COMUSFLTFORCOMINST 4790.3, Rev D Chg 1
USFF/CPF N43

15 Jan 21

COMUSFLTFORCOM INSTRUCTION 4790.3 Revision D Change 1

Subj: JOINT FLEET MAINTENANCE MANUAL

Ref: (a) SECNAV M-5210.1, Records Management Manual

Encl: (1) Joint Fleet Maintenance Manual – Rev D Chg 1, CD-ROM

1. Purpose. To promulgate Revision D Change 1 of the Joint Fleet Maintenance Manual (JFMM).
2. Cancellation. Joint Fleet Maintenance Manual – Rev D of 16 Oct 2019.
3. Records Management. Records created as result of this instruction, regardless of media and format, must be managed per reference (a).
4. Discussion.

a. Enclosure (1) adjudicated 86 change requests submitted by JFMM users, and is issued to clarify requirements, update procedures reflecting current practice, reduce redundancies to the instruction, and support the overall objectives of the JFMM.

b. Afloat activities on distribution will receive enclosure (1).

c. Ashore activities are directed to the NAVSEA SUBMEPP JFMM public web page at <https://www.navsea.navy.mil/Home/SUBMEPP/Products/JFMM/>. The CD-ROM is not to be used to post the JFMM on the Internet. To ensure the latest version of the JFMM is being used, activities who want to include the JFMM on a Web site should establish a link to the NAVSEA SUBMEPP JFMM public web page.

d. Ashore activities wanting to be added to the distribution list for enclosure (1) should submit a letter to their applicable Type Commander (TYCOM) N43 or System Commander (SYSCOM) division or activity, identifying CD-ROM requirements along with justification for the request. Casual, informal and infrequent JFMM users will be referred to the Web site identified in paragraph 4.c.

5. Action.

a. Replace Revision D of COMUSFLTFORCOMINST 4790.3, Joint Fleet Maintenance Manual, with Revision D Change 1 of COMUSFLTFORCOMINST 4790.3 in its entirety. Properly dispose the COMUSFLTFORCOMINST 4790.3 Revision D CD- ROMs and all printed copies.

b. All activities shall conduct a detailed review of JFMM Revision D Change 1 using the Change Synopsis located on enclosure (1) and JFMM public web page. Training shall be conducted for all personnel whose work assignments may require them to be familiar with the requirements of the JFMM. PowerPoint training file with an associated Word file highlighting the major changes are located on enclosure (1) and JFMM public web page.

6. Review and Effective Date.

a. TYCOMs shall establish an implementation date for Forces Afloat, subordinate units, and TYCOM-directed maintenance activities as soon as practical and promulgate via naval message.

b. As operators of the Regional Maintenance Centers and Naval Shipyards for the Fleet Commanders, CNRMC and NAVSEA 04 are requested to direct Naval Supervising Authorities to implement this change as soon as practical.

c. Ensure implementation direction does not create delay and disruption or unnecessary costs to the government for ongoing ship maintenance work.

d. Implementation direction is expected within 30 days of receipt of this letter. Request notification if implementation cannot be achieved within 60 days of providing direction and follow-on status, as necessary thereafter, until completely implemented.

7. Point of Contact. Questions regarding JFMM distribution or Life Cycle Management should be directed to the JFMM Program Manager, Mr. Doug Vogel, commercial (207) 438-6052, DSN 684-6052, or via e-mail: submepp.jfmm.fct@navy.mil.

JOINT FLEET MAINTENANCE MANUAL

FOREWORD

REFERENCES

- (a) SECNAVINST 5239.21 - Department of the Navy Electronic Signature Policy

LISTING OF APPENDICES.

- A Master List of References
- B Responsibilities
- C JFMM Change Request Form
- D Record of Revisions and Changes

1 MANUAL DEVELOPMENT. The development of the Joint Fleet Maintenance Manual has been a dedicated effort by all Naval Type Commanders to establish a single, unified source of maintenance requirements across all platforms.

2 VOLUME TOPICS. The Joint Fleet Maintenance Manual is made up of seven distinct volumes.

- Volume I - New Construction
- Volume II - Integrated Fleet Maintenance
- Volume III - Deployed Maintenance
- Volume IV - Tests and Inspections
- Volume V - Quality Maintenance
- Volume VI - Maintenance Programs
- Volume VII - Contracted Ship Maintenance

3 PURPOSE. This manual serves as:

- a. A standardized, basic set of minimum requirements to be used by all Type Commanders and subordinate commands.
- b. Clear, concise technical instructions to ensure maintenance is planned, executed, completed and documented within all Fleet commands.
- c. A vehicle for implementing Regional Maintenance policies across all platforms.
- d. A comprehensive set of process descriptions for use by schools such as Surface Warfare Officer School (SWOS), Senior Officer Ship Maintenance and Repair Course (SOSMRC), Engineering Duty (ED), Technical Training, etc.

4 CANCELLATION. The Joint Fleet Maintenance Manual supersedes all existing Type Commander Maintenance and Quality Assurance manuals and all associated correspondence and clarifications thereto. The following is a list of manuals that are cancelled as a result of this manual:

- a. COMNAVAIRLANTINST 4700.1/COMNAVAIRPACINST 4700.1 (Naval Air Force Ship Material Manual)

- b. COMNAVSURFLANTINST 9000.1 (Naval Surface Force, U.S. Atlantic Fleet, Maintenance Manual)
- c. COMNAVSURFPACINST 4700.1 (Naval Surface Force, U.S. Pacific Fleet, Maintenance Manual)
- d. COMSUBLANT/COMSUBPACINST 4790.4 (Submarine Force Maintenance Manual)
- e. COMNAVAIRLANTINST 9090.1/COMNAVAIRPACINST 9090.1 (Naval Air Force Quality Assurance Manual)
- f. COMSUBLANT/COMSUBPACINST 4855.2 (Submarine Force Quality Assurance Manual)
- g. COMNAVSURFLANT/COMNAVAIRLANTINST 4855.3/COMNAVSURFPAC/COMNAVAIRPACINST 4855.3 (Nuclear Surface Forces Afloat Quality Assurance Instruction)
- h. COMNAVSURFPACINST 4855.1 (Naval Surface Force, U.S. Pacific Fleet, Quality Assurance Manual)
- i. COMNAVSURFLANTINST 9090.1/COMNAVSURFPACINST 4855.22 (Naval Surface Force Quality Assurance Manual)
- j. COMNAVSURFLANTINST 9090.2 (IMA Quality Assurance Manual)
- k. CINCLANTFLT/CINCPACFLTINST 4355.1 (Quality Assurance Program)
- l. COMSUBPACINST 4855.3 (Deep Submergence Systems Quality Assurance Manual)

5 DISCUSSION.

5.1 Platform Considerations. Throughout this manual, certain requirements apply only to specific platforms. To point these out, the terms (Submarines only), (Aircraft Carriers only), (Surface Force ships only), and specific hull designators (e.g., DDG, SSN) are used in parentheses within the paragraph to which they apply. When no specific platform is mentioned, the requirements apply to all platforms. The term “ship” (alone) should be related to the context of the paragraph in which it is mentioned. The term “Submarine Force” applies to all ships under the responsibility of Submarine Forces, Atlantic and Pacific Fleets; the term “Aircraft Carriers” applies to all ships under the responsibility of Naval Air Forces, Atlantic and Pacific Fleets; and the term “Surface Force” applies to all ships under the responsibility of Naval Surface Forces, Atlantic and Pacific Fleets.

5.2 Maintenance Considerations. In the development of this manual, considerable effort was put forth to standardize work practices, incorporate accepted Regional Maintenance philosophies, and make allowances for future changes resulting from new Regional Maintenance policies. With respect to this, the term Intermediate Maintenance Activity (IMA) has been replaced by Fleet Maintenance Activity (FMA) operated by NAVSEA. Subsequently, the management of Regional Maintenance Centers and the Regional Maintenance Center function in the Naval shipyards has shifted to NAVSEA, but a Flag-level decision was made to maintain guidance for the Regional Maintenance Centers in this manual for continuity. Thus, Commander, Navy Regional Maintenance Center (CNRMC) and NAVSEA 04 representatives were invited to become members of the Joint Fleet Maintenance Manual Board of Directors (JFMMBOD) to address RMC and Naval Shipyard management or business issues associated with JFMM change requests. Navy Expeditionary Combat Command (NECC) was added to the JFMMBOD in 2020.

5.3 Terminology Considerations. Use of the term “Type Commander or Immediate Superior in Command (TYCOM) or (ISIC)” throughout this manual is defined as:

- a. For Submarine and Surface Forces, the “TYCOM” or “ISIC” refers to the Squadron or Group.
- b. For Aircraft Carriers, the “TYCOM” or “ISIC” refers to the Type Commander for maintenance issues.
- c. For Submarine and Surface Forces, the term “ISIC”, used by itself, refers to the Squadron or Group. The term “ISIC” does not apply to Aircraft Carriers for maintenance issues, but refers to the Permanent Battle Group Commander for operational issues and non-maintenance certifications.

5.4 Administrative Considerations.

5.4.1 Master List of References. Appendix A of this foreword is a Master List of References used throughout the manual. This Master List should be reviewed to ensure that the necessary technical manuals, instructions, etc. are readily available prior to using the manual.

5.4.2 Table of Responsibilities. Appendix B provides a table of responsibilities associated with specific positions or functions located within the manual. Each position listed identifies the major responsibilities for that position and provides a link to the Chapter and paragraph where the responsibility is detailed.

5.4.3 Acronyms. Acronyms used in a particular volume are contained in the List of Acronyms at the front of each volume. Acronyms appearing four or more times in a chapter or those considered “common acronyms” (i.e., words that are known better by their acronym than by their spelled out word, for example, CD-ROM) will be spelled out the first time an acronym is used within a chapter, and the acronym listed in parentheses after the word. Terms not meeting these conditions will not be considered as acronyms within the text and the words will be spelled out.

5.4.4 Appendices. Numerous chapters throughout this manual contain Appendices for the purpose of providing further detail or examples of required reports and correspondence. In all cases the Appendices are intended as examples only and may not reflect the most current guidance or format. Higher authority source documents should be consulted. Sample correspondence provided as Naval messages may be communicated in letter format to facilitate timely transmission by electronic facsimile.

5.4.5 Volume Structure. Volumes II and V of this manual have been divided into specific parts. Volume II is made up of three parts. Part I contains requirements to implement and execute the management of an integrated maintenance process for all Navy ships. Part II defines a common validation, screening and brokering process, work package preparation process and work close out process for ship maintenance and modernization for all Navy ships unless otherwise indicated. Part III provides procedures and guidance necessary to accurately allocate cost for work performed on or for Navy ships, ship classes or customer projects by Fleet Maintenance Activities (FMA). Volume V is made up of two parts. Part I contains requirements and procedures necessary to establish and maintain a Quality Maintenance Program. Part III contains requirements which apply to Scope of Certification for all ships and Deep Submergence Systems in the fleet.

5.4.6 Digital Signatures. Digital or Electronic signatures are authorized on all Forms and Quality Assurance Records. Electronic signatures will be per reference (a) and must be defined and approved for use by local instruction.

6 CHANGES TO THE MANUAL. A formal change process has been established for the Foreword and all seven volumes of the manual. The processes are described in Figure 1 for routine change requests and Figure 2 for urgent change requests. Users of this manual are encouraged to submit change requests. All change requests must be submitted using the Change Request Form, Appendix C. If changes are submitted in electronic format, facsimile or E-mail, each change request must contain the information required on the Change Request Form. Your participation in this change process is both important and appreciated. Appendix D provides a listing of this manual's archived revisions and changes.

7 LIFE CYCLE MAINTENANCE PROCESS FOR THE JOINT FLEET MAINTENANCE MANUAL

7.1 Purpose. To establish a management plan for life cycle maintenance of the Joint Fleet Maintenance Manual (JFMM). This plan describes the change process requirements and identifies the related responsibilities and requirements for maintaining all volumes of the JFMM.

7.2 Background. This manual was developed with the objective of providing a standard set of clear and concise maintenance requirements for the Fleet. The establishment of a formal life cycle maintenance process is necessary to ensure successful accomplishment of this objective. Utilizing a formal process will ensure effective coordination and management of the JFMM and will ensure:

- a. Standardized format for all change request responses.
- b. Timely evaluation and incorporation of change request.
- c. Automated tracking system for all review comments.
- d. Consistent distribution of all changes to the manual.
- e. A historical database containing all background information that led to changes and revisions to the JFMM.

7.3 Responsibilities and Requirements. This section defines the responsibilities and requirements of all activities involved in supporting the life cycle maintenance process of the JFMM.

7.3.1 Fleet Commanders. The Fleet Commanders are responsible for the following:

- a. Designating a single Commander, U.S. Fleet Forces Command (USFFC) and Commander, U.S. Pacific Fleet (PACFLT) point of contact to act as JFMM coordinators.
- b. Establishing a JFMMBOD. The JFMMBOD will be co-chaired by the Fleet coordinators and made up of TYCOM Quality Assurance and Maintenance representatives, the SUBMEPP JFMM Program Manager, NAVSEA 04 and CNRMC representatives.
- c. Providing final approval and promulgation letter for all JFMM changes and revisions issued to the Fleet.

- d. Providing funding for the life cycle maintenance of the JFMM.
- e. Approving all Advanced Change Notices (ACN), either by message or letter, for urgent changes to the JFMM. Develop and distribute all message ACNs. Forward all ACNs approved via letter to Submarine Maintenance Engineering, Planning and Procurement (SUBMEPP) for distribution.
- f. Convening periodic JFMMBOD review meetings. The purpose of these meetings is to review all proposed changes that may be incorporated into the manual in preparation of issuing an official change or revision to the manual.
- g. The Fleet, TYCOM or NAVSEA representatives may invite Subject Matter Experts (SME) to assist in answering proposed changes. The following rules apply for SMEs:
 - (1) All SMEs must have an advocate. The advocate will be one of the JFMMBOD members. For JFMMBOD members other than Fleet Commander representatives, a Fleet Commander member's concurrence for the SME to attend the JFMM Board of Directors Meeting is required. USFF and PACFLT will determine if other members will be polled and notify SUBMEPP of the result. The advocate is responsible to ensure the SME complies with the established norms of the meeting.
 - (2) Access to the JFMM Electronic Change web site is generally limited to the Fleet Commanders, TYCOMs and NAVSEA representatives. When necessary, other SMEs will be sent a proposed change for comment concurrent with member review, by e-mail and outside of the electronic change web site. At the request of a member, an SME with a creditable need to know as determined by USFF and PACFLT may be granted limited access. Access is associated with individuals, not organizations or positions within organizations. Normally access will not be granted to individuals at commands subordinate to members.

7.3.2 Type Commander. The Type Commander (TYCOM) will:

- a. Review and evaluate all JFMM change requests by the due date of electronic posting for review, in order to provide users with timely responses. Electronic postings not reviewed by the date of the JFMMBOD will automatically be evaluated as N/A for the respective TYCOM.
- b. For changes which affect ship and personnel safety, notify Fleet Commanders and request a message ACN be distributed.
- c. For all other changes requiring ACNs, TYCOMs will review the ACN and forward to Fleet Commanders for approval.
- d. Review and endorse all change packages in preparation of issuing an official change or revision to the manual. Notify the Fleet Commanders of this endorsement via letter.
- e. Designate representatives to be members of the JFMMBOD.
- f. Identify changes to the JFMM distribution list.

7.3.3 Naval Sea Systems Command. NAVSEA will:

- a. Review and evaluate all JFMM change requests provided by the designated NAVSEA representatives within due date of electronic posting for review.
- b. For changes which affect ship and personnel safety, notify TYCOMs and request a message ACN be distributed.
- c. For all other changes requiring ACNs, NAVSEA will review the ACN and forward to TYCOMs.
- d. Designate one representative, each, from NAVSEA 04 and CNRMC to be members of the JFMMBOD to address Naval Shipyard and RMC management, NAVSEA policy, technical issues, or both associated with JFMM change requests.

7.3.4 Joint Fleet Maintenance Manual Board of Directors. The JFMMBOD will:

- a. Adjudicate all JFMM change requests not unanimously resolved by TYCOMs.
- b. Continue collaboration to standardize maintenance requirements across platforms.
- c. Determine the frequency of official changes or revisions to the JFMM. The frequency of these changes or revisions may be dictated by the number of JFMM change requests submitted and approved.

7.3.5 Submarine Maintenance Engineering, Planning and Procurement. SUBMEPP will:

- a. Issue a letter of acknowledgment to the submitting activity when the change request is entered into the system.
- b. Perform a preliminary review of all JFMM change requests including an assessment of the impact on other volumes and provide background information and additional recommendations, when necessary, to applicable TYCOMs and NAVSEA within seven calendar days of receiving change request.
- c. Manage an automated tracking system for all JFMM change requests and provide a periodic status report of changes to the TYCOMs and Fleet Commanders.
- d. Incorporate approved changes into the JFMM and forward all change packages to the JFMMBOD for review in preparation of issuing an official change or revision to the manual.
- e. Develop all ACNs not requiring a message and forward to TYCOM for review. Distribute all ACNs approved by Fleet Commanders via letter.
- f. Forward any unresolved change requests to the JFMMBOD for adjudication.
- g. Maintain the JFMM distribution list.
- h. Support the TYCOM in the performance of customer surveys and audits, as requested.
- i. Adjudicate all editorial change requests (as defined in paragraph 7.4.b. of this foreword) with the Fleet Commander representatives on behalf of the JFMMBOD.
- j. Identify yearly budget requirements for life cycle maintenance of the JFMM to the Fleet Commanders.

- k. Attend all JFMMBOD Review Meetings.

7.3.6 Other Systems Commands. Other Systems Commands (SYSCOM) will:

- a. Provide technical evaluation for change requests when requested.
- b. Review JFMM revisions when requested.

7.3.7 User Activities.

- a. User Activities will submit change requests to SUBMEPP, using the required change request form, Appendix C, and provide the following information on the change request form:
 - (1) A clear description of the problem including Volume number, Part Number, Chapter and applicable paragraph(s).
 - (2) The recommended change containing the specific text, table or figure to be added, deleted or modified.
 - (3) Rationale for the recommended change.
- b. When changes are issued to this manual, conduct a detailed review of all changes using the change synopsis. Training will be conducted for all personnel whose work assignments may require them to be familiar with the requirements of this manual.

7.4 Change Process. This section defines the change process for the JFMM. The change process is an integral part of JFMM life cycle maintenance. The process is described in detail here and relates to the flow chart shown in Figure 1.

- a. All User Activities (e.g., FMAs, Squadrons, Ships Force, etc.), will submit JFMM change requests using the change request form located in Appendix C.
- b. Upon receipt of this change request, SUBMEPP will send a letter to the original submitter notifying them that the change request has been received. SUBMEPP will log the change request into a database and conduct a preliminary review, assess the impact of the change on other volumes of the JFMM, gather all appropriate background information and provide additional recommendations when necessary. SUBMEPP will adjudicate all editorial change requests where an editorial change is generally limited to spelling, grammar or punctuation or, for example, where published office codes, Activity names, acronyms or web site URLs have changed. For non-editorial change requests, SUBMEPP will determine the applicable TYCOM(s), and post them electronically for their review and approval. Change requests pertaining to Naval Shipyards and RMCs will also be posted electronically for NAVSEA 04 and CNRMC, respectively, to review before/concurrent with TYCOM review. All change requests sent to TYCOMs after SUBMEPP review will include the following:
 - (1) Change Request Response Form.
 - (2) Appropriate reference material (e.g., previous change requests, applicable instructions, etc.).
 - (3) Applicable marked up pages showing the requested change incorporated.

- (4) SUBMEPP's preliminary evaluation and recommendation, when applicable.
- c. TYCOMs will review the change request and provide a resolution to SUBMEPP electronically. NAVSEA 04 and CNRMC will review the change request for Naval Shipyard and RMC management, NAVSEA policy, technical issues, or both, and provide input to SUBMEPP and TYCOMs electronically. Other SYSCOMs will provide technical assistance when requested. If the TYCOM should approve a change request and desire the use of an ACN, they will indicate this on the Change Response Form and provide any additional information for the ACN. For changes which affect ship and personnel safety, TYCOMs will notify Fleet Commanders when a message ACN is required. Fleet Commanders will develop and distribute all message ACNs. For all other ACNs, SUBMEPP will develop the ACN and submit the ACN to the TYCOMs for review. TYCOMs will forward the ACN to the Fleet Commanders for approval. Upon approval, SUBMEPP will distribute the ACN.
 - d. SUBMEPP will forward all unresolved change requests to the JFMMBOD. An unresolved change request is a change request that does not receive unanimous approval or disapproval from all applicable TYCOMs.
 - e. The JFMMBOD will adjudicate all unresolved change requests and will forward the resolution to SUBMEPP.
 - f. SUBMEPP will provide a formal response to the original submitter based upon the TYCOM(s) or JFMMBOD final resolution.
 - g. SUBMEPP will incorporate the approved change into a JFMM change package. This change package will contain both approved changes and ACNs incorporated into the applicable pages of the manual and will be sent to the JFMMBOD, for review in preparation of an official change or revision to the manual.
 - h. The JFMMBOD will review this change package and make a recommendation to the Fleet Commanders regarding approval and promulgation.
 - i. Fleet Commanders will provide final approval and promulgation letter for all JFMM changes and revisions. Fleet Commanders will forward promulgation letter to SUBMEPP.
 - j. SUBMEPP will provide distribution of the approved JFMM change or revision according to the approved distribution list.

JOINT FLEET MAINTENANCE MANUAL CHANGE PROCESS

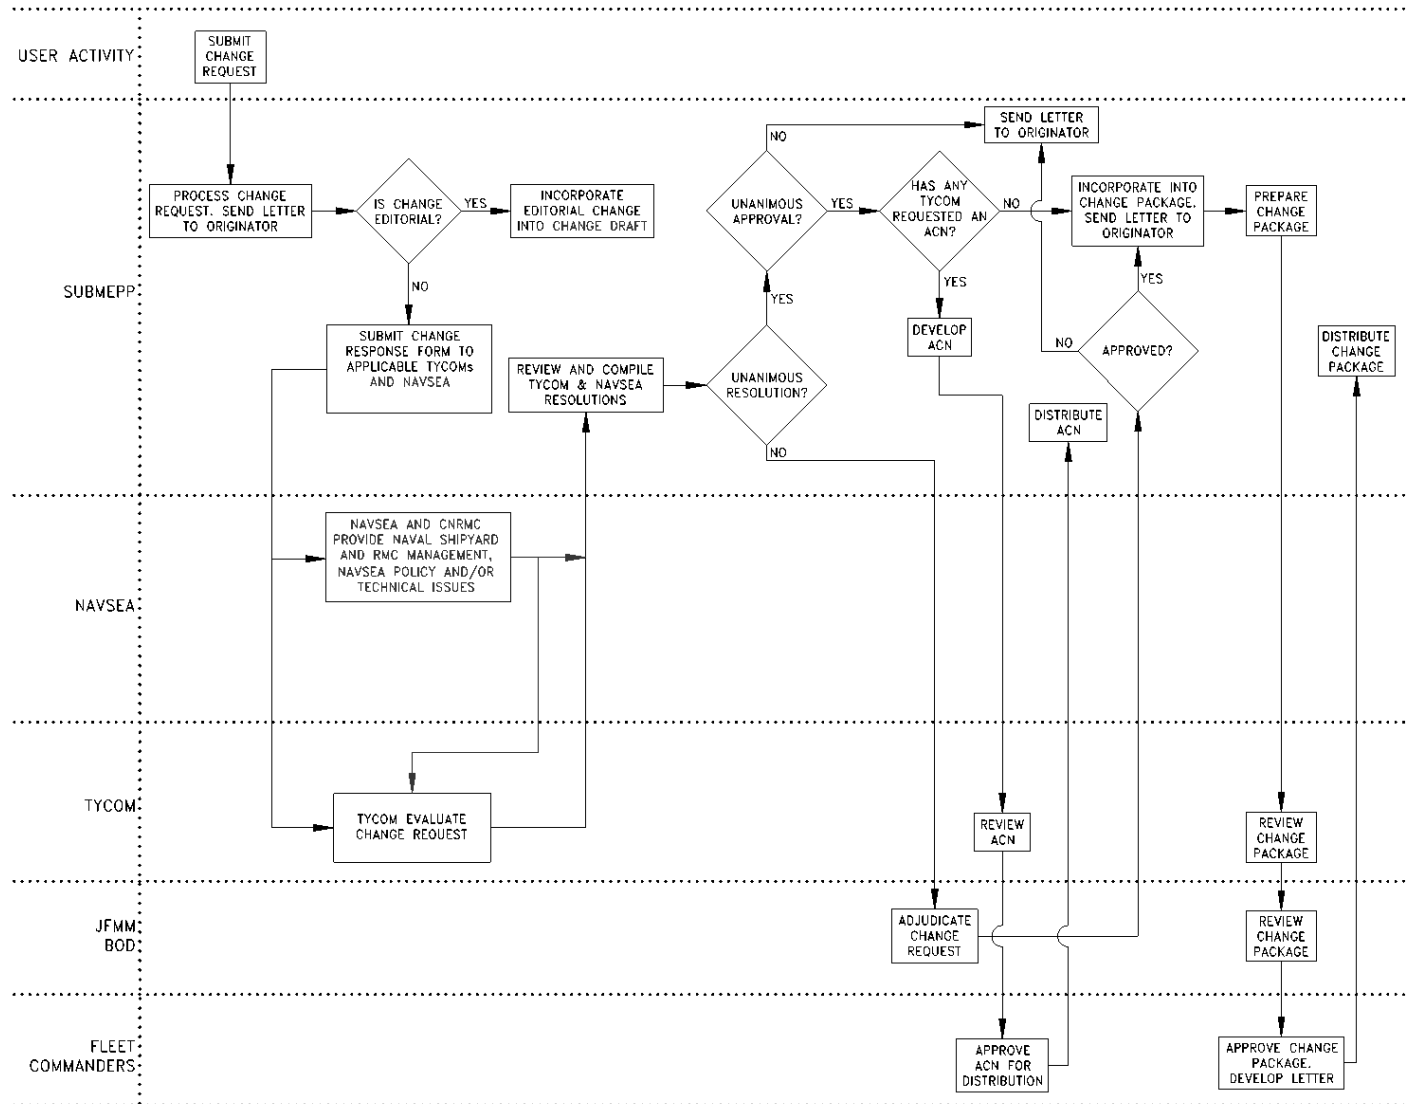

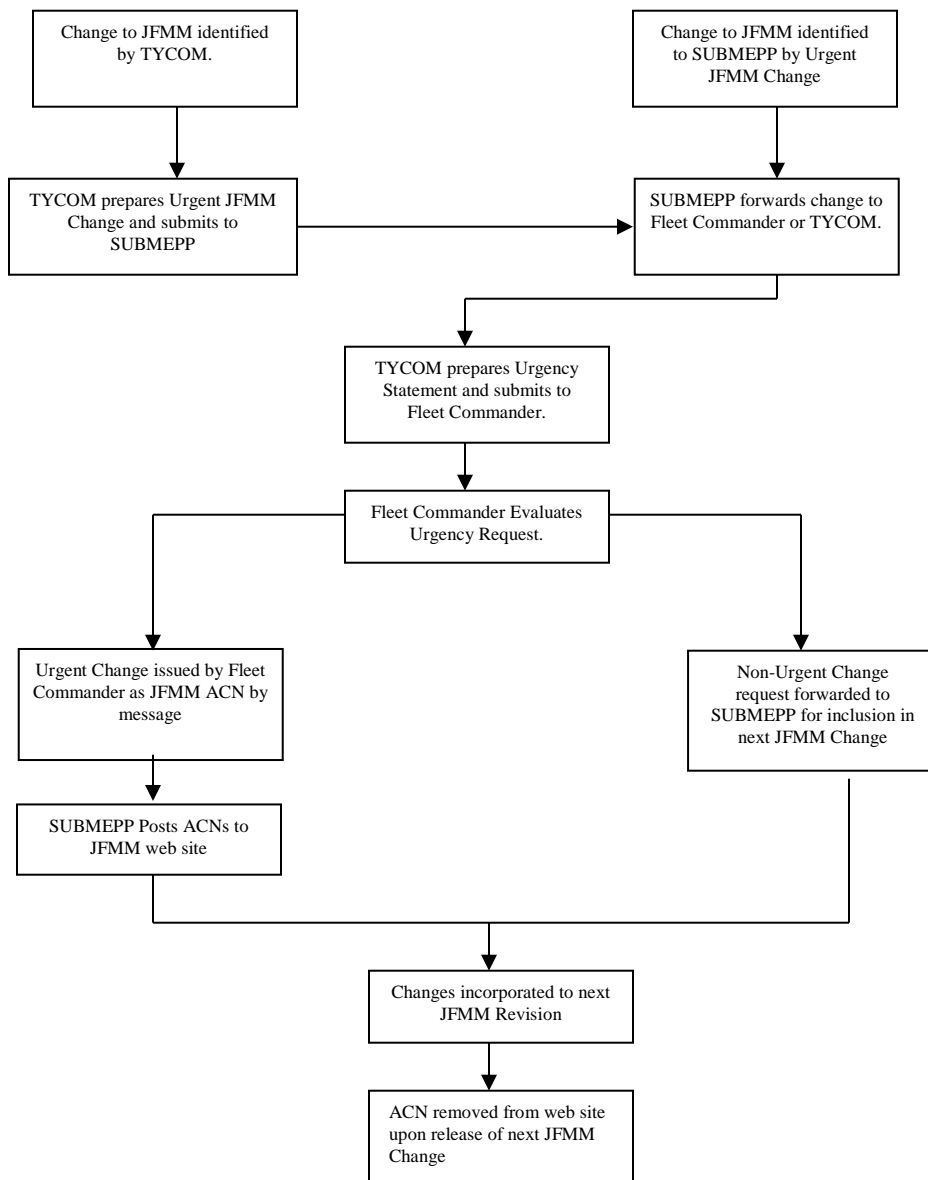

FIGURE 1

15 Jan 2021

URGENT JOINT FLEET MAINTENANCE MANUAL CHANGE PROCESS

Purpose: To publish the process to be followed in the event that a requirement of the JFMM must be modified, cancelled or implemented prior to the next regularly scheduled change.

Process: The following process will be used to issue urgent changes to the JFMM

**FIGURE 2**

APPENDIX B

RESPONSIBILITIES

Fleet Commander

Section	Area of Responsibility	Responsibility
FWD-7.3.1	Life Cycle Maintenance Process for JFMM	<ul style="list-style-type: none"> Establish a JFMM Board of Directors (BOD) Provide final approval and promulgation letter Provide funding for life cycle maintenance Approve all Advanced Change Notices (ACN) Convene periodic JFMM BOD review meetings Designate Atlantic and Pacific Fleet JFMM Coordinators
II-I-3.3.8.1	Maintenance Policies and Procedures	<ul style="list-style-type: none"> Maintain availability intervals and cycles Inform of changes affecting ship manning requirements Coordinate as applicable to accomplish availability planning Implement Docking Officer Qualifications and Certifications Plan and monitor availability execution Plan and provide berthing, messing, etc., if necessary
II-I-3.6.1.1	Availability Execution	<ul style="list-style-type: none"> Monitor to achieve balance of cost and schedule Ensure testing of applicable systems is conducted prior to availability completion Provide berthing, messing, etc., if necessary
IV-3.3.3	Boiler Inspections	<ul style="list-style-type: none"> Identify and designate inspection responsibilities Ensure inspection report is recorded and updated in BIRMIS Schedule and coordinate inspections to avoid unnecessary opening of boilers Ensure availability of “school ships” Suspension of SGPIs who fail to comply with requirements of certification Administer and control TYCOM pre-test program Host semi-annual SGPI seminars Provide qualified SGPI when requested
IV-23.3.2.3	Gas Turbine Engine Inspection	<ul style="list-style-type: none"> Identify and designate fleet activities having inspection responsibilities Maintain a base of MGTIs Ensure availability of “school ships” to support MGTI training Host semi-annual MGTI seminars

Section	Area of Responsibility	Responsibility
V-I-1.3	Organizational Responsibilities	<ul style="list-style-type: none"> Promulgate QA Program through guidelines of Volume V of JFMM Promote use of Volume V of JFMM by TYCOMs Ensure the scope of training through fleet schools provides the necessary skills Jointly authorize changes to Volume V of JFMM Review TYCOM QA program by annual conference Assessments of FMAs and RMCs occur per Volume IV, Chapter 2, paragraph 2.1.1
VI-6.4.1	Industrial Plant Equipment	<ul style="list-style-type: none"> Review all PEPs Prioritize and assign project number to PEPs Forward information regarding PEPs to submitting activities
VI-8.2.1	Miniature/Micro-miniature Electronic Repair Program	<ul style="list-style-type: none"> Operationally administer 2M and module test repair programs Inspect and certify 2M repair facilities and technicians Ensure all 2M maintenance actions are documented
VI-9.2.1	Metrology and Calibration Program	<ul style="list-style-type: none"> Operationally administer METCAL program Ensure calibration performed at lowest level practical Monitor effectiveness of programs Chair working groups and committees (Surface) Establish SISCAL program Provide funding for calibration and testing of TAMS (exceptions)

Section	Area of Responsibility	Responsibility
VI-35.3.1	RMC I-Level Maintenance Capabilities	<ul style="list-style-type: none"> • Approve changes, additions and deletions to the I-Level Capabilities Matrix • Approve recommended changes to the NAMTS NEC At-Sea Requirements Matrix • Approve and forward, with endorsement, NAMTS NEC modifications as developed and recommended by CNRMC • Review, approve and submit Billet Change Requests developed by CNRMC to support sea/shore rotation requirements • Request additions and deletions to the I-Level capabilities and/or corresponding capacities at each RMC based on utilization metrics and written Business Case Analysis to the cognizant Fleet Commander • Ensure full utilization of the full range of organic RMC I-Level capability • Establish and communicate work priorities to CNRMC and cognizant RMCs. Resolve work priority conflicts as necessary • Regularly assess NAMTS maintenance skills required on respective afloat units • Approve CNRMC recommended, or recommend additional changes to specific NAMTS maintenance skills and required training for billets on respective afloat units • In collaboration with CNRMC, review and recommend NAMTS NEC At-Sea Requirements Matrix revisions to the cognizant Fleet Commander(s) • Review and approve establishment and disestablishment of MATs, as recommended by CNRMC. Optimize utilization of MATs capacity within existing total I-Level workload in each cognizant RMC
VI-42.6.1	Material Assessment	<ul style="list-style-type: none"> • Maintain a common material assessment process and policy • Be the Fleet's advocate and single point of contact for all material assessment issues • Provide and support a standard material assessment tool set • Review the personnel and monetary resources required • Establish minimum standards of continuous program improvements

Type Commander (TYCOM)

Section	Area of Responsibility	Responsibility
FWD-7.3.2	Life Cycle Maintenance Process for JFMM	<ul style="list-style-type: none"> • Review and evaluate JFMM changes (by the due date) • Notify Fleet Commanders of changes which affect ship and personnel safety • Review ACNs and forward to Fleet Commanders • Review and endorse all change packages • Designate representatives of JFMM BOD • Identify changes to JFMM distribution list
I-2.3	New Construction	<ul style="list-style-type: none"> • Pre-commissioning major construction phase • Trials • Post-Shakedown Availability
II-I-2.9.4	Material Condition Assessment (Aircraft Carriers Only)	<ul style="list-style-type: none"> • Budget and plan for correction of both typical recurring deficiencies and other material deficiencies during all upkeeps, availabilities, Planned Incremental Availabilities and Docking Planned Incremental Availabilities • Assign groom teams as necessary, to assist Ship's Force in maintaining the material condition of the propulsion plant • Provide the maintenance and inspection training requested by Ship's Force • Provide training for RMOs through the TYCOM N9 and N43 organizations to ensure they understand common maintenance problems among carriers, the requirements • For CNO Availabilities, maintain, with Ship's Force and shipyard input, an Availability Parts Support List containing special parts and routinely required support equipment necessary to support Ship's Force work • Meet periodically with the Reactor Officer or RMO to review the ship's material condition • Provide timely review and scheduling of deficiency correction for items identified during the inspections and grooms
II-I-3.2.2	Early Start Concurrence	<ul style="list-style-type: none"> • Provide concurrence to execute an "early start" period

15 Jan 2021

Section	Area of Responsibility	Responsibility
II-I-3.3.8.2	Maintenance Policies and Procedures	<ul style="list-style-type: none"> • Coordinate scheduling of availabilities with Fleet Commander • Initiate required budgetary actions • Coordinate work assignments between FMA and industrial activity • Seek resolution of technical problems and coordinate requirements for modernization and repair • Authorize AWP's prepared by SUBMEPP • (Submarines) Coordinate interface 3-M system with PMR scheduling and feedback • Designate representative for WDC/PRC and pre-arrival conference • Recommend to CNO any high priority fleet modernization • (Submarines) Send a Sea Trials Support Services message, if required • (Submarines) For minor maintenance availabilities, send a Waiver of Escort Requirements message when requested by the ISIC • Conduct QA audit of Ship's Force and FMA CWP's • (Submarines) For major availabilities send message for Fast Cruise, Sea Trials and Unrestricted Operations • (Submarines) For availabilities less than six months issue required message for Sea Trials • (Submarines) Verify that all SFCC-certified On Board Repair Parts are loaded out by Fast Cruise following any major or minor CNO availability
II-I-3.3.8.3a (All Ships)	Maintenance Policies and Procedures	<ul style="list-style-type: none"> • Assist TYCOM and SUBMEPP in preparation of AWP • Monitor corrective maintenance action taken • Schedule and conduct inspections of Forces Afloat • Monitor progress of CNO maintenance availabilities • Ensure that a MOA is executed prior to availability start

Section	Area of Responsibility	Responsibility
II-I-3.3.8.3b (Submarines Only)	Maintenance Policies and Procedures	<ul style="list-style-type: none"> • Ensure timely accomplishment and reporting of PMR maintenance actions on assigned ships • Ensure industrial activities and ships maintain current copies of Maintenance Standards, PMR schedules and PMR inventories • Review Ship's Force submitted deferrals for industrial activity assistance • Ensure industrial activities provide the 3-M and Maintenance Standards feedback • Request assistance from SUBMEPP as necessary in resolving problems with PMR scheduling and software • Report to SUBMEPP the inability to perform PMRs • Designate an Availability Coordinator • Provide updated Sea Trials status • For minor CNO availabilities, issue the required messages for Sea Trials escort requirements/waiver of escort requirements
II-I-3.3.8.3c (Surface Force Ships Only)	Maintenance Policies and Procedures	<ul style="list-style-type: none"> • In coordination with the RMC Chief Engineer, submit Change Deferral Requests and Change Notifications to SURFMEPP • Coordinate with SURFMEPP to update the AWP • Coordinate meetings as required at key milestones and as required to support resolution of major issues
II-I-3.6.8.3.11d	Availability Completion Prerequisites	<ul style="list-style-type: none"> • Issue message to the ship certifying the FBW SCS and authorizing FBW SCS unrestricted use
II-I-3.6.8.4.1c	Responsibilities for trials and inspections	<ul style="list-style-type: none"> • Schedule Fleet Commander PORSE • Provide Fast Cruise, Sea Trial and completion prerequisites to the ship • Assign material representatives to embark for trials • Inform CNO and Fleet Commander of trials • Provide escorts as required • Conduct ship salvage inspection • Approve Sea Trial Agenda • Report crew readiness and request authorization for critical ops • Report status of SUBSAFE boundary conditions and authorization of Sea Trials • Report status of SUBSAFE certification and authorize URO to test depth • Authorize underway operation of the FBW SCS • Issue a message to the ship authorizing FBW SCS unrestricted use in support of submarine unrestricted operations

Section	Area of Responsibility	Responsibility
II-II-2.5	Milestones	<ul style="list-style-type: none"> Obtain technical adjudication for any Baseline AWP items prior to the removal of any Baseline AWP item from the work package.
IV-2.4.1	FMA Assessment	<ul style="list-style-type: none"> Promulgate assessment schedule Forward precepts letter or message to FMA's Commanding Officer Conduct in-brief and out-brief with designated personnel Issue assessment report
IV-5.3.1	Marine Sanitation Devices	<ul style="list-style-type: none"> Ensure surface ships participate in pollution abatement program Ensure MSD systems are properly installed, operated and maintained
IV-16.2.3d	Aircraft Launch and Recovery Systems	<ul style="list-style-type: none"> Provide ALRE Maintenance Management Teams to conduct assist visits and annual audits of all units
IV-17.4.3	Steam Catapult Inspection	<ul style="list-style-type: none"> Provide or arrange for certified SGPIs to perform inspections Coordinate inspections of all catapult accumulators and support systems Assist COs in arranging for corrective action of deficient items Review the SCIRMIS
IV-26.2.1	Board of Inspection and Survey Material Inspections Policy	<ul style="list-style-type: none"> Act as cognizant authority for conduct of INSURV inspections Nominate active ships for MIs by the INSURV board Schedule inspections/assessments within 60 days of MI Review Safety Survey results and corrective action status report Track and work to resolve historical issues identified by INSURV Coordinate with the ISIC to disseminate the best practices and lessons learned
IV-27.4.3	Steam Reboiler Inspection	<ul style="list-style-type: none"> Arrange for certified SGPIs to perform inspections Schedule inspections of all Steam Reboilers and support systems. Coordinate the inspections. Assist Commanding Officers in arranging corrective action of deficient items beyond the capability of Ship's Force to perform. Monitor follow-up action to correct deficiencies. Review the RIRMIS to ensure deferred inspection deficiencies are entered into the CSMP

Section	Area of Responsibility	Responsibility
V-I-1.4	Organizational Responsibilities	<ul style="list-style-type: none"> • (Submarines) Obtain NAVSEA approval for exception to REC requirements • Administer a departure from specification system • Perform assessment of nuclear FMAs annually • (Submarines) Perform assessment of ISICs annually • Perform assessment of FMA's non-nuclear programs annually • Perform random, unannounced assessments and monitor visits • Review and evaluate FMA and ISIC reports of corrective actions • (Submarines) Maintain system to provide SUBSAFE certification • Provide annual self-evaluation of QA program • Evaluate and analyze proposed changes to this volume • (Submarines) Perform annual SUBSAFE/Scope of Certification awareness training • (Submarines) Develop and implement necessary instructions and procedures to meet requirements of reference (a) • (Submarines) Maintain FBW SCS certification • Approve at-sea testing developed by the ISEA following Upgrades/Alterations or Major Repair Work • Issue a message to the ship certifying the FBW SCS and authorize FBW SCS unrestricted use in support of Submarine unrestricted operations • (Submarines) For assigned activities, provide NAVSEA 07Q informational copies of critiques, trouble reports and incident reports for SUBSAFE/FBW SCS/DSS/SOC issues that result in a problem severity level of Level 1 (critical) or Level 2 (serious).
V-I-1.4.1	Training	<ul style="list-style-type: none"> • (Submarines only) For FBW SCS, DSS-SOC, and SUBSAFE, develop and implement the necessary instructions and procedures to meet the requirements of references (a), (b) and (c), to ensure these requirements are adhered to during the life cycle of the ship.
V-I-9.3.4	Assessments	<ul style="list-style-type: none"> • Conduct annual assessments of ISICs and FMAs

Section	Area of Responsibility	Responsibility
V-III-1.2.1	Organizational Responsibilities	<ul style="list-style-type: none"> Obtain SCA approval for REC requirements in SOC systems Administer DFS system Perform assessment of ISICs responsible for DSSs annually Perform random, unannounced Sustaining Activity Quality Assurance assessments Perform an annual self-evaluation of the QA program Evaluate and analyze proposed changes to JFMM Volume V Recommend to SCA suspension and reinstatement of DSS certification Perform annual SOC awareness training
VI-4.9.a	Shipboard Electromagnetic Compatibility	<ul style="list-style-type: none"> Coordinate to identify, solve and correct operational EMI deficiencies Review and authorize documents prepared by technical agencies Evaluate comments and recommendations regarding EMI reduction Ensure FMA and RMC have technicians to support EMI surveys
VI-5.2.4	Deficiency Documentation and Reporting	<ul style="list-style-type: none"> Validate, screen and broker all 4790/2Ks Broker all 4790/2Ks associated with any outstanding C3/C4 CASREP during the next scheduled maintenance availability Approve any planned delay of action on a CASREP Enforce compliance with the policy of updating a CASREP
VI-6.4.2	Industrial Plant Equipment	<ul style="list-style-type: none"> Review PEPs for technical accuracy and completeness Review PEPs for conflicts with other maintenance actions Prioritize PEPs and evaluate each project to ensure compatibility with capability requirements and site configuration Forward approved requests and return unapproved requests Schedule annual assessment and coordinate repairs

TABLE OF CONTENTS

CHAPTER 1 - INTRODUCTION

1.1	Purpose	I-1-1
1.2	Scope	I-1-1
1.3	Changes and Corrections	I-1-2
1.4	Request for Copies of the Manual	I-1-2

Appendices

A1	Summary of Typical New Construction Major Milestones and Message Reporting Requirements for Submarines	I-1A-1
A2	Summary of Typical New Construction Major Milestones and Message Reporting Requirements for Aircraft Carriers.....	I-1A-3
A3	Summary of Typical New Construction and Post Shakedown Availability Planning Events, Major Milestones and Message Reporting Requirements for Surface Forces	I-1A-5
B1	CVN General Time Line of Key Events	I-1B-1
B2	USS <i>Virginia</i> (SSN 774) General Time Line of Key Events	I-1B-2
B3	Delivery Messages Scenario.....	I-1B-3
C	List of Acronyms	I-1C-1
D	Glossary of Terms	I-1D-1

CHAPTER 2 - POLICIES AND RESPONSIBILITIES

2.1	Navy Shipbuilding Program Managers	I-2-3
2.1.1	Pre-Commissioning	I-2-3
2.1.2	Post Shakedown Availability (Submarines only).....	I-2-4
2.2	Naval Sea Systems Command Nuclear Propulsion Directorate (Nuclear Powered Ships only)	I-2-4
2.2.1	Pre-Commissioning	I-2-4
2.2.2	Reactor Safeguard Examination	I-2-4
2.2.3	Criticality and Power Range Testing.....	I-2-4
2.2.4	Post Shakedown Availability	I-2-4
2.3	Type Commander	I-2-4
2.3.1	Pre-Commissioning	I-2-5
2.3.2	Combined Trials, Acceptance Trials, Final Contract Trials or Guarantee Material Inspection	I-2-7
2.3.3	Post Shakedown Availability	I-2-7
2.4	Supervising Authority	I-2-7
2.4.1	Pre-Commissioning	I-2-7

15 Jan 2021

2.4.2	Acceptance Trials or Combined Trials	I-2-11
2.4.3	Post Shakedown Availability	I-2-11
2.4.4	Deficiencies	I-2-11
2.5	Immediate Superior in Command	I-2-12
2.5.1	Pre-Commissioning	I-2-12
2.5.2	Post Shakedown Availability	I-2-14
2.6	Building Yard	I-2-15
2.7	Design Yard or Planning Yard	I-2-15
2.8	Commanding Officer, Prospective Commanding Officer or Officer In Charge	I-2-15
2.8.1	General	I-2-15
2.8.2	Pre-Commissioning	I-2-16
2.8.3	Trials and Inspections	I-2-19
2.8.4	Post Shakedown Availability	I-2-19
2.9	Pre-Commissioning Unit	I-2-20
2.9.1	Initial Man-up	I-2-20
2.9.2	Training	I-2-21
2.9.3	Ship's Qualification Program	I-2-22
2.9.4	Deficiency Identification and Correction	I-2-23
2.9.5	Establishment of Engineering and Reactor Department	I-2-23
2.10	Support Activities	I-2-25
2.10.1	Technical Support	I-2-25
2.10.2	Submarine Maintenance Engineering, Planning and Procurement Activity	I-2-25
2.10.3	Carrier Planning Activity, PMS312C (Aircraft Carriers only)	I-2-26
2.10.4	Surface Maintenance Engineering Planning Program (Surface Force Ships Only)	I-2-26
2.10.5	Space and Naval Warfare Systems Centers	I-2-26
2.10.6	Fleet Introduction Team (Surface Forces only)	I-2-27
2.10.7	Afloat Training Group (Surface Force Ships only)	I-2-27
2.10.8	Surface Nuclear Propulsion Mobile Training Team (Aircraft Carriers only)	I-2-27
2.10.9	Fitting Out Supply Assistance Team (Surface Ships only)	I-2-27
2.11	Naval Sea Systems Command (Submarines only)	I-2-28
2.12	Integration of Class Maintenance Plan and Baseline Availability Work Package (Surface Force Ships Only)	I-2-29
2.12.1	Life Cycle Planning Conference	I-2-29
2.12.2	BAWP Pre-Pushed to Maintenance Team	I-2-29
2.12.3	BAWP Upload	I-2-29
2.12.4	Other BAWP to AWP Process Milestones	I-2-29
Appendices		
A	Message Scenario and Sample Messages or Letters for Habitability Inspections and In-Service	I-2A-1

A1	Sample Supervising Authority Letter to Navy Shipbuilding Program Manager Recommending Habitability Inspection and In-Service	I-2A-2
A2	Sample Navy Shipbuilding Program Manager Letter Requesting TYCOM to Authorize ISIC to Conduct Habitability Inspection.....	I-2A-3
A3	Sample TYCOM Message Directing ISIC to Conduct Habitability Inspection	I-2A-4
A4	Sample ISIC Message Reporting Completion of Habitability Inspection and Recommending Ship Be Placed “In-Service”	I-2A-5
A5	Sample Navy Shipbuilding Program Manager to CNO Message	
	Recommending Ship Be Placed In-Service.....	I-2A-7
A6	Sample TYCOM Message Recommending Ship Be Placed “In-Service Active”	I-2A-8
A7	Sample CNO to Navy Shipbuilding Program Manager Message Directing the Ship Be Placed In-Service	I-2A-9
A8	Sample Supervising Authority to Navy Shipbuilding Program Manager Message Recommending Ship Be Placed In-Service.....	I-2A-10
A9	Sample Navy Shipbuilding Program Manager to Ship Message Directing Ship Be Placed In-Service	I-2A-11
A10	Sample CO Pre-Commissioning Unit Message Reporting “In-Service Active”	I-2A-12
B	Message Scenario and Sample Messages for Fast Cruise and Alpha Sea Trial (Nuclear Powered Ships)	I-2B-1
B-SUBS	(Submarines Only) Message Scenario and Sample Messages for Fast Cruise and Alpha Sea Trial (Nuclear Powered Ships)	I-2B-2
B1	Sample ISIC Certification of New Construction Readiness for Fast Cruise and Sea Trials Message (Submarines).....	I-2B-3
B2	Sample Pre-Commissioning Unit Message to TYCOM Concerning Crew Certification (CVN)	I-2B-5
B3	Sample TYCOM Certification of Crew Readiness for Underway Trials Message (Submarines)	I-2B-6
B4	Sample Supervising Authority to Navy Shipbuilding Program Manager Message Concerning Fast Cruise and Alpha Sea Trial Readiness (Submarines)	I-2B-7
B5	Sample Supervising Authority Message to Navy Shipbuilding Program Manager Concerning Fast Cruise and Sea Trial Readiness (CVN)	I-2B-9
B6	Sample Supervising Authority to Navy Shipbuilding Program Manager 24 Hour Message Concerning Fast Cruise Readiness (Submarines)	I-2B-10
B7	Sample Supervising Authority to Navy Shipbuilding Program Manager and TYCOM Message Concerning Fast Cruise Completion (Submarines).....	I-2B-11
B8	Sample NAVSEA to TYCOM Message Concerning Material Condition and Authorized Depth for Alpha Sea Trial (Submarines)	I-2B-13
B9	Sample TYCOM to Pre-Commissioning Unit Message Concerning Alpha Sea Trial Authorized Test and Operating Depth (Submarines).....	I-2B-15
C	Message Scenario and Sample Messages for Bravo, Charlie, and Combined Trials (Submarines).....	I-2C-1

C1	Sample Supervising Authority to Navy Shipbuilding Program Manager Message Concerning Design Test Depth Dive Readiness	I-2C-2
C2	Sample NAVSEA to TYCOM Message Concerning Design Test Depth Dive Authorization	I-2C-4
C3	Sample TYCOM to Pre-Commissioning Unit Message Concerning Design Test Depth Dive Authorization	I-2C-5
C4	Supervising Authority Installation of Shore Power Covers for Bravo and Subsequent Sea Trials Sample Message.....	I-2C-7
D	Message Scenario and Sample Messages for URO Certification (Submarines).....	I-2D-1
D1	Sample Supervising Authority to Navy Shipbuilding Program Manager Message Concerning URO	I-2D-2
D2	Sample NAVSEA to TYCOM Message Concerning URO	I-2D-3
D3	Sample TYCOM to Pre-Commissioning Unit Message Concerning URO.....	I-2D-4
E	Pre-RSE, RSE, Criticality or Power Range Testing Logic Table (All Nuclear Powered Ships).....	I-2E-1
E1	Sample Supervising Authority to NAVSEA Message Requesting Authorization for Criticality	I-2E-2
E2	Sample Supervising Authority to NAVSEA Request for Initial Criticality	I-2E-3
E3	Sample NAVSEA to Supervising Authority Message Authorizing Criticality	I-2E-4
F	Sample TYCOM Message Concerning Sea Trial Agenda (Submarines)	I-2F-1
G	Sample TYCOM Message to PCU Concerning Use of the FBW SCS in Support of Alpha Sea Trials (Submarines).....	I-2G-1
H	Sample TYCOM Message to PCU Concerning FBW SCS Material Condition Initial Certification (Submarines).....	I-2H-1
I	Sample TYCOM Message to the Ship Concerning FBW SCS Certification (Submarines)	I-2I-1
J	Sample Supervising Authority Message to NAVSEA Concerning PCU FBW SCS Material Condition Readiness for Fast Cruise and Alpha Trials (Submarines)	I-2J-1
K	Sample Supervising Authority Message to TYCOM and NAVSEA Concerning PCU Fast Cruise Completion and Readiness of FBW SCS Material Condition for Alpha Sea Trials (Submarines)	I-2K-1
L	Sample Supervising Authority Message to NAVSEA Concerning PCU FBW SCS Material Condition Readiness Upon Completion of Alpha Sea Trials and Readiness of the FBW SCS for Use During Bravo and Subsequent Sea Trials (Submarines).....	I-2L-1
M	Sample Supervising Authority Message to NAVSEA Concerning PCU FBW SCS Material Condition Initial Certification (Submarines)	I-2M-1
N	Pre Man-Up Checklist for TYCOM/ISIC	I-2N-1
O	Basic Requirements for Initial Man-Up Personnel of the PCU (Detachment Concept) (Aircraft Carriers and Surface Force Ships).....	I-2O-1
P	Basic Requirements for Initial Man-Up Personnel of the PCU	I-2P-1

Q	Generic Base Line of Fleet Introduction Team Functions and Responsibilities.....	I-2Q-1
R	Sample NAVSEA Message to TYCOM Concerning PCU FBW SCS Material Condition Readiness for Alpha Sea Trials (Submarines)	I-2R-1
S	Sample NAVSEA Message to TYCOM Concerning PCU FBW SCS Material Condition Initial Certification (Submarines)	I-2S-1
T	Sample NAVSEA Message to TYCOM Concerning PCU Recommendation for Fly-By-Wire Ship Control System Certification	I-2T-1

CHAPTER 3 - PRE DELIVERY

3.1	Purpose	I-3-2
3.2	Shipbuilder's Test Program.....	I-3-2
3.3	Inspections, Certifications and Assists.....	I-3-3
3.3.1	Arrival Assist.....	I-3-3
3.3.2	Periodic Monitoring, Inspections and Visits	I-3-3
3.3.3	Pre-Reactor Safeguard Examination (Nuclear Powered Ships only)	I-3-4
3.3.4	Crew Certification	I-3-5
3.3.5	Sonar Certification (Applicable Surface Force Ships and Submarines)	I-3-5
3.3.6	Aviation Facility Certification (Air Capable Ships only).....	I-3-5
3.3.7	Salvage Inspection (Submarines only)	I-3-6
3.3.8	NAVSEA Calibration Activity or Aircraft Intermediate Maintenance Department Calibration Laboratory Initial Certification (Submarines, Aircraft Carriers and Surface Forces, as appropriate)	I-3-6
3.3.9	National Policy on the Control of Compromising Emanations Inspection	I-3-7
3.3.10	Diesel Inspection	I-3-7
3.3.11	Habitability Inspection	I-3-8
3.3.12	Requirements for In-Service.....	I-3-8
3.3.13	Degaussing or Deperming	I-3-9
3.3.14	Light-Off Assessment (Surface Force Ships only).....	I-3-9
3.3.15	Shipboard Crane Certification Program (Surface Force Ships and Aircraft Carriers, as appropriate)	I-3-10
3.3.16	Marine Gas Turbine Inspection	I-3-10
3.4	Maintenance and Material Management Program	I-3-10
3.4.1	Planned Maintenance System.....	I-3-10
3.4.2	Technical Feedback Reports.....	I-3-12
3.4.3	Establishment of Current Ship's Maintenance Project.....	I-3-13
3.4.4	Naval Tactical Command Support System.....	I-3-13
3.5	Equipment Load Out	I-3-13
3.5.1	Test Equipment.....	I-3-13
3.5.2	Hand Tools and Weight Handling Equipment	I-3-13
3.6	Logistic Support	I-3-13
3.6.1	Technical Manuals and Drawings	I-3-13
3.6.2	Unrestricted Operations Maintenance Requirement Cards (Submarines only).....	I-3-16

3.7	Operational Control Transfer	I-3-16
3.8	Sound Silencing Programs Unique to New Construction (MHC and SSN only)	I-3-17

Appendices

A	Areas to Be Evaluated During Arrival Assists	I-3A-1
B	Areas to Be Evaluated During Monitoring Inspections	I-3B-1
C	Sample Pre-Reactor Safeguard Examination Notice.....	I-3C-1
D	In-Service Compartment Surveillance Guide (Aircraft Carriers and Submarines Only).....	I-3D-1
E	Sample Pre-Commissioning Habitability Inspection Checklist for New Construction Ships.....	I-3E-1

CHAPTER 4 – TRIALS

4.1	Purpose	I-4-2
4.2	Dock Trials	I-4-2
4.2.1	Purpose	I-4-2
4.2.2	Conduct.....	I-4-2
4.2.3	Scheduling	I-4-2
4.2.4	Specific Test Areas	I-4-2
4.3	Fast Cruise	I-4-2
4.3.1	Purpose	I-4-2
4.3.2	Conduct.....	I-4-2
4.3.3	Scheduling	I-4-3
4.3.4	Specific Test Areas	I-4-3
4.3.5	Reports (Nuclear Powered Ships only)	I-4-3
4.4	Sea Trials	I-4-3
4.4.1	General	I-4-3
4.4.2	Builder's Trials	I-4-5
4.4.3	Alpha Sea Trial (Submarines only)	I-4-6
4.4.4	Bravo Sea Trial (Submarines only)	I-4-8
4.4.5	Charlie Sea Trial (Submarines only)	I-4-8
4.4.6	Acoustic Trials (Platform and Radiated) (Submarines only)	I-4-9
4.4.7	Shock Trials.....	I-4-9
4.4.8	Acceptance Trials, Combined Trials, Final Contract Trials and Guarantee Material Inspection	I-4-9

Appendices

A	Specific Dock Trial Test Areas	I-4A-1
B	Minimum Fast Cruise Requirements.....	I-4B-1
C	Listing of Tests to Be Performed During Aircraft Carrier Builder's Trials.....	I-4C-1
D	Listing of Tests to Be Performed During Initial Tightness Dive (Submarines Only).....	I-4D-1
E	Escort Ship Capabilities for Submarine Sea Trials	I-4E-1
F	Listing of Tests to Be Performed Prior to, During and Following First Dive to Test Depth.....	I-4F-1

CHAPTER 5 - POST DELIVERY DEFICIENCIES

5.1	Purpose	I-5-1
5.2	Deficiency Correction	I-5-1
5.2.1	Government Responsible Items.....	I-5-1
5.2.2	Shipbuilder Responsible Items	I-5-2
5.2.3	Recommended Changes in Characteristics, Design Specifications, or Plans	I-5-2
5.3	Required Reports	I-5-2
5.4	Combined Trials, or Acceptance Trials.....	I-5-4
5.5	Guarantee Material Inspection or Final Contract Trials.....	I-5-5
5.6	Post Delivery Deficiency Items.....	I-5-5

Appendices

A	Sample Page of 4760-1 Report with Representative Data	I-5A-1
B	Legend and Explanation of Symbols Used in Report 4760-1	I-5B-1
C	Preparation for Guarantee Material Inspection/Final Contract Trials	I-5C-1

CHAPTER 6 - POST SHAKEDOWN AVAILABILITY

6.1	Purpose	I-6-1
6.2	Planning and Execution.....	I-6-1
6.3	Trials, Inspections and Crew Certification.....	I-6-1
6.4	Sea Trials.....	I-6-1
6.5	Deficiency Correction Period.....	I-6-2
6.6	Period Following Post Shakedown Availability	I-6-2

Appendices.

A	Major Funding Milestones During Construction/Conversion.....	I-6A-1
B	Post Shakedown Availability Planning Events Milestone Schedule.....	I-6B-1
C	Summary of Major Milestones for Post Shakedown Availability.....	I-6C-1

VOLUME I
CHAPTER 1
INTRODUCTION

REFERENCES.

- (a) NAVSEA S9086-C4-STM-000 - NSTM Chapter 094 (Trials)
- (b) OPNAVINST 9080.3 - Procedures for Tests and Trials of Navy Nuclear Powered Ships Under Construction, Modernization, Conversion, Refueling and Overhaul
- (c) OPNAVINST 4700.8 - Trials, Acceptance, Commissioning, Fitting-Out, Shakedown, and Post Shakedown Availability of U.S. Naval Ships Undergoing Construction or Conversion
- (d) NAVSEAINST 4790.8/OPNAVINST 4790.4 - Ships' Maintenance and Material Management (3-M) Manual

LISTING OF APPENDICES.

- A Summary of Typical New Construction Major Milestones and Message Reporting Requirements
- B General Time Lines of Key Events
- C List of Acronyms
- D Glossary of Terms

1.1 **PURPOSE.** Volume I of this manual summarizes maintenance related information for all units of the Fleet during Ship construction and through the completion of Post Shakedown Availability (PSA). The time span is from initial crew man-up to departure from the PSA facility.

1.2 **SCOPE.**

- a. New Construction ships require a succession of inspections and tests followed by a series of underway trials. The philosophy and sequencing of these inspections, tests, and trials are set forth in references (a), (b) and (c) and are graphically represented in Appendices A and B of this chapter. This Volume provides information, guidance, policies and procedures for maintenance related topics during the Ship's construction period. Reference (d) must be used in conjunction with the Joint Fleet Maintenance Manual (JFMM) to establish an effective maintenance program. The requirements of this manual do not supersede or take precedence over directives issued by higher authority. Where conflicts exist with previously issued Type Commander (TYCOM) letters and transmittals, this manual takes precedence. Conflicts should be reported to the applicable TYCOM.
- b. The development of this and subsequent volumes to the JFMM has required the study of numerous reference documents, many of which are referenced as source or governing documents in specific chapters. The Foreword of this Manual contains a Master Listing of all the references called out in the JFMM. These references are arranged in an alphanumeric sequence to facilitate the ordering of documentation to support the use of the JFMM. References used in specific chapters are called out at the beginning of that chapter.

- c. Appendices C and D of this chapter contain a list of acronyms and a glossary of terms used throughout Volume I of the JFMM.
- d. Equipment under the cognizance of the Strategic Systems Programs and Naval Sea Systems Command (NAVSEA) Nuclear Propulsion Directorate (08) are maintained following the Strategic Systems Programs and NAVSEA 08 directives, respectively.

1.3 CHANGES AND CORRECTIONS. Changes and corrections will be issued as required. Comments and suggestions for improving or changing this volume are invited. Address comments, recommendations, and requested changes to Submarine Maintenance Engineering, Planning and Procurement (SUBMEPP) Activity utilizing the change request form located in the front of this manual. If changes are submitted in electronic format, facsimile or E-mail, each change request must contain the information required on the change request form.

1.4 REQUEST FOR COPIES OF THE MANUAL. Activities on distribution for the JFMM CD-ROM that require additional copies or activities wanting to be added to distribution should submit a letter to their applicable TYCOM or SYSCOM, identifying CD-ROM requirements along with justification for the request. To the maximum extent possible, all activities and commands will utilize the JFMM public web page located at <https://www.navsea.navy.mil/Home/SUBMEPP/Products/JFMM/>. Any CD-ROM authorized to be issued to ashore activities or commands will be issued to the technical publications libraries at the activity who will coordinate local distribution and updates for that activity.

15 Jan 2021

APPENDIX A₁**SUMMARY OF TYPICAL NEW CONSTRUCTION MAJOR
MILESTONES AND MESSAGE REPORTING REQUIREMENTS
FOR SUBMARINES**

Event	Cognizance	Approximate Schedule (see Note)
A. Arrival Assist	Immediate Superior in Command (ISIC)	Crew Arrival +2 months
B. Periodic Monitoring Inspections	ISIC	Start to completion
C. Pre-Reactor Safeguard Examination (RSE)	ISIC (TYCOM Assist)	Criticality -6 to -8 weeks
D. RSE per OPNAVINST 3540.3	Naval Sea Systems Command (NAVSEA) Nuclear Propulsion Directorate (08)	Criticality -4 to -6 weeks
E. Criticality	Prospective Commanding Officer (PCO)	
F. Escort Recommendation Message	ISIC or Supervising Authority	-60 days
G. Habitability Inspection for In-Service per OPNAVINST 9080.3	ISIC	-60 days
H. Phase I Crew Certification	ISIC	-35 days
I. Salvage Inspection	ISIC	-30 days
J. Approve Sea Trial Agendas *	NAVSEA for Propulsion Trials; Director, Strategic Systems Programs for Ballistic Missile Trials; Board of Inspection and Survey (INSURV) for Acceptance Trial (AT); TYCOM for Operational Aspects all Trials	-30 days
* Only Alpha Trial Agenda is approved 30 days before trial date		
K. In-Service per OPNAVINST 4700.8 and OPNAVINST 9080.3	Supervising Authority NAVSEA, ISIC and TYCOM	-28 days
L. Dock Trial	Officer in Charge (OIC)	-21 days
M. Phase II Crew Certification Message (Volume I, Chapter 2, Appendix B ₁)	ISIC	-10 days
N. Crew Certification Message (Volume I, Chapter 2, Appendix B ₃)	TYCOM	-9 days
O. Readiness for Fast Cruise or Sea Trial Message (Volume I, Chapter 2, Appendix B ₄)	Supervising Authority or OIC concurrence	-7 days
P. Certify Material Condition for Alpha Sea Trial Message (Volume I, Chapter 2, Appendix B ₈)	NAVSEA	-7 days
Q. Authorize Commencement of Sea Trial Message	TYCOM to ISIC to Ship	-7 days
R. Fast Cruise	OIC	-7 days (2 days on, 1 day off, 2 days on)
S. Report Completion of Fast Cruise and Readiness for Sea Trial Message (Volume I, Chapter 2, Appendix B ₇)	Supervising Authority (with OIC concurrence) to TYCOM	-2 days
T. Depth Authorization Message (Volume I, Chapter 2, Appendix B ₉)	TYCOM	-1 day

Event	Cognizance	Approximate Schedule (see Note)
U. Alpha Sea Trial	OIC	0
V. Readiness for Bravo Sea Trial Message (Volume I, Chapter 2, Appendix C ₁)	Supervising Authority	Bravo Sea Trial -1 day
W. Readiness for Bravo Sea Trial Message (Volume I, Chapter 2, Appendix C ₂)	NAVSEA	Bravo Sea Trial -1 day
X. Bravo Sea Trial Authorization Message (Volume I, Chapter 2, Appendix C ₃)	TYCOM	Bravo Sea Trial -1 day
Y. Bravo Sea Trial	OIC	+3 days
Z. Readiness for Charlie Sea Trial Message (Volume I, Chapter 2, Appendix C ₁)	Supervising Authority	Charlie Sea Trial -1 day

APPENDIX D

GLOSSARY OF TERMS

<u>TERM</u>	<u>DEFINITION</u>
Alpha Trial	Builder's Propulsion Trial; Acceptance Trial for SSN Propulsion Plant; Initial Tightness Dive (SSN); Dive to Maximum Authorized Depth (Selected SSN platforms).
Acceptance Trials (AT)	Trials and material inspections conducted underway by the INSURV Board for ships constructed in a private industrial activity to determine suitability for acceptance of a ship by the Navy.
Accepting Authority	The officer designated by the Chief of Naval Operations (CNO) to accept a vessel for the Navy, normally NAVSEA.
Bravo Trial	Normally the initial Dive to Test Depth; Noise Trial (SSN); Weapons testing (Surface Combatants).
Builder's Trials (BT)	Evaluation trials and inspections conducted underway by the builder to assure the builder and the Navy that the ship is, or will be, ready for Acceptance Trials. These trials should be a comprehensive test of all ship's equipment and be similar in scope to Acceptance Trials. For Aircraft Carriers, this is the Acceptance Trial for the Nuclear Propulsion plant.
Charlie Trial	Combat Systems and retesting (SSN); Acceptance Trials (Surface Forces as applicable).
Combined Trials (CT)	Combined Trials are a combination of an Acceptance Trial with a Final Contract Trial. The INSURV Board normally conducts Combined Trials for nuclear powered submarines.
Common Assessment Procedures	Common assessment procedures are assessments that, to the maximum extent possible, are common across platforms and serve all users for assessments, inspections and certifications. Common assessment procedures are RCM applicable and effective maintenance procedures that can be properly and consistently executed. They deliver accurate assessment and measurement of, determine and document discrepancies to, and specify repairs required to restore satisfactory material condition. Common assessment procedures satisfy the needs of work definition, inspections and certifications in a common document used both across ship classes and by all activities. The two types of commonality invoked are common across functional use and common across platforms with similar systems and equipment.

Deep Dive	The first dive to maximum operating depth. This depth will not necessarily coincide with the design test depth of the hull. See definition of Maximum Operating Depth.
Delivery	The date the Navy accepts the ship from the shipbuilder. This requires a recommendation from the INSURV Board to accept or deliver the ship. Delivery of the ship is based on Acceptance Trials and satisfactory correction or resolution of deficiencies.
Dock Trial	Dock Trials are those ship trials conducted at the Industrial Activity to determine the ability of the ship, from a material standpoint, to conduct Sea Trials safely.
Executive Agent	A term used in Department of Defense and Service regulations to indicate a delegation of authority by a superior to a subordinate to act on behalf of the superior. An agreement between equals does not create an executive agent.
Fast Cruise	A period immediately prior to underway trials during which Ship's Force operates the ship for dockside training. Fast Cruise must, as far as is practical, simulate at-sea operating conditions.
Final Contract Trials (FCT)	Trials that are conducted prior to the end of the guarantee period to determine if there are any defects, failures, or deterioration other than that due to normal wear and tear.
Fleet Introduction Team (FIT)	A team of personnel assembled to support a pre-commissioning crew by monitoring progress of construction and coordinating training and facilities. They provide administrative support in all facets of new construction.
Group	Normally that first 1-Star organization or Command above the Squadron before to TYCOM.
Guarantee Material Inspection (GMI)	A material inspection, conducted inport prior to Post Shakedown Availability (PSA) by a Trial Board prior to the end of the guarantee period when CNO has authorized a Combined Trial to determine if contractor responsible equipment has operated satisfactorily during the guarantee period. It must include the opening and inspection of equipment designated by the Board together with the operation and visual inspection of equipment and the review of material maintenance records.
Guarantee Period (New Construction)	The period of time immediately following preliminary acceptance (delivery), normally eight or nine months (six months for nuclear powered ships), for which the industrial activity is responsible for the

correction of deficiencies.

Guarantee Period (PSA)	The guarantee period following PSA varies with the type of contract. Historically, a “cost plus” type contract has had a guarantee period of six months and a “fixed price” type contract a period of 90 days. The Supervising Authority will advise at the time of PSA the guarantee that applies.
In-Service	Nuclear powered ships are assigned an active status of In-Service approximately two to four weeks (two to four months for aircraft carriers) prior to the commencement of Sea Trials and maintain this status until commissioning.
Industrial Activity	The activity responsible for accomplishing construction or repair of ships whether private or public. This includes Naval shipyards, private shipyards, shipbuilders, vendors, Naval Aviation Depots, Naval Ship Repair Facilities, and other Naval Repair or Technical Activities (i.e., Naval Underwater Weapons Center, Naval Ships Weapons Center, etc.).
Initial Dive	For purposes of seawater valve and system testing, as defined in NAVSEAINST C9094.2, the first dive to a depth not previously reached during the trials.
Initial Tightness Dive	First submergence (a submarine's Alpha Trial).
INSURV	Prior to the acceptance and delivery of a new ship, whether built by a private or a naval industrial activity, all machinery, electronics and weapons systems installed must be subjected to acceptance trials to determine that the installations are capable of meeting performance specifications. Depending upon your platform, these trials are referred to as either Acceptance Trials, Combined Trials or INSURV. This independent verification of the ship's readiness for acceptance and recommendation for fleet introduction is the responsibility of the President, Board of Inspection and Survey.
Lead Maintenance Activity	The single activity responsible for integrating all maintenance and modernization on U.S. Naval ships during any type of availability.
Maximum Operating Depth (Also Maximum Authorized Operating Depth)	The depth to the keel for a particular submarine which is authorized by Commander Submarine Forces Atlantic or Commander Submarine Forces Pacific upon the recommendation of NAVSEA, as the depth not to be exceeded in operations. This depth is normally the Test Depth but may be reduced in specific cases. The depth authorized may be less than, but in no case exceed, the depth recommended by NAVSEA.
Mid-Cycle	Intermediate meeting held between Fleet Weeks to discuss a limited

number of Technical Ticklers and pending action items.

Moderate Speed	The range of speed that allows the submarine optimum recovery (as shown on applicable submerged operating envelope curves) if loss of stern plane control, flooding, or both occurs. Normally 8-15 knots.
Naval Supervisory Authority or Supervisory Authority	The officer designated to represent the Navy Department at an industrial activity; normally a Supervisor of Shipbuilding (new construction), Regional Maintenance Center (Conversion and Repair), or the Commander of a Naval Shipyard.
Post Shakedown Availability (PSA)	An industrial activity availability following Final Contract Trials or Guarantee Material Inspection assigned to correct deficiencies found during the shakedown period or to accomplish other authorized improvements.
Reliability Centered Maintenance	A methodology to develop or revise a maintenance approach with the objective of maintaining the inherent reliability of the system or equipment, recognizing that changes in inherent reliability may be achieved only through design changes.
Technical Data	Recorded information (regardless of the form or method of recording) of a scientific or technical nature (including computer databases and computer software documentation). This term does not include computer software or financial, administrative, cost or pricing, or management data or other information incidental to contract administration. The term includes recorded information of a scientific or technical nature that is included in computer databases. For these purposes, technical data includes the characteristic of a particular science, trade or profession.
Technical Tickler	A “living document” submitted by the Commander, United States Fleet Forces Command Maintenance Officer to present the Fleet's top material readiness issues to COMNAVSEASYSCOM and Office of the Chief of Naval Operations Resource Sponsors and used subsequently to record and track their planned corrective action.
Test Depth (TD)	For the purpose of the proper method of measuring and specifying Test Depth, the requirements are: Test Depth must be measured to the bottom of the keel for all types of submarine operations. Builders trials and trials following major industrial activity availabilities greater than six months, must be at a tolerance of plus zero (0), minus twenty (20) feet of Test Depth when specified. All other trials can be conducted at 95% to 100% of Test Depth to satisfy all the requirements specified for 100% Test Depth.
Top Management	Top Management Attention (TMA) O-6 level panel meeting to discuss

Attention Fleet Week the Technical Ticklers, review action items, close issues where action is complete and refer issues to Top Management Issues that require Flag level action. TMA Fleet Week is held twice a year, generally in October and April.

Top Management Issues (TMI) Top Management Issues, flag level panel meeting to discuss those issues requiring identification or realignment of resources (funding or manpower), or flag level participation to resolve.

Valve Repair, Restoration or Overhaul

- a. Repair. Any work done to improve the material condition or operation of the valve correcting deficient conditions such that the component may be returned to service, but which, in total does not meet the full intent of the applicable restoration or overhaul technical standard, is considered a repair.
- b. Restoration or Overhaul. All valve parts replaced or restored to the requirements of the applicable technical standard (e.g., the full intent of the restoration or overhaul technical standard is invoked).

Waterline The term “waterline” in this manual refers to where the hull of a ship meets the surface of water when afloat.

Work

- a. Any action that actually or potentially changes (including disassembly for the purposes of inspection or repair) the approved configuration of any part, component or ship’s system.
- b. Any action that removes or affects the ship’s ability to operate ship’s systems or components following ship’s systems, operating manuals or reactor plant manuals.
- c. Any testing or inspections required to establish, maintain or reestablish certification.
- d. Any design, engineering, planning or configuration management functions that involve the final review or approval of technical information.

Examples of work include:

1. Action which disassembles or removes any part, component or ship’s system.
2. Action specified in a Technical Work Document.
3. Any action that removes or affects the ship’s ability to operate ship’s systems or components following ship’s systems manuals, operating manuals or reactor plant manuals, excluding tagout following the guidance of the Tagout User’s Manual, including but

not limited to:

- (a) Component or system tests.
- (b) Intrusive inspections (such as breaking the plane of electrical panels requiring electrical safety).
- (c) Valve line-ups that alter the normal system line up not governed by operating procedures.
- (d) Removing valve hand wheels, disconnecting of reach rods.

LISTING OF APPENDICES.

- A Message Scenario and Sample Messages or Letters for Habitability Inspections and In-Service
- B Message Scenario and Sample Messages for Fast Cruise and Alpha Sea Trial (Nuclear Powered Ships)
- C Message Scenario and Sample Messages for Bravo, Charlie and Combined Trials (Submarines)
- D Message Scenario and Sample Messages for URO Certification (Submarines)
- E Pre-RSE, RSE, Criticality or Power Range Testing Logic Table (All Nuclear Powered Ships)
- F Sample TYCOM Message Concerning Sea Trial Agenda (Submarines)
- G Sample TYCOM Message to PCU Concerning Use of the FBW SCS In Support of Alpha Sea Trials (Submarines)
- H Sample TYCOM Message to PCU Concerning FBW SCS Material Condition Initial Certification (Submarines)
- I Sample TYCOM Message to the Ship Concerning FBW SCS Certification (Submarines)
- J Sample Supervising Authority Message to NAVSEA Concerning PCU FBW SCS Material Condition Readiness for Fast Cruise and Alpha Sea Trials (Submarines)
- K Sample Supervising Authority Message to TYCOM and NAVSEA Concerning PCU Fast Cruise Completion and Readiness of FBW SCS Material Condition for Alpha Sea Trials (Submarines)
- L Sample Supervising Authority Message to NAVSEA Concerning PCU FBW SCS Material Condition Readiness Upon Completion of Alpha Sea Trials and Readiness of the FBW SCS for Use During Bravo and Subsequent Sea Trials (Submarines)
- M Sample Supervising Authority Message to NAVSEA Concerning PCU FBW SCS Material Condition Initial Certification (Submarines)
- N Pre Man-Up Checklist for TYCOM or ISIC
- O Basic Requirements for Initial Man-up Personnel of the PCU (Detachment Concept) (Aircraft Carriers and Surface Force Ships)
- P Basic Requirements for Initial Man-up Personnel of the PCU
- Q Generic Base Line of Fleet Introduction Team (FIT) Functions and Responsibilities

- R Sample NAVSEA Message to TYCOM Concerning PCU FBW SCS Material Condition Readiness for Alpha Sea Trials (Submarines)
- S Sample NAVSEA Message to TYCOM Concerning PCU FBW SCS Material Condition Initial Certification (Submarines)
- T Sample NAVSEA Message to TYCOM Concerning PCU Recommendation for Fly-By-Wire Ship Control System Certification

2.1 NAVY SHIPBUILDING PROGRAM MANAGERS. The various Naval Sea Systems Command (NAVSEA), Program Executive Office for Carriers, Littoral Warfare and Auxiliary codes designated as Navy Shipbuilding Program Managers provide the specifications for the building and testing of all ships. These codes are initially established to get the shipbuilding program and development of logistic support programs up and running.

2.1.1 Pre-Commissioning. Navy Shipbuilding Program Manager responsibilities during the Pre-Commissioning phase of New Construction are delineated in references (a) and (b). The following is a summation of those responsibilities and is intended to be used as a guide, not to be considered all-inclusive. Questions concerning a Navy Shipbuilding Program Manager's specific functions should be directed to the applicable NAVSEA code.

- a. Provide supervision and direction concerning all non-nuclear aspects of ship construction.
- b. Provide written instructions to the Supervising Authority regarding the conduct and scheduling of all non-nuclear ship testing.
- c. Generate the correspondence (message or letter traffic) as indicated in Appendix A of this chapter recommending the Habitability Inspection and In-Service dates.
- d. The assignment of deficiency responsibility and ensuring the correction of those deficiencies identified during Combined Trials (CT), Acceptance Trials (AT), Final Contract Trials (FCT) and Guarantee Material Inspections (GMI).
- e. Report to the Type Commander (TYCOM), with information copies to Chief of Naval Operations (CNO) and Fleet Commander, that the material condition of the ship is certified satisfactory for Alpha Sea Trials and recommend authorization to dive the ship be granted under deliberate and controlled conditions to a specified depth for accomplishment of the approved Sea Trials agenda. Appendix B of this chapter provides a sample message flowchart for surface force ships and aircraft carriers. Appendix B-SUBS of this chapter provides a sample message flowchart for submarines.
- f. (Submarines only) Report to the TYCOM that the material condition of the ship is certified satisfactory for Bravo, Charlie, and CTs. Appendix C of this chapter provides a sample message.
- g. (Submarines only) After completion of all Sea Trials, report to the TYCOM that the material condition of the ship is certified for Unrestricted Operations (URO). Appendix D of this chapter provides a sample message.

2.1.2 Post-Shakedown Availability (Submarines only). Navy Shipbuilding Program Manager responsibilities during Post Shakedown Availability (PSA) are defined in Volume II, Part I, Chapter 3 of this manual.

2.2 NAVAL SEA SYSTEMS COMMAND NUCLEAR PROPULSION DIRECTORATE (NUCLEAR POWERED SHIPS ONLY).

2.2.1 Pre-Commissioning. NAVSEA Nuclear Propulsion Directorate (08) responsibilities for the Pre-Commissioning period are as follows:

- a. Provide specifications for the building and testing of the nuclear propulsion plant.
- b. Provide supervision and direction of nuclear propulsion plant testing and trials.
- c. Approve the sequencing and scheduling of nuclear propulsion plant tests and trials.
- d. Arrange for technical assistance from the U.S. Department of Energy, including the Pre-Critical Examination by the Director, Division of Naval Reactors.
- e. Provide written instructions to the Supervising Authority regarding the conduct and scheduling of all dockside tests and underway trials involving operation of the nuclear propulsion plant.
- f. Authorize critical operation of the reactor.
- g. Authorize commencement of Fast Cruise after receiving notification from the Supervising Authority that the ship has demonstrated a satisfactory state of training.

2.2.2 Reactor Safeguard Examination. A Pre-critical Reactor Safeguard Examination (RSE) will be conducted by NAVSEA 08 prior to initial reactor criticality. NAVSEA 08 will approve operation of the Nuclear Propulsion Plant during dockside testing and underway trials. Volume I, Chapter 3, Appendix C of this manual provides information on Pre-RSE preparations.

2.2.3 Criticality and Power Range Testing. Upon receiving the request for initial criticality from the Supervising Authority, NAVSEA 08 will authorize critical operation of the reactor, with subsequent power range testing. Appendix E of this chapter provides a listing of the events leading up to the authorization for critical operation of Naval Nuclear Propulsion plants, with sample request messages or letters.

2.2.4 Post-Shakedown Availability. NAVSEA 08 responsibilities for the PSA period are as follows:

- a. Provide approved test procedures for the verification of reactor plant repairs and alterations accomplished in the availability.
- b. Arrange for technical assistance by the U.S. Department of Energy as required.

2.3 TYPE COMMANDER. Reference (a) states the TYCOM is responsible for monitoring the construction and acceptance process to ensure “customer” input is provided. Reference (c) describes the TYCOM’s responsibilities during new construction for Submarine Fly-By-Wire Ship Control Systems (FBW SCS). The following summarizes major TYCOM responsibilities during the Pre-Commissioning, FCT, GMI and PSA periods.

2.3.1 Pre-Commissioning. During the construction phase, major TYCOM responsibilities include but are not limited to:

- a. Designating an Immediate Superior in Command (ISIC) for all units being built within the TYCOM's geographical area of responsibility.
- b. Ensuring that the Pre-Commissioning Unit (PCU) is placed on distribution for all message traffic applicable to the platform and platform's operational environment.
- c. Reviewing all incoming correspondence for PCU applicability and forwarding platform related documentation as required.
- d. Conducting the Habitability Inspection when requested by the Accepting Authority (may be delegated to the ISIC). Sample messages relating to Habitability and In-Service are contained in Appendix A of this chapter.
- e. Recommending to the CNO that the ship be placed "In-Service Active" upon receiving satisfactory results of the Habitability Inspection. Appendix A of this chapter provides sample messages.
- f. (Nuclear Powered Ships only) Conducting or assisting the ISIC with the Pre-RSE.
- g. (Surface Force Ships only) Establishing Light-Off Assessment (LOA) dates via liaison with the ISIC, the Ship and the Afloat Training Group (ATG).
- h. Conducting or directing the conduct of the arrival assist and periodic monitoring inspections as defined in Volume I, Chapter 3, paragraph 3.3.1 and 3.3.2 of this manual.
- i. (Nuclear Powered Ships only) Conducting an inspection to certify crew training per the requirements of reference (b).
- j. (Nuclear Powered Ships only) Exercising operational control during underway trials either directly or through the designated ISIC.
- k. (Submarines only) Reviewing the schedule and sequence of Sea Trial Agendas and concurring by message to the Supervising Authority concerning the operational aspects of the specific trial. Appendix F of this chapter provides a sample message.
- l. (Submarines only) Providing escorts as may be required. Send Sea Trial support services message to specify Submarine Rescue Diving Recompression System "modified alert" requirements. Appendix CA of Volume II, Chapter 3 of this manual provides a sample message.
- m. (Submarines only) Assigning an unrestricted Line Officer (a former Commanding Officer (CO) senior to the Officer In Charge (OIC)) as the TYCOM Embarked Representative who has authority to act for the TYCOM, making on-the-spot changes to approved Sea Trial Agendas.
- n. (Submarines only) If desired, assigning an officer to act as the TYCOM material representative on selected trials. The material representative's duties include:

- (1) Serving as a technical advisor to the TYCOM Embarked Representative on matters pertaining to Sea Trial Agenda modifications, compliance with this instruction and disposition of emergent material problems.
- (2) Acting for the TYCOM in making on-the-spot changes to approved Sea Trial Agendas in the absence of the TYCOM Embarked Representative.
- o. (Submarines only) Reporting to the CNO and the Navy Shipbuilding Program Manager that the crew is ready for underway trials, prior to Fast Cruise and upon receipt of the ISIC message certifying the operational readiness of the submarine crew. Appendix B of this chapter reflects the message scenario and contains sample messages for Fast Cruise or Alpha Trials.
- p. (Submarines only) Promulgating of the Alpha Sea Trial Depth Authorization upon receipt of the Supervising Authority message reporting completion of Fast Cruise and the Navy Shipbuilding Program Manager message promulgating the authorized depth for the Alpha Trial. Appendix B of this chapter provides sample messages.

NOTE: SUBSEQUENT TO THE NAVY SHIPBUILDING PROGRAM MANAGER AND SUPERVISING AUTHORITY MESSAGES PROMULGATING DEPTH AUTHORIZATION AND REPORTING THE SHIP'S MATERIAL READINESS TO COMMENCE FAST CRUISE AND SEA TRIALS, ANY DEFICIENCY DISCOVERED AND CORRECTIVE ACTION TAKEN WHICH AFFECTS THE WATERTIGHT INTEGRITY, THE RECOVERABILITY OF THE SHIP, THE OPERATIONS OF THE SHIP'S CONTROL SURFACES OR THE SHIP'S SALVAGE CAPABILITY MUST BE REPORTED TO THE NAVY SHIPBUILDING PROGRAM MANAGER, THE TYCOM AND FLEET COMMANDER BY THE SUPERVISING AUTHORITY, ISIC OR TYCOM REPRESENTATIVE AND PCU BY MESSAGE. PREVIOUS CERTIFICATION MESSAGES MUST BE SUSPENDED. WHEN THE NAVY SHIPBUILDING PROGRAM MANAGER'S REVIEW OF THE MESSAGE IS COMPLETED, THE NAVY SHIPBUILDING PROGRAM MANAGER WILL CERTIFY TO THE TYCOM THAT THE MATERIAL CONDITION OF THE SHIP IS SATISFACTORY FOR SEA TRIALS TO A SPECIFIED DEPTH.

- q. (Submarines only) Promulgating by message the Bravo, Charlie and Combined Trials Depth Authorization after receipt of the Supervising Authority message confirming readiness for the test depth dive and the Navy Shipbuilding Program Manager message promulgating Sea Trial Depth Authorization. Appendix C of this chapter provides sample messages.
- r. (Submarines only) Promulgating by message to the PCU the final URO Material Certification upon receipt of the Supervising Authority message concerning material condition for URO and the Navy Shipbuilding Program Manager message recommending URO. Appendix D of this chapter provides sample messages.
- s. (Applicable Submarines only) Prior to Alpha Sea Trials and following NAVSEA certification that the submarine FBW SCS is satisfactory for sea trials and Supervising Authority report that the FBW SCS is satisfactory for commencement of Alpha Sea Trials, report by message to ship authorizing conduct of sea trials per the approved Sea

Trial Agenda and specifically identify any operating restrictions of the ship or system. Repeat the routine for each subsequent sea trial. Appendix G of this chapter provides a sample message.

- t. (Applicable Submarines only) After all builder's sea trials, and following NAVSEA certification that the submarine FBW SCS is satisfactory for unrestricted use, report by message to ship authorizing FBW SCS unrestricted use in support of submarine unrestricted operations or specifically identify any operating restrictions of the ship or system. Appendix H of this chapter provides a sample message.

2.3.2 Combined Trials, Acceptance Trials, Final Contract Trials or Guarantee Material Inspection. The TYCOM's responsibilities for these trials are documented in references (a), (d), and (e). The most significant action from the ship's perspective is the TYCOM's presenting of the ship for GMI or FCT.

2.3.3 Post-Shakedown Availability. The TYCOM's responsibilities as related to PSA are as follows:

- a. (Surface Force Ships only) Assist with LOA as shown in Volume I, Chapter 6, Appendix C.
- b. (Nuclear Powered Ships only) Conduct or assist the ISIC in conducting the Pre-Critical Inspection (only required when reactor has been shut down greater than 16 weeks). Schedule the Fleet Commander Post-Overhaul RSE as recommended by the Industrial Activity in the Key Events Schedule and confirmed by the parent ISIC or TYCOM representative (required if the availability is scheduled for more than six months) upon completion of the ISIC's Pre-Critical Inspection.
- c. (Submarines only) TYCOM responsibilities are defined in Volume II, Part I, Chapter 3 of this manual.
- d. (Applicable Submarines only) For the first ship of a class or when directed by NAVSEA, ship control trials are planned and conducted under the direction of NAVSEA 05 to support verification that the FBW SCS automatic control algorithms performance is per Section 4 of reference (c). Upon successful completion of these trials, the Navy Shipbuilding Program Manager issues to TYCOM, the ship's final FBW SCS certification message with NAVSEA 07 concurrence and in support of the submarine class FBW SCS design. TYCOM issues to the ship a final FBW SCS certification message. When required, by message or letter, the NAVSEA Navy Shipbuilding Program Manager via separate correspondence must identify impact to the FBW SCS Certification of other ships in the submarine class. Appendix I of this chapter provides a sample message

2.4 SUPERVISING AUTHORITY. References (a), (b), (c) and (f) describe the Supervising Authority's responsibilities during new construction. The following is a synopsis of those functions with additional amplification. Platform unique functions are identified by indicating the applicable class (if any) or group covered (i.e., Nuclear Powered Ships).

2.4.1 Pre-Commissioning. The Supervising Authority's responsibilities as related to Pre-Commissioning are as follows:

- a. Provide crew support as directed by the Navy Shipbuilding Program Manager. This support may include facility support requirements such as berthing, administration, officer and crew training spaces, vehicles for transportation, computers for development of training programs and ship's directives.
- b. Ensure PCU office spaces have been certified to the appropriate classification for storage of classified documentation.
- c. Provide the required safety training and gear to the crew for working in an industrial area.
- d. Provide initial briefing to Prospective Commanding Officer (PCO) or crew to provide an overview of the Supervisor's role during construction.
- e. Provide to the PCO or crew the planning documents necessary for establishing goals during New Construction, such as a Master Construction Schedule, an Operational Control Transfer (OCT) schedule, testing schedules, and all other schedules that would require crew support and coordination.
- f. Act as liaison for the ship in resolving conflicts in construction schedules.
- g. Ensure that at least ten copies of reference (g) are available to support Phase 1 and Phase 2 of the Planned Maintenance System (PMS) installation.
- h. Provide the PCU with at least one set of all the technical manuals required to support the equipment installed on the particular platform.
- i. Provide the PCU with, or access to a complete set of ship's drawings and contract specifications.
- j. Monitor the ship's familiarization training conducted by the Industrial Activity or Fleet Introduction Team (FIT) for fulfillment of the contract. For familiarization training conducted using computer-aided instruction, the Supervising Authority is responsible only for ensuring sufficient resources are available to the PCU to utilize the training. Provide feedback to the Navy Shipbuilding Program Manager and the Industrial Activity concerning content and value of this training.
- k. Recommend to the Navy Shipbuilding Program Manager the commencement date for the Habitability Inspection. Appendix A of this chapter provides sample documentation.
- l. Recommend to the Navy Shipbuilding Program Manager the date for placing the ship "In-Service". In-Service for submarines should occur approximately two to four weeks prior to underway trials and for aircraft carriers two to four months prior to underway trials. Appendix A of this chapter provides sample documentation.
- m. Recommend to the Accepting Authority the date for placing the ship "In Commission". The "In Commission" date is normally on or about the date of delivery.
- n. Request necessary services for each trial from the Fleet Commander per reference (a), with an informational copy to the TYCOM.

- o. (Nuclear Powered Ships only) Accept custody of special nuclear material upon delivery from the U.S. Department of Energy.
- p. (Nuclear Powered Ships only) Transfer custody of, and responsibility for, special nuclear material to the OIC when the ship is placed "In-Service".
- q. (Nuclear Powered Ships only) Coordinate the schedule for dockside and underway tests and trials per the requirements of the Navy Shipbuilding Program Manager and the Builder.
- r. (Nuclear Powered Ships only) Provide sufficient time for crew training and Fast Cruise during the building period to permit Ship's Force to attain a state of training adequate to ensure proper operation and safety of the ship and its personnel during Sea Trials. Provide sufficient time for the correction of deficiencies after the completion of the final Dock Trials and before the start of the operational training period.
- s. (Nuclear Powered Ships only) Submit for approval the schedule and sequence of any dockside tests or Sea Trials involving operation of the nuclear propulsion plant to NAVSEA 08, except where such tests and trials have been approved in the written instructions provided by NAVSEA 08.
- t. (Submarines only) Coordinate with ISIC for support personnel to perform salvage inspection.
- u. (Nuclear Powered Ships only) Submit the schedule and sequence of all Sea Trials to the ISIC for approval and to the TYCOM for concurrence with the operational aspects of the trial.
- v. (Nuclear Powered Ships only) Report to the Navy Shipbuilding Program Manager when the ship is ready for Fast Cruise and Alpha Sea Trial (Builder's Trials for aircraft carriers). Appendix B of this chapter provides a sample message.
- w. (Nuclear Powered Ships only) Report the successful completion of Fast Cruise and readiness for Alpha Sea Trial (Builder's Trials for aircraft carriers), with the concurrence of the OIC, to the TYCOM, with an information copy to the Navy Shipbuilding Program Manager, the Fleet Commander and the ISIC. Appendix B of this chapter provides a sample message for submarines.
- x. (Nuclear Powered Ships only) Report to the Navy Shipbuilding Program Manager the satisfactory completion of Alpha Sea Trials (Builder's Trials for aircraft carriers). For submarines, the material status of the ship is certified to support operations to test depth. Appendix C of this chapter provides a sample message.
- y. (Submarines only) Certify to the Navy Shipbuilding Program Manager the completion of all Sea Trials, reporting the status of all Sea Trial deficiencies and all CAT 1A Audit Items. Certify the material condition of the ship is satisfactory for URO to test depth. Appendix D of this chapter provides a sample message.
- z. Retain responsibility for the material condition of the ship until it reports for duty in the fleet.

- aa. Maintain “Lessons Learned Logs” from the CO of previously built ship for delivery to the next PCO or OIC.
- ab. (Applicable Submarines only) Report by message to NAVSEA Navy Shipbuilding Program Manager, in advance of the scheduled start of Fast Cruise, that all FBW SCS work necessary for Alpha Sea Trials, including resolution of NAVSEA FBW SCS Certification Audit Category I recommendations, has been completed, provide the status of all incomplete NAVSEA FBW SCS Certification Audit Category IA recommendations, and that the FBW SCS is ready for commencement of Fast Cruise. The message must also state that there are no conditional FBW SCS Deviations or Waivers which have not been satisfied or cite those that exist, identify any operating restrictions of the ship or system, and that, subject to satisfactory completion of Fast Cruise and resolution of mandatory FBW SCS deficiencies, the submarine FBW SCS is satisfactory for commencement of sea trials. Make a similar report prior to each subsequent sea trial. Appendix J of this chapter provides a sample message.
- ac. (Applicable Submarines only) Report by message to the NAVSEA Navy Shipbuilding Program Manager and TYCOM, with the concurrence of the ship’s Commanding Officer, successful completion of Fast Cruise as a prerequisite for the start of sea trials. Appendix K of this chapter provides a sample message.
- ad. (Applicable Submarines only) Report by message to the NAVSEA Navy Shipbuilding Program Manager the satisfactory completion of Alpha Sea Trials and report the status of all incomplete NAVSEA FBW SCS Certification Audit Category IA recommendations. Appendix L of this chapter provides a sample message.
- ae. (Applicable Submarines only) Report by message to the NAVSEA Navy Shipbuilding Program Manager the satisfactory completion of all shipbuilder’s sea trials, correction of all mandatory sea trial deficiencies, and resolution of all NAVSEA FBW SCS Certification Audit Category IA recommendations. Report that the submarine FBW SCS is satisfactory for unrestricted use in support of submarine unrestricted operations. Identify all deferred FBW SCS work and conditionally approved deviations and waivers to date which have not had the condition satisfied and specifically identify any operating restrictions of the ship or system. Appendix M of this chapter provides a sample message.
- af. Prior to Ship’s Force assuming operational control, ensure that assigned New Construction units operate and maintain installed diesel engines per established procedures. Specifically, the Supervisor must:
 - (1) Schedule a routine diesel inspection prior to initial start-up by Ship’s Force.
 - (2) Observe diesel engine operations during shipboard visits per Volume IV, Chapter 4 of this manual.
 - (3) Ensure that the Automated Diesel Engine Trend Analysis Program addressed by reference (g) and TYCOM directive is in place.
- ag. Prior to Ship’s Force assuming operational control, ensure that assigned New Construction units operate and maintain an installed gas turbine per established

procedures. The Supervisor must schedule a gas turbine inspection prior to start up by Ship's Force.

2.4.2 Acceptance Trials or Combined Trials. The Supervising Authority is responsible for presenting the ship for AT or CTs. References (d), (e), and (f) delineate the Supervising Authority's responsibilities concerning these trials. Several of the more significant issues are:

- a. Submit for approval the schedule and sequence of AT or CT to the President, Board of Inspection and Survey (INSURV).
- b. Request necessary services for each trial from the Fleet Commander per reference (a), with an informational copy to the TYCOM.
- c. Provide riders to assist and provide system or historical expertise.

2.4.3 Post-Shakedown Availability. During PSA, the Supervising Authority is responsible for the following:

- a. Determining, in conjunction with the CO, the type and extent of post-repair dockside and at-sea tests or trials, in addition to those described in Volume I, Chapter 6, section 6.4 of this manual. Submit the following for approval:
 - (1) The schedule and sequence of post-repair nuclear propulsion plant trials to NAVSEA for concurrence and the ISIC or TYCOM Representative for approval.
 - (2) The schedule and sequence of post-repair trials subsequent to the nuclear propulsion plant trials to the ISIC for approval. Include the TYCOM as a "Copy To" addressee.
- b. Providing sufficient time for crew training to support Fast Cruise and to ensure the proper operation and safety of the ship.
- c. Coordinating the schedule for Fast Cruise and post repair trials with the ISIC or TYCOM representative. Submit the Sea Trials Agenda to the Navy Shipbuilding Program Manager for approval.
- d. (Submarines only) Additional Supervising Authority responsibilities are defined in Volume II, Part I, Chapter 3 of this manual.
- e. Reporting to the TYCOM the completion of Fast Cruise and the correction of all mandatory deficiencies. Recommend commencement of Sea Trials with the CO's concurrence per Volume II, Part I Chapter 3 of this manual.
- f. Reporting to the Navy Shipbuilding Program Manager or the TYCOM (PSA less than six months) that Sea Trials have been completed, and for submarines, that the material condition of those parts of the ship installed, prepared or tested by the Industrial Activity is satisfactory for URO to design test depth, concurrence per Volume II, Part I Chapter 3 of this manual.

2.4.4 Deficiencies. The Supervising Authority's primary functions involve the building of ships and the correction or resolution of deficiencies discovered during the building and trials portion of construction. Reference (f) and locally generated Supervising Authority Instructions provide specific and detailed information pertaining to deficiencies, their identification, tracking and

resolution. Contact the Supervising Authority for more information. Volume I, Chapter 5 of this manual also provides additional guidance.

2.5 IMMEDIATE SUPERIOR IN COMMAND. The ISIC is the TYCOM's delegate.

2.5.1 Pre-Commissioning. During the Pre-Commissioning period, the ISIC is responsible for the following:

- a. Providing crew support prior to initial man-up. Personnel arriving prior to initial manning will be tasked with coordinating with the Supervising Authority to start the necessary preparations for initial man-up. Appendix N of this chapter provides a checklist of areas that need to be addressed several months before personnel start arriving.
- b. Conducting an inspection approximately two months following the arrival of the first increment of the crew at the building yard, using Volume I, Chapter 3, paragraph 3.3.1 of this manual as a guide.
- c. Conducting periodic monitoring of ships per Volume I, Chapter 3, paragraph 3.3.2 of this manual to include:
 - (1) Technical, administrative or training assistance visits (Tech Assists) directed toward improvements in the management and conduct of maintenance and training tasks.
 - (2) Evaluation visits (Work-ups) to determine the state of administration and training.
 - (3) Spot checks (Monitor Visits) to monitor the progress and effectiveness in specific material, training and administrative areas.
- d. Coordinating with the Bureau of Personnel (BUPERS) to ensure personnel arrive in support of initial crew man-up.
- e. Conducting a Habitability Inspection when directed by the TYCOM. Volume I, Chapter 3, Appendix D of this manual provides information concerning the Habitability Inspection and a sample Compartment Surveillance Guide. Volume I, Chapter 3, Appendix E of this manual provides a sample checklist.
- f. Making recommendations to the TYCOM for placing the ship "In-Service". Appendix A of this chapter provides a sample message.
- g. Contact TYCOM Metrology and Calibration Point of Contact to verify if Establishment of Field Calibration Activity Request has been submitted per references (h) and (i).
- h. When Ship's Force has assumed operational control, ensuring that assigned New Construction units operate and maintain installed diesel engines per established procedures. Specifically, the ISICs will conduct follow-up action to ensure that any unsatisfactory conditions found are corrected at an early date.
- i. (Nuclear Powered Ships only) Conducting a Pre-RSE of the Engineering or Reactor Department to determine the ship's readiness for the Naval Reactors Pre-Critical RSE.

The TYCOM will assist in this examination. Volume I, Chapter 3, Appendix C of this manual provides administrative guidelines for the conduct of the Pre-RSE.

- j. (Nuclear Powered Ships only) Reviewing Pre-RSE findings, the CO's training plan, and progress evaluations, and direct follow-up reviews or inspections necessary to verify the ship's readiness for the RSE.
- k. (Submarines only) Prior to Fast Cruise, reporting ship's preparations to assume responsibility for Re-entry Control in the Crew or Material Certification message. Appendix B of this chapter provides a sample message.
- l. (Submarines only) Scheduling salvage inspections per Volume IV, Chapter 18 of this manual.
- m. (Submarines only) Designating the salvage inspection team using the guidance provided in Volume IV, Chapter 18 of this manual.
- n. For CVNs, conduct crew certification per reference (j).
- o. For all other hulls, conduct formal Phase I crew certification inspection(s) of the Ship's Force following the TYCOM Training Manual (when required). The purpose of this inspection must be to audit the readiness and training of the Ship's Force, particularly in the areas of watch stander qualifications, damage control readiness, status of operational and emergency bills, presence on board of essential technical manuals and general operational knowledge. This inspection must be scheduled about one month prior to Fast Cruise and should include written examinations and personal interviews with officers and key enlisted personnel to determine their readiness and status of training as outlined for Phase I. A comparison of personnel allowance (including Navy Enlisted Classification requirements) versus onboard count must be made to ensure that the ship is adequately manned.
- p. Conduct Phase II crew certification. Witness and certify to the TYCOM that the state of crew training is satisfactory for at-sea operations following the TYCOM Training Manual. This will be done during a two-day period, subsequent to Dock Trials and Phase II crew certification, and prior to Fast Cruise. This two-day period must be scheduled so that there is normally a 48-hour period between the end of this event and the beginning of Fast Cruise. This two-day Phase II crew certification period is divided into a 40-hour crew work-up and rest period and an eight-hour modified dockside Operational Readiness Inspection. The entire period should be scheduled to minimize interference with industrial activity work. However, since the certification must be conducted carefully to be meaningful, the officer scheduling the certification should coordinate industrial activity interference during the eight hour modified Operational Readiness Inspection. This certification should be thorough and meticulous. Pressure from the industrial activity or any other source to compromise ship safety must not be permitted to influence the judgment of the certifying officers. The desired overall sequence of these events is shown in Appendix B of this chapter.
- q. Conduct a material inspection of the ship.
- r. Satisfactory completion of the inspections of paragraphs 2.5.1.n. through 2.5.1.p. of this chapter should be reported to the TYCOM in one "PRIORITY" crew certification

message following the sample message format of Appendix B of this chapter paralleled by a telephone call to the TYCOM Watch Officer reporting the date-time group of the message. If significant deficiencies exist or it appears that an extension of time is required to correct training or material deficiencies, the TYCOM must be immediately advised by telephone and by message. The Supervising Authority will be included as an information addressee.

- s. A summary of typical New Construction major milestones and message reporting requirements as they apply to the ISIC is listed in Volume I, Chapter 1, Appendix A of this manual.

2.5.2 Post-Shakedown Availability. During PSA, the ISIC is responsible for the following:

- a. Conducting periodic monitoring similar to that described in paragraph 2.5.1.c of this chapter, placing the emphasis on the management and conduct of PSA.
- b. (Nuclear Powered Ships only) Conducting a Pre-Critical Inspection of the Engineering or Reactor Department per Volume I, Chapter 6, paragraph 6.3 of this manual. Review inspection findings, the CO's training plan and progress evaluations, and direct follow-up reviews or inspections as necessary to verify ship's readiness for criticality.
- c. Witnessing and certifying to the TYCOM that the state of crew training is satisfactory for at-sea operations per the Force Training Manual.
- d. (Aircraft Carriers only) Receiving from the CO or Supervising Authority the scope, schedule and agenda of the tests for Sea Trials for review and approval. When approved, forward copies of the agenda to the TYCOM.
- e. Arranging for the embarkation of technical personnel who may be assigned by the Navy Shipbuilding Program Manager to observe tests or trials.
- f. Arranging for the assignment of operating areas and communications frequencies.
- g. (Submarines only) Scheduling a salvage inspection in time to have discrepancies corrected prior to Fast Cruise.
- h. (Submarines only) Prior to Fast Cruise, auditing Ship's Force Re-entry Control and Departure from Specification Records. Using the Submarine Maintenance Engineering, Planning and Procurement (SUBMEPP) Activity URO Maintenance Requirement Card (MRC) scheduling reports and current Industrial Activity and Ship's Force updates to the latest report, ensure URO MRC accomplishment is current.
- i. (Submarines only) Conducting a material inspection consisting of a vertical audit of Ship's Force and Fleet Maintenance Activity Submarine Safety (SUBSAFE), Deep Submergence Systems Scope of Certification and FBW work and URO completion status per Volume V, Part I, Chapter 9 of this manual.
- j. (Submarines only) Additional ISIC responsibilities are defined in Volume II, Part I, Chapter 3 of this manual.

- k. If deficiencies exist or it appears that extension of time is required to correct training or material deficiencies, the TYCOM must be immediately advised by telephone and message. The Supervising Authority will be included as an information addressee. The TYCOM retains the prerogative to authorize corrective action by the Industrial Activity in the case of material deficiencies.

- l. When authorized by the TYCOM, direct the ship to get underway for Sea Trials.

2.6 BUILDING YARD. The Building yard is an industrial activity responsible for construction of the ship, correction of shipbuilder responsible deficiencies and additional logistic support products as delineated in the contract. The following is a sample listing of the shipbuilder's products and responsibilities.

- a. Technical Manuals for Contractor Furnished Equipment (CFE).
- b. Ship Information Book (SIB) or Ship Systems Manual (SSM).
- c. PMS for new systems when tasked by Navy Shipbuilding Program Managers or cognizant NAVSEA code.
- d. Selected Familiarization Training.
- e. Ship Drawings.
- f. Advising the Accepting Authority and the TYCOM of the date of initial criticality.
- g. Builder's Trials (non-nuclear) to include:
 - (1) Taking the ship to sea.
 - (2) The testing of all equipment and systems with the exception of weapons.

2.7 DESIGN YARD or PLANNING YARD. The Design Yard or Planning Yard, which may also be the Building Yard, is an industrial activity responsible for maintaining the Ship's Drawing Index current with configuration. The Planning Yard is responsible for updating ship's drawings to reflect PSA changes.

2.8 COMMANDING OFFICER, PROSPECTIVE COMMANDING OFFICER, or OFFICER IN CHARGE.

2.8.1 General.

- a. The responsibilities of a PCO for a new construction ship are set forth in U.S. Navy Regulations. In the case of a nuclear powered ship under construction, the PCO has additional responsibilities associated with the operation of the nuclear propulsion plant as specified in references (a) and (b). In order to provide him with authority commensurate with this responsibility the PCO will be designated in his orders as CO of the PCU, a separate and detached command, with responsibilities as specified in references (a) and (b) and U.S. Navy Regulations.
- b. Following completion of the required training and material readiness certification, the CO, PCO or OIC must keep the ISIC fully informed of any changes in personnel, training or material status which could affect the validity of certification. Prompt notification is required to permit revision of Operational Orders and services required.

2.8.2 Pre-Commissioning. Specific responsibilities of the PCO during the primary construction phase are as follows:

- a. The preparation and execution of training plans, operational and emergency bills, procedures and organization manuals in support of his responsibilities.
- b. The demonstration of his crew's operational and administrative readiness per the inspections required by Volume I, Chapter 3, paragraph 3.3.4 of this manual.
- c. Verifying that all required Navy Enlisted Classification Codes or other skill requirements are met by BUPERS or by the ship's training programs.
- d. The presentation of the crew for the platform applicable inspections described within this volume.
- e. The designation of a Miniature or Microminiature (2M) Repair or Module Test and Repair Manager.
- f. The designation in writing of a Calibration Coordinator.
- g. Ensuring that at least two NAVSEA or Naval Air Systems Command certified Field Calibration Activity or Aircraft Intermediate Maintenance Department technicians, as required, are available to support certification.
- h. Verifying that all pertinent alongside tests, inspections and trials are completed.
- i. The establishment of "Lessons Learned Files". These files are to be turned over to the incoming PCO of the next ship of the class to be built. DDG 51 Class Destroyers should pass their files to the PMS 400 tasked contractor. MHC Class ships can provide this data to the FIT while all others should pass Lessons Learned to the Supervising Authority if the next PCO has not yet arrived.
- j. The establishment of PMS per reference (g) and Volume I, Chapter 3, paragraph 3.4.1 of this manual.
- k. Concurring with the Navy Shipbuilding Program Manager's request to the TYCOM for the conduct of a Habitability Inspection.
- l. The designation of system or space experts to assist the ISIC with the Habitability Inspection.
- m. The establishment of early liaison with the ATG team OIC to define training needs and the agenda for assist visits in preparation for LOA and Initial Light-Off.
- n. (Nuclear Powered Ships only) The development and execution of training plans and documents in support of his responsibilities for inspection and operation of the nuclear propulsion plant. These plans and documents must be in conformance with the instructions and procedures approved by NAVSEA.
- o. (Nuclear Powered Ships only) The preparation of ship's engineering or reactor personnel for examination by the Nuclear Propulsion Directorate (NAVSEA 08).
- p. (Nuclear Powered Ships only) Review the findings of the ISIC's Pre-RSE Inspection Team and make necessary adjustments to the ship's training program to ensure the

crew's readiness for the RSE. Keep the ISIC advised of the ship's training plan and provide an assessment of the crew's progress.

- q. (Nuclear Powered Ships only) Maintain the Reactor Plant per reference (k). Ensure records are ready for the ISIC's audit prior to Fast Cruise.
- r. (Nuclear Powered Ships only) Review test and trial schedules and agendas and signify concurrence to the TYCOM and the designated ISIC. Copies of detailed schedules and agendas for underway trials will be forwarded to the designated ISIC, the escort ship (Submarines) and the TYCOM Embarked Representative.
- s. (Nuclear Powered Ships only) Assume duty as the OIC and accept custody and responsibility for special nuclear material, after the ship is placed "In-Service". Report to the Fleet Commander
In-Service status. Appendix A of this chapter provides a sample message.
- t. (Nuclear Powered Ships only) The preparation of Ship's Force Dock Trial Agenda.
- u. (Nuclear Powered Ships only) Per the specifications and information in this volume, the conduct of dockside and underway trials. Critical operation of the reactor will be conducted per reference (l).
- v. (Aircraft Carriers only) Prior to Fast Cruise, report to the TYCOM the successful completion of Crew Certification and recommend commencement of Fast Cruise and Builder's Trials via message. Appendix B of this chapter provides a sample message.
- w. (Nuclear Powered Ships only) When authorized by the Navy Shipbuilding Program Manager, conduct Fast Cruise per Volume I, Chapter 4, section 4.3 of this manual.
- x. (Nuclear Powered Ships only) During Sea Trials, assume the duties of Officer in Tactical Command unless otherwise designated by the ISIC. For submarines, ISICs must comply with direction found in Annex C of reference (m).
- y. (Nuclear Powered Ships only) Provision for adequate crew rest time during Sea Trials. Six uninterrupted hours in each twenty-four-hour period is a minimum for each crew member.
- z. (Nuclear Powered Ships only) In the absence of a TYCOM and ISIC representative, act for the TYCOM in approving on-the-spot changes to approved Sea Trial Agendas.
- aa. (Nuclear Powered Ships only) When all platform applicable requirements of this instruction are completed to the OIC's satisfaction and when permission has been received from the ISIC, proceed to sea following the operations order and carry out the approved Sea Trial Agenda.
- ab. (Submarines only) If possible, participate in two at sea periods prior to initial Sea Trials as follows:
 - (1) Accompany the preceding ship of the class on the first Sea Trial to learn how the propulsion trial is run (except first ship of class).
 - (2) Participate in an underway period of at least five days duration approximately six months prior to the final phase of Crew Certification. The purpose of this ride is to re-familiarize the PCO with those functions unique to being

underway so as to ensure the safe conduct of his own initial Sea Trials and shakedown. This underway period also allows him to validate his crew's training program. This underway period should be on a ship, preferably of the same class, which is concentrating on basic ship or submarine operations, such as Selected Refresher Training or Independent Ship Exercise (ISE), so he can witness such evolutions as: coming to periscope depth, snorkeling, ventilating, casualty training, etc. If the new construction schedule has 10-12 weeks between Power Range testing and the final phase of Crew Certification, the PCO should go to sea approximately two months before initial criticality. The intent is for the PCO to go to sea after having been in the Industrial Activity for a fair amount of time (normally one year or more), but with sufficient time remaining to improve his own training program if necessary. During these underway periods, the PCO should spend time on the bridge and also observe piloting and navigation.

NOTE: IF NOT POSSIBLE TO PARTICIPATE IN TWO AT-SEA PERIODS AS DESCRIBED ABOVE, THE ISIC AND TYCOM WILL COORDINATE REQUIRED TRAINING.

- ac. (Submarines only) Request that the ISIC conduct a salvage inspection following the policies set forth in Volume IV, Chapter 18 of this manual.
 - (1) Coordinate salvage inspection support requirements as may be needed by the inspecting team to fulfill the requirements of Volume IV, Chapter 18, Appendix D of this manual.
 - (2) Ensure Volume IV, Chapter 18, Appendix D of this manual is completed and furnished to the Senior Inspecting Officer prior to the commencement of the Salvage Inspection.
 - (3) Ensure all ship's data called out in Volume IV, Chapter 18, Appendix D of this manual is assembled and staged prior to the inspection for ease of reference by the inspecting team.
 - (4) Take corrective action on all discrepancies found during the Salvage Inspection. Inform the ISIC of corrective action prior to commencement of Fast Cruise.
- ad. (Submarines only) Ensure a copy of the salvage plan has been provided to the escort ship designated for Sea Trials. Coordinate communications and operational procedures with the escort ship to ensure the escort is fully informed of the submarine's condition and intentions.
- ae. (Submarines only) Concur with the Supervising Authority message that the material condition of the ship is satisfactory to commence Fast Cruise.
- af. (Submarines only) Upon successfully completing Fast Cruise and after having exercised his crew thoroughly and operated all machinery, equipment and systems to his satisfaction, concur in the Supervising Authority's message recommending commencement of Alpha Trials. Appendix B of this chapter provides an example of this message.

- ag. (Submarines only) Maintain Planned Maintenance Management Plan per reference (n). Ensure records are ready for the ISIC's audit conducted prior to Fast Cruise.

2.8.3 Trials and Inspections. PCO responsibilities are delineated in references (d) and (e).

2.8.4 Post-Shakedown Availability. Specific responsibilities of the PCO during PSA are as follows:

- a. Determine, in conjunction with the Supervising Authority, the nature and extent of PSA Sea Trials. Prepare, in conjunction with the Supervising Authority, the Sea Trial Agenda, including the sequence and duration of each test. The Supervising Authority will submit it to the Navy Shipbuilding Program Manager and the ISIC or TYCOM representative for approval as described herein. Provide copies of the approved detailed schedule and agenda for underway trials to the local ISIC and, if appropriate, the escort ship and the TYCOM Embarked Representative. This schedule and agenda must include:
 - (1) The minimum requirements shown in Volume I, Chapter 6, section 6.4 (Volume II, Part I, Chapter 3 for submarines) of this manual.
 - (2) A firm time scheduled for conducting all tests and trials showing their sequence and duration.
 - (3) General prerequisites for conducting each test. Detailed prerequisites should be itemized as part of individual test requirements.
 - (4) Responsibility for conducting each test (Industrial Activity or Ship's Force).
 - (5) Ship's Force support required for conducting each test.
 - (6) Provision for adequate crew rest time during Sea Trials. Six uninterrupted hours in each twenty-four-hour period is a minimum for each crew member.
 - (7) (Submarines only) Provision for a minimum of six hours of uninterrupted ISE for crew training following the initial tightness dive and prior to the deep dive.
 - (8) Underway tests may be run during ISE and rest periods on a not-to-interfere basis. Specifically, tests which can be conducted underway under normal operating conditions without manning special watch stations that require extra military personnel may be scheduled during rest periods. Tests which will not interfere with Ship's Force drills and training exercises may be conducted during ISE periods.
- b. Prepare Dock Trial Agenda.
- c. Conduct one-day Ship's Force Dock Trials per Volume II, Part I, Chapter 3 of this manual.
- d. Demonstrate the crew's state of training.
- e. Ensure that all pertinent alongside tests, inspections, and trials are conducted.
- f. (Nuclear Powered Ships only) Supervise operation of the nuclear propulsion plant. Conduct critical operations as set forth in reference (l).

- g. (Nuclear Powered Ships only) When authorized by the TYCOM, conduct Fast Cruise per Volume II, Part I, Chapter 3 of this manual.
- h. (Nuclear Powered Ships only) Review the findings of the Pre-Critical Inspection (if performed) and adjust the training plan to ensure the crew's readiness for criticality. Advise the ISIC of training plan adjustments and provide an assessment of the crew's progress.
- i. (Nuclear Powered Ships only) Maintain Reactor Plant Maintenance per reference (k). Ensure records are ready for an ISIC audit conducted prior to Fast Cruise.
- j. (Submarines only) Undergo a salvage inspection per Volume IV, Chapter 18 of this manual.
- k. (Submarines only) Maintain Planned Maintenance Management Plan per reference (n) and Scope of Certification, FBW Controlled Work Packages and SUBSAFE Re-entry Control per Volume V, Part I, Chapter 5 of this manual. Ensure records are ready for an ISIC audit prior to Fast Cruise.
- l. (Submarines only) Additional PCO or CO responsibilities are defined in Volume II, Part I, Chapter 3 of this manual.

2.9 PRE-COMMISSIONING UNIT. The PCO and crew will monitor the ship's construction, prepare ship's directives, regulations and administrative programs, and observe and demonstrate the operation of installed systems to ensure the ship is safe and habitable prior to commissioning. The shipyard period is an opportunity for the crew to familiarize themselves with the ship. The ship will be required to complete various certifications leading up to introduction into the fleet. This section provides some insight into the administrative requirements and personnel related issues associated with the initial man-up.

2.9.1 Initial Man-up. New construction ships are manned based on a Crew Scheduling and Phasing Plan. Dependent upon the platform type, crew manning is accomplished in two, three, four or as many as eight increments. The quantitative and qualitative requirements of these increments are based on the platform type, test and construction schedule. The objectives of the Crew Scheduling and Phasing Plan are to:

- a. Ensure adequacy of schooling for personnel assigned.
- b. Ensure appropriate course convening dates.
- c. Ensure there are no conflicts or redundancies between Navy and contractor courses.
- d. Ensure sufficient training for anticipated maintenance and operating skill requirements.
- e. Ensure the optimization of training opportunities for personnel in the pipeline enroute to the ship. A senior crew member from the first increment must be assigned with the responsibility of tracking and reviewing manning issues. For some ships, the Navy Shipbuilding Program Manager has provided support contractors to assist either partially or entirely in the management of the Crew Scheduling and Phasing Plan. Regardless of the class or type of ship, the initial increment of personnel must quickly organize. If a detachment concept is used, Appendix O of this chapter provides a

basic listing of requirements that the first increment of personnel should be pursuing. Appendix P of this chapter provides similar information for the non-detachment approach.

2.9.2 Training.

2.9.2.1 Shipboard Training. The Industrial Activity presents a unique environment with special circumstances not routinely encountered by operating forces. The incremental assignment of personnel to PCUs and the pace of new construction demands a comprehensive training strategy. A well-established training program is the key to the ship being ready for introduction into the Fleet. Consistent with the objectives of a shipboard training program, the TYCOM training manuals and references (j) and (o) through (t), a new construction training program will ensure that:

- a. (Nuclear Powered Ships only) The qualification of all Engineering and Reactor Department personnel in strict accordance with reference (u). Included is the CO's responsibility to personally conduct an RSE of each key propulsion plant watch stander.
- b. Personnel are trained in any special Quality Assurance (QA) procedures that may be used during the construction period.
- c. Personnel assigned are knowledgeable of the platform, system and equipment installations and operation of installed equipment.
- d. Watch stander qualifications support a watch section of fully or provisionally qualified personnel for all scheduled events.
- e. Training designated for assigned personnel supports the platform and equipment configuration.
- f. Intensified special training is provided to support:
 - (1) Cold Operations.
 - (2) Hot Operations.
 - (3) RSE.
 - (4) LOA.
 - (5) Criticality or Power Range Testing.
 - (6) Combat Systems Installation Certification.
 - (7) Crew Certification.
 - (8) Fast Cruise and Sea Trials.
 - (9) Piloting Party or Navigation Detail.
 - (10) Damage Control Team.
 - (11) Fire Fighting Team.
 - (12) Tactical Team.
 - (13) Special details.

- g. All billets requiring specific Navy Enlisted Classifications are filled.
- h. Established Naval Schools and Trainers are used to the maximum extent possible.
- i. Factory training on systems and equipment for which Naval Schools are not established is provided.
- j. Special training following TYCOM directives is provided for provisional certification to load, handle, stow and maintain a weapons load-out specific to the class of ship.
- k. Weapons or Combat Systems training is sufficient to enable the Weapons or Combat Systems Department to operate its systems while complying with existing safety rules, technical directives and governing operating procedures issued by the CNO, the Defense Nuclear Agency, NAVSEA, Space and Naval Warfare Systems Command, the TYCOM or other commands as applicable.
- l. Industrial Activity or contractor familiarization training courses are monitored for content and value. Provide supplemental instruction where necessary and inform the Supervising Authority and Navy Shipbuilding Program Manager of significant problems or shortfalls.
- m. The enlisted training program is started as soon as the Leading Petty Officers for the major divisions arrive. The Officers and senior enlisted personnel will develop the content and scope of the training programs for implementation with the arrival of the first large increment of enlisted personnel.
- n. Aircraft Launch and Recovery Equipment Maintenance Program training must be conducted per reference (v).

2.9.2.2 Industrial Activity Training. The Industrial Activity or FIT will provide familiarization training following the shipbuilding contract on ship's characteristics and systems. This training generally is not sufficient for "System Expert" qualification, but will provide an excellent opportunity for School of the Boat or Ship, and at the same time provide an opportunity for Divisional Training Petty Officers to develop a more detailed and in depth training program. In most cases, the Industrial Activity will allow the ship to control the scheduling of topics.

2.9.2.3 Training Support Center. Surface ships utilizing the Pre-Commissioning Detachment Concept at a Training Support Center (TSC), either in Norfolk, VA or San Diego, CA, are provided with an outstanding opportunity to ensure pipeline training is obtained. This concept also provides for the easy access to many of the basic courses such as firefighting, damage control, Repair Parts Petty Officer training, Drug and Alcohol Program Advisors, Component Change Control, etc., which are needed to ensure assigned personnel can effectively function as a ship's crew upon delivery. For ships not utilizing the TSC Detachment Concept, such as submarines, an individual should be assigned to monitor and track training and manning issues as they develop.

2.9.3 Ship's Qualification Program. The implementation and operation of the Ship's Qualification or Personnel Qualification Standard (PQS) should ensure a logical process for training Ship's Force for watchstanding and ship's qualification. TYCOM instructions that cover Ship's Qualification or PQS requirements are found in references (j) and (o) through (t). The department organization manual should establish prerequisites for watch stander

qualification. Qualification goals should be established and the program should support completion of goals within each division. Fleet wide training and qualification goals are:

- a. Underway Watchbills; 3 Section Enlisted, 4 Section Officer or Chief Petty Officer.
- b. Inport Watchbills; 4 Section Enlisted, 5 Section Officer or Chief Petty Officer (6 Section for all personnel on Aircraft Carriers).

2.9.4 Deficiency Identification and Correction. The establishment of procedures by which Ship's Force reports and tracks the correction of deficiencies cannot be overstressed. The Supervising Authority relies heavily upon PCU involvement to augment their efforts. Inspections of systems, equipment and spaces by PCU personnel are extremely important in the identification of unsatisfactory work and material deficiencies. Each shipbuilder and associated Supervising Authority have their own established system for tracking shipbuilder responsible deficiencies. Those deficiencies which are not corrected during the construction cycle will be submitted to the INSURV Board just prior to FCT, AT or CT (the type of trial dependent on platform). These deficiencies, depending on their seriousness, may impact a ship's delivery to the Navy. Deficiencies cited must either be resolved, corrected or waived by the Navy Shipbuilding Program Manager.

2.9.5 Establishment of Engineering and Reactor Department. This paragraph addresses the Engineering or Reactor Department establishment and tasks which are to be accomplished during the pre-commissioning phase of new construction. The tasks defined in this section incorporate experience gained and lessons learned from previously completed ships. The objective is to provide guidance which will assist in the ship's readiness, from an Engineering or Reactor Department standpoint, to successfully complete contract milestones and to prepare for fleet introduction.

2.9.5.1 Requirements. The PCU should monitor and report on the ship's construction progress to the PCO, and dependent upon platform, conduct, witness and participate in the ship's dockside and at-sea testing, attend periodic documentation reviews, assessments, and validations, and provide recommendations regarding manpower, training, watchstanding and related shipboard engineering requirements. Tasks and responsibilities include items discussed in the following paragraphs.

2.9.5.2 Shipboard Inspections. Shipboard inspections by the ship's Engineering, Reactor Department and cognizant Supervising Authority personnel are necessary during the ship construction phase. There is no precise pattern or timetable for these inspections, but they should be thorough and conducted frequently. Ship's Force personnel need to become familiar with the contract specifications and system drawings. This will ensure the prompt identification, and documenting, of discrepancies discovered when comparing "as built" conditions to the actual specification.

2.9.5.3 Personnel Qualification Standards. Theoretical portions of PQS should be implemented during the training pipeline at the specific Training Centers and at the TSCs using available technical manuals and training material. Ship-wide PQS should be implemented prior to the arrival of the final crew increment at the shipbuilder's yard. The ship's Engineer Officer should establish interim watch qualifications to set the training goals for Engineering and Reactor Department personnel as they arrive at the Industrial Activity. Additionally, PQS sign-off

authority should be specified in writing by the ship's Engineer Officer, in order to ensure that the provisional qualifications and sign-off procedures function smoothly.

2.9.5.4 Outfitting Support (as applicable). The PCU must ensure that engineering spaces are completely outfitted. Routine progress inspections must be made in this area, and the PCU will participate in completing Compartment Completion Inspection Reports. It is important that personnel involved with Compartment Completion Inspection Reports are fully aware of all implemented Engineering Change Proposals and Engineering Change Notices to ascertain that outfitting materials and Operating Space Items (OSI) support the ship as revised by Engineering Change Proposals and Engineering Change Notices. Configuration Change Requests must be drafted with full recognition of the guidance contained in both the General Specifications for Building Naval Vessels and the specific Class Building Specifications.

2.9.5.5 Operational Sequencing System (Surface Force Ships and Aircraft Carriers only). The Operational Sequencing Systems (OSS) (Engineering Operational Sequencing System (EOSS), Sewage Disposal Operational Sequencing System, etc.) establish the operational procedures for various shipboard equipment, including applicable Casualty Control procedures. Validation of Engineering Department OSS manuals is the responsibility of the ship's Engineering Department personnel, with assistance provided by the Navy Shipbuilding Program Manager and contractor support personnel (if available). This validation will ensure that procedural requirements are current, well-defined and correct. OSS validation is a Key Event that must be accomplished by the PCU prior to arrival of the final crew increment. EOSS installation (under the cognizance of Naval Surface Warfare Center (NAVSURFWARCEN) Philadelphia Division involves the following sequence of events, which may be modified for other OSS installations:

- a. Develop the preliminary EOSS package.
- b. Submit the preliminary EOSS to the PCU, the Supervising Authority and the Navy Shipbuilding Program Manager.
- c. The PCU, the Supervising Authority and the Navy Shipbuilding Program Manager review the preliminary EOSS.
- d. Conduct cold plant check to validate equipment for correct system operation.
- e. Revise EOSS to pre-hot check package and submit EOSS to the PCU, the Supervising Authority and the Navy Shipbuilding Program Manager.
- f. Conduct pre-hot check.
- g. Conduct hot system ship check.
- h. Submit final EOSS to the PCU, the Supervising Authority and the Navy Shipbuilding Program Manager for review and comment.
- i. Deliver electronic copy of EOSS to Navy Shipbuilding Program Manager.
- j. Print, laminate, assemble EOSS.
- k. Install final EOSS.

2.9.5.6 Engineering and Reactor Department Organization and Regulations Manual. The Engineering or Reactor Department Organization and Regulations Manual (EDORM or RDORM) is the responsibility of the ship's Engineer or Reactor Officer, however, basic

EDORM or RDORMs have been established as guidelines. Reference (w) provides EDORM development guidance for Surface Forces, reference (x) provides guidance for submarines, and reference (u) provides EDORM or RDORM development guidance for aircraft carriers.

2.10 SUPPORT ACTIVITIES.

2.10.1 Technical Support. The Regional Maintenance Centers (RMC) have numerous functions and responsibilities, some of which will further be discussed in Volume I, Chapter 3 of this manual, but for the purpose of this section only those functions and responsibilities related to new construction will be discussed.

2.10.1.1 Naval Sea Logistics Center (Detachment Norfolk or Detachment San Diego).

- a. TYCOMs are responsible for ensuring the proper installation and operation of PMS within the ships under their command. The importance of the PMS installation cannot be overemphasized.
- b. Prior to the PMS installation, equipment configuration information will be verified by the Configuration Data Manager. The PMS Maintenance Index Page or MRC documentation will be certified by the Naval Sea Logistics Center Detachment Norfolk or Detachment San Diego (NAVSEALOGCEN Detachment Norfolk or NAVSEALOGCEN Detachment San Diego), as appropriate. Following the validation, the applicable NAVSEALOGCEN Detachment Norfolk or NAVSEALOGCEN Detachment San Diego will assemble the PMS documentation, equipment listings, schedules and forms required for the installation package. Each PMS installation package is ship tailored.
- c. NAVSEALOGCEN Detachment Norfolk or NAVSEALOGCEN Detachment San Diego has the responsibility for installing PMS aboard ship. The installation of PMS is done in two phases; preliminary and final.
- d. Supporting information can be found in reference (g).

2.10.2 Submarine Maintenance Engineering, Planning and Procurement Activity. The SUBMEPP Activity is located in Portsmouth, NH. SUBMEPP functions are related to submarines and selected submarine support activities. As was the case with the RMCs, SUBMEPP's functions are numerous and deal with a submarine's maintenance at all levels of accomplishment (Organizational, Intermediate, Depot) from construction to inactivation. For the purpose of this section SUBMEPP's responsibilities and functions include:

- a. Tracking the configuration of ships under construction.
- b. Assisting local RMC with the PMS installation on all new construction submarines.
- c. Assisting the Supervisor of Shipbuilding, Groton with the resolution of INSURV deficiencies concerning PMS related issues.
- d. Providing Ship's Force with a Master Equipment Guide List (EGL) for all non-nuclear and non-missile related equipment (component to MRC).
- e. Providing Ship's Force with their URO and Maintenance Standard documentation at PMS installation.

- f. Providing Maintenance and Material Management Coordinator Training at SUBMEPP concerning *Virginia* and *Seawolf* Maintenance philosophy.
- g. Processing all shipbuilder developed Submarine PMS to the In-Service Engineering Activity for review and approval.

2.10.3 Carrier Planning Activity, PMS312C (Aircraft Carriers only). The Carrier Planning Activity (CPA) provides centralized Aircraft Carrier life-cycle management, maintenance and modernization planning, closely aligned to Fleet and Program Executive Officer Aircraft Carriers needs and priorities. Operationally, CPA reports to the Navy Shipbuilding Program Manager, In-Service Aircraft Carriers (PMS 312). Per NAVSEAINST 5400.130, CPA responsibilities are as follows:

- a. Development, maintenance and monitoring of the Carrier Incremental Maintenance Plan (IMP), including tracking the backlog of IMP and modernization work.
- b. Developing Carrier Baseline Availability Work Packages (BAWP) including integration of the IMP sequencing plan and the Modernization Plan for presentation to the TYCOMs.
- c. Capturing and analyzing maintenance data history for use in updating the IMP Sequencing Plan and supporting the TYCOMs in assessing the value of ongoing material assessments.
- d. Supporting the TYCOMs and Executing Activities in the development of continuous maintenance requirements including life cycle input from the IMP to the continuous maintenance process.

2.10.4 Surface Maintenance Engineering Planning Program (Surface Force Ships only). Surface Maintenance Engineering Planning Program (SURFMEPP) must provide centralized surface ship lifecycle maintenance engineering, class maintenance planning and management closely aligned to the Surface TYCOM and NAVSEA needs and priorities per reference (y). For the purpose of this section, SURFMEPP's responsibilities and functions include:

- a. Serve as the authorized engineering agent for Surface Ship Lifecycle maintenance engineering, planning and management.
- b. Act as the surface ship Class Maintenance Program development and management activity.
- c. Capture and analyze maintenance data history, to include cost, for use in updating the Class Maintenance Plan.
- d. Review the material assessments in order to modify the technical content of the Class Maintenance Plan.
- c. Develop and issue BAWPs for CNO availabilities after PSA.

2.10.5 Space and Naval Warfare Systems Centers.

- a. Space and Naval Warfare Systems Center Atlantic (SSC Atlantic) designs, develops, implements and provides life cycle support for standard fleet non-tactical automated information systems, afloat and ashore. SSC Atlantic is the software development and

support activity for applications automated under the Naval Tactical Command Support System and remaining legacy systems. The Naval Tactical Command Support System automates supply, inventory, ship, submarine, aviation maintenance and configuration management; food services, retail operations, personnel administration and watch, quarter, and station bills, for fleet and fleet-like activities. In all, SSC Atlantic's customers number over 1200 separate activities, many of which operate with multiple functional systems.

- b. SSC Atlantic Tidewater facilities, located on Naval Station Norfolk, VA, manage all software development. Naval Station Norfolk is also home to SSC Atlantic's In-Service Engineering Activity for hardware and software support, along with Atlantic Fleet implementations. Space and Naval Warfare Systems Center Pacific (SSC Pacific), San Diego, CA is responsible for Pacific Fleet implementations and support. SSC Pacific maintains a detachment in Yokosuka, Japan to provide on-site assistance for commands and units deployed to their Area of Responsibility.

2.10.6 Fleet Introduction Team (Surface Forces only). Reference (z) states that for newly commissioned Commander Naval Surface Force Atlantic (COMNAVSURFLANT) ships, COMNAVSURFLANT assumes the responsibility of instituting and managing a fleet introduction program. FITs provide support to pre-commissioning crews by monitoring the progress of construction, coordinating training, providing continuity in the management and administration of facilities at the building site and providing administrative support. The Navy Shipbuilding Program Manager provides this support in the form of support contractors. The specific responsibilities of individual FITs will vary dependent upon the platform and the requirements peculiar to that platform. Appendix Q of this chapter provides a generic base line of services available if a FIT is established.

2.10.7 Afloat Training Group (Surface Force Ships only). The Afloat Training Group (ATG) is chartered by reference (w) to assist ships in tailoring a training program for the conduct of pre-light-off cold checks and evaluations, program management and firefighting. This assistance is rendered through formal visits, scheduled at the request of the ship's ISIC via the quarterly scheduling process. ATG teams will conduct tailored training, defined in consonance with the CO, the ISIC and the team OIC which best meets the needs of the ship.

2.10.8 Surface Nuclear Propulsion Mobile Training Team (Aircraft Carriers only). The Surface Nuclear Propulsion Mobile Training Team will conduct training and assessment of Reactor Departments (to include Engineering department on CVN 65) for ships undergoing extended availabilities and for PCUs. These assessments must include Reactor Department administration, qualifications, operations, cleanliness, preservation, material condition, radiological controls, chemistry controls and damage control. The Maintenance Training Group will conduct pre-availability training with Reactor Department personnel, conduct in-process quality assurance assessments and training visits, and train the crew in life cycle management.

2.10.9 Fitting Out Supply Assistance Team (Surface Ships only).

- a. Fitting Out Supply Assistance Team (FOSAT), a function under Naval Supply Weapons Systems Support-Mechanicsburg, will assist Prospective Supply Officers (PSO) in attaining maximum administrative and material readiness of the Supply Department prior to delivery of a ship to the Navy. The team is involved in

monitoring the provisioning process, material availability, inventory validity, Supply Department administrative readiness and establishment of Supply Department spaces. Additionally, the team provides pre-commissioning training and assistance in all areas of Supply Department organization. The primary focus of the FOSAT team is to provide assistance and evaluation. Assistance is rendered to the PSO through training and as a result of each of the PSO's divisions communicating their areas requiring assistance. Evaluation is accomplished by reviewing each division's operating procedures. Evaluation is also accomplished through regular communication to ascertain each division's progress based upon the most current Supply Management Certification checklist. In addition, assistance and evaluation are accomplished by performing visits to the PCUs.

- b. Services provided by FOSAT includes:
 - (1) Storeroom Bin Validation.
 - (2) Review of General Use Consumable List.
 - (3) RSUPPLY Implementation and Validation.
 - (4) Culinary Specialist Assistance.
 - (5) Ship's Serviceman Assistance.
 - (6) Disbursing Assistance.
 - (7) Postal Assistance.
 - (8) Critical Path Visits.

2.11 NAVAL SEA SYSTEMS COMMAND (SUBMARINES ONLY). Reference (c) describes NAVSEA's responsibilities during new construction for Submarine FBW SCS. NAVSEA's responsibilities for the Pre-Commissioning period are as follows:

- a. Supervising Authority sends message to NAVSEA in advance of the scheduled start of Fast Cruise stating the status of all incomplete NAVSEA FBW SCS Certification Audit Category IA recommendations, that all FBW SCS work necessary for sea trials, including resolution of all NAVSEA FBW SCS Certification Audit Category I recommendations, has been completed and that the FBW SCS is ready for commencement of Fast Cruise. The message must also state that there are no conditional FBW SCS Deviations or Waivers which have not been satisfied or cite those that exist, identify any operating restrictions of the ship or system, and that, subject to satisfactory completion of Fast Cruise and resolution of mandatory deficiencies, the FBW SCS is satisfactory for commencement of Alpha Sea Trials. Appendix R of this chapter provides a sample message.
- b. NAVSEA Navy Shipbuilding Program Manager message to TYCOM certifying that the submarine FBW SCS is satisfactory for sea trials per the approved Sea Trial Agenda. The message must also state that there are no conditional FBW SCS Deviations or Waivers which have not been satisfied or cite those that exist, identify any operating restrictions of the ship or system, and that, subject to satisfactory completion of Fast Cruise and resolution of mandatory deficiencies, the FBW SCS is

satisfactory for commencement of Alpha Sea Trials. Appendix S of this chapter provides a sample message.

- c. NAVSEA Navy Shipbuilding Program Manager must provide a report documenting the resolution of sea trial deficiencies to NAVSEA 07TC for review in support of NAVSEA 07 concurrence on final system certification. Appendix T of this chapter provides a sample message.

2.12 INTEGRATION OF CLASS MAINTENANCE PLAN AND BASELINE AVAILABILITY WORK PACKAGE (SURFACE FORCE SHIPS ONLY).

- a. SURFMEPP has lead responsibility for BAWP development for new construction ships entering the Fleet Readiness Plan (FRP) cycle.
- b. Initial BAWP generation for new construction ships is dependent on PSA completion and Class Maintenance Plan development. Once the BAWP is issued, see Volume II, Part II, Chapter 2, Appendix D of this manual for the remaining BAWP to Availability Work Package (AWP) process.

2.12.1 Life Cycle Planning Conference. SURFMEPP will coordinate the date, location and agenda for the Life Cycle Planning Conference (LCPC). SURFMEPP will be responsible for planning and conducting the conference, attendees should include: TYCOM, RMC Assessment Directors, Program Manager Representatives, representatives from NAVSEA 05, NAVSEA 21 Modernization, Planning Activity and the ship's MT.

2.12.2 BAWP Pre-Pushed to Maintenance Team. SURFMEPP will send a list of the FRP Maintenance Cycle Class Maintenance Plan requirements to the ship's Port Engineer for review and correction. This list is a preview of the initial BAWP and will be discussed in detail at the LCPC. Upon request, SURFMEPP will provide a list of Class Maintenance Plan-required assessments to TYCOM, Navy Regional Maintenance Center (NRMC) and RMC.

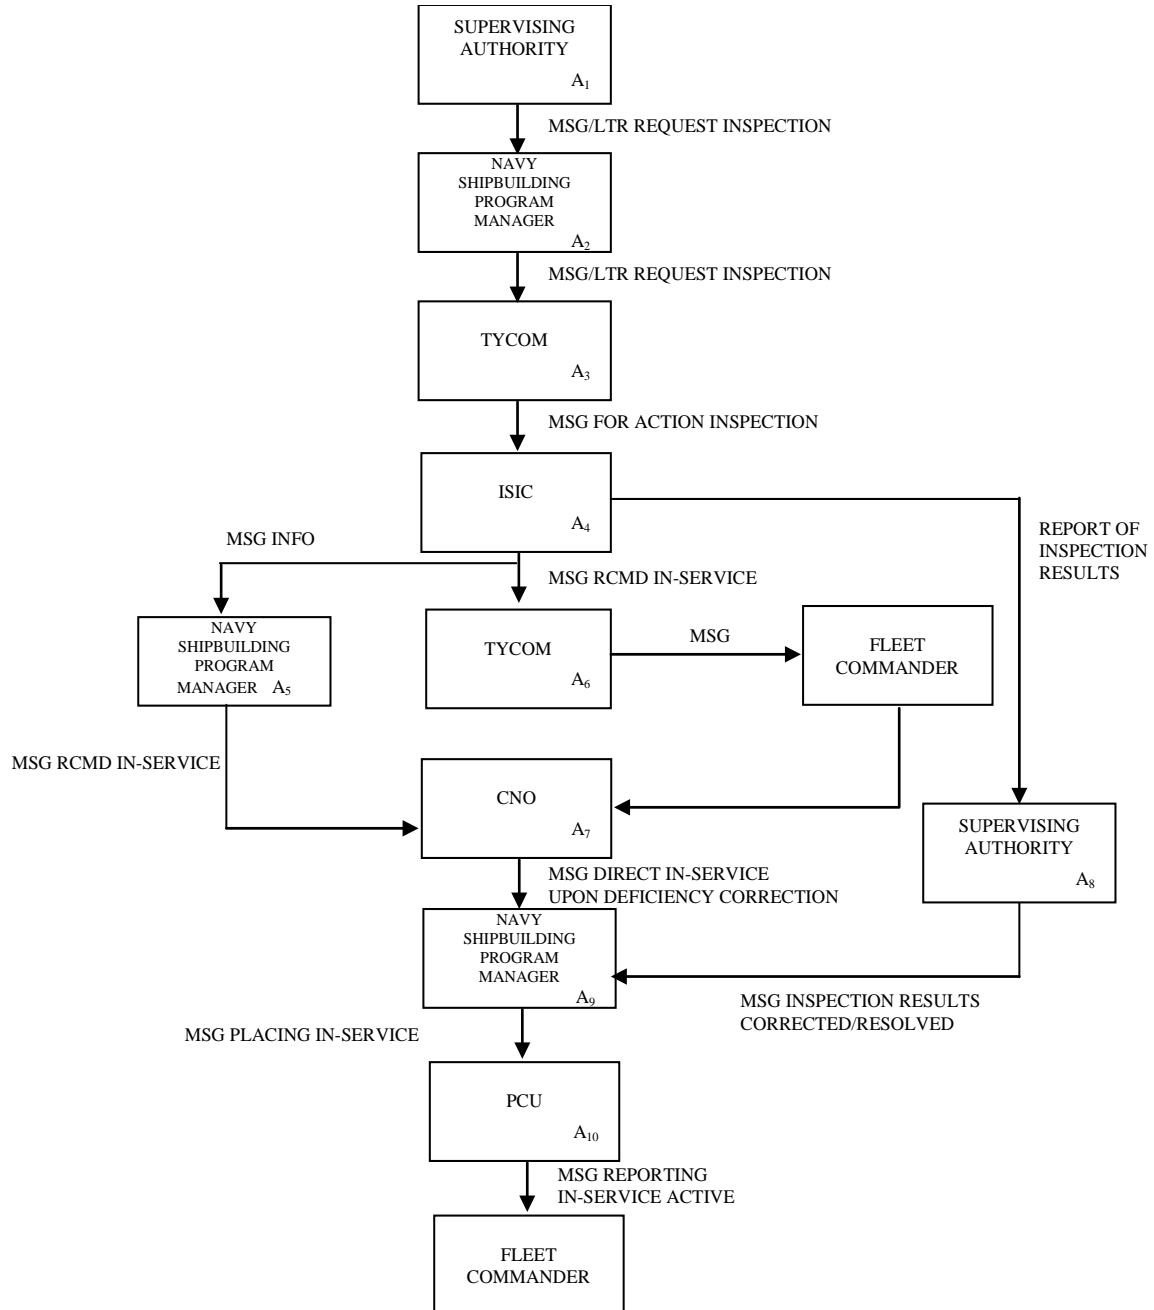

2.12.3 BAWP Upload.

- a. SURFMEPP will upload a data file (MM0001 file) with all mandatory requirements and expected CNO Availability services into the appropriate IT system in support of ship-specific MT screening and brokering requirements.
- b. SURFMEPP will issue formal correspondence detailing the planning schedule and outstanding action items from the LCPC.

2.12.4 Other BAWP to AWP Process Milestones. All other BAWP to AWP process milestones are germane (refer to Volume II of this manual) for in-service non-Forward Deployed Naval Forces ships.

APPENDIX A

Message Scenario and Sample Messages or Letters For Habitability Inspections and In-Service

16 Oct 2019

APPENDIX A₁

**SAMPLE SUPERVISING AUTHORITY LETTER TO NAVY SHIPBUILDING
PROGRAM MANAGER RECOMMENDING HABITABILITY INSPECTION AND IN-
SERVICE**

From: Supervisor of Shipbuilding, Conversion and Repair, USN, (Applicable Supervising Authority)

To: Commander, Naval Sea Systems Command (Attn: Navy Shipbuilding Program Manager)

Subj: PLACING (SHIP NAME) (HULL NUMBER) IN-SERVICE

Ref: (a) OPNAVINST 9080.3

(b) OPNAVINST 4700.8

1. Per references (a) and (b), recommend Habitability Inspection of (Ship Name) (Hull Number) commence on (Date) with active status of In-Service on or about (Date).

1. Request authorization required by reference (a) to perform test procedure with TPI incorporated.
2. The reactor core installed in (Ship Name and Hull No.) as specified in reference (b).
3. Estimated time to perform all critical testing is ___ days. All critical testing will require a maximum of ___ effective full power hours. This estimate includes Critical Over-the-Side-Noise testing.
4. The shipyard has certified that all the prerequisites for Initial Criticality required by reference (a) are met and the ship is ready for Initial Criticality and subsequent Power Range Testing.
5. The following reactor plant work item(s) is (are) not completed and does (do) not involve safety of the reactor plant.
 - a.
 - b.
6. The Prospective Commanding Officer and Naval Reactors Representative concur.
7. The event is scheduled for (Date) at (Time).

APPENDIX N**PRE MAN-UP CHECKLIST FOR TYCOM OR ISIC**

The TYCOM or ISIC is responsible for:

1. Contacting the Supervising Authority and establishing the date of initial man-up.
2. Coordinating with the Supervising Authority to ensure that crew facilities will be available on man-up.
3. Coordinating with the Supervising Authority and BUPERS on manning issues involving slippage or delays in schedule.
4. Upon man-up, coordinating with the PCO the dates for arrival inspection and monitoring watches.
5. Providing the ship with the necessary Fleet and TYCOM directives, instructions, notices, training memorandums, etc.
6. Reporting personnel arriving early onboard.
7. Ensuring personnel arriving early get pay accounts established and entitlements started.
8. Ensuring personnel arriving early have been screened for New Construction and meet all the requirements. Personnel not meeting the New Construction requirements should be brought into compliance, if possible, or made available for further assignment per the Enlisted Transfer Manual.
9. Ensuring the reporting personnel satisfy the requirements as outlined in the manning directive (i.e., Crew Scheduling and Phasing plans, Manning Letter, Enlisted Distribution and Verification Report, etc.). Areas that are deficient should be identified to BUPERS to correct deficiencies. In the case of submarines, submit a Personnel Deficiency Report.
10. For submarines, ensuring personnel are medically screened for submarine duty.
11. If the Detachment Concept is used, establishing a Point of Contact with TSC and obtain phone numbers for PCU office spaces.
12. Inspecting the PCU's office spaces prior to the arrival of the initial manning detachment. Immediately upon the PCU's arrival, coordinating with the PCO to arrange for the certification of office spaces to receive classified material.
13. Providing the requirements for storage of classified material in office spaces.
14. Assisting the PCU in developing a management system for handling classified material.

APPENDIX O**BASIC REQUIREMENTS FOR INITIAL MAN-UP PERSONNEL OF THE PCU
(DETACHMENT CONCEPT) (AIRCRAFT CARRIERS AND SURFACE FORCE
SHIPS)**

1. The following is a list of actions that should be undertaken by the Detachment within the first two months.

- a. Establish Fiscal Account with TSC Logistics.
- b. Provide accounting data for telephone service to Naval Station Public Works, Communications Department.
- c. Establish Temporary Plain Language Address with the communications facility.
- d. Obtain administrative supplies from SERVMART.
- e. Make Basic Enlisted Quarters arrangements with Naval Station Billeting.
- f. Establish Basic Enlisted Quarters Watch Bill.
- g. Acquire Government Vehicle from Public Works.
- h. Create Ship's Pre-Commissioning Indoctrination Manual.
- i. Designate Drug and Alcohol Program Advisors and obtain school quota from TSC.
- j. Designate Urinalysis Coordinator and establish program.
- k. Designate Key Sub-Custodian.
- l. Designate two Electrical Safety Petty Officers.
- m. Designate Ombudsman.
- n. Create or Start Pre-Commissioning Training schedule (Formal, School of the Ship, Afloat).
- o. Establish program for monitoring security clearance requirements.
- p. Write authorization letters for "By Direction," mail and paycheck pickup authority.
- q. Acquire software programs from the ship's allowance for use on computers.
- r. Set up office spaces and obtain the necessary instructions and publications necessary to function as an Administrative Office.
- s. Establish a Personnel Office to assist and check-in newly reporting personnel.
- t. Arrange a meeting with the local Personnel Support Detachment to formulate a memorandum of agreement to include Service Record maintenance, Pay Account maintenance, assignment of disbursing support personnel from the ship, liquidation of travel claims, authorization for travel advances and other personnel related matters.
- u. Arrange for maintenance of Medical and Dental records based on local military medicine procedures. The TSC will provide details.
- v. Compile a Recall List.

- w. Submit the Inaugural Diary to establish the manpower accounts and activate the Unit Identification Code in the Source Data System. This requires the reporting of one Enlisted and one Officer, using a gain Transaction Code with the use of a Diary Message Reporting System message. This should be done in advance of the initial manning date.
 - x. Coordinate with the TSC to establish the Security Certification of office spaces for retention of classified material.
 - y. Request of NAVSEA Non-Judicial Punishment (NJP) and Special Court Martial authority for the PCO. If the PCO is ordered in as OIC, NJP authority is limited.
 - z. Develop a planning schedule to incorporate Department Head training and the overall command planning schedule.
2. The following is a list of actions that must occur to support activity at the Construction Site.
- a. Obtain office space for the Prospective Commanding Officer or Prospective Executive Officer, Command Master Chief, and other crew personnel.
 - b. Arrange for installation and access to telephone service. The Supervising Authority will provide details.
 - c. Obtain phone listing for key Industrial Activity and Supervising Authority personnel.
 - d. Obtain Master Construction Schedule from the Supervising Authority Project Officer.
 - e. Make arrangements for the crew to receive badges for access to the industrial area.
 - f. Make arrangements for the crew to receive all necessary safety equipment (hard hats, safety glasses, safety shoes, etc.).
 - g. Arrange for the crew at the Construction Site to receive safety briefings.
 - h. Arrange for crew briefings on necessary Radiological Control procedures.
 - i. Arrange for the Supervising Authority to take action to add the PCU to the Standard Navy Distribution List.
 - j. Obtain copies of Supervising Authority instructions related to new construction activities.
 - k. Obtain a System Testing Schedule and Turnover Schedule. The Supervising Authority will provide assistance.
 - l. Request authorization for the crew to draw Basic Allowance for Subsistence if government messing is not available at the Construction Site. The BUPERS Manual provides direction.
 - m. Coordinate with the ISIC the Security Certification of office spaces to be used for the retention of classified material.

APPENDIX P**BASIC REQUIREMENTS FOR INITIAL MAN-UP PERSONNEL OF THE PCU**

The following is a list of actions that should be undertaken upon the arrival of the first members of a PCU:

1. Obtain office space for the Prospective Commanding Officer or Prospective Executive Officer, Command Master Chief, and other crew personnel.
2. Arrange for installation and access to telephone service. The Supervising Authority will provide details.
3. Obtain phone listing for key Industrial Activity and Supervising Authority personnel.
4. Obtain Master Construction Schedule from the Supervising Authority Project Officer.
5. Make arrangements for the crew to receive badges for access to the industrial area.
6. Make arrangements for the crew to receive all necessary safety equipment (hard hats, safety glasses, safety shoes, etc.).
7. Arrange for the crew at the Construction Site to receive safety briefings.
8. Arrange for crew briefings on necessary Radiological Control procedures.
9. Arrange for the Supervising Authority to take action to add the PCU to the Standard Navy Distribution List.
10. Obtain copies of Supervising Authority instructions related to new construction activities.
11. Obtain a System Testing Schedule and Turnover Schedule. The Supervising Authority will provide assistance.
12. Request authorization for the crew to draw Basic Allowance for Subsistence, if government messing is not available at the construction site. The BUPERS Manual provides direction.
13. Request of NAVSEA NJP and Special Court Martial authority for the PCO. If the PCO is ordered in as OIC, NJP authority is limited.
14. Develop a planning schedule to incorporate Department Head training and the overall command planning schedule.
15. Submit the Inaugural Diary to establish the manpower account and activate the Unit Identification Code in the Source Data System. This requires the reporting of one Enlisted and one Officer, using a gain Transaction Code with the use of a Diary Message Reporting System message. This should be done in advance of the initial manning date.
16. Set up office spaces and obtain the necessary instructions and publications necessary to function as an Administrative Office.
17. Establish a Personnel Office to assist and check-in newly reporting personnel.

18. Arrange a meeting with the local Personnel Support Detachment to formulate a memorandum of agreement to include Service Record maintenance, Pay Account maintenance, assignment of disbursing support personnel from the ship, liquidation of travel claims, authorization for travel advances and other personnel related matters.
19. Arrange for maintenance of Medical and Dental records based on local military medicine procedures. The TSC will provide details.
20. Compile a Recall List.
21. Coordinate with the ISIC the Security Certification of office spaces to be used for the retention of classified material.
22. Upon completion of the Security Certification coordinate with the Supervising Authority mailroom for delivery of the ship's mail.

APPENDIX Q
GENERIC BASE LINE OF FLEET INTRODUCTION TEAM
FUNCTIONS AND RESPONSIBILITIES

1. Perform all tasks normally assigned to the PCO until the PCO has reported to the Construction Site and assumed duties.
2. Provide assistance to the PCO in carrying out duties according to Navy Regulations.
3. Provide continuity in the management and administration of pre-commissioning facilities at the Construction Site.
4. Coordinate the overall pre-commissioning crew training program for both nucleus and balance crews.
5. Schedule and conduct crew training at the Construction Site. Such training must be structured to support the Force Commander's standard for Crew Certification. Additional training provided will consist of:
 - a. Basic Damage Control Training (100, 200 and 300 series).
 - b. Ship Familiarization Training.
 - c. Enlisted Surface Aviation Warfare Specialist Qualification and Requalification Training.
6. Provide each ship with standardized tailored Lesson Training Guides (where appropriate) in the areas of:
 - a. Engineering.
 - b. Mess Specialist.
 - c. Supply.
 - d. Communications.
 - e. Operations.
 - f. Weapons.
 - g. Deck.
 - h. Air.
7. Provide each PCO with standardized administrative, organizational and procedural manuals, bills, and directives for the ship class.
8. Monitor the progress of construction, outfitting, test and trials of each ship.
9. Perform the specific functions as assigned by the Force Commander or higher authority.
10. Provide familiarization training if directed.
11. Provide continuity between successive PCUs.

- a. Maintain results of significant trials, inspections, assist visits, design and progress meetings, etc., in order to provide lessons learned and a corporate history to each successive pre-commissioning crew.
 - b. Detailed reports of government and contractor material and operational tests and inspections are maintained by the Supervising Authority.
 - c. Develop a Plan of Action and Milestones (POAM) for each ship to support the mission objectives to consist of actions and milestones to be accomplished by the FIT and the ship before sail-away.
 - d. Tailor the POAM to each specific ship based on the delivery date. The POAM will start approximately one year before delivery and end upon sail-away. (Start date will vary depending on FIT establishment and crew manning).
 - e. Maintain copies of the POAMs at the FIT, PCU and Pre-Commissioning Detachment.
 - f. Update and perform quarterly reviews of the POAM.
12. Maintain a Standard Products POAM.
- a. Ensure that each ship receives their initial outfit of standard products such as directives, publications, forms, instructions, charts, etc. These products will be ordered by the FIT per the POAM, maintained at the FIT, and given to ship upon delivery.
 - b. In addition, locally developed standard administrative products such as the Standard Organization and Regulations Manual, Standard Operating Procedures, instructions, notices, etc., in support of the mission goals, will be tailored to each specific ship by the FIT with Ship's Force assistance.
13. Conduct Familiarization Training.
- a. Training will consist of lectures and ship tours which cover:
 - (1) Ship Capabilities
 - (2) Characteristics and Mission
 - (3) Damage Control
 - (4) Propulsion
 - (5) Electrical
 - (6) Auxiliaries
 - (7) Deck
 - (8) Communications
 - (9) Navigation
 - (10) Combat Systems
 - b. Familiarization Training will be performed in a manner that will also encompass Enlisted Surface Aviation Warfare Specialist qualification and requalification training.

- c. Provide each student a detailed and comprehensive Training Guide of each topic, for reference and study purposes.
14. Assist the ship in preparations for LOA to include:
- a. Assist in preparations for the ISIC and ETG visits (Pre-industrial, Industrial and Pre-LOA) to include the areas of administration, material, level of knowledge and firefighting.
 - b. Provide plans (in the form of ship's notices) for the Pre-Industrial and Pre-LOA visits.
 - c. Assist in EOSS validation (cold and hot checks to include hand over hand verification of piping systems and components) performed by the Navy Shipbuilding Program Manager.
 - d. Provide a standard package of cold and hot checks (schedule and procedures) required to support material checks for LOA. Conduct training in the execution of cold and hot checks.
 - e. Provide standard engineering administration (EDORM, Standing Orders, Main Space Fire Doctrine, Restricted Maneuvering Doctrine, logs, management programs, etc.).
 - f. Provide a standard ship engineering training plan which will include Lesson Topic Guides, Lesson Topic Matrix, Evolution Training Matrix, Casualty Control Training Matrix, Watch Team Replacement Plan, Quadrant Training Plan, Month Training Plan and Watchstander Proficiency Logs. Conduct training on implementation and execution of the engineering training plan.
 - g. Conduct training (lectures, seminars, drills, etc.) to improve the level of knowledge and firefighting capability of the crew in support of LOA. Conduct Damage Control training to combat a Main Space Fire. Provide procedures, drill packages and training for the Engineering Casualty Control Training Team and Damage Control Training Team.
15. Assist the ship in preparations for Crew Certification to include:
- a. Provide plans (in the form of ship's notices) for Crew Certification.
 - b. Provide procedures, drill packages and training (lectures, seminars, drills, etc.) for the Seamanship Training Team and Combat Systems Training Team.
16. Assist with the implementation of PMS to include:
- a. Provide training to the ship's 3-M Coordinator concerning ship specific or unique PMS, Waterfront Maintenance Management System Net and SNAP.
 - b. Assist in Phase I and II PMS installation by local RMC.
17. Order forms and publications.
- a. Order per the ship POAM and turn over to the crew upon delivery of the ship.
 - b. Include Initial Outfit List of publications and forms as well as Technical Manuals, SIBs, Naval Warfare Publications, Naval Telecommunication Procedures (NTP), charts, command-specific instructions and notices, etc.

18. Assist the ship in the load out of storerooms and operating spaces to include:
 - a. Assist in developing load out plan.
 - b. Assist in the coordination between ship, Supervising Authority, contractor and FOSSAC.
 - c. Act as technical advisor to the Supply Officer in matters concerning load out.
 - d. Provide training to Supply Department personnel in support of load out.
19. Maintain a reference library.
 - a. A master reference library will be located in the FIT building and will include general and ship specific directives, forms, publications, instructions, notices, Technical Manuals, PQS, Naval Warfare Publications, NTPs, SIBs, charts, EOSS, PMS, message correspondence, etc.
 - b. A satellite reference library will be located within the pre-commissioning building. This library will consist of immediate reference materials, Naval Ships' Technical Manuals, SIBs, Technical Manuals, instructions and notices.
 - c. A basic set of unclassified reference material will be maintained at the PCU for the pre-commissioning crews. Classified reference material for the pre-commissioning crews will be maintained at the FIT facilities due to the lack of adequate security at the PCU.
 - d. Liaison with the Supervising Authority to obtain technical documents such as contract specifications, drawings, test and inspection results, etc. when required.
 - e. Provide access to various electronic bulletin boards throughout the Navy via computer-modem hookup.
20. Provide audio and visual support consisting of projectors (overhead, slide), screen, video cassette recorder (VHS, BETA), and marker boards.
21. Provide situational administrative support as required.
 - a. Provide supplemental administrative support for events such as LOA, Crew Certification, Commissioning, etc.
 - b. Support may include word processing as well as E-mail, laminating, fax and copier service.
22. Maintain communication guard for PCUs until delivery.
 - a. Assist PCU Radiomen in processing (receiving and transmitting) standard naval messages up to and including Secret.
 - b. Locate the GATEGUARD terminals in the classified material storeroom at the FIT.
23. Provide secure stowage for classified material.
 - a. Store classified material for the FIT and PCU in General Services Administration approved safes located in the FIT's facilities.
 - b. Restrict access to those personnel authorized by the OIC or PCO.

- c. Maintain security through a combination of General Services Administration approved storage containers, controlled access (key and cipher locks) and intrusion detection systems.
- 24. Coordinate off-site training such as schools for pre-commissioning crew between the Ship, BUPERS and Navy Shipbuilding Program Manager.

SHIP CONTROL SYSTEMS. REF B IS JOINT FLEET MAINTENANCE MANUAL. REF C
IS <SUPERVISING AUTHORITY> MSG REPORTING FLY-BY-WIRE SHIP CONTROL
SYSTEM MATERIAL CONDITION READINESS OF <SHIP NAME/HULL NO.> FOR FAST
CRUISE AND ALPHA SEA TRIALS. REF D CONCURRED WITH THE SEA TRIALS
AGENDA FOR <SHIP NAME/HULL NO.>. REF E APPROVED THE SEA TRIALS
AGENDA FOR <SHIP NAME/HULL NO.>.///
RMKS/1. IAW REFS A AND B, AND AS REPORTED BY REF C, THE MATERIAL
CONDITION OF <SHIP NAME/HULL NO.> FLY-BY-WIRE SHIP CONTROL SYSTEM IS
CERTIFIED SATISFACTORY FOR USE DURING SEA TRIALS, UPON SATISFACTORY
COMPLETION OF FAST CRUISE AND RESOLUTION OF MANDATORY DEFICIENCIES,
IN ACCORDANCE WITH THE SEA TRIALS AGENDA CONCURRED IN BY REF D AND
APPROVED BY REF E.
2. THERE ARE NO FLY-BY-WIRE SHIP CONTROL SYSTEM DEVIATIONS AND
WAIVERS WITH CONDITIONS NOR FLY-BY-WIRE SHIP CONTROL SYSTEM or
RELATED SHIP OPERATING RESTRICTIONS/LIMITS WHICH HAVE NOT BEEN
SATISFIED. <or identify operating restrictions/limits and list conditional Deviations and
Waivers including Deviation Number, Short Title, and Expected Clearance Date/Key Event⁽¹⁾>.
3. THIS CERTIFICATION IS VALID THROUGHOUT TRIALS UNLESS A DEFICIENCY
HAS BEEN DISCOVERED. SHIP SPEED IS RESTRICTED TO LESS THAN 20 KNOTS
WHEN A FBW SCS FAULT CONDITION RESULTS IN A MAJOR NON-CONFORMANCE
AFFECTING CONTROL OF SHIPS PITCH, HEADING, DEPTH OR CONTROL
SURFACES. THESE DEFICIENCIES MUST BE REPORTED TO NAVSEA AND THE

16 Oct 2019

APPROPRIATE FLEET AND TYPE COMMANDERS. PREVIOUS NAVSEA CERTIFICATION OF THE FBW SCS MATERIAL CONDITION SHALL BE SUSPENDED UNTIL NAVSEA REVIEWS THE REPORT AND CERTIFIES TO THE TYCOM THAT THE FBW SCS MATERIAL CONDITION IS SATISFACTORY FOR SEA TRIALS IN ACCORDANCE WITH THE SEA TRIAL AGENDA APPROVED BY REFERENCE E. THE SHIP'S SPEED IS RESTRICTED TO LESS THAN 20 KNOTS UNTIL SATISFACTORY RESOLUTION OF THE MAJOR NON-CONFORMANCE AND TYCOM APPROVAL TO OPERATE THE FBW SCS TO PREVIOUSLY AUTHORIZED CONDITIONS IS GRANTED, UNLESS SPECIFICALLY ADDRESSED IN THE SEA TRIAL AGENDA.

4. REQUEST NAVSEA PMS< > BE INFO ADDEE ON ALL SEA TRIAL SITREPS.

5. RECOMMENDATION TO AUTHORIZE DIVING WILL BE ADDRESSED BY SEPCOR.

⁽¹⁾ Subject to Navy Shipbuilding Program Manager approval, cumulative lists of conditional Deviations and Waivers which are deemed too lengthy for messages may be communicated in a letter format, with the letter referenced by the applicable message.

LISTING OF APPENDICES.

- A Areas to be Evaluated During Arrival Assists
- B Areas to be Evaluated During Monitoring Inspections
- C Sample Pre-Reactor Safeguard Examination Notice
- D In-Service Compartment Surveillance Guide (Aircraft Carriers and Submarines Only)
- E Sample Pre-Commissioning Habitability Inspection Checklist for New Construction Ships

3.1 PURPOSE. This chapter addresses the major evolutions confronting the crew from initial man-up through Dock Trials, Fast Cruise and the commencement of Sea Trials.

3.2 SHIPBUILDER'S TEST PROGRAM. Throughout the building phase, the Shipbuilder is responsible for the testing and certification of installed equipment and systems. Reference (a) establishes the Test and Evaluation policy for all phases of a ship's life cycle. This guide contains information concerning the documentation and procedural requirements for a ship's Acquisition, Test and Evaluation Program. Reference (a), in conjunction with the Navy Shipbuilding Program Manager's prepared System Acquisition, Test and Evaluation Handbooks, provides familiarization and an understanding of the total Ship Test Program.

3.3 INSPECTIONS, CERTIFICATIONS AND ASSISTS. There are numerous inspections and certifications associated with new construction. Reference (b), which can be obtained from the Supervising Authority, identifies all the certification requirements which have been approved for accomplishment during surface ship industrial periods. The following paragraphs deal with generic inspections or platform unique certifications.

3.3.1 Arrival Assist.

- a. Purpose. To determine that adequate plans have been developed and implemented to support the requirements of Ship's Force training, administration and testing during new construction and to evaluate the ship's ability to conduct various evolutions.
- b. Conduct. The arrival assist visit may be conducted as a single visit or as a series of visits. Appendix A of this chapter provides sample areas to be reviewed during the arrival assist visit.
- c. Scheduling. The arrival assist should be scheduled for accomplishment within a two-month period following the arrival of the first crew increment.
- d. Reports. Formal reports are not required. However, the Immediate Superior in Command (ISIC) should inform the Type Commander (TYCOM) in the event that progress in preparations is evaluated as unsatisfactory.

3.3.2 Periodic Monitoring, Inspections and Visits.

- a. Purpose.
 - (1) To provide ships in new construction with training and administrative assistance as required by references (c) and (d). The focus will be to improve Ship's Force involvement with the construction process, maintenance and training tasks. Visits of this nature are defined as Tech Assists.
 - (2) To evaluate the effectiveness of the ship's administration and training policies. Inspections of this nature are defined as "Work-ups" and normally require the addition of at least two officers to the inspection team.
 - (3) To conduct spot checks to monitor progress in specific material, administrative and training areas. Visits of this nature are defined as Monitoring Visits.
- b. Conduct. The extent, type, and frequency of periodic monitoring inspections and visits should be determined by the ISIC. Submarine monitoring inspections may be combined with those required by reference (e). The initial inspection should be broad in scope in order to apprise the ISIC of the adequacy of the ship's performance and progress.
- c. Scheduling. The initial inspection should be conducted within a 45-day time period after the arrival inspection. The initial visit will indicate the frequency and scope of subsequent Tech Assists and Monitoring Visits. Some inspections should be conducted on an unannounced basis. In general, any required Work-ups should be scheduled in advance of Key Events. All inspections should be scheduled to minimize interference with industrial activity and Ship's Force work.

- d. Reports. Formal reports are not required. However, the ISIC should advise the TYCOM of situations where the completion of Key Events is in jeopardy due to a lack of progress in any of the subject areas identified in Appendix B of this chapter.
- e. Inspection Areas. Initial inspections normally examine the effectiveness of Ship's Force follow-up actions as a result of the arrival assist. Subsequent inspections and visits should review the areas designated in Appendix B of this chapter as appropriate.

3.3.3 Pre-Reactor Safeguard Examination (Nuclear Powered Ships only).

- a. Purpose. To evaluate the readiness of the Engineering or Reactor Department to undergo an RSE by representatives of Naval Sea Systems Command Nuclear Propulsion Directorate (NAVSEA 08). Appendix C of this chapter provides a sample Pre-RSE Notice which should be tailored to fit your specific platform.
- b. Conduct. The Pre-RSE performed by the ISIC with TYCOM assistance is not intended to duplicate the inspections for which readiness is being evaluated. It is prudent, however, to use an inspection plan similar to that employed by NAVSEA 08. Normally the crew's readiness can be assessed within two days using such a plan. The Supervising Authority will arrange for minimum industrial activity work interference during this inspection.
- c. Scheduling. The ISIC must conduct a Pre-RSE within six weeks of intended criticality. The Pre-RSE will be scheduled such that the qualification program and material condition of the ship are sufficiently complete to allow for a thorough inspection, but early enough to allow time for the correction of identified deficiencies prior to criticality. The TYCOM should be advised approximately two months prior to the tentative date and confirmed dates should be established approximately one month prior to the inspection.
- d. Composition of the Inspection Team. The Pre-RSE Inspection Team should consist of:
 - (1) A nuclear trained member of the ISIC Staff, usually the Deputy Commander for Readiness or Training.
 - (2) A qualified nuclear engineer with experience in the billet.
 - (3) A nuclear trained officer from the TYCOM Staff. Arrangements for the participation of TYCOM Staff members should be initiated by the ISIC at least one month prior to the anticipated inspection date.
 - (4) The Prospective Commanding Officer (PCO) of the next local ship in a new construction status.
 - (5) The TYCOM industrial activity representative.
- e. Reports. The Senior Inspector should provide the ship with an informal report of the findings with a copy to the ISIC and TYCOM.
- f. Inspection Areas. The Pre-RSE should, as a minimum, encompass the following:
 - (1) An administrative review.

- (2) Observation of basic drills and evolutions not requiring reactor operation or special conditions.
- (3) Personnel interviews and written tests.
- (4) Material inspection.

3.3.4 Crew Certification. Crew certification is required for new construction ships. Depending upon the platform and TYCOM policy, crew certification will be accomplished in two, three or four phases.

- a. Purpose. Initial phases determine the state of readiness and training of Ship's Force, particularly in the areas of watchstander qualifications, damage control readiness, status of operational and emergency bills, onboard supply of essential technical manuals and general operational knowledge. Later phases are structured to certify that the state of crew training is satisfactory for at-sea operations.
- b. Scope. Certifications for submarines and surface ships will be conducted using the guidance of the applicable TYCOM training manual, references (f), (g), and (h) through (l). Reference (m) provides additional direction for aircraft carriers.

3.3.5 Sonar Certification (Applicable Surface Force Ships and Submarines). Sonar certification for surface force ships is accomplished per reference (b). Submarine sonar certification is accomplished per references (h) through (l), during a designated Sea Trial just prior to the Combined Trial. Sonar certification is a prerequisite for Antisubmarine Warfare certification on surface ships and the Weapons and Tactical Readiness Evaluation on submarines.

3.3.6 Aviation Facility Certification (Air Capable Ships only). Reference (n) requires that all aviation facilities aboard naval ships which operate aircraft be formally inspected and certified adequate and safe for flight operations. It further directs, as implemented by references (o) and (p), that Commander, Pacific Fleet (COMPACFLT) and Commander, United States Fleet Forces (USFF) will establish responsibilities and procedures for mandatory certification of all ships with aviation facilities. Reference (n) also directs the Chief of Naval Operations (CNO) to establish responsibilities and procedures for mandatory certification of all ships' aviation facilities, provide for certification inspection teams and issue approved standards for certification. Naval Air Systems Command (NAVAIR) has overall responsibility for certification of aviation facilities and equipment in Naval ships. Aviation facility and equipment certification is a procedure which verifies and documents that the aviation facilities and equipment aboard ships are properly installed, operational, and adequate for the safe conduct of aircraft operations. Details for certifications can be found in reference (q), and in TYCOM specific instructions such as reference (r).

- a. Management Structure.
 - (1) The Navy Shipbuilding Program Manager is responsible for budgeting for the certification of ships involved in construction and modernization programs.
 - (2) Naval Air Warfare Center (NAVAIRWARCEN) administers the aviation facilities and equipment certification programs and will establish test programs and procedures for each aviation facility and equipment component.
- b. Certification Procedures.

- (1) Requests. Submit requests for certification directly to NAVAIRWARCEN. The ship's TYCOM will be advised of all requests for equipment and facility certification. Individual ships desiring certification inspections should submit requests via their TYCOM to ensure optimum scheduling of the certification team. Automatic Carrier Landing System certification requests will be submitted per reference (s).
 - (2) Inspection and Testing. The ship's aviation facilities and equipment will be inspected and tested by a team coordinated by a NAVAIRWARCEN representative. Upon completion, the NAVAIRWARCEN team coordinator will, (via message to NAWC, the TYCOM, and other appropriate commands) make a recommendation to either grant, rescind, or withhold certification. This recommendation is to be predicated upon all aviation facility systems or equipment being properly installed, configured, operational, and maintained as prescribed by applicable technical manuals or directives. The message will also specify the ship's current certification status, including deficiencies that preclude full certification for the operational capabilities specified by the CNO.
 - (3) Certification. NAVAIR or NAVAIRWARCEN grants or rescinds certification via message after review of the recommendation from the NAVAIRWARCEN team coordinator and any other information that may be available. The certification message will be addressed to the TYCOM and other appropriate commands. It will specify the ship's present aviation status, including any corrections that must be accomplished to achieve full certification for the operational capabilities specified by the CNO. Certifications granted will remain in effect until such time that major equipment modifications or alterations are accomplished or until the next overhaul (not to exceed two years on Air Capable Ships and Amphibious Assault Ships unless rescinded by NAVAIR or NAVAIRWARCEN).
- c. Technical Publications. A listing of technical publications required for Air Certification can be obtained from the TYCOM. References (b) and (q) list specific certifications required for aviation platforms.

3.3.7 Salvage Inspection (Submarines only).

- a. Purpose. To determine the readiness of submarine rescue and salvage equipment.
- b. Conduct. Submarine Salvage Inspections will be conducted following the direction of Volume IV, Chapter 18 of this manual.

3.3.8 NAVSEA Calibration Activity or Aircraft Intermediate Maintenance Department Calibration Laboratory Initial Certification (Submarines, Aircraft Carriers and Surface Forces, as appropriate).

- a. Purpose. To verify the NAVSEA or NAVAIR Designated Command has in place the necessary documentation, facilities, equipment and trained personnel to support calibrations of Test, Measurement and Diagnostic Equipment (TMDE) as specified in references (t), (u) and (v).

- b. Conduct. Initial certification is conducted by the NAVSEA or NAVAIR Metrology and Calibration (METCAL) Technical Representatives per the requirements of references (v) and (w). NAVSEA METCAL Technical Representatives are the NAVSEA METCAL Quality Manager and NAVSEA METCAL Engineering Agent.
- c. Scheduling. Initial certification should be accomplished after approval of Establishment of Field Calibration Activity Request and prior to or concurrent with delivery. Coordination between the TYCOM METCAL Point of Contact, METCAL Technical Representative, the Navy Shipbuilding's Program Manager and Ship's Calibration Coordinator is required to insure all participants can support the certification date and that all required TMDE is available.
- d. Reports. Reports will be per the requirements of reference (v) and submitted by letter to the applicable TYCOM and Commanding Officer (CO).
- e. Additional information concerning calibration can be found in Volume VI, Chapter 9 of this manual.

3.3.9 National Policy on the Control of Compromising Emanations Inspection.

- a. Reference (x) published the Navy's implementation of the National Policy on the Control of Compromising Emanations (TEMPEST). Reference (y) provides installation criteria for shipboard secure electrical information processing systems.
- b. All ships are considered to be operating under an "acceptable risk" category until such time as they have been certified to meet National Policy. Two types of inspections are conducted to certify ships:
 - (1) Instrumented TEMPEST Survey. The Instrumented TEMPEST Survey is a comprehensive inspection which will only be done on selected ships to certify the ship class.
 - (2) Visual TEMPEST Inspection (VTI). The VTI is a less comprehensive inspection to certify compliance with class and CNO standards. VTIs can be conducted by Regional Maintenance Centers (RMC), industrial activities and Navy Command, Control, and Ocean Surveillance Center Naval In-service Engineering.
- c. A VTI will be accomplished on all new construction ships. This inspection will be scheduled upon the completion of the installation of all Radio Room or secure electrical information processing equipment. In addition, a TEMPEST file needs to be established to include all actions pertaining to installations, modifications or alterations to secure electrical information processing equipment or centers. The specific information to be retained is identified in reference (x).

3.3.10 Diesel Inspection.

- a. Purpose. To validate and certify engine alignment, foundation integrity, engine frame integrity, shimming and stressing requirements, hold down bolts, blower operation and engine performance.
- b. Conduct. Diesel inspections will be conducted per Volume IV, Chapter 4 of this manual.

3.3.11 Habitability Inspection. Navy ships are built to meet habitability standards for berthing areas, messing areas, water closets, laundry and barber facilities as set forth in reference (z). Prior to certifying readiness for In-Service, the ISIC will conduct a Habitability Inspection to determine that the ship is materially ready for the crew to move aboard. The results of the Habitability Inspection will be reported to the TYCOM by message (see Volume I, Chapter 2, Appendix A4 of this manual for sample message).

- a. The Habitability Inspection for submarines is conducted two to four weeks prior to certifying the ship's readiness for In-Service, two to four months prior to this certification for aircraft carriers and just prior to delivery and crew move aboard for all others.
- b. Compartment Surveillance Guide. Appendix D of this chapter has been included to serve as a guide when preparing for the Habitability Inspection and In-Service. Appendix E of this chapter is a sample checklist which can be tailored to any platform.

3.3.12 Requirements for In-Service. Assigned Ship's Force constitutes the only group of personnel authorized to operate naval nuclear powered ships during dockside testing and Sea Trials. Because of this requirement, references (c) and (d) specify that nuclear powered ships in construction are assigned an active status of In-Service prior to commencement of the first Sea Trial (two to four weeks for submarines, two to four months for aircraft carriers) and retains that status until delivery of the ship. To support this event, the contractor is required to make the ship available to the Navy for a period of two days for a Habitability Inspection two to four weeks prior to In-Service. At In-Service, the responsibility for, and custody of, fissionable materials is transferred from the Supervising Authority to the Officer in Charge (OIC) of the ship. The PCO becomes the OIC of the ship and continues in this capacity until Commissioning at which time the OIC becomes the CO.

- a. Responsibilities for Safety of the Ship. Placing the ship In-Service has an impact upon the established responsibilities for safety of the ship.
 - (1) Prior to In-Service, or Delivery for Surface Ships, the industrial activity's responsibilities for the safety of the ship are all inclusive. The Supervising Authority is responsible for monitoring the industrial activity's safety and fire protection program.
 - (2) At In-Service the PCO assumes the duties of OIC and the responsibility for the safety of the ship. Reference (aa) states that the OIC of a ship In-Service has the same responsibilities for the safety of the ship as a CO of a commissioned ship.
- b. Division of Responsibility. In order to establish clear lines of responsibility at In-Service and to eliminate unnecessary duplication of effort, the following will apply:
 - (1) Ship's Force. At In-Service, Ship's Force must have operational control of all ship's systems required to maintain ship safety (i.e., ventilation, firefighting and flood control) in the ship and will stand all shipboard watches, making all security patrols of the ship, the moorings, and the immediate adjacent pier.

- (2) Industrial Activity. The industrial activity continues to perform all contract requirements until delivery. The industrial activity will support Ship's Force in the performance of those requirements assumed by Ship's Force as required.
- (3) Supervising Authority. During preparations for In-Service, conduct liaison between Ship's Force and the industrial activity to ensure the above division of responsibility is understood and agreed to. Verify that a schedule of compartment or space and system turnover is prepared, mutually agreed to, and that a means to identify deficiencies in systems and spaces turned over to Ship's Force is executed.

3.3.13 Degaussing or Deperming. Reference (ab) establishes the provision for checking, operating and maintaining degaussing systems. Reference (ac) contains basic principles and background information concerning degaussing.

- a. Deperming, a method of neutralizing the magnetic field of a ship's hull to minimize permanent magnetism, is required for all new construction ships.
- b. A listing of degaussing or deperming facilities currently available is contained in the Degaussing Folder (NAVSEA Form 8950/1) which is issued to individual ships.
- c. Degaussing or deperming requirements must be accomplished per Volume VI, Chapter 12 of this manual.

3.3.14 Light-Off Assessment (Surface Force Ships only).

- a. Light-Off Assessments (LOA) for boilers, Main Propulsion diesel and gas turbine ships will be conducted before propulsion plant operations at an appropriate time before completion of the fitting out availability. The ISIC, with the assistance of Afloat Training Group Atlantic or Pacific, will determine if ship's training procedures and status support safe plant operations, if management programs are effective, if the propulsion plant is ready for light-off and Ship's Force ability to combat a main space fire.
- b. References (ad) and (ae) address propulsion plant LOAs administered by the ISIC, with the assistance of Afloat Training Group Atlantic or Pacific, and recommend that Ship's Force is to have a minimum of two weeks after completion of industrial activity work in the engineering spaces prior to the LOA. Experience has shown this two-week period is crucial, not only to successful completion of the LOA but to the operation of the ship subsequent to construction. If it appears the two-week interval is in jeopardy, the ship's OIC should discuss ways to speed up the industrial activity work with the Ship Superintendent or this subject should be addressed at Supervising Authority progress conferences.
- c. Completion of industrial activity work should be interpreted as meaning that all known work and testing authorized for accomplishment by other than Ship's Force, and which is necessary to support LOA, is complete, including the removal of associated staging and equipment, reinstallation of access doors and hatches, cleanup and painting. Fuel and lube oil, and feedwater should be on board. Partial or temporary installations do not meet completion criteria except as necessary to support the LOA itself or, in the case of lagging pads, as necessary to allow readjustment upon

light-off to hot settings of regulators, reducers, and relief valves. The systems and spaces involved in LOA vary from ship to ship, but normally include all systems and spaces needed to support the plant(s) being inspected. This would include main and auxiliary machinery spaces, switchboards, diesels, shaft alleys, uptakes, repair lockers, oil laboratories and calibration laboratories for Automatic Boiler Control systems, etc. Confirm spaces subject to inspection with the Afloat Training Group.

- d. Emergent work items or additional discrepancies requiring industrial activity work that become apparent during the pre-LOA period need to be accommodated. Normally these requirements can be worked during night shifts or inclusive weekends. However, any industrial activity work during this period will be permitted only with the consent of the Supervising Authority and the OIC.
- e. This Key Event is largely an exercise in attention to detail and coordination at and between all three levels of maintenance activity (Ship's Force, the Shipbuilder and the Supervising Authority). LOA preparations should begin months before the availability.
- f. First-hand inspections of main and auxiliary machinery spaces are most effective when industrial activity personnel are not on board (weekends and holidays). During these periods, joint inspections by the Engineer Officer with Leading Petty Officers are recommended for every main space. Similar inspections of the auxiliary spaces should be conducted by either the CO or the Executive Officer, along with the Leading Petty Officers of those spaces. Discrepancy lists convert readily to work lists. Night repair teams (primarily composed of duty section personnel) can work discrepancies when industrial activity workers are not in the way.
- g. The Plan of Action and Milestones for a successful LOA must be written in detail, at the minor equipment or minor task level, and the more detailed, the better. It is a dynamic document and requires updating and revision daily as the LOA date approaches.

3.3.15 Shipboard Crane Certification Program (Surface Force Ships and Aircraft Carriers as appropriate). The Shipboard Crane Certification Program established by reference (af) is intended to improve the reliability and safety of all shipboard cranes and is applicable to all cranes mounted on board and cranes assigned to forces afloat (exceptions are listed in reference (af)). Initial crane certification should be accomplished per reference (af).

3.3.16 Marine Gas Turbine Inspection.

- a. Purpose. To validate and certify engine alignment, foundation integrity, engine frame integrity, engine resilient mounts, fluid system cleanliness, intake and uptake cleanliness, compressor and turbine blade integrity, fluids leakage, controls and instrumentation functionality and engine starting and performance.
- b. Conduct. Marine Gas Turbine inspections must be conducted per Volume IV, Chapter 23 of this manual.

3.4 MAINTENANCE AND MATERIAL MANAGEMENT PROGRAM.

3.4.1 Planned Maintenance System.

- a. The installation of the Planned Maintenance System (PMS) on new construction ships should be scheduled to provide maintenance documentation to support the Operational Control Transfer (OCT) of systems and equipment from the shipbuilder to Ship's Force. This early load out of PMS allows Ship's Force personnel to become familiar with the maintenance procedures and facilitates the identification of problems with the Maintenance Requirement Cards (MRC) prior to the ship being placed in operation. Local RMC coordinates the scheduling of PMS installations with the ship's Maintenance and Material Management (3-M) Coordinator. In addition, Naval Sea Logistics Center (NAVSEALOGCEN) is responsible for:
 - (1) Generating a preliminary List of Effective Pages (LOEP) for Phase I validation.
 - (2) Conducting Phase I of the PMS installation.
 - (3) Generating a final LOEP based on Phase I and 3-M Coordinator Feedback.
 - (4) Notifying local RMC of the required PMS documentation (LOEP requirements) and the date the documentation is required to support Phase II PMS installation.
 - (5) Compile Phase II PMS package and forward to ship.
 - (6) Conduct Phase II PMS installation.
 - (7) Effect additional LOEP corrections as a result of Phase II.
 - (8) Outbrief with ship's PCO or OIC concerning status of ship's 3-M program.
- b. PMS installation for nuclear powered ships will be conducted approximately six months prior to initial reactor plant criticality. The installation for Surface Force Ships will be conducted at least three months prior to delivery. Installation of PMS is accomplished in two phases.
 - (1) Phase I. Phase I results in the establishment of a ship's LOEP. Local RMC, utilizing either the LOEP from the previous ship of the class or configuration information provided by Submarine Maintenance Engineering, Planning and Procurement (SUBMEPP) Activity (Submarines only), Supervisor of Shipbuilding Newport News PMS 312C, (Aircraft Carriers) or applicable TYCOM (Surface Force Ships), generates a preliminary LOEP for Ship's Force review. This preliminary LOEP and copies of the listed Maintenance Index Pages (MIP) are delivered to the new construction unit for a review by the ship's 3-M Coordinator, Work Center Supervisors and maintenance personnel. Ship's Force personnel review the documentation, verify MIP to Work Center assignments and approve the preliminary LOEP. Phase I occurs approximately two months prior to Phase II.
 - (2) Phase II. Phase II is the actual load out of PMS documentation, final verification of the LOEP, generation of preliminary schedules for local RMC review and a Ship's Force validation of provided documentation. Depending upon the ship class, quantity of documentation, and Ship's Force preparation, Phase II can last from two to four days. Additionally, maintenance support

organizations such as Naval Surface Warfare Center, Philadelphia Division (NSWCPD), SUBMEPP or Submarine Monitoring, Maintenance and Support Program Office may be participants.

- c. The preparation of preliminary Cycle, Quarterly, or Weekly schedules to support PMS load out prior to the preparation of First Quarter after Overhaul schedules is recommended. As a minimum, the development of a cycle schedule for each work center should be accomplished prior to Phase II PMS installation. As systems or equipment is turned over, Ship's Force maintenance should be scheduled to support. This preliminary quarterly schedule (schedule "A") is utilized to track maintenance prior to the official First Quarter after Overhaul start date. Additional preliminary quarterly schedules identified as "B", "C", etc. may be developed as required.
- d. The "official" PMS start date depends upon several factors: OCT of equipment, available manpower, availability of supporting documentation and the availability of tools, parts, test equipment, and material. The start date is also an arbitrary date arrived at by the ship's 3-M Manager and 3-M Coordinator. A start date should be selected that causes as little disruption and preparation of schedules as possible. Utilization of preliminary schedules as discussed in paragraph 3.4.1.c of this chapter will allow for the flexibility to start PMS "officially" at the beginning of a quarter. However, should this approach not support your situation, the starting of PMS should be indicated on your quarterly schedule with a yellow vertical line, top to bottom, indicating your start date.
- e. Inactive Equipment Maintenance (IEM).
 - (1) IEM, per the direction of reference (ag), may be implemented anytime that an equipment will be out of service for thirty days or longer. The implementation of IEM may be appropriate for those systems or equipment which was transferred to ship's custody early in the construction cycle. Ship's Force should follow the guidance of reference (ag) when implementing.
 - (2) In deciding whether to place equipment in layup, consideration should be given to the training opportunity lost. As long as equipment is in an active status, Ship's Force will be performing PMS. By virtue of accomplishing those maintenance tasks, they will become more familiar with the equipment, its operation and the maintenance procedures. Maintaining equipment in an active status also allows for the identification of procedural problems within the MRCs.

3.4.2 Technical Feedback Reports. Ship's Force should start using Technical Feedback Reports (TFBR) to report problems with PMS as soon as the PMS package is installed. TFBRs should be submitted per the requirements of reference (ag). The TFBR tracking log should be established, even if PMS has not officially started. TFBRs are processed through the ISIC for further processing to RMC. If an ISIC is not available, TFBRs are to be processed through the TYCOM or directly to RMC. New construction ships will provide their TFBRs to the local RMC. The current contact information for the RMCs is listed in Volume VI, Chapter 2, Appendix A of this manual.

3.4.3 Establishment of Current Ship's Maintenance Project. The ship's Current Ship's Maintenance Project (CSMP) will be initialized at delivery. That does not mean however, that significant maintenance related events do not happen during the construction period. In fact, every industrial activity has their own deficiency tracking programs, all of which contain a certain degree of data that should be retained in the ship's CSMP. The problem is that this data resides on industrial activity computers which for the most part do not "talk" to Navy computers. When the ship leaves the industrial activity, it generally leaves without this data. Ship's Force will load into the CSMP any deficiencies not adjudicated at delivery and any historical construction related maintenance data deemed worthy of future retrieval.

3.4.4 Naval Tactical Command Support System. Space & Naval Warfare Systems Center Atlantic (SSC Atlantic) and Space & Naval Warfare Systems Center Pacific (SSC Pacific) are responsible for the software installation, installation training, hardware support and software support. Ship's Force should initiate liaison with the appropriate SSC Atlantic and Pacific team to facilitate installation or installation training. All support requests are initiated via the Navy 311 Help Desk. Additional details describing the SSC Atlantic and Pacific support functions are addressed in Chapter 2, paragraph 2.10.5 of this volume.

3.5 EQUIPMENT LOAD OUT.

3.5.1 Test Equipment. The General Purpose Electronic Test Equipment (GPETE) load out involves personnel from the ship, the Supervising Authority, NAVAIRWARCEN, China Lake, CA. The actual load out will vary dependent upon the platform. Generally, the equipment arrives during the construction phase and is stored by the shipbuilder until load out. Ship's Force, if not requested to do so by the Supervising Authority, should inventory and identify shortages while the GPETE is in storage. Coordinate with TYCOM METCAL Point of Contact to assist in resolving TMDE deficiencies.

3.5.2 Hand Tools and Weight Handling Equipment. Hand tools and weight handling equipment will also be arriving. Inventory of this equipment against Allowance Equipage Lists (AEL) or Allowance Parts Lists (APL) or class specific load lists at the earliest opportunity ensures the required support material is available when maintenance of equipment begins. Weight handling equipment requires certification prior to use and while it may be months before this equipment is required, a recall schedule should be developed to get the equipment certified.

3.6 LOGISTIC SUPPORT.

3.6.1 Technical Manuals and Drawings. Technical manuals and drawings are provided by the Supervising Authority and the Navy. The shipbuilder develops and provides manuals and drawings for all Contractor Furnished Equipment (CFE), including equipment furnished by subcontractors. In the case of Government Furnished Equipment (GFE), the shipbuilder will identify the required manuals to the Navy Publication and Printing Service Manuals Office, Washington, D.C., via the Supervising Authority and the Navy Shipbuilding Program Manager. Navy Publication and Printing Service Manuals Office will deliver the manuals to the shipbuilder. For the first ship of a class, equipment manuals for new design GFE may not be immediately available from the Navy Publication and Printing Service Manuals Office. These manuals will be shipped with the equipment by the vendor. The shipbuilder will provide stowage and custody of this documentation until actual shipboard load out. To ensure all required technical manuals and drawings are received, initial documentation validation should be accomplished on a random sampling basis with emphasis placed on low visibility items such as

power supplies and electronic subsystem manuals. Final validation will occur during load out. Each Navy Shipbuilding Program Manager has assigned an activity with the responsibility for loading out of Technical Manuals and Drawings. Contact the Supervising Authority or the Navy Distance Support Anchor Desk to determine the Navy Shipbuilding Program Manager. The Anchor Desk can be reached at 1-877-418-6824 or by e-mail (help@anchordesk.navy.mil).

- a. Ship Systems Manual (SSM) or Ship Information Book (SIB). The SSM or SIB (SSM for submarines and SIB for surface force ships and aircraft carriers) are the primary descriptive and operating manuals for non-propulsion plant ship systems. They are designed as a class manual and are the basic source of information for locating, describing and operating the following non-propulsion plant systems:

- (1) Mechanical.
- (2) Piping.
- (3) Electrical.
- (4) Electronic.

(These manuals do not provide detailed maintenance information but do reference sources of information on maintaining, testing, troubleshooting, installing and removing these systems and equipment. SSMs and SIBs must be turned over to the ship prior to or at OCT or custody transfer of the system or equipment.)

- b. Engineering Drawings. All engineering drawings belong to one of two groups: ship construction drawings or equipment drawings. Each group is made up of several types of drawings.
 - (1) Ship Construction Drawings. These drawings are developed for building the ship and to reflect installed systems. These drawings are each assigned a seven-digit NAVSEA number and depending upon the platform a three-digit Component Identification Number, Ship Work Breakdown Structure or Expanded Ship Work Breakdown Structure may appear on the drawing. The NAVSEA number identifies the drawing and the Component Identification Number, Ship Work Breakdown Structure or Expanded Ship Work Breakdown Structure assigns the drawing to a group of related drawings. Ship construction drawings are usually “class drawings” however, ships of a class, built at different times, may vary from the original design as improvements are made. This necessitates the development of hull unique construction drawings which have been verified by the shipbuilder and Supervising Authority to reflect an individual ship’s configuration. Systems requiring these Selected Record Drawings (SRD) are identified in the ship’s building specifications.
 - (2) Equipment Drawings. Equipment drawings describe equipment shown on ship construction drawings. They are prepared by industrial activities or equipment manufacturers and may be called vendor drawings. Equipment drawings are rarely assigned NAVSEA or any other government controlled number. These drawings are identified by a Commercial and Government Entity code with a manufacturer’s drawing number.

- c. Drawing Types. Engineering practices have developed common titles that are used on most drawings. By understanding the kind of technical information associated with each title, the drawing needed for a given job can be determined. The following is a list of common drawing types (they may be either equipment or ship construction drawing group types).
- (1) System diagrams - A system diagram shows how a system is designed and describes the relationship among system components. System diagrams do not include physical or dimensional data, but normally refer to other drawings and documents that contain detailed information.
 - (2) Arrangement drawings - Arrangement drawings show locations, dimensions, and other system component information necessary to make correct installation on the ship.
 - (3) Assembly and subassembly drawings - Assembly and subassembly drawings show how individual parts fit together to form a larger component or equipment.
 - (4) Installation drawings - Installation drawings show piping, foundations, ventilation ducting, and other installation details. Installation drawings are used to install systems and equipment in the ship.
 - (5) Outline drawings - Outline drawings show the outward appearance of major system components and contain dimensions and service requirements necessary to install the component.
 - (6) Detail drawings - Detail drawings show dimensions and other manufacturing data for individual parts of components.
 - (7) Electrical drawings - Electrical drawings have a family of titles similar to those of other engineering drawings. Proceeding from the general to the detailed the following are the common electrical drawing types:
 - (a) Electrical system wiring diagrams - Electrical system wiring diagrams show how the overall system is intended to function.
 - (b) Cabling drawings - Cabling drawings describe cable runs in greater detail (similar to piping system diagrams).
 - (c) Wireway drawings - Wireway drawings show how cables are routed from one point to another in the ship (similar to system arrangement drawings).
 - (d) Schematic wiring diagrams - Schematic wiring diagrams describe individual wires inside the cables and how they connect to components.
 - (e) Wiring tables - Wiring tables provide detailed point-to-point data for connecting ship's wiring between components.
- d. Technical Variance Documentation (TVD). Drawings may be amended with supplementary information called TVD. A set of TVD is a collection of documents describing how the as-built configuration of a ship differs from the class drawing design. TVD is not intended to be a revision to a drawing. Liaison Problem and

Solution Sheets, Engineering Notices, Waivers and Deviations are some of the documents that make up TVD.

- e. Format of Onboard Drawings. Very few drawings are provided to ships and shore facilities in hard copy form. Most are on microfilm aperture cards or microfiche, collectively known as microform. For selected platforms, Compact Disc Read Only Memory (CD-ROM) is being utilized. However, some of the more important SRDs are provided in hard copy as well as in other mediums.
- f. Ship Drawing Index (SDI). The SDI lists all drawings for a class of ship. Using the SDI is the only way to determine a drawing's applicability. In addition to drawing applicability, it provides drawing revision applicability and TVD applicability. The SDI will also identify whether a drawing contains Submarine Safety (SUBSAFE) information, Noise Control information or is an SRD.

3.6.2 Unrestricted Operations Maintenance Requirement Cards (Submarines only).

- a. Reference (ah) establishes the maintenance requirements and identifies the responsibilities and actions required to support continued unrestricted submarine operations to design test depth. This program is invoked on all SUBSAFE certified submarines. To support this program, the Navy Shipbuilding Program Manager issues individual manuals containing required, periodic SUBSAFE maintenance actions for each class and in some instances particular ships.
- b. Load out of Unrestricted Operations (URO) MRCs will be accomplished at delivery. The ISIC Quality Assurance Officer will provide to the ship's Quality Assurance Officer the ship's copy of the "URO CD-ROM". SUBMEPP manages the URO program for Navy Shipbuilding Program Managers.
- c. Additional information concerning the URO program can be found in Volume VI, Chapter 25 of this manual.

3.7 OPERATIONAL CONTROL TRANSFER. Operational Control Transfer (OCT), depending on the platform, will happen in one of several ways. The entire ship is turned over at one specific time (ship custody transfer), compartments or spaces are turned over as completed, or systems are turned over as completed without regard to space completion.

- a. The shipbuilder will:
 - (1) Ensure all testing is complete to the most practical extent possible.
 - (2) Provide Ship's Force and the Supervising Authority with a turnover schedule.
 - (3) Conduct a review of all existing work and deficiencies with Ship's Force and the Supervising Authority and determine those items that must be cleared or resolved to support a safe and operational system turnover.
 - (4) Verify system, space or ship ready for turnover.
 - (5) Conduct walk-through with Ship's Force.
 - (6) Execute turnover.
- b. Ship's Force should be prepared to:

- (1) Provide system experts for walk-throughs.
- (2) Address concerns regarding turnover to the Supervising Authority's Ship Manager.
- (3) Ensure all work and deficiencies are cleared or resolved to ship's satisfaction prior to acceptance.
- (4) Assume maintenance responsibility upon receipt. (PMS installation should be scheduled to support OCT).

NOTE: IN SOME INSTANCES, SYSTEMS MAY BE TURNED OVER THAT REQUIRE TEMPORARY SUPPORT SYSTEMS. THE INDUSTRIAL ACTIVITY WILL PROVIDE OPERATING INSTRUCTIONS, DRAWINGS (AS NECESSARY) AND OPERATING INDOCTRINATION TO SHIP'S FORCE. FOLLOWING THE REMOVAL OF TEMPORARY SUPPORT SYSTEMS, SHIP'S FORCE AND THE SHIPBUILDER SHOULD BE PREPARED TO CONDUCT ADDITIONAL WALK-THROUGHS.

3.8 SOUND SILENCING PROGRAMS UNIQUE TO NEW CONSTRUCTION (MHC and SSN only).

- a. Isolation System Survey. During the construction process, the shipbuilder, through Noise Reduction Program requirements, periodically inspects the ship to identify incorrect installation and poor construction techniques relating to the silencing nature of the ship. It is imperative that no sound shorts exist between sound isolated systems or components and the hull structure. Ship's Force can play a major role in the inspection process by identifying deficiencies. This survey is the basis for acoustic measurements to be completed in subsequent surveys. Additional information concerning submarine noise reduction surveys is addressed in Volume VI, Chapter 23 of this manual.
- b. (Submarines only) Topside and Housekeeping Survey. During the construction process, this survey is completed to accomplish two aspects of silencing. First, the topside inspection checks the outside of the pressure hull, especially flow exposed areas, to ensure that tones or rattles are not caused by loose gear, fairing plates, and other discontinuities. Secondly, the housekeeping inspection checks the inside of the pressure hull to ensure sound shorts do not occur as a result of installation of lockers and locker doors, stowage, clogged ventilation ducts or filters, etc. This survey usually identifies problems associated with items not covered by ship design, but those items typically handled by the ship.
- c. Structure borne and Overside Surveys. Upon installation of Noise Critical components and their associated operating systems, structure borne noise surveys are accomplished to check the acoustic nature of the installation. Proper installation of isolation features and proper maintenance of the component during any layup is crucial to the success of this survey. Ship's Force must continually be aware of the installation practices of the shipbuilder and thoroughly inspect the installation for sound shorts and proper alignment prior to system or component turnover. The Overside Survey is accomplished outside the hull (pressure hull for submarines) as an indication of radiated noise. Proper operation of systems and components during this

process is crucial to satisfactory acoustic levels. Reference (ai) provides additional information concerning acoustic surveys for submarines.

APPENDIX A
AREAS TO BE EVALUATED DURING
ARRIVAL ASSISTS

1. As a minimum, the following areas should be evaluated. Duplicate inspection of areas covered by other inspections need not be made.

1.1 Training program which should include instructions in the following:

- a. Industrial activity organization, including management and working levels.
- b. Industrial activity procedures and practices, including:
 - (1) OCT.
 - (2) Tag-Out.
 - (3) Ripout.
 - (4) Industrial Activity Deficiency Correction.
 - (5) General Testing Requirements. Personnel should be familiar with references (aj) and (ak).
 - (6) The industrial activity system for accomplishing planned maintenance on equipment under their cognizance.
- c. General schedule of Key Events and phases of work and testing.
- d. Safety requirements including Ship's Force and industrial activity responsibilities for:
 - (1) Dry Dock Safety.
 - (2) Fire Watches.
 - (3) Watertight Integrity.
 - (4) Reactor Plant Safety.

1.2 Status of administrative preparations, including:

- a. Ship and department organization manuals and directives to ensure administration is following current requirements.
- b. Ship and departmental training plans for implementation during construction.
- c. Procedures for qualifying underway or steaming watchstanders and maintaining proficiency for inport watchstanders, including:
 - (1) Formal provisional qualification procedures.
 - (2) Qualification goals for Key Events, such as undocking or launching, operational testing of ship and propulsion plant systems, steam testing, initial criticality, etc. The goals for Fast Cruise should include a three-section watch capability for the entire crew.
- d. Procedures for maintenance and security of Ship's Force barge or office spaces.
- e. General plan for Ship's Force responsible actions including provisions for:

- (1) Barge, berthing and messing facilities.
- (2) Routine ship and barge watch bill.
- (3) Scheduling of required shore based schools and leave for personnel.
- (4) Ship's Force planned maintenance routines.
- (5) Provisions for shift work during known periods of intensive testing (e.g., Hot Ops, Power Range Testing).
- (6) Target dates for completion of key ship and department directives and procedures.

1.3 Evaluate the capability of the crew to perform industrial activity type evolutions including:

- a. Ability to review industrial activity Work Authorization Forms, major system tag-outs, and test procedures.
- b. Inport and dry dock watchstanding procedures including special inspection requirements for systems in abnormal lineups or partially removed.
- c. Ability to inspect and monitor ship conditions in relation to the special requirements for watertight integrity. This evaluation should include observation of a trim or draft change calculation by the Ship's Safety Council representative.

1.4 Ensure that Ship's Force has a satisfactory understanding of the following:

- a. Relationship with the industrial activity and Supervising Authority including ship's responsibility regarding weekly management meetings.
- b. Relationships with the ISIC and the TYCOM Type Desk, including the ship's responsibility for reporting problem areas.
- c. Relationship with the local Naval Reactors Representative.
- d. Functions and responsibilities of the Joint Test Groups (Nuclear, Hull, Propulsion and Auxiliaries and Weapons) and the Ship's Safety Council.
- e. Control mechanisms for work or tests affecting ship's condition.
- f. Relationship with the TYCOM industrial activity representative (if assigned).

APPENDIX B
AREAS TO BE EVALUATED DURING
MONITORING INSPECTIONS

1. Procedures and administrative steps for provisional watch station qualifications.
2. Department organization manuals.
3. Department instructions and administrative procedures.
4. Ship's instructions and administrative procedures.
5. Equipment logs, operating instructions and casualty procedures.
6. Ship's standard operating procedures and the Ship's Organization and Regulations Manual.
7. Training planned and conducted to support initial qualifications for watchstander proficiency.
8. Watchstanding performance.
9. Spot checks of ship's records and logs in use.
10. Status of Ship's Force work.
11. Status of Ship's Force responsible planned maintenance.
12. Inspect installed equipment for cleanliness and adequate protection from damage.
13. Tag-Out and Work Authorization Logs. Spot-check for compliance following current directives.
14. Inspect ship for hazards.
15. Inspect provisions for casualty control including watertight integrity.
16. Verify that items are drawn from the ship's Coordinated Shipboard Allowance List (COSAL) stock only on an emergency basis and that such issues are well documented with appropriate adjustments to the inventory records.
17. Evaluate general safety practices.
18. Evaluate the response of the Supply System to requisitions in support of Ship's Force work. (Post Shakedown Availability requirement only.)
19. Status of technical manuals, drawings, maintenance documentation, etc., onboard.

16 Oct 2019

APPENDIX C**SAMPLE PRE-REACTOR SAFEGUARD EXAMINATION NOTICE**

(Ship Name)

NOTE 3540

PCU (Ship Name and Hull No.) NOTICE 3540

Subj: PRE-REACTOR SAFEGUARDS EXAMINATION (RSE)

- Encl:
- (1) Schedule of Examination
 - (2) Officer Roster
 - (3) Crew Roster
 - (4) Initial Criticality and Power Range Testing Watchbill
 - (5) Interview Schedule
 - (6) ELT Evolution Schedule
 - (7) Status of Propulsion Plant Systems and Spaces for Initial Criticality

1. Purpose. To issue information pertinent to the conduct of the Pre-RSE.
2. Discussion. A Pre-RSE is scheduled for PCU (Ship Name) on (Date). All examination activities will be conducted in the crew spaces in Building ____ at _____ Shipyard with the exception of observed drills and evolutions which are to be conducted onboard.
3. Inspection Team Conference Rooms. The Wardroom in Building ____ will be available for the private use of the Inspection Team throughout the examination. During the drill periods, the Wardroom aboard (Ship Name) will be available for use by the Inspection Team.
4. Responsibilities.
 - a. The Executive Officer is responsible for the overall coordination and execution of the examination per the schedule contained in enclosure (1). Crewmembers as designated by enclosures (2) and (3) will participate.
 - b. Enclosure (4) provides the intended watchbill for manning watches throughout initial criticality preparations and power range testing.
5. Interviews. All interviews will be conducted following the schedule contained in enclosure (5). Personnel must not discuss the interviews until all interviews are complete.

<u>Interview (Subject Area)</u>	<u>Locations</u>	<u>Groups Interviewed</u>
A Fluids	WEPS or SUP Office	EOOW/EWS and M Div
B Reactor Theory	NAV Office	EOOW/EWS, RC Div, 2 EPCP and 2 SPCP Operators
C Electrical	ENG Office	EOOW/EWS, E Div and RC Div
D CHEM/RADCON	XO Office	EOOW/EWS and all ELTs

16 Oct 2019

E Integrated Plant Ops

CO Office

EOOW

(Ship Name) NOTE 3540

6. Records Review. Record reviews will be conducted in a large classroom. Records will be pre-staged in the logroom or designated area and moved to the classroom just prior to the scheduled review.

7. Meals. The (Name & Location of Mess Facility) will be available for meals. Working lunches in the (Name & Location of Mess Facility) are available.

A.B. SKIPPER

Distribution:

RSE Team (7)

16 Oct 2019

(Ship Name) NOTE 3540

PRE-RSE SCHEDULE OF EXAMINATIONDD/MM

0600 Relieve the watch: Section I.
 0700 RSE Team arrives at PCU (Ship Name).
 0700-0730 Continental Breakfast in the Wardroom.
 0730-0800 Team meets with Commanding Officer, Executive Officer, and Engineer Officer to discuss the examination.
 0730 Long Form Pre-Critical Check off.
 0800-1000 ELT Evolution per enclosure (6).
 1000-1300 Individual interviews per enclosure (5).
 1100-1130 Relieve the watch: Section II.
 1130-1300 Observed evolutions and material inspection. Section II.
 1300-1330 Lunch.
 1330-1530 Individual interviews continued. Sections I, III.
 1330-1530 ELT chemistry and dosimetry observations per enclosure (6).
 1330-1530 Observed evolutions and material inspection continued.
 1500-1530 Relieve the watch: Section III.
 1530-1630 Drill Team brief shipboard in Wardroom.
 1530-1600 Inspection Team meeting in Wardroom (onboard).
 1630-1800 Drills: Section III.
 1800-1830 Relieve the watch: Section I.
 1830-2000 Drills: Section I.

DD/MM

0700 Relieve the watch: Section II.
 0700-0745 Continental Breakfast in the Wardroom.
 0730-0750 ELT Evolution per enclosure (6).
 0800-1000 Individual interviews per enclosure (5).
 0800-0900 EWS Group interview (Location).
 0800-1000 Training Records and Qualification Record review in large classroom.
 0900-1000 EOOW Group interviews.
 1000-1100 Watch Section Seminar. Section I.
 1000-1200 Admin review in large classroom.
 1200-1230 Lunch.
 1230-1630 Critique Preparations.
 1300 Relieve the watch: Section I.
 1630-1730 Critique, large classroom.

SIGNIFICANT ENGINEERING DEPARTMENT ADMINISTRATIVE DEFICIENCIES

Departmental

1. Qualifications. Due to significant shiftwork delays for Post-Core Fill and Hot-Ops, Phase II (Initial Criticality) qualifications are not complete. They will be completed by (Date).
2. CO RSE Interviews/Qualifications. Due to delays in qualifications noted in paragraph (1), these are not complete. The CO has issued a letter (Date) to the Engineering Department detailing the scope and conduct of these interviews. A copy of this letter has been provided to the Senior Member.
3. Change 11 to the qualification instruction is not implemented in all qualification cards (to be issued (Date)).
4. Some Department and EOOW/EWS exams from (Date) do not have a re-exam for exam failures.

Machinery Division

1. Material History
 - a. Hull and tank information recorded on Material History Cards vice Hull Cards.
 - b. No QA records - no QA work performed, no QAIs qualified.

Reactor Controls Division

1. Material History. Rod Control and SVFC Material History has not been updated with data that has just been received from recent Hot Operation Testing.

Electrical Division

1. Superseded cyclic primary PMS schedule has been accidentally destroyed.

Reactor Laboratory

(List deficiencies concerning the Reactor Laboratory.)

Encl (7)

APPENDIX D**IN-SERVICE COMPARTMENT SURVEILLANCE GUIDE
(AIRCRAFT CARRIERS AND SUBMARINES ONLY)**

1. As directed by OPNAVINST 4700.8, approximately two to four weeks for submarines, or two to four months for aircraft carriers, prior to the first Sea Trial, a nuclear ship is to be placed “In-Service”. A prerequisite to placing the ship “In-Service” is satisfactory habitability conditions. There still remains industrial and fitting out work prior to ship completion and readiness for Sea Trials. The accepting authority must take this action into consideration when scheduling the habitability inspection prior to the crew moving on board. The purpose of this inspection is to ascertain whether the spaces within which the crew will live, primarily berthing and messing, are clean, safe, and ready to receive the crew.
2. Spaces that are considered finished and have been inspected by Ship’s Force should be complete to approved plans.
3. The following is a list of attributes which should be checked for completeness during “In-Service” inspections of spaces in the final phases of construction.
 - a. Cable hanger and banding - properly installed.
 - b. Cleanliness - equipment, equipment space, and bilge area free of industrial dirt and debris (there may be areas of light dust).
 - c. System completeness - handwheels, spray shields, etc. are installed.
 - d. Bilges - free of standing oil.
 - e. Compartment free of damage - pipe scars, arc strikes, etc.
 - f. Grounding straps - properly installed.
 - g. Lockers - stowage and shelving solidly attached and operable.
 - h. Compartment lighting - installed and operable.
 - i. Compartments - to be free from construction material and any unsecured objects that may cause a threat to personnel safety.
 - j. Safety chains, ladders, and handrails - installed, fastened in place, and per plan.
 - k. Permanent deck plates - corners bolted down, well fitted, and do not present a tripping hazard (deck plates over bilge areas need not be bolted at this time).
 - l. Welding - all structures complete.
 - m. Preservation paint - neat and complete, with approved color schemes. Basic preservation applied to all structures and equipment (areas of minor rust and bare ferrous metal are acceptable at this time in compartments in the final phases of construction).
 - n. Appearance paint (applied for cosmetics rather than preservation) - applied to routinely visible surfaces and presents a neat appearance.

- o. Accessibility of equipment - convenient for operation, repairs, replacement, maintenance, testing, and visible use.
- p. Store Rooms - complete (installations and painting).
- q. Marking of equipment - valve labels, name plates, instruction and warning plates installed and readable.
- r. Protection of equipment from any damage - as required by plans or planned maintenance guidance (e.g., Scott Foam).
- s. Berthing and Messing arrangement - proper type, accessibility, clearance, seating capacity, etc. per plan.
- t. Joiner work - compartment bulkheads, overhead structures, moldings, and furniture installation complete and presents a neat appearance; Formica will be free of damage.
- u. Condition of deck coverings (Tile and Terrazzo) - free of any damage and major discoloration.
- v. Watertight and non-watertight doors - installation complete, well fitted, with proper operation (ease of opening and closing) and protection devices installed.

APPENDIX E**SAMPLE PRE-COMMISSIONING HABITABILITY
INSPECTION CHECKLIST FOR NEW CONSTRUCTION SHIPS**

Ref: (a) OPNAVINST 4700.8 - Trials, Acceptance, Commissioning, Fitting Out, Shakedown and Post Shakedown Availability of U.S. Naval Ships Undergoing Construction or Conversion

1. A pre-commissioning habitability inspection is required for new construction ships by reference (a). The purpose of the inspection is to verify that living and messing spaces are clean, safe and ready to receive the crew. Upon completion of the inspection, the inspection team leader will provide copies of the deficiency list to the Navy Shipbuilding Program Manager's representative, the Supervising Authority, the Commanding Officer of the ship's pre-commissioning unit and the TYCOM.
2. This assessment is not of the magnitude or detail required by the Supervising Authority to ensure shipbuilder compliance with all building specifications in the contract or by the Board of Inspection and Survey during acceptance trials. This assessment is a qualitative judgment of the ability of the crew to live on board safely and comfortably during the fitting out period. This assessment does not fulfill shipboard system certification requirements or other inspection requirements related to food service sanitation, laundry and dry cleaning, potable water and marine sanitation devices.
3. Areas to be inspected include general safety and sanitation, galley, scullery, messing, dry food storage spaces, refrigerated food storage spaces, berthing spaces, washrooms, showers, heads, lounges and potable water. Only spaces designated to support initial crew move aboard will be inspected. For example, if only the aft galley will be used at move aboard, the forward galley will not be inspected.
4. It is understood that not all equipment, spaces and systems aboard the ship will be completed and transferred to Ship's Force at the time of the assessment. If a space or system to be inspected has not been transferred to the crew, the shipbuilder and Supervising Authority will present the space or system to the inspector. If a space or system has been accepted by the crew, the crew will present the space; cognizant shipbuilder and Supervising Authority personnel should be present. As remaining habitability related spaces or systems are completed after crew move aboard, the Supervising Authority and Ship's Force are responsible for inspecting spaces or systems per the turnover procedure specified in the contract.
5. The pre-commissioning habitability inspection team will evaluate the following areas utilizing the enclosed inspection checklists:

- A. General
- B. Food Service
- C. Living Spaces
- D. Freshwater
- E. Collection, Holding and Transfer (CHT) System (See Note)
- F. Laundry and Dry Cleaning (See Note)

**NOTE: OPERATIONAL LAUNDRY FACILITIES AND WASTE REMOVAL
SYSTEMS ARE CONSIDERED DESIRABLE TO SUPPORT CREW MOVE**

ABOARD. IF REQUESTED BY THE SUPERVISING AUTHORITY, THE INSPECTION TEAM WILL ASSESS THE READINESS OF THESE AREAS DURING THE HABITABILITY INSPECTION. OTHER CREW SUPPORT SPACES, SUCH AS BARBER SHOPS, MAY ALSO BE INCLUDED IN THE INSPECTION IF REQUESTED BY THE SUPERVISING AUTHORITY AND AGREED UPON BY THE INSPECTION TEAM.

**SAMPLE PRE-COMMISSIONING HABITABILITY
INSPECTION CHECK LIST FOR NEW CONSTRUCTION SHIPS (Cont'd)**

Compartment Number: _____ Division: _____

	<u>YES</u>	<u>NO</u>
A. <u>GENERAL</u>		
1. All trash and rubbish removed.		
2. Spaces neat, clean and in a usable condition.		
3. Wireways and other exposed areas that could serve as a path for rats are free of foreign matter.		
4. Electrical wires or plugs are not located so as to be easily tripped over.		
5. Drains open with covers attached.		
6. Ventilation (heating and cooling) and lighting adequate to maintain healthful and comfortable conditions.		
7. Electrical outlets required for habitability are installed and operable.		
8. Spaces are free of major safety discrepancies.		
9. Damage Control equipment installed per ship plan and labeled.		
B. <u>FOOD SERVICE</u>		
1. Facility		
a. Decks sloped properly to allow drainage into deck drains.		
b. Adequate and convenient hand washing facilities with hot and cold running water, dispensed soap and single service disposable towels provided in or adjacent to food service facility (OPNAVINST 5100.19, Section IV CH2, Part D.2).		
c. Drain lines from refrigerators, ventilator hoods and other food service equipment drain through an air gap into a deck drain or funnel with removable grating (NAVSUPINST 4061.11; GEN SPECS sect. 528 (if cited in the contract)).		
d. Signs posted reminding personnel to wash hands and not smoke (NAVMED P-5010, Article 1-6).		
e. Equipment operating and safety instructions prominently posted on or conspicuously near the equipment to which it relates (OPNAVINST 5100.19, Section V).		
f. Steam and hot water lines properly lagged and sheathed (OPNAVINST 5100.19, Enclosure (1), Section III).		
g. Furniture installed in prescribed arrangement and neat, clean and in usable condition.		

Inspector: _____ Date: _____

16 Oct 2019

	<u>YES</u>	<u>NO</u>
h. Racks and bins installed in storerooms.		
2. Equipment		
a. Deck mounted equipment sealed to the deck or elevated on legs that provide at least 8 inches of clearance between the deck and equipment (NAVMED P-5010, Article 1-8).		
b. Decks in food service areas maintained in good repair (NAVMED P-5010, Article 1-15).		
c. All equipment accessible.		
d. Food contact surfaces made of smooth, corrosion resistant, non-toxic (FDA Food, Drug and Cosmetic Act guidelines), stable non-absorbent materials that will not impart odors, color or taste, nor contribute to adulteration of food (NAVMED P-5010, Article 1-8 (3)).		
e. Vegetable peelers, vegetable slicers, can openers, meat slicers, ranges, ovens, grills, deep fat fryers, microwave ovens, toasters, mixing machines, pressure cookers, steam jacketed kettles, steam tables, steam table and salad bar inserts, soft ice cream machines, baking and roasting pans, cooking and serving utensils, food carts, storage racks and shelving properly installed, sanitized and operationally tested (NAVMED P-5010, Article 1-17; NAVSUP P-421, Chapter 2).		
f. On and off toggle switches on food service equipment have toggle switch guards installed to prevent inadvertent operation (OPNAVINST 5100.19, Section V).		
g. Safety interlocks on food preparation equipment maintained in proper operating condition.		
h. Steam Jacketed Kettles.		
(1) Equipped with functional steam safety release valve (GEN SPECS, Section 528, Article C 1905 g(4)) if applicable.		
(2) Chains at least 18 inches long attached to steam safety release valves (GEN SPECS, Section 528, Article C1905 g(4)) if applicable.		
(3) Steam discharge piped down to kettle coamings and directed away from operators feet (GEN SPECS, Section 651 b) if applicable.		
i. Equipment free from salt-water connections except NAVMEDCOM approved garbage grinders or refrigeration units (NAVMED P-5010, Article 1-8 (3)).		
j. Food service spaces and equipment free from cross connections with non-potable liquids or submerged freshwater inlets (NAVMED P-5010, Articles 1-47, 1-61 and 1-8 (3)).		

Inspector: _____ Date: _____

16 Oct 2019

	<u>YES</u>	<u>NO</u>
3. Ventilation		
a. Grease filters and hoods are installed in appropriate places, are free from grease buildup and can be washed at least weekly (NAVMED P-5010, Article 1073; NAVSUPINST 4061.11).		
b. Ventilation grease interceptor hoods (Gaylords) are installed in proper places and are able to be cleaned daily (NAVSUPINST 4061.11).		
c. Spaces adequately ventilated to keep them free of excessive heat, steam, condensation, vapors, smoke or gases.		
d. Vent ducts free of excessive grease and debris which could be a fire hazard.		
4. Lighting		
a. Illumination levels adequate.		
b. Lighting fixtures in food service areas shielded.		
5. Refrigeration		
a. Frost build-up no more than 1/4 of an inch (NAVMED P-5010, Article 1-34).		
b. Refrigeration spaces clean (NAVMED P-5010, Article 1-31).		
c. One portable or built-in air measurement thermometer provided in all refrigerated storage spaces which is accurate to + or - 3°F.		
d. Refrigerated spaces maintained at (NAVMED P-5010, Article 1-34):		
(1) Freezers 0°F or lower.		
(2) Chilled Bulk Storage 33-36°F.		
(3) Thaw Boxes 36-38°F.		
(4) Dairy Products Box 32-34°F.		
(5) Milk Dispenser Cabinet 32-40°F.		
(6) Reach-in Refrigerator 34-40°F.		
e. Interior safety release latches installed and operable in all bulk refrigeration and freezer units (NAVSUPINST 4061.11).		
6. Serving Lines and Salad Bars		
a. Serving line areas clean.		
b. Functional sneeze shields installed on serving lines and salad bars (NAVMED P-5010, Article 1-40).		
c. Serving line inserts heatable to a minimum of 140°F (NAVMED P-5010, Article 1-40).		

Inspector: _____ Date: _____

	<u>YES</u>	<u>NO</u>
d. Salad bars capable of being maintained at 40°F or below (NAVMED P-5010, Article 1-40).		
7. Milk Dispensers and Holding Cabinets		
a. Bulk milk dispenser and holding cabinets capable of being maintained at 32-40°F (NAVMED P-5010, Article 1-21).		
b. Dispenser and holding cabinets have accurate temperature gages or thermometers.		
c. Dairy box capable of being maintained at 33-34°F (NAVMED P-5010, Article 1-34).		
8. Ice Machines		
a. Ice compartment drains are aligned to the deck drains with an air gap (NAVMED P-5010, Article 1-36).		
b. Ice scoop, stored handle up, in a covered and freely draining bracket outside ice storage compartment or inside the ice machine on a bracket above the highest level of the ice (NAVMED P-5010, Article 1-36).		
9. Manual Dishwashing		
a. Utensils move from dirty to clean side of wash area without risk of cross contamination by handling or splashing.		
b. A three-compartment sink installed for washing pots, pans and utensils.		
c. Booster heater installed and functional.		
d. Temperature gage installed or thermometer used to monitor wash and rinse temperatures.		
e. Wash water temperature ranges between 95-125°F.		
f. Final rinse water temperature reaches at least 170°F.		
g. Long-handled dip baskets available.		
10. Dishwashing Machine		
a. Center and end curtains installed.		
b. Temperature gages accurate to + or - 3°F.		
c. Multiple tank conveyor dishwashing machine meets following requirements (NAVMED P-5010, Article 1-9):		
(1) Wash temperature 150-160°F for 7 seconds.		
(2) Rinse temperature 160-180°F for 7 seconds.		
(3) Final rinse temperature 180-195°F with a conveyor speed of 15 feet per minute at 15 - 25 psi or as specified in the machine technical manual.

C. LIVING SPACES

1. Bunks and lockers neat and in usable condition and bunk curtains installed.
2. Plumbing fixtures installed in washrooms, showers and water closets, including showerheads and soap dishes and other necessary items.
3. Prescribed deck covering installed.
4. Adequate furniture and equipment installed to provide reasonable comfort, relaxation and entertainment in lounge areas.
5. Berthing spaces are clean, adequately ventilated and well illuminated (OPNAVINST 9640.1 and NAVMED P-5010, Chapter 2).
6. Drinking fountains are of the jet-angle type with clean bowls, orifices and orifice guards (NAVMED P-5010, Chapter 2).
7. No Category I flammables, combustibles or aerosol containers stored in berthing spaces (NSTM 670).
8. Sinks, urinals and commodes are clean, odor free and operable (NAVMED P-5010, Chapter 2).
9. The temperature of the hot water supplied for personal use of the crew does not exceed 130°F (NSTM 533).
10. Temperatures in berthing and messing spaces do not exceed 80°F (OPNAVINST 9640.1).
11. Temperatures in living, sanitary, messing, medical, control spaces, and normal working stations are not lower than 65°F (OPNAVINST 9640.1).
12. There are separate sleeping quarters for males and females (OPNAVINST 1300.17).

D. FRESHWATER

1. Surveillance
 - a. Halogen residual present (NAVMED P-5010, Chapter 6, Article 52).
 - b. Bacterial analysis obtained from points representative of the entire distribution system (NAVMED P-5010, Chapter 6, Article 53).

Inspector: _____ Date: _____

16 Oct 2019

	<u>YES</u>	<u>NO</u>
<ul style="list-style-type: none"> c. Ice machines tested for bacterial contamination (NAVMED P-5010, Chapter 6, Article 53). d. Potable water processed or obtained from an approved source (NAVMED P-5010, Chapter 6, Article 54). 		
2. Bromination System and Equipment (when applicable)		
<ul style="list-style-type: none"> a. Brominators are properly installed and functional (NAVMED P-5010, Chapter 6, Article 21). b. Warning plate installed next to unit (NSTM Chapter 533, Section 3.1.3.2.3 and Figure 533-5). c. Four foot hose with quick opening valve and vacuum breaker installed nearby (NSTM Chapter 533, Section 3.1.3.2.2). d. Bromine cartridges stored in dry, clean, well-ventilated storeroom (NSTM Chapter 533, Section 3.1.3.2.1). e. Locker or bin has label plate inscribed "Bromine Cartridges" (NSTM Chapter 533, Section 3.1.3.2.1). f. Storage locker has warning plate (NSTM Chapter 533, Section 3.1.3.2.1 and Figure 533-6). 		
3. Chlorination System and Equipment		
<ul style="list-style-type: none"> a. HTH stored in a metal box with three 1/4" holes, painted gray and labeled with red letters on white or black background "HAZARDOUS MATERIAL, CALCIUM HYPOCHLORITE" (OPNAVINST 5100.19, Chapter 23). b. HTH lockers not installed in machinery space, flammable liquids store room, berthing space or oil and water test lab areas (OPNAVINST 5100.19, Chapter 23). 		
4. Sounding Tubes		
<ul style="list-style-type: none"> a. Equipped with screw caps (NAVMED P-5010, Article 6-8.3). b. Screw caps have keeper chains attaching them to sounding tubes (NAVMED P-5010, Article 6-8.3). c. Padlocks secure caps (NSTM, Chapter 533, Section 2.3.6). d. Label plates present (NAVMED P-5010, Article 19.1). e. Caps color coded dark blue (NAVMED P-5010, Article 19.1). 		
5. Potable Water Hoses		
<ul style="list-style-type: none"> a. New hoses disinfected with solution not less than 100 ppm FAC for at least 2 minutes (NSTM, Chapter 533, Section 3.3.3). b. Labeled "Potable Water Only" at 10-foot intervals (NAVMED P-5010, Article 6-19 and NSTM Chapter 533, Section 2.1.3). 		

Inspector: _____ Date: _____

16 Oct 2019

	<u>YES</u>	<u>NO</u>
c. End couplings color coded dark blue (NAVMED P-5010, Article 6-19).		
d. Stored with ends capped or coupled together (NSTM, Chapter 533, Section 2.1.3).		
e. Hoses not used for any other purpose (NAVMED P-5010, Article 6-8 and NSTM Chapter 533, Section 2.1.3).		
6. Potable Water Hose Lockers		
a. Located at least 18 inches off deck and hose disinfecting instructions posted in a conspicuous location in the hose storage areas (NAVMED P-5010, Article 6-8 and NSTM 533, Section 2.1.3).		
b. Padlocked, vermin proof and labeled "Potable Water Hose" (NAVMED P-5010, Article 6-8 and NSTM 533, Section 2.1.3).		
7. Potable Water Receiving Connections		
a. Located at least 18 inches off deck, are not cross connected with any non-potable waterline or system and are turned down to protect against contamination (NAVMED P-5010, Article 6-8 and NSTM 533, Section 2.1.2).		
b. Conspicuously designated by warning plate "Potable Water Only", closed with screw cap when not in use, and cap has keeper chain attached to riser (NAVMED P-5010, Article 6-8 and NSTM 533, Section 2.1.2).		
c. Valve handwheel color-coded dark blue (NSTM 505).		
8. Cross Connections		
a. Potable water connections to the following equipment provided with either an air gap of at least two supply pipe diameters, or a vacuum breaker backflow preventer installed at least six inches above the maximum potable fill level (NSTM, Chapter 533, Sections 2.3.3.1 and 2.3.5.2):		
(1) X-ray and photo developing equipment and associated chemical mixing tanks.		
(2) Laundry washing machines.		
(3) Diesel engine cooling jackets.		
(4) Garbage disposals.		
(5) Gaylord hood automatic wash down system (vacuum breaker installed upstream from detergent injector) (GEN SPECS, Section 532b3) if applicable.		
(6) Steam tables, steam kettles, potato peelers, sinks and other food service equipment.		
(7) Bridge or helicopter control tower window washer tanks.		

Inspector: _____ Date: _____

<p>(8) Other equipment containing non-potable liquids.</p> <p>b. Continuous pressure backflow preventer with intermediate vent provided wherever a permanent or hose connection is made below the overflow level of equipment containing non-potable liquids and a manual or automatic cutout valve is installed downstream of the vacuum breaker (GEN SPECS, Section 532bl) if applicable.</p> <p>c. Reduced pressure backflow preventer provided wherever a permanent or hose connection is made to equipment or a system that could subject the potable water system to a positive pressure such as the chill water expansion tank (GEN SPECS, Section 532bl) if applicable.</p> <p>d. Sink and space faucets with standard 3/4 inch hose threads equipped with a hose connection vacuum breaker (NSTM 533, Section 2.3.5.1).</p> <p>e. Laboratory and shop (photo and battery shop) sinks with non-standard hose connections equipped with either an integral vacuum breaker or hose vacuum breaker (NSTM 533, Section 2.3.5.2).</p> <p>f. Hose connections to the potable water system disconnected when not in use (NSTM 533, Section 2.3.4).</p> <p>g. Label plate having the following wording in one inch high red letters installed in a conspicuous location near each hose connection to the potable water system: "CAUTION DISCONNECT HOSE WHEN NOT IN USE" (NSTM 533, Section 2.3.4).</p> <p>h. Two check valves installed in the potable water supply to carbonated beverage dispensers with no copper, brass or bronze pipe, valves or fittings downstream of check valves (GEN SPECS 532, Section 532bl) if applicable.</p> <p>E. <u>CHT SYSTEM</u></p> <p>1. Personal Hygiene</p> <p>a. Handwashing facilities located in or near pump rooms or comminutor spaces (OPNAVINST 5100.19, C1504.1. (6) and NSTM 593, Section 4.2.14.7).</p> <p>b. Signs posted in CHT spaces near each sewage pump controller requiring hand washing with soap and water prior to leaving area, and prohibiting eating, drinking and smoking while work is in progress (NAVMED P-5010, Chapter 7, Article 19(6) and NSTM 593).</p> <p>2. Pump Room Safety</p>		
Inspector: _____ Date: _____		

	<u>YES</u>	<u>NO</u>
<ul style="list-style-type: none"> a. Slightly negative pressure exhaust ventilation with duct installed 9 inches from the deck in CHT pump rooms (NAVMED P-5010, Chapter 7, Article 22 and NSTM 512). b. Indicator light installed outside compartment indicating ventilation system is operating (NAVMED P-5010, Chapter 7, Article 22). c. Two emergency escape breathing devices (EEBD) placed in each CHT pump room (NAVMED P-5010, Chapter 7, Article 22 and NSTM 593, Section 4.2.21.3.1.4). d. Placard installed at the access of each CHT pump room outlining safety precautions to be followed if a sewage spill occurs (NAVMED P-5010, Chapter 7, Article 22d). e. Warning sign posted near each sewage pump controller: “CAUTION, WHEN HIGH LEVEL ALARM SOUNDS DIVERT UPPER DECK DRAINS OVERBOARD AND CLOSE ISOLATION VALVES ON DRAINS BELOW OVERBOARD DISCHARGE” (GEN SPECS 593a) if applicable. f. Audible and visual alarms for high and low sewage tank levels wired to signal in a continuously manned station and in the CHT pump room (NSTM 593, Section 4.2.5 and GEN SPECS 593a). 		
3. Ship-Shore Transfer		
<ul style="list-style-type: none"> a. Sewage fuser properly labeled (GEN SPECS 593a). b. Label plates at each deck discharge connection with warning against disconnecting sewage hose while it is pressurized, hose hook-up and disconnect procedures and sanitary and health precautions (GEN SPECS 593a) if applicable. 		
4. Surveillance		
<ul style="list-style-type: none"> a. Removable drip pans installed beneath comminutors mounted off deck, or a two to four inch coaming around deck-mounted comminutors to aid in detection of possible leakage (NSTM 593, Section 4.2.14). b. Removable drip pans provided in health sensitive areas under valves and takedown joints to detect possible leakage (NSTM 593, Section 4.2.14). 		
5. General Requirements		
<ul style="list-style-type: none"> a. CHT space capable of containing sewage spills (NSTM 593, Section 4.2.14 and GEN SPECS 593a). b. Proper color-coding of handwheels, valves, fusers and caps (NSTM 505, Table 505-16). c. Functional eductor or sump pump installed in CHT spaces (NSTM 593, Section 4.2.14). 		

Inspector: _____ Date: _____

16 Oct 2019

F. LAUNDRY AND DRY CLEANING

1. Laundry and dry cleaning facilities are operational (OPNAVINST 9640.1).
2. Adequate ventilation available (NAVMED P-5010, Article 2-40.1).
3. Fixtures and appliances connected to prevent backflow or cross-connection with the potable water supply (NAVMED P-5010, Article 2-37.3).
4. Adequate drinking water furnished by drinking fountain (NAVMED P-5010, Article 2-37.4).
5. Rooms or spaces designed, and machines and equipment arranged, so that a separate flow of clean and soiled garments will be maintained through the laundry or cleaning process (NAVMED P-5010, Article 2-37.8).
6. All steam and hot water pipes are insulated with approved (non-asbestos) lagging (NAVMED P-5010, Article 2-40.2).
7. Adequate lighting levels are provided (NAVMED P-5010, Article 2-40.3).
8. Automatic safety devices on all equipment clearly identified and operational (NAVMED P-5010, Article 2-40.7).
9. Guard rails are installed for ironers, compressors, and other dangerous pieces of equipment. Drive shafts, exposed belts, and gears should be enclosed (NAVMED P-5010, Article 2-40.8).

<u>YES</u>	<u>NO</u>

LISTING OF APPENDICES.

- A Specific Dock Trial Test Areas
- B Minimum Fast Cruise Requirements
- C Listing of Tests to Be Performed During Aircraft Carrier Builder's Trials
- D Listing of Tests to Be Performed During Initial Tightness Dive
- E Escort Ship Capabilities for Submarine Sea Trials
- F Listing of Tests to be Performed Prior to, During and Following First Dive to Test Depth

4.1 PURPOSE. To identify the Trials incident to new construction, provide a brief description of each, identify unique support requirements and list specific test areas.

4.2 DOCK TRIALS.

4.2.1 Purpose. To demonstrate that major systems and equipment is ready to support Fast Cruise and Sea Trials.

4.2.2 Conduct. Dock Trials are conducted by Ship's Force per reference (a) for nuclear powered ships and following the Builder's Contract for Surface Force Ships. Normally a period of one day is assigned for integrated Dock Trials, tests and evolutions.

4.2.3 Scheduling. Dock Trials must take place prior to crew certification for submarines, prior to Fast Cruise for aircraft carriers and prior to the first Ship's Force underway period for Surface Force Ships. Dock Trials should be scheduled by mutual agreement between the ship, shipbuilder and the Supervising Authority. Dock Trials should be completed with adequate time allowed to correct deficiencies.

NOTE: THE SHIPBUILDER OR SUPERVISING AUTHORITY MAY DESIRE TO CONDUCT "MACHINERY CHECKOUT" OR SYSTEM CHECKS PRIOR TO DOCK TRIALS IN ORDER TO TEST SHIP SYSTEMS. COMPLETION OF REPAIRS AND MODIFICATIONS ARE NOT REQUIRED EXCEPT FOR SYSTEMS THAT DIRECTLY SUPPORT THE TESTS. IN ORDER TO SUPPORT THESE EVOLUTIONS, CLOSE LIAISON BETWEEN THE PROSPECTIVE COMMANDING OFFICER (PCO) OR OFFICER IN CHARGE (OIC) AND THE SHIPBUILDER OR SUPERVISING AUTHORITY WILL BE REQUIRED.

NOTE: SHIP'S FORCE MUST HAVE OPERATIONAL CONTROL OF ALL SHIP'S SYSTEMS REQUIRED FOR SEA TRIALS PRIOR TO THE CONDUCT OF DOCK TRIALS.

4.2.4 Specific Test Areas. There are specific tests which relate to both system and ship safety which must be conducted in preparation for Fast Cruise and Sea Trials. Appendix A of this chapter lists the minimum alongside tests to be conducted by Ship's Force during Dock Trials. References (b) and (c) provide additional information for aircraft carriers.

4.3 FAST CRUISE.

4.3.1 Purpose. To train the crew and determine the crew's ability to safely take the ship to sea.

4.3.2 Conduct.

- a. Fast Cruise is conducted per references (a), (d), and (e).
- b. In addition to the normal underway routine, the Commanding Officer (CO) or OIC must have all equipment operated to check for proper operation and to determine the state of training of the crew. Fast Cruise must, as far as is practical, simulate at-sea operating conditions. It is to be conducted by Ship's Force and is to be unhampered by construction or repair work or by movement of industrial activity personnel through the ship. Neither the shipbuilder nor the Supervising Authority will schedule any trials, tests or other work on the ship during this period.

- c. The ship will be operated as if underway, simulating the various evolutions required for safe operation. Each underway watch section must be exercised in the evolutions which are normally performed on a section basis. Check out all communication systems during each evolution. Ensure that each is in proper working order and that, where duplicate systems exist, a priority system is designated.
- d. (Submarines only) The Fast Cruise should be a minimum of four days in duration. It should be completed within a five-day period. It should end not more than three days prior to underway trials. Normally, the ship will go to sea for underway trials within a day after completion of Fast Cruise. Should the 72-hour period be exceeded, the Type Commander (TYCOM) may direct an additional Fast Cruise.

4.3.3 Scheduling. Fast Cruise is scheduled immediately prior to underway trials.

Approximately 7 days prior to the first underway trial, the Supervising Authority with the concurrence of the CO or OIC notifies the Navy Shipbuilding Program Manager that the ship is ready to commence Fast Cruise (Volume I, Chapter 2, paragraph 2.4.1.v of this manual refers).

4.3.4 Specific Test Areas. Appendix B of this chapter lists the minimum evolutions and drills to be conducted during Fast Cruise. Additional drills and evolutions are at the discretion of the PCO or OIC. References (b) and (c) provide additional information for aircraft carriers, reference (e) for Surface Force Ships.

4.3.5 Reports (Nuclear Powered Ships only). The Supervising Authority with concurrence from the PCO or OIC reports the successful completion of Fast Cruise using the format of Volume I, Chapter 2, Appendix B7 of this manual (submarines only). Volume I, Chapter 2, paragraph 2.4.1 of this manual refers.

4.4 SEA TRIALS.

4.4.1 General.

- a. The policies, procedures and responsibilities pertaining to Sea Trials for ships undergoing construction are set forth with reference (d). References (a), (f), (g) and (h) augment the basic instruction.
- b. Sea Trials for the various platforms undergoing construction differ in complexity, conduct and scope of Ship's Force involvement. Surface Force Ship platforms such as the DDGs or LHDs go through Builder's Trials (BT) which for the most part are conducted with little to no involvement by Ship's Force. Industrial activity employees take the ship to sea and perform the majority of system or equipment testing. Paragraph 4.4.2 of this chapter provides additional information concerning BTs.
- c. Nuclear powered ships' Sea Trials, however, are much more orientated to Ship's Force involvement. Ship's Force is responsible for taking the ship to sea and operating all shipboard equipment. The terms Alpha Trial, Bravo Trial, Charlie Trial, Combined Trial (CT) and Guarantee Material Inspection (GMI) are most often associated with submarine Sea Trials whereas aircraft carriers undergo BTs prior to Acceptance Trials (AT). Subsequent paragraphs provide amplifying information concerning these trials.
- d. Underway trials following construction, particularly initial submerged and test depth trials for submarines, must be undertaken with the knowledge that the crew lacks

recent experience operating as a unit and that the ship's structure and fittings have not been tested in an at-sea environment. All tests and procedures must be conducted carefully and methodically. In the case of submarines, systems and components designed to operate at test depth should not be exercised at test depth for the sole purpose of proving the design. They should be operated at the deepest depth at which they might be used. Trials and tests which are inherently hazardous should not be conducted. For example, a submarine's hovering system should not be demonstrated at test depth. Reference (i) provides additional information concerning the testing of submarine seawater systems during underway Sea Trials. Sea Trials following new construction are normally conducted with a significant number of "riders". These riders represent Naval Sea Systems Command (NAVSEA), TYCOM, Shipbuilder and Board of Inspection and Survey (INSURV) personnel onboard to observe various tests and trial evolutions. The ship's normal load out of Lithium Hydroxide canisters, Lithium Hydroxide curtains, Emergency Air Breathing (EAB) masks, Submarine Escape Immersion Ensemble suits and Oxygen candles is not sufficient to support this increase in personnel. Therefore, an additional four Lithium Hydroxide canisters, four Lithium Hydroxide curtains, one EAB mask, one Submarine Escape Immersion Ensemble suit (as applicable), and two oxygen candles must be carried for each rider exceeding normal crew manning. Lithium Hydroxide canisters, EABs, Submarine Escape and Surface Survival Personnel Equipment (SESSPE) (as applicable) and Lithium Hydroxide curtains are to be obtained from the industrial activity.

e. The following general conditions apply:

- (1) A shipbuilder generated, Supervising Authority, Navy Shipbuilding Program Manager or TYCOM approved agenda is required for each Sea Trial.
- (2) All trial periods must be organized such that each member of the crew has an opportunity to get six uninterrupted hours of sleep during each 24-hour period. Sea Trial elements which can be accomplished by a normal watch section may be conducted concurrently with crew rest periods.
- (3) Sea Trials should normally be scheduled to allow at least three weeks between CT or AT and the scheduled delivery date.
- (4) The prerequisites for aircraft carrier and submarine Sea Trials are a Pre-Critical Reactor Safeguard Examination (RSE), Crew Certification, Dock Trials and Fast Cruise.
- (5) Each submarine watch section must be provided with approximately two hours' experience submerged at moderate speeds prior to the deep dive or full power run.
- (6) Critical operation of reactors while naval nuclear powered ships are in a Naval or private industrial activity will be governed by reference (j). Prior to delivery, permission to conduct critical reactor plant operations must be obtained by the Supervising Authority from NAVSEA Nuclear Propulsion Directorate (08).
- (7) During inspections, deficiencies should be limited to those items for which a correction is mandatory to ensure safe operation during Sea Trials.

- (8) At the start of Fast Cruise the ship should be ready in all respects for the commencement of Sea Trials with the exception of the additional training the crew will receive during Fast Cruise.
- (9) Inspectors must determine that all work and testing necessary to support Sea Trials has been completed or identified for completion prior to commencement of Fast Cruise including the following:
 - (a) All ship systems which affect safe operation during Sea Trials must be operable.
 - (b) All work necessary for safe operation of the ship during Sea Trials has been satisfactorily completed and tested. Included must be a check for any special configuration or installations ensuring that they have been authorized by the proper authority (NAVSEA and TYCOM), that their impact has been fully assessed and that the Sea Trial agenda addresses these impacts or limitations.
- (10) NAVSEA and the Supervising Authority are expected to properly discharge their responsibilities for quality assurance and control of authorized industrial work (e.g., it is not necessary for the Immediate Superior in Command (ISIC) inspections to inspect the quality of the pressure hull radiographs or other nondestructive test records of the industrial activity).
- (11) Following completion of the required training and material readiness certification, the CO or OIC must keep the ISIC fully informed of any changes in personnel, training or material status which could affect the validity of certification. Prompt notification is required to permit revision of Operational Orders and services required.
- (12) (Submarines only) Prior to getting underway for Sea Trials, Shipyard, Ship's Force and Type Commander must jointly agree that the required seven day supply of Oxygen (O₂) and seven day supply of Carbon Dioxide (CO₂) removal capacity will be available in each compartment, based upon the number of expected occupants of that compartment, independent of the supply and removal capacity in the other compartment(s).
- (13) Sea Trial Situation Reports (SITREP) (Submarines only). Ships executing Sea Trials associated with a new construction program must submit daily SITREPs using the message format in Volume II, Part I, Chapter 3, Appendix BM of this manual following the SITREP guidelines contained in Volume II, Part I, Chapter 3, paragraph 3.6.8.3.9 of this manual.

4.4.2 Builder's Trials. BTs conducted by a private shipbuilder are normally comprised of a Builder's Dock Trial (BDT) and one or more Builder's Sea Trials (BST). Some DDGs are currently undergoing three BSTs. The first BST, referred to as an Alpha Trial by the DDG community, is primarily a propulsion plant trial. The second BST, referred to as a Bravo Trial, primarily covers Combat System evolutions and the third BST is the AT. While the actual content of BSTs will be dependent upon the platform, the primary purpose is still the same; the validation of ship's equipment and systems in preparation for Charlie Trials or AT. Appendix C of this chapter provides a sample listing of tests to be performed during an aircraft carrier's BT.

4.4.3 Alpha Sea Trial (Submarines only). A submarine's first underway period primarily conducted for propulsion plant testing and the initial tightness dive. (First ship of each class normally conducts a dive to Test Depth during this trial).

- a. Testing. The tests and evolutions to be carried out while on the surface en-route to the test dive area, just prior to the initial dive and during the initial dive are identified in Appendix D of this chapter.
- b. Restrictions. The following rules apply to the conduct of trials and tests associated with ship construction, Navy Shipbuilding Program Manager sponsored Trials and Tests or any other situation where the ship is requested to conduct trials or tests:
 - (1) No test or trial event will be conducted that requires crew intervention to avoid exceeding normal operating limits. Trial agendas will be based on the expectation that the ship will remain within normal operating limits of the Submerged Operating Envelope (SOE) and at angles less than 30 degrees.
 - (2) The trial director must be prepared to project whether the next event might exceed normal operating limits based on the empirical results of the previous event. A run that is predicted to exceed normal operating limits should be deleted along with the more demanding runs of that sequence.
 - (3) Any run which will result in exceeding normal limits of the SOE or 30 degree angles but which is essential to provide adequate test data must be specifically approved by the TYCOM. The test or trial sponsor will obtain this permission.
 - (4) A violation of the SOE limit or exceeding a 30-degree angle, not previously approved, must be reported by unit Situation Report (SITREP). No further testing or trials will be conducted until TYCOM concurrence is obtained.
 - (5) Specific written approval by the TYCOM is not required to operate outside the upper limits of the SOE, i.e., shallow and fast, while conducting the following operations during Sea Trials or tests following an agenda approved by the ISIC, Navy Shipbuilding Program Manager or higher authority:
 - (a) Conducting full power runs or cavitation curves.
 - (b) Navy Shipbuilding Program Manager sponsored acoustic trials following an approved acoustic trial agenda.
 - (6) The first underway will be limited in scope. The initial tightness dive will be a deliberate, planned, step-by-step evolution as defined in Appendix D of this chapter, using conservative angles and moderate speed. The maximum water depth for this dive must be 400 feet, as prescribed by Appendix D of this chapter.
- c. Escort. The submarine must be accompanied by an escort properly equipped with sonar communication equipment. The escort ship must have the capabilities identified in Appendix E of this chapter. Specifically, an escort is required for:

NOTE: FOR ALPHA SEA TRIAL, A BACK-UP ESCORT WILL BE ASSIGNED AND READY IN CASE OF FAILURE OF THE PRIMARY ESCORT.

- (a) Initial tightness dive after construction and the first dive to any deeper depth.
- (b) Initial deep dive after construction.
- (c) Emergency Main Ballast Tank (EMBT) blow test under the following conditions:
 - 1 Blow for first time from each depth. Trial agenda will specify depths.
 - 2 Any blow from greater than 400 feet. Rationale is to give submarine added protection to prevent interference from any surface contact.

NOTE: IN ALL CASES, HULL STRENGTH, TIGHTNESS AND VALVE OPERATIONS WILL HAVE BEEN TESTED TO A DEPTH EQUAL TO OR GREATER THAN EMBT BLOW DEPTH BEFORE TESTING EMBT BLOW SYSTEM.

- (d) The second and subsequent underway periods if major hull and system work has been accomplished since the last Sea Trial.
- (2) Alternate Escort. If a surface ship meeting the requirements of Appendix E of this chapter is not available, then a submarine with the required capabilities will be assigned. In any event, each situation must be examined on a case basis and approval by the TYCOM must be obtained to conduct the initial tightness or test depth dives.
- (3) When an escort ship is other than a submarine, an officer qualified in submarines (Gold Dolphins) must be embarked during the escort duty.
- (4) Assignment of Submarine Rescue Diving Recompression System (SRDRS). A SRDRS consisting of a designated SRDRS support ship, will be placed in a modified alert status at the beginning of those Sea Trials requiring an escort for:
 - (a) Ship's initial tightness and deep dive events.
 - (b) Subsequent Sea Trials until the completion of the initial dive to design test depth.
 - (c) If, in the TYCOM's judgement, a Sea Trial requires an escort due to major hull cuts, etc., the TYCOM must obtain Navy Shipbuilding Program Manager concurrence when determining the need for escort and SRDRS services. The ship conducting Sea Trials will notify Commander, Submarine Development Squadron Five and Commander Naval Sea Systems Command (COMNAVSEASYSCOM) when SRDRS is no longer required due to completion of the events necessitating the alert status or due to delays in completing Sea Trials.

- (d) The cognizant shipyard activity and Commander Submarine Force Atlantic or Commander Submarine Force Pacific must notify COMNAVSEASYSCOM and Commander, Submarine Development Squadron Five 30 Days prior to the SRDRS need date. All changes in the requested modified alert date will be immediately identified to COMNAVSEASYSCOM and Commander, Submarine Development Squadron Five. Sample messages in Volume II, Part I, chapter 3, Appendices BN and CQ of this manual.
 - (e) Commander Submarine Force Atlantic or Commander Submarine Force Pacific must identify the SRDRS support ship in the tasking message. The TYCOM must ensure Airport and Seaport verification checks are current or accomplished to support SRDRS activation.
 - (f) The SRDRS is not required to be placed in a modified alert status for those Sea Trials requiring an escort solely for the accomplishment of an EMBT blow from depths greater than 400 feet.
- d. Reporting Criteria. The Supervising Authority is responsible for reporting the satisfactory completion of Alpha Sea Trial to the Navy Shipbuilding Program Manager. Volume I, Chapter 2, Appendix C1 of this manual refers.

4.4.4 Bravo Sea Trial (Submarines only). Bravo Sea Trial is generally the submarine's second underway period and first dive to Test Depth.

NOTE: THE FIRST SHIP OF EACH CLASS NORMALLY CONDUCTS ITS FIRST DIVE TO TEST DEPTH DURING ALPHA TRIAL.

- a. Testing.
 - (1) The tests and evolutions to be carried out following the initial tightness dive and prior to the deep dive, during the deep dive, submerged following the deep dive, and on the surface following the deep dive, are identified with Appendix F of this chapter.
 - (2) Shutter Stall Speed. Run ahead at maximum speed allowed by SOE. Operate torpedo tube shutters and ejection pump shutters. If shutters do not open, gradually reduce speed until shutters open. This establishes "stall speed" for each shutter.
- b. Restrictions. As specified in paragraph 4.4.3.b of this chapter.
- c. Escort. As specified in paragraph 4.4.3.c of this chapter.
- d. Reporting Criteria. With the exception of reporting the deficiencies during the trial, reporting of the completion of Bravo Trial is not required. Daily SITREPs to the Supervising Authority and the Supervising Authority's message concerning the completion of all trials (Volume I, Chapter 2, Appendix D1 of this manual refers) satisfies the reporting requirements.

4.4.5 Charlie Sea Trial (Submarines only). Charlie Sea Trials are conducted prior to CT. Bravo Trial retest items are also included in this trial. The standard restrictions and escort requirements as specified per paragraphs 4.4.3.b and 4.4.3.c of this chapter apply.

4.4.6 Acoustic Trials (Platform and Radiated) (Submarines only). New construction acoustic trials, performed by the shipbuilder, are accomplished to determine, under various conditions of operation, the radiated and platform acoustic signatures of the submarine, the controlling noise offenders including those which are speed dependent, and whether or not the submarine meets its underway noise objectives. Proper operation of systems and components and the use of proper personnel quieting techniques is vital for successful acoustic measurements. Acoustic trials performed by Naval Surface Warfare Center Carderock Division (NAVSURFWARCEN CD) are used to establish the ship's baseline signature for normal operating conditions by performing independent measurements under preset conditions of speed, depth, aspect angle, and machinery line up. It is imperative that Ship's Force understand that this trial will determine its future operating conditions during various "patrol quiet" conditions.

4.4.7 Shock Trials. Shock Trials are designed to test the survivability characteristics of a ship under deliberate and controlled conditions. Normally scheduled for the first ship of a class just before Post Shakedown Availability (PSA); Shock Trials satisfy Congressionally mandated Live Fire Test and Evaluation requirements. Navy Shipbuilding Program Managers are responsible for the development of a management plan for the conduct of Shock Trials.

4.4.8 Acceptance Trials, Combined Trials, Final Contract Trials and Guarantee Material Inspection.

- a. Reference (d) tasks the INSURV with conducting an independent verification of the readiness of a newly constructed ship prior to its acceptance into Naval Service. Reference (k) states that the procedures for conducting trials and inspections must be specified by the President, INSURV. References (f) and (h) provide those procedures for submarines and surface ships respectively. References (f) and (h) are augmented by reference (a) in their application to nuclear powered ships. References (l) and (m) provide detailed information concerning the documentation of deficiencies. In addition, each Supervising Authority, TYCOM, the Naval Ships' Technical Manual (NSTM) and reference (n) all provide additional information concerning AT, CT, GMI and Final Contract Trials (FCT). TYCOM directives are identified in the applicable TYCOM 5215 Notice.
- b. Prior to the acceptance and delivery of a new ship, all machinery, electronics and weapons systems installed must be subjected to ATs to determine that the installations are capable of meeting performance specifications. Depending upon the platform type, these trials are referred to as either ATs, or CTs. This independent verification of the ship's readiness for acceptance and recommendation for fleet introduction, as specified in reference (d), is the responsibility of the President, INSURV.
- c. These trials are generally two part evolutions. There is an underway portion during which time the INSURV observes the performance of the ship and all equipment and systems. Upon completion of the underway portion, trial board designated equipment and associated components are disassembled for post-trial examination (the open and inspect evolution). References (f) and (h) provide amplifying information concerning this issue.
- d. CTs, usually the norm for submarines, are a combination of ATs and FCTs. The AT for non-submarine platforms results in a conditional acceptance primarily based on the

fact that the ship still requires fitting out. Submarines go through the fitting out period during the construction phase which produces a completed ready for sea vessel at delivery. The standard restrictions and escort requirements as specified per paragraphs 4.4.3.b and 4.4.3.c of this chapter apply.

- e. FCTs are conducted after the ship has been fully equipped, armed, made complete and ready for service. These trials are normally held just prior to PSA and prior to the end of the guarantee period. Their objective is to determine if there are any defects, failures or deterioration, other than that due to normal wear and tear, directly related to shipbuilder fault which have not been corrected or resolved. The scope of FCTs is essentially the same as AT.
- f. A GMI is a material inspection, conducted on submarines prior to PSA by an INSURV per reference (f).
- g. INSURV reports from previous ships as held by the Supervising Authority provide familiarity with problems and corrective actions already taken. In addition, these reports provide a baseline for conducting shipboard inspections and generating inputs for the PCO's monthly progress reports.

APPENDIX A
SPECIFIC DOCK TRIAL TEST AREAS

Test Area	Class of Ship			
	MSC Ships	CVN	Surface Force Ships	SSN
1. Check all sound powered and interior communications circuits between all stations.	X	X	X	X
2. Test all alarms, i.e., General Quarters, Collision, etc.	X	X	X	X
3. Test each indication on Ballast Control Panel.				X
4. Test whistle.	X	X	X	X
5. Check emergency lights.	X	X	X	X
6. Operate all hydraulic plants using each installed pump.	X	X	X	X
7. Conduct a complete air charge using only ship's compressors.				X
8. Conduct a normal battery charge using only ship's power and equipment.				X
9. Conduct low-pressure blow of all MBTs. Thereafter conduct dockside operation portion of URO MRC 022.				X
10. Flood sanitary tanks and then blow or pump them.				X
11. Operate each main vent valve in hand and power. Following operation, with vent valves shut, conduct a controlled removal of MBT vent covers, one at a time, to check MBT vents for leaks.				X
12. Operate the outboard induction valve in hand and power.				X
13. Operate the diesel engine exhaust valve in hand and power.				X
14. Operate inboard induction valves.				X

Test Area	Class of Ship			
	MSC Ships	CVN	Surface Force Ships	SSN
15. Raise, train and lower periscopes, snorkel, radar and antenna masts and fairings.				X
16. Test operation of all radio transmitters and receivers using all antennas.	X	X	X	X
17. Operate all radar equipment at rated conditions.	X	X	X	X
18. Operate all sonar equipment at rated conditions.			X	X
19. Take and plot fixes using all navigation equipment and each antenna.	X	X	X	X
20. Test operation of drain pump(s) from all operating locations using each bilge suction.				X
21. Test operation of trim, ballast control and list control system and pump by pumping to and from each tank and by pumping to and from sea (from all operating locations).	X	X	X	X
22. Calculate and enter the diving trim compensation.				X
23. Test operation of portable submersible pump from each installed outlet.	X	X	X	X
24. Fire water slugs from torpedo room.				X
25. Fire water slugs from weapons launch console.				X
26. Test magazine and pyro flooding system.	X	X	X	X
27. Operate each lube oil system, including pumps, controllers, purifiers and indicators.	X	X	X	X
28. Energize the Navigation System and gyrocompass; determine that they settle out; take azimuth; check all repeaters.	X	X	X	X
29. Check fresh water system, have water samples analyzed.	X	X	X	X

Test Area	Class of Ship			
	MSC Ships	CVN	Surface Force Ships	SSN
30. Test capstans.	X	X	X	X
31. Test bow and stern planes in all modes following applicable class operating procedures.				X
32. Operate steering system. Test normal and emergency rudder angle indicators, if applicable.	X	X	X	X
33. Check alignment of periscopes, TBTs and all bearing and range repeaters.				X
34. Test engine order telegraphs.	X	X	X	X
35. Test ABTs.	X	X	X	X
36. Operate each watertight door and hatch.	X	X	X	X
37. Check operation of escape hatch or scuttle fittings.	X	X	X	X
38. Operate each bulkhead flapper and each inter-compartment air salvage valve.				X
39. Operate Signal Ejector by impulse and by hand. Demonstrate satisfactory operation of the Signal Ejector both locally and remotely by firing water slugs and operating the hand rammer through one complete cycle.				X
40. Turn on and check navigation and running lights for brightness and proper lenses (to be done at night). Includes Flight Deck lighting.	X	X	X	X
41. Check air conditioning, chill water, ventilation, and heating systems.	X	X	X	X
42. Check underwater log.	X	X	X	X
43. Check operation of all 400 cycle generating equipment.	X	X	X	X

Test Area	Class of Ship			
	MSC Ships	CVN	Surface Force Ships	SSN
44. Check out all galley, messing, and ship's service equipment.	X	X	X	X
45. Check fathometer.	X	X	X	X
46. Check bilge flooding alarms.	X	X	X	X
47. Check dummy log.	X	X	X	X
48. Check all HP and LP air system.	X	X	X	X
49. Operate distilling units.	X	X	X	X
50. Check out anchor windlass and brake operation.	X	X	X	X
51. Check battery water system.				X
52. Check out atmosphere monitoring equipment, both installed and portable.		X		X
53. Operate oxygen generator, CO ₂ scrubbers, CO burners, and emergency air breathing system.				X
54. If possible, lower, train (if applicable), operate and raise secondary propulsion motor(s).				X
55. Ensure that all required planned maintenance to ship depth detectors is complete.				X
56. Operate the diesel.	X	X	X	X
57. Engage and disengage the clutch.			X	X
58. Test Main Engines; Submarines jack main engines.	X	X	X	X
59. Ensure 7-day supply of oxygen onboard.				X
60. Check out all TV monitoring systems.	X	X	X	X
61. Check out SASS upper and lower trolley cars.		X		

Test Area	Class of Ship			
	MSC Ships	CVN	Surface Force Ships	SSN
62. Check out small arms lockers and security devices.	X	X	X	X
63. Check out all IFF equipment.	X	X	X	X
64. Check out degaussing equipment (where applicable).	X	X	X	X
65. Check out Hangar Bay doors.	X	X	X	
66. Check out damage control equipment.	X	X	X	X
67. Inspect and operate oxygen and nitrogen systems.	X	X	X	X
68. Check out all tank level indicating systems.	X	X	X	X
69. Check out Flight Deck communications.	X	X	X	
70. Check out meteorological equipment.	X	X	X	
71. Check out graphics preparation and display equipment.	X	X	X	
72. Check out Weapon Systems. Check to include loading of dummy missile at each launch station, transmission of fire control signals and operation of launchers in all modes.	X	X	X	X
73. Operate all electrical and mechanical medical equipment.	X	X	X	X
74. Inspect all compartments for proper stowage and cleanliness.	X	X	X	X
75. Inspect boiler and diesel fuel oil systems.	X	X	X	X
76. Test and inspect jet blast deflectors.		X		
77. Test and inspect JP-5 fuel systems.	X	X	X	
78. Test and inspect all aircraft starting and handling equipment.	X	X	X	

Test Area	Class of Ship			
	MSC Ships	CVN	Surface Force Ships	SSN
79. Test and inspect aircraft landing equipment including landing signal officer equipment, arresting gear, crash barriers, as applicable.	X	X	X	
80. Operate all RAS equipment.	X	X	X	
81. Inspect paint lockers and sprinkling systems.	X	X	X	
82. Operate all accommodation ladders.	X	X	X	
83. Operate all conveyors.	X	X	X	
84. Launch and raise motor whaleboat.	X	X	X	
85. Operate all boats.	X	X	X	
86. Test and inspect lifeboat, life raft stowage and launch equipment.	X	X	X	
87. Test and inspect all elevators in all modes of operation.	X	X	X	
88. Test and inspect all firefighting systems.	X	X	X	X
89. Test and inspect refrigeration systems.	X	X	X	X
90. Test and inspect all seawater cooling systems.	X	X	X	X
91. Operate stern gate doors.			X	
92. Operate boat handling cranes.			X	
93. Conduct URO MRC 029.				X
94. Test and inspect Torpedo Handling System.				X
95. Test and inspect aircraft elevators.		X	X	
96. Test and inspect aircraft launching equipment including catapults.		X		

16 Oct 2019

Test Area	Class of Ship			
	MSC Ships	CVN	Surface Force Ships	SSN
97. Record megger readings of all antennas where meggering is permissible. (Note: This evolution is not required for PSA unless antennas or hull fittings are specifically worked during PSA.)				X

APPENDIX B
MINIMUM FAST CRUISE REQUIREMENTS

Test Area	Class of Ship			
	MSC Ships	CVN	Surface Force Ships	SSN
1. Make all preparations for getting underway.	X	X	X	X
2. Station the maneuvering watch, sea and anchor detail.	X	X	X	X
3. Station the normal underway watch (section watches).	X	X	X	X
4. Simulate getting underway and return to port. (Day and Night)	X	X	X	X
5. Walk through all major Sea Trial evolutions.	X	X	X	X
6. Walk through the cycling of hull and back-up valves to be tested during the deep dive.				X
7. Exercise the reduced visibility detail.	X	X	X	X
8. Spot check storage and availability of spare parts and tools. Verify adequacy of stores and provisions.	X	X	X	X
9. Rig for dive and rig for surface.				X
10. Simulate diving and surfacing.				X
11. Rig for deep submergence.				X
12. Conduct the following emergency drills:				
a. Fire	X	X	X	X
b. Collision	X	X	X	X
c. Flooding	X	X	X	X
d. Toxic Gas				X
e. Abandon Ship	X	X	X	X
f. Man Overboard	X	X	X	X

Test Area	Class of Ship			
	MSC Ships	CVN	Surface Force Ships	SSN
g. Submarine Escape				X
h. Loss of AC Power	X	X	X	X
i. Emergency Ventilation				X
j. Loss of Air Conditioning or ACW		X		X
k. Loss of Lighting	X	X	X	X
l. Loss of Interior Communications	X	X	X	X
m. Loss of Steering	X	X	X	X
n. Engine Casualty Control	X	X	X	X
o. Flight deck and hangar deck crash drills, fire drills, barricade drills, and MOVLAS drills		X		
13. Set General Quarters. Exercise the crew at battle stations.	X	X	X	X
14. Conduct communication and ECM drills.	X	X	X	X
15. Conduct an air charge to all air banks.				X
16. Bleed oxygen and ventilate ship. Ensure 7-day supply of oxygen onboard.				X
17. Anchor (walk-through).	X	X	X	X
18. Exercise damage control party with emergency and damage control equipment.	X	X	X	X
19. Operate atmosphere control equipment and take air samples.				X
20. Perform the minimum Fast Cruise requirements for nuclear propulsion plants contained in reference (o).		X		X
21. Operate air conditioning plants to demonstrate ability to carry the maximum existing ship's air conditioning load or 100% capacity.	X	X	X	X

Test Area	Class of Ship			
	MSC Ships	CVN	Surface Force Ships	SSN
22. Operate fresh water and seawater heat exchangers at sufficient load to demonstrate proper operation.				X
23. Simulate underway conditions, performing all evolutions and operating all equipment.	X	X	X	X
24. Simulate boat transfer at sea.	X		X	
25. Conduct competitive and non-competitive drills and exercises such as aircraft tracking and aircraft control.	X	X	X	
26. Light-off main propulsion plant, shift to ship's power and run all engines with steam for a short period of time.	X	X	X	X
27. Man Towing, Salvage and Fueling Stations.	X	X	X	
28. Set Flight Quarters as applicable.	X	X	X	

APPENDIX C
LISTING OF TESTS TO BE PERFORMED DURING
AIRCRAFT CARRIER BUILDER'S TRIALS

1. The following systems and components will be tested during Aircraft Carrier Builder's Trials:

a. Auxiliaries

Emergency Diesel Generators
O₂N₂ Plants (Forward and Aft)
Steering Gears
Motor Driven Fire Pumps and Eductors
Anchor Windlass
Stores Conveyors
Hot Water Heaters
HP Air Compressors
Ship Service and Control Air Compressors
Air Filter Cleaning
Air Conditioning and Refrigeration Systems
Turbine Generator and Diesel Generator (Load Transfer Operations)

b. Aviation

Aircraft Elevators 1, 2, 3, 4
Aircraft Starting and Servicing Power
Boat and Airplane Crane
Flight Deck Night Lighting
Arresting Gear
Aircraft Barricade
Jet Engine Test Facility
Elevator Doors and Hangar Bay Division Doors
Landing Officer's Console and Windscreen
Visual Landing Aid
Catapults (No Load Launching)
Jet Blast Deflectors
Integrated Catapult Control Stations
Hangar Bay Darken Ship Switches
JP-5 Filling, Transfer and Service System

c. Combat Systems

Upper Stage Weapons Elevators
Flight Deck Hatches
Magazine Sprinkling and Alarms
Lower Stage Weapons Elevator 7 Hatches
Inspect Masts

d. Damage Control

Halon Fire Protection System

Machinery Space and Pump Rooms 2 and 3 AFFF

Diesel Driven Portable Pumps

Aqueous Potassium Carbonate System

Miscellaneous Sprinkling Systems

Electrical Driven Portable Pumps

List Control Pumps

Magazine Sprinkling and Alarms Systems

CO₂ Hose Reels

Hydraulically Operated Valves

Hangar Bay and Weapons Elevator AFFF

Turbine Driven Fire Pumps

e. Deck

Ship's Boats

Boat and Airplane Crane

Anchor Windlass

Sliding Padeyes

Replenishing-At-Sea Winches

Trash Burners

Mooring and Warping Capstans

Replenishing-At-Sea Support Legs

f. Electrical

Ship Service and Coolant Turbine Generators

Aircraft Elevators 1, 2, 3, 4

Emergency Diesel Generators

Aircraft Starting and Servicing Power

Steering Gear

Gyro-Compass Standby Power Supply

Anchor Windlass

Miscellaneous Alarms (Non-Navigational)

IC CKTs: BZ or JB, CX, DA, 1DL, 3DL, 4FD, 14FD

Degaussing System

General, Chemical and Collision Alarms From All Stations

Flight Deck Crash Alarms

Flight Deck Night Lighting

Navigation Lights

Hangar Bay Darken Ship Switches:

Turbine Generator and Diesel Generator Load Transfer Operations

Mooring and Warping Capstans

400 HZ MG Set Parallel Operations

NOTE: ALL SCUPPERS MUST BE OPERATED FOR CHT CERTIFICATION

g. Environmental Protection

Collection, Holding and Transfer (CHT) Dockside Pumping

CHT SYS - Switch To Holding Mode

CHT SYS - Switch To At-Sea Mode

CHT Valve Rooms 3 Through 9 Valve Operations (4th Deck)

- h. Main Propulsion
 - Shaft Seals Including Inflatable Seals
- i. Medical and Dental
 - Brominators
- j. Navigation
 - Steering Gear
 - Engine Order Telegraph
 - Rudder Angle Indicating System
 - Gyro-Compass Standby Power Supply
 - General Announcing System
 - Bridge Announcing System
 - Ship's Whistles
 - Pelorus, Signal Lights and Big Eyes
 - Degaussing System
 - Visibility - Pilot House, Bridge and Lookout Stations
 - Navigation Lights
 - AN/SRN-25 Radio Navigation
 - AN/SRN-9 Satellite Navigation
 - AN/SPS-64 Navigation Radar
 - AN/WRN-6 GPS
 - Wind Direction
 - DRTs and DRAI
 - Magnetic Compass
 - AN/WSN-1 Navigation System
 - MK 19 Compass
- k. Supply
 - Stores Conveyors
 - Laundry
 - Dumbwaiter
 - Bridge Crane
 - Scullery

APPENDIX D
LISTING OF TESTS TO BE
PERFORMED DURING INITIAL TIGHTNESS DIVE
(SUBMARINES ONLY)

1. The following tests and evolutions will be carried out on the surface en route to the test dive area and prior to the initial tightness dive:
 - a. Underway. Rig for dive (for Alpha Trial, rig for deep submergence is required for the initial dive). Compensate. Start-up reverse osmosis units.
 - b. Ship's Force instruct Sea Trial riders on the proper use of EAB masks.
 - c. Conduct operational test of rudder in normal and emergency modes.
 - d. Navigation system check. Take fixes by all electronic, celestial, and visual means and compare.
 - e. Test underwater log(s) using the base course and reciprocal course method (i.e., inertial reference method) or other approved functional procedures to determine accuracy.
 - f. Check accuracy of all bearing transmitters and indicators. Compare sonar, visual and radar bearings.
 - g. Check operation of all radar.
 - h. Check all radio transmitters, receivers and electronic equipment.
 - i. Inspect stern tube packing glands, seals and circulating water flow for excessive heating, leakage and audible noise.
 - j. Check Dead Reckoning Analyzer Indicator (DRAI), Dead Reckoning Analyzer (DRA), Dead Reckoning Tracers (DRT) and RPM indication. If certified for electronic navigation, verify satisfactory operation of the Voyage Management System including the ability to receive inputs from the Navigation System, Electromagnetic Logs, Radar bearings, Sonar bearings, fathometer and Gyrocompass, as applicable.
 - k. Test fathometer(s) and compare with charted soundings.
 - l. Run ahead at full power long enough for temperatures to reach a stable value. After readings have stabilized, operate rudder through full throw in each direction in normal and emergency power. Time evolution and compare with design values. Check out hand modes.
 - m. Ahead flank to back emergency.
 - n. Fire Control System operation.
 - o. Check operation and accuracy of ship's gyrocompass.
 - p. Check operation of magazine/pyro locker flooding if not tested in industrial activity.
 - q. Rendezvous with escort. Conduct radio and sonar communications checks. (See Note 1).

- r. Test all bottomside sonar.
- s. Test bow plane, sail plane and stern plane operations in all modes.
- t. Flood variable tanks to computed compensation.
- u. Record megger readings of all antennas where meggering is permissible. (See Note 8).
- v. Operate trim and drain pumps.
- w. Test variable ballast system for proper operation.

NOTE: CONDUCT PARAGRAPHS 1 AND 3 OF URO MRC 022 (DOCKSIDE OPERATION OF EMBT BLOW SYSTEM VALVES) OR EQUIVALENT SHIPYARD TEST PROCEDURE DURING DOCK TRIALS PER APPENDIX A OF THIS CHAPTER FOR THE TEST OF THE EMBT BLOW SYSTEM. ENSURE THE REMAINING PORTIONS OF URO MRC 022, OR AN EQUIVALENT NAVSEA APPROVED TEST PROCEDURE, THE TEST OF THE EMBT BLOW SYSTEM, ARE COMPLETED PRIOR TO INITIAL DIVE TO TEST DEPTH ON ALPHA SEA TRIAL (INITIAL BUILDER'S SEA TRIAL).

- x. Perform a low pressure, normal and EMBT blow for as long as necessary to verify system operability. A static blow must not be used to test the EMBT blow system.
- y. Operate on the Emergency Propulsion Motor (EPM) for 10 minutes.
- z. Motor generator set operation.
- aa. Ventilate ship.
- ab. Start atmosphere control equipment.
- ac. Additional requirements may be imposed at the discretion of the CO.

NOTE: REQUIRED SYSTEMS ARE LISTED IN PARAGRAPH 4b OF REFERENCE (i). OBSERVE RESTRICTIONS ON OPERATION OF SYSTEMS LISTED IN PARAGRAPH 4d OF REFERENCE (i). BALL VALVE TRASH DISPOSAL UNITS (TDU) (WITHOUT REMOTE CLOSURES) WILL NOT BE OPERATED BELOW 200 FEET.

2. The following tests and evolutions will be carried out immediately prior to or during the initial tightness dive:

- a. Obtain navigational fix and take sounding. Maximum depth of water is 400 feet as specified in reference (p).
- b. Conduct a dive to periscope depth. Obtain stop trim, if practical, at periscope depth. If sea state requires deeper submergence, proceed slowly to 150 feet for SSN 688 Class submarines (155 feet for SSN 774 Class submarines), (160 feet for SSN 21 and SSBN or SSGN 726 Class submarines) to obtain stop trim. Maximum keel depth must be per Table 1 of Appendix F.

16 Oct 2019

- c. Inspect the discharge of all automatic drains in each EMBT Blow quadrant for seawater leakage prior to the first dive when the ballast tanks are flooded (e.g., at periscope depth).
- d. Check operation of ship control systems, including depth indication. (See Note 2).
- e. Shoot pyrotechnics from each ejector by hand and impulse methods, as applicable (see Notes 3 and 4).
- f. Communicate with escort on WQC at each depth increment or at ten-minute intervals, whichever is sooner. If communications are lost, return to depth at which communications can be established before continuing (see Note 1).
- g. All hands inspect for leaks and report them to the Sea Trial coordinator.
- h. Operate all periscopes, checking optics and for leakage. Operate all masts.
- i. Test full throw of rudder and planes at slow speeds.
- j. Test operation of trim and drain systems.
- k. Check all sonar equipment on each hydrophone.
- l. At 155 feet for SSN 774 Class submarines and at 160 feet for SSBN 826 Class submarines (if installed), verify operation of each BQN-13 transmitter using the ship's own SONAR.
- m. Comply with the Command Control Systems (CS or CCS) Test Program regarding the shooting of water slugs. This event is not required by the TYCOM if not required by the CS or CCS Test Program (see Notes 3 and 4).
- n. Snorkel, test operation of stills and air compressors (see Notes 4 and 5).
- o. Operate all hull and back-up valves and equalize sea pressure on all systems designed for test depth (see Notes 4, 6 and 7).
- p. Check hovering system (where applicable) (see Note 4).
- q. Ensure air banks are charged to within 200 psi of full pressure.
- r. Line up MBT blow system for maximum blow rate.
- s. Conduct EMBT blow from 200 feet keel depth. Check bank pressure before and after surfacing. Surfacing with EMBT blow may be delayed to permit additional testing, commencing pre-transit valve operating cycling or transit submerged. However, first surface after initial tightness dive must be by EMBT blow from 200 feet.
- t. Additional requirements may be imposed at the discretion of the CO.

NOTES

- 1. In the execution of any Sea Trial, whether escorted or not, submarine COs are reminded of their responsibility to communicate with escorts or shore authorities, or both, within prescribed, previously agreed upon time limits to avoid initiation of inadvertent lost contact or submarine disaster procedures.**

2. **Compare all depth and pressure gages. Depth and pressure gages should be checked as soon as the next specified depth is reached.**
3. **Integrity of launchers or signal ejectors must be established by admitting sea pressure through equalizing lines or flooding connection and the muzzle valve or door operated before conducting operational tests. Shoot water slugs from specified launchers or signal ejectors, at specified depths, as required by the CS or CCS test program. Shoot pyrotechnics on initial dive and at test depth on the deep dive. Shooting of pyrotechnics during the initial dive must be accomplished in conjunction with the 200 foot EMBT Blow. Shooting of pyrotechnics at test depth during the deep dive must be accomplished in conjunction with the test depth EMBT blow.**
4. **Those seawater systems which are not required for normal safe operation of the ship at test depth but which have been designed for and may be subjected to test depth pressure should not be subjected to submergence pressure during the initial dive to any specified depth (e.g., a blown sanitary tank). (See reference (i)).**
5. **Check operation of electrodes; head valve and each snorkel safety circuit.**
6. **Depth increments for cycling vital sea valves are as set forth in reference (i).**
7. **This evolution (initial operation of hull and back-up valves in fully submerged condition) at depths other than specified in reference (i) is intended for crew training and is not technically required. Evolution may be abbreviated or deleted on a case basis with concurrence of the embarked TYCOM representative.**
8. **Meggering of antenna may be accomplished during dock trials but must be accomplished prior to initial deep dive.**

APPENDIX E**ESCORT SHIP CAPABILITIES FOR SUBMARINE SEA TRIALS****1. Radio Communication:**

- a. Ability to transmit and receive on two Ultrahigh Frequency (UHF) and on High Frequency (HF) circuits simultaneously including 243.0 MHZ or equivalent system capabilities (Very High Frequency (VHF) and INMARSAT-C).
- b. Equipped to tape record all non-secure radio transmissions between the submarine and the escort.
- c. Capability to communicate on the submarine UHF, HF or equivalent system capabilities (VHF or INMARSAT-C) circuits.

2. Sonar and Sonar Communications:

- a. Equipped with underwater telephone capable of communicating to the submarine's test depth or equivalent system capabilities.
- b. Sufficient operators to man underwater telephone on a continuous basis, including a Continuous Wave (CW) capable operator on call if the requirement for CW communication develops.
- c. Equipped to tape record (installed or portable) all transmissions between the submarine and the escort by underwater telephone.
- d. Explosive charge signals or active sonar called for by AXP-1.

3. Navigation:

- a. Equipped with an operable LORAN C, Global Positioning System (GPS) or the latest accurate off-the-shelf navigational equipment.
- b. Equipped with an operable DRT or equivalent system capability.
- c. Possess navigational capability to fix his position to two miles' average accuracy.
- d. Fathometer.
- e. Gyrocompass.
- f. Underwater log or equivalent system capability.

4. Sea keeping and speed:

- a. Ability to remain at sea for one week in State 6 seas.
- b. Be capable of making 10 knots. Escorts will keep the submarine informed of any speed or sea state limitations. In addition, if the escort has an unfaired WQC hydrophone, it must notify the submarine of the maximum sea state and speed which will not restrict WQC communications. If the submarine requires a speed above this limit, the submarine should run a track about the escort within WQC range.

APPENDIX F**LISTING OF TESTS TO BE
PERFORMED PRIOR TO, DURING AND
FOLLOWING FIRST DIVE TO TEST DEPTH**

1. The following tests and evolutions, as summarized in Table 1 of this appendix, will be carried out following the initial tightness dive and prior to the deep dive:

- a. Six hours of Independent Ship Exercise for crew training. (See Note 1).
- b. Charge air banks and battery if necessary. The ship may be submerged while charging air banks provided the depth of the ship does not exceed other guidelines in this instruction, or those of the flooding bill or ship's operating procedures.
- c. Operate IFF and ESM equipment. If possible, use aircraft. (See Note 2).

2. The following tests and evolutions, as summarized in Table 1 of this appendix, will be carried out immediately prior to or during the first deep dive. Per Volume V of this manual, a second deep dive must be performed to complete valve cycling and operation of systems not required for normal safe operation of the ship, i.e., torpedo tubes, Trash Disposal Unit (TDU), hovering, plumbing. (See Note 3).

- a. Ensure that air banks are charged to within 200 psi of full pressure.
- b. Ensure all MBT blow systems are fully operational and in a normal line up configuration.
- c. Take sounding. Maximum water depth is given in reference (p). Accurately fix the ship's position within the specified dive area (reference (p)).
- d. Conduct a dive to periscope depth. Obtain speed trim, if practical, at periscope depth. If sea state requires deeper submergence, proceed slowly to (150 feet for SSN 688 Class submarines), (155 feet for SSN 774 Class submarines), (160 feet for SSN 21 and SSBN or SSGN 726 Class submarines) to obtain speed trim. (See Note 4).
- e. Obtain stop trim. Take readings and water samples required to make a check of ballasting. Stop trim should be conducted at the most desirable time during the trials.
- f. Trim ship to maintain neutral buoyancy. (See Note 5).
- g. Line up propulsion plant for maximum reliability following ship's instructions.
- h. Rig ship for deep submergence, except reverse osmosis units. All systems should be in the maximum secure condition with unnecessary sea systems isolated. (See Note 6).
- i. Station personnel throughout the ship to inspect for leaks.
- j. At depths specified in reference (i):
 - (1) Inspect for leaks.
 - (2) Adjust trim. (See Note 5).

- (3) Communicate with escort at each 100 feet depth increment or at 10-minute intervals, whichever is sooner. If communications are lost, return to depth at which communications can be reestablished before continuing. (See Note 7).

NOTE REQUIRED SYSTEMS ARE LISTED IN PARAGRAPH 4b OF REFERENCE (i). OBSERVE RESTRICTIONS ON OPERATION OF SYSTEMS LISTED IN PARAGRAPH 4d OF REFERENCE (i). BALL VALVE TRASH DISPOSAL UNITS (TDU) (WITHOUT REMOTE CLOSURES) WILL NOT BE OPERATED BELOW 200 FEET.

- k. At depths listed for hull valve cycling in reference (i) (as applicable) per NAVSEA approved Deep Dive Test Form:
 - (1) Check accuracy of gages and repeaters.
 - (2) Conduct operational test of signal ejectors. (See Note 8).
 - (3) Check shaft bearings and stern tubes for excessive heating, leakage and noise. Shaft seals must be tested at each depth and for the required time, as specified in the approved class test form.
 - (4) Cycle rudder and planes through full throw to check for binding. (See Note 9).
 - (5) Operate all hull and back-up valves (using remote closures, as applicable, from flooding control stations) of seawater systems required to maintain propulsion and other functions vital to the ship's operation at increments of depth specified in reference (i). Required systems are listed in paragraph 4.b. of reference (i). Observe restrictions on operation of systems listed in paragraph 4.d. of reference (i).
 - (6) Check operation of bulkhead flappers and watertight doors for binding.
 - (7) Operate trim and drain pumps, discharging to sea.
 - (8) Cycle components of each torpedo tube. Check for leakage. Establish integrity of torpedo tubes by admitting sea pressure through equalizing lines or flooding connection before cycling components (see Notes 3, 8 and 16).
 - (9) Vent negative tank inboard (if installed). (See Notes 3 and 10).
 - (10) Cycle main vents to check for binding.
- l. At maximum authorized operating depth:
 - (1) Repeat item 2.k.(1) of this appendix - Depth gages and repeaters.
 - (2) Operate each signal ejector by impulse and hand, as applicable. (See Notes 3 and 8).
 - (3) Repeat item 2.k.(3) of this appendix - Shafting and bearings.
 - (4) Repeat item 2.k.(5) of this appendix - Hull and back-up valves.
 - (5) Repeat item 2.k.(6) of this appendix - Bulkhead flappers and watertight doors.
 - (6) Repeat item 2.k.(7) of this appendix - Trim and drain pumps.

- (7) Repeat item 2.k.(8) of this appendix - Torpedo tubes. (See Notes 3 and 16).
 - (8) Repeat item 2.k.(9) of this appendix - Negative tank (if applicable).
 - (9) Equalize TDU with sea pressure through trim line. During conduct of the Deep Dive Test Form on new construction submarines, the TDU Hull Valve will be cycled at depths specified by reference (i) in order to meet material certification requirements. (See Note 3).
 - (10) Equalize sea systems and cycle hull and back-up valves as specified in reference (i).
 - (11) Repeat item 2.k.(10) of this appendix - Cycle main vents and check for binding.
 - m. After the deep dive, surface fully with EMBT blow from the depth required per the NAVSEA approved EMBT Test Procedure and the approved Sea Trial Agenda. Check air bank pressures before and after blow.
 - n. Additional requirements may be imposed at the discretion of the CO.
3. The following tests and evolutions will be carried out submerged following the deep dive:
- a. Steering and diving operation at full speed. (See Notes 4 and 11).
 - b. Full power run. (See Notes 11, 12 and 13).
 - c. Steep angles - operate the ship through several depth changes using large up and down angles to check operation of ship machinery. (See Notes 11 and 14).
 - d. Time raising each periscope and mast at maximum depth and speed for which they were designed. Check training feature where applicable.
 - e. Run and observe air conditioning plants throughout trials. Operate the air conditioning plant to demonstrate ability to carry entire maximum existing ship's air conditioning load, or 100 percent capacity.
 - f. Run and observe refrigeration plant throughout trials.
 - g. Missile fire control erection performance tests (Vertical Launch System (VLS) on SSN).
 - h. Missile fire control alignment (VLS on SSN).
 - i. Missile tube muzzle hatch operation (VLS on SSN).
 - j. Missile compensation system operation submerged (VLS on SSN).
 - k. Additional requirements may be imposed at the discretion of the CO.
 - l. Comply with the CS or CCS test program with regard to firing of water slugs and testing of torpedo tubes. (See Notes 3, 8 and 16).
4. The following tests and evolutions will be carried out on the surface following the deep dive:
- a. Note condition of periscope optics.
 - b. Measure resistance to ground of all external electrical cables.

- c. Take radio antenna megger readings immediately after surfacing, again in one-half hour, and compare with readings obtained in Appendix D, step 1.v. of this chapter.
- d. With ship proceeding at full speed, conduct low-pressure blow (if installed) to check whether circulation water systems and machinery become air bound.
- e. Measure resistance, across and to ground from each side, of all sonar hydrophones, projectors and transducers. (See Note 15).

TABLE 1. SUMMARY OF SIGNIFICANT UNDERWAY TRIAL REQUIREMENTS

Sea Trials	Initial Tightness Dive	Transit	Deep Dive
Policy References	Appendix D, paragraph 2 of this chapter.	Appendix F, paragraph 1 of this chapter.	Appendix F, paragraph 2 of this chapter.
Start Depth	Surface	Surface to 400 ft.	Surface to 400 ft.
Conduct Depth	Periscope depth or about 150 ft for SSN 688 Class (155 ft for SSN 774 Class), (160 ft for SSN 21 and SSBN or SSGN 726 Class) if sea state dictates for trim. Remaining events of Appendix D, paragraph 2 of this chapter no deeper than 200 ft.	Surface to 400 ft but not to exceed deepest depth previously escorted or valve cycling accomplished. Additional trials and testing permitted within the Independent Ship Exercise, crew rest and other requirements of this instruction.	200 ft increments to one half Maximum Authorized Operating Depth, then 100 ft increments to Maximum Authorized Operating Depth.
Maximum Keel Depth	200 ft.	One half test depth.	Maximum Authorized Operating Depth.
Finish Event	Surface from 200 ft with EMBT blow.*	Rendezvous with escort.	Deep dive will be terminated with an EMBT blow from Maximum Authorized Operating Depth Appendix F section 2.
Escort Required	Yes**	No	Yes**
Water Depth	400 ft per reference (p)	Unlimited.	Reference (p).

* May be delayed to permit additional testing, commencing pre-transit valve operating cycling or transit submerged. However, first surface after initial tightness dive must be by EMBT blow from 200 feet.

** An escort is required on the initial tightness dive and on subsequent first dive to any deeper depths, i.e., the first dive to any depth requires an escort. EMBT blow escort requirements given in paragraph 4.4.3.c of this chapter.

NOTES

1. Each person involved in Sea Trials should be allowed a minimum of six hours of continuous, uninterrupted sleep during any 24-hour period encompassed by the Sea Trial.
2. Event is optional with regard to sequence. May be conducted at any time during Sea Trials and is not a prerequisite to the deep dive. If listed with initial tightness dive events, completion is not mandatory prior to proceeding with remainder of trials.
3. Those seawater systems which are not required for normal safe operation of the ship at test depth but which have been designed for and may be subjected to test depth pressure should not be subjected to submergence pressure during the initial dive to any specified depth (e.g., a blown sanitary tank). (See reference (i)).
4. At maximum safe speed, operate the rudder and planes through full throw in both directions in normal and emergency power. Time evolutions and check against design values.
5. Deep dive should be conducted using moderate speed, or as approved by NAVSEA, and constantly adjusting trim, at depths specified in reference (i), to maintain neutral buoyancy. Moderate speed must be defined as that range of speed that allows the ship to recover from a loss of stern plane control or flooding casualty.
6. Reference (i) prescribes procedures for systems operation during deep dive.
7. In the execution of any Sea Trial, whether escorted or not, submarine COs are reminded of their responsibility to communicate with escorts or shore authorities, or both, within prescribed, previously agreed upon time limits to avoid initiation of inadvertent lost contact or submarine disaster procedures.
8. Integrity of launchers or signal ejectors must be established by admitting sea pressure through equalizing lines or flooding connection and the muzzle valve or door operated before conducting operational tests. Shoot water slugs from specified launchers or signal ejectors, at specified depths, as required by the CS or CCS test program. Shoot pyrotechnics on initial dive and at test depth on the deep dive. Shooting of pyrotechnics during the initial dive must be accomplished in conjunction with the 200 foot EMBT Blow. Shooting of pyrotechnics at test depth during the deep dive must be accomplished in conjunction with the test depth EMBT blow.
9. Cycling of rudder and planes through full throw should be limited to 90% of test depth.
10. Test to demonstrate the ability of the tank to withstand external pressure.
11. The required sequence of events is initial dive, deep dive, full power run submerged, then high speed maneuverability and steep angle tests. On initial propulsion plant trials for new construction nuclear powered submarines, the deep dive will be to test depth minus 300 feet unless otherwise approved by NAVSEA or the TYCOM and reflected in the Sea Trial Agenda.
12. Run full power submerged for at least two hours. COs may schedule the full power run for four hours if deemed necessary. Operate at minimum non-cavitating depth but not to exceed 400 feet. Water depth is not limited for this event.

13. Propulsion Plant Tests. The full power trial for new construction submarines will follow building specifications or directions from the Navy Shipbuilding Program Manager. Submarine depth during the submerged full power trials should be limited to 400 feet. The submerged full power ahead test for commissioned nuclear powered submarines must be terminated by a back emergency bell. The duration of the back emergency bell must be limited to 45 seconds, to be followed immediately by an appropriate ahead bell. Caution must be exercised to avoid stern way.
14. Completion of full power, deep dives and EMBT Blow Test Forms are prerequisites for the high-speed maneuverability and steep angle tests. Initial high-speed ship control tests, steep angle tests and exercises of major casualties must be conducted in water that does not exceed one and one-half times design test depth, which equates to collapse depth.
15. The spherical array need not be done if an array purge or power into the array measurements are scheduled at a later date.
16. Fire water slugs from torpedo tubes at the depths and speeds required by the CS or CCS test program (or Combat Systems Assessment or Non-Propulsion Electronic System Operability, Verification and Evaluation, as applicable).

LISTING OF APPENDICES.

- A Sample Page of 4760-1 Report with Representative Data
- B Legend and Explanation of Symbols Used in Report 4760-1
- C Preparation for Guarantee Material Inspection and Final Contract Trials

5.1 **PURPOSE.** The purpose of this chapter is to provide a procedure to identify and document deficiencies found in new construction ships. This chapter focuses on the period from initial Acceptance Trials (AT) until the termination of funding responsibility under the Shipbuilding and Conversion, Navy (SCN) appropriation. Proper management of these deficiencies is necessary to ensure:

- a. Final settlement of the construction contract with the shipbuilder.
- b. Correction of the maximum number of shipbuilder responsible deficiencies under terms of the construction contract.
- c. Correction of the maximum number of government responsible deficiencies under the SCN appropriation.
- d. Identification of all new construction deficiencies which must be corrected subsequent to the guarantee period under appropriations other than SCN, and identification of improvement items which have class application.

Deficiency items not adjudicated prior to Combined Trials (CT) and the Guarantee Material Inspection (GMI) for submarines or during ATs and Final Contract Trials (FCT) for all other ships are identified to the Navy by the Board of Inspection and Survey (INSURV). Additional items are identified during Naval Sea Systems Command (NAVSEA) Acoustic Trials, **Underwater Electromagnetic Trials**, Combat System Certification Trials (CSCT) and by the Commanding Officer (CO) of the ship during the contract guarantee period and reported to the Supervising Authority.

5.2 **DEFICIENCY CORRECTION.** Deficiencies are addressed in terms of three general categories. The procedure for initiating corrective action for a deficiency is determined by the category.

5.2.1 **Government Responsible Items.** The obligation and work limiting date for all shipbuilding programs under the SCN appropriation will normally be at the end of the 11th month following completion of the fitting out period. For submarines, the fitting out period ends at delivery. Government responsible work accomplished in support of a new construction ship and funded

under SCN is limited to work which can be completed prior to the end of this 11-month period. Authorization for correction of non-reactor plant government responsible deficiencies is provided by the Navy Shipbuilding Program Manager based on a priority assignment by the ship and recommendations from the Type Commander (TYCOM). Authorization for correction of reactor plant government responsible deficiencies is provided by NAVSEA Nuclear Propulsion Directorate (08).

5.2.2 Shipbuilder Responsible Items. Construction contracts with private industrial activities contain a guarantee clause. The rights of the government concerning deficiencies identified during the guarantee period are set forth in the contract. Deficiencies must be identified and reported to the shipbuilder and cognizant government agencies prior to the end of the guarantee period in order for corrective action to be established. Correction of deficiencies designated shipbuilder responsible can be accomplished during any subsequent period that the ship is made available to the shipbuilder. Availability of the ship is usually limited to the Post Shakedown Availability (PSA), except under special circumstances when immediate corrective action prior to PSA is required to permit the ship to meet operational commitments. The ship may also be made available to the shipbuilder after PSA to permit follow-up corrective action on shipbuilder responsible deficiencies identified during the guarantee period but not satisfactorily corrected during PSA.

5.2.3 Recommended Changes in Characteristics, Design Specifications, or Plans. Improvements to the ship recommended by INSURV will be investigated by the Navy Shipbuilding Program Manager. Action, as appropriate, will be initiated by a government approved change. This change may be in the form of a Field Modification Request (FMR), Headquarters Modification Request (HMR), Ship Change, Strategic Systems Programs Alteration (SPALT), Service Change and Field or Engineering Change Proposal. Changes of this nature usually have application to more than one ship of the class. Improvements to the ship recommended by Ship's Force should be forwarded by the CO per Volume VI, Chapter 3 (submarines) or Volume VI, Chapter 36 (surface force ships and aircraft carriers), as appropriate, of this manual to the Navy Shipbuilding Program Manager via the Supervising Authority.

5.3 REQUIRED REPORTS. The responsibility for ensuring deficiencies are corrected rests jointly with the CO, the Supervising Authority and the Navy Shipbuilding Program Manager. The method of corrective action varies with the type of deficiency and may involve the coordinated action of several activities. In order to effectively prosecute each deficiency, special reporting and handling procedures are necessary. The Ship's Maintenance Data System must be implemented not later than delivery per reference (a). This will provide a smooth transition into the appropriate ship and shore based data management systems and permit Maintenance and Material Management (3-M) documentation of all INSURV deficiencies for use with the Consolidated Report. The Consolidated Report provides follow-up action on all deficiencies and minimizes administrative effort.

- a. Consolidated Report. A Consolidated Report, compiled by the Navy Shipbuilding Program Manager, combines into one document the screening actions, reports of completed actions and significant information listed (as applicable):
 - (1) AT or CT INSURV Report.
 - (2) FCT or GMI INSURV Report.

15 Jan 2021

- (3) Post Delivery Deficiency Items (PDDI).
 - (4) CSCT.
 - (5) Silencing Deficiencies.
 - (6) HMRs.
 - (7) Navy Shipbuilding Program Manager action on all deficiencies.
 - (8) Shipbuilder Delivery Letter.
 - (9) Supervising Authority evaluation of shipbuilder comments on Deficiency Items.
 - (10) Priority assignment of all deficiencies.
 - (11) TYCOM action on all deficiencies.
 - (12) Authorized action for PSA for appropriate items.
 - (13) Final status of all deficiencies at the end of the SCN funding period (PSA Completion Report).
 - (14) TYCOM final action on each item uncorrected at the end of the SCN funding period.
 - (15) Identification of deficiencies requiring Navy Shipbuilding Program Manager action to develop corrective action.
 - (16) Estimated cost to the government for correction by Forces Afloat of shipbuilder responsible deficiencies.
 - (17) Antenna Inspection Deficiency Items.
- b. Report Format. Appendix A of this chapter is an example of a completed page of the Consolidated Report, containing sample entries from various parts. The symbols used in defining the action taken by each activity are described in Appendix B of this chapter along with a discussion of the use of each column. The Consolidated Report typically consists of the following parts:
- (1) Part A Key Definitions for Symbols used in the PSA Work Package.
 - (2) Part B INSURV Deficiencies.
 - (3) Part C-I Non-Nuclear HMRs.
 - (4) Part C-II Other Non-Nuclear Items.
 - (5) Part C-III Non-Nuclear CSCT Items.
 - (6) Part D Antenna Inspection Deficiency Items.
 - (7) Part E PDDIs.
 - (8) Part F Silencing Deficiencies.
- c. Preparation.
- (1) Part B:

- (a) List of INSURV deficiency items: Prepared by the Navy Shipbuilding Program Manager and distributed following CT or AT.
- (b) List of INSURV GMI or FCT items: Prepared by the ship per Appendix C of this chapter immediately following the GMI or FCT for use by NAVSEA at the GMI or FCT Card Conference. The Navy Shipbuilding Program Manager will distribute a finalized GMI or FCT list following the GMI or FCT Card Conference.
- (2) Part C-I, C-II, C-III, D and F: Prepared and distributed by the Navy Shipbuilding Program Manager.
- (3) Part E: Prepared by the ship as discussed in section 5.6 of this chapter.
- d. Reporting.
 - (1) Thirty days after delivery, the ship will submit marked up copies of Part B indicating the priority assignment of each uncorrected CT or AT deficiency (Navy Shipbuilding Program Manager, TYCOM, Immediate Superior in Command (ISIC), Supervising Authority).
 - (2) The Navy Shipbuilding Program Manager will prepare and distribute marked up copies of Parts C-I, C-II, C-III, D and F as the information becomes available.
 - (3) Priority assignment for Part B deficiencies (including review of all uncorrected CT or AT deficiencies) is determined at the GMI or FCT Card Conference. Marked up copies are retained by all participants. (Navy Shipbuilding Program Manager, TYCOM, ISIC, Ship, Supervising Authority).
 - (4) The ship will report deficiencies discovered after GMI or FCT and before the end of the SCN period per section 5.6 of this chapter.
 - (5) Deficiencies listed in the Consolidated Report which are corrected by Forces Afloat are to be reported in writing to the Navy Shipbuilding Program Manager with copies to the TYCOM, the Supervising Authority as appropriate, and the scheduled PSA activity. This report will normally be submitted by the ship at the end of a refit or maintenance period. Negative reports are not required.
 - (6) The ship will submit a marked up copy of the Consolidated Report to the TYCOM; copy to the ISIC, Navy Shipbuilding Program Manager, Supervising Authority, Submarine Maintenance Engineering, Planning and Procurement (SUBMEPP) Activity (for submarines), Surface Maintenance Engineering, Planning Program (SURFMEPP) (for surface force ships) and the President of the INSURV Board thirty days after PSA or at the end of the guarantee period, whichever is later. This report will indicate the final status of all deficiencies identified during the guarantee period.

5.4 COMBINED TRIALS or ACCEPTANCE TRIALS. The CT or AT is scheduled by the Supervising Authority and conducted by the INSURV Board. The Supervising Authority in

conjunction with the ship's CO will present to the INSURV Board known deficiencies which require correction.

5.5 GUARANTEE MATERIAL INSPECTION or FINAL CONTRACT TRIALS. GMIs or FCTs are scheduled by the TYCOM and conducted by the INSURV Board after shakedown, prior to the end of the guarantee period. These inspections or trials provide a formal evaluation of the material condition of each newly constructed ship after limited service. GMIs or FCTs are conducted sufficiently in advance of PSA to allow "lead time" for the procurement of material and the advanced planning required for the correction of deficiencies during the availability. The CO will present the ship's material status to the INSURV Board following the guidance in Appendix C of this chapter. GMIs are conducted for submarines; all other ships will undergo an FCT.

5.6 POST DELIVERY DEFICIENCY ITEMS. The CO is responsible for reporting deficiencies not otherwise identified by INSURV, until the end of the SCN period per the following procedures. By using the same format for PDDI reporting as for INSURV items and by extending the use of the Consolidated Report to include these items, the same management attention is afforded to all construction deficiencies.

- a. The following types of problems should be reported as PDDIs:
 - (1) Recurring failures in a piece of equipment or machinery such that the reliability is considered unsatisfactory.
 - (2) Major equipment or component malfunction which requires outside assistance to correct (vendor or industrial activity).
 - (3) Symptoms of major machinery problems which require investigation to determine the extent of the problem. (Improper temperatures, pressures, leakage, vibration, noise, etc.).
 - (4) Insufficient supply support for specific equipment or machinery based on operational experience. Allowance deficiencies reported as PDDIs should be supplemented by submission of Allowance Change Requests or Configuration Change Reports as appropriate.
 - (5) Excessive or accelerated wear, erosion, or corrosion determined through inspection.
 - (6) Improper bonding of preservation on surfaces that must be protected.
 - (7) Any casualty which results in a Casualty Report (CASREP). Insert an amplification data set immediately after the Parts Identification data set consisting of "AMPN/PDDI: ____ - ____//", ensuring that the CASREP includes all appropriate PDDI addressees. A separate PDDI must also be submitted.
 - (8) Identification of any condition or defect which requires a Departure from Specification request.
 - (9) Improper alignment, clearance, or resistance to ground which indicates an unaccounted for change from baseline data.

- (10) Significant internal and external valve leakage. (Primary, seawater, steam, air, hydraulics, etc.).
- (11) Any significant AT or CT deficiency item reported corrected which has recurred. Refer to the AT or INSURV number in the text of the deficiency description.
- (12) Any AT or CT deficiency item reported corrected by the shipbuilder which is not considered by the ship to be complete. Refer to the AT or INSURV number in the text of the deficiency description.

NOTE: DEFICIENCIES AND MATERIAL PROBLEMS WHICH ARE CORRECTED BY SHIP'S FORCE WITHOUT ASSISTANCE SHOULD NOT BE REPORTED AS PDDIs.

b. Reporting.

- (1) Between delivery and GMI or FCT, uncorrected deficiencies of the nature described in paragraph 5.6 of this chapter should be documented in the Current Ship's Maintenance Project (CSMP) and presented to the INSURV Board for consideration during GMI or FCT.
- (2) Problems requiring corrective action prior to PSA, or of such significance that planning will have to commence as early as possible, should be reported by OPNAV 4790/2K without delay. The OPNAV 4790/2K must contain the sequential identification number of the PDDI and a brief description of the problem being reported. Multiple PDDIs per report are encouraged. Items reported by OPNAV 4790/2K should be included in the next regular PDDI report. The OPNAV 4790/2K should also be sent by message, or e-mail where appropriate, and must be addressed to the Supervising Authority, with information copies to the Navy Shipbuilding Program Manager, TYCOM (N40), the ISIC, and NAVSEA 08 (for items with nuclear cognizance).
- (3) Routine PDDIs must be reported by OPNAV 4790/2K and summarized at least monthly after the GMI or FCT.
- (4) All PDDIs must be assigned a sequential number identifying the item for administrative purposes and a priority in the "ship" column of the 4760-1 Report. This forms Part E of the Consolidated Report. Report Form 4760-1 will be provided to the ship at the GMI or FCT Card Conference.
- (5) Distribution of the PDDI report by the ship will be:
 - (a) Advance copy to the Supervising Authority.
 - (b) Advance copy to the Navy Shipbuilding Program Manager. (Nuclear deficiencies to NAVSEA 08).
 - (c) Copy to the ISIC.
 - (d) Original to the Supervising Authority via the TYCOM and the Navy Shipbuilding Program Manager.

- (6) All PDDIs must be assigned a Job Sequence Number (JSN) in the ship's JSN log prior to input into the ship's CSMP. The CSMP summary line (Block 37, OPNAV 4790/2K) will contain the PDDI sequential number for cross reference.

APPENDIX A

SAMPLE PAGE OF 4760-1 REPORT WITH REPRESENTATIVE DATA

USS _____

REPORT 4760-1

Item	Description	N/S Action	K	SOS	Ship	TY	PSA	Final	TYCO M	N/S
1K1ax (CT)	Snorkel safety circuit high vacuum trip does not function.	K	KA	XK	XK	--	--	--	--	--

APPENDIX B**LEGEND AND EXPLANATION OF SYMBOLS USED IN REPORT 4760-1**

1. Each activity will enter in the applicable column the appropriate symbol to indicate status, position, priority, responsibility or authorization for each item.
2. Extra pages may be added to the package as necessary to provide history, results of investigations or comments to clarify the position or the item itself.
3. The action taken for each item in each of the columns from the “N/S Action” column through the “PSA” column will be an integrated action by all concerned following INSURV CT or AT, GMI or FCT, and PSA related conferences.
4. The following is a brief description of the purpose of each column:
 - a. Column “N/S Action” - Indicates Navy Shipbuilding Program Manager assignment of responsibility. No government SCN funded work is authorized in this column. Authorization of work will be as stated under the “PSA” column for each line item in the work package.
 - b. Column “K” - Column “K” is used to indicate the position of the shipbuilder for an item indicated in column “N/S Action” as being the responsibility of the shipbuilder to correct. The shipbuilder may prepare insert pages for comments as appropriate. A rationale is to be provided for all items not accepted (marked “KZ”) by the shipbuilder.
 - c. Column “SOS” - This column is used to indicate the position of the Supervising Authority for each of the items as feasible but especially for those items on which the shipbuilder has responded in column “K”.
 - d. Column “Ship” - This column is used by the ship to indicate the status or action desired for each item still considered open, including a priority assignment regardless of the responsibility or action indicated by INSURV or assigned by the Navy Shipbuilding Program Manager or reported corrected by the Supervising Authority. Comments from Ship’s Force providing further information and clarification as insert pages are especially helpful in planning correction of any item.
 - e. Column “TY” - This column indicates the position of the TYCOM on the priority assignment of the ship.
 - f. Column “PSA” - This column is used by NAVSEA. Authorization of SCN funded work appears only in this column.
 - g. Column “Final” (Ship and Supervising Authority) - This column is used to indicate the final status of each deficiency at the end of the SCN funded period. This column may be used by the shipbuilder to report to the Supervising Authority the status of deficiencies at the end of the guarantee period. This column is used by Supervising Authority to provide the final status of all authorized work (government and shipbuilder) as reported by the shipbuilder at completion of PSA. This information should be used as a portion of the Departure Report which is to be forwarded to the Navy Shipbuilding Program Manager not later than 50 days following the end of the

ship's PSA. Comments and recommendations by the Supervising Authority advising correction or non-correction of open items are required.

- h. Column "TYCOM" (Final) - This column is used to indicate the action desired by the TYCOM on all items still open at the end of the PSA period. This data will be reviewed at a "Disposition Conference" to be convened and chaired by the Navy Shipbuilding Program Manager.
- i. Column "N/S" (Final) - This column will be used by the Ship Program Manager to report on agreements made between the TYCOM and the Navy Shipbuilding Program Manager during the "Disposition Conference" for each open deficiency item.

5. The following list of symbols is provided in alphabetical order for ease of use. In the interest of simplification, many symbols have been combined.

Key	Used In The Following Columns	Definition
A	Ship, TY, PSA	Navy Shipbuilding Program Manager authorize correction of the item by the industrial activity as an item for first priority.
B	Ship, TY, PSA	Navy Shipbuilding Program Manager authorize correction of the item by the industrial activity as a highly desirable second priority item of work.
C	Ship, TY, PSA	Navy Shipbuilding Program Manager authorize correction of the item by the industrial activity within available funds as third order of priority.
F	N/S Action thru N/S	Forces Afloat to correct using TYCOM funds. This includes TYCOM Alteration and Improvement (A&I) Items.
FL	Final, TYCOM	Ship's Force submit request for alteration or request for change to Ship's allowance.
FU	Ship, Final	Forces Afloat will follow-up on material through procurement and correct the deficiency.
FV	Ship thru Final	Forces Afloat will correct with technical assistance from equipment manufacturer, vendor or the Navy Shipbuilding Program Manager.
G	N/S Action	Government responsible to correct condition noted as necessary to comply with shipbuilding specifications. No work authorized except by specific Navy Shipbuilding Program Manager action.
G/F	N/S Action, PSA	Government responsible to approve for accomplishment for Forces Afloat. Navy Shipbuilding Program Manager or Supervising Authority will provide material, technical or design assist as required.
GI	All	Navy Shipbuilding Program Manager investigate and authorize correction as appropriate.
G/V	N/S Action, PSA	Government responsible - equipment still under guarantee. Vendor responsible for correcting condition as noted. Supervising Authority responsible to ensure vendor is available and correction is taken under vendor supervision.
K	N/S Action, PSA	Shipbuilder responsible, authorized to correct condition noted as necessary to comply with shipbuilding specifications.
KA	K	Shipbuilder accepts responsibility for correction with or without comment. Comment on attached supplementary page.

Key	Used In The Following Columns	Definition
K/F	N/S Action, PSA	Shipbuilder responsible to make installations and all repair work. Shipboard testing approved for accomplishment by Forces Afloat.
K/G	N/S	Shipbuilder responsible, authorized to investigate and correct condition noted as necessary to comply with shipbuilding specifications. Government responsible for defects in Government Furnished Equipment (GFE) or Government Furnished Information (GFI). No work authorized for government portion of item without separate specific Navy Shipbuilding Program Manager action.
KI	K	Shipbuilder accepts item for investigation with determination of responsibility to be made after investigation.
KZ	K	Shipbuilder does not accept the item as his responsibility. Rationale to be provided on attached supplementary page.
NA	N/S Action	Not authorized using SCN funds: 1. Cost not commensurate with gain. 2. No longer considered a deficiency. 3. Recommend correction be accomplished by a Ship Alteration (SHIPALT) during future availability.
SA	Final, TYCOM, N/S	Recommend SHIPALT be developed to correct.
SC	SOS	Comments of shipbuilder are accepted and concurred with by the Supervising Authority.
SI	N/S Action	Silencing deficiency items with responsibility and authorization to be determined by separate Navy Shipbuilding Program Manager action.
SM	PSA	Supervising Authority is authorized to procure material and turn same over to Ship's Force for installation. A copy of the requisitioning document will be provided to Ship's Force to allow supply follow-up action if necessary.
SZ	SOS	Item remains controversial. Comments of the Supervising Authority are provided on attached supplementary page.
TY	PSA	Approved for correction by the industrial activity when authorized and funded by the TYCOM.

Key	Used In The Following Columns	Definition
V	Ship, TY, PSA	Government provide vendor service for Forces Afloat to assist during PSA.
XF	SOS thru Final	Item was corrected by Forces Afloat.
XG	SOS thru Final	Item was corrected by shipbuilder or other industrial activity under a work specification, job order, or FMR funded by the government.
XK	SOS thru Final	Shipbuilder has completed corrective action.
#	N/S Action, PSA	Changes to Navy Shipbuilding Program Manager action.
*	PSA	Authority to be provided separately by NAVSEA 08 action.

APPENDIX C**PREPARATION FOR GUARANTEE MATERIAL INSPECTION OR FINAL
CONTRACT TRIALS**

1. To properly prepare for and document deficiencies for the GMI or FCT conducted by the INSURV Board and conduct the GMI Card Conference, the following guidance is provided.

a. Pre-GMI or FCT Documents

- (1) Ship's Force provide to the INSURV Board:
 - (a) For previously reported CT or AT items, provide two copies of the Navy Shipbuilding Program Manager's Initial PSA Consolidated List with all INSURV items considered complete by Ship's Force lined out. Do not obliterate items lined out.
 - (b) Document all new deficiencies which have occurred since CT or AT on OPNAV 4790/2Ks per reference (a).
- (2) Upon arrival, Ship's Force provide to Navy Shipbuilding Program Manager representative(s) one complete set of each of the Pre-GMI or FCT documents as outlined in paragraph 1.a.(1).
- (3) Ship's Force submit required number of copies of all documents for entry into the CSMP per reference (a).

b. Action on Final GMI or FCT Documents

- (1) The INSURV Board will return the complete listing of GMI or FCT findings to the Navy Shipbuilding Program Manager representative(s) for follow-up action. This listing will include all items in format per paragraph 1.a.(1). The Navy Shipbuilding Program Manager will assemble this listing and prepare the GMI or FCT Consolidated Report, Section B, as required by this instruction. Type only the new documented findings from the OPNAV 4790/2Ks (1.a.(1)(b)).
- (2) Ship's Force will provide working spaces and administrative support as required by references (b) and (c).

VOLUME I**CHAPTER 6****POST SHAKEDOWN AVAILABILITY****REFERENCES.**

- (a) OPNAVINST 4700.8 - Trials, Acceptance, Commissioning, Fitting Out, Shakedown, and Post Shakedown Availability of U.S. Naval Ships Undergoing Construction or Conversion
- (b) NAVSO P 1000 - Navy Comptroller Manual
- (c) NAVSEAINST 4790.8/OPNAVINST 4790.4 - Ships' Maintenance and Material Management (3-M) Manual
- (d) INSURVINST 4730.11 - Preparation of Deficiency Forms
- (e) OPNAVINST 3540.3 - Naval Nuclear Propulsion Examining Boards

LISTING OF APPENDICES.

- A Major Funding Milestones During Construction or Conversion
- B Post Shakedown Availability Planning Events Milestone Schedule
- C Summary of Major Milestones for Post Shakedown Availability

6.1 PURPOSE.

- a. Post Shakedown Availability (PSA) is an industrial activity availability assigned to correct deficiencies found during the shakedown cruise or to accomplish other authorized improvements. PSAs are scheduled to commence after delivery and to be completed prior to the Shipbuilding and Conversion, Navy (SCN) obligation work limiting date. This date occurs at the end of the 11th month after the month in which the Fitting-Out Period completed for surface units or at the end of the 11th month after the month in which delivery occurs for submarines. Appendix A of this chapter, taken from reference (a), reflects the Major Milestones during Construction related to funding. Funding guidelines for PSA are outlined in reference (b).
- b. The length of time designated for PSAs will vary dependent on the platform. Acceptance Trial (AT), Final Contract Trial (FCT), Combined Trial (CT) and Guarantee Material Inspection (GMI) related deficiencies constitute the majority of the PSA workload. Navy Shipbuilding Program Manager planned, authorized and funded modifications may also be included.

6.2 PLANNING AND EXECUTION. The events leading to a successful completion of PSA involve several activities and a variety of actions and reports. Appendix B of this chapter outlines the schedule of PSA planning events.

6.3 TRIALS, INSPECTIONS AND CREW CERTIFICATION. For nuclear and Surface Force Ships, Appendix C of this chapter provides a summary of major milestones required for PSA. For submarines, Appendices BC and CC in Volume II, Part I, Chapter 3 of this manual provide a summary of major milestones.

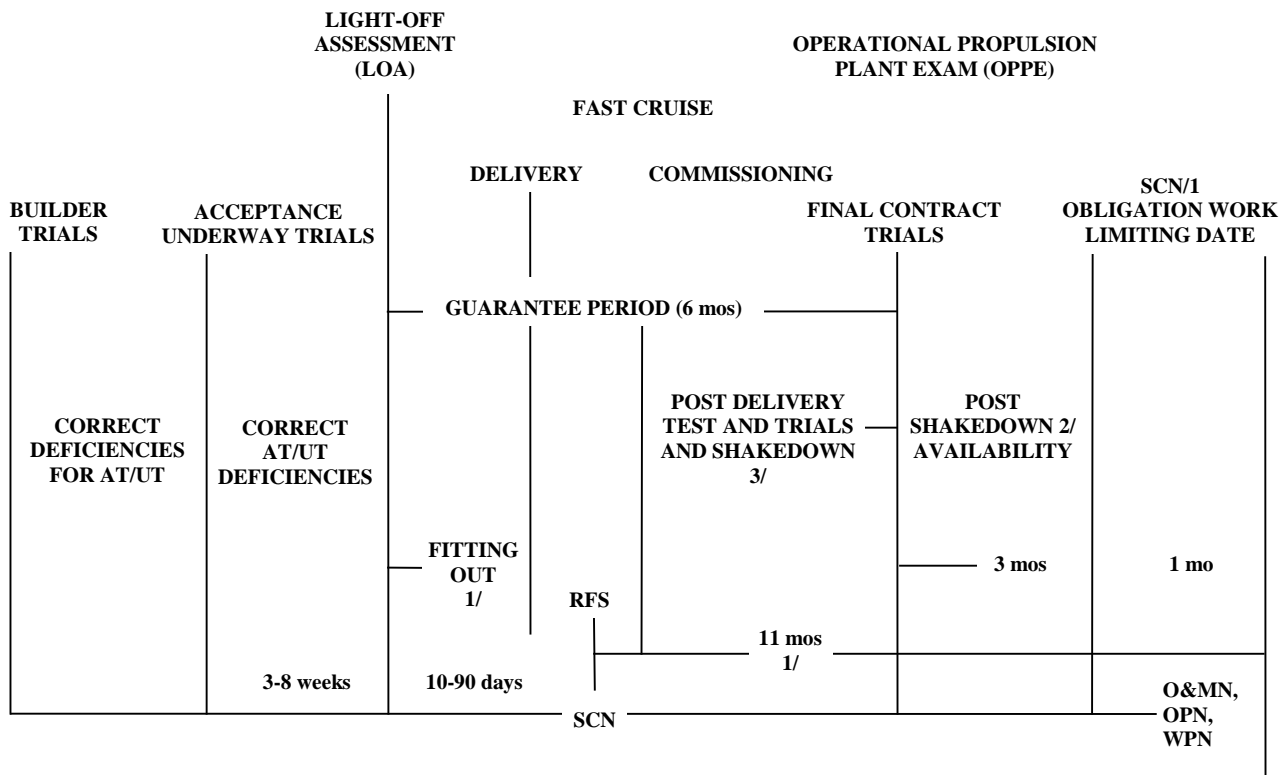

6.4 SEA TRIALS. Sea Trials are required to test work completed during PSA. The mandatory submarine requirements for PSA Sea Trials are identified in Volume II, Part I, Chapter 3 of this

manual. Volume II, Part I, Chapter 3, Appendix K of this manual provides a list of the minimum tests to be performed during Sea Trials for Surface Force Ships. The industrial activity must include at least two days in the availability for Sea Trials. The industrial activity must prepare an agenda for Sea Trials conducted after a PSA. Extensions or reductions of the Sea Trial period may be granted where warranted by the scope of work accomplished. Where an extension of Sea Trial and a change in the availability schedule is required, requests for such extensions must be submitted by the industrial activity to the Type Commander (TYCOM) as early as practical. All deficiencies resulting from Sea Trials must be satisfactorily resolved prior to completion of the availability. If no Sea Trial deficiencies are found, the availability may be completed with TYCOM concurrence at the completion of Sea Trials.

6.5 DEFICIENCY CORRECTION PERIOD. A deficiency correction period will be scheduled after Sea Trials and prior to PSA completion. The scheduled length of this deficiency correction period will be determined by the type and magnitude of the remaining deficiencies.

6.6 PERIOD FOLLOWING POST SHAKEDOWN AVAILABILITY. Depending on the PSA contract, the industrial activity will normally guarantee work accomplished during an availability for a period of 90 days from the completion of the availability. This does not include responsibility for malfunctioning machinery and equipment due to normal wear, improper adjustment, or tuning by Ship's Force and failure of limited life components. Ship's Force is required to report guarantee items to the industrial activity prior to the guarantee period expiration date. If operational commitments prohibit reporting prior to the 90-day period, the ship should report problems as soon as operations permit. A message is the preferred method of reporting these items. The message outlining specific deficiencies should be submitted to the Supervising Authority with a copy to the TYCOM, the Immediate Superior in Command (ISIC) and the Navy Shipbuilding Program Manager who will pass a copy to Naval Sea Systems Command (NAVSEA) 04, and to NAVSEA 08 for nuclear cognizant issues. Additionally, any Casualty Reports (CASREP) submitted during the guarantee period must also be addressed to the Supervising Authority and the Navy Shipbuilding Program Manager with passing instructions to NAVSEA 04, and to NAVSEA 08 for nuclear cognizant issues.

APPENDIX A

NOTE:

- 1. SSN or CVN fitting out is complete prior to delivery. Hence, the SCN obligation work limiting date is at the end of the 11th month after the month in which delivery occurs.**
- 2. PSA is normally scheduled to complete approximately one month prior to the obligation limiting date.**
- 3. Total period of PDT&T and Shakedown must be a minimum of six months. A waiver may be granted for a period greater than eight months; a request to extend SCN obligation limiting date may be required.**

APPENDIX B

POST SHAKEDOWN AVAILABILITY PLANNING EVENTS MILESTONE SCHEDULE

NOTE: EVENT TIMES ARE IN DAYS BEFORE AND AFTER DELIVERY AND ARE APPROXIMATE. SIGNIFICANT ADJUSTMENT MAY BE REQUIRED FOR PSAs THAT COMMENCE AT OTHER TIMES AFTER DELIVERY.

Time	Event
-90	a. Ship review and update Out of Commission List.
-30	a. Ship review and update Maintenance Data System and Equipment Deficiency Log per reference (c).
-21	<p>a. Supervising Authority prepare OPNAV 4790/2Ks for all deficiencies to be presented to the Board of Inspection and Survey (INSURV) at AT or CT per reference (d).</p> <p>b. AT or CT conducted by the INSURV Board.</p> <p>c. Conference following critique of AT or CT.</p> <p>(1) <u>Purpose</u> - to identify and resolve controversies over responsibility and timing for correction of deficiencies.</p> <p>(2) <u>Participants</u> - Navy Shipbuilding Program Manager, Supervising Authority, Shipbuilder and Ship.</p> <p>d. Supervising Authority provide ship one copy of each documented INSURV item for input at delivery into the Current Ship's Maintenance Project (CSMP) per reference (c).</p>
0	<p>a. Delivery.</p> <p>b. Navy Shipbuilding Program Manager issue Section B of Consolidated Report.</p> <p>c. Ship's Force submit OPNAV 4790/2Ks for all INSURV items and for all other material deficiencies that qualify for the CSMP.</p>
10	a. Shipbuilder issues delivery letter.
20	a. Supervising Authority comments on delivery letter.
27	<p>a. PSA Planning Conference.</p> <p>(1) <u>Purpose</u> - To establish PSA work package from input to date and to identify required advance planning actions.</p> <p>(2) <u>Participants</u> - Navy Shipbuilding Program Manager, Supervising Authority, TYCOM, Ship and Shipbuilder.</p>
30	a. Ship submit priority list of AT or CT deficiencies.
35	a. TYCOM comments on ship's priority list.
40	a. Navy Shipbuilding Program Manager issue list of SCN funded items authorized for accomplishment during PSA.

Time	Event
42	a. TYCOM assign availability.
45	a. Supervising Authority issue initial PSA work package. b. (Submarines only) Latest date for the conduct of Navy Shipbuilding Program Manager sponsored Acoustic and Combat System Certification Trials in order to present to the INSURV Board at the GMI.
50	a. Prepare for FCT or GMI per reference (c). b. TYCOM representative places ship in “INSURV Window” and calls down ship’s Pre-INSURV Package.
54	a. FCT or GMI by the INSURV Board. b. Conference following FCT or GMI critique (may coincide with Planning or Pre-Arrival Conference). (1) <u>Purpose</u> - To assign responsibility for correction of deficiencies and to assign ship or TYCOM priorities. (2) <u>Participants</u> - Navy Shipbuilding Program Manager, Supervising Authority, Shipbuilder, TYCOM, Ship, and ISIC (optional). c. Navy Shipbuilding Program Manager issue Section B of Consolidated Report. d. Ship comply with reference (c) for documenting INSURV items.
75	a. (Submarines only) Silencing Deficiency Conference: (1) <u>Purpose</u> - Naval Surface Warfare Center Carderock Division (NSWCCD) presents results of acoustic trials data analysis. (2) <u>Participants</u> - NSWCCD, Navy Shipbuilding Program Manager, Shipbuilder, TYCOM, Ship.
90	a. Navy Shipbuilding Program Manager issue final list of SCN funded items authorized for accomplishment during PSA.
100	a. Supervising Authority issue final PSA work package.
149	a. Pre-Arrival Conference: (1) <u>Purpose</u> - To review all work authorized by all customers with available cost estimates and to establish arrival procedures and conditions for the ship. Review and take action on Post Delivery Deficiency Items (PDDI). (2) <u>Participants</u> - Navy Shipbuilding Program Manager, Supervising Authority, Shipbuilder, TYCOM, ISIC and Ship.
154	a. Commence PSA. b. Arrival Conference (Navy Shipbuilding Program Manager and TYCOM participation not required unless specifically requested).

16 Oct 2019

Time	Event
214-274	a. End PSA. (Completion date varies with platform).
	a. Ship submit final status report of all deficiencies (Departure Report).
*	a. TYCOM comment on final status report from ship and submit recommendations for Navy Shipbuilding Program Manager action.
**	b. TYCOM issue follow-up letter requesting Navy Shipbuilding Program Manager final resolution and action on government responsible uncorrected deficiencies.
***	a. Work limiting date for SCN appropriation.

- * 30 days after completion of PSA
- ** 45 days after completion of PSA
- *** Refer to Appendix A of this chapter, Note (1)

APPENDIX C

SUMMARY OF MAJOR MILESTONES FOR POST SHAKEDOWN AVAILABILITY

Event	Cognizance	Approximate Schedule see Note 1
A. Periodic Monitoring Inspections	ISIC or TYCOM	Start to completion
B. (Nuclear Powered Ships only) Pre-Criticality Inspection (required if reactor shutdown greater than 16 weeks)	ISIC or TYCOM	Criticality -4 weeks
C. (Nuclear Powered Ships only) Post-Overhaul Reactor Safeguard Examination (per reference (e) if reactor shutdown greater than 6 months)	Fleet Commander	Criticality -4 weeks
D. Light-Off Assessment (LOA) (if propulsion plant shut down greater than 120 days)	Fleet Commander or TYCOM	-30 days
E. (Nuclear Powered Ships only) Approve Sea Trials Agenda	ISIC or TYCOM	-30 days
F. Dock Trials	Commanding Officer (CO) of ship	-21 days
G. Crew Certification	ISIC or TYCOM	-9 days
H. (Nuclear Powered Ships only) Message Certifying Crew and Material Readiness to Navy Shipbuilding Program Manager	TYCOM	-8 days
I. (Nuclear Powered Ships only) Authorize Ship to Commence Fast Cruise upon receipt of NAVSEA Permission to Conduct Critical Operations	TYCOM	-8 days
J. Commence Fast Cruise	CO of Ship	-7 days (2 days on, 1 off, 2 on)(length of Fast Cruise may be reduced based on length and extent of availability)
K. Report Completion of Fast Cruise and Ready for Sea Trials Message	Supervising Authority to TYCOM (CO of Ship concur)	-1 day
L. Authorize Commencement of Sea Trials Message	TYCOM to ISIC or TYCOM to Ship	-1 day
M. Commence Sea Trials	CO of Ship	0
N. Sea Trials Completion Message	Supervising Authority	+1 day

NOTE 1: Unless otherwise indicated, scheduled date referenced to Sea Trials underway date.

3.3.5	Delayed Production Completion Date	II-I-3-10
3.3.6	(Surface Force Ships Only) Command, Control, Communications, Computer, Combat Systems, Intelligence Light Off (AEGIS Light Off for AEGIS ships)	II-I-3-10
3.3.7	Memorandum of Agreement	II-I-3-11
3.3.8	Responsibilities	II-I-3-12
3.4	Availability Work Package Planning	II-I-3-18
3.4.1	Forces Afloat Planning Sources	II-I-3-18
3.4.2	Forces Afloat Planning Actions	II-I-3-19
3.4.3	Availability Work Packages	II-I-3-20
3.5	Availability Planning	II-I-3-22
3.5.1	Ship's Force Pre-Planning	II-I-3-22
3.5.2	Docking Conference	II-I-3-27
3.5.3	Ship's Force Administrative Preparations	II-I-3-27
3.5.4	TYCOM AWP Schedule and Documentation Requirements (Surface Force Ships Only)	II-I-3-28
3.5.5	BAWP or AWP Change Management Process (Surface Force Ships Only)	II-I-3-29
3.5.6	Modernization (Surface Force Ships Only)	II-I-3-32
3.6	Availability Execution	II-I-3-32
3.6.1	Responsibilities	II-I-3-32
3.6.2	Arrival Conference	II-I-3-36
3.6.3	Routine Meetings and Conferences	II-I-3-37
3.6.4	Assist Ship's Force Funds	II-I-3-39
3.6.5	Integrated Logistics Overhaul	II-I-3-40
3.6.6	Ship's Selected Records	II-I-3-41
3.6.7	New Work	II-I-3-42
3.6.8	Trials, Inspections and Crew Certification	II-I-3-43
3.7	Completion of Availability	II-I-3-92
3.8	Availability Completion Departure Conference	II-I-3-93
3.9	Post Availability	II-I-3-93
3.9.1	Completed Availability Work Package	II-I-3-93
3.9.2	End-of-Cycle Analysis (Surface Force Ships Only)	II-I-3-93
3.9.3	Post-Availability Analysis (Surface Force Ships Only)	II-I-3-93
3.10	Baseline Availability Work Package Close-Out (Surface Force Ships Only)	II-I-3-93

3.10.1	Fleet Readiness Plan Maintenance Cycle BAWP Close-Out	II-I-3-93
3.10.2	BAWP Close-Out Verification and Assessment Meeting	II-I-3-93

Appendices

A	Typical CNO Availability Planning Milestones (Submarines Only)	II-I-3A-1
B	Typical CNO Availability Planning Milestones (Surface Force Ships Only)	II-I-3B-1
C	Typical CNO Availability Planning Milestones (Aircraft Carriers Only)	II-I-3C-1
D	Suggested Guidelines for Forces Afloat Review of Availability Work Packages	II-I-3D-1
E	Monitoring Procedures (Surface Force Ships and Aircraft Carriers)	II-I-3E-1
F1	SITREP/Progress Report (Aircraft Carriers Only)	II-I-3F-1
F2	SITREP/Progress Report (Surface Force Ships Only)	II-I-3F-3
G	Sample New Work Forwarding Letter and Index	II-I-3G-1
H	Suggested Message Format for a New Work Candidate	II-I-3H-1
I	Minimum Dock Trials Requirements (Surface Force Ships and Aircraft Carriers)	II-I-3I-1
J	Minimum Fast Cruise Requirements (Surface Force Ships and Aircraft Carriers)	II-I-3J-1
K	Minimum Tests to be Performed During Sea Trials (Surface Force Ships and Aircraft Carriers)	II-I-3K-1
L	Minimum Dock Trials Requirements (Submarines Only)	II-I-3L-1
M	Minimum Fast Cruise Requirements (Submarines Only)	II-I-3M-1
N	Minimum Sea Trials Requirements for Chief of Naval Operations Availabilities Less Than Six Months Duration (Submarines Only)	II-I-3N-1
O	Minimum Sea Trials Requirements for Chief of Naval Operations Availabilities Greater Than Six Months Duration (Submarines Only)	II-I-3O-1
P	Summary of Significant Post Repair Sea Trial Requirements (Submarines Only)	II-I-3P-1
Q	Applicable RMC Availability Completion Certification Sheet (Surface Force Ships Only)	II-I-3Q-1
R	Availability Quality Management Plan (QMP) (Surface Force Ships Only)	II-I-3R-1

SAMPLE MESSAGES FOR CNO SCHEDULED AVAILABILITIES (SURFACE FORCE SHIPS ONLY)

AA	Sample Ship's Request for Permission to Commence Fast Cruise (Surface Force Ships and Aircraft Carriers)	II-I-3AA-1
AB	Sample Ship's Report of Fast Cruise Completion (Surface Force Ships and Aircraft Carriers)	II-I-3AB-1
AC	Sample Supervising Authority Readiness for Sea Trial Message (Surface Force Ships and Aircraft Carriers)	II-I-3AC-1
AD	Sample Prime Contractor Availability Key Event Readiness Certification Memorandum (Surface Force Ships Only)	II-I-3AD-1
AE	Sample Fleet Maintenance Activity Availability Key Event Readiness Certification Memorandum (Surface Force Ships Only)	II-I-3AE-1

15 Jan 2021

AF	Sample Naval Shipyard Availability Key Event Readiness Certification Memorandum (Surface Force Ships Only).....	II-I-3AF-1
AG	Sample Alteration Installation Team Availability Key Event Readiness Certification Memorandum (Surface Force Ships Only)	II-I-3AG-1
AH	Sample Ship's Force Availability Key Event Readiness Certification Memorandum (Surface Force Ships Only).....	II-I-3AH-1
AI	Sample Quality Assurance Availability Key Event Readiness Certification Memorandum (Surface Force Ships Only)	II-I-3AI-1
AJ	Sample Final Availability Key Event Readiness Certification Memorandum (Surface Force Ships Only).....	II-I-3AJ-1
AK	Branding Category (CAT) A Change Deferral Process (Surface Force Ships Only).....	II-I-3AK-1
AL	BAWP Change Deferral Request (SAMPLE).....	II-I-3AL-1
AM	Availability Planning Conference Agenda Sample (Surface Force Ships Only).....	II-I-3AM-1
AN	BAWP Work Item Branding Categories (Surface Force Ships Only) ..	II-I-3AN-1
AO	BAWP to AWP Process (Surface Force Ships Only)	II-I-3AO-1
SAMPLE MESSAGES FOR CNO SCHEDULED AVAILABILITIES OF LESS THAN SIX MONTHS IN DURATION (SUBMARINES ONLY)		
BA	Sample TYCOM Message Concerning Escort Services	II-I-3BA-1
BB	Sample ISIC Message to TYCOM Concerning Crew Certification and Material Condition for Fast Cruise and Sea Trials.....	II-I-3BB-1
BC	Major Trial and Inspection Milestones.....	II-I-3BC-1
BD	Sample TYCOM Message to Ship Concerning Sea Trials Depth Authorization.....	II-I-3BD-1
BE	Sample Ship Message to TYCOM Concerning Readiness for Follow-On Sea Trials	II-I-3BE-1
BF	Sample ISIC Message to TYCOM Concerning Material Certification for Follow On Sea Trials.....	II-I-3BF-1
BG	Sample TYCOM Message to Ship Concerning Follow-On Sea Trials Depth Authorization	II-I-3BG-1
BH	Sample Ship Message to ISIC Concerning Readiness for Fast Cruise ..	II-I-3BH-1
BI	Sample ISIC Message to Ship Authorizing Commencement of Fast Cruise.....	II-I-3BI-1
BJ	Sample Ship Message to ISIC and TYCOM Concerning Readiness for Sea Trials	II-I-3BJ-1
BK	Sample ISIC Message to TYCOM Concerning Final Material Certification Prior to Sea Trials.....	II-I-3BK-1
BL	Sample Ship Message to ISIC and TYCOM Concerning Material Certification Upon Completion of Sea Trials.....	II-I-3BL-1
BM	Submarine Sea Trial Situation Report (SITREP)	II-I-3BM-1
BN	Sample Message Concerning Mod Alert Notification	II-I-3BN-1
BO	Sample TYCOM Message to Ship Concerning URO	II-I-3BO-1
BP	Message Scenario for CNO Availabilities of Less than Six Months in Duration.....	II-I-3BP-1

BQ	Sample ISIC Message to TYCOM Concerning Fly-By-Wire Crew Certification and Fly-By-Wire Material Condition for At-Sea Testing or Fast Cruise and Sea Trials.....	II-I-3BQ-1
BR	Sample TYCOM Message to Ship Concerning Authorization to Use Fly-By-Wire Ship Control Systems.....	II-I-3BR-1
BS	Sample ISIC Message to TYCOM Concerning Fly-By-Wire Material Certification Upon Completion of At-Sea Testing or Sea Trials	II-I-3BS-1
BT	Sample TYCOM Message to Ship Concerning URO for Fly-By-Wire Ship Control Systems	II-I-3BT-1

SAMPLE MESSAGES FOR CNO SCHEDULED AVAILABILITIES OF GREATER THAN SIX MONTHS DURATION (SUBMARINES ONLY)

CA	Sample SRDRS Support Services Message	II-I-3CA-1
CB	Sample ISIC Message to TYCOM Concerning Crew Certification	II-I-3CB-1
CC	Major Trial and Inspection Milestones.....	II-I-3CC-1
CD	Sample TYCOM Message to Ship Concerning Completion Prerequisites	II-I-3CD-1
CE	Sample TYCOM Message to NAVSEA Concerning Fast Cruise and Critical Reactor Operations	II-I-3CE-1
CF	Sample TYCOM Message to Ship Concerning Sea Trials Depth Authorization.....	II-I-3CF-1
CG	Sample TYCOM Message to Ship Concerning URO	II-I-3CG-1
CH	Sample ISIC Message to TYCOM Concerning Material Certification Prior to Sea Trials.....	II-I-3CH-1
CI	Sample ISIC Message to TYCOM Concerning Material Certification upon Completion of Sea Trials	II-I-3CI-1
CJ	Sample Ship Message to TYCOM Concerning Readiness for Fast Cruise	II-I-3CJ-1
CK	Sample Ship Message to TYCOM Concerning Readiness for Sea Trials	II-I-3CK-1
CL	Sample TYCOM Message Concerning Resumption of Sea Trials Completion Prerequisites.....	II-I-3CL-1
CM	Sample ISIC Message to TYCOM Concerning Material Certification for Follow-On Sea Trials	II-I-3CM-1
CN	Sample Ship Message to TYCOM Concerning Readiness for Follow-On Sea Trials	II-I-3CN-1
CO	Sample TYCOM Message to Ship Concerning Follow-On Sea Trials Depth Authorization	II-I-3CO-1
CP	Reserved for Future Use	II-I-3CP-1
CQ	Sample Message Concerning Mod Alert Notification	II-I-3CQ-1
CR	Message Scenario for CNO Availabilities of Greater than Six Months in Duration	II-I-3CR-1
CS	Sample NAVSEA Message to TYCOM Concerning Fly-By-Wire Ship Control Systems Material Condition Readiness for Sea Trials.....	II-I-3CS-1
CT	Sample TYCOM Message to Ship Concerning Authorization to Use Fly-By-Wire Ship Control Systems.....	II-I-3CT-1
CU	Reserved for later use	II-I-3CU-1

CV	Sample TYCOM Message to Ship Concerning URO for Fly-By-Wire Ship Control Systems	II-I-3CV-1

CHAPTER 4 - FLEET MAINTENANCE AVAILABILITIES

4.1	Purpose	II-I-4-2
4.2	Definitions	II-I-4-3
4.2.1	Fleet Maintenance Activity	II-I-4-3
4.2.2	Lead Maintenance Activity	II-I-4-3
4.2.3	Executing Activity	II-I-4-3
4.2.4	Business Case Analysis	II-I-4-3
4.2.5	Planning Board for Maintenance	II-I-4-3
4.2.6	Maintenance and Modernization Business Plan	II-I-4-3
4.2.7	Immediate Superior In Command	II-I-4-4
4.3	Fleet Maintenance Availabilities	II-I-4-4
4.3.1	Ship's Force Upkeep	II-I-4-4
4.3.2	Scheduled Continuous Maintenance Availability	II-I-4-4
4.3.3	Major Maintenance Period	II-I-4-5
4.3.4	Unscheduled Continuous Maintenance Availability	II-I-4-5
4.3.5	Emergent Availability	II-I-4-5
4.4	Common Elements	II-I-4-5
4.4.1	Responsibilities	II-I-4-5
4.4.2	Submission of Work Candidates	II-I-4-8
4.4.3	Critical Jobs	II-I-4-8
4.4.4	Integrated Work Schedule	II-I-4-9
4.4.5	Technical Assistance and Assessment	II-I-4-9
4.4.6	Late Work and Scope Control	II-I-4-9
4.4.7	Memorandum of Agreement	II-I-4-10
4.4.8	Radiological Controls	II-I-4-10
4.4.9	Ship to Shop Material Control	II-I-4-10
4.4.10	Shipchecks	II-I-4-10
4.4.11	Lead Maintenance Activity Daily Production Meeting	II-I-4-10
4.4.12	Lead Maintenance Activity Progress Review	II-I-4-11
4.4.13	100 Hour Transition Periods (Submarines Only)	II-I-4-12
4.5	Ship's Force Upkeep	II-I-4-13
4.5.1	Upkeep Work Planning	II-I-4-13
4.5.2	Ship's Force Upkeep Work Execution	II-I-4-14
4.5.3	Ship's Force Upkeep Work Completion	II-I-4-14
4.6	Scheduled Continuous Maintenance Availability	II-I-4-14
4.6.1	Scheduled Continuous Maintenance Availability Planning	II-I-4-14
4.6.2	Continuous Maintenance Availability Execution	II-I-4-20
4.6.3	Continuous Maintenance Availability Completion Procedures	II-I-4-20
4.6.4	Hot Wash and Lessons Learned	II-I-4-23
4.6.5	Maintenance Management Performance Goals (Submarine Tenders only)	II-I-4-23

4.7	Major Maintenance Period	II-I-4-26
4.7.1	Major Maintenance Period Planning	II-I-4-27
4.7.2	Major Maintenance Period Execution	II-I-4-33
4.7.3	Major Maintenance Period Completion Procedures	II-I-4-34
4.7.4	Hot Wash and Lessons Learned	II-I-4-36
4.7.5	Activity Performance Summary	II-I-4-37
4.8	Year Long Continuous Maintenance	II-I-4-37
4.8.1	Year Long Continuous Maintenance Planning	II-I-4-37
4.8.2	Year Long Continuous Maintenance Work Execution	II-I-4-37
4.8.3	Continuous Maintenance Completion	II-I-4-37
4.9	Emergent Availability	II-I-4-37
4.9.1	Emergent Availability Planning	II-I-4-38
4.9.2	Work Execution	II-I-4-38
4.9.3	Availability Completion	II-I-4-38
4.10	Interim Drydocking or Pre-Inactivation Restricted Availabilities	II-I-4-38
4.10.1	Type Commander or Immediate Superior In Command (Group or Squadron) Responsibilities	II-I-4-38
4.10.2	Certification Availabilities (Less Than Six Months) (Submarines Only)	II-I-4-39
4.10.3	Operating Depth Policy	II-I-4-42
4.10.4	Propulsion Plant Tests (If Required)	II-I-4-42
4.10.5	Phase II Crew and Material Condition Inspection	II-I-4-42
4.10.6	Pre-Critical Inspections	II-I-4-42
4.10.7	Dock Trials	II-I-4-43
4.10.8	Fast Cruise	II-I-4-43
4.10.9	Sea Trials	II-I-4-44
4.10.10	Interrupted Sea Trials	II-I-4-46
Appendices		
A	Sample Message to TYCOM from ISIC Requesting Concurrence to Defer, Delete or Shorten a Scheduled CMAV	II-I-4A-1
B	Sample TYCOM Message Concerning Escort Services for IDD or PIRA Availabilities	II-I-4B-1
C	Suggested Format for a Message Work Candidate	II-I-4C-1
D	Business Case Analysis Tool	II-I-4D-1
E1	Availability Key Event List	II-I-4E-1
E2	CMAV Key Event Codes	II-I-4E-3
F	Availability Planning Message (Submarines Only)	II-I-4F-1
G	Final 100 Hours for Scheduled CMAV	II-I-4G-1
H1	Availability Milestone Schedule (SSNs and SSGNs Only)	II-I-4H-1
H2	Availability Milestone Schedule (SSBNs Only)	II-I-4H-7
H3	Availability Milestone Schedule (SSGNs Only)	II-I-4H-9
I	Availability Planning Response Message (Submarines Only)	II-I-4I-1
J	Major Trial and Inspection Milestones for IDD and PIRA Availabilities	II-I-4J-1

K	Sample ISIC Message to TYCOM Concerning Crew Certification and Material Condition for Fast Cruise and Sea Trials for IDD or PIRA Availabilities.....	II-I-4K-1
L	Sample Ship Message to ISIC and TYCOM Concerning Material Certification Upon Completion of Sea Trials for IDD or PIRA Availabilities.....	II-I-4L-1
M	Dock Trials Guidelines for IDD or PIRA Availabilities	II-I-4M-1
N	Fast Cruise Requirements for IDD or PIRA Availabilities	II-I-4N-1
O	Sample ISIC Message to TYCOM Concerning Final Material Certification Prior to Sea Trials for IDD or PIRA Availabilities	II-I-4O-1
P	Sample TYCOM Message to Ship Concerning Sea Trials Depth Authorization for IDD or PIRA Availabilities	II-I-4P-1
Q	Minimum Sea Trials Requirements for IDD or PIRA Availabilities	II-I-4Q-1
R	Submarine Sea Trial Situation Report (SITREP)	II-I-4R-1
S	Sample TYCOM Message to Ship Concerning URO for IDD or PIRA Availabilities.....	II-I-4S-1
T	Sample Ship Message to TYCOM Concerning Readiness for Follow-On Sea Trials for IDD or PIRA Availabilities.....	II-I-4T-1
U	Sample ISIC Message to TYCOM Concerning Material Certification for Follow-On Sea Trials in Cases Where a Previous Sea Trial was Aborted or Corrective Actions for Sea Trial Deficiencies Require an Additional Deep Dive for IDD or PIRA Availabilities	II-I-4U-1
V	Sample TYCOM Message to Ship Concerning Follow-On Sea Trials Depth Authorization for IDD or PIRA Availabilities	II-I-4V-1
W	Sample Ship Message to ISIC Concerning Readiness for Fast Cruise for IDD or PIRA Availabilities	II-I-4W-1
X	Sample ISIC Message to Ship Authorizing Commencement of Fast Cruise for IDD or PIRA Availabilities	II-I-4X-1
Y	Sample Ship Message to ISIC and TYCOM Concerning Readiness for Sea Trials for IDD or PIRA Availabilities	II-I-4Y-1

PART II

CHAPTER 1 - SHIP MAINTENANCE VALIDATION, SCREENING AND BROKERING

1.1	Purpose	II-II-1-1
1.2	Maintenance	II-II-1-1
1.2.1	Regional Maintenance Centers.....	II-II-1-1
1.2.2	Maintenance Team	II-II-1-1
1.2.3	Class Maintenance Plan.....	II-II-1-1
1.3	Work Candidates	II-II-1-2
1.3.1	Current Ship's Maintenance Project Composition	II-II-1-2
1.3.2	Requirements	II-II-1-2
1.3.3	Elements	II-II-1-3
1.3.4	Guidelines.....	II-II-1-4
1.3.5	Validation	II-II-1-5

1.3.6	Verification	II-II-1-5
1.4	Screening and Brokering	II-II-1-5
1.4.1	Screening and Brokering Work Candidates	II-II-1-5
1.4.2	Screening and Brokering	II-II-1-6
1.4.3	Key Data	II-II-1-6
1.4.4	Guidelines	II-II-1-7
1.4.5	Additional Requirements for Scheduled Mandatory Tasks Pushed by CMP	II-II-1-8
1.5	Assessments	II-II-1-11
1.5.1	Maintenance Team	II-II-1-11
1.5.2	Type Commander	II-II-1-11
Appendices		
A	Availability Creation and Numbering	II-II-1A-1

CHAPTER 2 - SURFACE SHIP AND AIRCRAFT CARRIER WORK PACKAGE PREPARATION

2.1	Purpose	II-II-2-1
2.1.1	Prorated Business Rules	II-II-2-1
2.1.2	Responsibilities	II-II-2-1
2.2	Scope	II-II-2-2
2.3	Executing Activity Planning	II-II-2-2
2.4	Master Specification Catalog	II-II-2-2
2.4.1	Work Package Preparation	II-II-2-2
2.4.2	Use of the Master Specification Catalog	II-II-2-3
2.4.3	Central Planning Activities	II-II-2-3
2.4.4	General Process	II-II-2-4
2.4.5	Common Business Rules	II-II-2-5
2.4.6	Prorate Information	II-II-2-5
2.5	Milestones	II-II-2-7
2.5.1	Milestone Compliance	II-II-2-9
2.5.2	Committed Work at 80% Lock	II-II-2-9
2.5.3	Committed Work at 100% Lock	II-II-2-9
2.5.4	Automated Work Request Screening	II-II-2-9
2.5.5	Flow Metric	II-II-2-10
2.6	Continuous Maintenance Availabilities	II-II-2-10
2.6.1	Continuous Maintenance Availability Types	II-II-2-11
2.6.2	Continuous Maintenance Availability Business Rules	II-II-2-11
2.6.3	Continuous Maintenance Availability Applicability	II-II-2-15
2.6.4	Work Included in Continuous Maintenance Availabilities	II-II-2-15
2.6.5	Concurrent Continuous Maintenance Availabilities	II-II-2-15
2.6.6	Ship Movement During a Continuous Maintenance Availability	II-II-2-16
2.6.7	Continuous Maintenance Availability Metrics	II-II-2-16

2.6.8	Continuous Maintenance Availability Late Work Premium (XAZ only)	II-II-2-16
2.6.9	Continuous Maintenance Planning	II-II-2-17
2.7	Advance Planning Status Messages	II-II-2-17
2.7.1	Work Package Execution Review	II-II-2-17
2.7.2	Monthly Execution Planning Status Reporting	II-II-2-17
2.8	Maintenance Teams Executing Maintenance with Firm Fixed Price Contracts	II-II-2-17
Appendices		
A	Prorate Items with Explanations	II-II-2A-1
B	Master Specification Catalog Maintenance Office Guidelines	II-II-2B-1
C	Surface Ship Prorate Process	II-II-2C-1
D1	Cost Surface Ship Availability Milestones	II-II-2D-1
D2	Fixed Price Surface Ship Availability Milestones	II-II-2D-27
E	Aircraft Carrier Navy Modernization Process Milestones	II-II-2E-1
F	Planning Priority Matrix	II-II-2F-1
G	Depot Planning Priority Schedule (PSIA)	II-II-2G-1
H1	Process Flowchart Firm Fixed Price CNO Availability	II-II-2H-1
H2	Process Flowchart Firm Fixed Price CMAV or Emergency Availability	II-II-2H-2
H3	Process Flowchart Firm Fixed Price PSIA CNO Availability	II-II-2H-3
H4	Process Flowchart Firm Fixed Price PSIA CMAV Availability	II-II-2H-4

CHAPTER 3 - MAINTENANCE WORK CLOSEOUT

3.1	Purpose	II-II-3-1
3.2	Scope	II-II-3-1
3.3	Background	II-II-3-1
3.4	Work Closeout Procedures	II-II-3-1
3.4.1	Depot Maintenance Activity Responsibilities	II-II-3-1
3.4.2	Fleet Maintenance Activity Responsibilities	II-II-3-2
3.4.3	Maintenance Team Responsibilities	II-II-3-3

PART III

FOREWORD - MISSION FUNDED FLEET MAINTENANCE ACTIVITIES

1.1	Purpose	II-III-FWD-1
1.2	Scope	II-III-FWD-1
1.2.1	Applicability	II-III-FWD-1
1.2.2	Authority	II-III-FWD-1
1.3	Organization	II-III-FWD-1
1.3.1	Basic Principles for Costing Maintenance	II-III-FWD-1
1.3.2	Special Requirements Associated with Maintenance Costing	II-III-FWD-2
1.4	Benefits of Capturing Costs	II-III-FWD-2

CHAPTER 1 - UNIFORM COSTING POLICIES AND PROCEDURES FOR FLEET MAINTENANCE ACTIVITIES

1.1	Purpose	II-III-1-1
1.2	Uniform Costing Policies and Procedures	II-III-1-1
1.2.1	Function	II-III-1-1
1.2.2	Classification	II-III-1-1
1.2.3	Uniformity	II-III-1-1
1.2.4	Control	II-III-1-1
1.2.5	Proration	II-III-1-1
1.2.6	Unique or New Requirements	II-III-1-1
1.2.7	Performance.....	II-III-1-2
1.2.8	Direct Cost Basic Definition	II-III-1-2
1.2.9	Mission Overhead Costs Basic Definition	II-III-1-2

CHAPTER 2 - DETAILED COSTING GUIDANCE FOR FLEET MAINTENANCE ACTIVITIES

2.1	Purpose	II-III-2-1
2.2	Types of Costs	II-III-2-1
2.2.1	Accommodation Storage and Handling.....	II-III-2-1
2.2.2	Administrative Assistance to Managers and Supervisors	II-III-2-2
2.2.3	Administrative Services for Tenants	II-III-2-2
2.2.4	Allowance List Outfit Material Items - Outfit Supply Activity Furnished Material.....	II-III-2-2
2.2.5	Issue and Return of Anti-Contamination Clothing.....	II-III-2-2
2.2.6	Funding Support of Board of Inspection and Survey	II-III-2-2
2.2.7	Calibration of Instruments	II-III-2-3
2.2.8	Clerical and Office Automation Staff.....	II-III-2-3
2.2.9	Administration and Review of Contractor Work	II-III-2-3
2.2.10	Crane Operators.....	II-III-2-3
2.2.11	Special Test and Certification of Cranes	II-III-2-4
2.2.12	Continuous Process Improvement.....	II-III-2-4
2.2.13	Data Processing Resources	II-III-2-4
2.2.14	Decontamination of Equipment and Tools.....	II-III-2-5
2.2.15	Delay Time	II-III-2-5
2.2.16	Dive Lockers	II-III-2-5
2.2.17	Dosimetry Issuing and Processing.....	II-III-2-6
2.2.18	Drills - Conducting and Participation.....	II-III-2-7
2.2.19	Dry Dock Blocks and Dock Caps.....	II-III-2-7
2.2.20	Dry Dock Operation	II-III-2-7
2.2.21	Preparation of Engineering Procedures for Specific Authorized Work ...	II-III-2-7
2.2.22	Equipment Maintenance	II-III-2-7
2.2.23	Equipment Rental	II-III-2-8
2.2.24	Disposal of Excess Plant Property.....	II-III-2-8
2.2.25	Fuel	II-III-2-9

2.2.26	Guarantee Work.....	II-III-2-9
2.2.27	Incentive Awards Program for Civilian and Military Personnel Assigned to the Activity	II-III-2-9
2.2.28	Inspection, Including Non-Destructive Testing	II-III-2-9
2.2.29	Inspection Services	II-III-2-10
2.2.30	Installation of Equipment	II-III-2-10
2.2.31	Janitorial Services and Work Area Clean-Up	II-III-2-11
2.2.32	Laundry Service.....	II-III-2-11
2.2.33	Lean	II-III-2-11
2.2.34	Lost and Damaged Tools	II-III-2-12
2.2.35	Lost Time.....	II-III-2-12
2.2.36	Upkeep of Maintenance Equipment	II-III-2-12
2.2.37	Maintenance of Nuclear Equipment	II-III-2-12
2.2.38	Management and Industrial Engineering Studies	II-III-2-12
2.2.39	Material Handling and Expediting	II-III-2-13
2.2.40	Fitness for Duty Medical Examination.....	II-III-2-13
2.2.41	Metal Stock Cutting (Bar, Pipe, Plate, Cable, etc.)	II-III-2-14
2.2.42	Acquisition of Minor Property	II-III-2-14
2.2.43	Miscellaneous Expenses of the Production Resources Department Shops	II-III-2-14
2.2.44	Mock-Up Work	II-III-2-14
2.2.45	Pilot and Tug Service	II-III-2-15
2.2.46	Planning and Estimating Services	II-III-2-15
2.2.47	Acquisition of Plant Property Equipment.....	II-III-2-16
2.2.48	Pollutant Clean-Up	II-III-2-16
2.2.49	Pre-Expended Bins	II-III-2-17
2.2.50	Printing, Reproduction and Duplication	II-III-2-17
2.2.51	Programming Effort for Numerically-Controlled Machines	II-III-2-17
2.2.52	Purchase of Gas, Liquid or Solid.....	II-III-2-17
2.2.53	Radiological Control Engineering.....	II-III-2-17
2.2.54	Radiological Waste Processing	II-III-2-18
2.2.55	Refueling Equipment.....	II-III-2-18

- (g) COMPACFLTINST 5400.3 - U.S. Pacific Fleet Regulations
- (h) NAVSEAINST 4790.8/OPNAVINST 4790.4 - Ships' Maintenance and Material Management (3-M) Manual
- (i) SSPINST 4720.1 - Policies and Procedures for Alteration of Strategic Weapon System Equipment

LISTING OF APPENDICES.

- A List of Acronyms
- B Glossary of Terms

1.1 PURPOSE. The purpose of this volume is:

- a. To provide guidance for implementing and executing the management of an integrated fleet maintenance process for all Navy ships throughout their life cycle. This includes establishing policies and responsibilities for determining, authorizing, planning, scheduling, performing and evaluating maintenance of ships, to ensure quality, safety and maximum operational and material readiness. References (a) through (i) must be used in conjunction with this volume in establishing an effective maintenance program.
- b. To outline current maintenance process policies and responsibilities for all maintenance availabilities and delineate programs and associated data management systems required for accomplishing this maintenance.

1.2 SCOPE.

- a. This volume applies to all ships of the Navy (active and reserve); it does not apply to civilian operated ships assigned to the Military Sealift Command. Throughout this manual, the term "ship" refers to all surface ships, aircraft carriers, submarines and those patrol and service craft specified in reference (a). Reference (b) provides policy and guidance for maintenance of service craft and boats not addressed in reference (c).

- b. The Foreword of this manual contains a master list of references. These references are arranged in alphanumeric order to facilitate the ordering of documents. References used in specific chapters are listed at the beginning of that chapter. Appendices A and B of this chapter contain a list of acronyms and glossary of terms used in this specific volume.
- c. Equipment under the cognizance of Naval Sea Systems Command Nuclear Propulsion Directorate (NAVSEA 08) is maintained following NAVSEA 08 directives.
- d. Nuclear-Powered Ballistic Missile Submarine (SSBN) Strategic Weapon System (SWS) and Nuclear-Powered Guided Missile Submarine (SSGN) Attack Weapons Systems (AWS) equipment under the cognizance of Strategic Systems Programs (SSP) is operated, maintained, modified or modernized following approved SSP directives, instructions or both.
 - (1) Reference (i) defines policies, controls, processes and procedures for the accomplishment of all SSP Alterations (SPALT) issued by the Director, Strategic Systems Programs for all SSP cognizant equipment on both SSBNs and SSGNs. Reference (i) further defines the methodology and processes to plan, document, coordinate, install, and test SWS hardware, AWS hardware, software and modernization SPALTs.
 - (2) Adherence to reference (i) ensures that all related or affected Equipment, Fleet Documentation, Training, Logistic and Maintenance functions under the cognizance of SSP are fully integrated as part of the SPALT. Only SSP authorized SWS or AWS SPALTs are installed on SSBNs and SSGNs.
 - (3) Applicable and required local support services such as Crane, Riggers, Power Isolation, Tag-Out, Hazardous Material, Quality Assurance, Critical Skill requirements, etc., for the conduct of a SPALT must be identified within the Director, Strategic Systems Programs SPALT document, related Ordnance Document or SPALT installation pre-briefings (as appropriate). This information must be communicated and provided to all involved and affected local activities following the SPALT process no later than forty-five (45) days prior to the conduct of a SPALT, as outlined and defined within reference (i).
 - (4) An SSP Contractor or Government Team will provide the required operational and engineering support for all SPALT, Maintenance and Repair Activities to SWS or AWS equipment under the cognizance of SSP. The respective responsibilities of SSP Contractor or Government Teams, the Fleet Maintenance Activity and other local Commands for the execution of the SSP SPALT program will be documented in an overarching Memorandum of Agreement in order to define areas of responsibility for all activities involved in the accomplishment of authorized alterations in a timely, efficient and coordinated manner.

1.3 CHANGES AND CORRECTIONS. Changes and corrections will be issued as required. Comments and suggestions for improving or changing this volume are invited. Address comments, recommendations and requested changes to Submarine Maintenance Engineering, Planning and Procurement (SUBMEPP) Activity utilizing the change request form located in the

front of this manual. If changes are submitted in electronic format, facsimile or E-mail, each change request must contain the information required on the change request form.

APPENDIX A

LIST OF ACRONYMS

2-Kilo (2K)	3-M Maintenance Action Form
3-M	Maintenance and Material Management
A&I	Alteration and Improvement
ACRN	Accounting Classification Reference Number
AERP	Advanced Equipment Repair Program
AIM	Advanced Industrial Management
AIM4RMC	Advanced Industrial Management for Regional Maintenance Centers
AIMXP	Advanced Industrial Management Express

CARPER	Aircraft Carrier Planned Equipment Replacement
CASREP	Casualty Report
CBM	Condition Based Maintenance
CDMD-OA	Configuration Data Managers Database-Open Architecture
CDNS	Cancellation Deferral Notification System
CFR	Contractor Furnished Report
CHENG	Chief Engineer
CJ	Critical Job
CM	Continuous Maintenance
CMAV	Continuous Maintenance Availability
CMP	Class Maintenance Plan
CNO	Chief of Naval Operations
CNRMC	Commander, Navy Regional Maintenance Center
CNSL	Commander, Naval Surface Atlantic
CNSP	Commander, Naval Surface Pacific
CO	Commanding Officer
COMNAVSEASYSKOM	Commander Naval Sea Systems Command
COMSUBDEVRON	Commander Submarine Development Squadron
COMSUBLANT	Commander Submarine Force, United States Atlantic Fleet
COMSUBPAC	Commander Submarine Force, United States Pacific Fleet
COMSUBRON	Commander, Submarine Squadron
COSAL	Coordinated Shipboard Allowance List

15 Jan 2021

CPA	Carrier Planning Activity
CPJ	Critical Path Job
CS or CCS	Command and Control Systems
CSMP	Current Ship's Maintenance Project
CVN	Nuclear Powered Aircraft Carrier
CWP	Controlled Work Package
DFS	Departure From Specification
DISSUB	Disabled Submarine
DSRA	Docking Selected Restricted Availability
DSS	Deep Submergence System
DTG	Date Time Group
EA	Executing Activity
EAB	Emergency Air Breathing
ECM	Electronic Counter Measure
EDL or ESL	Equipment Deficiency or Status Log
EDSRA	Extended Docking Selected Restricted Availability
EM	Emergent Availability
EMBT	Emergency Main Ballast Tank
EOC	Engineered Operating Cycle
EOG	Electrolytic Oxygen Generator
ESM	Electronic Warfare Support Measures
ESR	Engineering Service Request
FAC	Funding Activity Code
FBW SCS	Fly-By-Wire Ship Control Systems
FDNF	Forward Deployed Naval Forces
FFP	Firm Fixed Price
FMA	Fleet Maintenance Activity
FMPMIS	Fleet Modernization Program Management Information System
FRP	Fleet Readiness Plan
FWP	Formal Work Package
FY	Fiscal Year
HM&E	Hull, Mechanical and Electrical
IDD	Interim Drydocking
IDIQ	Indefinite Delivery, Indefinite Quantity
IEM	Inactive Equipment Maintenance
IFF	Identification Friend or Foe
ILO	Integrated Logistics Overhaul
ILS	Integrated Logistics Support
IMA	Intermediate Maintenance Activity
IMPAC	Integrated Modernization Planning for Aircraft Carriers
INSURV	Board of Inspection and Survey
IPC	Integrated Planning Conference
IPTD	Integrated Project Team Development
ISE	Individual Ships Exercises
ISEA	In-Service Engineering Activity
ISIC	Immediate Superior In Command (Group or Squadron)
IT	Information Technology
IWS	Integrated Work Schedule
JCN	Job Control Number
JFMM	Joint Fleet Maintenance Manual

LAR	Liaison Action Request
LCPC	Life Cycle Planning Conference
LDS	Logistics Data System
LLTM	Long Lead Time Material
LMA	Lead Maintenance Activity
LOA	Light-Off Assessment
MA	Maintenance Activity
MACHALT	Machinery Alteration
MARMC	Mid-Atlantic Regional Maintenance Center
MBT	Main Ballast Tank
MCA (Submarines)	Material Condition Assessment
MCA (Surface Ships)	Machinery Condition Analysis
MCAI	Material Condition Assessment Inspection
MCAP	Material Condition Assessment Process
MDCO	Maintenance Document Control Office
MDS	Maintenance Data System
MIP	Maintenance Index Page
MJC	Master Job Catalog
MLOC	Master Light-Off Checklist
MM	Maintenance Manager
MMBP	Maintenance and Modernization Business Plan
MOA	Memorandum or Memoranda of Agreement
MRC	Maintenance Requirement Card
MSC	Master Specification Catalog
MSCMO	Master Specification Catalog Maintenance Office
MSR	Master Ship Repair Contractor
MST	Maintenance Support Team
MT	Maintenance Team
MTT	Mobile Training Team
MWO	Maintenance Work Order
NAVAIR	Naval Air Systems Command
NAVIMFAC	Naval Intermediate Maintenance Facility
NAVSEA	Naval Sea Systems Command
NAVSEA 08	Naval Sea Systems Command Nuclear Propulsion Directorate
NDE	Navy Data Environment
NEC	Navy Enlisted Classification
NMD	Navy Maintenance Database
NMP	Navy Modernization Program
NNSY	Norfolk Naval Shipyard
NPEB	Nuclear Propulsion Examining Board
NRL	Naval Research Laboratory
NRMC	Navy Regional Maintenance Center

OPNAV	Naval Operations
OPORD	Operational Order
OPTAR	Operating Target
OQE	Objective Quality Evidence
ORDALT	Ordinance Alteration
PAC	Pre-Arrival Conference
PARM	Participating Acquisition Resource Managers
PB4M	Planning Board for Maintenance
PCD	Production Completion Date
PCO	Primary Contracting Officer
PE	Port Engineer
PEO	Program Executive Officer
PHNS	Pearl Harbor Naval Shipyard
PIRA	Pre-Inactivation Restricted Availability
PLAD	Plain Language Address Directory
PMA	Phased Maintenance Availability
PMR	Periodic Maintenance Requirement
PMS	Planned Maintenance System
PMT	Performance Monitoring Team
POET	Point of Entry Testing
PORSE	Post Overhaul Reactor Safeguards Examination
PPEA	Propulsion Plant Engineering Activity
PR	Planning Review
PRC	Project Review Conference
PSIA	Private Sector Industrial Activity
PTD	Provisioning Technical Documentation
PVI	Product Verification Inspection
QA	Quality Assurance
QAS	Quality Assurance Supervisor
QMP	Quality Management Plan
QMS	Quality Management System
RCC	Request for Contract Change
RCD	Required Completion Date
REC	Re-Entry Control
RLAR	Reverse Liaison Action Request
RMAIS	Regional Maintenance Automated Information System
RMC	Regional Maintenance Center
RMO	Reactor Maintenance Officer
RMT	Regional Maintenance Team
ROV	Repair of Other Vessels
RPCCR	Reactor Plant Configuration Change Report
RPM	Revolutions Per Minute
RRC	Regional Repair Center
RSE	Reactor Safeguards Examination
RSG	Regional Support Group
SBAT	SUPSHIP Bath
SC	Ship Change
SCA	System Certification Authority

SDI	Ship's Drawing Index
SDM	Ship Design Manager
SEIE	Submarine Escape Immersion Ensemble
SERMC	Southeast Regional Maintenance Center
SF	Ship's Force
SFCC	Submarine Flight Critical Component
SHIPALT	Ship Alteration
SID	Ship Installation Drawing
SITREP	Situation Report
SJM	Selected Job Management
SNAP	Ship's Non-Tactical Automated Data Processing System
SNPMTT	Surface Nuclear Propulsion Mobile Training Team
SOE	Submerged Operating Envelope
SOSMIL	Safety of Ship Maintenance Item List
SPALT	Strategic Systems Programs Alteration
SPM	Secondary Propulsion Motor
SPM	Ship Program Manager
SRA	Selected Restricted Availability
SRDRS	Submarine Rescue Diving Recompression System
SRF-JRMC	Ship Repair Facility - Japan Regional Maintenance Center
SSBN	Nuclear-Powered Ballistic Missile Submarine
SSCA	SUBSAFE Certification Audit
SSEOC	Surface Ship Engineered Operating Cycle
SSES	Ship System Engineering Station
SSGC	SUPSHIP Gulf Coast
SSGN	Nuclear-Powered Guided Missile Submarine
SSP ₁	Ship Specification Package
SSP	Strategic Systems Programs
SSPINST	Strategic Systems Programs Instruction
SSR	Ship Selected Records
SSRAC	NAVSEA Standard Specification for Ship Repair and Alteration Committee
SUBLANT	Submarine Atlantic
SUBMEPP	Submarine Maintenance Engineering, Planning and Procurement Activity
SUBPAC	Submarine Pacific
SUBSAFE	Submarine Safety
SUPSHIP	Supervisor of Shipbuilding
SUPSHIP NN	Supervisor of Shipbuilding Newport News
SURFMEPP	Surface Maintenance Engineering Planning Program
SWLIN	Ships Work List Item Number
SWRMC	Southwest Regional Maintenance Center
SWS	Strategic Weapon System
SYSCOM	Systems Command
TA	Type Availability
TAAS-INFO	Tech Assist, Assessments and Scheduling Information Software
TAMS	TYCOM Alteration Management System
TAR	Technical Analysis Report
TDA	Type Desk Assistant
TDO	Type Desk Officer
TEMPALT	Temporary Alteration
TEMPEST	National Policy on the Control of Compromising Emanations
TEMPMOD	Temporary Modification
TRFKB	TRIDENT Refit Facility Kings Bay
TRIPER	TRIDENT Planned Equipment Replacement

TSO	Temporary Standing Order
TSRA	Total Ship Readiness Assessment
TWD	Technical Work Document
TYCOM	Type Commander
UIC	Unit Identification Code
UNF	Unfunded
UNSEARESCOM	Undersea Rescue Command
UQC	Underwater Telephone
URO	Unrestricted Operation
WAF	Work Authorization Form
WDC	Work Definition Conference
WOO	Window of Opportunity
WPER	Work Package Execution Review
WQC	Underwater Telephone
WSS	Work Sequence Schedule
XAZ	Scheduled Continuous Maintenance Availability
XCM	Unscheduled Continuous Maintenance Availability
XCZ	CNO Scheduled Availability
XEM	Year-long Emergent Work Availability
YLCM	Year Long Continuous Maintenance

APPENDIX B

GLOSSARY OF TERMS

<u>TERM</u>	<u>DEFINITION</u>
Charging to a Unit Identification Code (UIC)	The action describing a person, who is normally categorized as direct support labor, charging his time to a ship's UIC and while not working on a specific work item or Maintenance and Material Management Maintenance Action Form (2K). When recording charges in this manner, he will charge to a Maintenance Work Order (MWO) that was created for that specific purpose. The nature of that MWO will be directly related to production but not to one specific job or 2K.
Deep Dive	The first dive to maximum operating depth. This depth will not necessarily coincide with the design test depth of the hull. See definition of Maximum Operating Depth.
Direct Labor Category	Assigned to those production personnel who charge their time to a MWO that originated from a specific 2K.
Direct Support Labor Category	Assigned to those personnel who are first line supervisors of direct personnel or who directly support production and charge to a UIC use Direct Support Labor. Also includes administrative personnel assigned to production; however, they will normally charge to overhead. Some examples of personnel likely to charge as Direct Support Labor: Port Engineer, Ship Supervisors, Production Quality Assurance, Engineers, Technical Assist Personnel, Planners.
Dock Trials	Dock Trials are those ship trials conducted at the industrial activity to determine the ability of the ship, from a material standpoint, to conduct Sea Trials safely.
Fast Cruise	A period immediately prior to underway trials during which Ship's Force operates the ship for dockside training. Fast Cruise must, as far as is practical, simulate at-sea operating conditions.
Fleet Maintenance Activity (FMA)	FMAs include tenders, shore based maintenance activities (Regional Maintenance Centers, Naval Ship Repair Facilities, Naval Submarine Support Facilities, Naval Intermediate Maintenance Facilities (NAVIMFAC), TRIDENT Refit Facilities, Weapons Repair Facilities and other activities of that type) and supporting activities (port services, etc. that perform maintenance on Fleet assets).
Indirect Labor Category	Assigned to those personnel who charge their time to a cost center as overhead and do not charge to a UIC or MWO. Some examples of personnel that are considered Indirect: Master At Arms, Training, Career Councilor.
Industrial Activity	The activity responsible for accomplishing construction or repair of ships whether private or public. This includes Naval shipyards, private shipyards, shipbuilders, vendors, Naval Aviation Depots, Naval Ship Repair Facilities and other Naval Repair or Technical Activities (Naval Underwater Weapons Center, Naval Ships Weapons Center, etc.).
Initial Dive	For purposes of seawater valve and system testing, as defined in reference (e), the first dive to a depth not previously reached during the trials.

Lead Maintenance Activity	The single activity responsible for integrating all maintenance and modernization on U.S. Naval ships during any type of availability.
Long Lead Time Material	Material which is not normally available in local stock and may not be received prior to the start of the availability if not ordered prior to the Work Definition Conference (WDC).
Maintenance Manager	Those persons, such as Port Engineers, Ship Superintendents, Ship's Coordinator and Maintenance Planning Managers, assigned to assist Ship's Force in the tracking of work candidates, development of work packages and tracking of FMA or Industrial Activities assigned jobs.
Maintenance Support Team (MST)	Military team that performs the function of Ship's Force, and reports to the supported ship's Immediate Superior In Command (ISIC) and the Operational Commander.
Maintenance Work Order (MWO)	The Automated Information System object that personnel use in order to charge time to a work item or 4790/2K.
Major Chief of Naval Operations (CNO) Maintenance Availability	An availability of six months or greater duration performed by industrial activities under NAVSEA management or contract administration or as designated by the TYCOM or NAVSEA.
Master Specification Catalog (MSC)	Database of templates for all Naval Ship Classes. It is a module located within NMD.
Maximum Operating Depth (Also Maximum Authorized Operating Depth)	The depth to the keel for a particular submarine which is authorized by Commander Submarine Force, United States Atlantic Fleet, Commander Submarine Force, United States Pacific Fleet (COMSUBLANT or COMSUBPAC) upon the recommendation of NAVSEA, as the depth not to be exceeded in operations. This depth is normally the Test Depth but may be reduced in specific cases. The depth authorized by COMSUBLANT or COMSUBPAC may be less than, but in no case exceed, the depth recommended by NAVSEA.
Minor CNO Maintenance Availability	An availability of less than six months in duration scheduled by and under Type Commander management.
Moderate Speed	The range of speed that allows the submarine optimum recovery (as shown on applicable submerged operating envelope curves) if loss of stern plane control or flooding occurs. Normally 8-15 knots.
Naval Supervisory Authority or Supervisory Authority	The officer designated to represent the Navy Department at an industrial activity, normally a Supervisor of Shipbuilding (new construction), Regional Maintenance Center (Conversion and Repair) or the Commander of a Naval Shipyard.
Navy Maintenance Database (NMD)	Worldwide database used for all repairs across Naval Ship Classes. Used to develop work items for repair or modernization.
Refurbishment Level Maintenance	The actions taken to return a component to "A" condition (like-new condition). Normally done under rotatable pool (Advanced Equipment Repair Program, TRIDENT Planned Equipment Replacement, etc.) programs by Designated Overhaul Points. Designated Overhaul Points must be certified to have the industrial capability to meet the program requirements for performing quality work and have the capacity to meet established Refurbishment Turnaround Times.

Regional Maintenance Team	A site specific, multi-disciplined group of people normally accomplishing “outside shop” or on-platform work. An RMT may be platform or technology specific (e.g., submarines or nuclear) to facilitate necessary worker training and competency. An RMT is generally comprised of both military and civilian workers.
Regional Repair Center	An “inside shop” focusing on a particular product line (e.g., motors) or technology (e.g., machinery). An RRC is generally comprised of both military and civilian workers.
Restoration Level Maintenance	The minimum planned inspection, maintenance and testing criteria to be applied to ensure a component will function satisfactorily until the next planned accomplishment of the maintenance requirement.
Ship’s Force	Members assigned as a ship’s permanent or rotational crew.
Technical Data	Recorded information (regardless of the form or method of recording) of a scientific or technical nature (including computer databases and computer software documentation). This term does not include computer software or financial, administrative, cost or pricing or management data or other information incidental to contract administration. The term includes recorded information of a scientific or technical nature that is included in computer databases. For these purposes, technical data includes the characteristic of a particular science, trade or profession.
Test Depth (TD)	For the purpose of the proper method of measuring and specifying Test Depth, the following applies: Test Depth must be measured to the bottom of the keel for all types of submarine operations. Builders’ trials and trials following major industrial activity availabilities greater than six months must be at a tolerance of plus zero (0), minus twenty (20) feet of Test Depth when specified. All other trials can be conducted at 95% to 100% of Test Depth to satisfy all the requirements specified for 100% Test Depth.
Waterline	The term “waterline” in this manual refers to where the hull of a ship meets the surface of water when afloat.
Work	<ol style="list-style-type: none"> a. Any action that actually or potentially changes (including disassembly for the purposes of inspection or repair) the approved configuration of any part, component or ship’s system. b. Any action that removes or affects the ship’s ability to operate ship’s systems or components following ship’s systems, operating manuals or reactor plant manuals. c. Any testing or inspections required to establish, maintain or reestablish certification. d. Any design, engineering, planning or configuration management functions that involve the final review or approval of technical information. <p>Examples of work include the following:</p> <ol style="list-style-type: none"> 1. Action which disassembles or removes any part, component or ship’s system. 2. Action specified in a Technical Work Document.

Work (Cont'd)

3. Any action that removes or affects the ship's ability to operate ship's systems or components following ship's systems manuals, operating manuals or reactor plant manuals, excluding tagout per the Tagout Users Manual, including but not limited to:
 - (a) Component or system tests.
 - (b) Intrusive inspections (such as breaking the plane of electrical panels requiring electrical safety).
 - (c) Valve line-ups that alter the normal system line up not governed by operating procedures.
 - (d) Removing valve hand wheels, disconnecting of reach rods.

LISTING OF APPENDICES.

- A Material Condition Assessment Process Timeline
- B CVN Propulsion Plant Material Condition Assessments
- C System Certification Checklist for CNO Availability Key Events (Aircraft Carriers Only)
- D Scope of Visual Inspections of Reactor Plant Fluid Systems
- E First 100 Hours for Surface Force Scheduled Availability
- F Final 100 Hours for Surface Force Scheduled Availability

2.1 PURPOSE. The purpose of this chapter is to provide Fleet Commanders' guidance for the maintenance of ships throughout their operating cycle per references (a) through (an). This includes maintenance levels, strategies, programs and modernization which define and support all maintenance accomplished per technical specifications and standards during a ship's operating cycle.

2.1.1 Naval Supervisory Authority.

- a. Naval Supervisory Authority Definition. The Naval Supervisory Authority (NSA) is the single Naval activity, as indicated in Table 2-1 of this chapter, responsible for the integration, oversight and verification of all work accomplished by all activities (i.e., Naval Shipyards (NSY), Regional Maintenance Centers (RMC), Supervisors of Shipbuilding (SUPSHIP) contractors, Type Commander (TYCOM) sponsored contractors, Intermediate Maintenance Activities (IMA), Alteration Installation Teams

(AIT) and Ship's Force) working within the assigned availability, and acts as the single point of contact for this work. The NSA will provide the oversight required to ensure that all work in the assigned availability (e.g., Chief of Naval Operations (CNO) availabilities, Continuous Maintenance Availability, Emergent Availability) is authorized and completed in compliance with applicable technical requirements and maintenance and modernization policy, and that all work meets schedule, quality, environmental, and safety requirements. The NSA must possess a Naval Sea Systems Command (NAVSEA) technical warrant.

- b. NSA Assignment. In most cases, the NSA is assigned by the Fleet Maintenance Officer and TYCOM per Table 2.1. An NSA must be assigned to all CNO availabilities and to all contracted work where the majority of the work is performed onboard the ship. However, for repair, maintenance and modernization work packages where TRIDENT Refit Facility Kings Bay (TRFKB), Naval Submarine Support Facility New London (NSSFNL) or the Tender is assigned as the Lead Maintenance Activity (LMA), no NSA Assignment is required (whether or not the work package includes contracted work). Local Technical Authority for the LMA is delegated by their assigned Chief Engineer per reference (a) as defined in a Memorandum of Agreement (MOA) between the responsible organizations. When such an MOA exists, the LMA (TRFKB, NSSFNL, Tenders) executes the specific NSA responsibilities of paragraphs 2.1.1.d.(1) through 2.1.1.d.(4) of this chapter when no NSA is assigned.
 - (1) Alterations installed by Alteration Installation Teams (AIT) per reference (b) can only be executed in availabilities that have a designated NSA, with the exception of availabilities where TRFKB, NSSFNL or Tenders are the assigned LMA. If the AIT install is being performed outside a CNO availability, the AIT Sponsor may propose NSA responsibility be assigned to any organization that is qualified as an NSA for the type of work being performed.
 - (2) An NSA is not required if the work is being performed by a U.S. Navy LMA outside a CNO availability.
 - (3) The NSA will normally be the activity assigned based on the geographic area covered by the assigned RMC, NSY or SUPSHIP, as indicated in Volume VI, Chapter 2, Table 2-1 of this manual. If this is not practical, the NSA assignment will be made based on the area of responsibility of the cognizant Chief Engineer as delineated in reference (a).
 - (4) The NSA designation does not apply to alterations to ships accomplished by AITs where the NSA may be responsible:
 - (a) Alterations to nuclear components and systems under the cognizance of the Deputy Commander for Nuclear Propulsion (NAVSEA 08).
 - (b) Strategic Systems Program Alterations (SPALT) issued by the Director, Strategic Systems Programs and alterations under the TRIDENT SYSTEM Change Management Program.

- (c) Temporary modifications performed as part of a shipyard availability to support industrial work or associated testing.
 - (d) Temporary Alterations (TEMPALT) to be accomplished on Submarines.
 - (e) Technical support personnel and certification teams who only provide technical guidance, equipment checkout and grooming or certification of systems or on-site training for Ship's Force not associated with the accomplishment of an alteration or Ship Change.
 - (f) Boats, small craft, service craft, equipment and other exceptions including items that are not permanently installed and are portable.
- c. NSA Qualification. In order to be qualified to perform the functions of an NSA, the organization must have a Chief Engineer holding a NAVSEA Technical Warrant. For this reason, the only organizations qualified to perform the functions of NSA are the NSYs, the RMCs and the SUPSHIPS. Facilities such as the Tenders, NSSFNL, TRFKB and Ship's Force cannot be considered NSAs.

NOTE: DELEGATION OF NSA RESPONSIBILITIES CAN BE ACCOMPLISHED THROUGH A MOA THAT IDENTIFIES DUTIES, RESPONSIBILITIES AND OVERSIGHT FUNCTIONS. THE NSA IS RESPONSIBLE FOR ALL WORK ACCOMPLISHED BY ALL ACTIVITIES AND ACTS AS THE SINGLE POINT OF CONTACT.

- d. NSA Responsibilities. These responsibilities include but are not limited to:
- (1) Coordination with other Maintenance Activities (e.g., NSY, RMC, SUPSHIP, AIT, Ordnance Alteration (ORDALT) or TEMPALT Installation Teams) through an authorized MOA. NSA representative must sign MOA(s) as assurance that any civilian contractor requirements detailed in the MOA are contained within applicable contracts.
 - (2) Single point of contact for the LMA and shipboard personnel.
 - (3) Verify completion of work for milestones, key events, end of availability, availability departure report based on documentation provided by all maintenance activities.
 - (4) Based on the amount of work accomplished, the NSA may also assume the role of the LMA per paragraph 2.1.2 of this chapter.
 - (5) For CNO availabilities, the NSA must:
 - (a) (For NSY only) Also serve as the LMA.
 - (b) Participate in all work definition, planning and completion conferences.
 - (c) Facilitate planning efforts. Ensure detailed planning and integration of the work package is accomplished to provide a schedule that incorporates the work and testing of all organizations involved in the availability. The schedule must address work definition, key events, ship-checks, job summary, material preparations and strategy

preparations. Identify milestones with sufficient detail to measure intermediate progress toward each key event. Ensure orientation briefings and training are conducted as necessary so that personnel understand applicable project processes and requirements. Identify their appropriate points of contact.

- (d) Prior to Fast Cruise, Sea Trials and availability completion, verify all authorized work has been completed unless waived. For work performed by contractors, ensure all provisions of the contract have been fully executed.
 - (e) During work execution, review all changes to specifications and work items impacting propulsion plant or designated areas of nuclear powered ships to ensure requirements are met.
 - (f) Participate in critiques and problem investigations (e.g., Trouble Reports) as necessary.
- (6) For alterations installed by AITs, the NSA, as provided in Table 2-1, as required by reference (b) must:
- (a) Monitor the effectiveness and the quality of AIT managers' execution of Quality Assurance oversight responsibilities by assessing their execution of Quality Assurance oversight responsibilities and by Quality Sampling. Request Qualification Records as needed in support of spot checks.
 - (b) Perform inspections of installations, on a sampling basis, and use the sampling evidence to indicate conformance or nonconformance with NAVSEA requirements.
 - (c) Conduct AIT In and Out briefs and coordinate with the AIT Manager and Ship's Force to ensure satisfactory completion of alterations.
 - (d) Receive copies of Integrated Logistics System products from the AIT and verify they were properly distributed.
 - (e) Ensure completion reports are issued and for any work not accomplished, assure a Current Ship's Maintenance Project (CSMP) Job Control Number is issued.

Table 2-1

Maintenance Availability	NSA	LMA
CNO Public (1)	NSY	NSY
CNO Private (1)	RMC or SUPSHIP (2)	Contractor
Non-CNO Public (3) (4)	RMC or NSY	RMC, NSY or Fleet Maintenance Activity (FMA)
Non-CNO Private (3)	RMC or SUPSHIP (2)	Contractor

15 Jan 2021

Emergent/Voyage repair (4)	RMC or SUPSHIP/NSY	FMA, RMC, NSY or Contractor
Maintenance Availability	NSA	LMA
New Construction	SUPSHIP	Contractor
AIT availabilities	RMC, SUPSHIP or NSY	FMA, RMC, NSY, AIT or Contractor
Other (4)	N/A	FMA or Ship's Force

NOTES:

1. Per reference (c).
2. Pearl Harbor NSY and Intermediate Maintenance Facility and Puget Sound NSY and Intermediate Maintenance Facility are also considered RMCs.
3. Examples of Non-CNO availabilities are located in Part I, Chapter 4 of this volume.
4. The Tenders, NSSFNL, TRFKB and Ship's Force are not NSAs. If the FMA is executing work, the FMA will be the LMA. The Fleet Maintenance Officer may designate a NSA if necessary.

NOTE: THE LMA IS RESPONSIBLE TO THE NSA WHEN AN NSA IS ASSIGNED OR THE IMMEDIATE SUPERIOR IN COMMAND (ISIC) IF NO NSA IS ASSIGNED.

2.1.2 Lead Maintenance Activity. The single activity responsible for work being accomplished on U.S. Naval ships during any type of availability. For work conducted during periods in which the NSYs or RMCs do not have oversight, an LMA will be designated. LMAs are responsible for:

- a. Conduct or attend routine progress review meetings with all assigned repair activities. Identify and resolve coordination problems and work conflicts. Advise the appropriate maintenance sponsors (e.g., NSA, NAVSEA, TYCOM, AIT Sponsor, Ship's Program Manager, etc.) of significant quality, cost and schedule impacts and problems.
- b. (CNO Availabilities only) Coordinate work and testing controls to include Work Authorization Forms, tagouts and test sequencing per Volume IV, Chapter 10, paragraphs 10.3 and 10.4 of this manual.
- c. Integrate the work of all repair activities. For CNO availabilities, this includes an integrated schedule. For non-CNO availabilities, an integrated schedule may be used, based on the complexity of the work as determined by the LMA. The schedule must ensure adequate time is provided for crew training.
- d. Report work status to Maintenance Brokers.
- e. Request assistance via Maintenance Broker as needed for outside activity performance.

- f. (CNO Availabilities only) Coordinate preparations by assigned repair activities for all key events (e.g., docking, undocking, hot ops, dock trials, fast cruise, sea trials, etc.) to include verification signature checklists of readiness to start.
- g. Track progress of all maintenance activities.
- h. (Submarines only) Provide management oversight of a ship safety council per reference (d).
- i. (Submarines and CNO Availabilities only) Coordinate sail safety and sail closeout efforts among the assigned repair activities conducting work.
- j. (CNO Availabilities only) Coordinate crane operations, pier laydown areas, dry dock work areas and resolve other real estate conflicts which may impede efficient execution of the availability.
- k. (CNO Availabilities only) Provide sea trials agenda, with all repair activity input, for ship Commanding Officer's concurrence and Type Commander approval.
- l. Maintain a list of activities authorized to work on the ship the LMA is responsible for and ensure the list is updated weekly or on an as-needed basis. Ensure activities working on ship have the proper credentials, work schedule and pedigree (authorized maintenance activity) prior to being added on the work authorization list (e.g., Submarine Safety, Scope of Certification, Fly-By-Wire, Radiological).
- m. Ensure maintenance activities performing maintenance on assigned ships have proper MOA, Standard Work Practices, NAVSEA standard items or Strategic Systems Programs Alteration authorization per reference (e) in place and that the MOA, Standard Work Practices, NAVSEA standard items or Strategic Systems Programs Alteration authorization address required support for work authorizations and work control. For SUBSAFE, Deep Submergence Systems (DSS), Scope of Certification and Fly-By-Wire work, ensure that the MOA identifies the certifying activity. NSA representative must sign MOA(s) as assurance that any civilian contractor requirements detailed in the MOA are contained within applicable contracts.
- n. Direct maintenance providers to their proper points of contact.
- o. Attend all production and maintenance management meetings to communicate and resolve priorities, problems, job interferences and issues.
- p. Define, identify and provide resolution to coordination problems and work conflicts between the Maintenance Managers, Maintenance Activities, Maintenance Brokers and the ship.
- q. Provide a copy of all Departures From Specifications to Ship's Force Quality Assurance Officer and the Type Commander (TYCOM) N43 and COMNAVSPECWARCOM N84 (for DSS assets) organization.
- r. Participate in critiques and problem investigations (e.g., Trouble Reports) as necessary.
- s. Conduct Ship's Force and contractor orientation briefings and training per references (b) or (f), as applicable prior to commencement of shipboard work.

- t. (CNO Availabilities only) Appoint a Ship Safety Officer to chair the Ship Safety Council and coordinate work and testing that affects ship's conditions (i.e., buoyancy, list, trim, stability and watertight integrity) and prevention and protection from fire and flooding.
- u. (Carrier Incremental Availabilities only) A Ship Safety Council is not required, but a Ship Safety Officer will be appointed and on site to oversee any high risk evolutions per Section 046 of reference (g).

2.1.3 Ship's Responsibility. The ship is responsible to:

- a. Monitor all maintenance activities to ensure they are on the master authorization list.
- b. Ensure a current master authorization list is maintained by the Ship's Duty Officer.
- c. Provide the LMA with information on ship-brokered work so all activities are placed on the master authorization list.

2.2 MAINTENANCE ACCOMPLISHMENT LEVELS.

2.2.1 Fleet Maintenance. Fleet maintenance encompasses Organizational and Intermediate level maintenance as defined in reference (b). It includes, but is not limited to:

- a. Ship's Force maintenance that is planned and corrective maintenance which is within the capability and the responsibility of the ship's crew or Maintenance Support Team (if assigned). The work is a blend of equipment operation, condition monitoring, planned maintenance and repairs ranging from simple equipment lubrication to component change-out and in some cases complete disassembly and repair in-place. The thrust of Ship's Force maintenance is to take advantage of operator experience and onboard rating skills and to ensure the ship is as maintenance self-sufficient as possible.
- b. FMA maintenance is that requiring specialized ratings, skill training in special maintenance processes and technical proficiency or equipment or instrumentation not available to Ship's Force. FMA maintenance normally consists of calibration, repair, refurbishment or replacement of damaged or unserviceable parts, components or assemblies, the emergency manufacture of unavailable parts within the FMA capability and providing technical assistance.
 - (1) FMAs will accomplish refurbishment level maintenance beyond Ship's Force capability to the maximum extent possible within the policies of this chapter and other directives consistent with the availability of funds, material and skilled manpower.
 - (2) TRIDENT Refit Facilities are additionally tasked and resourced to accomplish industrial restoration level maintenance to SSBN or SSGN 726 Class submarine components as part of the integrated overhaul maintenance strategy for these ships.
 - (3) FMAs include Regional Repair Centers and Regional Maintenance Teams which are capable of conducting in-depth maintenance on their assigned components using the latest available technology.

- c. Strike Force Intermediate Maintenance Activity is composed of the collective Strike Force elements capable of performing maintenance beyond the organizational level. A Strike Force Intermediate Maintenance Activity maximizes the Strike Force's ability to operate and sustain itself at sea during extended periods in forward areas through improved repair capabilities and material self-sufficiency.
- d. The Commercial Industrial Services program accomplishes Fleet maintenance for essential Fleet repairs that the FMAs have the capability to accomplish but not the shop capacity. The Commercial Industrial Services concept provides a means of using commercial industrial activities to provide maintenance services on a rapid response basis while observing approved commercial contracting procedures. Reference (h) fully describes policies and procedures for Commercial Industrial Services.

2.2.2 Industrial Maintenance. Industrial maintenance is that restoration level maintenance which encompasses Depot level maintenance as defined in reference (c). It includes but is not limited to:

- a. Industrial maintenance that is restoration level work requiring complex industrial processes, journeyman level technician skills, facilities, capabilities or manpower capacity not available at FMAs or to Ship's Force. This capability is provided within the Navy by naval industrial activities, ship repair facilities, Naval Aviation Depots and commercial industrial activities and repair facilities under contract.
- b. Ship maintenance work scheduled for accomplishment by industrial facilities that in the judgment of the TYCOM, Commander NAVSEA or Commander Space and Naval Warfare Systems Command in their specific areas of responsibility, is not feasible to be accomplished by FMAs or Ship's Force, due to:
 - (1) Having insufficient time or manpower.
 - (2) Being beyond the capabilities of the FMAs.
 - (3) Being of such a nature that split responsibility between Fleet and industrial maintenance activities may occur.

2.3 RELIABILITY CENTERED MAINTENANCE.

- a. Reliability Centered Maintenance is a systematic analysis approach where the system design is evaluated for possible failures, the consequences of these failures and the recommended maintenance procedures that should be implemented. The objective is to design a planned maintenance program to address possible failure consequences. The emphasis here is on the establishment of planned maintenance requirements (versus corrective maintenance requirements).
- b. Maintenance plans for in-service ships, systems and equipment should be reviewed and modified to incorporate Reliability Centered Maintenance principles in areas where it can be determined that the expected results will be commensurate with associated costs.

2.4 CONDITION BASED MAINTENANCE. Condition Based Maintenance (CBM) is maintenance based on objective evidence of actual or predictable failure of ship's installed

systems or components. This includes condition-directed maintenance and periodicity adjustments to time-directed planned maintenance.

- a. A thorough knowledge and assessment of actual equipment condition in relation to its designed condition is the basis for most maintenance decisions. Equipment condition is a broad term which includes static parameters, such as size and shape, and dynamic parameters, such as speed, temperature, pressure, voltage, etc. While each Ship's Force is in the best position to know the condition of its ship and equipment, the complexities of modern design and engineering dictate that specialized assistance be utilized to determine the condition of much of the equipment. Diagnostics, inspections, non-intrusive monitoring for trending, analyses and tests must be utilized to the maximum extent possible to determine performance and material condition of, and to predict and schedule required corrective maintenance action on, ships systems and equipment.
- b. Further information on CBM is provided by reference (c).
- c. Programs and organizations that are available to assess equipment conditions are described in paragraphs 2.4.1 through 2.4.8 of this chapter. Deficiencies identified by these and other programs and organizations must be documented in the CSMP.

2.4.1 Unrestricted Operations (Submarines Only).

- a. The Unrestricted Operation (URO) program is designed to ensure continued safe submerged operations to design test depth. URO requirements must be accomplished as scheduled and as described in Volume VI, Chapter 25, and Volume V, Part I, Chapter 5 of this manual.
- b. The Hull Integrity Procedures (HIP) program is designed to identify degradation of the material condition of the hull integrity boundary and of those systems affecting occupant safety. HIP requirements must be accomplished as scheduled and as described in Volume V, Part III, Chapter 5 and Volume VI, Chapter 38, of this manual.

2.4.2 Periodic Maintenance Requirements Program (Submarines Only). The Periodic Maintenance Requirement program has been established to integrate test, inspection, and maintenance directives from various Systems Commands and to control their input into each ship's CSMP for the required accomplishment by means of the Master Job Catalog. The phrase, "Periodic Maintenance Requirement" encompasses the URO program and the Submarine Engineering Management, Monitoring and Fleet Support Program Office Performance Monitoring Program. All requirements due for accomplishment must be included in the CSMP at least six months prior to the due date to allow sufficient time for material procurement and maintenance planning. Specific requirements of the Periodic Maintenance Requirement program are described in Volume VI, Chapter 24, of this manual.

2.4.3 Material Condition Assessment Feedback Program (Submarines Only).

- a. The submarine Material Condition Assessment (MCA) program is coordinated by NAVSEA and Submarine Maintenance Engineering, Planning and Procurement (SUBMEPP) Activity and is used to improve the maintenance efficiency of critical, non-nuclear Hull, Mechanical and Electrical (HM&E) components by optimizing

component refurbishment periodicities. This assessment of a component's condition at refurbishment, along with other pertinent component data such as performance monitoring and corrective maintenance data, provides the foundation for extension or reduction of component refurbishment periodicity. Further, it allows for consideration of modification of component design configuration or the revision or elimination of component maintenance requirements with confidence that component reliability will not be diminished.

- b. The MCA data collection program consists of MCA data sheets and pre-availability test and inspection information. Other feedback programs and sources of material condition data include, but are not limited to, UROs, Maintenance and Material Management (3-M) System, Casualty Reports, Advanced Equipment Repair Program (AERP), Performance Monitoring Program, etc.
- c. The Integrated Maintenance Analysis Profile database displays planned and corrective maintenance feedback, historical configuration, job completion and alteration installation data in support of the MCA program.

2.4.4 Machinery Condition Analysis (Surface Force Ships and Aircraft Carriers).

2.4.4.1 General. The TYCOM Machinery Condition Analysis (MCA) and Ship's Force Machinery Vibration Analysis programs provide an objective assessment of the mechanical condition of propulsion plant and auxiliary rotating machinery. MCA surveys and Ship's Force Machinery Vibration Analysis and testing directly support the CBM strategy by determining specific maintenance requirements and priorities.

2.4.4.2 Automated Machinery Condition Analysis. The advent of real-time machinery digital sensors, analysis tools, data recording and data transfer has brought Automated Machinery Condition Analysis (AMCA) to the forefront of CBM. AMCA systems are being employed and installed on new ships-of-the-line and back-fitted where practicable on existing ships. The AMCA tools and systems support the MCA programs and MCA surveys. The systems are implementing prognostic, diagnostic and maintenance capabilities for both shipboard and off-ship personnel to utilize to enhance understanding of the mechanical condition of propulsion plant and auxiliary rotating machinery.

2.4.4.3 Machinery Condition Analysis Surveys. MCA surveys combine vibration analysis, visual inspections and a review of operating and maintenance records to objectively determine each machine's condition.

- a. Surveys are conducted before and after each scheduled CNO maintenance availability period. The survey preceding the availability provides a comprehensive list of machines which require repair. The MCA survey after the availability allows time for corrective maintenance actions prior to the ship's deployment and, if applicable, repairs while machinery is still under the availability warranty period. The post-availability survey also establishes a baseline to which future surveys can be compared.
- b. The key to the MCA program is onboard analysis of vibration data. MCA surveys identify machinery problems. A written report details prioritized repair recommendations with appropriate diagnostic and visual inspection data for all machines tested. The report also summarizes machinery repair history.

- c. Reports of failure trends and recurring or continuing mechanical problems are available along with MCA history reports. These reports can be generated based on machine type, ship, ship class and Fleet.

2.4.4.4 Ship's Force Machinery Vibration Analysis Program. The Ship's Force Machinery Vibration Analysis program uses a fully capable automated diagnostics system to provide many ships with the ability to perform vibration testing. A set of computer programs in the diagnostics system provides the equivalent of a full time vibration engineer so that Ship's Force can test and analyze machinery at any time. Periodic training is provided to Ship's Force.

2.4.5 Ship Assessment, Groom and Evaluation. Ship Assessment, Groom and Evaluation is an existing TYCOM program which provides assessment of the material condition of selected shipboard systems and equipment. Ship Assessment, Groom and Evaluation includes identification of discrepancies to support development of a comprehensive conditioned based industrial availability work package. This program is fully described in Volume VI, Chapter 42 of this manual.

2.4.6 Performance Monitoring Team. The Performance Monitoring Team provides technical support to the Fleet by obtaining data using CBM methodology to monitor mission and safety critical systems and material conditions of selected HM&E systems. Performance Monitoring Team functions include, but are not limited to, the following:

- a. Collecting and analyzing equipment data.
- b. Establishing and maintaining a master database to track equipment performance.
- c. Providing feedback and technical guidance using trend analysis.
- d. Making equipment repair and deferral recommendations.

2.4.7 Command, Control, Communications, Computers and Combat Systems Readiness Assessment Program (Aircraft Carriers Only). The Command, Control, Communications, Computers and Combat Systems Readiness Assessment (C5RA) program is a TYCOM program which provides maintenance training and a comprehensive review and assessment of a ship's Combat Systems prior to deployment. It includes identification of discrepancies to support development of a comprehensive condition based availability work package for a ship's Combat Systems. For a complete description of the C5RA and Total Ship's Readiness Assessment (TSRA) program, refer to applicable TYCOM instructions.

2.4.8 Electronic Systems Review (SSBN and SSGN 726 Class Submarines Only). Fleet Training Support Center Detachments perform periodic Electronic Systems Reviews on SSBN and SSGN 726 Class submarines. The major emphasis of the Electronic Systems Review is on the job training of Ship's Force personnel in the performance of the Planned Maintenance System and maintenance of selected electronic equipment. Areas of review include monitoring for safety related issues, monitoring of the Planned Maintenance System and verifying equipment operability for the following systems: Radar, Electronic Warfare Support Measures, Periscopes, Fire Control, Central Atmosphere Monitoring System, Gyrocompass, Radio, Sonar, Launchers, Torpedo tubes and handling equipment. Additionally, the Electronic Systems Review team will assist division 3-M Coordinators in administrative reviews, perform National Policy on the Control of Compromising Emanations (TEMPEST) inspections or small arms inspections if requested.

2.5 SYSTEM OR COMPONENT MAINTENANCE PROGRAMS (SUBMARINES AND AIRCRAFT CARRIERS ONLY).

2.5.1 Advanced Equipment Repair Program (Submarines Only).

- a. AERP is a system for providing new or refurbished non-nuclear components to support specific programmed industrial activity availability and Engineered Operating Cycle (EOC) maintenance requirements. A programmed requirement is one that is identified, budgeted and funded for ultimate end use on a specific submarine hull. Industrial activity availability and EOC requirements are defined as those assets necessary to support the accomplishment of a planned availability work package during scheduled CNO maintenance availabilities. Although similar in concept to the usual rotatable pool or repairable items, the AERP differs in that pool requirements are not determined by usage data. By its nature, the AERP is limited to items of significant value for which it would not be economical to stock on the basis of 'normal' usage. Instead, requirements are specific and are determined by the overall schedule of submarine industrial activity availability and EOC requirements. Only so much material is provided as will meet the programmed needs of the specific ships involved. Range and depth of AERP assets will normally not exceed projected requirements for a two-year period.
- b. Components are furnished as Government Furnished Material to maintenance activities performing industrial activity availabilities and maintenance of submarines. The AERP provides the flexibility and speed-of-response required to ensure timely logistic support and engineering direction of complex maintenance planning.
- c. Components selected for management under the AERP are those complex, high value items required to effect the accomplishment of programmed submarine industrial activity availability or EOC requirements in the shortest possible time. However, other factors may also affect the decision to manage certain items under the AERP. Reference (i) provides specific guidance for selection of components.
- d. Various activities may initiate action to include additional components into the AERP. Such action may stem from independent study or the recognition of some Fleet requirement. In identifying potential AERP components, close coordination must be maintained with the Fleet and with the activity assigned responsibility for producing the availability work package for each submarine's availability. The final decision regarding inclusion of an item in the AERP rests with NAVSEA 07.

2.5.2 TRIDENT Planned Equipment Replacement Program (SSBN and SSGN 726 Class Submarines Only). Shipboard equipment which requires significant maintenance during the planned operating cycle, industrial level maintenance, which is beyond the capability of Ship's Force, and which cannot be accomplished during the refit period (without unacceptable impact on other refit requirements), will be supported by *Trident* Planned Equipment Repair (TRIPER) program. TRIPER equipment will be removed from the ship for refurbishment ashore, replaced with pre-tested, Ready for Issue units and the affected system restored to full operational condition prior to completion of the refit period. Replacement will be accomplished on a planned basis at intervals designed to preclude the failure of the equipment or significant degradation of its associated system. Deviations of greater or less than one refit from established

TRIPER change-out periodicities require ISIC concurrence. A planned change to shelf stock TRIPER equipment will be accomplished only when sufficient change kits are available to effect the change in all units of a given model of the equipment held in shelf stock. Shelf stock TRIPER equipment is represented in configuration status accounting databases maintained by SUBMEPP.

2.5.3 Aircraft Carrier Planned Equipment Replacement Program (Aircraft Carriers Only). The Aircraft Carrier Planned Equipment Replacement (CARPER) program is designed to ensure that the planned incremental availabilities of the USS *Nimitz* (CVN-68) class aircraft carriers are completed on time and within cost by having a pool of historically critical, hard-to-get equipment and components available both for planned replacement and for emergent issue if needed.

2.5.4 Seawolf Class Rotatable Pool Program.

- a. The *Seawolf* Rotatable Pool is part of the class maintenance and availability planning process. The purpose of the program is to provide replacement components as scheduled by the Planned Maintenance Cycle Schedule, prior to failure or unacceptable degradation of installed components. Components which have been replaced are refurbished at a Designated Overhaul Point and returned in Ready for Issue status to repeat a similar cycle.
- b. Reactor plant system and equipment under the cognizance of the NAVSEA Nuclear Propulsion Directorate (08) are excluded from the *Seawolf* Rotatable Pool Program.
- c. SUBMEPP has been designated as the *Seawolf* Class Rotatable Pool Program Manager. Reference (j) provides specific guidance for managing the *Seawolf* Rotatable Pool program.

2.6 MODERNIZATION.

2.6.1 Navy Modernization Program. The Navy Modernization Program (NMP) is a CNO managed program to develop, plan, fund and accomplish Ship Changes and alterations following policies mandated in reference (b). It is executed per Volume VI, Chapter 3 (Submarines) and Chapter 36 (Surface Ships and Aircraft Carriers) of this manual and applies to all alterations to commissioned ships and craft of the Navy except:

- a. Alterations to those portions of naval nuclear propulsion plants and facilities under the cognizance of the NAVSEA 08 identified in reference (k).
- b. Strategic Systems Program Alterations affecting the configuration or capabilities of systems and equipment under the cognizance of the Strategic Systems Programs (SSP). Reference (e) defines the policies, controls, processes and procedures for the accomplishment of all SSP Alterations issued by the Director, SSP for all SSP cognizant equipment on both SSBNs and SSGNs.
- c. TEMPALTs required for mission support or installed for test and evaluation or research and development programs.
- d. Alterations affecting configuration of hardware, software and support equipment of a TRIDENT system is under the cognizance of NAVSEA PMS 392.

- e. Temporary Modifications (TEMPMOD) are required for mission support or installed for test and evaluation or research and development programs associated with DSS and craft per reference (1). DSS systems on submarines and various craft such as Dry Deck Shelters are managed by NAVSEA PMS 399. DSS systems on various craft for Deep Submergence Rescue Systems are managed by NAVSEA PMS 394. TEMPMODs are managed in the same manner as a TEMPALT.

NOTE: TEMPORARY MODIFICATIONS TO DSS SYSTEMS PERMANENTLY INSTALLED ON SUBMARINES ARE MANAGED AS TEMPALTS.

2.6.2 Types of Ship Changes. There are only two types of Ship Changes in the NMP: Program Changes and Fleet Changes. The Submarine Force breaks these two types of Ship Changes into further sub-categories. See Volume VI, Chapter 3 of this manual for further details and definitions.

- a. Program Changes are programmed for installation by System Commands or Program Executive Offices, as well as funded for accomplishment by the System Commands, Program Executive Offices or other organizations as agreed upon.
- b. Fleet Changes are programmed and budgeted as part of TYCOM Ship Maintenance funding. Fleet Changes typically address safety of personnel or equipment, provide increased efficiency, reliability or maintainability and generally do not increase or add new capability.
- c. Non-Navy Ship Change Documents are programmed for installation on Naval vessels by Non-Navy organizations and they are funded for implementation by these organizations per previous agreement.
- d. Combination Ship Change Documents are programmed for installation on Naval vessels by a combination of the above organizations and their implementations are funded by those organizations per previous agreement. Under normal conditions, these Ship Change Documents are funded by their Programs. Otherwise, they are funded by the Fleet.

2.6.3 Navy Data Environment System.

- a. Navy Data Environment (NDE) was designed as an enterprise data model to integrate and merge existing modernization, maintenance and logistics legacy data structures into a single design. The objective of NDE is to consolidate Fleet Modernization Business Processes and legacy Data Systems. The following applications have been merged into the NDE common model:
 - (1) Fleet Modernization Program Management Information System (FMPMIS) (Logistics Module) and Alteration Installation Planning System (AIPS) became (NDE-NM).
 - (2) FMPMIS Program Module and FMPMIS Execution Modules (became NDE Program and Execution Modules respectively).
 - (3) Afloat Master Planning System (NDE AMPS Module).
 - (4) Integrated Logistics Support (ILS) Cert or Master List Module.

- b. The following systems replicate data and interface with NDE to share alteration, scheduling, material and financial data:
 - (1) NDE-**NAVWAR** Integrated Data Environment.
 - (2) Configuration Data Managers Database-Open Architecture (CDMD-OA).
- c. The following systems will replicate data and interface with NDE to share alteration, scheduling, material and financial data:
 - (1) TYCOM Alteration Management System (TAMS).
 - (2) Integrated Modernization Planning for Aircraft Carriers (IMPAC).

2.6.4 Submarine Force Navy Modernization Process. Submarine Force Navy Modernization Process phased implementation details are covered further in reference (b), Section 9 and Volume VI, Chapter 3 of this manual.

2.7 INTEGRATED FLEET MAINTENANCE MANAGEMENT.

2.7.1 Integrated Fleet Maintenance Management. Integrated Fleet Maintenance Management is the business management model that allows for continuous maintenance by providing a seamless interface between all associated processes. It provides for processing work candidates including storage and retrieval of historical data and feedback to improve the process. The intent is to have a standard management model applicable to all platforms at all maintenance levels encompassing the following:

- a. Discover and document work.
- b. Validate and diagnose work.
- c. Integrate and screen work.
- d. Estimate and task work.
- e. Plan work.
- f. Execute work.
- g. Collect feedback and analyze data.

2.7.2 Continuous Maintenance. Continuous Maintenance is a process that involves the near continuous flow of maintenance candidates to the most appropriate level and maintenance activity for accomplishment. Timed to best support operations, it migrates from a centralized timed based batch process to a decentralized condition based nearly continuous process.

2.7.2.1 Continuous Screening Process. Continuous Screening is a process of screening work as it is discovered. Continuous Screening:

- a. Begins with identification and documentation of work candidates.
- b. Includes validation, estimation and integration of work candidates and the screening of work candidates to availabilities.
- c. Ends with the assignment and release of an availability or individual work candidate to a specific maintenance activity for execution during a specific maintenance period.

2.7.2.2 Continuous Planning Process. Continuous Planning is a process in which work is planned when tasked. Continuous Planning:

- a. Begins with tasking of a work candidate to a planning activity for preparation of a work specification and cost estimate.
- b. Ends when the specification is approved for execution. There is overlap between Continuous Screening and Continuous Planning.

2.7.2.3 Continuous Execution Process. Continuous Execution is a process in which selected emergent and non-emergent work candidates are executed outside of scheduled availabilities. Continuous Execution will not replace the current availability system. Availabilities will still be necessary to accomplish major repairs and extensive configuration changes, as well as provide the ship with a specific period of time to concentrate on maintenance and training. Continuous Execution will assist planning activities and repair activities in leveling their workload while providing the ships with a means of accomplishing repairs when needed with a minimum level of interruption to the ships' in port routine that is acceptable to the ship. The process is used when:

- a. The work candidate is ready for execution.
- b. Capacity exists in the selected repair activity.
- c. Ship's in-port schedule supports the required level of repair effort.

2.8 TECHNICAL ASSISTANCE.

2.8.1 Regional Maintenance Center.

- a. The RMCs provide direct support to Fleet and TYCOMs in matters of waterfront technical assistance, maintenance training and logistics services associated with the installation, operation, maintenance, and readiness of shipboard equipment and systems. The RMCs promote Fleet readiness and maintenance self-sufficiency in shipboard systems and equipment through direct technical help in troubleshooting, maintenance and repair, on-the-job maintenance training, logistics reviews, and technical documentation support. These services help correct operational and maintenance problems which are beyond the technical capability or capacity of fleet units or FMAs.
- b. References (p) and (q) have been cancelled. Volume VI, Chapter 2 of this manual fully describes policies and procedures for the RMCs.

2.8.2 Ship Assessment, Groom and Evaluation.

- a. This program is managed and funded by the TYCOM and provides technical assistance to Ship's Force personnel in maintaining a select list of shipboard equipment and systems.
- b. Volume VI, Chapter 42 of this manual provides further explanation of this program.

2.8.3 Carrier and Field Service Unit.

- a. Carrier and Field Service Unit is a branch of the Naval Air Warfare Center designed to provide technical assistance to Fleet personnel for all launch, recovery and visual landing aids systems.

- b. Volume IV, Chapter 16 of this manual provides further explanation of this program.

2.8.4 Elevator Support Unit.

- a. Elevator Support Unit is an element of NAVSEA's Weapons and Cargo Elevator Improvement Program funded and scheduled by the TYCOM to provide technical assistance for the maintenance, modernization and repair of weapons and cargo handling elevators.
- b. Volume IV, Chapter 8 of this manual provides further explanation of this program.

2.8.5 Propulsion Plant Engineering Activity (Aircraft Carriers Only). CVN 68 Class aircraft carrier technical assistance is available from the Propulsion Plant Engineering Activity (PPEA) for non-nuclear propulsion plant systems. The PPEA provides an additional technical resource for assisting operating aircraft carriers with technical or operational issues, or both, not associated with SHIPALT installation and configuration control. PPEA Liaison services are requested using the Steam Plant Action Request per reference (r). The Steam Plant Action Request is not intended to replace the Liaison Action Request or Departure from Specifications processes described in Volume V, Part I, Chapter 8 of this manual. The PPEA, using the Steam Plant Liaison Inquiry described in reference (r), will request information, disseminate technical information and direct work that does not require a drawing change or affect system configuration control.

2.8.6 Waterfront Corrective Action Program.

- a. Waterfront Corrective Action Program is a subprogram of the Shipboard Electromagnetic Compatibility Improvement Program, and is part of the RMCs, designed to provide training and technical assistance to Ship's Force in Electromagnetic Interference recognition and reduction.
- b. Volume VI, Chapter 4 of this manual provides further explanation of this program.

2.8.7 Fleet Maintenance Support Branch (Nuclear Powered Vessels Only).

- a. Fleet Maintenance Support Branches' charter is to improve the Fleets ability to perform nuclear maintenance. This is accomplished by the following:
 - (1) Training.
 - (2) Providing on-site technical support.
 - (3) Acting as corporate memory.
- b. Fleet Maintenance Support Branch support should be coordinated through the respective Surface Nuclear Maintenance Training Group and, for submarines, coordinated through the parent ISIC.

2.9 PROPULSION PLANT MATERIAL CONDITION (AIRCRAFT CARRIERS ONLY).

2.9.1 Purpose. This section presents a comprehensive approach to assessing and maintaining propulsion plant material condition on Nuclear Powered Aircraft Carriers (CVN). The cornerstone of this program is the Material Condition Assessment Process (MCAP) which employs incremental maintenance concepts to apply inspections, maintenance, training and both depot and afloat assets toward the consistent identification, evaluation, tracking and correction of propulsion plant material condition deficiencies. The program assigns specific duties to both

Ship's Force and the TYCOM staff to ensure the ship has the assets, processes and support in place to effectively manage propulsion plant material condition over the life of the ship. The effectiveness of this process is measured by the material condition of the propulsion plants.

2.9.2 Applicability. The guidance provided in this section focuses on CVNs.

2.9.3 Ship's Force Requirements.

2.9.3.1 Reactor Maintenance Officer. The Reactor Maintenance Officer (RMO) is responsible for the long range planning and management of propulsion plant maintenance throughout the ship's cycle. Specific responsibilities include:

- a. Coordinate with other Reactor Department Principal Assistants to ensure divisions are continuously identifying, evaluating and correcting material deficiencies in the propulsion plants. The RMO will periodically review the MCAP Database (Equipment Deficiency Log (EDL)) and the Equipment Status Logs (ESL) to ensure deficiencies are being identified and documented.
- b. Coordinate with other Reactor Department Principal Assistants to ensure divisions are submitting work requests for inclusion into future availabilities and up-keeps, as necessary to correct significant or overly burdensome material deficiencies.
- c. Function as the ship's liaison for all outside maintenance activities. The RMO will be the primary point of contact for all matters pertaining to maintenance of the propulsion plants to include coordinating with the TYCOM in the planning, prioritizing and execution of scheduled repairs.
- d. Request assistance as necessary, via the TYCOM, to accomplish nuclear and non-nuclear planned maintenance inspections.
- e. Coordinate (with Reactor Training Assistant or Training Officer) all required shipyard and TYCOM training for the Reactor Department prior to the start of availabilities.
- f. Request training, via the TYCOM, on the execution of material inspections. The training, conducted by a small (a notional five person team consisting of shipyard nuclear and non-nuclear engineers and a MCAP Zone Manager or Coordinator) group of shipyard MCAP experts, is normally conducted in conjunction with the pre-deployment Material Condition Assessment Inspection (Pre-Deployment MCAI). The primary goal of the training is to provide focused information and training to Ship's Force personnel on MCAP inspection attributes and techniques. The RMO will be the single point of contact for scheduling TYCOM provided or funded maintenance and inspection training.
- g. Coordinate, via the TYCOM, the use of groom teams, as needed. Groom teams may be shipyard or contractor personnel who can be scheduled to find and fix discrepancies associated with specific systems or components. Groom teams employ standard tests to evaluate system performance and may assist in the correction of deficiencies as well as their identification and documentation.
- h. Coordinate, with other Reactor Department Principal Assistants, to ensure that deficiency lists generated by groom and inspection teams are incorporated into the MCAP Database (EDL).

- i. During CNO availabilities, perform actions necessary for certification of Reactor Plant Support Systems required to support principal propulsion plant evolutions per reference (s). Prior to performing work on these components or systems, the RMO must consult with the shipyard project team to ensure that a clear path to re-certification (or interim certification) is identified.
- j. Assist the Reactor Officer and the other Principal Assistants in the planning and management of SHIPALTS and modifications to reactor plant systems and support systems.
- k. Ensure that non-propulsion plant deficiencies identified as part of the MCAP are passed to the Ship's Maintenance Manager for action. The Ship's Maintenance Manager is responsible for coordinating and reporting the correction of these deficiencies in a timely manner. Increased emphasis on deficiency correction and reporting may be required by the Ship's Maintenance Manager during key event readiness periods.

2.9.3.2 Material Condition Assessment Process. Appendix A presents a notional, 27 to 36-month, MCAP Timeline. This timeline provides visibility of the many areas requiring consideration and action by both the ship and associated Project Team, both inside and outside of CNO availabilities. The timeline provides a template capturing the minimum efforts that should be undertaken throughout the ship's operational cycle to support improvement of propulsion plant material condition. It was developed by a detailed review of associated source documents and experience in MCAP implementation across the fleet and should be tailored by the RMO to suit the ship's individual schedule and circumstances. The following are events from the MCAP Timeline that are of particular significance to Ship's Force that are not specifically addressed in other source documents:

- a. Pre-Deployment Material Condition Assessment Inspection. The Pre-Deployment MCAI is a non-intrusive walk through inspection of propulsion plant spaces conducted by Ship's Force (with shipyard support) prior to deployment. This inspection is conducted as a joint effort in conjunction with pre-inspection training provided by shipyard engineers and inspectors. The scope of the pre-deployment MCAI exceeds that of the ship's periodic zone inspections and is intended to be a mid-cycle assessment of propulsion plant material condition.

(1) The objectives of the inspection are:

- (a) To validate the standards used in the material condition assessment process. This is accomplished through the pre-inspection training provided by shipyard engineers and inspectors. This training is intended to be the most significant opportunity to train and educate Ship's Force personnel with regard to inspection attributes and material standards.
- (b) To identify deficiencies prior to deployment in time to order and receive material before departure. This ensures that Ship's Force has the material on hand to correct deficiencies while on deployment.
- (c) To provide a mid-cycle review and validation of the health of the MCAP.

- (d) To set the tone for continuing inspections during the ship's deployment. Aggressive identification and correction of deficiencies during deployment will result in an overall improved propulsion plant material condition and reduce work package churn in the subsequent CNO availability.
 - (2) Scheduling of the Pre-Deployment MCAI must balance the benefits of early identification of material issues against operational requirements. However, whenever possible, the inspection should be completed no later than three months prior to deployment. The TYCOM Maintenance Program Manager will fund a shipyard MCAP training team (notionally five to ten people in size), when requested by the RMO, to assist in the performance of the MCAI. The training team provides (1) targeted training and deck-plate feedback to Ship's Force in support of the inspection, and (2) acts as an independent check for both the ship and the TYCOM that the ship's MCAP program is being administered in a manner that supports the intent of the program. The ship's Commanding Officer retains responsibility for determining the impact and required actions for deficiencies identified during this inspection.
- b. Production Completion Date. Production Completion Date (PCD) is a CNO availability key event that is scheduled two weeks prior to the respective plant hot-operations key event and marks the Project Team's transition from production work to preparations for test events and plant operations. It is intended that all propulsion plant work, deficiency correction and associated testing required for hot-operations (Light Off Assessment) be completed by PCD. However, PCD requires a subjective evaluation by the ship's Commanding Officer, Reactor Officer and Project Superintendent that production work, testing and deficiency correction has been reduced to a level or area of the plant such that required key event preparations can proceed satisfactorily, to completion, in the ensuing two- week period. Upon reaching PCD, the Reactor Officer and the rest of the Project Team must be able to shift their focus away from production work and testing to preparations for plant operations. These preparations include but are not limited to:
- (1) Pre-event certifications and resulting discrepancy correction
 - (2) Danger Tag removal and system restoration
 - (3) Ship's Force Startup Maintenance
 - (4) System Valve lineups
 - (5) Continued deep cleaning and small valve maintenance
 - (6) Use of Groom Teams in areas requiring special emphasis
 - (7) Temporary Service Removal
 - (8) Training on Hot Operations or Non-Critical Steaming
- c. Transition to an operational environment and focus
- (1) Previous availabilities have shown that if excessive production work and testing is still ongoing at the time PCD is evaluated as complete, key event

preparations will be adversely affected and the hot operations key event date will usually be negatively impacted.

- (2) If it is necessary to delay PCD, strong consideration should be given to moving the hot operations key event accordingly, in order to protect the integrity of the two-week preparation period. Otherwise, it must be recognized that the transition from a maintenance intensive environment to an operationally focused environment may be negatively impacted.
- (3) In the event that some production work and testing will be ongoing, the Project Team will generate an exceptions list detailing all work and associated testing that is intended to continue after PCD. The Project Team must **formally** agree that the intensity or volume of the items on the exceptions list will not adversely impact the Project's ability to complete preparations for the upcoming event, in an orderly and timely manner.
- (4) Some specific questions that should be considered when determining whether a project has reached PCD include:
 - (a) Are major system piping and valves intact?
 - (b) Are propulsion plant damage control and fire-fighting systems and the associated repair lockers stocked and operational?
 - (c) Are ladders installed? Are space accesses and at least one of the two escape trunks in each space clear for passage?
 - (d) Are doors, hatches and scuttles installed and operational?
 - (e) Are temporary services removed with the exception of essential support systems and systems installed to support remaining work?
 - (f) Are all deck plates and associated supports installed?
 - (g) Has loose industrial material and debris been removed?
 - (h) Have major lagging repairs been completed? Is the extent of any remaining lagging work minimal (not including temporary lagging installed to support later testing)?
 - (i) Are pre-test inspections and correction of associated deficiencies complete?
 - (j) Has major preservation and painting been completed? Is the extent of remaining touch-up painting acceptable?
 - (k) Have deficiencies identified by the MCAI, weekly walk-throughs, associated cold plant testing, and any rework or retest associated with the testing, been completed or resolved? If not, are the remaining deficiencies at a low enough level that they can be corrected without impacting event preparations?
 - (l) If applicable, has System Turnover been completed? Have all discrepancies identified during the turnover process been corrected?

- d. Deficiency Identification and Correction. The basic organization of a CVN Reactor Department has long established programs in place to support the day-to-day identification and tracking of material deficiencies (3M system, Zone Inspection Programs, MCAP Database, EDL, CSMP, etc.). However, experience has shown that successful programs are those that support **continuous** identification and correction of propulsion plant deficiencies that have incorporated the timelines of Appendix A and have placed increased emphasis on known problem areas. Some of the propulsion plant maintenance areas that have historically required special attention are listed in sub-paragraphs (1) and (2) here. Each CVN may identify additional areas as they progress through the maintenance cycle.
- (1) Valve Maintenance and Inspection. All valves in the propulsion plant are required to be inspected and maintained per the applicable chapters of the component technical manual. Special emphasis should be placed on the early identification and correction of stem packing leakage in conjunction with the MCAP inspection program. All valves having less than two valve isolation from high-energy systems should be inspected annually at a minimum. Prior to availabilities that will include a plant cool down, particular attention should be given to steam generator isolation valves, safety valves, blowdown and sampling system valves and all 500 series main feed and main steam system valves. Any valve that shows signs of packing leakage or has minimal packing gland adjustment remaining should be entered into the MCAP Database (EDL) for further evaluation.
 - (2) Structural Preservation. Areas of the propulsion plant are to be inspected for structural corrosion on a rotating basis in conjunction with the ship's MCAP inspection plan. Particular emphasis should be placed on areas exposed to salt spray (ventilation spaces, weather deck fittings), equipment foundations, low traffic areas, and all out of plant spaces owned by Reactor Department or that contain reactor support equipment. References (t), (u) and (v) provide additional guidance on applying and resurfacing plant structural components and coating color schemes.

NOTE: REFERENCE (v) WAS DISTRIBUTED TO ALL CVNs BY NAVSEA LTR 92T124/0418 DATED 5 NOV 01 AND PROVIDES AN EXCELLENT STANDARDIZED GUIDE OF THE VISUAL CONDITION OF PAINTED COMPONENTS AND SURFACES IN THE INTERIOR OF SHIPS DURING MAINTENANCE AVAILABILITIES OR CONTRACTED PRESERVATION TEAM WORK. ADDITIONAL COPIES ARE AVAILABLE IN SPIRAL BOUND BOOK FORM AND ON CD-ROM FROM THE NAVAL LOGISTICS LIBRARY (<http://nll.navsup.navy.mil/>). ACCESS THE P2003 SHOPPING CART AND INPUT EITHER TECH MANUAL NUMBER SL700-AB-GYD-010 OR NSN 0910-LP-100-4420.

- (3) Lagging and Insulation. Damaged or worn lagging or insulation should be inspected and upgraded using the guidance of references (c), (h), and the CVN 68 Class Incremental Maintenance Plan, Sequencing Plan in conjunction with the ship's MCAP inspection program. Ships should consider maintaining a

separate list of lagging removed by Ship's Force as a result of maintenance, wetting or becoming oil soaked. Guidance for installing and maintaining insulation can be found in reference (w). Painting of insulation is covered by the aforementioned Reactor Plant Paint Schedule.

- (4) **Paint and Preservation.** In conjunction with the structural preservation and bilge preservation inspections discussed in this section, the ship must ensure that the paint and preservation status of general propulsion plant spaces is maintained over time with emphasis placed on the work that will be done during availabilities. The CVN 68 Class Incremental Maintenance Plan, Sequencing Plan provides guidance on rotation plans for propulsion plant spaces. Ships should consider maintaining a list of spaces annotating the dates when spaces were last painted or preserved to assist in long term planning. References (t), (u) and (v) (see NOTE in paragraph 2.9.3.2.c.(2) of this chapter) provide additional guidance on applying and resurfacing plant structural components and coating color schemes.
- (5) **Bilge Preservation.** Invasive, below the deck level, inspections are the key to maintaining the integrity of bilges and bilge structural members. Ships should ensure that regular bilge inspections are scheduled in conjunction with the ship's MCAP inspection program with increased emphasis during the Pre-Availability and Pre-Deployment MCAI inspections.

Progressive maintenance techniques are required for coatings in the propulsion plant bilges to wear as projected and must be resurfaced at the appropriate intervals. Guidance on inspection criteria and establishment of inspection zones can be found in CVN 68 Class Depot Maintenance Requirement Card MRC 631-01. References (t), (u), (v) and (x) (see NOTE in paragraph 2.9.3.2.c.(2) of this chapter) provide additional guidance on applying and resurfacing plant structural components and coating color schemes.
- (6) **Oil Leak Identification and Correction.** Ships should aggressively identify and correct oil leaks, with particular attention to areas underneath the main engines, turbine generators, lube oil purifiers and in the vicinity of lube oil pumps. Inspection plans should divide the propulsion plant spaces into zones to ensure all areas are inspected annually at a minimum. The list of identified oil leaks can then be prioritized in the MCAP Database (EDL) for correction.
- (7) **Electrical Cableway Inspection.** Shipboard electrical cableways for the most part are taken for granted. Improperly installed cables in the propulsion plant can not only damage existing cables but may also impact watertight or airtight integrity. Cableways must be properly installed and maintained per the requirements of references (y) and (z). Additional guidance for conducting cableway assessments in conjunction with the ship's MCAP inspection program is available in Volume VI, Chapter 28 of this manual.
- (8) **Typical Recurring Deficiencies.** The ship should actively pursue the identification, documentation and correction of typical recurring deficiencies through the periodic MCAP inspections. Listed in sub-paragraphs (a) through

- (k) are examples of the types of items that should be continuously identified and corrected. TYCOM will provide funding during availabilities, Planned Incremental Availabilities and Docking Planned Incremental Availabilities for the shipyard or other activity to provide assistance in resolution, as required.
 - (a) defective or missing spray shields
 - (b) missing deck plate screws
 - (c) lockwire or locking cable deficiencies
 - (d) mixed, missing or corroded fasteners
 - (e) small valve maintenance deficiencies
 - (f) loose or damaged stuffing tubes
 - (g) missing or damaged pipe hangers
 - (h) missing, misaligned or leaking funnels
 - (i) missing gage fasteners and gage line supports
 - (j) electrical cable and lighting deficiencies
 - (k) missing or damaged label plates
- e. Acceptable-As-Is items. The MCAP database has the ability to provide the ship with information concerning material conditions that have been previously classified as “Acceptable As-Is”. Each entry should identify the equipment and its location, provide a description of the acceptable condition and a reference to the technical documentation that accepted the condition. Shipyards can use this data during depot availabilities to preclude repetitive research for acceptable, existing conditions that would otherwise be considered deficiencies. The shipyard will provide the ship with electronic copies of all waiver letters, Liaison Action Request responses, Departures from Specifications and any other acceptance documentation generated during an availability. The RMO with the assistance of the Reactor Plant Planning Yard should ensure the data is kept up to date between depot availability periods.

2.9.3.3 Methods for Assessment of Material Condition. There are several methods used to periodically assess and improve the material condition of the propulsion plants for CVN outside of depot availabilities. The existing programs provided by the fleet commanders to improve material condition are addressed in Volume VI, Chapter 42, of this manual. Other methods include:

- a. Material inspections conducted by the Surface Nuclear Propulsion Mobile Training Teams (MTT).
- b. Material inspections conducted by the Board of Inspection and Survey.
- c. Material inspections conducted by the Nuclear Propulsion Examining Board (NPEB).
- d. Periodic inspections conducted by shipyard engineering and inspection groups, usually in conjunction with availability planning. These inspections include Carrier Availability Planning System, Point of Entry Testing (POET), MCAIs and zone inspections of the propulsion plant spaces.

- e. Carrier Engineering Material Assessment Team coordinators groom systems to include Leslie valves, high pressure air compressors, low pressure air systems, governor control systems, distilling plants, etc.
- f. Periodic Ship's Force Zone Inspections.
- g. Pre-Deployment Material Condition Assessment Inspection.

The table shown in Appendix B is a compilation of propulsion plant inspections and references.

2.9.3.3.1 Attributes and Acceptance Standards for Material Condition Inspections. The inspection criteria used for material inspections throughout the ship's operational cycle must be uniform and consistent to provide an accurate assessment of the material condition of the propulsion plant.

- a. Reference (s) must be used to inspect non-nuclear propulsion systems and components. The checklist provided in Appendix C is to be used as a guide during CNO Availabilities when reference (r) is invoked for determination of system readiness to support execution of a Key Event. This checklist may also be used outside of availabilities to determine system readiness to support ship operations.
- b. References (aa), (ab) and (r) must be used to inspect nuclear propulsion systems and components. Inspection criteria for nuclear mechanical systems is listed in Appendix D. Inspection criteria for nuclear electrical systems is listed in reference (ab).

2.9.3.4 Propulsion Plant Planned Maintenance. Reference (ac) lists the planned maintenance pertinent to reactor systems and includes numerous inspections and checks to review material condition. It can be advantageous for the ship to request shipyard quality control inspector or production shop assistance when conducting the annual inspections of the Reactor Compartment and Pressurizer Shed. In addition, the ship should consider requesting assistance when performing periodic inspections of piping hangars, piping and supports in bilges, load centers and reactor vessel shielding.

2.9.3.5 Training for Ship's Force. The TYCOM, in conjunction with other activities (e.g., NSY, Fleet Maintenance Support Branch, Shore Intermediate Maintenance Activity (SIMA), Trident Training Facility), has developed specific training courses to enhance technical maintenance capabilities and inspection techniques. In addition, shipyard personnel can provide training on subjects such as lagging replacement, lockwire or locking cable installation and inspection techniques. Ship's Force requests for specific training topics (e.g., shipyard inspection training prior to conducting the pre-deployment MCAI) must be processed through the TYCOM. Ship's Force should schedule this training early and ensure sufficient personnel are trained.

2.9.4 Type Commander Responsibilities.

- a. Budget and plan for correction of both typical recurring deficiencies and other material deficiencies during all upkeeps, availabilities, Planned Incremental Availabilities and Docking Planned Incremental Availabilities.
- b. Assign groom teams as necessary, to assist Ship's Force in maintaining the material condition of the propulsion plant.
- c. Provide the maintenance and inspection training requested by Ship's Force. This provisioning of training will include funding a shipyard MCAP team requested by the

RMO in support of the pre-deployment MCAI. This small team (five to ten-person notional size) provides (1) targeted training and deck-plate feedback to Ship's Force in support of the inspection, and (2) acts as an independent check for both the ship and the TYCOM that the ship's MCAP program is being administered in a manner that supports the intent of the program.

- d. Provide training for RMOs through the TYCOM N9 and N43 organizations to ensure they understand common maintenance problems among carriers, the requirements of this chapter and how to better plan for availabilities.
- e. For CNO Availabilities, maintain, with Ship's Force and shipyard input, an Availability Parts Support List containing special parts and routinely required support equipment necessary to support Ship's Force work (e.g., breaker locking clips, valve locking devices, Tygon tubing, flexes, thread protectors, foreign material exclusion plugs, valve stems). These material items can then be ordered and procured early so that production work will not be disrupted.
- f. Meet periodically with the Reactor Officer or RMO to review the ship's material condition. The need for TYCOM support in identifying and correcting material deficiencies should be addressed at this time.
- g. Provide timely review and scheduling of deficiency correction for items identified during the inspections and grooms of paragraph 2.9.3.3 of this chapter.

2.9.4.1 Type Commander Mobile Training Team Visits. The MTT should periodically evaluate the ship's material condition including a review of the ship's MCAP Database (EDL) to ensure the ship has an effective program for identifying and correcting material condition deficiencies. It is important that the MTT does not critique lists that are too large, since this chapter specifically encourages ship's to document deficiencies that are beyond the capability of the ship or are too numerous to fix considering the ship's operational commitments. Attributes that should be checked include:

- a. Ensure that the MCAP Database (EDL) is current and accurate based on MTT material condition inspections (i.e., is the ship's MCAP Database (EDL) an accurate representation of propulsion plant material condition based on the number, type and severity of items identified by the MTT? Are the plans for corrections realistic?)
- b. Ensure that deficiencies have not remained in the MCAP Database (EDL) for an excessive amount of time (i.e., the turnover rate of the deficiencies). Large backlogs indicate the need for increased Ship's Force attention or TYCOM assistance to correct deficiencies.

2.9.5 Assessing Deficiency Impact and Scheduling Corrective Action. During scheduled CNO availabilities, shipyard personnel must review applicable plans and specifications in order to determine whether correction of a deficiency is required to support propulsion plant testing key events. Factors that must be considered in making this determination are type and severity of the defect, service of the component involved, accessibility of the defect for repair during shipyard availability versus upkeep period, effect on personnel or equipment safety, impact on system operation and cleanliness or preservation (i.e., required to restore cosmetic appearance versus resistance to corrosion). Every attempt should be made to correct all deficiencies during scheduled CNO availabilities. However, propulsion plant testing key events must not be delayed

in order to correct deficiencies that are not required to support that event. Such deficiencies can be deferred and may be scheduled for correction outside of the availability. Deficiencies that are primarily cosmetic are ideal candidates for deferral consideration. When material condition deficiencies are identified outside of CNO scheduled availabilities, the Reactor Officer determines whether corrective action is necessary and when it should be accomplished. Appendix A provides guidance regarding deficiency disposition in either case.

2.10 100 HOUR TRANSITION PERIODS (SURFACE FORCE SHIPS ONLY).

2.10.1 Critical Time Period. The 100 hours at the beginning and at the end of an availability are critical times for availability execution. The ISIC, TYCOM, NSA, LMA and ship are responsible for coordinating the 100-hour plan. Any job or event that is viewed as hindering the start of the availability must be included in the 100-hour plan. Communication is vital to ensuring a full understanding of all work and associated requirements. Details for the first and final 100 hours will be:

- a. First 100 Hour Plan should be discussed at:
 - (1) Work Package Execution Review (WPER)
 - (2) Planning Board for Maintenance (PB4M) meetings within six months of a scheduled availability
 - (3) Arrival Conference
- b. Final 100 Hour Plan should be discussed at:
 - (1) 50% and 75% Completion Conferences
 - (2) Planning Board for Maintenance (PB4M) meetings conducted during Availabilities

2.10.2 First 100 Hour Plan. The First 100 Hour Plan will notionally start the first full work day of the availability. The items listed here are the focus of the first 100 hours, as indicated in Appendix E.

- a. Conduct Tag-out audit.
- b. Establishing plant conditions.
- c. Establishing working hours and implement work controls (i.e., Tag-outs and Work Authorization Forms (WAF) throughout the availability.
- d. NSA, LMA and Ship's Force will have a plan ready to execute at the start of the availability to place required equipment and systems into Inactive Equipment Maintenance status.
- e. Jobs still requiring ship checks will be listed in the Availability Planning Message.
- f. Test forms required for Ship's Force retest of FMA work will be delivered to the ship within the first 100 hours for Ship's Force to review, plan and write procedures as necessary.
- g. Brief all critical path jobs (i.e., work that requires most of the availability to complete) that will start during the first 100 hours.

- h. Establish who from Ship's Force is authorized to sign off equipment testing (i.e., E-7 and above).
- i. Confirm weekly progress meetings and times with Ship's Force and contractor management.
- j. Submit Availability Start Message to cognizant Fleet Commander.
- k. Provide Ship's Force with an Executive Level Integrated Maintenance Availability schedule (i.e., critical path jobs, long lead-time jobs, Maintenance Control Team jobs, high visibility jobs).
- l. Conduct maintenance availability training and stand down for Ship's Force on critical safety systems (i.e., Tag-out, electrical safety, hearing conservation, sight protection, respiratory safety, etc.).

2.10.3 Final 100 Hour Plan. The Final 100 Hour Plan will notionally begin four days prior to the beginning of sea trials; or if no sea trials, last day of the ships' scheduled availability. Items listed here must be completed per Appendix F of this chapter, which provides an outline of the final 100 hours.

- a. Production work complete. It is vital all production work is completed by the 100-hour point to allow for the remaining events to occur without delay.
- b. Production related temporary services removed.
- c. Conduct departure conference.
- d. Commence dock trials; complete dock trials.
- e. Conduct Tag-out audit.
- f. WAFs require close out no later than 72 hours prior to the beginning of sea trials; or if no sea trials, end of the availability. Conduct final WAF audit after closeout.
- g. Testing associated with production work is completed and reviewed. (Testing should be ongoing as production work is completed throughout the ship's availability.)
- h. Operationally test systems and equipment repaired or modernized during the availability.
- i. Conduct Pre-Underway checks and Master Light-Off Checklists (MLOC).
- j. Crew watchbills and berthing bills complete.
- k. Conduct Fast Cruise.
- l. Complete Fast Cruise.
- m. Crew rest and final administration.

APPENDIX A

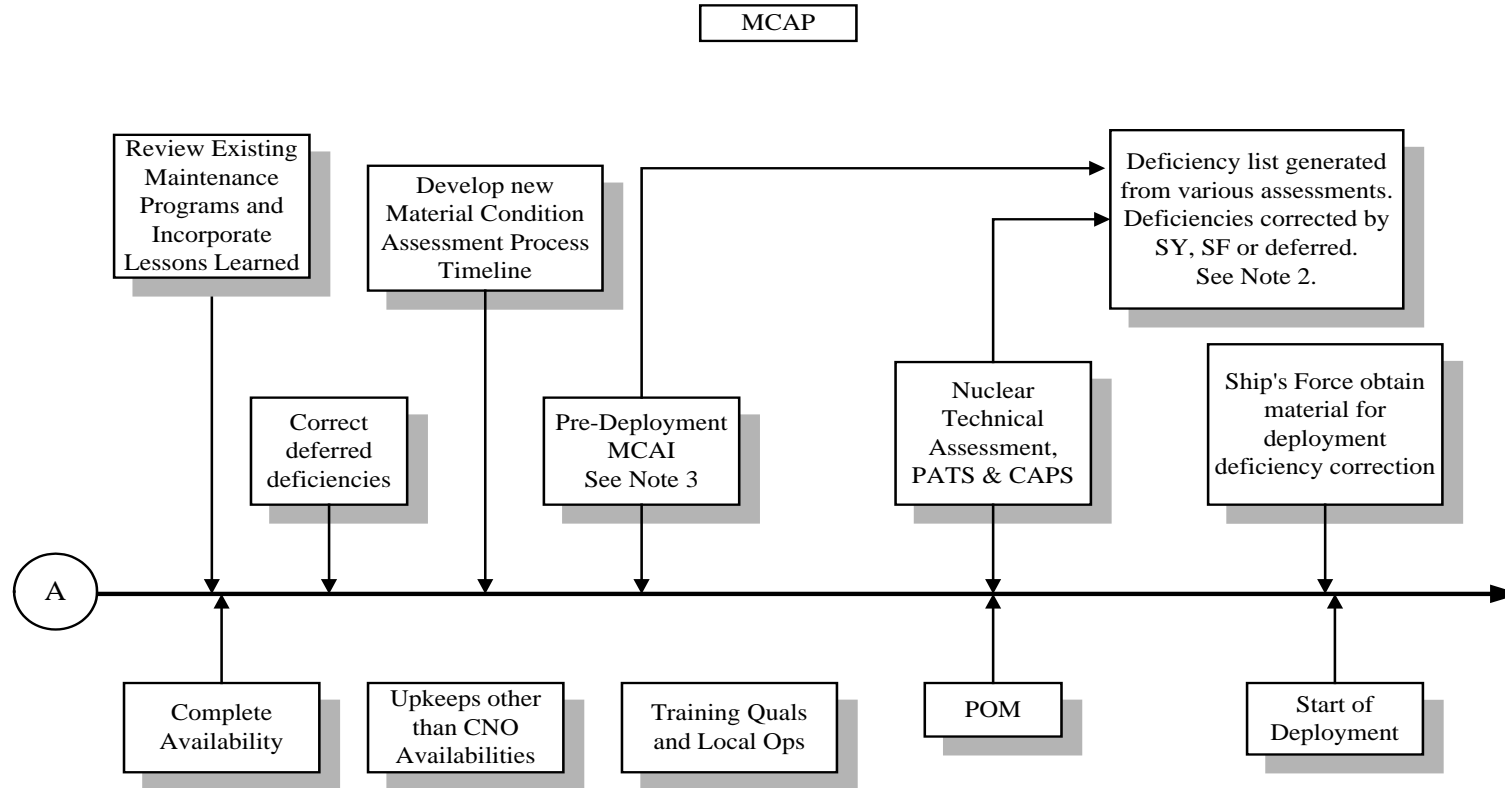

MATERIAL CONDITION ASSESSMENT PROCESS TIMELINE

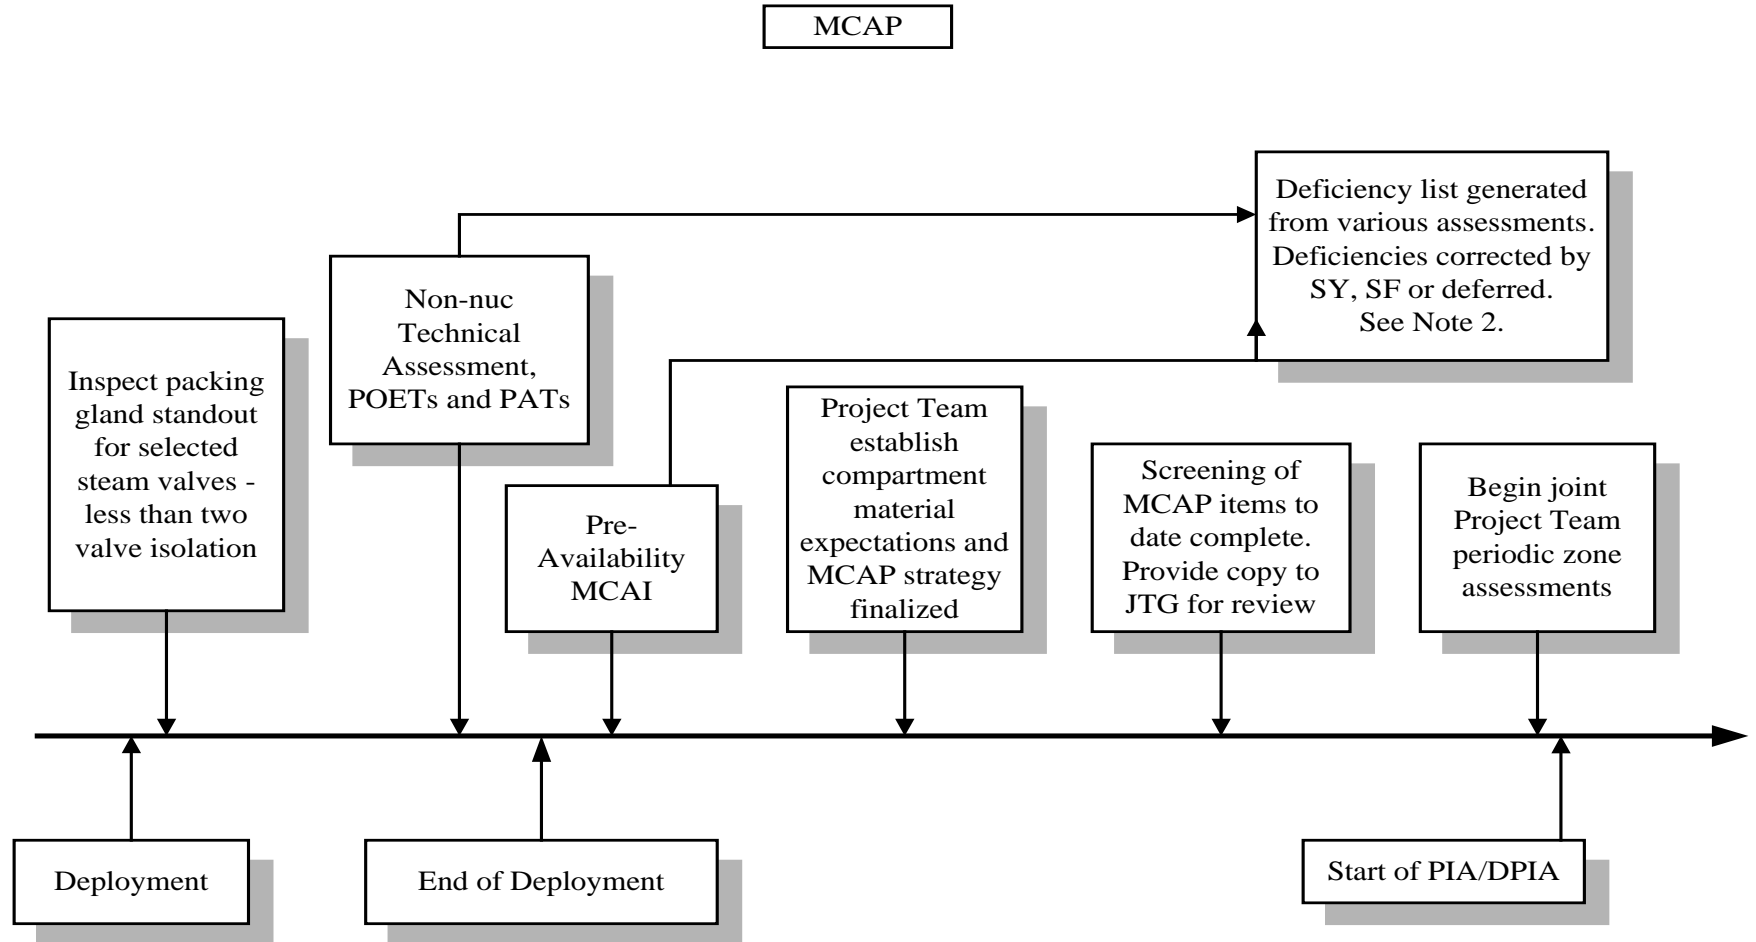

PURPOSE: The timeline of this Appendix lays out the material condition assessment process throughout the ships' Fleet Readiness Training Plan. The plan also includes descriptions of the various events that occur and who is responsible for the actions outlined. With this information, the various stakeholders in the project team can develop a clear understanding of the process. This will encourage better communication, planning and completion of all required actions.

This timeline is provided as a guide to be used for development of a CVN 68 class ship specific timeline for a Planned Incremental Availability or Docking Planned Incremental Availability. The timeline is not applicable to a Refueling Complex Overhaul availability.

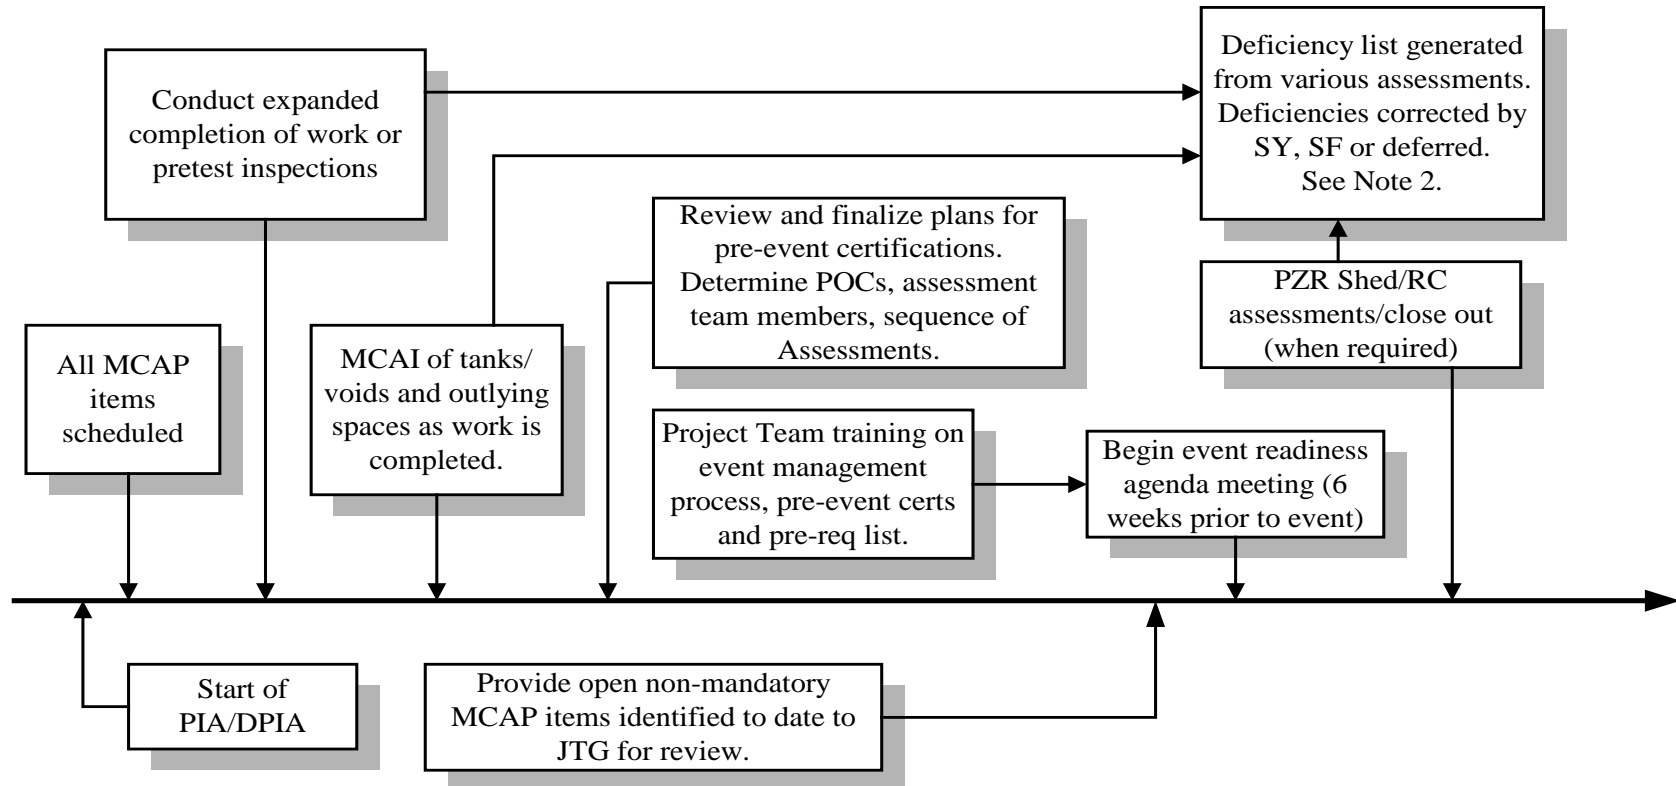

Notes:

1. The following timeline is a generic version of a Project Material Condition Assessment Process. The project team will develop a timeline and plan specific to each availability taking into account the ship's schedule (deployment, transit periods, upkeeps and early start periods). The plan includes descriptions of the events (purpose of inspection or action, which activity performs the action, results, etc.). The timeline and plan allows the Project Team (shipyards, Ship's Force, TYCOM) to develop a clear understanding of the process. Timeline should be developed to present at the first project planning meeting (target 15 months prior to start of availability).
2. Deficiencies identified during the MCAI and following assessments will be evaluated per the attached Deficiency Evaluation Flowchart.
3. The Pre-deployment MCAI may be required more than once in an MCAP "cycle" given that two (more) deployments may be planned for a carrier in the interval between CNO availabilities. In this instance, the RMO should request the shipyard MCAP training team in conjunction with each performance of the Pre-deployment MCAI.

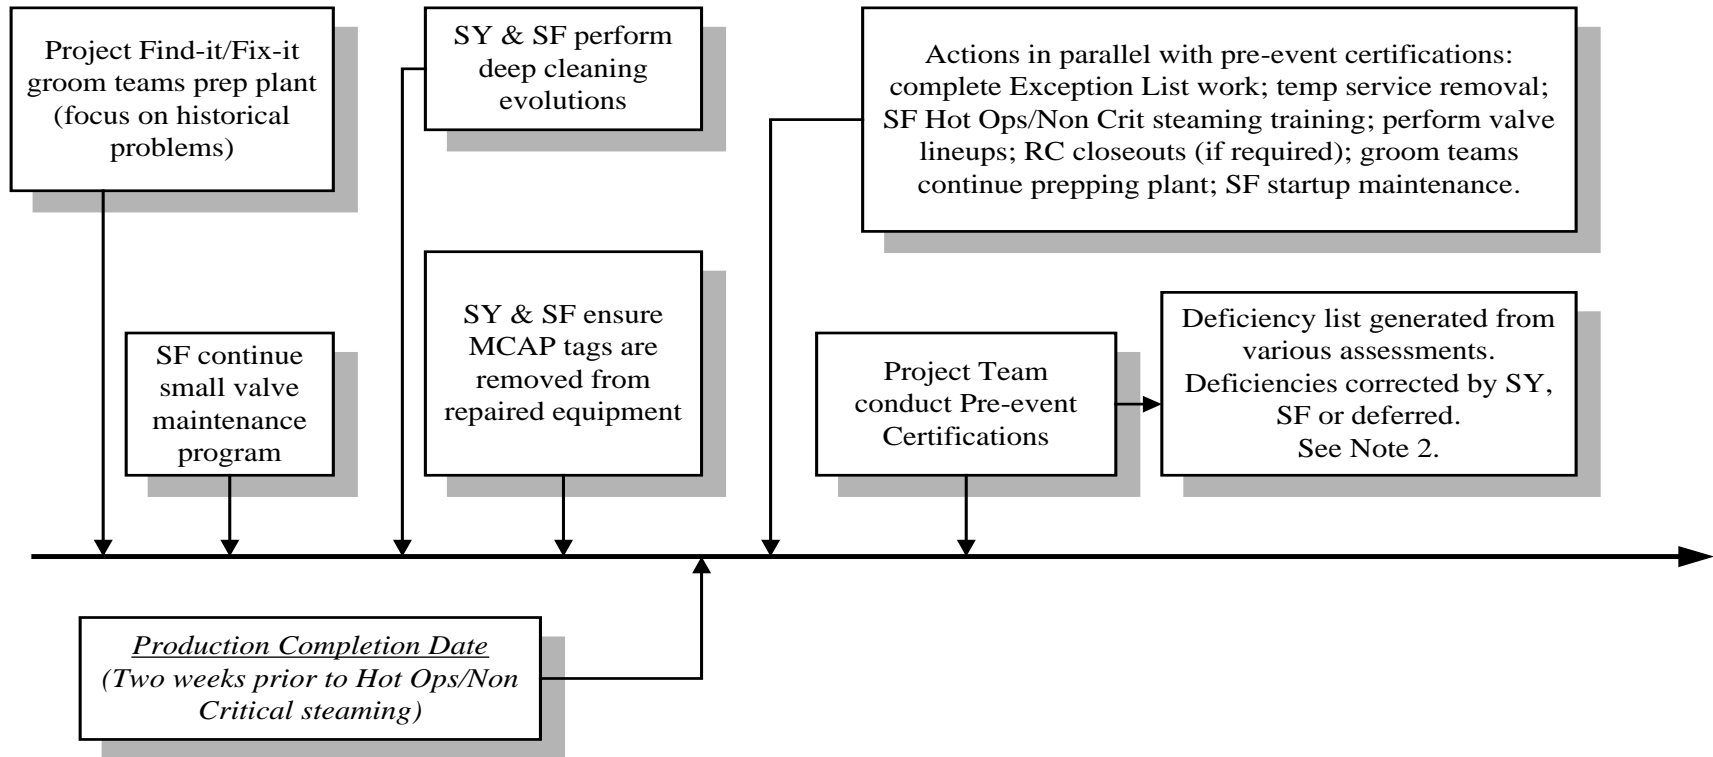

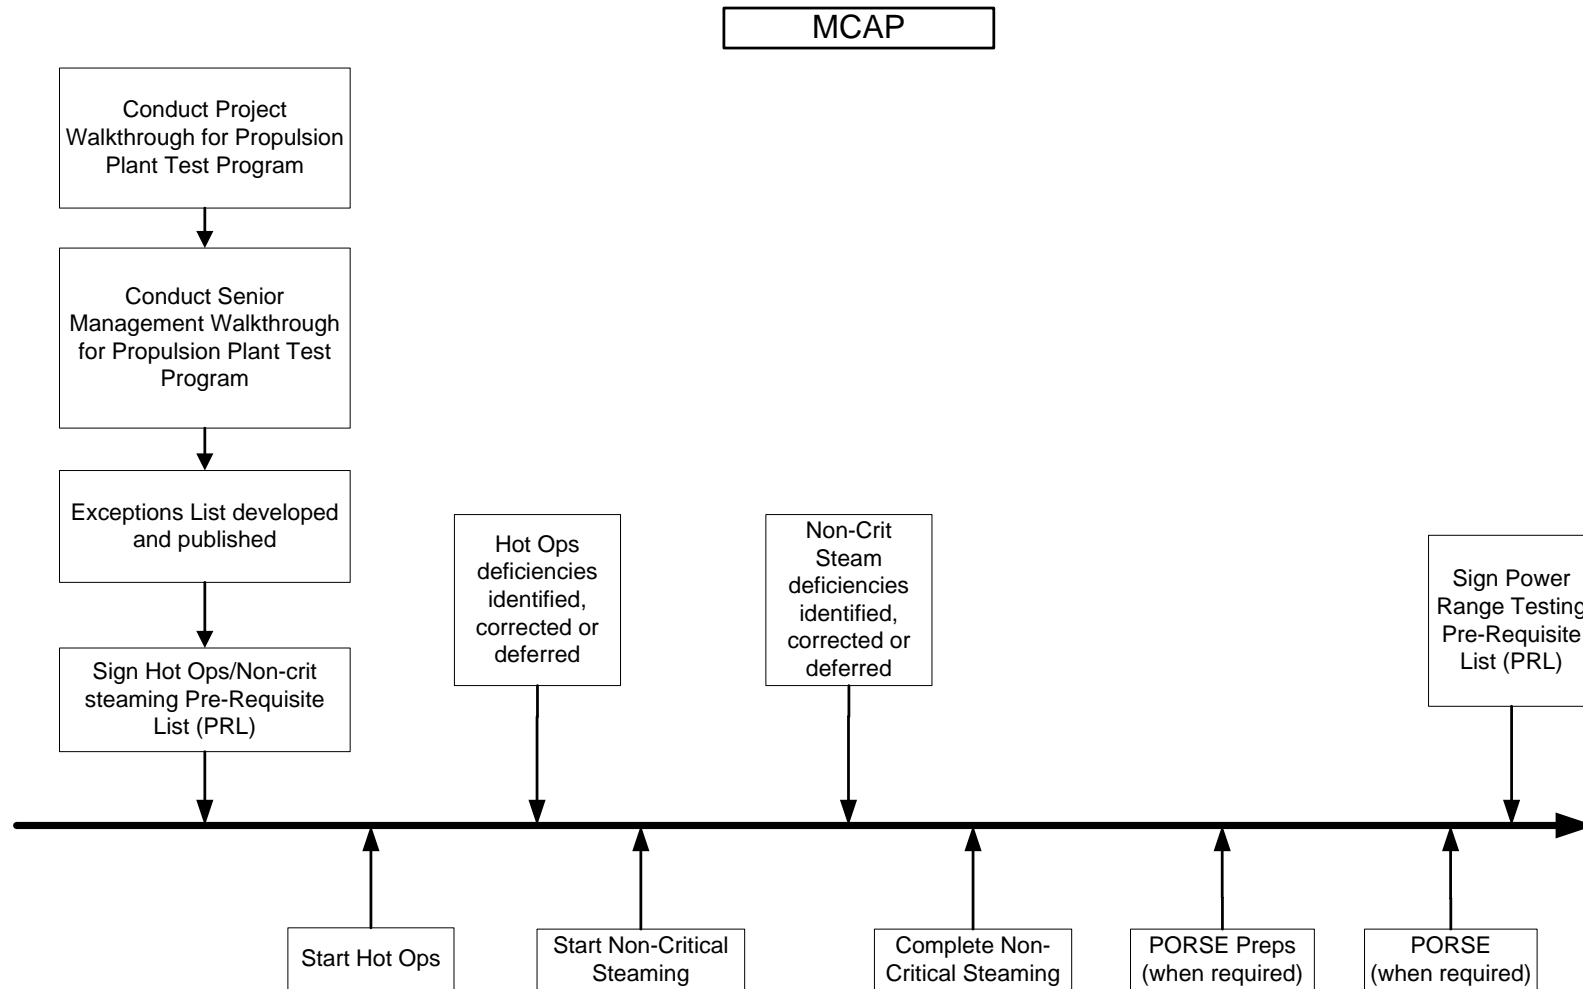

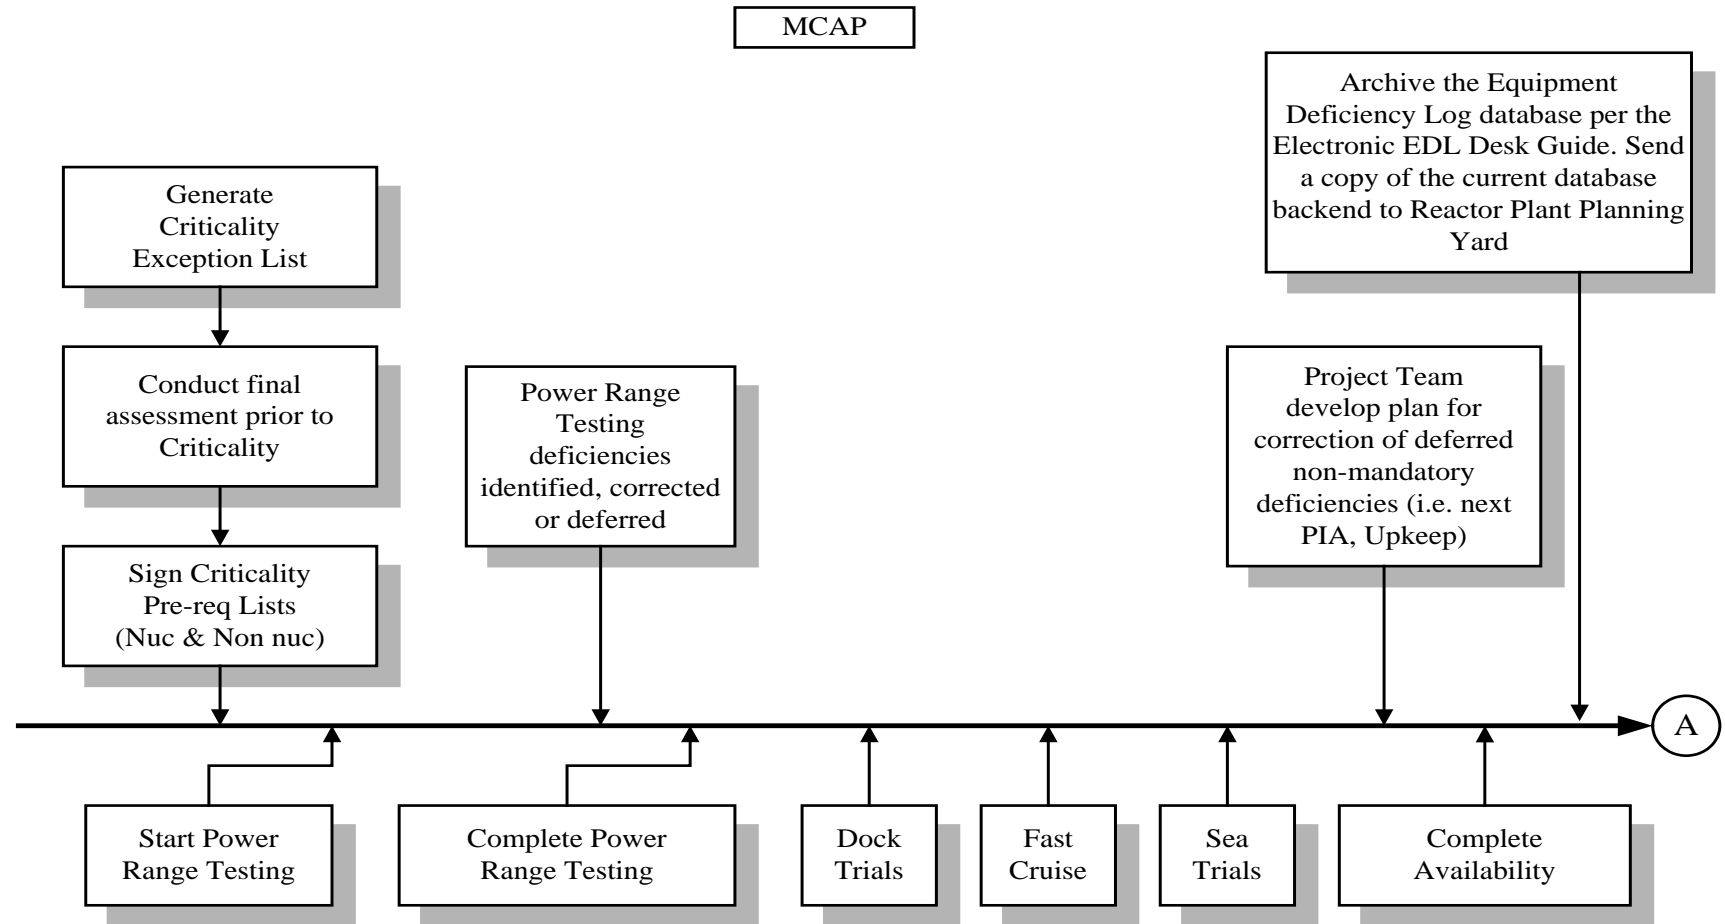

MCAP

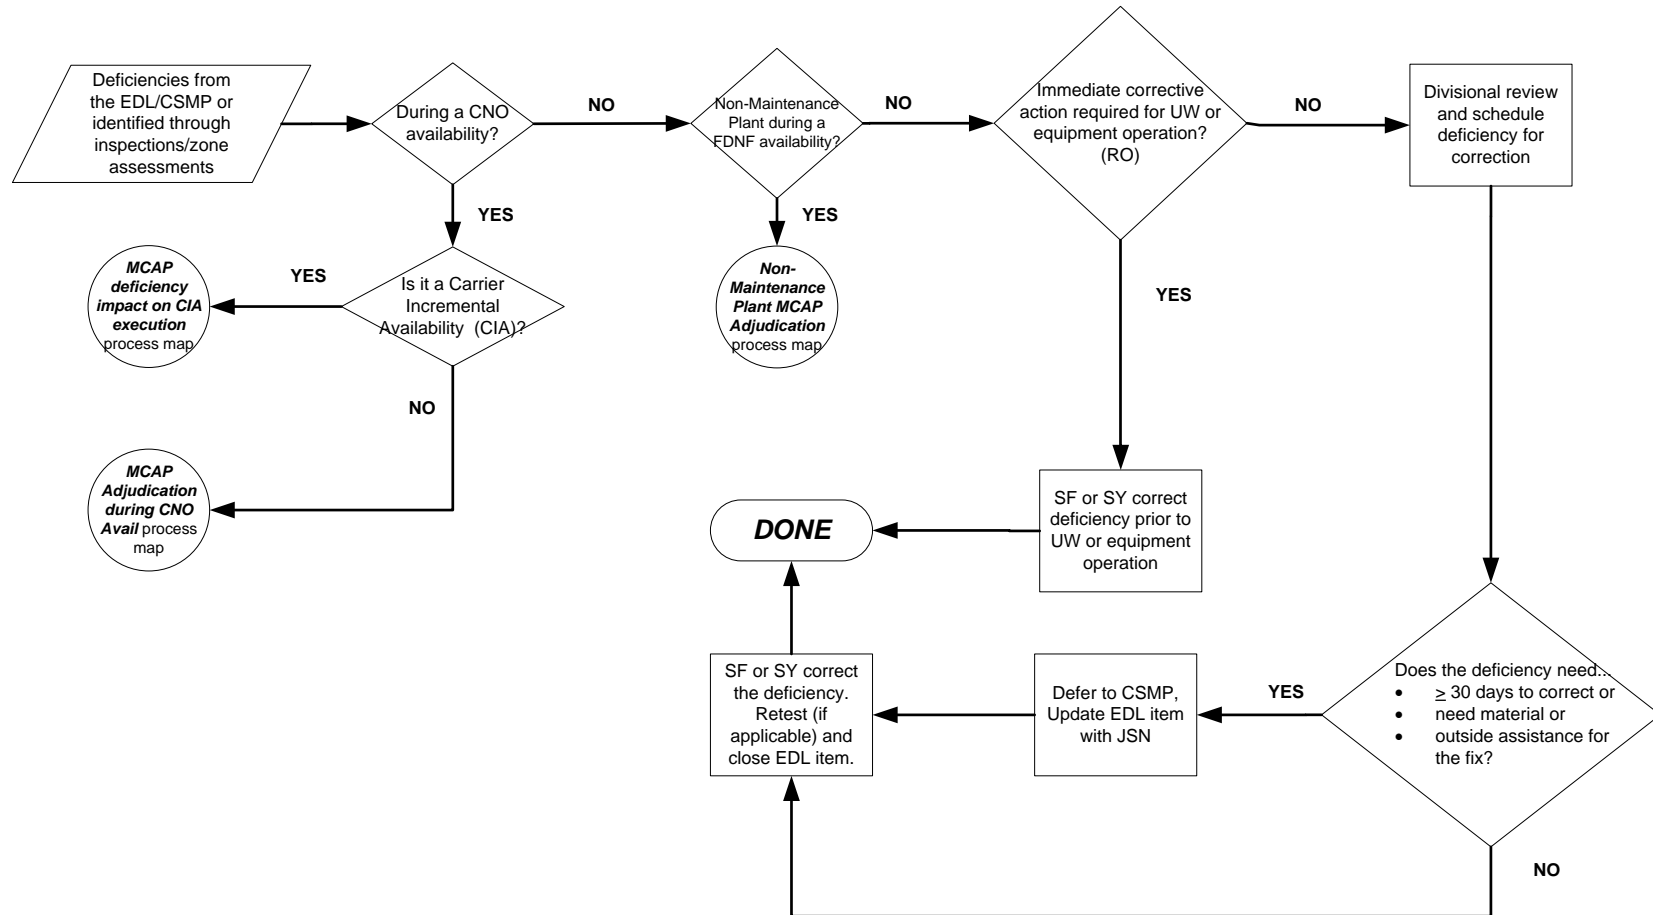

MCAP

MCAP Deficiency Evaluation Flowchart

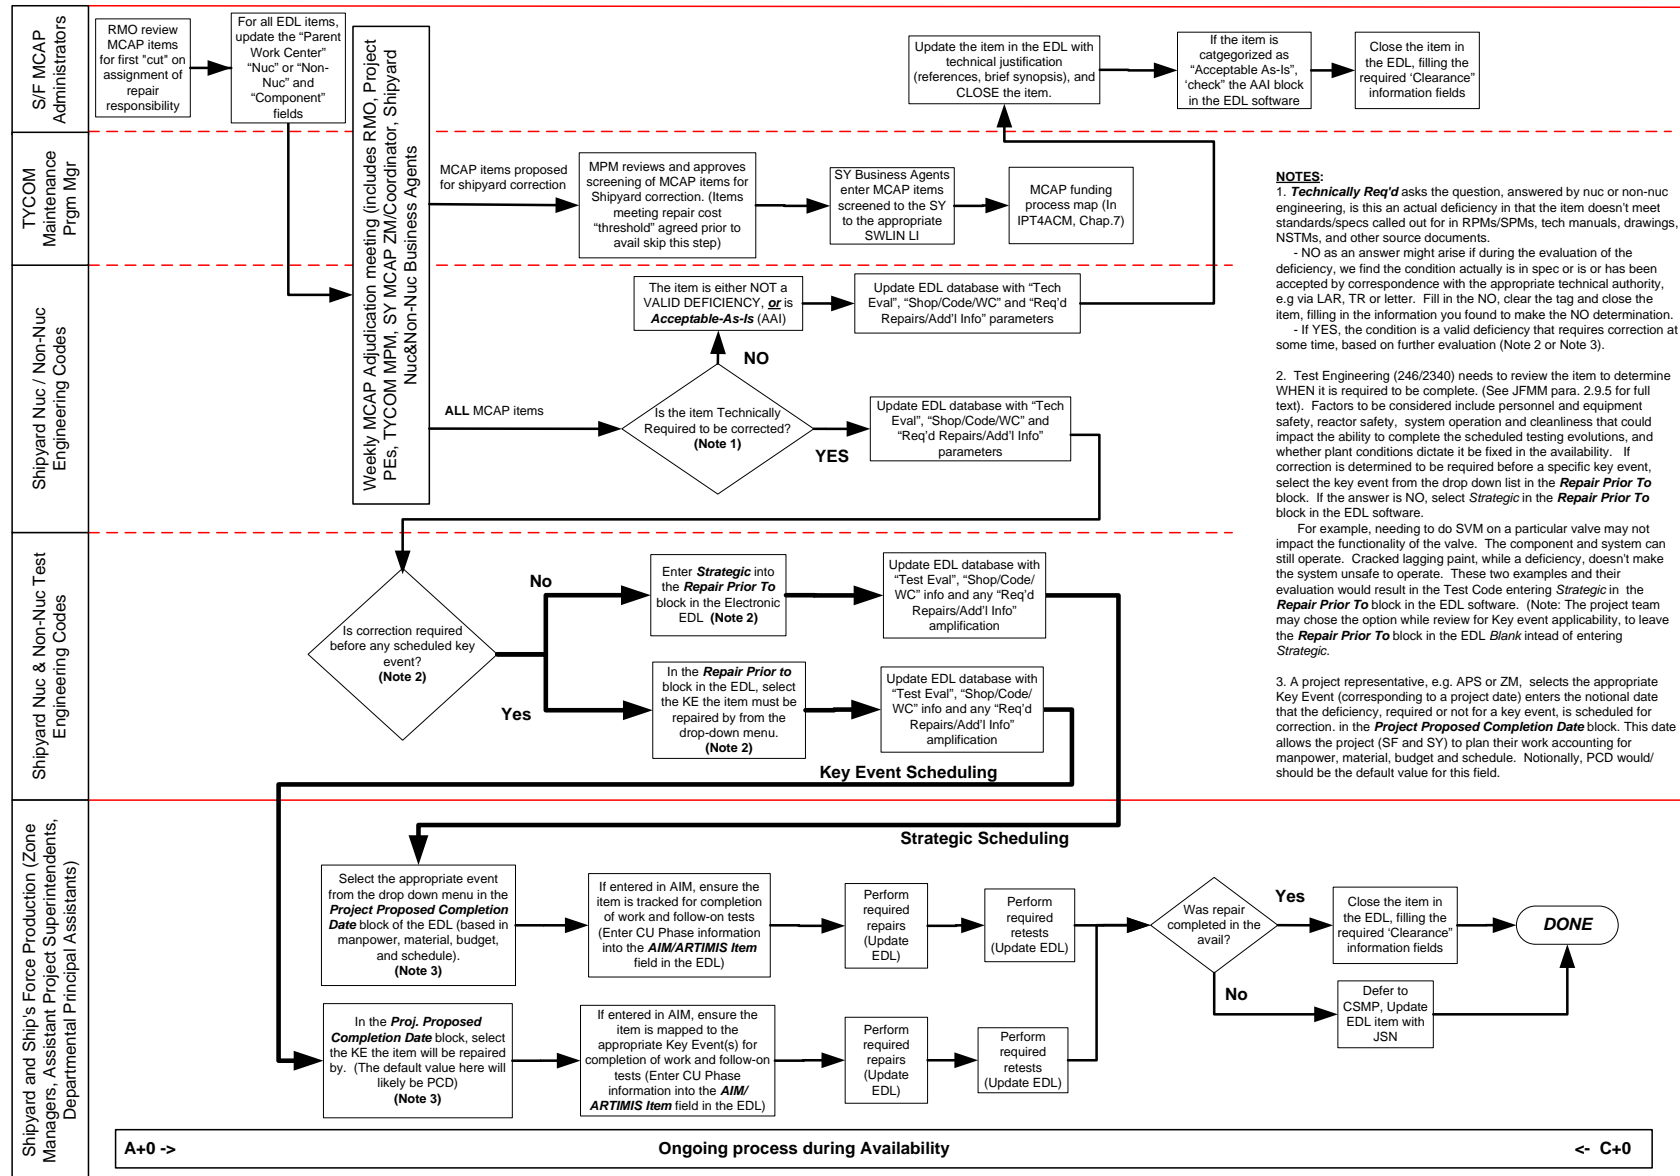

General Notes:

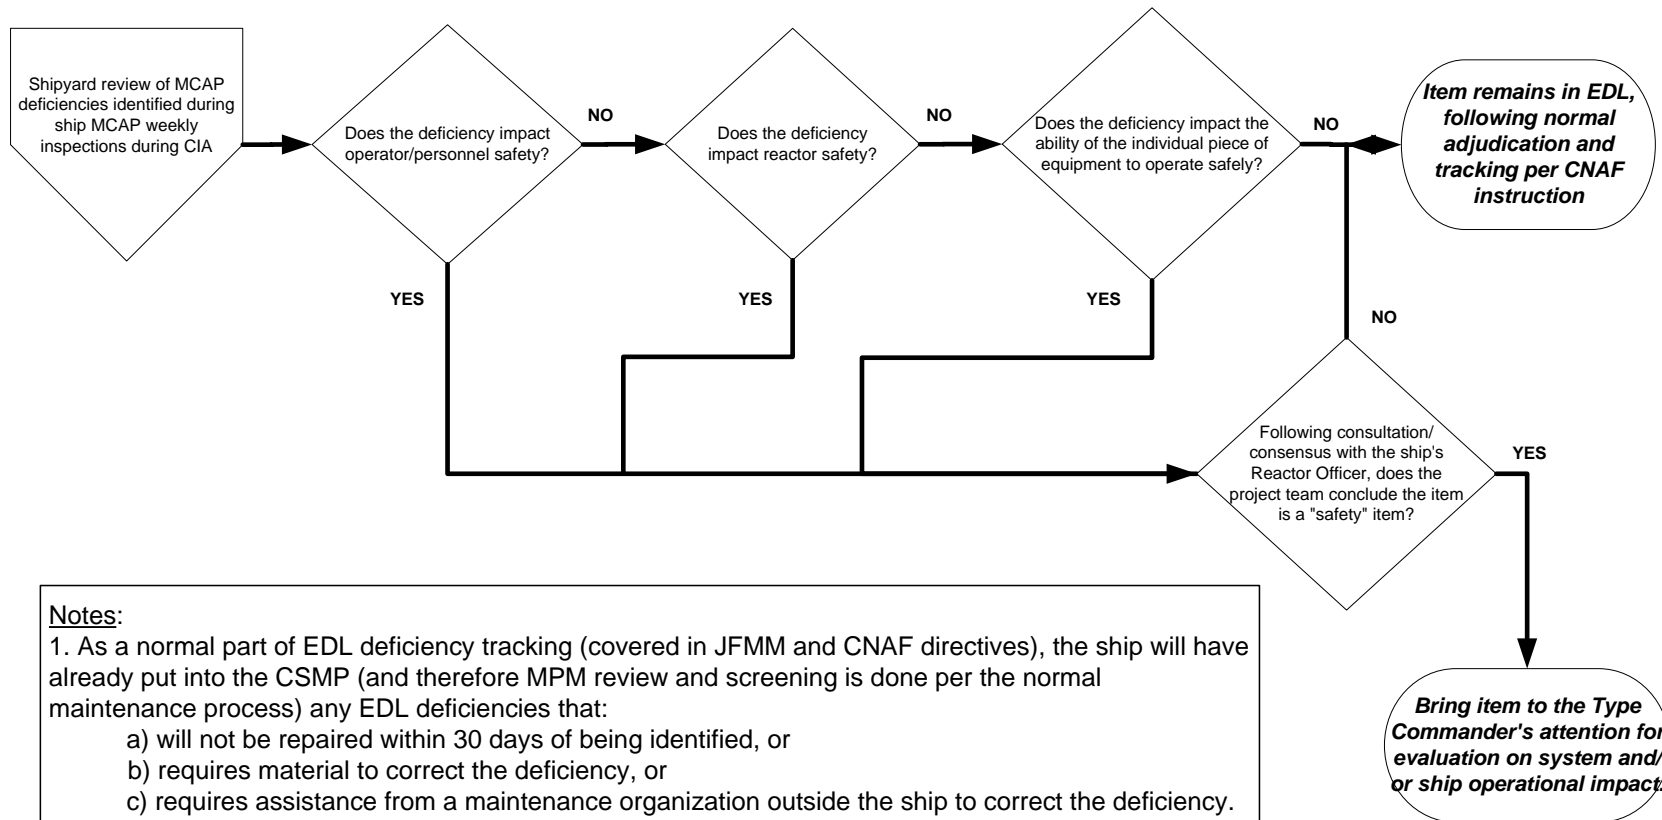

An effort should be made to fix any and all deficiencies as soon as possible. Generally, deficiency correction will fall within one of three general, generic "paths"...

1. The item doesn't meet technical requirements in one or more parameters, and must be fixed prior to the next startup, or a Key Event in a maintenance period.
2. The item doesn't meet technical requirements, and it's preferable to fix the item during the maintenance period in question. You could, however, operate the plant safely with the item as it stands.
3. While not meeting technical requirements, it's an item requiring a small (usually < 8 hours to fix) expenditure of time/labor to correct. Examples include minor paint touchup, small lagging tears, a lagging "button" missing from a sheet of bulkhead lagging.

MCAP Adjudication Process Map (during a CNO availability)

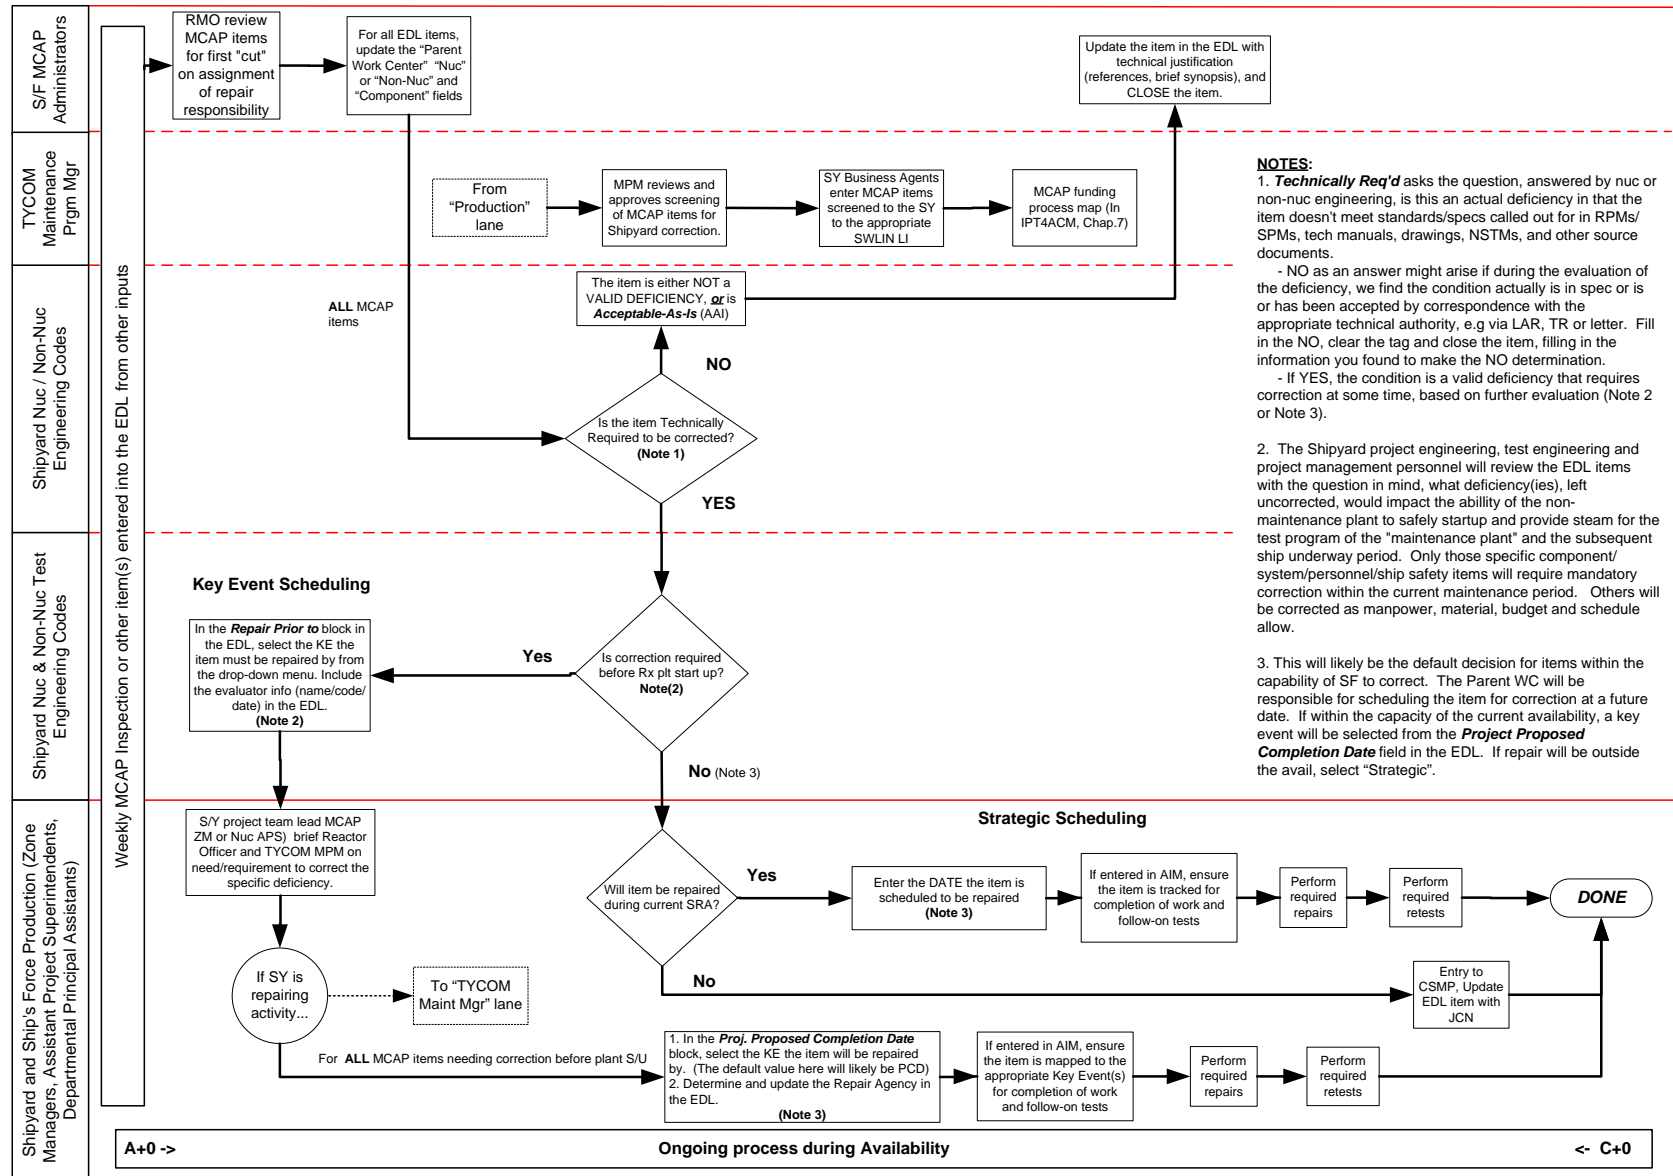

MCAP deficiency impact on CIA execution

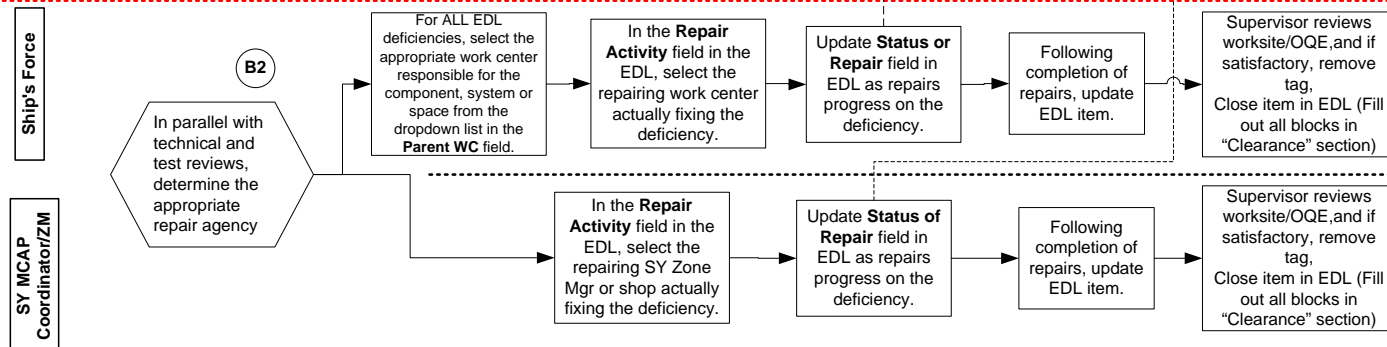

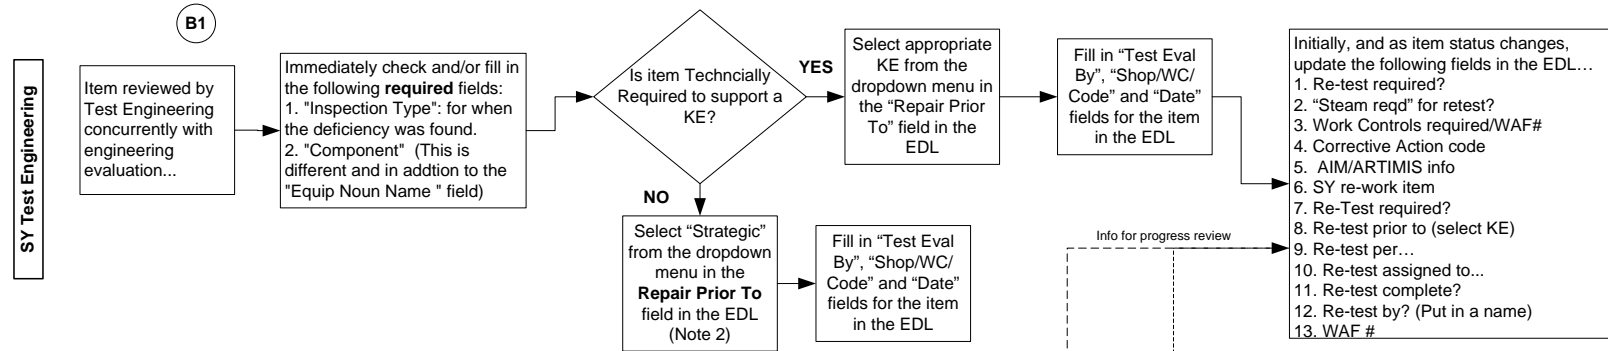

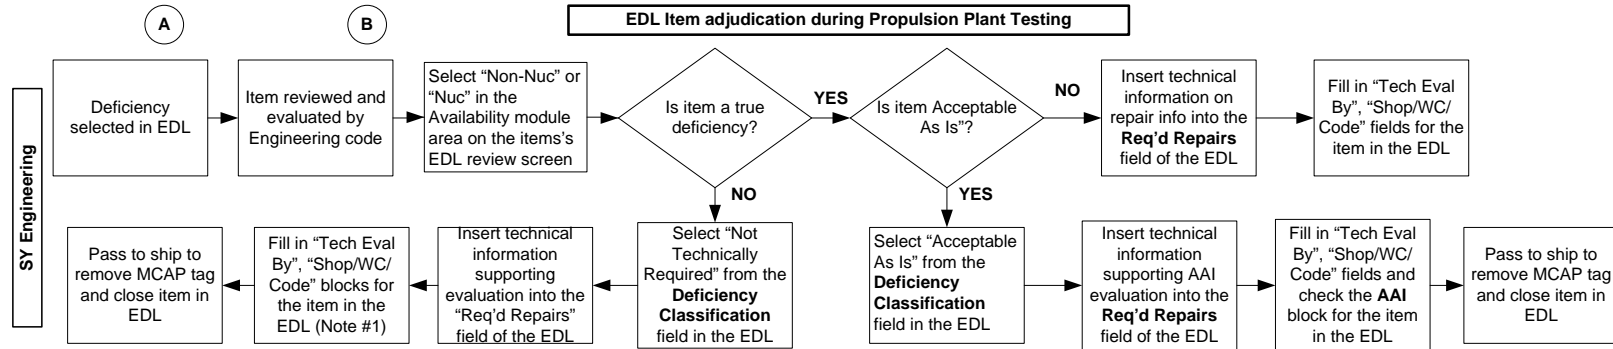

Notes:

1. As a normal part of EDL deficiency tracking (covered in JFMM and CNAF directives), the ship will have already put into the CSMP (and therefore MPM review and screening is done per the normal maintenance process) any EDL deficiencies that:
 - a) will not be repaired within 30 days of being identified, or
 - b) requires material to correct the deficiency, or
 - c) requires assistance from a maintenance organization outside the ship to correct the deficiency.
2. The ship's normal in-port MCAP process is being used.
3. The shipyard is assigned NSA roles and responsibilities for the maintenance period (CIA).
4. The shipyard's engineering and test engineering codes (246/2340) will review MCAP items identified from the weekly ship walkthroughs to determine if any items discovered require repair prior to the end of the inport maintenance period (CIA). Following consultation and consensus with the Reactor Officer/Commanding Officer, the item is brought to the attention of the Type Commander to schedule the repair and evaluate it's impact on ship's schedule.

Non-Maintenance Plant MCAP Adjudication Process Map (during a CNO availability)

Notes:

1. If authorized to sign as Project Engineer, check the "SY PE" review block and enter the date in the "Review" area of the EDL screen for the item being reviewed.
2. Items coded as "Strategic" can continue to be repaired if manpower, material, budget and schedule permit.

APPENDIX C

**SYSTEM CERTIFICATION CHECKLIST
FOR CNO AVAILABILITY KEY EVENTS
(AIRCRAFT CARRIERS ONLY)**

PURPOSE: This checklist is provided as a guide during CNO Availabilities when reference (r) is invoked for determination of system readiness to support execution of a Key Event. This checklist may also be used outside of availabilities to determine system readiness to support ship operations.

NOTE: THIS CHECKLIST IS FOR USE TO CERTIFY SYSTEMS OR COMPONENTS LISTED IN REFERENCE (r) ENCLOSURES (1) THROUGH (3) WHERE SHIPYARD RESPONSIBLE WORK WAS NOT PERFORMED IN ORDER TO MAKE SIGNATURES ON KEY EVENT PREREQUISITE LISTS. SPECIFIC ATTRIBUTES ARE LISTED IN REFERENCE (r) ENCLOSURE (4) AS A GUIDE.

System _____

Attribute	Yes or No
AWP reviewed to ensure all authorized work has been performed and any incomplete work (adjudicated at the appropriate supervisory level) does not affect certification.	
EDL, CSMP, Nuc and Non-Nuc DR Logs and DFS Log reviewed for unresolved deficiencies.	
WAF Log reviewed to ensure all authorized work is completed, tested or ready for testing.	
CWPs and FWPs reviewed for accuracy and completeness.	
Preventive maintenance complete and up to date (i.e., SU maintenance complete, PMS within periodicity).	
All standing orders, including temporary standing orders in effect for system, have been reviewed and adjudicated by the JTG.	
NOTE: THE INTENT OF THIS STEP IS FOR THE ZONE MANAGER AND PRINCIPAL ASSISTANT TO DETERMINE WHICH SYSTEM OR PORTIONS OF A SYSTEM OR CIRCUIT REQUIRE AN INSPECTION USING HISTORICAL FAILURES AND TESTING TO BE PERFORMED. System inspection, based on history and deficiencies noted, completed and operating deficiencies resolved.	
Instrument (i.e., gages, pressure, temperature switches, meters) calibration is within periodicity and will not expire within two months of ship delivery.	
Operating logs are updated and approved for configuration changes or modifications.	
System or component safety features are set, tested, operational, and all automatic controls necessary to support the planned testing are calibrated, tested and operational.	

APPENDIX D

SCOPE OF VISUAL INSPECTIONS OF REACTOR PLANT FLUID SYSTEMS

INSULATION	<ul style="list-style-type: none"> - Wetted - Damaged - Missing
HANGERS	<ul style="list-style-type: none"> - Installed hangers are connected or welded and not damaged - Verify correct thread engagement on fasteners - Liners are acceptable
PIPING AND COMPONENTS	<ul style="list-style-type: none"> - Leakage - Arc strikes - Significant surface discontinuities - Corrosion or pitting - Dents, bends, visible cracks - Missing or damaged locking devices - Sound shorts (if applicable) - Missing, damaged or incorrect label plates - Proper clearance between vent and drain lines and associated funnels, funnel misalignment and clogged screens - Damaged or out of calibration gages and thermometers - Inadequate preservation - Foreign material on outside of piping or components
MECHANICAL CONNECTIONS	<ul style="list-style-type: none"> - Leaks - Missing or loose fasteners - Incorrect material (e.g., dissimilar materials) - Proper thread engagement - Misaligned flanged joints
VALVES	<ul style="list-style-type: none"> - Missing or damaged valve caps or vent plugs - Leaks - Loose, missing or non-functional handwheels - Damaged valve position indicators - Missing or damaged fasteners - Permanent identification of handwheels by system number and color coding (if required) - Bent stems - Packing glands with little or no remaining adjustment - Cocked packing glands - Corrosion

FOUNDATIONS	<ul style="list-style-type: none">- Obvious damage- Corrosion or cracks- Integrity of attachment welds- Missing or loose fasteners or locking devices
LOCKING DEVICES	<ul style="list-style-type: none">- Damaged, where installed- Serve intended function
SHIELDING	<ul style="list-style-type: none">- Damaged shielding- Damaged or missing radiation area exclusion barriers (if applicable)- Corrosion or leaking of canning plate materials- Damaged viewing windows or periscopes- Missing or loose fasteners

SAMPLE MESSAGES FOR CNO SCHEDULED AVAILABILITIES OF LESS THAN SIX MONTHS IN DURATION (SUBMARINES ONLY)

- BA Sample TYCOM Message Concerning Escort Services
- BB Sample ISIC Message to TYCOM Concerning Crew Certification and Material Condition for Fast Cruise and Sea Trials
- BC Major Trial and Inspection Milestones
- BD Sample TYCOM Message to Ship Concerning Sea Trials Depth Authorization
- BE Sample Ship Message to TYCOM Concerning Readiness for Follow-On Sea Trials
- BF Sample ISIC Message to TYCOM Concerning Material Certification for Follow-On Sea Trials
- BG Sample TYCOM Message to Ship Concerning Follow-On Sea Trials Depth Authorization
- BH Sample Ship Message to ISIC Concerning Readiness for Fast Cruise
- BI Sample ISIC Message to Ship Authorizing Commencement of Fast Cruise
- BJ Sample Ship Message to ISIC and TYCOM Concerning Readiness for Sea Trials
- BK Sample ISIC Message to TYCOM Concerning Final Material Certification Prior to Sea Trials
- BL Sample Ship Message to ISIC and TYCOM Concerning Material Certification Upon Completion of Sea Trials
- BM Submarine Sea Trial Situation Report (SITREP)
- BN Sample Message Concerning Mod Alert Notification
- BO Sample TYCOM Message to Ship Concerning URO for Industrial Activity Availabilities Less Than Six Months in Duration
- BP Message Scenario for CNO Availabilities of Less than Six Months in Duration
- BQ Sample ISIC Message to TYCOM Concerning Fly-By-Wire Crew Certification and Fly-By-Wire Material Condition for At-Sea Testing or Fast Cruise and Sea Trials

15 Jan 2021

- BR Sample TYCOM Message to Ship Concerning Authorization to Use Fly-By-Wire Ship Control Systems
- BS Sample ISIC Message to TYCOM Concerning Fly-By-Wire Material Certification upon Completion of At-Sea Testing or Sea Trials
- BT Sample TYCOM Message to Ship Concerning URU for Fly-By-Wire Ship Control Systems

SAMPLE MESSAGES FOR CNO SCHEDULED AVAILABILITIES OF GREATER THAN SIX MONTHS IN DURATION (SUBMARINES ONLY)

- CA Sample SRDRS Support Services Message
- CB Sample ISIC Message to TYCOM Concerning Crew Certification
- CC Major Trial and Inspection Milestones
- CD Sample TYCOM Message to Ship Concerning Completion Prerequisites
- CE Sample TYCOM Message to NAVSEA Concerning Fast Cruise and Critical Reactor Operations
- CF Sample TYCOM Message to Ship Concerning Sea Trials Depth Authorization
- CG Sample TYCOM Message to Ship Concerning URO
- CH Sample ISIC Message to TYCOM Concerning Material Certification Prior to Sea Trials
- CI Sample ISIC Message to TYCOM Concerning Material Certification upon Completion of Sea Trials
- CJ Sample Ship Message to TYCOM Concerning Readiness for Fast Cruise
- CK Sample Ship Message to TYCOM Concerning Readiness for Sea Trials
- CL Sample TYCOM Message Concerning Resumption of Sea Trials Completion Prerequisites
- CM Sample ISIC Message to TYCOM Concerning Material Certification for Follow-On Sea Trials
- CN Sample Ship Message to TYCOM Concerning Readiness for Follow-On Sea Trials
- CO Sample TYCOM Message to Ship Concerning Follow-On Sea Trials Depth Authorization
- CP Reserved for Future Use
- CQ Sample Message Concerning Mod Alert Notification
- CR Message Scenario for CNO Availabilities of Greater than Six Months in Duration
- CS Sample NAVSEA Message to TYCOM Concerning Fly-By-Wire Ship Control Systems Material Condition Readiness for Sea Trials
- CT Sample TYCOM Message to Ship Concerning Authorization to Use Fly-By-Wire Ship Control Systems
- CU **Reserved for later use**
- CV Sample TYCOM Message to Ship Concerning URU for Fly-By-Wire Ship Control Systems

3.1 PURPOSE. This chapter provides guidance in support of advanced planning, pre planning, execution and close out of Chief of Naval Operations (CNO) Scheduled Maintenance Availabilities. The implementation of policies as set forth in references (a) through (bg) provide additional guidance as required. Requirements listed here apply unless otherwise approved by

Naval Sea Systems Command (NAVSEA). Where differences may exist, NAVSEA requirements take precedence.

3.2 CHIEF OF NAVAL OPERATIONS SCHEDULED MAINTENANCE AVAILABILITIES.

- a. Chief of Naval Operations (CNO) scheduled maintenance availabilities greater than six months in duration are:
 - (1) Overhaul. An availability scheduled for accomplishment of industrial maintenance and modernization. Types of availabilities include:
 - (a) Regular Overhaul.
 - (b) Complex Overhaul.
 - (c) Engineered Overhaul.
 - (d) Refueling Overhaul.
 - (e) Refueling Complex Overhaul.
 - (f) Engineered Refueling Overhaul.
 - (2) Other availabilities. An availability scheduled primarily for industrial maintenance and installation of major, high priority alterations. Types of these availabilities include:
 - (a) Depot Modernization Period.
 - (b) Planned Incremental Availability.
 - (c) Docking Planned Incremental Availability.
 - (d) Extended Drydocking Phase Maintenance Availability.
 - (e) Post Shakedown Availability.
 - (f) Carrier Incremental Availabilities.
- b. CNO scheduled maintenance availabilities less than six months in duration. Short, labor intensive availabilities scheduled for accomplishment of industrial maintenance and modernization. Types of these availabilities include:
 - (1) Selected Restricted Availability (SRA).
 - (2) Docking SRA.
 - (3) Phased Maintenance Availability (PMA).
 - (4) Docking Phased Maintenance Availability.
 - (5) Service Craft Overhaul.
 - (6) Extended SRA.
 - (7) Extended Docking SRA.
 - (8) Incremental SRA.
 - (9) Extended Refit Period.

(10) Post Shakedown Availability.

(11) Pre-Inactivation Restricted Availability (PIRA)

3.2.1 Early Start. An “early start” is defined as that time when ships or submarines are made available by Type Commanders (TYCOM) for the execution of maintenance or modernization, including dry-docking, prior to a scheduled CNO availability start date.

3.2.2 Early Start Concurrence. The Naval Supervisory Authority (NSA) (e.g., Naval Shipyard, Ship Repair Facility, Regional Maintenance Center, Supervisor of Shipbuilding (SUPSHIP)) must request an “early start” period via Naval Message no later than A-75 days, A-365 days or A-210 days from scheduled availability start for surface force ships, aircraft carriers and submarines, respectively. TYCOMs must provide concurrence to execute an “early start” period. The cognizant maintenance activity will formally document each “early start” period using applicable availability management control tools (e.g., Navy Data Environment, Final Review Estimate provided to the TYCOM, etc.), and include NSA acknowledgement that the availability cost to the TYCOM will be the same, as if no “early start” period was utilized, within that documentation.

3.2.3 Readiness to Start Availability (Aircraft Carriers and Surface Force Ships Only). The Project will conduct a Readiness to Start brief per the appropriate milestones listed in Appendix C for Aircraft Carriers and Part II, Chapter 2, Appendix D of this volume for Surface Force Ships. The purpose of this briefing is for the Project Team to demonstrate its readiness to execute, test and certify the maintenance availability. The Project Team must review the Availability Work Package (AWP) for risks that would threaten the Project Team’s ability to accomplish the work to the expected level of quality within the scheduled time and budget. The Project Team must develop risk mitigation strategies that eliminate or minimize risks. These risk mitigation strategies must be outlined in a letter provided to the TYCOM and the NSA’s Immediate Superior In Command (ISIC) (e.g., Commander, Navy Regional Maintenance Center (CNRMC), NAVSEA 04X, Program Executive Officer (PEO)).

3.2.3.1 Readiness to Start Brief.

- a. All required Technical Work Documents (TWD) are complete, reviewed and approved by the NSA Engineering Department. Any unfinished TWDs will be discussed.
- b. The Quality Management Plan (QMP) is complete and signed.
- c. The initial conditions can be established to support the work (e.g., drained, depressurized, de-energized, tag out and Work Authorization Form (WAF)).
- d. The required repair parts, materials (including pre-fabrication) and test equipment are available or will be available to support the work.
- e. Assigned project team personnel are knowledgeable, trained and qualified. The Executing Activity must provide appropriate written documentation to support the qualifications or certifications prior to personnel performing any work.
- f. The milestones and key events schedule, critical path jobs and budget (including the overtime plan).
- g. All required MOAs are signed and a communications plan has been established between the key participants of the availability.

- h. A risk management plan is developed to mitigate or reduce risk. These mitigation or risk reduction options will be continuously evaluated throughout the availability.
- i. A Fast Start strategy must be developed and monitored. A 100-hour beginning of the availability strategy will be part of this plan.
- j. Ship's Force availability related training plan.
- k. Readiness to receive Ship's Force. Items to be discussed must include adequacy of workspace, computer and telephone connectivity, completion of training and Ship's Force watchbill qualifications.

3.3 MAINTENANCE POLICIES AND PROCEDURES.

3.3.1 Critical Path Jobs. Critical Path Jobs (CPJ) are those jobs or series of jobs that require special management attention and normally present the greatest risk to on time completion of the Key Event or availability. Industrial activities should be judicious in designating jobs as CPJs to prevent diverting management attention from those jobs which are, in fact, critical to on time completion of the availability. Consideration must be given to, but not limited to, the following in determining the CPJs:

- a. Little or no room for delay exists.
- b. Establishing plant conditions.
- c. Long Lead Time Material (LLTM).
- d. Complexity of job or special skills or resources required.
- e. Significant test requirements.
- f. Not previously accomplished by a Fleet Maintenance Activity (FMA) (alterations, etc.).

3.3.2 Work Sequence Schedule. The Work Sequence Schedule is an integrated timeline (Pert Chart, Gantt Chart, etc.) that includes plant conditions, major work steps, tests and recertifications used to identify and progress CPJs. The Work Sequence Schedule should include:

- a. Staging.
- b. Establishing plant conditions.
- c. Issuing work procedures.
- d. Identifying major production steps.
- e. Testing or Recertifying.
- f. Closing out work procedures.

3.3.3 Milestones. Appendices A, B and C of this chapter are representative of Typical CNO Maintenance Availability milestones for ships.

- a. Appendix A of this chapter is applicable to submarines only. NAVSEA will issue specific advance planning milestones for each CNO Maintenance Availability.

- b. Appendix B of this chapter is applicable to the surface force only. It is a guide to aid the Commanding Officer (CO) in planning and executing the availability. Specific advance planning milestones are developed jointly by the ship, the TYCOM, and the planning and executing activities (if possible). A particular availability may require development of a complete off-load, storage, security plan or a tailored list of Inactive Equipment Maintenance (IEM) items, or may require office, training or flammable storage space, etc. These items should be added to the milestones through coordination with the responsible planning and engineering activity.
- c. Appendix C of this chapter is applicable to aircraft carriers only. For specific availabilities, a listing of milestones is included as an enclosure to Supervisor of Shipbuilding Newport News PMS 312C, as applicable, Maintenance Planning Tasking letter. Subsequent to this, the TYCOM sends out periodic revisions until availability completion. Various activities which have specific responsibilities for the maintenance of aircraft carriers, composite listings of milestones for the TYCOM, NAVSEA, PMS 312C, planning yard and the CO of the ship, imposed by the TYCOM and higher authority are found in reference (a). The milestones are arranged in order of occurrence through the planning, execution, and post-repair phases of CNO Maintenance Availabilities.

3.3.4 Production Completion Date. Production Completion Date (PCD) for the Engineering Plant is an availability key event that provides sufficient time for the necessary steps to be taken by Ship's Force to shift from a maintenance environment back to operations. It is the intent that all work and testing in engineering and auxiliary spaces will be complete and certified up through Stage 2 testing per reference (p) by the scheduled PCD. PCD includes all work planned for accomplishment during the maintenance availability by all maintenance and modernization providers including, but not limited to, the Lead Maintenance Activity (LMA), Alteration Installation Team (AIT), Commercial Industrial Services and FMA. The time reserved between PCD and propulsion plant light off is set aside to allow Ship's Force to complete pre-event certifications, clearance of tagouts, complete any remaining discrepancy corrections, continued deep cleaning, small valve maintenance, Ship's Force startup maintenance, valve lineups, temporary service removal, and, if required, any groom teams in areas requiring special emphasis. This time is necessary to allow Ship's Force to transition to an operational environment and focus necessary training and complete final preparations for the Light Off Assessment (LOA) and propulsion plant light off. For availabilities in excess of 120 days (140 days for forward deployed CVNs), PCD will be scheduled for a minimum of 14 days prior to the LOA. For availabilities 120 days or less (140 days for forward deployed CVNs), PCD will be scheduled between 3-14 days prior to LOA. The ship's CO, Chief Engineer and the NSA Project Manager will determine the number of days needed between PCD and LOA for availabilities 120 days or less (140 days for forward deployed CVNs) based on the scope of work, length of availability and other pertinent factors. PCD will not be less than 3 days prior to propulsion plant light off regardless of whether a LOA is scheduled. Generally, LOAs will be scheduled for availabilities greater than 120 days. For availabilities 120 days and less (140 days for forward deployed CVNs), the requirement for a LOA will be determined by the TYCOM. The following list contains examples of items to be considered when deciding whether or not the ship is ready to call PCD and begin the shift from a maintenance environment back to operations:

- a. Temporary services removed, except for those required by Ship's Force or late emergency industrial activity work required for LOA.
- b. Access openings and ladders installed and clear for passage.
- c. All damage control or firefighting systems operational.
- d. Lagging repairs completed. As required for operational testing, minimal minor lagging repairs may be deferred until completion of hot plant testing.
- e. All machinery in-place, and assembled, and certified complete through Stage 2 testing per current instructions.
- f. All deck plates and supports installed.
- g. Boiler work completed including hydrostatic testing, with boiler under appropriate lay-up.
- h. Industrial tools, material and debris removed.
- i. All main propulsion and auxiliary piping, valves, and systems intact, hydrostatic tightness tests completed satisfactorily and remote valve operator and associated or indicator tests completed satisfactorily.
- j. Engineering and auxiliary space turnover complete.
- k. Ship distributed systems that impact engineering or auxiliary spaces are intact and operational.

3.3.5 Delayed Production Completion Date. In the event that the decision is made to delay the scheduled PCD, careful consideration should be given to ensure that the times allotted for Ship's Force between PCD and the LOA are preserved, even if the availability end date would be adversely affected. The ship's CO, TYCOM, NSA Chief Engineer and the NSA Project Manager should carefully evaluate any and all work remaining within the engineering spaces that could impact Ship's Force ability to be successful in preparing for the LOA. An exceptions list will be generated and agreed to by the ship's CO, TYCOM, NSA Chief Engineer and the NSA Project Manager listing all outstanding engineering or auxiliary space and other plant affecting work, which will continue after PCD while the ship is preparing for the LOA.

3.3.6 (Surface Force Ships Only) Command, Control, Communications, Computer, Combat Systems, Intelligence Light Off (AEGIS Light Off for AEGIS ships). Command, Control, Communications, Computer, Combat Systems, Intelligence Light Off (C5ILO) is a Key Event to document all production work supporting uninterrupted C5I testing is complete and certified. C5ILO is defined as met when production work including LMA, Commercial Industrial Services and AIT in designated compartments and support systems is complete to the degree required to support uninterrupted testing. For compartments, the degree required includes compartment release of all spaces required prior to C5ILO per the Compartment Release Schedule of NAVSEA Standard Item 009-117. For support systems, which are ship-wide distributed in nature, the degree required includes complete installation of the branches supporting the C5I equipment and completion of support systems test procedures or applicable portions of the support system test procedures such that the support equipment is verified to be operating within design parameters.

15 Jan 2021

- a. The NSA must certify all related industrial production work and Stage 1 and Stage 2 testing is completed for C5ILO, with any exceptions noted and approved by the appropriate technical authority and agreed to in writing by the Ship's CO, NSA Project Manager, TYCOM and the NSA.
- b. Access routes need not be released but must be passable or alternate routes made to the Combat Systems Suite available at all times. Services, either ship or shore based, must be available on a reliable basis. These services may include (based on ship class) but not limited to: 60 HZ or 400 HZ, Air Conditioning, Chilled Water, condensate drains, Vacuum, Collection, Holding and Transfer, Firemain or AEGIS Salt Water Cooling pumps, Ventilation, Electronic Cooling Water (demineralized water), Dry Air, High Pressure Air, Low Pressure Air, Fwd and Aft AN/SPY skids, Sonar skid, AN/SPS 49 skid, Command and Decision skid, AN/SLQ 32 Cooling unit and Close-In Weapons System heat exchanger. In addition, the Electric Plant Control Equipment console or equivalent remote 400 HZ control unit must be available. Cabling from 60 HZ Power panels, Chilled Water hoses and routes must be intact to 400 HZ power sources or converters. Electronic Cooling Water modifications must be completed and all contractor flushes accomplished. If in dock, AC plants, cooling skids and Firemain must be placed in operation to support C5ILO with an acceptable means of discharge or operation (e.g., overboard discharge).
- c. C5I testing must not begin in a compartment which has not been formally released per NAVSEA Standard Item 009-117 and accepted by the PEO Integrated Warfare System or SEA 21 Combat Systems Project Engineer (if assigned), Ship's CO and the NSA.

3.3.7 Memorandum of Agreement. The Memorandum of Agreement (MOA) must be executed and jointly signed by the ship's CO, the NSA, the ISIC representative (if applicable) and the FMA representative (if applicable) prior to commencing authorized work. It is an agreement between the industrial activity and Ship's Force concerning the responsibilities of each party during the availability. It deals with a number of areas in which Ship's Force generally provides support to the industrial activity and vice versa. References (c) and (d) contain training requirements and additional guidance for MOAs involving aircraft carriers and submarines. As a minimum, the MOA must include:

- a. Purpose. Include:
 - (1) Availability Type
 - (2) Period of Performance
 - (3) Geographic Location of Maintenance
(e.g. CMAV, 2-30 Jun 2019, Norfolk, VA)
- b. Applicability. List all parties involved in the MOA and include:
 - (1) Point of Contact Department or Code for each activity involved.
 - (2) The NSA and LMA.
 - (3) The AIT (if applicable) to include the Sponsor, Manager, Contractor(s) and Subcontractor(s) for alteration work.

- c. Responsibilities for control of plant conditions and work area isolation.
- d. Responsibilities for accomplishment of work.
- e. Responsibilities for Quality Assurance (QA).
- f. Responsibilities for support services or equipment.
- g. Responsibilities for testing requirements.
- h. Responsibilities for waivers, deviations, or Departure from Specifications.
- i. (Submarines Only) Precise delineation of the Submarine Safety (SUBSAFE), Deep Submergence Systems, Scope of Certification (DSS SOC) and Fly-By-Wire (FBW) work responsibility of each activity for all phases of SUBSAFE, DSS, SOC and FBW work prior to issuing Re-Entry Controls or Controlled work.
 - (1) Identify the requirement that all activities assigned SUBSAFE work must be authorized by the current version of reference (bf). If a new reference (bf) is issued during any stage of the availability, the LMA must validate the new reference (bf) does not impact the work or notify NAVSEA 07Q of the discrepancy.
 - (2) Identify the outsourcing of SUBSAFE work meets the requirements of reference (bg).
- j. Responsibilities for training.
- k. Miscellaneous responsibilities (as required) (i.e., Radiological Control, Hazardous Material, etc.).
- l. Signatures of all activities (signifying agreement with the terms and responsibilities of the MOA).
- m. Responsibilities for reports or notifications for Emergency Planning and Community Right-to Know Act (EPCRA) requirements (Sections 302, 304, 311, 312, and 313).

3.3.8 Responsibilities. Responsibilities for the Maintenance Policies and Procedures for CNO scheduled availabilities are:

3.3.8.1 Fleet Commander.

- a. Maintain the Availability Intervals and Cycles issued in reference (e) to the maximum extent practical within operational requirements.
- b. Inform the Chief of Naval Personnel of any significant changes which would affect ship manning requirements during an extended CNO Maintenance Availability.
- c. Coordinate with the Program Executive Office, Direct Reporting Program Manager or Ship Program Manager, as applicable, in the accomplishment of CNO Maintenance Availability planning.
- d. Implement Docking Officer Qualification and Certification requirements as issued in NAVSEA instructions.
- e. Plan for and monitor availability execution to achieve a balance of cost and schedule for the scope of work authorized. Ensure that any growth in the scope of work

authorized is necessary to reasonably assure safe, reliable operation of the ship during the subsequent operating cycle.

- f. Plan for and provide berthing, messing, offices, classrooms, equipment stowage space, and Ship's Force repair shop per reference (f) when shipboard facilities are expected to become unusable or uninhabitable.

3.3.8.2 Type Commander.

- a. Coordinate the scheduling of availabilities at industrial activities with Fleet Commander, NAVSEA and CNO.
- b. Initiate the required budgetary actions for funding availabilities.
- c. Coordinate the work assignments between the FMA and the industrial activity.
- d. Seek resolution of all class and major technical problems and coordinate industrial requirements for modernization and repair.
- e. Authorize AWP's prepared by Submarine Maintenance Engineering, Planning and Procurement (SUBMEPP) Activity (Submarines only), PMS 312C (Aircraft Carriers only) with recommendations from the ship's CO, Maintenance Manager and ISIC (if applicable). Exercise all work candidate screening and follow up actions relating to the availability directly with the ship concerned. (Surface Force Ships only) Assume the lead role in managing the AWP from the Baseline Availability Work Package (BAWP) developed by Surface Maintenance Engineering Planning Program (SURFMEPP).
- f. (Submarines Only) Coordinate the interface of the Maintenance and Material Management (3-M) system with the Periodic Maintenance Requirement (PMR) scheduling and feedback reporting system.
- g. Designate a TYCOM representative for the Work Definition Conference (WDC), Project Review Conference (PRC) and Pre-Arrival Conference (PAC) when such conferences are scheduled.
- h. Recommend to CNO any high priority fleet modernization desired to be accomplished.
- i. (Submarines Only) Send a Sea Trials Support Services message, if required, to specify Submarine Rescue Diving Recompression System (SRDRS) "modified-alert" requirements (see Appendices BA or CA of this chapter).
- j. (Submarines Only) For minor CNO Maintenance Availabilities send a Waiver of Escort Requirements Message to NAVSEA when requested by the ISIC per paragraph 3.6.8.3.9.b.(4) of this chapter.
- k. Conduct a QA audit of Ship's Force and FMA Controlled Work Packages per Volume V, Part I, Chapter 9 of this manual.
- l. (Submarines Only) For major CNO Maintenance Availabilities issue the required messages for Fast Cruise, Sea Trials and Unrestricted Operations (URO) Certification per paragraph 3.6.8.4 of this chapter.

- m. (Submarines Only) For CNO scheduled availabilities of less than six months in duration issue the required message for Sea Trials per paragraph 3.6.8.3 of this chapter.
- n. (Submarines Only) Verify that all Submarine Flight Critical Component - certified On Board Repair Parts are loaded out by Fast Cruise following any major or minor CNO availability.

3.3.8.3 Type Commander or Immediate Superior In Command (Group or Squadron).

- a. All Ships.
 - (1) Assist the TYCOM, SUBMEPP (Submarines), PMS 312C (Aircraft Carriers) and SURFMEPP (Surface Force Ships) in the preparation of the AWP.
 - (2) Monitor corrective maintenance action taken by industrial activities and Regional Support Groups (RSG) or Regional Maintenance Centers (RMC).
 - (3) Schedule and conduct inspections of Forces Afloat.
 - (4) Monitor progress of CNO Maintenance Availabilities.
 - (5) Ensure that a MOA is executed prior to availability start per paragraph 3.3.6 of this chapter.
- b. Submarines Only.
 - (1) Ensure timely accomplishment and reporting of PMR maintenance actions on assigned ships. This should include the use of the PMR scheduling system and the SUBMEPP scheduling tape for automatic interface between the Master Job Catalog, the Current Ship's Maintenance Project (CSMP), and the Automated Material Requisitioning system.
 - (2) Ensure industrial activities and ships maintain current copies of Maintenance Standards, PMR schedules and PMR inventories.
 - (3) Review Ship's Force submitted deferrals for industrial activity assistance to determine if restoration per Maintenance Standard criteria is warranted in lieu of, or in addition to, requested industrial activity corrective maintenance.
 - (4) Ensure industrial activities provide the 3-M and Maintenance Standards feedback necessary for analysis by SUBMEPP.
 - (5) Request assistance from SUBMEPP as necessary in resolving problems with PMR scheduling and software.
 - (6) Report to SUBMEPP the inability to perform PMRs due to software technical inadequacy, non-availability of overhauling spares, insufficient manpower or inadequate industrial activity facilities.
 - (7) Designate an Availability Coordinator to coordinate industrial activity, FMA drydock and Ship's Force work to meet the availability completion date.
 - (8) Provide updated Sea Trials status by telephone to Commander, Submarine Squadron (COMSUBRON) ELEVEN if SRDRS "modified-alert" support services are in use.

- (9) For minor CNO Maintenance Availabilities issue the required messages for Sea Trials escort requirements or waiver of escort requirements as applicable, Fast Cruise, Sea Trials and URO Certification per paragraph 3.6.8.3 of this chapter.
 - (10) Report that all Submarine Flight Critical Component-certified On Board Repair Parts are loaded out by Fast Cruise following any major or minor CNO availability (Appendix BQ or Appendix CS).
- c. Surface Force Ships Only.
- (1) In coordination with the RMC Chief Engineer (CHENG), submit Change Deferral Requests and Change Notifications to SURFMEPP per Appendices AK and AL. These documents will provide adequate information to support a technical analysis, including the date the maintenance was last accomplished, the proposed timeframe for accomplishment, reason for non-accomplishment using the deferral codes provided and a mitigation strategy with impact statement for non-accomplishment. In addition, TYCOM will maintain mandatory BAWP requirements proposed for non-accomplishment in an active planning status until adjudicated.
 - (2) Coordinate with SURFMEPP to update the AWP when Class Maintenance Plan (CMP) changes drive a change to the BAWP after A-360.
 - (3) Coordinate meetings as required at key milestones and as required to support resolution of major issues, such as those associated with large budget reductions or shipyard resource shortfalls due to scheduling conflicts.

3.3.8.4 Submarine Maintenance Engineering, Planning and Procurement Activity or Planning Engineering Repairs and Alterations.

- a. Develop plans for accomplishing periodic maintenance or equipment replacement.
- b. Maintain Baseline AWP's configured to each ship class and type availability and include the standard 3-M data elements controlled by the TYCOM.
- c. Prepare and issue all phases of AWP's and AWP Supplements (if applicable).
- d. Maintain custody of shore based spares under the direction of NAVSEA and the TYCOM.
- e. (Submarines Only) Prepare, issue and maintain PMR computerized inventories and scheduling reports and associated Master Job Catalog or PMR computer tapes.
- f. (Submarines Only) Prepare, issue and maintain Maintenance Standards under the guidance of NAVSEA and the TYCOM.

3.3.8.5 (Surface Force Ships Only) Surface Maintenance Engineering Planning Program (SURFMEPP).

- a. Act as the surface force ship CMP development and management activity.
- b. Build Technical Foundation Papers for each ship class and Ship Sheets by hull.

- c. Identify, track and process all mandatory CMP requirements.
- d. Develop, track and process the BAWP to reflect changes in the CMP.
- e. Capture all mandatory maintenance closeout or return costs at the Job Control Number and Ship's Work List Item Number (SWLIN) levels.
- f. Review Change Deferral Letters and Cancellation Deferral Notification System (CDNS) requests for sufficient supporting documentation, mitigating actions and to determine the impact of reprogramming work or reducing scope following the change deferral process located in Appendix AK of this chapter.
- g. Develop a response in conjunction with applicable Technical Authorities and Engineering Authorities such as Naval Air Systems Command, Space and Naval Warfare Systems Command, Naval Surface Warfare Centers and other stakeholders. If required, coordinate the revision of the mitigation strategy with Commander, Naval Surface Atlantic (CNSL) or Commander, Naval Surface Pacific (CNSP) N43.
- h. Review and forward recommended action for CDNS requests to NAVSEA 05D with justification and recommendation for approval or disapproval within fourteen (14) calendar days of receipt.
- i. SURFMEPP will provide recommendations to Deferral Letters and forward to NAVSEA 05 for Surface Ship Engineering Operation Cycle designators and provide final determination for all other tasks to the TYCOM with information copy to SEA 05.
- j. Ensure the CMP configuration data, Last Maintenance Accomplished dates as designated in the Maintenance and Ship Work Planning program, next Due Dates and associated periodicities remain current using historical technical data to correct deficiencies when necessary.
- k. Review NAVSEA 05D responses to Change Deferral Requests and send the Final Disposition Letter to TYCOM within ten (10) calendar days of receipt.
- l. Coordinate the Corrosion Planning Conference, Life Cycle Planning Conference (LCPC), CSMP, Departure From Specifications (DFS), BAWP Mid-Cycle Review and the BAWP Close-Out Verification and Assessment Meeting and summarize all Deferral Letters, Change Notifications and resulting actions for the current Fleet Readiness Plan (FRP) Maintenance Cycle.
- m. Brand tasks residing in the CMP and CSMP, as applicable.
- n. Issue the CNO Availability Advance planning schedule.
- o. Integrate Modernization tasks into the BAWP prior to A-360 per an issued Advance Planning Letter. After BAWP or AWP turnover, enter authorized Modernization tasks into the CSMP following the Navy Modernization Process and brand per Appendix AN.
- p. Attend TYCOM, RMC, and Private Sector Industrial Activity (PSIA) planning conferences for each ship.

3.3.8.6 Ship's Commanding Officer. The CO is the TYCOM representative for monitoring the progress and quality of industrial work. As such, he should review availability progress during weekly conferences with Department Heads and others as necessary. The Supervising Authority meets weekly with the CO and other industrial activity officials as described in paragraph 3.6.3.1 of this chapter. The CO should be prepared to discuss and assist in the resolution of scheduling, design, material, and production problems. The CO's responsibilities are defined in reference (e). Additionally, COs must:

- a. All Ships.
 - (1) Review AWP's and provide comments to the TYCOM, ISIC and SUBMEPP or PMS 312C during the WDC or PRC.
 - (2) Assign a Ship Selected Records (SSR) Coordinator to perform the functions of paragraph 3.6.6.b. of this chapter.
 - (3) Publish policy concerning the number of duty sections, liberty, ship cleanliness, tagout procedures, tank closeout and blanking of otherwise exposed fluid systems, waveguides and air systems before availability start.
 - (4) Ensure non-conformances (Waivers, Deviations or Departures from Specification) submitted during the availability by any activity are approved prior to trials at sea (if held) and not later than the completion of the availability.
- b. Submarines Only.
 - (1) Review the status of PMR maintenance schedules and CSMP reports with parent ISIC prior to CNO Maintenance Availabilities in order to assist in planning for accomplishment of the required planned maintenance and corrective maintenance. Additional information and requirements concerning PMR are discussed in detail in Volume VI, Chapter 24 of this manual.
 - (2) Maintain a current SUBMEPP PMR inventory of maintenance requirements and Maintenance Standards applicable to the ship class.

3.3.8.7 Maintenance Team (Surface Force Ships Only).

- a. BAWP requirements uploaded to the CSMP with a due date prior to the ship's Mid Cycle Review must be screened and brokered within ten (10) calendar days after receipt of task.
- b. Screen and broker 100 percent of the BAWP's mandatory requirement 2-kilos by Mid Cycle Review.
- c. Meet with TYCOM Representatives and SURFMEPP by Mid Cycle Review to review the ship's BAWP, CSMP, Availability Duration Estimate, active DFSs, Class Advisories, routines and services. The CSMP will be reviewed and evaluated for branding per Appendix AN. The ship will assign a Job Control Number (JCN) to active temporary DFSs with no open JCN in the CSMP (the ship must update the DFS to reflect the new JCN as appropriate and the Port Engineer will ensure the "Job Closure Method" is set to "Both" as referred in Part II, Chapter 3 of this volume).

- d. Screen and broker any mandatory CMP requirement uploaded to the CSMP by Mid Cycle Review within ten (10) days of receipt into the Information Technology (IT) screening and brokering system.

NOTE: MAINTENANCE TEAM (MT) WILL SCREEN ALL REQUIREMENTS TO A SCHEDULED OR FUTURE MAINTENANCE PERIOD TOTAL SHIP READINESS ASSESSMENT (TSRA) EVENT WITHIN THE CURRENT FRP MAINTENANCE CYCLE.

- e. Provide timely closeout information for completed requirements.
- f. When required, provide CMP configuration data corrections to SURFMEPP.

3.3.8.8 Technical Warrant Holders and In-Service Engineering Agents (Surface Force Ships Only).

- a. Evaluate Deferral Letters requested by NAVSEA 05D (Ship Design Manager).
- b. Evaluate CDNS deferral requests as requested by NAVSEA 05D.
- c. Provide approval or disapproval recommendations to NAVSEA 05D in support of Deferral Letters and CDNS Deferral Requests.

3.3.8.9 NAVSEA 05D (Surface Force Ships Only).

- a. Review, adjudicate and provide a response for all Change Deferral Requests to SURFMEPP within ten (10) business days of receipt.
- b. For Deferral Letters requiring other agency approvals (e.g., Naval Air Systems Command, Naval Ship Systems Engineering Station, etc.), NAVSEA 05D will coordinate with the appropriate Technical Authority for adjudication.
- c. Review, adjudicate and provide a response for all CDNS requests within ten (10) business days.
- d. NAVSEA 05D (Ship Design Manager) must provide a representative to all BAWP Process Milestone Meetings when practical.

3.4 AVAILABILITY WORK PACKAGE PLANNING.

3.4.1 Forces Afloat Planning Sources. The majority of the Forces Afloat Work Package can be identified in advance from the following sources:

- a. Ship's CSMP Integrated with the Life Cycle Maintenance Plan. This document contains work items deferred during the previous maintenance availabilities, outstanding Departures from Specifications, dry dock requirements, etc. To ensure the CSMP accurately reflects the required ships maintenance, the ISIC Material Officer or TYCOM will review each ship's CSMP in detail with the ship prior to the WDC or PRC for CNO Maintenance Availabilities. The ISIC or TYCOM 3-M Coordinator and Maintenance Document Control Office (MDCO) should provide the necessary technical assistance and training to facilitate CSMP updates.
 - (1) (Submarines Only) PMR or URO. The ISIC will load scheduled PMRs into each ship's CSMP for a specific availability.
 - (2) Alterations.

- (a) (Aircraft Carriers and Submarines only) The ISIC MDCO or TYCOM will enter alterations on the ship's CSMP which the TYCOM has authorized for accomplishment. The ISIC or TYCOM calls out alterations for a specific availability based on material availability as identified by the industrial activity. Within funding constraints and TYCOM guidance, all alterations authorized on the TYCOM Alteration Management System or Navy Modernization Process are candidates for accomplishment during each availability.
 - (b) (Surface Force Ships only) SURFMEPP enters alterations on the ship's CSMP as discussed in section 3.3 of this chapter.
 - (3) Condition Based Maintenance. (Machinery Condition Analysis or Technical Assessment, Repair, Groom and Evaluation Team or Performance Monitoring Team (PMT), Combat System Readiness Review, etc.). The ISIC or TYCOM Material Officer and Ship's Force must ensure that all material deficiencies identified by Condition Based Maintenance programs as identified in Part I, Chapter 2, section 2.4 of this volume are loaded into the CSMP for a specific availability.
 - (4) Life Cycle Planning Conference (Surface Force Ships Only). Representatives from SURFMEPP, TYCOM and the ship's Port Engineer (PE) will convene for a LCPC. SURFMEPP will be responsible for planning and conducting the conference. TYCOM, RMC Assessment Directors, Program Manager Representatives, representatives from NAVSEA 05, NAVSEA 21 Modernization, Planning Activity and the ship's MT should attend the LCPC. Appendix AO illustrates the entire process timeline.
 - b. Work Routines. A set of Master Job Catalog standard work routines should be developed for every availability. The MDCO or TYCOM tailors each work routine package to the needs of the ship by calling out additional work routines to document periodic, interim dry-docking, URO maintenance and calibration recall requirements, as applicable.
 - c. Pre-Availability Tests and Inspections. Ship's Force, PMTs and industrial activity inspectors perform and submit the results of these pre-availability tests and inspections to the industrial activity, SUBMEPP (Submarines), PMS 312C (Aircraft Carriers) or applicable TYCOM (Surface Force Ships) for evaluation and inclusion in the AWP, as applicable. NAVSEA 07T provides results and recommendations for pre-availability tests performed by PMTs and Ship's Force.
 - d. Additional requirements for nuclear powered ships are contained in reference (b).
- 3.4.2 Forces Afloat Planning Actions. Ship's Force must take the following maintenance availability planning actions, as applicable:
- 3.4.2.1 Forces Afloat Work Package Preparations.
- a. Develop a Ship's Force concurrent Work Package that includes all major maintenance actions such as Planned Maintenance System (PMS), Reactor Plant PMS, repairs,

PMRs, alterations and testing to be conducted by Ship's Force during the availability, as applicable.

- b. Identify CPJs per paragraph 3.3.1 of this chapter, and submit to the planning or industrial activity for integration into the availability schedule.
- c. Establish a strategy for calibration of gages, instruments, and tools based on the Calibration Recall List and Calibration Support Plan.
- d. Identify all industrial activity provided production and testing support equipment needed to accomplish Ship's Force work, or to recertify systems following Ship's Force work. Identify this equipment to the industrial activity prior to the start of the availability. This support equipment includes the following, as applicable:
 - (1) Reactor Plant PMS support equipment.
 - (2) System hydrostatic test equipment.
 - (3) Calibration equipment.
 - (4) Special tools.
- e. Ship's Force should use Appendices A, B or C of this chapter as guidance to prepare for availabilities, as applicable. These appendices provide Typical CNO Maintenance Availability Planning Milestones for submarines, surface ships and aircraft carriers respectively.

3.4.3 Availability Work Packages.

3.4.3.1 Availability Work Package Content. The AWP includes all nuclear and non-nuclear authorized industrial work and associated Forces Afloat work for modernization, maintenance and repair during the availability. The work described is developed from NAVSEA and TYCOM instructions. Forces Afloat actions in the AWP scheduled to complete prior to availability start are critical in defining additional work candidates per Appendix D.

3.4.3.2 Availability Work Package Sources.

- a. CMP.
- b. NAVSEA authorized alterations.
- c. TYCOM authorized alterations, repairs, PMRs, Engineering for Reduced Maintenance Costs items and baseline AWP.
- d. Results of pre-availability tests and inspections.
- e. CSMP.

3.4.3.3 Availability Work Package Development. The five stages of AWP development include Baseline, Preliminary, Proposed, Approved and Completed.

- a. SUBMEPP (Submarines), PMS 312C (Aircraft Carriers) or SURFMEPP (all other Surface Ships) develop and maintain Baseline AWP for each ship class and type of availability.

- b. SURFMEPP (Surface Force Ships only) is responsible for BAWP development. The BAWP contains all NAVSEA requirements due during a ships' current FRP Maintenance Cycle and is comprised of:
 - 1. Mandatory assessment and corrective maintenance requirements from the CMP
 - 2. Surface Ship Engineered Operating Cycle (SSEOC)-applicable repairs from the CSMP
 - 3. Other programmatic mandatory requirements (e.g., Mandatory Safety Alterations)
 - 4. Services and routines in support of Mandatory Technical Requirements or availability execution
- c. (Surface Force Ships only) Mandatory SSEOC work, identified by having an "A" brand in the Category of Work field regardless of its origin, will be tracked and adjudicated using processes described in this section. See APPENDIX AN for detailed branding code information.
- d. SUBMEPP (Submarines), PMS 312C (Aircraft Carriers) or applicable TYCOM (all other Surface Force Ships) consolidate the Baseline AWP, NAVSEA authorized alterations and TYCOM authorized alterations, repairs, PMRs and Engineering for Reduced Maintenance Costs items to produce the Preliminary AWP. This Preliminary AWP is issued approximately 12 to 14 months prior to the start of the availability.
- e. Systems Command (SYSCOM), TYCOM, and the ship's CO should review the Preliminary AWP to ensure that it includes known work candidates and authorized alterations that will not be accomplished prior to availability start and for proposed work candidates, which in their opinion, are unnecessary. Appendix D of this chapter provides suggested guidelines for review of the AWP. Following the initial review of the Preliminary AWP, Ship's Force will host a meeting with the TYCOM and SUBMEPP or PMS 312C, as applicable to consolidate comments and recommendations for the WDC or PRC. This meeting is normally held early in the same week as the WDC or PRC.
- f. SUBMEPP (Submarines only), PMS 312C (Aircraft Carriers only) or TYCOM (Other Surface Force ships only) will host a WDC or PRC attended by NAVSEA, the Supervising Authority, FMA (if applicable), TYCOM, ISIC, PMT (Submarines Only), Strategic Systems Project Officer (SSBN and SSGN 726 Class submarines only) and Ship's Force when practical. During this meeting, the Preliminary AWP is carefully reviewed and the SYSCOM and the TYCOM authorize the work. When actions are required before a decision is made, those actions are identified and subsequently monitored. The goal is to issue the Proposed AWP (one which represents all SYSCOM or TYCOM authorized work integrated and specifically tailored to the ship involved) within two months following this meeting. At this meeting, the SYSCOM or TYCOM authorizes the industrial activity to continue with planning on the basis of the work identified in the AWP. During this meeting, any activity may submit new work candidates for consideration by the SYSCOM or TYCOM. The SYSCOM or TYCOM will authorize or reject each new work candidate submitted. A reason for

rejecting a work candidate will be provided. For Surface Force Ships only, the NSA Chief Engineer will review requested growth and new work items for technical compliance.

- g. SURFMEPP (Surface Force Ships only) will host four scheduled meetings over the course of the ship's FRP Maintenance Cycle: Corrosion Planning Conference, the LCPC Mid-Cycle Review and the BAWP Close-Out Verification and Assessment Meeting. When possible, SURFMEPP conferences will be held in conjunction with other MT scheduled meetings, such as monthly Availability Advanced Planning Meetings and Planning Board for Maintenance (PB4M).
- h. SYSCOM or TYCOM and the ship's CO should review the Proposed AWP to ensure that it contains all agreements made at the WDC or PRC. Appendix D of this chapter also provides suggested guidelines for review of this AWP.
- i. The Supervising Authority will host a PAC attended by NAVSEA, FMA (if applicable), TYCOM, ISIC, SUBMEPP (Submarines), PMS 312C (Aircraft Carriers), and Ship's Force when practical. During this meeting, the Proposed AWP, with results of the pre-availability tests and inspections incorporated where possible, will be carefully reviewed and the SYSCOM or TYCOM will approve the work. The goal is to issue the Approved AWP at the conclusion of this meeting. During this meeting, any activity may submit new work candidates for consideration by the SYSCOM or TYCOM and NSA Chief Engineer. The SYSCOM or TYCOM will authorize or reject each new work candidate submitted. A reason for rejecting a work candidate will be provided. For Surface Force Ships only, the NSA Chief Engineer will review requested growth and new work items for technical compliance.
- j. Within six months after the completion of the availability, SUBMEPP (Submarines) or applicable TYCOM (Aircraft Carriers and Surface Ships) will issue the Completed AWP.

3.5 AVAILABILITY PLANNING.

3.5.1 Ship's Force Pre-Planning.

- a. To effectively complete the Ship's Force and Maintenance Support Team (MST) (if assigned) responsibilities during the months preceding the start of the availability, it is necessary to assign an Officer or Chief Petty Officer as the Availability Coordinator, responsible for coordinating the completion of the milestones. The quality of the availability will be reflected in the preparations done by Ship's Force and MST (if assigned).
- b. Prior to commencement of the availability, the industrial activity will request the ship to provide personnel Temporary Assigned Duty to the activity (approximately one month prior to the start date). The industrial activity will identify the personnel requirements of this pre-arrival team based on the type of availability and ship class.

3.5.1.1 Industrial Activity Visit. The ship's CO, Executive Officer, MST Officer In Charge (OIC) (if applicable) and department heads will visit the industrial activity as soon as practical prior to the start of the availability. The CO will meet key industrial activity managers involved in the availability, other COs of ships in availabilities at the same industrial activity and if applicable, the local Naval Reactors Representative. The Executive Officer, MST OIC (if

applicable) and department heads will meet their counterparts within the industrial activity Project Team and counterparts assigned to other ships in an availability at the same industrial activity. The Executive Officer will also check available crew quarters and barge accommodations, if applicable. Ship's Force will:

- a. Coordinate with the industrial activity to conduct pre-availability training and indoctrination. The following are suggested topics for training:
 - (1) Industrial activity organization and Ship's Force or MST (if assigned) interface.
 - (2) Industrial activity procedures and practices, including:
 - (a) Operational Control Transfer.
 - (b) Tagout, Rip-Out and Work Authorization Form. This training must address the WAF and tagout process described in Volume IV, Chapter 10, paragraph 10.4.1.2 of this manual.
 - (c) SUBSAFE REC Procedures and, if applicable, SOC and FBW Procedures.
 - (d) Deficiency Reporting and Correcting.
 - (e) Radiological Controls Agreement.
 - (f) General Testing Requirements.
 - (g) Defueling or Fueling Requirements (Nuclear Reactor and Fossil Fuel).
 - (h) Industrial Activity Procedures for Accomplishing PMS of Equipment Under Their Cognizance.
 - (i) Nuclear Reactor or Radiological Accident Plan.
 - (j) Maintenance of Ship's Cleanliness.
 - (k) QA Interface with the Industrial Activity.
 - (3) General schedule of Key Events and phases of work and testing.
 - (4) Safety requirements including Ship's Force or MST (if assigned) industrial activity responsibilities for:
 - (a) Dry Dock Safety.
 - (b) Fire Watches.
 - (c) Watertight Integrity.
 - (d) Reactor Plant Safety.
 - (e) Personal Protective Equipment.
 - (5) Relationship with industrial activity management including responsibility regarding weekly management meetings.

- (6) Functions and responsibilities of the joint test groups (Nuclear, Hull, Mechanical, Electrical and Combat Systems) and the Ship's Safety Council including the designation of Ship's Force group and council members.
 - (7) Control mechanism for work and tests affecting ship's conditions.
 - (8) Special evolutions and procedures to be conducted early in the availability such as dry-docking and establishing plant conditions.
 - (9) QA.
 - (10) IEM.
 - (11) Hazardous Material Requirements.
 - (12) Special Environmental Requirements.
 - (13) Support of Trials and Inspections.
 - (14) System Experts.
 - (15) Space Turnover.
- b. Develop training plan and watch station requalification program per TYCOM directives.
 - c. Develop Plan of Action and Milestones for Ship's Force or MST (if assigned) responsibilities during the availability.
 - d. Review and prepare SSRs for turnover to the planning yard or industrial activity at the start of the availability (see paragraph 3.6.6 of this chapter).
 - e. Support the industrial activity's pre-availability ship checks, tests and inspections.

3.5.1.2 BAWP Milestones for Surface Force Ships. Specific milestone timeline is located in Part II, Chapter 2, Appendix D of this volume.

3.5.1.2.1 Corrosion Planning Conference. SURFMEPP, TYCOM representatives, RMC, CNRMC, Ship Repair Facility (SRF) (Japan only) and ship's Project Team will review current FRP cycle corrosion requirements for: Tank or void **coating and structural** conditions, tank or void assessments, tank or void preservation (includes boundary tank review), tank or void repairs, tank or void mitigation strategies, long range tank planning, structural assessments, intake or uptake assessments, bilge well assessments, structural repairs or preservation **maintenance**, **CMP specific surface ship class structural inspections**, **CMP corrosion Directive Maintenance Strategies**, deferred corrosion related maintenance, corrosion related modernization, corrosion related DFS and shipboard habitability improvements.

3.5.1.2.2 Life Cycle Planning Conference. SURFMEPP will conduct an LCPC and issue a BAWP for ships at the beginning of each ship's FRP maintenance cycle. The purpose of the LCPC is to review contents of the preliminary BAWP and planning timeline schedules with TYCOM, RMC Assessment Directors, Program Manager Representatives, representatives from NAVSEA 05, NAVSEA 21 Modernization, Planning Activity and the MT. Feedback from the meeting will be folded into the issued BAWP as applicable.

3.5.1.2.3 Baseline Availability Work Package. SURFMEPP will send a list of the FRP Maintenance Cycle CMP requirements and a list of recommended availability services to the

ship's PE for review. This list is a preview of the initial BAWP and will be discussed in detail at the LCPC. SURFMEPP will provide a list of CMP-required assessments to TYCOM, Navy Regional Maintenance Center (NRMC) and RMC as requested in support of the TSRA process.

- a. SURFMEPP will upload a data file (MM0001 file) with all mandatory requirements and expected CNO Availability services into the ship's CSMP in support of ship-specific MT screening and brokering requirements.
- b. SURFMEPP will issue formal correspondence detailing the BAWP planning schedule and outstanding action items from the LCPC.
- c. Requirements uploaded to the IT screening and brokering system with a due date prior to the ship's Mid-Cycle Review milestone must be screened within ten (10) calendar days after receipt of task.
- d. The PE must screen 100 percent of the BAWP requirements in IT screening and brokering system no later than Mid-Cycle Review and will only utilize the IT screening and brokering system or the Maintenance Support Tool to accomplish this task. These requirements must be screened by the PE to a scheduled or future maintenance period or availability (other than Unfunded) within the current FRP Maintenance Cycle.

3.5.1.2.4 Fleet Readiness Plan Mid-Cycle Review. SURFMEPP will conduct a mid-cycle review of the ship's BAWP and CSMP to ensure inclusion of all mandatory requirements, services or routines and lifecycle impacting Class Advisories, active DFSs and Avail Duration. Navy Data Environment (NDE) modernization forecasts are addresses as applicable. TYCOM, RMC Assessment Directors, Program Manager Representatives, representatives from NAVSEA 05, NAVSEA 21 Modernization, Planning Activity and the MT should attend this meeting.

- a. 100 percent of the BAWP requirements in the IT screening and brokering system are required to be screened by the ship's PE. These requirements must be screened by the PE to a scheduled or future maintenance period or availability (other than Unfunded) within the current FRP Maintenance Cycle.
- b. Any mandatory CMP requirement pushed after LCPC (initial BAWP push) is required to be screened within ten (10) calendar days of receipt into the appropriate IT system.

3.5.1.2.5 Mid-Cycle Review.

- a. Following the Mid-Cycle Review, SURFMEPP will update the BAWP with lifecycle critical tasks.
- b. Further TYCOM deferrals or deletions to the BAWP must be submitted using a Deferral Letter or the CMP CDNS.
- c. CMP work completion, configuration updates and new CMP additions will require SURFMEPP to upload more CMP requirements into a ship's CSMP following the Mid-Cycle Review. These updates will be coordinated with the ship's PE prior to initiation. If the ship is beyond the BAWP turnover to TYCOM, updates must be coordinated with the respective TYCOM AWP Manager in addition to the ship's PE.

- d. Mandatory CMP requirements pushed after LCPC (initial BAWP push) are required to be screened within ten (10) calendar days of receipt into the IT screening and brokering system.

3.5.1.2.6 Review of BAWP and CSMP.

- a. SURFMEPP, TYCOM representatives, RMC and the ship's MT will meet to review the ship's BAWP and CSMP to ensure inclusion of all required services **or** routines and lifecycle impacting Class Advisories and active DFSs. NDE modernization forecasts are addressed as applicable. RMC Assessment Directors, RMC and TYCOM TSRA Planners, NRMC, Program Manager Representatives and representatives from NAVSEA 05D, NAVSEA 21 Modernization, CNSL **or** CNSP N43, PSIA Contractor (or Planning Activity), ISIC and the ship's MT **must** attend this meeting.
- b. 100 percent of the BAWP requirements in the maintenance screening and brokering system are required to be screened by the ship's PE. These requirements **must** be screened by the PE to a scheduled or future maintenance period **or** availability (other than Unfunded) within the current FRP Maintenance Cycle.
- c. Any mandatory CMP requirement pushed after LCPC is required to be screened within 60 days of the maintenance screening and brokering system import date.

3.5.1.2.7 Updating the BAWP.

- a. SURFMEPP will update the BAWP with lifecycle critical repair tasks resulting from assessment requirements in addition to the results (i.e., deferral or technical challenges) from the CSMP, DFS **or** BAWP Mid-Cycle review.
- b. Further changes to the BAWP must be submitted using a Change Request Deferral Letter or the maintenance screening and brokering system.
- c. CMP work completion, configuration updates and new CMP additions will require SURFMEPP to upload more CMP requirements into the BAWP whose next due date falls within the current FRP Maintenance Cycle through C+120. These updates will be coordinated with the ship's PE prior to call down. If the ship is beyond A-360, updates must be coordinated with the respective TYCOM AWP Manager in addition to the ship's PE.
- d. Mandatory CMP requirements pushed after LCPC are required to be also screened within 60 days of their maintenance screening and brokering system import date.
- e. Ship Design Manager authorization via SURFMEPP Platform Engineering will be obtained if stakeholders desire to withhold or delay CMP requirements generated by configuration updates and new CMP additions if these requirements will be due prior to the end of the current FRP Maintenance Cycle.
- f. Updates will cease after 100 percent D-level maintenance lock.

NOTE: IF BAWP TURNOVER TO TYCOM OCCURS WITHIN 30 CALENDAR DAYS OF LCPC, THE PE MAY FORGO THE 50 PERCENT SCREENING MILESTONE AND INSTEAD HAVE 100 PERCENT OF THE BAWP REQUIREMENTS SCREENED BY MID-CYCLE REVIEW.

3.5.1.2.8 BAWP Turnover to TYCOM. The TYCOM's AWP Manager will review the BAWP and assume responsibility for planning and developing the AWP as described in paragraph 3.5.4 of this chapter.

3.5.1.3 Availability Coordinator (Submarines Only). A submarine served, nuclear trained Limited Duty Officer will be assigned to augment the normal ship's complement during Depot Modernization Periods, Engineered Refueling Overhauls, or Engineered Overhauls and will act as the Availability Coordinator for the ship. Availability Coordinator responsibilities are specified in Volume V, Part I, Chapter 1, paragraph 1.5.6 of this manual.

3.5.2 Docking Conference. For availabilities involving a ship's dry-docking, the industrial activity will conduct a Docking Conference prior to the ship entering the activity if scheduled to go directly into dry dock.

3.5.3 Ship's Force Administrative Preparations. Ship's Force administrative preparations for availabilities will include:

- a. Necessary revisions to ship and department organization manuals to ensure compliance with established requirements.
- b. Preparation of necessary ship and department directives to ensure that administration is formally supported per current requirements.
- c. Formulation of procedures for qualification of underway or steaming watchstanders and maintenance of proficiency of in-port watchstanders, including:
 - (1) Implementation of formal provisional qualification procedures.
 - (2) Establishment of qualification goals for Key Events, such as undocking, operational testing of ship and propulsion plant systems, steam testing, initial criticality, space turnover, etc.
 - (3) Incorporation of qualification requirements necessitated by alterations to ship or propulsion plant systems.
- d. Procedures for maintenance and security of Ship's Force or MST (if assigned) barge or office spaces.
- e. General overhaul plan for Ship's Force or MST (if assigned) responsible actions including provisions for:
 - (1) Ship off-load.
 - (2) Establishment of barge, berthing and messing facilities.
 - (3) Establishment of routine ship and barge watch bills.
 - (4) Scheduling of required shore based schools and leave for personnel.
 - (5) Provision for accomplishment of known Ship's Force or MST (if assigned) corrective maintenance.
 - (6) Establishment of Ship's Force PMS routines.
 - (7) Establishment of Integrated Logistics Overhaul (ILO) procedures.

- (8) Provisions for shift work during known periods of intensive testing (e.g., Engine Room Steaming Operations, Hot Operations, Power Range Testing).
 - (9) Ship load-out.
 - (10) Target dates for completion of key ship and department directives and procedures.
- f. Assignment of ship system experts, or QA Inspectors, capable of monitoring industrial activity work on assigned systems.

3.5.4 TYCOM AWP Schedule and Documentation Requirements (Surface Force Ships Only).

- a. Assume lead responsibility for AWP management at A-360.
- b. TYCOM will conduct Availability Planning Conferences periodically throughout the availability planning timeline per the milestones listed in Part II, Chapter 2, Appendix D of this volume. Further details concerning Availability Planning Conferences can be found in Appendix AM.

3.5.4.1 Resource Allocation.

- a. Identify and evaluate the links between the technically mandated life cycle or service life requirements contained in the CMP, the known repair tasks mandated in the BAWP and the current readiness or corrective maintenance requirements identified in the ship's CSMP.
- b. Across this mutually supportive prioritization and resource allocation process, TYCOM will function as the representative for making resource allocation recommendations in direct support of the AWP.
- c. Submit Change Deferral Requests at any time to expedite reallocation of resources.

3.5.4.2 Technical Resolution. To resolve technical issues in a timely manner, there is one major milestone for processing Deferral Letters and Change Notifications by the TYCOM.

- a. TYCOM will submit a Deferral Letter to SURFMEPP per the milestone chart located in Part II, Chapter 2, Appendix D of this volume, which will include a list of mandatory tasks in the current FRP Maintenance Cycle being requested for deferral. The information provided in the Deferral Letter should have a sufficient level of detail to enable a complete evaluation by the Technical Warrant Holder and the Ship Design Manager. SURFMEPP will review the requested deferrals and forward the recommendation to NAVSEA 05D for technical resolution.
- b. Subsequent Deferral Letter submissions occurring after TYCOM delivery of the Deferral Letter must be individually submitted. It is incumbent upon MTs and TYCOMs to discuss Deferral Letters as early as possible to enable a technical evaluation and an approval or disapproval granted prior to A-35 or Award.

3.5.4.3 Change Notifications. Subsequent submissions occurring after delivery of the Deferral Letter will be provided to SURFMEPP by TYCOM at the BAWP Close-Out Verification and Assessment Meeting using Appendix AL format and will include the same information provided in any Deferral Letter submitted during the current cycle.

NOTE: THIS SECTION DOES NOT GOVERN NOR MODIFY THE POST-

AVAILABILITY TESTING AND CERTIFICATION OR CLOSEOUT PROCESS.**3.5.4.4 Technical Deferral and Adjudication Process for Post-AWP Definitization (for Cost Contracts and Award (Firm Fixed Price Contracts) Through the End of the Execution Period).**

- a. The local RMC or SRF SEA 05 Chief Engineer is empowered as prescribed in reference (b) to provide final technical deferral authority of mandatory (“A” branded) tasks from Definitization or Award through the end of availability execution period.
- b. In the event the RMC or SRF Chief Engineer exercises this deferral authority, a signed letter with the following information must be provided to both TYCOM and SURFMEPP no later than the Availability closeout meeting.
 - (1) JCN, Job Summary.
 - (2) Reason for Non-Accomplishment.
 - (3) DFS number if required.
 - (4) Any further information that may help future completion or scheduling integration.
- c. The TYCOM will provide a letter documenting all technically adjudicated and deferred work. This letter will be forwarded to SEA 21 and SEA 05, via SURFMEPP, prior to either Hull, Mechanical and Electrical or Combat Systems Production Completion date, whichever is later.

3.5.5 BAWP or AWP Change Management Process (Surface Force Ships Only).

3.5.5.1 Branding. To support work prioritization and authorization decisions, BAWP work items must be branded using the branding category codes in Appendix AN. Change Requests to “A” branded items require adjudication through the BAWP Change Management process per Appendix AK. Deferral Letters and CDNS Requests are adjudicated by NAVSEA 05D via SURFMEPP. Work Item Branding Categories will be entered in the “Category of Work” block of the Automated Work Request (AWR) by SURFMEPP.

3.5.5.2 CMP Cancellation Deferral Notification System. The CDNS is embedded in the maintenance screening and brokering system and is used to track the status of all CMP mandatory maintenance in a ship’s shore file CSMP. If a particular maintenance requirement is screened to a maintenance period that starts greater than 90 days before or after the requirement’s due date, if the requirement is screened by the ship’s PE to an “unfunded availability”, a series of e-mails are automatically sent from CDNS to key maintenance plan stakeholders. The stakeholders then communicate with the MT to provide technically sound adjudication for the situation surrounding that specific requirement. Deferrals using this system will be routed through SURFMEPP and NAVSEA 05 as appropriate. This system provides an automated, auditable process for monitoring each ship’s accomplishment of CMP requirements. MTs will use this system to request deferral or cancellation of mandatory CMP requirements per sub-paragraphs “a” through “g”:

- a. CDNS will only be used to request deferral of CMP tasks within the FRP. Requests for deferrals outside the FRP must be submitted using the Deferral Letter process.

- b. Once SURFMEPP has entered the ship's CMP requirements into IT screening and brokering system, the MT will screen each requirement to an appropriate maintenance period or TSRA event. CMP requirements may be identified by the MT as requiring deferral or correction based on errant configuration data, substitution JCNs or an inability to accomplish the requirement by the due date.
- c. When the MT identifies such a condition, it must contact the local SURFMEPP Detachment to review the situation.
- d. If both parties agree this item should be addressed by higher technical authority, the MT will screen the item to an "Unfunded" availability to initiate the CDNS process.
- e. The CDNS adjudication process will be followed to resolve the request.
- f. The PE will provide all approved deferrals to the TYCOM AWP Manager, who will list them on the BAWP Deferral letter.
- g. This process is authorized for use from LCPC to Definitization.

3.5.5.3 BAWP Work Item Branding Categories.

- a. Branding Category A (Mandatory - Technical). An approved Deferral Letter or positive CDNS adjudication is required to defer the maintenance requirement (see Appendix AK). Only SURFMEPP or an authorized Technical Warrant Holder is authorized to brand items in this category. BAWP requirements in this branding category include maintenance actions which have high-level technical requirements and have been subdivided into branding categories as detailed in Appendix AN. Any "A" branded item whose deferral violates a technical requirement (e.g., CMP mandatory requirement) requires NAVSEA 05 adjudication via the CDNS or a Deferral Letter. Late, cancelled or deferred execution of a technical requirement may require a QA form 12 through the e-DFS system. See Volume V of this manual for guidance regarding DFS requirements.
- b. Branding Category B (Required - Non-Technical). Items in this branding category include tasks significant to TYCOM; however, non-accomplishment does not require adjudication via the technical chain of command. Work items in this branding category have been subdivided into branding categories as detailed in Appendix AN.

3.5.5.4 Branding Responsibility.

- a. SURFMEPP brands all technically required, mandatory maintenance requirements residing in the CMP and any other tasks meeting branding Category "A" criteria. In addition, SURFMEPP will brand all Category "B" CMP issued tasks per Appendix AN.
- b. The Assessment Director is responsible for ensuring CSMP-ready repair AWRs are provided following assessment completion. In all cases, these AWRs will start the Block 35 narrative AWR with the words "Per (JCN)", where '(JCN)' is the Assessment JCN that generated the repair 2-Kilo followed by the characters "XXX" (e.g., "Per YYYYYYEM01ZA56 "XXX", where "YYYYYY") is the ship's Unit.

Identification Code and “XXX” signifies a break between the JCN and the beginning of the 2-Kilo’s text description). This methodology allows maintenance personnel to connect each repair job to its initiating assessment.

3.5.5.5 Change Request Types. Change Requests and Change Notifications will be identified in one of the following three ways:

- a. Reprogram. Requirements due during the current FRP Maintenance Cycle, but will be moved to a future FRP Maintenance Cycle. These requests must be requested through the Deferral Letter Process.
- b. Cancel. Requirements neither applicable nor due during the current FRP Maintenance Cycle and therefore should not be included in the BAWP, including items for which the configuration or requirement has changed and requirements with periodicities extending to a future FRP Maintenance Cycle beyond C+120 of the current cycle.
- c. De-scope. Requirements that experienced a reduction in the original scope of work, where the portion of work not accomplished is reprogrammed.

3.5.5.6 Deferral Process for an “A” Branded Mandatory Requirement (Surface Force Ships Only).

- a. Deferral of an “A” branded mandatory task within the current FRP must be requested from the Ship’s Design Manager and NAVSEA 05 by the Maintenance Team using the CDNS if it cannot be accomplished within 90 days of its due date.
- b. Deferral of an “A” branded mandatory task outside the current FRP must be requested from the Ship’s Design Manager and NAVSEA 05 by the Maintenance Team using the deferral letter process if it cannot be accomplished within the current FRP.
- c. On approval of deferral of the task by NAVSEA 05 within the current maintenance cycle SURFMEPP will change the branding of the task from “A1” or “AR” to “AH”. SEA 05 will send the deferral recommendation to the TYCOM via SEA 21.
- d. On approval of the deferral and at the end of the current cycle, SURFMEPP must change the brand from “AH” to “A6”. If the task cannot be accomplished in the second FRP, then the ship should initiate a request for a Major DFS per Volume V, Part I, Chapter 8 of this manual and request a technical review by SEA 05 and a programmatic review by SEA 21. If the review results in a recommendation to not defer, then a two Flag Panel review will be conducted between the TYCOM and either SEA 05 or SEA 21. The two Flag Panel will make the final adjudication. If disapproved by the two Flag Panel, then the task will be completed in the current FRP.
- e. On approval of deferral of the task to the third FRP, SURFMEPP must change the branding from “A6” to “AD”.
- f. If the task cannot be accomplished in the third FRP and is requested for deferral to the fourth FRP, then a three Flag Panel review (TYCOM, SEA 05, SEA 21) is required. Flag level approval is required to defer the task to the fourth FRP. If disapproved by the three Flag Panel, then the task will be completed in the current FRP. The AD brand will remain until the task is executed or superseded.

3.5.6 Modernization (Surface Force Ships Only). NAVSEA and TYCOM Letters of Authorization (LOA) are issued identifying all modernizations scheduled for the CNO Availability.

3.5.6.1 Modernization List. Forecasted ship changes may be viewed through the NDE database at LCPC and continuing throughout the BAWP to AWP development process. This list will be reviewed at each BAWP Milestone Meeting. Items from this list will not be entered into the ship's CSMP until they have been reconciled with an issued Advance Planning Letter or LOA. After this reconciliation, SURFMEPP is responsible for entering the modernization work into the ship's CSMP. Category A and Category B BAWP-branded assessment tasks that may be affected by forecasted Ship Change Documents must be planned and executed, despite discussion of removal or upgrade of equipment due to pending ship changes. Since the majority of "approved and authorized" modernization alterations are completed during the CNO availability, executing the assessments throughout the cycle as scheduled in the BAWP is required to ensure operational readiness throughout the FRP Maintenance Cycle. For example, NDE indicates CG-XX is scheduled for the electric modification SHIPALT 588K, which, among other changes, removes the waste heat boilers. The 18-month and five (5) year mandatory boiler inspections were entered in the BAWP at LCPC for completion during the SRA. The MT, in this case, cannot cancel the scheduled assessment without following the established deferral or adjudication process.

3.5.6.2 BAWP or AWP Update. The BAWP or AWP will be updated as subsequent LOAs are issued by NAVSEA and TYCOM as ship changes mature. This process will continue through the advanced planning and execution phases of the availability to capture late and newly authorized alterations.

3.6 AVAILABILITY EXECUTION.

3.6.1 Responsibilities. Responsibilities for CNO scheduled Maintenance Availabilities are:

3.6.1.1 Fleet Commander.

- a. Monitor availability execution to achieve a balance of cost and schedule for the scope of work authorized. Ensure that any growth in the scope of work authorized is necessary to ensure safe, reliable operation of the ship during the subsequent operating cycle.
- b. Ensure that testing of all systems and equipment installed or repaired during the availability, which require at sea testing, is conducted prior to availability completion.
- c. Provide berthing, messing, offices, classrooms, equipment stowage space, and Ship's Force repair shops per reference (f), when shipboard facilities are unusable or uninhabitable.

3.6.1.2 Type Commander or Immediate Superior In Command (Group or Squadron).

- a. Authorize new items and growth industrial work items.
- b. Monitor and approve all changes in established milestones, not internal to industrial activity, including LOA and completion dates.
- c. Issue direction when the quality or completeness of industrial activity work is in question.

- d. Monitor off-ship crew messing and berthing arrangements when required.
- e. Notify the TYCOM when essential Ship's Force work cannot be completed on the scheduled contract or Key Event completion date. Make recommendations for assistance where appropriate.
- f. (Surface Ships Only). Periodically assess and monitor shipboard conditions using Appendix E of this chapter for guidance.
- g. (Submarines Only). Periodically assess and monitor shipboard conditions per paragraph 3.6.8.4.4 of this chapter.
- h. Monitor Ship's Force or MST (if assigned) preparation for LOA (if applicable).
- i. (Nuclear Powered Ships Only). Conduct a Pre-Critical Inspection of the Engineering Department to determine the ship's readiness for either the Reactor Safeguards Examination (RSE) or the Fleet Commander Post-Overhaul Reactor Safeguards Examination (PORSE) as applicable.
- j. (Submarines Only). Schedule a salvage inspection by Forces Afloat in time to have discrepancies corrected prior to the start of Fast Cruise. Normally, the salvage inspection should be completed not less than one week prior to the scheduled start of the Fast Cruise.
- k. Conduct formal Phase I crew certification inspection(s) of the Ship's Force per the TYCOM Training Manual (when required). The purpose of this inspection must be to audit the readiness and training of the Ship's Force, particularly in the areas of watch stander qualifications, damage control readiness, status of operational and emergency bills, presence on board of essential technical manuals and general operational knowledge. This inspection must be scheduled about one month prior to Fast Cruise and should include written examinations and personal interviews with officers and key enlisted personnel to determine their readiness and status of training as outlined for Phase I. A comparison of personnel allowance (including Navy Enlisted Classification requirements) versus onboard count must be made to ensure that the ship is adequately manned.
- l. (Submarines Only). Prior to Fast Cruise, the ISIC QA Officer must conduct a formal audit of Ship's Force REC, Departure from Specification Records and CSMP. Using the SUBMEPP PMR and URO Maintenance Requirement Card (MRC) scheduling reports and current industrial activity or Ship's Force updates to the latest report, ensure all required "D"-Level PMR and URO MRC accomplishment is current. The ISIC must forward the audit results to the TYCOM via the cognizant Commander, Submarine Group. The ISIC will then report to the TYCOM by message per message sample format of Appendix BB or CB of this chapter the status of the crew or material certification. An update of this certification is needed prior to Sea Trial and following the rescinding of certification noted in paragraph 3.6.8.4.1.c. of this chapter.
- m. Conduct Phase II crew certification. Witness and certify to the TYCOM that the state of crew training is satisfactory for at sea operations per the TYCOM Training Manual. This will be done during a two-day period subsequent to Dock Trials and Phase I crew certification and prior to Fast Cruise. This two-day period will be scheduled so that

there is normally a 48-hour period between the end of this event and the beginning of Fast Cruise. This two-day Phase II crew certification period is divided into a 40-hour crew work-up and rest period and an eight-hour modified dockside Operational Readiness Inspection. The entire period should be scheduled to minimize interference with industrial activity work. However, since the certification must be conducted carefully to be meaningful, the officer scheduling the certification should coordinate industrial activity interference during the eight hour modified Operational Readiness Inspection. This certification should be thorough and meticulous. Pressure from the industrial activity or any other source to compromise ship safety must not be permitted to influence the judgment of the certifying officers. The desired overall sequence of these events is shown in Volume I, Chapter 2, Appendix B of this manual.

- n. Conduct a material inspection of the ship.
- o. Satisfactory completion of the inspections of paragraphs 3.6.1.2.k. through 3.6.1.2.m. of this chapter should be reported to the TYCOM in one "PRIORITY" crew certification message per the sample message format of Appendix BB or CB of this chapter paralleled by a telephone call to the TYCOM Watch Officer reporting the date-time group of the message. If significant deficiencies exist or it appears that an extension of time is required to correct training or material deficiencies, the TYCOM must be immediately advised by telephone and by message. The Supervising Authority will be included as an information addressee.
- p. Receive from the ship's CO or Supervising Authority the scope, schedule and agenda of tests for Sea Trials for review and approval. When approved, forward copies of the agenda to the TYCOM. The concurrence of NAVSEA is required for the sequencing and scheduling of nuclear propulsion plant Sea Trials for CNO Maintenance Availabilities.
- q. (Submarines only) Prior to Sea Trials, report material certification of the ship by message per the message sample format of Appendix BB or CB of this chapter, to the TYCOM.
- r. Monitor the progress of the availability.
- s. (Submarines Only) If required, initiate Operating Cycle Extension Assessment per references (i) and (j).

3.6.1.2.1 Extended Operating Cycles. (Submarines only) An extended operating cycle is the period of time from the end of the current operating cycle to the anticipated start of the next major depot availability (Depot Modernization Period, Engineered Overhaul, Engineered Refueling Overhaul, Inactivation). The Interim Drydocking (IDD) or PIRA AWP is comprised of minimum maintenance requirements that are required to support the specific operating cycle extension, as well as necessary repairs based on the submarine's material condition.

- a. For extended operating cycles less than 24 months performed by naval shipyards, the TYCOM must certify completion of IDD or PIRA availabilities. For extended operating cycles less than 24 months performed by private shipyards, the SUPSHIP, with assistance from NAVSEA, will certify completion of IDD or PIRA availabilities.

- b. For extended operating cycles of 24 months and greater, NAVSEA must certify completion of IDD or PIRA availabilities.

3.6.1.3 Fleet Maintenance Activity. A scheduled CNO Maintenance availability may involve concurrent FMA repairs. During such availabilities, it is imperative that the industrial activity and the FMA involved maintain a close working relationship, both between themselves and Ship's Force, to ensure a successful, on-time availability completion. As a minimum, the FMA must:

- a. Carry out all FMA work consistent with the procedures described in Part I, Chapter 4 of this volume.
- b. Participate in all Weekly Management Meetings. (See paragraph 3.6.3.1 of this chapter.)
- c. Provide information on FMA Job Status for ship's Weekly Situation Report (SITREP). (See Appendices F1 or F2, as applicable, of this chapter.)
- d. Closely coordinate all jobs affecting Key Event or Milestone completion dates with the industrial activity and Ship's Force.
- e. Assist the industrial activity and Ship's Force by maintaining good housekeeping on all job sites.

3.6.1.4 Ship's Force and MST (if assigned).

- a. Support work authorization, tagout and REC programs.
- b. (Submarines Only) Ensure no work is conducted within the certified SUBSAFE boundaries without proper authorization.
- c. Monitor the quality of the industrial activity's performance.
- d. Support industrial activity test programs and witness equipment testing.
- e. Perform IEM.
- f. Ensure Ship's Force work is integrated into the industrial activities schedule.

NOTE: FLEET POLICY DOES NOT PROHIBIT SHIP'S FORCE FROM ACCOMPLISHING WORK ON EQUIPMENT, COMPONENTS OR SYSTEMS NOT OTHERWISE ASSIGNED TO THE INDUSTRIAL ACTIVITY AS LONG AS SUCH WORK DOES NOT IMPEDE THE INDUSTRIAL ACTIVITY SCHEDULE OR IMPACT PRIMARY SHIP'S FORCE RESPONSIBILITIES. THE MAJORITY OF PERSONNEL LEAVE, PARTICULARLY FOR THE WEAPONS AND ENGINEERING DEPARTMENTS, SHOULD BE PROGRAMMED EARLY IN THE AVAILABILITY SO THAT NECESSARY PERSONNEL WILL BE AVAILABLE FOR SUCH THINGS AS COMBAT SYSTEM TESTING, HOT OPERATIONS, ENGINE ROOM STEAMING, POWER RANGE TESTING AND FAST CRUISE.

- g. Train and qualify personnel to support the Key Event schedule.

- h. Perform site visits where contractor services are being used for equipment refurbishment.
- i. Ensure LOA preparations are progressing on schedule.
- j. Attend weekly progress meetings.
- k. Ensure that equipment returned to the ship has passed required shop tests.
- l. (Surface Ships Only) For dry docking availabilities:
 - (1) Make sure that bilges are properly preserved. To avoid moisture from condensation, plan to complete bilge painting before the ship undocks.
 - (2) Make sure that air testing scheduled for tanks below the water line is completed before the ship undocks.
 - (3) Make sure that all hull valves are reinstalled and tested before the ship undocks.
 - (4) Make sure that underwater preservation is completed, that water line boot is painted evenly and draft marks restored before the ship undocks.
- m. Arrange for a post repair boiler inspection by Naval Surface Warfare Center Philadelphia Division (NSWCPD), and ISIC representatives. Detailed information concerning this inspection can be found in Volume IV, Chapter 3 of this manual.
- n. Schedule Combat Systems Mobile Training Team visit with the ISIC.
- o. Develop a Plan of Action and Milestones for LOA.

3.6.2 Arrival Conference.

3.6.2.1 Scheduling and Conducting. The arrival conference is scheduled shortly after the start of an availability and conducted by the industrial activity and attended by the CO, Executive Officer, MST OIC (if applicable), heads of department and their principal assistants, key shipboard personnel and a TYCOM representative. This meeting also provides an excellent opportunity for Ship's Force to meet key industrial activity personnel.

- a. The conference agenda should include, as a minimum, the following topics:
 - (1) Resolve problems not completed at the WDC, PRC or PAC.
 - (2) A discussion of work scheduling and production planning requiring close cooperation between Ship's Force and industrial activity personnel. Changes to dates for Key Events such as dry docking, Dock Trials, Fast Cruise, and Sea Trials must be made known and agreed upon at this time.
 - (3) Dissemination of planning information, such as job orders that have resulted from the deferral actions approved for industrial activity accomplishment.
 - (4) Resolution of any problems regarding work to be undertaken or material or scheduling problems.
 - (5) Reporting of plans and material status on Key Events or CPJs.

- (6) Discussion of industrial activity regulations and other pertinent requirements affecting the ship.
- (7) Dissemination of general administrative information of interest to Ship's Force, such as industrial activity and local facilities for training, recreation, housing accommodation, parking, etc.
- b. Activities may submit new work items for consideration.
- c. Industrial activity schedule daily or weekly meetings.
- d. Submit an Availability Start Message to cognizant Fleet Commander at the start of an industrial availability.

3.6.3 Routine Meetings and Conferences.

3.6.3.1 Weekly Management Meetings. Senior industrial activity management officials should meet weekly with the CO of the ship during the availability.

- a. Purpose. These meetings provide a formal means by which attendees can address important specific issues with the senior industrial activity official to obtain appropriate resolution. Questions not answered relative to the conduct of this meeting should be addressed by the CO through the ISIC (if applicable) to the TYCOM.
- b. Execution.
 - (1) The industrial activity Senior Officer or Manager will designate the time and day of the week for the meeting.
 - (2) Attendees will submit agenda items normally within 24 hours before the meeting. The industrial activity will collect, collate, and prepare all agenda items in writing and distribute them to attendees at the meeting.
 - (3) Attendees will discuss agenda items at the meeting.
- c. Attendees. The industrial activity chairs the meeting. The following personnel must attend and participate:
 - (1) The CO of the ship being repaired. The Executive Officer should attend if the CO cannot be personally present for any meeting.
 - (2) At some industrial activities, the TYCOM may designate a representative to attend. If so, he may submit agenda items in addition to those submitted by CO's that may be broadly applicable to all ships in specific availabilities. In the record, there shouldn't be any "TYCOM Position" on any items. The CO has the responsibility to deal with the senior industrial activity official on problems relating to his ship.
 - (3) The industrial activity Project Manager or equivalent.
 - (4) (Nuclear Powered Ships Only). The Naval Reactor Representative at industrial activities authorized to conduct naval nuclear work.
 - (5) Industrial Activity Senior Management (e.g., Engineering Department Head, QA Head, Production Officer).

- (6) Any industrial activity personnel as required to support specific agenda items.
- (7) MST OIC (if applicable).
- d. General Guidelines.
 - (1) Before submitting an agenda item, the ship CO should have made an attempt to resolve the problem at an appropriate level within the industrial activities organization.
 - (2) When agenda items are general subjects such as overall schedule adherence, overall industrial activity manning of ships, overall ship cleanliness, performance of workers and overall ship safety, sufficient factual data should be included to substantiate them.
 - (3) (Nuclear Powered Ships Only). Ship COs should not routinely submit their agenda items to the Naval Reactors Representative Office (NRRO) for review prior to giving them to the industrial activity's Senior Manager. This does not mean that specific questions related to agenda items cannot be discussed with the NRRO. They should be. Ship COs should not expect the NRRO to be a screen for checking the appropriateness of the item.
 - (4) Ship COs in private activities must be extremely careful in wording their agenda items, in the discussions at the meeting and in agreeing to words in the minutes to assure that they do not introduce or give tacit agreement to contractual matters.
 - (5) Ship COs should not submit items for the management meeting as a means to merely determine the status of a job.
 - (6) If required by the TYCOM, ship COs will provide a copy of the minutes of each meeting to their ISIC or TYCOM.
- e. The Weekly Management Meeting is used as a forum to produce a Progress Report, which is intended to form a brief word picture of the availability progress and identify problems that may require action or resolution. (Paragraphs 1 and 2 in Appendices F1 or F2, as applicable, of this chapter should not exceed one typewritten page.)
 - (1) If required by the TYCOM, COs will submit weekly Progress Reports by message of the overall status of work. As a minimum, quality of work, progress, significant problem areas, and action taken towards their resolution must be addressed. In addition, if the availability completion or readiness-for-sea dates appear to be in jeopardy, the estimated period and reasons for delay will be reported and identified. The Progress Reports will be routed via the industrial activity and FMA (if applicable) for comments and transmitted in time to reach the TYCOM by the first workday of each week. Appendices F1 and F2, as applicable, of this chapter are the desired format for the report.
 - (2) If, as a result of his inspections, the CO considers that the progress or the quality of work is unsatisfactory, he will promptly bring the matter to the attention of the industrial activity. If satisfactory corrective measures are not taken, he will report by letter, or if time is critical, by message, to the TYCOM

with a copy to the industrial activity stating specifically in what respects the work is unsatisfactory. If the condition reported is not corrected to the CO's satisfaction, a report will be made to CNO via the TYCOM per reference (g). Copies of this report will be sent to the industrial activity and appropriate Fleet Commander.

- (3) During the course of the availability, periodic progress reviews are conducted at the 25, 50 and 75 percent points of elapsed time of the availability. As a minimum, discussion should include the actions towards resolution of previously reported significant problem areas not yet resolved, upcoming Key Events that may be in jeopardy, any significant changes that may be required to meet availability milestones, status of new work and any other issues deemed necessary. The report of the periodic review will be annotated in the weekly SITREP.

- f. Cost Performance Index or Schedule Performance Index (Surface Force Ships Only). per Volume VII, Chapter 7 of this manual, the RMC must report Cost Performance Index and Schedule Performance Index.

3.6.3.2 Docking or Undocking Conferences. For availabilities involving a ship's dry docking, the industrial activity will conduct both a Docking and Undocking Conference, normally within one week prior to the expected evolution. These conferences will be conducted by the assigned industrial activity Docking Officer. Requirements for the conference agenda, attendees, and Ship's Force support are found in reference (k).

3.6.3.3 Interim Completion Conferences (Surface Force Ships Only). The NSA and the LMA must conduct 25, 50 and 75 percent completion conferences. These conferences will review all completed work, testing and certification. All open and remaining work must be discussed to include schedule, upcoming key events, milestones, planned production manning versus actual production manning, integrated test plan, certification and Departures From Specification. All open and inspect work must be completed in the first 20 percent of the maintenance availability. Two days prior to the 25 percent review conference, the LMA must provide the status of all open and inspect results so final adjudication on any growth or new work items may be completed.

3.6.4 Assist Ship's Force Funds. The TYCOM may set aside a portion of the maintenance funds for CNO availabilities as an Assist Ship's Force (ASF) fund. This fund is controlled by the CO and is used to obtain minor industrial activity assistance in the nature of services or labor, or both, to assist in completing assigned Ship's Force work. The following restrictions apply to the use of ASF funds:

- a. No work in the nature of an alteration will be undertaken, unless authorized by the TYCOM.
- b. No work using ASF funding will be undertaken in which Ship's Force is not the main participant.
- c. Only incidental material will be purchased with ASF funds. "Incidental Material" cost, when measured against the cost of labor on each specific ASF work item, will not exceed ten percent of the total job cost without TYCOM permission.

- d. A detailed account of ASF expenditures will be maintained. This account may be audited periodically by the TYCOM to ensure compliance with the restrictions in paragraphs 3.6.4.a. through c of this chapter.

3.6.5 Integrated Logistics Overhaul.

- a. The ILO concept was developed to provide improved maintenance support to the Fleet in response to the need for complete on board logistics support. An ILO focuses on both maintenance and supply requirements by ensuring that technical documentation and repair parts support the equipment which is actually on board. During an ILO, both maintenance and supply personnel are trained in the use and maintenance of shipboard logistics support documentation and systems to enable them to sustain the effects of the ILO during the operating cycle. The objective of an ILO is to improve readiness by providing a ship completing a specified availability with logistics support that accurately reflects the ship's configuration. A secondary objective is to train Ship's Force in the use of on board support documents and in recognizing and correcting support deficiencies.
- b. An ILO is a process which improves ship's readiness and equipment availability through verification of configuration status accounting data, ordering of proper logistics support, and training of Ship's Force in the use and maintenance of its logistics support documentation. An ILO is comprised of five functional elements:
 - (1) Configuration Analysis and Coordinated Shipboard Allowance List (COSAL) QA consists of verification of start of availability configuration data (including planned changes) with Weapons System File data and other documentation to ensure that the Start of Overhaul COSAL fully supports the projected end of availability equipment configuration. In addition, changes in configuration reported by the accomplishing activity are verified to ensure final COSAL documents include required support.
 - (2) PMS Analysis. Includes verification of applicable Maintenance Index Pages (MIP) with ship's existing configuration and all changes to this configuration reported by the accomplishing activity. Resolution of discrepancies with PMS managers is accomplished as required. Analysis of individual MRCs is performed to ensure that required PMS repair parts and special tools are identified, included in the applicable documents, and ordered.
 - (3) Technical Manual Analysis. Ensures that the technical manuals required to support the end of availability configuration are identified and requisitioned. Technical manuals, both those off-loaded and those received during the availability, are inventoried and reviewed for applicability, correct change level, and status of changes. Technical manuals applicable to final configuration are retained. Discrepancies are resolved with the Naval Sea Data Support Activity. Technical manuals missing from the required inventory are requisitioned as are any changes needed to upgrade manuals already held. The ship's Index of Technical Publications is updated to reflect the final configuration and is provided to the ship at the end of availability by the Naval Sea Data Support Activity. Also provided are the Technical Manual requisitions still outstanding. Finally, to ensure minimum deterioration of

stock after the availability, selected ship personnel are trained in technical manual maintenance procedures.

- (4) Repair Parts Analysis. Ensures the accuracy of the repair parts inventory to be back loaded to the ship at the conclusion of the availability. This analysis includes a complete inventory of all parts aboard and identification of any parts for which there is incomplete data. It also includes recomputation of allowances based on usage or new equipment installation, turn-in of parts no longer allowed and numerous location or quality checks prior to back-loading.
 - (5) Training. Focuses on proper accomplishment of the first four functional elements of the ILO to ensure that correct logistics support is identified and delivered for shipboard equipment. Efforts are made to ensure that shipboard personnel are fully able to utilize and maintain the ship's logistics support and configuration documentation, both for ILO purposes and for ongoing operating cycle requirements. COSAL use and maintenance training provides shipboard personnel with a working knowledge of the COSAL, its relationship to other maintenance documents and the procedures to ensure that logistics support remains current, (e.g., use of OPNAV 4790/CK Forms).
- c. The Ship's Force team will develop an off-load schedule of all ship's spare parts. The ship's spare part stowage plan will be updated to reflect changes in the desired location of individual spare parts. Additionally, provisions must be made for the Aviation Consolidated Allowance List to support the embarking air wing.
 - d. A ship load-out schedule, including stores, repair parts, yellow gear, and removal of industrial activity equipment, will be prepared by the ship with the assistance of the industrial activity.
 - e. During a CNO maintenance availability, the ship will ensure that new or removed equipment is reflected in the COSAL and that the required spare parts are added or subtracted as applicable. Allowance changes are to be requested per reference (I).
 - f. Spare parts, test equipment, and special tools are the hardware portion of new and old equipment. The other portions are software: drawings, technical manuals, allowance lists, operating instructions, and any other technical documentation. Prior to commencement of an availability, NAVSEA will task the industrial activity with providing a listing and schedule, for installation on board the ship, of all technical documentation for new equipment, including changes to SSR drawings and data. The ship is responsible for the installation and maintenance of technical documentation for all existing equipment.
 - g. The status of the installation of technical documentation will be reported in the Material Condition or Crew Readiness Status Report.

3.6.6 Ship's Selected Records.

- a. The SSRs include various tables, charts, drawings, damage control books and plates, technical manuals and other data selected for their reference value and kept current throughout the life of the ship. Accurate SSRs are necessary for configuration control, maintenance support and troubleshooting. SSR items are:

- (1) Ship's Information Books.
 - (2) Technical Manuals.
 - (3) Damage Control Books and Plates.
 - (4) Propulsion Operating Guides or Engineering Operational Sequencing System.
 - (5) Ship's Drawing Index (SDI).
 - (6) Index of Technical Publications.
 - (7) Docking Drawings (plan showing each of the docking positions).
 - (8) Booklet of General Drawings.
 - (9) Tank Capacity and Vehicle Center of Gravity Curves.
 - (10) Tank Sounding Tables.
 - (11) Other tables, charts, allowance lists, etc.
 - (12) Docking Reports (most recent two industrial availability dockings, and any interim reports).
- b. The ship should appoint a SSR Coordinator for the availability. The Coordinator should review the SSRs in paragraph 3.6.6 of this chapter, determine which items will be affected by work candidates listed in the approved work package, and send copies of these SSRs to the industrial activity responsible for executing the availability. The copies sent must include markups showing any changes accomplished during previous availabilities since last update. The ship must retain a master copy of each SSR item and keep it current. If SSR is on microfilm or electronic media, mark up hard copy prints.
- c. The SSR Coordinator will serve as the ship point of contact for dispatch, receipt and monitoring status of SSR items during the availability.

3.6.7 New Work.

- a. New work is any maintenance requiring industrial level assistance which is not authorized until after contract award or definitization.
- b. New work must be requested by message or letter to the appropriate TYCOM (information copy to the Supervising Authority, ISIC, SUBMEPP (Submarines), or PMS 312C (Aircraft Carriers), as applicable). Sample letter or message formats are provided in Appendices G and H of this chapter for requesting new work authorization. Work not currently in ship's CSMP must be added to CSMP prior to requesting new work approval.
- c. All new work candidates must be reviewed by and agreed to by the assigned Ashore Ships Maintenance Manager, Project Manager or Program Manager. Ashore Ships Maintenance Manager and Program Manager recommendations regarding requirement to perform repairs, risk assessment, and schedule impact are mandatory. The TYCOM, or the formally designated TYCOM representative, must be the final approving authority for all new work. For Surface Force Ships only, the NSA Chief Engineer will review requested new work items and determine whether or not they are

technically required or required to achieve minimum material readiness requirements. In the case of private industrial activity availabilities, the TYCOM will certify that, per Federal Acquisition Regulations, the accomplishment of the new work is of such unusual and compelling urgency so as to require waiving of Competition In Contracting Act public law regulations.

3.6.8 Trials, Inspections and Crew Certification.

3.6.8.1 Surface Force Ship.

- a. Crew Certification. Crews in ships undergoing major CNO Maintenance Availabilities must be effectively trained in standard operating procedures, emergency bills, casualty drills, etc., and be thoroughly cognizant of equipment either newly installed or relocated during the availability. Based on the length and type of availability, Crew Certifications will be conducted per references (m), (n) and (o), as applicable.
- b. LOA. LOA will be conducted, if the availability exceeds 120 days or as deemed necessary by the TYCOM. The ISIC, assisted by an assessment team provided by Fleet Commander N7, will conduct the LOA. LOAs will be scheduled by means of the ISICs input into the normal scheduling process.
- c. Steam Testing. All steam systems or equipment worked by the industrial activity must be tested per the Testing Plan developed by the industrial activity. Ship's Force must work closely with the industrial activity, providing necessary assistance and support, to carry out the Test Plan.
- d. Dock Trials. During an industrial activity availability and prior to conducting post-repair trials, the engineering plant must be tested to ensure its readiness for sea. All special sea details and required general quarters will be manned throughout the trials. Ordinarily, dock trials can be completed in one day or less. The minimum requirements for Dock Trials are listed in Appendix I of this chapter.
- e. Fast Cruise.
 - (1) All ships completing a CNO Maintenance Availability must conduct a Fast Cruise where the ship assumes, insofar as practical, an "at sea" posture while in port with all equipment or systems used to the maximum extent possible. The primary purpose of the Fast Cruise is to determine and certify the state of training of ship's company as adequate to conduct at-sea operations. The progress toward this goal is a critical evolution ongoing throughout the availability requiring the TYCOM and ship's CO attention. The training program must be designed to have completed all training necessary to safely operate the ship at sea prior to Fast Cruise. The Fast Cruise provides the opportunity to measure ship's preparedness; it is not a basic training period. Commencement of Fast Cruise requires TYCOM permission. Appendix AA of this chapter provides a sample message format for Ship's Request for Permission to Commence Fast Cruise.
 - (2) The following procedures pertain to the conduct of Fast Cruise:
 - (a) Fast Cruise will be included as a major event and scheduled for at least

two days duration by the industrial activity in the case of ships undergoing a CNO maintenance availability greater than six months in duration or at least one day for ships undergoing a CNO maintenance availability less than six months in duration. The Fast Cruise must follow Dock Trials and precede Sea Trials.

- (b) A schedule of proposed events must be published by the ship to all activities concerned and must be concurred with by the industrial activity.
 - (c) Limited numbers of industrial activity personnel may be permitted to be aboard as necessary to continue testing and production work on systems as required. Shop and technical personnel must be permitted on board as instructors, troubleshooters and QA representatives of the industrial activity. Equipment that is not complete must not be included in the Fast Cruise. Settlement of the foregoing provisions must be reached by mutual agreement between the CO and the industrial activity, as warranted.
 - (d) As a minimum standard, system operation tests and drills described in Appendix J of this chapter must be conducted in all Fast Cruises. It is intended that the necessary prerequisite training must have already been accomplished.
- (3) The Ship's CO will report completion of Fast Cruise to the TYCOM. Appendix AB of this chapter provides a sample message format.
- f. Rest and Repair Period. All ships completing a CNO Maintenance Availability should normally conduct a 48 Hour Rest and Repair Period to ensure Ship's Force is mentally and physically prepared after completing Fast Cruise and before the start of Sea Trials. The primary purposes of the Rest and Repair Period are to evaluate the results of Fast Cruise; to consider ship condition; to conduct necessary repairs on ship's equipment and systems; and to evaluate and conduct additional training for Ship's Company to ensure the ship is prepared to the highest possible standard.
- g. Sea Trials.
 - (1) Sea Trials (or Post Repair Trials) constitute the final determination of a ship's material readiness and ability to rejoin the Fleet as a fully operational unit. Each Sea Trial will be conducted per an agenda prepared by the industrial activity, concurred with by the ship's CO, and approved by the TYCOM. The Sea Trial Agenda will be prepared in four phases and will contain the minimum requirements of Appendix K of this chapter, a time-oriented sequence of events in Gantt chart form, and a matrix of fleet services required to support the trial. The requesting ship or industrial activity will arrange for these Fleet services per Fleet Commander Instructions. Since the purpose of the trial is to determine the material readiness of the ship, all systems or equipment overhauled by the industrial activity will be tested per following an industrial activity prepared test procedure which will document the results of the test and require operation of the system or equipment in all modes. A

Ship's Force Trial Officer will be appointed to coordinate with the industrial activity Trial Coordinator throughout the Sea Trial. The Trial Officer will accept the results of all tests for the ship. Ship's Force personnel will operate all equipment during the Sea Trial per standard operating instructions or Sea Trial test procedures, as appropriate. Commencement of Sea Trials requires TYCOM permission. Appendix AC of this chapter provides a sample message format for the Supervising Activity to report all work necessary for Sea Trials has been satisfactorily completed.

- (2) During Sea Trials the ship's CO will advise the TYCOM of major events accomplished and or significant problems encountered or outstanding on a daily basis. Appendices F₁ or F₂ as applicable, of this chapter provide the desired format for this report.

3.6.8.1.1 Availability Work Certification and Completion Requirements (Surface Force Ship Only). Timely and technically correct planning and execution of availabilities demands a rigorous approach to certifying major Key Events leading to availability completion. A NSA certification plan verifies that work is completed and technically correct and must include Executing Activity qualifications, NSA approval of mandatory technical requirements, an integrated test plan and adequate NSA oversight of all availability work. These elements provide the NSA with maximum reasonable assurance that availability work is complete and technically correct. Executing Activity work completion starts with assurance that each Executing Activity has an approved and current Quality Management System. Each Executing Activity must provide certification of technically correct work completion and Objective Quality Evidence (OQE) as required in NAVSEA Standard Items or other technical requirements. NSA work oversight must include a minimum level of supervision to provide assurance that all mandatory technical requirements have been met and sufficient review of work specifications, integrated test plan, technical work documents, audit of work items, in-process surveillance (Planning Review (PR), Procedures Evaluation, Product Verification Inspection (PVI)) and review of OQE. The NSA must utilize a risk-based availability QMP as discussed in Volume VII, Chapter 11 and Appendix R. NSA certification includes assurance that technical review or approval has been conducted on all OQE for work items requiring mandatory technical review. NSA certification includes technical review and approval of all waivers and deviations by the NSA CHENG. This includes assurance that any exceptions to completion have been approved as to not adversely impact Key Event completion.

3.6.8.1.2 Key Event or Milestone Readiness (Surface Force Ship Only). Minimum Key Events/Milestones that require certification and prerequisite lists are to assure proper completion. These Key Events constitute the critical availability completion events for the crew to transition from the maintenance phase to an operational phase. The NSA **Commanding Officer**, based on **the NSA Chief Engineers'** technical assessment of the risk associated with any work still in progress, may combine Work Complete, Dock Trials and Fast Cruise certifications into a single certification. Certification of required work and testing supporting each Key Event or Milestone must be accomplished using a detailed prerequisite list. Appendix Q will be tailored for each Key Event or Milestone and be used to certify work required for each specific Key Event or Milestone. In addition to giving the NSA reasonable assurance that work accomplished is technically correct to support the specific Key Event or Milestone, certification of Key Events or Milestone assures that certification for Fast Cruise or Sea Trial is properly completed to certify

the availability. The NSA will **normally** designate the LMA to develop and track an Event Readiness List utilizing NAVSEA Standard Items 009-60 and 009-67. The Event Readiness List will consist of all prerequisites including work items and actions to be completed by the NSA and all executing activities that have been associated with the Key Event or Milestone. These associations must include technical connections (technically required to support follow-on training or testing) and strategic ties (work deemed relevant by the maintenance team as required to meet the Key Event). Appendix Q will be tailored to the Key Event and utilized by the NSA for Undocking, PCD or C5ILO, Work Complete, Dock Trials and certification by all maintenance activities. In lieu of Naval Message, a signed letter or memorandum or centrally managed exception list may be utilized to document completion of all prerequisites for the Key Event or Milestone. If there are exceptions to completion, exceptions will be clearly identified and **the local Technical Authority will provide a risk assessment for each**. The NSA Project Manager, Ship's CO, TYCOM and the NSA **Commanding Officer** will sign the letter, memorandum or centrally managed list for the record noting agreement with Key Event or Milestone completion, including listed exceptions. When memoranda are used as an exception list, sample letters or memorandums (Appendices AD through AJ) must be tailored to each Key Event and used to certify that work and testing is complete.

- a. Interim Completion Conferences. Milestone to document the availability completion percentage. For these Milestones, the maintenance team must review and document work listed as complete and verify against OQE and proof of work certification. The emphasis for the maintenance team must be to certify all work as soon as possible after completion. For any work listed as complete, there must be follow-on status entries to document OQE on file and completion of Work Certification. If OQE and Work Certification have not been completed, there must be follow-on status entries to document when it is scheduled to be performed.
- b. Undocking. Key Event to document that the ship is ready in all aspects for Undocking. The NSA **Commanding Officer** must certify all related work and testing is completed prior to commencing the ship's Undocking, with any exceptions noted and approved by the appropriate technical authority and agreed to in writing by the Ship's CO, TYCOM and the NSA.
- c. Production Completion Date. Key Event scheduled prior to Propulsion Plant Hot Operations to document that all production work in engineering and auxiliary spaces to include work affecting equipment requirements for LOA is completed and certified up through Stage 2 testing per reference (p). Stage 2 inspections and static tests prove the integrity, strength and continuity and are applied to foundations, cabling, piping, ventilation, air conditioning, switchboards, etc. PCD includes all work planned for accomplishment during the maintenance availability by all maintenance and modernization providers including, but not limited to: LMA, AIT, Commercial Industrial Services and FMA. All work does not include touch up painting, minimal lagging, installation of spray shields or other items that cannot be accomplished until after hot plant testing is complete. The term complete is defined to mean the accomplishment of all work, testing, certification and removal of support equipment that is possible without completing LOA and hot plant testing. Steam must not be introduced into propulsion systems from any source until after a successful LOA. For gas turbine and diesel propulsion plant ships, the TYCOM or ISIC will issue a Safe-

to-Start authorization to allow Propulsion Plant Hot Operations testing, if testing is scheduled in advance of LOA. This testing period starts after PCD and ends before commencing the 3 to 14 day training period prior to LOA. This period allows for testing diesel and gas turbine engines after significant repairs or after significant periods of layup when restoration of those engines may entail schedule risk. The testing period durations is dependent on the testing requirements and will be included in the availability schedule. PCD includes all required reports and OQE have been submitted to **and risk assessed** by the NSA Chief Engineer. The NSA and LMA are responsible for thorough and rigorous management of this Key Event and minimizing exceptions. In the event of incomplete work, an evaluation by the Ship's CO, NSA and TYCOM must be performed to determine if the incomplete work will impede uninterrupted preparations and accomplishment of LOA. Exceptions must be approved by the NSA **Commanding Officer based on the** Chief Engineer **risk assessment**. PCD is scheduled to provide the crew sufficient time to prepare and train for LOA, and to shift from a maintenance to an operations environment. If a PCD adjustment is required, the NSA will coordinate with TYCOM to obtain approval.

- d. Command, Control, Communications, Computer, Combat Systems Intelligence Light Off (AEGIS Light Off for AEGIS Ships). C5ILO is set to provide sufficient time to support uninterrupted testing and allow the crew to shift from a maintenance environment back to operations and to train in preparation for required Readiness Assessments and Certifications. This Key Event validates and documents the completion of all production work required to support returning C5I equipment to the government testing activities and Ship's Force for operational Verification testing, training and operations. All required reports and OQE **have been** submitted to **and risk assessed** by the NSA Chief Engineer. **Exceptions must be approved by the NSA Commanding Officer based on** Chief Engineers' **risk assessment**. NSA is responsible for thorough and rigorous management of this Key Event and keeping any exceptions to a minimum.
- e. Work Complete. Work Complete (WC) is a Key Event scheduled prior to Dock Trials (DT) to ensure that all work affecting DT, Fast Cruise (FC) and Sea Trials (ST) is complete and certified through Stage 6 testing to allow for unrestricted training and testing throughout the ship. This includes work by all maintenance and modernization providers and completion of all exceptions agreed to at previous key events. Testing that is identified to the NSA and scheduled for completion at DT or ST, can carry past WC and will not be considered as an exception to the key event. WC includes all required reports and objective quality evidence **have been submitted to and risk assessed** by the NSA Chief Engineer. The NSA and LMA are responsible for thorough and rigorous management of this key event and minimizing exceptions. In the event of incomplete work, an evaluation by the Ship's CO, NSA and TYCOM must be performed to determine if the incomplete work will impede the remaining availability scheduled events. Exceptions must be approved by the NSA **Commanding Officer based on the** Chief Engineers' **risk assessment**.
- f. Dock Trials. Key Event conducted during an industrial activity availability prior to Fast Cruise to determine the ability of a ship's readiness for sea and capability to safely conduct Sea Trials. The NSA and LMA are responsible for conducting

integrated dockside system testing, with special sea and anchor detail and general quarters manning to ensure system readiness for sea. The NSA **Commanding Officer** must certify all required work and testing is completed prior to commencing Dock Trials, with any exceptions noted and approved by the appropriate technical authority and agreed to in writing by the Ship's CO, Project Manager, TYCOM and the NSA. The minimum requirements for Dock Trials are listed in Appendix I.

- g. Fast Cruise. Key Event conducted after Dock Trials and prior to Sea Trials during which Ship's Force operates the ship and all equipment and systems as if underway for in port training. The primary purpose of the Fast Cruise is to ensure that Ship's Force operational proficiency is adequate prior to conducting at-sea operations. The Ship's CO is responsible for conducting Fast Cruise prior to Sea Trials where the ship assumes an "at-sea" posture to exercise all equipment and systems to the maximum extent possible. The NSA **Commanding Officer** must ensure that all work is completed and certified prior to commencing Fast Cruise, with any exceptions noted and approved by the appropriate technical authority and agreed to in writing by the Ship's CO, TYCOM and the NSA. The minimum requirements for Fast Cruise are listed in Appendix J. Commencement of Fast Cruise requires TYCOM permission. Appendix AA provides a sample message format for ship's request for permission to commence Fast Cruise. Appendix AB provides a sample message format for ships to report Fast Cruise completion.
- h. Sea Trials. Key Event following Fast Cruise that constitutes the final determination of a ship's material readiness and ability to rejoin the Fleet as a fully operational unit. The Ship's CO is responsible for conducting Sea Trials following an agenda developed by the NSA, concurred on by the Ship's CO and approved by the ISIC. The NSA **Commanding Officer** must certify that all required work and testing is completed prior to commencing Sea Trials, with any exceptions noted and approved by the appropriate technical authority and agreed to in writing by the Ship's CO, TYCOM and the NSA. The minimum requirements for Sea Trials are listed in Appendix K. Commencement of Sea Trials requires TYCOM permission. The NSA **Commanding Officer** must certify to the TYCOM that all work and testing is complete and readiness to start Sea Trials (with exceptions noted) via the Readiness for Sea Trials message. Appendix AC provides a sample message format for the Supervising Activity to report all work necessary for Sea Trials has been satisfactorily completed. Completion of Sea Trials requires a formal report from the Ship's CO to the TYCOM via the ISIC.
- i. Availability Completion. Key Event to document all work, testing and inspections planned for and executed during the availability are complete and that all required reports and OQE have been submitted to and risk assessed by the NSA Chief Engineer. **Exceptions must be approved by the NSA Commanding Officer based on the Chief Engineers' risk assessment.** Availability Completion signifies that the availability is complete and the ship has successfully determined that all maintenance and modernization work performed by the NSA is fully operational. The NSA Chief Engineer must certify all work tied to the Key Event is completed per the Availability Work Certification process or technically adjudicated in writing prior to reporting Availability Completion.

- j. End of Maintenance Phase. Milestone to document the end of the Maintenance Phase and entrance into the Basic Training Phase. The Maintenance Phase exit criteria for equipment must include, but not be limited to: successful passing of Readiness Assessments and Certifications for non-Engineering systems (i.e. C5ILO, Aviation Certification, TSRA, etc.), and a Light-Off Assessment for Engineering systems, and successful completion of comprehensive post-Availability Sea Trials that tests all systems. Minimum Equipment (Redlines) must be met and maintained for all Mission Areas.

3.6.8.1.3 Availability, Key Event or Milestone Certification Procedures (Surface Force Ship Only).

- a. The procedures outlined in the following sections provide the minimum requirements to (RMCs or NSA) to utilize during execution of CNO Availabilities and major Continuous Maintenance Availabilities (as directed by the Fleet or TYCOM) for Availability Certification and Key Event or Milestone Management. This process is developed to provide the RMC Commander, via the RMC Project Manager and RMC CHENG, the maximum reasonable assurance that all availability work has been properly completed and that the ship is materially ready for the next Key Event or Sea Trial. This process provides assurance that all technical waivers or deviations have been reviewed and approved, any work exceptions (incomplete work) have been approved to not impact the Key Event or Sea Trials and work was planned, executed and tested technically correct.
- b. The following process defines the steps to be taken by the NSA and all Executing Activities when certifying work to support readiness for Key Event or Milestone. When Key Events or Milestones are accomplished sequentially and in conjunction with a tailored availability QMP, (Appendix R), this process will support incremental certification of Readiness for Fast Cruise or Sea Trials and Availability Completion and avoid late gathering of data and certifications to ensure readiness for Fast Cruise or Sea Trials. Certification may be tracked via a centralized signature sheet and central exceptions list or through each Executing Activity providing memoranda documenting work certification and exceptions. When memoranda are used, the Appendix Q signature sheet and Appendix AD through AJ certification letters or memorandums will be collected in an Availability Certification Book maintained by the Project Support Engineer on the Project Team. Normally, the Project Support Engineer works closely with the Integrated Test Engineer to manage the availability certification process for the Project Manager. The following paragraphs describe minimum requirements associated with each action leading to certification.

3.6.8.1.4 Availability Certification Requirements and Procedures (Surface Force Ship Only).

- a. Work Authorization. This step is required for Fast Cruise or Sea Trial Certification and Availability Completion Certification, but is not normally required for Key Event or Milestone Certification. TYCOM work authorization is screened and brokered by availability vice by availability Key Event. TYCOM certification of work authorization may be completed prior to Fast Cruise or Sea Trial and does not need to be repeated prior to availability completion unless new or growth work is identified

during Sea Trials which is required to be added to the AWP as a condition of availability completion.

- (1) The TYCOM's agent (Port Engineer) or Business Agent SRF-Japan Regional Maintenance Center (JRMC) will certify that all authorized CNO Availability or Continuous Maintenance Availability work identified in the AWP has been tasked to the Prime Contractor (PSIA or Firm Fixed Price), Naval Shipyard (NSY), FMA, AIT or Ship's Force.
 - (2) The TYCOM's agent (Port Engineer) or Business Agent (SRF-JRMC) will certify that all work identified after work package definition (new or growth work) has been branded and authorized for accomplishment or deferred. If work branded as "A" or technically mandated as required to be deferred, it must be concurred on by the waterfront Technical Warrant Holder (NSA CHENG).
 - (3) The TYCOM's agent (Port Engineer) or Business Agent (SRF-JRMC) will certify that a review has been accomplished on all existing deviations, waivers, and records of out-of-commission equipment. This review must include all conditions resulting in Temporary Standing Orders (TSO), DFSs and Casualty Reports (CASREP). Deviations have either been included in the AWP or an extension of the technical deviation has been submitted to the NSA CHENG for approval and concurred on by the TYCOM. If the condition resulting in a TSO or CASREP does not require technical concurrence for extension, the TYCOM must concur with not correcting the condition that resulted in the TSO or CASREP.
 - (4) Prior to Fast Cruise or Sea Trial, the TYCOM will certify to the NSA via signature on central signature sheet or serialized letter or memorandum that the conditions have been met. Exceptions will be noted and provided for approval by the NSA.
 - (5) The NSA or RMC certification signature will be provided by the Project Manager, with the TYCOM signature or letter or memorandum and serial number noted, verifying receipt of TYCOM certification or proper work authorization accomplished.
- b. Work Documents Issued or Prime Contractor. (This step must be completed by Key Event or Milestone for work tied to each Key Event or Milestone.)
- (1) Code 200 & 130 Review of Work Specifications and Test Procedures. The RMC or NSA Code 200 Project Support Engineer or Test Engineering (SRF-JRMC) and RMC or NSA Code 130 Quality Assurance Supervisor (QAS) will validate that Work Specifications and Test Procedures issued by the Master Ship Repair Contractor have received a technical review per RMC attributes checklist. At a minimum, work specifications will receive technical review per approved Availability QMP requirements and as outlined in Volume VII, Chapter 11, paragraph 11.2.3 of this manual.
 - (2) Code 300 Review of Work Specifications and Test Procedures. The RMC or NSA Project Manager must validate that all work specifications and test

procedures issued by the prime contractor have received a government review for compliance with contractual requirements per Volume VII, Chapter 4, Appendix E of this manual and approved in the appropriate maintenance database.

- (3) Contractor Furnished Reports (CFR). The RMC or NSA Project Manager will verify that all required CFRs have been received as required by NAVSEA Standard Item 009-01, paragraph 3.2.
 - (4) The RMC or NSA Project Support Engineer will verify that all CFRs screened for technical review in the Navy Maintenance Database (NMD) have been reviewed, technically adjudicated, and answered in NMD.
- c. Key Event or Availability Completion for the Prime Contractor. (This step must be completed by Key Event or Milestone for work tied to each Key Event or Milestone.) The prime contractor will provide to the NSA a signed letter or memorandum (Appendix AD) or sign a centrally managed list certifying all authorized work is completed satisfactorily, with any exceptions noted. Exceptions must be itemized and technically approved by the RMC or NSA **Commanding Officer** as to not impact Key Event or Milestone completion or Readiness for Sea Trials. Exceptions must include a plan for accomplishment. Testing scheduled to be conducted on Sea Trials does not need to be itemized on this letter or memorandum or centrally managed list, but can be referred to as “except testing included on Sea Trials agenda.” Signature of the centrally managed signature sheet or a letter or memorandum will be received prior to Key Event or Sea Trials. The RMC or NSA Project Manager will sign the signature sheet acknowledging receipt of letter or memorandum and noting serial number or signed list as noted.
- d. Key Event or Availability Completion for a FMA (I-Level). (This step must be completed by Key Event or Milestone for work tied to each Key Event or Milestone.) The FMA or RMC Code 900 will provide to the NSA assigned letter or memorandum (Appendix AE) or sign a centrally managed list certifying that all Formal Work Packages or Controlled Work Packages (FWP or CWP) and test procedures planned and accomplished by the FMA are technically correct and completed. Exceptions will be noted and technically approved by the RMC or NSA **Commanding Officer** as to not impact Key Event or Milestone completion or Readiness for Sea Trials. Exceptions must include a plan for accomplishment. Testing scheduled to be conducted on Sea Trials does not need to be itemized on this letter or memorandum or centrally managed list, but can be referred to as “except testing included on Sea Trials agenda.” The RMC or NSA Project Manager will sign the signature sheet acknowledging receipt of letter or memorandum and noting serial number or signed list as noted.
- e. Key Event or Availability Completion for a NSY. (This step must be completed by Key Event or Milestone for work tied to each Key Event or Milestone.) The NSY Project Superintendent will provide to the NSA a signed letter or memorandum (Appendix AF) or sign a centrally managed list certifying that all TWDs and test procedures planned and accomplished by the NSY are technically correct and completed. Exceptions will be noted and technically approved by the RMC or NSA **Commanding Officer** as to not impact Key Event or Milestone completion or

Readiness for Sea Trials. Exceptions must include a plan for accomplishment. Testing scheduled to be conducted on Sea Trials does not need to be itemized on this letter or memorandum or centrally managed list, but can be referred to as “except testing included on Sea Trials agenda.” The RMC or NSA Project Manager will sign the signature sheet acknowledging receipt of letter or memorandum and noting serial number or signed list as noted.

- f. Key Event or Availability Completion for an AIT. (This step must be completed by Key Event or Milestone for work tied to each Key Event or Milestone.) Each AIT On-Site Installation Coordinator will provide to the NSA a signed letter or memorandum (Appendix AG) or sign a centrally managed list certifying that respective AIT work and test procedures are technically correct and complete, with exceptions noted. Exceptions must be itemized and technically approved by the RMC or NSA **Commanding Officer** as to not impact Key Event or Milestone completion or Readiness for Sea Trials. Exceptions must include a plan for accomplishment. Testing scheduled to be conducted on Sea Trials does not need to be itemized on this letter or memorandum or centrally managed list, but can be referred to as “except testing included on Sea Trials agenda”. Signature of the centrally managed signature sheet or a letter or memorandum will be received prior to Key Event or Milestone. The Project Manager or AIT Manager (if assigned) will sign the signature sheet acknowledging receipt of letter or memorandum and noting serial number or signed list as noted.
- g. Key Event or Availability Completion for Ship’s Force (SF). (This step must be completed by Key Event or Milestone for work tied to each Key Event or Milestone.) Ship’s Force CO will submit to the NSA a signed letter or memorandum (Appendix AH) or sign a centrally managed list certifying all Ship’s Force FWPs and CWPs are technically correct and complete to support Key Event or Milestone completion or readiness for Fast Cruise or Sea Trials. At a minimum, this certification must include a review of:
 - (1) Ship’s Force Work Package derived from the CSMP.
 - (2) Inactive Equipment Maintenance is properly performed.
 - (3) TSO review.
 - (4) PMS review, including all checks to remove equipment or systems from IEM.
 - (5) Pre-underway or Pre-Event check-off list checks are complete.
 - (6) The RMC or NSA Project Manager will sign the signature sheet acknowledging receipt of Ship’s Force CO letter or memorandum and noting serial number or signed list as noted.
- h. Key Event or Availability Completion for RMC Engineering. (This step must be completed by Key Event or Milestone for work tied to each Key Event or Milestone.)
 - (1) RMC or NSA CHENG to certify that all work assigned has been tasked and properly executed prior to Fast Cruise or Sea Trials and at the end of an availability where RMC is the NSA. This process also ensures that there are no outstanding technical waivers or deviations or QA deficiencies that have not

- been properly adjudicated and identifies any exceptions to completion, including work or testing that will occur after Sea Trials completes and assures these work items have been technically adjudicated to prevent adverse impact on availability completion.
- (2) RMC or NSA CHENG must certify that all assigned assessments (TSRA) or Fleet Technical Assists (FTA) tied to Key Event or Milestone or Fast Cruise or Sea Trial are completed. If TSRA assessments or FTA are ongoing, the RMC or NSA CHENG will certify that they do not impact the Key Event or Fast Cruise or Sea Trial.
 - (3) All “A” branded requirements in the current FRP maintenance cycle must be reviewed for their completion status during the work certification and close out process. If an “A” branded requirement was screened for completion and was not fully accomplished as delineated in the task’s Block 35 or work item by the executing activity, its status must be reported during the departure conference to the RMC or Ship Repair Facility Commanding Officer or designated representative and in the follow-on departure report by JCN and work item as applicable. If the executing activity is an In-Service Engineering Activity (ISEA), the Project Manager or his or her designated representative must make this report.
- i. Testing. (This step must be completed by Key Event or Milestone, utilizing the approved Test and Inspection Plan required under NAVSEA Standard Item 009-67 for the Integrated Test Plan).
- (1) The LMA Test Engineer must certify that all Hull, Mechanical and Electrical and C51 test procedures identified in NAVSEA Standard Item 009-67 Integrated Test Plan were completed with OQE documentation or added to the exceptions list and that all tests required to be completed at sea have been identified for inclusion on the Sea Trial agenda. The LMA Test Engineer will provide to the NSA this certification via signature of a centrally managed signature sheet or letter or memorandum. The RMC or NSA Integrated Test Engineer (or Project Support Engineer) will verify compliance and sign the signature sheet, noting the LMA Test Coordinator memorandum or serial number or signed list as noted.
 - (2) The LMA and Ship’s CO will verify that all WAFs and Tag Outs required for Key Event or Milestone have been closed and cleared per NAVSEA Standard Item 009-106. Signature of a centrally managed signature sheet or a supporting memorandum documenting WAF and Tag Out clearance will be provided to the RMC or NSA Integrated Test Lead. The RMC or NSA Integrated Test Coordinator will verify and sign the signature sheet acknowledging WAF or Tag Out completion to support Key Event of Sea Trials.
- j. Waivers and Deviations. (This step must be completed for work tied to each Key Event or Milestone.) The RMC or NSA CHENG will certify that all technical non-

conformances have been satisfactorily resolved in order to support Key Event or Milestone to include availability completion. This includes certifying that all:

- (1) DFSs have been properly adjudicated and DFSs expiring during the availability have been corrected or extended.
 - (2) AIT or PMR Liaison Action Request (LAR) or Reverse Liaison Action Requests (RLAR) have been incorporated and all RMC Design Service Requests, LARs or RLARs have been answered and incorporated.
- k. Quality Assurance. (This step must be completed by Key Event or Milestone for work tied to each Key Event or Milestone.)
- (1) The RMC or NSA Code 130 QA Manager will submit to the Project Manager a signed letter or memorandum (Appendix AI) or sign a centrally managed list certifying that all QA Office actions regarding resolution of QA Audits and Surveillances necessary to support Key Events or Milestones are completed.
 - (2) All Contractor Corrective Action Requests (CAR – Method B-D) issued during the availability are either closed or at an acceptable level of completion to support work certification. Include a letter or memorandum (Appendix AI) describing outstanding items, remaining actions, and Estimated Completion Dates, if applicable.
- l. Final Key Event or Readiness for Sea Trials Completion Certificate. (Sub-paragraphs (1), (2), and (3) of this paragraph must be completed for work tied to each Key Event or Milestone and before Fast Cruise or Sea Trial. Sub-paragraph (4) is only required prior to Fast Cruise or Sea Trial.)
- (1) The NSA Project Manager shall verify that availability work required to commence Key Event or Readiness for Sea Trials is complete. NSA oversight (PR, Procedures Evaluation, PVI) and G points have been completed per the Availability QMP (Appendix R). Non-conformances identified have been corrected or provided to NSA Technical Authority for adjudication. Any exceptions to completion have been reviewed and do not impact Key Event or Sea Trials completion.
 - (2) The NSA CHENG will verify that availability work required to support Sea Trials has been completed in a technically correct manner and that all exceptions listed have been reviewed and authorized. NSA technical review of work items has been conducted per the Availability QMP (Appendix R).
 - (3) The RMC or NSA Project Manager and RMC or NSA CHENG will sign a letter or memorandum (Appendix AJ) or centrally managed list for the record acknowledging completion of all actions required for Key Event or Milestone. Any exceptions will be listed and concurred with by the RMC, TYCOM and Ship's CO.

NOTE: THIS STEP (SUB-PARAGRAPH (4)) IS REQUIRED PRIOR TO FAST CRUISE OR SEA TRIAL ONLY.

- (4) When the signature sheet (Appendix Q) is complete and any exceptions have been concurred on by Technical Authority, the NSA will release a message utilizing the format provided in Appendix AC. Sea Trials will commence after Ship's satisfactory report of Fast Cruise is completed by Ship's CO to the TYCOM per Appendix AB, mandatory 48-hour rest period and NSA report of readiness for Sea Trials to the TYCOM. TYCOM authorization of Sea Trials commencement will reference Ship's Fast Cruise completion message and NSA Readiness for Sea Trials message.
- m. Final Availability Certification. Upon completion of Sea Trials, a final certification will be accomplished utilizing test results from Sea Trials. If Sea Trials testing resulted in new or growth work that does not support completion of the availability (after consultation with TYCOM), this new or growth work and re-testing must be completed prior to final availability certification. If all availability testing completed satisfactorily, or identified new or growth work does not impact availability completion, the **RMC or NSA Commanding Officer** will certify availability completion.
 - (1) RMC or NSA Project Manager. Verify all testing required for availability completion has been completed on Sea Trials. Exceptions to completion (including any new or growth identified on Sea Trials) have been adjudicated via Technical Authority and agreed by TYCOM as to not impact availability completion. These exceptions will be tracked to completion by the Project Manager via the Availability Closeout process.
 - (2) RMC or NSA CHENG. Verify that all testing required for availability completion has been completed on Sea Trials. Any exceptions to completion (including new or growth work identified on Sea Trials) have been reviewed and do not impact availability completion.
 - (3) Availability Completion. The NSA will utilize Appendix Q to track signatures required to document Sea Trial testing completion and adjudication of any availability completion exception items. After gaining concurrence from TYCOM and the Ship's CO, the NSA will report availability completion to TYCOM utilizing Appendix F2 via CNRMC.
- n. End of Maintenance Phase. This documents the end of the Maintenance Phase and entrance into the Basic Training Phase for the ship.
 - (1) RMC or NSA Project Manager. Coordinate with Ship's Force to verify those systems and equipment not worked during the maintenance availability and operationally tested to ensure the ship is ready to transition from the maintenance phase to the training phase. Adjudicate all found deficiencies.
 - (2) Ship's Force. Operate all equipment and systems not worked during the maintenance availability. Identify and document any deficiencies. Coordinate with the RMC or NSA Project Manager to adjudicate all deficiencies that were found.

3.6.8.2 Aircraft Carriers.

- a. Crew Certification. Crews in ships undergoing major CNO Maintenance Availabilities must be effectively trained in standard operating procedures, emergency drills, casualty drills, etc., and are thoroughly cognizant of equipment either newly installed or relocated during the availability. Based on the length and type of availability, Crew Certifications will be conducted per references (n), (o), (q) and (r), as applicable.
- b. Steam Testing. All steam systems or equipment worked by the industrial activity must be tested following the Testing Plan developed by the industrial activity. Ship's Force must work closely with the industrial activity, providing necessary assistance and support, to carry out the Test Plan.
- c. PORSE or RSE. Based on the length of the availability, crew turnover and cold iron time, a PORSE or RSE will be scheduled and conducted per reference (s).
- d. Dock Trials. During an industrial availability and prior to conducting post-repair trials, the engineering plant must be tested to ensure its readiness for sea. All special sea details and required general quarters will be manned throughout the trials. Ordinarily, dock trials can be completed in one day or less. The minimum requirements for Dock Trials are listed in Appendix I of this chapter.
- e. Fast Cruise.
 - (1) All ships completing a CNO maintenance availability must conduct a Fast Cruise where the ship assumes, insofar as practical, an "at-sea" posture while in port with all equipment or systems utilized to the maximum extent possible. The primary purpose of the Fast Cruise is to determine and certify the state of training of ship's company as adequate to conduct at-sea operations. The progress toward this goal is a critical evolution ongoing throughout the availability requiring TYCOM and ship's CO attention. The training program must be designed to have completed all training necessary to safely operate the ship at sea prior to Fast Cruise. The Fast Cruise provides the opportunity to measure ship's preparedness; it is not a basic training period. Commencement of Fast Cruise requires TYCOM permission. Appendix AA of this chapter provides a sample message format for Ship's Request for Permission to Commence Fast Cruise. For ships completing Complex Overhaul or Complex Refueling Overhaul, additional requirements for obtaining permission to commence Fast Cruise are contained in reference (r).
 - (2) The following procedures pertain to the conduct of Fast Cruise:
 - (a) Fast Cruise will be included as a major event and scheduled for at least two days duration by the industrial activity in the case of ships undergoing a CNO maintenance availability greater than six months in duration or at least one day for ships undergoing a CNO maintenance availability less than six months in duration. The Fast Cruise must follow Dock Trials and precede Sea Trials.
 - (b) A schedule of proposed events must be published by the ship to all activities concerned and must be concurred with by the industrial activity.

- (c) Limited numbers of industrial activity personnel may be permitted to be aboard as necessary to continue testing and production work on systems as required. Shop and technical personnel must be permitted on board as instructors, troubleshooters and QA representatives of the industrial activity. Equipment that is not complete must not be included in the Fast Cruise. Settlement of the foregoing provisions must be reached by mutual agreement between the ship's CO and industrial activity, as warranted.
- (d) As a minimum standard, system operation tests and drills described in Appendix J of this chapter must be conducted in all Fast Cruises. It is intended that the necessary prerequisite training must have already been accomplished.
- (e) Fast Cruise will be included as a major event and scheduled for at least four days (usually two days of operation, one day of shutdown to allow shipyard, contractors, or both, to correct deficiencies, and two more days of operation) for CNO maintenance availabilities scheduled for greater than 9 months in duration. For ships undergoing a CNO maintenance availability less than 9 months, but greater than 6 months, a two-day Fast Cruise is required. For ships undergoing a CNO maintenance availability less than 6 months, a one-day Fast Cruise is required. The Fast Cruise must follow Dock Trials and precede Sea Trials. Additional requirements pertaining to nuclear powered ship Fast Cruises are contained in reference (t).
- (3) Ship's CO must report completion of Fast Cruise to the TYCOM. Appendix AB of this chapter is a sample message format for Ship's Report of Fast Cruise Completion.

f. Sea Trials.

- (1) Sea Trials (or Post Repair Trials) constitute the final determination of a ship's material readiness and ability to rejoin the Fleet as a fully operational unit. Each Sea Trial will be conducted following an agenda prepared by the industrial activity, concurred with by the ship's CO, and approved by the TYCOM. The Sea Trial Agenda will contain the minimum requirements of Appendix K of this chapter, a time-oriented sequence of events required to support the trial. The requesting ship or industrial activity will arrange for these Fleet services per Fleet Commander Instructions. Since the purpose of the trial is to determine the material readiness of the ship, all systems or equipment overhauled by the industrial activity will be tested following an industrial activity prepared test procedure which will document the results of the test and require operation of the system or equipment in all modes. A Ship's Force Trial Officer will be appointed to coordinate with the industrial activity Trial Coordinator throughout the Sea Trial. The Trial Officer will accept the results of all tests for the ship. Ship's Force personnel will operate all equipment during the Sea Trial per standard operating instructions or Sea Trial test procedures as appropriate. Commencement of Sea Trials requires

TYCOM permission. Appendix AC of this chapter is a sample message format.

- (2) During Sea Trials the ship's CO will advise the TYCOM of major events accomplished or significant problems encountered or outstanding on a daily basis. Appendix F1 of this chapter provides the desired format for this report.

3.6.8.3 Trials, Inspections and Certification Minor Availabilities (Less Than Six Months) (Submarines Only).

- a. Duties and Responsibilities for Sea Trials and Inspections. Reference (u) as applicable delineates the TYCOM's responsibility for operational control of assigned submarines during trials and for assuring that the crew and ship have attained satisfactory state of training, administrative, operational and material readiness for at-sea operations during the trials. Appendix BC of this chapter provides a detailed summary of trial and inspection milestones required for minor submarine availabilities. Appendix BP of this chapter provides a message sequence to support certification of work performed in the Minor CNO Availabilities.
- b. General Instructions for Industrial Activity Availability Trials and Inspections.
 - (1) Fast Cruise may not commence until Dock Trials have been satisfactorily completed and a satisfactory state of crew training (if required) and material readiness (if required), as delineated by this manual, has been certified. The required inspections and tests and their associated time periods may be modified by the TYCOM upon request from the cognizant ISIC.
 - (2) Sea Trials involving escorts will not normally be scheduled to commence on a weekend. When circumstances are such that Sea Trials must be rescheduled or planned to commence on a weekend to avoid costly delays, TYCOM approval will be obtained by the ISIC.
 - (3) Critical operation of reactors while nuclear powered ships are in a naval or commercial industrial activity will be governed by reference (h). The CO may authorize critical operation of the reactor in support of tasks assigned the ship. However, as long as the ship remains in an industrial activity, the CO will notify the Supervising Authority well in advance of any critical operation of the ship's reactor. This notification must include the nature and duration of such operations.
 - (4) In conducting the inspections required herein, inspectors should be guided by the concept that at the start of Fast Cruise, the ship should be, in all respects, ready for Sea Trials with the exception of the additional training the crew will receive during the Fast Cruise.
 - (5) The requirement for TYCOM SUBSAFE certification of SUBSAFE boundaries not entered by the industrial activity and the material readiness upon completion of an industrial activity availability imposes additional responsibilities on the ISIC inspectors. Included in the material inspection will be a review of all outstanding Forces Afloat Departures from Specifications as defined in Volume V, Part I, Chapter 8 of this manual. A review of the Ship's

Force REC Records is necessary for SUBSAFE work accomplished by Forces Afloat per Volume V, Part I, Chapter 5 of this manual, along with a review of the applicable URO MRC status. The ISIC certification message, per Appendix BB, will also provide a status report of any outstanding Re-Entries, Forces Afloat Departures from Specifications and delinquent URO MRCs. The scope and nature of this inspection will vary dependent upon the extent and length of the availability. In this regard:

- (a) Material certification may be made subject to the correction of specific deficiencies. (Deficiencies are such that they can be readily identified and listed.)
 - (b) Material certification should be postponed to a later date when deficiencies are so significant or so numerous as to preclude correction in the time remaining before the scheduled start of Fast Cruise.
 - (c) Deficiencies that could affect the safe operation of the ship during Sea Trials must be corrected, reinspected and reported to the TYCOM as having been corrected prior to the start of Fast Cruise.
 - (d) For ships with Fly-By-Wire Ship Control Systems (FBW SCS), if Upgrades or Alterations or Major Repair Work of the FBW SCS was performed, a 100% audit of the work performed by TYCOM managed activities, as defined in Volume V, Part I, Chapter 9 of this manual, will be performed by the ISIC. The ISIC must report certification of work and recommend at-sea operations using the message format of Appendix BQ.
- (6) Inspectors must determine that all work or testing necessary to support Sea Trials has in fact been completed or identified for completion prior to the start of Fast Cruise including the following:
- (a) All ship's systems which affect safe operation during Sea Trials must be operable.
 - (b) All work necessary for safe operation of the ship during Sea Trials which was undertaken by the industrial activity, Ship's Force, FMA, or other outside activities must have been satisfactorily completed and tested. Included must be a check for any "special configuration or installations" ensuring that they have been authorized by the proper authority, that their impact has been fully assessed and that the Sea Trial Agenda includes these impacts or limitations.
 - (c) If Upgrades, Alterations or Major Repair Work of the FBW SCS was performed by TYCOM managed activities, a 100% audit of the work will be performed by the ISIC.
- (7) Following the completion of the required training and material readiness certification, COs must keep the cognizant ISIC fully informed of any changes in personnel, training or material status which could affect the validity of

certification. Prompt TYCOM notification is required to permit revision or Operational Orders and services required.

- (8) Underway trials following an availability, particularly initial submerged and test depth trials, must be undertaken with the knowledge that the crew lacks recent experience operating as a unit and that the ship's structure and fittings have not been tested in an at-sea environment. All tests and procedures must be conducted carefully and methodically. Systems and components designed to operate at test depth should not be demonstrated at that depth for the sole purpose of proving the design, but instead should be operated at the deepest depth at which they might be used. For example, the hovering system should not be demonstrated at test depth. Trials and tests which are inherently hazardous should not be conducted.
- (9) A schedule is required for each underway, dockside or simulated trial. Prerequisites of the first underway period are satisfactory ship's material condition as shown by the successful completion of alongside tests, salvage inspection, Ship's Force Dock Trial, and a satisfactory state of training as shown by the successful completion of crew certification inspection and Fast Cruise. Fast Cruise deficiencies affecting safe operations revealed in either material conditions or state of training must be corrected prior to getting underway for Sea Trials.
- (10) Provide an operational order to be used incorporating the provisions of reference (u). Provide a copy to the TYCOM and, where appropriate, the local ISIC. Include within the operational orders pertaining to post-availability trials, instructions to send specific messages announcing the start and completion of initial deep dive with the TYCOM as an information addressee.
- (11) The trial schedule must include a minimum of six hours of Individual Ship Exercises (ISE) for Ship's Force training. This ISE should be sequenced as soon as practical after the initial tightness dive and should include the necessary evolutions to allow each watch section ship control party to familiarize themselves with their assigned stations and duties. The ship should be operated at moderate speed to develop proficiency prior to the deep dive and full power run. Testing may be scheduled during the ISE period on a not-to-interfere basis with training. The time spent in the initial tightness dive, if at moderate speed, may be included as one section's training. The requirement to provide each watch section ship control party with about two hours experience submerged at moderate speed prior to the deep dive and full power run is mandatory for ship's safety.
- (12) All trial periods must be organized such that each member of the command has an opportunity to get six uninterrupted hours of rest during each 24-hour period encompassed by the trials. Sea Trial events which can be accomplished by normal watch sections may be conducted concurrently with crew rest periods.

- (13) Prior to getting underway for Sea Trials, Shipyard, Ship's Force and Type Commander must jointly agree that the required seven day supply of Oxygen (O₂) and seven day supply of Carbon Dioxide (CO₂) removal capacity will be available in each compartment, based upon the number of expected occupants of that compartment, independent of the supply and removal capacity in the other compartment(s).
 - (14) For industrial activity availabilities, a one to five day deficiency correction period will normally be scheduled subsequent to the Sea Trials and prior to the completion date. The requirement to return to the availability site to correct deficiencies may be waived on a case basis with TYCOM authorization and agreement of the ship's CO and the Supervising Authority if the material condition of the ship so warrants.
 - (15) After the conclusion of Sea Trials, the submarine must not be operated at depths greater than 1/2 Test Depth plus 50 feet, unless specifically authorized by the TYCOM, and must not be released for unrestricted operations until all RECs are closed and the TYCOM issues the unrestricted operations authorization message.
 - (16) After the conclusion of Sea Trials, and based upon a review of Sea Trial deficiencies and TYCOM authorization, the submarine may transit to a port other than the industrial activity.
- c. If equipment malfunctions (except for casualties affecting recoverability, salvage, watertight integrity, or operation of ship's control surfaces), or seawater leakage in excess of the specification is found during the conduct of the initial tightness dive or the controlled dive to test depth, the ship should continue to the required depth and execute the sea trial agenda unless the Commanding Officer determines it appropriate to abort the dive. The Commanding Officer and Trials Director should be particularly circumspect in the case of leakage locations not isolable by flood control or other closures (e.g., electrical hull penetrators, periscope hoist rods, etc.).
 - d. Following completion of the initial tightness dive and the controlled dive to test depth, SUBSAFE deficiencies which result in seawater leakage exceeding the specification for acceptance must be reported to the TYCOM, NAVSEA and info to all concerned.
 - e. If leakage is from an unisolable joint, ship's depth will be limited to 1/2 test depth plus 50 feet until approval from the TYCOM is received to continue trials at depths greater than 1/2 test depth plus 50 feet.

3.6.8.3.1 Operating Depth Policy. The TYCOM's policy with respect to maximum allowable operating depths during trials, evolutions to be performed at the various depths, and the prescribed maximum water depth applicable in each case is stated in Volume VI, Chapter 26 of this manual. In every instance where the maximum authorized operating depth is exceeded, a report must be made per reference (v), paragraph 100-3.2.2.1.

3.6.8.3.2 Propulsion Plant Tests (If Required). For full power trials provisions of reference (w), Section 6 apply. Submarine depth during the submerged full power trial should be consistent with the applicable Submerged Operating Envelope (SOE), based on the Emergency Main Ballast Tank (EMBT) blow from maximum authorized operating depth being previously

accomplished. The full power submerged ahead test for commissioned nuclear powered submarines must be terminated by a back emergency bell. The duration of the back emergency must be limited to 45 seconds, to be followed immediately by an appropriate ahead bell. Caution must be exercised to avoid developing stern way.

3.6.8.3.3 Ocean Engineering Project Availability. Certain submarines have been assigned to provide dedicated support to NAVSEA Ocean Engineering Projects. Ships dedicated to these projects have been assigned to a parent industrial activity which provides Logistic support, performs the maintenance actions required by the Submarine Extended Operating Cycle program and other functions normally provided by an industrial activity. Routine and Submarine Extended Operating Cycle maintenance is factored into the Availability Work Package prepared by the cognizant technical activity in support of the Ocean Engineering Project. Certification of the work during these availabilities is governed by reference (x), Volume V of this manual and the applicable requirements of paragraph 3.6.8.3 of this chapter for availabilities less than six months duration or paragraph 3.6.8.4 of this chapter for availabilities greater than six months duration. Specific actions and reporting requirements which are mandatory prior to completion of an availability are summarized in Appendix BC or Appendix CC of this chapter, as applicable. The TYCOM will reiterate these requirements during the availability by a “Countdown Message” for availabilities greater than six months in duration. A sample format of this “Countdown Message” is shown in Appendix CD of this chapter.

3.6.8.3.4 Salvage Inspection (As Required). Conduct a Salvage Inspection per Volume IV, Chapter 18 of this manual. The Salvage Inspection should be conducted early enough in the availability to allow time to complete any mandatory corrective maintenance prior to Fast Cruise.

3.6.8.3.5 Phase II Crew or Material Condition Inspection. A Phase II Crew Certification Inspection is normally not required, but should be determined on a case basis by the parent ISIC. If there will be less than 15% personnel turnover, crew certification may be waived. Should the CO determine that alterations accomplished or the transfer of experienced personnel warrant a crew certification, a formal request must be submitted to the ISIC. When required, crew certification will be performed per references (y) through (ad). The material certification consisting of an ISIC audit of all Ship’s Force controlled work per Volume V, Part I, Chapter 9 of this manual will need to be conducted for all industrial activity availabilities since the extent of the availability is such that an independent evaluation by an organization other than Ship’s Force is required.

3.6.8.3.6 Pre-Critical Inspections. For availabilities where the reactor will be shut down for 16 weeks or more, it is considered prudent to use an inspection plan similar to that employed by NAVSEA. Normally, the crew’s readiness can be assessed within two days using such a plan, which should encompass the following:

- a. An administrative review.
- b. Observation of basic drills and evolutions not requiring reactor operation.
- c. Personnel interviews.
- d. Material inspection.

3.6.8.3.6.1 Scheduling of Pre-Critical Inspections. The ISIC Pre-Critical Inspection should be scheduled by the responsible ISIC about four weeks prior to criticality. The TYCOM should be

advised as soon as possible in advance of the tentative date for the ISIC Pre-Critical Inspection and confirmed dates should be established about one month in advance of the inspection.

3.6.8.3.6.2 Composition of the Inspection Team. The Pre-Critical Inspection Team should consist of:

- a. A nuclear-trained member of the cognizant ISIC Staff, usually the Squadron Training Officer.
- b. A qualified nuclear-trained officer with experience as an Engineer Officer.

3.6.8.3.6.3 Reports of Inspection.

- a. The Senior Inspector should provide the inspected unit with an informal report of findings by the inspection team, copy to the cognizant ISIC and TYCOM.
- b. The ship's CO must review the findings of the inspection team and make necessary adjustments to his training program to ensure his crew's readiness for criticality. He must keep the cognizant ISIC advised of his training plan and his assessment of his crew's progress.
- c. The cognizant ISIC must review the inspection findings, the CO's training plan and progress evaluations and direct follow-up reviews or inspections necessary to verify the ship's readiness for criticality.

3.6.8.3.7 Dock Trials. Dock Trials must, as a minimum, test those systems or equipment repaired or altered during the availability. The CO should use Appendix L of this chapter as a guide in preparing the Dock Trial Agenda.

3.6.8.3.8 Fast Cruise. Fast Cruise may commence immediately upon completion of Dock Trials and must consist of the minimum requirements as set forth in Appendix M. The requirement for a Fast Cruise may be less than or greater than 24 hours in length depending upon the length of the availability and the time since the crew last operated the ship at sea. The CO, with ISIC concurrence, will determine length of the Fast Cruise. Prior to the ship commencing Fast Cruise, the Supervising Authority must report to the ship, by message, that all mandatory work approved for accomplishment during the availability is completed. When the ship is ready for sea with the exception of conducting Fast Cruise and after receipt of the SUBSAFE material certification report from the performing activity as required by references (w), (y) through (ad) and Volume V of this manual, the ship will request permission from the ISIC by priority message to commence Fast Cruise. The ISIC will then, if satisfied with the state of crew training and material readiness, authorize the ship to commence Fast Cruise by message, information copy to CNO, Fleet Commander, NAVSEA, and the TYCOM.

- a. A 24-hour rest and repair period will normally be scheduled following Fast Cruise and prior to the start of Sea Trials. This rest and repair period may be extended or reduced at the discretion of the ISIC.
- b. COs should consider the work and alterations accomplished during the availability when determining the extent of the Fast Cruise. The minimum requirements are listed and identified with an asterisk in Appendix M of this chapter.

3.6.8.3.9 Sea Trials. Upon receipt of the report of successful completion of Fast Cruise from the ship, the ISIC authorizes the ship to get underway for Sea Trials. For submarines, following

15 Jan 2021

completion of Fast Cruise the ISIC will notify the TYCOM of satisfactory completion of Fast Cruise and readiness for Sea Trials using the message format of Appendix BB. The submarine TYCOM will authorize the ISIC to allow the ship to get underway for Sea Trials using the message format of Appendices BD and BR if the ship had Upgrades or Alterations or Major Repair Work of the FBW SCS. The submarine CO will keep the TYCOM aware of the progress of the Sea Trial through periodic SITREPs using the message format of Appendix BM of this chapter. SITREPs will be submitted following completion of the initial tightness dive, following completion of the deep dive to test depth and daily at a minimum and as identified by the TYCOM or the Sea Trial Agenda. Sea Trials following availability are normally conducted with a significant number of “riders”. These riders represent NAVSEA, TYCOM and Shipbuilder personnel onboard to observe various tests and trial evolutions. The ship’s normal load out of Lithium Hydroxide canisters for Disabled Submarine (DISSUB) (granular or ExtendAir®, no mix), Lithium Hydroxide curtains (or ExtendAir® Deployment kits, if equipped), Emergency Air Breathing (EAB) masks, Submarine Escape Immersion Ensemble (SEIE) suits and oxygen candles is not sufficient to support this increase in personnel. Therefore, an additional four Lithium Hydroxide canisters (or three ExtendAir®, if equipped), four Lithium Hydroxide curtains (or one ExtendAir® Deployment kit for every multiple of 60 ExtendAir® canisters in the compartment, if equipped), one EAB mask, one SEIE suit and two Oxygen candles must be carried for each rider exceeding normal crew manning. Stowage of this additional equipment for DISSUB must be in the same escape compartment as the rider’s designated General Emergency muster site assigned by the Commanding Officer. Lithium Hydroxide canisters, EABs, SEIE suits and Lithium Hydroxide curtains are to be obtained from the industrial activity. Sea Trials are required only as necessary to test work completed during the availability but must include those mandatory requirements identified in Appendix N of this chapter. The industrial activity must include at least four days in the availability for conduct of Sea Trials. The industrial activity must prepare a Sea Trial Agenda for Sea Trials conducted after an availability. The submarine involved must submit the Sea Trial Agenda to the ISIC for approval, with an information copy to the TYCOM. Extensions or reductions of the Sea Trial period may be granted where warranted by the scope of the work accomplished. Where extension of the Sea Trial period and a change in the availability schedule is required, requests for such extensions must be submitted by the industrial activity to the TYCOM as early as practical. All deficiencies resulting from Sea Trials will be satisfactorily resolved prior to the completion of the availability. If no Sea Trial deficiencies are found, the availability may be completed with TYCOM concurrence at the completion of Sea Trials.

- a. EMBT Blow: An EMBT blow is required for each Sea Trial following an industrial activity availability, availability docking, or availability of less than six months duration. EMBT blow must be conducted per the applicable URO MRC and does **not** require an escort for EMBT blow at depths of 400 feet or less.
- b. Assignment of Escort Ship.
 - (1) Per reference (ae), a surface escort must be provided during deep dive submergence trials for ships completing an availability for repair of collision or grounding damage where deformation is observed to be in the hull integrity envelope or supporting structure.

15 Jan 2021

- (2) In accordance with reference (ae), the requirement for providing an escort during deep dive submergence trials upon completion of all other availabilities will be evaluated by Commander, NAVSEA on a case basis. Commander, NAVSEA will advise the applicable Submarine Force Commander in writing whether or not an escort will be required based on the scope of work in the availability. In general, an industrial activity availability of less than six months duration should not require an escort, since the work typically performed in these availabilities is limited in scope, is carefully controlled and, therefore, does not result in substantial risk of unidentified or incomplete work adversely affecting the SUBSAFE boundary.
- (3) Escort requirements should be determined early so that an escort satisfying the requirements of paragraph 3.6.8.4.7.b.(6) of this chapter can be scheduled if required. The TYCOM will in turn request services from the Fleet Commander as applicable. As a general rule, pressure hull work which could not affect hull circularity will not require an escort.
- (4) Waiver of escort requirements may be requested by message when necessary. The ISIC will request the waiver as soon as possible. The TYCOM will pass the request to Commander, NAVSEA for approval. An escort waiver request message is to include all of the following specific statements, as applicable:
 - (a) A () inch by () inch hull cut between frames () and () including a () inch section of frame () was the only major hull integrity work accomplished during the availability. If no hull frame cut was made, a positive statement to that effect is required.
 - (b) The hull cut weld satisfactorily passed RT and 7 day MT non-destructive tests.
 - (c) Post repair frame circularity check readings are within specifications.

c. Assignment of SRDRS during Submarine Sea Trials.

NOTE: ASSIGNMENT OF AN SRDRS OR PLACING AN SRDRS IN MOD ALERT IS NOT REQUIRED WHEN THE SCOPE OF WORK IN THE AVAILABILITY DOES NOT REQUIRE AN ESCORT, PER REFERENCE (ae), AND THE ONLY REASON FOR ASSIGNMENT OF AN ESCORT IS PERFORMING AN EMBT BLOW FROM DEPTHS GREATER THAN 400 FEET AS A REQUIREMENT OF THE SEA TRIAL AGENDA.

- (1) A SRDRS will be placed in a modified alert status at the beginning of Sea Trials requiring an escort following an industrial availability or major maintenance availability for:
 - (a) Ships initial tightness and deep dive events.
 - (b) Subsequent Sea Trials until the completion of the initial dive to design test depth.
 - (c) If, in the TYCOM's judgment, a Sea Trial requires an escort due to major hull cuts.

- (2) A modified alert message will be sent by the industrial activity with the required SRDRS support dates 6 weeks prior to the requested date. Any changes in this request date will require immediate notification to the Fleet commander, Commander Naval Sea Systems Command (COMNAVSEASYSCOM) and Commander, Submarine Squadron (COMSUBRON) ELEVEN. Sample messages in Appendices BN and CQ of this chapter.
- (3) The ship conducting Sea Trials will notify COMSUBRON ELEVEN and COMNAVSEASYSCOM when SRDRS services are no longer required due to completion of the events in paragraph 3.6.8.3.9.c.(1) of this chapter or due to delay in completing Sea Trials.
- (4) The SRDRS is not required to be placed in a modified alert status for those Sea Trials requiring an escort solely for the accomplishment of an EMBT blow from depths greater than 400 feet.

3.6.8.3.10 Interrupted Sea Trials. In the event a Sea Trial is interrupted, or an additional Sea Trial becomes necessary, the following requirements are to be met. These requirements must be invoked if the ship returns to port for industrial activity repairs which affect SUBSAFE certification or which will require at-sea testing.

- a. The industrial activity will draft a revised Sea Trials agenda to support resumption of the trials. This agenda must be provided to the ISIC for concurrence and TYCOM for information.
- b. The Ship will report by message (format of Appendix BE of this chapter) that Ship's Force is ready for follow-on sea trials.
- c. The ISIC must report by message (format of Appendix BF of this chapter) to the TYCOM that the material condition of those SUBSAFE Certification boundaries that were installed, repaired or tested by Ship's Force is satisfactory for resuming Sea Trials.
- d. Upon completion of all of the requirements in paragraphs 3.6.8.3.10 a. and b., the TYCOM will provide a message (Appendix BG of this chapter) to the ISIC granting permission to proceed with the conduct of Sea Trials and authorize the ship to dive to the Sea Trial operating depth.
- e. The industrial activity will identify by message to COMNAVSEASYSCOM and COMSUBRON ELEVEN any additional SRDRS requirements to support the interrupted trials. Sample message in Appendices BN and CQ of this chapter.
- f. Submarine surface transits from industrial port in advance of completion of CNO availabilities (prior to certification for unrestricted operations) to a different or homeport can be executed without a sea trial, without an escort and without an SRDRS after obtaining NAVSEA concurrence and authorization from the TYCOM. The submarine will not be authorized to dive and no testing is permitted during the transit. Operational need for transit and mitigating actions, if applicable, will be determined by the TYCOM.

3.6.8.3.11 Availability Completion Prerequisites. Upon completion of Sea Trials and correction/resolution of deficiencies, the following requirements must be met prior to completion of an industrial availability less than six months duration:

- a. The Supervising Authority must report by message (format similar to reference (x), Appendix B.3.8) to the TYCOM, satisfactory completion of all Sea Trials, completion of controlled dives, correction of all mandatory and Sea Trial deficiencies. Report that the SUBSAFE material condition of the ship installed, repaired, and/or tested by the industrial activity is satisfactory for URO to test depth. Identify any deferred SUBSAFE work or conditionally approved deviations and waivers.
- b. Following verification from the ship Commanding Officer and the Supervising Authority of satisfactory completion of all Sea Trials, completion of controlled dives, correction of all mandatory Sea Trial deficiencies, certification that the SUBSAFE material condition of those parts of the ship installed, repaired, or tested by the industrial activity is satisfactory, and upon confirmation of maintenance of SUBSAFE certification of portions of ship not affected by the industrial activity, the TYCOM must report by message (Appendix BO of this chapter) to the ship, with copies to CNO and NAVSEA, reporting status of SUBSAFE certification and authorizing URO to test depth.
- c. ISIC. Following verification from the ISEA or activity performing the work of satisfactory completion of all at-sea testing or trials, completion of controlled dives, correction of all mandatory sea trial deficiencies and resolution of all ISIC FBW SCS Certification Audit Deficiencies recommendations, certify to the TYCOM using Appendix BS, with information copies to CNO, the appropriate Fleet Commander and NAVSEA, the FBW SCS material condition of those parts of the ship installed, repaired or tested by the ISEA or activity performing the work is satisfactory, and recommend authorization for FBW SCS unrestricted use in support of submarine unrestricted operations, subject to ISIC verification that FBW SCS certification of areas outside ISEA or activity performing the work tasking has been sustained, or specifically identify any operating restrictions of the ship or system.
- d. TYCOM. Following verification from the ISIC of satisfactory completion of all at-sea testing, correction of all mandatory deficiencies, receipt of certification that the FBW SCS material condition of those parts of the ship installed, repaired or tested by the ISEA or activity performing the work is satisfactory, and upon confirmation that FBW SCS certification was not affected for those portions of ship FBW SCS not affected by the ISEA or activity performing the work, issue a message to the ship using Appendix BT, with copies to CNO, ISIC and NAVSEA, certifying the FBW SCS and authorizing FBW SCS unrestricted use in support of submarine unrestricted operations or specifically identify any operating restrictions of the ship or system.

3.6.8.4 Trials, Inspections and Certification Major Availabilities (Greater Than Six Months) (Submarines Only). The following paragraphs summarize policies and responsibilities with respect to trials, tests and inspections incident to completion of major submarine availabilities. The TYCOM will maintain operational control of the submarine throughout the overhaul, conversion, refueling or post-conversion availability through the designated ISIC. For Atlantic or Pacific submarine units undergoing availabilities in West or East coast industrial activities,

respectively, the TYCOM responsible for conducting all trials and inspections specified in this manual is the TYCOM with Operational Control of the unit. Appendix CR of this chapter provides a message sequence to support Availability certification of work performed in a Major CNO Availability.

- a. Policy. Major availabilities require a succession of inspections and tests which culminate in a series of underway trials. References (r), (w), (af) and (ag) set forth the philosophy and sequencing of the various categories of these tests and trials, the results of which determine the readiness of the ship at the completion of overhaul or repair. References (ah) and (u) delineate the Force Commander's responsibility for operational control of submarines assigned during trials and for assuring the crew and ship have attained a satisfactory state of training, administrative, operational and material readiness for at-sea operations during the trials. ISICs and COs must comply with the provisions of this volume in the conduct of trials incident to the conversion, overhaul and refueling of submarines assigned.
- b. General Information for Industrial Activity Availability Trials and Inspections.
 - (1) The normal sequence of events leading up to Sea Trials is described in paragraph 3.6.8.4.b.(2) of this chapter. Fast Cruise may not commence until Dock Trials have been satisfactorily completed and a satisfactory state of crew training and material readiness, has been certified. The required inspections and tests, and their associated time periods, may be modified by the TYCOM upon request from the cognizant ISIC.
 - (2) The following inspections and tests are required:
 - (a) Periodic Monitoring Inspections.
 - 1 Arrival Assist (on or about A+30) using the attributes of Volume I, Chapter 3, paragraph 3.3.1 of this manual.
 - 2 Engineering Readiness Review(s).
 - 3 Departmental Readiness Review(s).
 - (b) Pre-Critical Inspection (two days).
 - (c) Phase I Inspection (one day).
 - (d) Salvage Inspection (one day).
 - (e) Dock Trials (one day).
 - (f) Phase II Crew or Material Certification (two days).
 - (g) Audit of Ship's Force REC and Departure from Specification records.
 - (h) Minimum of 48 hours for industrial activity work (following Phase II crew certification) (two days).
 - (i) Fast Cruise normally consists of two days of uninterrupted operation, one day to allow the industrial activity and Ship's Force personnel to correct deficiencies, followed by two more days of uninterrupted operation (five days).

- (j) Rest and repair period (about one day).
 - (k) Underway for initial Sea Trials.
 - (l) Appendix CC of this chapter provides a detailed summary of major trial and inspection milestones required for industrial activity availabilities of six months or greater in duration.
- (3) When circumstances are such that Sea Trials must be rescheduled or planned for a weekend to avoid costly delays, Fleet Commander approval will be obtained by the Supervising Authority on a case basis.
- (4) Critical operation of reactors while nuclear powered ships are in a naval or commercial industrial activity will be governed by reference (h). Until satisfactory completion of post repair propulsion plant trials (in the case of ships in industrial availabilities), permission to conduct critical reactor plant operations must be obtained from NAVSEA. Subsequent to completion of propulsion plant post repair trials, the CO may authorize critical operation of the reactor in support of tasks assigned the ship. However, so long as the ship remains in an industrial activity, the CO will notify the industrial activity, as appropriate, well in advance of any critical operations of the ship's reactor. This notification must include the nature and duration of such operations. Crew certification inspections will not involve or require critical operation of the reactor.
- (5) In conducting the inspections required herein, inspectors should be guided by the concept that at the start of Fast Cruise the ship should be, in all respects, ready for Sea Trials with the exception of the additional training the crew will receive during Fast Cruise.
- (6) NAVSEA SUBSAFE Certification Audit (SSCA). During major CNO Maintenance Availabilities NAVSEA will conduct a SSCA as required by reference (x). A copy of the SSCA will be provided to the Supervising Authority, the ship's CO, the TYCOM and Fleet Commander. Prior to conducting Fast Cruise, the Supervising Authority must report to NAVSEA and the TYCOM that those parts of the ship installed, repaired or tested by the industrial activity are certified satisfactory for post repair Sea Trials, including the resolution of NAVSEA SSCA Category I recommendations, status of all incomplete SSCA Category IA recommendations, and report that the ship is ready for commencement of Fast Cruise.
- (7) The requirement for TYCOM certification of SUBSAFE boundaries not entered by the industrial activity and material readiness upon completion of an industrial activity imposes additional responsibilities on the ISIC inspectors. A formal audit of Ship's Force REC and Departure from Specification records must be conducted by the ISIC QA Officer prior to Fast Cruise. Included in the audit and material inspection will be a review of ship procedures to ensure no unauthorized work was conducted within certified boundaries, and all outstanding Forces Afloat Departures from Specification, as defined in Volume V, Part I, Chapter 8 of this manual, granted prior to the availability

which required corrective action. There may or may not have been restrictions involved with these departures. A review of the Ship's Force REC Records and Procedures is necessary for SUBSAFE work accomplished by Forces Afloat per Volume V, Part I, Chapter 5 of this manual, along with a review of the applicable URO MRC status. The ISIC certification message will also provide a statement certifying that ship and industrial activity procedures ensured that no unauthorized work was conducted within the certified boundaries and, when required, will also provide a status report of any outstanding Re-Entries, Forces Afloat Departures from Specification and delinquent URO MRCs. The scope and nature of this inspection will vary dependent upon the extent and length of the availability. In this regard:

- (a) Material certification may be made subject to the correction of specific deficiencies. (Deficiencies are such that they can be readily identified and listed.)
 - (b) Material certification should be postponed to a later date when deficiencies are so significant or so numerous as to preclude correction in the time remaining before scheduled commencement of Fast Cruise.
 - (c) Deficiencies that could affect the safe operation of the ship during Sea Trials must be corrected, reinspected and reported to the TYCOM as having been corrected prior to the start of Fast Cruise.
- (8) Inspectors must determine that all work or testing necessary to support Sea Trials has in fact been completed or identified for completion prior to the commencement of Fast Cruise including the following.
- (a) All ship systems which effect safe operation of the ship during Sea Trials must be operable.
 - (b) All work necessary for safe operation during Sea Trials which was undertaken by the industrial activity, Ship's Force, FMA, or other outside activities must have been satisfactorily completed and tested. Included must be a check for any "special configuration or installations" ensuring that they have been authorized by proper authority, that their impact has been fully assessed and that the Sea Trial Agenda considers these impacts or limitations.
- (9) Following completion of the required training and material readiness certification, COs must keep the cognizant ISIC fully informed of any changes in personnel, training or material status which could affect the validity of certification. Prompt notification is required to permit revision of Operation Orders and services required.
- (10) Underway trials following major availabilities, particularly initial submerged and test depth trials, must be undertaken with the knowledge that the crew lacks recent experience operating as a unit and that the ship's structure and fittings have not been tested in an at-sea environment. All tests and procedures must be conducted carefully and methodically. Systems or components designed to operate at test depth should not be exercised at test depth for the

sole purpose of proving the design. They should be operated at the deepest depth at which they might be used. Trials and tests which are inherently hazardous should not be conducted. For example, the automated hovering system should not be demonstrated at test depth. Reference (ai) provides pertinent information regarding the testing of seawater systems during underway trials.

- (11) An approved agenda is required for each underway period. The prerequisites for the first underway period are set forth in paragraphs 3.6.8.4.4 through 3.6.8.4.7 of this chapter.
- (12) The first underway tests will be of limited scope. The initial tightness dive will be a deliberate, planned, step-by-step evolution using conservative angles and moderate speed. The submarine must be accompanied by an escort ship properly equipped with sonar communication equipment as described in paragraph 3.6.8.4.7 of this chapter. The maximum water depth for this dive must be 400 feet, as prescribed by reference (u).
- (13) The initial trial schedule must include a minimum of six hours of submerged ISE for Ship's Force training. This ISE should be sequenced as soon as practical after the initial tightness dive and should include the necessary evolutions to allow each watch section ship control party to familiarize themselves with their assigned stations and duties. The ship should be operated at moderate speed to develop proficiency prior to the deep dive and full power run. Testing may be scheduled during the ISE period on a not-to-interfere basis with training. The time spent in the initial tightness dive, if at moderate speed, may be included as one section's training. The requirement to provide each watch section ship control party with about two hour's experience submerged at moderate speeds prior to the deep dive and full power run is mandatory for ship safety.
- (14) All trial periods must be organized such that each member of the command has an opportunity to get six uninterrupted hours of rest during each 24-hour period encompassed by the trials. Sea Trial events which can be accomplished by normal watch sections may be conducted concurrently with crew rest periods.
- (15) Prior to getting underway for Sea Trials, Shipyard, Ship's Force and Type Commander must jointly agree that the required seven day supply of Oxygen (O₂) and seven day supply of Carbon Dioxide (CO₂) removal capacity will be available in each compartment, based upon the number of expected occupants of that compartment, independent of the supply and removal capacity in the other compartment(s).
- (16) A deficiency correction period will be scheduled subsequent to the last Sea Trial and prior to the completion date. The scheduled length and location of this deficiency correction period will be determined by the type and magnitude of the deficiencies to be corrected.

- (17) After the conclusion of Sea Trials, the submarine must not be operated at depths greater than 1/2 Test Depth plus 50 feet, unless specifically authorized by the TYCOM, and must not be released for unrestricted operations until all RECs are closed and the TYCOM issues the unrestricted operations authorization message.
 - (18) After the conclusion of Sea Trials, and based upon a review of Sea Trial deficiencies and TYCOM authorization, the submarine may transit to a port other than the industrial activity.
 - c. If equipment malfunctions (except for casualties affecting recoverability, salvage, watertight integrity, or operation of ship's control surfaces), or seawater leakage in excess of the specification is found during the conduct of the initial tightness dive or the controlled dive to test depth, the ship should continue to the required depth and execute the sea trial agenda unless the Commanding Officer determines it appropriate to abort the dive. The Commanding Officer and Trials Director should be particularly circumspect in the case of leakage locations not isolable by flood control or other closures (e.g., electrical hull penetrators, periscope hoist rods, etc.).
 - d. Following completion of the initial tightness dive and the controlled dive to test depth, SUBSAFE deficiencies which result in seawater leakage exceeding the specification for acceptance must be reported to the TYCOM, NAVSEA and info to all concerned.
 - e. If leakage is from an unisolable joint, ship's depth will be limited to 1/2 test depth plus 50 feet until approval from the TYCOM is received to continue trials at depths greater than 1/2 test depth plus 50 feet.
- 3.6.8.4.1 Responsibilities. The responsibilities for trials and inspections are:
- a. NAVSEA.
 - (1) Provide approved procedures for tests of the reactor plant required for nuclear refueling and for reactor plant repairs and alterations accomplished in the availability.
 - (2) Authorize critical operation of the reactor as outlined in paragraph 3.6.8.4.b.(4) of this chapter.
 - (3) Approve the scheduling and the sequencing of nuclear propulsion plant tests and concur in the schedule and sequence for nuclear propulsion plant trials.
 - (4) Arrange for technical assistance from the U.S. Department of Energy as required. (5) Conduct SSCAs and provide to the Supervising Authority, the ship's CO and the TYCOM and Fleet Commander a copy of the SSCA report.
 - (6) Review and concur with the Sea Trial Agenda submitted by the Supervising Authority.
 - (7) Certify (reference (x), Appendix B.3.2) to the TYCOM, information copies to CNO and Fleet Commander, that the material SUBSAFE condition of those parts of the ship installed, repaired or tested by the industrial activity are

15 Jan 2021

certified as satisfactory for Sea Trials and controlled dives to a specified depth (usually test depth).

- (8) Following verification from the Supervising Authority of satisfactory completion of all Sea Trials, completion of controlled dives, correction of all mandatory Sea Trial deficiencies, and resolution of all NAVSEA SSCA Category IA recommendations, certify to the TYCOM, with information copies to CNO and the appropriate Fleet Commander, the SUBSAFE material condition of those parts of the ship installed, repaired, or tested by the industrial activity is satisfactory, and recommend authorization for URO to design test depth subject to TYCOM verification that SUBSAFE certification of areas outside the industrial activity AWP has been sustained.

b. Supervising Authority.

- (1) Accept custody of and responsibility for special nuclear material upon delivery from the U.S. Department of Energy.
- (2) Accept custody of and responsibility for spent nuclear fuel and other special nuclear material removed from the submarine incident to refueling until transferred to the U.S. Department of Energy.
- (3) Transfer custody of and responsibility for nuclear fuel and other special nuclear material to the CO of the submarine undergoing refueling when it has been installed in the submarine.
- (4) Provide sufficient time for crew training during the major availability period to permit the Ship's Force to attain a state of training adequate to ensure proper operation and safety of the ship and its personnel during Fast Cruise and Sea Trials.

NOTE: THE SCHEDULING AND SEQUENCING OF TRIALS INVOLVING TESTS OF A REACTOR PLANT PROPULSION PLANT MUST BE APPROVED BY THE FLEET COMMANDER AND CONCURRED TO BY NAVSEA.

- (5) For FBW-SCS equipped ships, in order to maintain certification of the FBW-SCS Boundaries, the Supervising Authority must:
 - (a) Execute the Lifecycle Certification requirements of reference (aj), Section 5.4.
 - (b) Identify the pertinent information for inclusion in ship certification correspondence.
 - (c) Ensure that any required submarine FBW-SCS testing evolutions are included in the at-sea test or Sea Trial Agenda submitted to the ISIC for approval.
- (6) Prior to Fast Cruise, submit the Sea Trial Agenda to NAVSEA for concurrence and to the TYCOM for approval. Resolve any differences between NAVSEA and the TYCOM. Submit the Deep Dive Test Form and EMBT Blow Test Procedures to NAVSEA for approval. The Sea Trial Agenda will provide the

15 Jan 2021

detailed sequence of events for conducting the Sea Trials required to be performed.

- (7) Schedule the ship salvage inspection to ensure sufficient time for the TYCOM to conduct the inspection and for correction of deficiencies.
- (8) Report the status of the material condition of those parts of the ship installed, repaired or tested by the industrial activity prior to each Sea Trial.
 - (a) Report by message (reference (x), Appendix B.3.1) to NAVSEA and TYCOM, in advance of the scheduled start of Fast Cruise, that those parts of the ship installed, repaired or tested by the industrial activity are certified satisfactory for post repair Sea Trials, including resolution of NAVSEA SSCA Category I recommendations and status of all incomplete NAVSEA SSCA Category IA recommendations, and report that the ship is ready for commencement of Fast Cruise. The message must also state that there are no conditional SUBSAFE Deviations or Waivers which have not been satisfied or cite those that exist, and that, subject to satisfactory completion of Fast Cruise and resolution of mandatory deficiencies, the material condition of the ship is satisfactory for commencement of Sea Trials.

NOTE: SUBSEQUENT TO THE MESSAGE IN PARAGRAPH 3.6.8.4.1.b.(8)(a) OF THIS CHAPTER, ANY DEFICIENCY DISCOVERED AND THE CORRECTIVE ACTION TAKEN WHICH AFFECTS THE WATERTIGHT INTEGRITY, THE RECOVERABILITY OF THE SHIP, THE OPERATION OF THE SHIP'S CONTROL SURFACES, OR THE SHIP'S SALVAGE CAPABILITY MUST BE REPORTED TO NAVSEA AND THE APPROPRIATE FLEET COMMANDER AND TYCOM BY MESSAGE CITED IN PARAGRAPH 3.6.8.4.1.b.(8)(a) OF THIS CHAPTER. PREVIOUS CERTIFICATION OF MATERIAL CONDITION MUST BE SUSPENDED UNTIL NAVSEA AND TYCOM REVIEW THE REPORT AND NAVSEA CERTIFIES TO THE TYCOM BY MESSAGE THAT THE MATERIAL CONDITION OF THE PARTS OF THE SHIP COVERED BY THE INDUSTRIAL ACTIVITY AWP IS SATISFACTORY FOR SEA TRIALS TO A SPECIFIED DEPTH, AND THE TYCOM IN TURN CERTIFIES TO THE SHIP THAT THE SHIP'S SUBSAFE CERTIFICATION BOUNDARY IS SATISFACTORY FOR SEA TRIALS TO A SPECIFIED DEPTH.

- (b) Report by message (reference (x), Appendix B.3.3) to NAVSEA and TYCOM, with the concurrence of the CO, the successful completion of Fast Cruise and SUBSAFE material condition readiness as a prerequisite to start of Sea Trials.
- (c) Where a previous Sea Trial was aborted, or corrective actions for Sea Trial deficiencies require an additional deep dive, report by message (reference (x), Appendix B.3.5) to NAVSEA that the SUBSAFE

material condition of those parts of the ship installed, repaired, or tested by the industrial activity is satisfactory for Follow-On Sea Trials to test depth.

- (9) Report by message (reference (x), Appendix B.3.8) to NAVSEA, satisfactory completion of all Sea Trials, completion of controlled dives, correction of all mandatory Sea Trial deficiencies, and resolution of all NAVSEA SSCA Category IA recommendations. Report that the SUBSAFE material condition of those parts of the ship installed, repaired, or tested by the industrial activity is satisfactory for URO to test depth. Identify any deferred SUBSAFE work or conditionally approved deviations and waivers.
- (10) Coordinate the schedule for Fast Cruise and post repair trials with the TYCOM or ISIC representative.
- (11) Recommend to the President, Board of Inspection and Survey and the TYCOM, information to NAVSEA, Fleet Commander and TYCOM or ISIC representative, when post availability Material Inspection and Underway Trials by the Board of Inspection and Survey are required.

c. TYCOM.

- (1) Schedule the Fleet Commander PORSE as recommended by the industrial activity in the Key Events Schedule and confirmed by the parent TYCOM or ISIC representative upon completion of the ISIC Pre-Critical Inspection.
- (2) Provide Fast Cruise, Sea Trial and completion prerequisites message (Appendix CD of this chapter) to the ship approximately 90 days prior to the start of Sea Trials.
- (3) Assign material representatives to be embarked during trials as required by paragraph 3.6.8.4.2 of this chapter.
- (4) Inform the CNO and Fleet Commander of the scope and schedule of the trials. This is normally done by copy of the TYCOM or ISIC representative Operation Order to the CNO and Fleet Commander.
- (5) Provide escorts as required. Send a Sea Trials Support Services message (Appendix CA of this chapter) to specify SRDRS “modified alert” requirements.
- (6) Approve Sea Trial Agenda.
- (7) Report, by message (Appendix CE of this chapter), to NAVSEA crew readiness for Sea Trials and request NAVSEA Nuclear Propulsion Directorate (08) authorization for critical operations.
- (8) Prior to each Sea Trial, following certification from the Supervising Authority and NAVSEA that the material condition of those parts of the ship installed, repaired or tested by the industrial activity is satisfactory for Sea Trials and TYCOM verification that the SUBSAFE certification of those parts of the ship not affected by the industrial activity AWP has been sustained, report by message (Appendix CF of this chapter) to the ship, with copies to CNO and

15 Jan 2021

NAVSEA, reporting that the status of the SUBSAFE Certification Boundary is satisfactory and authorizing the conduct of Sea Trials and dives to specified depth. If the ship had Upgrades, Alterations or Major Repair Work of the FBW SCS, and following a recommendation from NAVSEA, the ISIC, or both, authorize underway operation of the FBW SCS using Appendix CT.

- (9) Following verification from NAVSEA of satisfactory completion of all Sea Trials, completion of controlled dives, correction of all mandatory Sea Trial deficiencies, certification that the SUBSAFE material condition of those parts of the ship installed, repaired or tested by the industrial activity is satisfactory, and upon confirmation of maintenance of SUBSAFE certification of portions of ship not affected by the industrial activity, report by message (Appendix CG of this chapter) to the ship, with copies to CNO and NAVSEA, reporting status of SUBSAFE certification and authorizing URO to test depth. If the ship had Upgrades or Alterations or Major Repair Work of the FBW SCS, following verification from NAVSEA of satisfactory completion of all at-sea testing, correction of all mandatory deficiencies, receipt of certification that the FBW SCS material condition of those parts of the ship installed, repaired or tested by the ISEA or activity performing the work is satisfactory, and upon confirmation that FBW SCS certification was not affected for those portions of ship FBW SCS not affected by the ISEA or activity performing the work, issue a message to the ship using Appendix CV, with copies to CNO, ISIC and NAVSEA, certifying the FBW SCS and authorizing FBW SCS unrestricted use in support of submarine unrestricted operations or specifically identify any operating restrictions of the ship or system.

NOTE: SUBSEQUENT TO THE MESSAGES, APPENDICES CB AND CE OF THIS CHAPTER, AND REFERENCE (x), APPENDICES B.3.1 AND B.3.2, ANY DEFICIENCY DISCOVERED AND THE CORRECTIVE ACTION TAKEN WHICH AFFECTS THE WATERTIGHT INTEGRITY, THE RECOVERABILITY OF THE SHIP, THE OPERATION OF THE SHIP'S CONTROL SURFACES OR THE SHIP'S SALVAGE CAPABILITY MUST BE REPORTED TO NAVSEA, TYCOM AND FLEET COMMANDER BY THE SUPERVISING AUTHORITY (INDUSTRIAL ACTIVITY DEFICIENCY) OR SHIP CO (FORCES AFLOAT DEFICIENCY) IN MESSAGE FORMAT. PREVIOUS CERTIFICATION MUST BE CONSIDERED RESCINDED. WHEN A REVIEW OF THE DEFICIENCY IS COMPLETED BY NAVSEA FOR INDUSTRIAL ACTIVITY ITEMS AND TYCOM FOR SHIP'S FORCE ITEMS, NAVSEA WILL CERTIFY TO THE TYCOM THAT THE MATERIAL CONDITION OF THE PARTS OF THE SHIP COVERED BY THE INDUSTRIAL ACTIVITY AWP IS SATISFACTORY FOR SEA TRIALS TO A SPECIFIED DEPTH. THE TYCOM IN TURN CERTIFIES THAT THE SHIP'S SUBSAFE CERTIFICATION BOUNDARY IS SATISFACTORY FOR SEA TRIALS TO A SPECIFIED DEPTH.

- d. ISIC or TYCOM Representative.

- (1) Conduct periodic monitoring of ships using paragraph 3.6.8.4.4 of this chapter as a guide to include:
 - (a) Technical, administrative and training assistance visits directed toward improvements in management and conduct of maintenance during the availability and training tasks (Tech Assists).
 - (b) Evaluation visits to determine the state of administration and training (Work-Ups).
 - (c) Spot checks to monitor progress and effectiveness in specific material, training and administrative areas (Monitor Visits).
 - (d) Monitor Maintenance Reports that require post availability actions (Liaison Action Requests, Deficiency Management Tracking System items, Departure From Specifications, Deficiency Reports, etc.) for inclusion in the ship's CSMP, as required.
- (2) Conduct a Pre-Critical Inspection of the Engineering Department per paragraph 3.6.8.4.4 of this chapter to determine the ship's readiness for either the RSE or the Fleet Commander PORSE (as applicable).
- (3) Schedule a salvage inspection by the operating forces in time to have discrepancies corrected prior to the start of Fast Cruise.
- (4) Conduct a formal Phase I certification inspection of the ship's company per references (y) through (ad). The purpose of this inspection must be to audit the readiness and training of the Ship's Force, particularly in the areas of watch stander qualifications, damage control readiness, status of operational and emergency bills, present on board of essential technical manuals, and general operational knowledge. This inspection must be scheduled about one month prior to Fast Cruise and should include written examinations and personal interviews with officers and key enlisted men to determine their readiness and status of training as outlined for Phase I. A comparison of personnel allowance (including Navy Enlisted Classification requirements) versus onboard count must be made to ensure that the ship is adequately manned.
- (5) Prior to Fast Cruise, the ISIC QA Officer must conduct a formal audit of Ship's Force REC and Departure from Specification Records and CSMP. Using the SUBMEPP PMR and URO MRC scheduling reports and current industrial activity or Ship's Force updates to the latest report, ensure all "D"-Level PMR and URO MRC accomplishment is current. The ISIC must forward the audit results to the TYCOM via the cognizant Commander, Submarine Group. The ISIC will then report to the TYCOM by message (Appendix CB of this chapter) the status of the crew or material certification. An update of this certification is needed prior to Sea Trials and following the rescinding of certification noted in the NOTE following paragraph 3.6.8.4.1.c. (9) of this chapter. If Upgrades, Alterations or Major Repair Work of the FBW SCS was performed by TYCOM managed activities, a 100% audit of the work, as defined in Volume V, Part I, Chapter 9 of this manual, will be performed by

the ISIC. The ISIC must report certification of work and recommend at-sea operations using the message format of Appendix BQ.

- (6) Witness and certify to the TYCOM that the state of crew training is satisfactory for at-sea operations per references (y) through (ad). This will be done during a two-day period subsequent to Dock Trials and prior to Fast Cruise as outlined in paragraph 3.6.8.4.4.e. of this chapter. This two-day period will be scheduled so that there is normally a 48-hour period between the end of this event and the beginning of Fast Cruise. This two-day Phase II crew certification period is divided into a 40-hour crew work-up and rest period and an eight-hour modified dockside Operational Readiness Inspection. The entire period should be scheduled to minimize interference with industrial activity work. However, since the certification must be conducted most carefully to be meaningful, the officer scheduling the certification should coordinate industrial activity interference during the eight hour modified Operational Readiness Inspection. This certification should be thorough and meticulous. Pressure from the industrial activity or any other source to compromise the submarine's safety must not be permitted to influence the judgment of the certifying officers. The desired overall sequence of these events is shown in Appendix CC of this chapter.
- (7) Conduct a material inspection of the ship concurrent with the inspection of paragraph 3.6.8.4.1.d.(5) of this chapter. This inspection should be conducted using the guidelines contained in paragraphs 3.6.8.4.b.(5) and 3.6.8.4.b.(7) of this chapter.
- (8) Satisfactory completion of the inspections of paragraphs 3.6.8.4.1.d.(5) through 3.6.8.4.1.d.(7) of this chapter should be reported to the TYCOM in one "PRIORITY" crew certification message following the sample message format of Appendix CB of this chapter paralleled by a telephone call to the TYCOM Watch Officer reporting the date-time group of the message. If significant deficiencies exist or it appears that extension of time is required to correct training or material deficiencies, the TYCOM must be immediately advised by telephone and by message. The Supervising Authority will be included as an information addressee.
- (9) Receive from the CO or Supervising Authority the scope, schedule and agenda of tests for Sea Trials for review. The concurrence of NAVSEA is required for the sequencing and scheduling of propulsion plant Sea Trials for industrial activity availabilities.
- (10) Prior to Sea Trials, report by message (Appendix CH of this chapter) to the TYCOM the material certification of the ship.
- (11) Advise the TYCOM by message of escort requirements and ensure that an escort is provided during the initial tightness dive, during the deep dive and during emergency blow tests as required by paragraph 3.6.8.4.7.a. of this chapter.

- (12) Arrange for a SRDRS to be on “modified alert” during the Sea Trials via message (Appendix CA of this chapter) to COMSUBRON ELEVEN.
- (13) Provide updated sea trials status by telephone to COMSUBRON ELEVEN if SRDRS “mod-alert” support services are in use per paragraph 3.6.8.4.7.b.(6) of this chapter.
- (14) Provide an operation order to be used incorporating the provisions of reference (u). Provide a copy to the TYCOM and, where appropriate, the local ISIC, information to CNO and Fleet Commander. Include within operation orders pertaining to post-availability trials, instructions to send specific messages announcing the start and completion of initial deep dive with the TYCOM as an information addressee.
- (15) Arrange for the embarkation of technical personnel who may be assigned by NAVSEA to observe tests or trials.
- (16) Arrange for the assignment of operating areas and communications frequencies.
- (17) Assign a submarine qualified officer to act as TYCOM representative embarked during Sea Trials as required by paragraph 3.6.8.4.2 of this chapter. When necessary, provide a gold dolphin wearer to ride the escort vessel.
- (18) When authorized by the TYCOM, grant permission for the ship’s CO to commence Sea Trials per the approved Sea Trials Agenda.
- (19) Upon completion of Sea Trials, report by message (Appendix CI of this chapter) to the TYCOM the status of any work performed by Forces Afloat within the SUBSAFE boundary, status of Departures from Specification and status of URO MRCs. If Upgrades or Alterations or Major Repair Work of the FBW SCS was performed by TYCOM managed activities, following verification from the ISEA or activity performing the work of satisfactory completion of all at-sea testing or trials, completion of controlled dives, correction of all mandatory sea trial deficiencies, and resolution of all ISIC FBW SCS Certification Audit Deficiencies recommendations, certify to the TYCOM using Appendix BS, with information copies to CNO, the appropriate Fleet Commander and NAVSEA, the FBW SCS material condition of those parts of the ship installed, repaired, or tested by the ISEA or activity performing the work is satisfactory, and recommend authorization for FBW SCS unrestricted use in support of submarine unrestricted operations, subject to ISIC verification that FBW SCS certification of areas outside ISEA or activity performing the work tasking has been sustained, or specifically identify any operating restrictions of the ship or system.

e. Ship CO.

- (1) Carry out his command responsibilities per reference (g).

NOTE: SUBMARINES UNDERGOING INDUSTRIAL ACTIVITY AVAILABILITIES NORMALLY REMAIN IN COMMISSION WITH A CREW ASSIGNED. THE CO REMAINS FULLY RESPONSIBLE FOR THE NUCLEAR PROPULSION

PLANT DURING ALL PHASES OF THE AVAILABILITY, INCLUDING ALL POST REPAIR TESTS AND TRIALS.

- (2) Develop and execute training plans and documents in order to maintain the state of training of the crew adequate to support post repair tests, inspections and trials. The nature and scope of the training required will depend to a great extent on the length of the availability. Care must be taken to ensure that these plans and documents are in conformance with instructions and procedures approved by NAVSEA.
- (3) Supervise operation of the nuclear propulsion plant. Critical operations will be conducted as set forth in paragraph 3.6.8.4.b.(4) of this chapter.
- (4) Prepare the ship's engineering personnel and propulsion plant and spaces for examination by the Director, Division of Naval Reactors, U.S. Department of Energy or the Fleet Commander Nuclear Propulsion Examining Board. For PORSE conducted by the Nuclear Propulsion Examining Board, direct liaison is authorized with the industrial activity to ensure estimated dates are included in the Key Events schedule.
- (5) Maintain PMS per reference (ak), SUBSAFE REC per Volume V, Part I, Chapter 5 of this manual to ensure no unauthorized Ship's Force work is conducted within the certified SUBSAFE boundaries, Reactor Plant PMS per reference (al) and Planned Maintenance Management Program per reference (am), for work performed by Forces Afloat. Ensure records are ready for ISIC audit conducted prior to Fast Cruise.
- (6) Participate in at-sea periods prior to the first Sea Trials.
 - (a) If possible accompany the preceding ship in overhaul on the first Sea Trial to learn how the propulsion trial is run.
 - (b) For ships in availabilities 18 months or longer, the CO must participate in an underway period of sufficient duration about six months before Phase II Crew Certification. The purpose of this ride is to refresh him on what is important to ensure the safe conduct of his own Sea Trials and to ensure his crews training program is emphasizing those matters. This underway should be on a ship, preferably of the same class, which is concentrating on basic submarine operations, such as Selected Refresher Training or ISE, in order for the CO to see evolutions such as coming to periscope depth, snorkeling, ventilating, casualty training, etc. If the availability schedule has 10-12 weeks between Power Range Testing and Phase II Crew Certification, the CO should go to sea about two months before Power Range Testing. The intent is for the CO to go to sea after having been in the industrial activity for a fair amount of time (normally one year or more), but with sufficient time remaining to improve his own training program if necessary. During these underway periods, the CO should have time on the bridge and also observe piloting and navigation.

- (7) Determine, in conjunction with the Supervising Authority, the nature and extent of the post-repair Sea Trials. Review the Sea Trial Agenda, including the sequence and duration of each test. The CO will concur with the trial agenda, then the Supervising Authority will submit it to NAVSEA for concurrence and the TYCOM for approval. Provide copies of the approved detailed schedule and agenda for underway trials to the local ISIC, if appropriate, the escort ship and embarked TYCOM representative, if assigned. This schedule and agenda must include:
 - (a) The minimum requirements in paragraph 3.6.8.4.7 of this chapter.
 - (b) A firm time scheduled for the conduct of all tests and trials showing their sequence and duration.
 - (c) General prerequisites for the conduct of each test. Detailed prerequisites should be itemized as part of individual test requirements.
 - (d) Responsibility for the conduct of each test (industrial activity or ship).
 - (e) Support required from the operating forces for the conduct of each test.
 - (f) Provision for adequate crew rest time during Sea Trials. Opportunity for six uninterrupted hours of rest in each twenty-four-hour period is a minimum for each member of the command.
 - (g) Provision for a minimum of six hours of uninterrupted independent ship exercises for crew training following the initial tightness dive and prior to the deep dive.
 - (h) Underway tests may be run during ISE and rest periods on a not-to-interfere basis. Specifically, tests which can be conducted underway under normal operating conditions without manning of special watch stations that require extra military personnel, may be scheduled during rest periods. Tests which will not interfere with Ship's Force drills and training exercises may be conducted during ISE periods.
- (8) Undergo a salvage inspection per Volume IV, Chapter 18 of this manual.
- (9) Conduct one-day Ship's Force Dock Trials per paragraph 3.6.8.4.5 of this chapter.
- (10) Demonstrate the state of training of the crew per references (y) through (ad).
- (11) Ensure that all pertinent alongside tests, inspections, and trials are conducted.
- (12) Certify to the designated ISIC or TYCOM representative that all salvage inspection discrepancies affecting safe conduct of Sea Trials have been corrected. Deliver a copy of the salvage plan to the escort ship, if required, and confer with the escort ship to coordinate communications and operational procedures, ensuring that the escort is fully informed as to the submarine's condition and intentions.
- (13) Concur with Supervising Authority message (reference (x), Appendix B.3.1) concerning Fast Cruise or Sea Trial readiness.

15 Jan 2021

- (14) Report by message (Appendix CJ of this chapter) to the TYCOM that crew and ship are ready for Sea Trials. List exceptions such as completion of Fast Cruise, removal of shore power connections, etc.
- (15) When authorized by the TYCOM and, when permission has been granted by NAVSEA 08 for critical reactor operations, conduct a Fast Cruise per paragraph 3.6.8.4.6 of this chapter.
- (16) Concur with Supervising Authority message (reference (x), Appendix B.3.3) that Fast Cruise was successfully completed, all mandatory deficiencies for Sea Trials have been corrected and recommend commencement of Sea Trials.
- (17) Report completion of Fast Cruise to the TYCOM by message (Appendix CK of this chapter) and request permission to commence Sea Trials.
- (18) When all the requirements of this instruction are completed and permission has been received from the TYCOM, proceed to sea per operation order. At sea, carry out the approved Sea Trial Agenda and Schedule.

NOTE: SUBSEQUENT TO THE MESSAGES, APPENDICES CF AND CH OF THIS CHAPTER, ANY DEFICIENCY DISCOVERED AND THE CORRECTIVE ACTION TAKEN WHICH AFFECTS THE WATERTIGHT INTEGRITY, THE RECOVERABILITY OF THE SHIP, THE OPERATIONS OF THE SHIP'S CONTROL SURFACES OR THE SHIP'S SALVAGE CAPABILITY MUST BE REPORTED TO NAVSEA, TYCOM AND FLEET COMMANDER BY THE SUPERVISING AUTHORITY, ISIC OR TYCOM REPRESENTATIVE BY MESSAGE. PREVIOUS CERTIFICATION MESSAGES MUST BE SUSPENDED. WHEN A REVIEW OF THE DEFICIENCY IS COMPLETED BY NAVSEA FOR INDUSTRIAL ACTIVITY ITEMS AND TYCOM FOR SHIP'S FORCE ITEMS, NAVSEA WILL CERTIFY TO THE TYCOM THAT THE MATERIAL CONDITION OF THE PARTS OF THE SHIP COVERED BY THE INDUSTRIAL ACTIVITY AWP IS SATISFACTORY FOR SEA TRIALS TO A SPECIFIED DEPTH. THE TYCOM IN TURN CERTIFIES THAT THE SHIP'S SUBSAFE CERTIFICATION BOUNDARY IS SATISFACTORY FOR SEA TRIALS TO A SPECIFIED DEPTH.

3.6.8.4.2 Type Commander Embarked Representative. For the first Sea Trial after a major industrial activity availability of a nuclear powered submarine, an unrestricted line officer (a former CO senior to the CO) normally provided by the ISIC or TYCOM will be the TYCOM embarked representative. This officer has the authority to act for the TYCOM in making on the spot changes to the approved Sea Trial Agenda. A TYCOM material representative may also be assigned. When assigned, he will serve as a technical advisor to the TYCOM embarked representative on matters pertaining to Sea Trial Agenda changes, compliance with this manual and disposition of emergent material deficiencies.

- a. During Sea Trials, assume the duties of Officer In Tactical Command unless otherwise designated by the ISIC. As Officer In Tactical Command, this officer must comply with direction found in Annex C of reference (u).

- b. When no officer senior to the CO is embarked for sea trials, the following officers must act for the TYCOM in approving on-the-spot changes to the Sea Trial Agenda in the order of precedence listed:
 - (1) TYCOM material representative if embarked.
 - (2) Designated ISIC representative if embarked.
 - (3) Ship's CO.

NOTE: SEA TRIAL AGENDAS ARE DEVELOPED AS A RESULT OF LESSONS LEARNED OVER A LONG PERIOD OF TIME. EVENTS AND SEQUENCES OF EVENTS ARE IMPORTANT AND SHOULD BE CHANGED ONLY AFTER THOROUGH DELIBERATION.

3.6.8.4.3 Availability Completion Prerequisites. The following requirements will be included in the TYCOM "Countdown Message" outlined in paragraph 3.6.8.4.8 of this chapter:

- a. The Supervising Authority will report by message (reference (x), Appendix B.3.8) to NAVSEA, satisfactory completion of all Sea Trials, completion of controlled dives, correction of all mandatory Sea Trial deficiencies, and resolution of all NAVSEA SSCA Category IA recommendations. Report that the SUBSAFE material condition of those parts of the ship installed, repaired, or tested by the industrial activity is satisfactory for URO to test depth. Identify any deferred SUBSAFE work or conditionally approved deviations and waivers.
- b. Following verification from the Supervising Authority of satisfactory completion of all Sea Trials, completion of controlled dives, correction of all mandatory Sea Trial deficiencies, and resolution of all NAVSEA SSCA Category IA recommendations, NAVSEA must certify by message (reference (x), Appendix B.3.9) to the TYCOM, with information copies to CNO and the appropriate Fleet Commander, the SUBSAFE material condition of those parts of the ship installed, repaired, or tested by the industrial activity is satisfactory, and recommend authorization for URO to design test depth subject to TYCOM verification that SUBSAFE certification of areas outside industrial activity AWP has been sustained.
- c. Following verification from NAVSEA of satisfactory completion of all Sea Trials, completion of controlled dives, correction of all mandatory Sea Trial deficiencies, certification that the SUBSAFE material condition of those parts of the ship installed, repaired or tested by the industrial activity is satisfactory, and upon confirmation of maintenance of SUBSAFE certification of portions of the ship not affected by the industrial activity, the TYCOM must report by message (Appendix CG of this chapter) to ship, with copies to CNO and NAVSEA, reporting status of SUBSAFE certification and authorizing URO to test depth.

3.6.8.4.4 Inspection Procedures.

- a. Periodic Monitoring, Inspections, and Visits.
 - (1) Purpose.
 - (a) To provide to ships in availability such administrative and training assistance as is necessary to improve the Ship's Force conduct of the

- availability, maintenance and training tasks. Visits of this nature are termed Tech Assists.
- (b) To evaluate the effectiveness of administration and training. Inspections of this nature are termed Work-Ups.
 - (c) To conduct spot checks to monitor progress in specific material, administrative and training areas. Visits of this nature are termed Monitor Visits.
- (2) Discussion. The extent, type and frequency of periodic monitoring, inspections, and visits should be determined on a case basis by the responsible ISIC or TYCOM representative. The initial inspection should be broad in scope in order to appraise the responsible ISIC of the adequacy of the ship's performance and progress. Normally, the initial visit will indicate the necessary frequency and scope of subsequent Tech Assists and Monitor Visits. In general, any required Work-Ups should be scheduled in advance of Key Events during the availability.
- (3) Areas of Inspection Coverage. Initial inspections normally examine the effectiveness of Ship's Force preparations for an availability. Subsequent inspections and visits should review the following areas as appropriate for the purpose of the specific inspection.
- (a) Review procedures and administrative steps for provisional watch station qualifications.
 - (b) Review department organization manuals.
 - (c) Review department instructions and administrative procedures.
 - (d) Review ship's instructions and administrative procedures.
 - (e) Review department logs, operating instructions and casualty procedures.
 - (f) Review ship's standard operating procedures and the ship's organization and regulations manual.
 - (g) Review training conducted and planned to support the goal of requalifying or reestablishing proficiency of watchstanders.
 - (h) Monitor performance of watch standing.
 - (i) Conduct spot check of ship's records and logs in use.
 - (j) Review Ship's Force controlled work (SUBSAFE, SOC, FBW, Level I and Nuclear) and procedures to ensure proper controls and documentation per this manual and no unauthorized work is conducted within the SUBSAFE, SOC and FBW boundaries.
 - (k) Review status of Ship's Force responsible PMS or IEM.
 - (l) Inspect installed equipment for cleanliness and adequate protection from damage.

- (m) Review Tag-Out and Work Authorization Logs. Spot-check for compliance per current directives.
 - (n) Inspect ship for hazards.
 - (o) Inspect provisions for casualty control including watertight integrity.
 - (p) Verify that all COSAL material, including operating space items, have been off-loaded to processing areas which provide appropriate security.
 - (q) Inspect the processing area to verify provisions and procedures for careful ILO inventory.
 - (r) Review response of supply system to requisitions in support of Ship's Force work.
 - (s) Verify that items are withdrawn from the ship's COSAL stock undergoing inventory or ILO only on an emergency basis and that such issues are well documented with appropriate adjustments to the inventory records.
 - (t) Evaluate general safety practices.
- (4) Scheduling of Periodic Monitoring, Inspection and Visits. Periodic Monitoring, Inspections, and Visits should be scheduled by the responsible ISIC as appropriate for the purposes of the inspection concerned. Some monitoring visits should be conducted on an unannounced basis. These inspections should be given so as to minimize interference with industrial activity and Ship's Force work.
- (5) Reports of Inspection. Formal reports of the results of periodic monitoring, inspection and visits are not required by the TYCOM. However, the responsible ISIC should advise the TYCOM in situations when the attainment of required progress toward completion of Key Events is in jeopardy.
- b. Pre-Critical Inspection.
- (1) Purpose. To evaluate the readiness of the engineering department to undergo a PORSE by the Fleet Commander Nuclear Propulsion Examining Board or a RSE by representatives from NAVSEA 08.
 - (2) Discussion. The conduct of the Pre-Critical Examination by the ISIC is not intended to duplicate the inspections for which readiness is being evaluated. It is considered prudent, however, to use an inspection plan similar to that employed by NAVSEA. Normally, the crew's readiness can be assessed within two days using such a plan, which should encompass the following:
 - (a) An administrative review.
 - (b) Observation of basic drills and evolutions not requiring reactor operation.
 - (c) Personnel interviews.
 - (d) Material inspection.

NOTE: FOR SSBN OR SSGN PRE-CRITICAL INSPECTIONS, THE CREW TO BE INSPECTED IS THE COMPOSITE CREW SELECTED FOR INITIAL CRITICALITY AND POWER RANGE TESTING.

- (3) Scheduling of Pre-Critical Inspections. The ISIC must conduct a Pre-Critical Inspection within six weeks of intended criticality. The Pre-Critical Inspection must be scheduled such that the qualification program and material condition of the ship are sufficiently complete to allow for a thorough inspection, but early enough to allow time for the correction of identified deficiencies prior to criticality. The TYCOM should be advised as soon as possible in advance of the tentative date for the ISIC Pre-Critical Inspection and confirmed dates should be established about one month in advance of the inspection.
 - (4) Composition of the Inspection Team. The Pre-Critical Inspection Team should consist of:
 - (a) A nuclear-trained member of the cognizant ISIC Staff, usually the Squadron Training Officer.
 - (b) A nuclear-trained officer with experience as an Engineer Officer.
 - (c) When available, a nuclear-trained officer from the TYCOM's Staff will participate in ISIC Pre-Critical Inspections involving refueling. Arrangements for participation of the TYCOM Staff member should be initiated by the responsible ISIC at least one month in advance of the anticipated ISIC Pre-Critical Inspection.
 - (5) Reports of Inspection.
 - (a) The Senior Inspector should provide the inspected unit with an informal report of findings by the inspection team, copy to the cognizant ISIC and TYCOM.
 - (b) The ship's CO must review the findings of the inspection team and make necessary adjustments to the training program to ensure the crew's readiness for the examination. The ship's CO must keep the cognizant ISIC advised of the training plan and the assessment of the crew's progress.
 - (c) The cognizant ISIC must review the inspection findings, the CO's training plan and progress evaluations, and direct follow-up reviews or inspections necessary to verify the ship's readiness for the examination.
- c. Phase I Certification Inspection.
- (1) Purpose. To determine the state of readiness and training of the Ship's Force, particularly in the areas of watch stander qualification, damage control readiness, status of operational and emergency bills, present onboard supply of essential technical manuals and general operational knowledge.
 - (2) Discussion. The guidelines for the Phase I inspection are provided in references (y) through (ad). The intent of the inspection is to provide a

preliminary estimate of readiness and to identify areas requiring action prior to final certification (Phase II).

- (3) Scheduling of Phase I Certification Inspection. Phase I Inspections should be scheduled by the responsible ISIC about 35 days before scheduled initial Sea Trials.
 - (a) Chief Inspector - ISIC representative of appropriate seniority.
 - (b) Assistant Chief Inspector - a submarine CO.
 - (c) Assistant inspectors for the following departments or areas - overall training, executive, operations, navigation, communications, weapons, first lieutenant, engineering and material.
 - (d) The inspector for the engineering areas of nuclear powered submarines will be a nuclear-trained officer qualified as an Engineer Officer.
- (4) Reports of Inspection.
 - (a) The Chief Inspector must provide the inspected ship with an informal report of findings by the inspection team.
 - (b) In the event that inspection results indicate the readiness for final (Phase II) certification in the required time cannot be assured, the responsible ISIC should advise the TYCOM of the circumstances.
- d. Material Inspection. Prior to certifying commissioned ships' readiness for at-sea operations, conduct a material inspection to determine that the ship is materially ready for at-sea operations per Volume V of this manual. In addition, on all ships conduct a Salvage Inspection per Volume IV, Chapter 18 of this manual. Results of material inspections should be reported with Phase II crew certification reports.
- e. Phase II Certification Inspection.
 - (1) Purpose. To certify that the state of training of the crew is satisfactory for at-sea operations.
 - (2) Discussion. The requirements for Phase II certification inspection are provided in references (y) through (ad).
 - (3) Scheduling of Phase II Certification Inspections. Phase II inspections should be scheduled by the responsible ISIC about nine days prior to Sea Trials.
 - (4) Composition of the Inspection Team. The requirements for Phase II Certification Team composition are the same as those for Phase I.
 - (5) Reports of Certification. The Phase II Certification and Material Certification Reports are combined and submitted per Appendix CB of this chapter.

3.6.8.4.5 Dock Trials. Ship's Force Dock Trials provide the opportunity to test and check out systems, components and portable equipment prior to the Fast Cruise training period simulating underway conditions. Although normally a period of one day is assigned for integrated Ship's Force Dock Trials, tests and evolutions performed in the one to two weeks prior to the Dock Trial date may be accepted by the CO as fulfilling the requirements of this paragraph. The

purpose of Dock Trials is to afford the ship an opportunity to demonstrate that major systems and equipment is in fact ready to support Sea Trials. It is expected that individual equipment will have been satisfactorily tested prior to commencement of the integrated operational tests afforded by Ship's Force Dock Trials. Appendix L of this chapter lists the minimum requirements for Dock Trials and will be used by the ship's CO in preparing for and conducting Dock Trials.

3.6.8.4.6 Fast Cruise. The overall objective of the Fast Cruise is to train the crew and determine the crew's ability to take the ship to sea safely. In addition to the normal underway routine, the CO must have all equipment operated to check for proper operation and to determine the state of training of the crew. Fast Cruise must, as far as is practicable, simulate at sea operating conditions. It is to be conducted by the Ship's Force and is to be unhampered by repair work or by movement of industrial activity personnel through the ship. The Supervising Authority must **not** schedule any trials, tests or other work to be performed on the ship during this period. The Fast Cruise should be four days in duration for nuclear ships and two days for non-nuclear submarines. It should be completed within a five-day period. It should end not more than three days prior to underway trials. Normally, the ship will go to sea for an underway trial within a day after completion of Fast Cruise. Should the 72-hour period be exceeded, the TYCOM may direct an additional Fast Cruise. The parent ISIC will make formal recommendations to the TYCOM as to the desired period of Fast Cruise. Appendix M of this chapter lists the minimum requirements for Fast Cruise and will be used by the ship's CO in preparing for and conducting Fast Cruise. Additional drills and operations are at the discretion of the ship's CO. The ship must be operated as if underway, simulating the various evolutions required for safe operation of the ship. Each underway section must be exercised in the evolutions which are normally performed on a section basis. During each evolution, check out all communication systems. Ensure that each is in proper working order and that, where duplicate systems exist, a priority system is designated.

3.6.8.4.7 Sea Trials. Appendix O of this chapter delineates the minimum requirements incident to Sea Trials following industrial activity availabilities. For submarines, following completion of Fast Cruise the ISIC will notify the TYCOM of satisfactory completion of Fast Cruise and readiness for Sea Trials using the message format of Appendix CH. The submarine TYCOM will authorize the ISIC to allow the ship to get underway for Sea Trials using the message format of Appendix CF. The submarine CO will keep the TYCOM aware of the progress of the Sea Trial through periodic SITREPs using the message format of Appendix CP of this chapter. SITREPs will be submitted following completion of the initial tightness dive, following completion of the deep dive to test depth and daily at a minimum and as identified by the TYCOM or the Sea Trial Agenda. Sea Trials following availability are normally conducted with a significant number of "riders". These riders represent NAVSEA, TYCOM and Shipbuilder personnel onboard to observe various tests and trial evolutions. The ship's normal load out of Lithium Hydroxide canisters for DISSUB (granular or ExtendAir®, no mix), Lithium Hydroxide curtains (or ExtendAir® Deployment kits, if equipped), EAB masks, SEIE suits and oxygen candles is not sufficient to support this increase in personnel. Therefore, an additional four Lithium Hydroxide canisters (or three ExtendAir®, if equipped), four Lithium Hydroxide curtains (or one ExtendAir® Deployment kit for every multiple of 60 ExtendAir® canisters in the compartment, if equipped), one EAB mask, one SEIE suit and two oxygen candles must be carried for each rider exceeding normal crew manning. Stowage of this additional equipment for

DISSUB must be in the same escape compartment as the rider's designated General Emergency muster site assigned by the Commanding Officer. Lithium Hydroxide canisters, EABs, SEIE suits and Lithium Hydroxide curtains are to be obtained from the industrial activity. The Supervising Authority and ship's CO will use Appendix O of this chapter in preparing for and conducting Sea Trials.

- a. Assignment of Escort Ship. An escort is required for:
 - (1) Initial tightness and deep dives after a major industrial activity availability, including EMBT blow at the completion of each of these dives.
 - (2) Any EMBT blow from greater than 400 feet. Rationale is to give the submarine added protection to prevent interference from any surface contact.

NOTE: IN ALL CASES, HULL STRENGTH OR TIGHTNESS AND VALVE OPERATIONS WILL HAVE BEEN TESTED TO A DEPTH EQUAL TO OR GREATER THAN EMBT BLOW DEPTH BEFORE TESTING EMBT.

- (3) For second and subsequent underway periods if major hull or sea connected system work has been accomplished since last Sea Trials.
- b. Escort Ship Capability Requirements. The surface escort ship must have the following capabilities with the necessary equipment in an operating condition:
 - (1) Radio Communication:
 - (a) Ability to transmit and receive on two UHF and on HF circuits simultaneously including 243.0 MHz or equivalent system capabilities (Very High Frequency (VHF) and INMARSAT-C).
 - (b) Equipped to tape record all non-secure radio transmissions between the submarine and the escort.
 - (c) Capability to communicate on the submarine HF, UHF or equivalent system capabilities (VHF or INMARSAT-C) circuits.
 - (2) Sonar and Sonar Communications:
 - (a) Equipped with underwater telephone capable of communicating to the submarine's test depth or equivalent system capabilities.
 - (b) Sufficient operators to man underwater telephone on a continuous basis, including CW capable operator on call if the requirement for CW communications develops.
 - (c) Equipped to tape record (installed or portable) all transmissions between the submarine and the escort by underwater telephone.
 - (d) Explosive charge signals or active sonar transmit capability as called for by AXP-1.
 - (3) Navigation:
 - (a) Equipped with an operable LORAN C, Global Positioning System (GPS) or the latest accurate off-the-shelf navigational equipment.

- (b) Equipped with an operable Dead Reckoning Tracers or equivalent system capability.
 - (c) Possess navigational capability to fix his position to two-mile average accuracy.
 - (d) Fathometer.
 - (e) Gyrocompass.
 - (f) Underwater log or equivalent system capability.
- (4) Sea Keeping and Speed:
- (a) Ability to remain at sea for one week in State 6 seas.
 - (b) Be capable of making 10 knots. Escorts will keep the submarine informed of any speed or sea state limitations. In addition, if the escort has an unfaired WQC hydrophone, it must notify the submarine of the maximum sea state and speed which will not restrict WQC communications. If the submarine requires a speed above this limit, the submarine should run a track about the escort within WQC range.
- (5) When an escort ship is other than another submarine, the ISIC will designate a minimum of one officer qualified in submarines (Gold Dolphins) and ensure a sufficient number of officers qualified in submarines (Gold Dolphins) will be embarked during the escort duty. An escort is not required on Board of Inspection and Survey (INSURV) trials since the EMBT blow is done per applicable URO MRC vice from maximum authorized operating depth.
- (6) Assignment of SRDRS During Submarine Sea Trials.
- (a) A SRDRS will be placed in a modified-alert status at the beginning of Sea Trials requiring an escort following an industrial activity availability or major maintenance period for:
 - 1 The ship's initial tightness and deep dive event.
 - 2 Subsequent Sea Trials until the completion of the initial dive to design test depth.
 - 3 If, in the TYCOM's judgment, a Sea Trial requires an escort due to major hull cuts, etc. The TYCOM must obtain NAVSEA concurrence when determining the need for escort or SRDRS services.
 - (b) The ship conducting Sea Trials will notify COMSUBRON ELEVEN and COMNAVSEASYSCOM when SRDRS services are no longer required due to completion of the events in paragraph 3.6.8.4.7(6)(a) of this chapter or due to delay in completing Sea Trials.
 - (c) The SRDRS is not required to be placed in a modified alert status for those Sea Trials requiring an escort solely for the accomplishment of an EMBT blow from depths greater than 400 feet.

- (7) A modified alert message will be sent by the industrial activity with the required SRDRS support dates 6 weeks prior to the requested date. Any changes in this request date will require immediate notification to the Fleet Commander, COMNAVSEASYS COM and COMSUBRON ELEVEN. Sample messages in Appendix BN and CQ of this chapter.

3.6.8.4.8 Interrupted or Additional Sea Trials. In the event a Sea Trial is interrupted, or an additional Sea Trial becomes necessary, the following requirements are to be met. These requirements must be invoked if the ship returns to port for industrial activity repairs which affect SUBSAFE certification or which will require at-sea testing. These requirements will be reiterated by the TYCOM via a special “Countdown Message” Appendix CL of this chapter when the need arises:

- a. The industrial activity will draft a revised Sea Trials Agenda to support resumption of the trials. This Agenda must be provided to NAVSEA for concurrence and TYCOM for approval.
- b. The ISIC must report by message (format of Appendix CM of this chapter) to the TYCOM that the material condition of those SUBSAFE Certification boundaries that were installed, repaired or tested by Ship’s Force is satisfactory for resuming Sea Trials.
- c. The Supervising Authority must provide a report, by message (reference (x), Appendix B.3.5), to NAVSEA (information copy to the TYCOM) that the material condition of the systems installed, repaired or tested by the industrial activity is satisfactory for resumption of Sea Trials. As a minimum, the report should state the status of all incomplete Category IA Audit Items resulting from the NAVSEA SSCA and that all SUBSAFE work has been performed per the requirements of reference (x).
- d. The CO of the ship must provide a report by message (format of Appendix CN of this chapter) to the TYCOM stating that the crew and ship are ready for Sea Trials. Any exceptions are to be listed in this message.
- e. NAVSEA (PMS 392), upon receipt of the Supervising Authority report, must recertify the material condition of the ship for operation to a specific operating depth for Sea Trials and report recertification by message (reference (x), Appendix B.3.6) to the TYCOM.
- f. Upon completion of all of the requirements in paragraphs 3.6.8.4.8.a. through e, the TYCOM will provide a message (Appendix CO of this chapter) to the ship granting permission to proceed with the conduct of Sea Trials and authorize the ship to dive to the Sea Trial operating depth recommended by NAVSEA.
- g. Submarine surface transits from industrial port in advance of completion of CNO availabilities (prior to certification for unrestricted operations) to a different or homeport can be executed without a sea trial, without an escort and without an SRDRS after obtaining NAVSEA concurrence and authorization from the TYCOM. The submarine must not be authorized to dive and no testing is permitted during the transit. Operational need for transit and mitigating actions, if applicable, must be determined by the TYCOM.

3.6.8.4.9 Availability Completion Prerequisites. Upon completion of Sea Trials and correction or resolution of deficiencies, the following requirements must be met prior to completion of an industrial availability greater than six months duration. These requirements will be reiterated in the TYCOM “Countdown Message” Appendix CD or CL of this chapter:

- a. The Supervising Authority must report by message (reference (x), Appendix B.3.8) to NAVSEA, satisfactory completion of all Sea Trials, completion of controlled dives, correction of all mandatory sea trial deficiencies, and resolution of all NAVSEA SSCA Category IA recommendations. Report that the SUBSAFE material condition of the ship installed, repaired, or tested by the industrial activity is satisfactory for URO to test depth. Identify any deferred SUBSAFE work or conditionally approved deviations and waivers.
- b. Following verification from the Supervising Authority of satisfactory completion of all Sea Trials, completion of controlled dives, correction of all mandatory Sea Trial deficiencies, and resolution of all NAVSEA SSCA Category IA recommendations, NAVSEA must certify by message (reference (x) Appendix B.3.9) to the TYCOM, with information copies to CNO and the appropriate Fleet Commander, the SUBSAFE material condition of those parts of the ship installed, repaired, or tested by the industrial activity is satisfactory, and recommend authorization for URO to design test depth subject to TYCOM verification that SUBSAFE certification of areas outside the industrial activity AWP has been sustained.
- c. Following verification from NAVSEA of satisfactory completion of all sea trials, completion of controlled dives, correction of all mandatory sea trial deficiencies, certification that the SUBSAFE material condition of those parts of the ship installed, repaired, or tested by the industrial activity is satisfactory, and upon confirmation of maintenance of SUBSAFE certification of portions of ship not affected by the industrial activity, the TYCOM must report by message (Appendix CG of this chapter) to the ship, with copies to CNO and NAVSEA, reporting status of SUBSAFE certification and authorizing URO to test depth.

3.7 COMPLETION OF AVAILABILITY.

- a. (Surface Force Ships or Aircraft Carriers) In order to standardize reporting practices, the official end of a CNO Availability will be upon Certification of work per “Availability Work Certification” dictated in this chapter and completion of the TYCOM approved Sea Trials Agenda. Ships must report Sea Trial Agenda Completion in the form of Appendix F1 or Appendix F2 of this chapter. Availability Certification Completion can occur with agreed to exceptions as discussed in Volume VII, Chapters 7 and 8 of this manual. The TYCOM, Contractor, FMA and NSA should consider Work Certification Requirements and the definition of “Availability Completion” when adjudicating New or Growth work in any availability. If scope, time and cost are impacted by New or Growth work, the impact should be addressed and documented in writing (by the RMC Project Manager) to the TYCOM or ISIC.
- b. (Submarines only) CNO availabilities are complete when the TYCOM transmits one of the two following messages:

- (1) Appendix BO of this chapter. (SAMPLE TYCOM MESSAGE TO SHIP CONCERNING URO FOR INDUSTRIAL ACTIVITY AVAILABILITIES LESS THAN SIX MONTHS IN DURATION (SUBMARINES ONLY)).
- (2) Appendix CG of this chapter. (SAMPLE TYCOM MESSAGE TO SHIP CONCERNING URO FOR INDUSTRIAL ACTIVITY AVAILABILITIES GREATER THAN SIX MONTHS IN DURATION (SUBMARINES ONLY)).

3.8 AVAILABILITY COMPLETION DEPARTURE CONFERENCE. At the end of the availability, the Supervising Authority, FMA (if applicable), and Ship's Force will conduct a Departure Conference to finalize the status of all work performed during the availability. The conduct of this conference is similar to that of the Progress Reviews conducted per paragraph 3.6.3.1.b. of this chapter, and should be used to gather all necessary information to draft and send the Availability Completion Message. Further policy on availability completion can be found in Volume VII, Chapter 7, paragraph 7.12 and Chapter 8, paragraph 8.5 of this manual. As a minimum, the Availability Completion Message should address all areas addressed in the Weekly Progress Message, Appendices F1 or F2 of this chapter as applicable, as well as the following:

- a. Unresolved maintenance issues and guarantee work items.
- b. Report of configuration changes resulting from alterations installed during the availability.
- c. Summarize the NAVSEA waivers issued during the availability.
- d. Identify those work candidates that will be deferred until the next industrial availability.

3.9 POST AVAILABILITY.

3.9.1 Completed Availability Work Package. Within six months after the completion of the availability, SUBMEPP (Submarines), PMS 312C (Aircraft Carriers) or SURFMEPP (Surface Ships) will issue the Completed Work Package.

3.9.2 End-of-Cycle Analysis (Surface Force Ships Only). Provide inputs to support the SURFMEPP End-of-Cycle Analysis. These inputs will include DFSs approved during the availability and work that was accomplished, but not in the approved AWP.

3.9.3 Post-Availability Analysis (Surface Force Ships Only). TYCOM will participate in the post-availability analysis process and attend CNO Availability completion Maintenance and Modernization Performance Reviews per Volume VI, Chapter 44 of this manual.

3.10 BASELINE AVAILABILITY WORK PACKAGE CLOSEOUT (Surface Force Ships Only).

3.10.1 Fleet Readiness Plan Maintenance Cycle BAWP Closeout. The following procedures will be utilized to closeout and complete the FRP Maintenance Cycle and associated BAWP.

3.10.2 BAWP Closeout Verification and Assessment Meeting. No later than 45 days after CNO Availability completion, SURFMEPP will conduct a BAWP Close-Out Verification and Assessment Meeting. This meeting will determine the status of all "A" branded BAWP items.

A list of all BAWP work items that were not accomplished and the reason(s) for non-accomplishment will be compiled for inclusion in the BAWP Close-Out Report.

3.10.2.1 Attendees. The BAWP Close-Out Verification and Assessment Meeting will be chaired by a SURFMEPP representative. The following personnel are encouraged to attend this meeting:

- a. Ship's CO (or designated representative).
- b. Engineer Officer and Availability Coordinator.
- c. Project Engineer and Combat Systems Project Engineer.
- d. Project Manager or Class Team Lead.
- e. PSIA, LMA or Planning Activity Representative.
- f. TYCOM Representative.
- g. ISIC Representative.
- h. Planning Yard Representative.
- i. Program Manager's Representative.
- j. Navy Regional Maintenance Center Representative.
- k. NRMC Assessment Director.
- l. NAVSEA 05D Representative.

3.10.2.2 BAWP Closeout Letter. This letter is a deliverable due at the BAWP Close-Out Verification Meeting per Part II, Chapter 2, Appendix D of this volume. This meeting is used to ascertain the final disposition of each BAWP mandatory requirement ("A" branded JCN in the FRP maintenance cycle) and a BAWP Close-Out Report to summarize all changes for SURFMEPP, Technical Warrant Holders, Ship Design Managers, engineering authorities and other stakeholders as applicable. Maintenance requirement status will be reviewed at the meeting for deferred, accomplished or non-accomplished-no deferral authorized status. At the conclusion of the meeting, all non-accomplished-not authorized for deferral JCNs will require adjudication via the deferral letter process. The NSA, RMC and TYCOM will coordinate this effort as described in paragraph 3.5.4.5 of this chapter, which discusses the technical deferral and adjudication process for post-AWP definitization.

APPENDIX A
TYPICAL CNO AVAILABILITY PLANNING MILESTONES
(SUBMARINES ONLY)

MILESTONES	RESPONSIBLE ACTIVITY	TIMELINE (Months)
1. Identify Non-Nuclear Title “K” SHIPALTs, fund and authorize planning and procurement.	NAVSEA	A-24
2. Identify Non-Nuclear Title “D” and “F” SHIPALTs, fund and authorize SUBMEPP to accomplish planning.	TYCOM	A-24
3. Issue Advance Planning Letter for NAVSEA funded Alterations and Selected Restricted Availability Advance Planning Milestones.	NAVSEA	A-18
4. Update CSMP. Submit to SUBMEPP via ISIC	Ship	A-16
5. Issue Preliminary AWP.	SUBMEPP	A-15
6. Issue AWP Supplement (replaces inventory of PMRs and URO).	SUBMEPP	A-12 to -14
7. Issue SHIPALT drawings.	Design Agent	A-12
8. Issue Final Planning Letter for NAVSEA funded Non-Nuclear Title “K” SHIPALTs.	NAVSEA	A-12
9. Issue Initial LLTM Report for Centrally Procured LLTM.	LLTM Agent	A-12
10. Issue Preliminary Work Sequence Schedules, provide estimates for NAVSEA funded Non-Nuclear Alterations.	Industrial Activity	A-11
11. Conduct Ship’s Force Meeting.	SUBMEPP	A-10
12. Conduct initial Shipcheck.	Industrial Activity	A-10
13. Conduct site Logistics and Facilities Check (for Selected Restricted Availability at FMA only).	Industrial Activity	A-10
14. Issue message providing centrally procured LLTM and FMPMIS material availability status and best estimated delivery dates for Non-Nuclear Title “K” SHIPALTs.	NAVSEA	A-10
15. Host WDC with customers and Industrial Activity.	SUBMEPP	A-10
16. Response to NAVSEA’s Material Message issued.	Industrial Activity	A-9
17. Issue Interchangeability Data Sheets for Advance Equipment Repair Program components.	SUBMEPP	A-9
18. Provide Pre-Availability Test Procedures to users on the Standardized Test Procedures CD-ROM and on the SUBMEPP ePortal web site. For ePortal access, go to https://www.submepp.csd.disa.mil , select “Products/Services” then “Secure Web Site” and follow the instructions.	SUBMEPP	A-9
19. Issue SHIPALT Authorization (240 day) letter for NAVSEA funded SHIPALTs.	NAVSEA	A-8

MILESTONES	RESPONSIBLE ACTIVITY	TIMELINE (Months)
20. Issue Proposed AWP.	SUBMEPP	A-8
21. Confirm ability to accomplish all authorized Alterations during Availability.	Industrial Activity	A-7
22. Submit PAT results and Proposed changes to the AWP.	Industrial Activity and Ship	A-5
23. Submit Valve Lists and Sonar Testing, Assessment and Grooming Report for the AWP.	Ship and ISIC	A-5
24. Provide screening action on Pre-Arrival Test results and proposed changes to AWP.	TYCOM	A-4
25. Confirm AWP man-day estimate vs. availability duration for compatibility.	Industrial Activity	A-3
26. Convene PAC.	Industrial Activity	A-3
27. Provide preliminary review estimates (90 day estimates) for NAVSEA funded Non-Nuclear Alterations.	Industrial Activity	A-3
28. Confirm receipt of centrally procured LLTM, Fleet Modernization Program Management Information System (FMPMIS) material and Advanced Equipment Repair Program (AERP) components.	Industrial Activity	A-2
29. Issue PAC Report.	Industrial Activity	A-2
30. Promulgate Availability schedule.	Industrial Activity	A-2
31. Deliver centrally procured LLTM.	LLTM Agent	A-2
32. Deliver AERP components.	SUBMEPP	A-2
33. Provide final review estimates (45 day estimates) for NAVSEA funded Non-Nuclear Alterations.	Industrial Activity	A-1.5
34. Issued Approved AWP.	SUBMEPP	A-1
35. Start Availability.	Industrial Activity	A-0
36. Conduct Arrival Conference	Industrial Activity	A-0
37. Issue monthly Availability Status messages.	Industrial Activity or Supervisor of Shipbuilding (SUPSHIP)	Monthly
38. Submit Reactor Plant Configuration Change Reports (RPCCR) or OPNAV 4790/CK forms for completed Alterations to ship's CO.	Industrial Activity	Monthly
39. Update material history records, manual changes, onboard repair parts for complete alterations. Endorse and forward RPCCRs and OPNAV 4790/CK forms.	Ship	Monthly
40. Complete Availability.	Industrial Activity	C

MILESTONES	RESPONSIBLE ACTIVITY	TIMELINE (Months)
MILESTONES	RESPONSIBLE ACTIVITY	TIMELINE (Months)
41. Issue Availability Completion Message.	Industrial Activity	C+1

NOTE: “A” AND “C” IN THE “TIMELINE” COLUMN REPRESENT THE START AND COMPLETION DATES, RESPECTIVELY. THE DATES SHOWN ARE FOR ILLUSTRATION ONLY, SINCE ACTUAL MILESTONES VARY DEPENDING ON SHIP OPERATING SCHEDULES, START DATE CHANGES AND OTHER CONSIDERATIONS.

APPENDIX B
TYPICAL CNO AVAILABILITY PLANNING MILESTONES
(SURFACE FORCE SHIPS ONLY)

- * 1 - Both Naval and Private Industrial Activities
 2 - Naval Activities

MILESTONES	*CODE	RESPONSIBLE ACTIVITY	TIMELINE (Days)
1. Review CSMP and make sure that all ship deferred maintenance actions desired for accomplishment are documented.	1	Maintenance Team (MT)	Continuous
2. Update BAWP with new requirements.	2	SURFMEPP	A-410
3. Pre-Availability Test and Inspection or Work Package Definition Conference, including combat systems and inspection of boilers (if possible).	1	TYCOM, Industrial Activity and MT	A-360 to A-304
4. Issue Pre-Availability Test and Inspections or Work Package Definition Conference Meeting report (within 10 days after conference).	1	TYCOM and Industrial Activity	A-334 to A-274
5. Order material for Ship's Force work.	1	Ship	A-90 to A-45
6. Cancel all outstanding Casualty Reports (CASREP) which are scheduled to be corrected during the industrial availability per CNSP/CNSL INST. 3040.2.	1	Ship	A to A+3
7. Arrival Conference.	1	Industrial Activity, ISIC and Ship	A to A-0

NOTE: "A" IN THE "TIMELINE" COLUMN REPRESENTS THE START DATES. THE DATE SHOWN IS FOR ILLUSTRATION ONLY, SINCE ACTUAL MILESTONES VARY DEPENDING ON SHIP OPERATING SCHEDULES, START DATE CHANGES AND OTHER CONSIDERATIONS.

APPENDIX C

31. FINAL REVIEW ESTIMATE (FRE) ESTABLISHED	TYCOM MPM NAVSHIPYD	*A-1	A-1
32. START AVAILABILITY		A-0	A-0

* THE FINAL REVIEW ESTIMATE (FRE) IS DELIVERED 30 DAYS PRIOR TO EXECUTION OF INDUSTRIAL WORK, BUT NO LATER THAN 30 DAYS PRIOR TO THE CNO AVAILABILITY START DATE.

APPENDIX D**SUGGESTED GUIDELINES FOR FORCES AFLOAT
REVIEW OF AVAILABILITY WORK PACKAGES**

a. The preliminary AWP includes information which SUBMEPP (Submarines), PMS 312C (Aircraft Carriers) or applicable TYCOM (Surface Force Ships)/Ashore Ships Maintenance Manager extracts from the CSMP prior to the availability. SUBMEPP/PMS 312C/TYCOM (as applicable) and Ashore Ships Maintenance Manager only reviews items in the CSMP which are coded 1 under the type availability column. SUBMEPP, PMS 312C or TYCOM (as applicable) and Ashore Ships Maintenance Manager continues to monitor the CSMP until submission of the first Supplementary Work List. It is essential that the CSMP be up-to-date and reflect what work the ship requires the industrial activity to accomplish. The CSMP is the primary means of communicating unique work items not already covered by the AWP until submission of the first Supplementary Work List.

b. Ship's Force should review each maintenance item on the CSMP deferred for accomplishment to ensure that the deficiency reported and the work involved to correct it are complete and accurate.

c. To the maximum extent possible, work items that are within the capability of an FMA to accomplish should be accomplished as T/A-2 work prior to the CNO Maintenance Availability.

d. Ship's Force will identify CSMP repair items previously deferred for other than industrial activity action which Forces Afloat will not likely accomplish prior to the availability and change the type availability code to T/A-1, with ISIC concurrence, on these items.

e. Ship's Force will review each outstanding alteration for applicability and ensure that the record of completed alterations is correct. Alterations erroneously reported complete result in plans and tests which do not fit the ship. Completed alterations not reported as complete will cause unnecessary expenditure of shipcheck funds, duplication or both, of effort during the availability.

f. During AWP review meetings, Ship's Force should markup both the index and applicable SWLIN as an aid in recalling information.

g. Ship's Force will review the AWP to see if any component or equipment requiring attention of any kind has been omitted. Note that the Advanced Equipment Repair Program and *Trident* Planned Equipment Replacement (TRIPER) Program (SSBN and SSGN 726 Class), *Seawolf* Rotatable Pool Program and Aircraft Carrier Planned Equipment Replacement Program replace many components with refurbished units. Repair work on components that will be replaced by AERP can be canceled or noted as covered by the replacement SWLIN.

h. On receipt of the Proposed AWP, Ship's Force should review each Ship System Work Description. Ship's Force should prepare comments as to whether the extent of planned restoration, maintenance or repairs is sufficient or excessive. Additional comments regarding abnormal operation or configuration will be of interest to the industrial activity even if the AWP covers the particular component for repair because the scope of the job can be exactly defined early, avoiding "growth within scope" and schedule slippage later in the availability.

i. Ship's Force should review the General Information Section, "zero" series SWLINs and the glossary for a definition of terms used in the AWP to obtain a general understanding of availability procedures, philosophy and the pre-availability planning requirements.

j. Ship's Force should review all outstanding Departures from Specification to ensure they identify, for correction during the availability, all known non-standard repairs or installations not per class plans.

k. Ship's Force should identify any recently completed repair actions on components assigned to industrial activities and alterations that may negate the need for, or reduce the extent of, industrial activity refurbishment.

l. Ship's Force should identify any equipment not presently addressed in the AWP. SUBMEPP, PMS 312C, TYCOM (as applicable) and Ashore Ships Maintenance Manager are interested in identifying special or temporary equipment installations which may need maintenance during the availability.

15 Jan 2021

m. Ship's Force should identify any equipment listed for restoration, that is in exceptionally good material condition.

n. Ship's Force should review, "Forces Afloat Actions to be Accomplished Prior To or At Arrival" index in the AWP to ensure these actions are understood.

o. (Submarines only) Ship's Force should review the AWP Part 4.14 NAVSEA 07T and PMT Actions (Non-Nuclear) to ensure SF and PMT actions are completed when required.

APPENDIX E
MONITORING PROCEDURES
(SURFACE FORCE SHIPS AND AIRCRAFT CARRIERS)

1.1 Periodic Monitoring.

- a. Purpose. To provide to ships in availability such administrative and training assistance as is necessary to improve the Ship's Force conduct of the overhaul, maintenance and training tasks. Visits of this nature are termed Tech Assists.
- b. To evaluate the effectiveness of administration and training. Visits of this nature are termed Work-Ups.
- c. To conduct spot checks to monitor progress in specific material, administrative and training areas. Visits of this nature are termed Monitor Visits.
- d. The extent, type and frequency of periodic monitoring and visits should be determined on a case basis by the responsible ISIC or TYCOM Representative. The initial inspection should be broad in scope in order to apprise the responsible ISIC of the adequacy of the ship's performance and progress. Normally, the initial visit will indicate the necessary frequency and scope of subsequent Tech Assists and Monitor Visits. In general, any required Work-Ups should be scheduled in advance of key events during the availability.
- e. Examine the effectiveness of Ship's Force preparations for overhaul during initial inspections. Subsequent visits should review the following areas as appropriate for the purpose of the specific inspection.
 - (1) Review procedures and administrative steps for provisional watch station qualifications.
 - (2) Review department organization manuals.
 - (3) Review department instructions and administrative procedures.
 - (4) Review ship's instructions and administrative procedures.
 - (5) Review department logs, operating instructions and casualty procedures.
 - (6) Review ship's standard operating procedures and the ship's organization and regulations manual.
 - (7) Review training conducted and planned to support the goal of requalifying or reestablishing proficiency of watchstanders.
 - (8) Monitor performance of watchstanding.
 - (9) Conduct spot check of ship's records and logs in use.
 - (10) Review Ship's Force controlled work (Level I and Nuclear) and procedures to ensure proper controls and documentation are per Volume V, Part I, Chapter 2 of this manual.
 - (11) Review status of Ship's Force responsible PMS and IEM.

- (12) Inspect installed equipment for cleanliness and adequate protection from damage.
 - (13) Review Tagout and Work Authorization Logs. Spot check for compliance per current directives.
 - (14) Inspect ship for hazards.
 - (15) Inspect provisions for casualty control including watertight integrity.
 - (16) Verify that all COSAL material including operating space items, have been off-loaded to processing areas which provide appropriate security.
 - (17) Inspect the processing area to verify provisions and procedures for careful ILO inventory.
 - (18) Review response of supply system to requisitions in support of Ship's Force work.
 - (19) Verify that items are withdrawn from the ship's COSAL stock undergoing inventory and ILO only on an emergency basis and that such issues are well documented with appropriate adjustments to the inventory records.
 - (20) Evaluate general safety practices.
- f. Scheduling of Periodic Monitoring Visits. Periodic Monitoring Visits should be scheduled by the responsible ISIC or TYCOM as appropriate. Some monitoring visits should be conducted on an unannounced basis. These visits should be given so as to minimize interference with industrial activity and Ship's Force work.
- g. Reports of Visits. Formal reports of the results of periodic monitoring visits are not required by the TYCOM. However, the responsible ISIC should advise the TYCOM in situations when the attainment of required progress toward completion of Key Events is in jeopardy.

APPENDIX I
MINIMUM DOCK TRIALS REQUIREMENTS
(SURFACE FORCE SHIPS AND AIRCRAFT CARRIERS)

REQUIREMENT	AIRCRAFT CARRIERS	SURFACE FORCE SHIPS
1. Check all Telephone, Announcing and Interior Communications circuits between all stations.	X	X
2. Test all alarms, i.e., General Quarters, Collision, etc.	X	X
3. Check all operational status readout interior communications circuits.	X	X
4. Test whistle.	X	X
5. Check adequacy of interior lighting and emergency lighting.	X	X
6. Operate all hydraulic systems using each installed pump.	X	X
7. Test operation of all radio transmitters and receivers using all antennas.	X	X
8. Operate all radar equipment.	X	X
9. Operate all sonar equipment.	X	X
10. Take and plot fixes using all navigation equipment and each antenna.	X	X
11. Test operation of trim, ballast control and list control system and pump (from all operating locations) per local instructions.	X	X
12. Test operation of portable submersible pump from each installed outlet.	X	X
13. Test engine order telegraphs.	X	X
14. Test magazine and pyro flooding systems.	X	X
15. Operate each lube oil system, including pumps, controllers, purifiers and indicators.	X	X
16. Energize the Navigation System and gyrocompass; determine that they settle out; take azimuth; check all repeaters.	X	X
17. Check potable water system, have water samples analyzed.	X	X
18. Test capstans and winches.	X	X
19. Operate steering system in all modes. Test normal and emergency rudder angle indicators.	X	X
20. BLANK		

REQUIREMENT	AIRCRAFT CARRIERS	SURFACE FORCE SHIPS
21. Test Automatic Bus Transfer devices.	X	X
22. Operate each watertight door and hatch.	X	X
23. Check operation of escape hatches and scuttle fittings.	X	X
24. Check navigation and running lights for brightness and proper lenses (to be done at night). Includes Flight Deck lighting. (if applicable)	X	X
25. Check air conditioning, chill water, ventilation, and heating systems.	X	X
26. Test underwater log and dummy log if water depth permits.	X	X
27. Check operation of all 400 cycle generating equipment.	X	X
28. Check all galley, messing, and ship's service equipment.	X	X
29. Check fathometer.	X	X
30. Check that mooring lines are doubled and taut and that camels are secured to the pier not the ship.	X	X
31. Check bilge flooding alarm.	X	X
32. Check all High Pressure and Low Pressure air systems and components.	X	X
33. Operate distilling units.	X	X
34. Check anchor windlass and brake operation.	X	X
35. Check atmosphere monitoring equipment, both installed and portable.	X	
36. If possible, operate Secondary Propulsion Motor(s) (SPM), auxiliary propulsion units and thrusters.		X
37. Operate the emergency diesel generator(s).	X	X
38. Engage and disengage propulsion shaft clutch(es).	X	X
39. Test Main Engines; Nuclear Powered ships jack main engines.	X	X
40. Check all TV monitoring systems.	X	X
41. Check small arms lockers and security devices.	X	X
42. Operate all Identification Friend or Foe (IFF) Equipment.	X	X
43. Check degaussing equipment.	X	X
44. Check hangar bay doors.	X	X

REQUIREMENT	AIRCRAFT CARRIERS	SURFACE FORCE SHIPS
45. Inventory and check all damage control equipment.	X	X
46. Inspect and operate oxygen and nitrogen systems.	X	
47. Check out all Tank Level Indicating systems.	X	X
48. Check out Flight Deck communications. (if applicable)	X	X
49. Check meteorological equipment.	X	X
50. Check graphics preparation and display equipment.	X	X
51. Check weapon systems. Check to include loading of dummy missile at each launch station, transmission of fire control signals and operation of launchers in all modes.	X	X
52. Operate all electrical and mechanical medical equipment.	X	X
53. Inspect all compartments for proper stowage and cleanliness and operability of equipment.	X	X
54. Test operation of all data processing equipment.	X	X
55. Test and inspect jet blast deflectors.	X	X
56. Test and inspect JP-5 fuel systems.	X	X
57. Test and inspect all aircraft starting, handling and launching equipment including catapults.	X	X
58. Test and inspect aircraft landing equipment including land signal officer equipment, arresting gear, barricades, as applicable.	X	X
59. Operate all Refueling at Sea equipment.	X	X
60. Check bridge window wiper system.	X	X
61. Operate all accommodation ladders.	X	X
62. Operate all conveyors.	X	X
63. Launch and raise motor whaleboat.	X	X
64. Operate all Boats.	X	X
65. Test and inspect Lifeboat and Life Raft stowage and launch equipment.	X	X
66. Test and inspect all elevators in all modes of operation.	X	X
67. Test and inspect all firefighting systems.	X	X
68. Test and inspect refrigeration system.	X	X
69. Test and inspect all sea water cooling systems.	X	X

REQUIREMENT	AIRCRAFT CARRIERS	SURFACE FORCE SHIPS
70. Operate stern gate doors.		X
71. Operate cranes.	X	X
72. Operate all ship's service generators.	X	X
73. Check all photographic processing and recording equipment.	X	X

APPENDIX J
MINIMUM FAST CRUISE REQUIREMENTS
(SURFACE FORCE SHIPS AND AIRCRAFT CARRIERS)

REQUIREMENT	AIRCRAFT CARRIERS	SURFACE FORCE SHIPS
1. Make all preparations for getting underway.	X	X
2. Station the maneuvering watch and sea and anchor detail.	X	X
3. Station the normal underway watch (section watches).	X	X
4. Simulate getting underway and return to port. (Day and Night)	X	X
5. Walk through all major Sea Trial evolutions.	X	X
6. Exercise the reduced visibility detail.	X	X
7. Spot check storage and availability of spare parts and tools. Verify adequacy of stores and provisions.	X	X
8. Conduct the following emergency drills:		
a. Fire	X	X
b. Flooding	X	X
c. Abandon Ship	X	X
d. Man Overboard	X	X
e. Loss of AC Power	X	X
f. Loss of Air Conditioning and ACW	X	X
g. Loss of Lighting	X	X
h. Loss of Interior Communications	X	X
i. Steering Casualty	X	X
j. Engine Casualty Control	X	X
9. Set General Quarters. Exercise the crew at battle stations.	X	X
10. Conduct communication and Electronic Counter Measures (ECM) drills.	X	X
11. Anchor (walk-through).	X	X
12. Exercise damage control party with emergency and damage control equipment during conduct of item 12.	X	X
13. Perform the minimum Fast Cruise requirements for nuclear propulsion plants contained in reference (t).	X	
14. Operate air conditioning plants to demonstrate ability to carry the maximum existing ships air conditioning load or 100% capacity.	X	X

REQUIREMENT	AIRCRAFT CARRIERS	SURFACE FORCE SHIPS
15. Operate fresh water and seawater heat exchangers at sufficient load to demonstrate proper operation.	X	X
16. Simulate underway conditions, performing all evolutions and operating equipment normally.	X	X
17. Simulate boat transfer at sea.	X	X
18. Conduct competitive and non-competitive drills and exercises such as aircraft tracking, and aircraft control.	X	X
19. Man Towing, Salvage and Fueling Stations.	X	X
20. Set Flight Quarters as applicable.	X	X
21. Check all interior communications circuits.	X	X

APPENDIX K**MINIMUM TESTS TO BE PERFORMED DURING SEA TRIALS****(SURFACE FORCE SHIPS AND AIRCRAFT CARRIERS)****I. RESPONSIBILITIES** (reference (an), Chapter 094).

The Ship's Force or Ship Trial Coordinator is responsible for:

1. The scheduling of the various trials and for conducting tests during trials while underway. A schedule of equipment tests should be available so all personnel are prepared for the evolutions.
2. Equipment operation during testing and for conducting the trials per reference (w) and TYCOM directives.
3. Verifying necessary trial documentation and technical data is on board.
4. Review of Personnel Qualification Standard (PQS) programs to identify new equipment and systems requiring PQS coverage, to implement PQS standards for new personnel, and to determine required watch station qualification in preparation for propulsion plant light-off and Sea Trials.
5. Providing a Sea Trial watch organization to accomplish the trial agenda.
6. Preparing and providing fire and abandon ship bills and holding emergency underway drills (can be completed and certified as part of Dock Trials or Fast Cruise).

II. PREPARATION FOR SEA TRIALS (reference (an), Chapter 094c).

Prior to Sea Trials, every reasonable effort must be made to complete all prerequisites:

1. Dockside tests must be satisfactorily completed and all safety requirements met. Incomplete non-safety items must be documented, including plans for timely resolution and completion. Should it be impractical to conduct any of these prerequisite tests dockside, the Naval Supervisory Authority (NSA) may permit the test to be conducted while underway.
2. All equipment, furniture and systems necessary to the conduct of the trials must be installed and in operating condition. All labeling, painting, sheathing, insulation and deck covering must be completed.
3. An inclining experiment, if required, must be performed and the results certified in writing to the NSA that the ship meets stability requirements and is safe for sea.
4. All temporary rigging and equipment, except that necessary for collection of Sea Trial test data, and all debris must be removed from the ship.
5. Painting that will not be dry at time of trials must be avoided.
6. Messing, sanitary and berthing facilities must be operational and available for use during Sea Trials.
7. The ship must be prepared for possible emergencies at sea. The NSA must certify in writing that equipment or systems listed that have been installed, overhauled or

disturbed during the overhaul have been restored to their normal operating status. The minimum readiness includes:

- a. Power boats to be utilized in an emergency must be fully operational, fitted-out and provisioned as prescribed by reference (ao).
- b. All davits must be operational.
- c. Air inflatable lifeboats must be onboard and properly installed and within PMS certification requirements.
- d. Emergency radios must be onboard and operable.
- e. Life rings and float lights must be rigged in stowage brackets.
- f. Life jackets for all personnel embarked plus 5 percent spares must be onboard and distributed in readily accessible areas.
- g. Adequate first aid kits and emergency medical equipment must be onboard.
- h. Firefighting and damage control equipment must be returned to the ship (if removed), verified to be fully operational and ready for use and properly stowed.
- i. All navigation devices and equipment must be tested to ensure proper operation.
- j. Work on all compartments whose water tight integrity is essential to the safety of the ship must be completed and, where authorized, satisfactorily tested.

III. PRIOR TO GETTING UNDERWAY.

1. Prior to Sea Trials following extended in-port or lay-up time, the following preliminary inspections should be conducted (reference (w), section 1.3.2):

- a. Inspect the underwater sea chests.
- b. Clean the sea chests of marine growth and debris if required.
- c. Inspect underwater hull for foreign material or objects.
- d. Inspect and clean as necessary condenser sea water sides.

NOTE: CVNS IN JAPAN HAVE THEIR HULLS INSPECTED PER QUARTERLY REQUIREMENTS SET BY NAVSEA.

- e. Ensure correct hoses for blowing sea chests are available on board and can be made up to hose connections provided for this purpose.
- f. Establish operability of each item of machinery to be used during the trial.
 - (1) Test equipment to validate minimal equipment available to conduct operations per technical specifications.
 - (2) Specific emphasis should be placed on fire pumps, anchor equipment and steering systems.

2. Ensure instrumentation to be used for obtaining trial data is properly installed, calibrated and certified.
 - a. The NSA must determine, in conjunction with the Commanding Officer, any special instrumentation required such as flow meters, torsion meters and calorimeters. Government Loaned Equipment may be made available with NAVSEA approval. The NSA will ensure the installation of any other temporary test instrumentation and equipment necessary for the trials except as otherwise stated herein or as indicated on the list of Government Furnished Equipment.
 - b. Unless otherwise specified, the NSA must ensure the installation of all temporary instrumentation and equipment regardless of who furnished it. All temporary instrumentation and equipment must be removed from the ship by the NSA upon conclusion of the trial. It must be the NSA's responsibility to maintain Government Loaned Equipment in proper working order. The NSA must calibrate, test and otherwise ensure both temporary and permanent instrumentation utilized to collect data for trials is reliable. Government furnished flow meters on loan from NSWCPD will be calibrated by NSWCPD.
 - c. Verify proper installation, adjustment and operability of torsion meter, if installed (reference (w), section 1.4.1.f).
 - d. Care must be taken that proper draft and trim of the ship are maintained throughout the duration of the trial (reference (w), section 1.4.1.g).
 - (1) Firefighting systems must be completely installed, tested and placed in operating condition before the ship is fueled.
 - (2) Fuel ship and adjust draft and trim to attain trial requirements.
 - e. Prior to departure, check all communications equipment, including radio, interior communications circuits, telephones and special signal circuits that may be used during the trial.
 - f. Zero set EM log.
 - g. Settle Navigation System and gyrocompass.
 - h. Test arresting gear systems, including barricade (as applicable).
 - i. Test Visual Landing Aid systems (as applicable).
 - j. Conduct static JP-5 System Certification. Test Control Console functions and conduct system stripping, transferring and purifying operations, as necessary, in preparation for underway systems dynamic operations.

IV. UNDERWAY ENGINEERING AND OTHER MAJOR TESTS.

1. The following systems must be tested to the extent authorized in the NSA's Work Package and test procedures identified in the trial agenda and be in an operating condition at the time of Sea Trial (reference (an), Chapter 094c). Table 1

summarizes general items. Procedural precedence is current PMS, equipment technical manuals and NAVSEA technical manuals procedures:

- a. Newly installed, modified or overhauled ventilating, heating and air conditioning systems.
 - b. Newly installed, modified or overhauled firefighting systems and damage control equipment.
 - c. Newly installed, modified or overhauled alarms and safety devices.
 - (1) All alarm systems must be operative.
 - (2) Gages and safety devices must be checked and all final adjustments completed per technical specifications.
 - (3) SSTG Resistance Temperature Element settings may be made according to reference (ap), Table 231-3-2 during dockside testing at 0 to 100 percent load or during Sea Trials, whichever gives the highest temperature reading (reference (p), section 3.10.3.4.1-.3).
 - d. Newly installed, modified or overhauled interior communication systems.
 - e. Newly installed, modified or overhauled radio and navigation systems.
2. Propulsion systems.
- a. Particular attention must be paid to boiler water treatment levels during Dock and Sea Trials. Additional tests of water chemistry and increased bottom blowdown frequency must be planned (reference (aq), section 2.4.12).
 - b. A full power run must be scheduled following each regular maintenance availability to ascertain the propulsion plant is capable of full power operation. The following general rules must be observed during all full power trials and during other machinery trials to which they may be applicable, consistent with conditions imposed (reference (w), section 1.4.1.e):
 - (1) In diesel powered ships not required to be fitted with torsion meters, brake horsepower developed by the main propulsion engines may be closely approximated by careful observations of fuel injection rack positions and compared with data taken during shop tests, where output has been previously measured directly on a dynamometer, or equivalent.
 - (2) Fuel used for the trials should be comparable to that used during shop tests.
 - (3) Average power developed by diesel-electric plants may be computed from kilowatt output from each propulsion generator set. Such observations must be taken at intervals of not greater than 15 minutes for the duration of the run.

- (4) In ships required to be fitted with torsion meters, readings of torque and rpm should be taken at sufficiently frequent intervals to produce an essentially continuous record. The record should be averaged at 15-minute intervals, for the duration of the run.
- 3. Main lube oil systems: Post-availability Sea Trial operations will normally jar and vibrate the lube oil system enough to break loose foreign material hidden in the system, even after flushing. To contain this foreign material, muslin or nylon bags must be kept in the lube oil strainers from initial operation through final Sea Trials (reference (ap), section 3.10.3.4.3). Filter bags and disposable filters must remain in propulsion machinery lubricating oil systems until Sea Trials are completed, except where 25 or 40-micron filter elements are required for the propulsion lubricating oil system, remove the disposable filter elements and install the applicable cleanable filter elements upon completion of Sea Trials (reference (ar), section 3.7.3.5.2).
- 4. Reduction gear systems for new and overhauled gears: At the first Sea Trial, determine proper tooth contact of main pinions and gears and conduct operational tests. After trials, in addition to inspections that may be directed by the proper authority, remove the inspection plates and examine the tooth contact and the condition of the teeth to note changes that occurred during the trial (reference (as), section 5.3.9).
- 5. Turbine casing joints: Experience has shown when new bolting is installed, particularly steam chest bolting exposed to temperatures above 900°F, the bolting must be rechecked and retightened after initial dockside steaming and again after Sea Trials following the overhaul (reference (ap), section 8.7.6).
- 6. Turbine bearing Resistance Temperature Element Settings: Make the initial settings before initially operating the bearing. Make the final settings before the Inspection Survey (INSURV) Trial or final Post Overhaul Trial if an INSURV Trial is not run. Base these settings on the highest values observed from the ship Sea Trials or shipbuilder test form data taken during all previous trials (reference (ap), section 3.10.3.4.2).
- 7. Propulsion demonstrations (reference (an), Chapter 200f).
 - a. Runs ahead at various power levels, using all main propulsion unit combinations, including cruising speed and maximum full-power ahead.
 - b. Runs astern, using all main propulsion unit combinations, including maximum full-power astern.
 - c. For Builder's Sea Trials only: Emergency reversals and crash stops, including maximum design full-power ahead to maximum design full power astern and vice versa.
 - d. Maximum speed steering gear tests ahead, limited speed steering tests astern and such other ship maneuvering tests as the specifications may require.
 - e. Twenty percent boiler overload test on one boiler (as applicable).

- f. Boiler flexibility tests (as applicable).
 - g. Locked-shaft tests (as applicable).
8. Anchor gear demonstration (including towing winch demonstration, if installed) (reference (at), section 3.8.1).
- a. Complete all inspections, repairs and adjustments prior to conducting drop tests.
 - b. Conduct drop tests by or under the direction of experienced personnel from the repair activity.
 - c. Conduct drop test following the test agenda based on type of repairs conducted. Do not allow more than 15 fathoms (90 ft) of chain to run free without stopping. Observe the 65 fathom (390 ft) maximum depth for the drop test.

NOTE: 65 FATHOM DROP TEST IS ONLY REQUIRED FOR NEW INSTALLATIONS AND TYPICALLY CONDUCTED AT ORIGINAL SHIP DELIVERY BUILDERS'S SEA TRIALS.

- d. Conduct anchor retrieval rate test to determine adequacy of power units.
9. Distilling plant test: Conduct twenty-four-hour production capacity check. A shorter test period is permissible with concurrence of the NSA and so indicated in the trials agenda (reference (au), section 7.7.6.3.5).
10. Steering gears: Ensure limits are determined (or have been determined) during current or previous Sea Trials and are posted on the ship control console and in the steering gear room (reference (au), section 2.2.3).
- a. Reference (av), Table 562-2-1 lists the astern limits for several (but not all) ship classes and may be used as a reference. Any limits posted on the ship control console or in the steering gear room must be strictly followed.
 - b. Conduct an analysis of the hydraulic fluid contamination by a naval test facility as required per PMS or whenever one of the following conditions exists:
 - (1) Immediately before the first Sea Trials following a maintenance availability.
 - (2) Immediately after Sea Trials following a maintenance availability.
11. Auxiliary propulsion units or Thruster engines: Conduct testing following the trial agenda based on scope of repairs conducted per the NSA's contract specifications (reference (w), section 1.4).
12. Electrical ship service generating and distribution system: Conduct testing following the trial agenda based on scope of repairs conducted per the NSA's contract specifications (reference (w), section 1.4).

13. Surface ship stabilizing devices: Conduct testing following the trial agenda based on scope of repairs conducted per the NSA's contract specifications (reference (aw), section 7.9.4.4).
 - a. Conduct an analysis of the hydraulic fluid contamination by a naval test facility as required per PMS or whenever one of the following conditions exists:
 - (1) Immediately before the first Sea Trials following a maintenance availability.
 - (2) Immediately after Sea Trials following a maintenance availability.
14. Washdown countermeasures and miscellaneous topside demonstrations: Conduct testing following the trial agenda based on scope of repairs conducted per the NSA's contract specifications (reference (w), section 1.4).
15. Ballast or deballast ship (when applicable): Conduct testing following the trial agenda based on scope of repairs conducted per the NSA's contract specifications (reference (w), section 1.4).
16. Sonar, radar and navigation system demonstrations. Conduct testing following the trial agenda based on scope of repairs conducted per the NSA's contract specifications.
17. Underway replenishment demonstrations: Conduct testing (including special winch tests, as applicable) following the trial agenda based on scope of repairs conducted per the NSA's contract specifications.
18. Other demonstrations and tests: Conduct testing following the trial agenda based on scope of repairs conducted per the NSA's contract specifications. Consideration should also be given to the equipment repaired or overhauled by Ship's Force and subsequent testing is required to validate operability. These items may be tested or demonstrated during Sea Trials providing:
 - a. Such tests do not significantly extend the duration of Sea Trials.
 - b. Such tests are within the capability of Ship's Force.
 - c. Such tests have a prescribed PMS MRC procedure or an equivalent procedure provided by Ship's Force or in service engineering agent which has technical authority concurrence.

V. AIRCRAFT OPERATIONS (IF APPLICABLE).

1. Certify Aircraft Launch and Recovery Equipment (as required).
2. Conduct flight deck certification (as applicable) per applicable TYCOM instructions (reference (ax)).

TABLE 1.
UNDERWAY TESTS

	Light off distilling plants and conduct 24 hour capacity test
	Test fathometer
	Test Countermeasure Washdown system
	Test navigation radar comparing fixes with visual fixes
	Test Electronic Warfare Support Measures and Identification Friend or Foe
	Conduct infrared communications device checks (Nancy lights)
	Test firefighting systems, to include Flight Deck and Hangar Bay for aviation capable units
	Test aircraft support systems
	Test steering systems in all modes ahead and astern at optimum design speed for the steering systems per ship steering technical manuals or ship information book
	Operationally test JP-5 system and components as required for JP-5 System Certification
	Warm up catapults and shoot no loads
	Operate emergency diesel generators carrying ship's load
	Run in shaft seals shifting to forward and after seals
	Test all Aircraft Control and Tracking functions
	Test air conditioning, ventilation and refrigeration systems
	Demonstrate Prairie and Masker Air operation
	Demonstrate Darken Ship
	Operate both forward and after Oxygen-Nitrogen plants
	Test Jet Blast Deflector cooling water systems

NOTE: IF THESE TESTS WERE PERFORMED AND CERTIFIED BY THE INDUSTRIAL ACTIVITY WITHIN TWO (2) MONTHS OF SEA TRIALS AND THE TEST RESULTS WERE SATISFACTORY, THE ITEM MAY BE REDUCED IN SCOPE OR OMITTED.

APPENDIX L
MINIMUM DOCK TRIALS REQUIREMENTS
(SUBMARINES ONLY)

1. Dock Trials. Ship's Force Dock Trials provide the opportunity to test and check out systems, components and portable equipment prior to the Fast Cruise training period simulating underway conditions. Although normally a period of one day is assigned for integrated Ship's Force Dock Trials, tests and evolutions performed in the one to two weeks prior to the Dock Trial date may be accepted by the CO as fulfilling the requirements of this paragraph. The purpose of Dock Trials is to afford the ship an opportunity to demonstrate that major systems and equipment is in fact ready to support Sea Trials. It is expected that individual equipment will have been satisfactorily tested prior to commencement of the integrated operational tests afforded by Ship's Force Dock Trials.

1.1 Supervising Authority. The industrial activity may desire to conduct "machinery checkouts" or system checks prior to the Ship's Force Dock Trials in order to test the propulsion plant or other ship's systems. In order to support these evolutions, close liaison between the ship's CO and the industrial activity will be required. For these evolutions, completion of repairs or modifications to all ship's systems are not required except for those systems which directly support the proposed tests.

1.2 Scheduling of Tests. The scheduling of Ship's Force Dock Trials is flexible. Ship's Force Dock Trials may be scheduled by mutual agreement between the ship and the supervising authority but must take place prior to certification of crew and material readiness with adequate time allowed for collection of deficiencies discovered during the Ship's Force Dock Trials. Preparation of the agenda and schedule for the Dock Trials is the CO's responsibility.

1.3 Extent of Trials. Ship's Force Dock Trials are conducted by the Ship's Force and are normally unhampered by repair work. This applies to the entire ship not just the propulsion plant. The trials may be witnessed by the industrial activity.

1.3.1 Tests. The term "test" must include, where applicable:

- a. The review and use of a procedure for correct line-up, starting, operation and securing of systems or equipment.
- b. Rigging, connecting and using all hoses, fittings and devices required for the test evolution.
- c. Operation of systems in all modes, such as emergency, hand, override, cross-connected, normal, local, etc.
- d. Checking all electrical and mechanical, local and remote indicators for proper readings.
- e. Testing communications between normal control station and other locations involved in operating the system or performing the evolution.
- f. Calibration and adjustment of equipment, systems and devices where required.
- g. Inventory consumables, fittings, devices and portable test equipment to ensure that sufficient amounts are on board for proper operation throughout the trials.

1.3.2 Specific Test Areas. There are specific tests which relate to both systems and ship safety which must be conducted in preparation for Sea Trials.

- a. The following are specific alongside tests which must be conducted during Dock Trials:
- (1) Check the sound powered phone system between all stations.
 - (2) Check the announcing system between all stations.
 - (3) Test collision alarm and diving alarm.
 - (4) Test general alarm.
 - (5) Test each light on Ballast Control Panel (BCP).
 - (6) Test whistle.
 - (7) Check emergency lights.
 - (8) Operate all hydraulic plants using each installed pump.
 - (9) Conduct a complete air charge using only ship's compressors.
 - (10) Conduct a normal battery charge using ship's motor generator on shore power.
 - (11) Conduct low pressure blow of all Main Ballast Tanks (MBT). Thereafter conduct the dockside portions of URO 022 (remote static blow and local static blow).
 - (12) Fill sanitary tanks, then blow or pump them.
 - (13) Operate each main vent in hand and power. Following operation, with valves shut, conduct a controlled removal of MBT vent covers, one at a time, to check MBT vents for leaks.
 - (14) Operate the outboard induction in hand and power.
 - (15) Operate the diesel engine exhaust valve in hand and power.
 - (16) Operate inboard induction valve.
 - (17) Raise, train and lower periscopes, snorkel, radar and antenna masts and fairings as applicable.
 - (18) Test operation of radio transmitters and receivers on all antennas.
 - (19) Operate all sonar and radar equipment at rated conditions.
 - (20) Take and plot Global Positioning System fixes using each antenna.
 - (21) Test operation of drain pump using each bilge suction.
 - (22) Test operation of trim system and pump by pumping to and from each tank and by pumping to and from sea (if applicable).
 - (23) Review and enter the diving trim calculation provided by the shipyard Naval Architects (or equivalent).
 - (24) Test operation of portable submersible pump from each installed outlet.

- (25) Fire inboard slugs from torpedo room.
- (26) Fire inboard slugs from weapons launch console.
- (27) Test magazine flooding system.
- (28) Operate each lube oil system including pumps, controllers, purifiers and indicators.
- (29) Energize the Navigation System and gyrocompasses; determine that they settle out and take an azimuth; check all repeaters.
- (30) Check fresh water system, have water samples analyzed.
- (31) Test the capstans.
- (32) Test bow plane rigging (where applicable).
- (33) Test bow or sail and stern plane tilting in hand, normal power and emergency. Test normal and emergency plane angle indicators.
- (34) Test rudder in hand, normal and emergency power. Test normal and emergency rudder angle indicators.
- (35) Check alignment of periscopes, TBTs and all bearing and range repeaters.
- (36) Test the engine order telegraphs.
- (37) Test Automatic Bus Transfer Devices.
- (38) Operate each watertight door and hatch, each bulkhead flapper and each intercompartment air salvage valve.
- (39) Check operation of escape hatch fittings.
- (40) Operate signal ejectors by impulse and hand using dummy signal. Fire water slugs from all launchers, both locally and remotely.
- (41) Turn on and check running lights for brightness and proper lenses (to be done at night).
- (42) Check freon air conditioning system.
- (43) Check underwater log.
- (44) Check 400 Hz MG sets.
- (45) Check out galley equipment.
- (46) Check fathometer.
- (47) Check bilge flooding alarms.
- (48) Check dummy log.
- (49) Check ship service air system.
- (50) Check out vapor compressor distilling units.
- (51) Check anchor windlass and brake operation.

- (52) Check battery water system. (NA for SVRLA-equipped ships)
- (53) Check out atmosphere monitoring equipment, both installed and portable.
- (54) Operate oxygen generator, CO₂ scrubbers, CO burners and emergency air breathing system.
- (55) If possible, lower, train, operate and raise the SPM.
- (56) Ensure that all required PMS to ship depth detectors is complete.
- (57) Verify that the PMS for this diesel engine high vacuum cutout is current.
- (58) Check main propulsion. (Should be done during the propulsion plant test program)
- (59) Ensure seven-day supply of oxygen onboard, test operate the Electrolytic Oxygen Generator(s) (EOG)

APPENDIX M
MINIMUM FAST CRUISE REQUIREMENTS
(SUBMARINES ONLY)

1. Fast Cruise Requirements. Asterisk items are the minimum requirements for an industrial activity availability of less than six months duration. All listed items are the minimum requirements for an industrial activity availability of greater than six months duration.

a. All Ships (as applicable):

- *(1) Station the maneuvering watch and check each system and piece of equipment for proper operation. (For availability less than six months duration, system and equipment checks are **not** required).
- *(2) Station the normal underway watch (section watches).
- (3) Simulate getting underway and return to port (day and night).
- *(4) Walk through all major Sea Trial evolutions, including cycling of hull and back-up valves to be tested during the deep dive.
- *(5) Exercise the reduced visibility detail.
- *(6) Emergency ventilate a compartment.
- (7) Spot check storage and availability of spare parts and tools. Verify adequacy of stores and provisions.
- *(8) Rig for dive and rig for surface.
- *(9) Simulate diving and surfacing.
- *(10) Rig for deep submergence.
- (11) Rig for various quiet conditions.
- (12) Drill at loss of power to various circuits including lighting, communications, 400 Hz power, etc.
- (13) Battery charge - Normal or equalizer as required. (NA for SVRLA-equipped ships)
- *(14) Conduct the following emergency drills:
 - *(a) Fire.
 - *(b) Collision.
 - *(c) Flooding.
 - *(d) Toxic Gas.
 - (e) Abandon Ship.
 - *(f) Man Overboard.
 - (g) Submarine Escape.
 - (h) Loss of AC Power.

- (i) Emergency Ventilation.
 - (j) Loss of Air Conditioning.
 - (k) Loss of Lighting.
 - (l) Loss of Interior Communications.
 - (15) Exercise the crew at battle stations.
 - (16) Conduct communications and ESM drills.
 - *(17) Conduct an air charge to all air banks. (For availabilities less than six months duration "Conduct an air charge").
 - *(18) Bleed oxygen and ventilate ship. Ensure a seven day supply of oxygen is onboard and EOG(s) or Integrated Low Pressure Electrolyzer are fully operational. Ships without EOG(s) may provide a seven day supply of oxygen in O2 candle form and have oxygen banks inerted until after availability completion.
 - (19) Simulate anchoring.
 - (20) Operate atmosphere control equipment and take air samples.
 - *(21) Check out all interior communications circuits, including battle telephones.
 - (22) Simulate submerged patrol, performing all evolutions and operating equipment normally used.
 - *(23) Operate freshwater and seawater heat exchangers at sufficient load to verify proper operation (not fouled with marine growth).
 - (24) Submarines must meet all requirements of reference (t), Appendix D, Part 3.
- b. Additional requirements for SSBN and SSGNs. SSBN and SSGNs must conduct exercises in casualties to missile tube breather valves which would result in:
- (1) Flooding.
 - (2) Introducing toxic gases into the missile compartment from gas generators.

APPENDIX N**MINIMUM SEA TRIALS REQUIREMENTS FOR CHIEF OF NAVAL OPERATIONS
AVAILABILITIES LESS THAN SIX MONTHS DURATION****(SUBMARINES ONLY)**

1 Sea Trial Agenda. This Appendix delineates the minimum requirements incident to Sea Trials following a Chief of Naval Operations availability of less than six months duration. Additional events listed in Appendix O, Minimum Sea Trials Requirements for Chief of Naval Operations Availabilities Greater Than Six Months Duration (Submarines only), may be included by the shipyard based on the scope of the work accomplished or as desired by the CO.

2 Sea Trial Policy. The following policies apply to conduct of trials and tests associated with industrial activity availabilities, NAVSEA or Naval Surface Warfare Center, Carderock Division sponsored Trials and Tests or any other situation where the ship is requested to conduct trials or tests:

- a. No test or trial event must be conducted that requires crew intervention to avoid exceeding normal operating limits. Trial agendas will be based on the expectation that the ship will remain within normal operating limits of the SOE and at angles less than 30 degrees.
- b. The trial director(s) must be prepared to project whether the next event might exceed normal operating limits based on the empirical results of the previous event. A run that is predicted to exceed normal operating limits should be deleted along with the more demanding runs of that sequence.
- c. Any run which will result in exceeding normal operating limits of the SOE or 30 degree angles but which is essential to provide adequate test data must be specifically approved by the TYCOM. The test and trial sponsor will obtain this permission.
- d. A violation of the SOE limit or exceeding a 30 degree angle, not previously approved, should be reported by unit SITREP. The TYCOM will resolve the situation.
- e. Specific written approval by the TYCOM is not required to operate outside the upper limits of the SOE (i.e., shallow and fast) while conducting the following operations during Sea Trials or tests following an agenda approved by the ISIC, NAVSEA or higher authority:
 - (1) Conducting full power runs or cavitation curves.
 - (2) NAVSEA sponsored acoustic trials following Naval Surface Warfare Center, Carderock Division acoustic trial agenda.
- f. In cases where troubleshooting is required, it must meet the following criteria or a formally approved change to the agenda is mandatory.
 - (1) The troubleshooting does not violate any policy listed in paragraphs 2.a. through 2.e. of this Appendix or any other requirement of the trials agenda.
 - (2) The troubleshooting will not result in the ship being in a certain condition before that condition is reached during the normal testing sequence. For example, troubleshooting requiring the ship to be deeper than 200 feet cannot

be done until after the deep dive. Likewise, troubleshooting requiring large angles or turn rates cannot be done until after the completion of the steering and diving operational tests and the large angle tests.

- g. Each person involved in Sea Trials should be allowed to obtain a minimum of six hours of continuous, uninterrupted sleep during any 24-hour period.

3. Test Phasing. The Sea Trials should be scheduled and phased to support actions enroute to the test dive area, in the test dive area, prior to the deep dive, etc., subject to the amplifying notes.

- a. The following tests and evolutions must be carried out on the surface enroute to the test dive area and prior to the initial tightness dive:
 - (1) Underway. Rig for dive.
 - (2) Ship's Force instruct Sea Trials riders on the proper use of Emergency Air Breathing System.
 - (3) At slow speed, conduct operational test of rudder in all modes (local and remote) per applicable class operating procedures.
 - (4) Navigation system check. Take fixes by all means available and compare.
 - (5) Test underwater log(s) using the base course or reciprocal course method (i.e., inertial reference method) or other approved functional procedures to determine accuracy.
 - (6) Test accuracy of all bearing transmitters and indicators. Compare sonar, visual and radar bearings.
 - (7) Check operation of all radars. Demonstrate accuracy by conducting simultaneous radar and visual plot.
 - (8) Inspect stern tube packing gland, seals and circulating water flow for excessive heating, leakage and audible noise.
 - (9) Test fathometer(s) and compare with charted soundings.
 - (10) Run ahead at maximum allowable surface speed long enough for temperatures to reach a stable value. After readings have stabilized, at maximum allowable surface speed, operate the rudder through full throw in each direction, in all remote modes of operation.
 - (11) Ahead, at maximum allowable surface speed, to back emergency. For SSBN and SSGN 726 Class only - Answer ahead standard. Once ship speed has stabilized, perform back emergency for 5 minutes.
 - (12) Run astern up to a back full bell. Full power run astern to be within the main engine limits of the applicable Steam and Electric Plant Manual. For SSBN and SSGN 726 Class only - Run astern up to a back full bell for 5 minutes, followed by 60 SRPM for 5 minutes. (See Note 1.)
 - (13) Check operation and accuracy of ship's gyro compass.

- (14) Rendezvous with escort, if an escort is required. Conduct radio and sonar communications checks (See Note 2).
 - (15) Rig out bow planes, if applicable. Test bow, fairwater and stern planes in all modes.
 - (16) Flood variable tanks to computed compensation less a safety factor.
 - (17) Operate trim and drain pumps.
 - (18) Test variable ballast system for proper operation.
 - (19) Perform both a low pressure blow and an EMBT blow for as long as necessary to verify system operability. A static blow must not be used to test the EMBT blow system. For SSN 23 only: Additionally, perform an MBT 6 normal blow from the BCP for a minimum duration of 2 seconds to verify that air flows into MBT 6 as indicated by a reduction in air bank pressure. For SSBN and SSGN 726 Class submarines only: Additionally, perform a high pressure blow for as long as necessary to verify system operability.
 - (20) Check that initial EMBT Blow system actuating air pressure and air bank pressure is within +0 PSIG, -200 PSIG of nominal operating air pressure.
 - (21) Ensure all MBT blow systems are in a normal line up configuration.
 - (22) Additional requirements may be imposed at the discretion of the CO.
- b. The following tests and evolutions must be carried out immediately prior to or during the initial tightness dive:
- (1) Obtain navigational fix and take sounding. Maximum depth of water is 400 feet as specified in reference (u).
 - (2) Rig ship for deep submergence. Line up propulsion plant for maximum reliability. All systems must be in the maximum secure condition with unnecessary sea systems isolated (See Note 3).
 - (3) Station additional personnel throughout the ship to inspect for leaks.
 - (4) Transmit commencing initial tightness dive message. Submerge the ship per the Ship Systems Manual Operating Procedures. If desired to conduct periscope depth tests, the ship may be submerged to periscope depth.
 - (5) Check operation of ship control systems, including depth indication (See Note 4).
 - (6) When escort is required, communicate with escort on RAC or WQC at each depth increment or at 10 minute intervals, whichever is sooner. If communications are lost, return to depth at which communications can be established before continuing (See Note 2).
 - (7) All hands inspect for leaks and report them.
 - (8) Inspect the discharge of all automatic drains in each EMBT Blow quadrant for sea water leakage prior to the first dive when the ballast tanks are flooded (e.g., at periscope depth).

15 Jan 2021

- (9) At periscope depth, operate all masts checking optics and leakage. Observe speed and depth restrictions for masts without violation of the SOE (See Note 5). Event may be performed following initial dive, if sea state prevents operation at periscope depth.
- (10) Test operation of trim and drain system discharging to sea.
- (11) If not at 150 feet for SSN 688 Class submarines (155 feet for SSN 774 Class submarines), (160 feet for SSBN and SSGN 726 and SSN 21 Class submarines), proceed to 150 feet for SSN 688 Class submarines (155 feet for SSN 774 Class submarines), (160 feet for SSBN and SSGN 726 and SSN 21 Class submarines) and obtain SAT 1/3 trim per the Ship's Operating Manual. Take readings as required to make a check of ballasting.
- (12) At 200 feet:
 - (a) Adjust trim (See Note 6).
 - (b) Inspect for leaks.
 - (c) Communicate with escort at each depth increment or at 10-minute intervals, whichever is sooner. If communications are lost, return to depth at which communications can be re-established before continuing (See Note 2).
- (13) At 200 feet, per reference (ai):
 - (a) Check accuracy of gauges and repeaters (See Note 4).
 - (b) Evaluate signal ejectors or launchers. Conduct operational test of each by hand and impulse methods, as applicable (See Note 7).
 - (c) Check shafting bearings and stern tubes for excessive heating, leakage and noise. Main shaft seals must be tested at each depth specified in reference (ai) testing one seal for 20 minutes, and shifting to the other seal. Test the second seal for 20 minutes or until the boat is ready to go to the next depth, whichever comes first.
 - (d) Cycle rudder and planes through full throw at slow speed to check for binding.
 - (e) Operate all Main and Auxiliary Sea Water hull and back-up valves and those other seawater system valves worked during the availability (using remote closures, as applicable, from flooding control stations) that are required to maintain propulsion and other functions vital to the ship's operation.

NOTE: REQUIRED SYSTEMS ARE LISTED IN PARAGRAPH 4b OF REFERENCE (ai). OBSERVE RESTRICTIONS ON OPERATION OF SYSTEMS LISTED IN PARAGRAPH 4d OF REFERENCE (ai).

- (f) Test operation of trim and drain system discharging to sea.
- (g) Cycle main ballast tank vents hydraulically to check for binding.

- (14) Test the SPM (see Note 13 in Appendix O of this chapter).
- (15) Additional requirements may be imposed at the discretion of the CO.
- c. The following tests and evolutions must be carried out following the initial tightness dive and prior to the deep dive:
 - (1) Transmit initial tightness dive complete message (See Note 12).
 - (2) A minimum of six hours of Individual Ship Exercises submerged for crew training.
 - (3) Charge air banks and battery as necessary. The ship may be submerged while charging air banks provided the depth of the ship does not exceed other guidelines in this instruction, or those of the flooding bill or ship's operating procedure.
 - (4) If escort is required, detach escort after initial tightness dive. Escort will then proceed to station for deep dive. Ensure that deep dive rendezvous time and location are clearly established before escort is released. The escort may be retained for additional testing during the transit as described in Appendix P. Transit depths must not exceed depth as described in Appendix P.
 - (5) Additional requirements may be imposed at the discretion of the CO.
- d. The following tests and evolutions must be carried out immediately prior to or during the deep dive:
 - (1) Check that initial EMBT Blow system actuating air pressure and air bank pressure is within +0 PSIG, -200 PSIG of nominal operating air pressure.
 - (2) Verify MBT systems lined up for normal operation.
 - (3) Take sounding. Accurately fix ship's position within the specified dive area per reference (u). Transmit the commencing deep dive message.
 - (4) Proceed to normal submergence depth and obtain 1/3 speed trim. Use conservative angles and speed on initial dive.
 - (5) Trim ship to maintain neutral buoyancy (See Note 6).
 - (6) Rig ship for deep submergence. Line up propulsion plant for maximum reliability. All systems must be in the maximum secure condition with unnecessary sea systems isolated (See Note 3).
 - (7) Station additional personnel throughout the ship to inspect for leaks.
 - (8) At 400 feet and then in increments of 100 feet descending to one-half the maximum operating depth and every 100 feet or other lesser specified increments thereafter down to the maximum authorized operating depth:
 - (a) Adjust trim (See Note 6).
 - (b) Inspect for leaks.
 - (c) Communicate with escort (if escort required) at each 100-foot depth

15 Jan 2021

increment or at 10 minute intervals, whichever is sooner. If communications are lost, return to a depth at which communications can be re-established before continuing (See Note 2).

NOTE: REQUIRED SYSTEMS ARE LISTED IN PARAGRAPH 4b OF REFERENCE (ai). OBSERVE RESTRICTIONS ON OPERATION OF SYSTEMS LISTED IN PARAGRAPH 4d OF REFERENCE (ai).

- (9) At depths listed for hull valve cycling in reference (ai) including the maximum authorized operation depth:
 - (a) Check accuracy of gauges and repeaters (See Note 4).
 - (b) Evaluate signal ejectors or launchers. Conduct operational test of each by hand and impulse methods, as applicable (See Note 7).
 - (c) Check shafting bearings and stern tubes for excessive heating, leakage and noise. Main shaft seals must be tested at each depth specified in reference (ai) testing one seal for 20 minutes, and shifting to the other seal. Test the second seal for 20 minutes or until the boat is ready to go to the next depth, whichever comes first.
 - (d) Cycle rudder and planes through full throw at slow speeds to check for binding. Cycling of rudder and planes through full throw must be limited to 90% of test depth. For SSN 21 Class follow the specific Sea Trial Agenda.
 - (e) Operate all Main and Auxiliary Sea Water hull and back-up valves and those other seawater system valves worked during the availability (using remote closures, as applicable, from flooding control stations) that are required to maintain propulsion and other functions vital to the ship's operation at increments of depth specified in reference (ai).

NOTE: TRASH DISPOSAL UNITS (TDU) WITH BALL VALVES WILL NOT BE OPERATED BELOW 200 FEET. TDUs WITH FLAPPER VALVES WILL NOT BE OPERATED BELOW 150 FEET.

- (f) Operate trim and drain pumps, discharging to sea.
 - (g) Cycle main ballast tank vents to check for binding. Main ballast tank vents will be cycled hydraulically except at test depth where they will be cycled manually.
- (10) Surface fully with EMBT blow per applicable URO MRC. Check air bank pressures before and after blow. For SSN 23 only: Perform an MBT 6 normal blow from the BCP until MBTs 6A and 6B are blown to residual water levels.
- (11) Transmit completion of deep dive message (See Note 12).
- (12) Additional requirements may be imposed at the discretion of the Commanding Officer.
- e. The following tests and evolutions must be carried out submerged following the deep dive:

- (1) Full power run (See Notes 8, 9 and 10).
- (2) Emergency stop (See Notes 9 and 10).
- (3) Steering and diving operation at full speed (See Notes 9 and 11).
- (4) Steep angles - operate ship through several depth changes using large up and down angles. Check operation of ship machinery (See Note 9).
- (5) Time raising each periscope and mast at maximum depth and speed for which they are designed. Check training feature where applicable.
- (6) Run and observe air conditioning plants throughout trials noting deficiencies. Operate the Lithium Bromide air conditioning plant (if installed) to demonstrate ability to carry entire maximum existing ship's air conditioning load or 100 percent capacity.
- (7) Shoot water slugs from all torpedo tubes (See Note 13).
- (8) Additional requirements may be imposed at the discretion of the Commanding Officer.

4. Sea Trial Conclusion. At the conclusion of Sea Trials, and based on a review of Sea Trial deficiencies and TYCOM concurrence, the submarine may transit to a port other than the overhauling activity. During this transit the submarine must not operate at depths greater than one-half test depth plus fifty feet, unless specifically authorized by NAVSEA, and must not be released for unrestricted operations until final certification is received via message from the TYCOM (Appendix BO).

NOTES

1. For SSBN and SSGN 726 Class submarines only - This surface evolution, full power run astern, must be conducted only if maintenance was accomplished on the reduction gears, the astern throttle(s) or the main shaft thrust bearing.
2. In the execution of any Sea Trial, whether escorted or not, submarine COs are reminded of their responsibility to communicate with escorts, shore authorities, or both, within the prescribed previously agreed upon time limits to avoid initiation of lost submarine procedures.
3. Reference (ai) (C9094.2 (Series)) prescribes procedures for system operation during the deep dive.
4. Compare all depth and pressure gauges. Depth and pressure gauges should be checked as soon as each next specified depth is reached.
5. Any evolutions (e.g., mast testing, propeller cavitation data collection, etc.) required by the Sea Trials Agenda which violate the ship's SOE must be approved by the TYCOM prior to Sea Trials per paragraph 2 of this Appendix.
6. Deep dive should be conducted using moderate speed and constantly adjusting trim, at depths indicated in paragraphs 3.b.(12)(a) and 3.d.(8)(a) of this Appendix, to maintain neutral buoyancy. Moderate speed must be defined as that range of speed that allows the ship to recover from a loss of stern plane control or flooding casualty.
7. Integrity of launchers or signal ejectors must be established by admitting sea pressure through equalizing lines or flooding connection and the muzzle valve or door operated before conducting operational tests. Shoot water slugs from specified launchers or signal ejectors, at depths specified by reference (ai). Shoot pyrotechnics on initial dive and at test depth on deep dive only if work was accomplished on the launchers or signal ejectors or if an escort vessel is required for the trial.
8. Run full power submerged for at least two hours. Operate at minimum non-cavitating depth but not to exceed 400 feet, per reference (u); water depth is not limited for this event.
9.
 - A. The required sequence of events is initial dive, deep dive, full power run submerged, back emergency, then high speed maneuverability and steep angle tests.
 - B. Completion of full power runs, deep dives and EMBT blow tests are prerequisites for high speed maneuverability and steep angle tests. Initial high speed ship control tests, steep angle tests and exercises at major casualties must be conducted in water that does not exceed one and one-half times design test depth.
10. The submerged full power run with an ahead flank bell is to be terminated with a back emergency bell, consistent with current Main Propulsion Operating Limits (shaft torque is not a limiting factor in this test). The duration of the back emergency bell will be limited to 45 seconds, to be followed immediately by an appropriate ahead bell. The 45 second limit will:

- a. **Standardize the crashback requirements throughout the submarine force.**
 - b. **Provide a backing transient similar to that experienced in response to a stern plane jam.**
 - c. **Be short enough that no ship will gather sternway.**
- 11. At maximum safe speed, operate the rudder and planes through full throw in both directions, in all remote modes of operation.**
 - 12. If required, perform resistance measurement checks of communication antennas per Volume IV, Chapter 22, paragraph 22.4 of this manual.**
 - 13. Shoot water slugs at a speed and depth defined by the Commanding Officer unless otherwise specified in the Sea Trial Agenda.**

APPENDIX O**MINIMUM SEA TRIALS REQUIREMENTS FOR CHIEF OF NAVAL OPERATIONS
AVAILABILITIES GREATER THAN SIX MONTHS DURATION****(SUBMARINES ONLY)**

1. Sea Trial Agenda. This Appendix provides the minimum requirements following a major Depot availability of greater than six months duration. Due to unique ship configuration, work performed or operational area requirements, these events may be re-sequenced as they are integrated with the testing required to certify shipyard and Ship's Force work, and the additional events required by the Commanding Officer of the submarine. TYCOM approval and NAVSEA concurrence with these changes is obtained when NAVSEA concurs and the cognizant TYCOM approves the agenda.
2. Sea Trial Policy. The following applies to the conduct of trials and tests associated with ships following major industrial activity availabilities, NAVSEA or Naval Surface Warfare Center, Carderock Division sponsored Trials and Tests or any other situation where the ship is requested to conduct trials or tests:
 - a. No test or trial event must be conducted that requires crew intervention to avoid exceeding normal operating limits. Trial agendas will be based on the expectation that the ship will remain within the normal operating limits of the SOE and at angles less than 30 degrees.
 - b. The trial director(s) must be prepared to project whether the next event might exceed normal operating limits based on the empirical results of the previous event. A run that is predicted to exceed normal operating limits should be deleted along with the more demanding runs of that sequence.
 - c. Any run which will result in exceeding normal operating limits of the SOE or 30 degree angles but which is essential to provide adequate test data must be specifically approved by the TYCOM. The test or trial sponsor will obtain this permission.
 - d. A violation of the SOE limit or exceeding a 30 degree angle, not previously approved, should be reported by unit SITREP. The TYCOM will resolve the situation.
 - e. Specific written approval by the TYCOM is not required to operate outside the upper limits of the SOE (i.e., shallow and fast) while conducting the following operations during Sea Trials or tests following an agenda approved by the ISIC, NAVSEA or higher authority:
 - (1) Conducting full power runs or cavitation curves.
 - (2) Conducting NAVSEA sponsored acoustic trials following Naval Surface Warfare Center, Carderock Division acoustic trial agenda.
 - (3) The 200 foot EMBT blow conducted at the conclusion of the initial tightness dive.
 - f. In cases where troubleshooting is required, it must meet the following criteria or a formally approved change to the agenda is mandatory.

- (1) The troubleshooting does not violate any policy listed in paragraphs 2.a. through 2.e. of this Appendix or any other requirement of the trials agenda.
- (2) The troubleshooting will not result in the ship being in a certain condition before that condition is reached during the normal testing sequence. For example, troubleshooting requiring the ship to be deeper than 200 feet cannot be done until after the deep dive. Likewise, troubleshooting requiring large angles or turn rates cannot be done until after the completion of the steering and diving operational tests and the large angle tests.
- (3) The depth authorization for sea trials is automatically suspended upon re-entry to the SUBSAFE certification boundary or casualty affecting recoverability, salvage, watertight integrity or operation of the ship's control surfaces. The ship must not operate at a depth greater than 200 feet until re-entry is certified to the TYCOM and the TYCOM grants approval to operate (resume sea trials) to test depth.
- (4) In the instance of SUBSAFE REC conducted only to adjust Flood Control hydraulic valve or hull closure timing (discovered during individual valve or hull closure cycling or during Flood Control System Operation), the ship is authorized to continue with Sea Trials without specific message correspondence from TYCOM and the most recent depth message is considered valid, provided that:
 - (a) The ship initiates a REC to correct the identified valve or hull closure timing deficiency and the ship operates no deeper than 200 feet while valve or hull closure timing adjustments are in progress.
 - (b) Valve or hull closure timing, as well as applicable flood control system timing, is verified to be within specification prior to resumption of the deep dive or proceeding to depths greater than 200 feet.
 - (c) The REC is closed and a report is made to TYCOM on material deficiencies and corrective actions taken related to Flood Control valve or hull closure timing adjustments prior to resumption of the deep dive or proceeding to depths greater than 200 feet.

- g. Each person involved in Sea Trials should be allowed to obtain a minimum of six hours of continuous, uninterrupted sleep during any 24 hour period.

3. Test Phasing. The Sea Trials should be scheduled and phased to support actions en route to the test dive area, in the test dive area, prior to the deep dive, etc., subject to these amplifying notes:

- a. The following tests and evolutions may be carried out at any time during Sea Trials.
 - (1) Test operation of fresh water production (distilling plants or reverse osmosis systems) noting deficiencies.
 - (2) Test operation of high pressure and low pressure air compressors.

- (3) Run and observe air conditioning plants throughout trials noting deficiencies. Operate air conditioning plant to demonstrate ability to carry the maximum existing ship's air conditioning load, or 100 percent capacity.
 - (4) Run and observe refrigeration plant throughout trials, noting deficiencies.
 - (5) Operate IFF and ESM equipment. If possible, use aircraft.
 - (6) Test all radio transmitters, receivers, and electronic equipment. Test on all possible antenna combinations including emergency antennas and emergency radio equipment.
 - (7) Fire control system operation. Check target designation system, alignment of sensors to bench marks and transmissions to receivers. Compute fire control solutions on available contacts. Conduct transmission checks to tubes.
 - (8) Check operation of magazine flooding if not tested in industrial activity.
 - (9) Additional requirements may be imposed at the discretion of the CO.
- b. The following tests and evolutions, summarized in Appendix P, must be carried out on the surface en route to the test dive area and prior to the initial tightness dive:
- (1) Underway. Rig for dive.
 - (2) Ship's Force instruct Sea Trial riders on the proper use of Emergency Air Breathing system.
 - (3) At slow speed, conduct operational tests of rudder in all modes (local and remote) per applicable class operating procedures.
 - (4) Navigation system check. Take fixes by all means available and compare.
 - (5) Test underwater log(s) using the base course or reciprocal course method (i.e., inertial reference method) or other approved functional procedures to determine accuracy.
 - (6) Test accuracy of all bearing transmitters and indicators. Compare sonar, visual and radar bearings.
 - (7) Check operation of all radars. Determine accuracy by conducting simultaneous radar and visual plot.
 - (8) Inspect stern tube packing gland and seals and circulating water flow for excessive heating, leakage and audible noise.
 - (9) Test Dead Reckoning Analyzer Indicator (if installed) or Dead Reckoning Analyzer (if installed), Dead Reckoning Tracers (if installed) and Revolution Per Minute (RPM) indication.
 - (10) Test fathometer(s) and compare with charted soundings.
 - (11) Run ahead at maximum allowable surface shaft RPM long enough for temperatures to reach a stable value. After readings have stabilized, at maximum allowable surface shaft RPM, operate the rudder through full throw

in each direction, in all remote modes of operation. Time evolution and compare with design values. (See Note 1).

- (12) Ahead, at maximum allowed surface shaft RPM, to back emergency.
For SSBN and SSGN 726 Class only - Answer ahead standard. Once ship speed has stabilized, perform back emergency for 5 minutes. This event may be conducted after the submerged full power run.
 - (13) Run astern up to a back full bell for 10 minutes or to meet the intent of a more restrictive industrial activity test. Full power run astern to be within the main engine limits of the applicable Steam and Electric Plant Manual.
For SSBN and SSGN 726 Class only - Run astern up to a back full bell for 5 minutes, followed by 60 SRPM for 5 minutes. (See Note 3.)
 - (14) Check operation and accuracy of ship's gyrocompass.
 - (15) Rendezvous with escort. Conduct radio and sonar communications checks (See Note 4).
 - (16) Test all bottom side sonars.
 - (17) Rig out bow planes, if applicable. Test bow, fairwater and stern planes in all modes.
 - (18) Flood variable tanks to computed compensation less a safety factor.
 - (19) Perform resistance measurement checks on all antennas, as appropriate.
 - (20) Operate trim and drain pumps (See Note 5).
 - (21) Test variable ballast system for proper operation.
 - (22) Perform both a low pressure blow and an EMBT blow for as long as necessary to verify system operability. A static blow must not be used to test the EMBT blow system. For SSN 23 only: Additionally, perform an MBT 6 normal blow from the BCP for a minimum duration of 2 seconds to verify that air flows into MBT 6 as indicated by a reduction in air bank pressure. For SSBN and SSGN 726 Class submarines only: Additionally, perform a high pressure blow for as long as necessary to verify system operability.
 - (23) Operate the Emergency Propulsion Motor for 10 minutes.
 - (24) Surface ventilate ship.
 - (25) Check that initial EMBT Blow system actuating air pressure and air bank pressure is within +0 PSIG, -200 PSIG of nominal operating air pressure.
 - (26) Ensure all MBT blow systems are in a normal line up.
 - (27) Start atmosphere control equipment.
 - (28) Additional requirements may be imposed at the discretion of the CO.
- c. The following tests and evolutions, summarized in Appendix P, must be carried out immediately prior to or during the initial tightness dive:

- (1) Obtain navigational fix and take soundings. Maximum depth of water is 400 feet as specified in reference (u).
- (2) Rig ship for Deep Submergence. Line up propulsion plant for maximum reliability. All systems must be in the maximum secure condition with unnecessary sea systems isolated (See Note 6).
- (3) Station additional personnel throughout the ship to inspect for leaks.
- (4) Transmit commencing initial tightness dive message. Submerge the ship per the Ship Systems Manual Operating Procedures. If desired to conduct periscope depth tests, the ship may be submerged to periscope depth.
- (5) Check operation of ship control systems, including depth indication (See Note 7).
- (6) Equalize signal ejectors or launchers. Shoot pyrotechnics from each by hand and impulse methods (See Note 8).
- (7) Communicate with escort on RAC or WQC at each depth increment or at 10 minute intervals, whichever is sooner. If communications are lost, return to depth at which communications can be established before continuing (See Note 4).
- (8) All hands inspect for leaks and report them.
- (9) Inspect the discharge of all automatic drains in each EMBT Blow quadrant for sea water leakage prior to the first dive when the ballast tanks are flooded (e.g., at periscope depth).
- (10) Operate all periscopes checking optics and leakage. Operate all masts.
- (11) Test full throw of rudder and planes at slow speeds.
- (12) Test operation of trim and drain system discharging to sea.
- (13) If not at 150 feet for SSN 688 Class submarines (155 feet for SSN 774 Class submarines), (160 feet for SSBN and SSGN 726 Class and SSN 21 Class submarines), proceed to 150 feet for SSN 688 Class submarines (155 feet for SSN 774 Class submarines), (160 feet for SSBN and SSGN 726 Class and SSN 21 Class submarines) and obtain SAT 1/3 trim per the Ship's Operating Manual. Take readings as required to make a check of ballasting.
- (14) At 150 feet for SSN 688 Class submarines (155 feet for SSN 774 Class submarines, 160 feet for SSBN Class and SSGN 726 Class submarines and SSN 21 Class submarines), verify operation of each BQN-13 Transmitter using the ship's own SONAR.
- (15) Test all sonar equipment on each hydrophone. In addition, for SSBN and SSGN 726 Class submarines, test the Emergency Underwater Telephone (BQC) on each hydrophone.
- (16) At 200 feet:
 - (a) Adjust trim (See Note 10).

- (b) Inspect for leaks.
 - (c) Communicate with escort at each depth increment or at 10 minute intervals, whichever is sooner. If communications are lost, return to depth at which communications can be re-established before continuing (See Note 4).
- (17) At 200 feet as specified in reference (ai):
- (a) Check accuracy of depth gauges and repeater (See Note 7).
 - (b) Equalize signal ejectors or launchers and conduct operational tests (See Note 8).
 - (c) Check shaft bearings and stern tubes for excessive heating, leakage and noise. Test one seal for 20 minutes and shift to the other seal. Test the second seal for 20 minutes or until the boat is ready to go to the next depth, whichever comes first.
 - (d) Cycle rudder and planes through full throw, at slow speeds, to check for binding (See Note 11).
 - (e) Operate all hull and back-up valves (using remote closures, as applicable, from flooding control stations) of seawater systems required to maintain propulsion and other functions vital to the ship's operation.

NOTE: REQUIRED SYSTEMS ARE LISTED IN PARAGRAPH 4.b. OF REFERENCE (ai). OBSERVE RESTRICTION ON OPERATION OF SYSTEMS LISTED IN PARAGRAPH 4.d. OF REFERENCE (ai).

- (f) Check operation of bulkhead ventilation valves and watertight doors for binding (excluding lower escape hatches).
 - (g) Operate trim and drain pumps, discharging to sea.
 - (h) Cycle components of each torpedo tube. Check for leakage. Establish integrity of torpedo tubes by admitting sea pressure through equalizing lines or flooding connection before cycling components (See Note 2).
 - (i) Cycle main ballast tank vents hydraulically to check for binding.
 - (j) Equalize TDU with sea pressure through trim line, then cycle the muzzle valve.
 - (k) Where installed, demonstrate ability of sanitary pump to discharge overboard.
- (18) Conduct an EMBT blow from 200 feet keel depth. Check bank pressure before and after surfacing. Additionally, for SSN 23 only, perform a MBT 6 normal blow from the BCP until MBT 6A and 6B are blown to residual water levels. Surfacing with EMBT blow may be delayed to accommodate additional testing or transit as explained in Appendix P.
- (19) Additional requirements may be imposed at the discretion of the CO.

- d. The following tests and evolutions, summarized in Appendix P, must be carried out following the initial tightness dive and prior to the deep dive:
- (1) Transmit initial tightness dive completion message. (See Note 19.)
 - (2) A minimum of six hours of Individual Ship Exercises submerged for crew training.
 - (3) Charge air banks and battery as necessary. The ship may be submerged while charging air banks provided the depth of the ship does not exceed other guidelines in this instruction or those of the flooding bill or ship's operating procedures.
 - (4) Detach escort after initial tightness dive. Escort will then proceed to station for deep dive. Ensure that deep dive rendezvous time and location are clearly established before escort is released. The escort may be retained for additional testing during the transit as described in Appendix P. Transit depth must not exceed depth as described in Appendix P.
 - (5) Additional requirements may be imposed at the discretion of the CO.
- e. The following tests and evolutions, may be carried out following the initial tightness dive but are not required to be completed prior to the deep dive:
- (1) Snorkel on each engine designed for snorkeling. (See Notes 9 and 12).
 - (2) Test the SPM (see Note 13).
 - (3) Check hovering system (See Note 9).
 - (4) Additional requirements may be imposed at the discretion of the CO.
- f. The following tests and evolutions, summarized in Appendix P, must be carried out immediately prior to or during the deep dive:
- (1) Check that initial EMBT Blow system actuating air pressure and air bank pressure is within +0 PSIG, -200 PSIG of nominal operating air pressure.
 - (2) Verify MBT system lined up for normal operation.
 - (3) Take soundings. Maximum water depth is given in reference (u). Accurately fix the ship's position within the specified dive area, per reference (u). Transmit commencing deep dive message.
 - (4) Proceed to normal submergence depth and obtain slow speed trim. Use conservative angles and speed.
 - (5) Trim ship to maintain neutral buoyancy (See Note 10).
 - (6) Rig ship for deep submergence. Line up propulsion plant for maximum reliability. All systems should be in the maximum secure condition with unnecessary sea systems isolated (See Note 6).
 - (7) Station additional personnel throughout the ship to inspect for leaks.

- (8) At 400 feet and then in increments of 100 feet descending to one-half the maximum operating depth and every 100 feet or other lesser specified increments thereafter down to the maximum authorized operating depth:
 - (a) Adjust trim (See Note 10).
 - (b) Inspect for leaks.
 - (c) Communicate with escort at each depth increment or at 10 minute intervals, whichever is sooner. If communications are lost, return to depth at which communications can be re-established before continuing (See Note 4).
- (9) At depths listed for hull valve cycling in reference (ai) (as applicable), except maximum authorized operating depth:
 - (a) Check accuracy of depth gauges and repeater (See Note 7).
 - (b) Equalize signal ejectors or launchers and conduct operational tests (See Note 8).
 - (c) Check shaft bearings and stern tubes for excessive heating, leakage and noise. Main shaft seals must be tested at each depth specified in reference (ai), testing one seal for 20 minutes and shifting to the other seal. Test the second seal for 20 minutes or until the boat is ready to go to the next depth, whichever comes first.
 - (d) Cycle rudder and planes through full throw, at slow speeds, to check for binding (See Note 11).
 - (e) Operate all hull and back-up valves (using remote closures, as applicable, from flooding control stations) of seawater systems required to maintain propulsion and other functions vital to the ship's operation at increments of depth specified in reference (ai).

NOTE: REQUIRED SYSTEMS ARE LISTED IN PARAGRAPH 4.b. OF REFERENCE (ai). OBSERVE RESTRICTION ON OPERATION OF SYSTEMS LISTED IN PARAGRAPH 4.d. OF REFERENCE (ai).

- (f) Check operation of bulkhead ventilation valves and watertight doors for binding (excluding lower escape hatches).
- (g) Operate trim and drain pumps, discharging to sea.
- (h) Cycle components of each torpedo tube. Check for leakage. Establish integrity of torpedo tubes by admitting sea pressure through equalizing lines or flooding connection before cycling components (See Notes 2 and 9).
- (i) Cycle main ballast tank vents to check for binding. Main ballast tank vents will be cycled hydraulically except at test depth where they will be cycled manually.
- (j) Equalize TDU with sea pressure through trim line.

- (k) Where installed, demonstrate ability of sanitary pump to discharge overboard.

NOTE: DURING SEA TRIALS DO NOT OPERATE TDUs WITH BALL VALVES BELOW 200 FEET OR TDUs WITH FLAPPER VALVES BELOW 150 FEET.

- (10) At maximum authorized operating depth:
 - (a) Repeat item (9) (a) - Depth gauges and repeaters. (See Note 7)
 - (b) Equalize signal ejectors or launchers. Shoot pyrotechnics from each by hand and impulse methods, as applicable (See Note 8).
 - (c) Repeat item (9) (c) - Shafting and bearings.
 - (d) Repeat item (9) (e) - Cycle hull and back-up valves as specified in reference (ai).
 - (e) Repeat item (9) (f) - Bulkhead ventilation valves and watertight doors.
 - (f) Repeat item (9) (g) - Trim and drain pumps.
 - (g) Repeat item (9) (h) - Torpedo tubes. (See Notes 2 and 9)
 - (h) Repeat item (9) (i) - Cycle main ballast tank vents, manually only, and check for binding.
 - (i) Repeat item (9) (j) - Equalize TDU with sea pressure through trim line.
 - (j) Repeat item (9) (k) - Sanitary pump.
 - (11) Prior to blow, visually inspect discharge of automatic drains in each EMBT quadrant for seawater leakage. Surface fully with EMBT blow from maximum authorized operating depth (not to exceed maximum depth permitted by the SOE at the initial speed required for the test). Check air bank pressures before and after blow. For SSN 23 only: Perform an MBT 6 normal blow from the BCP until MBTs 6A and 6B are blown to residual water levels.
 - (12) Additional requirements may be imposed at the discretion of the CO.
- g. The following tests and evolutions must be carried out on the surface following the deep dive:
- (1) Transmit completion of deep dive message. (See Note 19.)
 - (2) Note condition of periscope optics.
 - (3) Measure resistance to ground of all external electrical cables (may be accomplished upon return to dockside port).
 - (4) Take radio antenna resistance measurement readings (as appropriate) immediately after surfacing, if there are UNSAT readings again in one-half hour, and compare with readings obtained in item 3.b.(19) of this appendix.
 - (5) Measure resistance across and to ground from each side of all sonar hydrophones, projectors, and transducers or run applicable sonar hydrophone and transducer fault localization test (See Notes 14 and 20).

- (6) Measure rodmeter coil and button resistance and coil insulation resistance to ground.
- (7) Open all lower hatches. Check the upper hatch seals, Logistics Escape Trunks or Logistics Plug Trunks inter-seals and penetrations for leakage. Open the sonar sphere access door, where applicable, and check sonar sphere for leakage.
- h. The following tests and evolutions must be carried out submerged following the deep dive:
 - (1) Full power run (See Notes 15, 16 and 17).
 - (2) Emergency stop (See Notes 15 and 16).
 - (3) Steering and diving operation at full speed (See Notes 16 and 18).
 - (4) Steep angles - operate ship through several depth changes using large up and down angles to check operation of ship machinery (See Note 16).
 - (5) Time raising each periscope and mast at maximum depth and speed for which they are designed. Check training feature where applicable.
 - (6) Shoot water slugs from all torpedo tubes. The CS and CCS test program does not always fulfill this requirement (See Note 2).
 - (7) Run ahead at maximum speed allowed by SOE. Operate torpedo tube shutters and ejection pump shutters. If shutters do not open, gradually reduce speed until shutters open. This establishes "stall speed" for each shutter.
 - (8) Additional requirements may be imposed at the discretion of the CO.

4. Sea Trial Conclusion. At the conclusion of Sea Trials, and based on a review of Sea Trial deficiencies and TYCOM concurrence, the submarine may transit to a port other than the overhauling activity. During this transit the submarine must not operate at depths greater than one-half test depth plus fifty feet, unless specifically authorized by NAVSEA, and must not be released for unrestricted operations until all RECs are closed and final URO certification is received, per the Submarine Safety (SUBSAFE) Requirements Manual.

NOTES

1. **Temporary condensate strainers that cannot be monitored for differential pressure must be inspected and cleaned during sea trials following at least one hour of operation at between 45 and 55 percent reactor power, and prior to operation at higher power levels, per reference (ay).**
2. **Fire water slugs from torpedo tubes at the depths and speeds required by the CS and CCS test program (or Combat Systems Assessment or Non-Propulsion Electronic System Operability, Verification and Evaluation, as applicable). If the CS and CCS test program does not fire water slugs, shoot water slugs at a speed and depth defined by the Commanding Officer.**

3. For SSBN and SSGN 726 Class only - This surface evolution, full power run astern, must be conducted only if maintenance was accomplished on the reduction gears, the astern throttle(s) or the main shaft thrust bearing.
4. In the execution of any Sea Trial, whether escorted or not, submarine COs are reminded of their responsibility to communicate with escorts, shore authorities, or both, within prescribed, previously agreed upon, time limits to avoid initiation of inadvertent lost contact or submarine disaster procedures.
5. Pumps should be tested in the industrial activity, prior to Sea Trials, to determine that they can pump against a test depth head.
6. Reference (ai) prescribes procedures for system operation during deep dive.
7. Compare all depth and pressure gauges. Depth and pressure gauges should be checked as soon as the next specified depth is reached.
8. Integrity of launchers or signal ejectors must be established by admitting sea pressure through equalizing lines or flooding connection and the muzzle valve or door operated before conducting operational tests. Shoot water slugs from specified launchers or signal ejectors, at depths specified by reference (ai). Shoot pyrotechnics on initial dive and at test depth on deep dive. Shooting of pyrotechnics during the initial dive must be accomplished in conjunction with the 200 foot EMBT Blow. Shooting of pyrotechnics at test depth during the deep dive must be accomplished in conjunction with the test depth EMBT Blow.
9. If major structural modifications were accomplished, those seawater systems which are not required for normal safe operation of the ship at test depth, but which have been designed for and may be subjected to test depth pressure, should not be subjected to submergence pressure during the initial dive to any specified depth (e.g., blown sanitary tanks). If major structural modifications were not accomplished, those sea water systems which are not required for normal safe operation of the ship at test depth, but which have been designed for and may be subjected to test depth pressure, may be equalized and operated on the initial dive to test depth (See reference (ai)).
10. Deep dive should be conducted using moderate speed and constantly adjusting trim, at depths indicated in paragraph 3.c.(15)(a) and 3.f.(8)(a) of this Appendix, to maintain neutral buoyancy. Moderate speed must be defined as that range of speed that allows the ship to recover from a loss of stern plane control or flooding casualty or as otherwise directed by NAVSEA.
11. Cycling of rudder and planes through full throw must be limited to 90% of test depth. For SSN 21 Class follow the specific Sea Trial Agenda.
12. Check operation of electrodes, head valve and each snorkel safety circuit.
13. The following table summarizes SPM and SPU limitations:

15 Jan 2021

TABLE 1. SPM and SPU Limitation Table (all classes)

Operational Cycle	Extend	Retract	Train	*Operate	*Drag
Sea Trials (Post Overhaul, New Construction)	200 Ft 5 Kts	200 Ft 5 Kts	200 Ft 5 Kts	200 Ft 5 Kts	200 Ft 10 Kts

* Do not violate the SOE of the ship.

14. The spherical array need not be done if an array purge or power into the array measurements are scheduled at a later date.
15. The submerged full power run with an ahead flank bell is to be terminated with a back emergency bell, consistent with current Main Propulsion Operating Limits (shaft torque is not a limiting factor in this test). The duration of the back emergency bell will be limited to 45 seconds, to be followed immediately by an appropriate ahead bell. The 45 second limit will:
 - a. Standardize the crashback requirements throughout the submarine force.
 - b. Provide a backing transient similar to that experienced during a stern plane jam.
 - c. Be short enough that no ship will gather sternway.
16. A. The required sequence of events is initial dive, deep dive, full power run submerged, back emergency, then high speed maneuverability and steep angle tests.
 B. Completion of full power runs, deep dives and EMBT blow tests are prerequisites for high speed maneuverability and steep angle tests. Initial high speed ship control tests, steep angle tests and exercises at major casualties must be conducted in water that does not exceed one and one-half times design test depth.
17. Run full power submerged for at least two hours. CO may schedule full power run for four hours if he deems it necessary. Submarine depth during the submerged full power run should be per reference (u), based on the EMBT blow from maximum authorized operating depth being previously accomplished.
18. At maximum safe speed, operate the rudder and planes through full throw in both directions in all remote modes of operation. Time evolutions and check against design values.
19. Perform resistance measurement checks on communication antennas per Volume IV, Chapter 22, paragraph 22.4 of this manual.
20. Electrical or fault localization testing of sonar sensors located above the waterline should be tested while the sonar sensor is submerged

APPENDIX P
SUMMARY OF SIGNIFICANT POST REPAIR SEA TRIAL REQUIREMENTS
(SUBMARINES ONLY)

SEA TRIALS	TRANSIT TO	INITIAL TIGHTNESS DIVE	TRANSIT BETWEEN DIVES	DEEP DIVE	TRANSIT BACK
Policy Reference	Appendix O Paragraph 3.b.	Appendix O Paragraph 3.c.	Appendix O Paragraph 3.d.	Appendix O Paragraph 3.f.	Appendix O Paragraph 3.g.
Start Depth	Surface	Surface	Surface to 400 Ft	Surface to 400 Ft	Surface
Conduct Depth	Surface	Periscope depth or about 150 ft for SSN 688 Class (155 ft for SSN 774 Class), (160 ft SSN 21 and SSBN and SSGN 726 Class) if sea state dictates for trim. Remaining events of Appendix O, Paragraph 3.c. no deeper than 200 ft.	Surface to 400 Ft but not to exceed deepest depth previously escorted or valve cycling accomplished. Additional trials and testing permitted within the ISE, crew rest and other requirements of this instruction.	200 Ft increments to ½ max Op depth, then 100 ft increments to max Op depth per Appendix O, Paragraph 3.f.	½ Test depth plus 50 ft.
Maximum Keel Depth	Surface	200 Ft	400 Ft	Maximum Authorized Operating Depth.	½ Test depth plus 50 ft.
Finish Event	Rendezvous with escort.	Surface from 200 Ft with EMBT blow.*	Rendezvous with escort	Deep dive will be terminated with an EMBT blow from max authorized Op depth.	TYCOM issue URO authorization message.
Escort Required	No	Yes**	No	Yes	No
SRDRS Required	No***	Yes	No***	Yes	No
Water Depth	Surface	400 Ft per reference (u).	Unlimited.	Reference (u).	

* - May be delayed to permit additional testing, commencing pre-transit valve cycling or transit submerged. However, first surface after initial tightness dive must be by EMBT blow from 200 feet and must be conducted prior to deep dive.

** - An escort is required on the initial tightness dive and on subsequent first dives to any deeper depths, i.e., the first dive to any depth requires an escort. EMBT blow escort requirements given in paragraph 3.6.8.4.7 of this chapter.

- ***
- **SRDRS required during tightness dives. For ease of scheduling SRDRS modified alert time, SRDRS will be placed on modified alert from start of Sea Trial until completion of deep dive, including final EMBT blow from maximum operating depth, per paragraph 3.6.8.3.9.c or 3.6.8.4.7.b of this chapter.**

APPENDIX Q

APPLICABLE RMC AVAILABILITY COMPLETION CERTIFICATION SHEET (SURFACE FORCE SHIPS ONLY)

CATEGORY or ITEM	REQUIREMENT	MILESTONE	SIGNATURE/DATE
PRIOR TO KEY EVENT OR SEA TRIALS			
I. Work Authorization	<p>TYCOM will certify via letter or memo:</p> <p>a. All authorized CNO availability or CMAV work identified in the Availability Work Package (AWP) has been tasked to the Master Ship Repair Contractor, Naval Shipyard (NSY), Fleet Maintenance Activity (FMA), Alteration Installation Team (AIT), or Ship's Force for accomplishment.</p> <p>b. All deferred new and growth branded "A" (mandatory) has been concurred on by Technical Authority.</p> <p>c. All Temporary Standing Orders (TSO), Departures from Specifications (DFS) and CASREPs have been included in AWP or have Technical Authority approval, if deferred.</p>	Prior to Sea Trials	<p>Business Agent/ Project Manager/date _____/_____ TYCOM memorandum/Ser #/date _____/____/____</p>
II. Work Documents Issued- Prime Contractor	<p>a. The Project Support Engineer and QAS must validate that Work Specifications and Test Procedures issued by the prime contractor have received a government technical review per Availability Quality Management Plan (QMP) and Local Attribute Checklist.</p>	a. Prior to Key Event or Sea Trials	<p>a. Project Support Engineer/date _____/_____ Code 130 QAS/date _____/____</p>

CATEGORY OR ITEM	REQUIREMENT	MILESTONE	SIGNATURE-DATE
PRIOR TO KEY EVENT/SEA TRIALS (Cont'd)			
II. Work Documents Issued-Prime Contractor (Cont'd)	<p>b. Project Manager must validate that all work specifications and test procedures issued by the prime contractor have received a government review per Volume VII, Chapter 4, Appendix E of this manual.</p> <p>c. Project Manager will verify that all required CFRs have been received as required by NAVSEA Standard Item 009-01 paragraph 3.2.</p> <p>d. Project Support Engineer will verify that all C 200 CFRs have been reviewed and answered. Deferred maintenance action and test result CFRs have been technically adjudicated. All CFRs screened to C 200 for action must be documented via Engineering Service Request (ESR).</p>	<p>b. Prior to Key Event or Sea Trials</p> <p>c. Prior to Key Event or Sea Trials</p> <p>d. Prior to Key Event or Sea Trials</p>	<p>b. Project Manager/date _____/_____</p> <p>c. Project Manager/ date _____/_____</p> <p>d. Project Support Engineer/ date _____/_____</p>
III. Work Completion/Prime Contractor	<p>Verify that all prime contractor work (including sub-contractors) has been certified as complete by prime contractor (include letter/memo Ser/date). All Sea Trials testing is included on Sea Trials Agenda. Verify that any incomplete work (exception items) have been provided to RMC/NSA CHENG for technical concurrence to not impact key Event/Sea Trials. RMC or NSA CHENG will provide a Risk Assessment to the RMC or NSA CO for certification.</p>	<p>Prior to Key Event or Sea Trials</p>	<p>Project Manager/date _____/_____</p> <p>Prime Contractor Memorandum/Ser _____/_____</p>

CATEGORY/ITEM	REQUIREMENT	MILESTONE	SIGNATURE/DATE
PRIOR TO KEY EVENT/SEA TRIALS (Cont'd)			
IV. Work Completion/FMA	Verify that all FMA FWP and CWP's have been certified as complete and technically correct by FMA (include letter/memo Ser/date). All Sea Trials testing is included on Sea Trials Agenda. Verify that any incomplete work (exception items) have been provided to RMC/NSA CHENG for technical concurrence to not impact Key Event or Sea Trials. RMC or NSA CHENG will provide a Risk Assessment to the RMC or NSA CO for certification.	Prior to Key Event or Sea Trials	Project Manager/date _____/_____ FMA Memorandum/Ser _____/_____
V. Work Completion/NSY	Verify that all NSY work has been certified as complete and technically correct by NSY (include letter or memo Ser/date). All Sea Trials testing is included on Sea Trials Agenda. Verify that any incomplete work (exception items) have been provided to RMC/NSA CHENG for technical concurrence to not impact Key Event/Sea Trials. RMC or NSA CHENG will provide a Risk Assessment to the RMC or NSA CO for certification.	Prior to Key Event or Sea Trials	Project Manager/date _____/_____ NSY Memorandum/Ser _____/_____
VI. Work Completion/AIT	Verify that all AIT work and test procedures have been certified as technically correct and complete by each AIT On-Site Installation Coordinator (include each letter or memo Ser/date). All Sea Trials testing is included on Sea Trials Agenda. Verify that any incomplete	Prior to Key Event or Sea Trials	Project Manager or AIT Coordinator/date _____/_____ AIT On-Site Installation Coordinator Memorandum/Ser. _____/_____

CATEGORY OR ITEM	REQUIREMENT	MILESTONE	SIGNATURE/DATE
PRIOR TO KEY EVENT/SEA TRIALS (Cont'd)			
VI. Work Completion-AIT (Cont'd)	work (exception items) have been provided to RMC/NSA CHENG for technical concurrence to not impact Key Event or Sea Trials. RMC or NSA CHENG will provide a Risk Assessment to the RMC or NSA CO for certification.	Prior to Key Event or Sea Trials (Cont'd)	
VII. Work Completion/SF	Verify that all SF FWP and CWP's have been certified as technically correct and complete by Ship's CO (include letter or memo Ser/date). All Sea Trials testing is included on Sea Trials Agenda. Verify that any incomplete work (exception items) have been provided to RMC or NSA CHENG for technical concurrence to not impact Key Event or Sea Trials. RMC or NSA CHENG will provide a Risk Assessment to the RMC or NSA CO for certification.	Prior to Key Event or Sea Trials	Project Manager/date _____/_____ SF Memorandum/Ser _____/_____
VIII. Work Completion/RMC Engineering	Certify that all assigned assessments (TSRA) or Fleet Tech Assists (FTA) tied to Key Event or Fast Cruise or Sea Trial are completed. For ongoing TSRA assessments or FTA, the RMC or NSA CHENG will certify that these assessments or FTA do not impact the Key Event or Fast Cruise or Sea Trial. RMC or NSA CHENG will provide a Risk Assessment to the RMC or NSA CO for certification.	Prior to Key Event or Sea Trials	RMC/NSA CHENG/date _____/_____

CATEGORY OR ITEM	REQUIREMENT	MILESTONE	SIGNATURE/DATE
PRIOR TO KEY EVENT/SEA TRIALS (Cont'd)			
IX. Testing	<p>The RMC or NSA Integrated Test Coordinator will verify that:</p> <p>a. LMA Test Coordinator has certified that all Hull, Mechanical and Electrical and C5I testing identified per NAVSEA Standard Item 009-67 are complete with requisite OQE. Testing not complete is included on Sea Trials Agenda or added to exceptions list and provided to RMC or NSA CHENG for technical concurrence not to impact Key Event/Sea Trials.</p> <p>b. LMA WAFCO and Ship's CO have certified that all WAFs and Tag-outs required to Support Key Event/Sea Trials have been closed and cleared. RMC or NSA CHENG will provide a Risk Assessment to the RMC or NSA CO for certification.</p>	<p>a. Prior to Key Event or Sea Trials</p> <p>b. Prior to Key Event or Sea Trials</p>	<p>a. X. Waivers and Deviations	<p>The RMC or NSA CHENG will certify that all technical non-conformances have been satisfactorily resolved in order to support Sea Trials and availability completion. This includes certifying that all Departures from Specifications (DFS) have been properly adjudicated, all PMR/AIT LAR/RLARs have been incorporated and that all RMC ESRs/Design</p>	Prior to Key Event or Sea Trials	<p>RMC/NSA CHENG/date _____/_____</p>
CATEGORY OR ITEM	REQUIREMENT	MILESTONE	SIGNATURE/DATE

PRIOR TO KEY EVENT/SEA TRIALS (Cont'd)			
X. Waivers and Deviations (Cont'd)	Service Requests, LARs and RLARs have been answered and incorporated. The NSA CHENG will also certify that all conditionally approved technical non-conformances that expire during the availability have been resolved.		
XI. Quality Assurance	Certify that all QA Office actions are satisfactory regarding resolution of QA Audits and Surveillances necessary to support Key Event or Sea Trials. All contractor Corrective Action Requests (CAR - Method B-D) issued during the availability are either closed or at an acceptable level of completion to support work certification. Include a memo describing outstanding items, remaining actions and Estimated Completion Dates, if applicable.	Prior to Key Event or Sea Trials	Quality Assurance Manager/date _____/_____ C130 Memorandum/Ser _____/_____
XII. Key Event Certification	RMC or NSA CO certifies readiness to proceed with Key Event or Sea Trials based on Risk Assessment from RMC or NSA CHENG	Prior to Key Event or Sea Trials	RMC/NSA CO/Date _____/_____

CATEGORY/ITEM	REQUIREMENT	MILESTONE	SIGNATURE/DATE
PRIOR TO KEY EVENT/SEA TRIALS (Cont'd)			
XIII. Availability Completion	a. RMC or NSA Project Manager verifies that all Sea Trials testing required for availability completion has been completed on Sea Trials. Exceptions to completion (including any new or growth work identified on Sea Trials have been approved by Technical Authority as to not impact availability completion and agreed upon by TYCOM. Exceptions will be tracked via Availability Closeout process.	a. Prior to Availability Completion	a. Project Manager/date _____ / _____
	b. RMC or NSA CHENG verifies that all Sea Trials testing required for availability completion has been completed on Sea Trials. Any exceptions to completion (including new or growth work identified on Sea Trials) have been reviewed and approved as not to impact availability completion.	b. Prior to Availability Completion	b. NSA CHENG/date _____ / _____
	c. The RMC or NSA CO releases message certifying availability completion based on the risk assessment provided by the RMC or NSA CHENG.	c. Prior to Availability Completion	c. RMC Commander/date _____ / _____ Message Date Time Group (DTG) _____ / _____

APPENDIX R
AVAILABILITY QUALITY MANAGEMENT PLAN (QMP)
(SURFACE FORCE SHIPS ONLY)

1. NSA Certification Requirements. Naval Supervisory Authority (NSA) certification of readiness for major Key Events, Fast Cruise or Sea Trials and availability completion is required. NSA certification of readiness for events must include a basis for certification. For surface force ship availabilities, this basis includes:

- a. Approved QMS. The Executing Activity performing the work has a NAVSEA approved QMS. The QMS is audited periodically and includes ongoing in-process surveillance and follow-up to assure that recurring, systemic problem areas are identified and corrective action is taken. The QMS is further defined in NAVSEA Standard Item 009-04, Quality Management System.
- b. Mandatory Oversight. The NSA or Government activity performing the oversight of contract execution provides mandatory oversight to include “G” point observation and mandatory review of test data when required by the contract for critical work as required by Volume VII, Chapter 11, Section 11.5 of this manual and other higher level documentation.
- c. Non-Mandatory Oversight. The NSA or Government activity performing oversight of contract execution must also perform adequate oversight of contract work not identified as mandatory. Although not specified, frequency or degree of oversight is often described as “random.” There should be a systematic approach taken to defining where government oversight should be applied in order to provide the NSA with the maximum reasonable level of assurance that work is planned, executed and tested correctly.

2. QMP Requirement. The Availability Quality Management Plan (QMP) provides a risk-based methodology for the NSA to utilize and provide this maximum reasonable level of assurance in work planning, execution and testing without requiring 100 percent oversight or review of contractor work products. An Availability QMP is required by Volume VII, Chapter 11 of this manual (Contract Administration Quality Assurance Program).

3. QMP Methodology. The Availability QMP then is a product of review(s) conducted on the Availability Work Package (AWP) that evaluates each work item based on probability of failure and criticality of failure. The evaluation of the work items for these two attributes should result in a plan which dictates which work items will have increased levels of Procedure Evaluations (PE), Process Quality Audits (PQA) and Product Verification Inspections (PVI) by Engineering, QA and Waterfront Operations Departments. In addition, the Availability QMP should determine which work items will receive Quality Audits by QA Department.

- a. Probability of Failure. Contractor’s past performance history in different work areas, as captured in Code 130 Quality Data Evaluation, is utilized to evaluate work items that will require additional oversight based on contractor’s past performance. If a contractor does not have any previous experience in a work area, probability of failure should be evaluated as high, unless there is work experience in a related area sufficient to build confidence in expectation of good contractor performance.

- b. Criticality of Failure. A consistent approach needs to be utilized by the NSA when developing Availability QMPs to identify work items which have higher criticality of failure. Simply put, equipment or systems that, by their failure alone, will result in the inability of the ship to get underway or meet primary mission requirements, (C4 CASREP) would equate to highest criticality of failure impact. Those systems or equipment that, by their failure alone, would result in a major degradation to ship's ability to meet mission requirements, (C3 CASREP) would have next highest criticality of failure consideration. Systems or equipment that, by their failure alone, would result in minor degradation to ship's ability to meet mission requirements, (C2 CASREP) would have the lowest criticality of failure consideration. There is no single source of input to determine criticality of failure. CNSP/CNSLINST 3504.1 identified "Redlines" requirements for surface force ships and should be utilized when identifying criticality of failure of systems or equipment being worked in the availability. Additional discussion on these requirements:
- (1) Redlines Systems. CNSP/CNSLINST 3504.1 includes matrices which identify minimum equipment lists by ship class. The NSA should utilize the redlines instruction as a guideline for determining "criticality of failure" when evaluating work items that may require additional oversight. Consideration should be given to redundancy, for example: On a DDG, relative level of oversight on a boat davit (1 of 1 required) would likely dictate more oversight than work on an air conditioning plant (2 of 5 required). For all redlines systems or equipment, contractor past performance discussed in paragraph 3.a. should be considered.
 - (2) Non-Redlines Systems. Systems or equipment that is not addressed by CNSP/CNSLINST 3504.1 normally require less oversight. An exception would be if there is a record of poor past performance such as poor performance on critical coating systems application in tanks and voids. While Volume VII, Chapter 11 of this manual requires increased RMC inspection requirements for these systems, additional PE, PR, PVI or QA audit may also be required by the RMC due to a contractor's past performance.
 - (3) QMP Applicability to FMA (I-Level), Ship's Force (SF), Naval Shipyards (NSY) and Alteration Installation Teams (AIT). While the QA Plan described herein generally refers to work contracted through the RMC, the NSA availability certification includes all work accomplished in the availability to include I-Level (FMA), SF, NSY and AIT. Each of these executing activities is also required to maintain an approved QMS. The NSA may not have direct oversight responsibility for these executing activities or provide auditing of their QMS. Oversight for NSY, FMA and SF work is provided organic to those organizations and does not normally require additional oversight by the NSA. The AWP review conducted concurrent with development of the QMP should, however, include a determination of high risk jobs being conducted that may require additional NSA oversight. This oversight, if required, should be part of the Availability QMP. For AIT work, NAVSEA Technical Specification 9090-310 requires that AIT contractors maintain a QMS approved by NAVSEA 04XQ and audited by respective government sponsor.

NAVSEA Technical Specification 9090-310 also requires that respective AIT government sponsors provide on-site oversight of AIT contractors, including specification review and approval, G point checks, and in-process surveillance of work. The NSA should include AIT work in the QMP development and make a determination on what additional oversight may be required to include in the QMP for AIT work.

15 Jan 2021

USS PILOT SHIP (XXX XX)

Ref: (a) COMUSFLTFORCOMINST 4790.3 Joint Fleet Maintenance Manual (JFMM)

Encl: (1) Prime Contractor Undocking Exception List, USS Pilot Ship (XXX XX) DSRA

1. Per reference (a), this memorandum is to certify that all Prime Contractor contracted work for subject DSRA is complete in support of Undocking and unless listed as an exception, none of the remaining Prime Contractor contracted work meets the following definition of "Dry Dock Critical":

Dry Dock Critical Items:

- a. All work or work items that require the ship to be in dry dock in order to perform the work.
- b. Work could be performed after undocking but would require additional costs, create an impact to schedule, or require the need for additional equipment and specialized personnel to perform the task that is not already covered by the original basic work package.
- c. This includes associated checkpoints, required OQE, and equipment testing required by the work or work item.

2. Exceptions listed in the attached enclosure were not completely accomplished and have been technically adjudicated in support of Undocking

AVAILABILITY PLANNING CONFERENCE AGENDA SAMPLE
(SURFACE FORCE SHIPS ONLY)

1. Introduction of Attendees. (Chair)
 - a. TYCOM Type Desk. (TDO or Availability Work Package Manager (AWPM) or PE) (Chair)
 - b. Ship's Force.
 - c. Maintenance Team.
 - d. SURFMEPP.
 - e. TSRA.
 - f. Program Office Management Representative.
 - g. Planning Yard Representative.
 - h. Naval **Information** Warfare Systems Command (**NAVWARSYSCOM**) Representative.
 - i. Government Planners.
 - j. PSIA Contractor Representatives.
2. Meeting Overview - Agenda Topics. (Chair)
3. Availability Overview. (Chair)
 - a. Type.
 - b. Location.
 - c. Start Date, End Date and Duration.
 - d. Notional Mandays, Dollars and AP Dollars.
 - e. Expected Control Mandays, Dollars and AP Dollars.
4. Availability Budget. (TYCOM Type Desk)
 - a. Expected Control Breakdown.
 - (1) Fees.
 - (2) Reservations.
 - (3) Farm-Out.
 - b. Cost of work screened to date.
 - c. Budget Assessment.
5. Review ship's schedule. (Chair)
 - a. Home port.

- b. Deployments and Underway periods.
 - c. Scheduled Availabilities. (CMAV and TSRA)
 - d. Inspections and Assessment Visits.
 - e. Alteration Installation Teams.
 - f. Special evolutions that affect ship access.
- 6. Review remaining advance planning milestones highlighting key dates and deadlines. (TYCOM (AWPM or PE))
 - 7. Brief BAWP contents including status of all mandatory repair and assessment tasks due during the cycle, showing those completed, scheduled and overdue. (SURFMEPP)
 - 8. SURFMEPP Turnover BAWP to TYCOM. (SURFMEPP)
 - 9. Brief CSMP showing the screening of all off-ship jobs. Highlight potential technical issues, including Departures from Specifications (DFS) and other jobs that may later be deemed mandatory. Discuss any other concerns. (TYCOM (PE))
 - 10. Brief status of all mandatory repair and assessment tasks due during the cycle, showing remaining tasks scheduled and overdue and discuss concerns. (SURFMEPP)
 - 11. Brief status of all mandatory CMP task Change Deferral Requests, showing those approved, approval pending and disapproved. (SURFMEPP)
 - 12. Assess impact of disapproved CMP task Change Deferral Requests. (TYCOM (PE))
 - 13. Brief schedule of remaining TSRA availabilities and mitigation strategy to accomplish those mandatory CMP assessments that were not executed as scheduled. (TSRA)
 - 14. Assess impact of remaining inspections and assessments. (TYCOM (PE))
 - 15. Brief Program and Fleet Alteration changes since last briefed. (TYCOM (AWPM) (SEA21 briefs Program Alterations changes, if present, else AWPM briefs both))
 - 16. Assess impact of modernization changes on other work. (TYCOM (AWPM) or TYCOM (PE) or Planner)
 - 17. Assess impact of AWP on habitability. (TYCOM (PE))
 - 18. Review and assess Ship's Force planned work that may impact other work. (TYCOM (PE))
 - 19. Review and assess Ship's Force deferred work that may need to be included in the AWP. (TYCOM (PE))
 - 20. New Issues.
 - 21. Ship Commanding Officer Concerns.
 - 22. Action Required after the Meeting:
 - a. TYCOM (AWPM) distributes meeting minutes with action items.
 - b. TYCOM Type Desk briefs chain of command of the Commanding Officer Concerns.
 - c. SURFMEPP negotiates the uploading of all new CMP tasks identified after this point with the TYCOM. (AWPM or PE)

APPENDIX AN
BAWP WORK ITEM BRANDING CATEGORIES
(SURFACE FORCE SHIPS ONLY)

Mandatory (Technical): Requires an approved Change Request prior to non-accomplishment. Only SURFMEPP is authorized to brand items in this category. BAWP work items in this branding category include maintenance actions, which have high-level technical requirements or are NAVSEA-mandated. Resolution is managed by the applicable Technical Warrant Holder.		
Type Sequence Number	Brand Code	
811	A1	Mandatory maintenance by direction of higher authority.
816	A6	Reprogrammed BAWP items from previous maintenance cycles.
831	AD	Mandatory items deferred at least two FRP cycles.
833	AH	Mandatory maintenance approved for deferral in the current maintenance cycle.
832	AR	Repair task that must be accomplished within the current FRP Maintenance Cycle.
834	AS	Mandatory Safety-Related Modernization.
Required (Non-Technical): Requires TYCOM approval and subsequent notification to SURFMEPP prior to non-accomplishment.		
842	B2	MTA, MILR and legacy as failed alterations.
843	B3	All other modernization not included as categories B1 or B2. (Note: "B1" N/A to Surface Ships)
846	B6	Availability Services. (Temp or Routine)
847	B7	Repair work related to an active CASREP or DFS.
849	B9	Non-Mandatory Technical Requirement, Non-Service and Routine CMP task.

APPENDIX AO
BAWP TO AWP PROCESS
(SURFACE FORCE SHIPS ONLY)

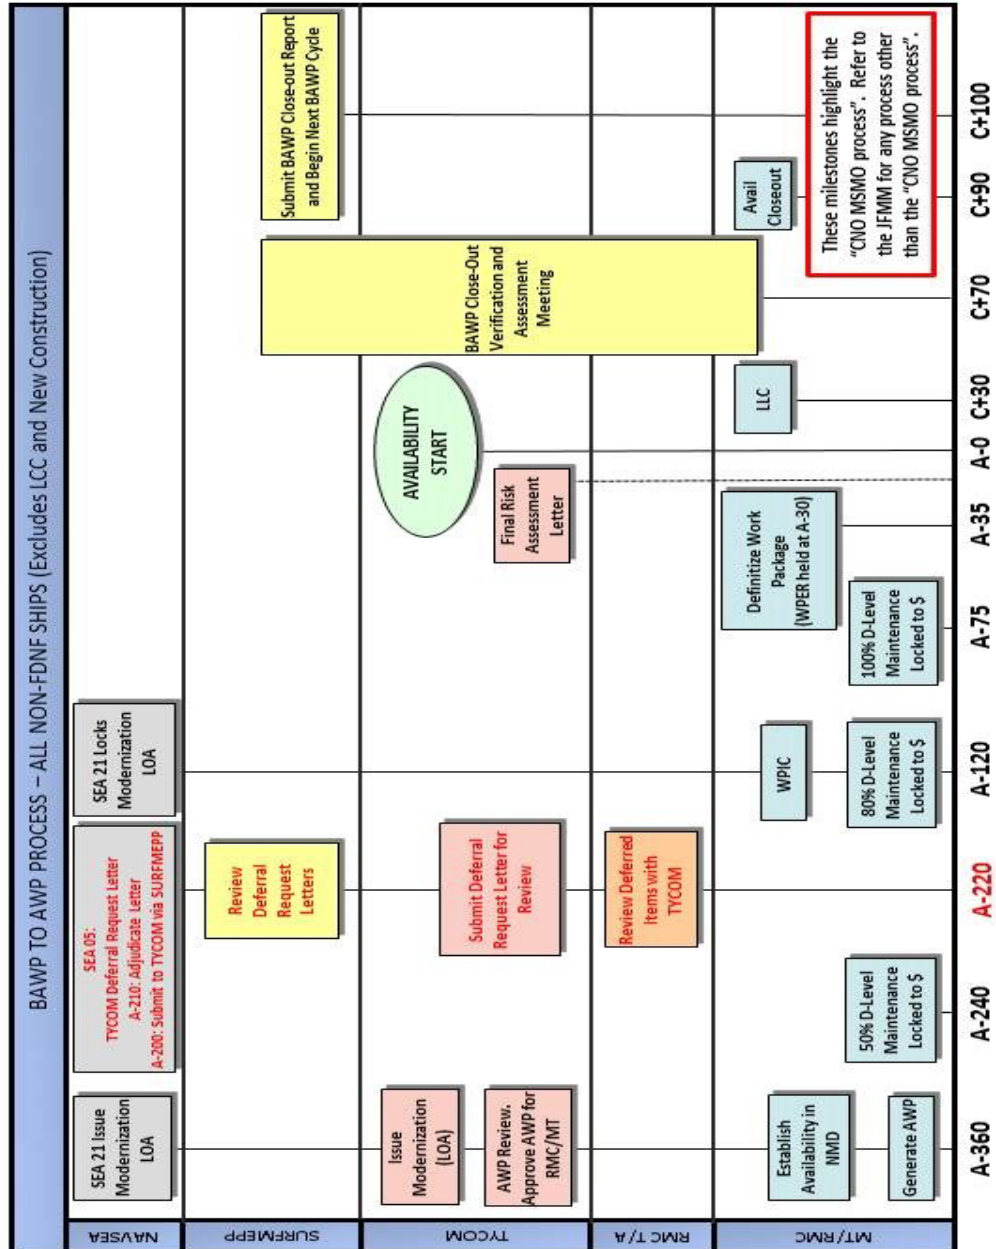

NOTE: SURFMEPP WILL HOST FOUR (4) SCHEDULED MEETINGS OVER THE COURSE OF THE SHIP'S FRP MAINTENANCE CYCLE: THE CORROSION PLANNING CONFERENCE (C+115), THE LCPC (C+140), THE MID-CYCLE REVIEW AND THE BAWP CLOSE-OUT VERIFICATION AND ASSESSMENT MEETING (C+70). DUE TO A COMPRESSED FRP MAINTENANCE CYCLE, TWO MAINTENANCE CYCLES ARE PLANNED CONCURRENTLY. THE FOLLOW-ON CYCLE'S LCPC OCCURS AFTER TYCOM'S CURRENT CYCLE DEFERRAL LETTER SUBMISSION AND PRIOR TO THE START OF THE CURRENT CYCLE'S CNO AVAILABILITY. WHEN POSSIBLE, SURFMEPP CONFERENCES WILL BE HELD IN CONJUNCTION WITH OTHER MT SCHEDULED MEETINGS, SUCH AS MONTHLY AVAILABILITY ADVANCED PLANNING MEETINGS AND PLANNING BOARD FOR MAINTENANCE (PB4M).

1. The Life Cycle Planning Conference will be controlled per paragraph 3.4.1a.(4) of this chapter.
2. C+100. SURFMEPP will issue LCPC Announcement Letter to establish the date, location and agenda for the LCPC.
3. C+130. SURFMEPP will send a list of the FRP Maintenance Cycle CMP requirements and a list of recommended availability services to the ship's PE for review and correction. This list is a preview of initial BAWP and will be discussed in detail at the LCPC. Upon request SURFMEPP will provide a list of CMP-required assessments to TYCOM, NRMC and RMC in support of the TSRA process.
4. C+140. The LCPC agenda will include a review of the planning schedule, required CMP assessments, Navy Data Environment (NDE) modernization forecasts, CNO Availability services or routines as applicable, organizational responsibilities, and DFSs.
5. C+150.
 - a. SURFMEPP will upload a data file (MM0001 file) with all mandatory maintenance actions and expected CNO Availability services into the ship's CSMP in support of ship-specific MT screening and brokering requirements. The data file will span approximately six (6) calendar quarters.
 - b. SURFMEPP will issue formal correspondence detailing the planning schedule and outstanding action items from the LCPC.
6. All other requirements listed in the body of this manual are germane (refer to Volume II, Part I, Chapter 3).

4.1 PURPOSE. Provide guidance for the implementation of policies set forth in references (a) through (x) for Fleet Maintenance Availability planning, scheduling, and execution. Policy,

procedures and guidance regarding utilization of Fleet Technical Assistance (FTA) program resources are contained in Volume VI, Chapter 2 of this manual.

4.2 DEFINITIONS.

4.2.1 Fleet Maintenance Activity. All government waterfront ship maintenance and modernization, activities, e.g., Regional Maintenance Centers, Naval Ship Repair Facilities, Naval Submarine Support Facilities, Naval Intermediate Maintenance Facilities, TRIDENT Refit Facilities, Weapons Repair Facilities, Naval Shipyards, tenders and other activities of that type responsible for the processing, screening and brokering, and execution of work candidates.

4.2.2 Lead Maintenance Activity. The single activity responsible for integrating all maintenance and modernization on US Naval ships during any type availability. The Lead Maintenance Activity (LMA) is the activity responsible for planning and coordinating the work of the Executing Activities in Continuous Maintenance (CM). The LMA may also be an Executing Activity.

4.2.3 Executing Activity. The public or private enterprise that is assigned or awarded the responsibility for accomplishing the actual production work to effect repairs or modernization to ships.

4.2.4 Business Case Analysis. A critical evaluation of late identified work, new work or growth work, based on the benefit of completing the work, the cost of the work to be performed including premiums, available work capacity and material resources, the risk to other work and schedule impact.

4.2.5 Planning Board for Maintenance. The regularly scheduled meeting of the ship's Maintenance Team, as required by Chapter II-II-1 and defined in Chapter VI-41 of this manual, to discuss ship wide maintenance issues. Chaired by the ship's Commanding Officer using an agenda prepared by the Ashore Ship's Maintenance Manager, this forum provides a review of current planned off-ship and organizational maintenance, Current Ship's Maintenance Project (CSMP) quality and accuracy, future maintenance and modernization planning, and fiscal concerns. The objective is to ensure clarity of intent for both the ship's efforts and the shore infrastructure with respect to total ship maintenance, operational schedules, and other concerns affecting ship material readiness. The PB4M should be conducted at the beginning of the SSN Fleet Response Training Plan immediately following deployment stand down and updated with a follow-on PB4M prior to each CMAV to ensure the maintenance plan is on track. The PB4M is should cover all planned and known corrective maintenance and should take into consideration ship's operations and maintenance facility loading during each planned maintenance period in the SSN Fleet Response Training Plan.

4.2.6 Maintenance and Modernization Business Plan. The Maintenance and Modernization Business Plan (MMBP), located in Volume VI, Chapter 33 of this manual, prepared six to eight months in advance of the fiscal year, is the ship's plan for maintenance and modernization effort for a fiscal year. The ship's maintenance team prepares the plan. The Maintenance Team applies its knowledge of the ship's material condition and Type Commander (TYCOM) scheduled modernization and Chief of Naval Operations (CNO) availabilities in the prospective operating cycle to develop the budget recommendation for funding maintenance requirements. The plan is based on an assessment of the ship's anticipated material condition, the validated CSMP including Class Maintenance Plan (CMP) applicable tasks, planned fleet alterations,

outstanding Departures from Specifications (DFS), Casualty Reports (CASREP) and Board of Inspection and Survey material discrepancies. The MMBP must address funding required for CNO availabilities advanced planning and CM opportunities.

4.2.7 Immediate Superior In Command. In the context of this chapter the TYCOM may act in support of or in the place of the Immediate Superior In Command (ISIC) for maintenance.

4.3 FLEET MAINTENANCE AVAILABILITIES. Fleet maintenance availabilities consist of the following:

4.3.1 Ship's Force Upkeep. A Ship's Force Upkeep is a scheduled period in which the ship is principally engaged in self-maintenance.

4.3.2 Scheduled Continuous Maintenance Availability. A Scheduled Continuous Maintenance Availability (CMAV) is a scheduled availability normally 2 to 6 weeks in duration and normally scheduled once per non-deployed quarter during a period when the ship will be in port.

NOTE: SUBMARINE MAINTENANCE MODERNIZATION AVAILABILITIES MAY BE 2 TO 6 MONTHS LONG. THESE AVAILABILITIES CAN BE MANAGED SEPARATE FROM THE REQUIRED MAINTENANCE AVAILABILITIES OR INCORPORATED IN THE REQUIRED MAINTENANCE PERIODS AT THE DISCRETION OF THE PLANNING BOARD FOR MAINTENANCE (PB4M) AND ISIC. MODERNIZATION AVAILABILITIES WILL INCLUDE KEY EVENTS AND CERTIFICATION MILESTONES PRIOR TO AT-SEA OPERATIONS AND MAY REQUIRE SEA TRIALS AS APPROVED BY THE PB4M AND ISIC PER THIS CHAPTER.

- a. Submarines - The Scheduled Continuous Availability requirement is mandatory. It cannot be deferred, deleted or shortened without TYCOM (N43) concurrence. Appendix A of this chapter contains a sample message to TYCOM from ISIC requesting concurrence to defer, delete or shorten a scheduled CMAV.
 - (1) For SSNs one regular CMAV every 3 to 4 months, of which a minimum of 21 days are dedicated to production work. SSN maintenance availabilities required to support the Fleet Response Plan will be scheduled per reference (a). SSN CMAV milestones are outlined in Appendix H1 of this chapter.
 - (2) For SSGNs the maintenance schedule for a 20-24 month operating cycle will be scheduled per reference (b) to include three to five forward deployed 21 day CMAVs. SSGN CMAV milestones are outlined in Appendix H1 of this chapter.
 - (3) For SSBNs, one 35 day CMAV will be conducted per patrol cycle. Docking CMAVs will be scheduled periodically by the TYCOM to meet URO MRC requirements. SSBN CMAV milestones are outlined in Appendix H2 of this chapter.
- b. Carriers - As Scheduled.
- c. Surface Ships - At a minimum, one 3-week CMAV per non-deployed quarter. Surface Force Ship CMAV milestones are outlined in Part II, Chapter 2, Appendix D of this volume.

4.3.3 Major Maintenance Period. A Major Maintenance Period (MMP) is a scheduled availability, unique to SSGNs, notionally 15 to 17 weeks in duration and normally scheduled every 15 to 18 months. The MMP is a mandatory availability. It cannot be deferred, deleted or shortened without TYCOM (N43) concurrence. For SSGNs, per reference (b), the OPCYCLE is defined as the start of one MMP to the start of the next. SSGN MMP milestones are outlined in Appendix H3 of this chapter.

4.3.4 Unscheduled Continuous Maintenance Availability. The Unscheduled CM Availability is a single yearlong availability, for the period 01 October through 30 September, scheduled for each ship every fiscal year. The Year Long Unscheduled CM Availability is for the scheduling and completion of non-emergent work items that are not accomplished during any other schedule availability.

4.3.5 Emergent Availability. The Emergent Availability (EM) is designed for work of such an urgent nature that the heightened risk of disruption and paying of premiums is accepted and planning horizons are shortened.

4.4 COMMON ELEMENTS.

4.4.1 Responsibilities. Responsibilities regarding maintenance policies and procedures for Fleet maintenance availabilities are:

4.4.1.1 Immediate Superior In Command.

- a. Coordinate scheduling of availabilities at LMAs with TYCOMs.
 - (1) Monitor corrective maintenance action taken by LMA/Executing Activities.
 - (2) Schedule and conduct inspections of Forces Afloat.
 - (3) Monitor progress of availabilities.
- b. Initiate the required budgetary actions for funding availabilities.
- c. Ensure all authorized alterations are identified by priority based on material availability.
- d. Identify the routine package to be accomplished based on Master Specification Catalog or Master Job Catalog (MJC) review (as appropriate).
- e. Review results of scheduled monitoring inspections and testing that could result in significant new work or could impact scheduled work.
- f. Identify required special evolutions associated with availabilities in support of Pre-Overseas Movement preparations and pre-availability test and inspection requirements.
- g. Issue availability planning message.
- h. (Submarines only) Ensure all Periodic Maintenance Requirement (PMR), Unrestricted Operation (URO) and Hull Integrity Procedure (HIP) (if applicable) Maintenance Requirement Card maintenance actions intended for accomplishment during availability are identified.

- i. (Submarines only) Send a Sea Trials Support Services message to specify Deep Submergence Rescue System “modified-alert” requirements per Appendix B of this chapter.
- j. (Submarines only) Provide updated Sea Trials status by telephone to Commander, Submarine Squadron (COMSUBRON) ELEVEN if Deep Submergence Rescue System “modified-alert” support services are in use.
- k. (Submarines only) Identify key events for each CMAV during the pre-arrival conference. Determine if Fast Cruise, Sea Trials, or both, are required based on the scope of the availability work, alterations and modernization. The ISIC will task the PB4M or Regional Maintenance Center (RMC) to submit the Fast Cruise, Sea Trials, or both, agendas for ISIC approval per paragraph 4.6.3.3 of this chapter.
- l. (Submarines only) Monitor Ship and Executing Activity preparations to transition to a CMAV period and make final report that the ship has transitioned to the CMAV period after the completion of the arrival conference to the Group and TYCOM.

4.4.1.2 Regional Maintenance Center or Lead Maintenance Activity. (As appropriate)

- a. Develop recommended Key Event schedule and present to the ISIC and Ship’s Force.
- b. Conduct ship checks, plan work candidates and order required material.
- c. Recommend returned work candidates to the RMC ISIC, as applicable.
- d. Develop strategy using the guidance found in Volume VI, Chapter 9 of this manual to accomplish calibration of systems, gages, instruments and tools in support of Ship’s Force requested work and the availability milestones.
- e. Identify and order Long Lead Time Material (LLTM).
- f. Review the Availability Work Package, write Formal Work Package (FWP) or Technical Work Documents (TWD), identify critical jobs and develop an Integrated Work Schedule (IWS) to aid in tracking and coordination of all work.
- g. Conduct the Work Package Execution Review (WPER).
- h. Conduct arrival conference.
- i. Conduct daily and weekly meetings.
- j. Issue Departure and Assessment report per paragraph 4.6.3.2.e of this chapter.

4.4.1.3 Submarine Maintenance, Engineering, Planning, and Procurement Activity. (SUBMEPP)

- a. (MMP only) Develop and publish work package identifying the following for accomplishment:
 - (1) PMRs scheduled for accomplishment during the availability.
 - (2) NAVSEA, TYCOM and SSP authorized alterations for installation.
 - (3) DFSs scheduled to be cleared.
 - (4) Work identified in the CSMP for accomplishment.

- (5) Planned Nuclear Work as received from Primary Shipyard
- b. (MMP only) Maintain work package to ensure it reflects currently authorized work.
- c. (MMP only) **Schedule** Initial Planning Meeting to incorporate input from stakeholders in the work package.

4.4.1.4 Ship's Maintenance Team. (Commanding Officer (CO))

- a. Validate, broker, schedule, and track through execution all maintenance candidates.
- b. Manage Ship's MMBP.
- c. Maintain a current and valid CSMP that serves as the single authoritative source for all maintenance requirements.
- d. Develop, plan and coordinate Ship's Force Upkeeps, CMAVs, CMs, and EMs and repairs within the resources provided.
- e. Prioritize all deferred maintenance actions intended for accomplishment during an availability.
- f. Develop a strategy for calibration of gages, instruments and tools.
- g. Publish a policy concerning number of duty sections, liberty, ship cleanliness, tagout procedures, tank closeout and installation of blank flanges of otherwise exposed fluid systems, waveguide and air systems before the availability starts.
- h. Assign an Officer or Chief Petty Officer to serve as the Availability Coordinator, responsible for coordinating the completion of all pre-availability and availability milestones.

4.4.1.5 Assigning Lead Maintenance Activity and Ship's Force Maintenance Responsibility.

The RMC or ISIC assigns work responsibility for each maintenance item in an availability work package. The assignment of work responsibility will be such that split responsibility between two organizations does not occur for the same unit task on a maintenance action. The following guidelines apply:

- a. The Fleet Maintenance Activity (FMA) will remove all controlled system interference as defined in Volume V, Part I, Chapter 2 of this manual and Ship's Force will remove all other interference.
- b. The following are examples of maintenance actions requiring Intermediate Level shop work that will be assigned as "ship-to-shop":
 - (1) Calibration and repair of portable equipment, removable gages, and rack-out electronic equipment and meters.
 - (2) Manufacture of components which do not require fit-up in a larger assembly, or that are fabricated with a sample provided by Ship's Force.
 - (3) Small flanged or bolted valves and operators sized 2.5 IPS and below.
 - (4) Small components such as pumps, motors, controllers, deck plates, access covers and lockers.

4.4.1.6 Fleet Maintenance Activity and Nuclear Regional Maintenance Department Radiological Controls Support. In order to fully use the FMA radiological controls resources, Ship's Force must request FMA or Nuclear Regional Maintenance Department (NRMD) radiological support for their jobs that involve significant radiological controls. The following guidelines apply:

- a. FMA or /NRMD will provide full radiological control support including material, surveys, supervision and instructions for radiological aspects of the job.
- b. FMA or NRMD will provide mock-up training, when necessary, for Ship's Force personnel performing the actual work.
- c. Ship's Force jobs which fall into this category include, but are not limited to, retention tank (or equivalent) inspection, nuclear instrument detector replacement, and primary plant venting or draining evolutions.
- d. As an example, during a retention tank inspection, an FMA or NRMD would:
 - (1) Construct and certify the containment tent.
 - (2) Conduct the necessary pre-job, in process and post-job surveys.
 - (3) Train Ship's Force personnel in the use of air fed hoods.
 - (4) Provide radiological monitoring.
 - (5) Review and comment on the Ship's Force work procedure.
- e. The FMA or NRMD should develop standard radiological work procedures to be used in developing FWP's and TWD's in support of Ship's Force jobs. The service of the Fleet Maintenance Support Branch should be used by FMAs, when necessary, to formulate these work procedures.

4.4.2 Submission of Work Candidates.

4.4.2.1 Documenting Requests. Requests by Ship's Force for corrective maintenance assistance or support equipment from outside activities will be appropriately documented on an Automated Work Request form 4790-2K or form 4790-2L of reference (c) or message work candidate per paragraph 4.4.2.2 of this chapter, and prioritized per reference (c). The work candidate will be promptly forwarded for processing. The description of the deficiency or support requested and the action desired must be complete and clear. This description must be in sufficient detail to allow LMA personnel to plan, obtain parts and assemble the correct tools.

4.4.2.2 Message Work Candidates. Messages may be used to notify the FMA as early as possible when data systems up-lines are not available. This is particularly applicable to ships in transit between FMAs, and ships scheduled to return to port shortly before starting an availability. Accordingly, ships should submit message work candidate requests to the parent RMC or ISIC, with an information copy to the tending LMA and tending Squadron or RMC (if different), for items of this type. Where the change of LMA occurs coincident with a change in Operational Control, the (new) tending Squadron or RMC should be action addressee for the message, with both the parent RMC or ISIC and (new) LMA as information addressees. Appendix C of this chapter provides the format for a message work candidate.

4.4.3 Critical Jobs. Critical Jobs (CJ) are those jobs or series of jobs that require special management attention and normally present the greatest risk to on-time completion of the key

event or availability. The Executing Activity should be judicious in designating jobs as CJs to prevent diverting management attention from those jobs which are, in fact, critical to on time completion of the availability. Consideration must be given to, but not limited to, the following in determining the CJs:

- a. Little or no room for delay exists.
- b. Establishing plant conditions.
- c. LLTM.
- d. Complexity of job or special skills or resources required.
- e. Significant test requirements.
- f. Not previously accomplished by the Executing Activity (alterations, etc.).

4.4.4 Integrated Work Schedule. The IWS is an integrated timeline that includes plant conditions, major work steps, tests and recertification used to progress all jobs as determined by the Naval Supervisory Authority (NSA) or LMA. The IWS should include:

- a. Establishing plant conditions.
- b. Major production steps.
- c. Testing and Recertification.
- d. Closing out work procedures.

4.4.5 Technical Assistance and Assessment. Technical assistance and assessments are to be assigned as work candidates within any of the following Fleet maintenance availabilities:

- a. CMAV.
- b. CM.
- c. EM Availabilities.
- d. MMP

4.4.6 Late Work and Scope Control.

- a. The complete LMA Availability work package is defined and agreed upon at the WPER. To provide for adequate time to plan the work and acquire the necessary materials in an efficient manner, the work submission cut-off date should not exceed the milestones listed in Appendix H1, H2, and H3 of this chapter for submarines or Part II, Chapter 2, Appendix D of this volume for Surface Force Ships. A minimum of 30 days will be allotted for known work to be brokered to I-Level activities. This will allow a WPER to take place per the platform specific milestones. If these minimum thresholds cannot be complied with, the Maintenance Team will complete a Business Case Analysis per paragraph 4.4.6.b. of this chapter.
- b. The Maintenance Team will perform a Business Case Analysis as a method of identifying risks associated with adding late work after the submission cut-off date identified in Appendix H1 and H2 of this chapter for Submarines and Part II, Chapter 2, Appendix D of this volume for Surface Force Ships. The Business Case Analysis is described in Appendix D of this chapter. Late work identified after the submission

cut-off date should not extend the availability completion date. The RMC or ISIC will take appropriate actions to make job tradeoffs, defer jobs to a subsequent availability or seek outside assistance to conduct the work.

- c. Non-mission essential late work may be accepted on a case-by-case basis. The ISIC will provide approval authority for all late work after establishing that the LMA can support the additional work load and the scope of work does not impact the ship's operational schedule or schedule of other operational units.

4.4.7 Memorandum of Agreement. For all Surface Force Ship and Aircraft Carrier availabilities not assigned to an FMA, a Memorandum of Agreement (MOA) will be issued. The purpose of the MOA is to define areas of responsibility for all activities involved with the availability. For all submarine availabilities involving maintenance within the Submarine Safety (SUBSAFE) boundary, Scope of Certification (SOC) boundary and Fly-By-Wire (FBW) boundary, a MOA will be issued. A NSA representative must sign MOA(s) as assurance that any civilian contractor requirements detailed in MOA(s) are contained within applicable contracts.

4.4.8 Radiological Controls. Nuclear powered vessels are responsible to implement and ensure adherence to radiological controls per reference (d). Industrial activities authorized to perform nuclear maintenance are responsible to engineer appropriate radiological controls into assigned work.

4.4.9 Ship to Shop Material Control. Positive identification and control of ship to shop transfer of equipment and components is maintained through the use of a Ship to Shop tag. The Ship to Shop tag may also be used in conjunction with other methods specified by the Executing Activity or the LMA. Each Executing Activity must make sure that positive control exists for those subcomponents of equipment and components received with a Ship to Shop tag attached. The procedure for using the Ship to Shop tag is provided in Volume V, Part I, Chapter 11 of this manual.

4.4.10 Ship-checks. The LMA or Executing Activity must conduct ship checks, when the tended ship is available in order to support process milestones, to verify the scope of work, identify interference, obtain equipment technical data, identify shipping (rigging) paths, verify system and equipment configuration and obtain additional problem identification data from Ship's Force. Ship-checks must be conducted as early in the planning phase as possible.

4.4.11 Lead Maintenance Activity Daily Production Meeting. This meeting is for the coordination of ongoing work for all availabilities. The LMA Repair Officer or Production Officer, or their designated representatives, will conduct a Daily Production Meeting for all ships in availabilities.

- a. Purpose. The primary purpose of the LMA Daily Production Meeting is to establish a joint Executing Activity and Ship's Force production plan and eliminate schedule conflicts that impact work for at least the next seven shifts (56 hours). It further tracks the current status of CJs. The results of this meeting are used to assess overall progress of the work, develop recovery plans when necessary and to ensure all the activities understand the production plan and support requirements during a minimum of the next seven shifts (56 hours).
- b. Execution. The Daily Production Meeting will be held as early in the day as practicable.

- c. Attendees. Representatives of the LMA Waterfront Operations, the Executing Activities, the tended ship, and LMA Supply or Fleet Logistics Center, as appropriate, will attend this daily production meeting and participate in its agenda. Others may attend as requested by the LMA.
- d. Agenda. The following agenda will be used for the LMA Daily Production Meeting. Additional items may be added at the discretion of the Waterfront Operations Officer, Repair Officer or Production Officer.
 - (1) Discuss specific work scheduled to be accomplished and support required over the next seven shifts.
 - (2) Discuss projected site evolutions (ship moves, weapon moves, pier maintenance, or changes of command, etc.) which could impact production work.
 - (3) Discuss respective ship evolutions such as stores load or Fast Cruise that could impact production work.
 - (4) The Executing Activity brief on the current status of CJs on each ship.
 - (5) Review Safety of Ship Maintenance Item List, necessary safety precautions and their status.

4.4.12 Lead Maintenance Activity Progress Review. This review will be conducted weekly for surface force ships and submarines in CMAVs.

- a. Purpose. The primary purpose of the LMA progress review is to ascertain that CJs and Key Events are progressing satisfactorily for on time completion of the availability. The meeting must also identify and resolve any issues, conflicts or differences since availability start or last review. These meetings may be conducted in conjunction with a ship's PB4M.
- b. Execution. This review must be conducted by the Waterfront Operations, Repair Officer, Production Officer, or their representatives and be scheduled so as not to conflict with daily production meetings.
- c. Attendees. As a minimum, the following must attend this review.
 - (1) Waterfront Operations Officer, Repair Officer, or Production Officer.
 - (2) Ship Superintendent and designated Executing Activity representatives.
 - (3) Tended ship CO.
 - (4) Availability Coordinator and designated Ship representatives.
 - (5) ISIC or RMC designated representatives.
 - (6) Maintenance Support Team (MST) Officer In Charge (OIC) (if applicable).
- d. Agenda. As a minimum, the following agenda must be used for LMA progress review. Additional items may be added at the discretion of the Waterfront Operations Officer, Repair Officer, Production Officer, ship CO, or ISIC. Attendees must be prepared to discuss their respective portions of the agenda.

- (1) Specific work scheduled for accomplishment during the availability.
- (2) Projected Executing Activity and ship evolutions which could impact production work on ship(s).
- (3) Discuss current status of CJs and Key Events listed in Appendix E1 (Submarines Appendix E2).
- (4) Heavily loaded Executing Activity work centers and impact on the availability.
- (5) Status of funds, supplies and equipage funding.
- (6) Status of outstanding DFS scheduled for correction during the availability.
- (7) Outstanding high priority repair material status.
- (8) Provide Automated Work Requests (AWR) or a list of completed work with applicable 3-M final action taken codes per reference (c).
- (9) For ships with work in the Year Long CM or EM Availability no separate formal meeting is required. Rather, issues with these availabilities should be a part of the routine PB4M held by the ship's maintenance team or special meetings as needed to properly monitor and manage the ongoing maintenance.
- (10) (Submarines Only) Ship's Force will brief the status of all scheduled K-MRCs and active OSARs. The brief will include time critical K-MRC status, completion percentage and schedule to complete outstanding K-MRCs and schedule to correct active OSARs in the availability.

4.4.13 100-Hour Transition Periods (Submarines only). The 100-hours at the beginning and at the end of a CMAV are critical times for availability execution. The ISIC, LMA and ship are responsible for coordinating the 100-hour plan. Any job or event that is viewed as hindering the start of the availability must be included in the 100-hour plan. Communication is vital to ensuring a full understanding of all work and associated requirements. The 100-hour transition plans will be outlined in the Availability Planning Message per Appendix F. Details for the first and final 100 hours must be as indicated in paragraphs 4.4.13.1 and 4.4.13.2 of this chapter.

4.4.13.1 First 100-Hour Plan (Submarines only). The First 100-Hour Plan will notionally start the first full work day of the availability. The items listed in this paragraph are the focus of the first 100 hours and will be discussed at the Arrival Conference.

- a. Establishing plant conditions and work controls.
- b. Working hours.
- c. Jobs still requiring ship checks will be listed in the availability planning message.
- d. Test forms required for Ship's Force retest of FMA work will be delivered to the ship within the first 100 hours for Ship's Force to review, plan and write procedures as necessary.
- e. Time critical jobs that will start during the first 100 hours. Completion of all time critical K-MRCs as determined at the A-21 meeting with the maintenance team. Time critical K-MRCs are those that:
 - (1) Would result in long repair times if failed.

- (2) Require unique plant conditions which conflict with required plant conditions for other scheduled work (e.g., seawater hull and backup valve cycling when seawater systems must be secured for maintenance or trim and drain pump performance test when trim and drain systems are to be secured).
- (3) K-MRCs that have a poor historical performance based on review of the data contained in the Performance Monitoring Team (PMT) database.

4.4.13.2 Final 100-Hour Plan (Submarines only). The Final 100-Hour Plan will notionally begin four days prior to the last day of the ship's scheduled CMAV. Items listed in this paragraph must be completed prior to the 100-hour point. Appendix G will provide an outline of the final 100 hours.

- a. Production work complete - it is vital all production work is completed by the 100-hour point to allow for the remaining event to occur without delay.
- b. Weapons handling.
- c. Testing associated with production work is completed.
- d. Sail closeout.

4.5 SHIP'S FORCE UPKEEP. Ship's Force Upkeep availability is a scheduled period in which the ship is conducting self-maintenance per reference (c), training, supporting inspections by outside activities, and performing routine shipboard evolutions. Ship's Force Upkeep availability can be accomplished at sea when the ability of the ship to perform its assigned missions and tasks is not affected and the work is accomplished onboard the ship. Scheduled Ship's Force Upkeep periods must not be interrupted for other than emergency reasons.

4.5.1 Upkeep Work Planning.

4.5.1.1 Planning Sources. The upkeep work package must be developed using three sources:

- a. Planned Maintenance System (PMS) must be scheduled per reference (c).
- b. Reactor Plant PMS must be scheduled per reference (e).
- c. CSMP will be reviewed to ensure scheduling and accomplishment of all work which is within Ship's Force capability.

4.5.1.2 Ship's Force Planning Actions.

- a. Preparation for Ship's Force Upkeep should be the normal activity of the maintenance team and be discussed at PB4M meetings.
- b. Review all Ship's Force screened CSMP work candidates and identify those items to be accomplished within the scheduled Ship's Force Upkeep period.
- c. Identify CJs.
- d. Develop an IWS per paragraph 4.4.4 of this chapter to aid in tracking and sequencing CJs.
- e. Establish strategy for Ship's Force calibration of gages, instruments, and tools based on the onboard Calibration Recall List.

- f. Develop FWP, Controlled Work Packages, and TWDs, as required, per Volume V, Part I, Chapter 2 of this manual.
- g. (Submarines only) Identify operational Unrestricted Operation (URO) Maintenance Requirement Cards (MRC) and Hull Integrity Procedures (HIP) (if applicable) to be accomplished during the availability. The ship must identify the plan to accomplish PMRs called down by the ISIC and identify any conflicts affecting the PMR execution.

4.5.2 Ship's Force Upkeep Work Execution. Duty section, division meetings, and shift briefings will be conducted as necessary to discuss current status of work and projected work progress expected for the period covered. The status and projections will be based on CJs and the IWS and should be reviewed at the regular ship's PB4M Maintenance Team meetings.

4.5.3 Ship's Force Upkeep Work Completion.

4.5.3.1 Management Closeout Procedures. Upon completion of repairs, FWP, Controlled Work Packages, and TWDs will be closed out per Volume V, Part I, Chapter 2 of this manual. Update the CSMP. Ensure non-conformances (Waivers, Deviations or Departures from Specification) submitted during the availability by any activity are approved prior to trials at sea (if held) and not later than the completion of the availability.

4.5.3.2 Dock Trials, Fast Cruise and Sea Trials. Dock Trials, Fast Cruise and Sea Trials must be conducted as required. Sample agendas in Part I, Chapter 3 of this volume may be modified, as necessary, to ensure the equipment which was worked during the upkeep is exercised prior to at sea operation.

4.5.4 Ship Certification Prior to Underway (Submarines only). Ship and Executing Activity provide the ISIC a written report of ship's certification continuity prior to underway per Volume V, Part I, Chapter 5 of this manual. If Upgrades, Alterations or Major Repair Work of the FBW SCS was performed by TYCOM managed activities, the ISIC will accomplish a 100% audit, as defined in Volume V, Part I, Chapter 9 of this manual of the work. ISIC and TYCOM will use the FBW message reporting process for certification specified in Part I, Chapter 3 of this volume for availabilities of less than six months duration.

4.6 SCHEDULED CONTINUOUS MAINTENANCE AVAILABILITY.

4.6.1 Scheduled Continuous Maintenance Availability Planning. Thorough, detailed planning is an absolute prerequisite to effective CMAV execution. Effective CMAV management begins well before the ship arrives with material procurement and job planning. Appendices H₁ and H₂ of this chapter are typical submarine CMAV Milestone Schedules to be used by all activities involved in planning and executing the submarine availability. The Surface Force Maintenance and Modernization Milestones are located in Part II, Chapter 2, Appendix D of this volume.

4.6.1.1 Scheduled Continuous Maintenance Availabilities Planning Sources. A significant portion of the CMAV Work Package can be identified in advance from five basic sources. Submarines, will also execute a planning availability as described in sub-paragraph f.

- a. Ship's CSMP. This document contains work items deferred during previous maintenance availabilities as the result of inadequate material support, outstanding DFS, drydock requirements, etc. To ensure the CSMP accurately reflects the required ship's maintenance, the Maintenance Team and ISIC will review each ship's CSMP in

detail with Ship's Force during routine PB4Ms and prior to every maintenance availability.

- b. Ship's Force Planned Maintenance. Ship's Force must conduct a review of PMS and Reactor Plant PMS requirements (where applicable) and ensure all maintenance actions are identified. In particular, an in-depth review of scheduled K-MRCs is required so that they are properly integrated into the planning process.
- c. PMR, URO and HIP electronic files (Submarines only). Submarine Maintenance Engineering, Planning and Procurement (SUBMEPP) Activity provides electronic files of PMR, URO and HIP maintenance requirements for each ship, as applicable. The ISIC will load these requirements into each ship's CSMP for a specific CMAV.
- d. Alterations (Fleet Alterations, Program Alterations, Ship Changes and Strategic Systems Program Alterations, etc.). The RMC or ISIC will enter alterations on the ship's CSMP that the TYCOM has authorized for accomplishment. The Ship Maintenance Team, RMC or ISIC calls out alterations for a specific CMAV based on material availability and Executing Activity capacity as identified by the Executing Activity. Within funding constraints and TYCOM guidance, all alterations authorized on the TYCOM Alteration Management System (Submarine Force only) or Navy Modernization Process (NMP) are candidates for accomplishment during each CMAV.
- e. Work Routines. A set of standard routines from the MJC should be planned for every CMAV. The ISIC or RMC tailors each CMAV routine package to the needs of the ship by calling out additional routines to document periodic, interim dry docking, URO maintenance (as applicable), and calibration recall requirements, as appropriate.
- f. Planning availability. (SSNs only) A scheduled one week planning availability will normally be scheduled approximately four weeks prior to a scheduled regular CMAV. The purpose of the planning availability is to allow the LMA and other activities scheduled to perform maintenance during the regular CMAV to conduct ship checks and job scoping and inspections (e.g., PMT time critical KMRCs) early enough to write required FWPs and TWDs, order material and develop a cohesive plan for the regular availability. Only underway limiting repairs should be accomplished during a planning availability. Paragraphs of 4.6.1 and all A-30 items from Appendix H₁ of this chapter must be addressed and focused on during the planning availability. The results of the planning availability directly feed into the WPER.

4.6.1.2 Scheduled Continuous Maintenance Availability Planning Functions. The Maintenance Team, RMC and ISIC will take the following actions in planning a CMAV. Surface Force Ships see Part II, Chapter 1 of this volume for maintenance validation, screening and brokering.

- a. Work Package Submission. Ensure that ships submit a CMAV work packages as scheduled per Appendix H₁ or H₂ of this chapter for submarines. The Surface Force Maintenance and Modernization Milestones are located in Part II, Chapter 2, Appendix D of this volume. Message work packages may be sent if the ship is not in port. This singular action has significant impact on the ability of both the RMC or ISIC and Executing Activity to properly plan for the CMAV, and determine potential impacts on other planned work.

- b. PMR URO and HIP Review (Submarines only). Review PMR URO and HIP requirements and ensure all maintenance actions intended for accomplishment during the CMAV are identified and entered in the CSMP. Using the PMR scheduling system as described in Volume VI, Chapter 24 of this manual, the ISIC will request that all applicable PMR work be added to the ship's CSMP when the SUBMEPP CD-ROM is received. This work is applicable if it is prescribed for the ship and is due per the associated schedule. PMR, URO and HIP work is mandatory. PMR requirements are to be accomplished on or before the scheduled due date listed in the SUBMEPP provided report as contained in the TYCOM PMR scheduling system. PMR requirements which are not accomplished by their scheduled completion date will be rescheduled and identified to the TYCOM per Volume VI, Chapter 24, paragraph 24.8.3.g of this manual. UROs and HIPs are to be accomplished by the scheduled due dates or appropriate waivers or DFS must be requested.
- c. NMP Review. Review NMP and ensure all authorized alterations intended for accomplishment during the CMAV are identified by priority based on material availability as identified by the Executing Activity. Ensure they are properly entered into the CSMP.
- d. MJC Review. Review the MJC and identify the routine package to be accomplished during the CMAV. Ensure it is properly entered into the CSMP.
- e. Review work candidates for applicability of Master Specification Catalog task lists.
- f. Draft Key Event Schedule.
- g. Work Package Screening. Screen and forward the assigned prioritized work package to the Executing Activity. Maintenance Team, RMC and ISIC responsibilities for work package screening are established in reference (c). Additional specific requirements are:
 - (1) Ensure work candidates meet the criteria for the level of work and are correctly prioritized per reference (c).
 - (2) If the assistance requested is for use of the Executing Activity facilities or technical guidance in order for Ship's Force to accomplish planned or corrective maintenance, the submitting ship and TYCOM should be advised to use MJC Routine N0000EXCNA740, (Facilities for Ship's Force Work).
 - (3) If a work candidate is received in message format, the RMC or ISIC must input the message work candidate into the Maintenance Data System (MDS). For a ship in transit, the parent RMC or ISIC must advise the RMC or ISIC to which the ship is reporting of the desired disposition of the message work candidate.
 - (4) Designate controlled work as defined in Volume V, Part I, Chapter 5 of this manual. Indicate the appropriate governing Key Event.
 - (5) (Submarines only) If the equipment is contained in the PMR program and the repair can possibly satisfy the PMR requirement, the ISIC will designate the work as Special Interest in Block 10, note the PMR MJC Job Control Number (JCN) in Block 49, and instruct to call out the MJC item. Enter remarks as necessary in Block 49 preceded by "SQ-", and sign in Block C.

- h. From the Key Event schedule, develop an IWS per paragraph 4.4.4 of this chapter to aid in tracking and sequencing CJs.
- i. CMAV Funding. CMAV funding targets are developed as a part of each ship's MMBP. RMC or ISIC will establish CMAV funding targets in order to properly and responsibly administer funds, and gain optimum readiness return on each dollar invested.
- j. Submarine Engineering Management, Monitoring and Fleet Support Program Office Performance Monitoring Team or Supervisor of Shipbuilding Newport News PMS 312C Material Condition Assessment (MCA) Review. Review scheduled Submarine Engineering Management, Monitoring and Fleet Support Program Office, PMT and PMS 312C MCA inspections, monitoring and testing that may result in significant new work for the Executing Activity or Ship's Force; or that may impact scheduled Ship's Force or Executing Activity work.
- k. Outside Activity Support. Identify outside activities (e.g., Warfare Center, Alteration Installation Team, Naval Undersea Warfare Center, Supervising Authority, RMC, Industrial Activity Tiger Team, etc.) participating in the CMAV and their associated support requirements.
- l. Special Evolutions. Identify required special evolutions associated with pre-availability tests and inspections.
- m. WPER. The WPER is conducted with the Executing Activity, ISIC, TYCOM, (and Ship's Force if available) as scheduled per Appendix H₁ or H₂ of this chapter. The purpose is to finalize the CMAV work package and required evolutions. This is accomplished as noted in sub-paragraphs (1) through (13) of this paragraph. This meeting may be conducted in conjunction with the ship's PB4M.
 - (1) Attendees will include the Maintenance Team, ISIC Material Officer, TYCOM Ship's Coordinator, Maintenance Planning Manager, RMC, Ashore Ships Maintenance Manager, Production Officer representative, Executing Activity, Ship's Engineer Officer, MST OIC, Availability Coordinator and the Ship Superintendent (as applicable).
 - (2) Assemble the proposed CMAV work package from the CSMP, PMRs, UROs, NMP and MJC, as applicable.
 - (3) Screen the proposed work package to designate the work to be accomplished during the CMAV.
 - (4) Prioritize the proposed work package.
 - (5) (Submarines only) Identify Safety of Ship Maintenance Items List evolutions in Volume IV, Chapter 10, paragraph 10.4.8 of this manual.
 - (6) Designate the CJs.
 - (7) Integrate Executing Activity recommended CMAV Key Event schedule with other ISIC and Ship planned events for the ship, such as weapons moves, fueling, and training events.

- (8) Review scheduled PMT and MCA testing that may result in significant new work after the CMAV starts.
 - (9) Establish the CMAV berth for pre-staging material and support equipment.
 - (10) Review adequacy of available testing and support equipment needed for the CMAV.
 - (11) Identify other outside activities participating in the CMAV and associated support requirements.
 - (12) Identify required special evolutions associated with pre-availability tests and inspections. The result of the CMAV WPER should be an executable work package within the CMAV time frame, budget, and Executing Activity capacity.
 - (13) (Submarines Only) Review the plan developed by the ship for the K-MRC completion and ensure it is part of the integrated schedule per paragraph 4.4.13.1.e. of this chapter. Prior to this meeting, Ship's Force engineer and 3M Coordinator will meet with the PMT, TYCOM 3M representative and ISIC together (typically at A-40) to review current K-MRC status, ensure the ship's records match that of PMT and develop a K-MRC execution plan. Any discrepancies will be adjudicated prior to A-21 and provided to the RMC for inclusion in the integrated work schedule. ISIC will concur with Ship's Force plan for K-MRC completion. All time critical K-MRCs (see paragraph 4.4.1.13.e. of this chapter) should be completed as soon as possible, preferably on the in port transit with PMT aboard (when possible) but no later than the end of the first 100 hours.
- n. Re-screen Work Candidates. Re-screen and assign returned work candidates (per Part II, Chapter 1 of this volume). Notify ship of final disposition of each item.
 - o. Issue Availability Planning Message (Submarines only). No later than two weeks prior to start of the CMAV, send the Availability Planning Message prepared per Appendix F of this chapter and reviewed during the CMAV WPER, to the ship. It should describe the major work scheduled, controlling Executing Activity and Ship's Force Key Events, PMT and MCA testing, PMR jobs scheduled, alterations to be accomplished by the Executing Activity and Ship's Force, any other scheduled evolutions and 100 hour transition plans. This message should identify the current numbers of components due or overdue from the Calibration and Weight Test Recall Program.

4.6.1.3 Issue Availability Planning Response Message (Submarines only). No later than one week prior to the start of the CMAV, the ship must certify readiness to transition to a CMAV period, and address any concerns with the Availability Planning Message to TYCOM or ISIC per Appendix I of this chapter. The following items must be addressed in the ship's report:

- a. Schedule requirements such as action items from Availability Planning Message, schedule of key events, ability to conduct 100-hour transition plans.
- b. Ship material preparation such as a report status of parts for Ship's Force work and desires for ISIC or TYCOM assistance in procurement and ensuring all outstanding

CASREPs, SUBS, ZOZZS and TDENTS are identified in availability planning message.

- c. Ship's Force integrated schedule such as miscellaneous programs (calibration, small valve maintenance, etc.), drills and trainers that will affect Ship's Force ability to support production work, preservation zones and planned maintenance (to include PMS, Reactor Plant PMS, and PMT KMRCs).
- d. CO's report of readiness or concerns: CO review items in sub-paragraphs "a" through "c" of this paragraph and availability planning message and report readiness and exceptions to transition to CMAV period.

4.6.1.4 Arrival Conference. This conference is conducted by the LMA. The Arrival Conference purpose is to provide an executive level brief to the RMC or ISIC, Executing Activity, MST OIC (if applicable) and ship's CO on the total scope of the CMAV effort and must be conducted as discussed in sub-paragraphs "a" through "d". Note that the Arrival Conference may be conducted in conjunction with the PB4M.

- a. Attendees. The Arrival Conference is hosted by the responsible FMA and attended by the following personnel:
 - (1) RMC or ISIC Material representative(s).
 - (2) Executing Activity representative(s).
 - (3) Tended ship, (recommended, as applicable, are the CO, Department Heads, and Availability Coordinator).
 - (4) Site PMT or MCA Officer.
 - (5) MST OIC (if applicable).
- b. Agenda. The following items comprise the agenda to be covered during the Arrival Conference:
 - (1) Introduction of key FMA, Executing Activity and ship personnel.
 - (2) CMAV material and funding status.
 - (3) Review the CMAV Key Event schedule for potential conflicts.
 - (4) Special evolutions scheduled during the availability.
 - (5) Validate that critical jobs to be accomplished by the Executing Activities and Ship's Force are properly sequenced in the IWS.
 - (6) Introduce the LMA representative as the single point of contact for all elements of the CMAV, including responsibility for coordination of all Executing Activities and Ship's Force. This point of contact may be the Port Engineer, Project Manager, or Ship Superintendent, as applicable.
 - (7) Alterations to be accomplished.
 - (8) Significant material issues.
 - (9) Review status of outstanding DFS, as applicable.

- (10) Results of arrival inspections and PMT or MCA testing.
- (11) Issue meeting schedule for the CMAV.
- c. Tended Ship Actions. The ship takes the following actions at this conference:
 - (1) Submit a list of key Ship's Force personnel, including officers, Leading Petty Officers or Work Center Supervisors, Quality Assurance Inspectors, Calibration Coordinator and Availability Coordinator.
 - (2) Verify that all known work candidates requiring outside assistance have been identified and work candidates submitted to the LMA or TYCOM (or submit known late work candidates for immediate screening).
 - (3) Discuss potential Executing Activity and Ship's Force work interface concerns.
 - (4) Identify Ship's Force and MST (if assigned) planned evolutions that could impact scheduled work and verify that they are properly sequenced in the IWS.
 - (5) (Submarines Only) Ship's Force brief the plan developed by the ship, with help from PMT, for the K-MRC completion and ensure it is part of the integrated schedule per paragraph 4.4.13.1.e. of this chapter.
- d. RMC or ISIC Actions. During this conference, the RMC or ISIC staff will take the following actions (if not already done):
 - (1) Review any late work candidates submitted by the ship per paragraph 4.4.6 of this chapter. Should the late work presented require that other work be deferred, that work to be deferred must be clearly understood. A Business Case Analysis described in Appendix D of this chapter should be conducted.
 - (2) (Submarines and Aircraft Carriers only). Brief the Key Events schedule for the availability. The ship's Key Events should normally be scheduled in the Pre-CMAV or Availability Planning Message, concurred with by the ship's CO on arrival and input to the MDS by the RMC or ISIC prior to the Arrival Conference. CJs controlling the CMAV completion must be identified for special management attention by the ISIC, LMA, Executing Activity and Ship's Force.

4.6.2 Continuous Maintenance Availability Execution. CMAVs are complex evolutions characterized by detailed management, closely coordinated RMC or ISIC, Executing Activity and Ship's Force work, systems testing, and other sequenced evolutions such as weapons movements, diver operations and training. Successful CMAV execution requires the closest possible communication and coordinated efforts by the RMC or ISIC, Executing Activity and Ship's Force.

4.6.3 Continuous Maintenance Availability Completion Procedures. The following procedures will be utilized for completing a CMAV. Exceptions are provided for those CMAVs of less than four weeks, or are of a minor scope where the PB4M may be an appropriate forum.

4.6.3.1 Management Reports Closeout Procedures. Upon completion of a scheduled availability, the MDS files must be updated to reflect the current status of work. To accomplish

this goal and to ensure that all activities understand the status of all work, the following procedures will be followed:

- a. Upon completion of the assigned work, the LMA or Executing Activity will present a copy of the work candidate or a list of completed JCNs with the applicable final action codes to the ship to obtain concurrence that the described work was completed. Ship's Force will complete all AWRs per reference (c). Within 2 weeks of completion, the Executing Activities who have performed any configuration change must submit the form 4790 CK of reference (c) to Ship's Force for submission to Configuration Data Managers Database - Open Architecture.
- b. Within two working days after the completion of an availability, all work centers will ensure that final man-hours have been entered. The ship's superintendent may sign off all Executing Activity routines for the ship. Completed work candidates and AWRs will be a product of the CMAV Departure and Assessment Conference of paragraph 4.6.3.2 of this chapter.
- c. On the third working day after the completion of an availability, the Maintenance Team will ensure that the CSMP ship and shore files reflects the current status of the ship's JCNs and request a Departure and Assessment Report by priority for the ship.
- d. On the fourth working day after the completion of an availability, the ship's superintendent will annotate each incomplete JCN on the final Departure and Assessment Report by JCN as to its present status and actions required in order to complete the item. Lead work centers must update this status into the MDS.
- e. Within seven working days after the completion of an availability, the Executing Activity will forward copies of the annotated Departure and Assessment Report to the ship and ISIC.
- f. Review status of outstanding DFSs.

4.6.3.2 End of Scheduled Continuous Maintenance Availability Departure and Assessment Conference. This comprehensive review and critique of the availability is another cornerstone of the continuous improvement policy regarding Fleet maintenance.

- a. Purpose. The CMAV Departure and Assessment Conference is held to:
 - (1) Review the conduct of the availability and identify those improvements necessary to increase the effectiveness of Fleet maintenance.
 - (2) Identify the work that was completed during this CMAV and complete the appropriate documents (e.g., work candidates, AWRs, etc.) or produce the list necessary to update the ship's CSMP to reflect the completed work.
 - (3) Identify and reschedule to a future CMAV, the work deferred during this CMAV.
 - (4) Identify any incomplete work candidates and plan of action to complete items.
 - (5) Establish the basic requirements (i.e., initial work package, sequence number and tentative dates) for the next CMAV.
 - (6) Review status of outstanding DFSs.

- b. Execution. The Departure and Assessment Conference will be held during the last week of the CMAV at a time agreed upon by the Executing Activity Repair Officer or Production Officer and the ship. This meeting may be held in conjunction with the final weekly Management Conference or Progress Review.
- c. Attendees. The Departure and Assessment Conference is arranged, coordinated and chaired by the LMA Repair or Production Officer. Where the LMA is a contractor, the LMA Project Manager may co-chair these meetings with the NSA Project Manager. However, lack of participation by the contractor does not alleviate the NSA Project Manager of this responsibility. The following personnel must attend this meeting and participate in its agenda:
 - (1) ISIC Supply Materials, Weapons, Combat Systems, Electronics Material Officer, and Submarine Engineering Management, Monitoring and Fleet Maintenance Support Program Office or PMT Staff personnel (as applicable).
 - (2) LMA Repair Officer, Production Officer, and Ship Superintendent, or their designated representatives.
 - (3) Tended ship CO, MST OIC (if applicable), Engineer and Availability Coordinator.
 - (4) Others as directed by the TYCOM, ISIC or Executing Activity CO.
 - (5) Executing Activity representatives.
- d. Agenda. The following agenda must be used for reviewing and assessing the CMAV. Additional items may be added at the discretion of the TYCOM, ISIC, Executing Activity or ship. Attendees will be prepared to address their respective portions of the agenda.
 - (1) Review of the CMAV work package to establish status of each item and, for items completed satisfactorily, complete the work candidate or AWR.
 - (2) Review incomplete work candidates that will remain open from this CMAV and identify plan of action to complete these items.
 - (3) Identify and reschedule to a future CMAV the work deferred during this CMAV.
 - (4) Assess the scheduling, execution and quality of work accomplished by each activity during the CMAV.
 - (5) Assess the quality of general services provided by the Executing Activity site.
 - (6) Review recommendations for process improvements and possible LEAN initiatives.
 - (7) Assess lost time that prevented or delayed execution of scheduled work. (Lost time internal to the Executing Activity, e.g., waiting for transportation, assist work center, etc. and lost time caused by the ship such as waiting access, tagout, other Ship's Force support.)
 - (8) (Submarines only) At the end of the first normally scheduled CMAV after a CNO availability, the LMA, via letter, informs the appropriate Naval Shipyard,

with copies to the TYCOM, PMS392 and SEA04X, of any identified lessons learned, rework and quality concerns related to Naval Shipyard work.

- e. Results. The LMA must consolidate the minutes of this meeting into the Departure and Assessment Report to the ISIC and provide a copy to the TYCOM and appropriate planning activity (and NAVSEA 07 for NAVSEA Submarine Repair Activities only). The report must include:
- (1) List of completed work or completed work candidates or AWRs for direct input into MDS to update the ship's CSMP and Configuration Data Managers Database - Open Architecture.
 - (2) Preliminary establishment of the next CMAV.
 - (3) List of policies and processes identified as requiring review for improvement. Proposed process improvements and corrective actions suggested to improve the effectiveness of future CMAVs.
 - (4) Lessons learned from the availability.

4.6.3.3 Fast Cruise or Sea Trials. The ISIC may schedule a one to two day Fast Cruise as part of the CMAV Key Event schedule. This is normally the last major Key Event prior to CMAV completion. As a minimum, the Fast Cruise agenda will include specified drills and evolutions necessary to re-establish proficiency in basic ship operations. It will also include sufficient formal testing to certify that the equipment and systems are fully ready to operate at sea in an operational environment. For CMAVs less than four weeks, the requirement for a Fast Cruise must be at the ISIC discretion. The necessity of Sea Trials is a function of work performed during a CMAV and may not be required. If the duration or complexity of the CMAV is determined to be sufficient to warrant Sea Trials, the Ship, ISIC or TYCOM (as required by specific Force policy) must determine if a formal Sea Trial Agenda is necessary, and if required, task the RMC or ship to prepare a formal Sea Trial Agenda for ISIC or TYCOM approval.

4.6.4 Hot Wash or Lessons Learned. For long duration or complex CMAVs, or in cases where there are significant lessons to be learned, Hot Wash or Lessons Learned will be conducted. The Hot Wash or Lessons Learned Conference should be within 30 days of completion of the availability. The Lessons Learned process is described in Volume VI Chapter 39 of this Manual. All key NSA, RMC, LMA, TYCOM or his representative, Executing Activity and Maintenance Team personnel must attend it. The agenda and details of the meeting must be determined by the RMC and Maintenance Team and must be of appropriate length to evaluate the overall scope of the work accomplished. The Hot Wash or Lessons Learned process provides the maintenance and modernization community with a process to identify, resolve, and provide feedback communication on barriers causing inefficiencies or waste within business processes. While there are several milestone meetings within the availability planning and execution process, the feedback process exists to continually collect information to improve processes.

4.6.5 Maintenance Management Performance Goals (Submarine Tenders only). Except for section 4.6.5.1 of this chapter, which is also applicable for RMC I-Level Production Shops, the following maintenance management performance goals are established for Submarine Tender Repair and Weapons Repair Departments. COs and Repair Officers are responsible for making every effort to attain these goals.

4.6.5.1 Activity Performance Summary. The Activity Performance Summary is a compilation of manpower statistics and production indices that are cumulative on a monthly basis. The following information summarizes the content and use of this report:

- a. This report is produced weekly on a cumulative basis for the current month and analyzed by the Production Officer and Repair Officer. This analysis should help determine the relative accuracy and adequacy of the man-hour accounting for each work center. The data reflects how each work center is loaded with production work.
- b. On the last day of the month, a complete monthly cumulative report is produced. A thorough review and analysis is conducted by the Repair Officer and Production Officer, similar to the weekly review.
- c. Following review and analysis, the Repair Officer approves the data and the required reports are submitted to the TYCOM (for Submarine Tenders) or Commander, Navy Regional Maintenance Center (for RMC I-Level Production Shops). The TYCOM or Commander, Navy Regional Maintenance Center in turn forwards the data to higher authority.
- d. The Performance Summary provides management with data to determine the capacity of the activity for CMAV maintenance, and subsequent monitoring of the activity maintenance effort conducted on ships. The determination of activity capacity for ship maintenance is the gauge by which managers can evaluate activity productivity while reviewing the report of man-hour expenditures.
- e. Activity capacity is a function of both total manpower and the distribution of personnel within the activity. A comparison of Repair Department manning to the manpower authorization should be conducted periodically to ensure activity work centers are not undermanned with respect to rate, Navy Enlisted Classification, or number of personnel. This review may determine that local action is required to schedule formal schools leading to the Navy Enlisted Classification acquisition where shortages exist, or may dictate a temporary or permanent reassignment of resources from one work center to another.

NOTE: FOR RMC I-LEVEL PRODUCTION PERFORMANCE SUMMARY, RMCs ARE NOT REQUIRED TO COUNT TRANSIENT PERSONNEL AND OTHERS THAT ARE NOT ABLE TO TRULY ACCOMPLISH OR SUPPORT PRODUCTION WORK, YET ARE ASSIGNED TO I-LEVEL PRODUCTION SHOPS FOR SUPERVISION.

- f. Part One of the activity Performance Summary shows the manpower distribution within the Activity. The Analyst Records and Report Section is responsible for collecting manning information from the activity departments and divisions as a basic input to the Performance Summary. The manning level of the Repair Department is monitored to ensure that this department is properly manned across its work centers.
- g. Part Two of the activity Performance Summary provides departmental manpower usage indicators and statistics. The Productivity Index is a key indicator of activity employment. Each Productivity Index is a ratio of production man-hours expended to the production man-hours available. Available man-hours are computed from the

number of production personnel assigned each day, assuming an eight-hour workday and no more than five working days per week.

- h. Part Three of the activity Performance Summary is a breakdown of activity man-hours expended aboard each tended ship.
- i. Part Four of the activity Performance Summary shows the status of work screened for activity accomplishment.
- j. Part Five of the activity Performance Summary provides the same man-hour usage information as Part Two, but broken down by work center.

4.6.5.2 Available Production Hours. The standard workday consists of eight hours of available production work each workday, five days a week. Weekends and national holidays are not considered to have available production work hours. It further requires that TYCOMs will establish policies that maximize available production hours within the context of the total activity mission profile. The activity CO must implement the eight-hour production workday for activity personnel. Reduction in this available effort will be for requisite industrial training, skill qualification, facilities maintenance, and capability certification efforts needed to meet the activity's Mission Profile requirements.

4.6.5.3 Performance Indices.

- a. All factors relative to the following indices must be accurately reflected in the baseline of the FMA computer management system. These factors are:
 - (1) Assigned Man-hours. The number of personnel assigned to the activity as production and production support, over the normal eight-hour work day and the number of days tending (exclusive of weekends, holidays and days underway), comprise the "Assigned (Gross Available) Man-hours".
 - (2) Production Man-hours. The man-hours actually expended in the progress and completion of work requests authorized for activity accomplishment are those expended by personnel assigned to the activity work centers. The expended man-hours by personnel from other departments are not included in the activity's indices, but are credited to other special work centers on the Performance Summaries.
 - (3) Productive Support Ratio for the Department is defined as:

$$\frac{\text{Total Assigned Support Personnel}}{\text{Total Assigned Production Personnel}}$$
- b. A Productive Support Ratio of between 0.65 and 0.85 must be maintained. A ratio of greater than 0.85 is indicative of an excessive number of FMA personnel assigned to non-FMA tasks. A ratio of less than 0.65 is indicative of a shortage of personnel in Quality Assurance, Planning and other critical production support work centers. For AS-39, local specification is $65\% \pm 10\%$.
- c. Supervisory Ratio. The Supervisory Ratio, production personnel to permanent support personnel, must be a minimum ratio of 7:1.
- d. Supply Production Support. Production work centers must not have supply function

production support personnel assigned such as Repair Parts Petty Officers. The supply support function is assigned to the Planning and Estimating and Repair Other Vehicle work centers. When the production work centers must provide technical details for Repair Other Vehicle supply requests, such research time must be reported as production time against the applicable work request. Production managers must ensure the Automated Material Requisitioning system is fully utilized to preclude wasted labor by activity personnel in copying supply data already available from the computer.

e. Department Productivity Index.

(1) The Productivity Index for the Department is defined as:

$$\frac{\text{Total Production Man-hours Expended by Department Personnel for the Reported Period}}{\text{Total Production Personnel} \times 8 \text{ hours per day} \times \text{Total Number of Days Tending for the Reported Period}}$$

(2) A Productivity Index for the department should average between 0.55 and 0.75. An index of greater than 0.75 indicates (AS-39 local specification is 55% to 90%):

- (a) Insufficient assignment of production personnel resulting in significant overtime work or deferral of requisite technical skill training and qualification, and proficiency or general military training.
- (b) An excessive amount of overtime work caused by improper work-loading of an activity by the ISIC.
- (c) Inaccurate reporting of man-hours.
- (d) Inaccurate accounting of assigned personnel (e.g., 340 assigned personnel working and reporting production hours but only 310 shown in the computer as assigned).

f. Work Center Productivity Index. A Productivity Index for individual production work centers for the month could range from 0.25 to 1.35 with a norm of 0.85. However, if the quarterly average for a production work center is less than 0.40, the number of personnel should be reduced.

g. Repair Utilization Index. Repair Utilization Index for the Department is:

$$\frac{\text{Total Support Man-hours} + \text{Expended Production Man-hours}}{\text{Total Production and Support Man-hours Assigned}}$$

The Department Repair Utilization Index requires 45% to 90% for the month.

h. Long-Term Non-FMA Duty Index. There are two special work center codes established to monitor the total Repair Department (10J) and Weapons Repair Department (10K), if assigned, personnel detailed to non-activity duties for greater than 30 continuous days. These numbers should not exceed ten percent of the total assigned activity personnel averaged for the calendar quarter.

4.7 MAJOR MAINTENANCE PERIOD.

4.7.1 Major Maintenance Period Planning. The designation of “CNO for Scheduling Purposes Only” make MMPs unique in the submarine community. This designation makes planning support through standard meetings, formal work packages, and additional oversight available to the TYCOM or ISIC, if required. Maintaining MMPs as fleet availabilities allows executing activities to resource accomplishment of work at a level commensurate with other work being done on an operational asset. Effective MMP management begins well before the ship arrives with material procurement and job planning. Appendix H₃ of this chapter is a typical submarine MMP Milestone Schedule to be used by all activities involved in planning and executing the submarine availability.

4.7.1.1 Major Maintenance Period Planning Sources. A large majority of the MMP Work Package can be identified in advance from four basic sources.

- a. Ship's CSMP. To ensure the CSMP accurately reflects the required ship's maintenance, the Maintenance Team and ISIC will review each ship's CSMP in detail with Ship's Force during routine PB4Ms and prior to every maintenance availability.
- b. PMR and URO electronic files. SUBMEPP provides electronic files of PMR and URO maintenance requirements for each ship, as applicable. The ISIC may load these requirements into each ship's CSMP for a specific MMP or they may be provided by SUBMEPP as part of a formal work package.
- c. Alterations (Fleet Alterations, Program Alterations, Ship Changes and Strategic Systems Program Alterations, etc.). Depending on the direction provided by TYCOM or ISIC alterations may be identified for installation in the formal work package or they may be entered in the ship's CSMP for accomplishment during the availability. TYCOM calls out alterations for a specific MMP based on material availability and Executing Activity capacity as identified by the Executing Activity. Within funding constraints and TYCOM guidance, all alterations authorized on the TYCOM Alteration Management System or Navy Modernization Process (NMP) are candidates for accomplishment during each MMP.
- d. Work Routines. A set of standard routines from the MJC should be planned for every MMP. The ISIC or RMC tailors each MMP routine package to the needs of the ship by calling out additional routines to document periodic, interim dry docking, URO maintenance (as applicable), and calibration recall requirements, as appropriate. The routine package is authorized in either the local job planning system or in a formal work package, if provided.

4.7.1.2 Major Maintenance Period Planning Functions. The Maintenance Team, RMC, ISIC, SUBMEPP and LMA will take the following actions in planning a MMP.

- a. Establish and Confirm Availability Dates. TYCOM will establish or confirm availability dates for the MMP with input from the ISIC, Maintenance Team or LMA. These dates will be provided to SUBMEPP for development of the ship's platform schedule. The accuracy of these dates is important to determine which PMR and URO requirements will be scheduled in the availability and schedule changes can result in significant modification to the work package
- b. Platform Schedule. SUBMEPP will update the ship's platform schedule for the MMP, ensuring that all PMR and URO requirements that are due during the MMP, or that

will become due prior to the next availability are included. PMR and URO work is mandatory. PMR requirements are to be accomplished on or before the scheduled due date listed in the SUBMEPP provided report as contained in the TYCOM PMR scheduling system. PMR requirements which are not accomplished by their scheduled completion date will be rescheduled and identified to the TYCOM per Volume VI, Chapter 24, and paragraph 24.7.3.g of this manual. UROs are to be accomplished by the scheduled due dates or appropriate waivers or DFS must be requested.

- c. Current Ship's Maintenance Project Update. The Maintenance Team will ensure that the CSMP is updated as scheduled per Appendix H3. Work intended to be accomplished during the availability, to include PMS and testing for Ships Force assignment, must be prioritized and submitted to the ISIC. This action has significant impact on the ability of both the LMA or ISIC and Executing Activity to properly plan for the MMP, and determines potential impacts on other planned work.
- d. Reactor Plant Work Requirements. The Maintenance Team will review Reactor Plant PMS and update the CSMP with the actions that need to be accomplished during the MMP. Additionally, the ISIC must identify any major nuclear actions that are to be scheduled during the availability.
- e. PMR and URO Review. The Maintenance Team will review PMR and URO requirements in order to ensure all maintenance actions intended for accomplishment during the MMP are identified.
- f. Alteration Management System or NMP Review. ISIC will review and ensure all authorized alterations identified for accomplishment during the MMP are prioritized based on material availability. If applicable, the ISIC will provide list of alterations identified for installation to SUBMEPP for inclusion in the work package.
- g. DDS off-loads and on-loads. NAVSEA is responsible to identify DDS off-loads and on-loads planned for the availability.
- h. DIRSSP alterations and work. DIRSSP is responsible to identify any unique work requirements or alterations scheduled to be accomplished in the availability for inclusion in the work package.
- i. Missile Tube reconfiguration. ISIC will identify any actions required for the availability to support necessary Missile Tube reconfiguration.
- j. Preliminary Work Package. If requested by the funding customer, SUBMEPP will publish the Preliminary Work Package in order to assist availability planning. The Preliminary Work Package is used by NAVSEA, TYCOM, ISIC, LMA, and the Maintenance Team to develop an initial scope of the availability and identify work requirements which may impact successful execution.
- k. Preplanning Meeting. If requested by the funding customer, the Preplanning Meeting serves as the initial review of the Preliminary Work Package. The Preplanning meeting may be attended by TYCOM, ISIC, LMA, Ship, NRMD and Primary Shipyard and SUBMEPP. The intent of this meeting is to provide an initial review of the MMP Work Package. The following will be reviewed for incorporation into the

Initial Issue Availability Work Package; PMR and URO requirements, alterations, DFSs, and CSMP items that are in the Preliminary Work Package or need to be added.

- (1) PMR and URO requirements from the class maintenance plan.
 - (2) Authorized NAVSEA, TYCOM and DIRSSP alterations.
 - (3) DFS that have been deferred to the MMP.
 - (4) Work currently identified in the ship's CSMP.
 - (5) Shipyard Nuclear Work
- l. JCN Call Down. SUBMEPP will call down JCNs for PMR and URO requirements intended for accomplishment during the availability. JCN Call Down is executed after the Preplanning Meeting in order to minimize the number of JCNs generated which will not be worked in the MMP.
 - m. Long Lead Time Material. The LMA will review CSMP T/A 2 items and order any Long Lead Time Material required.
 - n. Initial Issue Work Package. Initial Issue Work Package is the first formal work package issued for MMP and incorporates changes from the Preliminary Planning Meeting. The Initial Issue Work Package includes PMR and URO requirements, alterations, CSMP items, and DFSs that are identified for accomplishment during the availability.
 - o. Work Package Fully Brokered. With the publication of the Initial Issue Work Package, identifying all work authorized by the TYCOM and JCN Call Down completed by SUBMEPP the ISIC will broker all known work.
 - p. Initial Planning Meeting. The LMA will schedule and chair the Initial Planning Meeting (IPM). The IPM is conducted with the assistance of SUBMEPP and is usually attended by NAVSEA, TYCOM or ISIC and Ship's Force. The IPM serves as system-by-system review of the Initial Work Package in order to ensure that all necessary work is identified and potential problems with conflicting requirements are identified.
 - (1) Attendees will include the Maintenance Team, ISIC Material Officer or TYCOM Ship's Coordinator, Maintenance Planning Manager, RMC, Ashore Ships Maintenance Manager, Production Officer Representative, LMA, Ship's Engineer Officer, Ship Superintendent, SUBMEPP, and NAVSEA.
 - (2) Review the initial MMP work package in order to ensure all required work is identified.
 - (3) Authorize the Initial Issue Work Package.
 - (4) Integrate Executing Activity recommended MMP Key Event schedule with other ISIC or Ship planned events for the ship, such as weapons moves, fueling, and training events.
 - (5) Review scheduled PMT and TSRA testing that may result in significant new work after the MMP starts.

- (6) Review adequacy of available testing and support equipment needed for the MMP.
- (7) Identify other outside activities participating in the MMP and associated support requirements
- q. Work Integration. Activities supporting work during the availability are expected to provide the LMA with scope of work, testing requirements, and timelines. This information is critical to successful execution of the MMP, ensuring that the LMA can plan and resource work.
- r. Post Initial Planning Meeting Work Package. If requested by the TYCOM, SUBMEPP will issue a formal, Post Initial Planning Meeting Work Package containing all of the changes identified at the IPM. This serves as the authorizing document for work requirements accomplished during the MMP.
- s. Deficiency Screening. The RMC, LMA, PMT, and the Maintenance Team must submit the results of all pre-availability testing (POTs, PATs or KMRCs) to the TYCOM or ISIC with recommended changes to the availability work package. The TYCOM or ISIC will provide authorized changes to SUBMEPP for inclusion in the work package, if applicable.
- t. AIT Memorandums of Agreement. AIT Managers are responsible for submitting Memorandums of Agreement to the LMA.
- u. Nuclear Work Risk Assessment. NRMD will provide a risk assessment for the MMP to the LMA. This is required for LMA development of overall MMP risk assessment letter for TYCOM or ISIC.
- v. Execution Planning Products. The LMA will develop the following products in support of MMPs
 - (1) FWPs, TWDs and TGIs to support identified work requirements.
 - (2) Integrated Work Scheduling, identifying critical jobs.
 - (3) Weapons and Sail arrival inspection plan.
 - (4) Recommended Key Event Schedule for presentation to ISIC or Maintenance Team.
- w. Work Package Execution Review (WPER) or Final Planning Meeting (FPM). The WPER or FPM is conducted by the LMA. The WPERP or FPM is scheduled per Appendix H₃ of this chapter. The purpose is to finalize the MMP work package and required evolutions, any new work submitted after the WPER or FPM is considered "Late Work". This meeting may be conducted in conjunction with the ship's PB4M.
 - (1) Attendees will include the Maintenance Team, ISIC Material Officer or TYCOM Ship's Coordinator, Maintenance Planning Manager, LMA, NRMD and Primary Shipyard representative, Ashore Ships Maintenance Manager, Production Officer Representative, Ship's Engineer Officer, Availability Coordinator, Ship Superintendent, and SUBMEPP.

- (2) Review the proposed MMP work package to ensure all required work is identified.
 - (3) Prioritize the proposed work package.
 - (4) Identify Safety of Ship Maintenance Items List evolutions in Volume IV, Chapter 10, paragraph 10.4.8 of this manual.
 - (5) Designate the CJs.
 - (6) Integrate Executing Activity recommended MMP Key Event schedule with other ISIC and Ship planned events for the ship, such as weapons moves, fueling, and training events.
 - (7) Review scheduled PMT or TSRA testing that may result in significant new work after the MMP starts.
 - (8) Establish the MMP berth for pre-staging material and support equipment.
 - (9) Review adequacy of available testing and support equipment needed for the MMP.
 - (10) Identify other outside activities participating in the MMP and associated support requirements.
 - (11) Identify required special evolutions associated with pre-availability tests and inspections. The result of the MMP WPER or FPM should be an executable work package within the MMP time frame, budget, and Executing Activity capacity.
 - (12) Review the ship's KMRC plan and ensure it is part of the integrated schedule per paragraph 4.4.13.1.e. of this chapter. Prior to this meeting, Ship's Force engineer and 3M Coordinator will meet with the PMT, TYCOM 3M representative and ISIC together (typically at A-365 and A-90) to review current K-MRC status, ensure the ship's records match that of PMT and develop a K-MRC execution plan. Any discrepancies will be adjudicated prior to WPER or FPM and provided to the LMA for inclusion in the integrated work schedule. Additionally, PMT will provide RMC curves to Ship's Force in order to help Ship's Force develop a plan to conduct all required K-MRCs during the availability. ISIC will concur with Ship's Force KMRC plan. ISIC should work with TYCOM to execute all KMRCs that will inform the Final Work Package in the last deployed CMAV before RTHP. All time critical K-MRCs (see paragraph 4.4.1.13.e. of this chapter) should be completed as soon as possible, preferably on the in port transit with PMT aboard (when possible) but no later than the end of the first 100 hours.
- x. Issue Availability Planning Message. No later than four weeks prior to start of the MMP, send the Availability Planning Message prepared per Appendix F of this chapter and reviewed during the MMP WPER, to the ship. It should describe the major work scheduled, controlling Executing Activity and Ship's Force Key Events, PMT or TSRA testing, PMR jobs scheduled, alterations to be accomplished by the Executing Activity and Ship's Force, any other scheduled evolutions and 100 hour

transition plans. This message should identify the current numbers of components due or overdue from the Calibration or Weight Test Recall Program.

4.7.1.3 Issue Availability Planning Response Message. No later than two weeks prior to the start of the MMP, the ship must certify readiness to transition to a MMP period, and address any concerns with the Availability Planning Message to TYCOM or ISIC per Appendix I of this chapter. The following items must be addressed in the ship's report:

- a. Schedule requirements such as action items from Availability Planning Message, schedule of key events, ability to conduct 100-hour transition plans.
- b. Ship material preparation such as a report status of parts for Ship's Force work and desires for ISIC or TYCOM assistance in procurement and ensuring all outstanding CASREPs, SUBS, ZOZZS and TDENTS are identified in availability planning message.
- c. Ship's Force integrated schedule such as miscellaneous programs (calibration, small valve maintenance, etc.), drills and trainers that will affect Ship's Force ability to support production work, preservation zones and planned maintenance (to include PMS, Reactor Plant PMS, and PMT KMRCs).
- d. CO's report of readiness or concerns: CO review items in sub-paragraphs "a" through "c" of this paragraph and availability planning message and report readiness and exceptions to transition to the MMP period.

4.7.1.4 Arrival Conference. This conference is conducted by the LMA. The purpose is to provide an executive level brief to the TYCOM or ISIC, Executing Activity, and ship's CO on the total scope of the CMAV effort and must be conducted as discussed in sub-paragraph "a" through "d" of this paragraph. Note that the Arrival Conference may be conducted in conjunction with the PB4M.

- a. Attendees. The Arrival Conference is hosted by the responsible FMA and attended by the following personnel:
 - (1) LMA or ISIC Material representative(s).
 - (2) Executing Activity representative(s).
 - (3) Tended ship, (CO, XO, COB, Department Heads, EDMC and Availability Coordinator).
 - (4) Site PMT or OIC
- b. Agenda. The following items comprise the agenda to be covered during the Arrival Conference:
 - (1) Introduction of key LMA, Executing Activity and ship personnel.
 - (2) MMP material and funding status.
 - (3) Review the MMP Key Event schedule for potential conflicts.
 - (4) Special evolutions scheduled during the availability.
 - (5) Validate that critical jobs to be accomplished by the Executing Activities and Ship's Force are properly sequenced in the IWS.

- (6) Introduce the LMA representative as the single point of contact for all elements of the MMP, including responsibility for coordination of all Executing Activities and Ship's Force. This point of contact may be the Port Engineer, Project Manager, or Ship Superintendent, as applicable.
 - (7) Alterations to be accomplished.
 - (8) Significant material issues.
 - (9) Review status of outstanding DFS, as applicable.
 - (10) Results of arrival inspections and PMT or TSRA testing.
 - (11) Issue meeting schedule for the MMP.
- c. Tended Ship Actions. The ship takes the following actions at this conference:
- (1) Submit a list of key Ship's Force personnel, including officers, Leading Petty Officers, Work Center Supervisors, Quality Assurance Inspectors, Calibration Coordinator and Availability Coordinator.
 - (2) Verify that all known work candidates requiring outside assistance have been identified and work candidates submitted to the LMA or TYCOM (or submit known late work candidates for immediate screening).
 - (3) Discuss potential Executing Activity and Ship's Force work interface concerns.
 - (4) Identify Ship's Force or planned evolutions that could impact scheduled work and verify that they are properly sequenced in the IWS.
 - (5) Brief the Ship's Force plan for the K-MRC completion and ensure it is part of the integrated schedule per paragraph 4.4.13.1.e. of this chapter.
- d. LMA or ISIC Actions. During this conference, the LMA or ISIC staff will take the following actions (if not already done):
- (1) Review any late work candidates submitted by the ship per paragraph 4.4.6 of this chapter. Should the late work presented require that other work be deferred, that work to be deferred must be clearly understood. A Business Case Analysis described in Appendix D of this chapter should be conducted.
 - (2) Brief the Key Events schedule for the availability. The ship's Key Events should normally be scheduled in the Pre-MMP or Availability Planning Message, concurred with by the ship's CO on arrival and input to the MDS by the LMA or ISIC prior to the Arrival Conference. CJs controlling the MMP completion must be identified for special management attention by the ISIC, LMA, Executing Activity and Ship's Force.

4.7.2 Major Maintenance Period Execution. MMPs are complex evolutions characterized by detailed management, closely coordinated LMA or ISIC, Executing Activity and Ship's Force work, systems testing, and other sequenced evolutions such as weapons movements, diver operations and training. Successful MMP execution requires the closest possible communication and coordinated efforts by the LMA or ISIC, Executing Activity and Ship's Force.

4.7.3 Major Maintenance Period Completion Procedures. The following procedures will be utilized for completing a MMP.

4.7.3.1 Management Reports Closeout Procedures. Upon completion of a scheduled availability, the MDS files must be updated to reflect the current status of work. To accomplish this goal and to ensure that all activities understand the status of all work, the following procedures will be followed:

- a. Upon completion of the assigned work, the LMA or Executing Activity will present a copy of the work candidate or a list of completed JCNs with the applicable final action codes to the ship to obtain concurrence that the described work was completed. Ship's Force will complete all AWRs per reference (c). Within 2 weeks of completion, the Executing Activities who have performed any configuration change must submit the form 4790 CK of reference (c) to Ship's Force for submission to Configuration Data Managers Database - Open Architecture.
- b. Within four working days after the completion of MMPs, all work centers will ensure that final man-hours have been entered. The ship's superintendent may sign off all Executing Activity routines for the ship. Completed work candidates and AWRs will be a product of the MMP Departure and Assessment Conference of paragraph 4.7.3.2 of this chapter.
- c. On the fifth working day after the completion of MMPs, the Maintenance Team will ensure that the CSMP ship and shore files reflects the current status of the ship's JCNs and request a Selected Job Management Report by priority for the ship.
- d. On the sixth working day after the completion of MMPs, the ship's superintendent will annotate each incomplete JCN on the final Selected Job Management Report by JCN as to its present status and actions required in order to complete the item. Lead work centers must update this status into the MDS.
- e. Within eighth working days after the completion of MMPs, the Executing Activity will forward copies of the annotated Selected Job Management Report to the ship and ISIC.
- f. Within 25 calendar days after the completion of an availability, and prior to issuing the Departure and Assessment Report, the Executing Activity will have all JCNs for the availability closed.
- g. Review status of outstanding DFSs.

4.7.3.2 End of Availability Departure and Assessment Conference. This comprehensive review and critique of the availability is another cornerstone of the continuous improvement policy regarding Fleet maintenance.

- a. Purpose. The MMP Departure and Assessment Conference is held to:
 - (1) Review the conduct of the availability and identify those improvements necessary to increase the effectiveness of Fleet maintenance.
 - (2) Identify the work that was completed during this MMP and complete the appropriate documents (e.g., work candidates, AWRs, etc.) or produce the list necessary to update the ship's CSMP to reflect the completed work.

- (3) Identify and reschedule to a future availability, the work deferred during this MMP.
 - (4) Identify any incomplete work candidates and plan of action to complete items.
 - (5) Establish the basic requirements (i.e., initial work package, sequence number and tentative dates) for the next MMP.
 - (6) Review status of outstanding DFSs.
- b. Execution. The Departure and Assessment Conference will be held during the last week of the MMP at a time agreed upon by the Executing Activity Repair Officer or Production Officer and the ship. This meeting may be held in conjunction with the final weekly Management Conference or Progress Review.
- c. Attendees. The Departure and Assessment Conference is arranged, coordinated and chaired by the LMA Repair or Production Officer. The following personnel must attend this meeting and participate in its agenda:
- (1) ISIC Supply Materials, Weapons, Combat Systems, Electronics Material Officer, and Submarine Engineering Management, Monitoring and Fleet Maintenance Support Program Office or PMT Staff personnel (as applicable).
 - (2) LMA Repair Officer, Production Officer, and Ship Superintendent, or their designated representatives.
 - (3) Tended ship CO, Engineer and Availability Coordinator.
 - (4) Others as directed by the TYCOM, ISIC or Executing Activity CO.
 - (5) Executing Activity representatives.
 - (6) SWFLANT Representative
- d. Agenda. The following agenda must be used for reviewing and assessing the MMP. Additional items may be added at the discretion of the TYCOM, ISIC, Executing Activity or ship. Attendees will be prepared to address their respective portions of the agenda.
- (1) Review of the MMP work package to establish status of each item and, for items completed satisfactorily, complete the work candidate or AWR.
 - (2) Review incomplete work candidates that will remain open from this MMP and identify plan of action to complete these items.
 - (3) Identify and reschedule to a future availability the work deferred during this MMP.
 - (4) Assess the scheduling, execution and quality of work accomplished by each activity during the MMP.
 - (5) Assess the quality of general services provided by the Executing Activity site.
 - (6) Review recommendations for process improvements and possible LEAN initiatives.

- (7) Assess lost time that prevented or delayed execution of scheduled work. (Lost time internal to the Executing Activity, e.g., waiting for transportation, assist work center, etc. and lost time caused by the ship such as waiting access, tagout, other Ship's Force support.)
- e. Results. The LMA must consolidate the minutes of this meeting into the Departure and Assessment Report to the ISIC and provide a copy to the TYCOM and appropriate planning activity). The report must include:
 - (1) List of completed work, completed work candidates and AWRs for direct input into MDS to update the ship's CSMP and Configuration Data Managers Database - Open Architecture.
 - (2) Preliminary establishment of the next MMP.
 - (3) List of policies and processes identified as requiring review for improvement. Proposed process improvements and corrective actions suggested to improve the effectiveness of future MMPs.
 - (4) Lessons learned from the availability.

4.7.3.3 Fast Cruise or Sea Trials. The ISIC may schedule a one to two day Fast Cruise as part of the MMP Key Event schedule. This is normally the last major Key Event prior to MMP completion. As a minimum, the Fast Cruise agenda will include specified drills and evolutions necessary to re-establish proficiency in basic ship operations. It will also include sufficient formal testing to certify that the equipment and systems are fully ready to operate at sea in an operational environment. If the duration or complexity of the MMP is determined to be sufficient to warrant Sea Trials, the Ship, ISIC or TYCOM (as required by specific Force policy) must determine if a formal Sea Trial Agenda is necessary, and if required, task the RMC or ship to prepare a formal Sea Trial Agenda for ISIC or TYCOM approval.

4.7.4 Hot Wash or Lessons Learned. Hot Wash or Lessons Learned Conferences will be conducted. The Hot Wash or Lessons Learned Conference should be within 30 days of completion of the availability. The Lessons Learned process is described in Volume VI Chapter 39 of this Manual. All key NSA, LMA, TYCOM or his representative, Executing Activity, Maintenance Team, and SUBMEPP personnel must attend it. The agenda and details of the meeting must be determined by LMA and Maintenance Team and must be of appropriate length to evaluate the overall scope of the work accomplished. The Hot Wash or Lessons Learned process provides the maintenance and modernization community with a process to identify, resolve, and provide feedback communication on barriers causing inefficiencies or waste within business processes. While there are several milestone meetings within the availability planning and execution process, the feedback process exists to continually collect information to improve processes.

NOTE: FOR RMC I-LEVEL PRODUCTION PERFORMANCE SUMMARY, RMCs ARE NOT REQUIRED TO COUNT TRANSIENT PERSONNEL AND OTHERS THAT ARE NOT ABLE TO TRULY ACCOMPLISH OR SUPPORT PRODUCTION WORK, YET ARE ASSIGNED TO I-LEVEL PRODUCTION SHOPS FOR SUPERVISION.

4.7.5. Activity Performance Summary. The Activity Performance Summary is a compilation of manpower statistics and production indices that are cumulative on a monthly basis. The following information summarizes the content and use of this report:

- a. This report is produced weekly on a cumulative basis for the current month and analyzed by the Production Officer and Repair Officer. This analysis should help determine the relative accuracy and adequacy of the man-hour accounting for each work center. The data reflects how each work center is loaded with production work.
- b. The Performance Summary provides management with data to determine the capacity of the activity for maintenance, and subsequent monitoring of the activity maintenance effort conducted on ships. The determination of activity capacity for ship maintenance is the gauge by which managers can evaluate activity productivity while reviewing the report of man-hour expenditures.

4.8 YEAR LONG CONTINUOUS MAINTENANCE. The CM is a single yearlong availability, for the period 01 October through 30 September, scheduled for each ship every fiscal year. The Year Long Continuous Maintenance (YLCM) availability is for the scheduling and completion of non-emergent work items that are not accomplished during any other scheduled availability.

4.8.1 Year Long Continuous Maintenance Planning. Planning sources and actions are similar to those for the CMAV. Since the continuous availability is a year long, it has no specific arrival date as a reference for the planning milestones. As a result, the milestone dates for the yearlong availability are consistent with those for the scheduled availability but are referenced to the planned execution date(s) of the work item(s). This approach for non-emergent work is intended to reduce premiums and waste for most work candidates by allowing the work to be planned, resourced with manpower and materials in a routine way. The submarine planning Milestones are included in Appendix H₁ or H₂ of this chapter. The Surface Force Planning Milestones are included in Part II, Chapter 2, Appendix D of this volume. The definition of Executing Activity scope that takes place in the WPER of a CMAV does not occur in the YLCM availability as a discrete signal point. Rather LMAs should continuously define scope and schedule across the LMA and assigned Executing Activities at the times described in Appendix H₁ or H₂ of this chapter and Part II, Chapter 2, Appendix D of this volume.

4.8.2 Year Long Continuous Maintenance Work Execution. During the execution period of work items in the YLCM availability, measures should be taken to ensure that Ship's Force, LMA and Executing Activities remain appraised of:

- a. Status of work to be accomplished.
- b. Identities of designated contact personnel.
- c. Status of material and other resources.
- d. Current schedule status.
- e. Special Evolutions that may impact completion of the work items.

4.8.3 Continuous Maintenance Completion. At the end of the fiscal year, the availability should be entered as complete and a new availability established for the new fiscal year.

4.9 EMERGENT AVAILABILITY. The EM availability is designed for work of such an urgent nature that the heightened risk of paying premiums is accepted and planning horizons are

shortened. This type of availability is for C3 or C4 CASREPs, or a C2 CASREP with reasonable potential to become a C3 or C4 CASREP. These CASREPs are identified as emergent maintenance and ordinarily funded from emergent funds. The RMC Commander may, with the respective TYCOM's approval, convert Emergent Maintenance funds to execute CNO availability or CM in this regard. Emergent work will be scheduled to minimize premiums in as much as the operational schedule will permit. Generally, C2 CASREPs will be corrected using the CM Process where work is scheduled in the unscheduled Continuous Maintenance availability, a Window of Opportunity or a CMAV, which supports the ship schedule, need and policy objectives minimizing premiums paid and operational schedule impacts.

4.9.1 Emergent Availability Planning. Planning sources and actions are similar to those for the CMAV. In the case of the EM availability, the milestone dates for the availability are not consistent with those for the scheduled availability and produce added risk of disruptions and payment of premiums. This risk is acceptable only because of the effect of the work on the mission capability of the tended ship. The definition of scope and schedule for emergent work occurs after the definition for both scheduled CMAV and unscheduled CM availabilities when Executing Activities may already be fully loaded and material may need extra effort to be expedited. Additionally, it may result in already scheduled work being deferred.

4.9.2 Work Execution. During the execution period of work items in the EM Availability measures should be taken to ensure that Ship's Force, LMA and Executing Activities remain appraised of:

- a. Status of work to be accomplished.
- b. Identities of designated contact personnel.
- c. Status of material and other resources.
- d. Current schedule status.
- e. Special evolutions that may impact completion of the work items.

4.9.3 Availability Completion. Once the Ships Commanding Officer and ISIC determine that the Ship's mission capability has been restored, the LMA can certify the work and the ISIC can close the availability.

4.10 INTERIM DRYDOCKING OR PRE-INACTIVATION RESTRICTED AVAILABILITIES. (Submarines Only.) A scheduled availability for repair activity accomplishment of specific maintenance items, such as URO MRCs. The availability, together with a Material Condition Assessment per reference (f), can request that the CNO extend the ship's operating interval, operating cycle, or both. A Pre-Inactivation Restricted Availability (PIRA) is specifically used to extend the operating interval, operating cycle, or both, to the inactivation availability for the submarine. An Interim Drydocking (IDD) is specifically used to extend the submarine's operating interval, operating cycle, or both, to the next CNO scheduled availability other than an inactivation availability. Appendix J of this chapter contains a list of Major Trial and Inspection Milestones for IDD and PIRA availabilities.

4.10.1 Type Commander or Immediate Superior In Command (Group or Squadron) Responsibilities.

- a. Authorize new items and growth industrial work items.

- b. Monitor and approve all changes in established milestones, not internal to industrial activity completion dates.
- c. Issue direction when the quality or completeness of industrial activity work is in question.
- d. Notify the TYCOM when essential Ship's Force work cannot be completed on the scheduled contract or Key Event completion date. Make recommendations for assistance where appropriate.
- e. Periodically assess and monitor shipboard conditions during the availability.
- f. Prior to Fast Cruise, the ISIC Quality Assurance Officer must conduct a formal audit of Ship's Force Re-Entry Control (REC) and DFS Records. Using the SUBMEPP PMR and URO MRC scheduling reports and current industrial activity and Ship's Force updates to the latest report, ensure all required "D"-Level PMR and URO MRC accomplishment is current. The ISIC must forward the audit results to the TYCOM via the cognizant Commander, Submarine Group. The ISIC will then report to the TYCOM by message per message sample format of Appendix K of this chapter the status of the crew and material certification. An update of this certification is needed prior to Sea Trial and following the rescinding of certification noted in paragraph 4.9.9 of this chapter.
- g. Conduct a material inspection of the ship prior to Fast Cruise.

4.10.2 Certification Availabilities (Less Than Six Months) (Submarines Only).

- a. Duties and Responsibilities for Sea Trials and Inspections. Reference (g), as applicable, delineates the TYCOM's responsibility for operational control of assigned submarines during trials and for assuring that the crew and ship have attained satisfactory state of training, administrative, operational and material readiness for at-sea operations during the trials. Appendix L of this chapter provides a Sample Ship Message to ISIC and TYCOM Concerning Material Certification Upon Completion of Sea Trials.
- b. General Instructions for Industrial Activity Availability Trials and Inspections.
 - (1) Fast Cruise may not commence until Dock Trials have been satisfactorily completed and a satisfactory state of crew training (if required) and material readiness (if required), as delineated by this manual, has been certified. The required inspections and tests and their associated time periods may be modified by the TYCOM upon request from the cognizant ISIC.
 - (2) Sea Trials involving escorts will not normally be scheduled to commence on a weekend. When circumstances are such that Sea Trials must be rescheduled or planned to commence on a weekend to avoid costly delays, TYCOM approval will be obtained by the ISIC.
 - (3) Critical operation of reactors while nuclear powered ships are in a naval or commercial industrial activity will be governed by reference (h). The CO may authorize critical operation of the reactor in support of tasks assigned the ship. However, as long as the ship remains in an industrial activity, the CO will

notify the Supervising Authority well in advance of any critical operation of the ship's reactor. This notification must include the nature and duration of such operations.

- (4) In conducting the inspections required herein, inspectors should be guided by the concept that at the start of Fast Cruise, the ship should be, in all respects, ready for Sea Trials with the exception of the additional training the crew will receive during the Fast Cruise.
- (5) The requirement for TYCOM SUBSAFE certification of SUBSAFE, SOC and FBW certification of work not performed by the industrial activity and the material readiness upon completion of an industrial activity availability imposes additional responsibilities on the ISIC inspectors. Included in the material inspection will be a review of all outstanding Forces Afloat DFS as defined in Volume V, Part I, Chapter 8 of this manual. A review of the Ship's Force REC or Controlled Work Package Records is necessary for SUBSAFE, SOC and FBW work accomplished by Forces Afloat per Volume V, Part I, Chapter 5 of this manual, along with a review of the applicable URO MRC status.
- (6) The ISIC certification message, per Appendix K, will also provide a status report of any outstanding Re-Entries, Forces Afloat DFS and delinquent URO MRCs. The scope and nature of this inspection will vary dependent upon the extent and length of the availability. In this regard:
 - (a) Material certification may be made subject to the correction of specific deficiencies. (Deficiencies are such that they can be readily identified and listed).
 - (b) Material certification should be postponed to a later date when deficiencies are so significant or so numerous as to preclude correction in the time remaining before the scheduled start of Fast Cruise.
 - (c) Deficiencies that could affect the safe operation of the ship during Sea Trials must be corrected, reinspected and reported to the TYCOM as having been corrected prior to the start of Fast Cruise.
- (7) Inspectors must determine that all work and testing necessary to support Sea Trials has in fact been completed or identified for completion prior to the start of Fast Cruise including the following:
 - (a) All ship's systems which affect safe operation during Sea Trials must be operable.
 - (b) All work necessary for safe operation of the ship during Sea Trials which was undertaken by the industrial activity, Ship's Force, FMA, or other outside activities must have been satisfactorily completed and tested. Included must be a check for any special configuration or

installations ensuring that they have been authorized by the proper authority, that their impact has been fully assessed and that the Sea Trial Agenda includes these impacts or limitations.

- (8) Following the completion of the required training and material readiness certification, COs must keep the cognizant ISIC fully informed of any changes in personnel, training or material status which could affect the validity of certification. Prompt TYCOM notification is required to permit revision or Operational Orders and services required.
- (9) Underway trials following IDD or PIRAs, particularly initial submerged and test depth trials, must be undertaken with the knowledge that the crew lacks recent experience operating as a unit and that the ship's structure and fittings have not been tested in an at-sea environment. All tests and procedures must be conducted carefully and methodically. Systems and components designed to operate at test depth should not be demonstrated at that depth for the sole purpose of proving the design, but instead should be operated at the deepest depth at which they might be used. For example, the hovering system should not be demonstrated at test depth. Trials and tests which are inherently hazardous should not be conducted.
- (10) A schedule is required for each underway, dockside or simulated trial. Prerequisites of the first underway period are satisfactory ship's material condition as shown by the successful completion of alongside tests, salvage inspection, Ship's Force Dock Trial, and a satisfactory state of training as shown by the successful completion of crew certification inspection and Fast Cruise. Fast Cruise deficiencies affecting safe operations revealed in either material conditions or state of training must be corrected prior to getting underway for Sea Trials.
- (11) The trial schedule must include a minimum of six hours of Individual Ship Exercises (ISE) for Ship's Force training. This ISE should be sequenced as soon as practical after the initial tightness dive and should include the necessary evolutions to allow each watch section ship control party to familiarize themselves with their assigned stations and duties. The ship should be operated at moderate speed to develop proficiency prior to the deep dive and full power run. Testing may be scheduled during the ISE period on a not-to-interfere basis with training. The time spent in the initial tightness dive, if at moderate speed, may be included as one section's training. The requirement to provide each watch section ship control party with about two hours experience submerged at moderate speed prior to the deep dive and full power run is mandatory for ship's safety.
- (12) All trial periods must be organized such that each member of the command has an opportunity to get six uninterrupted hours of rest during each 24-hour period encompassed by the trials. Sea Trial events which can be accomplished by normal watch sections may be conducted concurrently with crew rest periods.

- (13) Prior to getting underway for Sea Trials, Shipyard, Ship's Force and Type Commander must jointly agree that the required seven day supply of Oxygen (O₂) and seven day supply of Carbon Dioxide (CO₂) removal capacity will be available in each compartment, based upon the number of expected occupants of that compartment, independent of the supply and removal capacity in the other compartment(s).
- (14) After the conclusion of Sea Trials, the submarine must not be operated at depths greater than 1/2 Test Depth plus 50 feet, unless specifically authorized by the TYCOM, and must not be released for unrestricted operations until all RECs are closed and the TYCOM issues the unrestricted operations authorization message.
- (15) After the conclusion of Sea Trials, and based upon a review of Sea Trial deficiencies and TYCOM authorization, the submarine may transit to a port other than the industrial activity.

4.10.3 Operating Depth Policy. The TYCOM's policy with respect to maximum allowable operating depths during trials, evolutions to be performed at the various depths, and the prescribed maximum water depth applicable in each case is stated in Volume VI, Chapter 26 of this manual. In every instance where the maximum authorized operating depth is exceeded, a report must be made per reference (i), section 3.3.5.c.

4.10.4 Propulsion Plant Tests (If Required). For full power trials provisions of reference (j), Section 6 applies. Submarine depth during the submerged full power trial should be consistent with the applicable Submerged Operating Envelope (SOE), based on the Emergency Main Ballast Tank (EMBT) blow from maximum authorized operating depth being previously accomplished. The full power submerged ahead test for commissioned nuclear powered submarines must be terminated by a back emergency bell. The duration of the back emergency must be limited to 45 seconds, to be followed immediately by an appropriate ahead bell. Caution must be exercised to avoid developing stern way.

4.10.5 Phase II Crew or Material Condition Inspection. A Phase II Crew Certification Inspection is normally not required, but should be determined on a case basis by the parent ISIC. If there will be less than 15% personnel turnover, crew certification may be waived. Should the CO determine that alterations accomplished or the transfer of experienced personnel warrant a crew certification, a formal request must be submitted to the ISIC. When required, crew certification will be performed per references (k) through (o). The material certification consisting of an ISIC audit of all Ship's Force SUBSAFE work per Volume V, Part I, Chapter 9 of this manual will need to be conducted for all industrial activity availabilities since the extent of the availability is such that an independent evaluation by an organization other than Ship's Force is required.

4.10.6 Pre-Critical Inspections. For availabilities where the reactor will be shut down for 16 weeks or more, it is considered prudent to use an inspection plan similar to that employed by NAVSEA. Normally, the crew's readiness can be assessed within two days using such a plan, which should encompass the following:

- a. An administrative review.
- b. Observation of basic drills and evolutions not requiring reactor operation.

- c. Personnel interviews.
- d. Material inspection.

4.10.6.1 Scheduling of Pre-Critical Inspections. The ISIC Pre-Critical Inspection should be scheduled by the responsible ISIC about four weeks prior to criticality. The TYCOM should be advised as soon as possible in advance of the tentative date for the ISIC Pre-Critical Inspection and confirmed dates should be established about one month in advance of the inspection.

4.10.6.2 Composition of the Inspection Team. The Pre-Critical Inspection Team should consist of:

- a. A nuclear-trained member of the cognizant ISIC Staff, usually the Squadron Training Officer.
- b. A qualified nuclear-trained officer with experience as an Engineer Officer.

4.10.6.3 Reports of Inspection.

- a. The Senior Inspector should provide the inspected unit with an informal report of findings by the inspection team, copy to the cognizant ISIC and TYCOM.
- b. The ship's CO must review the findings of the inspection team and make necessary adjustments to his training program to ensure his crew's readiness for criticality. He must keep the cognizant ISIC advised of his training plan and his assessment of his crew's progress.
- c. The cognizant ISIC must review the inspection findings, the CO's training plan and progress evaluations and direct follow-up reviews and inspections necessary to verify the ship's readiness for criticality.

4.10.7 Dock Trials. Dock Trials must, as a minimum, test those systems and equipment repaired or altered during the availability. The CO should use Appendix M of this chapter as a guide in preparing the Dock Trial Agenda.

4.10.8 Fast Cruise. Fast Cruise may commence immediately upon completion of Dock Trials and must consist of the minimum requirements as set forth in Appendix N. The requirement for a Fast Cruise may be less than or greater than 24 hours in length depending upon the length of the availability and the time since the crew last operated the ship at sea. The CO, with ISIC concurrence, will determine length of the Fast Cruise. Prior to the ship commencing Fast Cruise, the Supervising Authority must report to the ship, by message, that all mandatory work approved for accomplishment during the availability is completed. When the ship is ready for sea, with the exception of conducting Fast Cruise and after receipt of the SUBSAFE material certification report from the performing activity as required by reference (p) and Volume V of this manual, the ship will request permission from the ISIC by priority message to commence Fast Cruise. The ISIC will then, if satisfied with the state of crew training and material readiness, authorize the ship to commence Fast Cruise by message, information copy to CNO, Fleet Commander, NAVSEA, and the TYCOM.

- a. A 24-hour rest and repair period will normally be scheduled following Fast Cruise and prior to the start of Sea Trials. This rest and repair period may be extended or reduced at the discretion of the ISIC.

- b. COs should consider the work and alterations accomplished during the availability when determining the extent of the Fast Cruise. The minimum requirements are listed and identified with an asterisk in Appendix N of this chapter.

4.10.9 Sea Trials. Following completion of Fast Cruise, the ISIC will notify the TYCOM of satisfactory completion of Fast Cruise and readiness for Sea Trials using the message format of Appendix O. The submarine TYCOM will authorize the ISIC to allow the ship to get underway for Sea Trials using the message format of Appendix P. Sea Trials are required only as necessary to test work completed during the availability but must include those mandatory requirements identified in Appendix Q of this chapter. The industrial activity must include at least two days in the availability for conduct of Sea Trials. The industrial activity must prepare a Sea Trial Agenda for Sea Trials conducted after an availability at the industrial activity. For an availability at a FMA, the submarine must prepare the Sea Trial Agenda, assisted by the industrial activity. The submarine involved must submit the Sea Trial Agenda to the ISIC for approval, with an information copy to the TYCOM. During the Sea Trial, the submarine CO will keep the TYCOM aware of the progress of the Sea Trial through periodic Situational Reports using the message format of Appendix R of this chapter. The frequency of these Situational Reports will be identified by the TYCOM or the Sea Trial Agenda. Extensions or reductions of the Sea Trial period may be granted where warranted by the scope of the work accomplished. Where extension of the Sea Trial period and a change in the availability schedule is required, requests for such extensions must be submitted by the industrial activity to the TYCOM as early as practical. All deficiencies resulting from Sea Trials will be satisfactorily resolved prior to the completion of the availability. If no Sea Trial deficiencies are found, the availability may be completed with TYCOM occurrence at the completion of Sea Trials.

NOTE: SUBSEQUENT TO THE MESSAGES, APPENDICES O AND S OF THIS CHAPTER, ANY DEFICIENCY DISCOVERED AND THE CORRECTIVE ACTION TAKEN WHICH AFFECTS THE WATERTIGHT INTEGRITY, THE RECOVERABILITY OF THE SHIP, THE OPERATIONS OF THE SHIP'S CONTROL SURFACES OR THE SHIP'S SALVAGE CAPABILITY MUST BE REPORTED TO THE TYCOM BY THE SUPERVISING AUTHORITY, ISIC OR TYCOM REPRESENTATIVE BY MESSAGE. PREVIOUS CERTIFICATION MESSAGES MUST BE SUSPENDED. WHEN A REVIEW OF THE DEFICIENCY IS COMPLETED BY THE TYCOM, THE TYCOM WILL CERTIFY THAT THE SHIP'S SUBSAFE CERTIFICATION BOUNDARY IS SATISFACTORY FOR SEA TRIALS TO A SPECIFIED DEPTH.

- a. Assignment of Escort Ship.
 - (1) Per reference (q), an escort must be provided during deep dive submergence trials for ships completing an availability for repair of collision or grounding damage where deformation is observed to be in the hull integrity envelope or supporting structure.
 - (2) Per reference (q), the requirement for providing an escort during deep dive submergence trials upon completion of all other availabilities will be evaluated by Commander, NAVSEA on a case basis. Commander, NAVSEA will advise the applicable Submarine Force Commander in writing whether or not an

escort will be required based on the scope of work in the availability. In general, an industrial activity availability of less than six months duration should not require an escort, since the work typically performed in these availabilities is limited in scope, is carefully controlled and, therefore, does not result in substantial risk of unidentified or incomplete work adversely affecting the SUBSAFE boundary.

- (3) Escort requirements should be determined early so that an escort satisfying the requirements of Part I, Chapter 3, paragraph 3.6.8.4.7.b.(6), of this volume can be scheduled if required. The TYCOM will in turn request services from the Fleet Commander as applicable. As a general rule, pressure hull work which could not affect hull circularity will not require an escort.
 - (4) Waiver of escort requirements may be requested by message when necessary. The ISIC will request the waiver as soon as possible. The TYCOM will pass the request to Commander, NAVSEA for approval. An escort waiver request message is to include all of the following specific statements, as applicable:
 - (a) A () inch by () inch hull cut between frames () and () including a () inch section of frame () was the only major hull integrity work accomplished during the availability. If no hull frame cut was made, a positive statement to that effect is required.
 - (b) The hull cut weld satisfactorily passed Radiographic Testing and 7-day Magnetic Particle Testing nondestructive tests.
 - (c) Post repair frame circularity check readings are within specifications.
- b. Assignment of Deep Submergence Rescue System during Submarine Sea Trials.
- (1) A Submarine Rescue Diving Recompression System will be placed in a modified alert status at the beginning of Sea Trials requiring an escort following an industrial availability or major maintenance availability for:
 - (a) Ships initial tightness and deep dive events.
 - (b) Subsequent Sea Trials until the completion of the initial dive to design test depth.
 - (c) If, in the TYCOM's judgment, a Sea Trial requires an escort due to major hull cuts.
 - (2) The ship conducting Sea Trials will notify COMSUBRON ELEVEN when Submarine Rescue Diving Recompression System services are no longer required due to completion of the events in paragraph 4.9.9 of this chapter or due to delay in completing Sea Trials.
- c. The ship's normal load out of Lithium Hydroxide canisters for Disabled Submarine (granular or ExtendAir®, no mix), Lithium Hydroxide curtains (or ExtendAir® Deployment kits, if equipped), Emergency Air Breathing masks, Submarine Escape Immersion Ensemble suits and oxygen candles is not sufficient to support this increase in personnel. Therefore, an additional four Lithium Hydroxide canisters (or three ExtendAir®, if equipped), four Lithium Hydroxide curtains (or one ExtendAir®

Deployment kit for every multiple of 60 ExtendAir® canisters in the compartment, if equipped), one Emergency Air Breathing mask, one Submarine Escape Immersion Ensemble suit and two Oxygen candles must be carried for each rider exceeding normal crew manning. Stowage of this additional equipment for Disabled Submarine must be in the same escape compartment as the rider's designated General Emergency muster site assigned by the Commanding Officer. Lithium Hydroxide canisters, Emergency Air Breathing masks, Submarine Escape Immersion Ensemble suits and Lithium Hydroxide curtains are to be obtained from the industrial activity.

4.10.10 Interrupted Sea Trials. In the event a Sea Trial is interrupted, or an additional Sea Trial becomes necessary, the following requirements are to be met. These requirements must be invoked if the ship returns to port for industrial activity repairs which affect SUBSAFE certification or which will require at-sea testing.

- a. The submarine will draft a revised Sea Trials Agenda to support resumption of the trials. This agenda must be provided to the ISIC for concurrence and TYCOM for information.
- b. Ship's Force will report by message (format of Appendix T of this chapter) that Ship's Force is ready for follow-on sea trials.
- c. The ISIC must report by message (format of Appendix U of this chapter) to the TYCOM that the material condition of those SUBSAFE Certification boundaries that were installed, repaired or tested by Ship's Force is satisfactory for resuming Sea Trials.
- d. Upon completion of all of the requirements in paragraphs 4.9.10.a. and b., the TYCOM will provide a message (Appendix V of this chapter) to the ISIC granting permission to proceed with the conduct of Sea Trials and authorize the ship to dive to the Sea Trial operating depth.

APPENDIX D

BUSINESS CASE ANALYSIS TOOL

To use this tool, first analyze the safety and mission impact of the damage to be repaired using Table 1. Determine the Hazard-Mission Index. Then consider the impact on schedule and cost using Table 2 and obtain the Cost - Schedule Index. On the next sheet, select the appropriate CO Modifier and sum the indices to obtain the Risk Index. Determine indicated action from the Business Case Analysis Table.

Table 1 - Hazard Severity and Impact to Mission					Table 2 - Cost Severity and Impact to Schedule				
	Hazard Severity					Cost Severity			
Impact to Mission	Catastrophic	Critical	Major	Minor	Impact to Schedule	Extreme	Significant	Major	Minor
Frequent	1	1	3	6	Frequent			7	4
Probable	1	2	4	7	Probable			6	3
Occasional	2	3	5	8	Occasional		8	5	1
Remote	3	4	6	9	Remote	7	6	4	1
Improbable	5	5	7	10	Improbable	5	3	2	1

Impact to Mission Likelihood		Impact to Schedule Likelihood	
Description	Explanation	Description	Explanation
Frequent	Likely to adversely impact mission, operation of ship, ship's future schedule or critical systems regularly. Work to rectify this deficiency must be undertaken at the first opportunity.	Frequent	The undertaking of the work or combination of availability of Long Lead Time Material and Work Completion WILL delay the schedule greater than 5 working days.
Probable	Could adversely impact mission, operation of ship, ship's future schedule or critical system several times. Work to rectify this deficiency should be programmed in the current availability.	Probable	The undertaking of the work or combination of availability of Long Lead Time Material and Work Completion COULD delay the schedule greater than 2 working days.
Occasional	Unlikely, but could be reasonably expected to adversely impact mission, operation ship, ship's future schedule or critical system occasionally. Work to rectify this deficiency should be considered during the current availability depending upon schedule and cost.	Occasional	The undertaking of the work or combination of availability of Long Lead Time Material and Work Completion COULD BE REASONABLY expected to delay the schedule not greater than 2 working days.
Remote	Unlikely, but could possibly impact mission, operation of ship, ship's future schedule or critical system at some time. Work to rectify this deficiency should be considered and programmed to meet the ship's operational schedule.	Remote	The undertaking of the work or combination of availability of Long Lead Time Material and Work Completion is UNLIKELY BUT POSSIBLE to delay the schedule.
Improbable	So unlikely that there should be no adverse impact to mission, operation of ship, ship's future schedule or critical system. Work to rectify this deficiency should be programmed in due course.	Improbable	The undertaking of the work or combination of availability of Long Lead Time Material and Work Completion is SO UNLIKELY to delay the schedule it can be assumed it will not affect schedule.

Hazard Severity if Work Not Undertaken		Cost Severity Impact	
Description	Explanation	Description	Explanation
Catastrophic	Failure of System could result in total loss of ship or critical system. Resultant damage would be beyond economical repair.	Catastrophic	The increase in cost due to Growth & New Work, delay to start of work, cost or availability of material is so great that it either represents funding that would need to be sourced from another activity, or it constitutes a G&NW premium of 60% or higher.
Critical	Failure of System could result in significant damage to the ship or critical system. Resultant damage would require intervention of support agency. Usually damage to Primary structure or Water Tight Integrity.	Critical	The increase in cost due to Growth & New Work, delay to start of work, cost or availability of material, represents a very large increase that it either can be covered in the existing budget plan but would adversely impact the remaining financial plan or it constitutes a G&NW premium of 40% to 60%.
Major	Failure could result in the temporary loss or deterioration of the system requiring repair action.	Major	The increase in cost, while large, is either able to be covered inside the existing budget plan with little impact to the remaining financial plan or it constitutes a Growth & New Work premium of 20% to 40%.
Minor	Failure could result in the need for minor defect repair action, continued operation without significant loss of output is possible.	Minor	The increase in cost is very small and is either able to be covered inside the existing budget plan with no impact to the remaining financial plan or it constitutes a Growth & New Work premium of 0% to 20%.

Commanding Officer's Concern	CO's Top 5	Subtract 2
Commanding Officer's Concern	Concerned	Subtract 1
Commanding Officer's Concern	Not Concerned	Subtract 0

Business Case Analysis (Table 1 + Table 2 + CO's Concerns) = Risk Index			
Risk Index	Relative Level of Risk	Decision	Amplifying Comments
Less than 10	Low	MT continue	Represents work that is either a safety concern or mission critical, or is relatively low cost and no impact to schedule.
10 - 14	Med	MT reschedule or conduct more rigorous BCA	Represents work that is either of reasonably high cost or a high risk to schedule impact, or of little to no safety or mission critical concern. This work should either be rescheduled, cancelled, or subject to a more comprehensive BCA.
Greater than 14	High	MT reschedule or cancel	Represents work that is either of high cost or extreme schedule impact, or of little to no safety or mission critical concern.

APPENDIX H₁
AVAILABILITY MILESTONE SCHEDULE

(SSNs and SSGNs ONLY)

NOTE STANDARD MILESTONES SHOWN IN THIS TABLE SHOULD BE MODIFIED BY THE MAINTENANCE TEAM (USING AN MOA OR OTHER SIMILAR CORRESPONDENCE) FOR CMAVS WITH A PLANNED DURATION OF GREATER THAN 120 DAYS, IN ORDER TO ENSURE SUFFICIENT PLANNING TIME IS AVAILABLE FOR EXTENDED CMAVS. PROPOSING AND FINALIZING THIS MAINTENANCE TEAM AGREEMENT NLT A-270 IS AN ISIC RESPONSIBILITY.

* Times are in days

NO.	MILESTONE	Responsible Activity	Scheduled CMAV *	Year-Long CM *	Remarks
1	Identify drawing development assignments, including Class Drawings.	PARMs, TYCOM, NAVSEA	A-390	NA	Send to RMC and Planning Yard.
2	Assign drawing development responsibility.	PEO Ships	A-390	NA	
3	Issue Hull Modernization Plan (HMP) and Letter Of Authorization AITs.	SPM, NAVSEA, TYCOM	A-360	NA	HMPs to be issued in March each year to maintenance Teams to support MMBP. Letter of Authorizations will be posted at A-360.
4	Request Availability Funding for planning repair work.	NSA	A-345	NA	This provides funds for early executor planning.
5	Task and Fund SID Development.	SPM, NSA, AIT, TYCOM, RMC Manager	A-330	NA	
6	Screen CMP and TYCOM routines.	TYCOM	A-270	NA	Push CMP work items to CSMP NOT LATER THAN A-270.
7	Issue and Deliver SIDs to NSA for contractor(s) and AITs.	Planning Yard	A-180	NA	This is a change from A-4. Including all SIDs for AITs. For FFP contracts, this milestone should occur at A-8 when possible and NOT LATER THAN A-180.
8	Request Availability Funding for both repair & modernization work.	NSA or RMC	A-180	NA	
9	All Modernization Risk Assessments (including waivers) submitted.	PARM SPM TYCOM	A-175	NA	

NO.	MILESTONE	Responsible Activity	Scheduled CMAV *	Year-Long CM *	Remarks
10	All Modernization Risk Assessments (including waivers) approved.	TYCOM	A-150	NA	
11	Identification of AIT support and schedule impact requirements.	AIT Manager	A-135	NA	A-168 for FFP or IDIQ.
12	Ship checks completed for alterations.	Planning Yard	A-90	NA	No FFP considerations relate to this date.
13	Provide Incremental Funds for ordering Long Lead Time Material for both repair and Alt or mod work to meet required dates.	SYSCOM or TYCOM	A-90	NA	
14	Award AIT contracts for work not being done by prime contractor.	AIT Sponsor	A-90	NA	
15	Solicit Bids.	RMC	NA	NA	A-50 for FFP or IDIQ. If CMAV is to be performed under an IDIQ contract and is over \$500k RMC may need to add 30 days for solicitation per Fair Value purchasing policy. This would reset the CMAV solicit bid milestone to A-70.
16	Review PMR and URO requirements and ensure all maintenance actions intended for accomplishment during the availability are identified.	ISIC	A-60	NA	
17	Review CSMP and ensure all deferred maintenance actions intended for accomplishment during the availability identified by priority and submit to the TYCOM or ISIC.	Maintenance Team	A-50	NA	
18	Conduct Pre-CMAV Planning Board for Maintenance	Maintenance Team	A-50	NA	And at the start of each Fleet Response Training Plan
19	Provide Availability Funding for Modernization to the RMC or LMA.	SYSCOMS, PEO, TYCOM	A-45	NA	Includes funding for AITs support services.

15 Jan 2021

NO.	MILESTONE	Responsible Activity	Scheduled CMAV *	Year-Long CM *	Remarks
20	Review PMS, Reactor Plant PMS, CSMP, and testing requirements and ensure all Ship's Force maintenance actions scheduled for accomplishment during the availability are identified. Ship's Force review K-MRC data with PMT, TYCOM 3M representative and ISIC to develop K-MRC Completion Plan for submission to integrated work schedule.	Maintenance Team	A-40	NA	See Paragraphs 4.4.13.1 and 4.6.1.2.m.(13) of this chapter.
21	Review TYCOM Alteration Management System or NMP and ensure all authorized alterations intended for accomplishment during the availability are identified by priority based on material availability as identified by the LMA.	TYCOM	A-40	NA	
23	Review CSMP T/A 2 items. Identify and order LLTM.	FMA	A-40	NA	
24	I-Level work package fully brokered.	Maintenance Team and Ship's Force	A-40	E-14	Intent is to fully broker all known work to I-Level by this date. This allows for routine procurement of materials and brokering of work candidates to other Executing Activities if necessary.
25	Establish funding targets for budgeting purposes for the availability.	Funding Activity	A-40	NA	
26	Review the availability work package, begin writing FWPs and TWDs, identify critical jobs and develop the integrated work schedule to aid in tracking and coordination of all work.	LMA	A-40	E-14	
27	100% of D-Level maintenance work package 2Ks planned, estimated.	Planning Activity	A-35	E-14	A-60 for FFP or IDIQ.
28	Supporting activities submit work scope, testing requirements, and timelines to LMA for integration in to overall schedule	Maintenance Team	A-35	NA	Include NRMD, AITs, KTR

15 Jan 2021

NO.	MILESTONE	Responsible Activity	Scheduled CMAV *	Year-Long CM *	Remarks
29	I-Level work package fully accepted.	Planning Activity	A-33	E-14	Intent is for I-Level to accept or reject all work brokered to it up to this point in time, work entering later in the process will be subject to normal Business Case Analysis. At this point the I-Level activity work has been locked. Any remaining work will be re-brokered to another Executing Activity, rescheduled or returned.
30	100% of maintenance work D-Level package 2Ks locked.	Maintenance Team	A-30	E-7	A-60 for FFP or IDIQ.
31	Develop recommended Key Events schedule and present to ISIC, Ship's Force and TYCOM.	LMA	A-30	NA	
32	Begin to integrate executing activity schedules.	LMA	A-30	E-7	
33	Review scheduled Ship's Maintenance Monitoring Support Office, PMT, MCA inspections and testing that may result in significant new work for the FMA or Ship's Force or that may impact scheduled Ship's Force and FMA work.	TYCOM	A-30	NA	
34	100% of O-Level maintenance work package locked.	Maintenance Team	A-30	NA	A-60 for FFP or IDIQ Intent is to provide work to be accomplished so that an integrated execution schedule can be developed for the WPER.
35	Identify to RMC, ISIC or TYCOM returned work candidates.	LMA	A-30	NA	
36	Begin processing all new work as "late work". See Appendix D for Business Case Analysis.	RMC	A-30	E-30	The intent is that all work regardless of the intended Executing Activity or level (O, I, or D) will have been brokered and accepted. Hence additional work will be treated as "late work".

15 Jan 2021

NO.	MILESTONE	Responsible Activity	Scheduled CMAV *	Year-Long CM *	Remarks
37	MOA SUBMITTED	AIT Manager or outside activity	A-30	NA	
38	Conduct Planning Availability	Maintenance Team or LMA	A-30	NA	Should be prior to the WPER.
39	Cutoff for bidders questions.	PCO	NA	NA	A-30 for FFP or IDIQ.
40	Perform risk assessments and verify deliverables O-Level, I-Level, and D-Level work items and AIT schedule requirements to LMA.	Maintenance Team	A-25	NA	This is to confirm that the LMA has all input for his development of the integrated availability schedule. Note that for FFP CMAV LMA will not be identified until A-15, verification with LMA will take place at WPER.
41	Complete ship checks and order all required material.	Executing Activities	A-25	NA	
42	Conduct Work Package Execution Review (WPER) - finalize funding.	Maintenance Team	A-21	NA	A-10 for FFP or IDIQ. LMA or executing activity presents fully planned execution schedule (could be a Gantt chart) to the full Maintenance Team.
43	Deliver Material (LLTM and Kitted Materials) to Executing Activity.	Planning Yards or PARM	A-20	NA	
44	Complete TAR.	RMC	A-20	NA	
45	Submit Bids.	Contractor	NA	NA	A-20 for FFP or IDIQ.
46	Award Contract.	RMC	NA	NA	A-15 for FFP or IDIQ.
47	Issue availability planning message prepared per Appendix F of this chapter.	ISIC	A-14	NA	
48	Work Specs Developed.	Executing Activity	NA	E-14	
49	Develop strategy for FMA and Ship's Force calibration of gages, instruments and tools.	Maintenance Team or LMA	A-10	NA	
50	Issue availability planning response message prepared per Appendix I of this chapter.	Ship's Force	A-7	NA	Send to ISIC and TYCOM
51	Commence First 100 Hours	Maintenance Team or LMA	A-0	NA	
52	Conduct Arrival Conference.	LMA	A-0	NA	
53	Report ships transition to CMAV period.	ISIC	A-0	NA	Send to ISIC and TYCOM

15 Jan 2021

NO.	MILESTONE	Responsible Activity	Scheduled CMAV *	Year-Long CM *	Remarks
54	Conduct Progress Review.	LMA	Weekly	NA	
55	Commence Final 100 Hours	Maintenance Team or LMA	C-4	NA	
56	Complete Availability.	LMA	C+0	30 Sep	
57	Conduct Departure and Assessment Conference.	Maintenance Team or LMA	C+0	NA	
58	Issue Departure and Assessment Report.	LMA	C+21	NA	

APPENDIX H₂

AVAILABILITY MILESTONE SCHEDULE

(SSBNs ONLY)

NOTE: DUE TO SSBN PATROL CYCLES, THE WORK SUBMISSION CUT-OFF DATE FOR SSBNs IS AFTER THE WPER, BUT ALL KNOWN WORK SHOULD BE BROKERED NO LATER THAN A-30 AND ONLY WORK ASSOCIATED WITH EQUIPMENT DEFICIENCIES THAT OCCURRED SINCE LAST COMMUNICATIONS SHOULD BE SUBMITTED AFTER A-30. SSBNs SHOULD ATTEMPT TO UPLOAD WORK AS OFTEN AS POSSIBLE BEFORE THE WORK SUBMISSION CUT OFF DATE (A-10) TO MINIMIZE THE PLANNING EFFECT ON REFIT.

* Times are in days.

NO.	MILESTONE	Responsible Activity	SSBN CMAV	Remarks
1	Review CSMP and ensure all deferred maintenance actions intended for accomplishment during the CMAV identified by priority and submit to the TYCOM or ISIC.	Maintenance Team	A-50	
2	Conduct Pre-CMAV Planning Board for Maintenance	Maintenance Team	A-50	And at the start of each Fleet Response training team
3	Review PMS, Reactor Plant PMS, CSMP, and testing requirements and ensure all Ship's Force maintenance actions scheduled for accomplishment during the CMAV are identified.	Maintenance Team	A-40	Include all required K-MRC.
4	Review PMR and URO requirements and ensure all maintenance actions intended for accomplishment during the CMAV are identified.	Maintenance Team	A-40	
5	Review TYCOM Alteration Management System or NMP and ensure all authorized alterations intended for accomplishment during the CMAV are identified by priority based on material availability as identified by the LMA.	TYCOM	A-40	
6	Review CSMP T/A 2 items. Identify and order LLTM.	FMA	A-40	
7	Work Package fully brokered.	Maintenance Team	A-40	This includes alterations, PMRs, UROs, deferred work, and known Ship's Force 2-Kilos.
8	Conduct meeting to review the CMAV work package. Begin writing FWPs and TWDs, identifying critical jobs and developing the integrated work schedule.	LMA	A-40	

NO.	MILESTONE	Responsible Activity	SSBN CMAV	Remarks
9	Supporting activities submit work scope, testing requirements, and timelines to LMA for integration in to overall schedule.	Maintenance Team	A-35	Includes NRMD, AITs, KTR
10	Work Package fully accepted (minus Ship's Force submitted 2-Kilo between now and work submission cut-off).	LMA	A-33	
11	MOAs submitted.	AIT Manager	A-30	
12	Review scheduled PMT inspections and testing that may result in significant new work or that may impact scheduled work.	ISIC	A-30	
13	TRF and IMF develop weapons and sail arrival inspection plan.	LMA	A-21	
14	Develop recommended Key Event schedule and present to ISIC and Ship's Force.	LMA	A-21	
15	Perform risk assessments and verify deliverables O-Level and I-Level work items and AIT schedule requirements to LMA.	LMA	A-21	
16	Conduct Work Package Execution Review (WPER).	LMA	A-21	
17	Issue CMAV planning message.	ISIC	A-14	per Appendix F.
18	Work Submission Cut-off established. Begin processing all new work as "late work".	LMA	A-10	Or first day after the ship can communicate following alert. See Appendix D for Business Case Analysis.
19	Develop strategy for FMA and Ship's Force calibration of gages, instruments and tools.	Maintenance Team	A-10	
20	Identify to RMC, ISIC, TYCOM rejected work candidates.	LMA	A-7	
21	Issue CMAV planning response message.	Ship's Force	A-7	Per Appendix I.
22	Commence first 100-hour plan.	Maintenance Team	A-0	
23	Conduct Arrival Conference.	LMA	First Week	Conducted during first senior management meeting after A-0.
24	Complete first 100-hour plan.	Maintenance Team	A+5	
25	Conduct Progress Review.	Maintenance Team	Weekly	
26	All Production Work Complete.	Maintenance Team	C-4	
27	Complete Availability.	Maintenance Team	C+0	
28	Conduct Departure and Assessment Conference.	LMA	C+0	
29	Issue Departure and Assessment Report.	LMA	C+21	

APPENDIX H₃
AVAILABILITY MILESTONE SCHEDULE
(SSGN ONLY)

* Times are in days

NO.	MILESTONE	Responsible Activity	MMP	Remarks
1	Establish and Confirm Availability Dates.	TYCOM and Project Team	A-395	
2	Review CSMP and ensure all deferred maintenance action intended for accomplishment during the availability are identified by priority and submit to the TYCOM or ISIC.	Maintenance Team	A-395	
3	Review PMS, Reactor Plant PMS, CSMP, and testing requirements and ensure all Ship's Force maintenance actions scheduled for accomplishment during the availability are identified.	Maintenance Team	A-395	Include all required K-MRC.
4	Identify major nuclear maintenance actions scheduled for accomplishment during the availability.	NAVSEA and TYCOM	A-395	Preliminary list. Finalize during planning process.
5	Review TYCOM Alteration Management System or NMP and ensure all authorized alterations intended for accomplishment during the availability are identified by priority based on material availability as identified by the LMA.	TYCOM	A-395	
6	Issue Modernization Planning Letter.	NAVSEA	A-.395	
7	Identify DIRSSP alterations and work.	DIRSSP	A-365	
8	Identify Missile Tube reconfiguration actions for the availability.	ISIC	A-365	
9	Provide Preliminary Issue Availability Work Package to NAVSEA, TYCOM, NSSC, ISIC, Project Team.	SUBMEPP	A-365	
10	Conduct Preliminary Planning Meeting (TYCOM, NSSC, ISIC, Project Team).	SUBMEPP and Project Team	A-330	TYCOM may elect to conduct meeting with just Project Team and NSSC.

NO.	MILESTONE	Responsible Activity	MMP	Remarks
11	Review PMR and URO requirements and ensure all maintenance actions intended for accomplishment during the availability are identified.	Maintenance Team	A-330	
12	Perform JCN call down for the availability.	SUBMEPP	A-310	To be done based on results of Preliminary Planning Meeting.
13	Review CSMP T/A 2 items. Identify and order LLTM.	LMA	A-300	
14	Work package fully brokered.	Maintenance Team	A-300	All jobs currently planned for execution during the availability.
15	Begin writing FWPs, TWDs and TGIs, identifying critical jobs and developing the integrated work schedule.	LMA	A-300	
16	Provide Initial Issue Availability Work Package.	SUBMEPP	A-300	
17	Work package fully accepted.	LMA	A-210	All known work, expect Ship's Force to submit 2-Kilos until WSCO.
18	Conduct Initial Planning Meeting (IPM) to review the availability Work Package.	SUBMEPP	A-180	IPM conducted based on TYCOM guidance.
19	Supporting activities submit work scope, testing requirements and timelines to LMA for integration into overall schedule.	Maintenance Team	A-180	Includes NRMD, AITs, KTR.
20	Issue Post Initial Planning Meeting Availability Work Package.	SUBMEPP	A-150	
21	MOAs submitted to LMA.	AIT Managers	A-120	
22	Review scheduled PMT inspections and testing that may result in significant new work or that may impact scheduled work.	ISIC	A-120	
23	Develop weapons and sail arrival Inspection plan.	LMA	A-120	
24	Develop recommended Key Event schedule and present to ISIC and Ship's Force.	LMA	A-120	
25	Perform risk assessments and verify deliverables O-Level and I-Level work items and AIT schedule requirements to LMA	LMA	A-120	
26	Provide risk assessment to LMA.	NRMD	A-120	

NO.	MILESTONE	Responsible Activity	MMP	Remarks
27	Issue Risk Assessment letter to TYCOM.	LMA	A-75	
28	Conduct Work Package Execution Review (WPER) or Final Planning Meeting (FPM)	LMA	A-60	Agenda for meeting will be negotiated between LMA and TYCOM.
29	Issue availability planning message	LMA	A-30	
31	Work Submission Cutoff established	LMA	A-30	Begin processing all new work as "late work". May move milestone to correspond to first day after the ship can communicate following alert.
32	Develop strategy for LMA and Ship's Force calibration of gages, instruments, and tools	Maintenance Team	A-10	
33	Identify to RMC, ISIC, TYCOM and SUBMEPP (as applicable) rejected work candidates.	LMA	A-7	Rejected work candidates should be identified by the WPER or IPM if possible.
34	Issue availability planning response message	Ship's Force	A-7	per Appendix I of this chapter
35	Conduct Readiness to Start Conference	Maintenance Team	A-7	Includes TYCOM, NSSC, ISIC, NRMD, Shipyard.
36	Commence first 100-hour plan	Maintenance Team	A-0	
37	Conduct Arrival conference	LMA	First Week	Conducted during first senior management meeting after A-0.
38	Complete first 100-hour plan	Maintenance Team	A+5	
39	Conduct Progress Review	Maintenance Team	WEEKLY	
40	All Production Work Complete	Maintenance Team	C-4	
41	Complete Availability	Maintenance Team	C+0	
42	Conduct Departure and Assessment Conference	LMA	C+0	
43	Close out JCNs for availability	LMA	C+25	
44	Issue Departure and Assessment Report, Job Management Availability or End of Availability Report as applicable	LMA	C+30	Provide copy to TYCOM, SUBMEPP.
45	Conduct Hot Wash	LMA	C+30	
46	Issue Final Availability Work Package	SUBMEPP	C+180	Final AWP will be only published electronically on SUBMEPP website

15 Jan 2021

APPENDIX M**DOCK TRIALS GUIDELINES FOR IDD OR PIRA AVAILABILITIES**

1. Dock Trials. Ship's Force Dock Trials provide the opportunity to test and check out systems, components and portable equipment prior to the Fast Cruise training period simulating underway conditions. Although normally a period of one day is assigned for integrated Ship's Force Dock Trials, tests and evolutions performed in the one to two weeks prior to the Dock Trial date may be accepted by the CO as fulfilling the requirements of this paragraph. The purpose of Dock Trials is to afford the ship an opportunity to demonstrate that major systems and equipment is in fact ready to support Sea Trials. It is expected that individual equipment will have been satisfactorily tested prior to commencement of the integrated operational tests afforded by Ship's Force Dock Trials.

1.1 Supervising Authority. The industrial activity may desire to conduct machinery checkouts, or system checks prior to the Ship's Force Dock Trials in order to test the propulsion plant or other ship's systems. In order to support these evolutions, close liaison between the ship's CO and the industrial activity will be required. For these evolutions, completion of repairs or modifications to all ship's systems are not required except for those systems which directly support the proposed tests.

1.2 Scheduling of Tests. The scheduling of Ship's Force Dock Trials is flexible. Ship's Force Dock Trials may be scheduled by mutual agreement between the ship and the supervising authority but must take place prior to certification of crew or material readiness with adequate time allowed for collection of deficiencies discovered during the Ship's Force Dock Trials. Preparation of the agenda and schedule for the Dock Trials is the CO's responsibility.

1.3 Extent of Trials. Ship's Force Dock Trials are conducted by the Ship's Force and are normally unhampered by repair work. This applies to the entire ship not just the propulsion plant. The trials may be witnessed by the industrial activity.

1.3.1 Tests. The term test must include, where applicable:

- a. The review and use of a procedure for correct line-up, starting, operation and securing of systems or equipment.
- b. Rigging, connecting and using all hoses, fittings and devices required for the test evolution.
- c. Operation of systems in all modes, such as emergency, hand, override, cross-connected, normal, local, etc.
- d. Checking all electrical and mechanical, local and remote indicators for proper readings.
- e. Testing communications between normal control station and other locations involved in operating the system or performing the evolution.
- f. Calibration and adjustment of equipment, systems and devices where required.
- g. Inventory consumables, fittings, devices and portable test equipment to ensure that sufficient amounts are on board for proper operation throughout the trials.

1.3.2 Specific Test Areas. There are specific tests which relate to both systems and ship safety which must be conducted in preparation for Sea Trials.

- a. The following are specific alongside tests which must be conducted during Dock Trials:
- (1) Check the sound powered phone system between all stations.
 - (2) Check the announcing system between all stations.
 - (3) Test collision alarm and diving alarm.
 - (4) Test general alarm.
 - (5) Test each light on BCP.
 - (6) Test whistle.
 - (7) Check emergency lights.
 - (8) Operate all hydraulic plants using each installed pump.
 - (9) Conduct a complete air charge using only ship's compressors.
 - (10) Conduct a normal battery charge using ship's motor generator on shore power.
 - (11) Conduct low pressure blow of all Main Ballast Tanks (MBT). Thereafter conduct dockside operation portion of URO 022 (as appropriate).
 - (12) Flood sanitary tanks, then blow or pump them as required.
 - (13) Operate each main vent in hand and power. Following operation, with valves shut, conduct a controlled removal of MBT vent covers, one at a time, to check MBT vents for leaks.
 - (14) Operate the outboard induction in hand and power.
 - (15) Operate the diesel engine exhaust valve in hand and power.
 - (16) Operate inboard induction valves.
 - (17) Raise, train and lower periscopes, snorkel, radar and antenna masts and fairings as applicable.
 - (18) Test operation of radio transmitters and receivers on all antennas.
 - (19) Operate all sonar and radar equipment at rated conditions.
 - (20) Take and plot LORAN, OMEGA and NAVSAT fixes using each antenna.
 - (21) Test operation of drain pump using each bilge suction.
 - (22) Test operation of trim system and pump by pumping to and from each tank and by pumping to and from sea (if applicable).
 - (23) Calculate and enter the diving trim compensation.
 - (24) Test operation of portable submersible pump from each installed outlet.
 - (25) Fire inboard slugs from torpedo room.

- (26) Fire inboard slugs from weapons launch console.
- (27) Test magazine flooding system.
- (28) Operate each lube oil system including pumps, controllers, purifiers and indicators.
- (29) Start the Navigation System and gyrocompasses; determine that they settle out and take an azimuth; check all repeaters.
- (30) Check fresh water system, have water samples analyzed.
- (31) Test the capstans.
- (32) Test bow plane rigging (where applicable).
- (33) Test bow, sail and stern plane tilting in hand, normal power and emergency. Test normal and emergency plane angle indicators.
- (34) Test rudder in hand, normal and emergency power. Test normal and emergency rudder angle indicators.
- (35) Check alignment of periscopes, TBTs and all bearing and range repeaters.
- (36) Test the engine order telegraphs.
- (37) Test Automatic Bus Transfer Devices.
- (38) Operate each watertight door and hatch, each bulkhead flapper and each inter-compartment air salvage valve.
- (39) Check operation of escape hatch fittings.
- (40) Operate signal ejectors by impulse and hand using dummy signal. Fire water slugs from all launchers, both locally and remotely.
- (41) Turn on and check running lights for brightness and proper lenses (to be done at night).
- (42) Check Freon air conditioning system.
- (43) Check underwater log.
- (44) Check 400 Hz MG sets.
- (45) Check out galley equipment.
- (46) Check fathometer.
- (47) Check bilge flooding alarms.
- (48) Check dummy log.
- (49) Check ship service air system.
- (50) Check out vapor compressor distilling units.
- (51) Check anchor windlass and brake operation.
- (52) Check battery water system.

- (53) Check out atmosphere monitoring equipment, both installed and portable.
- (54) Operate oxygen generator, CO2 scrubbers, CO burners and emergency air breathing system.
- (55) If possible, lower, train, operate and raise the SPM.
- (56) Ensure that all required PMS to ship depth detectors is complete.
- (57) Test diesel engine high vacuum cut-out. Take altimeter to engine room or diesel generator room for test.
- (58) Check main propulsion.
- (59) Ensure seven-day supply of oxygen onboard, test operate the Electrolytic Oxygen Generator(s) (EOG).

APPENDIX N**FAST CRUISE REQUIREMENTS FOR IDD OR PIRA AVAILABILITIES**

1. Fast Cruise Requirements. Asterisk items are the minimum requirements for an IDD or PIRA availability:

a. All Ships:

- * (1) Station the maneuvering watch and check each system and piece of equipment for proper operation. (For availability less than six months duration, system and equipment checks are not required.)
- * (2) Station the normal underway watch (section watches).
 - (3) Simulate getting underway and return to port (day and night).
- * (4) Walk through all major Sea Trial evolutions, including cycling of hull and back-up valves to be tested during the deep dive.
- * (5) Exercise the reduced visibility detail.
- * (6) Rig for Emergency Ventilate.
 - (7) Spot check storage and availability of spare parts and tools. Verify adequacy of stores and provisions.
- * (8) Rig for dive and rig for surface.
- * (9) Simulate diving and surfacing.
- * (10) Rig for deep submergence.
- (11) Rig for various quiet conditions.
- (12) Drill at loss of power to various circuits including lighting, communications, 400 Hz power, etc.
- (13) Battery charge - Normal or equalizer as required.
- * (14) Conduct the following emergency drills:
 - * (a) Fire.
 - * (b) Collision.
 - * (c) Flooding.
 - * (d) Toxic Gas.
 - (e) Abandon Ship.
 - * (f) Man Overboard.
 - (g) Submarine Escape.
 - (h) Loss of AC Power.
 - (i) Emergency Ventilation.
 - (j) Loss of Air Conditioning.

- (k) Loss of Lighting.
 - (l) Loss of Interior Communications.
 - (15) Exercise the crew at battle stations.
 - (16) Conduct communications and ECM drills.
 - * (17) Conduct an air charge to all air banks. (For availabilities less than six months duration, conduct an air charge.)
 - * (18) Bleed oxygen and ventilate ship. Ensure a seven-day supply of oxygen is onboard and EOGs are fully operational. Ships without EOGs may provide a seven-day supply of oxygen in O2 candle form and have oxygen banks inerted until after availability completion.
 - (19) Anchor.
 - (20) Operate atmosphere control equipment and take air samples.
 - * (21) Check out all interior communications circuits, including battle telephones.
 - (22) Simulate submerged patrol, performing all evolutions and operating equipment normally used.
 - * (23) Operate freshwater and seawater heat exchangers at sufficient load to verify proper operation (not fouled with marine growth).
 - (24) Nuclear powered submarines must meet all requirements of reference (r), Appendix D, Part 3.
- b. Additional requirements for SSBN and SSGNs. SSBN and SSGNs must conduct exercises in casualties to missile tube breather valves which would result in:
- (1) Flooding.
 - (2) Introducing toxic gases into the missile compartment from gas generators.

RECOVERABILITY, SALVAGE, WATERTIGHT INTEGRITY, OR OPERATION OF SHIP'S CONTROL SURFACES. THE SHIP MUST NOT OPERATE AT A DEPTH GREATER THAN 200 FEET UNTIL RE-ENTRY IS CERTIFIED. TYCOM APPROVAL IS REQUIRED PRIOR TO COMMENCING A SUBSEQUENT DEEP DIVE TO CERTIFY WORK ACCOMPLISHED TO CORRECT SUBSAFE DEFICIENCIES DISCOVERED DURING THE SEA TRIAL UNLESS SPECIFICALLY ADDRESSED IN THE SEA TRIAL AGENDAS.//

BT

NOTE: ENSURE MESSAGES ARE PER CURRENT MESSAGE FORMAT AND CURRENT PLAD IS UTILIZED.

APPENDIX Q

MINIMUM SEA TRIALS REQUIREMENTS FOR IDD OR PIRA AVAILABILITIES

1. Sea Trial Agenda. This Appendix delineates the minimum requirements incident to Sea Trials following an IDD or PIRA availability. Additional events listed in Appendix O of Part I, Chapter 3, of this volume. Minimum Sea Trials Requirements for Chief of Naval Operations Availabilities Greater Than Six Months Duration (Submarines only), may be included by the repair activity based on the scope of work accomplished or as desired by the CO.
2. Sea Trial Policy. The following policies apply to conduct of trials and tests associated with IDD or PIRA availabilities:
 - a. No test or trial event must be conducted that requires crew intervention to avoid exceeding normal operating limits. Trial agendas will be based on the expectation that the ship will remain within normal operating limits of the SOE and at angles of less than 30 degrees.
 - b. Any run which will result in exceeding normal operating limits of the SOE or 30 degree angles but which is essential to provide adequate test data must be specifically approved by the TYCOM. The test or trial sponsor will obtain this permission.
 - c. A violation of the SOE limit or exceeding a 30-degree angle, not previously approved, should be reported by unit Situation Report. The TYCOM will resolve the situation.
 - d. Specific written approval by the TYCOM is not required to operate outside the upper limits of the SOE, i.e., shallow and fast, while conducting the following operations during Sea Trials or tests following an agenda approved by the ISIC, NAVSEA or higher authority:
 - (1) Conducting full power runs or cavitation curves.
 - (2) NAVSEA sponsored acoustic trials following a Naval Surface Warfare Center, Carderock Division acoustic trial agenda.
 - e. In cases where troubleshooting is required, it must meet the following criteria or a formally approved change to the agenda is mandatory.
 - (1) The troubleshooting does not violate any policy listed in paragraphs 2.a through 2.e of this Appendix or any other requirement of the trial agenda.
 - (2) The troubleshooting will not result in the ship being in a certain condition before that condition is reached during the normal testing sequence. For example, troubleshooting requiring the ship to be deeper than 200 feet cannot be done until after the deep dive. Likewise, troubleshooting requiring large angles or turn rates cannot be done until after the completion of the steering and diving operational tests and the large angle tests.
 - f. Each person involved in Sea Trials should be allowed to obtain a minimum of six hours of continuous, uninterrupted sleep during any 24-hour period.
3. Testing Phase. The Sea Trials should be scheduled and phased to support actions en route to the test dive area, in the test dive area, prior to the deep dive, etc., subject to the amplifying notes.

- a. The following tests and evolutions must be carried out on the surface en route to the test dive area and prior to the initial tightness dive:
- (1) Underway. Rig for dive.
 - (2) Ship's Force instruct Sea Trials riders on the proper use of Emergency Air Breathing System.
 - (3) At slow speed, conduct operational test of rudder in all modes (local and remote) per applicable class operating procedures.
 - (4) Navigation system check. Takes fixes by all means available and compare.
 - (5) Test underwater log(s) using the base course or reciprocal course method (i.e., inertial reference method) or other approved functional procedures to determine accuracy.
 - (6) Test accuracy of all bearing transmitters and indicators. Compare sonar, visual and radar bearings.
 - (7) Check operation of all radars. Demonstrate accuracy by conducting simultaneous radar and visual plot.
 - (8) Inspect stern tube packing gland and seals and circulating water flow for excessive heating, leakage and audible noise.
 - (9) Test fathometer(s) and compare with charted soundings.
 - (10) Run ahead, at maximum allowable surface speed, long enough for temperatures to reach a stable value. After readings have stabilized, at maximum allowable surface speed, operate the rudder through full throw in each direction, in all remote modes of operation.
 - (11) Ahead, at maximum allowable surface speed, to back emergency.
For SSBN or SSGN 726 Class only - Answer ahead standard. Once ship speed has stabilized, perform back emergency for 5 minutes.
 - (12) Run astern up to a back full bell. Full power run astern to be within the main engine limits of the applicable Steam and Electric Plant Manual.
For SSBN or SSGN 726 Class only - Run astern up to a back full bell for 5 minutes, followed by 60 SRPM for 5 minutes. (See Note 1.)
 - (13) Check operation and accuracy of ship's gyro compass.
 - (14) Rendezvous with escort, if an escort is required. Conduct radio and sonar communications checks (See Note 2).
 - (15) Rig out bow planes, if applicable. Test bow, fairwater and stern planes in all modes.
 - (16) Flood variable tanks to computed compensation less a safety factor.
 - (17) Operate trim and drain pumps.
 - (18) Test variable ballast system for proper operation.

- (19) Perform a low pressure, normal and EMBT blow for as long as necessary to verify system operability. A static blow must not be used to test the EMBT blow system. For SSN 23 only: Perform an MBT 6 normal blow from the BCP for a minimum duration of 2 seconds to verify that air flows into MBT 6 as indicated by a reduction in air bank pressure.
 - (20) Check that initial EMBT Blow system actuating air pressure and air bank pressure is within +0 PSIG, -200 PSIG of nominal operating air pressure.
 - (21) Ensure all MBT blow systems are in a normal line up configuration.
 - (22) Additional requirements may be imposed at the discretion of the CO.
- b. The following tests and evolutions must be carried out immediately prior to or during the initial tightness dive:
- (1) Obtain navigational fix and take sounding. Maximum depth of water is 400 feet as specified in reference (g).
 - (2) Rig ship for deep submergence. Line up propulsion plant for maximum reliability. All systems must be in the maximum secure condition with unnecessary sea systems isolated (See Note 3).
 - (3) Station additional personnel throughout the ship to inspect for leaks.
 - (4) Transmit commencing initial tightness dive message. Submerge the ship per the Ship Systems Manual Operating Procedures. If desired to conduct periscope depth tests, the ship may be submerged to periscope depth.
 - (5) Check operation of ship control systems, including depth indication (See Note 4).
 - (6) When escort is required, communicate with escort on RAC or WQC at each depth increment or at 10-minute intervals, whichever is sooner. If communications are lost, return to depth at which communications can be established before continuing (See Note 2).
 - (7) All hands inspect for leaks and report them.
 - (8) Inspect the discharge of all automatic drains in each EMBT Blow quadrant for seawater leakage prior to the first dive when the ballast tanks are flooded (e.g., at periscope depth).
 - (9) At periscope depth, operate all masts checking optics and leakage. Observe speed and depth restrictions for masts without violation of the SOE (See Note 5). Event may be performed following initial dive, if sea state prevents operation at periscope depth.
 - (10) Test operation of trim and drain system discharging to sea.
 - (11) If not at 150 feet for SSN 688 Class submarines (155 feet for SSN 774 Class submarines), (160 feet for SSBN and SSGN 726 and SSN 21 Class submarines), proceed to 150 feet for SSN 688 Class submarines (155 feet for SSN 774 Class submarines), (160 feet for SSBN and SSGN 726 and SSN 21

15 Jan 2021

Class submarines) and obtain SAT 1/3 trim per the Ship's Operating Manual. Take readings as required to make a check of ballasting.

- (12) At 200 feet:
 - (a) Adjust trim (See Note 6).
 - (b) Inspect for leaks.
 - (c) Communicate with escort at each depth increment or at 10-minute intervals, whichever is sooner. If communications are lost, return to depth at which communications can be re-established before continuing (See Note 2).
- (13) At 200 feet, per reference (s):
 - (a) Check accuracy of gauges and repeaters (See Note 4).
 - (b) Evaluate signal ejectors or launchers. Conduct operational test of each by hand and impulse methods, as applicable (See Note 7).
 - (c) Check shafting bearings and stern tubes for excessive heating, leakage and noise. Main shaft seals must be tested at each depth specified in reference (s) testing one seal for 20 minutes, and shifting to the other seal. Test the second seal for 20 minutes or until the boat is ready to go to the next depth, whichever comes first.
 - (d) Cycle rudder and planes through full throw at slow speed to check for binding.

NOTE: REQUIRED SYSTEMS ARE LISTED IN PARAGRAPH 4b OF REFERENCE (s). OBSERVE RESTRICTIONS ON OPERATION OF SYSTEMS LISTED IN PARAGRAPH 4d OF REFERENCE (s).

- (e) Operate all Main and Auxiliary Sea Water hull and back-up valves and those other seawater system valves worked during the availability (using remote closures, as applicable, from flooding control stations) that are required to maintain propulsion and other functions vital to the ship's operation.
 - (f) Operate Trim and Drain pumps, discharging to sea.
 - (g) Cycle main ballast tank vents to check for binding. Main ballast tank vents will be cycled hydraulically except at test depth where they will be cycled manually.
- (14) Test the SPM (See Note 13 in Appendix O of Part I, Chapter 3 of this volume).
- (15) Additional requirements may be imposed at the discretion of the CO.
- c. The following tests and evolutions must be carried out following the initial tightness dive and prior to the deep dive:
 - (1) Transmit initial tightness dive complete message (See Note 12).
 - (2) A minimum of six hours of ISE submerged for crew training.

- (3) Charge air banks and battery as necessary. The ship may be submerged while charging air banks provided the depth of the ship does not exceed other guidelines in this instruction, or those of the flooding bill or ship's operating procedure.
 - (4) If escort is required, detach escort after initial tightness dive. Escort will then proceed to station for deep dive. Ensure that deep dive rendezvous time and location are clearly established before escort is released. The escort may be retained for additional testing during the transit as described in Part I, Chapter 3, Appendix P of this volume. Transit depths must not exceed depth as described in Part I, Chapter 3, Appendix P of this volume.
 - (5) Additional requirements may be imposed at the discretion of the CO.
- d. The following tests and evolutions must be carried out immediately prior to or during the deep dive:
- (1) Check that initial EMBT Blow system actuating air pressure and air bank pressure is within
+0 PSIG, -200 PSIG of nominal operating air pressure.
 - (2) Verify MBT systems lined up for normal operation.
 - (3) Take sounding. Accurately fix ship's position within the specified dive area per reference (g). Transmit commencing deep dive message.
 - (4) Proceed to normal submergence depth and obtain a 1/3 speed trim. Use conservative angles and speed on initial dive.
 - (5) Trim ship to maintain neutral buoyancy (See Note 6).
 - (6) Rig ship for deep submergence. Line up propulsion plant for maximum reliability. All systems must be in the maximum secure condition with unnecessary sea systems isolated (See Note 3).
 - (7) Station additional personnel throughout the ship to inspect for leaks.
 - (8) At 400 feet and then in increments of 100 feet descending to one-half the maximum operating depth and every 100 feet or other lesser specified increments thereafter down to the maximum authorized operating depth:
 - (a) Adjust trim (See Note 6).
 - (b) Inspect for leaks.
 - (c) Communicate with escort (if escort required) at each 100-foot depth increment or at 10-minute intervals, whichever is sooner. If communications are lost, return to a depth at which communications can be re-established before continuing (See Note 2).
 - (9) At depths listed for hull valve cycling in reference (s) including the maximum authorized operation depth:
 - (a) Check accuracy of gauges and repeaters (See Note 4).
 - (b) Evaluate signal ejectors or launchers. Conduct operational test of each

by hand and impulse methods, as applicable (See Note 7).

- (c) Check shafting bearings and stern tubes for excessive heating, leakage and noise. Main shaft seals must be tested at each depth specified in reference (s) testing one seal for 20 minutes, and shifting to the other seal. Test the second seal for 20 minutes or until the boat is ready to go to the next depth, whichever comes first.
- (d) Cycle rudder and planes through full throw at slow speeds to check for binding. Cycling of rudder and planes through full throw must be limited to 90 % of test depth. For SSN 21 Class follow the specific Sea Trial Agenda.

NOTE: REQUIRED SYSTEMS ARE LISTED IN PARAGRAPH 4b OF REFERENCE (s). OBSERVE RESTRICTIONS ON OPERATION OF SYSTEMS LISTED IN PARAGRAPH 4d OF REFERENCE (s).

- (e) Operate all Main and Auxiliary Sea Water hull and back-up valves and those other seawater system valves worked during the availability (using remote closures, as applicable, from flooding control stations) that are required to maintain propulsion and other functions vital to the ship's operation at increments of depth specified in reference (s).

NOTE: TRASH DISPOSAL UNITS (TDU) WITH BALL VALVES WILL NOT BE OPERATED BELOW 200 FEET. TDUs WITH FLAPPER VALVES WILL NOT BE OPERATED BELOW 150 FEET.

- (f) Operate trim and drain pumps, discharging to sea.
- (g) Cycle main ballast tank vents to check for binding. Main ballast tank vents will be cycled hydraulically except at test depth where they will be cycled manually.
- (10) Surface fully with EMBT blow per applicable URO MRC. Check air bank pressures before and after blow. For SSN 23 only: Perform an MBT 6 normal blow from the BCP until MBTs 6A and 6B are blown to residual water levels.
- (11) Transmit completion of deep dive message (See Note 12).
- (12) Additional requirements may be imposed at the discretion of the Commanding Officer.
- e. The following tests and evolutions must be carried out submerged following the deep dive:
 - (1) Full power run (See Notes 8, 9 and 10).
 - (2) Emergency stop (See Notes 9 and 10).
 - (3) Steering and diving operation at full speed (See Note 11).
 - (4) Steep angles - operate ship through several depth changes using large up and down angles. Check operation of ship machinery (See Note 9).

- (5) Time raising each periscope and mast at maximum depth and speed for which they are designed. Check training feature where applicable.
- (6) Run and observe air conditioning plants throughout trials noting deficiencies. Operate the Lithium Bromide air conditioning plant (if installed) to demonstrate ability to carry entire maximum existing ship's air conditioning load or 100 percent capacity.
- (7) Shoot water slugs from all torpedo tubes (See Note 13).
- (8) Additional requirements may be imposed at the discretion of the Commanding Officer.

4. Sea Trial Conclusion. At the conclusion of Sea Trials, and based on a review of Sea Trial deficiencies and TYCOM concurrence, the submarine may transit to a port other than the overhauling activity. During this transit the submarine must not operate at depths greater than 400 feet (one-half test depth plus fifty feet for SSN 688 class), and must not be released for unrestricted operations until all RECs are closed and any deficiencies identified during the controlled dive to test depth have been reported and reviewed by the TYCOM and specific TYCOM approval for URO is granted.

NOTES

- 1. **For SSBN and SSGN 726 Class submarines only - This surface evolution, full power run astern, must be conducted only if maintenance was accomplished on the reduction gears, the astern throttle(s) or the main shaft thrust bearing.**
- 2. **In the execution of any Sea Trial, whether escorted or not, submarine COs are reminded of their responsibility to communicate with escorts, shore authorities, or both, within the prescribed previously agreed upon time limits to avoid initiation of lost submarine procedures.**
- 3. **Reference (s) [C9094.2 (Series)] prescribes procedures for system operation during the deep dive.**
- 4. **Compare all depth and pressure gauges. Depth and pressure gauges should be checked as soon as each next specified depth is reached.**
- 5. **Any evolutions (e.g., mast testing, propeller cavitation data collection, etc.) required by the Sea Trial Agenda, which violate the ship's SOE, must be approved by the TYCOM prior to Sea Trials, per paragraph 2 of this Appendix.**
- 6. **Deep dive should be conducted using moderate speed and constantly adjusting trim at depths indicated in paragraphs 3.b.(12)(a) and 3.d.(8)(a) of this Appendix, to maintain neutral buoyancy. Moderate speed must be defined as that range of speed that allows the ship to recover from a loss of stern plane control or flooding casualty or as otherwise directed by NAVSEA.**
- 7. **Integrity of launchers or signal ejectors must be established by admitting sea pressure through equalizing lines or flooding connection and the muzzle valve or door operated before conducting operational tests. Shoot water slugs from specified launchers or signal ejectors at depths specified by reference (s). Shoot pyrotechnics on initial dive and at test depth on deep dive only if work was**

accomplished on the launchers or signal ejectors or if an escort vessel is required for the trial.

8. **Run full power submerged for at least two hours. Operate at minimum non-cavitating depth, but not to exceed 400 feet, per reference (g); water depth is not limited for this event.**
9. **Note that the required sequence of events is initial dive, deep dive, full power run submerged, back emergency, then high-speed maneuverability, and steep angle tests. Initial high-speed ship control tests, steep angle tests and exercises at major casualties must be conducted in water that does not exceed one and one-half times design test depth.**
10. **The submerged full power run with an ahead flank bell is to be terminated with a back emergency bell, consistent with current Main Propulsion Operating Limits (shaft torque is not a limiting factor in this test). The duration of the back emergency bell will be limited to 45 seconds, to be followed immediately by an appropriate ahead bell. The 45-second limit will:**
 - a. **Standardize the crash-back requirements throughout the submarine force.**
 - b. **Provide a backing transient similar to that experienced in response to a stern plane jam.**
 - c. **Be short enough that no ship will gather sternway.**

For SSBN and SSGN 726 Class submarines only - The submerged full power run with an ahead flank bell is to be terminated by reducing the bell to ahead standard until speed stabilizes. The ship is then to conduct a back emergency bell consistent with current Main Propulsion Operating Limits (shaft torque is not a limiting factor in this test). The duration of the back emergency bell will be limited to 45 seconds, to be followed by an appropriate ahead bell. The 45-second limit will avoid developing sternway.

11. **At maximum safe speed, operate the rudder and planes through full throw in both directions, in all remote modes of operation.**
12. **If required, perform resistance measurement checks of communication antennas per Volume IV, Chapter 22, paragraph 22.4 of this manual.**
13. **Shoot water slugs at a speed and depth defined by the Commanding Officer unless otherwise specified in the Sea Trial Agenda.**

VOLUME II
PART II
CHAPTER 1
SHIP MAINTENANCE VALIDATION,
SCREENING AND BROKERING

REFERENCES.

- (a) OPNAVINST 4700.7 - Maintenance Policy for U.S. Naval Ships

LISTING OF APPENDICES.

A Availability Creation and Numbering

1.1 PURPOSE. This chapter provides procedures and guidance regarding ship maintenance work candidate validation, screening and brokering processes. These processes affect all Type Commanders (TYCOM), Regional Maintenance Center (RMC) Commanding Officers and ship Maintenance Teams.

1.2 MAINTENANCE.

1.2.1 Regional Maintenance Centers. The command with overall responsibility for efficient planning and execution of all ship maintenance and modernization for assigned ships is the local RMC. The RMC is a subordinate command to Naval Sea Systems Command (NAVSEA). The RMC must report Additional Duty to the appropriate TYCOMs. This reporting relationship ensures that the TYCOMs continue to effectively carry out their responsibilities relating to material readiness of their ships. Contact information for the RMCs can be found in Volume VI, Chapter 2, Appendix A of this manual.

1.2.2 Maintenance Team. Each ship must have a formally structured Maintenance Team as identified in Volume VI, Chapter 41 of this manual

1.2.3 Class Maintenance Plan. The Class Maintenance Plan (CMP) database is an engineered set of organizational, Intermediate and Depot-level maintenance tasks, including the following: material condition assessment tasks (I-tasks), qualified repair and life renewal tasks (Q-tasks), availability routine tasks (R-tasks) and authorized Fleet and Program ship change tasks. Tasks are either scheduled or unscheduled.

- a. Scheduled tasks are those “I” Level and “D” Level tasks the cognizant technical authority (usually the designated In-Service Engineer) requires to be accomplished on a periodic basis. These tasks have been identified, using Reliability Centered Maintenance, to be both applicable and effective. The CMP system automatically pushes scheduled tasks for Maintenance Team screening and brokering based on last accomplished date and task periodicity.
 - (1) For Aircraft Carriers, scheduled tasks are pushed to the shore Current Ship’s Maintenance Project (CSMP) six quarters before the deadline date, unless the periodicity is such that the task is due in less than 18 months. These tasks are mandatory and must be completed by the due date or approved for deferral or

cancellation by the Ship Design Manager (SDM) (see paragraph 1.4.5.e of this chapter).

- (2) For Surface Force ships, scheduled tasks are pushed to the shore CSMP and must be completed by the due date or approved for deferral or cancellation by the SDM (see paragraph 1.4.5.e of this chapter).
- b. Unscheduled tasks are pulled by the Maintenance Team based on evidence of need. This includes unscheduled assessment tasks, qualified repair tasks, approved ship changes with their associated support and service tasks and availability routine tasks. Additionally, if the need arises for a scheduled task to be accomplished before it has been pushed into the CSMP, the Maintenance Team has the ability to pull that scheduled task, and the last accomplished date will be appropriately updated.

1.3 WORK CANDIDATES.

1.3.1 Current Ship's Maintenance Project Composition. An accurate, up-to-date CSMP is essential for a well-maintained ship. The importance of documenting all discrepancies cannot be overemphasized because the CSMP is the basis for all funding. Only work that is documented in the CSMP will be authorized for accomplishment. The CSMP is maintained in two files, the organizational unit file and the shore file.

- a. Shipboard File. This file contains information regarding all known material discrepancies that require corrective maintenance. These discrepancies are normally discovered either by Ship's Force personnel during routine operations and planned maintenance or by non-Ship's Force personnel during material assessment, training and assist visits, documented per Volume VI Chapter 42 of this manual. The criticality of the discrepancy determines the maximum length of time allowed to upload the information regarding the discrepancy to the RMC responsible for managing the shore file. Exceptions to this policy are made within the considerations of bandwidth availability and Operational Security conditions.
 - (1) 2-Kilos (Naval Operations (OPNAV) 4790/2K) associated with correction of C2 Casualty Reports must be uploaded within 24 hours.
 - (2) 2-Kilos associated with correction of C3 or C4 Casualty Reports must be uploaded within four hours.
- b. Shore File. This file contains the material discrepancies uploaded from the shipboard file, other work identified by shore-based managers and tasks from the CMP. Tasks from the CMP include pushed scheduled tasks, pulled tasks, authorized program and Fleet modernization work and availability support routines. The Type Desk Officer and Ashore Ship's Maintenance Manager are responsible for pulling CMP tasks as required based on evidence of need, availability support routines and Fleet and Program alterations into availability work packages. Although only on the CSMP shore file, this work is visible to Ship's Force via reports sent to the ship.

1.3.2 Requirements. All work requiring an expenditure of man-hours, material or a combination of both requires a work candidate (OPNAV 4790/2K) to document the identified requirement. Pushed and pulled CMP tasks are already formatted as OPNAV 4790/2Ks when transferred to the CSMP shore file. The OPNAV 4790/2K requires certain information to be included by the

identifying activity to support the maintenance request and may be authored by activities other than the affected ship. There are three levels of the validation process:

- a. The ship (Ship Material Maintenance Officer or 3MC) must do an initial validation of the work statement to determine if there is enough information for the designated representative (e.g., Ashore Ship's Maintenance Manager, Fleet Maintenance Activity Ship Superintendent, Project Manager, etc.) to understand the requirement.
- b. The Ashore Ship's Maintenance Manager working with members of the Maintenance Team is responsible for requirement validation, and will determine whether there is real need (objective evidence) and, if so, will also verify the requirement's urgency.
- c. Final validation is the responsibility of the Ashore Ship's Maintenance Manager. The Ashore Ship's Maintenance Manager ensures that the scope of the work is adequately defined and technically accurate before authorizing the work. This is the final product screened and brokered to a planning or execution activity.

1.3.3 Elements. A valid work candidate will provide the following key data elements at a minimum. The blocked numbers to the right of each item reference an OPNAV 4790/2K data block.

- a. Configuration information automatically entered from the master configuration database (Configuration Data Manager's Database or Ship's Configuration and Logistics Support Information System) by the shipboard system:
 - (1) Ship Unit Identification Code [1]
 - (2) Work Center Job Control Number [2]
 - (3) Allowance Parts List or Allowance Equipage List [4]
 - (4) Ship Name [A]
 - (5) Ship Hull Number [B]
 - (6) Equipment Noun Name [5]
 - (7) Equipment Identification Code [14]
 - (8) Location [16]
 - (9) Ship Work List Item Number [56]
 - (10) References
- b. Job Sequence Number [3]
- c. Equipment Status Code [7]
- d. When Discovered Date [17]
- e. Deferred Date [26]
- f. Symptoms and Supporting Information [35]
- g. First Contact Name [38]
- h. Priority [41]

- i. Type Availability - (Recommended Accomplishment Level) [42]
- j. Required Delivery Date [28]
- k. Recommended resolution [35]
 - (1) Master Job Catalog, if applicable
 - (2) Port Engineer's Notes
 - (3) Additional references
- l. Maintenance Action Requested [35]
 - (1) Assessment
 - (2) Repair
 - (3) Modernization
- m. Maintenance Figure of Merit In CSMP Shore File
- n. Initial Estimate (man days & material) In CSMP Shore file
- o. TYCOM Screening Code [45]
- p. TYCOM Screening Remarks In CSMP Shore File

1.3.4 Guidelines. After a work candidate is created and uploaded by an assessment activity or provided and entered into the CSMP shore file by the CMP or other means, it will be reviewed by the Ashore Ship's Maintenance Manager with the Maintenance Team. The Ashore Ship's Maintenance Manager will use these guidelines to validate each work statement:

- a. Initial validation will be conducted on each new work candidate to ensure there is sufficient information to understand the requested maintenance action. The originator must populate configuration data elements from the master database by selecting the correct configuration item in a configuration-based system and complete data elements (1) through (7) listed in paragraph 1.3.3a. of this chapter. If the ship is the originator, then data element (8) must also be present. All work candidates created in an ad-hoc mode or with an incorrect configuration item (and therefore incorrect configuration data) will be returned to the originating activity for cancellation and recreation.
- b. If configuration data in the master data base is incorrect (e.g., Allowance Parts List or Allowance Equipage List, Hierarchical Structure Code (Ship Work List Item Number) references, location, etc.), the Ashore Ship's Maintenance Manager must act to correct the data at its source. The Ashore Ship's Maintenance Manager may request additional logistic assistance from the Configuration Data Manager to determine and document the correct data.
- c. When an initially validated work candidate is accepted as complete, the Ashore Ship's Maintenance Manager will then determine if there is enough objective evidence of need to validate the requirement. If not valid, the work candidate will be returned to the originator and cancelled.

- d. CMP material assessments may be accomplished outside of a depot maintenance period to allow for proper planning and preparation of resulting work during a depot maintenance period. However, CMP maintenance should be scheduled and executed during depot maintenance periods.
- e. If during validation, the Maintenance Team finds inaccurate configuration data or has questions concerning the necessity of a “Pushed” CMP work candidate, they will contact the appropriate maintenance planning activity prior to returning or cancelling the work candidate.

1.3.5 Validation.

- a. Validation is the process of reviewing an off-ship work statement to ensure that the correct configuration item (lowest repairable unit, equipment, system, etc.) is properly identified and that there is enough information to determine if the work candidate is required (objective evidence) and, if valid, contains enough information to:
 - (1) Properly determine the correct resolution inclusive of the root cause.
 - (2) Screen to the right maintenance period to support ship operations.
 - (3) Broker to the right activity to perform the work at the most practicable level.
 - (4) Pass to history.
- b. The goal of the validation process is to provide a work candidate that is sufficiently defined, contains correct and complete information, provides an accurate diagnosis, and provides an applicable, effective, and feasible recommended resolution. A properly validated work candidate should provide the planning and executing activities with the ability to understand the requirement without expending additional manpower or time obtaining required information. The Ashore Ship’s Maintenance Manager along with the Maintenance Team validates all off-ship (Type Availability 1, 2 and 3) work candidates before screening them to the planning activity by review of 2-Kilo documentation, personal shipboard observation of conditions, and knowledge of the quality of work candidates written by selected work centers or through additional technical assistance. All validated work candidates must be ship-checked by the Ashore Ship’s Maintenance Manager or designated representative when practicable. The purpose of this check is to determine the best maintenance action and add to Block 35 (data elements k. and l. in paragraph 1.3.3 of this chapter).

1.3.6 Verification. The Ashore Ship’s Maintenance Manager request additional assistance to determine and document the best corrective action. The recommended action will include all pertinent interferences, integration issues, verification of urgency and an initial estimate (data element n. in paragraph 1.3.3 of this chapter). The initial estimate for each job includes man-days, man-day rate and material costs. When validated, the Ashore Ship’s Maintenance Manager will assign a TYCOM Screening Code (data element o. in paragraph 1.3.3 of this chapter) to the work candidate. This shows the job as valid and ready for screening and brokering.

1.4 SCREENING AND BROKERING.

1.4.1 Screening and Brokering Work Candidates. The Ashore Ships Maintenance Manager validates and screens work candidates continuously as they are documented. Work integration

may entail screening multiple work candidates together when possible. Work screening also entails selecting the appropriate level of repair and the best opportunity in which to accomplish the work. The Ashore Ships Maintenance Manager makes recommendations on the lowest level of executing activity with the capability and the capacity to accomplish the work during the required time frame, following the guidance of the TYCOM business rules (e.g., Volume VI, Chapter 31 of this manual for Surface Force Ships).

- a. Management of ship maintenance is best performed by individuals most familiar with the condition of the ship, budgetary considerations and available workforce. (This requires a cooperative effort from the Ashore Ships Maintenance Manager and the Naval Supervisory Authority (NSA) Lead Maintenance Activity (LMA) for Submarine Fleet Availabilities). They have the responsibility to accomplish maintenance, repair and modernization work within available financial resources while balancing operational and technical risk.
- b. The Ashore Ship's Maintenance Manager screens all work candidates to the right time period and maintenance availability (e.g., Chief of Naval Operations (CNO) availabilities, Continuous Maintenance Availability, Window of Opportunity (WOO), Emergent Availability). Determination includes balancing operational schedule, material readiness requirements and cost concerns to maximize maintenance productivity (material readiness vs. related maintenance cost).
- c. All work screened by the Ashore Ship's Maintenance Manager to be accomplished aboard ship will be electronically visible to the NSA (LMA for Submarine Fleet Availabilities). Work assigned to the NSA (LMA for Submarine Fleet Availabilities) will be tasked following Ashore Ship's Maintenance Manager brokering determination. TYCOM approval is required if the initial brokering determination needs to be changed.

1.4.2 Screening and Brokering. Although they may appear to be accomplished simultaneously, screening and brokering are actually two distinct processes.

- a. Screening. Determines and assigns the work candidate to the right time period and maintenance availability. Determination includes balancing operational schedule, material readiness requirements and cost concerns to maximize maintenance productivity (material readiness vs. related maintenance cost).
- b. Brokering. Determines and tasks the right activity to perform the work based on business case analysis, material availability, experience, tool requirements, personnel requirements, special considerations (Environmental, Health and Safety) and capacity.

1.4.3 Key Data.

- a. The validated work candidate contains the following key data elements to aid in the screening and brokering process:
 - (1) Configuration Item (maintenance object) identification.
 - (2) Symptom (OPNAV 4790/2K - Block 35).
 - (3) Expected scope of preventive, corrective and alterative maintenance (OPNAV 4790/2K - Block 35).

- (4) Required Completion Date (RCD).
- (5) Level of Maintenance (TYCOM Code 1, 2, 3).
- (6) Identification of a Master Spec Catalog item (pre-planning data).
- (7) Priority (Figure of Merit).
- b. All OPNAV 4790/2Ks in the Master File should be screened and brokered to a maintenance availability within eight days after being uploaded from the Shipboard File.
- c. Work candidates will be brokered to the appropriate maintenance activity with the capability and capacity to accomplish the work during the required timeframe. When practicable, Fleet Maintenance Activity capacity will be utilized first.
- d. Available capacity will be judged after applying Maintenance Figure of Merit and Deadline Date. For Surface Force ships, this determination is made through a coordinated effort between the Project Manager, Ashore Ship's Maintenance Manager, RMC Ship superintendent and the Maintenance Team Private Sector Industrial Activity representative (If under a Private Sector Industrial Activity contract).
- e. The cause and effect relationship between screening and brokering must be exercised to maximize maintenance productivity. This may require negotiation with the ship, maintenance activity, or both, to adjust the Deadline Date.
- f. Other considerations for screening and brokering:
 - (1) Synergistic relationship between work candidates exist.
 - (2) Splitting responsibility.
 - (3) Third party access.
 - (4) Port loading.
 - (5) RMC Production Department training requirements.

1.4.4 Guidelines.

- a. Validation, screening and brokering will be accomplished continuously. The Ship Material Maintenance Officer will provide recommendations to the Ashore Ship's Maintenance Manager. The Ashore Ship's Maintenance Manager will use these guidelines to screen and broker work candidates to the proper availability:
- b. All work will be screened to an availability created and numbered per the business rules in Appendix A of this chapter.
- c. Work candidates will be screened to the following type of availabilities: CNO, Continuous Maintenance (CM), emergent or unfunded. No other type of availability will be used.
 - (1) CNO Availability. The work candidate is best performed during the scheduled CNO availability. These work candidates include major Ship Alterations and repairs that require support services and coordination.

- (2) Continuous Maintenance Availability. Based on ship availability, priority of the job, business case analysis, periodicity or other consideration, the maintenance should be performed during a scheduled Continuous Maintenance Availability or during a window of opportunity permitted by ship's schedule.
 - (3) Emergent Availability. Emergent work is performed at greater cost than work planned and completed in other availabilities. The criteria to be used to qualify work as emergent is provided in TYCOM business rules (e.g., Volume VI, Chapter 31, Paragraph 31.3.3 of this manual for Surface Force ships).
 - (4) Unfunded Availability. This availability is reserved for work candidates, which should be shown as backlog or are of such low priority they are unlikely ever to be accomplished.
- d. Brokering must follow these requirements:
- (1) Work candidates for technical assistance, assessment or inspection will be brokered to the RMC Fleet Maintenance Activity or another technical activity.
 - (2) Work candidates will be brokered to the lowest level of maintenance activity, filling Fleet Maintenance Activity capacity first, based on the following criteria:
 - (a) Material availability.
 - (b) Capability:
 - 1 Experience.
 - 2 Available Production Resource Tools.
 - 3 Available qualified and certified personnel.
 - 4 Ability to comply with Environmental, Health and Safety regulations.
 - (c) Work center capacity.
 - (d) Funding.

1.4.5 Additional Requirements for Scheduled Mandatory Tasks Pushed by CMP. (Surface Force ships only) Since mandatory tasks pushed to the CSMP by the CMP are directed by proper Technical Authority, further screening and brokering restrictions apply.

- a. Certain fields on mandatory tasks cannot be changed, including job summary, problem description, recommended solution, deadline date and maintenance level.
- b. Mandatory tasks must be accomplished by an off-ship maintenance activity, not by Ship's Force. Organizational-level requirements are scheduled by Planned Maintenance System (PMS), not by CMP.
- c. Mandatory tasks cannot be cancelled or passed to history by the Maintenance Team, or customer completed without being screened to an availability. If cancellation is requested, the CMP item must be adjudicated by proper Technical Authority and approved for cancellation as dictated in paragraph 1.2.3 of this chapter.

- d. Mandatory tasks must be screened to a defined maintenance period instead of to the yearlong CM availability. When equipment condition requirement or other scheduling problems make it impractical to accomplish the mandatory task, the yearlong CM availability may be used for non-depot mandatory tasks. However, mandatory tasks screened to a CM availability will be considered to be improperly deferred after the mandatory tasks deadline date without consideration of the availability end date (see paragraph 1.4.5.g.(1) of this chapter).
- e. Mandatory task may not be screened to an emergent maintenance period. Planned maintenance does not warrant the use of emergent maintenance money. This requirement does not preclude pulling a task from the CMP when needed and screening it to an emergent maintenance period.
- f. If the mandatory task is screened to the unfunded availability or to an availability that begins more than 90 days after the mandatory task's deadline date, a "notification" is triggered by the Cancellation Deferral Notification System (CDNS) to notify the appropriate Technical Authority and a Departure From Specification (DFS) may be required. The Ashore Ship's Maintenance Manager comments will be reviewed and the Technical Authority will either recommend approval or disapproval of the DFS. The Ashore Ship's Maintenance Manager must then rescreen the mandatory tasks to an appropriate availability following the guidance provided in the DFS. This functionality is referred to as the "CDNS Process".
 - (1) The Ashore Ship's Maintenance Manager may challenge whether the mandatory tasks should be accomplished (as opposed to not accomplished until after the deadline date). The task should be screened to the unfunded availability and comments entered. Depending on whether the CDNS notification is administrative or technical, the mandatory tasks will be adjudicated in the following manner:

NOTE: THE SUBSTITUTED WORK CANDIDATE WILL BE SUBJECT TO THE SAME PUSHED TASK RESTRICTIONS DESCRIBED IN THIS SECTION.

- (a) Administrative: If the intent of the task was completed since the Last Accomplished Date by a non-CMP work candidate, provide that Job Control Number in the comment field. If the Planning Activity Engineer agrees that the intent of the task was met by the non-CMP work candidate, the Planning Activity Engineer will cancel the pushed mandatory tasks from the CSMP. If the intent of the task is covered by a non-CMP work candidate that is currently open and in planning or execution, the Planning Activity Engineer will substitute the pushed mandatory tasks with the non-CMP work candidate and cancel the pushed mandatory tasks from the CSMP. If the mandatory tasks cannot be accomplished because the component or system no longer exists on the ship, the Planning Activity Engineer will cancel the pushed mandatory tasks from the CSMP and update the configuration records. For all administrative notifications, if the Planning Activity Engineer does not agree with the Port Engineer's comments, the CDNS notification will be forwarded to the SDM for resolution.

- (b) Technical: The Ashore Ship's Maintenance Manager can technically challenge pushed mandatory tasks using CDNS. Reasons for technically challenging mandatory tasks include non-modernization configuration change, permanent or temporary DFS exists, or authorized modernization upgrade to equipment. If the Planning Activity or SDM disapproves the CDNS notification, an e-mail will be sent to the Ashore Ship's Maintenance Manager providing justification. All technical challenges will be reviewed by the Planning Activity or SDM for resolution.
 - (2) If the Ashore Ship's Maintenance Manager determines that the mandatory tasks should be accomplished beyond the due date, the task should be screened to the recommended availability and comments entered. Reasons for deferring a mandatory task past its due date include: a temporary DFS exists making the task unnecessary before the due date, lack of an appropriate maintenance availability by the due date, unable to set required assessment conditions because of a related casualty or other issue, lack of capability or capacity to accomplish the mandatory tasks by due date, etc. Deadline challenges must be documented using the CDNS Process and must be reviewed and approved by the Planning Activity and a DFS may be required.
- g. CMP push tasks must be accomplished within required periodicity or approval for deferral in the CDNS Process by NAVSEA Technical Authority. Ashore Ship's Maintenance Managers, RMCs and TYCOMs should resolve these mandatory task deferrals promptly. CMP push tasks can be addressed using a DFS or the CDNS Process. Deferred CMP push task delays are categorized as:
 - (1) Open and overdue. Often, CMP push tasks are screened to an appropriate availability but are not executed by their deadline dates. Sometimes, task deferrals are approved through the CDNS Process but then are subsequently moved to a later availability without further Planning Activity or SDM approval. Open and overdue jobs are particularly troublesome because they are now past the deadline date and do not have deferral approval from Technical Authority via a DFS or the CDNS Process. Specific types of open and overdue CMP push tasks jobs include:
 - (a) Job is open, screened to a yearlong CM availability and past its deadline date.
 - (b) Job is open, screened to an acceptable numbered availability (one that starts no later than 90 days after the deadline date or one approved in the CDNS Process by the Planning Activity or SDM).
 - (c) Job is open, unscreened and past its deadline date.
 - (2) Overturned and not rescreened. When a mandatory task is challenged by the Ashore Ship's Maintenance Manager via DFS or the CDNS Process but that challenge is overturned by Technical Authority, the Ashore Ship's Maintenance Manager receives an e-mail stating that the job must be rescreened to an appropriate availability for accomplishment. Jobs should be

rescreened to an appropriate availability within 30 days after the Ashore Ship's Maintenance Manager is made aware of the ruling.

- h. Deferral notifications approved by the Planning Activity or SDM are approved for the availability to which the mandatory task was screened when the mandatory task triggered a notification. If a mandatory task is subsequently rescreened to a later availability, the approval is removed and the screening action must be acted on by the Planning Activity or SDM again.

1.5 ASSESSMENTS.

1.5.1 Maintenance Team.

- a. All material condition assessments, including tasks for Combat Systems Command, Control, Communications and Computer Readiness Assessments or Total Ship's Readiness Assessment, must be derived from the CMP. Scheduled condition assessments have been validated by an approved Reliability Centered Maintenance analysis to be applicable and effective, and are pushed by the CMP system to the CSMP shore file for the Ashore Ship's Maintenance Manager action, based on the ship's last accomplished date and task periodicity. Unscheduled material condition assessments are not, without further evidence of need, considered effective and are thereby not pushed into the CSMP shore file, but can be pulled from the CMP by the Ashore Ship's Maintenance Manager or his representative if there is evidence of need (such as degraded performance, errors, or other indication of problems). Scheduled tasks can also be pulled if circumstances warrant, and the Last Accomplished Date will be properly updated. The Ashore Ship's Maintenance Manager with help from the Maintenance Team must review all 2-Kilos pushed from the CMP system just as for any other off-ship 2-Kilo, and broker to the appropriate assessing activity.
- b. Only assessment tasks in the CMP or assessment procedures in the PMS database may be used for assessments. Information addressing assessment requirements found not to be included within the CMP or PMS databases, such as local practices, In-Service Engineering Activity unique items, RMC practices, etc., must be forwarded using the Technical Feedback Report for review and approval as an acceptable addition to the CMP and PMS databases. If not approved, these practices must not be used by any activity.
- c. The Ashore Ship's Maintenance Manager will make the preliminary determination of the most appropriate source for all off-ship activity work for their assigned ships. Decisions made by the Ashore Ship's Maintenance Manager, with concurrence from the Maintenance Team, must be in compliance with policies in this instruction, reference (a), and guidance provided by the cognizant RMC.

1.5.2 Type Commander. The TYCOM must develop and execute a Memorandum of Agreement per Volume II, Part I, Chapter 3 of this manual with each supporting RMC to define reporting and administrative relationships between the TYCOM and the RMCs.

APPENDIX A

AVAILABILITY CREATION AND NUMBERING

1. Specifying Availabilities. A uniform method of specifying availabilities is an essential part of availability management and data collection. No deviation from these protocols is permitted. **An availability is defined as a specified period of time during which maintenance is conducted. Only Type Desk Officers, Type Desk Program Managers, and Ashore Ship's Maintenance Managers are authorized to create availabilities. Availabilities must include all work completed during a specific time period regardless of executing activity. With exception of the emergent availability, availabilities must not overlap and work by every activity (depot, Intermediate Maintenance Activity (IMA), Alteration Installation Team, tech assist and Ship's Force) must be entered into the same availability. Availability numbers are not to be used as a method of segregating the executing activity or the level of work performed. SSGN and SSBN will be exempt from the requirements of this appendix due to use of the existing Logistic Data System (LDS) program. TRIDENT Availabilities are negotiated and established based on the Fleet Scheduling Conference and are not managed by Type Desk Officers, Type Desk Program Managers or Ashore Ship's Maintenance Managers.**
2. Availability Numbering. The availability number consists of the first four digits -- the availability category code and the availability serial number. The Funding Activity Code (FAC) is used to identify the source of funding for any job and is entered at the time of job screening and authorization. The availability numbering system must consist of:
 - a. A one-digit availability category code.
 - b. A three-digit availability serial number.
 - c. A two-digit funding activity code.
3. Availability Category Code: This code is the first character of the four-digit availability number. These codes are used by all TYCOMs and, therefore, not all codes are applicable to all ships. The stand alone "T" availability is no longer used by the Surface Force.

<u>CODE</u>	<u>TITLE</u>
A	ALONGSIDE SCHEDULED CONTINUOUS MAINTENANCE
B	DOCKING SELECTED RESTRICTED AVAILABILITY (DSRA)
C	SELECTED RESTRICTED AVAILABILITY (SRA)
D	COMPLEX OVERHAUL
E	EXTENDED INCREMENTAL SELECTED RESTRICTED AVAILABILITY
F	EXTENDED DOCKING SELECTED RESTRICTED AVAILABILITY (EDSRA)
G	EXTENDED SELECTED RESTRICTED AVAILABILITY (ESRA)
H	DOCKING INCREMENTAL SELECTED RESTRICTED AVAILABILITY (DISRA)

I	INTERMEDIATE MAINTENANCE AVAILABILITY
J	INCREMENTAL SELECTED RESTRICTED AVAILABILITY
K	INTERIM OR EMERGENT DRY DOCK
L	DOCKING PHASED MAINTENANCE AVAILABILITY
M	PHASED PLANNED MAINTENANCE AVAILABILITY
N	INACTIVATION AVAILABILITY (INAC)
O	POST DELIVERY AVAILABILITY
P	CONTINUOUS AVAILABILITY (YEAR LONG CM)
Q	POST SHAKEDOWN AVAILABILITY
R	REGULAR OVERHAUL
S	SELF AVAILABILITY OR SHIP TO SHOP AVAILABILITY
U	UNFUNDED
V	PLANNED INCREMENTAL AVAILABILITY (PIA)
W	DEPOT MODERNIZATION PERIOD
Z	VOYAGE REPAIRS (PER TITLE X) OR STRIKE FORCE INTERMEDIATE MAINTENANCE ACTIVITY
1	DOCKING PLANNED INCREMENTAL AVAILABILITY (DPIA1)
2	DOCKING PLANNED INCREMENTAL AVAILABILITY (DPIA2)
3	DOCKING PLANNED INCREMENTAL AVAILABILITY (DPIA3)
4	PLANNED INCREMENTAL AVAILABILITY (PIA1)
5	PLANNED INCREMENTAL AVAILABILITY (PIA2)
6	PLANNED INCREMENTAL AVAILABILITY (PIA3)
7	REFUELING COMPLEX OVERHAUL (RCOH)
8	NOT USED

4. Availability Serial Number. The availability serial number is the same three-character serial field currently used in Regional Maintenance Automated Information System (RMAIS). This entry is made in the “serial” field of the maintenance data system availability editor window. There are five authorized serial codes used to designate availabilities.

- a. Alongside Availability (XAZ). The XAZ availability is intended to be a planned CM availability, such as a Continuous Maintenance Availability, over a specified period of time determined by the ship’s operational schedule. The TYCOM will schedule the availability during the normal fleet scheduling process. A nominal time frame for availability length is no less than two weeks and no more than six weeks. A ship is not to get underway during any period of the availability. There is no limit to the number of XAZ availabilities that may be scheduled during a year. The first character indicates FY at availability start. The last character indicates a specific XAZ

availability during that FY. If the number of availabilities in a single FY results in the Z character being greater than 9, alphabetical characters will then be used beginning with "A". Sequential serial number assignment is desired, but the occasion may arise when a significant schedule change allows for a new availability to be scheduled prior to an existing availability. In this unique case, an availability may be created using an out of sequence serial number. This eliminates the need to move jobs that are already screened in RMAIS and Navy Maintenance Database and additional maintenance data systems. Availabilities may be scheduled in RMAIS for future years using notional time frames and the exact dates can be adjusted later once a more precise schedule is issued. All executing activities may be scheduled to work during this availability. If a job scheduled for completion is not started, then it must be moved into another availability and the availability closed on the scheduled completion date. The fact that the job was not completed will be reported in the availability completion report.

- b. CNO Scheduled Availability (XCZ). The XCZ availability is the scheduled CNO availability published in the OPNAV 4700 Notice. These availabilities are normally conducted in a shipyard under the direct supervision of the Naval Supervisory Authority. All major modernization programs will be scheduled for CNO availabilities. Other executing activities may conduct work during these availabilities pursuant to the contractual limits imposed by the shipyard and the Naval Supervisory Authority. Notional CNO availabilities may be established for years beyond the scope of the OPNAV Notice to support long-term work item placement. The first character indicates FY at availability start. The last character indicates a specific XCZ availability during that FY. Software programs require that only one contract solicitation may be recorded against a given availability, therefore the situation may arise when two availabilities must be simultaneously executed. In this case, the same type of availability will be used and the next sequential number assigned.
- c. Yearlong Continuous Maintenance Availability (XCM). The XCM availability is a yearlong availability for the scheduling and completion of work items that are not accomplished during any other scheduled availability. A job is not to be kept in the XCM availability if it is accomplished in an XCZ or XAZ availability. The first character indicates the FY.
- d. Yearlong Emergent Work Availability (XEM). The XEM availability is for the completion of emergent work items as defined in Volume VI, Chapter 31 of this manual. Jobs screened to an XEM availability are paid for using emergent work funding. Items assigned to this availability will not be moved into any other availability and will remain in the XEM availability. Emergent work will not be conducted in a XCZ availability. Emergent work that is discovered during a CNO availability will be added to the availability and paid for using CM funding, for example, work required to support light off or sea trials. The first character indicates the FY.
- e. Multi-year Unfunded (UNF) availability. The UNF availability is for those items for which there is no realistic expectation that they will be funded even in the out years but must be maintained for material history purposes. It is also for those jobs with a Maintenance Figure of Merit such that there is a low probability of accomplishment,

15 Jan 2021

but the job remains valid. These jobs will be screened to the UNF availability but will not be authorized in RMAIS.

5. Availability Category Code (Aircraft Carriers). The codes in this section are authorized for use on all Aircraft Carrier availabilities.

CODE	AVAILABILITY ID	EXAMPLE
P	NXX	N09 - ORIGINATING WORK CENTER FOR 2009 CHANGES YEARLY CALENDAR.
P	990	990 - JCN REQUIRES SCD TO BE SUBMITTED. STATIC AVAILABILITY CODE.
P	991	991 - SCD WRITTEN AND SUBMITTED AWAITING APPROVAL. STATIC AVAILABILITY CODE.
P	992	992 - TYCOM HOLD FOR REVIEW OR INVESTIGATION. STATIC AVAILABILITY CODE.
P	REJ	REJ - REJECTED BACK TO SHIP FOR SF ACTION. ACCOMPANIED WITH TYCOM REMARKS. STATIC AVAILABILITY CODE.
P	N43	N43 - SHIP ASSIGNED (SMM OFFICE) TA1, 2, 3. TA4 REQUESTING ACCOMPLISHMENT DURING CNO AVAILABILITY. STATIC AVAILABILITY CODE.
P	BDF	BDF - DEFERRED BASELINE JCN FOR REASSIGNMENT AT A LATER DATE. STATIC AVAILABILITY CODE.
P	CIS	Commercial Industrial Services approved by TYCOM CNAP specific
P	DEF	Non-BWAP JCN deferred by TYCOM from CNO Availability Work Package
P	DIQ	Commercial Preservation Work approved by TYCOM - Indefinite Delivery, Indefinite Quantity CNAP specific
P	MAC	Commercial Deck Work approved by TYCOM - Multiply Award Contract CNAP specific
S	SXX	S09 - SHIP SELF AVAILABILITY 2009 CHANGES YEARLY CALENDAR.

CODE	AVAILABILITY ID	EXAMPLE
U	UNF	UNF - UNFUNDED. STATIC AVAILABILITY CODE.

X, XX = YEAR Z = SEQUENTIAL NUMBER

6. Funding Activity Code. The FAC is a two-digit exportable field in RMAIS. A FAC must be entered for every non-TYCOM funded 2-Kilo prior to being screened and brokered. Any member of the maintenance team authorized to screen work may enter a FAC. The FAC table is NAVSEA controlled. The approved FACs are:

<u>CODE</u>	<u>TITLE</u>
AA	TYCOM CM NON-NUCLEAR
AB	TYCOM EM NON-NUCLEAR
AC	TYCOM DIVING SERVICES
AD	TYCOM FLEET ALTERATION (NON NUCLEAR)
AE	TYCOM FUNDED SEMAT (ETC) SHIP'S FORCE ASSISTANCE
AF	TYCOM NUCLEAR MAINTENANCE OR REPAIRS
AG	TYCOM NUCLEAR ALTERATION
AH	TYCOM FUNDED CNO SCHEDULED AVAILABILITY MAINTENANCE
BA	NAVSEA NUCLEAR ALTERATION
BB	NAVSEA ORDNANCE ALTERATION (ORDALTS)
BC	NAVSEA NON-NUCLEAR PROGRAM ALTERATION
BD	NAVSEA - UNIQUE - NON-NUCLEAR (INCLUDES ALTERATION DEVELOPMENT, TECHNICAL SUPPORT)
BE	NAVSEA - UNIQUE - NUCLEAR OR REFUELING
BF	NAVAL SHIPYARD MISSION FUNDED
BG	SRF MISSION FUNDED
CA	IMA FUNDED MAINTENANCE
CB	IMA FUNDED FLEET ALTERATION
DA	ADMINISTRATIVE SUPPORT NON-NUCLEAR (PRORATABLE) INCLUDING DSA FUNDED
DB	ADMINISTRATIVE SUPPORT SERVICES NUCLEAR (PRORATABLE)
EA	SHIP'S FORCE MAINTENANCE OR REPAIRS
EB	SHIP'S FORCE - SELF HELP HABITABILITY
FA	TECHNICAL SUPPORT: NAVWAR SSC, RMC (MISSION FUNDED)

FB	TECHNICAL SUPPORT: NAVWAR (SEPARATE FUNDING ONLY)
GA	VRT-N, VRT-M, ALRE
HA	NAVAIR (CAFSU, NAWC, FAA, ASIR)
HB	NAEC LAKEHURST NJ
HC	NAWC CHINA LAKE
HD	NAWC PT MUGU
HE	NAWC PAX RIVER
HF	NAWCAD ST INIGOES MD
IA	NSWCCD
IB	NSWCPD
IC	NSWC PHD
ID	NSWC CRANE
IE	NSWC PANAMA CITY
IF	NSWC NEWPORT
IG	NSWC KEYPORT
IH	NAVSURFWAR CENIHEODTECHDIV DET PICATINNY
JA	NAVWAR (ALTERATION INSTALLATION TEAM)
KA	ESU
OO	OTHER - EXPLAIN IN REMARKS
VV	VISITING SHIP SUPPORT (FOREIGN NAVY)

7. Example Cases: The FAC is designed to be applied from a user perspective. For example, if Naval Surface Warfare Center, Philadelphia Division (NSWCPD) plans to use an Alteration Installation Team to install an alteration and they are funded for the install, then the maintenance team would select the FAC for NSWCPD. The maintenance team is not expected to know if it was OPNAV or the TYCOM that funded NSWCPD, this is beyond their level of knowledge and those agencies are expected to track their own funds. In this case, a FAC of "IB" would be applied. The following table provides examples of how the various codes can be applied to common availabilities:

Availability Category	Availability Serial	Fund Activity Code
A, K, X, Z	XAZ	AA, AC, AD, AE, BB, BC, FA, FB, VV, OO (Note: 1)
B, C, H, J, K, L, M, N, R, T, W	XCZ	AA, AC, AD, AE, AH, BB, BC, BF, DA, FA, FB, OO (Note: 2)
P	XCM	AA, AC, AD, FA, FB, OO (Note: 3)
P	XEM	AB, BF, BG, VV, OO (Note: 4)
U	UNF	NONE

NOTES

NOTE 1: The primary fund activity code is AA for the alongside availability as most work is TYCOM funded maintenance. Commander, Naval Surface Force Atlantic ships should not use codes CA or CB unless the IMA becomes a fleet funded activity as it is in the Pacific region. Pacific Fleet ships would use CA for IMA work performed during this availability. The voyage repair Availability Category should be used for scheduled voyage repairs using either the AA or AB activity code as appropriate, the XEM availability should not be used for voyage repairs.

NOTE 2: The primary fund activity code is AH and a common additional code is BC. In Atlantic Fleet, any IMA work would use the AA code, Pacific Fleet ships would use CA for IMA work performed during this availability.

NOTE 3: Primary FAC is AA for TYCOM funded maintenance.

NOTE 4: Primary FAC is AB indicating ERATA expenditure. In some cases, BF or BG may be used as dictated by each region.

Examples:

- a. A ship entering a scheduled CNO docking availability in FY07 will have an availability number consisting of a “B” for the Availability Category Code and the serial will use the XCZ format. The full availability number will be B7C1 as this will be the first CNO availability for this ship in FY07. The “B” is entered in its own field in RMAIS using the availability drop down menu. The three-digit serial is manually entered in the “serial” data field of the RMAIS window.
- b. A ship entering an alongside three-week CM availability will use “A” as the Availability Category and the XAZ format for the serial. So the third alongside CM availability for FY06 will be an A6A3 availability. Again, the first digit and the last

three digits are entered in separate RMAIS entry fields. The FAC is applied on a job-by-job basis and is not tied to the availability number. In a single availability, there can be several executing activities and multiple FACs across all the jobs screened to the availability. For example, Job EA04-1111 might be a pump repair screened to Supervisor of Shipbuilding and paid out of TYCOM CM funds so that job will have “AA” FAC assigned when it is screened to the A6A3 availability.

- H₂ Process Flowchart Firm Fixed Price CMAV or Emergency Availability
- H₃ Process Flowchart Firm Fixed Price PSIA CNO Availability
- H₄ Process Flowchart Firm Fixed Price PSIA CMAV Availability

2.1 **PURPOSE.** To establish ship maintenance work items and specification package preparation procedures, milestones and business rules. These rules apply to Regional Maintenance Centers (RMC), Commander, Naval Surface Force Pacific; Commander, Naval Surface Force Atlantic; Commander, Naval Air Forces Atlantic; Commander, Naval Air Forces Pacific; Systems Commanders (sponsoring Program Alterations) and other Alteration Installation Team (AIT) Sponsors. This chapter is not applicable to submarine availabilities.

2.1.1 **Prorated Business Rules.** This chapter also provides prorated business rules including:

- a. Defining common prorates, those prorates to be assigned to specific alterations, and those Type Commander (TYCOM) operational prorates (Appendix A).
- b. Providing a simple consistent method to divide those prorates between Program Alterations, Fleet Alterations, maintenance and repair items.
- c. Providing a coast specific “Prorate Factor” used in planning as part of the Cost Benefit Analysis of the Ship Change (SC) Document to estimate installation cost of the alteration. Paragraph 2.4.6.2 of this chapter lists the Prorate Factors.

2.1.2 **Responsibilities.**

- a. The Life Cycle Manager or Ship Program Manager (SPM) is responsible for the planning, budgeting and execution of the approved Program Ship Modernization.

- b. The TYCOM is responsible for the planning, budgeting and execution of the approved Fleet Ship Modernization, ship repair and ship maintenance.
- c. The Ashore Ship's Maintenance Manager is responsible for the execution of each ship's Maintenance and Modernization Business Plan (MMBP) and the division of the prorated percentages between Fleet and Program based on the business rules herein.

2.2 SCOPE. The goal of the effort is to deliver effective maintenance and modernization while capturing efficiencies. The cost avoidance can then be put to use in accomplishing additional maintenance. This chapter introduces work package preparation improvements that leverage existing planning information and process capabilities to make final work package content decisions closer to the time work is actually scheduled to begin. This will significantly reduce the churn in the work package content and support timely delivery of all work desired for the Chief of Naval Operations (CNO) availability. This includes the depot level repair and modernization package, Ship's Force, Intermediate Maintenance Activity and AIT modernization work. Effective financial management of ship maintenance and modernization depends upon use of return cost data in planning for future installations. Upon completion of each availability, the participants must use the availability completion report return cost data to update Navy Data Environment modernization cost estimates and the next fiscal year business plan. Return costs for repair work will also be used to populate and validate costs estimates that are resident in the Master Specification catalog. A disciplined prorated distribution process, coupled with updates to the Navy Data Environment database and the business plan will help modernization financial planning and reduce cost surprises both before and during availability execution.

2.3 EXECUTING ACTIVITY PLANNING. Work Package Preparation process improvements include long-term contractual relationships and Private Sector Industrial Activity (PSIA) contracts, with public executing activities and private ship repair yards. The Executing Activity (EA) is the public or private enterprise that is assigned or awarded the responsibility for accomplishing the actual production work to effect modernization and repairs to surface force ships and aircraft carriers. For the most part, the EAs will perform the planning for accomplishment of the work that they will execute. All work, whether CNO availability, continuous maintenance or emergent work will have a Ship Specification Package (SSP) prepared in the appropriate maintenance database work planning and execution tool. The exception to EA planning is first of ship class ship alteration advance planning (drawing preparation and material ordering). This will be performed by the assigned planning yard. The EA will plan subsequent ship alteration installations provided they are not of such a complex nature that it is determined that these should be assigned to the planning yard. In most cases, as part of the planning effort, the EA will prepare the actual work specification (accomplished today in the Navy Maintenance Database (NMD) for depot level or in another maintenance Automated Information System for I-Level). The exceptions to the EA work item preparation is that the government may elect to accomplish work item development to provide an avenue to train government personnel in the critical skill sets used during the work item development process or to provide surge capabilities for the EA during peak work loading.

2.4 MASTER SPECIFICATION CATALOG.

2.4.1 Work Package Preparation. The Work Package Preparation process will leverage the large library of planning documents that exist today and are currently stored in Master Specification

Catalogs (MSC). The MSCs provide a ready resource of technically correct and current work items that are universally accessible for use. The vast majority of these documents can be reused for planning future repair actions. The primary purpose of the MSC is to reduce maintenance costs by:

- a. Reducing planning efforts.
- b. Identifying and promoting best practices.
- c. Effectively managing lessons learned.
- d. Minimizing delays associated with maintenance planning.
- e. Providing a cost estimate for the work item.

2.4.2 Use of the Master Specification Catalog. Use of the MSC by Maintenance Teams and Planners at maintenance activities is mandatory. Processes are established to allow all users to recommend content and provide feedback regarding the quality of specifications and templates. The Depot level MSC can be accessed through the NMD application. The Depot level catalog consists of master specifications, specifications used directly without any modification, and templates that can be used with minor modifications. NMD has been modified to capture the contractors' planning estimates and actual return costs. This allows standard costs to be developed for the specifications residing in MSC. The D-Level MSC is maintained by the Master Specification Catalog Maintenance Office (MSCMO) at Surface Maintenance Engineering Planning Program (SURFMEPP), who is assigned to standardize all templates to the maximum extent possible to ensure the specifications that reside there are technically correct and reflect the most current guidance. Appendix B provides the general guidelines for template preparation, processing and maintenance. The MSCMO will incorporate the directives of Naval Sea Systems Command (NAVSEA) Standard Specification for Ship Repair and Alteration Committee, and Volume VII, Chapter 4, Appendix 4-E of this manual. Under certain circumstances, these guidelines may expand upon or differ from Volume VII, Chapter 4, Appendix 4-E of this manual. The intent is to standardize templates for all ship classes at each geographic location. The MSCMO relies on the expertise of the author for technical content of templates, although when processing a template, the MSCMO will question areas of omission and scrutinize non-conformance to Volume VII, Chapter 4, Appendix 4-E of this manual. SURFMEPP also acts as the clearinghouse for the nomination or acceptance of additional specifications to the MSC.

2.4.3 Central Planning Activities. Central management is used to ensure quality and consistency of the catalog content and a Central Planning Activity is assigned for each branch to carry out central management responsibilities. For the NMD branch, the Central Planning Activity is the MSC Maintenance Office and is functionally part of SURFMEPP. For the I Level Planning, the Central Planning Activity is the Southwest Regional Maintenance Center. The Central Planning Activity responsibilities include:

- a. Ensuring MSC content adheres to a standard format.
- b. Enforcing technical authority compliance for MSC content.
- c. Ensuring reference lists cited by MSC content are current.
- d. Ensuring that documents stored in the MSC are current and technically correct.

- e. Managing the review process for proposed MSC documents.
- f. Managing the MSC document change process.
- g. Addition of new content to the MSC.
- h. Deletion of content from the MSC.
- i. Analysis of feedback and metrics; monitor and maintain MSC content quality.
- j. Monitoring MSC business rule compliance.
- k. Providing decision quality data to oversight commands and committees.
- l. Provide first level support for questions related to MSC use or content.
- m. Screening requests for access to the MSC prior to submittal to the catalog user and Information Technology management offices.

Each Central Planning Activity has established detailed processes to accomplish the responsibilities. These processes are contained in Central Planning Activity process or instruction manuals.

2.4.4 General Process. The general process for using the MSC is discussed in this paragraph. While details and terminology will vary from system to system, the basic workflow and responsibilities are common to both systems.

- a. The ship identifies a problem and requests a maintenance action via the Office of the Chief of Naval Operations 2-Kilo Maintenance and Material Management Maintenance Action Form (OPNAV 4790/2K) using the ship's Maintenance Data System.
- b. The request is transferred to the fleet brokering system - Regional Maintenance Automated Information System.
- c. The Maintenance Team screens the request, determines maintenance level, and enters the appropriate branch of the MSC to determine if there is a work item that accomplishes the scope of work required by the work request.
- d. If there is a work item, the OPNAV 4790/2K is annotated with the work item identification information prior to brokering the OPNAV 4790/2K.
- e. The OPNAV 4790/2K is brokered to a maintenance activity.
- f. The maintenance activity receives the work request and checks for MSC information. If there is MSC information that identifies a master specification, or if the maintenance activity identifies an appropriate master specification, the maintenance activity uses the specified pre-planned MSC specification and adds the new specification to the work package without additional planning review.
- g. If there is MSC information that identifies a template, or if the maintenance activity identifies an appropriate template, the maintenance activity uses the specified pre-planned MSC template, makes the required changes, performs the normal planning reviews, and then adds the resulting work item to the work package.

- h. If there is no catalog identification information, the maintenance activity verifies that there is no appropriate master or template. After verification, the activity plans the work using the established planning and planning review processes. The maintenance activity also forwards the new work item to the MSC Maintenance Office and local standards personnel as a proposed template.
- i. The work in the work package is released at the appropriate time and sent through established work integration or contracting processes.

2.4.5 Common Business Rules. There are seven business rules that are common to both branches of the MSC. These business rules form the fundamental base for the catalog. Consequently, Central Planning Activity processes, as well as programming of the MSC software systems, are designed to support these business rules. Additionally, enforcement of the rules is required to attain MSC goals. Metrics and review processes have been established to support compliance monitoring and reporting. The following business rules apply to both branches of the MSC.

NOTE: NAVSEA “STANDARD ITEMS” ARE NON-DEVIATIONAL.

NOTE: CONTRACTS DICTATE THAT “TEMPLATES” MAY BE CHANGED OR MODIFIED. CHANGES MUST BE FED BACK TO THE MSCMO AS APPROPRIATE.

- a. NAVSEA Standard Items must be used whenever they fulfill the requirements of a specific maintenance task.
- b. Standard Items and templates must be the preferred method of planning for both public and private Lead Maintenance Activities (LMA).
- c. NAVSEA Standard Items will be used without change.
- d. NAVSEA Standard Items and templates must be centrally filed and maintained by a Central Planning Activity. Only the Central Planning Activity will be allowed to store, delete or change the status of a NAVSEA Standard Item or template stored in the central library.
- e. MSC task lists will adhere to a specific format. The format is defined in:
 - (1) Volume VII, Chapter 4, Appendix 4-E of this manual maintained on the Standard Specification for Ship Repair and Alteration Committee (SSRAC) web site.
 - (2) Enclosure (1) of the I-Level MSC process manual for I-Level specifications and templates.
- f. NAVSEA Standard Items are reviewed prior to approval for use. No additional planning review is required prior to use of a Standard Item to accomplish a maintenance task.
- g. Although NAVSEA Standard Items do not require planning review, they are subject to established release, scheduling and integration planning processes.

2.4.6 Prorate Information.

2.4.6.1 Prorate Distribution Process. The prorate distribution process map (Appendix C) summarizes the steps in arriving at an equitable distribution of prorate costs. The prorate distribution process follows these milestones:

- a. April prior to execution fiscal year:
 - (1) RMC, TYCOM or Program Executive Officer (PEO) SHIPS issues the Maintenance and Modernization Business Plan Guidance. This is the baseline for prorate distribution.
 - (2) The TYCOM input to the MMBP will provide total dollars budgeted for the Fleet Modernization, Maintenance and Repair scheduled for each availability.
 - (3) The Program Modernization input to the MMBP is the Extended Planning Hull Maintenance Plan which provides man-days and material costs for each scheduled SC. The RMC multiplies the current port man-day rate by the total number of program man-days, by appropriation, and adds locally procured material costs to provide total "installation dollars" for Program Modernization.

NOTE: THE TOTAL DOLLARS USED TO DETERMINE THE PRORATE PERCENTAGES DO NOT INCLUDE SERVICES, GROWTH OR AWARD FEES.

- (4) The proportion of TYCOM dollars and Program dollars relative to the total dollars will provide the percentage of prorate costs assigned to TYCOM and Program respectively.
- b. Following Maintenance and Modernization Process milestones as shown in Appendices D and E:
 - (1) TYCOM or PEO SHIPS issues the Letters of Authorization for all modernization.
 - (2) The work package that began definition at the Integrated Planning Conference is further refined with a 50% lock on repair items. The Project Manager provides a list of expected prorated items, with work item numbers assigned, using Appendix A for guidance, for all Program and Fleet Letter of Authorization authorized modernization and TYCOM repair items.
 - (3) All SCs listed in the Letter of Authorization, except ST1 and ST2 SCs, are mature, impact approved or are removed from the Letter of Authorization (except for ST1 and ST2 SCs, Programmed but not Authorized SCs will be removed at this time). This locks the prorate distribution percentages. This milestone obligates the cost of prorates based on the locked Letters of Authorization and MMBP budget of the repair and maintenance package.
 - (4) If one of the participants elects to remove maintenance, repair or modernization work from the availability work package after 80% lock, that participant is still responsible for payment of the actual prorate costs incurred, as of the date of the withdrawal, on execution planning for the removed work.

In the event a Program SC owner declines to comply with paying the prorate charges, payment of the delinquent charges will be a prerequisite for adding the SC to the Letter of Authorization for the next availability for which the SC is programmed.

- (5) If new modernization work is added after 80% lock, the activity requesting the SC will incur all additional prorate costs generated as a result of the additional work.
- (6) A 100% lock is placed on all repair items. Funding is requested from the participating activities. The Naval Supervisory Authority (NSA) must receive funding to support definitization.
- (7) The modernization, maintenance and repair package is definitized.
- c. If the availability is extended, the additional prorate requirements are paid for by the party or parties causing the extension.
- d. Once the originally planned growth pool is expended, large increases due to growth (exceeding 2% of the total work package costs) will result in reallocation of prorates.

2.4.6.2 Prorate Factors. The prorate factor is used in the budget process for modernization, repair and maintenance, in order to ensure adequate funding for planned work. The following prorate factors are to be applied to total estimated ship repair cost to forecast the portion of total cost for “Prorate” effort. These factors are based on data from selected Departure Reports for ship repairs completed in 2003 through 2005 and are subject to periodic updates.

	Prorate Factor		
	<u>East coast</u>	<u>West coast</u>	<u>Navy-Wide Average</u>
All Prorate work	33%	33%	33%

2.5 MILESTONES. Package preparation milestones have been developed that support the continuous maintenance philosophy. These milestones are designed to allow a more continuous flow of work to create a work package. The milestones now require that only 50% of the work, measured by 50% of the budgeted funds for repair work during the availability being committed, be “locked” at the 50% lock per the appropriate milestones in Appendix D₁ or D₂ of this chapter for Surface Force Ships and Appendix E of this chapter for Aircraft Carriers. It is expected that this work will be repair and major industrial work that is generally known well before the 50% lock. Every effort should be made to include unscheduled and unaccomplished mandatory Class Maintenance Plan work items in the ship’s Baseline Availability Work Package (BAWP) in the work package. Once work is placed in the package, and funding for that work is committed, the EA is authorized to plan that work, order material and expend other funds as necessary to execute the work. It should be the rare exception that work is ever removed from a work package. TYCOM will obtain technical adjudication for any BAWP items prior to the removal of any BAWP item from the work package. It is extremely important that the right work at the right time is placed in the work package. Operational commitments, port loading or other reasons may require modification to availability schedules and milestones may need to be adjusted accordingly.

- a. (Surface Force Ships Only) Availabilities that are in the A-720 to A-360 window when rescheduled should not impact the Maintenance and Project Teams ability to meet milestones that begin inside of the A-360 date.

- b. Milestones that are agreed upon by TYCOM and Program Office at the Advance Planning to Planning Event will be included in the NSA's Naval Message of the Joint Fleet Maintenance Manual tailored milestones released within five working days of the event.
- c. Availabilities that are within the A-360 window may miss milestones due to the compressed timeline, however, every effort should be made to accommodate those milestones lost to compression. There should be no attempt to compress milestones of an availability that is already inside of the A-90 date. The TYCOM, NSA, affected Program Office and LMA will agree on the compressed milestone timeline and enter a Memorandum of Agreement (MOA) for the record dictating the agreement. Additionally, there may be instances where other factors create a need to make milestone changes after A-360 that are not related to compression issues. In these cases, the process to approve milestone changes remains the same as the compressed timelines. The following steps must be adhered to for all milestone changes after A-360:
 - (1) The Contracting officer and the Project Team should be notified immediately. Additionally, should the Primary Contracting Officer (PCO) or Administrative Contracting Officer make any changes, C300 (to include the Program Manager) should be notified immediately.
 - (2) Adjustment of milestones will be addressed and adjudicated by TYCOM, NSA, affected Program Office and LMA.
 - (3) Where availability compression or a milestone change after A-360 is deemed necessary, all efforts will be made to preserve the 100% lock date to meet planning and estimating requirements to support the on time release of the proposal and contract award or the Final Technical Analysis Report (TAR) and contract definitization. If it is determined the 100% lock date must move, TYCOM and affected Program Office concurrence is required and the NSA must develop a mitigation plan to ensure on time contract award or definitization. If milestone changes cause a loss of either the 50% or 80% lock milestone, the 100% lock date must be adjusted to 15 days earlier in order to accommodate an excess of scope, plan and estimate requirements. This will aide in completion of Final TAR and contract definitization on their regularly scheduled dates.
 - (4) TYCOM, NSA, LMA, Program Office sign MOA identifying the adjusted milestones.
 - (5) Where applicable, the appropriate package lock date should be met as soon as practical (if lost in the compression) following the change of availability dates. The Class Maintenance Plan (CMP) BAWP should be used to accommodate this event. Repair items on the Current Ship's Maintenance Project (CSMP) will also be locked based on the highest readiness return on investment (Use Maintenance Figure of Merit screening values where appropriate). For example, if the availability is compressed and the 50% or 80% lock milestones were lost in the compression, they should in turn be met as soon as practical.

- (6) All work items should be scoped, estimated and TAR submitted.
- (7) In all cases, the Final TAR and definitization milestones must be met.
- (8) In all cases, an Integrated Project Team Development (IPTD) Integrated Planning Conference (IPC) and Work Package Execution Review (WPER) must be convened to discuss the integration and execution plans regarding the adjusted work package and accommodate Project Team communications regarding changes.

2.5.1 Milestone Compliance. (Surface Force Ships Only) All Availabilities (e.g., CNO, CMAV, CM, EM) in the Navy Maintenance Database (NMD) must meet the requirements of the Maintenance and Modernization Milestones per the milestone chart located in Appendix D of this chapter. The Maintenance Team Project Manager is responsible for ensuring that all milestones (for the specific contract type) are entered in NMD.

- a. Any changes to milestones dates must be entered in NMD in the "Revised" column with the authorized revised date.
- b. Actual milestone completion dates must be entered in NMD.
- c. If a milestone is late being met, a comment must be entered in NMD stating the reason.

2.5.2 Committed Work at 80% Lock. The milestones require that 80% of the depot level work package be committed at 80%, and 100% of the Ship's Force and I-Level work that is planned to be executed during the availability concurrently with the depot level work be identified. This provides a period of time during which this work can be evaluated and placed in the depot level package if necessary. Additionally, all AIT support requirements must be identified no later than the 80% lock date.

2.5.3 Committed Work at 100% Lock. One hundred percent of the depot level package must be identified, with the activity accomplishing the planning to complete planning and estimating per the appropriate milestones in Appendix D₁ or D₂ of this chapter for Surface Force Ships and Appendix E of this chapter for Aircraft Carriers. The EA will then have 30 days to produce an integrated work schedule that will be reviewed at a Work Package Execution Review. By delaying the final commitment of the last 20% of the depot level work package until the 100% lock date, there should no longer be any reason to front load "insurance" work. The new entitled work package preparation process will better reflect the most current priority of maintenance that needs to be performed on the ship. These milestones are designed for use by those ships supported with PSIA contracts. For Surface Force Ships, Appendix D₁ describes milestones to be used for cost contracts and Appendix D₂ describes milestones to be used with Firm Fixed Price (FFP) contracts. Where PSIA contracts are not in effect and no existing Indefinite Delivery, Indefinite Quantity (IDIQ) contracts cover the work contemplated, work packages for Continuous Maintenance Availabilities (CMAV) must be submitted to meet local contracting milestones.

2.5.4 Automated Work Request Screening. By no later than the 100% lock date, the entire depot level package must have been screened to the appropriate IT System availability by the Ashore Maintenance Manager (PE). The PE must screen the Automated Work Requests (AWR) based upon the established TYCOM controls and planning budget. The Project Manager will

broker the screened work to the planning activity for development of work specifications. No additional AWRs must be brokered for inclusion into the basic proposal after lock date.

- a. The 100% package lock is the official milestone to mark identification of 100% of the work requirements for an availability based on the MMBP budget. All work added to or deleted from the package after the 100% lock will be via errata, addendum or inducted as new work via the Request for Contract Change Process.
- b. For certain availabilities, the 100% lock date will need to be adjusted to a date which will support timely definitization. Appendix D₁ or D₂ reflects the various milestones based upon the package size. This will usually be based upon the total projected budget (all funding sponsors) of the project to be contracted. The RMC and TYCOM must agree upon the change in planning preparation dates. It is anticipated that any change will be made no later than A-360.
- c. TYCOM Port Engineers must screen work using AWR estimates against their Available Controls and budget. Available planning budget is defined as the remaining budget after Long Lead Time Material (LLTM), contractor fees, other work and growth pools are subtracted from controls.
- d. The contractor Class C and Independent Government Estimate (IGE) submission at the 50 and 80 percent milestones are required to ensure that calculations of package build are based on an accurate estimated value.
- e. The Project Manager will verify that the planning budget supports the estimated value of the 100% locked work package. If the work package exceeds the planning budget, the Project Manager will notify the funding sponsor(s) of the delta and request additional funds or removal of work from the authorized priority list to get to the budget allocated.
- f. On the lock date, the Project Manager will provide the RMC Administrative Contracting Officer with a complete and consolidated list of all AWRs that make up the 100% D Level work package. The Administrative Contracting Officer will issue the list of AWRs to the PSIA contractor annotating that all AWRs listed constitute the basic work package. The contractor must ensure that all AWRs listed are incorporated in work items, published and included in the proposal through to award. Currently availabilities are not being definitized on time due to the time it takes from package lock. Furthermore, churn in package content after the 100% lock date causes turmoil in the contractor's ability to develop a work package proposal.

2.5.5 Flow Metric. In order to track the progress of creation of the work package, a work package flow metric has been created. This metric will provide the maintenance team a tool to manage their work package preparation progress. It also provides the RMC Commander and the maintenance teams a leading indicator of the manner in which the ship's Maintenance and Modernization Business Plan is being executed.

2.6 CONTINUOUS MAINTENANCE AVAILABILITIES. CMAVs are intended to provide the maintenance team with the flexibility required to do the right maintenance at the right time for the right price. An additional intent of CMAVs is to provide the agility required to support the fleet response plan.

2.6.1 Continuous Maintenance Availability Types. CMAVs are established as the only type of availability that will be accomplished on Surface Force ships outside of CNO availabilities for non-emergent maintenance. Fleet Maintenance Activity Availabilities, Restricted Availabilities, Technical Availabilities are no longer authorized to describe ship maintenance availabilities. There are two basic types of CMAVs, scheduled (XAZ) and unscheduled (XCM). CMAV schedules will be reviewed at each Planning Board for Maintenance and will be adjusted as ship's operational schedules dictate. Schedule adjustment should be requested by the ship via naval message to the Immediate Superior In Command (ISIC), information to the applicable RMC.

2.6.2 Continuous Maintenance Availability Business Rules. The following CMAV business rules have been established to provide guidance for developing work items associated with scheduled and unscheduled repair and modernization availabilities, managing assigned work brokered to both CNO and CMAV availabilities for FFP and PSIA contracts, and establishing priorities for the executing activity to accomplish planning and execution of Work Candidates into work items. This enables the Vision of Entitlement to be realized. The Vision of Entitlement requires a somewhat continuous flow of the planned work items to allow for a continual estimating, work item review and cost definitization process.

2.6.2.1 Applicability. This process is applicable to all personnel involved with writing work items for repair and modernization contracts using work items developed and maintained in NMD per this manual, Maintenance and Modernization contracts and NAVSEA Standard Items. The start and stop points of the process are when a Work Candidate is brokered from an appropriate IT system into an availability and the production period of the maintenance availability is completed.

2.6.2.2 Ship Specification Package. The Project Manager, or if required by contract, the contractor's Planning Manager on behalf of the Maintenance Team must:

- a. Establish a SSP₁ within NMD Planning for scheduled and unscheduled CMAVs ((XAZ), (XCM) and (XEM)) and set up the availability in NMD to receive AWRs from Regional Maintenance Automated Information System (RMAIS) electronically per this manual.
- b. For each Work Candidate that is brokered to the availability in NMD, ensure that the planning date, the "Deadline Date" and the "Availability Number" (in which an availability period can be entered) listed on the Work Candidate is correct, and also include a preliminary man-hour and material cost estimate. Work must be planned and estimated (man hours and material cost) with LLTM identified prior to being routed into any NMD execution availability. This planning estimate is necessary to more accurately predict, for a CNO availability, what percent of the package (in dollars), has been authorized at the 50%, 80% and 100% milestones, and for a CMAV (XAZ) and (XCM) availability, will allow the Navy to know if they have adequate funding available in the budget. A minimum of **fourteen calendar days** should be allowed for planning unscheduled (XCM) availabilities before routing a job to an NMD execution availability.

2.6.2.3 Planning. With the creation of an SSP₁ in NMD, the actual Planning start and stop dates for the execution of the work within that SSP₁ will be established. The one exception to this will

be the yearlong CMAV, Scheduled or Unscheduled CMAV (XAZ) and (XCM) (XEM) availabilities.

- a. All valid maintenance items will have a specification prepared in the NMD Planning module per this manual. All new work will also be written in the planning module of NMD.
- b. When a valid maintenance item is ready for brokering, review of the currently scheduled SSP₁ availabilities in NMD Planning will then determine to which SSP₁ the item should be added. All SSP₁s existing within NMD Planning will have a date established when that package should be “locked” per the advance planning milestones contained in Appendix D₁ or D₂ of this chapter. No valid work items can be added to an existing SSP₁ if the current date is past the “lock” milestone date without providing a written detailed description of the rationale used to add it in the “Work Item” comments field.
- c. The priorities for the Planning Activity are then established by the next scheduled availability milestone that is coming due per Appendix F and G. This could be a CNO, the next scheduled CMAV (XAZ) or yearlong XCM availability. Process flowcharts appear in Appendices H₁ through H₄ of this chapter. The yearlong XCM SSP₁ availability will be a workload leveling mechanism for the planning activity and the goal would be to have these items brokered, planned, material ordered, funded, scheduled and ready to start work within 14 calendar days prior to start. The valid maintenance items in the XCM SSP₁ availability will become candidates for scheduled CMAVs and unscheduled XCM execution availabilities (windows of opportunity) that are identified on short notice. These planned work items for PSIA contracts will be routed to NMD execution availabilities that branch off of this yearlong NMD XCM planning availability. Re-broker those remaining AWRs at the end of the fiscal year, into the next fiscal year long XCM and scheduled CMAV (XAZ) SSP₁ availability. Refer to Appendices H₁ through H₄. Refer to Appendix F to assist in determining priority of planning work.
- d. If the urgency to accomplish any emergency maintenance repairs does not allow for development of a work item prior to the start of work and a work item does not exist in the MSC, then a work item will be prepared after completion of work to document it within NMD. Route these emergent Work Candidates to the applicable SSP₁ planning availability, which can then be forwarded to the NMD execution availabilities where the emergency maintenance work was executed.
- e. The Project Manager will check NMD daily for AWRs received in NMD SSP₁ planning availability, review and validate each AWR to determine scope of work. If the information contained in the AWR is insufficient to write a work item, the Project Manager must coordinate and manage any required shipchecks.
- f. The RMC will determine who should plan a given availability (other than CNO) based on manpower available either at the PSIA contractor or the Government. (Check Contract Line Item Number verbiage for actual contract requirements.)

2.6.2.4 Planners and Estimators.

2.6.2.4.1 Key Terms. Key Terms as found in Volume VII, Chapter 4, Appendix 4-E of this manual.

- a. Standard Items: Mandatory and non-deviational. There are two types of Standard Items:
 - (1) Standard Items (SI)
 - (2) Local Standard Items (LSI)
- b. Templates: Work Items that can be modified and used for single or multiple ship classes. There are five types of Templates:
 - (1) Standard Work Templates (SWT)
 - (2) Class Standard Work Templates (CSWT)
 - (3) Local Work Templates (LWT)
 - (4) Basic Work Shell Template (BWST)
 - (5) Master Specification Work Template (MSWT)

2.6.2.4.2 Planning and Estimating Process.

- a. Determine if the information contained in the AWR is adequate enough to write a work item. If yes, continue development. If no, check the inadequate box and note reasons for inadequacy, then continue.
- b. Review for MSC Templates:
 - (1) Identify appropriate Ship Work List Item Number that applies for AWR to be planned under.
 - (2) Check or search for an appropriate Master Specification Template such as a Class Standard Work Template, Standard Work Template or Local Work Template that addresses the scope of work identified in AWR.
 - (a) If no applicable template is found, check or search for a previously written work item that is applicable and addresses the scope of work identified in AWR.
 - (b) If no previously written work item is found that is applicable, check or search for a “basic” work item template or format.
- c. Select appropriate Master Specification Template, previously written work item or “basic” work item template or format and initiate planning the work item.
- d. Identify and validate all references, including Liaison Action Requests or Reverse Liaison Action Requests required to complete the work item.
- e. Identify test requirements needed to complete work item. If test procedures are required, obtain from execution site design group, planning yard contractor or In-Service Engineering Activity.
- f. Identify security and certification requirements. Develop technical requirements and Planning Estimate.

- g. Identify repair material required to include long lead-time items and submit to material specialist for procurement.
- h. Determine if there is Hazardous Material involved with the work item.
- i. Review the completed work item for candidacy as a new or revised template for inclusion into the MSC. If a candidate, submit the new or revised template to the local NSA Standards Person for review and subsequent routing to the MSCMO for processing and inclusion into the catalog.
- j. Route completed work item in its preliminary state to the Program Manager queue in NMD to be included in a final review work package compiled in NMD.

2.6.2.5 Maintenance Team Program Manager.

- a. Route review work package of work items to Prelim Spec review web site. Web site address: <https://www.spear.navy.mil/onlineSpecReview.aspx>.
- b. Review and respond to comments on prelim work item review web site.
- c. Route and approve work items to “APPROVED” work item review web site.
- d. Process entire work package and issue.

2.6.2.6 Advanced Planning Manager. The PSIA Contractor will publish the CNO PSIA Package in NMD at A-60 and the CMAV PSIA at A-25. This is an important milestone and metric captured within NMD.

2.6.2.7 Scheduled Availabilities.

- a. Scheduled XAZ availabilities are normally 3 to 6 weeks in duration and are nominally scheduled once per non-deployed quarter during a period when the ship will be in port at least three continuous weeks. The ship, via the ISIC, will schedule XAZ availabilities. RMC requirements will be addressed to the ship via the maintenance team. Adjustments to XAZ availability start dates are inevitable; however, the start dates may not move “forward” if package preparation and work package “lock” milestone dates would be violated by the new start date. In this case, the applicable XAZ CMAV availability must be rescheduled to support the entitled process milestone dates. In general, CMAVs will be scheduled to start on the first weekday after arriving in port and will be scheduled to complete one week prior to the scheduled underway day. The minimum length of a ship’s uninterrupted period will be three weeks if an XAZ availability is to be scheduled, with the XAZ availability preferably being a minimum length of three weeks. Any XAZ availability that is scheduled without adhering to these minimums should be avoided and work required during that timeframe will be conducted as XCM. Ships and ISICs must ensure that other in port requirements (training, inspections, etc.) are not scheduled concurrent with an XAZ availability if these requirements will impede scheduled production.
- b. CMAVs will not normally start on weekends or holidays when support for tag-outs and availability start up is limited, and will not be the same day the ship arrives in port. As a result of requiring the XAZ availability to complete one week prior to getting underway, a reduction in premiums is expected by eliminating the last minute rush to complete work to support the scheduled underway. Maintenance teams must

ensure that work scheduled for an XAZ availability can realistically be accomplished in the production window. When operational schedule changes occur early enough to allow the scheduling of an additional XAZ availability without violating the milestones discussed in paragraph 2.5 of this chapter, a new XAZ availability should be scheduled when possible rather than executing maintenance in the unscheduled XCM availability. Additionally, the length of an existing XAZ availability may be increased to accommodate changes in operational schedules provided none of the scheduling rules are violated.

NOTE: XCM AVAILABILITIES ARE NOT TO BE USED AS HOLDING QUEUES FOR MAINTENANCE ITEMS.

2.6.2.8 Unscheduled Availabilities.

- a. The unscheduled XCM availability is a single yearlong availability, for the period of 01 October through 30 September, scheduled for each ship every fiscal year. This yearlong availability is used to accomplish maintenance when a ship is not in a scheduled XCM availability or CNO availability. Since the XCM CMAV Windows Of Opportunity (WOO) are potentially short notice, a reduced set of D level milestones is established. Read in three columns:

<u>TASK</u>	<u>RESPONSIBLE ACTIVITY</u>	<u>MILESTONE</u>
WORK SPECS DEVELOPED	RMC OR MSR	WOO-14
WORK PACKAGE DEFINITIZED	RMC OR MSR	WOO-7

- b. No length requirement exists for an XCM availability. These are accomplished as WOOs become available. If a work item is determined to require more than one WOO to accomplish in its entirety, then it may be executed during multiple WOOs provided that it can be broken into several shorter period requirements.

2.6.3 Continuous Maintenance Availability Applicability. The CMAV business rules apply to all XAZ availabilities and XCM. Since the potential exists for CMAVs to become increasingly more complex, an NSA will be assigned for every CMAV. The NSA will typically be the applicable RMC, or naval shipyard (if applicable).

2.6.4 Work Included in Continuous Maintenance Availabilities. All levels of work (organizational, intermediate and depot) must be included in a single CMAV for a specific availability period regardless of the executor (Ship's Force, RMC production personnel or contractor). The intent is to integrate all types of work into a single production schedule for a specific CMAV. Separate intermediate and depot availabilities will not be established for the same period of time. Dependent upon complexity of the scheduled maintenance or modernization and the number of maintenance activities involved, the Ashore Ship's Maintenance Manager may include a work item for production scheduling and integration in the work package or bid specifications. If this work item is not used, then the Ashore Ship's Maintenance Manager will perform this function.

2.6.5 Concurrent Continuous Maintenance Availabilities. It is incumbent upon the Ashore Ship's Maintenance Manager to ensure that two non-emergent availabilities are not in progress at the same time. Additionally, CMAVs are not to be scheduled concurrently with CNO availabilities. As required, XCM work items meeting the requirements of paragraph 2.6.2.8 of

this chapter that are being accomplished in WOOs may overlap with XAZ and CNO availabilities.

2.6.6 Ship Movement During a Continuous Maintenance Availability. In order to maintain focus on the maintenance work package and minimize premium costs, no ship must get underway during a CMAV other than to support the maintenance availability or to complete sea trials. Maintenance that prevents a ship from being ready for sea within 96 hours will normally only be screened to XAZ availabilities. Ships will notify their ISIC of any production item that will prevent the ship from getting underway within 96 hours. If this work is being conducted within a scheduled XAZ availability, a waiver is not required. It is imperative that the ISIC take a proactive role in ensuring that the integrity of the scheduling process be maintained as it relates to CMAVs. CMAVs must be incorporated into the ship's operational schedule and must remain as a priority for completion.

2.6.7 Continuous Maintenance Availability Metrics. In order for accurate metrics to be obtained, it is imperative that all CMAVs be planned and executed utilizing the appropriate IT systems. The following placement and oversight metrics will be collected to measure the effectiveness of the CMAV process. This is not a complete listing of all CMAV metrics. Volume VI, Chapter 36 of this manual provides additional guidance and discussion on the metrics topic.

- a. Award on time delivery (XAZ only). Scheduled CMAV "on time award" is defined as the percentage of time contract award is made on time or early.
- b. Completion on time delivery (XAZ only). The CMAV completion on time delivery metric calculates the percentage of occasions when a CMAV availability is completed on or before the CMAV end date as recorded in the appropriate maintenance database.
- c. Availability churn (XAZ only). The CMAV availability churn percentage is a monthly capture of the dollar value of work items changed, deleted or added in a CMAV work package from contract award until availability completion versus the dollar value of the work package at award for all CMAV availabilities that ended in the current measurement month and the previous two months. This metric is collected by availability and reported in the month the availability completes.
- d. Growth and New Work Premiums. The Growth and New Work Premiums metric is a measure of late work premiums paid as a percent of growth and new work monthly. It does not include authorized work included at the start of the availability as growth reserves for specific work items or execution of pre-priced option items if executed within the scope and schedule as pre-priced. This metric is collected weekly with each change to the original contract award (FFP) or definitization (PSIA) work package transaction being reported one time in the data call for the week in which it was settled for scheduled CMAVs.

2.6.8 Continuous Maintenance Availability Late Work Premium (XAZ only). The CMAV late work premium metric is a measure of the total dollar value of late work premiums paid for CMAV availabilities completed in the current month divided by the sum of the execution contract award (FFP) or definitization (PSIA) and the settled cost of all Request for Contract Changes for that availability.

2.6.9 Continuous Maintenance Planning. Continuous maintenance is the process of scheduling and accomplishing work outside of CNO availabilities. PSIA contracts create a long-term relationship with the EA that accomplishes the continuous maintenance to maintain the ship at an acceptable readiness level. The Ashore Ship's Maintenance Manager will use every scheduled in-port period as an opportunity to accomplish continuous maintenance. Funding for continuous maintenance is included in the ship's Maintenance and Modernization Business Plan. In order to prevent premiums from being accrued, a minimum of 30 days will be allotted between the time depot level work is brokered to the EA and the time work is scheduled to start. A minimum of 40 days will be allotted for work brokered to I-Level activities. This will provide for adequate time to plan the work and acquire the necessary material in an efficient manner. This will allow a Work Package Execution Review to take place and for all work to be definitized per the milestones listed in Appendix D₁ or D₂ of this chapter for Surface Force Ships and Appendix E of this chapter for Aircraft Carriers. If these minimum thresholds cannot be complied with, the work should be postponed until the next continuous maintenance opportunity. The Ashore Ship's Maintenance Manager may run a business case analysis if there are other factors that might justify the addition of work inside these preferred windows.

2.7 ADVANCE PLANNING STATUS MESSAGES. The Advance Planning Status Messages required by reference (a) should continue to be issued by the activity responsible for planning the ship's CNO availability. Messages should commence at the completion of the Integrated Planning Conference. These messages play a vital role in keeping all concerned parties informed of the status of the planning effort. The messages document the successful accomplishment or failure to achieve milestones and produce deliverables.

2.7.1 Work Package Execution Review. The Work Package Execution Review meeting, held to review the integrated work production schedule that has been prepared by the EA, is the final opportunity to resolve any work interface or production support issues between the different activities before actual production work begins.

2.7.2 Monthly Execution Planning Status Reporting. (Surface Force Ships Only) The Execution Planning Status reports required by reference (a) must be issued by the Naval Supervising Authority (NSA). Reporting must commence on the last working day of the month in which the availability was established in NMD. The monthly report must conclude with the submission of the A-30 Readiness To Start (RTS) message.

2.8 MAINTENANCE TEAMS EXECUTING MAINTENANCE WITH FIRM FIXED PRICE CONTRACTS. PSIA contracts are not in place for all surface force ships in the Navy's inventory. Some classes of ships will not receive PSIA contracts as they will be decommissioning soon, others have such a small number in their class that it is not worthwhile to do this. A modified planning milestone table for FFP contracts is included in Appendix D₁ or D₂.

APPENDIX A**PRORATE ITEMS WITH EXPLANATIONS**

- A. The following items may be shared by all parties participating in the availability. The share will be based upon installation man-hours. The man-hours will be the sum of Prime (PSIA), Prime Subcontractor and AIT man-hours for each maintenance or modernization work item. These are then subtotaled to arrive at the equitable distribution weight for each participating organization. If the total man-hours for an AIT work item is less than 2% of the total work package, then the AIT will not be assigned a share of the prorates. Each of these prorated items is followed by a brief description.
1. Production Planning (813-10-XXX): The PSIA contractors are required to develop and maintain an integrated production plan for the availability. The plan integrates all repair and modernization work, including AIT work items. All parties gain benefit from the plan which assists in man-hour and material planning for the PSIA contractor as well as the repair and Participating Acquisition Resource Managers (PARM). AITs will not be included in the share of prorates for this item.
 2. Temporary Services (863-50-XXX): These include ventilation air, compressed air, fire main, cooling water, potable water, shore power, sewer connections and welding leads as examples. These items benefit all and are appropriate for equitable sharing.
 3. Housekeeping (864-90-XXX): Housekeeping includes trash disposal, deck coverings, post workday tidying and final cleaning during the compartment closeout process. Every participant benefits from this service.
 4. Integrated Test Plan (894-90-XXX): The Integrated Test Plan is closely associated with the Production Plan. The Integrated Test Plan benefits every participating repair and modernization manager by showing when they can expect various equipment and services to be ready for use and when their own equipment must be ready for testing. Examples include ship's power which must be available to complete combat systems testing.
 5. Program Management (897-00-XXX): Every PSIA contractor has a small staff which manages the overall availability. These include the availability manager and principle assistants. Every participant benefits from this team.
- B. The costs of the following will be charged to the individual work items.
1. Provisioning Technical Documentation (PTD) (830-21-XXX): PTD is the source document notifying the Supply System that new equipment is being installed on the ship. PTD typically arises from a modernization installation or in repair cases where original equipment is beyond repair, or repair parts are not available, and a substitute must be installed. In all cases, the PTD is generated for an individual work item and will be charged accordingly.
 2. Waterfront Liaison Engineering Services (838-10-XXX): Waterfront Liaison Engineering Services are typically required when the Ship Installation Drawings (SID) for a modernization installation have an error or there are interferences not accounted for in the SIDs. It is also possible to need Waterfront Liaison Engineering Services if there are deteriorated structural members or sections which must be analyzed to see if

replacement is mandatory or advisable. In all cases, the work is tied to an individual work item.

3. Test Memorandum Development (841-10-XXX): This item is for individual work item testing as compared to the total ship Integrated Test Plan which is shared by all. The individual Test Memoranda are charged to the respective work items.
4. Technical Support (861-00-XXX): This is technical support such as Original Equipment Manufacturer on-site assistance provided for individual work items. In all cases, the support is charged to the individual work item.
5. Condition Report Estimating (862-30-XXX): Condition reports are typically required for “open and inspect” repair items and for emergent requirements during a modernization installation. In all cases, the cost will be assigned to the individual work item.
6. Dry docking (863-40-XXX): Dry-docking may be required for maintenance of the hull or underwater appendages or there may be needs for access cuts low on the hull to install modernization items. Unlike most of the items in this section, the costs will typically not be charged to a single work item. It is much more likely that the costs will be distributed between parties that require use of the dock. The equitable distribution weight factor will be man-hours.
7. Hazardous Waste Disposal (863-50-XXX): This item is tied to specific work items. Examples include asbestos from propulsion space piping replacements. Lead abatement when sand or water blasting or doing preparations for welding. In all these cases, charging the cost to an individual work item is appropriate.
8. Temporary Access Cuts (863-60-XXX): In many cases, the cuts are for general access to reduce time to get both people and equipment in and out of high intensity work areas such as main machinery spaces. These cases will probably be charged to the TYCOM. In other cases, cuts must be made for a specific repair or modernization work item and they will be charged accordingly.
9. Gas Free and Maintenance of Gas Free (864-42-XXX): The requirement to gain access to a tank or void is usually job specific and will be charged to the individual work item. Exceptions will be evaluated on a case-by-case basis.
10. Crane Services (865-20-XXX): The crane services requirement will be estimated and assigned to individual work items that require the service.
11. Rigging Services (865-30-XXX): This is for rigging for the cranes and is assigned to individual work items.
12. Material Handling (865-20-XXX): This charge is for the “yellow gear” forklifts that support material handling on the pier, dock or main deck of the ship. The cost is assigned to individual work items that require the service.
13. Fire Watch Services (865-70-XXX): The fire watch personnel are estimated and assigned to individual work items.

14. Quality Assurance Support (866-20-XXX): In keeping with ISO 9000, each PSIA contractor maintains its own Quality Assurance. The cost of Quality Assurance will be assigned to individual work items.
15. Production Supervision (897-00-XXX): Every PSIA contractor has a small staff which manages the accomplishment of repairs and the installation of the alterations. The costs will be assigned to the appropriate work items.

C. The TYCOM will pay for the following items:

1. Armed Security Guards and Waterway Security Barrier (042-27-XXX): The security guards and the water barrier are designed to stop terrorist attacks similar to the events at the Marine Barracks in Beirut and the small craft attack upon USS *Cole*. The security guards are supported by land obstacles which are designed to stop unauthorized boats from approaching the ship.
2. Compartment Closeout Schedule (813-00-XXX): The Compartment Closeout Schedule is developed in conjunction with the Production Plan. The Compartment Closeout Schedule shows when each of the ship compartments will be completed in every respect. This includes all work as well as painting, labeling and final cleaning. The closeouts are usually done by a team of PSIA and Navy (civilian or military) personnel who sign the closeout form.
3. Weight and Moment Change Data (843-10-XXX): Every significant availability requires compilation of weight and moment changes to ensure long-term damaged stability of the ship is maintained. Though many repair items, and some modernization alterations, have negligible impact upon weight and moment, it is impractical to try to fractionalize the weight and moment costs to individual jobs.
4. Ship's Force Parking (863-70-XXX): This is a TYCOM item.
5. RMC Office Space (863-70-XXX): When the TYCOMs assumed responsibility for the repair RMCs, the cost of personnel and spaces became a TYCOM responsibility.
6. Cleaning and Pumping Bilges and Maintenance of the Oil Boom (864-42-XXX): This is a ship housekeeping item that is properly charged to the ship or TYCOM.
7. Light Off Assessment (868-30-XXX): This is a TYCOM item.
8. Dock Trial or Fast Cruise (868-40-XXX) and Sea Trials (868-50-XXX): This is a TYCOM item.
9. Work Authorization Forms (897-00-XXX): The Work Authorization Form formally documents the work scope to be performed, establishes a schedule, provides a cost estimate, identifies a responsible person for accomplishing the work, and provides time phased cost and manpower profiles.
10. Temporary Staging for Ship's Force Use (991-12-XXX): This is a TYCOM item.

APPENDIX B

MASTER SPECIFICATION CATALOG MAINTENANCE OFFICE GUIDELINES

1. Scope. This procedure is applicable to all personnel involved in processing and submitting new proposed templates, including updated proposals of existing templates, in the Navy Maintenance Database (NMD) for processing by the MSCMO.

2. Procedure.

2.1 Template.

- a. Select template candidate.
- b. Check for an existing template or a previously successful Work Item in the following order:
 - (1) Master Specification Work Template.
 - (2) Class Standard Work Template.
 - (3) Standard Work Template.
 - (4) Local Work Template.
 - (5) Basic Work Shell Template.
 - (6) Past Availability.
- c. Initiator of the proposed new template candidate must first review existing templates within the MSC to ensure a duplicate is not being created. If there is no duplicate, initiator can proceed with proposal.
- d. Ensure item number conforms to Volume VII, Chapter 4, Appendix 4-E of this manual (e.g., correct Expanded Ship Work Breakdown Structure and contains 8 digits). If non-conforming, correct proposed template.
- e. Template Paragraph 1 “Scope”, ensure the following:
 - (1) Paragraph 1.1 Title: Conforms to Volume VII, Chapter 4, Appendix 4-E of this manual B.2.a.
 - (2) Paragraph 1.2 Location of Work: Conforms to Volume VII, Chapter 4, Appendix 4-E of this manual B.2.b.
 - (3) Paragraph 1.3 Identification: Conforms to Volume VII, Chapter 4, Appendix 4-E of this manual B.2.c.
 - (4) Paragraph 1.4 Security Classification of Equipment, Components, Spaces and Documents: When required to identify classified spaces, equipment or documents, conforms to Volume VII, Chapter 4, Appendix 4-E of this manual B.2.d.

All Titles that currently contain ANY PHRASE in parentheses that is not a Navy Standard acronym, abbreviation or part of a Planning Yard drawing title must be removed. Example: (OPTION ITEM, DRYDOCK).

f. Ensure the following:

- (1) Template Paragraph 2 “References” conforms to Volume VII, Chapter 4, Appendix 4-E of this manual B.3.

Reference is appropriate and correct for work being done. References must be in one of the following formats:

602-6663754PL Rev *, (Title)

602-6663754 Rev *, (Title)

525146-1 Rev B, (Title) (No Group listed-Manufacturer’s Drawing)

- (2) For FFG-7 Class, any of the formats in sub-paragraph (1) or as indicated here:

528-****501 Rev *, (Title)

528-****501PL Rev *, (Title)

- (3) Reference type is correctly identified and per Instructions for Entering Reference Types table located in the help section of NMD.
- (4) Any liens (Liaison Action Requests or Reverse Liaison Action Requests) against a drawing must be deleted from the proposed template.
- (5) The order in which the references are listed is in the same order as they appear in the body of the proposed template.

g. Ensure Template Paragraph 3 “Requirements” conforms to Volume VII, Chapter 4, Appendix 4-E of this manual B.4. Verify the following:

- (1) NAVSEA Standard Items are called out as required.
- (2) Category I NAVSEA Standard Item requirements are not invoked.
- (3) Current Volume VII, Chapter 4, Appendix 4-E of this manual Standard Phraseology is used.
- (4) Required reports are called out and flagged in NMD. Required flag identifies the purpose of the report such as Inspection Results. The first letter of each word must be upper case.
- (5) Inspections, Tests, and Government Notifications conform to Volume VII, Chapter 4, Appendix 4-E of this manual B.4.j.
- (6) Planner’s Notes are used to call out information that needs to be inserted or addressed.
- (7) Verify that parts listed as repair parts have the correct information.
- (8) Bilge cleaning and pumping requirements of Standard Work Template 992-XXX and tank void cleaning and pumping requirements of CSWT 123-XXX are not invoked.

- (a) DDG
Tanks and Voids CSWT 123-XXX
Bilges CSWT 992-XXX

- (b) LPD
Tanks and Voids CSWT 123-XXX
Bilges CSWT 992-XXX
 - (c) LSD
Tanks and Voids CSWT 123-XXX
Bilges CSWT 992-XXX
 - (d) LHD
Tanks and Voids CSWT 123-XXX
Bilges CSWT 992-XXX
 - (e) CG
Tanks and Voids CSWT 123-XXX
Bilges CSWT 992-XXX
 - (f) LCS
Tanks and Voids CSWT 123-XXX
Bilges CSWT 992-XXX
 - (g) PC
Tanks and Voids CSWT 123-XXX
Bilges CSWT 992-XXX
 - (h) MCM
Tanks and Voids CSWT 123-XXX
Bilges CSWT 992-XXX
 - (i) LHA
Tanks and Voids CSWT 123-XXX
Bilges CSWT 992-XXX
- (9) Fluid capacities for tanks with designated tank numbers are not listed in the proposed template.
- (10)
- (a) A lead paragraph must include phraseology that begins with a verb, and refer to paragraphs 1.2 and 1.3 within the sentence structure where applicable (e.g., 3.1 Remove existing and install new the equipment listed in 1.3 and located in 1.2).
 - (b) Or refer to a previous lead paragraph that referred to paragraphs 1.2 and 1.3 within the template (e.g., 3.2 Remove each watertight closure listed in 1.3 and located in 1.2., 3.4. Install each watertight closure removed in 3.2).
- (11) The following format must be used when entering Contractor Furnished Material:
- (a) Each entry must be inserted to line up to header standard phrase B-30 to justify left.
 - (b) No space between material line entries:

TOTAL QUANTITY REQUIRED	NAME OF PART	PIECE NO.	REF. NO.	FIGURE DRAWING NO.	PART NO.
One EA	Seal	2	2.2	7-6	12345
Two EA	Worm Gear	4	2.2	7-6	6789

- (12) Where Table, Line(s), and Column(s) of 009-32 are specified within a template, the template must be updated and filled in using the appropriate Table, Line(s), and Column(s). If non-conforming or incorrect, correct proposed template.
- h. Ensure Template Paragraph 4 “Notes” conforms to Volume VII, Chapter 4, Appendix 4-E of this manual B.5. If non-conforming, correct proposed template.
 - i. Ensure Template Paragraph 5 “Government Furnished Material (GFM)” conforms to Volume VII, Chapter 4, Appendix 4-E of this manual B.6. If Government Furnished Material is listed in paragraphs 5.1 - 5.3 ensure Government Furnished Material information is correct.
 - j. Ensure Attachments are correct and open properly in NMD. If errors are found, correct errors.
 - k. Review template for conformance to Volume VII, Chapter 4, Appendix 4-E of this manual. If non-conforming, correct proposed template.
 - l. Ensure proposed template estimate is completely filled out, estimated as a minimum to the lead paragraph level, and accurate. Templates that are silent in paragraph 1.3 (where the equipment has no identification or specific quantity listed) do not have a true and accurate estimate on file reflecting the actual work within the template. Insert a Planner’s Note in the template to reflect a unit of (One EA) for estimating purposes.
 - m. Is the proposed template complete and in conformance with Volume VII, Chapter 4, Appendix 4-E of this manual and the MSCMO Guidelines? If yes, submit proposed template.

2.2 Submission of Change.

- a. Recommended changes to the MSCMO Guidelines must be submitted to the MSCMO for consideration. Approved changes to the Guidelines will be forwarded by the MSCMO to the Joint Fleet Maintenance Manual Program Manager for inclusion in the next scheduled Joint Fleet Maintenance Manual release, utilizing the Joint Fleet Maintenance Manual Change Request Form.
- b. Recommended changes, to Volume VII, Chapter 4, Appendix 4-E, of this manual must be submitted to the SSRAC, for consideration of adding to reference (b), through the SSRAC proposed change process. See Volume VII, Chapter 4, Appendix 4-E of this manual for the SSRAC web site and e-mail addresses and phone number.
- c. Recommended Enhancements to the NMD program must be submitted to the Automated Information Service Center through the Configuration Control Board process.

2.3. Internal Review (Planner to Supervisor). Initiating activity must perform an internal review of proposal to ensure template candidate is appropriate and conforms to Volume VII, Chapter 4, Appendix 4-E of this manual and meets the MSCMO Guidelines. Upon completion of review, template candidate is routed to the Regional RMC or NSA Standards Coordinator.

NOTE: CONTRACTOR GENERATED PROPOSALS MUST BE ROUTED FROM THE CONTRACTOR'S LOCAL STANDARDS COORDINATOR TO THE REGIONAL RMC or NSA STANDARDS COORDINATOR IN THEIR GEOGRAPHIC AREA.

2.4 Command Review. The Regional RMC or NSA must review proposal to ensure proposed template candidate is appropriate and conforms to Volume VII, Chapter 4, Appendix 4-E of this manual and the MSCMO Guidelines. Upon completion of review, proposed template candidate is:

- a. Routed to the MSCMO for review; or
- b. Prior to routing to the MSCMO for review, the RMC or NSA for that class of ship must review proposed Class Standard Work Template candidate. This must be initiated by an e-mail notification from the submitting Regional RMC or NSA MSC Standards Coordinator to the cognizant class RMC or NSA MSC Standards Coordinator. The e-mail notification must include the file number of the new proposal. The cognizant class RMC or NSA MSC Standards Coordinator receiving the notification must review proposed template for technical accuracy, current applicable phraseology, conformance to Volume VII, Chapter 4, Appendix 4-E of this manual and the MSCMO Guidelines, estimate information, and submit a response to the submitting Regional RMC or NSA Standards Coordinator via e-mail within 10 days of receipt of notification. Responses must be provided for all templates submitted for review.

2.5 Master Specification Catalog Maintenance Office.

- a. The MSCMO must review proposal to ensure template conforms to Volume VII, Chapter 4, Appendix 4-E of this manual and the MSCMO Guidelines. If there are no issues, MSCMO activates new template. If there are significant issues with proposal, MSCMO initiates dialog with local standards person or originator of proposal to resolve issues. Once issues are resolved, MSCMO activates new template.
- b. The MSCMO will return a template if there is no estimate or if the proposed template is a duplicate of an existing template.
- c. Processing Changes to Existing Template. The MSCMO is responsible for maintaining templates (Class Standard Work Templates and Standard Work Templates) up to date. When a user finds an active MSC template that needs to be updated (as a result of changes through Lessons Learned, error, outdated requirements, etc.), a proposed change must be initiated following these Guidelines and processed for review per paragraph 2.4 of this appendix.

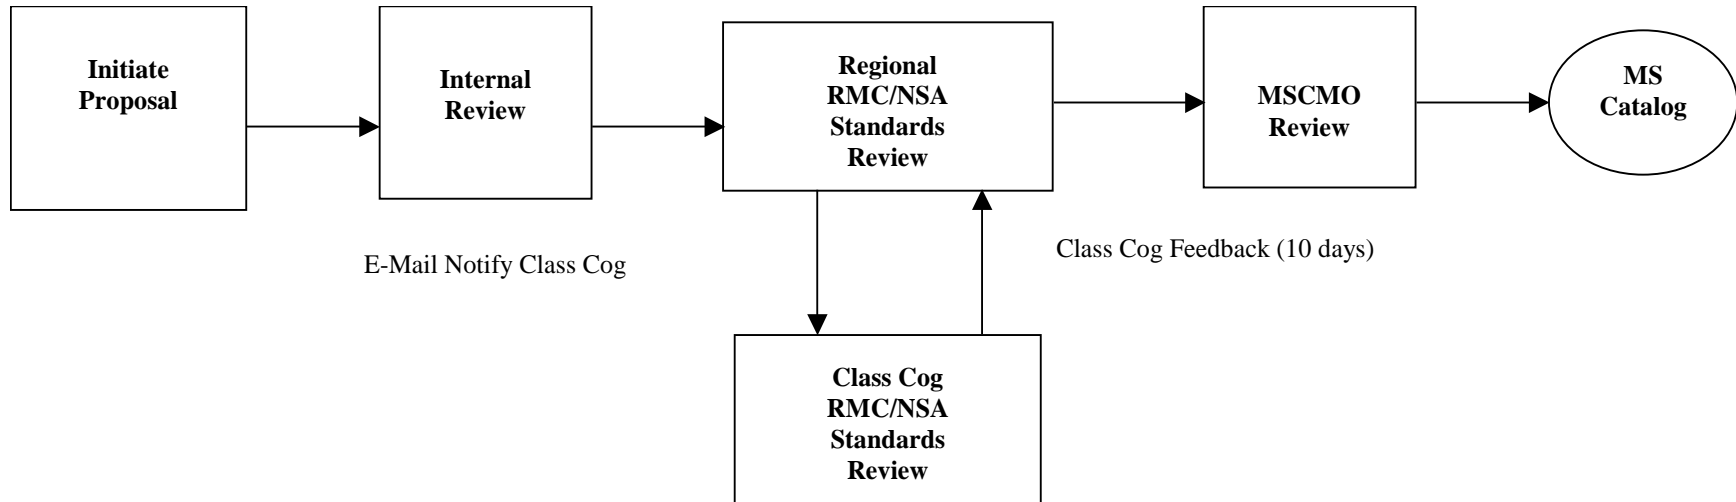

3. Naval Supervisory Authorities and Class Assignment Responsibilities.

- a. Mid-Atlantic Regional Maintenance Center (MARMC):
AGF-3, AOE, ARS-50, LCC-19 & DD-963

15 Jan 2021

- b. Norfolk Naval Shipyard (NNSY):
LHA & LHD
- c. Southwest Regional Maintenance Center:
LPD-4, LSD-41, LSD-49, MCM & MHC
- d. Southeast Regional Maintenance Center (SERMC):
FFG-7
- e. SUPSHIP Gulf Coast (SSGC):
CG-47
- f. SUPSHIP Bath (SBAT):
DDG-51

(Proposed New Template or Proposed Change to Existing Template)

APPENDIX C

SURFACE SHIP PRORATE PROCESS

APPENDIX D₁

COST SURFACE SHIP AVAILABILITY MILESTONES

EVENT #	Task or Milestone	Responsible Activity	CNO COST	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
CNO ADVANCE PLANNING PROCESS (SEA 21 RESPONSIBILITY)					
1	Establish CNO or CM Availability Schedule	TYCOM	A-720		<u>Establish CNO or CM Availability Schedule</u> : Schedule established per the Fleet Response Plan maintenance cycle. TYCOM will publish routine updates in Navy Data Environment (NDE) as they occur.
2	Fund Modernization Procurement & Installation - Decision Point 3 in the Ship Change Document Process	PARM or TYCOM	Varies		<u>Fund Modernization Procurement & Installation - Decision Point 3 in the Ship Change Document process</u> : Decision Point 3 is to validate and update the Modernization Plan and to proceed with material procurement and scheduling installations with Resource Sponsor confirmation that funds exist in the budget to fully execute the Ship Change (SC).
3	Issue Execution Planning Hull Modernization Plan (EHMP)	SPM	Varies		<u>Issue Execution Planning Hull Modernization Plan (EHMP)</u> : In support of MMBP development, in March of each year, SPMs will deliver an EHMP listing all program SCs scheduled for each active ship under their cognizance to the RMCs. TYCOMs will deliver an EHMP listing all scheduled fleet SCs for each active ship under their cognizance to the RMCs. The EHMP will contain all SCs scheduled for the next fiscal year and the first quarter of the following fiscal year. It is a snapshot of the current maturity and authorization status and industrial man-day and material estimates for SCs scheduled for installation in the next fiscal year.
4	Post-LCPC	SURFMEPP	C+150		

APPENDIX D₁

COST SURFACE SHIP AVAILABILITY MILESTONES

EVENT #	Task or Milestone	Responsible Activity	CNO COST	COMMENTS/ REMEDIAL ACTION	DESCRIPTION
5	Issue 2-year rolling Advance Planning Hull Modernization Plan (AHMP)	SPM	Varies		<u>Issue 2-year rolling Advance Planning Hull Modernization Plan (AHMP):</u> An AHMP for all active ships must be provided by the cognizant SPM to each RMC in July each year in support of the A-810 to A-450 rolling HMP NMP milestone and development of SPM Advance Planning Letters. The AHMP will contain all Program and Fleet SCs planned for the year after the next fiscal year (Example: JUL 2006 release is for FY 2008). The RMC is advised of the planned SCs for installation to facilitate necessary long lead-time planning efforts for ships under their cognizance.
6	Planning Yard (PY) Submit Funding Request for work assigned	Planning Yard	A-480		<u>Planning Yard (PY) Submit Funding Request for work assigned:</u> PYs request funding from the alteration sponsors for what they know they are going to be tasked to perform.
7	SC Design or Planning Funds provided	PARM, SPM, TYCOM	A-425		<u>SC Design or Planning Funds provided:</u> Funding is requested by the PY and the Alt sponsor is to provide the funding. The purpose is to accomplish site-specific advanced planning of the SC. The attention is redirected from overall SC applicability to design for installation on a specific hull or at a specific location. This includes finalized design (including ship check, site survey and drawings, technical installation instructions, etc.), initiation of procurement, pre-installation certification and testing, installation readiness reviews and risk assessments.

APPENDIX D₁

COST SURFACE SHIP AVAILABILITY MILESTONES

EVENT #	Task or Milestone	Responsible Activity	CNO COST	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
8	Send habitability project advance planning notice	TYCOM N43	A-420		<u>Send habitability project advance planning notice:</u> This TYCOM generated notice identifies Projects proposed for accomplishment, and provides work scope details including, if applicable, Ship's Force manpower requirements. This notice also requests Commanding Officer's comments, concurrence and commitment of resources to the proposed projects.
9	Installation Control Drawings (ICD), Installation Requirements Drawings (IRD) delivered to alteration developer or PY	PARM	A-420		<u>Installation Control Drawings (ICD), Installation Requirements Drawings (IRD) delivered to alteration developer or PY:</u> ICDs and IRDs are equipment specific drawings and should be used as general guidance to develop Ship Specific or Ship Class Ship Installation Drawings (SID). SIDs are the authorized or approved drawings to be used by the IAs for shipboard implementation of SCs. ICDs or IRDs should be used as supplemental information where SIDs are deficient in specific guidance, and should be accompanied by a Liaison Action Record (LAR) prior to their use. Alteration Sponsors provide the ICD for SID development to the appropriate party (PY or Third Party).

APPENDIX D₁

COST SURFACE SHIP AVAILABILITY MILESTONES

EVENT #	Task or Milestone	Responsible Activity	CNO COST	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
10	Issue Request for the EP Proposal to the planning activity. Notify each funding sponsor of the requirement and amount of funding for Execution Planning. Provide no later than date for required funding.	RMC C300	A-410		<u>Issue Request for the EP Proposal to the planning activity. Notify each funding sponsor of the requirement and amount of funding for Execution Planning. Provide no later than date for required funding:</u> Develop Execution Planning CLIN MSC Work Item. Develop Independent Government Estimate (IGE), and Issue RFP for Planning. Notify each funding sponsor of the requirement for Planning funding. Provide “no later than date” for required funding. Each funding Sponsor is required to fund the Planning Costs associated with their requirements. If an advanced LOA is not available, the SEA21 Monthly Advanced Planning Letter will be used to estimate the Modernization Sponsor’s cost. Funding must be received NLT A-365 to ensure Work Item development and Long Lead Time Material (LLTM) identification can start at A-360 in conjunction with issuance of the AWP and LOAs.
11	Accomplish SURFMEPP Mid-Cycle Review	SURFMEPP	A-410		Accomplish SURFMEPP Mid Cycle Review: This is the SURFMEPP Mid Cycle Review of the ship’s BAWP, CSMP, active DFSs, Class Advisories, routines, services, and the Availability Duration. All items will be reviewed and evaluated for branding. The MT will ensure 100% of BAWP is screened to a scheduled or future maintenance availability. The MT will screen all requirements to a maintenance period or availability (other than unfunded) within the current FRP maintenance cycle. This is the final verification prior to the BAWP change to the AWP. The A-360 Letter is the output.
12	Provide Funding for Execution Planning	PARM, SPM, TYCOM	A-365		Provide Funding for Execution Planning: Funding must be received NLT A-365 to ensure Work Item development and LLTM identification can start at A-360 in conjunction with issuance of the AWP and LOAs.

APPENDIX D₁

11	Accomplish SURFMEPP Mid-Cycle Review	SURFMEPP	A-410		Accomplish SURFMEPP Mid Cycle Review: This is the SURFMEPP Mid Cycle Review of the ship's BAWP, CSMP, active DFSs, Class Advisories, routines, services, and the Availability Duration. All items will be reviewed and evaluated for branding. The MT will ensure 100% of BAWP is screened to a scheduled or future maintenance availability. The MT will screen all requirements to a maintenance period or availability (other than unfunded) within the current FRP maintenance cycle. This is the final verification prior to the BAWP change to the AWP. The A-360 Letter is the output.
12	Provide Funding for Execution Planning	PARM, SPM, TYCOM	A-365		Provide Funding for Execution Planning: Funding must be received NLT A-365 to ensure Work Item development and LLTM identification can start at A-360 in conjunction with issuance of the AWP and LOAs.
13	Provide BAWP Turnover Letter	SURFMEPP	A-360		
14	Provide Availability Financial Target Control	SPM, TYCOM	A-360		Provide Availability Financial Target Control: A financial control is required in order to establish the Availability Planning Requirements.

APPENDIX D₁

COST SURFACE SHIP AVAILABILITY MILESTONES

EVENT #	Task or Milestone	Responsible Activity	CNO COST	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
15	Issue Initial Letter Of Authorization (including AITs) or Hull Modernization Plan	SPM, TYCOM	A-360		Issue Initial Letter Of Authorization (including AITs) or Hull Modernization Plan: NAVSEA and TYCOM Letters of Authorization (LOA) are issued showing all modernizations scheduled for the CNO Availability. The SPM LOA specifies to the NSA the SCs approved to be accomplished during a specific ship CNO availability. Forecasted ship changes may be viewed through the NDE database at C+130 and continuing throughout the BAWP to AWP development process. This list will be reviewed at each BAWP Milestone Meeting. Items from this list will not be entered into the ship's CSMP until they have been reconciled with an issued LOA.
16	Definitize Execution Planning	RMC C400	A-360		<u>Definitize Execution Planning</u> : A negotiated price for the anticipated planning actions necessary to support the availability that has been funded via a supplemental agreement. This step contractually obligates both the government and contractor to the requirements defined in the EP work Item(s).
17	Establish Availability in the appropriate IT system	RMC C300	A-360		<u>Establish Availability in the appropriate IT system</u> : Availabilities will be established in the applicable planning data base when known or work is ready to be screened.
18	Advance Planning to Planning Event	NRMC C300	A-355		<u>Advance Planning to Planning Event</u> : IPTD overview or introduction of the IPTD Program to the Ship or MT. BAWP package review. AWP Package Review to include any planned habitability work scheduled for the avail and TYCOM funded alterations. Modernization Package review LOA, discussion of the PY drawing status including Ship checks (if they are funded), etc. Review schedule risk identified during BAWP process, start identification of overall availability risks. Select Planning Milestones to suit availability. Establish Communication plan or strategy and meeting or planning drumbeat.

EVENT #	Task or Milestone	Responsible Activity	CNO COST	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
CNO PLANNING PROCESS (RMC RESPONSIBILITY)					
19	Task or Fund SID Development	SPM, NSA, AIT, TYCOM	A-330		<u>Task or Fund SID Development</u> : Alteration Sponsors task and fund appropriate party to develop SIDS (PY or Third Party). This is a Modernization milestone to ensure funding has been obligated in support of SID development or SID delivery milestones.
20	Modernization Ship Checks Completed	Planning Yard, Or Other as Assigned	A-300		<u>Modernization Ship Checks completed</u> : Ship checks (Design, Verification, Production and Proofing) are accomplished in support of the development of SIDS. All ship checks will incorporate a validation or verification of actual Hull or Site configuration. This is a Modernization milestone to ensure all design ship checks are complete in support of the SID delivery milestone.
21	Provide incremental funds for ordering LLTM for both repair and alt or mod work to meet required dates	SYSCOM, SPM, TYCOM	A-270		<u>Incremental funding</u> : Provide incremental funds for ordering LLTM for both repair and alt or mod work to meet required dates. This is an iterative process as LLTM is identified and funding is requested and authorized based on the lead time. It is incumbent on the Execution Planning Activity or MT to identify LLTM as soon as possible. LLTM is defined as any material with a delivery date in excess of 30 days.
22	50% of D-level maintenance work package development 2Ks have been screened based on target control	TYCOM	A-240		<u>50% of D-level maintenance work package development 2Ks have been screened based on target control</u> : Intent is that 50% of the expected AWRs (work, not services) have been screened to the planning activity. The planning activity continually develops specs in the most cost effective manner and does not batch this work in front of the next package development milestone.

APPENDIX D₁

COST SURFACE SHIP AVAILABILITY MILESTONES

EVENT #	Task or Milestone	Responsible Activity	CNO COST	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
23	Submit A-220 Deferral Letter with Maintenance Team Assist	TYCOM	A-220		<u>Submit A-220 Deferral Letter with Maintenance Team Assist:</u> At A-220, TYCOM will submit a Change Deferral Request Letter to SURFMEPP, which will include a list of Change Deferral Requests for subject FRP Maintenance Cycle.
24	Total Ships Readiness Assessment (TSRA)-1 Discrepancies Screened	Ashore Ships Maintenance Manager	A-240		<u>Total Ships Readiness Assessment (TSRA) 1 Discrepancies Screened:</u> TSRA-1 is a TYCOM-scheduled two-week ship-wide pre-deployment material condition assessment designed to identify work items for inclusion in the post-deployment maintenance availability. The goal of this phase is to reduce availability growth and new work, by providing the earliest possible identification of work, which is then notionally scheduled in an availability. This is a validation that the discrepancies identified as a result of TSRA-1 assessment has been screened by this date.
25	Issue or Deliver SIDs to NSA for contractors and AITs	Planning Yard	A-240		<u>Issue or deliver SIDs to NSA for contractors and AITs:</u> SID delivery is listed in the NMP MOM as a critical milestone. All SIDs must be issued to the NSA to ensure planning milestones can be met.
26	Planning Activity complete planning and estimating of work assigned as required by the 50% package development milestone.	Contractor	A-190		<u>Planning activity complete planning and estimating of work assigned as required by the 50% package development milestone:</u> The requirement is that all work brokered by the 50% package development milestone must be planned (Work Item complete and LLTM identified) and estimated with minimum quality as described as a "Class C" estimate.
27	IGE Submitted in support of 50% package development.	RMC C300	A-190		<u>IGE Submitted in support of 50% package development:</u> The requirement is that all work Planned in support of the 50% package development milestone must be estimated by the government with minimum quality as described as a "Class C" estimate.

APPENDIX D₁

COST SURFACE SHIP AVAILABILITY MILESTONES

EVENT #	Task or Milestone	Responsible Activity	CNO COST	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
28	Estimate Comparison Complete in support of 50% package development	RMC C400 or C300	A-180		<u>Estimate Comparison Complete in support of 50% package development:</u> The requirement is that a bottom line comparison of the contractor provided Class C estimate and IGE Class C will be compared. Any estimate in excess of 10% or \$10K (whichever is greater) will be scoped for requirements. Estimates will be revised as required to ensure that there is a consensus for the scope of work required. The government estimate will be documented to reflect the outcome of the scoping.
29	LOA Change 1 Issued	SPM	A-180		<u>LOA Change 1 issued:</u> After LOA Change 1 is issued, any change to the Fielding Plan in NDE-NM that requires SIDs or impacts ship distributed systems requires sponsoring activity to submit a late add impact assessment.
30	All Modernization Risk Assessments (including waivers) submitted	PARM, SPM, TYCOM	A-175		<u>All Modernization Risk Assessments (including waivers) submitted:</u> Complete all required design, procurement of material, pre-installation testing, and obtain all required certifications or impact assessment(s) prior to final installation. Evaluate maturity of an installation and determine if the SC is ready for installation. Perform an impact assessment for SCs that have not achieved maturity per the Navy Modernization milestone charts to determine whether or not to proceed with installation planning.

APPENDIX D₁

EVENT #	Task or Milestone	Responsible Activity	CNO COST	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
31	Risk Letter Sent to CNRMC	RMC Code 100	A-170		<u>Risk Letter Sent to CNRMC</u> : Risk letter will be submitted to CNRMC (with copy to TYCOM) for review and endorsement no later than 10 days after the milestone. The A-180 Risk Letter (Include Modernization Risk) will address, at a minimum, the following: Budget, Schedule, Resources (Manpower and Fiscal), RMC or NSA Capability or Capacity, Contractor Capability or Capacity, Availability Duration, Planning, Modernization, Funding. (Include work items MT intends to broker to IDIQ contracts and other government agencies.)
32	All Modernization Risk Assessments (including waivers) approved	FLEET, TYCOM	A-150		<u>All Modernization Risk Assessments (including waivers) approved</u> : Perform an impact assessment for SCs that have not achieved maturity IAW the Navy Modernization milestone charts to determine whether or not to proceed with installation planning.
33	Maintenance Ship Check	RMC or WFO	<\$5M: A-120 >\$5M<\$20M: A-134 >\$20M<\$100M: A-155 >\$100M: A-155		<u>Maintenance Ship Checks Complete</u> : Intent is that all maintenance related ship checks will be completed as early as possible within the planning process however, no later than this milestone.

APPENDIX D₁

COST SURFACE SHIP AVAILABILITY MILESTONES

EVENT #	Task or Milestone	Responsible Activity	CNO COST	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
34	Award AIT contracts for work not being done by prime contractor. Identify all outside activities participating in the availability and associated support requirements	AIT Sponsor, TYCOM N43, SEA 21	A-150		<u>Award AIT contracts for work not being done by prime contractor. Identify all outside activities participating in the availability and associated support requirements:</u> The AIT Manager must have the AIT contract in place NLT this milestone. Contract tasking can also include testing support, incidental and consumable material, ship check and post-install support. The selected contractor must have a NAVSEA 04XQ accepted QMS in order to accomplish shipboard industrial work. The AIT Manager must ensure that the contract identifies all contractor deliverables necessary to complete schedule, return costs and design change feedback. Date supports requirement for POA&M at A-135. All non-AIT contractor outside activities will be contacted to obtain service requirements.
35	Identification of AIT support requirements and POA&M provided	AIT Manager	A-135		<u>Identification of AIT support requirements and POA&M provided:</u> If the AIT will require industrial support, (e.g., crane and rigging services, welding or burning, compressed air), during accomplishment of the alteration or SC, additional information (OPNAV Form 4790/2K) requesting these services will be provided for loading into the CSMP shore file. The AIT Manager, or their designated representative, will prepare information for the creation of a 2K/JCN. In addition, if required by the NSA, any required support services must be specified using 4790/2K. The planning activity can then prepare a 4E specification work item per Volume VII, Chapter 4, Appendix E of this manual for inclusion in the CNO availability work package for private sector industrial availabilities, or a job summary and Task Group Instruction (TGI) for Naval shipyard availabilities.

APPENDIX D₁

COST SURFACE SHIP AVAILABILITY MILESTONES

EVENT #	Task or Milestone	Responsible Activity	CNO COST	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
36	80% of D-level maintenance work package development 2Ks have been screened based on target control	TYCOM	<\$5M: A-120 >\$5M <\$20M: A-134 >\$20M <\$100M: A-155 >\$100M: A-155 (See Note 1)		80% of D-level maintenance work package development 2Ks have been screened based on target control: Intent is that 80% of the expected AWRs (work not services) have been screened or brokered to the planning activity. The planning activity continually develops specs in the most cost effective manner and does not batch this work in front of the next package development milestone.
37	Conduct Work Package Integration Conference (WPIC)	RMC C300	A-120		<u>Conduct Work Package Integration Conference (WPIC)</u> : Provides a forum for early identification of work requirements that require integration to avoid conflicts with other work during execution.
38	LOA CH 2, 100% Modernization Lock	SPM	A-120		<u>LOA CH 2, 100% Modernization Lock</u> : The SPM must prepare and issue the LOA. The LOA will identify any planned SCs identified in the A-360 letter that have reached maturity. All SCs that have not reached maturity or do not have an approved impact assessment will be deferred from the availability with the exception of Sustainment Type SCs which must meet this criteria by A-75.
39	Submit Execution Risk Letter	RMC Code 100	A-110		<u>Submit Execution Risk Letter</u> : A-120 Risk letter will be submitted to CNRMC for review and endorsement (to be sent to TYCOM) NLT 10 days after the A-120 milestone. The A-120 Risk Letter is the first Risk Letter to specifically address Execution Risk along with Planning Risk.

APPENDIX D₁

COST SURFACE SHIP AVAILABILITY MILESTONES

EVENT #	Task or Milestone	Responsible Activity	CNO COST	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
40	Planning Activity complete planning and estimating of work assigned as required by the above 80% package development milestone.	Planning Activity	<\$5M: A-95 >\$5M <\$20M: A-109 >\$20M <\$100M: A-120 >\$100M: A-120 (See Note 1)		<u>Planning Activity complete planning and estimating of work assigned as required by the above 80% package development milestone:</u> The requirement is that all work brokered by the 80% lock milestone must be planned (Work Item complete and LLTM identified) and estimated with the minimum quality described as a "Class C" estimate.
41	IGE Submitted in support of 80% package development	RMC C300	<\$5M: A-95 >\$5M <\$20M: A-109 >\$20M <\$100M: A-120 >\$100M: A-120 (See Note 1)		<u>IGE Submitted in support of 80% package development:</u> The requirement is that all work Planned in support of the 80% package development milestone must be estimated by the government with the minimum quality described as a "Class C" estimate.
42	Total Ships Readiness Assessment (TSRA)-2 Discrepancies Screened	Ashore Ship Maintenance Manager	<\$5M: A-90 >\$5M <\$20M: A-114 >\$20M <\$100M: A-128 >\$100M: A-128 (See Note 1)		<u>TSRA-2 Discrepancies Screened:</u> TSRA-2 focuses on the evaluation of equipment after deployment to minimize growth and new work within the ship's CNO availability. It includes a post-deployment, underway material assessment of selected HM&E and C5I systems and is designed to add work items needed to fully define the Availability Work Package (AWP).
43	I-level work package fully brokered	Ashore Ship Maintenance Manager	A-90		<u>I-level work package fully brokered:</u> Intent is to fully broker all known Intermediate Level work to I-level by this date.

APPENDIX D₁

COST SURFACE SHIP AVAILABILITY MILESTONES

EVENT #	Task or Milestone	Responsible Activity	CNO COST	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
44	Estimate Comparison Complete in support of 80% package development	RMC C400 or C300	<\$5M: A-85 >\$5M <\$20M: A-99 >\$20M <\$100M: A-110 >\$100M: A-110 (See Note 1)		<u>Estimate Comparison Complete in support of 80% package development:</u> The requirement is that a bottom comparison of the contractor provided Class C estimate and IGE Class C will be compared. Any estimate in excess of 10% or \$10K (whichever is greater) will be scoped for requirements. Estimates will be revised as required to ensure that there is a consensus for the scope of work required. The government estimate will be documented to reflect the outcome of the scoping.
45	I-level work package fully accepted	RMC Code 900	A-75		<u>I-level work package fully accepted:</u> Intent is for I-level to accept or reject all work brokered to it up to this point in time. Any work entering later in the process will be subject to the Business Case Analysis process and will likely need to be inducted into the work package as new work.
46	100% of O-level maintenance work package locked	Ship's Force	A-75		<u>100% O-level Maintenance Work Package locked:</u> Develop a Ship's Force concurrent Work Package that includes all major maintenance actions such as Planned Maintenance System (PMS), repairs, alterations and testing to be conducted by Ship's Force during the availability, as applicable. Review PMS, CSMP and Testing requirements and ensure all Ship's Force maintenance actions scheduled for accomplishment during availability are identified

APPENDIX D₁

COST SURFACE SHIP AVAILABILITY MILESTONES

EVENT #	Task or Milestone	Responsible Activity	CNO COST	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
47	100% of D-level maintenance work package 2K's locked based on target control	Ashore Ship Maintenance Manager	<\$5M: A-75 >\$5M <\$20M: A-90 >\$20M <\$100M: A-120 >\$100M: A-140 (See Note 1)		<u>100% of D-level maintenance work package 2Ks locked based on target control:</u> Intent is that 100% of the expected AWRs have been brokered to the planning activity. The planning activity continually develops specs in the most cost effective manner and does not batch this work in front of the next package development milestone.
48	Final Work Item Review and Approval	RMC C300	<\$5M: A-65 >\$5M <\$20M: A-92 >\$20M <\$100M: A-104 >\$100M: A-104 (See Note 1)		<u>Final Work Item Review and Approval:</u> Work Item reviews must be accomplished on a routine drumbeat established by the MT with the final work item review being completed in support of the established publishing date for the specification package. This will include the final quality and technical and contractual review of the work items. Contractual must include legal requirements (i.e., if sole source, is there sole source justification?).
49	Solicit Bids	RMC C400	N/A		<u>Solicit Bids:</u> Non-Multi-Option Contracting Vehicles. The Federal Acquisition Regulation designates FedBizOpps as the mandatory "Government wide point of entry (GPE)" for posting of Government business opportunities, including proposed contract actions, solicitations and associated information.
50	100% of D-level maintenance work package 2Ks planned, estimated.	Planning Activity	<\$5M: A-65 >\$5M <\$20M: A-89 >\$20M <\$100M: A-106 >\$100M: A-106 (See Note 1)		<u>100% of D-level maintenance work package 2Ks planned, estimated:</u> The requirement is that all work brokered by the 100% lock milestone must be planned (Work Item complete and LLTM identified) and estimated with the minimum quality described as a "Class C" estimate.

APPENDIX D₁

EVENT #	Task or Milestone	Responsible Activity	CNO COST	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
51	Planning Activity "publish" package in the appropriate IT system	Planning Activity	<\$5M: A-65 >\$5M <\$20M: A-92 >\$20M <\$100M: A-104 >\$100M: A-104 (See Note 1)		<u>Planning Activity "publish" package in the appropriate IT system</u> : This is the act of issuing a final specification package for the availability that will be used to formulate a proposal. All work after this date will be handled as supplemental or new work.
52	IGE Submitted in support of 100% lock	RMC C300	<\$5M: A-65 >\$5M <\$20M: A-67 >\$20M <\$100M: A-78 >\$100M: A-78 (See Note 1)		<u>IGE submitted in support of 100% lock</u> : The requirement is that all work Planned in support of the 100% lock milestone must be estimated by the government with the minimum quality described as a "Class C" estimate.
53	Submit I-level work package and schedule for integration	RMC C900	A-60		<u>Submit I-level work package and schedule for integration</u> : The LMA must develop an inclusive, detailed, integrated and resource-loaded schedule of all participating activities. All participants must meet and review the proposed plan and make necessary adjustments to render a balanced and optimized integrated schedule. This formal schedule review must occur after the WPIC, but no later than the Work Package Execution Review. The NSA or LMA must serve as the final arbiter of conflicts. By the Work Package Execution Review, all integrated schedule conflicts must be resolved by the NSA or LMA.
54	Contractor submit final package cost proposal	Contractor	<\$5M: A-55 >\$5M <\$20M: A-67 >\$20M <\$100M: A-76 >\$100M: A-76 (See Note 1)		<u>Contractor submit final package cost proposal</u> : This is the date that the Prime contract holder must submit their valid and complete cost proposal. It must be in compliance with the DCAA's "CRITERIA FOR ADEQUATE CONTRACT PRICING PROPOSALS" associated with an option within the contract in support of a defined scope of work. The proposal must include an integrated schedule based upon the proposed work package.

APPENDIX D₁

COST SURFACE SHIP AVAILABILITY MILESTONES

EVENT #	Task or Milestone	Responsible Activity	CNO COST	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
55	Complete TAR	RMC C400	<\$5M: A-50 >\$5M <\$20M: A-53 >\$20M <\$100M: A-55 >\$100M: A-55 (See Note 1)		<u>Complete TAR:</u> The Technical Advisory Report (TAR) will be prepared by the technical analyst on claims or proposals that meet threshold criteria established by the FAR. At any value below that threshold, and at the discretion of the negotiator, a "desk" TAR may be performed by the negotiator. Usually the evaluation involves review of direct labor hours and costs associated with material, delay in delivery or disruption costs. It will also include review of the contractor's estimating standards. The TAR should reflect the technical evaluation and its results. The TAR serves several essential purposes, including essential file documentation, advice to the negotiator and ACO and advice to the auditor if an audit is to be conducted. The objective of the TAR is to establish the acceptability and reasonableness of the contractor's proposal or backup data and records.
56	Establish Prorate based on final cost proposal	RMC C400 RMC C300 SEA 21 Program Managers Rep TYCOM N43	<\$5M: A-50 >\$5M <\$20M: A-53 >\$20M <\$100M: A-55 >\$100M: A-55 (See Note 1)		<u>Establish prorate based on final cost proposal:</u> At A-120, all mature SCs listed on the LOA will be considered for proration. The budgets associated with SCs and repair and maintenance will lock the proration distribution percentages. If modernization is added after this date, the sponsor will assume the full increase in cost associated with the prorated items. The percentages established at this time will be applied to the proratable items proposal amount by sponsor to establish the full funding required.
57	Submit Funding Requests to Funding Sponsors	RMC C300	<\$5M: A-50 >\$5M <\$20M: A-53 >\$20M <\$100M: A-55 >\$100M: A-55 (See Note 1)	Program Office wants 14 days from receipt of request to receipt of funds.	<u>Submit Funding Requests to Funding Sponsors:</u> Sponsors must be kept aware of anticipated funding needs including prorated amounts. This typically happens as estimates come in but MUST be communicated when the proposal is received and finalized as the TAR completes.

APPENDIX D₁

COST SURFACE SHIP AVAILABILITY MILESTONES

EVENT #	Task or Milestone	Responsible Activity	CNO COST	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
58	Pre-Business Clearance Approved Within C400	RMC C400	<\$5M: A-46 >\$5M <\$20M: A-46 >\$20M <\$100M: A-45 >\$100M: A-45 (See Note 1)		<u>Pre-Business Clearance Approved within C400</u> : The pre-negotiation plan is an official document of the contracting officer's negotiation objectives relating to pricing, technical, business and contractual issues. It assists in the contracting officer's determination of a fair and reasonable price. It must document the pertinent issues to be negotiated and the cost objectives and a profit or fee objective. Because it serves as the basis of the negotiation, the pre-negotiation plan should fully explain the contractor and Government positions.
59	Provide Availability Funding for Repair and Modernization to the RMC	SYSCOMS, SPM, TYCOM	A-45		<u>Provide Availability Funding for Repair and Modernization to the RMC</u> : Availability funding is required prior to definitization. In order to assure that the correct amount and type of funding is available; it should be received at the RMC NLT 10 days prior to the scheduled definitization date. Receipt of funding later than that may cause the work to be deleted from the work package or may delay definitization.
60	Pre BCM Routed and Approved Through SEA 02	RMC C400 or SEA 02	<\$5M: N/A >\$5M <\$20M: A-40 >\$20M <\$100M: A-40 >\$100M: A-40 (See Note 1)		<u>Pre-BCM Routed and Approved through SEA 02</u> : SEA 02 must approve the Pre-BCM for all contracting actions expected to exceed the Contracting Officers threshold for award.

APPENDIX D₁

COST SURFACE SHIP AVAILABILITY MILESTONES

EVENT #	Task or Milestone	Responsible Activity	CNO COST	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
61	Final Negotiations	RMC C400 or SEA 02	<\$5M: A-43 >\$5M <\$20M: A-43 >\$20M <\$100M: A-38 >\$100M: A-38 (See Note 1)		<u>Final Negotiations</u> : Negotiation is a procedure that includes the receipt of proposals from offerors, permits bargaining, and usually affords offerors an opportunity to revise their offers before award of a contract. Bargaining, in the sense of discussion, persuasion, alteration of initial assumptions and positions, and give-and-take, may apply to price, schedule, technical requirements, type of contract or other terms of a proposed contract.
62	Post BCM Drafted within C400	RMC C400	<\$5M: N/A >\$5M <\$20M: N/A >\$20M <\$100M: A-35 >\$100M: A-35 (See Note 1)		<u>Post BCM Drafted within C400</u> : Upon completing negotiations, a price negotiation memorandum must be developed. It should document the purpose and results of the negotiation, the extent to which negotiation objectives were met and the basis for accepting a position that departs from the established objective. To the extent that specific negotiation objectives were met, a statement to this effect is sufficient. A restatement or summary of information and analysis provided in the pre-negotiation is not required. However, where there are differences between the negotiation objectives and the actual negotiated outcome or issues not identified in the pre-negotiation plan, the price negotiation memorandum should provide a full explanation of the agreement reached.

APPENDIX D₁

COST SURFACE SHIP AVAILABILITY MILESTONES

EVENT #	Task or Milestone	Responsible Activity	CNO COST	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
63	CHINFO Release	RMC C400	<\$5M: N/A >\$5M <\$20M: A-40 >\$20M <\$100M: A-32 >\$100M: A-32 (See Note 1)		<u>CHINFO Release</u> : A news release is required per DFARs to provide information on all contractual actions or modifications that have a face value of more than \$6.5 million, excluding unexercised options. This information will be used in a public news release announcing the award. Congressional members whose states or districts are affected by the contract (either the contractor lives in the state or district or the work will be performed there) will be provided similar information concurrent with the public announcement. Contract award information will be provided to the appropriate Public Affairs Office (PAO) in the form of a news release.
64	Post BCM Routed and Approved Through SEA 02	RMC C400 or SEA 02	<\$5M: N/A >\$5M <\$20M: N/A >\$20M <\$100M: A-30 >\$100M: A-30 (See Note 1)		<u>Post-BCM Routed and Approved through SEA 02</u> : SEA 02 must approve the Post-BCM for all contracting actions exceeding the Contracting Officers threshold for award.
65	Definitize Work Package	RMC C400	<\$5M: A-35 >\$5M <\$20M: A-35 >\$20M <\$100M: A-30 >\$100M: A-30 (See Note 1)		<u>Definitize Work Package</u> : The culmination of the contractual planning efforts resulting in a negotiated price for the availability that has been funded via a supplemental agreement. This step contractually obligates both the government and contractor to the requirements of the Work Package.
<u>Note 1</u> : : For Availabilities in excess of \$100M, milestones may need to be established earlier in the planning process to account for the DCAA Audit, Peer Review Process and other issues unique to the magnitude of the work package.

COST SURFACE SHIP AVAILABILITY MILESTONES

EVENT#	Task or Milestone	Responsible Activity	CMAV-COST	ADDITIONAL NOTES	DESCRIPTION
66	Deliver Material (LLTM and Kitted Materials) to Executing Activity	Planning Yards, PARM	A-30		<u>Deliver Material (LLTM and Kitted Materials) to Executing Activity:</u> LLTM is any material that will take in excess of 30 days to procure. The government may elect to provide LLTM or prefabricated assemblies generally kitted via a planning yard. This material procured through sources other than the executing activity should be delivered 30 days prior to start of the availability to ensure that there is no disruption to production.
67	Conduct Work Package Execution Review (WPER)	RMC C300	A-30		<u>Conduct Work Package Execution Review (WPER):</u> Review of the integrated work production schedule that has been prepared by the Executing Activity. The complete LMA Availability work package is defined and agreed upon at the WPER.
68	Start of Availability	Ship's Force, MT, Industrial Activity	A-0		<u>Start of Availability:</u> The first day of the production period for the executing activity.
CMAV (RMC RESPONSIBILITY)					
These are notional milestones for CM or CMAV packages that are within the TAR threshold. If availabilities are expected to exceed the TAR threshold, the MT must establish milestones that fit the particular availability.					
				Anything over \$750k must TAR.	
69	Establish CM Availability Schedule	TYCOM	Annually		<u>Establish CM Availability Schedule:</u> CMAV Schedules are established annually at the fleet scheduling conferences. TYCOM will publish routine updates as they occur for the CMAV schedules.
70	Establish Availability in the appropriate IT system	RMC C300	As Required		<u>Establish Availability in the appropriate IT system:</u> Availabilities will be established in the applicable planning data base when known or work is ready to be screened.

APPENDIX D₁

COST SURFACE SHIP AVAILABILITY MILESTONES

EVENT#	Task or Milestone	Responsible Activity	CMAV-COST	ADDITIONAL NOTES	DESCRIPTION
71	100% of D-level maintenance work package 2Ks locked based on target control.	Ashore Ships Maintenance Manager	A-60		<u>100% of D-level maintenance work package 2Ks locked based on target control:</u> Intent is that 100% of the expected AWRs have been screened to the CMAV. The planning activity continually develops specs in the most cost effective manner and does not batch this work in front of the next package development milestone.
72	100% of D-level maintenance work package 2Ks planned, estimated	Planning Activity	A-50		<u>100% of D-level maintenance work package 2Ks planned and estimated:</u> The requirement is that all work brokered by the 100% lock milestone must be planned to include Work Item complete and LLTM identified and estimated with minimum quality as described as a "Class C" estimate.
73	IGE Submitted in support of 100% lock	RMC C300	A-50		<u>IGE Submitted in support of 100% lock:</u> The requirement is that all work Planned in support of the 100% lock milestone must be estimated by the government with minimum quality as described as a "Class C" estimate.
74	Planning Activity "publish" package in the appropriate IT system	Planning Activity	A-45		<u>Planning Activity "publish" package in the appropriate IT System:</u> This is the act of issuing a final specification package for the availability that will be used to formulate a proposal. All work after this date will be handled as supplemental or new work.
75	Final Work Item Review and Approval	RMC C300	A-45		<u>Final Work Item Review and Approval:</u> Work Item reviews must be accomplished on a routine drumbeat established by the MT with the final work item review being completed in support of the established publishing date for the specification package. This will include the final quality, technical and contractual review of the work items (contractual must include legal requirements i.e.; if sole source: is there sole source justification?).

APPENDIX D₁

COST SURFACE SHIP AVAILABILITY MILESTONES

EVENT#	Task or Milestone	Responsible Activity	CMAV-COST	ADDITIONAL NOTES	DESCRIPTION
76	I-level work package fully brokered	Ashore Ship Maintenance Manager	A-40		<u>I-level work package fully brokered</u> : Intent is to fully broker all known Intermediate Level work to I-level by this date.
77	Contractor submit final package cost proposal	Contractor	A-35		<u>Contractor submit final package cost proposal</u> : This is the date that the Prime contract holder must submit their valid and complete cost proposal. It must be in compliance with the DCAA's "CRITERIA FOR ADEQUATE CONTRACT PRICING PROPOSALS" associated with an option within the contract in support of a defined scope of work.
78	I-level work package fully accepted	RMC C900	A-33		<u>I-level work package fully accepted</u> : Intent is for I-level to accept or reject all work brokered to it up to this point in time, work entering later in the process will be subject to normal Business Case Analysis and will likely need to be inducted into the work package as new work.
79	Submit I-level work package and schedule to contractor for integration	RMC C900	A-30		<u>Submit I-level work package and schedule to contractor for integration</u> : The LMA must develop an inclusive, detailed, integrated and resource-loaded schedule of all participating activities. All participants must meet and review the proposed plan and make necessary adjustments to render a balanced and optimized integrated schedule. This formal schedule review must occur after the WPIC, but no later than the Work Package Execution Review. The NSA or LMA must serve as the final arbiter of conflicts. By the Work Package Execution Review, all integrated schedule conflicts must be resolved by the NSA or LMA.

APPENDIX D₁

COST SURFACE SHIP AVAILABILITY MILESTONES

EVENT#	Task or Milestone	Responsible Activity	CMAV-COST	ADDITIONAL NOTES	DESCRIPTION
80	BCM and Negotiations Complete	RMC C400	A-22		<u>BCM and Negotiations Complete</u> : Negotiation is a procedure that includes the receipt of proposals from offerors, permits bargaining and usually affords offerors an opportunity to revise their offers before award of a contract. Bargaining, in the sense of discussion, persuasion, alteration of initial assumptions and positions, and give-and-take, may apply to price, schedule, technical requirements, type of contract or other terms of a proposed contract. Upon completing negotiations, a price negotiation memorandum must be developed. It should document the purpose and results of the negotiation, the extent to which negotiation objectives were met and the basis for accepting a position that departs from the established objective.
81	Definitize Work Package	RMC C400	A-18		<u>Definitize Work Package</u> : The culmination of the contractual planning efforts resulting in a negotiated price for the availability that has been funded via a supplemental agreement. This step contractually obligates both the government and contractor to the requirements of the Work Package.
AVAILABILITY CLOSE OUT - START OF NEXT CYCLE (RMC or SURFMEPP RESPONSIBILITY)					
82	Start of Availability	RMC C300	A-0		<u>Start of Availability</u> : The first day of the production period for the executing activity.

APPENDIX D₁

COST SURFACE SHIP AVAILABILITY MILESTONES

EVENT#	Task or Milestone	Responsible Activity	CNO COST	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
83	Conduct Departure and Assessment Conference	RMC C300	C+0		<u>Conduct Departure and Assessment Conference:</u> To verify completion of all work assigned to the availability or to document exceptions. Exceptions must have a plan for completion with an estimated completion date and must be tracked through completion. This conference will establish the date and conditions under which the TYCOM and NAVSEA will accept redelivery of the ship.
84	Issue Completion Report	NSA	C+60		<u>Issue Completion Report:</u> NAVSEAINST 4710.8 series details the requirements for availability completion reporting which must include financial as well as production and exception reporting.
85	SURFMEPP BAWP Close-Out Meeting	MT, RMC, TYCOM, SURFMEPP	C+70		<u>SURFMEPP BAWP Close-Out Meeting:</u> To identify "A" branded BAWP requirements that were completed, not completed or deferred. To establish requirements for the next FRP Maintenance Cycle and to review outstanding DFS.
86	Verify Completion of Departure Report and Close Out of Avail in the Appropriate IT System	RMC C300	C+90		<u>Verify Completion of Departure Report and Close Out of Avail in the Appropriate IT System:</u> Purpose is to verify that financial information, AWRs and work items, as applicable, have been uploaded and closed out in the appropriate IT system as required by NAVSEA Standard Item 009-99.
87	Submit Final BAWP Close-Out Report	SURFMEPP	C+100		<u>Submit Final BAWP Close-Out Report:</u> Purpose is to document the results (including follow up action items) resulting from the Close Out Meeting.
88	Conduct the Corrosion Planning Conference	SURFMEPP	C+115		<u>Conduct the Corrosion Planning Conference:</u> Supported by CNSF, TYCOM, SEA 21, CNRMC FLAGS and RMC Commanders.

APPENDIX D₁

COST SURFACE SHIP AVAILABILITY MILESTONES

EVENT#	Task or Milestone	Responsible Activity	CNO COST	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
89	Life Cycle Planning Conference (LCPC) Meeting	SURFMEPP	C+140		<u>Life Cycle Planning Conference (LCPC) Meeting:</u> The LCPC agenda will include a review of the planning schedule, required CMP assessments, NDE modernization forecasts, CNO Availability services and routines as applicable, organizational responsibilities and DFSs.
90	Upload BAWP task to ship's CSMP	SURFMEPP	C+150		<u>Upload BAWP task to ship's CSMP:</u> SURFMEPP will upload a data file with all mandatory maintenance actions and expected CNO Availability services into the ship's CSMP in support of ship-specific MT screening and brokering requirements. The data file will span approximately ten (10) calendar quarters and will include the requirements through C+120.
91	Issue Post-LCPC Planning Schedule Letter	SURFMEPP	C+150	After last CNO Availability Completion	<u>Issue Post-LCPC Planning Schedule Letter:</u> SURFMEPP issue planning schedule letter containing outstanding action items from the LCPC as well as communicating the remaining BAWP-specific JFMM milestones through avail execution.
92	TSRA-5 Discrepancies Screened	Ashore Ships Maintenance Manager	C+360	Done after intermediate training phase and should be completed 90 days prior to deployment.	<u>TSRA-5 Discrepancies Screened:</u> This event is the final validation of equipment prior to the ships deployment.

APPENDIX D₂

FIRM FIXED PRICE (FFP) SURFACE SHIP AVAILABILITY MILESTONES

EVENT #	Task or Milestone	Responsible Activity	TPP CNO FFP	CNO FFP (FDNF)	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
CNO ADVANCE PLANNING PROCESS (SEA 21 RESPONSIBILITY)						
1	Establish CNO or CM Availability Schedule	TYCOM N1	A-720	A-720		<u>Establish CNO or CM Availability Schedule:</u> Schedule established per the Fleet Response Plan maintenance cycle. TYCOM will publish routine updates in Navy Data Environment (NDE) as they occur.
2	Issue Execution Planning Hull Modernization Plan (EHMP)	SPM	N/A	Varies		<u>Issue Execution Planning Hull Modernization Plan (EHMP):</u> In support of MMBP development, in March of each year, SPMs will deliver an EHMP listing all program SCs scheduled for each active ship under their cognizance to the RMCs. TYCOMs will deliver an EHMP listing all scheduled fleet SCs for each active ship under their cognizance to the RMCs. The EHMP will contain all SCs scheduled for the next fiscal year and the first quarter of the following fiscal year. It is a snapshot of the current maturity and authorization status and industrial man-day and material estimates for SCs scheduled for installation in the next fiscal year.
3	Issue 2-year rolling Advance Planning Hull Modernization Plan (AHMP)	SPM	N/A	Varies		<u>Issue 2-year rolling Advance Planning Hull Modernization Plan (AHMP):</u> An AHMP for all active ships must be provided by the cognizant SPM to each RMC in July each year in support of the A-810 to A-450 rolling HMP NMP milestone and development of SPM Advance Planning Letters. The AHMP will contain all Program and Fleet SCs planned for the year after the next fiscal year (Example: JUL 2006 release is for FY 2008). The RMC is advised of the planned SCs for installation to facilitate necessary long lead-time planning efforts for ships under their cognizance.

APPENDIX D₂

FIRM FIXED PRICE (FFP) SURFACE SHIP AVAILABILITY MILESTONES

EVENT #	Task or Milestone	Responsible Activity	TPP CNO FFP	CNO FFP (FDNF)	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
4	Request funding for repair work item development	Third Party Planning (TPP) COR	A-560	N/A		<u>Request funding for repair work item development:</u> Request necessary funding from TYCOM to plan Availability.
5	Request funding from PARM for modernization work item development	SEA21, PMS407	A-560	N/A		<u>Request funding for PARM for modernization work item development:</u> Validate and update the Modernization Plan and request funding to proceed with material procurement and scheduling installations with Resource Sponsor. Confirm that funds exist in the budget to fully execute the Ship Change (SC).
6	C+150 Post LCPC Letter	SURFMEPP	A-560	A-560		<u>C+150 Post LCPC Letter</u>
7	Establish Third Party Planning (TPP) Tech Instruction (TI)	TPP COR, SEA024	A-540	N/A		<u>Establish Third Party Planning (TPP) Tech Instruction (TI):</u> A Technical Instruction (TI) is to be drafted by the TPP COR and issued by NAVSEA 024 TPP PCO. This function authorizes the TPP to begin the Planning process.
8	Establish work split strategy for Modernization	SEA21, PMS407	A-540	N/A		<u>Establish work split strategy for Modernization</u>
9	Contract Determination Point (CDP): Coast Wide or MAC-IDIQ	SEA21, PMS407	A-540	N/A		<u>Contract Determination Point:</u> Coast Wide or MAC-IDIQ: The CDP is the documented decision by PMS 407 that establishes whether an availability will be a Coast Wide competition or will be restricted to Homeport or MAC-IDIQ.

APPENDIX D₂

FIRM FIXED PRICE (FFP) SURFACE SHIP AVAILABILITY MILESTONES

EVENT #	Task or Milestone	Responsible Activity	TPP CNO FFP	CNO FFP (FDNF)	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
10	Issue Initial Letter of Authorization	SPM	A-540	A-540 (A-360)		<u>Issue Initial Letter Of Authorization:</u> NAVSEA and TYCOM Letters of Authorization (LOA) are issued showing all modernizations scheduled for the CNO Availability. The SPM LOA specifies to the NSA the SCs approved to be accomplished during a specific ship CNO availability. Forecasted ship changes may be viewed through the NDE database and continuing throughout the BAWP to AWP development process. This list will be reviewed at each BAWP Milestone Meeting. Items from this list will not be entered into the ship's CSMP until they have been reconciled with an issued LOA.
11	Provide availability target control	TYCOM	A-540	A-360		<u>Provide availability target control:</u> A financial control is required in order to establish the Availability Planning Requirements.
12	Purchase Request submit to NAVSEA 02	SEA21	A-540	A-540		<u>Purchase Request submit to NAVSEA 02</u>

APPENDIX D₂

EVENT #	Task or Milestone	Responsible Activity	TPP CNO FFP	CNO FFP (FDNF)	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
13	Issue Request for the EP Proposal to the planning activity. Notify each funding sponsor of the requirement and amount of funding for Execution Planning. Provide no later than date for required funding.	RMC C300	N/A	A-410		<u>Issue Request for the EP Proposal to the planning activity. Notify each funding sponsor of the requirement and amount of funding for Execution Planning. Provide no later than date for required funding:</u> Develop Execution Planning CLIN MSC Work Item. Develop Independent Government Estimate (IGE), and Issue RFP for Planning. Notify each funding sponsor of the requirement for Planning funding. Provide “no later than date” for required funding. Each funding Sponsor is required to fund the Planning Costs associated with their requirements. If an advanced LOA is not available, the SEA21 Monthly Advanced Planning Letter will be used to estimate the Modernization Sponsor’s cost. Funding must be received in order to ensure Work Item development and Long Lead Time Material (LLTM) identification can start in conjunction with issuance of the AWP and LOAs.
14	Provide incremental funding for ordering LLTM	SYSCOM SPM, TYCOM	A-540	N/A		<u>Provide incremental funding for ordering LLTM:</u> Provide incremental funding for ordering Long Lead Time Material (LLTM) for both Maintenance (Repair) and Modernization (Alterations).
15	Establish Availability in NMD	RMC C300	A-539	A-360		<u>Establish Availability in the Navy Maintenance Database (NMD):</u> Availabilities will be established in the NMD base when known or work is ready to be screened.
16	All BAWP tasks screened to appropriate avail	TYCOM	A-510	N/A		<u>All BAWP tasks screened to appropriate avail</u>

APPENDIX D₂

FIRM FIXED PRICE (FFP) SURFACE SHIP AVAILABILITY MILESTONES

EVENT #	Task or Milestone	Responsible Activity	TPP CNO FFP	CNO FFP (FDNF)	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
17	Planning Yard (PY) Submit Funding Request for work assigned	Planning Yard	N/A	A-480		<u>Planning Yard (PY) Submit Funding Request for work assigned:</u> PYs request funding from the alteration sponsors for what they know they are going to be tasked to perform.
18	Fund or Task Ship Installation Drawing (SID) development	SPM, NSA, AIT, TYCOM	Coast Wide: A-465 MAC-IDIQ: A-405	A-330 (A-375)		<u>Fund or Task SID Development:</u> Alteration Sponsors task and fund appropriate party to develop SIDS (PY or Third Party). This is a Modernization milestone to ensure funding has been obligated in support of SID development or SID delivery milestones.
19	Send habitability project advance planning notice	TYCOM N43	A-450	A-420		<u>Send habitability project advance planning notice:</u> This TYCOM generated notice identifies Projects proposed for accomplishment, and provides work scope details including, if applicable, Ship's Force manpower requirements. This notice also requests Commanding Officer's comments, concurrence and commitment of resources to the proposed projects.
20	SC Design, Planning Funds provided	PARM, SPM, TYCOM	N/A	A-420		<u>SC Design and Planning Funds provided:</u> Funding is requested by the PY and the Alt sponsor is to provide the funding. The purpose is to accomplish site-specific advanced planning of the SC. The attention is redirected from overall SC applicability to design for installation on a specific hull or at a specific location. This includes finalized design (including ship check, site survey and drawings, technical installation instructions, etc.), initiation of procurement, pre-installation certification and testing, installation readiness reviews and risk assessments.

APPENDIX D₂

FIRM FIXED PRICE (FFP) SURFACE SHIP AVAILABILITY MILESTONES

EVENT #	Task or Milestone	Responsible Activity	TPP CNO FFP	CNO FFP (FDNF)	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
21	Installation Control Drawings (ICD)/, Installation Requirements Drawings (IRD) delivered to alteration developer or PY	PARM	N/A	A-420		<u>Installation Control Drawings (ICD) and Installation Requirements Drawings (IRD) delivered to alteration developer, PY:</u> ICDs and IRDs are equipment specific drawings and should be used as general guidance to develop Ship Specific, Ship Class Ship Installation Drawings (SID). SIDs are the authorized and approved drawings to be used by the IA's for shipboard implementation of SCs. ICDs and IRDs should be used as supplemental information where SIDs are deficient in specific guidance, and should be accompanied by a Liaison Action Record (LAR) prior to their use. Alteration Sponsors provide the ICD for SID development to the appropriate party (PY or Third Party).
22	Accomplish SURFMEPP Mid-Cycle Review	SURFMEPP	A-410	A-410		<u>Accomplish SURFMEPP Mid Cycle Review:</u> This is the SURFMEPP Mid Cycle Review of the ship's BAWP, CSMP, active DFSs, Class Advisories, routines, services, and the Availability Duration. All items will be reviewed and evaluated for branding. The MT will ensure 100% of BAWP is screened to a scheduled or future maintenance availability. The MT will screen all requirements to a maintenance period or availability (other than unfunded) within the current FRP maintenance cycle. This is the final verification prior to the BAWP change to the AWP. The A-360 Letter is the output.
23	LOA CH 1 issued	SPM, TYCOM	A-400	A-400 (A-180)	For FDNF see description for event #42	<u>LOA Change 1 issued:</u> After LOA Change 1 is issued, any change to the Fielding Plan in NDE-NM that requires SIDs or impacts ship distributed systems requires sponsoring activity to submit a late add impact assessment.

24	Revise TPP Technical Instruction (TI) to incorporate program modernization updates	TPP COR, SEA024	A-400	N/A		<u>Revise TPP Technical Instruction (TI) to incorporate program modernization updates:</u> This action is initiated by the TPP COR to add the Modernization planning work to the TI that was issued at A-540. Revision will be given to the SEA 024 TPP PCO who will execute the revision to the TI. This action authorizes the TPP to begin Planning Modernization work.
25	Update work split strategy for Modernization	SEA21, PMS407	A-400	N/A		<u>Update work split strategy for Modernization</u>
26	Modernization Ship Checks Complete for ship specific SID's	Planning Activity	Coast Wide: A-390 MAC-IDIQ: A-330	A-300 (A-315)		<u>Modernization Ship Checks completed:</u> Ship checks (Design, Verification, Production and Proofing) are accomplished in support of the development of SIDs. All ship checks will incorporate a validation and verification of actual Hull or Site configuration. This is a Modernization milestone to ensure all design ship checks are complete in support of the SID delivery milestone.
27	BAWP Turnover Letter	SURFMEPP, TYCOM	A-360	A-360		<u>BAWP Turnover Letter</u>
28	Validate Availability Target Control	SPM, TYCOM	Coast Wide: N/A MAC-IDIQ: A-360	N/A		<u>Validate Availability Target Control</u>

APPENDIX D₂

FIRM FIXED PRICE (FFP) SURFACE SHIP AVAILABILITY MILESTONES

EVENT #	Task or Milestone	Responsible Activity	TPP CNO FFP	CNO FFP (FDNF)	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
29	50% of D-level maintenance work package 2Ks locked based on target control	Ashore Ships Maintenance Manager	Coast Wide: A-360 MAC-IDIQ: A-305	A-240		<u>50% of D-level maintenance work package 2Ks locked based on target control:</u> Intent is that 50% of the expected 2Ks (work, not services) have been screened and WNs brokered to the planning activity via tasking memo. The planning activity continually develops specs in the most cost effective manner and does not batch this work in front of the next lock milestone.
CNO PLANNING PROCESS (RMC RESPONSIBILITY)						
30	Advance Planning to Planning Event	NRMC C300	N/A	A-355		<u>Advance Planning to Planning Event:</u> IPTD Overview Introduction of the IPTD Program to the Ship and MT. BAWP package review. AWP Package Review to include any planned habitability work scheduled for the avail and TYCOM funded alterations. Modernization Package review LOA, discussion of the PY drawing status including Ship checks (if they are funded), etc. Review schedule risk identified during BAWP process, start identification of overall availability risks. Select Planning Milestones to suit availability. Establish Communication plan or strategy and meeting or planning drumbeat.
31	Complete planning and estimating (P&E) of work assigned by the 50% work package lock milestone to include all CNO BAWP items	Planning Activity	Coast Wide: A-330 MAC-IDIQ: A-275	N/A		<u>Complete planning and estimating (P&E) of work assigned by the 50% work package lock milestone to include all CNO BAWP items:</u> The requirement is that all work brokered by the 50% lock milestone must be planned (Work Item complete and LLTM identified) and estimated with minimum quality as described as a "Class C" estimate.

APPENDIX D₂

FIRM FIXED PRICE (FFP) SURFACE SHIP AVAILABILITY MILESTONES

EVENT #	Task or Milestone	Responsible Activity	TPP CNO FFP	CNO FFP (FDNF)	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
32	Total Ships Readiness Assessment (TSRA)-1 Discrepancies Screened	Ashore Ships Maintenance Manager	A-320	A-240		<u>Total Ships Readiness Assessment (TSRA) 1 Discrepancies Screened:</u> TSRA-1 is a TYCOM-scheduled two-week ship-wide pre-deployment material condition assessment designed to identify work items for inclusion in the post-deployment maintenance availability. The goal of this phase is to reduce availability growth and new work, by providing the earliest possible identification of work, which is then notionally scheduled in an availability. This is a validation that the discrepancies identified as a result of TSRA-1 assessment has been screened by this date.
33	IGE Complete in support of 50% lock.	RMC C300	Coast Wide: A-305 MAC-IDIQ: A-245	A-190		<u>IGE Complete in support of 50% lock:</u> The requirement is that all work Planned in support of the 50% lock milestone must be estimated by the government with minimum quality as described as a "Class C" estimate.
34	Provide incremental funds for ordering LLTM for both repair and alt or mod work to meet required dates	SYSCOM, SPM, TYCOM	N/A	A-270 (A-315)		<u>Incremental funding:</u> Provide incremental funds for ordering LLTM for both repair and alt or mod work to meet required dates. This is an iterative process as LLTM is identified and funding is requested and authorized based on the lead time. It is incumbent on the Execution Planning Activity or MT to identify LLTM as soon as possible. LLTM is defined as any material with a delivery date in excess of 30 days.

APPENDIX D₂

FIRM FIXED PRICE (FFP) SURFACE SHIP AVAILABILITY MILESTONES

EVENT #	Task or Milestone	Responsible Activity	TPP CNO FFP	CNO FFP (FDNF)	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
35	Issue or Deliver SIDs to NSA for contractors and AITs	Planning Yard	Coast Wide: A-300 MAC- IDIQ: A-240	A-240		<u>Issue or deliver SIDs to NSA for contractors and AITs:</u> SID delivery is listed in the NMP MOM as a critical milestone. All SIDs must be issued to the NSA to ensure planning milestones can be met.
36	Finalize method of install for modernization	SEA21, PMS407	Coast Wide: A-300 MAC- IDIQ: A-240	N/A		<u>Finalize method of install for modernization</u>
37	Maintenance Ship Check	RMC or WFO	Coast Wide: A-285 MAC- IDIQ: A-225	A-210		<u>Maintenance Ship Checks Complete:</u> Intent is that all maintenance related ship checks will be completed as early as possible within the planning process however, no later than this milestone.
38	80% of D-level maintenance work package 2Ks locked based on target control	Ashore Ships Maintenance Manager	Coast Wide: A-285 MAC- IDIQ: A-225	A-210		<u>80% of D-level maintenance work package 2Ks locked based on target control:</u> Intent is that 80% of the expected 2Ks (work not services) have been screened and WNs brokered to the planning activity via tasking memo. The planning activity continually develops specs in the most cost effective manner and does not batch this work in front of the next lock milestone.

APPENDIX D₂

FIRM FIXED PRICE (FFP) SURFACE SHIP AVAILABILITY MILESTONES

EVENT #	Task or Milestone	Responsible Activity	TPP CNO FFP	CNO FFP (FDNF)	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
39	Submit Deferral Letter with Maintenance Team Assist	TYCOM N43	Coast Wide: A-285 MAC-IDIQ: A-220	A-220		<u>Submit Deferral Letter with Maintenance Team Assist:</u> TYCOM will submit a Change Deferral Request Letter to SURFMEPP, which will include a list of Change Deferral Requests for subject FRP Maintenance Cycle.
40	Identification of AIT support requirements and required milestones	SEA21, PMS407	Coast Wide: A-280 MAC-IDIQ: A-220	A-220 (A-180)		<u>Identification of AIT support requirements and required milestones:</u> If the AIT will require industrial support, (e.g., crane and rigging services, welding or burning, compressed air), during accomplishment of the alteration or SC, additional information (OPNAV Form 4790/2K) requesting these services will be provided for loading into the CSMP shore file. The AIT Manager, or their designated representative, will prepare information for the creation of a 2K/JCN. In addition, if required by the NSA, any required support services must be specified using 4790/2K. The planning activity can then prepare a 4E specification work item per Volume VII, Chapter 4, Appendix E of this manual for inclusion in the CNO availability work package for private sector industrial availabilities, or a job summary and Task Group Instruction (TGI) for Naval shipyard availabilities.
41	Complete planning and estimating (P&E) of work assigned by the 80% work package lock milestone.	Planning Activity	Coast Wide: A-265 MAC-IDIQ: A-205	N/A		<u>Complete planning and estimating (P&E) of work assigned by the 80% work package lock milestone:</u> The requirement is that all work brokered by the 80% lock milestone must be planned (Work Item complete and LLTM identified) and estimated with the minimum quality described as a "Class C" estimate.

APPENDIX D₂

FIRM FIXED PRICE (FFP) SURFACE SHIP AVAILABILITY MILESTONES

EVENT #	Task or Milestone	Responsible Activity	TPP CNO FFP	CNO FFP (FDNF)	COMMENTS OR REMEDIAL ACTION	DESCRIPTION
42	IGE complete in support of 80% lock	RMC C300	Coast Wide: A-250 MAC-IDIQ: A-190	A-185		<u>IGE Complete in support of 80% lock:</u> The requirement is that all work Planned in support of the 80% lock milestone must be estimated by the government with the minimum quality described as a "Class C" estimate.
43	LOA CH 2 issued and Modernization Package Lock	SPM	Coast Wide: A-240 MAC-IDIQ: A-240	A-240 (A-120)	For FDNF see description for event # 56	<u>LOA CH 2 issued and Modernization Package Lock:</u> The SPM must prepare and issue the LOA. The A-120 LOA will identify any planned SCs identified in the initial letter that have reached maturity. All SCs that have not reached maturity or do not have an approved impact assessment will be deferred from the availability with the exception of Sustainment Type SCs which must meet this criterion by A-75.
44	All Modernization Risk Assessments (including waivers) submitted	SPM	A-235	A-235 (A-175)		<u>All Modernization Risk Assessments (including waivers) submitted:</u> Complete all required design, procurement of material, pre-installation testing, and obtain all required certifications, impact assessment(s) prior to final installation. Evaluate maturity of an installation and determine if the SC is ready for installation. Perform an impact assessment for SCs that have not achieved maturity per the Navy Modernization milestone charts to determine whether or not to proceed with installation planning.

CHAPTER 3
MAINTENANCE WORK CLOSEOUT

REFERENCES.

- (a) NAVSEA SI 009-99 - Ship Departure Report; Provide
- (b) NAVSEAINST 4790.8 series - Ship's Maintenance and Material Management (3-M) Manual
- (c) NAVSEAINST 4790.14 series - Ship Departure and Alteration Completion Reports

3.1 **PURPOSE.** This chapter provides procedures and guidance regarding ship and submarine maintenance and modernization work candidate closeout. These rules apply to Maintenance Activities (MA), Maintenance Teams (MT), Regional Maintenance Centers, Fleet Maintenance Activities (FMA), Naval Shipyards, Systems Commanders sponsoring Program Alterations and other Alteration Installation Team sponsors.

3.2 **SCOPE.** This chapter covers the process and responsibilities for closing all Form 4790/2K (2-kilos) work candidates that were screened and brokered to an activity other than Ship's Force.

3.3 **BACKGROUND.** Prior to changes in the work closeout process, 2-kilos executed in shipyards (public and private), by intermediate-level activities, and technical assistance organizations often did not get closed until long after the work was completed, and then often by someone unfamiliar with the actual work accomplished. Additionally, even though shipyards provide completion data in the form of departure reports following an availability, that information was either not captured in Ship's Maintenance and Material Management (3-M) History or captured manually. This means that useful data was not seamlessly making its way into the Navy's maintenance data warehouse. Since this data is used to determine troubled systems, identify trends in system health, identify causes and solutions to expensive growth work, update cost estimates in the Master Specification Catalogs, update return costs in the Open Architecture Retrieval System database, program for future maintenance budgets, identify the most cost-efficient periodicity for scheduled assessments, and identify candidates for alterations or assessments, it is critical that it be captured and made readily available to all users. This chapter provides the required means to close and report accurate completion data for all 2-kilos executed by other than Ship's Force personnel.

3.4 **WORK CLOSEOUT PROCEDURES.**

3.4.1 **Depot Maintenance Activity Responsibilities.**

3.4.1.1 **Private Shipyards Using the Navy Maintenance Database.** Comply with reference (a) for submission of cost and completion information directly in Navy Maintenance Database (NMD) for each work specification and Request for Contract Change (RCC). No other ship departure reports should be created or distributed because stakeholders can print standardized departure reports that contain the required data directly from NMD. Submission of cost and completion information is required within 60 days after the completion of an availability (including

Continuous Maintenance Availability), or within 60 days after completion of the work for emergent maintenance or unscheduled continuous maintenance. This data can be entered either directly in NMD Planning or through a computer-to-computer connection to NMD. The MA must notify the MT when cost and completion information has been entered.

- a. For Surface Forces: If the work item is a Class Maintenance Plan (CMP) scheduled maintenance task or assessment, include the As Found Condition as part of the Final Action code (see paragraph B-2.5.2 of Appendix B to reference (b) for code definitions).
- b. For Submarine Force: If the work item is a CMP (Periodic Maintenance Requirement or Unrestricted Operation), see Volume VI, Chapter 24 and 25 of this manual.
- c. For Firm-Fixed-Price contracts, the completion costs are, by definition, the award costs for original work and the Regional Maintenance Center-approved RCC costs for growth and new work. As such, for Firm-Fixed-Price availabilities, cost information for original work items must be entered by the Project Manager directly in NMD Execution on the Work Item Management screen cost tab after award, and cost information for RCCs must be entered by the Negotiator directly in NMD Execution on the RCC Management screen during RCC settlement. These cost values will populate to the Actual Return Cost screen in NMD Planning and are not editable by the MA. However, completion information (Final Action and Completion Date) must still be entered in NMD just as it is for Cost contracts.
- d. Once the MA enters the required information and the MT closes the availability, NMD automatically prorates completion costs from the work specification to the 2-kilos that make up the specification based on the proportion of the most recent estimates. NMD also submits a “growth 2-kilo” for each completed growth or growth on new work RCC. A growth 2-kilo is used strictly for documentation purposes, getting its information from the “parent” 2-kilo and cost and completion data from the RCC. It requires no additional actions by, and should be transparent to, the MA or MT.

3.4.1.2 Naval Shipyards and Facilities Using Advanced Industrial Management (AIM) or AIM Express (AIMXP). Comply with reference (c) for submitting Ship Departure Reports. AIM (via AIMXP) transmits 2-kilo cost and completion information to the brokering Information Technology (IT) system automatically based on labor entries and material transactions made during availability execution. Users should follow local instructions for AIM operations.

3.4.1.3 Depot Maintenance Activities Not Using Navy Maintenance Database or Advanced Industrial Management. The MA is responsible for providing to the Ashore Ship’s Maintenance Manager (or Immediate Superior in Command for submarines), within 60 days after completion of the work, the man-days, labor costs, material cost, total cost, date completed, and the Final Action code (see paragraph B-2.5.2 of Appendix B to reference (b) for code definitions) for each 2-kilo. At the time of submission, return costs must be the best prediction of the final costs for that 2-kilo. If the costs are not finalized when the MA reports return cost data (i.e., there are outstanding invoices), report costs from the Final Cost Report or equivalent financial report. Additionally, if the 2-kilo was a scheduled task generated by the CMP, the MA must report the As Found Condition (the second character in the Final Action code).

3.4.2 Fleet Maintenance Activity Responsibilities.

3.4.2.1 Fleet Maintenance Activities Managing 2-kilos Using AIM, AIMXP, Advanced Industrial Management for Regional Maintenance Centers (AIM4RMC) or Tech Assist, Assessments and Scheduling Information Software (TAAS-INFO). AIMXP, AIM (via AIMXP), AIM4RMC and TAAS-INFO transmit 2-kilo cost and completion information to the brokering IT system automatically based on labor entries and material transactions made during 2-kilo execution. FMAs working 2-kilos assigned to these IT systems should follow local instructions for AIMXP, AIM, AIM4RMC or TAAS-INFO operations.

3.4.2.2 Fleet Maintenance Activities Managing 2-kilos Using Logistics Data System. Logistics Data System (LDS) transmits a portion of the required cost and completion information to the brokering IT system. The information that is transmitted can be used to calculate the missing information with a reasonable level of accuracy. Naval Sea Logistics Center has implemented a procedure in Ship's 3-M History to calculate and fill in the missing information. FMAs should follow local instructions for LDS operations.

3.4.2.3 Fleet Maintenance Activities Managing 2-kilos in a System Other Than AIM, AIMXP, AIM4RMC, TAAS-INFO or LDS. The FMA is responsible for coordinating with the applicable Ashore Ship's Maintenance Manager, within 60 days after completion of the work, to enter in the brokering IT system the man-days, labor costs, material cost, total cost, date completed, and the Final Action code (see paragraph B-2.5.2 of Appendix B to reference (b) for code definitions) for each 2-kilo. Additionally, if the 2-kilo was a scheduled task generated by the CMP, the FMA must report the "As Found Condition" (the second character in the Final Action code).

3.4.3 Maintenance Team Responsibilities.

- a. The MT, led by the Ashore Ship's Maintenance Manager, is administratively responsible for all work screened and brokered to an activity other than Ship's Force.
- b. Depending on the settings of the brokering IT system, 2-kilos may require both a "Maintenance Activity Completion" and a "Customer Completion" to fully close the 2-kilo. CMP, non-modernization "Z" 2-kilos that originate from the Surface Maintenance Engineering Planning Program (SURFMEPP) will be assigned a "Maintenance Activity complete" closure method, which will allow the task to be closed by the Maintenance Activity upon completion of work and the task Lead Maintenance Activity be updated in the CMP. The Type Commander Representative (or Immediate Superior in Command for submarines), or Ship's Force must "Customer Complete" all remaining open 2-kilos executed in the availability no later than 90 days after the completion of an availability (including Continuous Maintenance Availability), or no later than 90 days after completion of the work for emergent maintenance or unscheduled continuous maintenance.
- c. If a 2-kilo was created in the brokering IT system, it may not appear on the ship's Current Ship's Maintenance Project. These 2-kilos may need to be "Customer Completed" by the MT on behalf of the ship.

3.4.3.1 Work Executed by Private Shipyards Using the Navy Maintenance Database. The following steps must be followed by the MT to properly closeout the work.

- a. After notification that the MA entered cost and completion information data in NMD, but not later than 90 days after the completion of an availability (including Continuous

Maintenance Availability), or no later than 90 days after completion of the work for emergent maintenance or unscheduled continuous maintenance, enter Government Furnished Material costs for each specification and RCC in NMD Planning and set the Actual Cost Tab to “Complete”.

- b. Change the Avail Status to “Closed” and enter the Closed Date in NMD Execution. This transmits the cost and completion information to the brokering IT system and creates a “Maintenance Activity Completion” for the executed 2-kilos.
- c. Obtain validation that the work was accepted by Ship’s Force.
- d. Close any 2-kilos not closed by the ship or auto-closed by the brokering IT system by completing a “Customer Completion”. They can be closed individually, or group selected and closed.
- e. When an availability is closed in NMD, all 2-kilos that were in the work package will be closed. It is not possible to keep 2-kilos that were not accepted or not worked from getting a “Maintenance Activity Completion”. For that reason, if the work is not acceptable by the end of the availability, a new 2-kilo, referencing the original 2-kilo in the narrative text, should be created to document the remaining deficiencies. This new 2-kilo will then be screened and brokered to the appropriate MA for a future availability.

3.4.3.2 Work Executed by Maintenance Activities Using AIM, AIMXP, AIM4RMC, LDS or TAAS-INFO. These IT systems automatically report cost information and create a “Maintenance Activity Completion” for 2-kilos executed using those systems. The following steps must be followed by the MT to properly closeout the work:

- a. Obtain validation that the work was accepted by Ship’s Force.
- b. Close any 2-kilos not closed by the ship or auto-closed by the brokering IT system by completing a “Customer Completion”. They can be closed individually, or group selected and closed.

3.4.3.3 Work Executed by Maintenance Activities Not Using NMD, AIM, AIMXP, AIM4RMC, LDS or TAAS-INFO. 2-kilos executed outside of these IT systems will not automatically have their costs transmitted to the brokering system, nor will a “Maintenance Activity Completion” be recorded. Instead, the required cost and completion information must be entered directly in the brokering IT system. The following steps must be followed by the MT to properly closeout the work:

- a. Upon receipt of cost and completion information from the MA, enter this information in the brokering IT system and complete a “Maintenance Activity Completion”.
- b. Obtain validation that the work was accepted by Ship’s Force.
- c. Close any 2-kilos not closed by the ship or auto-closed by the brokering IT system by completing a “Customer Completion”. They can be closed individually, or group selected and closed.

VOLUME II**PART III****FOREWORD****MISSION FUNDED FLEET MAINTENANCE ACTIVITIES**

1.1 PURPOSE. Volume II, Part III of this manual provides procedures and guidance which reasonably ensure that accounting for work performed on or for a specific Navy ship's hull, ship class, or reimbursable customer's final product or service applies uniform costing policies and procedures for Fleet Maintenance Activities (FMA). Application of uniform costing practices and procedures is necessary to ensure comparability among FMAs costing procedures, reliability in development of activities' budget requirements and the proper funding of these requirements. The coordination of costing, budgeting and funding requirements will help ensure the maximum benefit from the consumption of resources by the FMAs.

1.2 SCOPE.

1.2.1 Applicability. The guidance contained in Part III of this volume is directive in nature and applicable to each FMA performing work on specific ship's hull, ship class, or reimbursable customer's final product or service and to outside organizations (contractors) performing maintenance work on specific ship's hull, ship class, or reimbursable customer's final product or service. This volume does not currently apply to organic depot maintenance organizations (naval shipyards) when a maintenance availability is conducted by organic assets of the depot facility or the reimbursable customer's order specifies the use of other specifications. It does apply to all contract maintenance work.

1.2.2 Authority. Part III of this volume is directive in nature and may be cited as authority for action as the need dictates. Where higher authority imposes more stringent requirements or conflicts exist, such requirements have precedence. Where conflicts exist with previously issued Commander, United States Fleet Forces Command, Commander, Naval Reserve Force, Type Commander (TYCOM) letters, transmittals and instructions, this manual takes precedence. When such conflicts are identified, they should be reported immediately to the Fleet and TYCOMs for resolution.

1.3 ORGANIZATION.

1.3.1 Basic Principles for Costing Maintenance. In order for maintenance costs records to be accurate, reliable and uniform, several principles must be adhered to:

- a. The individual worker must have a process that guides him or her in accurately charging performance of maintenance. (See Part III, Chapter 3 of this volume.)
- b. The supervisors (shop supervisors, Leading Petty Officers, etc.) and individual worker must be trained so that work can be charged correctly and in a timely manner. This training will provide the craftsman with the basic principle related to identifying direct versus indirect charges. (See Part III, Chapter 3 of this volume.)
- c. The maintenance charges recorded by the individual worker must have proper oversight and supervisory direction to assure management of the accuracy and completeness of the information. (See Part III, Chapter 5 of this volume.)

- d. The worker must be provided the correct charge number prior to commencing work. In the case where an individual worker utilizes multiple charge numbers, the supervisors are critical to ensure the proper charge number is used. (See Part III, Chapter 3 of this volume.)
- e. In order for all levels of management to have confidence that costs are accurate and complete, an appropriate level of independent testing or audit must be performed. The specific metrics and an assessment check list is provided. (See Part III, Chapter 5 of this volume.)

1.3.2 Special Requirements Associated with Maintenance Costing. In the course of accumulating maintenance costs, special actions may be required to achieve certain goals. Other actions not directly related to accumulating maintenance costs are required to assure accuracy and completeness of cost information. Other chapters in this volume discuss these:

- a. Resources (Organization). (See Part III, Chapter 3 of this volume.)
- b. Audits and assessments. (See Part III, Chapter 5 of this volume.)
- c. Retention of records. (See Part III, Chapter 4 of this volume.)

1.4 BENEFITS OF CAPTURING COSTS. In periods of increased competition for limited available funding, it is imperative that budget submissions and other requests for these limited funds be thoroughly justified. One of the more effective means of justifying funding requests is through the demonstration of the benefits and results achieved with previous successful funding efforts. As part of this justification, it is essential that these benefits and outcomes be tied to a specific result, that is in terms of maintenance to specific ship hulls, ship class or customer orders. Direct costs are those expenditures which result in a specific definable benefit to a specific Navy ship's hull, ship class, or reimbursable customer's final product or service. In contrast, indirect cost, while essential at some level, cannot be defined as benefiting a specific outcome. Obviously, it is not reasonable to have zero indirect cost but it is vital that cost that can be identified as benefiting a specific outcome be so identified. Programs that have the minimum indirect cost or overhead are generally looked upon as being more efficient and thus it is far easier to justify resources for efficient programs to support vital maintenance requirements than programs with high overhead.

VOLUME II
PART III
CHAPTER 1
UNIFORM COSTING POLICIES AND PROCEDURES
FOR FLEET MAINTENANCE ACTIVITIES

REFERENCES.

- (a) DoD Financial Management Regulation 7000.14-R - Volume 4, Chapter 21
- (b) DoD Financial Management Regulation 7000.14-R - Volume 4, Chapter 20

1.1 PURPOSE. To provide procedures and guidance necessary to accurately allocate cost for work performed on or for Navy ships, ship classes or customer projects by Fleet Maintenance Activities (FMA). Uniformly applying these costing practices and procedures will ensure comparability among FMAs costing procedures, reliability in development of activities' budget requirements and the highest probability of successfully funding these requirements. The requirements contained in Part III of this volume are directive in nature and mandatory for all FMAs.

1.2 UNIFORM COSTING POLICIES AND PROCEDURES. The following principles and guidelines were applied in establishing these uniform costing policies and procedures:

1.2.1 Function. Each function will be identified as being either a mission overhead (indirect) or a direct cost. Direct costs may be funded by either direct mission funds or by a reimbursable customer as appropriate. Overhead costs will be funded with direct mission funds.

1.2.2 Classification. Reclassification from overhead to direct or from direct to overhead must be fully justified and based on generally accepted accounting principles. Commander, United States Fleet Forces Command authorization is required prior to any reclassification.

1.2.3 Uniformity. The rules contained herein are mandatory, therefore, if all FMAs consistently apply these rules, a significant level of uniformity in their financial operations will be achieved. Where ambiguity exists with this guidance, the activity should immediately report the ambiguity to the Commander, United States Fleet Forces Command for clarifying guidance.

1.2.4 Control. Focus will be on controlling total cost and not the classification of costs. Controlling total cost of maintenance will help ensure the greatest return from the expenditure of the limited funding provided. Adherence to these requirements in this volume by the FMAs should eliminate the issues related to classification of cost, direct versus indirect.

1.2.5 Proration. Accurate costs are desired within reasonable economic considerations. Proration techniques are allowed under strict control when absolutely necessary due to the magnitude of the cost. Proration will be employed only when it is either not possible to accurately classify the cost or too expensive to classify the cost (cost versus benefit).

1.2.6 Unique or New Requirements. Unique customer requirements that result in procedures, methods, etc., which have no foreseeable use for the same or another customers' work, will be charged, in their entirety, to the requesting customer.

1.2.7 Performance. The decision to charge cost incurred to direct or indirect will be completely dependent on the function or operation being performed and not the employee's title.

1.2.8 Direct Cost Basic Definition. Reference (a) defines a production operation as a direct cost center. Direct costs, whether funded with direct mission funds or customer reimbursable funds, are defined as those items that can be identified to a specific ship's hull, ship class, end product or a customer order. Reference (a) also identifies direct costs as including labor of identifiable individual employees, material required for the job, travel and contracts or services required to complete the end product. Costs may be charged direct when the following criteria are met:

- a. Readily identifiable with the benefiting ship's hull, ship class, end product or customer order.
- b. The effort expended is conducive to uniform costing to a specific ship's hull, ship class, end product or a customer order.
- c. Readily definable and appraisable for planning, estimating and authorization of effort to be expended to a specific ship's hull, ship class, end product or a customer order.
- d. An individual employee's hours must be identifiable and measurable to a specific job. The FMA may not prorate labor hours at the end of a shift between direct and overhead or between direct Job Order Numbers. Cost proration within direct is permitted when absolutely necessary to accurately charge costs to the benefiting customers. Proration should be a rare occurrence.
- e. Direct labor may include:
 - (1) Craft and trade skill labor, production support such as crane operators and material handlers, planners and schedulers, project management team members, waterfront maintenance teams and class teams (including clerical support), Engineering Services (including Chief Test Engineers, Assistant Chief Test Engineers, Shift Test Engineers, Shift Refueling Engineers, and Chief Refueling Engineers), Technical Support which includes inspections, certifications, assessments, distance support and on-site technical assistance.
 - (2) Direct labor may also include project-related contract and fund administration, including but not limited to: contract managers, contracting officer's representatives, price and cost analysts, cost monitors, and quality assurance specialists.
- f. Where direct charging is indicated but the cost of the effort (including clerical) required for such charging makes it impractical or burdensome (cost versus benefit) and the direct charge is not material to the total cost of the project, the effort should be charged to overhead.

1.2.9 Mission Overhead Costs Basic Definition. Reference (b) states that overhead costs are those costs which pertain to departments supporting production departments. Overhead costs are defined as costs incurred at a FMA that CANNOT be directly identified and charged to a specific ship's hull, ship class, or end product, or customer order, but are necessary for the operation of the FMA.

2.1 **PURPOSE.** The purpose of this chapter is to provide detailed guidance regarding direct versus overhead (indirect) cost charges. While this chapter attempts to address all foreseeable categories of costs, it is recognized that an unforeseen cost category will likely materialize. In that case, please notify the Commander, United States Fleet Forces Command so that the situation may be addressed.

2.2 **TYPES OF COSTS.**

2.2.1 **Accommodation Storage and Handling.** Accommodation storage and handling represents the cost of handling and storing ship's equipment and stores taken off the ship when it is in the Fleet Maintenance Activity (FMA) for a conversion, alteration or repair.

- a. Overhead.
 - (1) Accommodation storage and handling, principally warehouse operations, which cannot be specifically identified and conveniently charged on a direct labor basis, must be charged to the overhead of the performing cost center.
 - (2) Warehouse operations related to accommodation storage provided by Supply Department personnel, which cannot be specifically identified and charged directly to a job order, must be charged to overhead.
- b. Direct Cost. The handling of a ship's equipment and stores and the subsequent accommodation storage, while the ship is undergoing conversion, alteration or repair, which can be identified with the ship involved, must be charged direct or to a service type productive job order. When production schedules dictate the presence of a safety monitor during hazardous operations, such as loading and off-loading of military explosives from ships, the safety monitor will be costed direct. Also, includes Q-Cosal actions. Warehouse operations related to accommodation storage for a specific ship's hull, ship class, end product or customer order must be charged to direct for the specific Job Order Number assigned the maintenance effort.

2.2.2 Administrative Assistance to Managers and Supervisors. Employees are assigned to assist managers and supervisors with administrative duties, paperwork, messenger services, correspondence, scheduling, etc. The duties consist of a number of operations, none of which are normally directly connected with a productive job order. This permits the supervisors to function more actively in a supervisory capacity.

- a. Overhead. Employees assigned as assistants to managers and supervisors must be considered as overhead personnel and must be charged to the expense of the parent shop or code.
- b. Direct Cost. When an administrative assistant is performing duties as part of project management or specific to a direct-funded job, such administrative assistance must be charged direct to the job.

2.2.3 Administrative Services for Tenants.

- a. Overhead. None.
- b. Direct Cost. Administrative services for tenants should be charged direct. Administrative services rendered tenant activities, which can be identified, in sufficient increments of time must be charged on a direct labor basis.

2.2.4 Allowance List Outfit Material Items - Outfit Supply Activity Furnished Material.

- a. Overhead. None.
- b. Direct Cost. All labor expended in obtaining, receiving, packing, stowing and delivery of Outfit Material items must be directly charged to Naval Supply funds.

2.2.5 Issue and Return of Anti-Contamination Clothing.

- a. Overhead. None.
- b. Direct Cost. When the cost of issue and return of anti-contamination clothing is identifiable to a specific Navy ship's hull, ship class, or reimbursable customer's final product or service it must be charged to that effort. All other costs associated with issue and return of anti-contamination clothing must be charged to a service type job order for prorating to nuclear work customers. The percentages for the prorating are to be determined by the Planning Department.

2.2.6 Funding Support of Board of Inspection and Survey. Per Chapter 20 of the U.S. Navy Regulations, the Board of Inspection and Survey (INSURV) is required to conduct acceptance trials, material inspections, surveys and such other inspections and trials of naval vessels. The regulations also provide that representatives from the systems commands and other naval activities will assist the INSURV on request. It is recognized that qualified maintenance personnel may be utilized to meet INSURV requirements, therefore, the responsibility for financing these services is established so that INSURV requests will receive prompt and effective response.

- a. Overhead. None.
- b. Direct Cost. The cost of personnel (salaries and overtime), travel and per diem required by the INSURV to assist in the conduct of trials and material inspections must be charged to customer funds.

2.2.7 Calibration of Instruments. All instruments, i.e., electrical, electronic and mechanical standards and non-standard instruments are included.

- a. Overhead. The cost of calibration for activity-owned mechanical and electrical or electronic test equipment and calibration standards must be charged to overhead. Exceptions are described in paragraph 2.2.7.b.
- b. Direct Cost.
 - (1) The cost of calibration of non-indigenous instruments to Fleet Maintenance Activity (FMA) electrical, electronic and mechanical standards, both local and reference, are to be charged to funds provided by the customer.
 - (2) All calibration of fleet-held electrical, electronic instrumentation and standards are to be charged to funds provided by the customer.
 - (3) The cost of special calibration performed on test equipment dedicated to specific programs and utilized for those programs will be funded by the appropriate customer.

2.2.8 Clerical and Office Automation Staff.

- a. Overhead. Clerical and Office Automation staff must be charged overhead, except as provided in paragraph 2.2.8.b.
- b. Direct Cost. When the clerical and Office Automation staff services are a significant ingredient to the end product or project and can be identified as directly supporting a project, these charges may be charged to the project.

2.2.9 Administration and Review of Contractor Work.

- a. Overhead. All design administrative services supporting contractor work, which are undertaken in conjunction with and in support of other productive services within the activity, must be charged to overhead.
- b. Direct Cost. Administrative and technical services supporting contractor work, not in support of other or additional productive effort of the activity, must be charged to a job order under the applicable customer order. Technical services supporting contractor work and the checking of plans returned by contractors, which is undertaken in conjunction with and in support of other productive services within the activity, must be charged direct. If the administrative and technical services are in direct support of a specific ship's hull, ship class, end product, or customer order, the services must be charged to direct cost.

2.2.10 Crane Operators.

- a. Overhead. Inside crane operators' time must be charged to overhead, when not dedicated to a single direct project.
- b. Direct Cost.
 - (1) Waterfront crane operators' and crane walkers' time must be charged as identified to service-type job orders, or to specific job orders when feasible. Crane operators used in the prefabrication of major ship structures, regardless of location, will be charged to the customer.

- (2) Crane services necessary for loading and unloading material or parts which, though not directly involved in productive work, have to be removed to permit the performance of productive work on a ship incident to an availability are chargeable to the customer order as a service type productive job order.
- (3) In the case where the FMA has a contract for the provision of crane services and the specific cost for crane services can be identified to a specific Navy ship's hull, ship class, or reimbursable customer's final product or service, those costs will be charged as direct. In the event that information is not available, the cost of the contract will be charged as an indirect cost.

2.2.11 Special Test and Certification of Cranes.

- a. Overhead. Regular test of cranes performed per Naval Facilities Engineering Command directives must be charged to overhead.
- b. Direct Cost.
 - (1) The cost of testing cranes performed at a customer's direction that are outside the time frames or with more stringent requirements than those specified by Naval Facilities Engineering Command directives must be charged to the customer establishing the requirement. When the more stringent requirement is applicable to a specific type of work or a specific task and more than one customer benefits, the cost will be charged to a service job order and prorated to the benefiting customers on the basis to be determined by the Planning Department.
 - (2) The cost to perform a technical assistance visit to a ship to troubleshoot or perform required test on a ship's crane is a direct charge.

2.2.12 Continuous Process Improvement.

- a. Overhead. Assigned as a Team Member to a process improvement event that is not directly associated with a specific Navy ship's hull, ship class or reimbursable customer's final product or service.
- b. Direct. Assigned as a Team Member to process improvement event that is directly associated with a specific Navy ship's hull, ship class or reimbursable customer's final product or service.

2.2.13 Data Processing Resources. Includes cost of administrating, programming, operating, rental and maintenance of FMA Automatic Data Processing Equipment, supplies and operating Automatic Data Processing Equipment in direct support of activity's Management Information System (MIS) applications and local applications, as well as claimant approved pilot installations.

- a. Overhead. The following categories of Data Processing Resources are considered overhead and properly chargeable to the Data Processing Office or Information Technology Department:
 - (1) All costs identified for operating the various standard activity MIS applications.
 - (2) All costs identified to the development and maintenance of the activity MIS applications as assigned by their major claimant.

- (3) All costs identified to the programming, testing and debugging of activity MIS improvement Automatic Data Processing (ADP) programs, except hardware, of local programs or the testing of corporate programs commencing at the point at which Central Design Agent provides the package to the activity.
 - (4) All labor costs identified to the implementation of the various activity MIS improvement program applications, (e.g., provide material, support, material requirements, etc.).
 - (5) Rental and maintenance cost including terminal and required ancillary equipment such as uninterrupted power supply.
 - (6) Augmentation to the standard activity MIS computer equipment configuration in support of activity MIS.
- b. Direct Cost.
- (1) Direct costs are recoverable via direct labor charges and through reimbursement rates when supported by an acceptable method of accounting which clearly identified the time used on various equipment for each job identifiable to a specific ship's hull, ship class, end product or customer order.
 - (2) Systems analysis and programming services as well as equipment rental and ADP material costs when provided for ADP applications which are either the end product or provided in support of activity customers. These provisions are not to be interpreted as authorization to charge activity customers for standard activity MIS reports.
 - (3) All costs where a clearly identifiable industrial customer is the principal beneficiary of the ADP resource, e.g., analysis, programming and associated material identified to the propeller profiler, rental of terminals, timesharing costs used for engineering or scientific calculations.

2.2.14 Decontamination of Equipment and Tools.

- a. Overhead. None.
- b. Direct Cost. The cost of decontamination of equipment or tools identified to a specific Navy ship's hull, ship class, or reimbursable customer's final product or service must be charged to that effort. All other costs associated with decontamination of equipment or tools must be charged to a service type job order for prorating to nuclear work customers.

NOTE: DELAY TIME SHOULD NOT BE CONFUSED WITH LOST TIME. LOST TIME OCCURS DUE TO EVENTS THAT ARE SIGNIFICANT OR CATASTROPHIC IN NATURE. LOST TIME IS TIME IN A WORK STATUS PRIOR TO RELEASE CHARGEABLE TO ADMINISTRATIVE LEAVE. FOR SPECIFICS, REFER TO LOST TIME.

2.2.15 Delay Time.

- a. Overhead. None.

- b. Direct Cost. Delay time occurs during the performance of productive work due to inherent causes which prevent the work from being accomplished in the most efficient manner. Delay time is charged directly to the actual work being performed when the delay occurs. Delay time may be a result of internal or external causes.

Examples (1) through (7) are causes of delay time internal to the activity and therefore within the activity's responsibility. Examples (8) through (10) are causes of delay time external to the performing activity.

- (1) Material. Time spent by mechanics waiting for material that should be available or time spent by them in procuring material beyond the designated point of delivery.
- (2) Tools and Equipment. Time spent in getting or waiting for tools and equipment the use of which should have been anticipated and brought to the job or their delivery scheduled.
- (3) Plans and Instruction. Time spent in waiting for plans and instructions or getting plans from a location beyond the designated point of delivery.
- (4) Waiting for Assist Trade. When an assist has been requested and the mechanic is unable to continue working.
- (5) Waiting for Supervisor.
- (6) Trade Interference. Held up by another trade which is not an assist to the trade held up.
- (7) Minor Power Failures. Time spent due to minor power failures caused by faulty temporary utility connections.
- (8) Waiting for ship to conduct required steps (Tag Out).
- (9) Held up by the ship while conducting a drill or security alert.
- (10) Held up during fueling or ammo handling.

2.2.16 Dive Lockers.

- a. Overhead. Diving services performed within the shop are for planning, administrative management, diving equipment maintenance, diver's life support systems maintenance, training, inspections, quality assurance, boat maintenance and cleanliness and cofferdam inventory control and are charged to overhead.
- b. Direct. Diving services performed outside shop areas are for underwater ships husbandry, dry-docking support of a particular ship and emergency salvage support. These are charged as direct costs to the appropriate productive job orders.

2.2.17 Dosimetry Issuing and Processing. Dosimetry processing is defined in Article 233 of reference (a).

- a. Overhead. None.
- b. Direct Cost. The cost of issuing and processing dosimetry used to monitor personnel radiation exposure must be charged to the benefiting customer.

2.2.18 Drills - Conducting and Participation. The time and costs for employees vacating the work site during mock or actual drill and employees assisting in the drill, i.e., street and building wardens and monitors. It does not include the time and costs of employees whose job is primarily associated with security and prevention such as fire, security and police personnel. These people will charge their normal cost class or function as well as the personnel who are conducting, supervising or administering the drill. Drills include radiological control, communication, disaster preparedness, perimeter security and fire (nuclear and non-nuclear).

- a. Overhead. All labor associated with conducting and participating in drills is considered overhead. Employees should be provided specifics to properly account for this time.
- b. Direct Cost. None.

2.2.19 Dry Dock Blocks and Dock Caps. Dry dock blocks are fabricated, reusable composite concrete and wooden timber structures. Dry dock caps are wooden structures which are appended to the dry dock block.

- a. Overhead. Fabrication or purchase of reusable dry dock blocks or caps.
- b. Direct Cost. Fabrication or purchase of dock wood caps, shapes, wedges, ties and shims to support a specific hull's requirement is charged to customer funds.

2.2.20 Dry Dock Operation.

- a. Overhead. Cost associated with the overall effectiveness of the Dry Dock Operation and not specifically identified to a customer.
- b. Direct Cost. Labor of operators during docking and undocking and while the vessel is in dock, including the costs of cleaning dry docks and caissons, must be charged on a direct labor basis against the productive job orders (multiple dockings must be prorated to the respective productive job orders).

2.2.21 Preparation of Engineering Procedures for Specific Authorized Work. Preparation of engineering procedures, such as Nuclear Power Engineering Authorizations, for specifically authorized work must be charged as:

- a. Overhead. The development of engineering procedures for specific authorized work that can be used for other customers.
- b. Direct Cost. The development of engineering procedures for specific authorized customer work is chargeable to the customer authorizing the work.

2.2.22 Equipment Maintenance. The cost of equipment maintenance includes maintenance of equipment, machine tools, machinery, plant equipment and office furniture. Government Furnished Equipment provided to the activity for use will be maintained in a similar preventive maintenance program.

- a. Overhead.
 - (1) The cost of labor and material incident to preventive maintenance inspection, lubrication and minor adjustments, repair, overhaul and subsequent performance testing of all equipment and their attachments.
 - (2) In the event routine maintenance and inspection indicate the necessity of major overhaul or repair, the maintenance cost will be charged to overhead.

- b. Direct Cost. When the maintenance of equipment is the service being requested by a customer, it will be charged direct. When repairs are due to customer negligence, the customer is responsible. Government Furnished Equipment certification and return of equipment to certification standards will be charged direct. For example: Processing of Hazardous Waste, Oil Waste.

Equipment used in support of a project should be placed in a Ready for Use Condition for the next customer. The customer (last user) is to provide a post-use job order for equipment refurbishment, replacement of worn out, damaged and lost equipment. Customer should also be charged for the labor for sorting and establishing equipment after use.

NOTE: OPERATOR'S COST REQUIRED BY THE EQUIPMENT RENTAL AGENCY TO ACCOMPANY RENTAL EQUIPMENT SHOULD BE CHARGED TO THE SAME JOB OR EXPENSE ORDER THAT AN ACTIVITY OPERATOR WOULD BE CHARGED.

2.2.23 Equipment Rental. A lease contract is considered an operating cost of the activity. However, if such a lease is for property or equipment, which may be offered for sale at a certain point in time, the activity may exercise an option to purchase. When this option is exercised, the cost to purchase may be changed from an operating cost to an investment cost. If the cost to acquire title at the time the option is exercised is \$250,000 or more and the item has a remaining useful life of more than 2 years, it is considered a purchased fixed asset, financed using Other Procurement Navy funds. Conversely, if at the time of conversion, the cost to acquire title is less than \$250,000 or the item has a remaining useful life of less than 2 years, such financing will be expensed. Regardless of the amount of credit given toward purchase, rental costs will remain an operating cost as initially charged and costs to purchase will be recorded as a capital investment. It is the responsibility of the maintenance activity to have on hand general purpose equipment to perform the required work.

- a. Overhead. Rental costs of equipment procured because there is insufficient equipment available to meet FMA workload requirements are charged to the overhead of the cost center with functional custody.
- b. Direct Cost. Rental costs of equipment rented to meet a specific customer's unique requirement or to fulfill a specific unique work requirement for a customer are charged as direct costs. The direct charging of equipment rental costs to a specific customer order is limited to the particular customer's requirements. Direct charging of rental costs required to supplement inoperative activity equipment is not authorized.

2.2.24 Disposal of Excess Plant Property.

- a. Overhead. The cost of removing, preparing and transporting of excess Class 3 or Class 4 plant property to be disposed of, which is incurred prior to acceptance of accountability by the property disposal officer, must be charged to overhead.
- b. Direct Cost. The cost of preparation for shipment, packing, loading, shipping and transporting incident to reference (b) donations of excess plant property must be charged to the applicant for such donation. After the property disposal officer accepts accountability for excess Class 3 or Class 4 plant property to be disposed of, costs incurred are properly chargeable to disposal funds.

NOTE: PARAGRAPH 2.2.25 APPLIES TO NON-GENERAL SERVICES ADMINISTRATION VEHICLES ONLY. FUEL FOR GENERAL SERVICES ADMINISTRATION VEHICLES IS INCLUDED IN THE LEASE COST. GENERAL SERVICES ADMINISTRATION VEHICLES DO NOT USE THE ON-BASE FUEL STATION. FUEL FOR VEHICLES TO SUPPORT SPECIFIC CUSTOMERS (OTHER COMMANDS, PROJECTS) IS A COST REIMBURSABLE DIRECT CHARGE.

2.2.25 Fuel.

- a. Overhead. Fuel such as petroleum products consumed in the generation of power or motor gas, for operating vehicles, weight handling, service craft and other such equipment.
- b. Direct. Fuel must be charged direct if special delivery arrangements were set up for a particular Ship project where deliveries were made exclusively.

2.2.26 Guarantee Work. Work performed by a maintenance activity must be guaranteed, i.e., deficiencies attributable to actions of the activity must be corrected at activity expense. The guarantee applies to work performed and materials procured by the activity, and to Government Furnished Materials and equipment only to the extent that the failure or deficiency directly results from the activity's acts or failure to act (in area of local responsibility).

- a. Overhead. None.
- b. Direct. When maintenance (Chief of Naval Operations, Continuous Maintenance, Emergent Availability, etc.) is complete the warranty period starts. The Maintenance Team will be notified and take appropriate action.

2.2.27 Incentive Awards Program for Civilian and Military Personnel Assigned to the Activity.

- a. Overhead. All supervisor's efforts and administrative services supporting the incentive awards programs within an individual productive or general expense cost center must be charged to overhead.
 - (1) Administration. Each activity should provide internal guidance on specific accounting structures for tracking of award programs.
 - (2) Cash Awards. All cash awards are to be charged at the discretion of each activity.
 - (3) Cash Incentive Awards for Military Personnel. These are limited to awards for scientific achievement, inventions and beneficial suggestions. No cash incentive can be given to a military person for performance based on reference (c).
 - (4) Civilian and Military Non-Monetary Awards. These awards are to be modest in cost (up to \$100.00 maximum), have no significant utilitarian value (e.g., medal, certificate, plaque, citation, badge, tie-tack, coffee mug, belt buckle or other similar item that carries an honorary award connotation).
- b. Direct. Awards paid on behalf of another activity.

2.2.28 Inspection, Including Non-Destructive Testing.

- a. Definitions.
 - (1) Level I is the highest level of inspection and applies to inspections performed on material identified to Level I per reference (d) or (e).
 - (2) Non-level I inspection is all other inspections identified in references (d) and (e).
 - (3) Non-level inspection is authorized for specific material per reference (f).
- b. Policy.
 - (1) All direct costs incurred in Level I inspections, non-level inspections and controlled industrial material inspections must be charged to the job and customer order. Overhead type functions (e.g., material handlers, clerks, supervisors, etc.), may be charged direct if dedicated to Level I inspections and the criteria for direct labor are met.
 - (2) Level II and III inspections may be charged direct if the criteria for costing direct labor in this manual are met.
 - (3) Non-level inspection costs will be charged the same as Level I.

2.2.29 Inspection Services. The general principle involved is that the customer is entitled to have the completed work given a normal inspection for proper accomplishment. If the cost of inspection is part of a package, then no additional costs should be incurred by the customer.

When an activity is providing quality assurance and oversight of contractor work as its mission, the quality assurance and oversight effort will be charged to the appropriate funds to support the specific customer.

- a. Overhead. The cost of developing procedures for conducting inspections or other quality control actions or the maintenance of records of such, is an overhead function of the performing cost center except when development of procedures is one time and will not be used for other customers, such work must be charged direct.
- b. Direct Cost.
 - (1) The cost of inspection or test of productive work and the associated or related engineering or technician costs must be charged direct when the criteria for direct costs in Volume II, Part III is met.
 - (2) The time of Inspector Foreman, when engaged in the aforementioned inspection duties must be charged as direct labor.
 - (3) Inspection services performed to determine the productive work to be accomplished must be charged direct, i.e., services rendered by engineers, inspectors, laboratory technicians and others performing inspection tests, Sea Trials and Dock Trials are also charged direct. Inspection work specifically requested by the customers is considered as a direct cost.

2.2.30 Installation of Equipment.

- a. Overhead. The cost of installation of activity equipment is charged to overhead. Exceptions are noted under Direct Cost. The cost of installation of customer equipment is direct.
- b. Direct Cost.
 - (1) The cost of installation of capital investment equipment (the purchase cost is \$250,000 or more with useful life of at least two years) is charged to the Other Procurement, Navy (OPN) funds purchasing the equipment if the installation is part of the contract (turnkey). In-house labor for installation would be overhead funded; material to support installation of equipment would be OPN funded.
 - (2) The cost of installation of built-in equipment associated with a military construction project is Military Construction funded; considered to be part of the bid (elevators, paint booths, etc.).
 - (3) The cost of installation of collateral equipment (Class III & IV) associated with military construction projects is charged to in-house overhead labor for installation unless the purchase cost of the equipment exceeds \$250,000, the guidance provided in paragraph 2.2.30 a. applies.

2.2.31 Janitorial Services and Work Area Clean-Up.

- a. Overhead.
 - (1) General clean-up details in shop's high security areas not accessed by contractor employees are charged to that shop or shop group.
 - (2) Clean up of approved eating areas must be charged to the shop or shop group that uses it.
- b. Direct. Productive personnel, when required to clean up their own immediate work areas or equipment incident to work on a productive job order, must be charged direct to the productive job.

2.2.32 Laundry Service.

- a. Overhead. Laundry service for military uniforms related to specific tasks such as color guard, linens for watch standers and shop rags.
- b. Direct Cost. Laundry service, which is provided by outside sources and is in support of customers or multiple ships, must be prorated and charged to all benefiting customers.

2.2.33 Lean.

- a. Overhead. This includes the permanently assigned staff, as well as those loaned from other shops and departments. If they are located in the Lean Office, they charge to the Lean Office job order. Employees attending Lean events, but not assigned to the Lean Office, will charge to their shop and department's overhead job orders, except as noted in paragraph 2.2.33.b.
- b. Direct. Employees working on a Lean event that are for a specific customer will charge to the project's job order.

2.2.34 Lost and Damaged Tools.

- a. Overhead. All tools that are lost, damaged or require refurbishment after use over a period of time by activity employees.
- b. Direct. Any tool in a Tool Kit that is damaged, needs refurbishment, or is wasted for a reason after being used to accomplish work on a project will be direct charged to the project.

NOTE: LOST TIME SHOULD NOT BE CONFUSED WITH DELAY TIME. DELAY TIME IS CHARGED TO A DIRECT JOB ORDER NUMBER ASSOCIATED WITH A SPECIFIC NAVY SHIP'S HULL, SHIP CLASS, OR REIMBURSABLE CUSTOMER'S FINAL PRODUCT OR SERVICE, OCCURS DURING THE PERFORMANCE OF PRODUCTIVE WORK DUE TO INHERENT CAUSES WHICH PREVENT THE WORK FROM BEING ACCOMPLISHED IN THE MOST EFFICIENT MANNER. (SEE DELAY TIME IN THIS CHAPTER.)

2.2.35 Lost Time.

- a. Overhead. Employees assigned to productive work and prevented from performing such work because of events, primarily unavoidable, but always of a significant or catastrophic nature. This would include but is not limited to, major power plant failures, fire or severe weather conditions that cause most, if not all, productive work to cease. Lost time is charged while the employees are in a working status. If the employees are released from duty, administrative leave would apply.
- b. Direct Costs. None.

2.2.36 Upkeep of Maintenance Equipment.

- a. Overhead. Upkeep costs of equipment used in the maintenance of grounds, streets, roads and walks, including the upkeep of equipment used in the collection of trash and garbage material.
- b. Direct. When maintenance represents the specific service requested by the customer, it will be charged direct.

2.2.37 Maintenance of Nuclear Equipment.

- a. Overhead. The costs of maintenance of equipment used exclusively in the area of nuclear work.
- b. Direct. Equipment used in support of a project should be placed in a Ready for Use Condition for the next customer. The customer (last user) is to provide a post-use job order for equipment refurbishment, replacement of worn out, damaged and lost equipment. Customer should also be charged for the labor for sorting and establishing equipment after use.

2.2.38 Management and Industrial Engineering Studies.

- a. Overhead.
 - (1) Routine management engineering studies undertaken for activity departments.

- (2) Special one-time studies requiring more than 40 man-hours on the part of Most Efficient Organization and initiated upon the request of the Type I Supply Department.
- b. Direct Cost. A special one-time study for another activity must be charged directly to funds provided by requesting activity.

2.2.39 Material Handling and Expediting.

- a. Overhead. Those costs related to general material handling, i.e., those persons not directly supporting a specific project, that are responsible for checking, processing, moving and distributing material, must be charged to the overhead expense of the performing shop. This includes shipping clerks, material runners, expeditors, handlers and equipment operators. The general operators of material stations or centers that support multiple projects are charged to overhead.
- b. Direct Cost.
 - (1) The time of mechanics and helpers devoted to material handling functions must be charged direct when this work is directly related to the productive work which the employees are assigned.
 - (2) Personnel involved in material expediting and material issue or staging may be charged direct if their time is dedicated to a specific Navy ship's hull, ship class or reimbursable customer's final product or service when it is clearly identifiable to that project. This would include all personnel involved in the operation of a material cage or station that is dedicated to a single project or, individual personnel that are operating out of a multi-project support cage or station, but whose specific individual efforts are dedicated to a single project, e.g., material kitting for a specific availability. Such personnel inside a production shop do not normally meet the criteria for direct charging.
 - (3) At times, the activity may be required to receive, store and issue material owned outside the Navy Supply System and the Navy Working Capital Fund, in the categories of Government Furnished Material and NAVSEA or fleet-owned items. All labor and material costs incurred by the FMA in connection with such storage and handling are properly chargeable to funds provided by the owner of the material.
 - (4) Material Inventory Managers or Specialists dedicated to a single project.

2.2.40 Fitness for Duty Medical Examination.

- a. Overhead. When an agency obtains a fitness for duty medical examination (in connection with a separation for medical unfitness) whether by a federal medical officer or an employee-designated physician, there must be no cost to the employee or the Office of Personnel Management. The Comptroller General has ruled that agencies have authority to pay for such medical examinations, which are made by employee-designated physicians under those conditions.
- b. Direct Cost. Medical examinations required by a specific customer prior to work performance.

2.2.41 Metal Stock Cutting (Bar, Pipe, Plate, Cable, etc.).

- a. Overhead. The function of cutting metal is charged against overhead when the purpose of the cutting is in support of an overhead job because the benefiting customer of the end product is not readily identifiable.
- b. Direct Cost. When the benefiting customer of the end product is readily identifiable, the function of cutting metal is charged against the appropriate direct project.

2.2.42 Acquisition of Minor Property.

- a. Overhead. The acquisition of all minor property. The limit for minor property has been raised to \$250,000.
 - (1) Items of equipment with a purchase cost less than \$250,000.
 - (2) Items of equipment with a purchase cost of \$250,000 or more but with a useful life of less than two years.
- b. Direct. None.

2.2.43 Miscellaneous Expenses of the Production Resources Department Shops.

- a. Overhead. Provides for the accumulation of miscellaneous costs and labor, identifiable with the productive cost centers of the Production Resources Department. Work performed by cost centers outside the Production Resources Department will not be charged to this cost center. This center is primarily established to cover such items as maintaining common use grounds and shipways, printing for shops and maintenance of shop equipment benefiting more than one cost center or more than one common services group cost center. It is the intent of Commander, United States Fleet Forces Command that this cost center be highly restrictive and charged only with those productive expense costs that cannot be identified to a productive shop or common services group cost center. Various Cost Classes will be utilized to meet the correct costing requirements.
- b. Direct Cost. None.

2.2.44 Mock-Up Work. Mock-ups include those full size replicas which are used to facilitate production efforts by saving time or reducing material costs. Included in the cost of mock-ups are the labor, material and other direct costs associated with producing replicas, as the interior of a submarine replica of materials or parts to be test welded, etc.

Mock-ups do not include construction of facilities required for test purposes when such construction requires various levels of approval and special funding as specified in reference (g).

Mock-ups that qualify as plant equipment must follow the rules concerning the acquisition of plant property.

- a. Overhead. The cost of mock-up to reconstruct a specific problem condition such as a mock-up to reinstruct personnel involved in deficient work aboard ship.
- b. Direct Cost.
 - (1) The cost of mock-ups is chargeable to customer funds under the following conditions:

- (a) It is specifically authorized as chargeable to the initial ship of a class;
or
 - (b) Is required for accomplishment of a specific job.
- (2) If the mock-up will be used for more than one customer or ship, the cost of the mock-up may be distributed to the benefiting customers.

2.2.45 Pilot and Tug Service.

- a. Overhead. The cost of all pilot and tug services (naval and commercial) are the cost of the movement or rearrangement of various types of floating equipment such as sludge barges, wheelerizing equipment, floating cranes, etc., used in connection with FMA support, but not directly related to the immediate productive efforts, will be charged to overhead except as provided herein.
- b. Direct Cost. The cost of the pilot and tug services must be charged to customer funds, based on a unit rate which includes the costs of maintenance and operation of the naval craft and the rental costs of commercial tugs.
 - (1) For ships (U.S. Navy and Financial Management Supervisor cases) with an assigned Naval FMA availability - the cost of tug and pilot services in connection with the overhaul.
 - (2) For ships without a Naval FMA industrial availability, such as loading and unloading equipment and supplies onto a commercial ship.
 - (3) For ships under construction at the Naval FMA.
 - (4) For assist services provided to activities which have the responsibility for providing pilot and tug services.
 - (5) The costs for movement of the various types of floating equipment discussed in paragraph 2.2.45.a. will be charged to customer's funds when such movements are directly related to immediate productive efforts.

2.2.46 Planning and Estimating Services.

- a. Overhead.
 - (1) Planning and Estimating support personnel.
 - (2) Estimators who provide basic ("boilerplate") estimates used for several customers, e.g., Baseline Cost Estimating Standards Program.
 - (3) Production Resources Department estimators other than identifiable to direct labor.
 - (4) All planning and estimating services in support of estimating potential work that is not subsequently assigned to the activity.
- b. Direct Cost.
 - (1) All planning and estimating services performed for assigned work must be charged to sponsor funds.

- (2) Cost of scoping and estimating work assigned to the FMA which is subsequently eliminated at work definition conference or thereafter because of a shortage of funds, rescheduled for ships force, deferred or cancelled because of non-availability of material or funds.
- (3) Services performed for the Inactive Ship Maintenance Facility in preparing and updating estimates for ship activation during mobilization are chargeable to Inactive Ship Program Funds.
- (4) Cancellation of work. Paragraph VIII C10 of reference (h) must apply to any reimbursable order. "Costs incurred in the termination of project orders must be reimbursable to the performing establishment when such orders are terminated by the ordering component, to the extent such costs do not exceed the amount of the fixed price, or the current ceiling amount in the case of cost reimbursement project orders. In determining termination costs for reimbursement purposes, the performing establishment must be guided by the principles stated in this directive. When military departments cannot agree on the costs of terminations, the case will be referred to the Assistant Secretary of Defense (Comptroller) for settlement".
- (5) Preparation of data in support of work to be accomplished by Ship's Force during overhaul.
- (6) The effort utilized in collating the authorized work into a Ship Alteration and Repair Package, including printing and mailing.

2.2.47 Acquisition of Plant Property Equipment.

- a. Overhead.
 - (1) The purchase cost of an equipment type item costing less than \$250,000 (i.e., minor property) will be expensed to overhead.
 - (2) Acquisition of OPN equipment with a purchase cost of over \$250,000 and a useful life of more than two years will be purchased using OPN funds, including transportation, installation, training, discounts, etc.
- b. Direct Costs. Procurement, transportation and installation of equipment specifically authorized to be acquired by a reimbursable order for use in fulfilling the requirements thereof may be financed by the customer. Equipment acquired specifically for a customer in this manner is the property of the customer and will be disposed of following the customer's instruction.

2.2.48 Pollutant Clean-Up. Naval activities are called upon to remove and dispose of contaminated waste from a variety of sources, e.g., ships under an availability, ships without an availability, general pollution clean-up and ships under the jurisdiction of the FMA. Examples are oil, chemical spills, etc. If the pollution resulted in a fine from the Environmental Protection Agency or other agency, the cost of the fine would be charged in the same way the clean-up is charged. If the clean-up were charged as a direct expenditure, the corresponding fine would be charged as a direct expenditure.

- a. Overhead. When the pollution is caused by activity effort, no matter where it occurs, the cost of pollution clean-up is chargeable to overhead. Also, the disposal costs of pollutants will be charged to overhead.
- b. Direct Costs. The cost of clean-up and disposing of pollutants will be charged direct under the following circumstances:
 - (1) When the pollution is caused by the action of Ship's Force personnel, the cost of clean-up will be funded by the ship.
 - (2) When the cause of the pollution is not the activity, and the activity is required to perform clean-up in a non-activity designated area of responsibility, the activity responsible for the area will be required to provide the funds.
 - (3) Disposal cost resulting from pollution clean-up that is chargeable to ship or station is chargeable to the same ship or station as the pollution clean-up.

2.2.49 Pre-Expended Bins.

- a. Overhead. The cost of stocking and replenishing pre-expended bins of items with a unit cost of \$50.00 or less. Items of unit cost in excess of \$50.00 may be authorized by the Activity Commander.
- b. Direct Costs. None.

2.2.50 Printing, Reproduction and Duplication.

- a. Overhead. Charges of all purchased printing, reproduction and duplicating when not chargeable to a project.
- b. Direct. Charges that can be readily identifiable to a project; for example, copies of project drawings.

2.2.51 Programming Effort for Numerically-Controlled Machines.

- a. Overhead. The cost of programming effort for numerically-controlled machines is usually charged to overhead, since they are used by more than one sponsor.
- b. Direct Costs. The cost of programming effort is chargeable to customer funds when the programs are planned for use by a specific program or project.

2.2.52 Purchase of Gas, Liquid or Solid.

- a. Overhead. The cost of natural gas consumed in the generation of power.
- b. Direct. The cost of gas, (argon, nitrogen, etc.) which represents the level of service required for a customer is charged direct.

2.2.53 Radiological Control Engineering.

- a. Overhead. Costs associated with the FMA, whose objective is to ensure the continual over-all effectiveness of the Radiological Engineering effort and not specifically identified to a particular availability, are charged to overhead. For example:
 - (1) Preparation and maintenance of local FMA procedures which are formulated to implement directives from higher authority.
 - (2) Evaluation of FMA Functional Area and Radiological Trend Analysis.

- (3) Training or travel related thereto.
 - (4) Review and evaluation of applicable improvement suggestions.
 - (5) Production support-type work where it is difficult to charge direct.
- b. Direct Cost. Radiological Engineering activities, whose associated costs are clearly identified to a specific availability or would not have been incurred were it not for the presence of that availability, is direct. This activity consists of providing engineering and technical services in direct support of maintaining the radiological control effort of a specified availability. For example:
 - (1) Review and concurrence of work instructions, such as Nuclear Power Authorizations or Production Engineering Memos, to verify compliance with applicable Radiological regulations or requirements.
 - (2) Initiation and preparation of Nuclear Power Engineering Authorizations.
 - (3) Preparation and issue of local Radiological agreements between activity arriving ships.
 - (4) Planning and scoping the Radiological Engineering effort for a particular availability. This includes the allocation of resources required to perform this effort, and the identification and analysis of those areas which are unique to this availability and require special emphasis.
 - (5) Direct technical support of the daily in-progress Radiological effort on an availability.
 - (6) The design and modification of radiological containments that are to be used only on a specific availability.

2.2.54 Radiological Waste Processing.

- a. Overhead. Costs associated with activity, whose objective is to ensure the continual over-all effectiveness of the Radiological Waste Processing effort and not specifically identified to a particular availability, is charged to overhead. For example:
 - (1) Preparation and maintenance of local activity procedures which are formulated to implement directives from higher authority.
 - (2) Review and evaluation of applicable improvement suggestions. Production support-type work where it is difficult to charge direct.
- b. Direct Cost. The cost of processing should be charged to a Mission Funded Process Shop.

2.2.55 Refueling Equipment. Assembly and certification for use and decontamination, disassembly and preparation for storage (nuclear) of refueling equipment are charged:

- a. Overhead. Cost of preventative and storage maintenance on the equipment while in storage.
- b. Direct Costs. The cost of assembly and certification for use and the decontamination, disassembly and preparation for storage after use must be charged to the refueling customer orders.

2.2.56 Ripout Material. Ripout of equipment component, etc., is defined as the removal action for accessibility, interference, Ship Alteration or other repair work. It is performed during a specific key operation of the ship's availability.

- a. Overhead. None.
- b. Direct Cost. Costs incurred during ripout operation aboard ship will be charged to the customer job order.

2.2.57 Satellite Steam Boiler. High pressure steam generated from auxiliary steam boilers used for Quality Assurance (QA) test evaluation. High pressure steam may be generated from steam barges, portable boilers, Mobile Utility Support Equipment or satellite steam boilers. High pressure steam is used in the testing phase of the ship's operating system. The steam is not utility steam to provide heat for the ship.

- a. Overhead. The repair and maintenance of the auxiliary steam generating facility is charged to the overhead.
- b. Direct Cost. Costs associated with the operations (and set-up for operation) of the auxiliary steam generating equipment or facility, including fuel and chemicals.

2.2.58 Security Furnished by the Fleet Maintenance Activity.

- a. Overhead. Providing security for the general safety of property including routine services for customers.
- b. Direct Cost. When required by the customer or his agent, the cost of providing special security may be charged to ship project funds. For example, the cost of civilian personnel performing shipkeeper duties, which is usually performed by ship's crews when available, is to be charged to a service job order under the Type Commander's funds. The cost of marines for refueling security, including their travel, per diem, etc., is also direct chargeable to the project they are supporting.

2.2.59 Service Craft and Floating Equipment (Other Than Nuclear).

- a. Overhead. The costs of maintenance of service craft, floating dry docks, camels, dredges, work barges, floating cranes and other floating equipment and costs of miscellaneous overhead functions performed for such craft.
- b. Direct. Only for customer owned items (i.e., United States Fleet Forces Command barges).

NOTE: ACTIVITIES WILL CHARGE OPERATING TARGET FUNDS FOR COST OF TOOLS BORROWED BY SHIP'S FORCE AND NOT RETURNED PRIOR TO COMPLETION OF THE SHIP'S AVAILABILITY. IF OPERATING TARGET FUNDS ARE NOT AVAILABLE (E.G., MANAGEMENT ACTION PLAN SHIPWORK), ACTIVITIES SHOULD OBTAIN FUNDS FROM THE CUSTOMER FINANCING THE MAJOR SHIP CUSTOMER ORDER.

2.2.60 Services in Support of Centralized Tools and Equipment.

- a. Overhead.
 - (1) The cost of labor and material incident to preventive maintenance inspection and normal corrective maintenance including: lubrication, minor adjustments,

repair, overhaul, alignment and subsequent performance testing of all machine tools and industrial shop equipment and their attachments under cognizance and inventory control of the activity.

- (2) Manning and operating of all inside and outside tool rooms.
- (3) Conditioning and sharpening of all cutting tools, including saws.
- (4) Heat treating of tools regardless of physical location of the facilities.
- (5) Procurement initiation, inventory control, maintenance, storage, issue, accountability and development of statistics on tool life, usage, cost and performance of craftsmen's furnished by the activity, abrasion wheels and devices, and special issue of industrial clothing and safety equipment.
- (6) Minor layouts.
- (7) The acquisition of safety shoes, safety goggles and lenses (including prescription lenses) and the custody, maintenance and issue of such equipment and other safety equipment.

b. Direct.

- (1) Purchase or manufacture of tools required for work outside of the activity assigned missions or functions, and such other tools as are necessary to fill a particular need under a specific customer order and their future use on other work is not contemplated. Such tools become the property of the customer and are disposed of following his direction.
- (2) Overhaul and repair of equipment in the Navy supply system.
- (3) Overhaul and repair of ship equipment and allowance materials.
- (4) Miscellaneous services for the Inactive Ship Maintenance Facility.
- (5) Loaned tools lost or damaged beyond economical repair must be charged to the customer.

2.2.61 Temporary Services.

a. Overhead.

- (1) Maintenance of facilities required to perform assigned functions such as storage bins and racks, workbenches, cleaning vats, lines, blowers, ventilation equipment, pumps, etc.
- (2) Manufacture, stage and store items such as electrical distribution equipment; air, water, hoses, strainers, valves, sewage lift stations built by the FMA, air and water filter systems, chilled water units, refrigeration units (chill and freeze boxes), air conditioning units, heaters, etc., for nuclear as well as non-nuclear. Build or repair tool air hose for the tool rooms. Assemble and maintain emergency response gear (electrical and mechanical) for disaster relief support, nuclear and non-nuclear (spills, earthquakes, etc.)

- (3) Maintenance work (cleaning, lubricating and minor adjustment of temporary service equipment). This excludes the regular maintenance of equipment which is under the responsibility of Shop 06.
- (4) Security patrol, emergency response, of temporary service connections provided dry docks and berthing areas must be charged to the overhead of the performing cost center.
- b. Direct Cost. Cost of installation, connection, maintenance and removal for utilities services such as fresh and salt water, steam and hot water, steam power, hydraulic power, electricity, gas and compressed air furnished ships and communication systems at an activity or off-site location.

2.2.62 Severance Pay.

- a. Overhead. Severance pay costs will be charged to overhead.
- b. Direct Cost. None.

2.2.63 Special Programs (External or Claimant Authorized). To provide a better focus on the costs of this type, only programs specifically authorized by the claimant will be included. Basically, such programs will be approved only if they are directed by the claimant and are not an inherent functional responsibility of a specific department or activity, e.g., activity assignments under the FMA MIS program are usually automated information systems assignments and will continue to be charged as such.

- a. Overhead. The cost of activity-wide special programs that have been specifically authorized for reporting in this category must be charged to overhead. Each program must be separately identifiable, so that the cost of each individual program can be readily determined.
- b. Direct Cost. None.

NOTE: THE DIRECT COSTING OF SUPERVISION IS NOT ALLOWED WHEN THE SUPERVISION IS OF EMPLOYEES WHOSE EFFORTS ARE FOR A MULTITUDE OF END PRODUCTS OR CUSTOMERS. THE PRORATION OF SUPERVISORY COSTS FOR DIRECT CHARGING, WHERE THE BASIS OF PRORATION IS OF AN ARBITRARY NATURE AND THE TIMEKEEPING EFFORT IMPRACTICAL, IS PROHIBITED.

2.2.64 Supervision.

- a. Overhead. When performing administrative functions, or supervisory functions which cannot be readily identified to one project, the supervisory effort will be charged to overhead.
- b. Direct Cost. Time spent when working on a specific project where the supervisory effort is directly identifiable to the end product. This could include any level of supervision, e.g., project managers, if the effort is identified to one project. This also applies to engineering codes if the supervisor's employees are clearly costed to only one sponsor. Supervisors may not be charged direct to a productive job when working in an administrative capacity.

2.2.65 Consumable Supplies.

- a. Overhead. Consumable supplies, such as x-ray film, tracing cloth and office supplies, including those consumed in the process of serving tenants, must be charged to the appropriate overhead classification.
- b. Direct Cost. Industrial x-ray film and other specialized consumable supplies issued in quantities that can be identifiable to a specific customer may be charged direct. Direct costs should be easily identifiable items not of the pre-expended bin type.

2.2.66 Operation and Maintenance of Tank Cleaning System.

- a. Overhead. Maintenance costs are charged to the overhead for this equipment.
- b. Direct Cost. Operating costs for productive work will be charged direct.

2.2.67 Telephone Services.

- a. Overhead. The following costs should be charged to overhead:
 - (1) Activity telephone services - all costs including installation or removal, lease lines, basic service, relocation, message units (or current electronic texting devices) and toll charges when the service is for the benefit of the activity will be charged to overhead.
 - (2) Ships with an availability - basic services and toll call charges related to activity's industrial effort will be charged to overhead.
- b. Direct Cost.
 - (1) The following costs should be charged direct:
 - (a) Voice - the charge for toll calls and identifiable additional message units, installation and relocation costs, special services and devices such as data phones, speakerphones, call directors and private leased lines.
 - (b) Data or record - the charges for private line services and leased equipment, such as TWX, TELEX and FACPHONE and off-line message preparation using optical character reading machines or other special equipment when such equipment is not required by the Naval Communication Telecommunication Service Center.
 - (2) Tenant activities and other users - costs in 2.2.67 a.(1) and 2.2.67 a.(2) which can be identified to the users will be charged direct.
 - (3) Cable installation connections for ships with an availability are charged to ship funds. Connections for those telephones needed to coordinate or support the FMA's ship availability work both aboard ship and ashore are chargeable to ship overhaul funds. Connections for additional convenience telephones are properly chargeable to the ship's Operating Target Fund.
 - (4) The cost of telephone services, including cable connections, rentals, etc., including toll calls, rendered to ships in the activity for berthing only, must be charged to the ship funds.

2.2.68 Issue of Uncontaminated and Contaminated On Return Tools.

- a. Overhead. None.

- b. Direct Cost. When the effort requires the use of a special tool crib and can be readily identified to a specific ship, the costs must be charged to a service job order and to the sponsors. Proration will be based on auditable, consistent accounting methods.

2.2.69 Training of Personnel.

- a. Overhead.
 - (1) All training on the job by supervisors is a regular duty of supervision and the supervisors' time will be charged to the supervisor's regular job order. Any formal training of apprentices on jobs will be treated as an expense of the job order on which the apprentice is working.
 - (2) Apprentices while attending Apprentice School Training will charge so that the expense is separately identifiable. All other training not associated with the Apprentice School will be charged to overhead.
 - (3) Apprentice Instructors charge overhead in their applicable shop or department.
 - (4) The time of trainees while they are receiving scheduled instruction away from productive work and the instructor's time will be charged as overhead. Related training duties applicable to instructors are the preparation and revision of course and lesson plans and related materials.
 - (5) The training and qualification of personnel to perform special skills, within their cognizance, which are required by advanced technology being applied. Examples are: Train and qualify welders to perform welding per applicable standards; train and qualify personnel for reactor plant work, i.e., radiological control, quality control and all classroom work to qualify or periodically requalify Shift Refueling Engineers, Shift Test Engineers, Chief Test Engineers, etc. Retraining and requalification are required based on lapsed time.
 - (6) The cost related to sending employees to the equipment manufacturer's plant for in-house training to undergo training for a new product or system must be treated as an overhead expense. This includes training and qualification of employees to perform special skills, within their cognizance, which are required by advanced technology. In such instances, the costs (travel, per diem and labor) are chargeable to overhead expense.
 - (7) The cost of training after the initial training for a new product or function that has been introduced into the Navy must be treated as overhead expense.
- b. Direct Cost.
 - (1) Apprentices' time when working (not merely observing or other non-contributive conduct) on productive jobs is chargeable to the job order on which the apprentice is working.
 - (2) The training and qualification of personnel to perform specific functions when such training and qualification is required each time the function is performed is chargeable directly to the benefiting customer.

- (3) The development and qualification of employees requested by activities outside the activity must be a direct charge to the requesting customer.
- (4) It is suggested that, initially, training be provided to state and local government employees on a space available basis and that the activity not require reimbursement for this service. If, however, the scope, frequency or other characteristics of the training requested by the state or local government requires significant alteration to the activity's existing training program, reimbursement should be requested for the costs incurred from the appropriate state or local government.
- (5) The adaptation of standard activity procedure to specific application is chargeable to the benefiting customer.
- (6) The cost of providing the initial training for new products or weapons systems is chargeable to the organization introducing the new product or system. These costs include instructional material and instructors' costs which occur as a result of contracts placed with equipment manufacturers or within the Navy to teach maintenance and repair techniques to employees of the Government. After an initial training for a new product or system has been introduced, the training program is chargeable to overhead.
- (7) Training and qualification of personnel to perform specific functions, when such training and qualifications are required each time the function is performed, is chargeable directly to the benefiting customer. In this instance, the training is peculiar to and identifiable to a specific product or system and expertise is lost through non-use. Examples of this exception include the training of personnel to overhaul or repair unique equipment, which is not within their normal cognizance or expertise, nor is it expected that such unique equipment will be overhauled or repaired for other customers in the future. In addition, if a customer imposes additional training or re-qualification of personnel even though the personnel may be properly certified per current training manuals, then the additional training costs would be properly charged to the benefiting customer.

2.2.70 Traumatic Injuries - Continuation of Pay. When an employee sustains a traumatic injury, Public Law 93-416 provides that the employee can be retained in full pay status for up to 45 calendar days for each injury without charge to leave.

- a. Overhead. The labor cost for employees sustaining traumatic injuries will be charged to a separate overhead job order.
- b. Direct Cost. None.

2.2.71 Utilities for Ships. Utilities, excluding telephone service, include fresh and salt water, steam and hot water heat, steam power, hydraulic power, electricity, gas and compressed air, whether delivered to the vessels proper or used by shore activity personnel in dockside operation.

- a. Overhead. None.
- b. Direct Cost.

- (1) All utilities for ships with an assigned availability must be charged to a service type job order based upon utility rates.
- (2) Utilities for ships not in an availability must be charged to funds provided for this purpose.

- B. Foreign Ship Repair Reply

3.1 DIRECT AND INDIRECT COST IDENTIFICATION FUNCTIONS AND TASKS

OVERVIEW. Since the consolidation of the Repair Supervisors of Shipbuilding, Conversion and Repair, USN (SUPSHIP) into the Regional Maintenance Centers (RMC), RMCs have assumed responsibility, within their geographic region, for all ship maintenance work contracted for accomplishment by commercial shipyards as well as organic intermediate level maintenance efforts. Along with operational responsibility came the responsibility to prepare and manage financial budgets and budget execution. This chapter provides an overview of the RMC functions and responsibilities regarding uniform costing of direct versus indirect expenditures within the maintenance enterprise. Uniform costing of direct versus indirect is an important tool in the budget process. The financial management program with regard to maintenance is managed at various levels of the Department of the Navy.

- a. Chief of Naval Operations (CNO).
- b. Naval Sea Systems Command (NAVSEA).
- c. Commander, United States Fleet Forces Command.
- d. Type Commanders (TYCOM).
- e. Ship Commanding Officer or Officer in Charge.
- f. Commander, RMC or Commanding Officer, Fleet Maintenance Activity (FMA).

3.2 ORGANIZATIONAL RELATIONSHIPS FOR FINANCIAL MANAGEMENT OF MAINTENANCE ACTIVITIES.

3.2.1 General. The following sections discuss the basic responsibilities of various levels of the Navy as they affect the financial management of maintenance funding within each organization.

3.2.2 Chief of Naval Operations. The CNO is responsible to the Secretary of the Navy for the readiness, operations and logistics support of all U.S. Naval Forces. As the military chief of the Navy, the CNO is the principal advisor to the Secretary of the Navy and the executive branch of the Government on naval military matters, including funding of ship maintenance. The CNO

formulates detailed budget submissions which identify the resources required to carry out the missions assigned to the Navy. These budget submissions are based on detailed support from subordinate commands and include funding requests to Congress for the resources necessary to carry out specific ship modernization, repair and maintenance programs.

3.2.3 Systems Commands.

- a. To provide support for the operating Fleet, the Navy has established five Systems Commands (SYSCOM) with specific support responsibilities. These SYSCOMs are:
 - (1) Naval Sea Systems Command (NAVSEASYSCOM or NAVSEA).
 - (2) Naval Air Systems Command (NAVAIRSYSCOM).
 - (3) Naval **Information** Warfare Systems Command (**NAVWARSYSCOM**).
 - (4) Naval Supply Systems Command (NAVSUPSYSCOM).
 - (5) Naval Facilities Engineering **Systems** Command (NAVFAC**SYSCOM**).
- b. The SYSCOMs are responsible for establishing technical requirements and meeting logistics, maintenance and support requirements of Fleet Commanders in the area of new construction and ship maintenance. In addition, these SYSCOMs provide technical requirements for all varieties of maintenance and conduct detailed analyses to determine the proper balance between design improvement and logistics support to achieve the required operational availability.

3.2.4 Naval Sea Systems Command.

- a. For procurement purposes, Commander, NAVSEA, is Head Contracting Agency with delegated authority in the Federal Acquisition Regulation to enter into and administer contracts for materials and services for which the COMNAVSEA is responsible. COMNAVSEA, in turn, has delegated this authority to the Deputy Commander for Contracts (NAVSEA 02). Delegation of authority to the RMC Contracts Department Head is addressed in the NAVSEA Contracts Handbook and in other volumes of this manual. Only COMNAVSEA and individuals designated by NAVSEA 02 who are duly authorized and acting within the limits of their written delegated authority can commit the Government to any contractual action.
- b. As the agent of the CNO, COMNAVSEA maintains the Navy Data Environment and develops documentation for all authorized alterations. COMNAVSEA also authorizes and funds all program alterations not authorized and funded by the cognizant TYCOM. The maintenance, repair and modernization of ships, submarines, craft and boats assigned to the operating forces may be carried out by procurement of services and material from private industry through the RMCs, organic assets of the RMCs, or the Naval Shipyards (organic depot maintenance).
- c. COMNAVSEA is also responsible for developing, validating and maintaining Organizational, Intermediate, and Depot-level maintenance requirements and tasks in the Planned Maintenance System.

3.2.5 The Atlantic and Pacific Fleets. The Commanders, Atlantic and Pacific Fleets under the direction of the Commander, United States Fleet Forces Command are responsible for all aspects

of their assigned ships including adequate funding of maintenance requirements. The Commanders must balance the competing needs of funding the operational Fleets with the funding need for maintenance and modernization of the Fleet. Ships and craft under their cognizance comprise the largest portion of the repair and overhaul budget. Fleet Commanders, through their respective Fleet Maintenance Officers, are responsible for the budgeting, scheduling and executing CNO-scheduled ship maintenance and modernization availabilities plus emergent maintenance requirements. Through the respective TYCOMs, the Fleet Commanders provide funding for advance planning and execution of scheduled ship maintenance availabilities.

3.2.6 Type Commanders.

- a. TYCOMs and RMCs are responsible for preparing budget submissions and managing budget execution in support of ship modernization, repair and maintenance availabilities as well as the material readiness and training of their assigned ships. The basis of the TYCOM budget should be historical cost incurred for similar efforts. These historical costs are generated by the RMC or FMA based on direct versus indirect maintenance cost identification. In this regard, the TYCOM is one of the most important activities involved in scheduling and managing ship repair planning activities.
- b. Under guidelines established by the CNO and Fleet Commanders, the TYCOMs and RMC manage funds for advance planning for repairs and some selected alterations, and execution of the availabilities. TYCOMs are responsible for providing advanced planning funds to the respective ships Maintenance Team for availability planning. After the availability work package has been identified and documented, the TYCOM provides a level of funding to accomplish necessary repairs and some of the alterations. Depending on the availability of funds, the funds provided may not be sufficient to accomplish the entire work package.

3.2.7 Regional Maintenance Centers or Fleet Maintenance Activities.

- a. The CNO has delegated authority to RMC Commanding Officers to assign availabilities for ships under their cognizance. The local RMC has overall responsibility for efficient planning, brokering and execution of all ship maintenance and modernization for assigned ships. Contact information for the RMCs can be found in Appendix A of Volume VI, Chapter 2 of this manual. This section outlines RMC or FMA responsibilities related to financial budgeting, execution and reporting.
- b. From a budget formulation perspective, the individual RMC or FMA is the first step in preparing the annual budget submission for ship maintenance. Based on cost incurred in prior periods, the RMC or FMA determines the resources necessary to perform the anticipated level of maintenance effort. The charges passed on to the reimbursable customers form the basis for preparing their budget submission for the maintenance the activity plans for the future period. Therefore, it is critical that all costs are properly classified as direct or indirect. With regard to reimbursable customers, the RMC or FMA is only allowed to pass on direct cost incurred for their project since indirect costs are supported with direct mission funding. If direct costs are misclassified as indirect, the RMC or FMA is not able to recoup the cost of the effort

and the customer's historical record shows a flawed lower cost for the effort and consequently future funding requests may not be sufficient to support future maintenance efforts. The RMC will perform the following related to direct versus indirect charge:

- (1) Providing detailed guidance regarding identifying, charging, classifying, collecting and reporting expenditures related to maintenance cost with the exception of organic depot level maintenance.
- (2) Review budget submissions from subordinate commands.
- (3) Prepare budget submissions, with appropriate supporting documentation, for submission to higher headquarters.
- (4) Provide necessary training and supervision to internal intermediate level resources to ensure the requirements of this manual are implemented.
- (5) It is the responsibility of the local RMC to provide necessary oversight to subordinate FMAs ensuring the requirements of this manual are executed.

3.2.8 User Commands or Activities (Users). Per reference (a), the CNO assigns service craft and boats to Users. These craft and boats are maintained and overhauled using funds granted by Support Commanders to their subordinate Users activities. Service craft and boats under the cognizance of the Users comprise a portion of the RMC or FMA repair and overhaul workload and the User Commands must provide the required funding through reimbursable orders for the RMC or FMA to maintain the User's assets. For example, the Naval Station Port Operations are assigned service craft that support home ported or visiting ships. When one of these craft requires maintenance, the Naval Station Port Operations provides a reimbursable order to the RMC or FMA to provide the required maintenance.

3.2.9 Naval Inactive Ship Maintenance Facilities. The RMC or FMA may be required to support the inactivation of ships scheduled for retention at Inactive Ship Maintenance Facilities. The TYCOM normally authorizes the work and NAVSEA funds such work using reimbursable orders. In some cases, inactive ships may be reactivated for delivery to foreign Governments through the Foreign Military Sales Program. This work is normally authorized and funded by NAVSEA or higher authority using reimbursable orders.

3.2.10 Naval Reserve Force Vessels. Ships assigned for training Naval Reserve Force personnel comprise a portion of the RMC or FMA workload. The TYCOM who has cognizance over these ships authorizes and funds the repair and overhaul work using the reimbursable order process.

3.2.11 Foreign Governments. RMCs or FMAs may interact with foreign Governments, when requested and authorized by the CNO or NAVSEA, to procure commercial repair work to:

- a. Recondition and otherwise repair Navy ships that are to be, or have been, transferred to foreign Governments.
- b. Effect emergency voyage repairs or other services for vessels of foreign Governments, when approved and authorized by CNO. Request authorization using sample message of Appendix A. CNO may reply with sample C in Appendix B or other message format.

- c. Unless specific legal authority to price on other than a full cost basis, DoD services and materials must be priced on a full cost basis per Volume 12, Chapter 9 of reference (b). In order to accomplish this requirement, it is critical the RMC or FMA accurately identify and accumulate direct and indirect cost. Full cost basis requires that the RMC or FMA accumulate all costs associated with the maintenance effort. This includes all direct costs that are normally captured as well as a portion of the indirect cost. In a situation like this, if the system for capturing cost is not accurate, the RMC or FMA may recoup more or less than the cost incurred and if it were discovered later, a refund or additional bill would have to be issued.

3.2.12 Private Companies - Demilitarizing and Stripping. The RMC or FMA may be required to arrange for the demilitarization and stripping of ships that are programmed for disposal or for sale to private concerns. In the case of ships programmed for disposal, these functions, when not performed by the activity having cognizance of the vessel, are carried out by the responsible RMC or FMA. When the ships are sold to private concerns, the work will be performed by the purchasing contractor as a condition of sale. In these cases, the RMC or FMA will be requested to provide surveillance over the work to ensure its proper performance. Of particular concern is the compliance with Environmental Protection Agency rules and regulations where there is potential for environmental impacts resulting from work associated with disposal action. The cost of this surveillance would be considered a direct cost and charged to the contract.

3.3 STANDARDS OF CONDUCT.

- a. Congress has passed numerous laws which place significant controls over funds management such as those identified in Volume VII Chapter 6 of this manual (references (a) through (f)). The Department of Defense has issued additional regulations in the form of reference (b). Practices that may be acceptable in the private business world regarding funds management are not necessarily acceptable for naval personnel. Individuals who manage, control, expend or report on government funding are held to high standard regarding the control of those funds. In order to accomplish the intent of these legal requirements it is critical the RMC or FMA accurately identify and accumulate direct and indirect cost.
- b. All personnel must exercise special diligence to prevent fraud, collusion, larceny, embezzlement or other improper conduct within the area of their responsibilities and must report immediately to the RMC Commanding Officer any instance of fraud or other improper conduct they observe or suspect. Failure to accurately record expenditures could be considered improper conduct in certain circumstances.

VOLUME II**PART III****CHAPTER 4****RETENTION OF FINANCIAL RECORDS****REFERENCES.**

- (a) SECNAV M-5210.1 - Records Management Manual, Part III Chapter 7
- (b) DoD Financial Management Regulation Policies and Procedures 7000.14-R - Volume 1, Chapter 9
- (c) National Archives and Records Administration General Records Schedules, General Records Schedule 8 - Stores, Plant, and Cost Accounting Records, Transmittal No. 13, September 2004
- (d) National Archives and Records Administration General Records Schedules, General Records Schedule 8 - Stores, Plant, and Cost Accounting Records, Transmittal No. 8, December 1998

4.1 **PURPOSE.** This chapter provides guidance and policy for maintaining and retaining financial records related to the charging of direct and indirect maintenance expenditures.

4.2 **GENERAL.** Maintenance cost records provide a historical record of financial resources required to perform a specific level of maintenance and the cost history of repairs and alterations performed on individual ships of the fleet. These records must be accurate and complete so as to “stand alone”, that is, the record will be understood without additional explanation. These records will provide a basis to estimate the cost of similar efforts in the future and preparing and supporting future budget requests. Records will be maintained for direct mission funded efforts, indirect mission funded efforts, and reimbursable orders.

4.2.1 **Maintenance Cost Record Requirements.** The process of maintaining financial related records can affect the perceived validity of completed financial record. If the process used to maintain the financial records appears to have inadequate controls, then the accuracy and completeness of the information produced will be questionable. In order to maintain confidence in Fleet maintenance financial records, and to provide the necessary support for budgeting, the following record keeping rules are specified:

- a. When recording labor or materials against a specific Job Order Number it is critical that all entries be legible and in ink. Erasures, write-overs, white outs, ditto marks, continuation arrows, signature stamps, etc., are not acceptable. When corrections are required, the employee must initial all changes.
- b. Neatness and readability of the original record is paramount. Copying records to “make them neat”: is prohibited. Original documentation must be maintained to support summary reports.
- c. When an error is made, it will be corrected by drawing a single line through the error, recording the correct entry, initialing and dating the correction. This allows the original record to be available and provides an audit trail through the entire process.

- d. When a questionable item is identified, research will be initiated to determine the validity of the item. The research will be fully documented and if the research determines the original item was correct or incorrect, that will be clearly identified and the documentation will fully explain the decision and be added or appended to the original record as appropriate.

4.2.2 Record Retention in General. The following paragraphs summarize the general requirements for retaining financial records and how long they will be retained:

- a. Records required to be maintained for periods exceeding 12 months may be reduced in size (such as by microfilming or CD-ROM in .pdf format only). However, the Fleet Maintenance Activity (FMA) responsible for the record will ensure that the reduced size records are clearly legible, reproducible, and will so certify prior to destroying the original records. The following procedure will be followed for record reduction:
 - (1) Record reduction must be per reference (a).
 - (2) Compare the reduced size record against the original record to ensure each page of the original record has been reduced, is clearly legible and reproducible. This comparison must ensure that the front and the associated back of documents have been reproduced.
 - (3) Reproduce two randomly selected pages of the reduced record into paper copy. Verify completeness and legibility of reproduced pages by comparing against the original record.
 - (4) Person making comparison will sign the logbook or some other permanent record to certify that the reduced size record is complete and legible after being reproduced.
- b. After steps (1) through (4) are satisfactorily completed, the original record may be destroyed.

4.3 IMMEDIATE SUPERIOR IN COMMAND RECORD RETENTION.

4.3.1 Financial Record Retention. Copies of documents used to provide maintenance funds to FMAs and Immediate Superiors In Command will be retained per reference (b).

4.3.2 Inspection Record Retention. Copy of last Immediate Superior In Command or Type Commander inspection of the FMAs financial records including copies of discrepancies identified, root cause analysis performed and corrective action implemented.

4.3.3 Command Evaluation and Independent Audit Record Retention.

- a. Records of command evaluation reviews related to financial management will be retained for 5 years after cutoff of corrective actions as required by references (b) and (c).
- b. Copy of last independent audit (if any) of FMA financial management procedures and processes.

4.3.4 Assessments, Evaluations and Audits. The Financial Management Officer will retain records of assessments and evaluation for the past 24 months (unless otherwise stated). The records will consist of:

- a. A log will be maintained of all Financial Management Discrepancy Forms, Part III, Chapter 5, Appendix E of this volume. Financial Management Discrepancy Form, Part III, Chapter 5, Appendix E of this volume identifies the Job Order Number reviewed, work center responsible, discrepancy identified (if any), corrective action to be taken, and estimated date corrective action is expected to be complete.
- b. Copy of last higher authority assessment and the corrective action for all discrepancies identified.
- c. Results of all reviews of the financial reporting program, including the corrective action taken or pending. (This may be kept with the rest of the monitor program records.)
- d. Last annual evaluation of the financial reporting program performed.

4.3.5 Training. Each employee will be trained on how to accurately charge their labor and materials to direct and indirect Job Order Numbers. Records related to this training will be retained following Type Commander or Immediate Superior In Command instructions.

4.4 FLEET MAINTENANCE ACTIVITY FINANCIAL MANAGEMENT RECORD RETENTION. Financial records, including those focusing on direct versus indirect costs, will be maintained for 3 years, per references (b) and (d). Reference (b) requires the financial information “be maintained for at least the minimum period specified in the applicable National Archives and Records Administration General Records Schedules and longer if compelling reasons exist or supplemental guidance directs”. The specific records addressed by this volume relate to cost accounting which must be maintained for at least 3 years from the date the actions are closed.

4.5 LOST RECORDS.

- a. In the event that it is determined that some portion of the financial records have been lost or destroyed, an investigation will be performed to document the circumstances. The RMC or FMA Commanding Officer will appoint, in writing, an investigating officer. The written appointment will identify, in detail, the lost records and the circumstances, as they are known. The investigating officer will make sufficient inquiries to determine the most likely disposition of the records.
- b. The investigating officer will prepare a written report to the Commanding Officer, detailing the results of the investigation. The report will include recommendations designed to correct the control weakness that allowed the records to be lost.

VOLUME II**PART III****CHAPTER 5****FINANCIAL AUDITS, EVALUATIONS AND ASSESSMENTS****LISTING OF APPENDICES.**

- A Vertical Audits
- B Horizontal Audits
- C Checklist for Evaluating Direct versus Indirect Costing
- D Financial Management Audit Discrepancy Form
- E Financial Management Discrepancy Form

5.1 **PURPOSE.** This chapter provides requirements, procedures and criteria for audits, evaluations and assessments regarding direct versus indirect expenditures incurred by the Fleet Maintenance Activities (FMA). The expenditures include both Direct Mission Funded Resources and funds received through reimbursable orders and the provisions of this chapter apply to both.

5.2 **GENERAL.** An effective command evaluation program is essential to ensure the accuracy and completeness of the cost data associated with maintenance efforts. Audit, evaluation and assessment programs are objective, constructive tools to monitor the accuracy and completeness of the maintenance cost data collected. These same tools also evaluate the effectiveness and efficiency of the collection process. The purpose of the command evaluation program is to determine the activity's compliance with established directives and their ability to capture and correctly classify the overall cost of maintenance and provide an opportunity to correct any discrepancies. The command evaluation program must be flexible and dynamic. Focusing on specific areas of interest or current issues should be done on a regular basis to increase the benefit of the audit. Focusing reviews would prove most beneficial when the activity is involved with infrequent repair efforts, components with an abnormally high cost of maintenance or first time repair efforts. Review guides should be developed which lend themselves to evaluating recent command, division or cost center efforts related to identifying the accuracy and completeness of direct versus indirect expenditures. The involvements of the highest levels of the command are essential to ensure the Department of the Navy gets the greatest return from the limited maintenance funds available.

5.2.1 **Audits.** Audits are an independent systematic comparison of financial cost reports with the supporting documentation to ensure the accuracy and completeness of maintenance cost reported to higher headquarters and used to support budget requests. Different types of audits may be performed depending on the area to be audited and the purpose of the audit. The general audit categories are:

- a. Vertical Audit. These audits review all aspects of the cost of one repair or maintenance action or Job Order Number (JON). They track the maintenance task from inception to completion. This is done by verifying all cost aspects of the technical, material, process and documentation requirements associated with the work. These audits include attributes covering the entire spectrum of the cost charged to the

effort. Reviewing the direct versus indirect charging of cost will be just one part to the audit. Appendix A provides guidelines for the preparation and execution of vertical audits.

- b. **Horizontal Audit.** These audits are conducted on only one specific area or aspect of the direct or indirect cost program (e.g., material charges or a specific category of labor on multiple JONs, administrative efforts within the activity, etc.). They focus on the particular area and do not track a complete JON from inception to completion but rather track expenditures across the activity for a specific function. Appendix B provides guidelines for preparation and conduct of horizontal audits.
- c. **Repeat Findings.** Once an audit is conducted and findings are identified, it is expected that the command will take action to correct the identified discrepancy and institute controls that will prevent reoccurrence of the condition. If during the course of an audit a repeat finding is identified, the recommended corrective actions must be addressed to the Immediate Superior In Command (ISIC). A repeat finding is one that was identified in the preceding audit.

5.2.2 Evaluation. The results of evaluations provide the Commanding Officer with an unbiased review of the overall accuracy and completeness of cost reported. Based on these results the Commanding Officer can, if discrepancies are noted, make an informed decision to apply additional emphasis or resources against the program to improve the condition. If the results of the evaluation reveal no significant discrepancies, the Commanding Officer has independent verification of the effectiveness of the function.

5.2.3 Assessments. Assessments are an external programmatic review of processes to ensure compliance with parent directives. The assessment could include a review of the accuracy and completeness of direct versus indirect costing. Assessments are normally conducted by the activity's Type Commander or ISIC with participation of other commands if the Type Commander or ISIC determines additional expertise is necessary.

5.2.4 Key Elements of an Effective Command Evaluation Review. Fleet Activities will use, as a minimum, the following key elements to assure the effectiveness of their command evaluation program.

- a. Conduct training for all personnel assigned to the command evaluation effort on techniques for preparation, execution, documentation and the evaluation of findings prior to conducting an audit for the first time. Subsequent evaluations, performed with experienced personnel, will only require refresher training. The training should be adequately documented in order for other independent reviewers to ascertain what was and who were trained.
- b. Development and use of attribute sheets or guides. These should be based on key attributes from the source documents and are not meant to limit the scope of the review.
- c. Develop a thorough review process focusing on previously identified audit deficiencies to disclose potential adverse trends and recurring deficiencies.

5.2.5 Record Retention. The retention of records for audits will be per Part III, Chapter 4 of this volume.

5.3 RESPONSIBILITIES AND PROCEDURES.

5.3.1 Fleet Maintenance Activity Audit and Evaluation Program.

- a. Audits. FMAs will schedule and conduct the following command evaluation audits:

NOTE: IF THE AUDITOR ONLY OBSERVES PERSONNEL WORKING ON SHIPS, EXPECT TO FIND VIRTUALLY 100% DIRECT. THEREFORE, WHEN SELECTING THE PERSONNEL TO OBSERVE, ENSURE THE AUDITOR GETS A REPRESENTATIVE SAMPLING.

- (1) Annual audits to be conducted:
 - (a) Perform an evaluation of the percentage of direct versus indirect expenditures using Appendix C as a guide. Identify and evaluate any unusual results in order to determine the root cause of the anomaly. Also, based on the results of this review, evaluate whether it is possible to economically reduce the indirect percentage. The command is required to review the percentage of indirect expenditures on a monthly basis and report that information to the ISIC.
 - (b) Perform an audit on the accuracy of charges direct versus indirect. This will involve observing the recording of cost against selected JONs.
- (2) Perform post closeout audit of the expenditure charge for selected Controlled Work Packages (CWP). Determine if the total direct expenditures recorded were within the range of what was expected. The CWPs selected should be representative of the maintenance efforts performed during the period.
- (3) Written audit guides must be used for each audit. The activity performing the audit will develop audit guides based on the unique nature of the audit planned. The audit guides should be tailored and customized for the specific organization or area being audited. One successful technique is to acquire a collection of audit findings from other FMAs and incorporate these into the audit guides. Once an audit guide is prepared, it will be filed and reused when similar audits are performed. It is also recommended that the FMAs share audit guides.
- (4) The results of each step in the audit guides will be documented sufficiently to support the final conclusion or finding.
- (5) Audits should be conducted on an annual basis unless a shorter period is specified. Those areas identified as weak should be followed-up on more frequently. The periodicity of these audits must be adjusted by the Financial Management Officer (FMO) based upon the results of previous audits.
- (6) Report results of all audits to the Commanding Officer with copies to the FMO and cognizant Department Head or Division Officer.
- (7) A copy of the final report will be provided to the Commander, Navy Regional Maintenance Center or appropriate ISIC after the FMA Commanding Officer has accepted and implemented the corrective actions.

- b. Evaluations. The FMA FMO will conduct a semi-annual evaluation of the overall adequacy and effectiveness of the FMA's direct versus indirect program. This effort is less than an audit, requiring less documentation and of shorter duration. The results of this evaluation will provide an indication of the effectiveness of the program. If the results indicate a significant, widespread problem, the evaluation will be expanded into an audit.
- (1) Results of this evaluation will be provided to the FMO, appropriate Department Head, and Commanding Officer if the results indicate a significant problem.
 - (2) A copy of the final report will be provided to the Commander, Navy Regional Maintenance Center or appropriate ISIC after the FMA Commanding Officer has accepted and implemented the corrective actions.

5.3.2 Management Metrics for Direct Versus Indirect Costing.

5.3.2.1 Metric Number 1, Total Indirect Time.

5.3.2.1.1 Activity Goal. Recognizing that establishing an activity goal for indirect cost before the FMAs have had an opportunity to evaluate and implement the guidance is arbitrary and will probably require adjustment after more detailed information is accumulated. The initial goal for indirect expenditures is 10% of total expenditures. Total expenditures are the sum of total direct mission funding plus the total of reimbursable order expenditures. This metric is computed at the organizational level.

5.3.2.1.2 Activity Level. On a monthly basis, the financial manager will determine the total expenditures for the overall FMA; this includes both direct mission funding expended and reimbursable order funding expended for the period. Based on the collection of cost information using the guidance in Volume II, Part III of this manual, determine the total indirect cost reported by the FMA for the period. Using this information and the following formulas, determine the percentage of expenditures which are attributable to indirect efforts. The following formula will be used:

$$\begin{aligned} &\text{Direct Mission Funds Expended} \\ &\text{Plus + } \underline{\text{Reimbursable Order Funding Expended}} \\ &\text{Equals = Total Expenditures by Maintenance Activity for Period} \\ &(\text{Total Indirect Expenditures for Period}) \text{ Divided by} \\ &(\text{Total Expenditures by Maintenance Activity for Period}) \\ &\text{Equals = (Percentage of Indirect Expenditure for Period)} \end{aligned}$$

If the total indirect percentage exceeds the goal, the FMA should determine what events caused the increase. The FMA should identify what actions are necessary to bring the indirect into the acceptable range. The results of the evaluation will be provided to the Commander, Navy Regional Maintenance Center not later than the 15th day following the close of the month.

RATINGS: GREEN 10% or less RED More than 10%

5.3.2.2 Metric Number 2, Direct Positions Charging Indirect.

5.3.2.2.1 Activity Goal. The goal of the FMA with regard to direct versus indirect costing is to minimize indirect expenditures. Minimizing indirect expenditures will help maximize the return that the Fleet gets from resources committed to maintenance efforts. The FMA is staffed with personnel who are primarily working on direct maintenance efforts and some personnel who would primarily be performing overhead assignments. For personnel who are primarily working on direct maintenance efforts, occasionally they will be required to charge their efforts against an indirect Job Order Number (JON). Charging personnel who are primarily assigned to the activity to perform direct maintenance efforts against indirect JONs should be minimized. Therefore, another metric that should be measured is the amount and percentage of indirect cost generated by personnel in direct maintenance positions.

5.3.2.2.2 Activity Level. On a quarterly basis, obtain a listing of all personnel who charged to an indirect JON for the preceding month. Determine if personnel who normally work on direct maintenance efforts are identified on the list. If any of the direct personnel charged over 10% of their available efforts to an indirect JON, determine why the indirect JON was used. Document the results. If the charges were inappropriate, document corrective actions taken to prevent a reoccurrence of the error.

Using the same listing, review the charges for personnel who potentially could have charged a direct effort, such as contract specialists, and identify their direct charges for the period. Determine if there were other opportunities for them to charge a direct JON.

RATINGS: GREEN 10% or less RED More than 10% without adequate explanation

5.3.2.3 Metric Number 3, Indirect Charges Against Reimbursable Orders.

5.3.2.3.1 Activity Goal. The FMA is allowed to pass along all direct costs incurred in the completion of a reimbursable order. Those costs include materials, direct labor, and contracts or any other cost that must be incurred to complete the work requested. All indirect costs must be borne by the activity using direct mission funding. The indirect cost must be captured because in certain instances, such as performing work for private parties or foreign government, they must be recouped.

5.3.2.3.2 Activity Level. On a quarterly basis, randomly select five reimbursable orders which were completed during the period. Evaluate the cost that was charged to them to determine if any indirect costs were charged to the efforts. If as a result of the evaluation it is determined that indirect cost has been improperly charged to the reimbursable orders reviewed, document the control that failed and the actions taken to prevent future inappropriate charges against reimbursable orders.

Using the same five reimbursable orders, review the charges for personnel who would normally charge an indirect effort, such as administrative staff, and identify their direct charges for the period. Determine if those charges were appropriate. This test provides assurance that the direct charges reported are supportable.

RATINGS: GREEN 0 RED More than 0

5.3.3 Immediate Superior In Command Financial Management Assessments and Audits.

- a. Financial Management (FM) Program Assessment.

- (1) The ISIC must schedule and conduct a financial management program assessment periodically, but not less than annually of all assigned Regional Maintenance Centers (RMC) or FMAs. This assessment will review the following areas:
 - (a) Vertical audit of selected JONs.
 - 1 Material charges to those JONs.
 - 2 Contract charges to those JONs.
 - 3 Evaluate whether direct versus indirect cost charging training for personnel working on those JONs was conducted.
 - (b) Review selected FM records to determine that they are complete and retention is per regulations.
 - (2) Copies of the assessment reports will be provided to the RMC or FMA Maintenance Officer and the FMA Commanding Officer. Written responses will be provided by the FMA Commanding Officer if any significant findings or if findings of an unusual or serious nature were identified.
 - (3) Copies of the assessment reports will be forwarded to the ISIC Maintenance Officer, to include the FMA Commanding Officer's comments, if there are any significant findings or if findings of an unusual or serious nature are found requiring corrective action by the ISIC or higher authority.
- b. ISICs will conduct the following additional periodic audits:
- (1) Conduct periodic monitoring of RMC or FMA direct versus indirect cost charges related to controlled work and on all assigned ships during maintenance availabilities.
 - (2) Conduct monitoring of assigned FMAs direct versus indirect cost charges. This monitoring will include:
 - (a) Review of direct versus indirect cost charges procedures including practices related to opening and closing of maintenance efforts.
 - (b) Monitoring of direct versus indirect cost charges for progress work both on tended ships and in FMA work centers.

5.4 REPORTING AUDIT RESULTS AND CORRECTIVE ACTION.

5.4.1 Reporting Requirements for External Audits and Assessments.

- a. Audit Reports. Each finding should be a concise statement of the situation, complete to the extent that it will stand on its own as a summary of the condition. It should include the requirement for defined corrective action where discrepancies are identified. A discussion should generally be included to amplify the nature of the finding. If not included in the finding, identify positively what directives were violated. Audit findings will be reported using the format of Appendix D. Each finding will provide space for the command response to the recommended corrective action, which includes a root cause, immediate corrective action, permanent corrective action, and when returned to the originator, ensuring the single document provides the

complete record of the finding and actions taken. The ISIC cover letter forwarding the FM Audit Discrepancy forms (Appendix D) will include a summary of all areas where discrepancies were identified. When repeat findings are noted, the effectiveness of the corrective action taken in response to previous audits should be addressed. RMC or FMA will provide a report to the ISIC of completed corrective action, proposed corrective action and schedule of accomplishment within 60 days of receipt of the ISIC Official Audit Report. Those items determined to require immediate correction should be addressed on a case-by-case basis.

- b. ISIC, RMC or FMA Reports. Reports of audit or review should usually take the form of locally generated forms. It may be an existing form used in other monitoring programs. An FM Discrepancy Form (Appendix E) should be used to report deficiencies that require investigation and program evaluation.

5.4.2 Correcting Deficiencies in Job Order Numbers or Financial Records. When deficiencies are identified in Financial Records associated with certified (closed) CWPs or JONs corrective action is required. The action must focus on updating or correcting those records to reflect the correct data and be thoroughly documented to leave an adequate audit trail. The CWP and financial record must be annotated to associate the additional information to the document(s) as:

- a. An FM Discrepancy Form must be generated for each JON deficiency identified. Each FM Discrepancy Form must identify the deficiency, root cause and corrective action required or completed. The corrective action taken must clearly identify the overall impact on the financial records of the RMC or FMA and any customer records.
- b. Once all required actions are completed to revise or update the financial records, a copy of the completed FM Discrepancy Form and any additional documentation generated must be attached to the CWP and financial record such that it is clear that the record was revised or updated. The FM Discrepancy Form index log must be updated to indicate the action was completed.

5.4.3 Assessments, Evaluations and Audits. The FMAs' FMO will retain records of assessments and evaluation for the past 24 months (unless otherwise stated). The records will consist of:

- a. FM Discrepancy Form index log that has the document numbers, work center responsible to correct and estimated date corrective action is expected to be complete.
- b. Copy of all FM Discrepancy Forms that have been completed during the period.
- c. Copy of last higher authority assessment and the corrective action for all identified deficiencies.
- d. Last annual financial management program evaluation performed.

APPENDIX A

VERTICAL AUDITS

1. The function of a vertical audit is to determine if a single job (JON) or maintenance effort has been completed per the financial management requirements. It tracks the JON from inception to completion by evaluating the documentation associated with the job (labor, material, contract charges, etc.) against the financial records. The following steps are considered the minimum requirements to conduct an audit:
 - a. Assemble the documentation for the job being audited.
 - b. Assemble the references.
 - c. Assign auditors who are familiar with the job being audited. If the assigned auditors are not familiar with the area to be audited, provide sufficient training.
 - d. Develop (if not already existing) attribute sheets to be used during conduct of audit.
 - e. Assemble previous audit discrepancies, if applicable.
 - f. Brief and train auditors on the following:
 - (1) Purpose of vertical audit.
 - (2) Common discrepancies from previous audits.
 - (3) Audit attributes.
 - g. Conduct audit:
 - (1) Review procedure against the governing references and documentation to ensure they reflect what was supposed to be accomplished, if it was accomplished, and how it was accomplished.
 - (2) Review all documentation pertaining to financial records to ensure that they actually reflect that the job was charged correctly. Additionally, a check for accuracy and completeness of forms is required of the financial records and supporting documentation.
 - (3) All deficiencies noted, that require a more detailed investigation or program evaluation to identify root cause and permit effective and permanent corrective action, will be documented on a Financial Management Audit Discrepancy form (Appendix C), or FM Discrepancy Form (Appendix E), as appropriate, and presented to the activity being audited.
2. There is no specific formula for the successful completion of a vertical audit other than time and attention to detail. If properly performed, this audit provides an excellent method to assess the effectiveness of the financial management program regarding direct versus indirect costing process, since it provides small concise snap-shots of several areas of the entire program.

APPENDIX B

HORIZONTAL AUDITS

1. Horizontal Audit. These audits are conducted on only one specific area or aspect of the direct or indirect cost program (e.g., material charges or a specific category of labor on multiple JONs, administrative functions of the activity, etc.). These audits focus on the particular area and do not track a complete JON from inception to completion but rather track the funds expended across the activity for a specific function. This appendix provides guidelines for preparation and conduct of horizontal audits.
 - a. Assemble the source documents and references for the area being audited.
 - b. Assemble the documentation and records of area being audited.
 - c. Develop (if not already existing) attribute sheets and audit guide to be used during conduct of the audit. These attribute sheets will be posted to the Fleet Desk Guide web site (<https://www.navsea.navy.mil/Home/RMC/CNRM/Our-Programs/FDG/>) for use by other commands and will initially focus on the standard processes.
 - d. Assemble previous audit findings (if applicable) for area being audited.
 - e. Assemble, brief and train auditors on the following:
 - (1) Purpose of audit.
 - (2) Audit attributes.
 - (3) Common discrepancies from previous audits (if applicable).
 - f. Conduct audit:
 - (1) Review area being audited using attribute sheets and audit guide.
 - (2) Review the organization's implementation and adherence to the source documents.
 - (3) Review the documentation used to certify that the organization is in compliance with the governing requirements.
 - (4) Document deficiencies which require investigation or program evaluation to determine root cause and permit effective and permanent corrective action on a Financial Management Audit Discrepancy form (Appendix C), or FM Discrepancy Form (Appendix E), as appropriate, and present it to the organization being audited.
2. If properly performed this type audit provides an excellent command-wide assessment of a specific area within the overall financial management program.

APPENDIX C
CHECKLIST FOR EVALUATING
DIRECT VERSUS INDIRECT COSTING

<i>Evaluation Step</i>	<i>Discrepancy Identified</i>	<i>Corrective Action Recommended</i>
1. Determine if all personnel have been trained on the identification of direct versus indirect costing.		
2. Evaluate charges placed against 5 randomly selected Job Order Numbers that were completed in the prior period.		
a. Determine if there are charges against the JON which should have been indirect.		
b. Determine if there were any charges against the JON by personnel who predominantly charge indirect JONs and evaluate the accuracy of those charges.		
3. Review the process used by the FMA to compute the monthly direct versus indirect percentage. Ensure that all expenditures were included in the computation.		
4. Randomly select 25 FMA personnel who should predominantly charge direct cost. Determine if any of those personnel charged over 10% of their available time to indirect efforts.		
a. If any of these personnel charged over 10% indirect, determine the reason.		
5. Obtain a listing of personnel who charged 100% of their efforts to an indirect JON. Select 20 personnel randomly and determine if there should have been an opportunity to charge some portion of their efforts to direct.		
6. Randomly select 5 reimbursable orders that were completed in the preceding period. Evaluate the charges against these orders to ensure that no indirect charges were applied.

FINANCIAL MANAGEMENT DISCREPANCY FORM INSTRUCTIONSSURVEILLANCE, MONITORING, AUDIT DISCREPANCY RECORD

PURPOSE: Provide a method or means of documenting and reporting discrepancies identified by reviewers during audits, evaluations and assessments of the financial management records process. The form also provides a means to document and monitor corrective actions taken by the FMA, Work Center or division. This form is intended for use in documenting the results of command evaluations, internal audits and inspections. When completed and maintained in an accurate, auditable fashion, the form provides a record of completed corrective action. This form can also be used to evaluate trends to improve overall financial management and reporting of FMA.

NOTE: A COPY OF ALL ASSOCIATED FM DISCREPANCY FORMS MUST BE INCLUDED WITH THE FINAL CWP, ALONG WITH RECORD DEFICIENCIES FOUND IN A CLOSED CWP. FM RECORDS THAT REQUIRE CORRECTION MUST BE DOCUMENTED ON AN FM DISCREPANCY FORM. NO CHANGE TO THE CLOSED CWP OR FM RECORD IS PERMITTED EXCEPT AS CITED IN THIS NOTE. THE FM DISCREPANCY FORM SERIAL NUMBER WILL BE ANNOTATED TO CLEARLY INDICATE THE FORM WAS WRITTEN AFTER THE CWP OR FM RECORD WAS CLOSED AND CERTIFIED AND THAT ADDITIONAL OBJECTIVE EVIDENCE IS ASSOCIATED WITH THE CLOSED PACKAGE.

NOTE: THE REPAIR OFFICER, RESPONSIBLE DEPARTMENT HEADS, DIVISION OFFICERS AND FINANCIAL MANAGEMENT OFFICER (FMO) MUST ENSURE THAT ALL FM DISCREPANCY FORMS ARE APPROPRIATELY PROCESSED TO ENSURE THE ACCURACY AND COMPLETENESS OF THE FINANCIAL RECORDS.

PROCEDURE: The numbered blocks in FM Discrepancy Form correspond with the instructions listed.

BLOCK 1 - JON REVIEWED

The Financial Management Supervisor (FMS) will enter the appropriate Job Order Number (JON) for the specific maintenance cost being reviewed. This allows the original submission to be compared with the validated charges.

BLOCK 2 - WORK CENTER (WC)

Person performing the review will enter the original WC responsible for the maintenance cost input.

BLOCK 3 - DATE

Person performing the review will enter the date the review was performed.

BLOCK 4 - DISCREPANCY DESCRIPTION

Person performing the review will enter a description of the discrepancy, if any are noted. Enter the CWP serial number if appropriate. If no discrepancies are noted, the details of the review should be included and note that no discrepancies were identified.

BLOCK 5 - **REVIEWER'S SIGNATURE**

The individual performing the review will sign, and legibly print, type or stamp his or her name.

BLOCK 6 - **WC SUPERVISOR SIGNATURE**

The WC Supervisor will sign, and legibly print, type or stamp his or her name signifying a review of and concurrence of the results of the review.

BLOCK 7 - **CORRECTIVE ACTION**

- a. **ROOT CAUSE:** If discrepancies are identified, the FMO, with the assistance of the Division Officer of the WC where the discrepancy was identified (Block 2), will identify and enter the root cause of the discrepancy. The root cause should address the control failure that allowed inaccurate data to be reported.
- b. **CORRECTIVE ACTION:** If discrepancies are identified, the FMO, with the assistance of the Division Officer of the WC where the discrepancy was identified, will enter a description of the corrective action that has been initiated to correct the erroneous data and address actions taken to prevent recurrence, including any process improvements and policy or procedural changes.

BLOCK 8 - **ECD**

If discrepancies are identified, the FMO, with the assistance of the Division Officer of the WC where the discrepancy was identified, will enter the Estimated Completion Date (ECD) of the corrective action identified in Block 7. The reviewer will follow-up to ensure the actions were effective.

BLOCK 9 - **DIVISION OFFICER AND DATE**

The Division Officer of the WC reviewed will enter signature and date, and legibly print, type or stamp his or her name after Blocks 7 and 8 are complete.

BLOCK 10 - **RE-INSPECTION AND AUDIT COMMENTS**

Upon completion of any required corrective actions or reaching the ECD of Block 8, the FMO or an FMS designated by the FMO and the individual who performed the review, should perform a re-inspection audit and enter the re-inspection results and any additional comments. This must include a positive statement regarding effectiveness of the corrective action. The re-inspection audit will pay special attention to actions taken to prevent a reoccurrence of the problem.

BLOCK 11 - **FINANCIAL MANAGEMENT OFFICER (FMO) OR FINANCIAL MANAGEMENT SUPERVISOR (FMS) SIGNATURE**

The FMO or FMS will enter signature and date, and legibly print, type or stamp his or her name indicating acceptance of the actions taken and the results of those actions identified in Block 10. This will indicate that the actions are complete and the FM Discrepancy Form is closed.

COPY TO:

The appropriate WC will be identified to receive a copy of the completed or closed form.

NOTE: AFTER ALL SECTIONS OF THE FORM HAVE BEEN COMPLETED AND THE ACTIONS COMPLETE, ALL PREVIOUS COPIES OF THE FORM MAY BE DISCARDED AND THE FINAL COMPLETED OR CLOSED FORM RETAINED.

REFERENCES.

- (a) COMPACFLTINST 4710.6 - Policy for Accomplishment of Ship Repair Work in WESTPAC
- (b) COMSEVENTHFLT OPORD 201
- (c) NWP 1-03.1 - Naval Warfare Publication Operational Report

LISTING OF APPENDICES.

- A List of Acronyms
- B Glossary of Terms

1.1 NOTICE. Volume III revision reflects changes in Commander, U.S. Naval Force, Europe-U.S. Naval Forces, Africa, Sixth Fleet (COMUSNAVEUR-COMUSNAVAF-COMSIXTHFLT) maintenance support philosophy, practices and procedures. Transformational changes included the establishment of the Forward Deployed Regional Maintenance Center (FDRMC) Naples, Italy. Listed references, Operational Orders, instructions, policies and procedures will remain in effect and continue to be used until all references can be revised to reflect these changes and incorporated into this manual.

1.2 PURPOSE. To provide in one publication essential information concerning the maintenance policy for ships deployed in COMUSNAVEUR-COMUSNAVAF-COMSIXTHFLT, Commander, Fifth Fleet (COMFIFTHFLT), and Commander, Seventh Fleet (COMSEVENTHFLT) Areas of Responsibility (AOR).

1.3 SCOPE.

- a. COMUSNAVEUR-COMUSNAVAF-COMSIXTHFLT N43 oversees matters pertaining to repair and maintenance of Naval Surface Force ships in the COMUSNAVEUR AOR. Day-to-day administration of Surface Ship Maintenance in COMSIXTHFLT has been delegated to FDRMC NAPLES. Administration of repair and maintenance for Submarine Force ships has been delegated to Commander, Task Force 69 (CTF 69) and Commander, Submarine Group 8 (COMSUBGRU EIGHT). COMFIFTHFLT administers maintenance related matters and maintenance scheduling in the COMFIFTHFLT AOR. Day to day administration and scheduling of deployed submarine maintenance in the COMFIFTHFLT AOR is accomplished by Commander, Task Force 54 (CTF 54).

By references (a) and (b), Commander, Logistics (COMLOG) Western Pacific (WESTPAC) has the same responsibilities for ships deployed in the COMSEVENTHFLT AOR, other than Japan and Okinawa, which are the responsibility of the Ship Repair Facility - Japan Regional Maintenance Center (SRF-JRMC). Day-to-day administration and scheduling of deployed submarine maintenance in the COMSEVENTHFLT AOR is accomplished by Commander, Task Force 74 (CTF 74) and Commander, Submarine Group 7 (COMSUBGRU SEVEN).

- b. This manual authorizes overseas maintenance facilities to accomplish repairs on Military Sealift Command and United States Coast Guard ships and service craft, carrying out missions for the Navy in AORs specified in section 1.2.a of this Chapter, when authorized by the area commander. The procedures apply to all Navy ship maintenance administered and funded within the COMUSNAVEUR-COMUSNAVAF-COMSIXTHFLT, COMFIFTHFLT and COMSEVENTHFLT AORs.
- c. The COMSEVENTHFLT area and chop procedures are defined and governed by references (b) and (c). These maintenance procedures are not applicable in all cases to planned availabilities such as Selected Restricted Availabilities, Drydock Selected Restricted Availabilities, Phased Maintenance Availabilities, and planned availabilities, which are assigned to SRF-JRMC shore repair activities, for ships assigned to the Forward Deployed Naval Forces. Forward Deployed Naval Forces ships may also be assigned availabilities with Ship Repair Units (SRU) when deployed.
- d. Task Force Commanders and Commanding Officers must be guided by this manual to obtain maintenance assistance while deployed. Commanding Officers of RMCs and Shore Fleet Maintenance Activities, Repair Officers of Afloat Fleet Maintenance Activities and Officers-In-Charge of Space and Naval Warfare Systems Facilities Guam and Japan, as well as other activities involved in maintenance of deployed ships must comply with the direction provided in this manual. Comments and recommendations for its improvement are invited.
- e. The Foreword of this manual contains a master list of references. These references are arranged in alphanumeric order to facilitate the ordering of documents. References used in specific chapters are listed at the beginning of each chapter. Appendices A and B of this chapter contain a list of acronyms and glossary of terms used in this specific volume.
- f. Equipment under the cognizance of the Strategic Systems Programs and Naval Sea Systems Command Nuclear Propulsion Directorate (NAVSEA 08) is maintained following Strategic Systems Programs and NAVSEA 08 directives, respectively.

2. CHANGES AND CORRECTIONS. Changes and corrections will be issued as required. Comments and suggestions for improving or changing this volume are invited. Address comments, recommendations and requested changes to Submarine Maintenance Engineering, Planning and Procurement (SUBMEPP) Activity utilizing the change request form located in the front of this manual. If changes are submitted in electronic format, facsimile or E-mail, each change request must contain the information required on the change request form.

SUPSHIP	Supervisor of Shipbuilding, Conversion and Repair
TYCOM	Type Commander
USCG	United States Coast Guard
VR	Voyage Repair

APPENDIX B

GLOSSARY OF TERMS

<u>TERM</u>	<u>DEFINITION</u>
Fleet Maintenance Activity (FMA)	FMAs include tenders, shore based maintenance activities (Regional Maintenance Centers, Naval Ship Repair Facilities, Naval Submarine Support Facilities, Naval Intermediate Maintenance Facilities (NSRF), TRIDENT Refit Facilities, Weapons Repair Facilities and other activities of that type) and supporting activities (port services, etc. that perform maintenance on Fleet assets).
Industrial Activity	The activity responsible for accomplishing construction or repair of ships whether private or public. This includes Regional Maintenance Centers, Naval shipyards, private shipyards, shipbuilders, commercial contractors, Naval Aviation Depots, NSRFs, Ship Repair Units (SRU) and other Naval Repair and Technical Activities (Naval Undersea Warfare Center (NUWC), Naval Surface Warfare Center (NSWC), etc.).
Maintenance Manager	Those persons, such as Maintenance Teams, Port Engineers, Ship Superintendents, Ships Coordinator and Maintenance Planning Managers, assigned to assist Ship's Force in the tracking of work candidates, development of work packages and tracking of AFMA, Regional Maintenance Center (RMC), NSRF and Industrial Activities assigned jobs.
Maintenance Team	The Maintenance Team (MT), led by the Ashore Ships Maintenance Manager, is responsible for validating, scheduling and tracking through execution of all maintenance candidates. The primary responsibility of the Maintenance Team is to execute the maintenance policies, directives and regional business rules of this manual, the TYCOM and the RMC.
Naval Supervisory Authority or Supervisory Authority	The officer designated to represent the Navy Department at an industrial activity; normally a Supervisor of Shipbuilding (new construction), RMC (Conversion and Repair) or the Commander of a Naval Shipyard.
Regional Maintenance Team (RMT)	A site specific, multi-disciplined group of people normally accomplishing "outside shop" or on-platform work. An RMT may be platform or technology specific (e.g., submarines or nuclear) to facilitate necessary worker training and competency. An RMT is generally comprised of both military and civilian workers.
Regional Repair Center (RRC)	An "inside shop" focusing on a particular product line (e.g., motors) or technology (e.g., machinery). An RRC is generally comprised of both military and civilian workers.
Technical Data	Recorded information (regardless of the form or method of recording) of a scientific or technical nature (including computer databases and computer software documentation). This term does not include computer software or financial, administrative, cost or pricing, or management data or other information incidental to contract administration. The term includes recorded information of a scientific or technical nature that is included in computer databases. For these purposes, technical data includes the characteristic of a particular science, trade or profession.

Voyage Repairs A Voyage Repair availability is assigned solely for the accomplishment of corrective maintenance of mission or safety essential items necessary for a ship to deploy or continue on its deployment. Repairs accomplished during a VR availability are frequently referred to as Voyage Repairs.

Waterline The term “waterline” in this manual refers to where the hull of a ship meets the surface of water when afloat.

Work

- a. Any action that actually or potentially changes (including disassembly for the purposes of inspection or repair) the approved configuration of any part, component or ship’s system.
- b. Any action that removes or affects the ship’s ability to operate ship’s systems or components following ship’s systems, operating manuals or reactor plant manuals.
- c. Any testing or inspections required to establish, maintain or reestablish certification.
- d. Any design, engineering, planning or configuration management functions that involve the final review or approval of technical information.

Examples of work include the following:

1. Action which disassembles or removes any part, component or ship’s system.
2. Action specified in a Technical Work Document.
3. Any action that removes or affects the ship’s ability to operate ship’s systems or components following ship’s systems manuals, operating manuals or reactor plant manuals, excluding tagout per the Tagout Users Manual, including but not limited to:
 - (a) Component or system tests.
 - (b) Intrusive inspections (such as breaking the plane of electrical panels requiring electrical safety).
 - (c) Valve line-ups that alter the normal system line up not governed by operating procedures.
 - (d) Removing valve hand wheels, disconnecting of reach rods.

VOLUME III**CHAPTER 2****MAINTENANCE ORGANIZATIONS AND CAPABILITIES****REFERENCES.**

- (a) COMPACFLTINST 4710.6 - Policy for Accomplishment of Ship Repair Work in WESTPAC
- (b) COMPACFLTINST 4341.1 - Fleet Technical Assistance (FTA) Program (Cancelled)
- (c) OPNAVINST 4700.7 - Maintenance Policy for U.S. Naval Ships

2.1 COMMAND RELATIONSHIPS.

- a. Commander, U.S. Naval Force, Europe-Commander, U.S. Naval Forces, Africa-Commander, Sixth Fleet (COMUSNAVEUR-COMUSNAVAF-COMSIXTHFLT) assigns maintenance reporting responsibilities to subordinate Task Force commanders (CTF) while operating in the Area of Responsibility (AOR). Commander, Submarine Group (COMSUBGRU) Eight is the maintenance representative for all deployed Commander, Submarine Force, U.S. Atlantic Fleet units. Ships deployed to the COMUSNAVEUR-COMUSNAVAF-COMSIXFLT or Commander, Fifth Fleet (COMFIFTHFLT) AOR will address maintenance related correspondence to Forward Deployed Regional Maintenance Center (FDRMC) Naples and FDRMC DET Bahrain. Submarines deployed to COMSIXTHFLT address maintenance related correspondence to COMSUBGRU Eight, with information copy to their homeport Regional Maintenance Center (RMC) or Regional Support Group (RSG). Submarines deployed to COMFIFTHFLT, address all maintenance related correspondence directly to Commander Task Force 54 (CTF 54) with information copy to COMSUBGRU Eight.
- b. Commander, Naval Service Force, Fifth Fleet (COMSERVFORFIFTHFLT) is responsible for scheduling of maintenance and utilization of maintenance assets in the COMFIFTHFLT AOR. COMSERVFORFIFTHFLT has one other assignment: CTF 53, Force Logistics Commander for COMFIFTHFLT. COMSUBGRU Seven is responsible for coordination and execution of all deployed submarine maintenance in COMFIFTHFLT AOR as CTF 54.
- c. Commanding Officer, Ship Repair Facility - Japan Regional Maintenance Center (SRF-JRMC) is the Pacific Fleet Maintenance Officer's (CPF N43) representative for the Seventh Fleet AOR, coordinates ship repair and maintenance in Japan and Okinawa in accordance with references (a) and (b), and executes Fleet Technical Assistance (FTA) and Assessment in the entire Seventh Fleet AOR. Policy, procedures and guidance regarding utilization of FTA program resources are contained in Volume VI, Chapter 2 of this manual. He also acts as the Maintenance Representative for Commander Naval Surface Force, Pacific Fleet, Commander Naval Surface Force Atlantic Fleet and Commander Naval Air Force Pacific Fleet (COMNAVAIRPAC) Forward Deployed Naval Forces ships for all maintenance accomplished in Japan and Okinawa. Commander Logistics Western Pacific

(COMLOG WESTPAC) is the Maintenance Representative for Commander Naval Surface Force, Pacific Fleet, and COMNAVAIRPAC for ship maintenance in the WESTPAC outside of Japan and Okinawa. COMNAVAIRPAC, Commander Naval Surface Force, Atlantic Fleet and COMNAVAIRPAC ships permanently forward deployed to WESTPAC as part of the Forward Deployed Naval Forces will address maintenance correspondence to SRF-JRMC for all maintenance in Japan and Okinawa, information copy to their Immediate Superior In Command (ISIC) and to COMLOG WESTPAC, information copy to their ISIC for all maintenance outside of Japan and Okinawa. All other deploying surface ships will address maintenance related correspondence directly to COMLOG WESTPAC copy to ISIC or to SRF-JRMC for Port Visits in Japan.

COMSUBGRU Seven is the Maintenance Representative for all deployed Commander, Submarine Force, U.S. Pacific Fleet ships. Submarines deployed to the Commander, Seventh Fleet AOR will address all maintenance correspondence directly to Commander Task Force 74 (CTF 74)

(COMSUBGRU Seven), information copy to ISIC and SRF-JRMC for maintenance that will be accomplished in Japan and Okinawa.

2.2 MAINTENANCE ORGANIZATIONS AND CAPABILITIES. The following organizations support maintenance on ships in their respective AORs:

2.2.1 Sixth Fleet Organizations.

- a. COMUSNAVEUR-COMUSNAVAF-COMSIXFLT.
 - (1) Fleet Maintenance Officer (N43). Sole staff advisor on subjects regarding naval surface aviation maintenance and salvage. Coordinates with COMUSNAVEUR-COMUSNAVAF-COMSIXTHFLT Maritime Integrated Operation Center (MIOC) Logistics, and CTF Commanders on maintenance support requirements. Provides liaison with FDRMC Naples for in-theater ship repairs. Monitors programs relating to aircraft, surface force ship and aircraft carrier maintenance, engineering and material support.
 - (2) CTFs. Task Force commanders are responsible for monitoring the material condition of units assigned and coordinating emergent repairs and requests for technical assistance. Coordinate changes to operational scheduling due to maintenance related problems (must be approved by MIOC). CTF Commanders also provide recommendations regarding operational delays of C3 and C4 Casualty Reports (CASREP).
 - (3) CTF 63. COMUSNAVEUR-COMUSNAVAF-COMSIXTHFLT Task Force Commander for Logistics. Responsible for the scheduling and execution of Combat Logistics Force and Navy Unique Fleet Essential Airlift assets in charge of logistic support and distribution. MIOC Log Ops fulfills this responsibility for the CTF Commander.
 - (4) MIOC Log Ops. Provide logistical support to units operating in the COMUSNAVEUR-COMUSNAVAF-COMSIXTHFLT AOR. (PLAD: NAVEURLOGCOORD CENTER (NELCC)).

- (a) Air Log. Manages Navy Unique Fleet Essential Airlift assets used to transport personnel and material in COMSIXTHFLT AOR and adjoining AORs.
 - (b) Passenger, Mail, Cargo and CASREP. Passenger, Mail, Cargo and CASREP division tracks all material movement from Continental U.S. to AOR. Once in the AOR, they direct material shipments to the unit via the most economical means possible using MILAIR, Defense Distribution Depot Sigonella, Italy (DDSI) (Commercial Air or Ground) or Combat Logistics Force.
 - (c) Sustainment. Provides logistical coordination for provisions, hazardous material, ordnance and fuel.
- (5) COMSUBGRU Eight (CSG-8). Screens and coordinates maintenance for submarine-specific voyage repair. Assists CTF-69 in monitoring material condition of submarines assigned. Coordinates Voyage Repair (VR) repair brokerage through homeport RMC or RSG. Monitors Technical Assistance requests submitted to FDRMC Naples.
- b. FDRMC Naples. Commander, Navy Regional Maintenance Center Repair representative in the COMUSNAVEUR-COMUSNAVAF-COMSIXTHFLT AOR. Additional Duty to COMUSNAVEUR-COMUSNAVAF-COMSIXTHFLT as Fleet Surface Maintenance Officer (N43A). NAVSEA 00C Dive or the Salvage Officer assigned to FDRMC Naples is Additional Duty to COMUSNAVEUR-COMUSNAVAF-COMSIXTHFLT as Fleet Salvage Officer for all dive and salvage related operations. Coordinator of FTA for surface and subsurface units and sole coordinator of voyage repair efforts for surface units. Provide contract maintenance support in all ports when required. Functions include shipcheck of screened work packages, specification writing, contract technical representation, and Quality Assurance of contracted work. Working closely with Fleet Logistics Center (FLC) Sigonella which performs the Primary Contracting Officer functions. FDRMC Naples ensures completion of all work accepted for accomplishment as VR is on time and per specifications. (PLAD: FDRMC NAPLES IT).
- c. FLC Sigonella provides fleet and base support for U.S. Navy, Military Sealift and Coast Guard ships; U.S. bases and facilities located in Europe, Africa and Southwest Asia; contingency operations; and continental U.S. activities requiring supplies and services from Europe, Africa and Southwest Asia.
- d. DDSI provides the full complement of physical distribution services to all four service components and other federal agencies located south of the Italian Alps. It provides forward stock positioning support and enhanced physical distribution services. Specialized handling and support services include managing the Navy's hazardous materials, depot level repair part storage and distribution, and a complete range of material packing and shipping services. DDSI also provides expedited requisitioning and centralized receiving support to the military community.

2.2.2 Commander, Naval Service Force, Fifth Fleet Organizational Structure.

COMSERVFORFIFTHFLT N43 provides all organizational services. SRU DET Bahrain provides local management for the following services:

- a. Combat Systems and Hull, Mechanical and Electrical assists, provided by local RMC.
- b. Gas Turbine Changeout Vans.
- c. Waterjet Machines.
- d. Availability scheduling.

2.3 COMMON MAINTENANCE FACILITIES - ALL AREAS OF RESPONSIBILITY. The following types of maintenance facilities are common to all AORs and provide the services indicated.

2.3.1 Afloat Fleet Maintenance Activities.

2.3.1.1 Capabilities. For purposes of this volume, the Repair Department of a submarine tender will be referred to as Afloat Fleet Maintenance Activity (AFMA). AFMAs offer the broadest range of industrial capabilities of any afloat Navy activity. AFMAs are capable of repairs in all areas (e.g., hull, mechanical, electrical, electronic and ordnance equipment). Where there are shortfalls in shipboard expertise, AFMAs will be augmented by outside resources.

2.3.1.2 Workload. Maintenance Managers, Operational Commanders and AFMA Commanding Officers will maximize use of deployed AFMA Fly Away Teams (FAT), deployed or otherwise.

2.3.1.3 Afloat Fleet Maintenance Activity Fly Away Team. FATs provide a unique method of rapid deficiency correction which stresses mobility, initiative and maximization of resource utilization. AFMA FATs must be used for CASREP correction and technical assistance for ships not collocated with the AFMA. AFMA FATs are tasked by the Maintenance Manager only after the following conditions have been established:

- a. Casualty is not correctable by any ship, element or unit of the Strike Force Intermediate Maintenance Activity.
- b. Ship will provide parts or FAT can carry all required parts.

Each AFMA will establish procedures to enable the deployment of FATs within hours of receiving tasking. The procedures will include pre-designation of FAT members, rapid preparation for travel orders, travel regulation briefings, advances in travel funding, area briefings, and area clearance messages as appropriate.

2.3.1.4 Fly Away Team Funding. FAT funding will be provided following Fleet direction.

2.3.1.5 Afloat Fleet Maintenance Activity Tasking. Tasking AFMA for performance of VRs, FAT assistance or other availabilities will be: Maintenance Brokers for Fifth, Sixth and Seventh Fleet assigned units will request AFMA support and availability periods, via CTF 74, who will task Commander, Submarine Squadron (COMSUBRON) 15 for AFMAs located in Guam. For AFMAs in other locations in Fifth, Sixth and Seventh Fleet, Maintenance Brokers will request AFMA support and availability periods via the CTF (54, 69, 74) exercising Operational Control of the tender. The CTF exercising Operational Control will directly task the appropriate tender. CTF 54, 69, 74 or COMSUBRON 15, as applicable, must provide the required support based on AFMA operational considerations and resource limitations (e.g., manpower and materials).

2.3.2 Strike Force Intermediate Maintenance Activity.

2.3.2.1 Mission. The mission of the Strike Force Intermediate Maintenance Activity is to provide a first response to units needing assistance with maintenance candidates beyond their capability to correct while deployed, at sea, or away from regular support facilities. Requests for an impending service or equipment requirement will be processed through the Strike Force Commander, Ship's Maintenance Manager and the Aviation Intermediate Maintenance Department Officer via a Naval Message or SIPRNET E-mail. This will permit efficient work scheduling, advanced personnel planning and minimize disruption to other scheduled jobs. All work for the Engineering Repair Shops will be conducted and coordinated by the SMM through the Repair Officer and Repair Division Technicians. The Repair Officer will coordinate all efforts through the QA Program, Planning and Estimating, NDT and repair technicians. All Strike Force Intermediate Maintenance Activity work requires an individual Work Candidate entry by the repair work center into MDS. This will account for all repair man-hours and material through the 3-M up-line reporting process.

2.3.2.2 Policy. With the exception of SUBSAFE, Strike Force maintenance and repair actions are limited only by the procedures and guidelines contained in reference (c) and in the Quality Maintenance section, Volume V, Part I, Chapter 2 of this manual. The Strike Force is not authorized to perform SUBSAFE work.

2.3.2.3 Applicability. This paragraph applies to all Forces, Ships, Units and Detachments deploying as a cohesive force.

2.3.3 Regional Maintenance Center. RMCs provide contract maintenance support in all ports when assigned. RMC functions include shipcheck of screened work packages, specification writing, contract technical representation and Quality Assurance of contracted work. Working closely with FLC-Naval Regional Contracting Detachment (NRCD), which performs the Primary Contracting Officer functions; RMCs ensure all work accepted for accomplishment as VR is completed on time and per specifications. RMCs are located in Naples, Bahrain and Japan.

2.3.4 Regional Maintenance Center and Technical Assistance. The RMC Technical Support mission is to promote shipboard self-sufficiency per references (a) and (b) as applicable. This is carried out by providing system and equipment Subject Matter Experts to assist and train Ship's Force in casualty prevention and correction. When the assistance required is not resident in the AOR, the responsible RMC will arrange technical assistance from other sources. Each RMC publishes a list of their organic technical capabilities. RMCs can request additional resources to provide assistance per Volume VI, Chapter 2 of this manual. RMCs can provide assistance for all non-nuclear shipboard systems. Additional details on FTA are available in Volume VI, Chapter 2 of this manual and reference (a).

2.3.5 Naval Regional Contracting. FLC-NRCD Naples and Singapore, provide contracting in support of AFLOAT and ASHORE activities. In support of afloat maintenance, FLC-NRCDs can perform all pre- and post-award contracting functions. They execute a variety of contract actions to support ship maintenance such as: issue Master Agreements for Repair and Alterations of Vessels (MARAV); place calls against Blanket Purchase Agreements, award Contracts or Purchase Orders; and compete job orders among MARAV holders. Please note that establishment of a MARAV only pre-qualifies industrial activities to accomplish Navy work

which streamlines the procurement process. Being a MARAV holder does not guarantee the industrial activity can accomplish all types of work.

2.4 UNIQUE MAINTENANCE FACILITIES - COMMANDER, UNITED STATES NAVAL FORCES, EUROPE-COMMANDER, UNITED STATES NAVAL FORCES, AFRICA-COMMANDER, SIXTH FLEET AREA OF RESPONSIBILITY.

2.4.1 U.S. Navy Facilities. Maintenance piers and limited shore power are available at Naval Station Rota, Spain; Naval Support Activity Naples Detachment Gaeta, Italy; and Naval Station Souda Bay, Greece. Host nations also provide basic pier side services at the following ports: Faslane, Scotland; Gibraltar; Naples and Augusta Bay, Italy.

2.4.2 Repairs in Ports Without Navy Ship Maintenance Organizations.

- a. VRs are accomplished in many ports where there is no permanent Navy presence. This is accomplished by FDRMC Naples Surveyors and FLC-NRCD Naples Contracting Officers. FDRMC will develop contract specifications from ship's work packages, and NRCD will contract the work out to local contractors who have MARAV with FLC-NRCD. See Chapter 3, section 3.4 of this volume for additional information.
- b. FLC-NRCD contracted Husbanding Services Contractors may be used to obtain contract repair services using ship's operating budget. This should be done only on a very limited basis in emergency type situations. When used, Quality Assurance and conformance to Navy specifications are entirely the responsibility of Ship's Force.
- c. Submarine maintenance personnel and repair equipment will be assigned from the unit's homeport Fleet Maintenance Activity (an RMC or RSG), or brokered by the Fleet Maintenance Activity to another organization as necessary.

2.4.3 Commercial Industrial Activities. FLC-NRCD Naples maintain lists of commercial industrial activities in most major Mediterranean and some North Sea ports which have MARAVs with the Navy. Since this list changes with business conditions, it is not included here, but can be obtained from FLC-NRCD Naples.

2.5 UNIQUE MAINTENANCE FACILITIES - COMMANDER, FIFTH FLEET AREA OF RESPONSIBILITY. SRU Detachment Bahrain maintains a list of commercial industrial activities in Manama Bahrain, Jebel Ali United Arab Emirate, and Dubai United Arab Emirate, which have MARAVs with the Navy. Since this list changes with business conditions, it is not included here, but can be obtained from FDRMC Detachment Bahrain.

2.6 UNIQUE MAINTENANCE FACILITIES - COMMANDER, SEVENTH FLEET AREA OF RESPONSIBILITY.

2.6.1 Ship Repair Facility - Japan Regional Maintenance Center Yokosuka, Japan. SRF-JRMC Yokosuka, Japan is the Naval Supervisory Authority responsible for non-nuclear repair work in Yokosuka, Japan that has the resources to undertake voyage repairs, routine repairs, alterations, Selected Restricted Availability (SRA), and Drydocking Selected Restricted Availability (DSRA). SRF-JRMC Yokosuka, Japan is capable of repairing Hull, Mechanical, Electrical, Electronics, Ordnance, Gas Turbine equipment, boilers, etc., on all fossil-fueled ships including mechanical and electronic test equipment repair and calibration. Graving docks are available for all classes of ships. Cold iron and feed water services are available. Portable tools are available

for loan. Messages relating to repair matters in Yokosuka should be addressed to SRF-JRMC YOKOSUKA JA.

2.6.2 Ship Repair Facility - Japan Regional Maintenance Center Detachment Sasebo, Japan.

SRF-JRMC DET Sasebo is the Naval Supervisory Authority responsible for arranging SRA, DSRA and repair work during upkeep and VR periods in Sasebo. Because most of the SRA and DSRA work in Sasebo is contracted to Japanese industrial activities, repairs to classified weapons, electronics, or cryptological equipment is accomplished by work force augmentation from SRF-JRMC Yokosuka, Japan. A metrology lab at SRF-JRMC Sasebo has the capability of performing most mechanical and some electrical and General Purpose Electronic Test Equipment calibration. Ship-to-shop equipment repair and calibration beyond SRF-JRMC DET Sasebo's capabilities will normally be trucked or flown to Yokosuka for accomplishment. Calibration must be accomplished per the requirements of Volume VI Chapter 9 of this manual. The Production Shop can perform intermediate and depot level installs and repairs. Portable tools are available for loan. Messages relating to repair matters in Sasebo should be addressed to SRF-JRMC DET SASEBO JA, with information copies to SURFMO SASEBO JA, SRF-JRMC YOKOSUKA JA and COMFLEACT SASEBO JA.

2.6.3 Space and Naval Warfare Systems Facility Pacific Yokosuka, Japan. Naval **Information Warfare (NAVWAR)** Systems Facility Pacific is chartered and tasked to manage installations of all Naval **Information Warfare Systems Command (NAVWARSYSCOM)** sponsored Command, Control, Communications, Computers, Intelligence, Surveillance and Reconnaissance (C4ISR) systems (e.g., hardware, software and networking) aboard all ships assigned to Commander, U. S. Seventh Fleet. Integrated installations aboard individual ships will be completed so that the overall Strike Group command, control and communications interoperability is achieved. The overall Space and Naval Warfare Systems Facility Pacific management and oversight for Fleet C4ISR installations consists of an Integrated Installation Team (IIT). Members of the IIT include but are not limited to the following:

- a. Installation Management Office. Functions as the conduit by which **NAVWAR** Systems Center Pacific receives installation related advanced planning, execution tasking and funding. The Installation Management Office ensures product delivery within cost, schedule and performance.
- b. IIT Leader. Overall management and oversight of the IIT, Strike Group Officers, Strike Group Superintendents and Ship Superintendents. Long-range planning for execution of installations in ships of respective Strike Groups. Ensures all parties (e.g., ship and chain of command, IIT and chain of command, system managers and chain of command) are informed. Liaisons with **NAVWAR** Fleet Readiness Directorate and applicable Program Executive Officers for engineering related issues.
- c. IIT Strike Group Officer. Works scheduling conflicts and issues. Liaisons with **NAVWAR** Fleet Readiness Directorate for Strike Group scheduling issues. Responsible to IIT Team leader for Strike Group scheduling, availability and system readiness to install. Ensures timely submission of reports and other engineering documentation. Liaisons with Ship Repair Facility, Naval Supervising Activity, NAVSEA Ship Platform Manager, Fleet Commands, Type Commanders, Strike Group Commanders and Commanding Officers to resolve Strike Group availability,

- scheduling and Strike Group C4ISR composition issues. Coordinate final authorization to install in Strike Group ships.
- d. IIT Strike Group Superintendent. Project Manager for Strike Group IIT installations. Scheduling for Strike Group availabilities. Work scheduling conflicts and issues. Liaison with **NAVWAR** Fleet Readiness Directorate for Strike Group scheduling issues. Responsible to IIT Team leader for Strike Group scheduling, availability and system readiness to install. Ensure timely submission of reports and other engineering documentation. Liaison with Ship Repair Facility, Naval Supervising Activity, NAVSEA Ship Platform Manager, Fleet Commands, Type Commanders, Strike Group Commanders and Commanding Officers to resolve Strike Group availability, scheduling and Strike Group C4ISR composition issues. Coordinate final authorization to install in Strike Group ships.
 - e. IIT Ship Superintendent. Represents Commanding Officer, **NAVWAR** Systems Center Pacific, to Fleet Commanding Officers. Verifies work performed adheres to prescribed scope of tasking, policy and guidance. Designated person with overall responsibility for the conduct of the IIT. Has technical authority over contractor team members; must be knowledgeable of and responsible for team adherence to all invoked requirements including safety and quality. Provides a single point of contact between ships and various waterfront activities. Coordinates installations with the Regional Maintenance and Modernization Coordination Office.
 - f. Alteration Installation Team Manager. Responsible for installation of individual C4ISR systems in Strike Group ships. Ensures system has current funding, approved Ship Change Document and Government-Furnished Equipment ready for installation. Writes Statement of Work; provides and reviews cost estimates for contractor support as required. Provides system engineering and technical specifications before and during installation. Conducts System Operational Verification Testing and provides operator and maintenance training. Delivers drawings, configurations change forms and other system Integrated Logistics Support to ship's company as necessary. Updates Ship Selected Record as necessary. Reports to **NAVWAR** Systems Center Technical Code for installation assignment, pay, travel and other administrative matters. Reports to Ship Superintendent for operational matters concerning individual system installations.
 - g. Integrated Logistics Support Manager. Implements Integrated Logistics Support policies and procedures following Integrated Logistics Support guidance to the Installation Management Office and IITs.

VOLUME III
CHAPTER 3
MAINTENANCE MANAGEMENT

REFERENCES.

- (a) Title 10 U.S. Code
- (b) COMPACFLTINST 4710.6 - Policy for Accomplishment of Ship Repair Work in WESTPAC
- (c) OPNAVINST 4700.7 - Maintenance Policy for U.S. Naval Ships
- (d) COMNAVAIRFORINST 4790.2 - Naval Aviation Maintenance Program
- (e) NAVSEAINST 4790.8/OPNAVINST 4790.4 - Ship's Maintenance and Material Management (3-M) Manual

3.1 **PURPOSE.** To implement the policies of references (a) through (e) when conducting deployed maintenance. Commanding Officers will keep their operational, administrative, and logistic commanders fully apprised of their material readiness status. The effectiveness of maintenance availabilities, as well as technical assistance is highly dependent on the detailed information provided.

3.2 **CASUALTY REPORT SUMMARY.** To assist maintenance and logistics activities in maintaining current readiness status for all ships assigned to various Areas of Responsibility (AOR), in-chopping ships will report all outstanding Casualty Reports prior to in-chop following the applicable area Operational Orders.

3.3 **DEPLOYED MAINTENANCE PERIODS.** Commander, Fifth Fleet (COMFIFTHFLT), Commander, U.S. Naval Force, Europe-Commander, U.S. Naval Forces, Africa-Commander, Sixth Fleet, Commander, Seventh Fleet, Commander, Submarine Group (COMSUBGRU) Seven or COMSUBGRU Eight schedule all Availability periods for ships and submarines in their respective AORs (per references (a) and (b)) after receiving proposals from Operational Commanders. A Ship's Force Upkeep is a maintenance period during which steaming notice is extended sufficiently to facilitate the maintenance of equipment and systems. A ship may accomplish self-maintenance or be assigned any of the following upkeep maintenance availability types:

3.3.1 **MAINTENANCE AVAILABILITY.** A Maintenance Availability is an availability for the accomplishment of scheduled or emergent maintenance and may be further categorized based on scope, location and type.

3.3.2 **VOYAGE REPAIR AVAILABILITY.** A Voyage Repair (VR) Availability is assigned solely for the accomplishment of corrective maintenance on mission or safety essential items necessary for a ship to deploy or to continue on its deployment. Repairs accomplished during a VR availability are frequently referred to as Voyage Repairs.

- a. Per Subtitle C, Part IV, Chapter 633, Section 7310 of reference (a), a naval vessel or any other vessel under the jurisdiction of the Secretary of the Navy, the homeport of which is in the United States may not be overhauled, repaired, or maintained in a shipyard outside of the United States or Guam other than in the case of VRs.

- b. Forward Deployed Regional Maintenance Center (FDRMC) Naples and Commander Logistics Western Pacific (COMLOG WESTPAC), will submit to Congress, via Fleet Commanders and the Chief of Naval Operations, quarterly reports of work items accomplished during VRs.

3.4 VOYAGE REPAIR POLICY (NON-NUCLEAR WORK).

3.4.1 Surface Force Ship and Aircraft Carrier Policy.

- a. VR work package screening guidelines in reference (c) limit the type of work which may be accomplished using overseas shipyards or Ship Repair Facilities - Japan Regional Maintenance Center (SRF-JRMC) to VRs only. For the purpose of this prohibition, a shipyard is any facility that repairs naval vessels and is located outside the United States or its territories. VRs include only mission or safety essential items necessary for a ship to deploy or continue on its deployment. Only work which falls within these boundaries will be authorized for VR accomplishment. All other work will be deferred.
- b. VR work screening activities provide the results of screening to customer ships in a screening message. Approved work candidates are forwarded to the cognizant Regional Maintenance Center (RMC) for accomplishment or contract award. After authorized jobs are received by the RMC, the following steps take place:
 - (1) RMC Surveyor accomplishes shipcheck as ship schedule permits.
 - (2) Cognizant RMC Surveyor writes work specifications or contract work specifications prior to ship arrival.
 - (3) RMC or Contractor ship-checks take place upon ship's arrival. For VR that must be contracted, competitive bidding constraints require not less than three contractors be considered for contract award if possible.
 - (4) When VR contracting is required, contract award occurs not later than arrival plus one day.
- c. Voyage Repair Availability Execution.
 - (1) The assigned Ashore Ships Maintenance Manager and Ship Superintendent or Surveyor will meet ship on arrival and will ensure the Job Order Specification or contract is in place, as applicable. The assigned Ashore Ships Maintenance Manager and Ship Superintendent or Surveyor will ensure the Job Order Specification or technical portion of the contract is adhered to and provide liaison with the local industrial activity on technical matters. It is the RMC Ship superintendent or Surveyor and Ship's Force responsibility to ensure the activity performing the VR complies with work specifications.
 - (2) Where applicable, the Fleet Logistics Center (FLC) Naval Regional Contracting Detachment (NRCD) representative will award the contract and provide liaison with the contractor on contractual matters, including new work and payment.
 - (3) A pre-production meeting will be scheduled, after the contractor shipcheck. Purpose is for assigned Ashore Ships Maintenance Manager and Ship

Superintendent or Surveyor to review with the Ship's Force, contents of the Job Order Specification or Contract Specification, ship-contractor coordination requirements (if applicable), Quality Assurance (QA) requirements of Ship's Force and repair activity performing the VR, and list of government furnished material to be provided by the ship. The ship should provide the RMC Ship Superintendent or Surveyor a list of the ship's Quality Assurance Inspectors (QAI) to be used during the VR period.

- (4) Daily Production Meeting. The Ship's Maintenance Management Officer, Surveyor, and other essential personnel will meet daily to review progress, discuss daily production efforts, and remove possible "interferences" with the intent of minimizing length of the availability. Early and frequent communication between all parties involved in the repair and maintenance process will help to ensure the overall success and effectiveness of any availability.
- d. Growth and New Work.
- (1) Growth work identified during the open and inspect phase of the baseline repairs will be reviewed for cost and schedule impacts and incorporated in the work package by the RMC assigned Port Engineer or Surveyor, as applicable. No growth work or new work is authorized to commence until FLC NRCD negotiates with the contractor and the appropriate contract documentation is issued.
 - (2) New work must be processed and authorized without violating Public Law restrictions. To assure these restrictions are not violated, the ship must submit an OPNAV 4790/2K following the normal process and provide a copy to the assigned Ashore Ships Maintenance Manager or Surveyor. Continuous Screening process will ensure that the forward maintenance activity receives it in a timely manner. The Surveyor must determine the feasibility of completing new work and must obtain the required authorization from the cognizant organization (FDRMC Naples, FDRMC Det Bahrain, COMLOG WESTPAC, SRF-JRMC).
- e. Constructive changes are changes to contracts in the intent of work specifications directed at the contractor by anyone other than the surveyor or FLC-NRCD representative. Since they are not pre-negotiated with the contractor, constructive changes are against the law. Ship's Force personnel should be cautioned **not** to direct or otherwise influence contractor personnel to accomplish work not clearly delineated by contract specifications.
- f. Contractor Limitations.
- (1) Military Specification material may be available from SRF-JRMC or requisitioned by the SRF-JRMC for contractor VR conducted on ships in port Yokosuka and Sasebo, Japan.
 - (2) With the exception of lagging, Military Specification parts and material are not available to local contractors in other ports. Some parts can be manufactured,

but the material and parts required for work package execution should be provided by the ship.

CAUTION: THE SHIP SHOULD PROVIDE ONLY THE PARTS REQUIRED BY WORK SPECIFICATIONS. WITH THE EXCEPTION OF YOKOSUKA AND SASEBO, JAPAN, DRAWINGS AND TECHNICAL MANUALS ARE GENERALLY NOT AVAILABLE IN THEATER. SHIP'S FORCE SHOULD BE PREPARED TO PRODUCE ASSOCIATED TECHNICAL INFORMATION AS REQUIRED.

- g. Schedule Restrictions. Ships in VR should support the workweek schedule provided by local contractors to make the most productive use of personnel resources during the maintenance period.
 - (1) In the COMFIFTHFLT AOR, the Arab work week is **Sunday** through **Thursday** with the weekend being on Friday **and Saturday**.
 - (2) Contractor ability to accomplish work is sometimes limited by Port Captain regulations, and local strikes. Although generally short term in nature, the FLC-NRCD representative and RMC surveyor should be notified immediately of any indication of problems.
- h. Ship's Force QA responsibilities during VRs for work performed by non-Navy Maintenance Activities.
 - (1) Planning. Increased emphasis is required by Ship's Force to identify the level of control of maintenance of systems being worked and proper equipment, Allowance Parts List, technical manuals and drawings. Early identification of controlled work or work requiring Material Identification and Control or Material Identification Code (MIC)-LEVEL I material, per Volume V of this manual, will assist RMC Surveyors in producing correct work specifications.
 - (2) Execution. Although the name implies quick repairs, VRs require no less stringent QA procedures than any other routine planned repair. While Ship's Force is ultimately responsible for ensuring that the QA level is maintained on all repairs, regardless of who performs the work, the RMC overseeing the VR is responsible to Ship's Force to ensure all required specifications are met. Ship's Force QA responsibilities during execution include:
 - (a) Witnessing all tests and inspections specified in the contract work specification. Witnesses must be qualified QAIs who are aware of the technical requirements to be fulfilled by the test or inspection. For steam systems, final inspections will consist of two steps: unlagged and lagged.
 - (b) Ensuring that documentation of each contractor test or inspection is provided to the QAI at its conclusion. If not provided, the QAI will use the applicable form from Volume V, Part I, Chapter 11 of this manual to document the test or inspection. Records of all Ship's Force and contractor tests and inspections will be maintained per Volume V, Part I, Chapter 10 of this manual.

- (c) Insisting on verbatim compliance with the work specification, through the QAI, during the test or inspection. The QAI will immediately inform the Department Head of any discrepancies noted.
 - (d) Ensuring that any material provided by Ship's Force by direction of the work specification is in strict accordance with technical requirements.
 - (e) Ensuring that no other material, tools, or physical assistance is provided to the contractor unless it is specifically required by the contract specification. The entire Ship's Force will be briefed on this prior to the start of the VR period.
 - (f) Providing continual in-process inspections of work being accomplished aboard ship. In-process inspections of work accomplished off-ship will be accomplished as deemed necessary by the Department Heads and as agreed to by the RMC Surveyor.
 - (g) Providing ship-specific operating and design system parameters to aid in determining actual testing requirements. Reporting specified test results on appropriate QA forms to the RMC Surveyor prior to the end of the VR period.
 - (h) Providing all MIC LEVEL I material required to the RMC Surveyor. Material will not be accepted unless properly controlled by Ship's Force. A face-to-face turnover by a designated Controlled Material Petty Officer to the RMC Surveyor is required.
- i. RMC Quality Assurance and Quality Control responsibilities during VR availabilities.
- (1) An RMC Surveyor will be present on the site of the VR for the duration of the availability. The RMC Surveyor will be the sole point of contact between Ship's Force, FLC-NRCD and the contractor for all questions and actions concerning work specifications.
 - (2) The RMC Surveyor will assist Ship's Force in QA monitoring of each job. The surveyor will:
 - (a) Provide a working copy of the work specifications and all modifications to be used for each job to the ship availability coordinator prior to job start or as soon as they are developed.
 - (b) Brief the ship availability coordinator and ship supervisory personnel on the nature of the industrial environment and the need to insist on verbatim compliance with the job specification by the contractor, stressing that failure of the contractor to provide required material, perform required tests, or otherwise conform to the specification requirements of the work, should be reported immediately. The briefing will specify that Ship's Force will not obligate the government or diminish the requirements of the work specification by direct interface with the contractor personnel on any level.

- (c) Identify in the work specifications all tests and inspection check points which require Ship's Force witness or participation.
 - (d) Identify in the work specifications all tests which the ship must complete. Provide test parameters. If operational design and test information are not available or are unclear, the RMC will request assistance from the Type Commander (TYCOM).
 - (e) Identify in writing the specifications for material to be provided by the ship to the contractor.
 - (f) Inspect all material to be turned over to the contractor by Ship's Force for controlled work with the designated Ship's Force QAI. If the controlled material is MIC-Level I, the material inspection must be a joint inspection, to include the designated Ship's Force QAI and the Ship's Controlled Material Petty Officer, prior to a turnover of the material to the contractor.
 - (g) Inspect each completed controlled work job with the designated Ship's Force QAI prior to final acceptance.
 - (h) Advise the ship availability coordinator of any condition where the lack of references, Military Specification material, or qualified contractor personnel will require Ship's Force submission of a Departure from Specification per Volume V, Part I, Chapter 8 of this manual.
- j. Post-Production Meeting. The RMC Surveyor will provide to Ship's Force all appropriate documentation, including objective quality evidence, to verify the VR was satisfactorily completed. As necessary, technical justification will also be provided when a Departure from Specification request is required to be submitted.
 - k. Following the completion of the VR Availability, Ship's Force must generate and transmit a Post-VR Assessment Report for transmission via message or e-mail.

3.4.2 Voyage Repair Policy Commander, Logistics Western Pacific Area of Responsibility.

3.4.2.1 Voyage Repair Availability Execution.

3.4.2.1.1 Naval Regional Contract Detachment. The NRCD representative will award the contract and liaison with the contractor on contractual matters, including new work and payment.

3.4.2.1.2 Arrival. The RMC Surveyor will meet ship on arrival and ensure contracts are in place prior to the commencement of work. The Surveyor will ensure the technical portion of the contract is satisfied and will liaison with local industrial activity on technical matters. It is both the Surveyor and Ship's Force responsibility to ensure the contractor complies with work specifications.

3.4.2.1.3 Pre-Production Meeting. After the contractor ship-check, an arrival conference will be scheduled, during which the surveyor and Ship's Force will review the specifications, ship-contractor coordination requirements, QA requirements, and required government furnished material to be provided by the ship. The ship must provide the Surveyor a list of the ship's QAIs to be used during the availability.

3.4.2.1.4 Daily Production Meeting. The RMC Surveyor, Ship's Maintenance Management Officer, and other personnel as necessary will meet daily, as a minimum, to review progress with the intent being to identify possible problem areas that may require specific attention. The overall success and effectiveness of any availability is almost entirely a reflection of the customer ship's interest in the work being accomplished.

3.4.2.1.5 Growth and New Work.

- a. Growth work identified during the open and inspect phase of the baseline repairs will be reviewed for cost and schedule impacts and incorporated in the work package by the Surveyor, as applicable. No growth work or new work is authorized to commence until FLC-NRCD negotiates with the contractor and the appropriate contract documentation is issued.
- b. New work must be processed and authorized without violating Public Law restrictions. To assure these restrictions are not violated, the ship must submit an OPNAV 4790/2K following the normal process and provide a copy to the Surveyor. The Surveyor must determine the feasibility of completing new work and must obtain the required authorization from the Maintenance Manager.

3.4.2.1.6 Constructive Changes. Constructive changes are changes to contracts in the intent of work specifications directed at the contractor by anyone other than the Surveyor or FLC-NRCD representative. Since they are not pre-negotiated with the contractor, constructive changes are against the law. Ship's Force personnel should be cautioned not to direct or otherwise influence contractor personnel to accomplish work not clearly delineated by contract specifications.

3.4.2.1.7 Contractor Support.

- a. Material Support. Military Specification parts and material are often not available to local contractors. Some parts can be manufactured, but the ship should provide the material and parts required for work package execution. The ship should provide only the parts required by the work specifications.
- b. Technical Support. Drawings and Technical Manuals are generally not available in theater. Ship's Force should be prepared to produce associated technical information as required.

3.4.2.1.8 Schedule Limitations.

- a. In the COMFIFTHFLT AOR, the Arab work week is **Sunday** through **Thursday** with the weekend being on Friday **and Saturday**. Ships in VR Availabilities should support this schedule for the most productive use of the maintenance period.
- b. In Israel, the weekend is on Friday and Saturday. Ships in VR Availabilities should support this schedule for the most productive use of the maintenance period.
- c. Contractor ability to accomplish work is sometimes limited by Port Captain regulations, local strikes, and holidays. These stoppages are relatively frequent but short term in nature. The FLC-NRCD representative and RMC Surveyor should be notified immediately of any indication of problems.

3.4.2.1.9 Quality Assurance Responsibilities. Although the name implies quick repairs, VRs require no less stringent QA procedures than any other routine planned repair. While Ship's

Force is ultimately responsible for ensuring that appropriate QA is maintained on all repairs, regardless of who performs the work, the Surveyor overseeing the VRs is responsible to Ship's Force to ensure that all requirements specified in the contract are met. Specific Ship's Force QA responsibilities may include:

- a. Providing personnel to witness tests and inspections as required by the Surveyor. Witnesses must be qualified QAIs who are aware of the technical requirements to be fulfilled by the test or inspection.
- b. Ensuring that documentation of each contractor test or inspection is provided to the QAI at its conclusion. If not provided, the QAI will use the applicable form from Volume V, Part I, Chapter 11 of this manual to document the test or inspection. Records of all Ship's Force and contractor tests and inspections will be maintained per Volume V, Part I, Chapter 10 of this manual.
- c. Insisting on verbatim compliance with the work specification, through the QAI, during the test or inspection. The QAI will immediately inform the appropriate Department Head and Surveyor of any discrepancies noted.
- d. Ensuring that any material provided by Ship's Force by direction of the work specification is in strict accordance with technical requirements.
- e. Ensuring that no other material, tools, or physical assistance is provided to the contractor unless it is specifically required by the contract specification or requested by the Surveyor. The entire Ship's Force will be briefed on this prior to the start of the VR period.
- f. Assisting the Surveyor in providing continual in-process inspections of work being accomplished aboard ship. In-process inspections of work accomplished off-ship will be accomplished as deemed necessary by the Department Heads and as agreed to by the Surveyor.
- g. Providing ship-specific operating and design system parameters to aid in determining actual testing requirements. Reporting specified test results on appropriate QA forms to the Surveyor prior to the end of the VR period.
- h. Providing all MIC LEVEL I material required to the Surveyor. Material will not be accepted unless properly controlled by Ship's Force. A face-to-face turnover by a designated Controlled Material Petty Officer to the Surveyor is required.

3.4.2.1.10 Unsatisfactory Work or Work Practices. Any unsatisfactory work accomplished or work practice conducted by any maintenance activity must be promptly reported to the activity involved and the applicable Maintenance Manager. Reports should include sufficient detail to ensure timely and proper corrective action may be taken. Prior to informing the Maintenance Manager, direct liaison between customer and repair activity in identifying and clarifying deficiencies is required.

3.4.2.1.11 Post-Production Meeting. The Surveyor will provide to Ship's Force all appropriate documentation, including objective quality evidence, to verify that the VRs were satisfactorily completed. As necessary, technical justification will be provided when a Departure from Specification request is required to be submitted.

3.4.2.1.12 Assessment Report. Following the completion of the VR Availability, Ship's Force must generate and transmit a Post-VR Assessment Report for transmission via message or e-mail.

3.4.3 Submarine Policy.

- a. Mission essential VR support will be coordinated by COMSUBGRU Seven, COMSUBGRU Eight and applicable TYCOM, with information copies to MARCM DET Bahrain, COMLOG WESTPAC, and homeport Fleet Maintenance Activity (RMC or RSG).
- b. With the exception of Japanese National Master Labor Contract personnel employed by SRF-JRMC, foreign nationals must **not** be contracted to perform VRs onboard submarines. Japanese National Master Labor Contract personnel employed by SRF-JRMC may perform VR work in non-nuclear areas only.
- c. When required, Mobile Utility Support Equipment (MUSE) support can be provided in some WESTPAC foreign ports. Ship requests for MUSE support must be submitted to COMSUBGRU Seven, with information copies to FDRMC Det Bahrain and COMLOG WESTPAC. Commander, U.S. Naval Force, Europe-Commander, U.S. Naval Forces, Africa-Commander, Sixth Fleet has no MUSE support.

3.4.4 Nuclear Propulsion Plant and Related Equipment. Only qualified Navy or Naval Industrial Activity personnel must perform maintenance on nuclear propulsion plant and related equipment. Ship requests for VRs to this equipment must be forwarded to the TYCOM, with information copies to the parent Immediate Superior In Command, FDRMC Det Bahrain, COMLOG WESTPAC, COMSUBGRU Seven or COMSUBGRU Eight.

3.5 SHIP REPAIR WORK IN SEVENTH FLEET AREA OF RESPONSIBILITY. Subtitle C, Part IV, Chapter 633, Section 7310 of reference (a) limits vessels with a homeport in the United States to receiving **ONLY** VRs from foreign maintenance facilities. The restrictions imposed by Subtitle C, Part IV, Chapter 633, Section 7310 of reference (a) include SRF-JRMC. The WESTPAC Afloat Fleet Maintenance Activity and Guam repair facilities are considered U.S. repair facilities and are not limited to performing Voyage Repairs on U.S. homeported ships. Additionally, the VR restrictions under reference (a) do not apply to the Forward Deployed Naval Forces ships. Reference (b) provides specific instruction for the preparation of work packages, funding and management of WESTPAC availabilities.

3.5.1 Funding and Management for Naval Ship Repair Facility Availabilities. Detailed procedures for financing Naval Ship Repair Facility availabilities in WESTPAC are contained in reference (b). Funds for the accomplishment of repairs in WESTPAC are centrally budgeted and managed by Commander, Pacific Fleet, with the WESTPAC availability funds being provided direct to each individual repair activity for the accomplishment of authorized repairs to Seventh Fleet ships.

3.5.2 Current Work Package. For Commander, Seventh Fleet AOR, the Maintenance Team will screen, budget and broker ship's 2 Kilos to repair facilities, COMLOG WESTPAC, SRF-JRMC, or FLC- NRCD for local contracting (via RMC or COMLOG WESTPAC) following current FLEET and TYCOM policies and procedures.

3.6 UNSATISFACTORY WORK OR WORK PRACTICES. Any unsatisfactory work accomplished by any maintenance activity must be promptly reported to the activity involved. Inform the operational and administrative chains of command and RMC, as applicable. Reports should include sufficient detail to ensure that timely and proper corrective action may be taken. Direct liaison between customer and repair activity in clarifying deficiencies is mandatory.

VOLUME III**CHAPTER 4****SCHEDULED MAINTENANCE PLANNING, PREPARATION AND PRIORITIES**REFERENCES.

- (a) NAVSEAINST 4790.8/OPNAVINST 4790.4 - Ship's Maintenance and Material Management (3-M) Manual

LISTING OF APPENDICES.

A Format for Work Screening Message

4.1 PURPOSE. To implement the policies of reference (a) when planning deployed maintenance, and describe the process for the submittal and review of work packages and message work candidates for deployed ships.

4.2 SURFACE FORCE SHIP WORK PACKAGE PREPARATION. Volume II, Part II, Chapter 2 of this manual establishes Naval Surface Force ship maintenance work item and specification package preparation procedures, milestones and business rules. These business rules apply to Regional Maintenance Centers (RMC), Surface Type Commanders, Systems Commanders (sponsoring Program Alterations) and other Alteration Installation Team Sponsors.

4.3 CONTINUOUS MAINTENANCE PLANNING. In this Chapter on Deployed Maintenance, the term Continuous Maintenance (CM) Planning refers to Forward Deployed Naval Forces (FDNF) ships, and to work brokered to the Afloat Fleet Maintenance Activity (AFMA) for all other ships. A vital part of CM is the scheduling and accomplishment of work outside of Chief of Naval Operations availabilities. This allows the ship to be consistently maintained at acceptable readiness levels. Private Sector Industrial Activity contracts create a long-term relationship with the executing activity that facilitates the execution of CM. The ship's maintenance teams should recognize every scheduled in-port period as an opportunity to accomplish CM. Funding for CM is included in the ship's Maintenance and Modernization Business Plan. Discussions with Private Sector Industrial Activity contractors and I-Level service providers indicate that in order to get the most efficient use of CM maintenance dollars there are some minimum planning thresholds that should be adhered to in order to prevent premiums from being accrued. A minimum of 30 days should be allotted between the time depot level work is brokered to the executing activity and work is scheduled to start. A minimum of 40 days should be allotted for work brokered to I-Level activities. This assures there is adequate time to plan the work and acquire the necessary material in an efficient manner. If these minimum thresholds cannot be complied with, the work should be postponed until the next CM opportunity. The Maintenance Team may run a business case if there are other factors that might justify the addition of work inside these preferred windows. All work for a CM Availability should be identified at A-40 for I-Level and at A-30 for D-Level. This will allow a Work Package Integration review to take place at A-20 and for all work to be defined at A-10.

4.4 CURRENT SHIP'S MAINTENANCE PROJECT MAINTENANCE WHILE DEPLOYED.

- a. Under the CM concept, parent Maintenance Team, RMC, Immediate Superior In Command (ISIC) and the Fleet Maintenance Activity (FMA) will not transfer the

Current Ship's Maintenance Project to the deployed unit's maintenance activity. Parent Maintenance Team, RMC, ISIC and the FMA will maintain control of the Current Ship's Maintenance Project and will broker work, as a continuous process, per Volume II, Part I, Chapter 2 of this manual.

- b. Parent Maintenance Team, RMC, /ISIC and the FMA will identify work candidates brokered to a deployed screening activity in the appropriate IT system and report them to the ship through weekly Work Package Summary reports.
- c. When normal screening systems are down, parent Maintenance Team, RMC, ISIC and the FMA will receive automatic feedback on status of brokered work candidates through the appropriate IT system(s). The forward screening activity can identify work candidates that will **not** be undertaken during deployment by using the "Return to Broker" function.

4.5 WORK CANDIDATE PREPARATION AND PRIORITY.

- a. Work candidates must be prepared in strict accordance with reference (a). Use a message work candidate per Volume II, Part I, Chapter 4 of this manual whenever an OPNAV 4790/2K **cannot** be sent by any other means.
- b. Following End-to-End Maintenance Process procedures, an appropriate Figure of Merit should be assigned.
- c. Priority (PRI) assignment in 2 Kilo is a major factor in determining whether a work candidate is approved for accomplishment during deployment and must be accurate. The following table illustrates the interrelationships.

DEPLOYED ACCOMPLISHMENT FOR NON-FORWARD DEPLOYED NAVAL FORCES (FDNF) SHIPS

<u>PRI</u>	<u>DESCRIPTION</u>	<u>ACTIVITIES</u>
1	Voyage Repairs.	Afloat Fleet Maintenance Activity (AFMA), Technical Assistance or Foreign Contractor, Naval Ship Repair Facility (NSRF), Strike Force Intermediate Maintenance Availability (SFIMA).
2	Urgent repairs during Unscheduled Maintenance Availabilities.	AFMA, Technical Assistance or SFIMA.
3	Routine repairs.	AFMA or SFIMA.
4	Desirable ship work.	AFMA or SFIMA.

4.6 SUBMISSION OF WORK PACKAGES. Screened work packages should be continuously available to Commander, Logistics (COMLOG) Western Pacific (WESTPAC), Forward Deployed Regional Maintenance Center (FDRMC) Naples, Det Bahrain and the AFMAs from the ship's parent Maintenance Team Ship Repair Facility - Japan Regional Maintenance Center (SRF-JRMC) and ISIC. These work packages will form the basis for each availability. To ensure clearly defined work packages at availability start, the accomplishing activity (FMA, RMC or Maintenance Manager) will provide a screening message at arrival minus ten days to all

16 Oct 2019

concerned with an information copy to responsible ISICs and RMC (See Appendix A of this chapter).

4.7 WORK CANDIDATE SCREENING AND BROKERING.

- a. For Commander, U.S. Naval Forces, Europe-Commander, Sixth Fleet (COMUSNAVEUR)-(COMSIXTHFLT) Area of Responsibility (AOR), FDRMC Naples will screen, budget and broker surface ship's maintenance work candidates to Fleet Maintenance Activities, stateside repair facilities or to the Naval Regional Contracting Department for local. Commander, Submarine Group (COMSUBGRU) Eight will screen submarine Message Work Candidates, and coordinate with the Unit's home Fleet Maintenance Activity to broker the work to the appropriate repair facility.
- b. For Commander, Fifth AOR, the Maintenance Team will screen, budget and broker ship's 2-Kilos to repair facilities, COMLOG WESTPAC, RMC, Fleet Logistics Center or Naval Regional Contracting Department for local contracting (via RMC or COMLOG WESTPAC) following current FLEET and Type Commander policies and procedures.
- c. For Commander, Seventh Fleet AOR. For all maintenance actions in Japan and Okinawa, SRF-JRMC will screen, budget and broker surface ship's maintenance work candidates to FMAs, stateside repair facilities, or to Fleet Logistics Center Yokosuka for local contractor accomplishment. For all maintenance outside Japan, COMLOG WESTPAC will screen, budget and broker surface ship's maintenance work candidates to FMAs, stateside repair facilities or to Fleet Logistics Center Det Singapore for local contractor accomplishment. COMSUBGRU Seven will screen submarine Message Work Candidates, and coordinate with the Unit's home FMA to broker the work to the appropriate repair facility. COMSUBGRU Seven will also screen surface ship 2-Kilos to its assigned AFMA referred to them from COMLOG WESTPAC.

4.8 SCREENING OF WORK CANDIDATES AND WORK PACKAGES.

- a. The following activities are authorized to conduct screening of work packages:

<u>AREA OF RESPONSIBILITY</u>	<u>ACTIVITY</u>	<u>REMARKS</u>
COMUSNAVEUR-COMUSNAVAF-COMSIXTHFLT	FDRMC Naples	Screening for surface ships deployed to SIXTH Fleet
	COMSUBGRU Eight	Screening for submarines deployed in SIXTH Fleet.
Commander, Fifth Fleet (COMFIFTHFLT)	FDRMC Det Bahrain	Screening for all Arabian Gulf, Arabian Sea, Red Sea activities (AFMA, Contractor).
	COMFIFTHFLT AFMA	Screening for assigned MAVs only.
	COMSUBGRU Seven	Screening for all deployed submarines.

16 Oct 2019

Commander, Seventh Fleet (COMSEVENTHFLT)	SRF-JRMC	Screening for FDNF for ports covered by SRF-JRMC.
	WESTPAC AFMA	Screening for AFMAs only.
	COMSUBGRU Seven	Screening for all submarine and assigned surface ship AFMAs.
	SRF-JRMC	Screening for all COMSEVENTHFLT deployers visiting Yokosuka.
	SRF-JRMC	Screening for all COMSEVENTHFLT deployers visiting Sasebo.
	COMSUBGRU Seven	Screening for all deployed submarines.
	COMSUBRON Fifteen	Screens all work candidates and work packages brokered to the assigned AFMA.

- b. Non-FDNF Voyage Repairs Only. When AFMAs visit ports with substantial Naval repair facilities or are in commercial ports during times of high port loading, it is often desirable to divide availabilities and primary work screening functions between the shore activity and the AFMA on a ship-by-ship basis. When this happens, the applicable maintenance manager will, by message, assign the primary availability and work package screening responsibility to either the shore activity or the AFMA. When assigned, the primary activity will request and screen the work package. The primary activity will also screen work candidates for referral to the secondary activity for review and acceptance or rejection. The secondary activity will then issue its own screening message concerning only the work candidates referred by the primary activity. Ports where this may be routinely expected to happen are:

<u>PORT</u>	<u>ACTIVITY</u>
Yokosuka	SRF-JRMC
Sasebo	SRF-JRMC Det

- c. The following guidance applies to work to be accomplished by all maintenance activities on ships not permanently homeported overseas:
- (1) Work candidates which are clearly within the capability of Ship's Force will not normally be accomplished by repair activities, but technical assistance will be provided if the need is substantiated.
 - (2) Work candidates for material only or manufacture of standard stock items will not be approved, unless the item is not available in time to ensure timely correction of Casualty Reports or major safety items only.
 - (3) Unless previously authorized by the Type Commander, work candidates for ship changes will not normally be approved while deployed.

- (4) Activities authorized to accomplish work screening will use screening messages prepared per Appendix A of this chapter, or via E-mail (SIPRNET or NIPRNET) as applicable.

VOLUME III.**CHAPTER 5****MAINTENANCE SUPPORT FOR
NON-UNITED STATES NAVY SHIPS AND ACTIVITIES**

5.1 PURPOSE. Maintenance activities addressed in this volume must provide support to Military Sealift Command (MSC) ships, United States Coast Guard (USCG) ships and other craft and activities on a not to interfere with primary mission basis, at the discretion of the Commanding Officer or Officer In Charge. Generally, all material directly chargeable to the work accomplished must be funded by the requesting activity. Requesting activity should also fund any related temporary additional duty and travel expenses. If the requesting activity is non-United States Navy, man-day rates for military and civilian personnel will be chargeable.

5.2 MILITARY SEALIFT COMMAND VESSELS. Before the acceptance of work by the industrial activity, MSC vessels must obtain prior authorization and funding from the cognizant MSC program manager via the ship's MSC port engineer and MSC type desk. Where prior authorization has not been received, the Master and Chief Engineer of the requesting vessel should be directed to submit their Voyage Repair request to their MSC Port Engineer and MSC type desk for work authorization and brokering. After the MSC type desk authorizes the work, and it is accepted by the industrial activity, the industrial activity will use their standard procedures for work candidate processing, planning, Quality Assurance, and work execution methods. The MSC ship Chief Engineer or Port Engineer will be the primary points of contact to coordinate jobs. Work performed by Fleet Maintenance Activities must be included in the Maintenance Resource Management System for tracking and up line reporting. Note that MSC ships do not use the 3M system. A maintenance tracking number and a point of contact must be provided to the Chief Engineer and Port Engineer for tracking the job.

5.3 UNITED STATES COAST GUARD VESSELS. USCG vessels assigned to Navy operational control will be treated the same as Navy vessels for the purposes of maintenance, with the exception that the USCG will fund any direct material, or contractor charges.

5.4 OTHER SERVICE CRAFT AND ACTIVITIES. Work requested by non-Navy activities must be carefully screened to ensure the work is authorized by higher authority, funding arrangements are in place and technical requirements are fully understood prior to acceptance.

16.2 Aircraft Launch and Recovery Equipment Maintenance Program.....	IV-16-1
16.2.1 Applicability	IV-16-1
16.2.2 Objectives	IV-16-1
16.2.3 Responsibilities.....	IV-16-1
16.2.4 Management Team	IV-16-2
16.2.5 Assist Visits	IV-16-2
16.2.6 Audits.....	IV-16-2
16.3 Aviation Certification	IV-16-3
16.4 Carrier and Field Service Unit.....	IV-16-3
16.5 Responsibilities	IV-16-3
16.5.1 Aircraft Carrier Commanding Officer	IV-16-3
16.5.2 Industrial or Repair Activity.....	IV-16-4
16.6 Naval Aviation Depot	IV-16-4
16.7 Naval Aviation Depot Voyage Repair Team.....	IV-16-5

CHAPTER 17 - STEAM CATAPULT INSPECTION

17.1 Purpose.....	IV-17-1
17.2 Policy	IV-17-1
17.3 Types of Inspections	IV-17-2
17.4 Responsibilities.....	IV-17-2
17.4.1 Naval Sea Systems Command	IV-17-2
17.4.2 Naval Surface Warfare Center, Philadelphia Division	IV-17-2
17.4.3 Type Commander	IV-17-3
17.4.4 Regional Support Group/Regional Maintenance Center and Fleet Maintenance Activity Commanding Officers.....	IV-17-3
17.4.5 Ship Commanding Officer.....	IV-17-3
17.4.6 Regional Maintenance Center Senior Inspector	IV-17-4
17.4.7 Steam Generating Plant Inspector	IV-17-4
17.5 Inspection Scheduling.....	IV-17-4

17.6	Safety Procedures	IV-17-5
17.7	Catapult Accumulator Inspections and Requirements	IV-17-6
17.7.1	Routine Inspection	IV-17-6
17.7.2	Pre-Start of Availability Inspection	IV-17-6
17.7.3	Start of Availability Inspection	IV-17-6
17.7.4	Strength and Integrity Inspection	IV-17-6
17.7.5	Industrial Support Visit Inspection	IV-17-7
17.7.6	Completion of Availability Inspection	IV-17-7
17.7.7	Inactivation or Reactivation Inspection	IV-17-7
17.7.8	Special Inspections	IV-17-7
17.8	Inspection Guidelines and Reports	IV-17-8
17.8.1	Guidelines	IV-17-8
17.8.2	Reports	IV-17-8
17.9	Catapult Accumulator Inspection Preparation	IV-17-9
17.10	Catapult Accumulator Inspection	IV-17-9
17.10.1	Catapult Accumulator Inspection Forms	IV-17-9
17.10.2	Catapult Accumulator Inspection Areas	IV-17-9
17.10.3	Completion of Inspection	IV-17-10
17.10.4	Automatic Controls Systems Inspection Guidelines	IV-17-10
17.10.5	Operating and Casualty Procedures	IV-17-10
Appendices		
A	Sample Catapult Accumulator Inspection Request	IV-17A-1
B	Sample Inspection Confirmation Letter	IV-17B-1
C	Summary of Catapult Accumulator Inspection Scheduling and Responsibilities	IV-17C-1
D ₁	Sample Catapult Accumulator Inspection Report Cover Letter	IV-17D-1
D ₂	Sample 5 Year Strength and Integrity Catapult Accumulator Inspection Report Cover Letter	IV-17D-2
D ₃	Sample Other Catapult Accumulator Inspection Report Cover Letter	IV-17D-3
E	Sample Catapult Accumulator Inspection RBO and Severely Degraded Deficiencies Message	IV-17E-1
F	Sample 30 Day Update Message	IV-17F-1
G	Sample Catapult Accumulator Rescission Message	IV-17G-1

CHAPTER 18 - SUBMARINE SALVAGE INSPECTION

18.1	Purpose	IV-18-1
18.2	Inspections	IV-18-1
18.2.1	Periodicity	IV-18-1
18.2.2	Procedures and Reports	IV-18-1
18.2.3	Inspection Resources	IV-18-2
18.3	Responsibilities	IV-18-2
18.3.1	Immediate Superior In Command	IV-18-2
18.3.2	Commanding Officer or Officer In Charge	IV-18-2
18.3.3	Senior Inspecting Officer	IV-18-3

15 Jan 2021

Appendices

A	SSN 21 Class Submarine Salvage Inspection Check-Off List	IV-18A-1
B	SSN 688 Class Submarine Salvage Inspection Check-Off List	IV-18B-1
C	SSBN/SSGN 726 Class Submarine Salvage Inspection Check-Off List	IV-18C-1
D	SSN 774 Class Submarine Salvage Inspection Check-Off List	IV-18D-1
E	Sample Pre-Inspection Information or Certification	IV-18E-1
F	Sample Report of Salvage Inspection Forwarding Letter.....	IV-18F-1

CHAPTER 19 - RETENTION OF MATERIAL DEFICIENCY REPORTS AND RECORDS OF EQUIPMENT CHARACTERISTICS AND TESTS

19.1	Purpose.....	IV-19-1
19.2	Inspection Reports	IV-19-1
19.3	Retention of Records of Equipment Characteristics and Tests.....	IV-19-1

Appendices

A	Bearing Log (Submarines Only)	IV-19A-1
---	-------------------------------------	----------

CHAPTER 20 - DIVER LIFE SUPPORT SYSTEMS, SUBMARINE RESCUE CHAMBER AND DRY DECK SHELTER MAINTENANCE AND CERTIFICATION

20.1	Purpose.....	IV-20-1
20.2	Diver Life Support System Maintenance and Certification.....	IV-20-1
20.2.1	General.....	IV-20-1
20.2.2	Objective.....	IV-20-1
20.2.3	United States Navy Diving and Manned Hyperbaric Systems Safety Certification	IV-20-1

Appendices

A	System Certification Requirements	IV-20A-1
---	---	----------

CHAPTER 21 - SUBMARINE OXYGEN GENERATING PLANTS

21.1	Purpose.....	IV-21-1
21.1.1	Policy	IV-21-1
21.1.2	Background.....	IV-21-2
21.2	Responsibilities.....	IV-21-2
21.2.1	Immediate Superior In Command	IV-21-2
21.2.2	Performance Monitoring Team.....	IV-21-3
21.2.3	Commanding Officer	IV-21-3
21.3	Requirements for Shipboard Personnel Qualification	IV-21-4
21.3.1	Training.....	IV-21-4
21.3.2	Watchstanding Prerequisites.....	IV-21-5

CHAPTER 22 - SUBMARINE ANTENNA TESTING

22.1	Purpose.....	IV-22-1
22.2	Background	IV-22-1

22.3 Policy	IV-22-1
22.3.1 Hydrostatic Pressure Testing	IV-22-1
22.3.2 Fleet Maintenance	IV-22-2
22.4 Procedure	IV-22-2

CHAPTER 23 - GAS TURBINE ENGINE INSPECTION FOR SURFACE FORCE SHIPS

23.1 Purpose	IV-23-1
23.2 Discussion	IV-23-1
23.3 Marine Gas Turbine Inspector	IV-23-1
23.3.1 Certification	IV-23-1
23.3.2 Authorized Functions and Responsibilities	IV-23-2
23.4 Gas Turbine Inspections and Requirements	IV-23-5
23.4.1 Applicability	IV-23-5
23.4.2 Pre-Planned Major Maintenance Availability	IV-23-5
23.4.3 Pre-Deployment	IV-23-5
23.4.4 Gas Turbine Bulletin Inspections	IV-23-5
23.4.5 Casualties	IV-23-6
23.5 Requesting Procedures	IV-23-6
23.6 Preparation for Inspection	IV-23-6
23.7 Inspection Procedures	IV-23-6
23.7.1 Post Casualty Inspections	IV-23-6
23.7.2 Pre-Availability Inspections	IV-23-6
23.8 Inspection Criteria	IV-23-6
23.8.1 Repair Before Operating	IV-23-6
23.8.2 Severely Degraded	IV-23-7
23.8.3 Major Deficiencies	IV-23-7
23.8.4 Minor Deficiencies	IV-23-8
23.9 Inspection Results	IV-23-8

CHAPTER 24 - WOOD HULLED SHIPS AND CRAFT

24.1 Purpose	IV-24-1
24.2 Wood Decay	IV-24-1
24.2.1 Primary Causes	IV-24-1
24.2.2 Recognition	IV-24-1
24.2.3 Preventive Measures	IV-24-1
24.2.4 Corrective Measures	IV-24-2
24.3 Deck and Hull Maintenance	IV-24-3
24.3.1 Inspection Requirements	IV-24-3
24.3.2 Maintenance Policies	IV-24-3
24.3.3 Deck Covering Repairs	IV-24-4
24.3.4 Caulking Techniques	IV-24-4

24.3.5 Weather Deck/Planked Deck Repair	IV-24-4
24.3.6 Underwater Planking Repairs	IV-24-5
24.4 Surface Preparation and Painting	IV-24-5
24.4.1 General Techniques	IV-24-5
24.4.2 Preparation and Painting Policies	IV-24-5
24.5 Wooden Hull Bottom Sheathing	IV-24-6
24.6 Wooden Sea Chest Foundations	IV-24-6

CHAPTER 25 - GAS FREE ENGINEERING INSPECTIONS

25.1 Purpose	IV-25-1
25.2 Scope	IV-25-1
25.3 Discussion	IV-25-1
25.4 Oversight	IV-25-9

Appendices

A Gas Free Engineering Program Assessment Sheet	IV-25A-1
---	----------

CHAPTER 26 - BOARD OF INSPECTION AND SURVEY INSPECTIONS POLICY

26.1 Purpose	IV-26-1
26.1.1 Scope	IV-26-1
26.1.2 Background	IV-26-1
26.1.3 Discussion	IV-26-1
26.1.4 Policy	IV-26-2
26.2 Responsibilities	IV-26-2
26.2.1 Type Commander	IV-26-2
26.2.2 Immediate Superior In Command	IV-26-3
26.2.3 Ship Commanding Officer	IV-26-3
26.2.4 INSURV Coordinator	IV-26-3
26.2.5 Regional Maintenance Centers	IV-26-4
26.3 Inspection Scheduling	IV-26-4
26.3.1 Combined Trial/Acceptance Trial Inspections	IV-26-4
26.3.2 Guarantee Material Inspection or Final Contract Trials	IV-26-4
26.3.3 Material Inspections	IV-26-4
26.4 Preparation for INSURV Inspection	IV-26-5
26.4.1 Active Preparation	IV-26-5
26.4.2 Ship's Internal Organization	IV-26-6
26.4.3 Updating the Current Ship's Maintenance Project	IV-26-6
26.5 Board of Inspection and Survey Inspection Conduct and Documentation	IV-26-6
26.5.1 Inspection Conduct	IV-26-6
26.5.2 Deficiency Documentation	IV-26-6
26.6 Post Board of Inspection and Survey Inspection Actions	IV-26-7
26.6.1 Deficiency Processing and Resolution	IV-26-7

26.6.2 Post INSURV Inspection Reports	IV-26-7
26.6.3 Unsatisfactory Finding	IV-26-7

CHAPTER 27 - REBOILER INSPECTION

27.1 Purpose	IV-27-1
27.2 Policy	IV-27-1
27.3 Types of Inspections	IV-27-2
27.4 Responsibilities	IV-27-2
27.4.1 Naval Sea Systems Command	IV-27-2
27.4.2 Naval Surface Warfare Center, Philadelphia Division	IV-27-2
27.4.3 Type Commander	IV-27-3
27.4.4 Regional Maintenance Center	IV-27-3
27.4.5 Regional Maintenance Center Commanding Officer	IV-27-4
27.4.6 Immediate Superior in Command	IV-27-4
27.4.7 Ship's Commanding Officer	IV-27-4
27.4.8 Regional Maintenance Center Senior Inspector	IV-27-4
27.4.9 Steam Generating Plant Inspector	IV-27-5
27.4.10 Regional Maintenance Center Subject Matter Expert	IV-27-5
27.5 Inspection Scheduling	IV-27-5
27.6 Safety Procedures	IV-27-6
27.7 Steam Reboiler Inspections and Requirements	IV-27-6
27.7.1 Eddy Current Inspection	IV-27-6
27.7.2 Routine Inspection	IV-27-6
27.7.3 Pre-start of Availability Inspection	IV-27-7
27.7.4 Start of Availability Inspection	IV-27-7
27.7.5 Strength and Integrity Inspection	IV-27-7
27.7.6 Industrial Support Visit Inspection	IV-27-7
27.7.7 Completion of Availability Inspection	IV-27-8
27.7.8 Inactivation or Reactivation	IV-27-8
27.7.9 Special Inspection	IV-27-8
27.7.10 Annual Inspection	IV-27-8
27.7.11 Operational Assessments	IV-27-8
27.8 Reboiler Inspection Guidelines and Reports	IV-27-8
27.8.1 Guidelines	IV-27-8
27.8.2 Reports	IV-27-9
27.9 Steam Reboiler Inspection Preparation	IV-27-10
27.10 Steam Reboiler Inspection	IV-27-10
27.10.1 Steam Reboiler Inspection Forms	IV-27-10
27.10.2 Steam Reboiler Inspection Areas	IV-27-10
27.10.3 Completion of Inspection	IV-27-11

27.11 Steam Reboiler Control Systems/Online Verification Guidelines	IV-27-11
---	----------

Appendices

A	Sample Steam Reboiler Inspection Request	IV-27A-1
B	Sample Inspection Confirmation Message	IV-27B-1
C	Sample Steam Reboiler Inspection Report Cover Letter.....	IV-27C-1
D	Sample Reboiler Inspection RBO or Severely Degraded Deficiencies Message	IV-27D-1
E	Sample 30 Day Update Message	IV-27E-1

VOLUME IV
CHAPTER 1
INTRODUCTION

REFERENCES.

- (a) OPNAVINST 3120.32 - Standard Organization and Regulations of the U.S. Navy
- (b) OPNAVINST 4700.7 - Maintenance Policy for U.S. Naval Ships
- (c) COMLANTFLTINST 5400.2 - U.S. Atlantic Fleet Regulations
- (d) COMPACFLTINST 5400.3 - U.S. Pacific Fleet Regulations
- (e) NAVSEAINST 4790.8/OPNAVINST 4790.4 - Ships' Maintenance and Material Management (3-M) Manual

LISTING OF APPENDICES.

A List of Acronyms

1.1 PURPOSE. To provide guidance in the execution and management for tests, inspections and assessments applicable to units of the Navy.

- a. The Foreword of this manual contains a master listing of all references used throughout the Joint Fleet Maintenance Manual. These references are arranged in alphanumeric order to facilitate their procurement for use with this manual. References used in specific chapters of this volume are listed at the beginning of each chapter in the order in which they appear in the chapter text.
- b. Acronyms are identified when they are initially used in this volume. Appendix A of this chapter contains a master listing of acronyms used throughout this volume.
- c. References (a) through (e) must be used in conjunction with this manual, however, the requirements of this manual must **not** take precedence over these higher authority directives, or technical directives from applicable Systems Commands. Where conflicts exist with previously issued Fleet Commander, Commander, Naval Reserve Forces (COMNAVRESFOR), Type Commander (TYCOM) letters, transmittals and instructions, other than references (c) and (d), this manual must take precedence. Conflicts must be reported to the cognizant TYCOM for resolution.

1.2 SCOPE. This volume applies to all ships and shore activities under the cognizance of Commander, United States Fleet Forces Command (COMUSFLTFORCOM), Commander, Pacific Fleet (COMPACFLT) and COMNAVRESFOR. This volume is not intended to be all encompassing, since the guidance for many elements of the maintenance programs and their execution are issued by higher or technical authority (e.g., Naval Ships' Technical Manuals (NSTM), Office of the Chief of Naval Operations Instruction (OPNAVINST)).

- a. This volume contains general topics, applicable to all ships and units under the cognizance of COMUSFLTFORCOM or COMPACFLT. In those cases where chapters, sections or paragraphs of chapters are not applicable to certain Forces, an applicability statement has been used for clarification.

- b. Equipment under the cognizance of the Strategic Systems Programs and Naval Sea Systems Command Nuclear Propulsion Directorate (NAVSEA 08) is maintained following Strategic Systems Programs and NAVSEA 08 directives, respectively.

1.3 CHANGES AND CORRECTIONS. Changes and corrections will be issued as required. Comments and suggestions for improving or changing this volume are invited. Address comments, recommendations and requested changes to Submarine Maintenance Engineering, Planning and Procurement Activity utilizing the change request form located in the front of this manual. If changes are submitted in electronic format, facsimile or E-mail, each change request must contain the information required on the change request form.

APPENDIX A

LIST OF ACRONYMS

3-M	Maintenance and Material Management
ABC	Automatic Boiler Control
ABO	Aviators Breathing Oxygen
ACN	Advance Change Notice
AEL	Allowance Equipage List
AEOG	Automated Electrolytic Oxygen Generator
AIMD	Aviation Intermediate Maintenance Department
ALRE	Aircraft Launch and Recovery Equipment
ALREMP	Aircraft Launch and Recovery Equipment Maintenance Program
APL	Allowance Parts List
ATIS	Advanced Technical Information Support
AWR	Automated Work Request
BIRMIS	Boiler Inspection and Repair Maintenance Information System
CAFSU	Carrier And Field Service Unit
CAI	Completion of Availability Inspection
CASREP	Casualty Report

LISTING OF APPENDICES.

- A Typical Core Capability Assessment Areas
- B Typical Core Capability Assessment Projects
- C Sample FMA Assessment Report
- D FMA Assessment Deficiency Format

2.1 **PURPOSE.** The purpose of this chapter is to provide guidance for conducting a Fleet Maintenance Activity (FMA) Assessment, including areas to be assessed, responsibilities for conducting the assessment and deficiency correction and reporting requirements.

2.1.1 **Scope.** Fleet Maintenance Activity assessments will be conducted by the Type Commander (TYCOM) or Fleet Commander with cognizance over the FMA. For assessments conducted by the cognizant TYCOM, the assessment team will be comprised of members from each TYCOM that the FMA performs repairs for, with the senior member from the cognizant TYCOM. For assessments conducted by the cognizant Fleet Commander, the assessment team will be comprised of members from each TYCOM that the FMA performs repairs for, with the Fleet Commander, or Fleet Commander assigned TYCOM representative as the senior member of the assessment team. Assessments will be conducted per references (a) through (g) using the Quality Assurance assessment areas prescribed by Volume V, Part I, Chapter 9 of this manual.

- a. Assessments of Afloat FMAs will be performed annually, not to exceed 18 months.
- b. Assessments of shore based FMAs will be performed every 18 months, not to exceed 24 months. (TYCOM Quality Assurance assessments, explained in Volume V, Part I, Chapter 9 of this manual, will be accomplished concurrently with FMA assessments when scheduled in the same calendar year.)

- c. (Regional Maintenance Centers only) The following Regional Maintenance Centers (RMC) will be assessed every 18 months not to exceed 24 months. Areas may be assessed more frequently based upon results of previous assessments. These assessments encompass all functions of the RMC standard departments as listed in Commander, Naval Regional Maintenance Center Ship Organization and Regulation Manual:

Mid-Atlantic Regional Maintenance Center (MARMC)
 Southeast Regional Maintenance Center (SERMC)
 Southwest Regional Maintenance Center (SWRMC)
 Pearl Harbor Naval Shipyard and Intermediate Maintenance Facility
 Puget Sound Naval Shipyard and Intermediate Maintenance Facility

Forward Deployed Regional Maintenance Center (FDRMC)

- d. Assessments are to evaluate the ability of the FMA to execute maintenance following applicable technical directives and specifications. The assessment of FMAs encompasses Repair Department Work Centers (WC) and the direct repair WC support functions performed by other departments.

2.1.2 Applicability. The assessments described in this chapter are applicable for non-nuclear work only. This chapter does not apply to nuclear work and systems; they are addressed separately in Volume V, Part I, Chapter 9 of this manual.

2.2 ASSESSMENT AREAS.

- a. FMAs are expected to maintain a broad spectrum of capabilities at full readiness. The FMA can expect that many of these capabilities will be observed and evaluated during the course of the assessment. The Assessment Team will place primary emphasis on the essential core capabilities, utilizing the guidelines of references (a) and (b).
- b. Core capability craftsman demonstration areas are shown in Appendices A and B of this chapter. These represent the typical areas to be assessed and, as time permits, the team leader may observe other areas or projects. Observation of “in process work” is preferred to the assignment of projects or mockups in core capability areas. The team leader will make all decisions regarding the assignment of projects.

2.3 ASSESSMENT RESULTS. An overall grade of satisfactory or unsatisfactory will be assigned based on the FMA’s compliance with higher-level requirements and governing technical documents.

2.4 RESPONSIBILITIES.

2.4.1 Type Commander.

- a. Promulgate an assessment schedule by 30 November for the following calendar year.
- b. Forward a precepts letter, or a message, to the FMA’s Commanding Officer at least two weeks prior to the assessment. This letter should include:
 - (1) The date of the assessment.
 - (2) Assessment Team member’s security clearance information.

- (3) Core capability areas for the observation of in process work.
- (4) Logistic support requirements.
- (5) Additional information as appropriate.
- c. Conduct an inbrief and outbrief with the Immediate Superior in Command (ISIC) (if assigned), FMA's Commanding Officer and designated personnel. A preliminary copy of the Assessment Report will be provided to the FMA at the outbrief.
- d. Issue the Assessment Report (Appendix C of this chapter) to the FMA via the ISIC within 15 calendar days following completion of the assessment.

2.4.2 Fleet Maintenance Activity.

- a. Forward team security clearance information to the local base security office and to all units who are or will be in availability during the period of the assessment.
- b. Designate an Assessment Coordinator to act as the point of contact between the Assessment Team and the command. Notify the appropriate TYCOM of the name and phone number of the Assessment Coordinator upon receipt of the assessment precepts letter.
- c. Ensure the following assessment support is provided:
 - (1) Access to all industrial areas within the FMA.
 - (2) An adequate and dedicated administrative work area to allow the Assessment Team to assemble.
 - (3) Parking for the Assessment Team.
 - (4) A telephone with off-ship and long distance capability.
 - (5) Access to Maintenance Resource Management System.
 - (6) Clerical personnel to assist. These personnel will report to the Assessment Team Leader for assignment of working hours and duties.
 - (7) Copying services.
 - (8) Access to all Controlled Work Packages (CWP) and standard Formal Work Packages (FWP), including the index of FWPs.
 - (9) Access to selected Repair Department training records and the departmental weekly training schedule for the week of the assessment.
 - (10) A list of all non-nuclear Technical Work Documents performed since the last assessment.
 - (11) A list of key personnel and telephone numbers.
 - (12) A list of capabilities required per references (a) and (b), but not held.
 - (13) A list of all critical path jobs scheduled during the assessment.
 - (14) A list of all production or management meetings scheduled during the assessment.

- (15) In the Assessment Team work area, provide:
- (a) One desk top computer and a laser printer.
 - (b) A copy of the following reference documents:
 - 1 The previous TYCOM or Fleet Assessment report with corrective actions.
 - 2 Equipment out of commission lists.
 - 3 All FMA instructions and notices, including those pertaining to safety, production and repair functions, and the Command Availability Guide (if applicable).
 - 4 Activity manpower documents.
 - 5 Navy Afloat Maintenance Training Strategy-Training Reports.
 - 6 FMA Capabilities (currently titled IMA Capabilities) and WC Validation Reports for all applicable WCs.
 - 7 Joint Fleet Maintenance Manual.
 - 8 TYCOM Training Manual.
 - 9 Repair Department Equipment Status Log.
 - 10 FMA Audit and Surveillance Program records.
 - 11 FMA self-assessments.
 - 12 Departure from Specification files.
 - d. Initiate action to systematically correct each assessment deficiency finding (Appendix D of this chapter) per paragraph 2.5.1 and 2.5.2 of this chapter.

2.5 ASSESSMENT FINDINGS AND CORRECTIVE ACTION.

- a. For each noted deficiency in an assessment area, a finding will be written and classified as either “Immediate Corrective Action Required” or “Corrective Action Required”.
- b. Audit cards must clearly “stand on their own” and indicate if certification is or is not impacted by the finding when the audit card deals with SUBSAFE, Deep Submergence Systems or Fly-By-Wire deficiencies. All audit cards annotating a certification issue will be classified as “Immediate Corrective Action Required”.
- c. The FMA will annotate in the corresponding assessment report enclosure, the corrective actions taken for each finding.
- d. The Commanding Officer will also submit a findings status report to the TYCOM via the administrative chain of command within 60 days following receipt of the official assessment report.
- e. Unless a delay is specifically authorized by the TYCOM, all findings will be corrected within the time limits specified in paragraphs 2.5.1 and 2.5.2 of this chapter.

2.5.1 Immediate Corrective Action Required. A deficiency that poses a significant safety hazard or results in a total loss or extreme degradation of the FMA's readiness to perform work or provide a service within an area of required capability. Findings classified as "Immediate Corrective Action Required" require the immediate attention of the Commanding Officer and must be corrected within 15 days following the date of the assessment out-brief. Additionally, the TYCOM may direct the immediate suspension of work in any area(s) pending resolution of critical deficiencies.

2.5.2 Corrective Action Required. A deficiency which poses a potential hazard to personnel safety or has a significant impact on the FMA's readiness to perform work or provide a service within an area of required capability. Findings classified as "Corrective Action Required" require the prompt attention of the Commanding Officer to preclude them from developing into "Immediate Corrective Action Required" deficiencies and must be corrected within 60 days following receipt of the official assessment report.

APPENDIX A
TYPICAL CORE CAPABILITY ASSESSMENT AREAS

1. Safety or Navy Occupational Safety and Health.
2. Repair Training Effectiveness.
3. Maintenance Management.
4. Maintenance Data System Management.
5. Calibration - Production or WC Management.
6. FWPs (Volume V, Part I, Chapter 2 of this manual).
7. Tool or Equipment Control Programs.
8. Corrosion Control Program (as applicable).
9. Welding and Brazing Programs.
10. Quality Assurance Organization (Volume V of this manual).
11. Nondestructive Testing and Nondestructive Inspection (Volume V, Part I, Chapter 3 of this manual).
12. Technical Work Documents (Volume V, Part I, Chapter 2 of this manual).
13. Planning & Estimating.
14. Technical Library.
15. Hull Repair.
16. Machinery Repair.
17. Electrical Repair.
18. Electronics Repair.
19. Ordnance Repair (as applicable).
20. Weapon System Repair.
21. Weight Handling or Rigging.
22. Diving or Diver Life Support Systems (as applicable).
23. Regional Repair Center Capabilities (as applicable).

APPENDIX B

TYPICAL CORE CAPABILITY ASSESSMENT PROJECTS

1. Butt Weld (pipe).
2. HY-80 Weld Process.
3. Weld Hard-face.
4. Silver Braze.
5. Tube Bend.
6. Flex Hose Manufacture & Testing.
7. Electroplating.
8. Hydraulic Control Valve Repair.
9. Weight Handling Sling Manufacture and Weight Test.
10. Valve Lap and Hydrostatic Test.
11. Other projects as necessary.

APPENDIX C**SAMPLE FMA ASSESSMENT REPORT**

From: TYCOM (as appropriate)
To: Commanding Officer, FMA
Via: ISIC (as appropriate)
Subj: FMA ASSESSMENT

Ref: (a) COMUSFLTFORCOMINST 4790.3; Joint Fleet Maintenance Manual
(b) Precepts letter

Encl: (1) FMA Assessment Findings
(2) FMA Assessment Project Summary

1. Per Volume IV, Chapter 2 of reference (a) and reference (b), an FMA Assessment was conducted onboard FMA (Name of assessed command), during the period (Dates of Assessment).
2. The Assessment Team reviewed selected areas as prescribed in reference (a) and their findings and comments are contained in enclosures (1) and (2). Any required corrective actions should be initiated per Volume IV, Chapter 2, paragraph 2.5.1 and 2.5.2 of reference (a).
3. Overall Observation: (A brief summary of the results of the assessment including an overall evaluation of satisfactory or unsatisfactory).
4. (Subsequent paragraphs should briefly comment on major areas of concern found during the assessment).

LISTING OF APPENDICES.

- A Sample Boiler Inspection Request Message
- B Sample Inspection Confirmation Message
- C Summary of Boiler Inspection Scheduling and Responsibilities
- D Sample Boiler Inspection Report Cover Letter
- E Sample Boiler Inspection – RBO and Severely Degraded Deficiencies Message
- F Sample RBO Rescission Message
- G Sample 30 Day Update Message

3.1 PURPOSE. To establish policy and provide procedures and inspection requirements for the inspection of all conventional steam generating plants in surface force ships and training sites including schedules, preparations for inspection, inspection guidelines and reporting. Periodic standardized inspections are required of all non-nuclear propulsion, auxiliary, waste heat and training site boilers by a certified Steam Generating Plant Inspector (SGPI) or Naval Surface Warfare Center, Philadelphia Division (NAVSURFWARCEN PD), as applicable. The maximum interval between boiler inspections and other occasions requiring boiler inspections, including responsibilities for continuation and standardization of the boiler inspection program, are formally assigned in reference (a).

3.2 TYPES OF BOILER INSPECTIONS.

- a. Routine Inspection.
- b. Pre-start of Availability Inspection (PSAI).
- c. Start of Availability Inspection (SAI).
- d. Strength and Integrity Inspection.
- e. Industrial Support Visit (ISV).
- f. Completion of Availability Inspection (CAI).
- g. Inactivation or Reactivation Inspection.
- h. Engineer Officer Inspection.
- i. Major Repair Inspection.
- j. Special Inspection.
- k. Operational Assessments.

3.3 RESPONSIBILITIES.

3.3.1 Naval Sea Systems Command. NAVSEA must provide technical authority oversight over all main, auxiliary, waste heat and training site boiler systems and associated equipment. The designated NAVSEA Technical Warrant Holder must:

- a. Assure safe and reliable system operation.
- b. Set and enforce all technical requirements.
- c. Approve all major Departure from Specifications (DFS).
- d. Provide technical oversight and management of the SGPI and NSWCPD programs:
 - (1) Establish and enforce requirements for SGPI certification and recertification.
 - (2) Ensure periodic SGPI seminars are conducted.
 - (3) Ensure periodic technical audits of all Integrated Logistics Support documentation and Training.
 - (4) Maintain the Boiler Inspection and Repair Management Information System (BIRMIS).
 - (5) Routinely evaluate and ensure state of the art inspection, maintenance and repair tools and techniques are used.

3.3.2 Naval Surface Warfare Center, Carderock Division. NSWCCD must:

- a. Provide support to NAVSEA for the SGPI and NSWCPD programs. Ensure that the required technical documentation to support the SGPI or NSWCPD Inspector programs is maintained current.
- b. Establish and monitor the requirements and standards for routine and industrial inspections of steam generating plants.

- c. Develop, implement and maintain a program to train and certify NSWCPD Inspectors per reference (a).
- d. Ensure that inspections of newly constructed ships and ships undergoing major overhaul or conversion are conducted per this instruction.
- e. Conduct periodic technical audits of the SGPI Training Course per reference (a).
- f. Provide management of technical data, boiler history and the associated repair management information database system.
- g. Provide technical support to the semi-annual seminars.
- h. Maintain a roster of all certified SGPIs by name, rating, duty station, date of certification and expiration date of certification. Revoke inspector certification and initiate action to decertify inspectors who fail to comply with requirements of reference (a).
- i. Ensure that the requirements for SGPI certification, recertification and certification extensions are met prior to final approval.

3.3.3 Fleet Commander. The Fleet Commander must:

- a. Identify and designate those fleet activities which have inspection responsibilities and maintain a base of certified SGPIs within those activities.
- b. Ensure the availability of “school ships” to support SGPI or NSWCPD Inspector training. Student certification must be conducted on “D” type boilers.
- c. Host the semi-annual SGPI seminars on an alternating coast basis.

3.3.4 Regional Maintenance Center. The Regional Maintenance Center (RMC) must:

- a. Provide certified SGPIs to perform inspections per section 3.6 of this chapter.
- b. Review the guidelines and inspection requirements for all boiler inspections required by this instruction and ensure that each inspection report is recorded and updated into BIRMIS.
- c. Schedule and coordinate inspections of all steam generating plants required by this instruction with the appropriate technical activities to avoid the unnecessary opening of boilers.
- d. Provide a qualified SGPI when requested by the ship, Immediate Superior in Command (ISIC) or Type Commander (TYCOM).

3.3.5 Regional Maintenance Center Commanding Officers. RMC Commanding Officers must:

- a. Coordinate inspections in cognizant maintenance areas.
- b. Maintain an up-to-date status of required steam generating plant inspections which must include the latest inspection for all ships assigned to RMCs in their respective area of responsibility.

3.3.6 Immediate Superior In Command. The ISIC must:

- a. Maintain overall cognizance of the Steam Generating Plant Inspection Program within their area of responsibility to ensure requirements and standards are met.
- b. Schedule routine steam generating plant inspections in coordination with the cognizant RMC.
- c. Arrange for the availability of an SGPI during the SAI and CAI in coordination with NSWCPD and the cognizant RMC.
- d. Monitor the follow-up action required to correct noted discrepancies by randomly sampling the ship's deferred maintenance action file and most recent boiler inspection report.
- e. Assist Commanding Officers in arranging for the corrective action of items beyond the capability of Ship's Force, when requested.

3.3.7 Ship Commanding Officer, Officer In Charge or Maintenance Team. Ship Commanding Officers, Officers In Charge or Maintenance Team must:

- a. Request boiler inspections via Naval Message using the format in Appendix A of this chapter.
- b. Prepare for scheduled inspections to include required operational testing per references (b) and (c).
- c. Review inspection results and initiate corrective action for those items within Ship's Force capability. Initiate requests for the correction of items beyond Ship's Force capability. If any of the discrepancies of paragraph 3.9.2 of this chapter cannot be corrected within 72 hours following completion of the inspection, or if said discrepancies will impact the ship's operational schedule, initiate a Casualty Report (CASREP) for the affected boiler(s) per reference (d).
- d. Assess the impact (if any) of corrective action on operating schedules and advise the operational commanders. Decide (with repair activities) the optimum timing of repair actions to minimize impact on operating schedules.
- e. Submit reports per paragraph 3.7.2 of this chapter.
- f. Schedule boiler inspections as required by appropriate Planned Maintenance System (PMS) or Class Maintenance Plan item.

3.3.8 Regional Maintenance Center Senior Inspector. RMC Senior Inspectors must:

- a. Ensure all assigned SGPIs maintain current certifications per reference (a).
- b. Perform steam generating plant inspections per section 3.9 of this chapter, when directed.
- c. Review and submit reports per paragraph 3.7.2 of this chapter.
- d. Send inspection confirmation messages using Appendix B of this chapter.
- e. Administer an SGPI pre-test for SGPI training school candidates per reference (a).

3.3.9 Steam Generating Plant Inspector. The SGPI must:

- a. Maintain SGPI certifications per reference (a).

- b. Perform steam generating plant inspections per section 3.9 of this chapter, when directed.
- c. SGPIs are part of the technical authority chain-of-command and are accountable to the NAVSEA Technical Warrant Holder for the performance of their inspection duties.
- d. The shipboard SGPI must:
 - (1) Monitor all repairs conducted on the boilers, such as tube replacements, casing or refractory work, burner settings, hydrostatic test, etc., and annotate findings in Boiler Water or Feedwater log.
 - (2) Observe PMS performed on the boilers to include MLOCs (burner front checks), greasing of sliding feet, setting safety valves, high and low static checks, flex tests and auxiliary support equipment safety and governor settings.
 - (3) Accomplish special inspections and repairs on boilers after boiler casualties while underway and report in BIRMIS. Also, accomplish operational assessments on ship's boiler auxiliary support equipment prior to upcoming availabilities and report in BIRMIS and in ships Current Ship's Maintenance Project (CSMP), if repairs are required.
- e. It is recommended that the shipboard SGPI be assigned as the LCPO of the Oil Lab in order to monitor the boiler water chemistry, boiler lay-ups and the Boiler Water or Feedwater Program (not to be assigned as Ships Oil King).

NOTE: THE SHIP'S FORCE SGPI CAN ONLY ACCOMPLISH SPECIAL INSPECTIONS AND OPERATIONAL ASSESSMENTS ON THEIR OWN SHIP, AS DESCRIBED IN PARAGRAPHS 3.6.9 AND 3.6.10 OF THIS CHAPTER. THE SHIP'S FORCE SGPI WILL ASSIST THE RMC SGPI OR NSWCPD INSPECTOR DURING ROUTINE AND AVAILABILITY RELATED INSPECTIONS. THE SHIP'S FORCE SGPI MAY NOT INDEPENDENTLY CONDUCT ROUTINE, STRENGTH AND INTEGRITY, PSAI, SAI, ISV, CAI INSPECTIONS ON THEIR OWN SHIP.

3.4 INSPECTION SCHEDULING. Commands will coordinate boiler inspections with the Maintenance Team or ISIC to include operational testing. Commands must ensure the inspection scheduling complies with the following:

- a. Boiler inspections are actively managed by SURFMEPP utilizing the Class Maintenance Plan. All routine, Pre-Availability, Start of Availability, Completion of Availability, Strength, Integrity and Ultrasonic Test Inspections will be pushed by SURFMEPP into the maintenance screening and brokering system as part of the Baseline Availability Work Package. SURFMEPP will also push non-routine boiler inspections as requested by TYCOM or the Maintenance Team.
- b. Once the Work Notification is available in the maintenance screening and brokering system, Ship's Force and the Maintenance Team may coordinate and execute the inspection.
- c. Inspections should coincide with the required routine waterside and fireside maintenance.

- d. Boiler inspection services must be coordinated by geographic areas for maximum utilization of SGPIs and NSWCPD Inspectors. ISICs will combine inspection requests and schedule inspections.

3.5 BOILER SAFETY PROCEDURES. The safety of personnel must be given the highest priority. Observance of good engineering practices and careful control of boiler water chemistry will reduce the frequency of pressure vessel entry.

- a. Ensure “idle boiler condition” is accomplished per the provisions of the Engineering Operational Sequencing System (EOSS) and reference (b). Where conflicts occur, an EOSS feedback form should be submitted for resolution.
- b. Do not enter any part of a boiler or De-Aerating Feed Tank (DFT) until it has been fully ventilated and certified by a Naval Maintenance Facility Gas Free Engineer or National Fire Protection Agency marine chemist as safe for entry per references (e) and (f), as applicable, and Chapter 25 of this volume.
- c. Ensure the idle boiler is tagged out (valves wired shut and danger tagged). Observe two-valve protection per reference (g) where applicable. Open to the atmosphere the drain connections on all dead interconnecting piping to observe drainage.
- d. The use of unshielded or non-approved portable lighting in an open boiler is prohibited. Portable lighting must be watertight. (National Stock Number (NSN) 9S-6230-00-701-2947 applies.)
- e. Ensure all precautions cited in Section 2.24 of reference (b) are followed before entering an idle boiler.
- f. There must be a safety observer outside the boiler entrance to provide assistance whenever personnel are inside a boiler (steam drum, water drum, firebox or smoke pipe).
- g. Maintain an inventory log for accountability of all items taken into a boiler. The pockets of all personnel working in a boiler must be emptied and all jewelry removed. The removal of all items from the boiler must be verified from the inventory log prior to the close-up inspection. The Chief Engineer or his designated representative must inspect the boiler prior to final closeout.
- h. Cleaning of firesides or repairs conducted to the pressure vessel exterior of a boiler is acceptable with a steaming boiler in the same space provided the precautions cited in Section 2.7 of reference (b) are observed. Water washing of the firesides is not authorized without NAVSEA approval.
- i. Requiring personnel to enter the steam or waterside of a boiler with an adjacent steaming boiler is considered an unnecessary risk and will be avoided unless operations dictate otherwise. The decision to override normal safety precautions will be made by the Commanding Officer or Officer In Charge and will be reported to the TYCOM by message.
- j. Keep the area under the boiler clean and dry.

- k. Place signs warning that personnel are working in the boiler at the Boiler Console Operating station in the boiler operating space. The sign must remain there until the work has been completed and personnel are clear of the secured boiler.

3.6 BOILER INSPECTIONS AND REQUIREMENTS. Main propulsion, auxiliary, waste heat and training site boiler inspections conducted per the requirements of this chapter must fulfill all other requirements for comprehensive inspections of propulsion, auxiliary and waste heat boilers. All boiler inspections, including pre- and post-operational assessments, should be scheduled for coincidental performance. Appendix C of this chapter is a summary of boiler inspection scheduling and responsibilities. Propulsion, auxiliary and waste heat boilers will be inspected by a certified SGPI at the following intervals:

3.6.1 Routine Inspection. Routine Inspections will be conducted at least once every Fleet Readiness Training Cycle. For newly constructed ships, the period will begin at the completion of the Board of Inspection and Survey (INSURV) Acceptance Trials. For LHD-1 Class ships, the normal interval between routine boiler inspections will be 24 months. For LCC-19 and CG-47 Class ships, the normal interval between routine boiler inspections will be every 18 months. To provide scheduling flexibility, boiler inspections may be performed as early as 6 months before or as late as 6 months after the required inspection date. However, extensions beyond 24 months for LHDs or 18 months for LCC-19 and CG-47 class ships, require Type Commander approval via minor DFS. Such extensions must not result in the inspection interval exceeding 30 months for LHDs or 24 months for LCC-19 and CG-47 class ships. Any boiler which exceeds the inspection interval may be placed out of commission until inspected by a certified SGPI. A major DFS submitted from the TYCOM to NAVSEA Boiler and Condenser Technical Warrant Holder for adjudication is required to operate a boiler beyond 30 months for LHD-1 Class ships and beyond 24 months for LCC-19 and CG-47 Class ships without a Routine Boiler Inspection. The Completion of Availability Inspection (CAI) or Strength and Integrity required inspections fulfill the requirements of a routine inspection.

- a. A Safe-to-Steam Assessment will be performed when a DFS request for inspection periodicity extension is submitted for:
 - 1. LHD-1 Class - Minor and Major
 - 2. LCC-19 Class - Major
 - 3. CG-47 Class - Minor and Major
- b. A Safe-to-Steam Assessment performed by an SGPI that is not part of Ships Company must be included with the periodicity extension request. Safe-to-Steam Assessments are scheduled by the TYCOM via the ISIC. Minimum requirements for a SGPI Safe-to-Steam Assessment are:
 - 1. Boiler-water and Feed-water program review per guidance provided in NAVSEA S9221-D2-MMA-010, Steam Generating Plant Inspection (Non-Nuclear) Manual: para 9.2 and Appendix F for LHD and LCC Classes; para 11.7 and Appendix F for CG-47 Class.
 - 2. Operational inspection per guidance provided by NAVSEA S9221-D2-MMA-010, Steam Generating Plant Inspection (Non-Nuclear) Manual: Appendix E and Figure E-6 for LHD and LCC Classes; Appendix E and Figure 11-2 for

CG-47 Class. Demonstration of PMS that will become due during the requested extension timeframe along with any other PMS that has already been complete may be requested by the SGPI conducting the Assessment.

3. All Safe-to-Steam Assessment results must be reported in BIRMIS.
- c. The boiler inspection will be scheduled by the cognizant ISIC.
- d. The boiler inspection will be performed by the RMC SGPI.
- e. The TYCOM may utilize PSAIs, CAIs, and Strength and Integrity Inspections which are documented in BIRMIS, to satisfy the pressure vessel portion of a routine boiler inspection. This will reduce the number of boiler openings. A Routine Inspection will not be considered completed until an SGPI has certified all items required in NSTM 221-2.1.2.3 Ship's Pre-inspection Checklist For Up-coming Routine Boiler Inspection by U.S. Navy Steam Generating Plant Inspector and reference (c), Appendix E, F and Figure E-6 addressing Operational Assessments has been accomplished. Once completed, this resets the periodicity required for the next inspection to 24 months not to exceed 30 months for LHD-1 Class and 18 months not to exceed 24 months for LCC-19 and CG-47 Classes.

3.6.2 Pre-start of Availability Inspection. The PSAI may be required at the discretion of the TYCOM to support early bid specification and work package development.

- a. The PSAI will be scheduled by the ISIC, as approved by the cognizant TYCOM.
- b. The PSAI will be performed by the NSWCPD Inspector and the RMC SGPI.

3.6.3 Start of Availability Inspection. The SAI may be required to be accomplished at the beginning of an overhaul or availability to better define or re-evaluate the boiler bid specifications or work items at the discretion of the ISIC with TYCOM concurrence.

- a. The SAI will be scheduled by the ISIC, as approved by the cognizant TYCOM.
- b. The SAI will be performed by the NSWCPD Inspector and the RMC SGPI.

3.6.4 Strength and Integrity Inspection. The normal interval between Strength and Integrity Inspections will be 60 months. Strength and Integrity Inspections may be performed as early as 48 months or as late as 72 months after the last Strength and Integrity Inspection to provide scheduling flexibility. Inspections that exceed the 60-month interval will require a minor DFS to the TYCOM with recommendation from NSWCPD. Strength and Integrity Inspections **may not** exceed 72 months since the last inspection. Any boiler which exceeds the inspection interval will be placed out of commission until inspected by an NSWCPD Inspector and a certified SGPI. A major DFS with NAVSEA Technical Warrant Holder approval is required to operate a boiler beyond 72 months without a Strength and Integrity Inspection.

- a. The Strength and Integrity Inspection will be scheduled by the cognizant ISIC.
- b. The Strength and Integrity Inspection will be performed by an NSWCPD Inspector and the cognizant RMC SGPI.

3.6.5 Industrial Support Visit Inspection. The ISV inspection should be scheduled during the availability, but may be waived by the TYCOM for availabilities of short duration.

- a. The ISV inspection will be scheduled by the industrial activity or Supervising Authority as applicable.
- b. The ISV inspection will be performed by an NSWCPD Inspector and the cognizant SGPI.

3.6.6 Completion of Availability Inspection. The CAI will be conducted before reinstallation of steam drum internals and de-superheater for the Strength and Integrity Inspection.

- a. The CAI will be scheduled by the industrial activity or Supervising Authority, as applicable, and may be conducted in conjunction with a Routine Inspection.
- b. The CAI will be performed by an NSWCPD Inspector and the cognizant SGPI.

3.6.7 Inactivation or Reactivation Inspection. The Inactivation or Reactivation Inspection must be conducted on all boilers prior to completion of the inactivation or reactivation.

- a. The Inactivation or Reactivation Inspection will be scheduled by the industrial activity, Supervising Authority or Inactive Ship Facility as applicable.
- b. The Inactivation or Reactivation Inspection will be performed by an NSWCPD Inspector and the cognizant SGPI.

3.6.8 Engineer Officer Inspection. The Engineer Officer Inspection will be conducted per PMS and situational requirements of references (b) and (c), but does not qualify as a Routine Inspection described in paragraph 3.6.1 of this chapter. This inspection will be scheduled and performed by the ship's Engineer Officer. All results are to be documented in the Boiler or Water Feedwater logs and the Engineering Logs.

3.6.9 Special Inspection.

- a. A special inspection must be conducted whenever major repair work as defined by references (b) and (g) is accomplished. This inspection is arranged by the ISIC in coordination with the TYCOM and the RMC and performed by an SGPI.
- b. Additionally, SGPIs are authorized to conduct special no-notice inspections at their discretion to assess operational, chemistry and maintenance related problems.

3.6.10 Operational Assessments. An operational assessment must be accomplished prior to and at the completion of all Chief of Naval Operations (CNO) scheduled maintenance availabilities. These assessments are part of the Routine and Strength and Integrity Inspection requirements. These assessments will include both cold and hot plant inport safety checks and an operational evaluation. Detailed assessment requirements and checklists are available in reference (c), Figure E-6.

3.7 BOILER INSPECTION GUIDELINES AND REPORTS.

3.7.1 Guidelines.

- a. Routine Inspections of boilers will be conducted by certified SGPIs.
- b. Only an SGPI with a current certification may issue a Repair Before Operating (RBO) deficiency. All RBO items must be corrected prior to boiler operation and reinspected by a certified SGPI or NSWCPD Inspector, as applicable, and preferably the same SGPI or NSWCPD Inspector who originally inspected the boiler. RBO discrepancies

include those for which continued unrestricted operation could endanger personnel. RBOs may not be departed via DFS. If there is not an immediate or near future danger to personnel, the discrepancy must be assigned as SEVERELY DEGRADED with major operational restrictions.

- c. An SGPI-designated discrepancy discovered per reference (c) and paragraph 3.9.2 of this chapter which is assigned as severely degraded with major operational restrictions, and is considered for a DFS submission, is a major DFS and must be brought forward to the attention of the NAVSEA Boiler and Condenser Technical Warrant. A Major DFS must be forwarded for NAVSEA review and approval with accompanying engineering analysis recommendations from the originator. A severely degraded discrepancy per this chapter must be corrected or repaired prior to boiler operation unless it has been properly approved as a Major DFS.
- d. The status of a boiler related DFS will be verified by the SGPI during the inspection for conformance with the requirements of this manual prior to placing the boiler into operation.

3.7.2 Reports.

- a. The SGPI must provide an oral critique and preliminary report to the ship's Commanding Officer or his designated representative. The report will contain the findings of the inspection, with special note of recurring discrepancies from previous inspections. The SGPI must ensure a maintenance ready 2-Kilo for every discrepancy found during the inspection is entered into the Current Ship's Maintenance Project. **Document the assessment finding of maintenance ready work notification (2-Kilo) per Volume VI, Chapter 42, paragraph 42.5.5 of this manual.**
- b. The Senior Inspector will forward a copy of the BIRMIS report with cover letter per the sample shown in Appendix D of this chapter to the ship's Commanding Officer no later than ten days after satisfactory clearance of all discrepancies.
- c. The SGPI must report deficiencies discovered during the inspection by message within 24 hours, using the message format of Appendix E of this chapter. This message must contain both RBO and severely degraded deficiencies as described in paragraph 3.7.1 of this chapter.
- d. The cognizant SGPI must report by message, using the format in Appendix F of this chapter, the correction and re-inspection of all RBO deficiencies prior to lighting off an inspected boiler.
- e. The ship's Commanding Officer must submit a copy of the Current Ship's Maintenance Project to the SGPI for verification of downloaded 2 Kilos.
- f. The ship's Commanding Officer must report corrected deficiencies, by message, to the ISIC and TYCOM using the format in Appendix G of this chapter, within 30 days of the completed inspection and at 30-day intervals thereafter until all deficiencies are corrected or deferred to a CNO Maintenance Availability. The TYCOM is the sole authority for deferral of deficiencies. Update messages must list the BIRMIS item number and 2K Job Sequence Number of those items which have been completed

since the last update message. A corrected BIRMIS report will be provided to the ship after BIRMIS status codes are updated.

- g. The ship's Commanding Officer must notify the ISIC (as applicable) or TYCOM when a scheduled steam generating plant inspection cannot be conducted by submitting a DFS request. State the reason why the inspection cannot be conducted and recommend a revised date.

3.8 BOILER INSPECTION PREPARATION.

- a. Conduct the operational assessment before disassembling the boiler for inspection. Detailed assessment requirements are reported in reference (c).
- b. Prepare the boiler using the guidance provided in reference (b).
- c. Keep air passages, including the air box beneath the boiler and uptake spaces, clean and dry.
- d. Wire shut and danger tag all steam and water valves to the boiler per the ship's Tag Out Users Manual. Open to the atmosphere the drain connections on all dead interconnecting piping to observe drainage.
- e. The ship's Engineer Officer must ensure all Ship's Force responsibilities are complete using the guidance provided in reference (c).
- f. Open DFT for inspection.

3.9 BOILER INSPECTION.
