnel inside a DSS asset and isolating them from the outside or host submarine atmosphere or environment, regardless of the time period involved during normal operations. This can include testing and training in pursuit of certification or recertification of the DSS as described in NAVSEA SS800-AG-MAN-010/P-9290, section 3.7.4.
Non-critical Explodable Item	Any explodable item, which by exploding, does not affect the safety of DSS personnel.
Non-critical Implodable Item	Any implodable item, which by imploding, does not affect the safety of DSS personnel.

Objective Quality Evidence	Any documented statement of fact, either quantitative or qualitative, pertaining to the quality of a product or service based on observations, measurements or tests that can be verified. Evidence will be expressed in terms of specific quality requirements or characteristics. These characteristics are identified on drawings, in specifications and other documents that describe the item, process or procedure.
Planning Yard	The Naval Shipyard or other activity designated by NAVSEA to perform technical services in design matters, maintaining up to date files of working drawings and Selected Record Drawings.
Program Manager	The organization or activity that acts for the DSS Sponsor and provides overall program management direction.
Reinstatement of Certification	The SCA will reinstate certification when the cause of the suspension has been thoroughly investigated and satisfactorily corrected and the material and procedural adequacy of the DSS has been re-established.
Scope of Certification	Those systems, subsystems and components and the associated maintenance and operational procedures required to provide maximum reasonable assurance that DSS personnel are not imperiled during system operations.
Scope of Certification Notebook	A document containing simplified diagrams which outline those structures, systems, subsystems and equipment within the DSS SOC and may provide guidance to ensure compliance with the certification requirements.
Scope of Certification Planned Maintenance System	PMS which must be satisfactorily performed within periodicity to maintain system SOC certification.
Skirt	A formed shape which is permanently attached to a sphere. The skirt is designed to mate the sphere or DSS unit to another object and the interior of the skirt is designed to be equalized to the same interior pressure as the sphere, allowing the sphere to be opened. When mated, the skirt is subjected to the same differential loading as the sphere.
Special Material Identification Code (SMIC)	<p>A two-digit letter or number code at the end of the National Stock Number or Navy Item Control Number to provide visibility to designated items to ensure maintenance of their technical integrity. The following SMICs from NAVSUPWSSINST 4355.7 Series are for material commonly used in the Fleet for DSS-SOC systems:</p> <p>D0 An item that requires special cleaning and packaging for oxygen or nitrogen service (MIL-STD-1330/MIL-STD-1622 critical clean) and is considered Deep Submergence Program Scope of Certification MCD "B" material. Each item has undergone receipt inspection to ensure it meets the requirements of the applicable specification or drawing and is certified for use in DSS-SOC applications. Items must have serialization markings identified on a securely attached Ready For Issue (RFI) tag. Material coded with SMIC D0 requires receipt inspection and segregated storage.</p>

- D4 An item that supports the Deep Submergence Program and is considered Scope of Certification MCD “B” material. Each item has undergone receipt inspection to ensure it meets the requirements of the applicable specification or drawing and is certified for use in DSS-SOC applications. Items must have serialization markings identified on a securely attached RFI tag. Material coded with D4 SMIC requires receipt inspection and segregated storage.
- D5 An item that supports the Deep Submergence Program and is considered Scope of Certification MCD “A” material. Each item has undergone receipt inspection to ensure it meets the requirements of the applicable specification or drawing and is certified for use in DSS-SOC applications. Items must be permanently marked or tagged with a unique number traceable to the OOE. Material coded with D5 SMIC requires receipt inspection and segregated storage.
- D6 An item that requires special cleaning and packaging for oxygen or nitrogen service (MIL-STD-1330/MIL-STD-1622 critical clean) and is considered Deep Submergence Program Scope of Certification MCD “A” material. Each item has undergone receipt inspection to ensure it meets the requirements of the applicable specification or drawing and is certified for use in DSS-SOC applications. Items must be permanently marked or tagged with a unique number traceable to the OOE. Material coded with D6 SMIC requires receipt inspection and segregated storage.
- D7 An item that supports the Deep Submergence Program and is considered Scope of Certification, MCD “C” material. Each item has undergone receipt inspection to ensure it meets the requirements of the applicable specification or drawing and is certified for use in DSS-SOC applications. Items must have serialization markings identified on a securely attached RFI tag.
- D8 An item that requires special cleaning and packaging for oxygen or nitrogen service (MIL-STD-1330/MIL-STD-1622 critical clean) and is considered Deep Submergence Program Scope of Certification MCD “C” material. Each item has undergone receipt inspection to ensure it meets the requirements of the applicable specification or drawing and is certified for use in DSS-SOC applications. Items must have serialization markings identified on a securely attached RFI tag.

Surveys	Initial and sustaining surveys verify the adequacy of the DSS for manned use to the limits for which certification is being requested or was issued. This is accomplished by examining Objective Quality Evidence, reviewing processes and procedures and inspecting equipment to validate compliance with approved procedural, design, fabrication, test and maintenance requirements.
Suspension of Certification	A prohibition on manned operation of the DSS until the cause of the prohibition has been resolved.
Sustaining Activity	The recipient of the Letter of Certification. The Sustaining Activity maintains and operates the DSS in the as certified condition per the Letter of Certification required by the appropriate NAVSEA technical specification or manual.
Sustaining Certification	To sustain certification, the DSS must be operated and maintained in the as certified condition per the Letter of Certification.

System Certification Authority	The code within NAVSEA assigned the responsibility for the manned DSS process by Naval Operations. The SCA has final authority and responsibility for granting certification for DSSs covered by this manual. The SCA resides with the Deputy Commander for Submarines (NAVSEA 07). The working responsibility for certification is vested in NAVSEA 07Q.
Technical Assistance Review	An overall or specific area review of certification related documentation, processes or practices conducted at the request of the Program Manager to provide SCA guidance in support of the assigned DSS or facility certification.
Technical Data	Recorded information (regardless of the form or method of recording) of a scientific or technical nature (including computer databases and computer software documentation). This term does not include computer software or financial, administrative, cost or pricing, or management data or other information incidental to contract administration. The term includes recorded information of a scientific or technical nature that is included in computer databases. For these purposes, technical data includes the characteristic of a particular science, trade or profession.
Type Commander	For Submarines and Submarine TYCOM DSS assets it is Commander Submarine Force Atlantic and Commander Submarine Force Pacific. For DDS units it is Commander, Naval Special Warfare Command. When the DSS unit is attached to the host ship the TYCOM must be as identified in the Memorandum of Agreement.
User Activity	The activity that provides and exercises operational control for the DSS. In some instances the User Activity and the Sustaining Activity will be the same.
Waterline	The term “waterline” in this manual refers to where the hull of a ship meets the surface of water when afloat.
Work	<ul style="list-style-type: none">a. Any action that actually or potentially changes (including disassembly for the purposes of inspection or repair) the approved configuration of any part, component or ship’s system.b. Any action that removes or affects the ship’s ability to operate ship’s systems or components following ship’s systems or operating manuals or reactor plant manuals.c. Any testing or inspections required to establish, maintain or reestablish certification.d. Any design, engineering, planning or configuration management functions that involve the final review or approval of technical information. <p>Examples of work include the following:</p> <ul style="list-style-type: none">1. Action which disassembles or removes any part, component or ship’s system.2. Action specified in a Technical Work Document.

Work (Cont'd)

3. Any action that removes or affects the ship's ability to operate ship's systems or components following ship's systems manuals, operating manuals or reactor plant manuals, excluding tagout per the Tagout Users Manual, including but not limited to:
 - (a) Component or system tests.
 - (b) Intrusive inspections (such as breaking the plane of electrical panels requiring electrical safety).
 - (c) Valve line ups that alter the normal system line up not governed by operating procedures.
 - (d) Removing valve hand wheels, disconnecting of reach rods.

VOLUME V
PART III
CHAPTER 1
ORGANIZATIONAL RESPONSIBILITIES

REFERENCES.

- (a) NAVSEA SS800-AG-MAN-010/P-9290 - System Certification Procedures and Criteria Manual for Deep Submergence Systems
- (b) COMSUBLANT/COMSUBPACINST 3502.1 - Continuous Improvement in the Submarine Force

1.1 PURPOSE. To provide a list of responsibilities and duties of key personnel within the organizations that are involved in the Scope of Certification (SOC) Program. Responsibilities and duties listed in this section are SOC specific and are in addition to the responsibilities listed in Part I, Chapter 1 of this volume. Scope of Certification Organization.

- a. Type Commander (TYCOM).
- b. Immediate Superior In Command (ISIC).
- c. Sustaining Activity.
- d. User Activity.

1.2 RESPONSIBILITIES.

1.2.1 Type Commander. The TYCOM for Deep Submergence Systems (DSS) is responsible for the following items:

- a. Obtain System Certification Authority (SCA) approval for exception to Re-Entry Control (REC) requirements in SOC systems.
- b. Administer a Departure from Specification (DFS) system to:
 - (1) Establish and maintain an auditable method of processing requests for approval of DFS.
 - (2) Review and evaluate DFS requests and obtain clarification of technical specifications from Naval Sea Systems Command (NAVSEA) where appropriate.
 - (3) Approve or disapprove Non-SOC DFS requests.
 - (4) Monitor all outstanding major DFS and ensure ISIC records agree with TYCOMs and pursue DFS clearance.
 - (5) Obtain Program Manager approval of all DFSs in DSS SOC systems, unless the Program Manager has delegated, in writing, authority to approve specific routinely recurring DSS SOC DFSs or authority to approve minor DSS SOC DFSs.
 - (6) Keep the Program Manager and SCA informed of all DFS requests.

- (7) Liaison with the Program Manager on any outstanding DFS items requiring NAVSEA action. Provide a periodic status report to the Program Manager of those DFSs for which NAVSEA action is overdue.
- c. Perform assessments of ISICs responsible for DSSs annually not to exceed 18 months.
- d. At the discretion of the TYCOM perform random, unannounced User or Sustaining Activity Quality Assurance (QA) assessments and monitor visits.

NOTE: THE SCA, NOT THE TYCOM, ALSO APPROVES INITIAL DSS CERTIFICATION.

- e. Review and evaluate ISIC reports of corrective action taken on QA assessments to ensure compliance with this program.
- f. Perform an annual self-evaluation of the QA program.
- g. Evaluate and analyze proposed changes to this volume.
- h. Recommend to the SCA suspension and reinstatement of DSS certification as appropriate.
- i. Perform annual SOC awareness training for staff members that routinely review SOC Objective Quality Evidence (OQE), make determinations on SOC DFSs and perform other SOC work oversight functions.

1.2.2 Immediate Superior In Command. The ISIC for the DSS and host submarines and ships is responsible for the following:

- a. Organize and implement a QA program to carry out the provisions of this volume.
- b. Organize and implement a program to verify performance of required maintenance to sustain the material condition necessary to support Unrestricted Operations to authorized operating depth following the applicable class Hull Integrity Procedure Maintenance Requirement Card manual and Volume VI of this manual.
- c. (Submarines only) Organize and implement a work request screening process such that those jobs requiring special controls are recognized and the supporting technical documentation is provided to the maintenance activity as required by this volume (not applicable to COMNAVSPECWARCOM).
- d. Ensure DSS certification continuity report, when required by this volume, is received and reviewed before DSS manned use. In particular, the ISIC will ensure all Hull Integrity Procedure planned maintenance is up to date. Discrepancies noted must be resolved prior to underway.
- e. In accordance with reference (a), paragraph 3.7.4, when performing manned operations (manned use) in pursuit of certification or reinstatement of certification, review and approve User or Sustaining Activity requests prior to conducting these operations, as applicable.
- f. Review and sign the Memorandum of Agreement (MOA) required by Volume II, Part I, Chapters 3 and 4, of this manual and reference (a). This agreement will list the responsibilities and actions of each party before start of any availability (e.g., Tiger Team repairs, technical assist visits) that involves work within SOC boundaries to

ensure responsibilities for recertification of work performed is not split between maintenance activities and that each activity is responsible to certify the work they performed.

- g. Administer a DFS system to:
 - (1) Establish and maintain system of processing requests for DFSs.
 - (2) Review and evaluate DFS requests and obtain clarification of technical specifications from TYCOM or NAVSEA where appropriate.
 - (3) Approve or disapprove DFS requests as authorized by the applicable SOC Notebook.
 - (4) Obtain TYCOM or NAVSEA approval of DFS when required by the appropriate TYCOM or NAVSEA directive, technical specification or manual.
 - (5) (Submarines only) Ensure the deployed ISIC directing the supporting Fleet Maintenance Activity (FMA) will act as the cognizant ISIC for those actions required to approve, review and track DFSs for ships deployed. The parent ISIC, with concurrence from the deployed ISIC, may, on a case-by-case basis, perform these functions. In such cases, the parent ISIC will inform the deployed ISIC when such action(s) concurred upon are complete.
 - (6) (Submarines only) The parent ISIC will provide a complete file of all outstanding DFSs to the deployed ISIC, prior to any ship deployment. The deployed ISIC will provide a complete file of all outstanding DFSs to the parent ISIC at the end of deployment.
 - (7) Specify procedures for:
 - (a) Submission of OPNAV form 4790/2K for DFSs that require a future maintenance action to clear the departed condition.
 - (b) Submission of OPNAV form 4790/CK for permanent repair DFSs which result in new Allowance Parts List and Coordinated Shipboard Allowance List support requirements.
 - (8) (Submarines only) Keep parent ISIC apprised on the status of DFSs for deployed units.
 - (9) Maintain files of outstanding DFSs.
 - (10) Aggressively pursue clearing of DFSs.
- h. (Submarines only) Monitor the QA program and procedures of assigned FMA periodically and monitor corrective actions on discrepancies noted during the last TYCOM audit.
- i. (Submarines only) Schedule and conduct a QA Program assessment in conjunction with the Fleet Readiness Training Plan (or as determined by each TYCOM) of all assigned ships to ensure the repair actions undertaken by Ship's Force conform to the provisions of the QA Program as well as pertinent technical requirements.
- j. (Submarines only) Review and endorse TYCOM audit report of assigned FMA(s).

- k. Conduct periodic monitoring of Ship's Force work and QA program on all assigned DSS during maintenance periods.
 - (1) Perform at least one surveillance during each refit, upkeep or FMA availability.
 - (2) Conducting monitoring during industrial availabilities (e.g., Selected Restricted Availability, Drydocking Selected Restricted Availability, Extended Refit Period, Post Shakedown Availability, Phased Maintenance Availability, Docking Phased Maintenance Availability, Depot Modernization Period, Engineered Refueling Overhaul and Regular or Refueling Overhaul).
- l. Properly maintain certification on assigned DSS.
- m. Review and evaluate User or Sustaining Activity reports of corrective action taken on SCA Surveys to ensure compliance with this program. Retention of OQE to substantiate reviews or evaluations is not required except in the case where the review or evaluation of a Survey response was determined to be unsatisfactory.
- n. Ensure the Sustaining Activities properly perform internal surveys per reference (a).
- o. Ensure Sustaining Activities properly process requests for sustaining certification.
- p. Perform QA assessments of the Sustaining Activities or User Activities associated with the DSS and host submarines and ships annually not to exceed 18 months. Forward results of the assessments to the TYCOM and Program Manager.
- q. Route all appropriate DSS SOC DFSs to TYCOM and Program Manager for approval.
- r. Conduct a vertical audit of assigned DSS unit's OQE for all work within the SOC accomplished by the User Activity and the Sustaining Activity prior to the first sea trials or manned operation at the end of each major availability and after completion of any major repairs, modifications or alterations completed during non-depot level availability periods. Not required if an SCA Survey is scheduled at the conclusion of the availability.
- s. Perform annual SOC awareness training for staff members that routinely review SOC OQE, make determinations on SOC DFSs and perform other SOC work oversight functions.
- t. Ensure fact-finding critiques are held to establish underlying causes and pursue corrective actions when necessary. When major errors or problems occur during maintenance of DSS or SOC systems, a critique may be necessary. Examples include when significant problems or trends occur or those that did result or could result in incidents, significant unplanned rework, serious equipment damage, malfunction or personnel injury. Minor problems are isolated deficiencies with minimal overall impact and no significant consequences; these should normally be corrected on the spot and without expending much time and effort.
 - (1) Contact the TYCOM immediately of issues which will be result in a Submarine Safety (SUBSAFE), Fly-By-Wire (FBW) Ship Control System (SCS), DSS or SOC critique, SUBSAFE, FBW SCS, DSS or SOC trouble report or SUBSAFE, FBW SCS, DSS or SOC fact-finding.

- (2) (Submarines only) Additional guidance and direction for critiques is contained in reference (b).
- (3) (Submarines only) Copies of critiques and incident reports for DSS or SOC issues that result in a problem severity level of Level 1 (critical) or Level 2 (serious) will be sent to the TYCOM electronically.

1.2.3 Sustaining Activity or User Activity. Sustaining and User Activities in some cases may be the same organization. The Sustaining Activity is responsible for ensuring that the requirements established in the Letter of Certification and reference (a) are met. The Sustaining Activity and User Activity will:

- a. Follow REC procedures during re-entry of a certified component, system or a portion of a system.
- b. Document all deviations from the certification requirements in a form suitable for survey.
- c. Accomplish periodic maintenance actions as specified in the supporting requirements developed for each DSS and ensure that adequate OQE is available during surveys in a format conducive to review.
- d. Ensure accountability of maintenance for each DSS and establish an auditable system of scheduling, performing and reporting accomplishment of Maintenance Requirement Cards.
- e. Submit an official request to NAVSEA for continuation of certification for a specific time period and include written rationale for the continuation together with a status of maintenance and system condition.
- f. Sustaining Activities will conduct internal surveys per section 4.1.2 of reference (a) and:
 - (1) If the SCA sustaining certification survey periodicity is 15 months or greater, perform at least two internal surveys between the SCA surveys, not to exceed a 12-month periodicity.
 - (2) Prior to the SCA on-site survey, conduct an internal survey to evaluate compliance with certification requirements.
 - (3) For other than overhaul or new construction, complete the Sustaining Activity's internal survey and submit it to the Program Manager per the applicable SOC notebook or reference (a) section 4.1.2.
 - (4) Overhaul and New Construction. The activity's internal survey must be completed not more than 30 days prior to the SCA survey and the results of the internal survey must be submitted to NAVSEA at least 10 working days prior to the start of the SCA survey.
 - (5) Obtain NAVSEA approval of an updated Certification Survey Plan at least two weeks prior to the SCA survey for an SCA Certification Survey Only.
- g. Report to NAVSEA resolution of all survey deficiencies.

- h. Retain the completed maintenance and dive log, including, where required, pre-dive and post-dive check-off procedures for all evolutions from survey to survey. The procedures utilized must have prior Program Manager and SCA concurrence.
- i. Obtain NAVSEA approval for alterations to items within the SOC. This includes the addition of any mission-related equipment outside the defined lines of the DSS as deemed necessary by the SCA.
- j. Accomplish and report Maintenance Requirement Cards and Hull Integrity Procedures following the assigned periodicities approved by the Program Manager and immediately resolve any unacceptable conditions found as a result of conducting the maintenance procedures or inspections.
- k. Review and sign the MOA required by Volume II, Part I of this manual. This agreement, as a minimum, must define the activity's functions and responsibilities for implementing and administering REC procedures. Volume II, Part I of this manual contains specific requirements for MOAs. All applicable activities must sign the MOA prior to the start of work.
- l. The User Activity must issue the DSS certification continuity report before manned operations (Not applicable when in pursuit of certification or reinstatement of certification per reference (a) paragraph 3.7.4.). For vehicles loaded on submarines, the certification continuity report must be issued prior to the underway of the host ship (not required to issue DSS certification continuity report for work performed at sea).
- m. Obtain formal approval for any temporary modifications prior to installation in a DSS from the Program Manager. Submit the request to the Program Manager and include the items listed in section 5.4.4 of reference (a) and any other items as required by the Program Manager.
- n. Operate the DSS within the limits specified as part of the requirements for each sustaining certification.
- o. The Sustaining Activity must report any violation of the DSS operating limits to NAVSEA stating the cause or justification for the violation.
- p. Keep the Program Manager and SCA advised of any failure or improper operation experienced by, or damages sustained to, any item or system within the SOC.
- q. The responsibilities listed in Part I, Chapter 1 Section 1.5 of this volume apply to the User or Sustaining Activity. Each activity must comply with the applicable responsibilities listed in this section. For instance, DSSs are responsible for the duties listed in the Ship Commanding Officer section.
- r. When the sustaining Activity is different than the user activity, the Sustaining Activity will issue a written report to the User Activity, with a copy to parent ISIC, which addresses the status of SOC RECs, testing of SOC systems, Hull Integrity Procedure maintenance requirements completed and DFS items.
- s. Ensure fact-finding critiques are held to establish underlying causes and pursue corrective actions when necessary. When major errors or problems occur during maintenance of DSS or SOC work, a critique may be necessary. Examples include

when significant problems or trends occur or those that did result or could result in incidents, significant unplanned rework, serious equipment damage, malfunction or personnel injury. Minor problems are isolated deficiencies with minimal overall impact and no significant consequences; these should normally be corrected on the spot and without expending much time and effort. Contact the ISIC immediately of issues which will result in a SUBSAFE, FBW SCS, DSS or SOC critique, SUBSAFE, FBW SCS, DSS or SOC trouble report or SUBSAFE, FBW SCS, DSS or SOC fact-finding (Submarines only) Additional guidance and direction for critiques is contained in reference (b). Copies of critiques and incident reports for DSS or SOC issues that result in a problem severity level of Level 1 (critical) or Level 2 (serious) will be sent to the TYCOM electronically.

Examples include, but are not limited to the following:

- (1) Noncompliant work or technical direction resulting in nonacceptable material within the DSS or SOC boundary (e.g., incorrect material installed, failure to complete recertification actions, incorrect torque applied, improper conduct of testing, wrong weld procedure, lack of or incorrect Nondestructive Test, unqualified welder, failure to use specified measuring device, etc.).
- (2) Inaccurate or missing information or data provided on deliverable DSS or SOC technical documents affecting the certification status (e.g., certification messages, Unrestricted Operations Maintenance Requirement Card data reports).
- (3) Conduct of work within the SOC boundary without required authorization or re-entry control.
- (4) Failure to accomplish mandatory SOC related PMS within the required periodicity.
- (5) Performance of DSS manned operations with an open Category 1A, Category 1B (unless as allowed by the card) or expired Category 1C system certification survey card, or outside of the allowed sustaining certification periodicity.
- (6) Operation of SOC systems contrary to or without a NAVSEA approved procedure.

QUALITY MAINTENANCE PROCESSES

REFERENCES.

- (a) NAVSEA 0924-062-0010 - Submarine Safety (SUBSAFE) Requirements Manual
- (b) NAVSEA SS800-AG-MAN-010/P-9290 - System Certification Procedures and Criteria Manual for Deep Submergence Systems

2.1 **APPLICABILITY.** Use all of the quality maintenance processes specified in Part I, Chapter 2 of this volume.

2.2 **CONTROLLED WORK PACKAGE.** A Controlled Work Package is required for those items listed in Part I, Chapter 2, Paragraph 2.2.4 of this volume and the following items:

- a. Installation of Material Control Division A, B or C materials.
- b. Manufacture Material Control Division A, B or C materials. Manufacture of Material Control Division C materials may be made with a TWD other than a CWP if the part is labeled or tagged with the required information necessary for verification at the time of installation.
- c. Work within Scope of Certification (SOC) hull integrity boundary, identified in reference (a), (b) or the applicable Deep Submergence System (DSS) SOC Notebook, including pressure hull grinding, cutting and welding.
- d. Painting in excess of 10% of any DSS compartment including the interior of the transition trunk on the host ship above the access hatch.
- e. Installation and maintenance on implodable items within the SOC boundary and all explodable items that meet the requirements of reference (b) or the applicable DSS SOC Notebook.

VOLUME V
PART III
CHAPTER 3
PERSONNEL QUALIFICATION AND TRAINING

REFERENCE.

- (a) NAVEDTRA 43523 - Personnel Qualification Standard for Quality Maintenance Program

3.1 APPLICABILITY. Use the training and qualification requirements specified in Part I, Chapter 3 of this volume as modified in the following paragraphs.

3.2 GENERAL. Personnel who screen, plan, perform, inspect and supervise maintenance as listed in Part I, Chapter 2, paragraph 2.2.1 and Part III, Chapter 2 of this volume must be trained and qualified per this volume and reference (a).

3.3 DISCUSSION. For Deep Submergence Systems, modify the training specified in the qualification standard of reference (a) and the appendices of Part I, Chapter 3, of this volume to include Scope of Certification (SOC) knowledge and practical factors. Send the revised qualification cards to the applicable Type Commander via the Immediate Superior In Command. The Type Commander will standardize qualification requirements for all subordinate commands dealing with SOC issues.

3.4 QUALIFICATION REQUIREMENTS.

3.4.1 Qualifications. Most User Activities are too small and do not have billets for Quality Assurance Officers (QAO). However, the responsible Immediate Superior In Command will have a QAO qualified per Part 1, Chapter 3, paragraph 3.4.3 of this volume. The Sustaining Activity will have a QAO qualified per Part 1, Chapter 3, paragraph 3.4.4 of this volume.

3.4.2 Scope of Certification Quality Maintenance Qualifications. Use the qualification requirements for other qualifications as listed in Part I, Chapter 3 of this volume. Note that not all qualifications would apply.

3.5 TRAINING.

3.5.1 Scope of Certification Awareness Training (Submarines and Submarine Repair Facilities only). All maintenance crewmembers required to qualify as craftsman on board submarines with SOC systems or components must receive SOC awareness training during initial indoctrination and annually thereafter. All personnel assigned to a command responsible for performing maintenance on submarine system(s) within the SOC boundary must receive SOC awareness training during initial indoctrination and annually thereafter.

3.5.2 Immediate Superior In Command and Type Commander Training. ISIC and TYCOM staff members that routinely review SOC Objective Quality Evidence, make determinations on SOC Departures from Specifications and perform other SOC work oversight will receive annual SOC awareness training to keep knowledge and proficiency levels high.

LISTING OF APPENDICES.

- A Message Format for Certification Continuity for DSS
- B Letter Format for Certification Report to Tended DSS
- C Message Format for DDS Transfer of Custody Certificate of Continuity for Off-loads
- D Message Format for DDS Transfer of Custody Certificate of Continuity for On-loads
- E Message Format for DDS Acceptance of Custody

5.1 PURPOSE. To provide the requirements or direct the user to the appropriate references to ensure that maintenance performed during the Deep Submergence System's (DSS) life cycle supports certification at all times. Sustaining Activities, User Activities and Maintenance Activities should review specific system requirements for additional or superseding requirements. All material used within any DSS must be as authorized for the specific DSS as required by reference (a).

5.2 EXCEPTIONS TO RE-ENTRY CONTROL. Exceptions to Re-Entry Control (REC) must be listed in the applicable DSS Scope of Certification (SOC) Notebook.

5.3 PLANNED MAINTENANCE. Completion of Planned Maintenance System (PMS) is mandatory for continued certification of DSS units. Each DSS unit's PMS program will be administered per reference (a), reference (b) and the applicable SOC Notebook. Any incomplete SOC PMS or any SOC PMS not performed when scheduled requires a major Departure From Specification (DFS) to be processed and adjudicated prior to executing manned SOC operations. The Program Manager will determine SOC-REC implementation based on the maintenance task complexity, system boundary and material control requirements. It is critically important to realize that even though a particular maintenance procedure does not require a REC, any repair or replacement of SOC components necessary to correct a deficient condition identified during that maintenance may require a REC. There are two documentation categories for SOC PMS:

- a. SOC - REC Required. Each SOC-REC PMS item requires the issuance of a REC Form and associated Controlled Work Package (CWP).
 - (1) Each SOC PMS Maintenance Requirement Card (MRC) card will utilize the following note or an equivalent note that has been approved by the System

Certification Authority (SCA): “This maintenance involves equipment within the DSS SOC as defined by the SOC Notebook or applicable document. Performance of this maintenance requires that REC be utilized.”

- (2) This maintenance will be documented and audited using the REC as Objective Quality Evidence.
- b. SOC - NO REC Required. PMS items exempted from re-entry controls:
- (1) Each SOC PMS Maintenance Requirement Card (MRC) will utilize the following note or an equivalent note that has been approved by the SCA: “This maintenance involves equipment within the DSS SOC as defined by the SOC Notebook or applicable document. Performance of this maintenance does not require REC. However, if repair or replacement of any component is necessary, compliance with system certification requirements must be documented.”
 - (2) The Sustaining Activity must, depending on the frequency and complexity of the maintenance action, determine the methodology of documenting the accomplishment and completion of SOC PMS in a form suitable for audit. The maintenance requirements must identify that documentation is required.

5.4 TEST, MEASUREMENT AND DIAGNOSTIC EQUIPMENT. Follow the requirements specified in Part I, Chapter 5, Section 5.2 of this volume regarding Test, Measuring and Diagnostic Equipment for in-process work.

5.5 TORQUE. Follow the requirements specified in system drawings and Part I, Chapter 5, Section 5.3 of this volume for torque applied to components.

5.6 INSPECTIONS.

5.6.1 General Requirements. This section provides the minimum requirements and guidance for the performance of inspections. Inspections during the performance of maintenance form one of the fundamental elements essential in assuring that the task is completed properly and in compliance with all specifications. Inspections occur during the in-process phase of repair or maintenance (disassembly, repair, and re-assembly) and the re-certification phase (testing). Inspections serve to provide a careful and critical examination of the areas being inspected and form one of the cornerstones of a successful Quality Assurance (QA) Program. Use of inspections have and will continue to establish the Objective Quality Evidence (OQE) necessary for ensuring compliance to technical requirements.

5.6.2 Inspection Records. Inspection records provide a lasting record that the inspection was performed and completed according to the applicable specifications. Inspection records will be maintained when required for OQE and will be documented on appropriate QA forms contained in this volume or as Certification Signature Blocks in the Formal Work Package (FWP).

5.6.3 Critical Inspections. An inspection on any system or component, which by its nature is so critical to the successful completion of the task, that the inspection requires verification by a separate individual, other than the craftsman, qualified as an inspector. These inspections will be annotated in the written work procedure by the presence of an (I) or circle I, or in the case of Cleanliness Inspections (CI) or circle CI in the margin next to the applicable paragraph requiring

the inspection and will be documented as a signature in the FWP or on the appropriate QA form. Critical Inspections applicable to all DSS Systems or components are:

NOTE: THESE ARE CONSIDERED MINIMUM REQUIREMENTS FOR USAGE OF AN INDEPENDENT INSPECTOR DURING THE PERFORMANCE OF SOC CONTROLLED WORK. IT MUST BE UNDERSTOOD THAT THE REQUIREMENTS FOR AN INDEPENDENT INSPECTOR DO NOT NECESSARILY MEAN THAT THE DATA PROVIDED IS RETAINABLE AS OQE. VARIOUS SOURCE DOCUMENTS ADDRESS RECORD RETENTION AND MUST BE FOLLOWED FOR ENSURING THE PROPER OQE IS RETAINED.

- a. Inspections performed for all acceptance testing (e.g., hydrostatic testing, drop tests, joint tightness tests, weight tests) for certification of work completed under a CWP.
- b. Inspections performed to verify permanent traceability markings of SOC Material Control Division A material assigned and made locally at either a Fleet Maintenance Activity (FMA), a Sustaining Activity or at the User Activity. These inspections may also be performed by a Controlled Material Petty Officer.
- c. Inspections performed to verify permanent markings of Level I or SOC material (those which the FMA manufacture or transfer to smaller pieces of controlled material). These inspections may also be performed by a Controlled Material Petty Officer.
- d. Mechanical measurements used to verify wall thickness of components for work performed using a CWP.
- e. Inspections performed for post machining of any SOC component.
- f. All sealing surface inspections for work performed as a Controlled Assembly.
- g. Inspections for oxygen or nitrogen systems cleanliness as required by reference (c). These independent inspections are performed by personnel qualified as Oxygen Clean Workers per reference (c).
- h. Material receipt inspection. These inspections may also be performed by a Controlled Material Petty Officer.
- i. Weight testing or Pull Testing of SOC components.
- j. Performance of Emergent Controlled Work following the instructions of Part I, Chapter 2 of this volume.
- k. Sealing surface inspections for all SOC pressure boundary joints.
- l. Hull Integrity joint body bound stud inspections. For new stud installations, this includes stud stand out measurements and break away torque verification. For studs that were not removed and are to be reused, this includes verification of markings of significance (K. or KM) or completion of generic material identification check.
- m. Verification of body bound stud stand out measurements and breakaway torque for new stud installations in SOC systems.
- n. Final torque verification of SOC pressure boundary joints.

- o. Verification of new controlled material installed into the SOC boundary.
- p. Verification of proper software installation in SOC pressure boundary joints.
- q. Stack height measurement verification for hull packing installation.
- r. Seat tightness tests of SOC hull and backup valves. When seat tightness testing is impractical, verification of stack height and cavity dimensions or seat blue checks as applicable.
- s. Surface finish inspection and final torque verification of SOC Host interface non-pressure boundary bolted joints (i.e., DDS pedestals, etc.).

5.6.4 Cleanliness Inspections. Cleanliness controls are required to prevent the entry of foreign material which could interfere with the operation of any system or component. Cleanliness controls are essential during maintenance with the degree of control depending upon the system and work to be accomplished. Hydraulic system cleanliness controls are necessary to minimize degradation of components and system leaks. Life Support system cleanliness controls are necessary to ensure the safety of personnel. Improper cleanliness controls can result in personnel injury or damage to operating machinery or fouling of system components. The time spent making sure the work site is clean and system openings are properly controlled will help prevent premature component failure and rework.

- a. Cleanliness Inspectors are individuals who are trained and qualified to perform CI required by work procedures for systems or components requiring cleanliness controls. At the TRIDENT Refit Facilities, they are called Cleanliness Certifiers.

NOTE: ALL SYSTEMS REQUIRE VARYING DEGREES OF CLEANLINESS CONTROLS, BUT MAY NOT REQUIRE AN INDEPENDENT INSPECTOR. CRITICAL QUALITY CONTROL POINT INSPECTIONS BY SUPERVISORY PERSONNEL SHOULD BE USED WHERE APPROPRIATE.

- b. Acceptance inspections of cleanliness by an independent inspector (Cleanliness Certifier or Cleanliness Inspector) are required for the following as a minimum: Oxygen or nitrogen systems per reference (c).
- c. Results of cleanliness acceptance inspections required by paragraph 5.6.4.b of this chapter must be documented in the Technical Work Document and certified by a signature. These inspections will be identified by a (CI) or circle CI in the left margin, if performed by an independent inspector.
- d. There are no specific requirements for independent CI or acceptance by a Cleanliness Certifier or Cleanliness Inspector, during many SOC maintenance actions. However, many jobs may be performed using a craftsman to verify cleanliness vice requiring independent Cleanliness Inspector presence. When the risk or consequence of loss of cleanliness is minimal during a maintenance action, such as work requiring bonnet removal from a small hydraulic valve, maintenance of cleanliness may be verified by the craftsman. When the risk or consequences of loss of cleanliness is significant, such as when removing the bonnet from an oxygen or nitrogen valve or when the type or quantity of detrimental materials (e.g., cutting oils) pose a significant risk, the use of an independent inspector to verify maintenance of cleanliness should be considered

by the Department Head, Quality Assurance Officer (QAO) and Planning Officer (if assigned).

- e. It is the responsibility of User Activity to ensure the appropriate cleanliness control requirements are incorporated in any maintenance for which clear responsibility for cleanliness is not assigned.

5.7 SOFTWARE. For SOC system maintenance, software should always be selected per the approved plans and drawings. However, to assist in the determination of acceptability of non-metallic packing materials (e.g., O-Rings, wall seals) for installation in SOC systems, decision aids have been developed from reference (d) and are provided in Part I, Chapter 5, Appendix A of this volume. Because software can contain critical attributes in SOC systems, a Liaison Action Request (LAR) to the Planning Yard may be appropriate to resolve conflicts in requirements.

- a. It is Fleet policy that software (e.g., O-Rings, gaskets) will be reused only as a last resort. If new software is not available, software may be used after satisfactory inspection for damage, resiliency, discoloration or cracking per reference (d). This inspection will be documented in the CWP or FWP.
- b. In all cases, the guidance provided in applicable Naval Sea Systems Command (NAVSEA) technical documents (e.g., drawings, component technical manuals) for SOC systems and components will be followed.
- c. Reuse of software during daily PMS or other specified situations. The practice of not reusing software does not apply to items of daily PMS or items disturbed in the normal operation of a component per an approved operating procedure and, therefore, the O-Ring or gaskets may be reused provided the software has been inspected and is not damaged and new software is not required per the procedure.

5.8 SCOPE OF CERTIFICATION MAINTENANCE CERTIFICATION AND RE-ENTRY CONTROL.

5.8.1 Purpose. To issue the policy and procedures for:

- a. Maintaining continuity of SOC certification during the operating cycle.
- b. General Maintenance Certification Record administrative requirements.

5.8.1.1 General.

- a. Reference (a) establishes the SOC certification criteria which must be accomplished on DSS in order for NAVSEA to certify the DSS for operation. Once the certification criteria are satisfied, NAVSEA will issue a letter of certification to the Sustaining Activity. Based upon the NAVSEA letter of certification, the Sustaining Activity and the User Activity will operate the DSS within the SOC as authorized by NAVSEA in the SOC Notebook, Operating Instructions, Operating Procedures, Emergency Procedures, technical manuals or other directives governing operations.
- b. Sustaining Certification for continued operation is dependent on:
 - (1) The positive control and re-certification of all re-entries into the SOC or hull integrity boundaries of the DSS, and

- (2) The satisfactory and timely completion of Hull Integrity Procedure (HIP) requirements, and
- (3) Completion of SOC PMS within periodicity and as written.

5.8.2 Re-Entry Control Program.

- a. Applicability. This section is applicable whenever work is accomplished within a SOC boundary as defined by reference (a), and as depicted in the specific DSS SOC Notebook.

NOTE: THE SCA IS THE FINAL AUTHORITY FOR DETERMINING IF AN ITEM IS WITHIN THE SOC BOUNDARY. THE SOC NOTEBOOK IS AN ILLUSTRATED REFERENCE TO AID IN THE DETERMINATION OF WHETHER AN ITEM IS SOC OR NOT.

- b. General. The REC Program includes those elements associated with maintenance or repair necessary to maintain the certification established by NAVSEA. The program provides auditable OQE of the following:
 - (1) What work was accomplished, including material and components used, re-test requirements, tests performed and test data.
 - (2) Why work was required.
 - (3) Who authorized and accepted the REC.
 - (4) Who did the work.
 - (5) When and where the work was accomplished, including the work and re-test boundaries.
- c. When it becomes necessary to re-enter a SOC certified system or structure, it will be accomplished following the requirements and procedures of paragraph 5.8.3 of this chapter. Specific direction on completing the Maintenance Certification Record (MCR) (QA form 9) is contained in the instructions for QA form 9 in Part I, Chapter 11 of this volume.
- d. Some exceptions to RECs are allowed due to frequent entry into the certified boundary for routine operations or maintenance actions. These exceptions and administrative or operational control requirements are contained in paragraph 5.8.6 of this chapter.
- e. NAVSEA DSS Grams are not authorized for use by sustaining activities or maintenance activities managed by the Type Commander (TYCOM). DSS Grams will be engineered into the Joint Fleet Maintenance Manual where appropriate.

5.8.3 Re-Entry Control Administrative Procedures.

- a. General. REC procedures provide a continuous, auditable record of work done on fully certified systems to provide positive assurance that they remain “certified”. Continuity of Certification is mandatory throughout the operational life of the DSS to ensure continued safe operation within design limits for personnel safety.

- b. REC. When re-entry of a SOC system or a portion of a SOC system (or component) is necessary, the work and re-certification of the work will be documented using the MCR/REC, QA form 9.
- (1) An MCR/REC will be used for each re-entry of each certified system, certified component or portion thereof as defined by the SOC certification boundaries.
 - (2) An MCR/REC will be restricted to a single system within a single mapping plan, a single component removed from a system or a single component removed or worked that requires multiple mapping plans.
 - (3) When an MCR/REC is opened on a DSS to permit removal of a component by Sustaining or User Activity for repair by an FMA as a “ship to shop” job, an MCR/REC must be opened by the FMA to cover the work and retesting of the work center work performed.

NOTE: AN AUTHORIZED CONTRACTOR MAY BE PERFORMING WORK AS THE FMA OR DEPOT ACTIVITY. THE SPECIFIC MEMORANDUM OF AGREEMENT WILL FURTHER AMPLIFY THESE PROCEDURES AND THE INTERACTION WITH THE SUSTAINING OR USER ACTIVITY.

- (4) Where other certified systems must be re-entered to accomplish an MCR/REC, each system will have its own MCR/REC, except as described in paragraph 5.8.3.b.(2) of this chapter.
- (5) The MCR/REC and records of MCR/REC will contain all of the OQE necessary to comply with paragraph 5.8.2.b. of this chapter.
- (6) The work procedures associated with an MCR/REC will contain sufficiently detailed instructions to assure that all requirements for certification are properly accomplished and documented.
- (7) Work and test boundaries will be defined in terms that are unique and directly identifiable with the specific mapping plan or task involved.
- (8) When work and test boundaries are different, both boundaries will be set forth. The work boundaries, test boundaries and pressure boundaries should be specified and should not be confused. Work boundaries define the limits to which work was performed. Test boundaries define the limits for testing to certify the work; these tests may involve actuators, indicators or components other than those actually repaired. Pressure boundaries define (perhaps by valve lineups) the limits of the system which were pressurized to hydrostatically test the work. The pressure boundaries and test boundaries may be the same.
- (9) On a “ship to shop” job the work boundaries may be best described by system joint designators even though those joints were not “disturbed” by the FMA (e.g., rebuild a Rubber Insert Sound Isolation Coupling, the work or test boundaries will be the end flanges that bolt up to the system, the joint identification numbers may be clearest identification of that boundary point).

- (10) Previously certified hardware will be reused when certification is not affected by the re-entry, or when it can be recertified. The words “replace”, “repair” and “re-install” should be used carefully. “Replace” means the use of a different or new component, while “re-install” indicates the use of the previously installed component, whether repaired or not. “Repair” indicates that some refurbishment, other than mere disassembly or cleaning, was performed.
- (11) Associated supporting documents such as Nondestructive Testing (NDT) records, material certification, test data, etc., will be specifically identified and referenced on the MCR/REC.
- (12) When it becomes necessary for an FMA to re-enter NON-Depot Level Repairable certified components (rotatable pool, bench spares) which will not be returned to the DSS from which it was removed, or when a component is re-entered when the DSS on which it will be installed is not present, the FMA will control the work and document the re-entry using a QA form 9, MCR/REC. The MCR/REC will be initiated and closed out by the FMA. A copy of the completed MCR/REC will accompany the component when it is installed in a SOC certified DSS or shipped to another activity as proof of certification. These controls are required whether the certified component is to be installed in certified SOC DSS or stored. Each component must retain its certification. These RECs are separate from and in addition to any MCR/REC required for removal of a component from a SOC system and are only necessary whenever the original component will not be returned during the current availability to the ship from which it was removed.
- (13) The CWP/REC Log, QA form 11, will be established and maintained by the QAO per the detailed instructions for QA form 11 in Part I, Chapter 11 of this volume. The QA form 11 must be reviewed by the QAO to verify all MCR/RECs are closed prior to manned or submerged operations of the DSS, except as discussed in reference (a), paragraph 3.7.4. The FMA QAO will maintain a log for the FMA only and one for each tended ship RECs. The QA form 11 must be reviewed by the FMA QAO to verify all FMA MCR/RECs are closed prior to manned or underway operations of each tended ship or DSS, except as discussed in reference (a), paragraph 3.7.4.
- (14) Revisions to the MCR/REC are required for the following:
 - (a) Change in work boundaries (e.g., breaking additional or new mechanical joints not previously identified on the MCR/REC). A REC revision is not required to delete undisturbed joints. Deletion of joints must be authorized by cognizant technical authority and documented in the REC package. Block 14 must be annotated to reflect joint deletions prior to signing REC Block 17.
 - (b) Change in NDT or test requirements (e.g., “J” vice H hydrostatic test, when “H” was originally specified). This does not include a DFS for unaccomplished testing. A REC revision is not required for NDT

incidental to minor repairs as defined in paragraph 5.8.3.b.(14) (d) of this chapter. NDT results must be documented in the REC package.

- (c) Scope of work changes (e.g., originally replace software changed to weld repair sealing surfaces, originally replace software changed to metallic pressure boundary part replacement).
- (d) The REC does not require revision in order to conduct minor repairs in support of the original scope of work. These minor repairs must be authorized by cognizant authority and documented in the REC package, with appropriate OQE generated and added to Block 16 prior to the signing of Block 16 of the QA form 9. Hot work is not classified as a minor repair. Minor repairs authorized to be performed without a revision are:
 - 1 Minor machining such that the machining is within the limits of the technical drawing, Maintenance Standard or technical manual (e.g., taking a skim cut on an O-Ring groove such that the final machined dimensions are within the tolerances of the technical reference).
 - 2 Epoxy repairs.
 - 3 Electroplate repairs.
 - 4 Preventive coating application.
- (15) A revision cannot be used when a new MCR/REC is required (e.g., different system must be entered to conduct repair).
- (16) REC Cancellation and REC Administrative Closeout. In the event a CWP is prepared and the job is planned to be accomplished but for some reason it was cancelled or deferred, the following actions should be taken:
 - (a) If work was authorized to start, the CWP or REC must be revised to reflect that no work was accomplished and the REC was revised to close administratively. The QA form 11 log will be annotated that the job was "Cancelled".
 - (b) If work was not authorized to start, and the job has been cancelled, annotate the remaining blocks of the QA form 9 with "NA" and note that the REC was cancelled and no work was accomplished. Blocks 20 and 21 will be signed to formally close the REC. If the REC was prepared by a Repair Facility, a copy of the QA form 9 will be provided to the tended unit with the Certification Continuity Letter. QA form 11 log will be annotated that the job was "Cancelled".

- (c) If work was not authorized to start and the job has been deferred to a future maintenance period, the REC is not required to be cancelled. The QA form 11 log will be annotated as “Deferred”. This is not considered an open REC.
- (17) Prior to manned operations (and each submarine underway for submerged operations) except as discussed in reference (a) paragraph 3.7.4, the USER ACTIVITY will submit to the Immediate Superior In Command (ISIC), a written report per paragraph 5.8.7 of this chapter. An SOC certification letter is only required.
- (18) Ship's Force is responsible for providing “Buddy” SOC REC serial numbers to outside repair activities performing SOC work on the DSS systems. The Buddy REC number is issued from ship's QA form 11 log and will be documented on repair activities SOC REC FORM.

5.8.4 Using a Departure from Specification to Close a Maintenance Certification Record Re-Entry Control. If an MCR/REC is closed by transferring accountability for testing to an at-sea testing DFS, the DSS will be restricted per the following requirements:

- a. The unit must dive to the maximum depth at which it is to be certified or recertified to operate. The affected joints must be inspected for joint tightness during initial submergence and subsequently at 200-foot intervals. Operations are restricted to that depth at which satisfactory joint tightness has been certified. Inspections must be conducted at 200-foot intervals down to the maximum depth at which it is to be certified or recertified to operate. The test dive may be a single dive or a series of dives to accomplish the same purpose. The DSS will stay at test depth for the time required as detailed in the normal retest procedure (i.e., 30 minutes if the normal joint tightness test is for 30 minutes) plus adequate time to permit inspections.

NOTE: THE DSS MAY BE MANNED OR UNMANNED WHILE THE UNIT IS PROGRESSING TO EACH DEPTH INCREMENT. IF THE UNIT IS UNMANNED, BILGE ALARMS OR OTHER MEANS OF DETECTING FAILURES MUST BE PROVIDED TO ALERT OPERATORS OF ANY DSS SYSTEM FAILURE. SUFFICIENT TIME MUST BE ALLOTTED AT EACH 200 FOOT DEPTH INCREMENT FOR A POTENTIAL LEAK TO REGISTER AN ALARM BEFORE PROCEEDING TO THE NEXT DEPTH. IF THE BILGE ALARM (OR OTHER MEANS) INDICATES A FAILURE, THE PROHIBITION AGAINST MANNED OPERATIONS AND DEPTH LIMITATIONS OF 5.8.4C. BELOW APPLY. FINAL INSPECTIONS OF AFFECTED JOINTS DURING UNMANNED TESTING WILL BE MADE AT 200 FEET OR SHALLOWER PROVIDING NO OTHER INDICATIONS OF POTENTIAL FAILURE WERE NOTED AT THE DEEPER DEPTHS.

- b. If inspections of the system or component during the controlled dive are satisfactory, the DSS is released for operations with no immediate report required. Clearance of the DFS will be reported as required by Part III, Chapter 8 of this volume.
- c. If inspections of the system or component during the initial submergence or subsequent deeper depths are unsatisfactory:

- (1) The DSS is not authorized manned operations at any depth.
- (2) The DSS is restricted to a depth of 200 feet unless specific authorization is received from the TYCOM approving unmanned operations at depths deeper than 200 feet.
- (3) An immediate report of unsatisfactory inspections will be made to the ISIC.
- d. If unmanned operations at depths greater than 200 feet are required, the Commanding Officer or Officer-in-Charge must provide justification and request approval from the TYCOM (info ISIC, NAVSEA, 07Q and applicable Program Executive Officer) to conduct unmanned operations at depths deeper than 200 feet.
- e. Deficiencies discovered that are not joints specified for inspection in the MCR/REC and DFS must be dispositioned as required by Part III, Chapter 8 of this volume and are not cause for depth restrictions unless the Commanding Officer or Officer-in-Charge deem necessary.

5.8.5 Voyage or At-Sea Repairs. If emergent repairs or at-sea repairs involve REC work, the ship or DSS is limited to 200 feet or less until the ship's Commanding Officer has signed for the closed REC.

5.8.6 Exceptions to Re-Entry Control. Certain systems and equipment within the certified SOC boundary require frequent entry into the certified boundary for routine operations or maintenance actions in order to enable the ship to carry out its mission. These systems and components are listed in the DSS SOC Notebook. The operational requirements for these systems and equipment have been reviewed. Inherent operational controls in the present system are considered adequate and the items are considered safe exceptions to the formalized REC system. The operational control which is considered as meeting the intent of the REC requirements is specified in the DSS SOC Notebook and must be in effect in order to use the exception. Some REC exceptions permit removal of material from the installed system to perform maintenance or testing. The original material must be reinstalled or a complete REC (controlled work package) must be used to capture the installation of new Material Control Division A, B or C material or certification testing for new material.

NOTE: MCR/REC EXCEPTIONS ARE FOR USER ACTIVITY'S USE ONLY AND ARE NOT AUTHORIZED FOR USE BY REPAIR ACTIVITIES. REPAIR ACTIVITIES MUST NOT REQUEST THE SHIP TO INVOKE A REC EXCEPTION IN CONJUNCTION WITH REPAIR ACTIVITY WORK UNLESS SPECIFICALLY AUTHORIZED BY THE USER ACTIVITY'S SOC NOTEBOOK.

5.8.6.1 Controlled Assembly Requirements for SOC REC Exceptions.

- a. An FWP per Part I, Chapter 2 of this volume, (e.g., PMS MRC, technical manual pages, detailed maintenance outline), will be used to control and document all work performed as a REC exception.
- b. Controlled Assembly requirements are:
 - (1) Verification that surface finishes of gasket or O-Ring sealing surfaces are per applicable specifications.

- (2) Verification that fastener material and installation is per applicable specifications.
- (3) Verification that gaskets or O-Rings are properly installed and per applicable specifications.
- (4) Assembly is documented on a QA form 34 or 34B as applicable.
- (5) Inspected by a Quality Assurance Inspector or Quality Assurance Supervisor.
- (6) Verification that cleanliness was maintained per MIL-STD-1622 for critical applications or reference (c) (where applicable). Document "Cleanliness maintained per [MIL-STD-1622 or reference (c) (as applicable)]" and include the Craftsman's signature and date in the remarks block of the QA form 34.

5.8.7 Certification Continuity Report. In order to ensure continued certification of each DSS, periodic reports are required per the following requirements:

- a. Prior to each manned operation, except as discussed in reference (a), paragraph 3.7.4, the User Activity will submit to the ISIC (deployed ISIC, if deployed), a written certification continuity report, which addresses the status of the DSS SOC RECs, testing of SOC RECs, HIPs completed and RECs closed by transferring actions to a DFS. Submarines must submit this report to the ISIC prior to dockside manned operations or each underway for submerged operations (not required to issue DSS certification continuity report for work performed at sea). Appendix A provides the minimum requirements for the letter or message. If no SOC controlled work, testing or HIPs were accomplished, no report is required.
- b. Prior to the DSS submerged operations after an FMA availability, refit or inport period when SOC work was performed, the FMA Commanding Officer will issue a letter report to each tended DSS, with a copy to the Sustaining Activity and parent ISIC, which addresses the status of SOC CWPs, testing of SOC systems, HIP maintenance requirements completed and SOC non-conformances (i.e., DFS and LAR). Appendix B provides the minimum requirements for the letter or message.
- c. Prior to the DSS underway, activities other than FMAs which perform SOC maintenance on a DSS will issue a report to the DSS with a copy to the Sustaining Activity and parent ISIC, certifying that the maintenance performed meets the requirements of applicable specifications invoked by the governing document and the Memorandum of Agreement.
- d. In order to ensure continued certification of those DSSs that frequently change custody between activities such as the Dry Deck Shelters, off-loads and on-loads will use the format of Appendix C and D respectively to transfer custody of the vehicle. The receiving activity will conduct a review of the items identified in the transfer of custody letter or message and then report acceptance of custody using the format of Appendix E.

5.9 MATERIAL CONDITION MONITORING HULL INTEGRITY PROCEDURES PROGRAM (SUBMARINES ONLY).

- a. The HIP Program is applicable to specific DSS. The program provides the minimum material condition requirements to Sustain Certification, with an established periodicity to accomplish. It is one of the programs required to maintain SOC certification. Accomplishment of the HIP will identify changes within the SOC or hull integrity boundaries of the ship, which result from the degradation caused by the service environment.
- b. Administration, scheduling and reporting of the HIP program will be per the requirements of Volume VI, Chapter 38 of this manual. A summary of HIP status will be reported by the DSS User Activity per paragraph 5.8.7 of this chapter.
- c. When performing corrective maintenance, the following guidance is provided with regard to HIPs:
 - (1) When performing corrective maintenance, associated HIP should be reviewed to determine if the HIP should be accomplished concurrently ahead of scheduled periodicity to preclude having to disassemble equipment again to accomplish the HIP. The DSS schedule or FMA resources may preclude concurrent, early accomplishment of HIPs.
 - (2) If HIP criteria are used, in total or in part, during corrective maintenance, and a measured parameter is found out of tolerance and not restored, a major DFS must be submitted, following the instructions of Part III, Chapter 8 of this volume, even though the periodicity of the HIP MRC has not expired.
 - (3) When performing corrective maintenance that does affect a HIP measured parameter, perform that portion of the applicable HIP.
- d. Following installation of an alteration (Field Change, Temporary Modification) that modifies the structure of the DSS, such that access to vital equipment is or may be impacted, the Sustaining Activity must evaluate the need to perform the Access to Vital Equipment DSS HIP. If access to vital equipment could be restricted, the Sustaining Activity must perform the applicable DSS HIP. Partial accomplishment of the DSS HIP is acceptable if appropriate for the alteration. If partial accomplishment is performed, provide a copy to the installing activity and the ISIC. If the complete DSS HIP is accomplished, provide a copy to normal distribution.

5.10 **TEMPORARY MODIFICATIONS.** The User Activity or Sustaining Activity must obtain formal approval from the Program Manager for any use of special equipment or modification of a DSS unit on a temporary basis.

5.10.1 **Temporary Modification Program.** NAVSEA PMS 399 and 07 have established a Temporary Modification Program. Each User Activity or Sustaining Activity must manage Temporary Modifications to DSS as directed in reference (e).

NOTE: TEMPORARY MODIFICATIONS APPROVED FOR USE ON ONE DSS UNIT WILL NOT BE INSTALLED ON ANOTHER DSS UNIT WITHOUT PRIOR APPROVAL OF THE PROGRAM MANAGER WITH SCA CONCURRENCE.

5.10.2 **Configuration Control.** Installation of a previously approved temporary modification on the same unit is authorized only when the approval documentation is available and contains approval for re-installation for continuing use.

CHAPTER 6
MATERIAL CONTROL

REFERENCES.

- (a) NAVSEA 0948-LP-045-7010 - Material Control Standard (Non-Nuclear)
- (b) NAVSEA SS800-AG-MAN-010/P-9290 - System Certification Procedures and Criteria Manual for Deep Submergence Systems
- (c) NAVSUPWSSINST 4355.7 - Level I Systems Scope of Certification and Fly-By-Wire Stock Program Material Procedures
- (d) NAVSEALOGCENINST 4355.14 - Receipt Inspection Requirements for Deep Submergence Systems-Scope of Certification (DSS-SOC) Stock Program Material
- (e) NAVSEA 0924-062-0010 - Submarine Safety (SUBSAFE) Requirements Manual

6.1 PURPOSE. To define responsibility and provide guidance for material control which includes procurement, receipt inspection, stowage, issue, in-process control and records for controlled material used in maintenance.

6.1.1 Material Control Divisions (MCD). MCD will be used to define levels of control and Objective Quality Evidence (OQE) within the Scope of Certification (SOC) boundary. Material will be controlled as either MCD A, B or C depending on its application. Controlled material is the term used in this manual to describe those materials designated for use in or removed from SOC boundary which are in the custody of the end-user work center, division Controlled Material Petty Officer (CMPO) or are undergoing receipt inspection, have been certified for use and are tagged with the appropriate Quality Assurance (QA) forms of this manual.

6.1.2 Deep Submergence Systems (DSS)-SOC. DSS-SOC material in the custody of the Naval supply system, which includes supply departments onboard ships, Fleet Maintenance Activities (FMA) and contractors is identified as DSS-SOC stock program materials.

6.2 CONTROLLED MATERIAL DETERMINATION. This section describes the use of the specific references used to identify proper material for repair work. This section also provides references and guidance necessary to obtain this understanding and to determine if controlled material is required, and if so, the proper level of control.

6.2.1 General Requirements. In order to determine the correct material to be installed in a DSS and to properly certify the material prior to installation, the work center responsible for the specific area of the DSS must first gather the appropriate reference material:

- a. Naval Sea Systems Command (NAVSEA) approved "List of Material" or "Component List" which may be part of a drawing, diagram or may be a separate document.
- b. System or Component technical manual.
- c. Applicable "Y" suffixed Allowance Parts List (APL) from the ship's Coordinated Shipboard Allowance List. Y suffixed APLs are specific to DSS-SOC systems and components.

6.2.2 Scope of Certification Material Control Divisions. SOC components will be controlled as MCD A, B or C. The definitions and scope of boundaries for each MCD are:

- a. Material Control Division A: Any material in a manned DSS whose single failure would result in DSS loss with DSS personnel on board or death of the DSS personnel. As such MCD-A is assigned to any component for which back-up protection is not feasible and therefore even a single failure is unacceptable. Types of MCD-A material are:
 - (1) Components exposed to the differential pressure between sea pressure and DSS internal atmospheric pressure.
 - (2) Components that operate at greater than 400 psig which are internal to the DSS and cannot be isolated from the pressure source either by a directly accessible or remotely operated shut off valve.
 - (3) Any piping that penetrates the pressure hull from the pressure hull to and including the inboard flange of the first directly accessible or remotely operated shut-off valve.
 - (4) All oxygen and hydrogen systems with a design pressure of 100 psig and above.
 - (5) Components within an emergency or back-up system (e.g., jettison and emergency life support systems and release devices for external appendages) where maximum assurance that the system will operate when needed is essential to preventing a single failure in a primary system from resulting in the death or injury of DSS personnel.
 - (6) Components such as pressure hull (plate, forgings, castings, weld filler material, inserts and penetrations) hard structure, pressure storage tanks and flasks located in manned spaces, high pressure or sea connected piping components including mechanical joints and associated fasteners.
- b. Material Control Division B: Any material or component where failure would require immediate emergency corrective action, the activation of any emergency system or emergency return to the surface. MCD-B material includes:
 - (1) Low pressure (<400 psig) piping and component assemblies in the primary and back-up life support systems.
 - (2) The portion of the electrical power distribution system exposed to sea pressure.
 - (3) Instruments and sensors used to monitor external ambient conditions.
 - (4) Instruments and sensors used to monitor or control DSS functions.
 - (5) Hoses, tethers and umbilicals providing life support or thermal protection.
 - (6) All SOC piping and piping components external to manned spaces.
 - (7) All other low pressure (<400 psig) SOC piping and piping components within the manned spaces not otherwise classified as MCD-A.
 - (8) Mechanical joints and fasteners, not otherwise classified as MCD-A, used on SOC piping systems and piping components.

- c. Material Control Division C: Any SOC material that is not classified as either MCD-A or MCD-B. MCD-C material includes:
- (1) Emergency electrical power distribution systems.
 - (2) Portions of the main electrical power distribution system and electrical components not classified as MCD-A or MCD-B.
 - (3) Soft goods such as O-rings, gaskets and seals.

6.3 RECEIPT INSPECTION OF CONTROLLED MATERIAL. This section provides the guidance and procedures for Sustaining Activities, User Activities and FMAs to conduct and document receipt inspections to certify controlled material as acceptable for installation.

NOTE: THE TECHNICAL INSPECTION REQUIREMENTS OF THE APPLICABLE TECHNICAL MANUAL, DRAWING OR OTHER TECHNICAL REFERENCE AND PIPING SYSTEM MATERIAL REQUIREMENTS (E.G., CLEANLINESS, DIMENSIONS, SURFACE FINISH) ARE THE RESPONSIBILITY OF THE END-USER (WORK CENTER SUPERVISOR OR CRAFTSMAN) TO ACCOMPLISH PRIOR TO INSTALLATION AND ARE NOT PART OF THE RECEIPT INSPECTION OF THIS MANUAL.

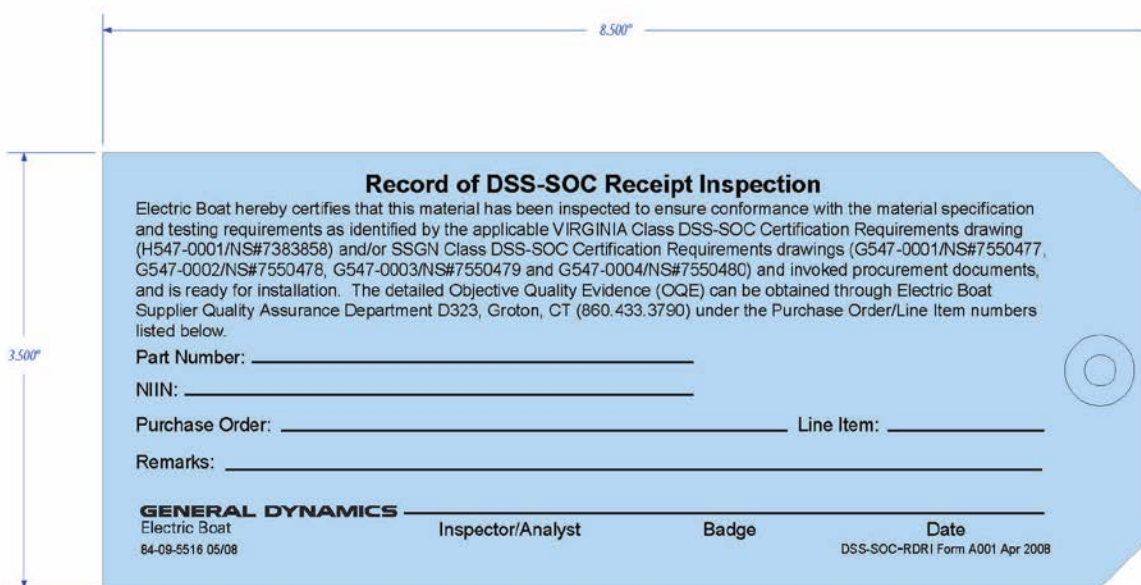

NOTE: IN SOME PROGRAMS, A CERTIFICATE OF CONFORMANCE (COC) IS ISSUED BY THE NAVY SUPPLY SYSTEM OR THE CONTRACTOR MANAGING THE STOCK PROGRAM FOR THE NAVY. NAVSEA HAS AUTHORIZED THE SUPPLY SYSTEM OR CONTRACTOR TO RETAIN ALL REQUIRED DOCUMENTS AND ISSUE THE COC TO THE SUSTAINING OR USER ACTIVITY AS SUPPORTING DOCUMENTATION FOR RECEIPT INSPECTION. THE SUSTAINING OR USER ACTIVITY MAY REQUEST ALL SUPPORTING DOCUMENTATION FROM THE CONTRACTOR AT ANYTIME.

6.3.1 General Requirements. Once the material ordered for use in SOC systems is received, the material must be receipt inspected. Receipt inspection of this material is required to establish positively that the material is the correct material for the job. For SOC MCD-A material, a unique marking system is required for “traceability” which links the material to OQE. OQE for the material is the quantitative and qualitative data proving that the material conforms to specified requirements. To meet the requirements for traceability, the following requirements are instituted:

- a. Receipt inspection of the material.
- b. Use of QA tags in association with the item(s).
- c. Segregated stowage for DSS-SOC stock program material and controlled material.
- d. Custody by CMPO or Controlled Material Handlers (CMH), Quality Assurance Inspectors (QAI) or qualified craftsman.
- e. Use of material verification procedures, as required by reference (a), during installation of the material.
- f. SOC material directly procured from Electric Boat, or Teledyne Brown Engineering or Electric Boat provided as interim spares or initial outfitting may be received with special tags, titled “Record of DSS-SOC Receipt Inspection” (Figure 6-1 Electric Boat, Figure 6-2

Teledyne Brown Engineering) that denote all inspection and certification attributes have been met except for a physical inspection to confirm the material was not damaged in shipping.

- (1) The blue tags, if received, will be retained as OQE and used to receipt inspect material.
 - (2) The Electric Boat blue tags must have the part number and stock number of the material ordered and the material received must be the material ordered.
 - (3) The Teledyne Brown Engineering blue tag is acceptable for SWCS material only and must have the applicable drawing number, part number, serial number (MCD A must be a unique number), remarks, NSN, NICN, material order, purchase order number, and certifying agent signature to include employee number and date.
- g. Level I Stock Program material ordered for a DSS-SOC application, as defined by the ship's Y-suffixed Allowance Parts List, and received from the Naval supply system with Material Identification and Control (MIC) numbers, may be used in DSS-SOC applications on all submarines.
- h. Level I material that was not procured per sub-paragraph g. may be used in DSS-SOC applications. Under this condition, the following conditions apply.
- (1) The MIC satisfies:
 - (a) Material Marking Requirements
 - (b) Records of Chemical and Mechanical Tests
 - (2) The MIC does not satisfy:
 - (a) Unique DSS-SOC OQE
 - (b) Lubrication and Thread Locking
 - (c) Paints
 - (d) Unique Clean Requirements
 - (e) DSS-SOC required as required by the specification
 - (f) DSS-SOC required Nondestructive Testing
 - (g) Certification of Compliance and when applicable, Certificate of Test
- i. Navy supply stock program material with Special Material Identification Codes (SMIC) L1, C1, Q3 or VG which are also used in DSS-SOC applications are identified by APLs that reflect a Y-suffix, e.g., 887056021Y. This material has been procured to meet any additional requirements of reference (b).

Record of DSS-SOC Receipt Inspection

Electric Boat hereby certifies that this material has been inspected to ensure conformance with the material specification and testing requirements as identified by the applicable VIRGINIA Class DSS-SOC Certification Requirements drawing (H547-0001/NS#7383858) and/or SSGN Class DSS-SOC Certification Requirements drawings (G547-0001/NS#7550477, G547-0002/NS#7550478, G547-0003/NS#7550479 and G547-0004/NS#7550480) and invoked procurement documents, and is ready for installation. The detailed Objective Quality Evidence (OQE) can be obtained through Electric Boat Supplier Quality Assurance Department D323, Groton, CT (860.433.3790) under the Purchase Order/Line Item numbers listed below.

Form F-811, Rev. A, 6/23/17

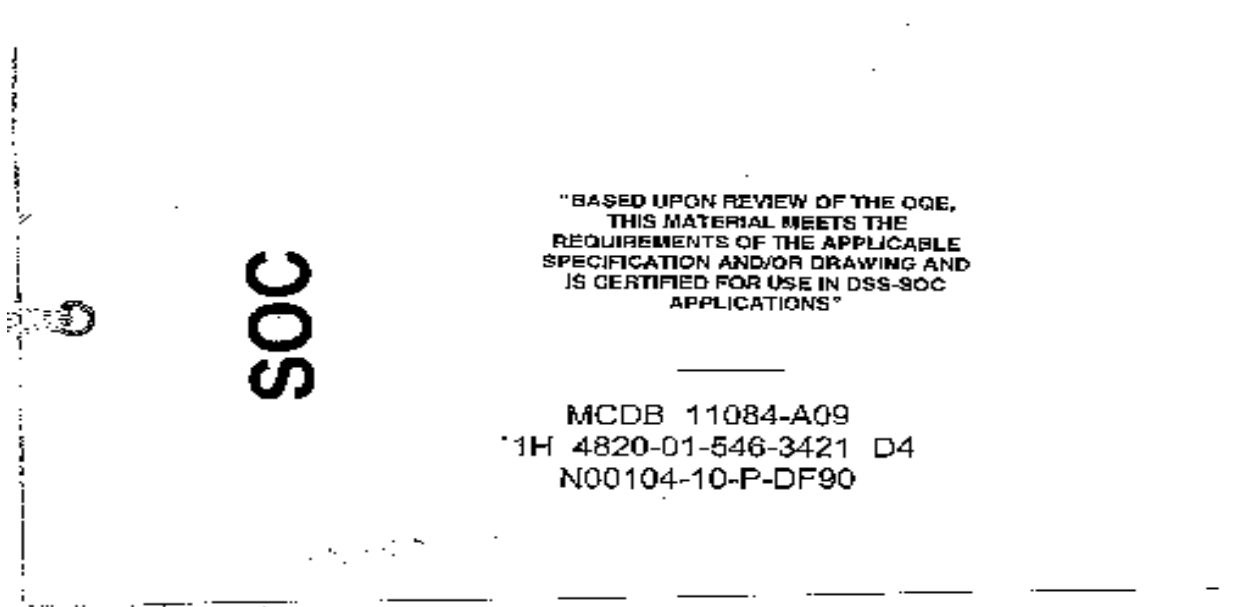

Figure 6-2 Teledyne Brown Engineering Record of DSS-SOC Receipt Inspection

6.3.2 Quality Assurance Forms for Receipt Inspections. The QA forms necessary to complete and document receipt inspections (QA form 1, QA form 2 and QA form 3) and instructions are found in Part I, Chapter 11 of this volume and are further discussed in paragraph 6.3.4 of this chapter.

6.3.3 NAVSUP WSS DSS-SOC Stock Program Material. DSS-SOC Stock Program material requires the material to be shipped to Portsmouth Naval Shipyard (PNSY) for Receipt Inspection prior to issuance to the end user per references (c) and (d). Material received from PNSY is shipped

16 Oct 2019

with Ready-for-Issue (RFI) tags (Figure 6-3) which contain the Receipt Inspection serial number, MCD level, National Stock Number (NSN) with a SMIC (D0, D4, D5, D6, D7, or D8) and contract number. RFI tag (Figure 6-3) denotes all inspection and certification attributes have been met except a physical inspection to confirm the material was not damaged in shipping. Material previously procured by the NAVSUP Weapons Systems Support (WSS) DSS-SOC Stock Program required the OQE to be shipped with each item. Material currently held by activities in condition code "A" is acceptable for use providing the required OQE is packaged with the material.

16 Oct 2019

Figure 6-3 DSS-SOC Stock Program Material Ready-For-Issue (RFI) Tag (example)

6.3.4 General Requirements for Receipt of Scope of Certification Material. This section contains the requirements for receipt inspection and control of new materials. Section 6.5 of this chapter contains the requirements for handling controlled material removed from a DSS for maintenance purposes.

- a. MCD-A material received from the Navy supply system with either a D5 or D6 SMIC and an RFI tag, or an EB Blue tag, will be receipt inspected by the CMPO using the following procedure:

Procedure**Responsibility**

Visually inspect the material.

Sustaining or User Activity,
CMPO or CMH

Check that quantity received is same quantity ordered.

Sustaining or User Activity,
CMPO or CMH

Check for completeness (i.e., are all parts of a component present); disassembly is not required or desired.

Sustaining or User Activity,
CMPO or CMH

Check NSN on part and verify that it is the NSN ordered.

Sustaining or User
Activity, CMPO or CMH

Verify item has either 1) a RFI tag attached which contains the Receipt Inspection serial number, MCD level, NSN with a SMIC (D5 or D6), and contract number, or 2) an EB Blue tag. Navy supply material received that does not meet this criterion must be receipt inspected using the receipt inspection process for Navy supply material received without a RFI tag attached per paragraph 6.3.4.c of this chapter.

Sustaining or User
Activity, CMPO or CMH

Verify item is permanently marked with a receipt inspection number that matches the receipt inspection number on the RFI tag, and that is formatted per paragraph 6.3.7.2 of this chapter.

Sustaining or User Activity,
CMPO or CMH

Verify that material received with a SMIC of D6 is packaged for special cleanliness (MIL-STD-1330 or MIL-STD-1622) and that the package is securely sealed and the proper cleanliness tag is present.

Sustaining or User Activity,
CMPO, Cleanliness Inspector
or CMH

Fill out QA form 1 and attach the shipping papers, if provided.

Sustaining or User Activity,
CMPO or CMH

NOTE: QA FORM 1 IS NOT REQUIRED FOR SHIP'S FORCE WHEN PERFORMING RECEIPT INSPECTION OF MATERIAL TO BE IMMEDIATELY INSTALLED FOR A SPECIFIC JOB. IF ALL MATERIAL IS NOT UTILIZED IN THE ONGOING JOB, QA FORM 1 MUST BE FILLED OUT PRIOR TO PLACING THE MATERIAL IN A STOWAGE LOCKER.

File QA form 1 with all applicable documents.

Sustaining or User Activity,
CMPO or CMH

16 Oct 2019

Fill out and attach QA form 2 to each unit of issue accepted. Turn over material to craftsman or stow in approved storage area.

Sustaining or User Activity,
CMPO or CMH

If material fails any of the steps, reject and attach QA form 3.

Sustaining or User Activity,
CMPO or CMH

Forward QA form 1 to QA Office when the material has been issued for installation.

CMPO or CMH

- b. MCD-B material received from the Navy supply system with either a D0 or D4 SMIC and an RFI tag, or an EB Blue tag, will be receipt inspected by the CMPO using the following procedure:

Procedure

Responsibility

Visually inspect the material.

Sustaining or User Activity,
CMPO or CMH

Check that quantity received is same quantity ordered.

Sustaining or User Activity,
CMPO or CMH

Check for completeness (i.e., are all parts of a component present); disassembly is not required or desired.

Sustaining or User Activity,
CMPO or CMH

Check NSN on part and verify that it is the NSN ordered.

Sustaining or User Activity,
CMPO or CMH

Verify item has either 1) a RFI tag attached which contains the Receipt Inspection serial number, MCD level, NSN with a SMIC (D0 or D4), and contract number, or 2) an EB Blue tag. Navy supply material received that does not meet this criterion must be receipt inspected using the receipt inspection process for Navy supply material received without a RFI tag attached.

Sustaining or User Activity,
CMPO or CMH

Verify that material received with a SMIC of D0 is packaged for special cleanliness (MIL-STD-1330 or MIL-STD-1622) and that the package is securely sealed.

Sustaining or User Activity,
CMPO, Cleanliness Inspector
or CMH

Fill out QA form 1 and attach the shipping papers, if provided.

Sustaining or User Activity,
CMPO or CMH

NOTE: QA FORM 1 IS NOT REQUIRED FOR SHIP'S FORCE WHEN PERFORMING RECEIPT INSPECTION OF MATERIAL TO BE IMMEDIATELY INSTALLED FOR A SPECIFIC JOB. IF ALL MATERIAL IS NOT UTILIZED IN THE ONGOING JOB, QA FORM 1 MUST BE FILLED OUT PRIOR TO PLACING THE MATERIAL IN A STOWAGE LOCKER.

File QA form 1 with all applicable documents.	Sustaining or User Activity, CMPO or CMH
---	---

Fill out and attach QA form 2 to each unit of issue accepted. Turn over material to craftsman or stow in approved storage area.	Sustaining or User Activity, CMPO or CMH
---	---

If material fails any of the steps, reject and attach QA form 3.	Sustaining or User Activity, CMPO or CMH
--	---

Forward QA form 1 to QA Office when the material has been issued for installation.	CMPO or CMH
--	-------------

- c. Receipt of MCD-A material without either an RFI tag, an EB Blue tag or received from a contractor or activity assigned by the Program Manager to supply the specific DSS will be receipt inspected by the CMPO and certified by the Quality Assurance Officer (QAO) using the following procedure:

Procedure

Responsibility

Review vendor data, Military Standard (MIL-STD), or Naval Shipyard or FMA manufacturing and test data to ensure that it all matches. See note at end of this table regarding vendor data.

Sustaining or User Activity,
CMPO, CMH, QAI and
QAO

Transfer MIC markings from accompanying OQE onto the item if the MIC is not already marked on the item. Disassembly of the item is not allowed or required.

Sustaining or User Activity,
CMPO, CMH or QAI

Fasteners will be appropriately marked and color-coded if required.

Sustaining or User Activity,
CMPO, CMH or QAI

Fill out QA form 1 to document the receipt inspection.

Sustaining or User Activity,
CMPO, CMH or QAI

NOTE: QA FORM 1 IS NOT REQUIRED FOR SHIP'S FORCE WHEN PERFORMING RECEIPT INSPECTION OF MATERIAL TO BE IMMEDIATELY INSTALLED FOR A SPECIFIC JOB. IF ALL MATERIAL IS NOT UTILIZED IN THE ONGOING JOB, QA FORM 1 MUST BE FILLED OUT PRIOR TO PLACING THE MATERIAL IN A STOWAGE LOCKER.

NOTE: IF THE COMPONENT HAS A SHORTENED MIC MARKING, ENSURE THE FULL MIC MARKING FROM THE SHIPPING DOCUMENTS, TAGS, OR PACKAGING IS ENTERED ON QA FORM 1 AND QA FORM 2.

File QA form 1 with all applicable documents.

Sustaining or User Activity,
Quality Assurance
Supervisor, QAI or CMPO

Fill out and attach QA form 2 to the item. Turn over material to craftsman or stow in approved storage area.

Sustaining or User Activity,
CMPO, CMH or QAI

Forward QA form 1 to QA Office when the material has been issued for installation.

CMPO or CMH

If material fails any of the steps, reject the material and attach QA form 3.

CMPO or CMH

NOTE: VENDOR DATA - MATERIAL RECEIVED DIRECTLY FROM THE MANUFACTURER REQUIRES CERTIFICATION DOCUMENTATION PER PARAGRAPHS 6.3.4.c.(1) THROUGH 6.3.4.c.(5) OF THIS CHAPTER AS A MINIMUM. A THOROUGH REVIEW OF THE PROCUREMENTS SPECIFICATIONS IS NECESSARY TO ENSURE ALL REQUIREMENTS ARE MET.

NOTE: NAVAL SHIPYARDS AND FMAS MAY USE A LOCALLY GENERATED TASK GROUP INSTRUCTION (TGI) OR CONTROLLED WORK PACKAGE (CWP) IN LIEU OF A COC AND COT FOR RECEIPT INSPECTION OF MCD A DSS SOC COMPONENTS MANUFACTURED OR FABRICATED BY THE ACTIVITY. THE TGI OR CWP MUST CONTAIN ALL OQE NECESSARY TO ESTABLISH THAT THE PART HAS BEEN PROPERLY MANUFACTURED, FABRICATED AND TESTED TO THE REQUIREMENTS OF APPLICABLE DRAWINGS AND SPECIFICATIONS, AS WELL AS TO MEET THE CERTIFICATION CRITERIA OF REFERENCE (B). THE TGI OR CWP HAS THE SAME RETENTION REQUIREMENTS AS A COC OR COT FOR A DSS SOC APPLICATION.

NOTE: IF ANY ITEM IS CERTIFIED AS LEVEL I, IT IS CONSIDERED AS MEETING THIS REQUIREMENT.

- (1) Chemical and mechanical testing is required for all metallic material. Chemical and mechanical testing for non-metallic materials as required by material specification.
- (2) Records of Nondestructive Testing as required by the specification.
- (3) Records of testing as required by the specification for implosion testing, cleanliness testing, toxicity or flammability testing, etc.
- (4) COC. Certifies that the components comply with the requirements of the procurement documents, invoked specifications and drawings. Asserts that the physical and chemical properties (material type, yield strength, tensile strength, elongation or hardness testing) are as specified in the contract specifications. The certificate will include:
 - (a) Contractors name, address, phone number and date.
 - (b) The issuing agency's purchase order number.
 - (c) Item nomenclature of the purchased item (the product is identified by description, amount, lot number, etc.).
 - (d) Contractor's or authorized person's signature.

NOTE: INSTALLATION OF MATERIAL ON THE BASIS OF A COC WILL NOT RELIEVE THE INSTALLING ACTIVITY OF THE RESPONSIBILITY FOR INCORPORATING MATERIAL WHICH CONFORMS TO THE REQUIREMENTS OF THE DRAWINGS AND SPECIFICATIONS. MATERIAL NOT CONFORMING TO THE REQUIREMENTS OF THE DRAWINGS AND SPECIFICATIONS WILL BE SUBJECT TO REJECTION WHETHER IN PLACE OR NOT.

- (5) In some cases a Certificate of Test (COT) may be required as evidence that testing was completed. The distinguishing characteristic of a COT is that it presents data which is the result of positive, reproducible testing performed to determine the quality of the product. It may be contained within the COC. The COT, issued by a test laboratory, states that a certain product was tested for certain qualities and must include:
 - (a) Contractors name, address, phone number and date.
 - (b) The issuing agency's purchase order number.
 - (c) Item nomenclature of the purchased item (the product is identified by description, amount, lot number, etc.).
 - (d) Contractor's or authorized person's signature.
 - (e) Test data is given along with the conclusion on conformance or non-conformance.

NOTE: IF ALL TESTING REQUIRED BY REFERENCE (b) CANNOT BE ACCOMPLISHED, THEN THE NEW COMPONENT CANNOT BE USED UNTIL A DEPARTURE FROM SPECIFICATION (DFS) IS SUBMITTED PER PART I, CHAPTER 8 OF THIS VOLUME.

NOTE: MORE THAN ONE MIC NUMBER MAY BE ON A COMPONENT (E.G., VALVE BODY MAY HAVE ONE MIC NUMBER AND THE BONNET MAY HAVE ANOTHER MIC NUMBER). IF THE COMPONENT HAS A SHORTENED MIC MARKING, ENSURE THE FULL MIC MARKING IS AVAILABLE ON THE SHIPPING DOCUMENTS, TAGS OR PACKAGING. VERIFY THAT THE SHORTENED MIC MARKING IS CORRECT PER PARAGRAPH 6.3.7 OF THIS CHAPTER AND REFERENCE (a).

- d. Receipt of MCD-B material without an RFI tag, an EB Blue tag or received from a contractor or activity assigned by the Program Manager to supply the specific DSS will be receipt inspected by the CMPO and certified by the QAO using the following procedure:

<u>Procedure</u>	<u>Responsibility</u>
Review vendor data (if provided with material), MIL-STD, or Naval Shipyard or FMA manufacturing and test data to ensure that it all matches. See note at end of this table regarding vendor data.	Sustaining or User Activity, CMPO, CMH, QAI or QAO
Fill out QA form 1 to document the receipt inspection.	Sustaining or User Activity, CMPO, CMH or QAI
File QA form 1 with all applicable documents.	Sustaining or User Activity Quality Assurance Supervisor, QAI or CMPO

NOTE: QA FORM 1 IS NOT REQUIRED FOR SHIP'S FORCE WHEN PERFORMING RECEIPT INSPECTION OF MATERIAL TO BE IMMEDIATELY INSTALLED FOR A SPECIFIC JOB. IF ALL MATERIAL IS NOT UTILIZED IN THE ONGOING JOB, QA FORM 1 MUST BE FILLED OUT PRIOR TO PLACING THE MATERIAL IN A STOWAGE LOCKER.

NOTE: IF THE COMPONENT HAS A SHORTENED MIC MARKING, ENSURE THE FULL MIC MARKING FROM THE SHIPPING DOCUMENTS, TAGS, OR PACKAGING IS ENTERED ON QA FORM 1 AND QA FORM 2.

<u>Procedure</u>	<u>Responsibility</u>
Fill out and attach QA form 2 to the item. Turn over material to craftsman or stow in approved storage area.	Sustaining or User Activity, CMPO, CMH or QAI
Forward QA form 1 to QA Office when the material has been issued for installation.	CMPO or CMH
If material fails any of the steps, reject the material and attach QA form 3.	CMPO or CMH

NOTE: VENDOR DATA - MATERIAL RECEIVED DIRECTLY FROM THE MANUFACTURER REQUIRES CERTIFICATION DOCUMENTATION PER PARAGRAPHS 6.3.4.d.(1) THROUGH 6.3.4.e. OF THIS CHAPTER AS A MINIMUM. A THOROUGH REVIEW OF THE PROCUREMENTS SPECIFICATIONS IS NECESSARY TO ENSURE ALL REQUIREMENTS ARE MET.

NOTE: NAVAL SHIPYARDS AND FMAS MAY USE A LOCALLY GENERATED TGI OR CWP IN LIEU OF A COC AND COT FOR RECEIPT INSPECTION OF MCD B DSS SOC COMPONENTS MANUFACTURED OR FABRICATED BY THE ACTIVITY. THE TGI OR CWP MUST CONTAIN ALL OQE NECESSARY TO ESTABLISH THAT THE PART HAS BEEN PROPERLY MANUFACTURED, FABRICATED AND TESTED TO THE REQUIREMENTS OF APPLICABLE DRAWINGS AND SPECIFICATIONS, AS WELL AS TO MEET THE CERTIFICATION CRITERIA OF REFERENCE (B). THE TGI OR CWP HAS THE SAME RETENTION REQUIREMENTS AS A COC OR COT FOR A DSS SOC APPLICATION.

- (1) COC which indicates any of the tests, if required, for implosion testing, cleanliness test, toxicity or flammability testing etc., have been satisfactorily accomplished.
 - (2) Certification that Hull, Mechanical and Electrical testing was accomplished as required by the specification. The COC must state each contractually invoked test by name and that it was performed satisfactorily. Actual test records are not required to be sighted.
 - (3) COC that the components comply with the requirements of the procurement documents, including invoked specifications and drawings.
- e. There is no receipt inspection or unique storage requirements for MCD-C material. MCD-C material must be inspected by the Craftsman and certified on the applicable QA form by the QAI at installation.

Procedure

Visual inspection at installation to ensure material conforms to specified requirements such as stock number, design dimensions, surface condition, compliance with technical work instructions or any vendor or manufacturer supplied information.

Responsibility

Sustaining or User Activity
Craftsman and QAI

NOTE: VENDOR DATA - MATERIAL RECEIVED DIRECTLY FROM THE MANUFACTURER REQUIRES CERTIFICATION DOCUMENTATION PER PARAGRAPH 6.3.5 OF THIS CHAPTER AS A MINIMUM.

6.3.5 Verification of Completion of Required Testing. This section is only applicable to DSS-SOC material received without a D0, D4, D5, D6, D7, or D8 SMIC and associated RFI tag, received without an EB Blue tag or contractor or activity assigned by NAVSEA. Regardless of the MCD, if implosion testing, cleanliness testing, toxicity or flammability testing etc., are required by the

applicable specification or drawing, a review of the OQE for these tests will be conducted prior to installation. If a COC is received with the component, it should be carefully reviewed to ensure that testing was performed satisfactory.

6.3.6 Authorized Material Certification Activities. This section provides a list of those activities that are currently authorized to receipt inspect and accept DSS-SOC controlled material. This list is provided as a reference to be used in performance of receipt inspections of paragraph 6.3.4.a, 6.3.4.b, and 6.3.4.c of this chapter. NAVSEA has authorized the following activity to certify material as MCD-A, MCD-B and MCD-C per reference (b) and this material may be used for DSS-SOC applications without further receipt inspection, other than normal receipt inspections of paragraph 6.3.4.a, 6.3.4.b, and 6.3.4.c of this chapter. The activity and their designator are:

<u>Activity</u>	<u>Identification Code</u>
Portsmouth Naval Shipyard	A

6.3.7 Marking of DSS-SOC Stock Program Material.

6.3.7.1 General Requirements. DSS-SOC Stock Program Material passes from the manufacturers into the Navy supply system by way of a Navy receipt inspection activity, which examines the material and subjects it to a number of tests. DSS-SOC material which meets acceptance criteria is marked with a unique identifying number traceable to the OQE.

- a. The purpose of the unique identifying number is four-fold:
 - (1) To denote that the marked material has been inspected, verified and accepted.
 - (2) To verify the material in hand by comparing it to the applicable drawings, plans, ordering requirements, and installing documents.
 - (3) To provide traceability from the installed material to OQE.
 - (4) To preclude complete re-inspection of material accepted by an approved activity.
- b. Two problems arise in application that can defeat the purpose of the unique identifying number:
 - (1) Internal components of an assembly which is marked with a unique identifying number on the exterior, are usually not marked individually, and can lose their identity as DSS-SOC material if separated during disassembly. Strict adherence to "bag and tag" requirements, using fleet QA forms, overcomes this problem. Any part that becomes separated from its QA form (a loss of traceability) must be treated as uncontrolled material.
 - (2) Reference (d) permits the use of a securely attached RFI tag in cases where material is non-metallic, cannot be marked without disassembly, are too small for marking (less than 3/8 square inch), oxygen clean items, welding consumables, plated parts or hardened material and all MCD-B or MCD-C material. The complete unique identifying number is recorded during receipt inspection. Although the unique identifying number may not be visible once the item is installed, traceability is maintained through the retained QA paperwork and tags associated with the job, which will list the full unique identifying number.
- c. The unique identifying number is in addition to the required manufacturer's marking.

- d. Altering of a DSS-SOC unique identifying number is prohibited.
- e. Method of marking DSS-SOC material. The physical marking method is described in reference (d).
- f. Items not physically capable of being marked. Items such as small parts are packaged in homogeneous lots (i.e., same heat, batch or melt; and same vendor traceability) and the package is marked. If the package is opened, the individual items removed must be tagged with QA form 2. The remaining items in the package will be controlled by the use of a single QA form 2 attached to the package.

6.3.7.2 SMIC DSS-SOC Material Acceptance Identification. Per reference (d), MCD-A metallic material must be permanently marked. Items that cannot be marked due to physical limitations, and all MCD-B or MCD-C material, must be identified using the following instructions:

- a. Serialization marking must be by use of a securely attached RFI tag. The RFI tag must contain the Receipt Inspection serial number, MCD level, the NSN and the contract number. The RFI tag must clearly state, "Based upon review of the OQE, this material meets the requirements of the applicable specification and drawing and is certified for use in DSS-SOC applications."
- b. Serialization of MCD-A material must bear a number consisting of a two-digit year, three digit Julian day, a daily serial number between 001 and 099, the Receipt Inspecting Activity Certifying Activity Designator followed by "MCDA". For example: "08137-001A-MCDA".
- c. Serialization of MCD-B and MCD-C material must utilize the Receipt Inspection Management System for technical inspection with the prefix "MCDB" or "MCDC", followed by the two-digit year, a three digit Julian date, the Receipt Inspecting Activity Certifying Activity Designator and a daily serial number. For example: "MCDB 08137-A01" or "MCDC 08137-A06".

6.4 STORAGE, ISSUE AND HANDLING OF SCOPE OF CERTIFICATION MATERIAL. Refer to Part I, Chapter 6, paragraph 6.3.9 of this volume for process requirements related to storage, staging, issue and handling of SOC material.

6.5 RE-USE OF PREVIOUSLY CERTIFIED SCOPE OF CERTIFICATION MATERIAL.

6.5.1 Material Removed from a Deep Submergence System or Operating Ship. Material removed from a DSS or operating ship to be installed in a SOC application on another DSS or ship is acceptable under the following conditions:

- a. Re-Entry Control (REC) is used to document material removal from the supplying ship. The supplying DSS or ship must be certified and REC must still be in effect.
- b. The following must be supplied by the supplying ship to the receiving ship:
 - (1) All outstanding DFS on the component.
 - (2) Any applicable technical variance documentation.
 - (3) The last accomplishment date and category of all applicable Maintenance Requirement Card (MRC) inspections.
 - (4) All legible component markings must be documented.

- (5) A copy of the supplying ship's REC.
- c. Positive control and identification must be maintained from removal through reinstallation.
- d. All documentation listed in sub-paragraph b of this paragraph must be maintained and filed with the REC package that installs the component on the receiving ship.
- e. The receiving activity must conduct a material receipt inspection to verify the following:
 - (1) Received component came from a certified system and REC has been maintained and that positive control has been maintained since removal from the supplying activity.
 - (2) Material marking or tagging on hardware matches material marking on supporting software.
 - (3) Applicable MRC inspections or any other maintenance actions are current for the intended end use.
 - (4) End use installation is consistent with the previous service parameters such as the design pressure rating, design temperature rating or system applicability of the component.
- f. Receiving activity must update applicable software to document information and records (e.g., DSS or Ship's Drawing Index for drawing revision) date of last MRC periodicity accomplishment and documentation of outstanding DFS into installing DSS or ship's Current Ship's Maintenance Project.
- g. Non-Conforming Material that is received from a DSS or operating ship to be installed in a SOC application that does not meet all the requirements of paragraph 6.5.1 of this chapter may be acceptable under the specific instances.
 - (1) Material received which is not current with respect to the applicable MRC inspection or any other required maintenance actions that are not current for the intended use must have the applicable maintenance actions completed. Any inspection or maintenance action not completed must be departed using the process of Part I, Chapter 8 of this volume.
 - (2) Material which has an end use that is not consistent with the previous service parameters must be subject to and satisfy the testing requirements for a new component installed in the receiving DSS or ship, provided the design is consistent with the intended end use.

6.5.2 Reuse of Scope of Certification Material. Reuse of SOC material from a ship whose certification has lapsed by virtue of inactivation availability is acceptable under the following conditions:

- a. Prior to commencement of system disassembly, material identified for transfer must be included in an identification and transfer system designated for this application. This system must provide a means for tagging components to be transferred to preclude compromise of material control integrity through unauthorized re-entry. NAVSEA considers existing tag-out systems as an adequate template for this identification system.

However, identification system tags must be durable and clearly discernible from existing “tag-out” system tags.

- b. The identification tags must include as a minimum:
 - (1) The statement that the component is SOC material and that the component is not to be removed until the tag is uniquely marked by the facility conducting the inactivation.
 - (2) The DSS or Ship hull number (e.g., SSN 752).
 - (3) System and item identification (e.g., MIC number, ASW-1, etc.).
 - (4) Activity unique identifier (e.g., PHNSY-657-001).
 - c. The following must be supplied by the supplying activity or ship to the receiving ship:
 - (1) All outstanding DFS on the component.
 - (2) Any applicable technical variance documentation.
 - (3) The last accomplishment date and category of all applicable MRC inspections.
 - (4) All legible component markings must be documented.
 - (5) A copy of the supplying ship’s REC.
 - d. All work completed on the material or component after removal from the supplying DSS or ship must be documented and controlled by a REC.
 - e. Those fasteners removed which connect a transferred item to equipment or components remaining on board, such as valve flange fasteners, must not be shipped with the item, since to do so needlessly complicates the certification process.
 - f. The receiving activity must conduct material receipt inspection to verify the following:
 - (1) Attached material identification tag and material marking on the material matches the documentation provided from the facility conducting the inactivation.
 - (2) End use installation is consistent with the previous service parameters such as the design pressure rating, design temperature rating or system applicability of the component.
 - g. The receiving activity must complete any maintenance due or overdue for the material. Any inspection not performed or other maintenance action not completed must be departed.
 - h. The receiving activity must maintain documentation of receipt, inspection, installation and testing of the provided material.
 - i. The material will be installed using a REC.
- 6.5.3 Material Recertification Required.
- a. Material which does not satisfy the requirements of paragraphs 6.5.1 or 6.5.2 of this chapter must require full component certification to all DSS program requirements prior to use. Documentation of this certification must be traceable from the installing activity’s REC.

- b. If the SOC material to be transferred is designated for non-SOC end use, and if the removal is to be accomplished subsequent to the Inactivation Availability start date, applicable non-SOC transfer requirements are in effect. These requirements for Submarine Safety components are in reference (e) and the requirements for Level I components are in reference (a).

6.5.4 Material Re-Certification Following Transfer to Outside Agency (Excluding Naval Shipyards).

Material transferred to and received from an outside maintenance organization which is not under Joint Fleet Maintenance Manual controls (to exclude Naval Shipyards audited by NAVSEA) will be handled in the following manner:

<u>Procedure</u>	<u>Responsibility</u>
Remove existing attached QA form 2 and retain in Controlled Work Package for OQE.	Sustaining or User Activity
Transfer existing material using DD 1149 to and from the Outside Agency.	Sustaining or User Activity, Department Head
Upon receipt, review vendor data, COC and test data as required by applicable specifications.	Sustaining or User Activity, CMPO, CMH, QAI or QAO
Fill out QA form 2 per Part III, Chapter 11 of this volume and attach to the item. Turn over material to craftsman or stow in approved storage area.	Sustaining or User Activity, CMPO, CMH or QAI
Place COC in respective REC for material control documentation.	Sustaining or User Activity, QAI or Quality Assurance Supervisor
If material fails any of the steps, reject the material and attach QA form 3.	Sustaining or User Activity, CMPO or CMH

6.5.5 Material Re-Certification Following Transfer to a Naval Shipyard. Material transferred to and received from a Naval Shipyard which is not under Joint Fleet Maintenance Manual controls but is audited by NAVSEA will be handled in the following manner:

<u>Procedure</u>	<u>Responsibility</u>
Existing QA form 2 will remain attached to the component. Fill out QA form 2 Blocks 13 through 16 to document transfer to the Naval Shipyard	Sustaining or User Activity

Attach Material Tracking Tag (MTT) or equivalent. The MTT (or equivalent) must include component identification, Shipyard Task Group Instruction and any special requirements (e.g., maintain diver air clean per MIL-STD-1622 for critical applications).

Naval Shipyard

Upon receipt, fill out QA form 2 Blocks 13 through 16 to document receipt from the Naval Shipyard. Positively identify the material, review certification or test data and verify proper cleanliness controls have been met as required by applicable specifications. Document results on QA form 2 Block 15. Shipyard certification or test data that has been satisfactorily reviewed and recorded on QA form 2 Block 15 may be discarded.

Sustaining or User Activity,
CMPO, CMH, QAI or QAO

Turn over material to craftsman or stow in approved storage area.

Sustaining or User Activity,
CMPO, CMH or QAI

Place QA form 2 and MTT (or equivalent) in respective REC for material control documentation. QA form 2 and MTT (or equivalent) may be discarded after the associated REC has been closed.

Sustaining or User Activity,
QAI, Quality Assurance
Supervisor

If material fails any of the steps, reject the material and attach QA form 3.

Sustaining or User Activity,
CMPO or CMH

CHAPTER 7
TESTING REQUIREMENTS

REFERENCES.

- (a) NAVSEA SS800-AG-MAN-010/P-9290 - System Certification Procedures and Criteria Manual for Deep Submergence Systems
- (b) NAVSEA SS521-AA-MAN-010 - U.S. Navy Diving and Manned Hyperbaric Systems Safety Certification Manual
- (c) NAVSEA S9505-AF-MMA-010 - Submarine Non-Nuclear Piping Systems Test Manual

7.1 PURPOSE. To provide additional guidance for Deep Submergence Systems (DSS) that cannot be found in Part 1, Chapter 7 of this volume.

7.2 TESTING REQUIREMENTS. Testing must be per Part I, Chapter 7 of this volume with the following additions and exceptions:

- a. Hydrostatic Testing Requirements:
 - (1) Implodable and explodable testing must be per references (a) and (b), as applicable. Additional implodable and explodable requirements may be contained in the applicable Scope of Certification Notebook.
 - (2) Pipe and piping components whose pressure boundary is externally loaded by sea pressure, but whose internal maximum operating pressure is equal to or greater than DSS design test depth pressure, must only require an internal hydrostatic test.
 - (3) Pipe and piping components whose pressure boundary is externally loaded by sea pressure, but whose internal maximum operating pressure is less than DSS design test depth pressure, must only require an external hydrostatic test. Additional guidance on external hydrostatic test requirements is contained in reference (a).
 - (4) Pipe and piping components that penetrate any hull integrity boundary where a single failure could result in internal flooding of the DSS unit must be hydrostatically tested from the hull integrity boundary penetration inboard to the first isolation valve at a pressure equal to 150% of DSS design test depth or 150% of system maximum operating pressure, whichever is greater.
 - (5) Pipe and piping components open to internally pressurized tanks or enclosures (including hyperbaric chambers) must be hydrostatically tested internally from the tank or enclosure penetration outboard to the first isolation valve at a pressure equal to the pressure used to hydrostatically test the tank or enclosure. These requirements are not applicable to piping and piping components open to compressed gas flasks.

- (6) External hydrostatic test acceptance criteria of “no permanent deformation” for pipe must, in addition to a complete visual inspection, be verified by out of roundness measurements. Out-of-roundness measurements not within the pipe specification, approved drawing or Military Standard 1627 (for pipe bends) must be cause for rejection of the item.
- b. Joint Tightness Testing.
 - (1) Pipe and piping components whose pressure boundary is externally loaded by sea pressure, but whose internal maximum operating pressure is equal to or greater than DSS design test depth pressure, must only require an internal joint tightness test.
 - (2) Pipe and piping components whose pressure boundary is externally loaded by sea pressure, but whose internal maximum operating pressure is less than DSS design test depth pressure, must require both external and internal joint tightness testing. Note that the ability to conduct external joint tightness testing is extremely limited. This testing is normally deferred using a Controlled Assembly per Part I, Chapter 7 of this volume, documenting a minor Departure from Specification and retesting during a dive to design test depth.
 - (3) Pipe and piping components that penetrate any hull integrity boundary, where a single failure could result in internal flooding of the DSS unit, must be joint tightness tested from the hull integrity boundary penetration inboard to the first isolation valve at a pressure equal to 100% of DSS design test depth pressure or 100% of system maximum operating pressure, whichever is greater.
 - (4) Pipe and piping components open to internally pressurized tanks or structural enclosures (including hyperbaric chambers) must be joint tightness tested internally from the tank or enclosure penetration outboard to the first isolation valve at a pressure equal to 100% of the maximum internal operating pressure of the tank or enclosure. These requirements are not applicable to piping and piping components open to compressed gas flasks.
- c. Pressure Drop Testing.
 - (1) Pressure drop testing for oxygen, helium, helium-oxygen, nitrogen and hydrogen diving systems must be as specified in reference (b).
 - (2) Pressure drop testing of submarine compressed air systems must be as specified in reference (c).
- d. Objective Quality Evidence. Objective Quality Evidence (OQE) documenting the satisfactory accomplishment of all required testing must be available and maintained in a format suitable for review and audit. Reference (a), Appendix J contains a detailed list of information which must be documented as OQE for testing. Existing forms contained in Part I, Chapter 11 of this volume do not capture all required OQE data. Forms contained in Part III, Chapter 11 of this volume should be used to support documentation of all reference (a), Appendix J OQE data. All mechanical joint tightness and hydrostatic testing (both those utilizing an external pressure source or

internal system pressure) should be documented on QA form 26A to ensure the requirements of reference (a), Appendix J are met. In the event standardized forms are not available, it is permissible to modify and use the forms in Part 1, Chapter 11 of this volume and standardize these forms within the Sustaining Activity organization.

- e. Operational Test. A test of a system to nominal operating pressure using the system fluid, system pumps and installed system gage(s) vice test instrumentation to determine leak tightness.
 - (1) A drop test meeting requirements of paragraph 7.2.c. may be performed as an operational test.
 - (2) An operational test can be used to satisfy a mechanical joint tightness test.

VOLUME V
PART III
CHAPTER 8
DEPARTURE FROM SPECIFICATIONS

REFERENCES.

- (a) NAVSEA SS800-AG-MAN-010/P-9290 - System Certification Procedures and Criteria Manual for Deep Submergence Systems

8.1 PURPOSE. To establish standard procedures to be used for reporting and requesting approval and clearance, at the earliest opportunity, of all non-conforming or departable conditions, Departures from Specification (DFS) associated with Scope of Certification (SOC) systems on Deep Submergence Systems (DSS). The guidance of Part 1, Chapter 8 of this volume and reference (a) should be used for handling DFS situations with the modifications listed in this chapter.

8.2 DEPARTURE FROM SPECIFICATION.

- a. A DFS is a non-conformance of any certification attribute from the intended or as-certified condition of the DSS. This includes non-conformances to approved drawings, components, specifications, technical manuals, operating and emergency procedures, maintenance procedures and any other authoritative document specifying a certification attribute of the DSS. DFS are identified as either a Deviation or Waiver.
 - (1) Deviation: A DFS which is requested prior to a planned non-conformance.
 - (2) Waiver: A DFS which is requested subsequent to the non-conformance occurring.
- b. Should any system, equipment or component within the SOC fail to operate within specifications, regardless of how the deficiency is discovered, and repair at the Sustaining Activity level is not practicable prior to manned operations, a Major DFS must be submitted.

8.2.1 Reporting Departures from Specification. It is incumbent upon User Activities, Sustaining Activities, Fleet Maintenance Activities and Immediate Superiors In Command to discuss potential DFS as early as possible (prior to the work close out or component assembly if possible) to determine direction of actions and alternatives to the DFS. Every effort must be made to correct each deficiency prior to equipment or system operation or underway of the DSS.

8.2.2 Approval of Departures from Specification. All SOC DFSs require Program Manager approval with System Certification Authority (SCA) concurrence prior to manned use of the DSS. Immediate Superiors In Command and Type Commanders are required to present all DFS items to the Program Manager for approval, except as noted in the SOC Notebook.

8.2.3 Major and Minor Departure from Specification Classification. These are specified in Part 1, Chapter 8 of this volume and each activities SOC notebook.

8.2.4 General Administrative Requirements. The following requirements pertain to all DFS:

- a. The User Activity and Sustaining Activity are responsible for all approved DFS relating to their systems or components until cleared or canceled. When a DFS is approved as a temporary repair requiring rework to correct the discrepancy, the ship referencing the DFS sequential number will initiate a Current Ship's Maintenance Project entry for correction of the discrepant condition. The ship's Quality Assurance Officer will ensure that this action is done.
- b. The Sustaining Activity must maintain a master departure log (or computer program equivalent) of all waivers and deviations approved for each DSS. The log must contain, as a minimum, the following:
 - (1) DSS unique identifier.
 - (2) Departure number.
 - (3) Departure title.
 - (4) Classification (Major or Minor).
 - (5) Type of departure (Deviation or Waiver).
 - (6) Date requested.
 - (7) Date resolved or approved.
 - (8) Approval or disapproval status.
 - (9) Conditional approval comments (if applicable).
 - (10) A copy of all applicable Naval Sea Systems Command correspondence delegating local approval of DFSs.
- c. Each activity must maintain all DFSs in a form suitable for audit including supporting justification, technical documentation, calculations, rationale and related correspondence.
- d. When an activity performs work which results in a conditionally approved DFS or waiver which requires future action (e.g., re-inspection, repair), the ship will submit an OPNAV 4790/2K (or equivalent) with a new Job Sequence Number. This Job Sequence Number will be added to the DFS prior to submission to the Immediate Superior In Command. The Current Ship's Maintenance Project Job Sequence Number will be included in Block 17 of the DFS form.

8.2.5 Submission and Approval of Departures from Specification.

- a. A copy of the waiver or deviation must be forwarded to the applicable asset and its planning yard. This applies to both approved and disapproved waivers and deviations to ensure the planning yard is kept fully informed and for maintenance of the asset historical file.
- b. The approval and routing actions are the same as listed in Part 1, Chapter 8, paragraph 8.3.7 of this volume with the User Activity performing the ship functions and the Sustaining Activity performing the Fleet Maintenance Activity functions.

- c. Unless specifically delegated by the Program Manager and approved by the SCA, the Program Manager must approve all DFSs and obtain SCA concurrence.

8.2.6 Departure from Specification Approval and Reporting for DSSs While at Sea. The Commanding Officer or Officer in Charge will evaluate any DFS and approve the corrective action to be taken including any necessary restrictions.

- a. The decision to continue manned operation of the DSS must be made only after a careful review of the impact the deficiency will have on DSS personnel safety under all normal and emergency conditions. A report to the Program Manager via the chain of command will be made at the first opportunity.
- b. As a minimum, the report must contain a description of the condition as well as the intended actions. If continued operation of the DSS is intended, the report must include a statement of impact on the ability of the system to operate safely, specifics and any required temporary local changes to the operating and emergency procedures made as a result of the deficiency and any imposed operating restrictions.
- c. If the condition is not corrected during the next in-port period (i.e., a port with a fleet maintenance facility), it must be forwarded as a DFS report for approval prior to the next manned use of the DSS.

VOLUME V**PART III****CHAPTER 9****AUDITS, SURVEILLANCE, EVALUATIONS, ASSESSMENTS AND SURVEYS****REFERENCES.**

- (a) SS800-AG-MAN-010/P-9290 - System Certification Procedures and Criteria Manual for Deep Submergence Systems
- (b) NAVSEA SS521-AA-MAN-010 - U.S. Navy Diving and Manned Hyperbaric Systems Safety Certification Manual

9.1 **PURPOSE.** Provide requirements, procedures and criteria for audits, surveillance, evaluations and assessments for Scope of Certification (SOC) systems. The requirements of Part 1, Chapter 9 of this volume should be followed with the exception of the modified sections in this chapter.

9.2 RESPONSIBILITIES AND PROCEDURES.

9.2.1 **User Activity Surveillance and Evaluation Program.** The responsibilities and procedures listed for Ship's Force in Part I, Chapter 9, paragraph 9.3.1 of this volume should be used by the User Activity.

9.2.2 **Sustaining Activity Audit, Surveillance and Evaluation Program.** The responsibilities and procedures listed for **the Ship's Force Audits, Surveillance and Evaluation Program in Part I, Chapter 9, paragraph 9.3.1** of this volume and reference (a) should be used by the Sustaining Activity with the modifications listed in this chapter.

- a. Deep Submergence Systems (DSS) Sustaining Activities must schedule and conduct an internal survey within 12 months of the last sustaining survey. A second internal survey must be performed not more than 30 days prior to the next sustaining survey unless otherwise directed by the program SOC Notebook. Results of all internal surveys must be forwarded to Naval Sea Systems Command (NAVSEA) for review.

NOTE: IF THE SYSTEM CERTIFICATION AUTHORITY (SCA) SURVEY PERIODICITY FOR THE DSS IS 15 MONTHS OR GREATER, THE SUSTAINING ACTIVITY WILL PERFORM AT LEAST TWO INTERNAL SURVEYS BETWEEN THE SCA SURVEYS. THE SUSTAINING ACTIVITY MUST COMPLETE THE FIRST INTERNAL SURVEY WITHIN 12 MONTHS OF THE LAST SUSTAINING SURVEY.

- b. Results of audits and evaluations will be provided to the Commanding Officer or Officer in Charge.

9.2.3 **Immediate Superiors In Command Assessments, Audits and Surveillance.** The responsibilities and procedures listed for Immediate Superiors In Command (ISIC) in Part I, Chapter 9, paragraph 9.3.3 of this volume should be used with the modifications listed in this chapter.

- a. ISICs must schedule and conduct a Quality Assurance (QA) Program assessment of all assigned User and Sustaining Activities. SOC and Hull Inspection Procedures should be substituted for Submarine Safety and Unrestricted Operation/Maintenance Requirement Cards respectfully where specified.
- b. ISICs will conduct the following additional periodic audits and surveillance:
 - (1) Conduct periodic monitoring of User Activity controlled work and QA program on all assigned DSSs during maintenance periods.
 - (a) Perform at least one surveillance during each refit, upkeep or fleet maintenance availability.
 - (b) Conduct monitoring during industrial availabilities.
 - (2) Conduct monitoring of assigned Sustaining Activity QA. This monitoring will include:
 - (a) Review of work procedures including opening and closing practices.
 - (b) Monitoring of in progress work both on tended ships and in Sustaining Activity work centers.

9.2.4 Type Commander Assessments. Type Commanders (TYCOM) should follow the guidance of reference (b) and Part 1, Chapter 9, paragraph 9.3.4 of this volume for assessments of ISICs associated with DSSs. The assessment will include a review of SOC controlled work packages.

9.3 SYSTEM CERTIFICATION AUTHORITY CERTIFICATION SURVEYS AND FUNCTIONAL AUDITS.

9.3.1 Certification Process. The requirements define reference (a) certification processes for TYCOM Activities and is the process the SCA and NAVSEA Program Managers will use when certifying or auditing Fleet Deep Submergence System (DSS) Sustaining Activities. Surveys for Certification (Initial Certification), Reinstatement of Certification and Sustaining Certification (Sustaining Surveys) are performed by NAVSEA 07 as the SCA per reference (a). Functional Audits may be performed at the discretion of the SCA. TYCOM assessments performed per Part I, Chapter 9 of this volume meet Functional Audit requirements and must be submitted, copy to the SCA, via the Program Manager.

9.3.2 Certification Survey Cards. SCA survey deficiencies noted during the survey and the recommended corrective action must be documented in the form of certification survey cards.

9.3.2.1 Categorization of Certification Survey Cards. Survey cards for Certification or Functional audits of the DSS must be categorized as:

- a. Category IA. Findings of such importance that manned use of the system will not be authorized and certification will be withheld until the deficiencies are satisfactorily resolved. These deficiencies must be satisfactorily resolved and the resolutions accepted by the Program Manager and SCA to ensure the material condition of the DSS is verified as satisfactory prior to manned use.
- b. Category IB. Findings which will allow manned use of the system for conduct of specific controlled evolutions, but will not allow issuance of the Letter of Certification

until the deficiencies are satisfactorily resolved or required actions taken. These findings must be satisfactorily resolved and the resolutions accepted by the Program Manager and SCA to ensure the material condition of the system is verified as satisfactory for use prior to the issuance of the Letter of Certification.

- c. Category IC. Findings of such importance that satisfactory resolution must be accomplished prior to a specific date or event specified on the survey card to sustain certification. These items must be satisfactorily resolved and the resolutions accepted by NAVSEA or be granted an extension approval from the SCA prior to the date or event specified in order to sustain certification.
- d. Category II. Findings which, while not mandatory for resolution to obtain or maintain certification, identify systemic weaknesses in the DSS program. These deficiencies should be resolved in a timely manner.
- e. Category III. Items audited and found acceptable.

9.3.2.2 Categorization of Functional Audit Cards. Survey cards for functional audits of the DSS activity must be categorized as:

- a. Certification. A non-compliance that affects or potentially affects the certification of a DSS; including a certified DSS. Resolution of a Certification item is mandatory prior to certifying DSS for manned operations.
- b. Non-Compliance. Any violation of documented requirements (e.g., local, NAVSEA or higher-tier instructions, procedures, specifications or contracts).
- c. Operational Improvements. A condition, that while not a specific requirement violation, may cause a degradation in the effectiveness of the DSS program, or an observation expected to offer significant improvement in the effectiveness of the DSS program.

9.3.3 Administration of Survey and Audit Findings. Survey and audit findings must be forwarded by official correspondence (i.e., letter). SCA surveys and Functional Audits of TYCOM activities will be forwarded from the Program Manager to the Sustaining Activity via the ISIC and an informational copy to the respective TYCOM. Responses from the Sustaining Activity must be forwarded to the SCA via the ISIC and Program Manager, with an informational copy to the respective TYCOM and the Program Manager. When a survey or audit identifies program deficiencies at a TYCOM Fleet Maintenance Activity the routing of the findings and responses must be made via the assigned chain of command. Findings identified at NAVSEA managed activities or contractors will be forwarded as defined by the Program Manager, copy to the Sustaining Activity and the assigned chain of command. Category IA, Category IB and applicable Category IC findings affecting manned operations must be acted on immediately by the activity surveyed or audited regardless of the status of the official correspondence. While the Program Manager is responsible for the management and tracking of Category IA, Category IB and Category IC survey items, the ISIC will also track status of all survey findings.

9.3.4 Administration of Surveys for Initial Certification or Reinstatement of Certification. Initial Certification surveys are performed for certification of a DSS during new construction or new acquisition. Surveys performed to reinstate certification are performed following a

suspension, such as failure to perform a Sustaining Survey on time or due to an event that causes decertification, such as a casualty or a major availability. The NAVSEA Program Manager will suspend certification when a Sustaining Survey due date is exceeded, when a significant casualty occurs or when major repairs, work or modifications defined during a maintenance period would affect certification of the DSS. The SCA will reinstate system certification when the cause for the suspension or decertification has been thoroughly investigated, satisfactorily corrected or restored, and the material and procedural adequacy of the DSS has been reestablished. A Certification Survey Plan (CSP) specified by the Program Manager and approved by the SCA identifies all of the surveys and testing required to be met to fulfill the certification or reinstatement of certification requirements of the DSS. When the CSP requirements are met, the SCA will define certification for a specific period of time or identify when the next Sustaining Survey will be performed.

9.3.4.1 Actions to Support Surveys for Initial Certification or Reinstatement of Certification.

Internal surveys for initial certification or reinstatement of certification following overhaul or major availabilities, are normally performed by the Maintenance Activity to support the SCA survey following the CSP. For all other reinstatement of certification scenarios, the Sustaining Activity will submit a CSP tailored to ensure all SOC work and all operations performed since the last survey receive an adequate review to the Program Manager for approval by the SCA via the ISIC and an informational copy to the respective TYCOM. The Program Manager, with SCA concurrence, will formally specify the requirements for reinstatement of certification. The following prerequisites have been established to ensure an activity is ready to support a certification survey:

- a. For initial certification, 85 percent of SOC Re-Entry Control (REC) work must have been completed. Complete work means all work, testing and recertification associated with the document has been completed.
- b. All SOC maintenance requirements must be current and, if requested, reports submitted to the SCA prior to the start of the survey.
- c. All maintenance logs must reflect the current status of maintenance actions.
- d. Deferred maintenance requirements must be appropriately approved and documented following existing documents.
- e. At least 90 percent of the SOC portion of all strength and tightness tests must be completed. All SOC operational tests and inspections which are possible to complete must be complete. At-sea and manned testing is excluded from these requirements.
- f. Provide a list of all open (unapproved or conditionally approved) Departures from Specification.
- g. Sustaining Activity must obtain NAVSEA approval of an updated Certification Survey Plan at least two weeks prior to the SCA survey.
- h. The activity's internal survey must be completed not more than 30 days prior to the SCA survey and the results of the internal survey must be submitted to NAVSEA at least 10 working days prior to the start of the SCA survey.
- i. An updated copy of the activity's internal survey reflecting actions taken as a result of the finding must be available to the SCA at the time of the SCA survey.

- j. Key personnel must be present (Officer In Charge, Engineering Officer, etc.) to support the survey. It is also essential that qualified personnel knowledgeable in all aspects of the DSS be available and ready to assist the survey team.

9.3.4.2 Authorization of Operational Demonstration for Initial Certification or Reinstatement of Certification. These surveys support Builder's Trials or Sea Trials to complete the initial certification or reinstatement of certification per reference (a), section 3.7. Satisfactory completion of trials is mandatory to achieve final certification. Contingent upon the DSS material condition and status of findings of the survey, the SCA will normally authorize manned dockside testing and manned at-sea testing in pursuit of certification via the Program Manager to the TYCOM of the Sustaining Activity. The TYCOM will forward the SCA recommendations to the Sustaining Activity and authorize the applicable operations.

NOTE: MANNED USE OF THE DSS WILL NOT BE AUTHORIZED UNTIL THE SCA CERTIFIES TO THE SUSTAINING ACTIVITY VIA THE ASSIGNED TYCOM THAT THE SYSTEM IS CERTIFIED TO SUPPORT THE REQUIRED TESTING.

- a. Survey findings will be formally forwarded to the Sustaining Activity via the ISIC and an informational copy to the respective TYCOM and maintenance activity as applicable. The Sustaining Activity response will be provided to the SCA via the ISIC and an informational copy to the respective TYCOM. Survey findings to allow manned operations will be processed as:
 - (1) When action identified by a specific card has been completed, a brief summary of the corrective action must be written on the card and the card must be signed by the Command responsible for the corrective action. All applicable Objective Quality Evidence documenting the corrective action taken must be attached to the signed card, and forwarded to the SCA via the ISIC and an informational copy to the respective TYCOM.
 - (2) Category IA, Category IB and applicable Category IC findings affecting manned operations, will be accepted by the SCA per reference (a). The Program Manager will provide copies of all completed survey cards to the Sustaining Activity via the TYCOM or ISIC, as applicable.
- b. The User Activity or Sustaining Activity, as applicable, must submit a trial schedule to the operational chain of command for approval by the SCA via the Program Manager. Included must be a description of general environmental considerations concerning safety (e.g., sea state limits, visibility limits, DSS handling capabilities, limits on diving under overhangs, cables, caves, etc.).

9.3.4.3 Certification or Reinstatement of Certification. Upon satisfactory completion of all testing identified by the CSP, and completion of all SCA or Program Manager actions specified to resolve any test deficiencies, the SCA will certify the DSS or reinstate certification of the DSS to the TYCOM via a Letter of Certification. TYCOM must formally forward the Letter of Certification to the designated Sustaining Activity, copy to the operational chain of command, the Program Manager and the SCA.

9.3.5 Manned Use in Pursuit of Certification or Reinstatement of Certification.

- a. When pursuing initial certification or reinstatement of certification there may be occasion where manned testing or training is required prior to conducting operational demonstration or trials testing. An assessment of items that could impact operator safety is necessary prior to conducting manned testing or training without obtaining formal SCA approval. The assessment must be provided to the activity immediately senior to the User Activity for approval. A copy of the assessment must be provided to the SCA, via the Program Manager, for information only, at least 24 hours prior to the evolution. If conducting testing or training at greater than one atmosphere, this section does not apply and formal SCA approval must be obtained.
- b. For manned testing with the DSS wet, the system will be tethered and in a pool, tethered to a certified lift system in port or in a certified captured lift system in port or at sea. Any other configuration while wet requires SCA approval prior to conducting the test. The following items must be assessed to support either wet or dry manned testing:
 - (1) Provide an impact assessment for any open Category IA survey cards.
 - (2) Identify any outstanding deficiencies that may impact testing or dives.
 - (3) Identify all open RECs and their impact on planned testing or dives.
 - (4) Ensure life support and communications system testing has been completed satisfactorily and are functioning properly.
 - (5) Ensure the results of the closed boat atmosphere analysis (bomb sample) are satisfactory.
 - (6) Ensure Operating Procedures or Emergency Procedures that will be used during the test or training, including pre-dive and post-dive procedures, have been updated to reflect new installations and system modifications.
 - (7) Ensure preventive maintenance procedures that will be used prior to and during the test or dive, have been updated to reflect new installations and system modifications.
 - (8) Ensure the safety analysis of new installations or modified systems that will be operated or tested during the dive has been evaluated by NAVSEA and that there are no hazards that impact planned tests or dives.
 - (9) Ensure electrical system testing (e.g., continuity, insulation resistance and ground checks) have been accomplished to the extent necessary to ensure electrical hazards do not exist to the operators.
- c. For other than one-atmosphere DSS systems, all manned testing or training conducted at other than one atmosphere requires SCA authorization.

9.3.6 Sustaining Certification Surveys. Sustaining Surveys conducted by the SCA are performed to verify that the DSS has been operated and maintained in the as-certified condition following the Letter of Certification. These surveys are granted for a specific time frame or are due on a specific date following initial certification or the last Sustaining Survey.

9.3.6.1 Scheduling. The Sustaining Survey must be scheduled for completion before the survey due date on the Letter of Certification or the previous Sustaining Survey letter. The periodicity of Sustaining Surveys is negotiated between the Program Manager and the SCA, is based upon results of the last survey, with other oversight and performance indicators taken into account. The periodicity must not be greater than that established in the DSSs Scope of Certification Notebook. If the SCA Sustaining Surveys occur more than 15 months apart, the Sustaining Activity must perform at least two internal surveys between the SCA surveys, not to exceed 12 months apart. The Sustaining Activity is responsible for scheduling Sustaining Surveys with the SCA via the Program Manager and the ISIC or TYCOM (as applicable). If the Sustaining Survey cannot be conducted prior to the survey due date due to operational circumstances, and manned use is required, the Sustaining Activity must submit a request for Continuation of Certification per section 9.3.7 of this chapter.

NOTE: IF THE SUSTAINING SURVEY DUE DATE IS EXCEEDED, MANNED OPERATIONS OF THE DSS MUST BE SUSPENDED UNTIL AUTHORIZED BY THE SCA AND TYCOM (AS APPLICABLE).

9.3.6.2 Actions to Maintain Certification. Internal surveys are performed by the Sustaining Activity to support the SCA survey following the CSP. The Sustaining Activity will perform an internal survey of DSSs on an annual basis and prior to the sustaining survey per section 9.2.2 of this chapter. Copies of these internal surveys are to be forwarded to the SCA via the Program Manager and the ISIC or TYCOM (as applicable). The following prerequisites have been established to ensure an activity is ready to support a sustaining certification survey:

- a. If the survey coincides with an availability with a duration of 30 days or less, 60 percent of SOC REC work must have been completed. If the availability is greater than 30 days, 85 percent of SOC REC work must have been completed. Complete work means all work, testing and recertification associated with the document has been completed. If the sustaining survey does not coincide with an availability, no work completion requirement exists, however, a complete list of all SOC work performed since the last survey will be provided to the SCA.
- b. All SOC maintenance requirements must be current and, if requested, reports submitted to the SCA prior to the start of the survey.
- c. All maintenance logs must reflect the current status of maintenance actions.
- d. Deferred maintenance requirements must be appropriately approved and documented following existing documents.
- e. If the survey coincides with an availability, at least 90 percent of the SOC portion of all strength and tightness tests must be completed. All SOC operational tests and inspections which are possible to complete must be complete. At-sea and manned testing is excluded from these requirements.
- f. Provide a list of all open (unapproved or conditionally approved) Departures from Specification.
- g. Sustaining Activity must obtain NAVSEA approval of an updated Certification Survey Plan at least two weeks prior to the SCA survey.

- h. The activity's internal survey must be completed and the results submitted to NAVSEA at least two working days prior to the start of the SCA survey or as specified in the specific DSS SOC Notebook.
- i. Key personnel must be present (Officer In Charge, Engineering Officer, etc.) to support the survey. It is also essential that qualified personnel knowledgeable in all aspects of the DSS be available and ready to assist the survey team.
- j. Deficiencies noted during the survey and recommended corrective actions must be documented in the form of certification survey cards.

9.3.6.3 Authorization for Manned Use Following a Sustaining Survey. Following formal reporting of the Sustaining Survey by the SCA, all Category IA, Category IB and applicable Category IC findings must be completed and accepted by the SCA prior to continued manned operations. If no Category IA, Category IB or Category IC audit cards are generated by the survey, manned use of the DSS may continue with no reports. Upon completion of a Sustaining Survey, manned use can be continued if the following actions are completed:

- a. All Category IA, Category IB and Category IC findings affecting manned operations with completed corrective actions must be presented to the SCA via the chain of command as described previously in section 9.3.4.2.a(1) of this chapter.
- b. Category IA, Category IB and Category IC findings affecting manned operations will be accepted by the SCA per reference (a). The Program Manager will provide copies of all completed survey cards to the Sustaining Activity via the TYCOM or ISIC, as applicable.

9.3.7 Continuation of Certification. If the Sustaining Survey cannot be conducted prior to the survey due date due to operational circumstances, and manned use is required, the Sustaining Activity must submit a request for Continuation of Certification. The following actions are required:

- a. At least six weeks prior to the expiration date of certification, the Sustaining Activity must submit an official request to NAVSEA via the operational chain of command for continuation of certification for a specific time period, and include written rationale for the continuation together with a status of maintenance and system condition.
- b. NAVSEA may conduct on-site surveys to verify system material condition and ensure that existing certification requirements have been properly sustained.
- c. The Sustaining Activity reports by message to NAVSEA, via the ISIC and an informational copy to the respective TYCOM, completion of any Category IA, Category IB and applicable Category IC survey deficiencies affecting manned operations, as applicable.
- d. The SCA grants continuation of certification to the Sustaining Activity, via the TYCOM for a specific period of time contingent on the overall DSS material condition. TYCOM will authorize the operations noting all required restrictions associated with the special case certification.

PART III
CHAPTER 10
QUALITY ASSURANCE RECORDS

REFERENCES.

- (a) NAVSEA SS800-AG-MAN-010/P-9290 - System Certification Procedures and Criteria Manual for Deep Submergence Systems
- (b) NAVSEAINST 4720.23 - Deep Submergence Systems Temporary Modifications

10.1 PURPOSE. Provide record keeping and retention requirements for the Quality Assurance records used in the Scope of Certification Program per reference (a). The requirements of Part I, Chapter 10 of this volume apply as modified in this chapter.

10.2 DEPARTURE FROM SPECIFICATION RECORD RETENTION.

- a. Each activity, Type Commander, Immediate Superior In Command, User Activity and Maintaining Activity is required to maintain an outstanding Departure From Specification (DFS) file. This file may be maintained on electronic media and will contain the following information:
 - (1) An index that reflects a Deep Submergence System unique identifier.
 - (2) Departure number.
 - (3) Departure title.
 - (4) Classification (Major or Minor).
 - (5) Type of Departure (Deviation or Waiver).
 - (6) Date requested.
 - (7) Date resolved.
 - (8) Approval or disapproval status.
 - (9) Conditional approval comments (if applicable).
 - (10) A copy of all applicable Naval Sea Systems Command correspondence delegating local approval of DFSs.
- b. A copy of each outstanding DFS and all applicable correspondence.
- c. A hard or electronic copy of cleared DFSs with an index will be retained for life of ship.

10.3 USER AND SUSTAINING ACTIVITY QUALITY ASSURANCE RECORD

RETENTION. User and Sustaining Activities will maintain records per the record retention requirements of this volume Part 1, Chapter 10, Section 10.6 for Submarines, and Section 10.7 for Fleet Maintenance Activities. Miscellaneous records to maintain include:

- a. Completed maintenance records dive log, including where required, pre-dive and post-dive check-off procedures for all evolutions must be retained from certification survey to survey or three years, whichever is longer.
- b. The marked up laminated pre-dive and post-dive sign off sheets which show valve and switch positions must be retained until commencement of the next dive.
- c. Records of gas supply certifications required by the applicable Scope of Certification Notebook must be retained for three years.
- d. Record of Temporary Modifications will be maintained per reference (b) and Volume II, Part I, Chapter 2 of this manual.

VOLUME V**PART III****CHAPTER 11****QUALITY ASSURANCE FORMS AND FORM INSTRUCTIONS**

11.1 **PURPOSE.** Provide Quality Assurance (QA) forms for Scope of Certification items. Forms listed in Part 1, Chapter 11 of this volume should be used except for the QA-26 and QA-27 forms. Use the QA-26A and QA-27A forms listed in this chapter for Hydrostatic or Pneumatic Test Records and Drop Test Records respectively, and the QA form 34B listed in this chapter for the assembly of Electrical and Electronic Cable connector assemblies.

11.2 **LIST OF FORMS.** This chapter provides copies of the following QA forms with instructions on how to complete each form.

- a. Instructions for QA form 2 for existing controlled material received from an outside vendor not under Joint Fleet Maintenance Manual controls.
- b. QA form 26A - Hydrostatic or Pneumatic Test Record for Deep Submergence Systems.
Instructions for QA form 26A
- c. QA form 27A - Drop Test Record for Deep Submergence Systems.
Instructions for QA form 27A
- d. QA form 34B - Electrical or Electronic Cable Connector Assembly and Test Record.
Instructions for QA form 34B

QA FORM 2 INSTRUCTIONSMATERIAL IDENTIFICATION (ID)/CONTROL TAG

LANTFLT 4790/2 (8-01) S/N 0103-LF-981-0300

PURPOSE: Used for receipt inspection, certification and traceability of existing controlled material received from an outside vendor not under Joint Fleet Maintenance Manual controls.

PROCEDURE: The numbered blocks on QA form 2 correspond with the instructions listed here.

BLOCK 1 - TAG (A) OF (B)

- a. Block A - Enter "1". For additional tags used during the fabrication, transfer or installation process, number the tags in sequential order as used (2, 3, 4, etc.).
- b. Block B - The last number reflects the total number of tags used for this item during this maintenance action. This block is filled in by the QAI at the time Block 21 is signed on the last tag (e.g., 3 of 3).

BLOCK 2 - MIC NO./SERIAL NO.

NOTE: THE INFORMATION ENTERED FOR FASTENERS MAY NEED TO INCLUDE INFORMATION FROM BLOCKS 3 AND 8 FROM QA-1. DO NOT ENTER THE PNSY TRACE NUMBER FROM BLOCK 3 OF THE QA-1.

- a. New Material: Enter the Material Identification and Control (MIC) etched on the material. If the component has no MIC or a shortened MIC marking, ensure the full MIC marking from the shipping documents, tags, or packaging is entered.
- b. Fasteners: Document the markings from the fastener to include either:
 - (1) The color code and the heat or lot number, material type, and manufacturer's symbol (for nuts containing a self-locking insert, the color of the insert is the manufacturer's symbol).
 - (2) The MIC number (when MIC number is on the fastener or on the individual tag for some small fasteners).
- c. If the material is Material Control Division B, enter Markings on the material or documented on the shipping papers providing identification to material type or military specification.

BLOCK 3 - MAT LEVEL

Check the Existing block and the SOC block.

BLOCK 4 - MATL DESCRIPTION

Enter the quantity, size and noun name of the material (e.g., (6 each) 5/8" - 11 NICU studs, 10" O.D. CUNI barstock 6" long).

BLOCK 5 - NSN/SMIC

Enter "NA".

BLOCK 6 - **RECEIPT INSPECTION COMMENTS**

Enter receipt inspection results (i.e., SAT or UNSAT). If inspection results are UNSAT in Block 6, initiate a QA form 3. For UNSAT results in Block 6, the CMPO will only sign Block 7 of the QA form 2 if the QAO disposes the item suitable for use on Block 12 of the QA form 3. For SAT receipt inspection, enter the following statement:

“Material Receipt Inspected SAT and is certified for re-use.”

This entry will be signed by the QAO.

BLOCK 7 - **CMPO/CMH**

CMPO or CMH certifying the entries in Blocks 1-7 print name, enter signature and date.

NOTE: THE CMPO WILL VERIFY THAT THE ITEM IS WHAT IS REQUIRED FOR INTENDED USE PRIOR TO TURNING THE MATERIAL OVER TO CRAFTSMAN FOR FABRICATION OR INSTALLATION AND FILL IN BLOCKS 8 THROUGH 12 AT THE TIME THE MATERIAL IS ISSUED.

BLOCK 8 - **UIC, WC, JSN AND CWP SERIAL NO.**

At the time of issue, enter the Job Control Number (JCN) [UIC, WC and Job Sequence Number (JSN)] and CWP serial number.

BLOCK 9 - **WC NO.**

Enter the number of the WC receiving material (e.g., EM01, 10C, 38A).

BLOCK 10 - **DATE**

Enter date the WC received the material.

BLOCK 11 - **REMARKS**

Enter the reason for issue (e.g., issued to 31A for manufacture of fitting, issued to EM01 for installation).

BLOCK 12 - **CRAFTSMAN/CMPO/CMH/QAI**

For Initial Material Issue: Print name, enter signature signifying issue of material by CMPO or CMH. For Fabrication or Transfer (Additional QA form(s) 2 required). Print name, enter signature signifying receipt of material.

NOTE: THE REMAINING SECTIONS OF THE TAG ARE COMPLETED BY THE COGNIZANT CRAFTSMAN, CMPO, CMH OR QAI DURING THE FABRICATION OR INSTALLATION PROCESSES.

NOTE: SATISFACTORY CONDITION OF MATERIAL EXCHANGED BETWEEN WCs IS ASSUMED, UNLESS AN ENTRY IS MADE IN REMARKS INDICATING MATERIAL IS REJECTED.

BLOCK 13 - **WC NO.**

Enter the number of the WC receiving material (e.g., 56A or EA01).

BLOCK 14 - **DATE**

Enter date material received.

BLOCK 15 - REMARKS

Record work performed while the material was in the custody of the WC (e.g., drilled screws and installed Nyloc pellets).

BLOCK 16 - CRAFTSMAN/CMPO/CMH/QAI

Cognizant craftsman print name and sign to certify blocks 1 through 15 are complete and correct.

NOTE: IF 2 OR MORE WCs ARE INVOLVED IN THE FABRICATION PROCESS, ADDITIONAL QA FORMS 2 WILL BE FILLED OUT AND NUMBERED PER THE INSTRUCTIONS ABOVE FOR BLOCK 1.

NOTE: IF FOR ANY REASON THE COGNIZANT CRAFTSMAN REJECTS THE MATERIAL, HE OR SHE WILL COMPLETE AND ATTACH A MATERIAL REJECT TAG (QA FORM 3) AND LEAVE THE QA FORM 2 ATTACHED.

NOTE: BLOCKS 17 THROUGH 21 WILL CONTAIN THE RECORD OF FINAL INSTALLATION. IF ADDITIONAL TAGS ARE REQUIRED FOR THE MATERIAL DURING THE FABRICATION AND TRANSFER PROCESS (MORE THAN TWO WCs OR PROCESSES INVOLVED IN THE REPAIR), BLOCKS 9 THROUGH 12 AND BLOCKS 17 THROUGH 21 MAY BE USED.

BLOCK 17 - WC NO.

Enter the number of the WC responsible for installation of the material (e.g., 56A or EA01).

BLOCK 18 - DATE

Enter the date of installation.

BLOCK 19 - REMARKS

Enter the location where the material was installed into the system or component (e.g., installed in AHP-514, installed in system at joints ASW-70014(F) and ASW-70015(F), etc.).

BLOCK 20 - CRAFTSMAN

Cognizant craftsman print name and enter signature signifying that the material is the correct material, is installed correctly and per the applicable technical specifications. Remove the QA form 2 and file with the CWP if a QAI is not required.

NOTE: A QAI INSPECTION IS REQUIRED FOR MATERIAL INSTALLATIONS FOR JOINTS AND ASSEMBLIES WITHIN THE SOC BOUNDARY.

BLOCK 21 - INSPECTOR

When required, inspector print name and enter signature and date certifying that the material is the correct material, acceptable for application and correctly installed. Enter NA in QAI signature space when QAI is not required. Remove the QA form 2 and file with the CWP.

HYDROSTATIC/PNEUMATIC TEST RECORD FOR DEEP SUBMERGENCE SYSTEMS					PAGE 1 OF 2

QA FORM 26A INSTRUCTIONSHYDROSTATIC/PNEUMATIC TEST RECORD

PURPOSE: To document hydrostatic or pneumatic tests accomplished on Scope of Certification piping systems or portions of a system to recertify the system after maintenance. It also provides a method for the Fleet Maintenance Activity to specify the required retests for work they performed. This form should be utilized to document mechanical joint tightness testing utilizing both an external pressure source and internal system pressure.

PROCEDURE: The numbered blocks on QA form 26A correspond with the instructions listed here. Any block not used will be marked NA. The planning organization must fill in blocks identified by a ♦ prior to issuing the Controlled Work Package (CWP).

BLOCK 1 - DSS Platform/Hull Number

Enter the Deep Submergence System (DSS) or ship's name and hull number.

BLOCK 2 - JCN

Enter the Joint Control Number (JCN).

BLOCK 3 - LWC

Enter the shop number of the Lead Work Center (LWC).

BLOCK 4 - CWP SER. NO.

Enter the CWP serial number.

BLOCK 5 - SYSTEM/COMPONENT

Enter the name of the system and component to be tested.

BLOCK 6 - TEST REFERENCES

Enter the applicable test reference and other applicable references (e.g., drawing number and revision used to obtain the required test pressure and conducting of the test).

NOTE: ENTER "S9505-AF-MMA-010/PIPING SYSTEMS" WHICH PROVIDES REQUIREMENTS FOR SHIP'S FORCE TO SET-UP AND CONDUCT TESTING.

BLOCK 7 - REQUIRED TEST AND INSPECTION POINTS

Enter the specific test requirements necessary to recertify the work. Specify test requirements (i.e., type of test, special valve position, duration, acceptance criteria, joints to be tested (if entire component or system is tested, so state)).

BLOCK 8 - DIAGRAM OF TEST AREA

Enter a diagram of the test area. Be specific. Include such things as relief valve locations, gage locations, blanks, gags, and valve positions, etc. The Quality Assurance Inspector (QAI) will verify the diagram prior to performance of the test.

NOTE: ALL VALVES WITHIN THE TEST BOUNDARIES MUST BE IDENTIFIED

AND THEIR POSITION (OPEN OR SHUT) DURING THE TEST ANNOTATED.

NOTE: IF DRAWINGS OR ADDITIONAL INFORMATION IS REQUIRED TO SUPPLEMENT THIS REPORT, EACH DRAWING, ETC., WILL BE NUMBERED AND AUTHENTICATED WITH THE SIGNATURE BY THE CRAFTSMAN AND QAI MAKING UP THE REPORT.

NOTE: LOCAL EXCEPTIONS TO GAGE RANGE AND OR INCREMENTS WILL BE APPROVED BY AN INDIVIDUAL WITH A TECHNICAL WARRANT.

NOTE: SHIPS, FLEET MAINTENANCE ACTIVITIES AND REGIONAL MAINTENANCE CENTERS MANAGED BY UNITED STATES FLEET FORCES COMMAND OR TYCOMS WILL DISREGARD THE BLOCK 8 DIAMOND WHEN TESTING IS PERFORMED BY AN ACTIVITY OTHER THAN THE ACTIVITY PERFORMING REPAIR. THE ACTIVITY PERFORMING THE TESTING MUST COMPLETE THE DIAGRAM REQUIRED BY BLOCK 8.

BLOCK 9 - GAGE DATA

Enter the Primary and backup gage data. Backup gage data is not required when performing an operational test as defined in Part I, Chapter 7 of this volume when a second system gage is not available.

BLOCK 10 - REQUIRED TEST FLUID

Enter the required test fluid.

BLOCK 11 - REQ'D TEST PRESSURE (PSIG)

Enter the required test pressure. If listing the value would classify the CWP then the symbols "J" or "H" with the applicable reference may be used instead of classifying the document.

BLOCK 12 - ACTUAL TEST PRESSURE (PSIG)

Enter the actual test pressure. If listing the value would classify the CWP then the symbols "J" or "H" with the applicable reference may be used instead of classifying the document.

BLOCK 13 - REQUIRED TEST DURATION

Enter the required test duration including units.

BLOCK 14 - ACTUAL TEST DURATION

Enter the actual test duration including units.

BLOCK 15 - ALLOWABLE LEAKAGE

Enter the allowable leakage including units for the leakage.

BLOCK 16 - MEASURED LEAKAGE

Enter the actual measured leakage including units for the leakage.

BLOCK 17 - INSPECTION RESULTS

- a. Check "SAT" block, if all inspections specified by Block 7 are complete and satisfactory.
- b. Check "UNSAT" block, if test results are unsatisfactory. Identify the specific inspection and reason for failure in the remarks section.

NOTE: IF A SATISFACTORY TEST CANNOT BE ACHIEVED, A DEPARTURE FROM SPECIFICATION MUST BE PROCESSED PER PART 1, CHAPTER 8 OF THIS VOLUME OR THE TASK MUST BE REWORKED AND RETESTED.

BLOCK 18 - OUT-OF-ROUNDNESS MEASUREMENTS

Enter out-of-roundness measurements for external hydrostatic tests of pipes only.

BLOCK 19 - REMARKS

Remarks pertinent to this test will be entered in this block.

BLOCK 20 - CERTIFICATION

PERFORMED BY

Person performing the test print name, enter signature and date signifying accuracy of data recorded.

INSPECTED BY

QAI print name, enter signature and date verifying the accuracy of test results recorded and inspection performed satisfactory.

BLOCK 21 - VALVE/SYSTEM LINEUP FOR PRESSURE TESTING

List all the valves within the test boundary and those valves that make up the test boundary. The required position for adequate testing of the component or system will be listed. Each valve will have the initials of the initial positioner, or in the event the valve is in the correct position and does not require positioning "NA" will be marked. Each valve will have 1st and 2nd checkers initials. Personnel involved with initial positioning, 1st and 2nd checking will print their names, sign, initial and date the required blocks at the bottom of the form.

NOTE: SHIPS, FLEET MAINTENANCE ACTIVITIES AND REGIONAL MAINTENANCE CENTERS MANAGED BY UNITED STATES FLEET FORCES COMMAND OR TYCOMS WILL DISREGARD THE BLOCK 21 DIAMOND WHEN TESTING IS PERFORMED BY AN ACTIVITY OTHER THAN THE ACTIVITY PERFORMING REPAIR. THE ACTIVITY PERFORMING THE TESTING MUST COMPLETE THE VALVE LINEUP REQUIRED BY BLOCK 21.

QA FORM 27A INSTRUCTIONSDROP TEST RECORD

NOTE: PLANNING WILL FILL IN BLOCKS IDENTIFIED BY A ♦ PRIOR TO ISSUING.

PURPOSE: To document drop tests accomplished on Scope of Certification piping systems or portions of a system to recertify the system after maintenance actions have been accomplished.

PROCEDURE: The numbered blocks on QA form 27A correspond with the instructions listed here. Any block not used will be marked NA. The planning organization must fill in blocks identified by a ♦ prior to issuing the CWP.

BLOCK 1 - DSS Platform/Hull Number

Planner enter the DSS or ship's name and hull number.

BLOCK 2 - JCN

Planner enter the JCN.

BLOCK 3 - LWC

Planner enter the shop number of the LWC.

BLOCK 4 - CWP SER. NO.

Planner enter the CWP serial number.

BLOCK 5 - SYSTEM/COMPONENT

Planner enter the name of the system and component to be tested.

BLOCK 6 - TEST REFERENCES

Planner enter the applicable test reference and other applicable references (e.g., drawing number and revision used to obtain the required test pressure and conducting of the test).

NOTE: ENTER "S9505-AF-MMA-010/PIPING SYSTEMS" WHICH PROVIDES REQUIREMENTS FOR SHIP'S FORCE TO SET-UP AND CONDUCT TESTING.

BLOCK 7 - REQUIRED TEST AND INSPECTION POINTS

Planner enter the specific test requirements necessary to recertify the work. Specify test requirements (i.e., type of test, special valve position, duration, acceptance criteria, and joints to be tested (if entire component or system is tested, so state)).

BLOCK 8 - DIAGRAM OF TEST AREA

Planner enter a diagram of the test area. Be specific. Include such things as relief valve locations, gage locations, blanks, gags, and valve positions, etc. The QAI will verify the diagram prior to performance of the test. For nuclear tests identify major components to be isolated or vented to preclude unnecessary pressurization.

NOTE: ALL VALVES WITHIN THE TEST BOUNDARIES MUST BE IDENTIFIED AND THEIR POSITION (OPEN OR SHUT) DURING THE TEST

ANNOTATED.

NOTE: IF DRAWINGS OR ADDITIONAL INFORMATION IS REQUIRED TO SUPPLEMENT THIS REPORT, EACH DRAWING, ETC., WILL BE NUMBERED AND AUTHENTICATED WITH THE SIGNATURE BY THE CRAFTSMAN AND QAI MAKING UP THE REPORT.

NOTE: LOCAL EXCEPTIONS TO GAGE RANGE AND OR INCREMENTS WILL BE APPROVED BY AN INDIVIDUAL WITH A TECHNICAL WARRANT.

NOTE: SHIPS, FLEET MAINTENANCE ACTIVITIES AND REGIONAL MAINTENANCE CENTERS MANAGED BY UNITED STATES FLEET FORCES COMMAND OR TYCOMS WILL DISREGARD THE BLOCK 8 DIAMOND WHEN TESTING IS PERFORMED BY AN ACTIVITY OTHER THAN THE ACTIVITY PERFORMING REPAIR. THE ACTIVITY PERFORMING THE TESTING MUST COMPLETE THE DIAGRAM REQUIRED BY BLOCK 8.

BLOCK 9 - GAGE DATA

Craftsman enter the Primary and backup gage data. Backup gage data is not required when performing an operational test as defined in Part I, Chapter 7 of this volume when a second system gage is not available.

BLOCK 10 - REQUIRED TEST FLUID

Planner enter the required test fluid.

BLOCK 11 - REQ'D TEST PRESSURE (PSIG)

Planner enter the required test pressure. If listing the value would classify the CWP then the symbols "J" or "H" with the applicable reference may be used instead of classifying the document.

BLOCK 12 - INITIAL TEST PRESSURE

Craftsman enter initial test pressure achieved at start of test.

BLOCK 13 - FINAL PRESSURE AT END OF TEST

Craftsman enter final pressure reading when the required test time is completed.

BLOCK 14 - TEMPERATURE AT START OF TEST

Craftsman enter temperature at start of the test with units.

BLOCK 15 - TEMPERATURE AT END OF TEST

Craftsman enter temperature at the end of the test with units.

BLOCK 16 - CHANGE IN TEMPERATURE

Craftsman subtract temperature at the end of the test recorded in Block 15 from temperature at the start of the test recorded in Block 14.

BLOCK 17 - REQUIRED TEST DURATION

Planner enter the required test duration including units.

BLOCK 18 - ACTUAL TEST DURATION

Craftsman record actual duration of the test.

BLOCK 19 - ALLOWABLE PRESSURE DROP % IN MINUTES/HOURS

Planner enter the allowable pressure drop as a percentage of the test pressure in minutes or hours. Cross-out time measure not used.

BLOCK 20 - FINAL PRESSURE DROP CORRECTED FOR TEMPERATURE CHANGE

Craftsman record final pressure drop calculated with corrections for temperature change in the same units as Blocks 11 and 12.

BLOCK 21 - TEST RESULTS

Craftsman

- a. Check "SAT" block if all inspections specified by Block 7 are complete and satisfactory.
- b. Check "UNSAT" block, if test results are unsatisfactory. Identify the specific inspection and reason for failure in the remarks section.

NOTE: IF A SATISFACTORY TEST CANNOT BE ACHIEVED, A DEPARTURE FROM SPECIFICATION MUST BE PROCESSED PER PART 1, CHAPTER 8, OF THIS VOLUME OR THE TASK MUST BE REWORKED AND RETESTED.

BLOCK 22 - REMARKS

Remarks pertinent to this test will be entered in this block.

BLOCK 23 - CERTIFICATIONPERFORMED BY

Craftsman performing the test print name, enter signature and date signifying accuracy of data recorded.

INSPECTED BY

QAI print name, enter signature and date verifying the accuracy of test results recorded and inspection performed satisfactory.

NOTE: SHIPS, FLEET MAINTENANCE ACTIVITIES AND REGIONAL MAINTENANCE CENTERS MANAGED BY UNITED STATES FLEET FORCES COMMAND OR TYCOMS WILL DISREGARD THE BLOCK 24 DIAMOND WHEN TESTING IS PERFORMED BY AN ACTIVITY OTHER THAN THE ACTIVITY PERFORMING REPAIR. THE ACTIVITY PERFORMING THE TESTING MUST COMPLETE THE VALVE LINEUP REQUIRED BY BLOCK 24.

BLOCK 24 - VALVE/SYSTEM LINEUP FOR PRESSURE TESTING

List all the valves within the test boundary and those valves that make up the test boundary. The required position for adequate testing of the component or system will be listed. Each valve will have the initials of the initial positioner, or in the event the valve is in the correct position and does not require positioning "NA" will be marked. Each valve will have 1st and 2nd checkers initials. Personnel involved with initial positioning, 1st and 2nd checking will print their names, sign, initial and date the required blocks at the bottom of the form.

16 Oct 2019

**ELECTRICAL/ELECTRONIC CABLE CONNECTOR
ASSEMBLY AND TEST RECORD****QA FORM 34B
(DSS)**

PAGE 1 OF 1

A separate QA Form 34B must be used for each connector requiring controlled assembly documentation. The QA Form 34B must be used to provide: 1) Standalone documentation for cable connector reconnection when controlled assembly is required by authorized REC exception; or 2) QA Form 34B will be included in CWP/REC packages when documentation of controlled assembly is required as OQE for the work performed.

Planning must fill in blocks identified by a ♦ prior to issuing.

♦ 1. DSS PLATFORM HULL NO.		♦ 2. JCN		♦ 3. LWC/SHOP		♦ 4. CWP/REC SER NO.		♦ 5. SYSTEM(S) COMPONENT

QA FORM 34B INSTRUCTIONSELECTRICAL/ELECTRONIC CABLE CONNECTOR ASSEMBLY AND TEST RECORD

NOTE: PLANNING WILL FILL IN BLOCKS IDENTIFIED BY A ♦ PRIOR TO ISSUING.

PURPOSE: To provide a standard form to document the assembly and test of Scope of Certification electrical and electronic cable connector assemblies.

PROCEDURE: The numbered blocks on QA form 34B correspond with instructions listed here. Any block not used will be marked N/A. The planning organization must fill in blocks identified by a * prior to issuing the CWP.

BLOCK 1 - DSS PLATFORM/HULL NO.

Planner enter the DSS or ship's name and hull number.

BLOCK 2 - JCN

Planner enter the JCN.

BLOCK 3 - LWC

Planner enter the LWC.

BLOCK 4 - CWP/REC SER. NO.

Planner enter the CWP serial number.

BLOCK 5 - SYSTEM(S)/COMPONENT

Planner enter the noun name of the system(s) and component (if applicable).

BLOCK 6 - CONNECTOR DESIGNATION

Planner enter the designation of the connector as listed on prints or other reference material.

BLOCK 7 - CABLE DESIGNATION

Planner enter the designation of the cables entering the connector as listed on prints or other reference material.

BLOCK 8 - CONNECTOR SIZE

Planner enter the type and size of the male connector (ex. M24231/13-001, where the M24231 is the standard for the type of receptacle and the 13-001 is the size and number of contacts from the standard).

BLOCK 9 - REFERENCES

Planner enter all references used to identify component parts, joint, material, and assembly information. Include revision letter and, if applicable, the assembly number (e.g., Assy D, Assy RA, etc.). Revisions for technical manuals are not required. If joint numbers are assigned in a sketch in a Work Procedure, include the Work Procedure sketch number. For Electrical Hull Fittings, include both the assembly drawing and electrical hole assignment drawing.

BLOCK 10 - NEW MATERIAL

Craftsman

PC NO: Enter piece numbers of parts. List only the new replacement parts actually being installed.

REF: Record the reference letter of the drawing or document listed in Block 9 which provides the material specification or assembly information for the piece listed in the "PC NO." block.

DESCRIPTION: Describe all new parts associated with the assembly or joint. For O-rings: record the MIL SPEC and the size. Enter the stock number of the O-ring lubricant or any sealant used during assembly.

QTY: Record quantity of new material installed.

LOE: Identify the Level of Essentiality (MIC Level). Example: L1, NA. For SOC material, enter the appropriate Material Control Division (A, B or C).

IDENT: Record the National Stock Number or traceability number of the new materials that were used.

R/I (Receipt Inspection): Enter receipt inspection results from the QA form 2 (SAT). For non-controlled material, enter "N/A". For SOC MCD C material, the craftsman will perform a receipt inspection per Part III Chapter 6 of this volume and document the inspection results in the R/I column of Block 10.

BLOCK 11 - INSPECTION

PINS: Craftsman record "SAT" or "UNSAT" for the plug and jack inspection using requirements of the references listed in Block 9.

SEALING SURFACE: Craftsman record "SAT" or "UNSAT" for the sealing surface inspection using requirements of the references listed in Block 9.

Planning. If the sealing surface is not required to be checked, mark the "NOT APPLICABLE" block.

THREADS: Craftsman record "SAT" or "UNSAT" for the fastening thread inspection using requirements of the references listed in Block 9.

Planning. If the thread inspection is not required to be checked, mark the "NOT APPLICABLE" block.

REMARKS: Enter any pertinent remarks or additional information related to the inspection of the pins, thread or sealing surfaces in Block 14. Each entry must contain a signature and date except where the entry is pre-printed on the form by planning.

BLOCK 12 - TORQUE DOCUMENTATION

Not all electrical or electronic cable connectors require torque documentation. For those joints not requiring torque documentation, the Planner will mark the "NOT APPLICABLE" block. The craftsman will still sign indicating that the joint was assembled following specification and the correct O-ring was used.

For those electrical or electronic cable connectors which require torque documentation:

REQUIRED TORQUE: The Planner will list the required torque for the vent screw and coupling ring as applicable per the requirements of the reference(s) listed in Block 9.

FINAL TORQUE: The craftsman will record the final torque applied to the vent screw or coupling ring.

TORQUE DEVICE DATA: Craftsman record range, serial number and calibration due date for the torque wrench or other device used during the assembly of the connector.

CRAFTSMAN(S) AND QAI CERTIFICATION BLOCK FOR JOINT DATA: Craftsman(s) and QAI must sign, record badge number and date of the signature after the satisfactory completion of assembly following the requirements. This signature provides certification that the joint meets the requirements for the following:

- (1) The applied lubricant is acceptable per the technical direction.
- (2) The final required pre-load torque has been applied following specified requirements.
- (3) Sealing surfaces meet the acceptance criteria of the applicable Maintenance Standard.

QAI CERTIFICATION BLOCK FOR JOINT DATA: QAI must sign and date the signature after the satisfactory completion of assembly following the requirements. This signature provides certification that the joint meets the requirements for the following:

- (1) The applied lubricant is acceptable per the technical direction.
- (2) The final required pre-load torque has been applied following specified requirements.
- (3) Sealing surfaces meet the acceptance criteria of the applicable Maintenance Standard.

BLOCK 13 - LOCKWIRE/LOCKING CABLE/DEVICE INSTALLATION

NOTE: THIS BLOCK APPLIES TO LOCKING DEVICES OTHER THAN SELF-LOCKING NUTS, SELF-LOCKING INSERTS OR SELF-LOCKING BOLT OR CAP SCREWS.

Planner enter an X in the “NOT APPLICABLE” box when not applicable. When an action is required to engage the locking device, enter a description of the required action.

NOTE: FOR MCD-C LOCKWIRE, LOCKING CABLE OR DEVICE, THE QAI WILL UTILIZE SPACE IN BLOCK 14 TO DOCUMENT COMPLETION OF INSPECTION OF MCD-C MATERIAL DURING INSTALLATION.

Craftsman sign, date and check SAT when lockwire, locking cable or required locking device (e.g., locking ring for EHF's, barrel nut locking device, etc.) has been properly installed or the required action has been accomplished. Enter description (e.g., lockwire, locking cable, lock tab) and ident (e.g., stock number, MIL-SPEC or piece number) of the lockwire, locking cable or locking device. Enter description and “Existing” for existing locking devices. If more than one locking device type (e.g., lockwire and lock tab washers) exists on the assembly, record additional information in the Remarks block. When the installation of more than one of the same type of locking device is being documented in Block 13 (e.g., 2 locking devices), record the quantity in addition to the description (Block 14 may be used if additional space is needed). Recording the quantity is not required for lockwire or locking cable, nor when the locking device quantity is documented in Block 10.

QAI sign, print and date in Block 14 for new MCD-C material installed by craftsman in Block 13, to ensure material conforms to specified requirements.

BLOCK 14 - REMARKS/RECORD OF REPAIRS/MODIFICATIONS/
INSPECTIONS

Enter any pertinent remarks or additional information related to the repair or assembly of the component. Each entry must contain a signature and date except where the entry is pre-printed on the form by planning.

BLOCK 15 - RECORD HAS BEEN REVIEWED FOR COMPLETENESS

Quality Assurance Supervisor or Quality Assurance Officer will print name, enter signature and date for final review, signifying the accuracy of the completed form. If any entry is UNSAT, the Quality Assurance Officer will initiate action to resolve the unsat condition and indicate the action taken in the remarks block. Do not sign unless a satisfactory repair is completed or the UNSAT condition is accepted.

MAINTENANCE PROGRAMS
TABLE OF CONTENTS

FOREWORD - INTRODUCTION

1.1 Purpose	VI-FWD-1
1.2 Scope	VI-FWD-1
1.3 Changes and Corrections	VI-FWD-2
Appendices	
A List of Acronyms	VI-FWD-A-1

CHAPTER 1 - WATERBORNE UNDERWATER HULL CLEANING

1.1 Purpose	VI-1-1
1.2 Scope	VI-1-1
1.3 Policy	VI-1-1
1.4 Responsibilities	VI-1-1
1.5 Reports	VI-1-2

CHAPTER 2 - FLEET TECHNICAL ASSISTANCE

2.1 Purpose	VI-2-1
2.2 Fleet Technical Assistance Definition	VI-2-1
2.3 Fleet Technical Assistance Exclusion Areas	VI-2-1
2.4 Fleet Technical Assistance Policy	VI-2-2
2.4.1 Requesting Assistance	VI-2-2
2.4.2 Required Fleet Technical Assistance Request Information	VI-2-2
2.4.3 Chief of Naval Operations Availability Fleet Technical Assistance Procedures	VI-2-3
2.4.4 Initial Response	VI-2-3
2.4.5 On-Sight Support	VI-2-3
2.5 Completion	VI-2-3
2.5.1 Fleet Technical Assistance Completion	VI-2-4
2.5.2 Transition to Repair	VI-2-4
2.6 Responsibilities	VI-2-4
2.6.1 Ship's Commanding Officer	VI-2-4
2.6.2 Regional Maintenance Center Commanders	VI-2-5
2.6.3 Other Source of Support Providers	VI-2-6
2.6.4 Navy 311 Fleet Technical Assistance Request Processing Procedure	VI-2-7

2.7	Regional Maintenance Centers.....	VI-2-7
2.7.1	Regional Maintenance Centers	VI-2-7
2.7.2	Area Regional Maintenance Center Area of Responsibility Assignments	VI-2-7
2.7.3	Considerations for Providing Assistance	VI-2-10
2.7.4	Funding	VI-2-11
2.8	Post-Fleet Technical Assistance Administrative Requirements.....	VI-2-12
Appendices		
A	Area Regional Maintenance Center Fleet Technical Assistance Contact Information	VI-2A-1
B	Sample Technical Assistance Visit Report (TAVR) Message	VI-2B-1
C	Sample E-Mail Technical Assistance Visit Report (E-TAVR)	VI-2C-1
D	Submarine Fleet Technical Support Providers Roles and Responsibilities	VI-2D-1

CHAPTER 3 - SUBMARINE MODERNIZATION

3.1	Purpose.....	VI-3-1
3.1.1	Scope.....	VI-3-1
3.1.2	Definition	VI-3-2
3.2	Responsibilities	VI-3-2
3.2.1	Immediate Superior In Command (Squadron or Naval Submarine Support Command)	VI-3-2
3.2.2	Fleet Maintenance Activity.....	VI-3-4
3.2.3	Ship's Alteration Coordinator.....	VI-3-5
3.3	Alteration Programs	VI-3-7
3.3.1	Reactor Plant Ship Alteration Package Program (Nuclear Powered Ships only)	VI-3-7
3.3.2	Alteration Installation Team Program	VI-3-7
3.3.3	Type Commander Alteration Kit Program	VI-3-7
3.3.4	Alteration and Improvement Item Program.....	VI-3-7
3.3.5	Command, Control, Communications, Computer, Combat Systems, Intelligence, Surveillance and Reconnaissance (C5ISR) Modernization Program (C5IMP)	VI-3-8
3.4	Monitoring of Alteration Status	VI-3-8
3.4.1	Type Commander Alteration Management System.....	VI-3-8
3.4.2	Navy Data Environment - Navy Modernization.....	VI-3-8
3.4.3	Navy Tool for Interoperability Risk Assessment, Submarine Modernization and Alteration Requirements Tool	VI-3-8
3.4.4	Nuclear Alteration Technical Documentation Compact Disk	VI-3-8
3.5	Liaison Action Request	VI-3-8
3.6	Alteration Feedback	VI-3-9
3.7	Alteration Requests	VI-3-9
3.8	TYCOM Modernization Websites	VI-3-9

3.9 Permanent Modifications to Tenders with Nuclear Support Facilities VI-3-9

Appendices

A	Major Ship Alteration Types Executive Summary.....	VI-3A-1
B	Submarine Alteration Request Format.....	VI-3B-1
C	Sample TEMPALT or OPALT Reporting Message.....	VI-3C-1
D	TYKIT Requisition Form	VI-3D-1
E	Changes to Reactor Plant Configuration.....	VI-3E-1
F	TYCOM Alteration Management System Interpretation Guide.....	VI-3F-1
G	Liaison Action Request (LAR) Form	VI-3G-1
H	Sample Alteration Feedback Message and Email Format	VI-3H-1

CHAPTER 4 - SHIPBOARD ELECTROMAGNETIC COMPATIBILITY

4.1	Purpose.....	VI-4-1
4.2	Background	VI-4-1
4.3	Electromagnetic Compatibility Certification and EMI Surveys	VI-4-2
4.3.1	Surface Ships and Aircraft Carriers Electromagnetic Compatibility Certifications.....	VI-4-2
4.3.2	Submarine Electromagnetic Compatibility Certifications	VI-4-3
4.4	Fleet Electromagnetic Compatibility Support Tools.....	VI-4-4
4.5	Engineer Electromagnetic Interference Fixes	VI-4-5
4.6	Shipboard Full-Scale Electromagnetic Compatibility Evaluations.....	VI-4-5
4.7	Electromagnetic Compatibility Certification	VI-4-5
4.7.1	System Electromagnetic Compatibility Certification	VI-4-5
4.7.2	Ship Electromagnetic Compatibility Certification.....	VI-4-6
4.8	Electromagnetic Compatibility Certification Maintenance.....	VI-4-6
4.9	Responsibilities	VI-4-6

CHAPTER 5 - DEFICIENCY DOCUMENTATION AND REPORTING

5.1	Purpose.....	VI-5-1
5.1.1	Background.....	VI-5-1
5.1.2	Scope.....	VI-5-2
5.1.3	Definitions.....	VI-5-3
5.2	Responsibilities	VI-5-5
5.2.1	Ship's Force	VI-5-5
5.2.2	Immediate Superior in Command.....	VI-5-5
5.2.3	Maintenance Team.....	VI-5-5
5.2.4	Type Commander.....	VI-5-5
5.2.5	Fleet Maintenance Activity.....	VI-5-6
5.3	Guidance.....	VI-5-6
5.3.1	Generation of a Ship Maintenance Action Form OPNAV 4790/2K	VI-5-6
5.3.2	Generation of a Casualty Report.....	VI-5-7

Appendices

A	Equipment Operational Capability Range of Values and Definitions	VI-5A-1
---	--	---------

CHAPTER 6 - INDUSTRIAL PLANT EQUIPMENT

6.1	Purpose	VI-6-1
6.1.1	Scope	VI-6-1
6.1.2	Background	VI-6-2
6.2	Definitions	VI-6-2
6.2.1	Plant Equipment - Classes Three and Four Plant Property	VI-6-2
6.2.2	Class Three Plant Property - Other Plant Equipment	VI-6-2
6.2.3	Class Four Plant Property - Industrial Plant Equipment	VI-6-2
6.3	Procurement Requirements	VI-6-2
6.3.1	Requesting Activities	VI-6-2
6.3.2	New Procurement	VI-6-2
6.3.3	Urgent Replacement	VI-6-3
6.3.4	Receipt of Plant Property	VI-6-3
6.4	Responsibilities	VI-6-3
6.4.1	Fleet Commander	VI-6-3
6.4.2	Type Commander	VI-6-4
6.5	Reports	VI-6-4

Appendices

A	Plant Equipment Project Form	VI-6A-1
---	------------------------------------	---------

CHAPTER 7 - SUBMARINE FORCES AFLOAT PAINTING AND PRESERVATION GUIDELINES FOR NON-NUCLEAR SPACES AND COMPONENTS

7.1	Introduction	VI-7-1
7.1.1	Applicability	VI-7-1
7.1.2	Technical Point of Contact	VI-7-2
7.2	Scope	VI-7-2
7.2.1	Ship's Force Responsibilities	VI-7-2
7.2.2	Fleet Maintenance Activity Responsibilities	VI-7-3
7.2.3	Quick Reference	VI-7-3
7.2.4	Scheduled Preservation Upkeep Coordinated Effort	VI-7-3
7.3	General Safety Precautions	VI-7-4
7.3.1	Hazards	VI-7-4
7.3.2	Precautions	VI-7-4
7.4	Inspection of Existing Paint and Base Metal	VI-7-4
7.4.1	Required Tools	VI-7-4
7.4.2	Failure Locations	VI-7-4
7.4.3	Cosmetic Paint Failure	VI-7-5
7.4.4	The Difference Between Rust and Rust Staining	VI-7-5
7.5	General Surface Preparation	VI-7-6

7.5.1	Surface Cleaning Methods.....	VI-7-6
7.5.2	Solvent Cleaning.....	VI-7-7
7.5.3	Detergent Cleaning	VI-7-7
7.5.4	Hand Tool Cleaning.....	VI-7-7
7.5.5	Power Tool Cleaning	VI-7-8
7.5.6	Feathering Edges.....	VI-7-9
7.5.7	Aged Paint.....	VI-7-9
7.5.8	Surface Salt Concentration	VI-7-9
7.5.9	Equipment Maintenance	VI-7-9
7.6	General Mixing and Paint Application.....	VI-7-10
7.6.1	Product Data Sheet/Material Safety Data Sheet	VI-7-10
7.6.2	Mixing Area.....	VI-7-11
7.7	Specific Painting Regulations for Submarines.....	VI-7-11
7.7.1	Motor Generator Units.....	VI-7-11
7.7.2	Coating Material	VI-7-11
7.7.3	Items Not To Be Painted.....	VI-7-12
7.7.4	Shelf Life of Paints	VI-7-13
7.8	Mixing Procedures	VI-7-13
7.8.1	Pre-Packaged Paint	VI-7-13
7.8.2	Mixing Observations.....	VI-7-13
7.8.3	Mixing and Application Procedures for the Navy Epoxy Paint System.....	VI-7-14
7.8.4	Mixing and Application Procedures for Commercial Epoxy Paint Systems	VI-7-15
7.9	Paint Application.....	VI-7-15
7.9.1	General Considerations.....	VI-7-15
7.9.2	Brush Application	VI-7-16
7.9.3	Roller Application.....	VI-7-17
7.9.4	Wet Film Thickness Check.....	VI-7-17
7.9.5	Overcoating.....	VI-7-19
7.10	Quick Reference Section.....	VI-7-19
7.10.1	Surface Preparation and Paint Application in Specific Areas	VI-7-19
7.10.2	Bilges	VI-7-20
7.10.3	Sail (Interior).....	VI-7-23
7.10.4	Non-Skid Areas.....	VI-7-26
7.10.5	High Temperature Piping (and Components Near the 12k Evaporator).....	VI-7-34
7.10.6	Underway Painting - Rust Converters	VI-7-36
7.10.7	Touch-Up of Miscellaneous Areas of General Corrosion Including New High Solids Coatings	VI-7-38
Appendices		
A	Submarine Paint Guide	VI-7A-1
B	Coating Inspection Report Form.....	VI-7B-1
C	Shipboard Power Cleaning Tools	VI-7C-1

CHAPTER 8 – MINIATURE/MICROMINIATURE ELECTRONIC REPAIR PROGRAM

8.1	Purpose	VI-8-1
8.1.1	Scope	VI-8-1
8.1.2	Policy	VI-8-1
8.1.3	Background	VI-8-2
8.2	Responsibilities	VI-8-2
8.2.1	Fleet Commander	VI-8-2
8.2.2	Type Commander or Immediate Superior In Command	VI-8-2
8.2.3	Commanding Officer or Officer In Charge	VI-8-2
8.2.4	Miniature/Microminiature Repair Program Coordinator or Module Test and Repair Facility Coordinator	VI-8-3
8.2.5	Fiber Optic Test and Repair Program Coordinator	VI-8-4
8.2.6	Commander, Navy Regional Maintenance Center	VI-8-4
8.2.7	NAVSEA 2M and MTR Program Manager	VI-8-5
8.3	Authorized Miniature/Microminiature Outfitting	VI-8-5
8.4	Miniature/Microminiature Personnel and Station Requirements	VI-8-5
8.5	Progressive Repair Process	VI-8-5
8.5.1	Repair Process	VI-8-5
8.5.2	Ship's Force Process	VI-8-5
8.5.3	Fleet Maintenance Activity Process	VI-8-6
8.5.4	Certification of Miniature/Microminiature Repaired Assets as Ready for Issue	VI-8-6
8.5.5	Miniature/Microminiature Module Test and Repair Piece Parts	VI-8-6
8.5.6	Fiber Optic Repair Piece Parts	VI-8-7
8.6	CVN Miniature/Microminiature Guidance (Naval Air Force Only)	VI-8-8
8.7	Submarine Miniature/Microminiature Guidance (Submarine Force Only)	VI-8-8
8.7.1	Module Screening and Repair Activity	VI-8-8
8.7.2	OHIO Class Organizational Repair Capability	VI-8-8
8.7.3	Reports	VI-8-8
Appendices		
A	2M Repair Process	VI-8A-1
B	Sample 2M and MTRF Quarterly Report Message (Naval Air Force Only)	VI-8B-1

CHAPTER 9 - METROLOGY AND CALIBRATION PROGRAM

9.1	Purpose	VI-9-1
9.1.1	Scope	VI-9-1
9.1.2	Policy	VI-9-1
9.2	Responsibilities	VI-9-2
9.2.1	Fleet Commanders	VI-9-2
9.2.2	Type Commander	VI-9-2
9.2.3	NAVSEA Technical Authority	VI-9-3

9.2.4	Immediate Superior In Command.....	VI-9-4
9.2.5	Commanding Officers All Forces.....	VI-9-4
9.2.6	Commanding Officers Naval Air Force.....	VI-9-4
9.2.7	Regional Maintenance Center Metrology and Calibration Coordinators	VI-9-4
9.2.8	Regional Maintenance Center and Regional Calibration Center.....	VI-9-5
9.3	Calibration Management	VI-9-5
9.3.1	Shipboard Gage Calibration Program Field Calibration Activity.....	VI-9-5
9.3.2	Calibration Accounting.....	VI-9-8
9.3.3	Shipboard Calibration Recall Inventories for MEASURE, TCR, and MCMS.....	VI-9-8
9.4	Regional Loan Pools	VI-9-8
9.5	Replacement of General Purpose Electronic Test Equipment/Calibration Standards ..	VI-9-9
9.5.1	Depot Level Repairables.....	VI-9-9
9.5.2	Navy Stock Funded.....	VI-9-9
9.6	Test Measurement Diagnostic Equipment Management	VI-9-9
9.6.1	Ship's Portable Electronic Test Equipment Requirements List.....	VI-9-9
9.6.2	Test Measurement Diagnostic Equipment Index.....	VI-9-9
9.6.3	Sub-Category Code.....	VI-9-10
9.6.4	Ship's Configuration and Logistics Support Information System Index.....	VI-9-10
9.6.5	Consolidated Test, Measurement and Diagnostic Equipment Readiness Assessment.....	VI-9-10
9.7	Shipboard Instrumentation and System Calibration.....	VI-9-11
9.7.1	Calibration Requirements List	VI-9-14
9.7.2	Calibration Interval	VI-9-14
9.7.3	Markings for Test, Measurement and Diagnostic Equipment	VI-9-15
9.7.4	SISCAL System Level Calibration Guidance for Ship Conversion Navy Platforms and Platforms in CNO or other Maintenance Availabilities	VI-9-15
9.8	LHA and LHD Class Ship Metrology and Calibration Program	VI-9-17
9.8.1	Purpose.....	VI-9-17
9.8.2	Background	VI-9-17
9.8.3	Discussion	VI-9-17
9.8.4	Scope.....	VI-9-18
9.8.5	Applicability	VI-9-18
9.8.6	Action.....	VI-9-18
9.9	Nuclear Propulsion Calibration Requirements.....	VI-9-21

CHAPTER 10 - MOTOR GASOLINE HANDLING AND STORAGE

10.1	Purpose	VI-10-1
10.2	Characteristics	VI-10-1
10.3	Personnel Hazards	VI-10-1
10.4	Storage and Handling	VI-10-2

10.4.1	Tank Conditions.....	VI-10-2
10.4.2	Loading and Off-loading.....	VI-10-2
10.4.3	Identification and Sampling Requirements.....	VI-10-3
10.4.4	Safe Handling of Motor Gasoline	VI-10-3
10.4.5	Containerized Motor Gasoline.....	VI-10-4
10.4.6	LPD 17 Class MOGAS System	VI-10-4
10.5	Motor Gasoline Assessment Program	VI-10-4
 CHAPTER 11 - MAINTENANCE, REPAIR AND OVERHAUL OF SERVICE CRAFT, LANDING CRAFT AND SMALL BOATS		
11.1	Purpose	VI-11-1
11.2	Material Readiness	VI-11-1
11.3	Maintenance of Landing Craft and Small Boats Assigned to Afloat Units	VI-11-2
11.4	Landing Craft and Small Boat Repairs During Chief of Naval Operations Maintenance Availability	VI-11-3
11.5	Maintenance of Service Craft, Landing Craft and Small Boats Assigned to Shore Activities, Group and Squadron Commanders.....	VI-11-3
11.5.1	Unit Level Maintenance.....	VI-11-3
11.5.2	Fleet Maintenance Activity Level/Contractor Assist Maintenance	VI-11-4
11.5.3	Overhaul of Service/Landing Craft and Small Boats	VI-11-4
11.6	Responsibilities	VI-11-5
11.6.1	Type Commander.....	VI-11-5
11.6.2	Immediate Superior In Command.....	VI-11-5
11.6.3	Commanding Officers of Parent Commands	VI-11-6
11.7	Repair and Overhaul of Small Boat Engines	VI-11-6
11.8	Boat Alterations.....	VI-11-6
11.9	Operation of Small Boat Engines.....	VI-11-6
 CHAPTER 12 - DEGAUSSING		
12.1	Purpose	VI-12-1
12.2	Degaussing Definitions	VI-12-1
12.2.1	Check Ranging.....	VI-12-1
12.2.2	Degaussing Folder	VI-12-1
12.2.3	Degaussing System	VI-12-1
12.2.4	Degaussing System Calibration	VI-12-2
12.2.5	Deperming.....	VI-12-2
12.2.6	Magnetic Compass Compensation.....	VI-12-2
12.3	Surface Ships and Submarines With Degaussing Systems	VI-12-2
12.3.1	Check Ranging.....	VI-12-3
12.3.2	Responsibilities	VI-12-3

12.4	Submarines Without Installed Degaussing Systems	VI-12-4
12.4.1	Check Ranging.....	VI-12-4
12.4.2	Responsibilities	VI-12-5
12.5	Surface Ships Without Degaussing Systems.....	VI-12-5

CHAPTER 13 - SURFACE SHIP CORROSION CONTROL

13.1	Purpose	VI-13-1
13.2	Background	VI-13-1
13.3	Policy.....	VI-13-2
13.4	Responsibilities	VI-13-2
13.4.1	Type Commanders	VI-13-2
13.4.2	Fleet Maintenance Activity/Regional Maintenance Center	VI-13-3
13.4.3	Surface Force Ships and Aircraft Carriers	VI-13-3

Appendices

A	Preservation Departures from Specifications Process Decision Tree	VI-13A-1
---	---	----------

CHAPTER 14 - CANNIBALIZATION

14.1	Purpose	VI-14-1
14.2	Policy.....	VI-14-1
14.2.1	Commander Naval Surface Force Ships	VI-14-1
14.2.2	Naval Air Force Ships.....	VI-14-2
14.2.3	Submarine Force Ships	VI-14-2
14.3	Definitions	VI-14-2
14.3.1	Self-Cannibalization	VI-14-2
14.3.2	System Cannibalization	VI-14-2
14.3.3	Active Ship Cannibalization	VI-14-2
14.4	Criteria for Authorization (Active Ship Cannibalization).....	VI-14-2
14.5	Request Procedure (Active Ship Cannibalization).....	VI-14-3
14.5.1	Requesting Ship	VI-14-3
14.5.2	ISIC (Surface Force Only)	VI-14-3
14.6	Cannibalization Authorization and Execution (Active Ship Cannibalization)	VI-14-4
14.6.1	Type Commander.....	VI-14-4
14.6.2	Type Commander/Immediate Superior In Command.....	VI-14-4
14.6.3	Requesting Ship	VI-14-4
14.6.4	Cannibalized Ship	VI-14-4

Appendices

A	Sample Cannibalization Request Message (Aircraft Carriers and Surface Force Ships Only)	VI-14A-1
B	Cannibalization Request	VI-14B-1

CHAPTER 15 - AMMUNITION OFF-LOAD

15.1 Purpose	VI-15-1
15.2 Action	VI-15-1
15.3 Notification.....	VI-15-2

CHAPTER 16 - HABITABILITY

16.1 Purpose	VI-16-1
16.1.1 Policy	VI-16-1
16.1.2 Discussion	VI-16-2
16.2 Habitability Improvement Programs	VI-16-2
16.2.1 Ship's Force Habitability Improvement Projects.....	VI-16-2
16.2.2 Habitability Programs Under the Technical Sponsorship of Naval Sea Systems Command.....	VI-16-3
16.3 New Construction Ships.....	VI-16-7
16.4 Naval AIRPAC and AIRLANT Specific Habitability Improvement Programs	VI-16-7
16.4.1 Aircraft Carrier Climate Control Improvement Team	VI-16-7
16.4.2 Food Service and Laundry (Commander, Naval Air Force Pacific) and Enhanced Quality Of Life Program (Commander, Naval Air Force Atlantic)	VI-16-8

Appendices

A	Table of Habitability Project Technical Requirements and Actions	VI-16A-1
B	Sample Habitability OPTAR Augment Funding Request	VI-16B-1
C	Advance Planning Milestones.....	VI-16C-1

CHAPTER 17 - IMPRESSED CURRENT CATHODIC PROTECTION

17.1 Purpose	VI-17-1
17.2 Cathodic Protection Logs	VI-17-1
17.2.1 Surface Force Ships	VI-17-1
17.2.2 Naval Air Force Ships.....	VI-17-1
17.2.3 Submarine Force Ships	VI-17-1
17.3 Post Drydocking Activation	VI-17-1

CHAPTER 18 - INFLATABLE LIFE RAFTS

18.1 Purpose	VI-18-1
18.2 Fleet Life Raft Program.....	VI-18-1
18.3 Types of Inflatable Life Rafts	VI-18-1
18.4 Commercial Life Rafts	VI-18-1
18.5 Recertification	VI-18-2
18.6 LRU 13/A Life Rafts.....	VI-18-2

18.7 Automated Tracking System	VI-18-2
18.8 Responsibilities	VI-18-2
18.8.1 Commanding Officer or Officer In Charge	VI-18-2
18.8.2 Fleet RMC, SRF, and FMA Life Raft Repair Facility.....	VI-18-2
18.8.3 TYCOM Life Raft Program Manager.....	VI-18-3
18.9 Unserviceable or Rejected Life Rafts.....	VI-18-4
18.10 Departures from Specifications	VI-18-4
18.11 Records.....	VI-18-4

CHAPTER 19 - MAINTENANCE AND MATERIAL MANAGEMENT

19.1 Purpose	VI-19-1
19.2 Policy.....	VI-19-1
19.3 Scope.....	VI-19-1
19.4 Ship Maintenance and Material Management.....	VI-19-2
19.4.1 Responsibilities	VI-19-2
19.4.2 Qualifications.....	VI-19-15
19.5 Maintenance and Material Management Operation and Administration	VI-19-15
19.5.1 Standard Force Work Center Numbering System	VI-19-15
19.5.2 Job Control Number.....	VI-19-16
19.5.3 Job Sequence Number.....	VI-19-16
19.6 Planned Maintenance System Feedback Reports.....	VI-19-16
19.6.1 Periodicity	VI-19-16
19.6.2 Rates.....	VI-19-17
19.6.3 Man-hours	VI-19-17
19.6.4 Tools, Parts, Material and Test Equipment.....	VI-19-17
19.6.5 Procedure	VI-19-17
19.6.6 Duplicates MRCs	VI-19-18
19.6.7 Addition or Deletion of an MRC	VI-19-18
19.6.8 Newly Installed or Removed Equipment.....	VI-19-18
19.6.9 Splitting a MIP	VI-19-18
19.6.10 Shift of Maintenance Responsibility.....	VI-19-19
19.6.11 MRC Changes Not Requiring Feedback Reports	VI-19-20
19.6.12 Types of Feedback Reports.....	VI-19-21
19.6.13 Feedback Report Submission.....	VI-19-21
19.6.14 Feedback Report Screening (Shipboard or Activity).....	VI-19-22
19.6.15 Feedback Report Screen (External to Hull or Activity).....	VI-19-22
19.6.16 Feedback Processing Activities	VI-19-23
19.6.17 Feedback Processing	VI-19-23
19.6.18 Feedback Response Implementation.....	VI-19-24
19.7 Inactive Equipment Maintenance.....	VI-19-24
19.8 Deactivated Equipment	VI-19-28

19.9	Related Maintenance	VI-19-28
19.9.1	Related Maintenance from MIP	VI-19-28
19.9.2	Work Center Supervisors	VI-19-29
19.9.3	MRC Related Maintenance	VI-19-29
19.10	Submarine Safety, Scope Of Certification And Survivability And Escape (Submarines Only)	VI-19-29
19.11	PMS Functional Operation	VI-19-31
19.11.1	Minimum Standards	VI-19-31
19.11.2	SKED	VI-19-32
19.11.3	Scheduling	VI-19-33
19.11.4	Accountability	VI-19-34
19.11.5	Accomplishing PMS	VI-19-34
19.11.6	Non-Accomplished Categories	VI-19-35
19.11.7	Weekly Status Report	VI-19-35
19.11.8	Electronic Accountability	VI-19-36
19.11.9	Informational MRCs	VI-19-36
19.11.10	Assessment Procedure MRCs	VI-19-36
19.11.11	Interim MRC Procedures	VI-19-36
19.11.12	Command Implementation of a Force Revision	VI-19-36
19.11.13	Change Service Accountability Log	VI-19-40
19.11.14	PMS Master File	VI-19-41
19.11.15	Work Center PMS File	VI-19-41
19.12	Maintenance Data System	VI-19-42
19.12.1	Specific Requirements and Policy	VI-19-42
19.12.2	Databases	VI-19-43
19.12.3	Data	VI-19-43
19.12.4	Reporting	VI-19-44
19.13	Evaluation	VI-19-56
19.13.1	Inspections	VI-19-56
19.13.2	Self-Assessments	VI-19-59
19.13.3	Self-Assessment Elements	VI-19-60
19.13.4	Work Center Audits	VI-19-66
19.13.5	Deficiency Abatement	VI-19-66
Appendices		
A	3-M System Inspection Procedures	VI-19A-1
A1	Inspection Procedures for Naval Air Force	VI-19A-2
A2	Inspection Procedures for Naval Submarine Forces	VI-19A-31
A3	Inspection Procedures for Naval Surface Forces	VI-19A-57
A4	Inspection Procedures for Navy Expeditionary Combat Command Force	VI-19A-114
A5	Inspection Procedures for Commander Naval Information Forces	VI-19A-153
B	Format for Reporting 3-M Inspections	VI-19B-1
C	Reserved for Future Use	VI-19C-1

D	Listing of Standard Work Center Codes for Master Job Catalog Items Contained in Ship's CSMP (Surface and Submarine Forces Only)	VI-19D-1
E	Job Originator Values	VI-19E-1
F	Sample Situational Requirement Reference Sheet	VI-19F-1
G	Preparation Instructions Configuration Change Form (OPNAV 4790/CK)	VI-19G-1
H	Preparation Instructions Maintenance Action Form (OPNAV 4790/2K)	VI-19H-1
I	Preparation Instructions Supplemental Form (OPNAV 4790/2L)	VI-19I-1
J	Work Candidate and JSN Log Example	VI-19J-1

CHAPTER 20 - WEIGHT AND MOMENT CONTROL FOR SUBMARINES

20.1	Purpose	VI-20-1
20.2	Ballast Changes	VI-20-2
20.2.1	Naval Sea Systems Command Notification	VI-20-2
20.2.2	Ballast Types	VI-20-2
20.3	Unusual Conditions	VI-20-4

Appendices

A	Sample Ship Message to ISIC Concerning Removal or Reinstallation of DDS Lead	VI-20A-1
B	Sample Ship Message to ISIC Concerning Audit of DDS Lead Loading	VI-20B-1
C	Sample Ship Message to ISIC Concerning Audit of Cargo Lead Documentation	VI-20C-1

CHAPTER 21 - SUBMARINE STORAGE BATTERIES

21.1	Purpose	VI-21-1
21.1.1	Background	VI-21-1
21.1.2	Discussion	VI-21-1
21.2	Action	VI-21-2
21.3	Casualty Reporting	VI-21-4
21.3.1	Purpose	VI-21-4
21.3.2	Background	VI-21-4
21.3.3	SSN and SSGN Class Submarine Main Storage Battery	VI-21-4
21.3.4	SSBN Class Submarine Main Storage Battery	VI-21-4

Appendices

A	Temperature Versus TVG Table	VI-21A-1
B	Temperature Versus MCV Table	VI-21B-1
C	TCV Calculation Table	VI-21C-1
D	Capacity Test Discharge Data Sheet	VI-21D-1
E	Main Storage Battery Inspection Check-Off	VI-21E-1

F	Instructions for Completing Submarine Battery Quarterly Reports - NAVSEA 9320/3	VI-21F-1
G	Instructions for Maintaining the Submarine Battery Record Book – NAVSEA 9320/1 (3-92)	VI-21G-1

CHAPTER 22 - TRIDENT SYSTEM AND EQUIPMENT MAINTENANCE PLANS

22.1	Purpose	VI-22-1
22.2	TRIDENT System and Equipment Maintenance Plans	VI-22-1
22.2.1	TRIDENT Planned Equipment Replacement	VI-22-1
22.2.2	Deployed SSGN Unplanned TRIPER Change Out	VI-22-2
22.2.3	Major Shore Spare	VI-22-3
22.2.4	Fleet Logistics Agent	VI-22-3
22.2.5	Updating of Submarine Logistics Technical Data	VI-22-4
22.2.6	Planned Refit Work Lists	VI-22-4

Appendices

A	TRIPER Information Sheet	VI-22A-1
---	--------------------------------	----------

CHAPTER 23 - SUBMARINE NOISE REDUCTION

23.1	Purpose	VI-23-1
23.1.1	Scope	VI-23-1
23.1.2	Background	VI-23-2
23.2	Noise Reduction Program Elements	VI-23-2
23.2.1	Radiated Noise Surveys	VI-23-2
23.2.2	Onboard Noise Surveys	VI-23-3
23.2.3	Shipboard Noise Reduction Program	VI-23-5
23.2.4	Training	VI-23-6
23.3	Responsibilities	VI-23-6
23.3.1	Immediate Superior In Command	VI-23-6
23.3.2	Industrial Activity	VI-23-7
23.3.3	Submarine Commanding Officer	VI-23-7

Appendices

A	Supplemental Noise Measurements	VI-23A-1
B	Beartrap Acoustic Radiated Trials (BART)	VI-23B-1
C	Shipboard Noise Reduction Instruction	VI-23C-1
D	Predeployment Noise Inspection	VI-23D-1
E	Submarine Silencing Publications	VI-23E-1
F	Sample Propeller Changeout Message	VI-23F-1

CHAPTER 24 - PERIODIC MAINTENANCE REQUIREMENT PROGRAM

24.1	Purpose	VI-24-1
24.2	Type Commander Scheduling System	VI-24-1
24.2.1	Periodic Maintenance Requirements Schedule	VI-24-2
24.2.2	Scheduling Periodic Maintenance Requirements Work	VI-24-2

24.2.3	Periodic Maintenance Requirements Calldown/Brokering	VI-24-2
24.2.4	Calculating Adjusted Last Maintenance Action Date.....	VI-24-2
24.2.5	Calculating Due Dates	VI-24-3
24.3	Periodic Maintenance Requirements Accomplishment	VI-24-3
24.4	Material Support for Fleet Maintenance Activity Accomplished Periodic Maintenance Requirements	VI-24-3
24.4.1	Mandatory Parts	VI-24-3
24.4.2	Contingency Parts	VI-24-3
24.4.3	Requisitioning Procedures	VI-24-3
24.4.4	Material Support Provided by the Advance Equipment Repair Program.....	VI-24-3
24.4.5	Material Support Provided by the TRIDENT Planned Equipment Replacement Program.....	VI-24-4
24.5	Corrective Maintenance of Equipment Using Periodic Maintenance Requirements..	VI-24-4
24.6	Periodic Maintenance Requirements Accomplishment During Chief of Naval Operations Maintenance Availabilities	VI-24-5
24.7	Periodic Maintenance Requirement Accomplishment During Dry Deck Shelter Maintenance Availabilities.....	VI-24-6
24.7.1	Regular Overhaul	VI-24-6
24.7.2	Restricted Availabilities (RAV).....	VI-24-7
24.8	Responsibilities	VI-24-7
24.8.1	Type Commander.....	VI-24-7
24.8.2	Submarine Maintenance Engineering, Planning and Procurement Activity	VI-24-7
24.8.3	Immediate Superior In Command.....	VI-24-8
24.8.4	Fleet Maintenance Activity.....	VI-24-11
24.8.5	Submarine Commanding Officer.....	VI-24-12
24.8.6	Deep Submergence System Commanding Officer	VI-24-13
Appendices		
A	Submarine Periodic Maintenance Requirement (PMR) Management Process	VI-24A-1
B	Work Package Supplement - Shipyard Planning and Feedback Report	VI-24B-1
C	Work Package - Ship's System Work Description Part 4.13.....	VI-24C-1

CHAPTER 25 - UNRESTRICTED OPERATIONS

25.1	Purpose	VI-25-1
25.2	Unrestricted Operation Maintenance Scheduling, Planning and Reporting.....	VI-25-1
25.2.1	Maintenance Requirements for Continued Unrestricted Operation to Design Test Depth.....	VI-25-1
25.2.2	Scheduling and Reporting	VI-25-1
25.2.3	Baseline and Due Dates	VI-25-2
25.2.4	Periodicity Extensions	VI-25-3
25.2.5	Scheduling, Planning and Reporting Unrestricted Operation Accomplishment at Ship/Fleet Maintenance Activity Level	VI-25-3

25.2.6	Unrestricted Operation Maintenance Requirement Card Accomplishment During Chief of Naval Operations Maintenance Availabilities.....	VI-25-4
25.2.7	Unrestricted Operation Maintenance Requirement Card Completion Reporting.....	VI-25-4
25.2.8	Operating Cycle/Interval Extensions	VI-25-5
25.3	Responsibilities	VI-25-5
25.3.1	Type Commander.....	VI-25-5
25.3.2	Submarine Maintenance Engineering, Planning and Procurement Activity	VI-25-5
25.3.3	Immediate Superior In Command.....	VI-25-6
25.3.4	Submarine Commanding Officer.....	VI-25-10
Appendices		
A	URO MRC Automated Work Request for Ship's Force Accomplishment	VI-25A-1
B	URO MRC Automated Work Request for FMA Accomplishment.....	VI-25B-1
C	SUBMEPP URO MRC Inventory	VI-25C-1
D	SUBMEPP URO MRC Schedule	VI-25D-1
E	Request for URO MRC Periodicity Extension Format.....	VI-25E-1
F	Sample Work Package Supplement	VI-25F-1

CHAPTER 26 - OPERATING DEPTH POLICY

26.1	Purpose	VI-26-1
26.2	Initial Tightness Dive	VI-26-1
26.3	Deep Dive or Controlled Dive.....	VI-26-2
26.3.1	Depth Limitations	VI-26-2
26.3.2	Conduct of Deep Dives or Controlled Dives	VI-26-2
26.3.3	Deep Submergence Bill	VI-26-2
26.3.4	Valve Operation	VI-26-2

CHAPTER 27 - SCHEDULED PRESERVATION UPKEEP COORDINATED EFFORT

27.1	Purpose	VI-27-1
27.2	Scheduling	VI-27-1
27.3	Responsibilities	VI-27-2
27.3.1	Type Commander.....	VI-27-2
27.3.2	Immediate Superior In Command.....	VI-27-2
27.3.3	Fleet Maintenance Activity.....	VI-27-3
27.3.4	Submarine Commanding Officer.....	VI-27-3

Appendices

A	SPRUCE Key Event Schedule.....	VI-27A-1
B	SPRUCE Report Form.....	VI-27B-1
C	SPRUCE Check List.....	VI-27C-1

CHAPTER 28 - CABLEWAY ASSESSMENT

28.1 Purpose	VI-28-1
28.2 Hazard Categories	VI-28-1
28.3 Deficiency Correction	VI-28-1
28.4 Assessment Scheduling	VI-28-1
28.4.1 Initial Assessment	VI-28-1
28.4.2 Follow-up Assessments	VI-28-2
28.4.3 Partial Assessments	VI-28-2
28.5 Cableway Assessment/Assist Team Composition and Procedures	VI-28-2
28.6 Responsibilities	VI-28-2
28.6.1 Immediate Superior In Command	VI-28-2
28.6.2 Regional Maintenance Center	VI-28-2
28.6.3 Fleet Maintenance Activity	VI-28-2
28.6.4 Cableway Assessment Team	VI-28-3
28.6.5 Ship Commanding Officer	VI-28-3
28.7 Reports	VI-28-3
Appendices	
A Sample Cableway Assessment Message	VI-28A-1

CHAPTER 29 - HEAT STRESS CONTROL AND REPAIR OF THERMAL INSULATION

29.1 Purpose	VI-29-1
29.2 Heat Stress	VI-29-1
29.2.1 Measurement of Insulation Surface Temperatures	VI-29-2
29.2.2 Heat Stress Area Stay Times	VI-29-2
29.3 Industrial Availability Lagging Plan	VI-29-2
29.4 Asbestos Lagging and Insulation	VI-29-2
29.4.1 Asbestos Control and Safety	VI-29-2
29.4.2 Repairs to Asbestos Lagging or Insulation	VI-29-3
29.4.3 Removal of Asbestos Lagging or Insulation	VI-29-3
Appendices	
A Inspection Guide for Excessive Heat	VI-29A-1

CHAPTER 30 - PORTABLE TOOL ASSISTANCE PROGRAM

30.1 Purpose	VI-30-1
30.2 Portable Tool Inventory Policy	VI-30-1
30.2.1 Distribution Priorities	VI-30-1
30.2.2 Borrowing Procedures	VI-30-1
30.2.3 Borrowing Ship's Responsibilities	VI-30-1

CHAPTER 31 - SURFACE FORCE SHIP MAINTENANCE PLACEMENT AND OVERSIGHT BUSINESS RULES

31.1 Purpose	VI-31-1
31.2 Background	VI-31-1
31.3 Ship Maintenance Funding Management Business Rules	VI-31-1
31.3.1 Scope	VI-31-1
31.3.2 Ship and Maintenance Team Business Responsibilities	VI-31-1
31.3.3 Regional Maintenance Center Business Responsibilities	VI-31-4
31.3.4 Type Commander Responsibilities	VI-31-5
31.4 Maintenance Proposal Review	VI-31-6
31.4.1 Concept	VI-31-6
31.4.2 Business Rules	VI-31-6
31.4.3 Continuous Estimating Incremental Planning Review Process	VI-31-7
31.5 Guidance for Firm Fixed Price Contracts	VI-31-9
31.5.1 Overall Process	VI-31-9
31.5.2 Firm Fixed Price Planning	VI-31-9
31.5.3 Firm Fixed Price Placement.....	VI-31-10
Appendices	
A RMC Spotlight Reports.....	VI-31A-1

CHAPTER 32 - TOP MANAGEMENT ATTENTION TOP MANAGEMENT ISSUES

32.1 Purpose	VI-32-1
32.2 Background	VI-32-1
32.3 Applicability and Scope	VI-32-1
32.4 Responsibilities	VI-32-2
32.4.1 Commander, United States Fleet Forces Command	VI-32-2
32.4.2 Naval Sea Systems Command	VI-32-3
32.4.3 Top Management Attention-Top Management Issues Panels	VI-32-4
32.4.4 Top Management Attention-Top Management Issues Analysis Center	VI-32-6
32.4.5 Type Commanders	VI-32-6
32.5 Metrics.....	VI-32-7
32.5.1 Top Management Attention-Top Management Issues Candidate Selection.....	VI-32-7
32.5.2 Charts and Graphs.....	VI-32-11

Appendices

A Top Management Attention and Top Management Issues Flowchart	VI-32A-1
--	----------

CHAPTER 33 - MAINTENANCE AND MODERNIZATION BUSINESS PLAN

33.1 Maintenance and Modernization Business Plan.....	VI-33-1
---	---------

33.2	MMBP Responsibilities	VI-33-1
33.2.1	Maintenance Team Responsibilities	VI-33-1
33.2.2	NSA Responsibilities	VI-33-2
33.2.3	TYCOM Responsibilities (Surface Force Ships only).....	VI-33-2
33.2.4	TYCOM Responsibilities (Aircraft Carriers and Submarines only).....	VI-33-3
33.2.5	Ship Program Manager Responsibilities.....	VI-33-3
33.3	The MMBP Submission	VI-33-3
33.3.1	MMBP Spreadsheet	VI-33-3
33.3.2	Prioritization	VI-33-5
33.3.3	Maintenance Summary and Risk Assessment	VI-33-5
33.4	Budget Process and MMBP Development Timeline	VI-33-5
33.4.1	Guidance	VI-33-5
33.4.2	Initial Budget Guidance (March)	VI-33-5
33.4.3	Provide Controls to Maintenance Team (April)	VI-33-5
33.4.4	Execution Strategy Adjustments (May).....	VI-33-6
33.4.5	(Surface Ships only) Maintenance Team Submit MMBPs for Approval via NSA (June).....	VI-33-6
33.4.6	TYCOM Approves MMBPs (July).....	VI-33-6
33.4.7	Submit Phasing Plans (August)	VI-33-6
33.5	Business Plan Resources	VI-33-6
Appendices		
A	Executive Summary Sheet	VI-33A-1

CHAPTER 34 - FLIGHT DECK NON-SKID INSPECTION

34.1	Purpose	VI-34-1
34.2	Background	VI-34-1
34.3	Scope	VI-34-2
34.4	Responsibilities	VI-34-2
34.4.1	Ship's Force	VI-34-2
34.4.2	Quality Insurance Officer	VI-34-2

CHAPTER 35 - REGIONAL MAINTENANCE CENTER I-LEVEL MAINTENANCE CAPABILITIES

35.1	Purpose	VI-35-1
35.2	Background	VI-35-1
35.2.1	Onboard Support	VI-35-1
35.2.2	Applicable Regional Maintenance Centers.....	VI-35-1
35.3	Responsibilities	VI-35-1
35.3.1	Fleet Commanders	VI-35-1
35.3.2	Commander, Navy Regional Maintenance Center	VI-35-2
35.3.3	Regional Maintenance Center	VI-35-4

35.4 Regional Maintenance Center Performance Measures	VI-35-4
---	---------

Appendices

A Regional Maintenance Center I-Level Maintenance Capability Matrix....	VI-35A-1
---	----------

CHAPTER 36 - SURFACE FORCE SHIP AND AIRCRAFT CARRIER MODERNIZATION PROGRAM

36.1 Scope	VI-36-1
36.2 Purpose	VI-36-1
36.3 Background	VI-36-2
36.4 Process.....	VI-36-2
36.4.1 Key Elements	VI-36-2
36.4.2 Decision Points	VI-36-3
36.4.3 Ship Change Document	VI-36-4
36.4.4 Technical Assessment Teams	VI-36-5
36.4.5 Cost Benefit Analysis	VI-36-6
36.4.6 Alteration Figure of Merit.....	VI-36-7
36.4.7 Annual Assignment of Weights.....	VI-36-8
36.4.8 Combining of Phases	VI-36-9
36.5 Voting Rules.....	VI-36-10
36.5.1 Voting Database Rules.....	VI-36-10
36.5.2 Initiate Ship Change Document Business Rules.....	VI-36-10
36.6 Decision Boards	VI-36-10
36.6.1 Decision Board Process	VI-36-10
36.6.2 Board Specific Rules.....	VI-36-11
36.7 Approval for Fleet Alterations	VI-36-12
36.8 Execution Year Changes to Modernization Plans.....	VI-36-12
36.9 Metrics.....	VI-36-12
36.9.1 Ship Modernization Program Goal	VI-36-12
36.9.2 Evaluation	VI-36-13
36.10 Milestones	VI-36-16

Appendices

A Modernization Plan Flowchart.....	VI-36A-1
B Ship Change Document Template	VI-36B-1
C Technical Assessment Flowchart.....	VI-36C-1
D Cost Benefit Analysis Flowchart	VI-36D-1
E Alteration Figure of Merit Flowchart	VI-36E-1
F Voting Database Flowchart.....	VI-36F-1

CHAPTER 37 - REGIONAL MAINTENANCE CENTER PASSIVE COUNTERMEASURE SYSTEM SUPPORT REQUIREMENTS

37.1	Purpose	VI-37-1
37.2	Passive Countermeasure System Event Description	VI-37-2
37.3	Passive Countermeasure System Personnel Certification	VI-37-2
37.3.1	Passive Countermeasure System In-Service Engineering Activity	VI-37-3
37.3.2	Training Requirements.....	VI-37-3
37.3.3	Support Personnel	VI-37-3
37.3.4	Regional Maintenance Center Japan, Regional Maintenance Center Rota and Pearl Harbor Naval Shipyard.....	VI-37-3
37.3.5	Ship's Force Personnel	VI-37-3
37.4	Passive Countermeasure System Technical Assistance	VI-37-3
37.5	Responsibilities	VI-37-3

CHAPTER 38 - DEEP SUBMERGENCE SYSTEMS HULL INTEGRITY PROCEDURES

38.1	Purpose	VI-38-1
38.2	Hull Integrity Procedures Maintenance Scheduling, Planning and Reporting.....	VI-38-1
38.2.1	Maintenance Requirements for Continued Certification	VI-38-1
38.2.2	Scheduling and Reporting.....	VI-38-1
38.2.3	Baseline and Due Dates	VI-38-2
38.2.4	Periodicity Extensions	VI-38-2
38.2.5	Scheduling, Planning and Reporting Hull Integrity Procedure Accomplishment at Sustaining Activity/Fleet Maintenance Activity Level	VI-38-3
38.2.6	Scheduling, Planning and Reporting Hull Integrity Procedures Accomplishment During Regular Overhaul (ROH)	VI-38-3
38.2.7	Scheduling, Planning and Reporting Hull Integrity Procedures Accomplishment During Restricted Availabilities (RAV)	VI-38-4
38.2.8	Deep Submergence System Hull Integrity Procedures Completion Reporting.....	VI-38-4
38.3	Responsibilities	VI-38-5
38.3.1	Type Commander.....	VI-38-5
38.3.2	Submarine Maintenance Engineering, Planning and Procurement Activity	VI-38-5
38.3.3	Immediate Superior In Command.....	VI-38-5
38.3.4	Deep Submergence System Commanding Officer	VI-38-8

Appendices

A	SUBMEPP DSS HIP Inventory	VI-38A-1
B	SUBMEPP DSS HIP Schedule	VI-38B-1
C	Request for DSS HIP Periodicity Extension Format	VI-38C-1

CHAPTER 39 - MAINTENANCE AND MODERNIZATION PERFORMANCE REVIEW AND LESSONS LEARNED CONFERENCE FOR SURFACE FORCE SHIPS

39.1	Purpose	VI-39-1
39.2	Maintenance and Modernization Performance Review Overview.....	VI-39-1
39.2.1	MMPR Objective	VI-39-1
39.2.2	MMPR Key Membership.....	VI-39-1
39.2.3	MMPR Action Items	VI-39-2
39.2.4	Further Guidance	VI-39-2
39.3	Lessons Learned Conference Overview	VI-39-3
39.3.1	Lessons Learned Conference Concept.....	VI-39-3
39.3.2	Lessons Learned Conference Objective.....	VI-39-3
39.3.3	Lessons Learned Conference Key Membership	VI-39-3
39.4	Preparing for the Lessons Learned Conference	VI-39-4
39.4.1	Preparation	VI-39-4
39.4.2	Lessons Learned Conference Presentation Overview.....	VI-39-4
39.5	Conducting a Lessons Learned Conference	VI-39-5
39.5.1	Lessons Learned Conference Schedule	VI-39-5
39.5.2	Agenda	VI-39-5
39.5.3	Lessons Learned Conference Focus Areas	VI-39-5
39.5.4	Invitees	VI-39-5
39.5.5	Invites and Announcement	VI-39-5
39.5.6	Lessons Learned Conference Documents	VI-39-5
39.5.7	Lessons Learned Conference Minutes	VI-39-5
39.5.8	Lessons Learned Conference Website	VI-39-6
39.6	Interaction Among Feedback Processes.....	VI-39-6
39.6.1	Relationships.....	VI-39-6
39.6.2	Consistency	VI-39-6
39.7	Lessons Learned Conference Application and Knowledge Sharing	VI-39-6
Appendices		
A	Access to Lessons Learned Conference and MMPR Sites on the ST1 Portal	VI-39A-1

CHAPTER 40 - SUBMARINE MESSAGE REPORTING

40.1	Purpose	VI-40-1
40.2	Background	VI-40-1
40.3	Scope	VI-40-1
40.4	Policy.....	VI-40-1
40.5	Responsibilities	VI-40-3
40.5.1	Type Commanders	VI-40-3
40.5.2	Immediate Superior In Command.....	VI-40-3
40.5.3	Ship's Commanding Officer	VI-40-3

40.6	Message Requirements.....	VI-40-3
------	---------------------------	---------

Appendices

A	Sample (SUBS) Initial Message	VI-40A-1
B	Sample (SUBS) Update Message	VI-40B-1
C	Sample (SUBS) Final/Closeout Message	VI-40C-1
D	Sample (SUBS) Shipalt/Tempalt Installation Message	VI-40D-1
E	Sample (SUBS) Shipalt/Tempalt Removal Message.....	VI-40E-1

CHAPTER 41 - MAINTENANCE AND PROJECT TEAM

41.1	Purpose	VI-41-1
41.2	Maintenance Team	VI-41-1
41.2.1	Crew Swap	VI-41-1
41.2.2	Maintenance Team Members.....	VI-41-1
41.2.3	The Principal Roles of the Maintenance Team.....	VI-41-2
41.2.4	Specific Duties of Maintenance Team Members.....	VI-41-3
41.3	Project Team	VI-41-12
41.3.1	Project Manager	VI-41-12
41.3.2	Contract Specialist	VI-41-18
41.3.3	Quality Assurance Specialist	VI-41-18
41.3.4	NSA Logistical Representative.....	VI-41-20
41.3.5	SEA 21 Hull, Mechanical and Electrical and AEGIS Combat Systems On Site Logistician (Surface Force Ship Only)	VI-41-20
41.3.6	Project Support Engineer	VI-41-20
41.3.7	Integrated Test Engineer	VI-41-21
41.3.8	Assessment Director	VI-41-22
41.3.9	Technical Matter Expert	VI-41-23
41.3.10	Shipbuilding Specialist	VI-41-23
41.3.11	AIT On-Site Installation Coordinator	VI-41-26
41.3.12	AIT Manager.....	VI-41-26
41.3.13	Combat Systems Project Engineer (Surface Force Ships only).....	VI-41-27
41.3.14	SEA 21 Hull Manager (Surface Force Ships only).....	VI-41-28
41.3.15	SURFMEPP Waterfront Engineering (Surface Force Ships only)	VI-41-29
41.3.16	Government Availability Planning Manager (GAPM).....	VI-41-29
41.4	Planning Process Support.....	VI-41-31
41.5	Planning Board for Maintenance.....	VI-41-31
41.6	Work Force Development Program (RMC only).....	VI-41-32
41.7	Integrated Project Team Development (Surface Force Ships only).....	VI-41-32
41.7.1	Project Team	VI-41-32
41.7.2	Program Events	VI-41-33

CHAPTER 42 - MATERIAL READINESS ASSESSMENT

42.1	Purpose	VI-42-1
42.2	Applicability	VI-42-2
42.3	Objectives	VI-42-3
42.4	Principles	VI-42-3
42.5	Material Assessment Process	VI-42-3
42.5.1	Discussion	VI-42-3
42.5.2	Material Assessments	VI-42-4
42.5.3	Assessment Authorizing	VI-42-4
42.5.4	Assessment Planning	VI-42-5
42.5.5	Assessment Execution	VI-42-5
42.5.6	Assessment Reporting	VI-42-6
42.5.7	Standard Assessment Tool Kit	VI-42-7
42.5.8	Assessment Personnel	VI-42-7
42.6	Responsibilities	VI-42-7
42.6.1	Fleet Commander	VI-42-7
42.6.2	Type Commander	VI-42-8
42.6.3	Material Assessment Executing Activity	VI-42-8
42.6.4	Commanding Officer	VI-42-9
Appendices		
A	Assessment Process	VI-42A-1
B	Prerequisites and Test Requirements Message (Example)	VI-42B-1
C	Readiness to Commence Message (Example)	VI-42C-1

43.3	Availability Execution Business Rules	VI-43-3

VOLUME VI
FOREWORD
INTRODUCTION

REFERENCES.

- (a) OPNAVINST 3120.32 - Standard Organization and Regulations of the U.S. Navy
- (b) OPNAVINST 4700.7 - Maintenance Policy for U.S. Naval Ships
- (c) COMLANTFLTINST 5400.2 - U.S. Atlantic Fleet Regulations
- (d) COMPACFLTINST 5400.3 - U.S. Pacific Fleet Regulations
- (e) NAVSEAINST 4790.8/OPNAVINST 4790.4 - Ships' Maintenance and Material Management (3-M) Manual
- (f) SSPINST 4720.1 - Policies and Procedures for Alteration of Strategic Weapon System Equipment

LISTING OF APPENDICES.

A List of Acronyms

1.1 PURPOSE. To provide guidance in the execution and management for maintenance programs applicable to units of the Navy.

- a. The Foreword of this manual contains a master listing of all references used throughout the Joint Fleet Maintenance Manual. These references are arranged in alphanumeric order to facilitate their procurement for use with this manual. References used in specific chapters of this volume are listed at the beginning of each chapter in the order in which they appear in the chapter text.
- b. Acronyms are identified when they are initially used in each chapter of this volume. Appendix A of this chapter contains a master listing of acronyms used throughout all chapters of this volume.
- c. References (a) through (e) must be used in conjunction with this manual, however, the requirements of this manual must **not** take precedence over these higher authority directives, or technical directives from applicable Systems Commands (SYSCOM). Where conflicts exist with previously issued Fleet Commander, Commander, Naval Reserve Force (COMNAVRESFOR), Type Commander (TYCOM) letters, transmittals and instructions, other than references (c) and (d), this manual must take precedence. Conflicts must be reported to the cognizant TYCOM for resolution.

1.2 SCOPE. This volume applies to all ships and shore activities under the cognizance of Commander, Atlantic Fleet (COMLANTFLT), Commander, Pacific Fleet (COMPACFLT) and COMNAVRESFOR. This volume is not intended to be all encompassing, since the guidance for many elements of the maintenance programs and their execution are promulgated by higher or technical authority (e.g., Naval Ships' Technical Manuals (NSTM), Office of the Chief of Naval Operations Instruction (OPNAVINST)).

- a. This volume contains general programs applicable to all ships and units under the cognizance of COMLANTFLT or COMPACFLT. In those cases where chapters,

sections or paragraphs of chapters are not applicable to certain Forces, an applicability statement has been used for clarification.

- b. Equipment under the cognizance of Naval Sea Systems Command Nuclear Propulsion Directorate (NAVSEA 08) is maintained per NAVSEA 08 directives.
- c. Nuclear-Powered Ballistic Missile Submarine (SSBN) Strategic Weapon System (SWS) and Nuclear-Powered Guided Missile Submarine (SSGN) Attack Weapons Systems (AWS) equipment under the cognizance of Strategic Systems Programs (SSP) is operated, maintained, modified or modernized per approved SSP directives and instructions.
 - (1) Reference (f) defines policies, controls, processes and procedures for the accomplishment of all SSP Alterations (SPALT) issued by the Director, Strategic Systems Programs for all SSP cognizant equipment on both SSBNs and SSGNs. Reference (f) further defines the methodology and processes to plan, document, coordinate, install, and test SWS, AWS hardware, software and modernization SPALTs.
 - (2) Adherence to reference (f) ensures that all related or affected Equipment, Fleet Documentation, Training, Logistic and Maintenance functions under the cognizance of SSP are fully integrated as part of the SPALT. Only SSP authorized SWS and AWS SPALTs are installed on SSBNs and SSGNs.
 - (3) Applicable and required local support services such as Crane, Riggers, Power Isolation, Tag-Out, Hazardous Material, Quality Assurance, Critical Skill requirements, etc., for the conduct of a SPALT must be identified within the Director, Strategic Systems Programs SPALT document, related Ordnance Document, or SPALT installation pre-brief. This information must be communicated or provided to all involved and affected local activities per the SPALT process no later than forty-five (45) days prior to the conduct of a SPALT, as outlined and defined within reference (f).
 - (4) An SSP Contractor or Government Team must provide the required operational and engineering support for all SPALT, Maintenance and Repair Activities to SWS and AWS equipment under the cognizance of SSP. The respective responsibilities of SSP Contractor, Government Teams, the Fleet Maintenance Activity and other local Commands for the execution of the SSP SPALT program must be documented in an overarching Memorandum of Agreement in order to define areas of responsibility for all activities involved in the accomplishment of authorized alterations in a timely, efficient, and coordinated manner.

1.3 CHANGES AND CORRECTIONS. Changes and corrections will be issued as required. Comments and suggestions for improving or changing this volume are invited. Address comments, recommendations, and requested changes to Submarine Maintenance Engineering, Planning and Procurement (SUBMEPP) Activity utilizing the change request form located in the front of this manual. If changes are submitted in electronic format, facsimile or E-mail, each change request must contain the information required on the change request form.

APPENDIX A**LIST OF ACRONYMS**

2-Kilo	3-M Maintenance Action Form
2M	Miniature/Microminiature
3-M	Maintenance and Material Management
3-MC	Maintenance and Material Management Coordinator
3-MPR	3-M Performance Rate
A&I	Alteration and Improvement
ACAT	Acquisition Category
ACCCIT	Aircraft Carrier Climate Control Investigating Team
ACF	Accomplishment Confidence Factor
ACN	Advance Change Notice
ACO	Administering Contracting Officer
ADP	Automated Data Processing
AEL	Allowance Equipage List
AER	Alteration Equivalent to Repair
AERP	Advanced Equipment Repair Program
AF	Advance Funding
AFOM	Alteration Figure of Merit
AIMD	Aviation Intermediate Maintenance Department
AIS	Automated Information Systems
AIT	Alteration Installation Team
Ao	Operational Availability
AOR	Area of Responsibility
AP	Advance Planning
APL	Allowance Parts List
APPN/PE	Appropriation/Preliminary Engineering
ARRS	Analysis, Records and Reports Section
ASI	Automated Shore Interface
ASTM	American Society for Testing and Materials
ATE	Automated Test Equipment
AWP	Availability Work Package
AWR	Automated Work Request
AWS	Attack Weapons Systems
BAF	Business Adjustment Factor
BART	Beartrap Acoustic Radiated Trials
BAWP	Baseline Availability Work Package
BCA	Business Case Analysis
BCE	Battery Charging Electrician
BCEF	Battery Charging Electrician Forward
BCR	Billet Change Request
BER	Beyond Economical Repair
BRB	Battery Record Book
BSC	Balanced Score Card

C4I	Command, Control, Communications, Computers and Intelligence
C5IMP	C5ISR Modernization Process
C5ISR	Command, Control, Communications, Computer, Combat Systems, Intelligence, Surveillance and Reconnaissance
C5RA	Command, Control, Communications, Computers and Combat Systems Readiness Assessment
CAL STD	Calibration Standard
CAQAP	Contract Administration Quality Assurance Program
CAR	Corrective Action Request
CAS	Contract Administration Services
CASCAN	CASREP Cancellation or Cancellation of Casualty Report
CASCOR	CASREP Correction or Correction of the Casualty in the Casualty Report
CASREP	Casualty Report

VOLUME VI**CHAPTER 1****WATERBORNE UNDERWATER HULL CLEANING****REFERENCES.**

- (a) NAVSEA S9086-CQ-STM-010 - NSTM Chapter 081 R4 (Waterborne Underwater Hull Cleaning of Navy Ships)
- (b) NAVSEA 389-0288 - Radiological Controls
- (c) NAVSEA S0600-AA-PRO-010 - Underwater Ship Husbandry Manual

1.1 **PURPOSE.** To implement the program requirements delineated in references (a), (b) and (c), and to provide guidance for waterborne hull cleaning of naval ships. This process applies to all surface force ships, submarines and aircraft carriers.

1.2 **SCOPE.** As stated in reference (a), commercial and Naval experience has demonstrated that appreciable savings in energy are obtainable by maintaining smooth underwater hull and propeller surfaces through periodic waterborne hull cleaning. Additionally, a hull-cleaning program provides a means in which hull damage can be detected in early stages and corrective action can be taken. The hull cleaning and propeller polishing requirements of this instruction apply to all ships. It is intended to conserve fuel, restore effectiveness of sonar systems, and reduce ship self-noise, which increases anti-submarine warfare effectiveness. Reference (a) provides necessary criteria, methodology, and guidelines for waterborne underwater ship inspection and cleaning. Reference (a) provides a rating scale for inspecting and reporting fouling, fouling thresholds to initiate cleaning, approved cleaning equipment for various underwater ship systems (i.e., hull sections, appendages, dome, masker or prairie air), cleaning requirements, safety precautions and procedures for cleaning, guidelines for establishing cleaning intervals and documentation and reporting requirements. To meet the objectives of reference (a), special attention will be given to ensure that appropriate action will be taken to clean ships within 30 days of deployment.

1.3 POLICY.

- a. Scheduling of periodic cleaning will be the responsibility of the Type Commander (TYCOM) and accomplished per reference (a). Full, partial and interim cleaning must be accomplished by diving activities (military and civilian) certified by Naval Sea Systems Command (NAVSEA) code 00C.
- b. Full hull cleaning will only be accomplished by NAVSEA divers contracted for worldwide waterborne underwater hull cleaning services. Interim or partial hull cleaning will be done by a certified navy activity or NAVSEA contracted service.
- c. The execution of waterborne underwater hull cleaning operations must follow best management practices delineated in reference (c) to maximize hull-cleaning effectiveness and to minimize the release of hull cleaning by-products into surrounding waters.

1.4 **RESPONSIBILITIES.** An effective hull-cleaning program that ensures the delivery of reliable, environmentally sound, and quality services to the Fleet requires the well-coordinated effort of several organizations. Together, these groups must manage the planning, execution,

16 Oct 2019

quality assurance, inspection and condition-reporting functions necessary to ensure the work is performed efficiently and following technical specifications. Reference (c), Chapter 28, Appendix A, Section II specifies the responsibilities for each organization (NAVSEA code 00C, Commander United States Fleet Forces Command, TYCOMs, On-Scene Navy Representative, and the Ship's Chief Engineer) involved in the hull cleaning program.

1.5 REPORTS. All waterborne underwater hull cleaning and inspection must be documented and submitted to the respective TYCOM and NAVSEA 00C for review. Documentation for cleaning submarines must also be transmitted to SUBMEPP Code 1844. Documentation for cleaning and inspection of aircraft carrier hulls must also be transmitted to PMS 312C Carrier Planning Activity, Code 22. Inspection results must be recorded on the standard Diver Hull Inspection Data form (NAVSEA 4730/3 available on-line at <https://forms.documentservices.dla.mil/order/>). The inspection documentation may be mailed or electronically stored and transmitted to the appropriate organizations.

VOLUME VI**CHAPTER 2****FLEET TECHNICAL ASSISTANCE****REFERENCES.**

- (a) COMUSFLTFORCOM/COMPACFLTINST 3501.3 - Fleet Training Continuum
- (b) OPNAVINST 3000.15 - Fleet Response Plan (FRP)

LISTING OF APPENDICES.

- A Area Regional Maintenance Center Fleet Technical Assistance Contact Information
- B Sample Technical Assistance Visit Report (TAVR) Message
- C Sample E-MAIL Technical Assistance Visit Report (E-TAVR)
- D Submarine Fleet Technical Support Providers Roles and Responsibilities.

2.1 **PURPOSE.** This chapter provides policy, procedures and guidance regarding utilization of Fleet Technical Assistance (FTA) program resources in support of all surface ships, aircraft carriers, submarines and craft. Commander, U. S. Fleet Forces Command and Commander, U.S. Pacific Fleet (COMPACFLT) Fleet Maintenance Officers (N43) will ensure that appropriate Fleet resources are available to provide technical assistance to the Naval operating forces under their cognizance.

2.2 **FLEET TECHNICAL ASSISTANCE DEFINITION.** FTA is the help that surface ships, aircraft carriers, submarines and craft request when they are unable to resolve equipment or software deficiencies using their own ships resources or other means available within their Strike Group. Paragraph 2.3 of this chapter lists FTA program exclusion items. Use of Regional Maintenance Center (RMC) or RMC-obtained resources for other purposes, such as non-Ship's Force repairs, assessments, Board of Inspection and Survey inspections, etc., is not considered a FTA but is addressed elsewhere in this manual or other policy guidance. All FTA requests will be responded to by the RMCs as defined in paragraph 2.4.1 of this chapter.

2.3 **FLEET TECHNICAL ASSISTANCE EXCLUSION AREAS.** RMCs are not responsible for technical assistance in the following areas:

- a. Naval Sea Systems Command (NAVSEA) 08 cognizant equipment.
- b. TRIDENT missile weapons systems.
- c. Aircraft.
- d. Catapults and arresting gear - Aircraft Launch and Recovery Equipment.
- e. Ordnance and munitions.
- f. Submarine Safety systems and components.
- g. Nuclear weapons.
- h. Special clearance carry-on equipment.
- i. Undersea and land-based surveillance equipment.
- j. Flight deck certification related systems and equipment.

- k. Diver life support systems.
- l. Non-Program of Record (pre-prototype) programs.
- m. Naval Supply Systems Command (NAVSUP) (e.g., Navy Cash)
- n. Navy Personnel Command (NAVPERS) (e.g., RAPIDS, MIAP, NSIPS)

2.4 FLEET TECHNICAL ASSISTANCE POLICY.
