Disclaimer: All procurement information contained within this Long-Range Acquisition Forecast (LRAF) is subject to modification and is in no way binding on the Government. The LRAF, and any data contained herein, is based on the best information available and is being shared for information only. Small business set-asides may be projected herein, but the actual set-aside determinations will be made by the Contracting Officer at the time the procurement action is initiated. More specific information relating to any individual item or class of items may not be furnished until the proposed action is synopsisized through the Government Point of Entry (GPE) or the solicitation is issued. The GPE is located at <https://sam.gov>, as prescribed by the FAR. Acquisitions other than those provided in this LRAF will be published in accordance with FAR 5.101.

Presently, there are 12 non-fixed windows, ranging in size from 44" x 84" to 44" x 96" (approximately) in the B3291 Tower. The windows open horizontally, but only one half of the area is open to the air. To facilitate test and evaluation of larger electro-optic sensor systems, we would like to explore replacing the windows with a style that provides less obstruction. In other words, we need to have the line of sight from electro-optic sensor to the target be unobstructed (including glass). A market study has not been performed.
